A TRIAL survey to be made from the Illawarra Railway, near to Marrickville, to Longnose Point, Balmain. The line would have to pass under the Petersham viaduct and follow down the east side of Long Cove. Also a branch from this line to Strathfield, joining the Illawarra branch, near Long Cove.

Instructions to Mr. Thomas, memo. 87-537, to have this survey made.

Coal Line.—Homebush to Balmain.

Sir,

Railway Survey Office, 17 January, 1888.

In accordance with your instructions of the 18th January, 84-267, I beg to report upon the general character of the country through which this survey has been made, and also give a description of the route.

To insure getting the best possible route, I have surveyed four separate lines,—No. 1, green; No. 2, red; No. 3, blue; No. 4, brown—of which I propose to recommend No. 4. This commences at a point on the southern railway, about 8 miles 35 chains from Sydney, on the eastern side of the cattle sale-yards, near Homebush, and is, as stated, coloured brown on plan and section. Several deviations have been surveyed and levelled here, in order to, if possible, reduce the bank over Powell's Creek, shown by deviation No. 1, dotted brown, on plan and section. The line, shown in firm brown, on a grade of  $\frac{1}{4}$  reduces the above bank, and, I think, is as near the best result as possible. The line here passes over the southern and northern junction railway, where there is a cutting of about 14 feet, hence the cause of the long and high bank (23 feet) spoken of above.

In this neighbourhood there is abundance of clay for bricks, but very little timber. A few iron-bark trees are still standing in the late Thomas Walker's estate, through which the line passes, which, possibly, might be made available for railway purposes. The line here passes near Mr. Bray's residence, which it was impossible to avoid, on account of being compelled to cross the southern and northern junction railway over the highest point of a cutting already made. There is nothing of any consequence to report from this point to Hen and Chickens Bay, which the line crosses at 2 miles 40 chains and 2 miles 70 chains. At 2 miles 40 chains the line passes over mud at low water, and at 2 miles 70 chains there is about 18 inches of water at low tide, bottom mud. At 2 miles 48·97 chains a deviation begins, which deviation, I think, is the best line as regards section, and will avoid a grade of 1 in 40 by West's Quarry. This deviation passes through some private property on the eastern side of Hen and Chickens Bay, which, at the present time I should say, is not of much value; and it is a question whether it would not be cheaper to make this line than the brown dotted one which shows 10 feet more cutting through the same hill.

The dotted brown line from same point, viz., 2 miles 48·97 chains, passes over a reclamation by Mr. Friend, and across another mud-flat of Hen and Chickens Bay, thence across the Great Northern Road, through Hemming's, Judge Fawcett's, Burton Bradley's, and Mr. Rodd's valuable properties. The firm brown line passes through a corner of Judge Fawcett's property and through a few sub-divisions of Mr. Suttor's; thence across the Five Dock Park, through Mrs. Bradley's Bush, and on through B. C. Rodd's property to Long Cove, and junctions in Leichhardt Park with the line surveyed from Tempe by Mr. Hardy.

I think an 8-foot culvert would be sufficient to carry off the surplus water at Powel's Creek. Two 8-foot culverts at Hen and Chickens Bay and about 500 feet of timber openings at Long Cove are about the main works required on this length.

Ample stone can be obtained for culverts or bridges anywhere from the North Road to Rodd's Point.

The three other lines that were set out and levelled are shown in plan and section on the same paper. They are all very fair lines as regards section; but, I presume, it would not be desirable to make either of them, on account of the valuable property they pass through, and also probably because they do not leave the suburban line soon enough, i.e., they would interfere with the suburban traffic.

I have not made detail surveys on these lines; but transfers from municipal plans have been given, to indicate the locality and a general idea of the routes traversed.

The Engineer-in-Chief for Railways.

I have, &c.,

GEORGE MELROSE.

Plan and section handed to Mr. Drewett by Engineer-in-Chief, who gave him the necessary instructions about laying down gradients, &c.—W.H.Q., 20/1/88. End of month. Mr. Drewett.—W.H.Q., 1/2/88.

Diagram

Diagram plan, plan and section of line of railway, Homebush to Longnose Point, together with plan of wharf at Balmain, also plan and section of line from Tempe to Balmain, sent to Engineer-in-Chief this day, 23 April, 1888.—J. W. DREWETT. The Engineer-in-Chief.

Plans, sections, and description of the proposed lines forwarded to the Minister, with memo. 88- , of 23rd April.

Mr. George Melrose to The Engineer-in-Chief for Railways.

Sir,

Camp, Ashfield, 16 October, 1887.

I have the honor to inform you that the trial survey of the line from Homebush to Longnose Point will be completed about Wednesday, the 26th instant. The sections are completed, and the plan is partly plotted.

I have, &c.,

GEORGE MELROSE.

Mr. Thomas.—W.H.Q., 17/10/87. Mr. Melrose will be instructed to return to the office when his survey is completed.—E.R.T., 18/10/87. The Engineer-in-Chief. When will the plan and section be ready?—W.H.Q., 1/12/87. Mr. Thomas. In about three weeks they will be completed. They are in a sufficiently forward state for inspection.—E.R.T., 2/12/87. The Engineer-in-Chief. End of month, 5/12/87. Mr. Thomas.—W.H.Q., 30/12/87. The plan and section are finished, and the report has been forwarded to the Head Office.—E.R.T. (*per* G.J.B.), 17/1/88. To the Engineer-in-Chief.

Mr. George Melrose to The Engineer-in-Chief for Railways.

Report on Coal Line to Balmain.

Sir,

Railway Survey Camp, Ashfield, 29 July, 1887.

In accordance with your instructions of the 23rd instant, No. 87-878, I have the honor to report upon a route indicated by you in red on the accompanying plan.

I have examined the country between the Homebush sale-yards for cattle and the point on Long Cove, opposite to Leichhardt Park, with a view to the above purpose, keeping in mind your instructions with regard to Government reserves and land between high and low water. The blue dotted line shown on plan seems to me to be the best, having that object in view, between the points A and B the line would be below high-water mark, and of course would not have to be paid for. Between the points B and C the land is rather valuable, as it passes through ornamental grounds, the property of Mrs. Bradley. The land is very high here, and would necessitate a deep cutting, the stuff from which would no doubt be required for filling along high-water mark.

The red line commences at the Southern Railway, about 8 miles 35 chains from Sydney, and on the eastern side of the cattle sale-yards, running in a north-easterly direction to a 14-ft. cutting on the Great Northern Railway at about 8 miles 25 chains from Sydney, at which place there is an over-bridge. From this point to D on plan this line is practically the same as the blue line, except that it passes through a little more valuable property. From D to Rodd's Point, Long Cove, the property is all more or less valuable. As regards section and grades, I am of opinion the red line is the best, on account of rising from high-water mark to the summit at E more gradually than the blue line; but certainly a tolerably good railway could be constructed over either line.

I have, &c.,

GEORGE MELROSE.

A section may be taken over the red line from the Southern Railway across the Waratah line, and then follow generally the blue line to Rodd's Point, as it appears the land along this route is less valuable than on the red line. If the dotted red line would be outside Mrs. Bradley's ornamental grounds that line might probably be adopted. After crossing Long Cove the line must be connected with Mr. Hardy's survey to Longnose Point.—J.W., 30/7/87. Mr. Thomas.

Noted and forwarded to Mr. Melrose.—E.R.T., 2/8/87. Mr. Melrose. Noted and returned.—GEO. MELROSE, 3/8/87. The Engineer-in-Chief. The dotted red line is outside of Mrs. Bradley's, but it passes through Mr. Burton's ornamental grounds, and is much higher land.—G.M. Survey the line that will be the best and do least damage to property.—J.W., 4/8/87. Mr. Thomas. Mr. Melrose informed.—E.R.T., 4/8/87.

Minute Paper.

*Subject*:—Proposed Coal Lines to Balmain.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,

Sydney, 28 May, 1888.

I HAVE the honor to inform the Minister that the estimated cost of the proposed coal lines from Tempe and Homebush to Longnose Point, including cranes, wharf, sidings, &c., is £500,000.

The Hon. the Minister for Works.

JOHN WHITTON.

Does this include land. I require a detailed estimate to enable me to determine how much of the work will be required at once.—JOHN SUTHERLAND, B.C., 28/5/88. Details of estimate herewith. The cost of land and compensation is not included.—J.W., 28/5/88. The Honorable the Minister. I enclose an estimate of the cost of the proposed double line branch railway from Tempe to Longnose Point, Balmain, with coal-sidings, wharves, cranes, &c. (£250,000).—J.W., 2/6/88. The Hon. the Minister. Received from Works Department, 18/1/89. Mr. Alexander to see.—W.H.Q., 18/1/89. Seen.—S.H.A., 19/1/89.

PROPOSED

PROPOSED BRANCH LINE OF RAILWAY FROM TEMPE TO LONGNOSE POINT, BALMAIN.  
 APPROXIMATE Estimate of quantities and cost of works for a double line of railway. Length, 6 miles 25 chains. (Exclusive of land and compensation.)

28th May, 1888.

## Trial Survey—Tempe to Longnose Point, Balmain.

Borings—Dated 4th June to 29th August, 1888; received 1st November, 1888.

From Mr. E. M. Hixson (Surveyor).

Subject:—Batty and Sheehy's account for hire and towage of punts, viz., twelve and a half weeks, at £3 10s. = £43 15s.

NOTE.—D. Morland was engaged from 1/4/88 to 28/8/88 at 11s. per diem for self and boats, in addition to this he was paid £14 for hire of extra boat. The men boring were engaged from 1st June to 28th August. Account for £43 15s. now submitted. H.C., 12/11/88.

Approved.—J.W., 12/11/88. W.C., 12/11/88. W.H.Q. Put by. Voucher herewith.—H.C., 12/11/88.

## Memo. to Mr. Quodling.—Tempe to Balmain.

Department of Public Works, Railway Survey Branch,

Engineer-in-Chief's Office, Sydney, 25 September, 1888.

I WOULD wish to suggest a short trial line connecting Hixson's line with Hardy's, to avoid two 1-40 gradients, which can only be otherwise improved by greatly increased work, and an expensive complicated crossing of both road and railway over the Marrickville to Liverpool line at one spot, viz., at Livingstone Road. The trial line would be about a mile long only, and would give useful information, even if not adopted.

STANLEY ALEXANDER.

Approved.—J.W., 25/9/88. Mr. Alexander. This line has been laid out by Mr. A. G. Little. The section I now forward to Engineer-in-Chief.—S.H.A., 30/10/88. Seen, and is, I think, satisfactory, and may be adopted.—J.W., 2/11/88. Mr. Alexander. Noted.—S.H.A., 2/11/88. Put by.

## Memo. to the Engineer-in-Chief.—Tempe to Longnose Point, Balmain.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 1 October, 1888.

I ENCLOSE an advertisement respecting Government leases for special purposes, in which attention is drawn to a lease about to be granted to W. A. Cormack for a jetty at Longnose Point, Balmain.

I am not aware whether the granting of this lease would interfere with the proposed coal wharves at Longnose Point, but objections to the application can be lodged at the Lands Office on or before the 4th October. Similar applications are, I understand, being made on the North Shore along the route of the proposed extension to Milson's Point.

J. W. DREWETT.

[Enclosure.]

LEASES FOR SPECIAL PURPOSES.

Department of Lands, Sydney, 7 September, 1888.

ATTENTION is directed to the notification in the *Government Gazette* of this date in reference to the proposal to grant special leases as hereunder mentioned. Any objections lodged on or before the 4th proximo will be duly considered.

A. W. CORMACK, for Jetty at Longnose Point, Balmain.  
JOHN BLUE, for Jetty at Berry's Bay, North Shore.

Will you please see Mr. Deering about this matter? I think certain conditions are imposed by the leases.—W.H.Q., 2/10/88. Mr. Drewett. Mr. Deering states that the lease applied for will not interfere with proposed line, and that, even if it were the case, the Government have reserved full power to cancel the lease at any time.—J.W.D., 3/10/88. The Engineer-in-Chief. Put by.—W.H.Q., 5/10/88.

Memorandum

Memorandum to The Engineer-in-Chief.  
Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 22 August, 1888.

I HAVE the honor to report that no reference-book of the owners and occupiers of property through which the various trial surveys made by Messrs. Hardy and Hixson of the Tempe to Balmain railway pass has been supplied. Shall I instruct Mr. Hixson to furnish a book of reference to all the trial surveys? It would probably occupy him from two to three days.

GEO. J. BECKETT.

Yes.—W.H.Q., 23/8/88. Mr. Beckett. Mr. Hixson instructed, 23/8/88. Letters to Mr. Hixson to return plan of trial survey, and to furnish book of reference without delay, 12/9/88. Book of reference received.—S.H.A., 14/9/88.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 1 June, 1888.

Mr. Quodling,  
88-1,351.—Herewith are copies of estimates of lines Homebush to Longnose Point and Tempe to Balmain to point A.

Also, revised estimate of line Tempe to Longnose Point, two copies.  
The cancelled sheets are also with these copies.

J.W.D.

Estimates in Guard Book, Nos. 141 and 142.

Memorandum to The Engineer-in-Chief.—Proposed Line of Railway, Tempe to Balmain.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 22 March, 1888.

I FORWARD herewith a tracing showing another trial line, from 5 miles 20 chains to 7 miles, Longnose Point, Balmain, on the above line, marked in blue on the plan.

I would suggest that fresh levels be taken over this line, and cross-sections at every chain, and soundings at every 4 chains apart, and intermediately, if required, these cross-sections to commence on an even chainage near the Balmain baths, and be continued through to Longnose Point, and taken for a distance of at least 2 chains on each side of the blue line.

The soundings should show the depth at low water.

J. W. DREWETT.

The Engineer-in-Chief has directed that Mr. Hixson should do this work.—J.W.D., 23/3/88.  
Mr. Edward Hixson.

Memorandum to The Engineer-in-Chief.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 21 April, 1888.

I FORWARD herewith six drawings, showing proposed double lines of railway, viz.:—A branch line from Homebush, on the Great Southern Railway, to Longnose Point, Balmain; also, from Tempe, on the Illawarra line, to a point marked A on the plan of the former line of railway, viz.:—

- No. 1. Diagram plan.
- " 2. Plan, Homebush to Balmain.
- " 3. Section, Homebush to Balmain.
- " 4. Enlarged plan of wharf arrangements at Longnose Point.
- " 5. Plan, Tempe to Point A, Balmain.
- " 6. Section, Tempe to Point A, Balmain.

DESCRIPTION OF LINES.

*Homebush to Longnose Point, Balmain.*

Branching off to the left from the Great Southern Railway, at about 8 miles 35 chains from Sydney, on the eastern side of the Homebush cattle sale-yards, the proposed line runs in a north-easterly direction through Concord, crossing over the Parramatta Road on the level; and thence over Powell's Creek and the Great Northern Railway, which line it is connected with by a loop about a quarter of a mile further on; thence crossing Brunswick Road and turning to the right, the line passes over Flavelle and Wellbank Streets and Major Bay Road; from thence across Broughton and Wharf Streets over the mud-flats in Hen and Chickens Bay, through Five Dock, across the Great Northern Road; thence over Iron Cove Creek Road, passing through Five Dock Park and the Barnstable Manor grounds, the property of B. C. Rodd, Esq.; thence over the Iron Cove Creek to the point A, where the proposed line from Tempe has its junction; from this point the line skirts the shore of Long Cove and the Parramatta River, passing through the left of Callan Park Asylum grounds, and to the right of Fig-tree and White Horse Points to Longnose Point, Balmain, where a wharf for loading coal is proposed. This line is 7 miles 30 chains in length.

Drawing No. 4 shows the general arrangements of the wharf and feeding lines, standage, and marshalling sidings in connection with the main line, to an enlarged scale of 1 chain to an inch.

In this plan it is proposed to have nine hydraulic cranes, with a loading-power of 14,000 tons of coal per day, discharging into ships or colliers alongside the wharf.

Each of the above cranes should lift 10 tons, and dump about twenty-six 10-ton hopper-waggons per hour, or 1,560 tons per working day of six hours, the remaining two hours being occupied in berthing the ships, trimming coal in the hold, &c., which will give an aggregate of 14,040 tons, or, approximately, 14,000 tons of coal per working day of eight hours.

The wharf will follow the natural configuration of the land, and at the same time will give 25 feet in depth at low water, probably without dredging or cutting the bottom.

The length of the wharf as now proposed will be about 2,500 feet, the end nearest to Longnose Point will be on a curve of 28 chains radius, the remainder will be in straight portions of 300, 200, and 800 feet in length.

Should future requirements necessitate an extension of the wharf, it can be made by continuing it in the direction of White Horse Point, as shown on the plan by the dotted red lines, which would give room for six extra loading cranes.

The sidings for loading the feeding and standage lines will hold 650 loaded trucks, and the marshalling lines will hold 600 empty trucks. The switches and crossings are arranged so as to give through communication with all the lines.

*Tempe to Point "A," Balmain.*

This line, branching off to the left in a northerly direction from Tempe station on the Illawarra Railway at 3 miles 78 chains from Sydney, crosses Meek's Road and turns sharply to the left, passing through Marrickville over the Illawarra and Livingstone Roads; thence across Wardell, New Canterbury, and Constitution Roads, turning to the right through Petersham and following the course of Long Cove Creek, which is upon its left for a distance of a mile; thence across the Old Canterbury Road and under the northern end of the Petersham viaduct on the Great Southern Railway, over the Great Western Road to the head of Long Cove, skirting its right bank; thence over Walter and Water Streets and through Leichhardt Park to Point A, where it has its junction with the line from Homebush, the length of this line being 4 miles 60 chains.

J. W. DREWETT.

Copy forwarded to the Minister with memo. 88-325, of 23 April.—J.W. (*per* W.H.Q).

No. 14.—Line from Tempe to Longnose Point, Balmain.

Length, 6 miles 76 chains 60 links.

The estimated cost of constructing a line from Tempe on the Illawarra Railway to Longnose Point, Balmain, including wharves and five steam cranes for shipping coal is £250,000, exclusive of land and compensation.

COMMENCING at 3 miles 78 chains 32 links on the Illawarra Railway, near Tempe Platform, and passing through the Municipalities of Marrickville, Petersham, and Balmain, to the end of Longnose Point in the latter suburb, being a distance of 6 miles 76 chains 60 links. Leaving the Illawarra line it proceeds in a north-westerly direction to the permanently staked line, St. Peters to Liverpool, which it will cross on an over-bridge in the vicinity of Livingstone Road; thence in a north-easterly direction along the south-east side of Long Cove Creek to the Great Southern Railway, which it passes under at the Petersham viaduct; thence to the Parramatta Road, which it intersects at 2 miles 74 chains (mileage on railway trial survey) near to where the road crosses the Long Cove Creek; thence in a northerly direction along the creek to Wilson-street, which it cuts at 5 miles 25 chains 15 links, near to where it forms the approach to the Long Cove Bridge; thence along the south-eastern side of the Parramatta River, passes Fig-tree and White Horse Points to Longnose Point, where it terminates at 6 miles 76 chains 60 links.

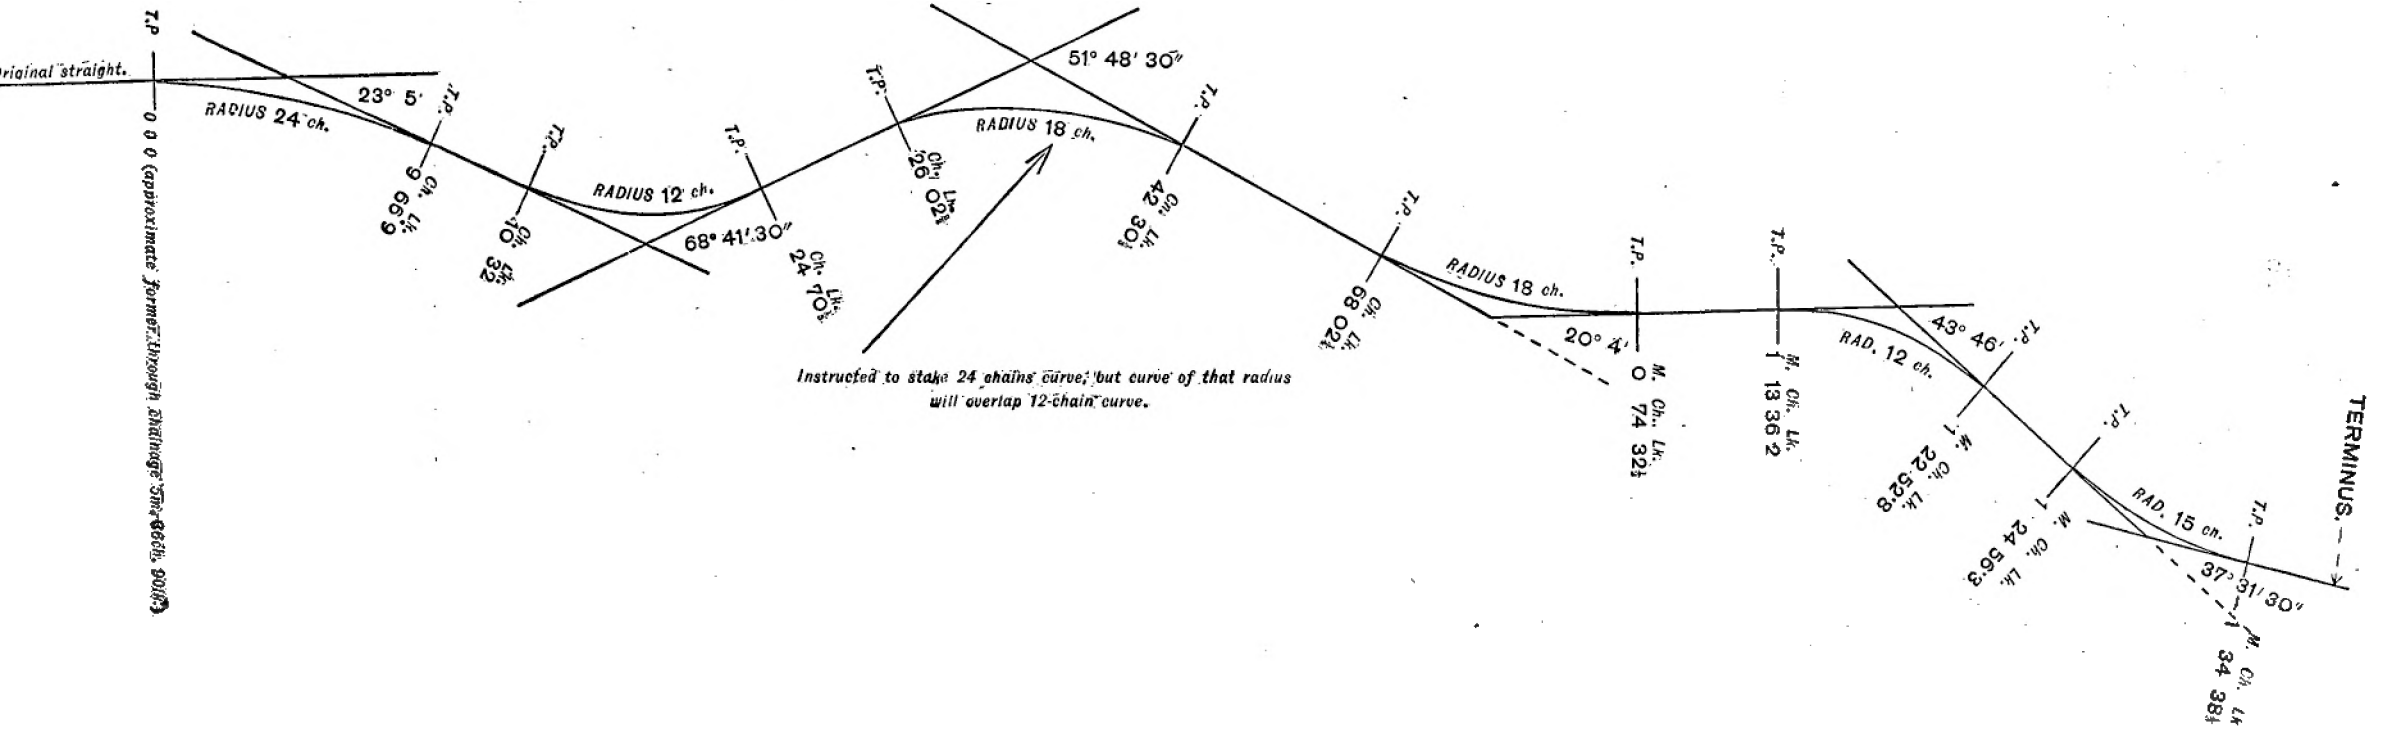

Railway Trial Surveys—Tempe to Longnose Point, Balmain.

D. MORLAND and boats, as required—generally two every day—was engaged at 11s. per diem.

EDWARD HIXSON.

Passed in June, vouchers; application required.—H.C., 9/7/88.

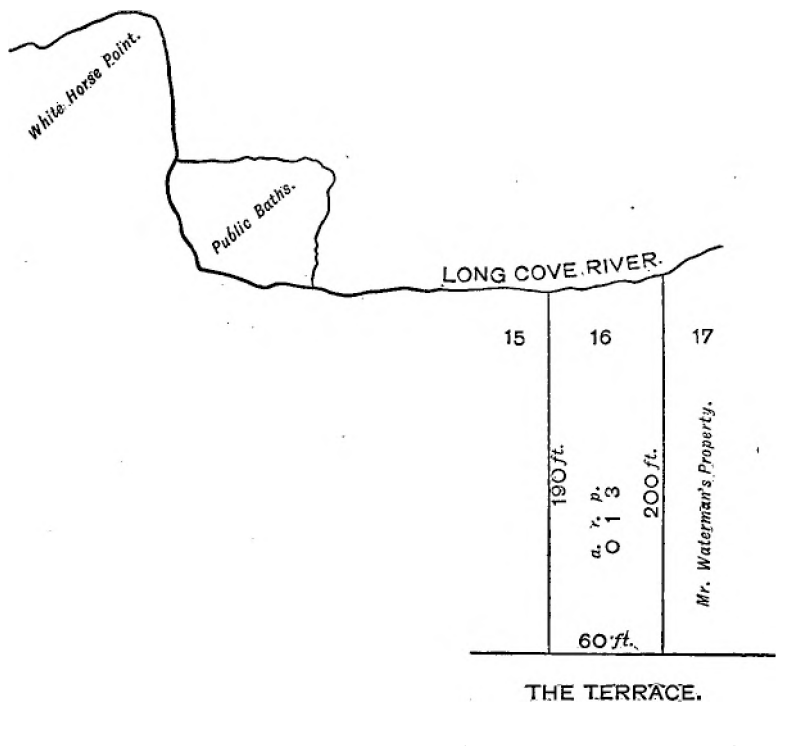

Put by.—W.H.Q., 10/7/88.

Dear Sir,

Sydney, 162A, Sussex-street, 4 June, 1887.

Enclosed, please find tracing of ground, situated Balmain, fronting the waters of Long Cove. I have made application to reclaim. The reclamation has been granted so far as the Lands and Harbours and Rivers Departments, but has now been put aside. I have asked the reason, and was told that the ground was wanted for railway purposes. Will you be good enough to let me know if such is the case, as I want to build.

Awaiting an early reply.  
Chas. A. Goodchap, Esq., Commissioner for Railways, N.S.W.

Yours, &c.,  
WILLIAM MILIN.

Engineer-in-Chief.—A.R. (for Commissioner), B.C., 6/6/87. A trial survey is now being made.—W.H.Q., 8/6/87. I understand that no further reclamations will be allowed along the foreshore of Longnose Point.—W.H.Q., 4/6/88.

Sir,

Petersham, 30 June, 1887.

I have the honor to request permission to hire a boat from time to time, when the services of such are necessary for executing the trial survey along the Balmain coast, from Leichhardt to Longnose Point.

An immediate reply is requested.

I have, &c.,  
HENRY HARDY.

The Engineer-in-Chief for Railways.

Approved.—J.W. (per W.H.Q.), 30/6/87. Mr. Hardy. Seen.—H.H., 2/7/87. Noted.—H.C., 6/7/87.

Dear Sir,

Denison Road, Petersham, Saturday.

Please send me, per bearer, an order on the Railway storekeeper for 500 pegs, as I am just out of same.

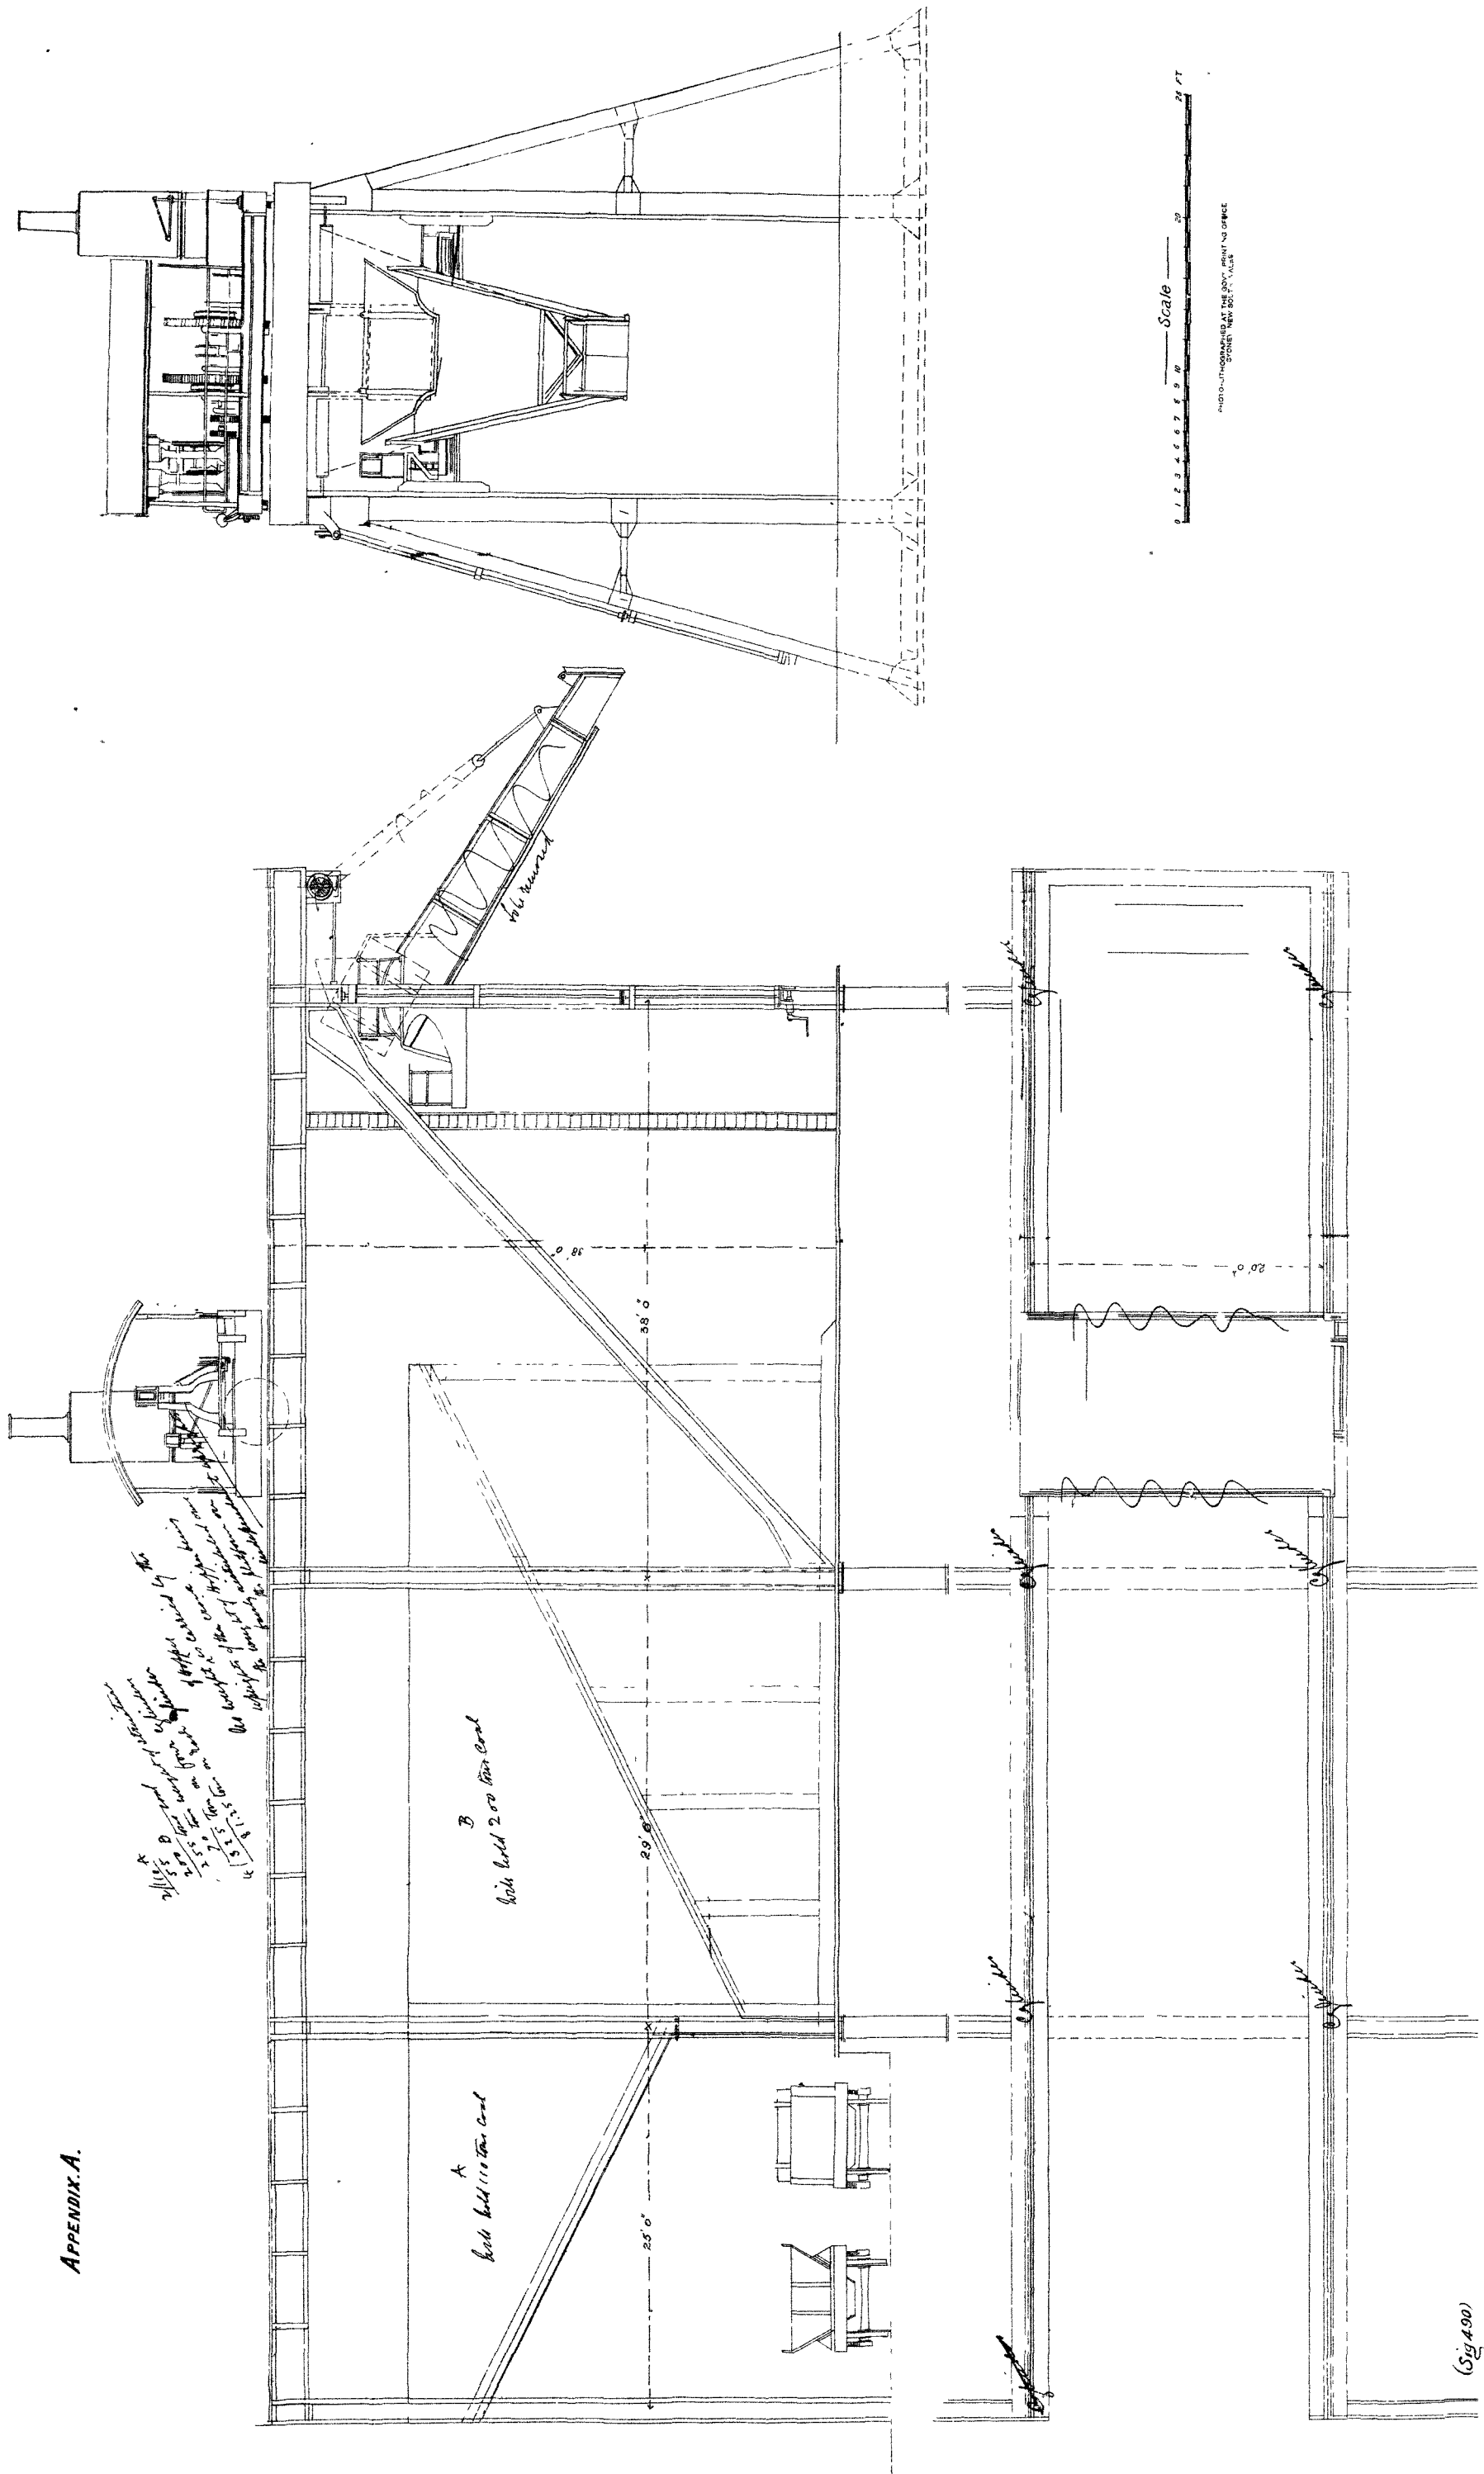

W. H. Quödling, Esq., Chief Clerk, Railways.

I remain, &c.,  
H. HARDY.

[Two Plans.]

**APPENDIX A.**

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**RAILWAYS.**

(TRIAL SURVEY—RICHMOND TO WALLERAWANG AND RICHMOND TO ESKBANK.)

*Ordered by the Legislative Assembly to be printed, 20 June, 1889.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 17th May, 1889, That there be laid upon the Table of this House,—

- “(1.) Copies of all correspondence, reports, minutes, papers, and other documents relating to the Railway trial survey, Richmond to Wallerawang.  
“(2.) Copies of all correspondence, reports, minutes, papers, and other documents relating to the Railway survey, Richmond to Eskbank, as “carried out by Mr. Sharkey, Civil Engineer.”

(*Mr. Edmunds.*)

SCHEDULE.

NO.	PAGE.
1. Deputation waited on Secretary for Public Works, who authorized examination of proposed line. 13 April, 1883	3
2. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways, respecting tracing of recent survey of track from Mount Tomah to Mount Wilson's Platform. 24 May, 1883	4
3. Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd—no information obtainable <i>re</i> traverse of road from Mount Tomah to Mount Wilson Platform. 25 May, 1883	4
4. Mr. Surveyor Lloyd to Engineer-in-Chief for Railways—progress made with examination of line. 2 June, 1883	4
5. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways—report on examination of line. 11 June, 1883	4
6. Chief Clerk to Assistant Engineer for Trial Surveys, <i>re</i> discrepancies between Mr. Lloyd's aneroid readings and the ascertained railway levels. 20 June, 1883	6
7. Mr. H. McQuade, M.P., to Secretary for Public Works—that Mr. Surveyor Lloyd be instructed to complete his survey before leaving for Dubbo. 13 July, 1883	6
8. Mr. Surveyor Lloyd to Engineer-in-Chief for Railways, forwarding tracing of lines levelled from Richmond to the summit of the Kurrajong Ridge. 26 September, 1883	6
9. Extract from the Report of the Assistant Engineer for Trial Surveys, <i>re</i> progress of survey. 15 October, 1883	7
10. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways—progress made with survey. 2 November, 1883	7
11. Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd—plan and section of trial survey are urgently required. 24 January, 1884	7
12. Mr. Surveyor Lloyd to Engineer-in-Chief for Railways—plan and section will be forwarded by 6th instant. 26 January, 1884	7
13. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways, forwarding tracings of plan and section of amended survey from 6 miles 60 chains to summit of gap at 13 miles 16½ chains. 11 February, 1884	7
14. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways, forwarding tracings of plan and section of survey as far as completed. 3 May, 1884	8
15. Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd—instructions to make a deviation from 6 ms. 60 chs. 6 May, 1884	8
16. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways—will complete section of line surveyed to junction with G. W. Railway by 30th instant. 23 July, 1884	8
17. Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd—plan and section of line to be submitted, to determine whether additional surveys are required. 24 July, 1884	8
18. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways—forwarding plan and section of survey, 11 August, 1884	9
19. Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd—instructions to break up camp and return to Sydney. 12 August, 1884	9
20. Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd—to furnish a report on survey. 11 September, 1884	9

355—A

[932 copies—Approximate Cost of Printing (labour and material), £25 6s. 7d.]

No.	PAGE.
21. Mr. Surveyor Lloyd to the Engineer-in-Chief for Railways—general report on survey. 18 September, 1884 .....	9
22. Assistant Engineer for Trial Surveys to Mr. Surveyor Cumming, to bring his plan and section to Sydney for comparison with Mr. Lloyd's survey. 31 March, 1884 .....	10
23. Mr. Surveyor Cumming to Engineer-in-Chief for Railways, will complete survey up to Mr. Sharkey's peg next week. 14 July, 1884 .....	10
24. Assistant Engineer for Trial Surveys to Mr. Surveyor Cumming, to forward his plan and section to determine whether any further trial surveys are required. 16 July, 1884 .....	10
25. Mr. Surveyor Cumming to Engineer-in-Chief for Railways, forwarding plan and section of trial line from Mt. Wilson platform to near Mt. Tomah. 22 July, 1884 .....	10
26. Mr. Surveyor Cumming to Engineer-in-Chief for Railways—general report on survey carried out by him. 25 July, 1884 .....	10
27. Mr. Surveyor Sharkey to Engineer-in-Chief for Railways, will complete his survey about end of month. 14 July, 1884 .....	11
28. Assistant Engineer for Trial Surveys to Mr. Surveyor Sharkey, to submit plan and section of routes surveyed before breaking up camp. 17 July, 1884 .....	11
29. Mr. Surveyor Sharkey to Engineer-in-Chief for Railways—report on character of country through which survey in vicinity of Mt. Tomah has been made. 5 September, 1884 .....	11
30. Engineer-in-Chief for Railways to Secretary for Public Works, forwarding report and plan and section of proposed line. 5 September, 1884 .....	11
31. Mr. A. Bowman, M.P., forwarding letter from Mr. T. H. F. Griffin, respecting deputation to wait on Secretary for Works. 9 March, 1888 .....	11
32. Secretary for Public Works to Engineer-in-Chief for Railways, forwarding report of deputation which waited on him. 16 March, 1888 .....	12
33. Mr. J. P. Sharkey to Engineer-in-Chief for Railways, that tracings of plan and section of trial survey may be prepared. 22 March, 1888 .....	13
34. Mr. T. H. F. Griffin to Under Secretary for Finance and Trade, forwarding £100 on account of survey. 23 March, 1888 .....	13
35. Mr. T. H. F. Griffin to Secretary for Public Works, draft for £100 has been forwarded to Treasury. 28 March, 1888 .....	13
36. Telegram. Mr. T. H. F. Griffin to Secretary for Public Works, that instructions be issued to furnish Mr. Sharkey with certain papers. 10 April, 1888 .....	14
37. Mr. A. Bowman, M.P., to Secretary for Public Works, forwarding letters from Mr. Sharkey, complaining of incomplete state of plans of survey. 10 April, 1888 .....	14
38. Mr. J. P. Sharkey to Engineer-in-Chief for Railways, reporting on incomplete state of plans and sections of trial survey. 7 April, 1888 .....	14
39. Chief Clerk to Mr. J. P. Sharkey, that incomplete plan and section are being finished up. 10 April, 1888 .....	15
40. Secretary for Public Works to Engineer-in-Chief for Railways, to be furnished with plan and section which were laid before Mr. Sharkey. 12 April, 1888 .....	15
40½. Minute by the Chief Clerk to the Engineer-in-Chief for Railways. 13 April, 1888 .....	15
41. Chief Clerk to Messrs. Surveyors Cumming and Lloyd, re Mr. Sharkey's statement, that trial survey was carried out in great haste. 10 April, 1888 .....	16
42. Mr. Surveyor Lloyd to Engineer-in-Chief for Railways, in reply to Mr. Sharkey's statements concerning trial survey. 13 April, 1888 .....	16
43. Mr. Surveyor Cumming to Engineer-in-Chief for Railways, respecting Mr. Sharkey's statements concerning trial survey. 14 April, 1888 .....	17
44. Mr. J. P. Sharkey to Secretary for Public Works—report on condition of plans and sections in Railway Survey Branch, re this survey. 18 April, 1888 .....	18
45. Chief Clerk to Mr. Surveyor Cumming, forwarding copy of Mr. Sharkey's statements respecting Mr. Cumming's plans. 26 April, 1888 .....	19
46. Engineer-in-Chief for Railways to Secretary for Public Works, forwarding reports of Messrs. Cumming and Lloyd, re Mr. Sharkey's statement as to uselessness of their surveys. 9 May, 1888 .....	19
47. Mr. J. P. Sharkey to Under Secretary for Public Works, forwarding his comments on certain minutes of Engineer-in-Chief for Railways, written in September, 1884. 21 April, 1888 .....	21
48. Mr. J. P. Sharkey to Engineer-in-Chief for Railways, that plans and sections at Trial Survey Office cannot be completed in the absence of field-books. 21 April, 1888 .....	22
49. Engineer-in-Chief for Railways to Secretary for Public Works, in reference to Mr. Sharkey's statement respecting incomplete state of plans and surveys. 27 April, 1888 .....	22
50. Mr. J. P. Sharkey to Secretary for Public Works, forwarding plan and section of portion of proposed deviation Richmond to Eskbank. 1 June, 1888 .....	23
51. Mr. J. P. Sharkey to Under Secretary for Public Works—if plans, &c., of line from Dargans Creek to bottom points of Clarence Zig Zag have been received. 30 July, 1888 .....	24
52. Mr. J. P. Sharkey to Secretary for Public Works respecting work carried out by him, of which plan and section have been furnished. 13 August, 1888 .....	24
53. Secretary for Railways to Mr. J. P. Sharkey that Secretary for Works cannot approve of additional funds being provided to carry on his proposed survey. 24 August, 1888 .....	25
54. Mr. J. P. Sharkey to Secretary for Railways—has no recollection of Secretary for Public Works having directed him to take up Richmond end of survey in first instance. 28 August, 1888 .....	26
55. Mr. J. P. Sharkey to Secretary for Public Works to be allowed use of plans and sections made by him. 3 September, 1888 .....	26
56. Mr. A. Bowman, M.P.; Deputation to wait on Secretary for Public Works, re survey from Richmond to Lithgow, via Kurrajong. 29 August, 1888 .....	26
57. Secretary for Public Works—report of deputation respecting completion of survey from Richmond to Esk Bank and Wallerawang. 31 August, 1888 .....	27
58. Mr. Colls, M.P., that Secretary for Works receive a deputation respecting survey from Richmond to Esk Bank .....	28
59. <i>Précis</i> of papers relating to trial survey Richmond to Wallerawang. 3 June, 1889 .....	23
60. Deputation for 31st May, postponed until 6th June .....	29

## RAILWAY TRIAL SURVEY.

### No. 1.

#### Deputation.

##### Minute Paper.

*Subject*:—Extension of Railway from Richmond to Wallerawang.

Department of Public Works, Sydney, 13 April, 1883.

Deputation—Introduced by Mr. M'Quade, M.P.:—Col. Holborrow, Mr. Bowers, Mr. Doukin, Mr. Larnach, Mr. Newton, and Mr. Griffin.

Petition presented by Mr. Griffin, plan submitted by Mr. Bowers, who offers to show surveyor—stated to be no gradients worse than 1 in 40.

*Replied*.—Will bring this matter under notice of Engineer-in-Chief, but as it involves so vast a project cannot promise more than that an officer may be sent to take a general look at the line, availing himself of Mr. Bowers' offer to show the way, from his strong local knowledge.

A.S.

The Engineer-in-Chief.—A.S., B.C., 16/4/83.

Mr. Palmer to send some one as early as practicable to explore this line. Mr. Bowers, whose address I will ascertain, will point out the line suggested by the petitioners. Surveys were made many years ago through this district, but I presume they were all burnt in the Garden Palace fire.—J.W., 25/4/83. Mr. Palmer.

Mr. Lloyd will leave for Richmond on Saturday next. I am informed that Mr. Bowers will be ready to accompany Mr. Lloyd over the proposed route on the following Monday morning.—H.P., 7/5/83. The Engineer-in-Chief.

To the Honorable Alexander Stuart, Minister for Public Works, Sydney,—

The Petition of the undersigned residents and property-owners at Kurrajong and surrounding districts, near Richmond,—

Humbly sheweth:—

1. That your petitioners and the inhabitants of the districts generally suffer much loss and inconvenience through the want of railway communication with Sydney, and having learnt that the pressure of traffic on the Great Western Railway is likely soon to become too great for it to carry, they beg to approach you with a view to state their conviction that a line through the Kurrajong to relieve the mountain portion of the Great Western Railway, and to connect with that line at some point to the west of Lithgow, can be more easily and cheaply constructed than it would be to double the existing railroad, besides opening up a large area of good land now lying idle.

2. That the settled portion of the district is rich and fertile, containing sixty-two thousand acres, of which forty thousand acres are excellent grazing and arable land, admirably adapted for the raising of fat stock, and for the successful cultivation of the orange, vine, and many other fruits—an average of no less than seven tons per diem of fruit having been sent out of the district by rail from Richmond during the last orange season, extending over a period of about five months, and this traffic is yearly increasing very fast. A large quantity, too, of summer fruit is also grown, and for which Sydney is the principal market. In this connection, also, it may be noted that a great deal of artificial manures is used in the orange orchards, and the demand for these preparations is yearly increasing; as it all comes from Sydney, a considerable source of revenue may be expected from the haulage of the same.

3. That the timber trade, if speedier means of transit were provided, would, your Petitioners believe, develop largely, as a great quantity of timber suitable for railway and building purposes is to be found in the neighbourhood, which, of course, it does not pay to carry by teams all the way to Richmond.

4. That the salubrious climate and great natural beauties of the Kurrajong are so widely known that a great many persons who now only know the locality by repute would immediately avail themselves of an improved means of communication to visit it, and a large passenger traffic must inevitably spring up upon such means being provided. The many points of loveliness and the unrivalled sites for buildings, coupled with the purity of the air, and the freedom from extremes of temperature, combine to render this locality one of the most attractive to be found in the Colony.

5. That the railway, as proposed by your Petitioners, would be about fifty miles from Richmond to Lithgow, against sixty-two from Penrith, and for a considerable distance would traverse a route presenting few difficulties, where no zigzag is required, and which, moreover, would bring a new district within reach of the metropolis.

Your Petitioners would therefore pray that you will be pleased to take the foregoing considerations into your favourable notice, and to cause a trial survey to be made as speedily as possible, with a view to the construction of a line of railroad from Richmond through the Kurrajong, believing, as they do, that such a work, if carried out, would soon prove as great a financial success as it would be an immense boon to the population affected by it.

And your Petitioners, as in duty bound, will ever pray.

Adopted at a public meeting held at Kurrajong, on Tuesday, 20th March, 1883.

ALEX. DEAN,

Chairman of the Meeting.

T. H. F. GRIFFIN,

Hon. Secretary.

[Here follow 491 signatures.]

## No. 2.

## Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Sir, P. Brown's Hotel, Mudgee Road, Wallerawang, 24 May, 1883.

I have the honor to inform you that the tracing asked for in my telegram had reference to a recent survey of a track (a modification of Bell's-line track) from Mount Tomah to Mount Wilson platform. The survey is well marked, and does not appear to have been so long as six months. The "bench-mark" referred to is at junction of the modified road from Mount Tomah and the formed road from Mount Wilson to Mount Wilson platform.

My only object for asking for the information is as under:—

Mr. Palmer read me a letter from Mr. Griffen (one of the members of the deputation who waited on the Hon. the Minister for Works), requesting me not to bring any camp equipage, as such was not required. I devoted my time from the 13th to the 17th instant in endeavouring to round the Kurrajong range, which I have effected.

I then pushed on to Mount Tomah, which I examined on the 18th and 19th instant, being then compelled to go right through to Wallerawang on the 20th, as the gentleman deputed to accompany me had to return (which he did) on the 21st instant, and I could obtain no shelter between Tomah and Wallerawang. As the journey occupied ten hours in heavy weather, and travelling as fast as the nature of the ground would allow us, I was wholly unable to obtain any information of use to me. I therefore sent for the tracing and height of bench-mark, hoping that such would be of service to me on the return journey, when I should be able to devote more attention to the country, having since made provision to camp at the station at Mount Wilson platform. I have been engaged here from the 20th instant, but have been delayed by the want of any intelligent help. I have, however, to-day run up a line of country from the flats to the high table-land, which cannot on survey fail to recommend itself favourably to you. My intention is to try two more passes, and to then return over Bell's track, examining the southern slopes of Mount Bell and Mount Tomah, as I have the northern slopes, returning to town by, I hope, the 31st instant.

I regret that the telegram I sent should have been considered as informal. It was not sent with such intention. I had no official paper, or would have written.

I have, &c.,

OCTAVIUS LLOYD.

## No. 3.

## The Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd.

25 May, 1883.

I CAN obtain no information as to a traverse of the road from Mount Tomah to Mount Wilson platform, and it is not likely that there is any section of this road, or that the bench-mark you refer to was ever connected with the railway levels. Make careful note as to distances and the main rises and falls along the proposed route you are examining, bearing in mind that the chief object of the examination you are making is to determine whether there are sufficient grounds to warrant the recommendation for a trial survey in that direction.

HERBERT PALMER.

## No. 4.

## Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Sir, Bowen Mount Post Office, Little Weeny Creek, Kurrajong, Richmond, 2 June, 1883.

I have the honor, in explanation of the form in which my diary is sent in (attached), to state that I omitted to bring a printed diary, and was not aware of the omission until to-day. From the 1st until the 10th ultimo I was engaged upon the plans of the Cootamundra to Gundagai railway. I left Sydney for Richmond on the 12th ultimo, and placed myself in communication with Mr. Griffin, as instructed. Acting at the desire of the gentleman who had been deputed to show me through the proposed route of survey, I commenced an examination of the country from about 8 miles from Richmond to a point on Bell's line, at about 20 miles from the same place. I found the line proposed, impracticable, but have succeeded in finding a practicable grade. I was then compelled to push on to Wallerawang, as Mr. Bowen (my guide) could give me no further time at Tomah, he having to return to Richmond. I therefore was engaged by myself with hired labour at Wallerawang from the 20th to the 28th. It was my intention to give Mounts Tomah and Bell a further trial at a lower grade than I had worked upon, but was compelled to go through to the Kurrajong, as I was alone and had no provisions. I have been engaged from the 30th ultimo in completing the omitted portion from Richmond to the Kurrajong Gap, and propose going to Tomah on the 4th instant to complete there. I trust that the result of the work I have done will satisfy you that, although I have been a considerable time here, I have not been so long as than was avoidable, and that the information I shall furnish will be satisfactory.

I have, &c.,

OCTAVIUS LLOYD.

## No. 5.

## Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Sir, Railway Survey Department, Sydney, 11 June, 1883.

I have the honor to report that, in accordance with your instructions, I have made an examination and have taken rough levels over the country between Richmond and Wallerawang.

As the production of the existing line beyond the Richmond station would intersect valuable town property, I have considered it probable that you would cause a survey to be commenced from a level crossing some 60 chains on the Sydney side of the station, and have accordingly started my rough trial from such point.

From the level crossing referred to, to a point at about 1 mile 60 chains, a line would pass through Crown lands and over practically level country.

From

From about 1 mile 60 chains to 2 miles 60 chains, where the channel of the "Hawkesbury" commences, the country is low-lying and subject to inundation. It has been submerged by water 10 ft. or more in depth over its highest points. A great portion of the area covered, however, is from back waters, and it is comparatively still water.

I have examined the different crossing-places, and that selected as most suitable for a line by the North Kurrajong ridge is about 8 chains in width, and about 40 chains above the site of the present low-level bridge. A bridge will have to be elevated at least 60 ft. above the summer level of the river. The bank on the north side is high, and is composed (as is also the bottom of the river) of strong shale.

Attached is a rough section, taken with an aneroid, showing the levels by way of the North Kurrajong ridge, as I believe such ridge to be the best for grade, as it certainly is the most central route through the Kurrajong District. I have, however, taken levels over all the "possible" ridges, including the South Kurrajong, Thompson's, and what is locally known as Cleeve's Ridge, two at least of which (the South Kurrajong and Cleeve's) it would be, I think, advisable to try in the event of a trial survey being determined upon.

From the crossing of the river to about the 8-mile distance the route followed was along the existing track, as I could obtain a better measure of distance by that means. The result, however, shown can in no respect be taken as what could be done by a survey with instruments, as the road has been carried throughout to Mount Wilson Platform over the tops of all mountains and hills. The natural slope of the ridge is about  $2\frac{1}{2}$  to 1; the character of soil, shale. It stands in road-cuttings at about 1 to 1.

From about the 8-mile distance to about 10 miles 60 chains I worked round spurs off the main ridge to get additional length, grading myself as well as I could judge. (I had previously taken the difference of height between the river and the Little Weeny Gap.) The levels will show you that there is nothing impracticable so far. All the land passed through up to this point from the river is valuable and improved, but few, if any, orange orchards need be touched.

From approximate distance 10 miles 60 chains to 12 miles 60 chains the character of the country is broken by gullies, deep but carrying little water; natural slopes, about  $1\frac{1}{2}$  to 1 to 2 to 1; formation, sandstone; heavily timbered. At about 12 miles 60 chains the line will cross the Little Weeny Creek. The side I worked is rough, but practicable. I imagine, however, that for the greater portion of the distance from 13 miles 40 chains to 14 miles a line would be in the bed of the creek; the side-drains will carry all the water. The head of the Little Weeny Creek is at about 14 miles, and it was the proposal of the gentlemen who waited upon the Honorable the Minister for Works that the line should go from that point to Bell's Line, joining it at about 18 miles from the river. After grading myself round to that point I abandoned their route, as I feel sure a survey would prove it to be impracticable, both as to curves and expenditure. Moreover, none of the gentlemen interested had ever previously explored this line at grade. I was therefore compelled to occupy some time at this place to endeavour to find a way of getting on to Bell's Ridge, and the route I propose is, I am sure, the only possible one.

It will be necessary to lose 150 feet of grade from 14 miles to the 15 miles 40 chains, the end of the Burrulo Swamp, which I propose crossing; but as some 60 feet will be required to fill in the Burrulo Swamp, and a considerable slice will in all probability be taken off at 14 miles, the grade lost will not be so much. A portion of the side from 14 miles to 15 miles 40 chains is rough, standing at about 1 to 1, or even less; but the larger portion is fair—sandstone rock. From 14 miles to 15 miles 40 chains the levels shown are from a high level, to obtain a better idea of distance; but I have been through the rough part, where the line will go if made.

From 15 miles 40 chains to 16 miles 40 chains is, with the exception of Mount Tomah, the worst feature to deal with; but I feel confident that a survey will show a better result than I have, as more distance can doubtless be obtained.

At about 17 miles 40 chains I proposed to use a long ridge connecting Bell's Line with the Grose River. The ridge is wide and smooth, and shows a grade from 17 miles 60 chains to 23 miles 60 chains of 1 in 100, or even better.

From 23 miles 60 chains approximate to 33 miles 60 chains there is a rise of some 950 feet. The ridge is wide, and the undulations shown can be worked out by using the side of the ridge. Moreover, there are lateral spurs which might be used to improve the grade where requisite. The natural slope of the ridge is about 2 to 1.

The mileage, as I made it to the eastern pass of Mount Tomah, is about 33 miles 60 chains, and to the western pass about 36 miles. I worked round the north side of the hill, grading as well as I could. The difference of level between the eastern and western passes is 110 feet. A gorge of great depth will have to be passed to attain the continuation of the main Bell's Line ridge. Where I crossed it was 200 feet below the western bridge. It is quite possible to run further up the gully than I have shown on rough section, the difficulty then being that with a reduced depth of crossing the gully becomes so narrow and tortuous as to render suitable curves hard to work in.

I essayed to get round Tomah at a lower grade 100 feet below the western pass, trusting to make up that height between Tomah and the Mount Wilson Platform, but I found the country so broken as to be nearly impossible to work.

If you will allow me to offer a suggestion, it would be that before any large expenditure be incurred in a trial survey of the whole line, both Mount Tomah and the rise from the Burrulo Swamp be thoroughly tried. If the result be (as I fancy it will) satisfactory, I have little doubt that the remainder of the work will be found to be feasible.

From about 25 miles 10 chains to Mount Wilson Platform I have taken the levels along the track, but, as stated elsewhere, the result shown cannot be taken as a fair test of what might be shown after a proper survey. The sides in places are steep, but I am confident are not impracticable. I dropped off the track here and there to what I supposed to be grade, and saw nothing hopeless.

From Mount Wilson Platform, at about 47 miles, to about 50 miles, the Main Western Line would, I think, be used. From thence to the head of the gully I propose as the only means of getting off Maddock's Mountain. I did not take the levels very close together, as I was aware that a far better route than that I rode over could be obtained with an occasional curve. The levels will, however, satisfy you that no difficulties exist in respect of grade. There are no large creeks or other impediments for 15 miles after leaving the main line.

From

From the head of the gorge (M'Andrew's Gully) to the Walgan Road there is a fall of about 500 feet in about  $5\frac{1}{2}$  miles or more. It will be necessary to use the bottom of the gully, which is flat as to its cross-section, and fairly straight. The side drains will carry all the water, the watershed being small. From the Walgan Road to the Wallerawang Station the country is gently undulating. The distance is about  $4\frac{1}{2}$  miles. I have taken no intermediate levels over this part, as there is only some 70 feet of difference between the height of the Wallerawang Station and the Walgan Road. A bridge over Walker's River is the only work of any consequence required.

I trust that the information I have supplied is such as was required. With such instruments as I had I used every endeavour to obtain fairly correct results.

I have, &c.,  
OCTAVIUS LLOYD.

No. 6.

Memo. from The Chief Clerk to The Assistant Engineer for Trial Surveys.

Department of Public Works, Railway Branch,  
Engineer-in-Chief's Office, Sydney, 20 June, 1883.

Mr. O. Lloyd's Report on his Exploration Survey between Richmond and Wallerawang.

Your attention is directed to the following apparent discrepancies between Mr. Lloyd's aneroid readings and the ascertained railway levels, viz. :—

Mr. Lloyd starts at Richmond at 60 feet. At Mount Wilson his aneroid level is 2,990 feet; the actual level by railway at this point being 3,478 feet, or a difference of 488 feet.

At Wallerawang Mr. Lloyd's aneroid height is 2,510 feet, or a difference of 418 feet against the actual railway level of 2,928 feet.

Be good enough to ask Mr. Lloyd if he can explain these discrepancies, as there appears to be an error in his readings.

The Engineer-in-Chief wishes a rough section to be plotted to a small scale from Mr. Lloyd's aneroid readings and approximate distances, and also a map indicating the route traversed.

W. H. QUODLING.

I have shown on the office map of the mountain district the route reported on by Mr. Lloyd, and have had a section plotted from his aneroid readings. With reference to the difference in level between the aneroid readings and the actual rail level where Mr. Lloyd joined the main line near Mount Wilson, he reports that he imagines this has been a gradually increasing error throughout the rise from Richmond. There is, however, no proof that such is the case, and as the survey of the most doubtful parts of the route has been ordered, I have instructed Mr. Lloyd to rough traverse throughout from Richmond to where the real difficulties commence, and also to carry forward from Richmond the true level, so that the survey of these doubtful places may be started from correct instead of from assumed heights.—H.P., 17/7/83. The Engineer-in-Chief.—J.W., 18/7/83.

No. 7.

Telegram from H. M'Quade, Esq., M.P., to The Secretary for Public Works.

Windsor.  
You promised that Mr. Lloyd should complete his survey at Mount Tomah on proposed line from Richmond to Wallerawang as soon as he returned from Illawarra District. He has returned, and starts for Dubbo to-night, unless you countermand his instructions. If you would send two lines to Mr. Palmer, of the Trial Survey Branch, he would explain that probably Lloyd would finish his survey at Tomah in a week or so, and then could go to Dubbo. I know that you only require reminding of your promise, and therefore I wire you. Kindly send word at once, or Lloyd will be gone. Please reply.  
HENRY M'QUADE.

Let this be carried out at once and Mr. M'Quade informed.—F.A.W., 13/7/83. Mr. Palmer.—W.H.Q., 14/7/83. Mr. Lloyd instructed to make a trial survey of the doubtful portions of the route explored by him between Richmond and Wallerawang, previous to going to the Dubbo district.—H.P., 14/7/83.

No. 8.

Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Railway Survey Camp, Little Weeny Creek P.O.,  
Richmond, 26 September, 1883.

Sir,  
I have the honor to forward herewith tracing showing lines levelled from Richmond to the summit of the Kurrajong ridge. The section shown in black ink (mileage, 15 miles 41 chains) can be considerably improved with heavy works, as a ridge near the 12-mile distance can be utilized with high embankment to permit introduction of a suitable curve. The rest of the survey can now be proceeded with rapidly. I have levelled another line, not shown on tracing, as I abandoned it as impracticable.

I have, &c.,  
OCTAVIUS LLOYD.

## No. 9.

## Extract from the Report of The Assistant Engineer for Trial Surveys.

Richmond to Wallerawang.

18 October, 1883.

"A TRIAL survey is now being made from Richmond; thence *via* Kurrajong to Mount Tomah and Bell's line of road; thence to a junction with the Western Railway, near Mount Wilson platform; thence along the existing railway for a few miles to near Mount Clarence; thence by a detour in a more northerly direction to a descent to the level of the river Cox; and thence to a junction with the main line at Wallerawang.

"Very little of the section of this trial line has yet been received; and as a continuous trial line from Richmond is being made, the main difficulties on the route of survey have not yet been approached, one surveyor only being employed."

## No. 10.

## Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Progress Report for O. Lloyd's survey party, Richmond to Wallerawang.

Sir,

2 November, 1883.

I have the honor to inform you that, after repeated trials to obtain a line which would be likely to recommend itself to your approval out of the Burraco Swamp, I have so far failed. The country traversed is that referred to in my report when I was first over Bell's line as being exceptionally difficult, and I regarded it as more so than any portion of the probable route. Yesterday I made another exploration, and am nearly confident that I can now get on to Bell's line. Hitherto my failure has been owing principally to the difficulty of obtaining suitable curves. I hope to complete the trial line in a fortnight; and if, when levelled and traversed, I find it to be very difficult, I shall send tracing of section and traverse to you to decide whether it be advisable to spend more time upon this survey. With the exception of the deep gully at Tomah there is nothing that I saw when making the preliminary survey with the aneroid in any way to compare to the roughness of the country between the head of the Weeny Creek and the ridge connecting the Grose River and Bell's line; and in justice to myself I would point out that I specially referred to those places in my report. The weather has been so extremely inclement, and the distance walked to work occupying five hours out of the day (it being impossible to camp nearer), that my diary seems to give poor results. Once on to the main ridge I can average 4 or 5 miles a week.

I have, &amp;c.,

OCTAVIUS LLOYD.

## No. 11.

## The Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd.

Mr. Lloyd,

24 January, 1884.

The plan and section of the trial survey from Richmond over the Kurrajong Range are urgently required. Please report by what date they will be forwarded to this office.

HERBERT PALMER.

## No. 12.

## Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Railway Survey Camp, Little Weeny Creek,

Sir,

Richmond, 26 July, 1884.

I have the honor to inform you that the plan and section referred to in your letter dated 25th instant, will be forwarded possibly on the 2nd proximo, but will certainly reach you not later than the 6th proximo. I have been in the field every day this month, but the roughness of the country and the repeated alterations and modifications necessary have delayed me. I believe that the section and plan to be submitted exhaust the possibilities of a line over the Kurrajong with 12-chain curves by way of the gap of the Little Weeny Creek, as suggested by the Railway League.

I have, &amp;c.,

OCTAVIUS LLOYD.

## No. 13.

## Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Sir,

Railway Survey Camp, Little Weeny Creek, Richmond, 11 February, 1884.

I have the honor to forward herewith tracings of plan and section of amended survey from 6 miles 60 chains to the summit of the Gap at 13 miles 16 chains 49 links, as instructed by Mr. Palmer. I have been unable to complete the cross-sections, but they will be sent down together with the plan and section in a few days. As my instructions were to survey a line through the Gap, I have confined my survey accordingly in that direction, but I have reason to believe that if it was considered desirable to test the country further, a section, at least as good as that submitted herewith, could be obtained by deviating at the 13-mile peg, and following the eastern slope of the Kurrajong range, and tunnelling through direct on to Bell's line. A deep gully pierces the range which would materially shorten the length of a tunnel. This would also avoid the almost impracticable country through Burraco and shorten the line. When shifting camp last I tried the levels with an aneroid, and I have done so once since, and I think that if it be possible to do anything at all with this line towards Tomah it will be found to be so in the direction indicated. When I was first here I was urged to try a line direct to Bell's line, but where suggested (from Weeny Creek) I found to be impracticable. Moreover it was not part of the scheme of the League, and I was told to report on their line. It would take a month to do this work. The cross-sections will show that the line can be raised between the Red-bank Creek and 7 miles 40 chains.

I have, &amp;c.,

OCTAVIUS LLOYD.

No. 14.

## No. 14.

Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Sir,

Railway Survey Camp, Wallerawang, 3 May, 1884.

I have the honor to forward by this day's post tracings of the plan and section of so much of the work in connection with this survey as I have completed and I regret to have to state that the result is so entirely unsatisfactory.

When I was through the ranges last May in estimating the length obtainable from the Walgan Road to the top of the table-land, I allowed myself what I thought to be an ample margin (viz., twenty-five minutes for every mile walked), and my estimate of the distance was more than borne out by such local information as I could obtain from my guide. That I was altogether at fault is now too apparent. I have, however, to inform you that there is little if any doubt that a good grade can be found if you deem it advisable to allow me to make a trial from about the 6m. 70chs. or 6m. 60chs. When I was here last year I made an examination of the watershed of the Walgan, and I was then of opinion that a line could be obtained by tunnelling from McAndrew's Gully into the low ground, and rising on the side of the hill where the ground is smooth and straight as to direction. Since my arrival here I have made a fairly exhaustive exploration of the country referred to and I think that it is worth a trial. To-morrow, pending instructions to the contrary, I proceed to make a traverse to the low country and I shall be able to send you a section showing the length of the tunnel required by Thursday at the latest, and a complete survey to the top of the table-land in a fortnight's time. I have to express my sincere regret that the country I have tried has turned out so unfavourably, for whatever doubt I entertained as to the feasibility of finding a good line elsewhere I entertained none whatever as to this particular place, and believe that I unfortunately expressed such in my report. You may rely that I shall waste no time in settling the chances of the grade being obtained as suggested, so that no unnecessary expense may be incurred.

I have, &amp;c.,

OCTAVIUS LLOYD.

Mr. Palmer.—W.H.Q., 5/5/84.  
6/5/84.

Tracings received and instructions sent to Mr. Lloyd.—H.P.,

## No. 15.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd.

6 May, 1884.

As the last 2 miles of the section sent in by you on the 3rd inst. of the trial line from Wallerawang towards the Mount Wilson Platform shows that it will be quite useless to continue the survey further in that direction, you may, as you suggest, start a deviation from 6 miles 60 chains—70 chains, and forward with as little delay as possible a plan and section thereon to the summit of the table-land.

HERBERT PALMER.

## No. 16.

Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Sir,

Railway Survey Camp, Clarence Siding, 23 July, 1884.

I have the honor to inform you that I shall complete the section of the line I have been surveying to a junction with the G. W. Line by at latest the 30th instant. The traverse is tied on now, but will have to be slightly modified. The cross-sections will take me about a fortnight additional time to complete them.

I have, &amp;c.,

OCTAVIUS LLOYD.

## No. 17.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd.

24 July, 1884.

WITH reference to your report that your trial survey from Wallerawang to a junction with the Western Railway between Mount Clarence and Mount Wilson Platform will be completed by the end of the month, it will be necessary for you to submit a plan and section with the least possible delay, so that it can be determined whether any additional trial surveys in that direction may be required before you break up your party. You may possibly be able to forward the plan and section before completing the cross-levels, which might be plotted after your return to Sydney.

HERBERT PALMER.

## The Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd.

12 August, 1884.

THE plan and section of your trial survey for proposed line of railway from near the Mount Wilson Platform, on the Western Railway, to near Wallerawang, have been received. You may now break up your party and return to this office.

HERBERT PALMER.

## No. 20.

## The Assistant Engineer for Trial Surveys to Mr. Surveyor Lloyd.

11 September, 1884.

I HAVE so far seen no report on the length, Richmond and Wallerawang trial survey, lately completed by you, which should have been sent in, in accordance with the printed instructions, dated the 18th of last January. Be good enough to forward this without delay.

HERBERT PALMER.

## No. 21.

## Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Sir,

Railway Survey Camp, Wingham, 18 September, 1884.

I have the honor to inform you, with reference to the delay in forwarding this report, that when my resignation was accepted in March last, and I broke up my camp, I must have destroyed the memo. referred to by Mr. Palmer in his minute (84/195, received by me on 17th instant,) and I had, when I resumed work at Wallerawang, forgotten the nature of its contents.

The survey from Richmond was commenced by me on the 19th of July, 1883. I started from a point about 40 chains from the Richmond terminus, the line being level to the Hawkesbury River. The length of country crossed and subject to inundation is approximately 75 chains, and as I understood from local residents that the current over that extent has at times been very swift, the whole distance will, I infer, have to be bridged. The width of the channel of the Hawkesbury at summer level is about 13 chains, the bottom being but a few feet above high-tide mark. The banks on both sides are favourable for bridge work, although on the left bank a considerable cutting (so far as my recollection serves me of about 50 feet) will be required. The country falls thence gently into the Redbank Creek, which will require to be bridged, three openings of 25 feet being ample for that purpose. Thence the line rises to the second crossing of the North Kurrajong Road; the works up to that point, with the exception of at one place, the mileage of which I forget, will be light side cutting, principally through shale. From near the Comlaroy Road to the 4-mile crossing of the North Kurrajong Road the earthworks required will be heavy, and the same will apply, although in a much greater degree, from that point up to so far as I surveyed the line to a crossing over the Burrulo Creek. Several deep ravines, three in particular between the 10-mile peg and the Little Weeney Creek, will be crossed, the side slopes throughout being severe, and the curves sharp. None of the places mentioned, including the Little Weeney Creek, carry any water to require more than a 10-foot opening. As surveyed by me, but subsequently I believe altered, the line crossed the Little Weeney Creek, and afterwards through a range necessitating a tunnel of some 50 chains to the head of the ridge dividing the waters of the Burrulo and Little Weeney branches.

The places suitable for obtaining water supply for locomotives are at the Hawkesbury River, at the crossing over the Redbank Creek, and at the Little Weeney Creek. At the latter place the water would have to be pumped up, so far as my recollection serves me, some 50 feet. Further on also (probably reported upon by Mr. Cumming) there is a never failing supply in the "Running Water Creek," and in the "Burrulo Creek."

In the Burrulo Swamp there is an abundance of sassafras swamp, gum, and turpentine, but most difficult of access, owing to the extreme roughness of the country. I think that the probable supply of timber for bridge work and fencing would have to be drawn from the ranges beyond the Kurrajong, and between the Cut Rock and Mount Tomah, the nearest point to Richmond being 16 miles. Stringy-bark and mountain ash abound in the locality named, which for some 10 miles would be along the line. A good clay is obtained at Redbank, but no stone suitable for ballasting nearer than at 11 miles, from which point the country traversed is sandstone formation, lower coal-measures so far as Wallerawang, with the exception of the outcrop of basalt at Mount Tomah.

On the 7th of April I recommenced field work in your department, starting my survey from the Great Western Railway at 103 miles 1 chain 46 links, Wallerawang, near the viaduct over the Cox River, in accordance with verbal instructions from Mr. Palmer. This place was adopted to avoid a crossing over the Cox River. The line might be considerably shortened by spanning that stream and effecting a junction with the main line at the commencement of the straight leading into the Wallerawang Station. The works required from the commencement of the survey to about the 6 miles 70 chains would be light. From about 6 miles 70 chains to about 8 miles 50 chains nearly one continuous tunnel would be required, and the ranges rise to so great a height that the sinking of shafts between openings of tunnels would be most expensive.

From 8 miles 50 chains to about the 12th mile the works required would be excessively heavy, several deep ravines (carrying, however, but little water) would be crossed, the side slopes steep, and the cutting sandstone. Also from about 18 miles to the junction with the Great Western Railway at 85 miles 40 chains the cuttings and embankments would be heavy, although a further survey might show the possibility of improving the line from the first-named point, viz., at about 18 miles. The only bridge required would be one over the Kangaroo Creek, and one opening would suffice. Water for locomotive purposes is available at the Kangaroo Creek, and at all the creeks crossed from 8 miles 50 chains to 11 miles 40 chains, but there is no other place from thence where a supply could be relied upon. The

timber required for sleepers, fencing, and bridges can be obtained close to the line from 8 miles, and thence throughout at a distance of 6 miles direct from Wallerawang. Ballast is available everywhere within easy distance, the line being surveyed throughout over sandstone country, lower coal measures. The survey was completed by me on the 19th of August.

I have, &c.,  
OCTAVIUS LLOYD.

Mr. Palmer.—W.H.Q., 24/9/84. Seen.—H.P., 25/9/84.

No. 22.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Cumming.

31 March, 1884.

On completing the traverse and approximate section of the alternative route of trial survey through the Kurrajong to Bell's Line, near the bottom of the hill known as the Cut Rock, you may bring both plan and section to this office, so that they may be examined in comparison with those of the route so far surveyed by Mr. Lloyd,—and a determination may be arrived at as to which of the surveys is to be continued.

HERBERT PALMER.

Mr. Surveyor Cumming to The Engineer-in-Chief for Railways.

Trial Survey—Richmond to Wallerawang.

Sir,

Mount Wilson Platform, 14 July, 1884.

I have the honor to report that I expect to finish the survey up to Mr. Sharkey's peg, about 3 miles from Mount Tomah, sometime next week.

I have, &c.,

JOHN CUMMING.

No. 24.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Cumming.

16 July, 1884.

With reference to your report that you will complete your trial survey from Mount Wilson Platform to near Mount Tomah sometime next week, it will be necessary for you to forward, with the least possible delay, your plan and section, so that it may be determined whether further trial surveys in that direction may be required before you break up your party.

HERBERT PALMER.

No. 25.

Mr. Surveyor Cumming to The Engineer-in-Chief for Railways.

Sir,

Mount Wilson Platform, 22 July, 1884.

Per same train I send you plan and section of trial line from Mount Wilson Platform to near Mount Tomah.

I have, &c.,

JOHN CUMMING.

Plan and section received.—H.P., 25/7/84.

No. 26.

Mr. Surveyor Cumming to The Engineer-in-Chief for Railways.

Richmond to Wallerawang Trial Survey.

Sir,

Sydney, 25 July, 1884.

I have the honor to report on the works required for the construction of the trial line Richmond to Wallerawang, from 49 miles 50 chains to 66 miles 71 chains, and from 71 miles 4 chains to 80 miles 40 chains, to the junction with the Great Western Railway at Mount Wilson Platform.

The line crosses Little Weeney Creek at 49 miles 50 chains, passes over the South Kurrajong Range, crosses the Burralow, and thence follows a main range to Mount Wilson Platform.

There is but one tunnel on this portion, from 53 miles 5 chains to 53 miles 15 chains—a length of 10 chains.

There are two bridges, and about six small culverts. The first bridge over Weeney Creek, at 49 miles 50 chains, is 115 feet deep and 5 chains wide at formation level. The second is over Burralow Creek, at 51 miles 52 chains, is 218 feet deep, a chain wide at the bottom, and 7½ chains wide at a depth of 50 feet.

The earthwork is very heavy from 51 miles 52 chains to 52 miles 50 chains, averaging 50 feet deep; the remaining portion is moderate, averaging from 10 to 30 feet deep. The tunnel and all the cuttings are rock (sandstone).

There is an alternative line on the North Kurrajong Range, from 49 miles 50 chains to 57 miles 69 chains, which is 1 mile 19 chains shorter.

There are two tunnels on the alternative line, one 71 chains long, from 51 miles 74 chains to 52 miles 65 chains, and the other 10 chains long from 53 miles 5 chains to 53 miles 15 chains. The remaining portion of the earthwork is light, except from 53 miles 15 chains to 54 miles, which is heavy, averaging 40 feet.

There is permanent water fit for locomotive at 50 miles and at 69 miles.

There

## 11

There is abundance of first-class timber fit for sleepers, girders, and fencing. There is good sandstone fit for masonry and ballasting.

Portion from 71 miles 4 chains to 80 miles 40 chains, at Mount Wilson Platform:—  
The earthwork on this portion is moderate, averaging from 10 to 30 feet; there is only one tunnel about 3 chains in length. The cuttings are all sandstone rock.

The timber on this length is very poor and unfit for sleepers or fencing.

The trial line up to Mount Wilson Platform is 2 miles 19 chains shorter than the existing line.

I have, &c.,

JOHN CUMMING.

## No. 27.

Mr. Surveyor Sharkey to The Engineer-in-Chief for Railways.

Sir,

Railway Survey Camp, Kurrajong Heights, via Richmond, 14 July, 1884.

I do myself the honor to report that the survey upon which I am now engaged will be completed at about the end of the present month.

I have, &c.,

JOHN P. SHARKEY.

## No. 28.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Sharkey.

17 July, 1884.

With reference to your report that your trial survey near Mount Tomah will be completed by the end of the month, it will be necessary for you to submit, with the least possible delay, a plan and section of the routes surveyed before breaking up your party, as so far nothing has been sent in giving any idea as to the nature of the section you have obtained, and consequently I cannot judge whether any farther surveys may be required.

HERBERT PALMER.

## No. 29.

Mr. Surveyor Sharkey to The Engineer-in-Chief for Railways.

Sir,

Railway Survey Office, Sydney, 5 September, 1884.

I do myself the honor to report on the general character of the country through which the trial survey, Richmond to Wallerawang, in the vicinity of Mount Tomah, has been made, and the nature of the works required should this line be constructed.

I surveyed from the base of Mount Tomah on the east side to the end of the broken country beyond Mount Bell, covering a distance of 4 miles 66 chains. This length passes over the north of Mount Tomah and Mount Bell, two exceedingly steep and difficult ranges, where high and perpendicular bluffs are frequent. The position of the survey is on the slopes of these ranges, in the best and only position possible, and passes over some steep declivities and two spurs, not avoidable, where earthworks would be very expensive. The two spurs would be tunnelled. Besides there are two gorges to be bridged, having perpendicular depths of 200 and 138 feet respectively.

My illness prevented the furnishing of this earlier.

I have, &c.,

JOHN P. SHARKEY.

## No. 30.

Minute by The Engineer-in-Chief for Railways to The Secretary for Public Works.

Engineer-in-Chief's Office, Sydney, 5 September, 1884.

Richmond and Wallerawang Trial Survey, via Bell's Line.

This trial survey has been completed, and the plan and section have been plotted. Herewith is a plan showing the Western Railway, part of the Mudgee line, and this line to Wallerawang. I also forward tracings of the section of the Western line, and of the trial survey, for comparison.

No quantities have yet been computed from the section; but when this has been done I think it will be found that the construction of a railway by this route would be a very costly undertaking.

No grade worse than 1 in 40 has been adopted on the section, and no curves of less than 12 chains radius need be used, except, perhaps, in one or two instances, at Mount Tomah.

The length of this proposed route would, with a few alterations that would probably be made in the event of its adoption, be almost the same as that of the line already constructed.

The length of tunnels will be about  $4\frac{1}{2}$  miles.

Several viaducts, from 100 feet to 200 feet in height, will be required; also a viaduct of about a mile in length over the river Hawkesbury at Richmond, in addition to exceedingly heavy earthworks throughout.

The summit level is about 200 feet higher than that of the Western line.

JOHN WHITTON.

## No. 31.

T. H. Griffin, Esq., to A. Bowman, Esq., M.P.

Dear Sir,

Richmond, 8 March, 1888.

Mr. Sharkey writes to say that he has seen you about the proposed railway from here to Wallerawang, and that you told him you thought the present was a favourable time for us to move in the matter. He also said that you had offered to introduce a deputation on the 16th. I am much obliged for this, and beg that you will arrange accordingly. Please send me a telegram immediately you have arranged for the deputation, so that I may myself apply for leave of absence to the Bank, and also communicate with the gentlemen who are to form the deputation. Please try and do this to-morrow, as I shall require as long an interval as possible.

Yours truly,

T. H. F. GRIFFIN.

Friday, 16th inst., at 11. Inform Mr. Bowman.—J.R., 9/3 88.

## Minute by The Secretary for Public Works to The Engineer-in-Chief for Railways.

Subject:—Railway, Richmond to Wallerawang.

16 March, 1888.

I ENCLOSE report of deputation that waited upon me with reference to the above, and shall be glad if matter is attended to as therein directed.

JOHN SUTHERLAND.

## [Enclosure.]

The deputation consisted of Messrs. Bowman (M.P.), Griffin, Dean, Bowen, Onis, Holdsworth, Ducker, and Lamrock.

In introducing the deputation *Mr. Bowman* stated that the object of the deputation was to have a resurvey of the route, Richmond to Wallerawang. A rough survey had been made *via* Mount Tomah, and they now wanted a better one.

*Mr. Griffin* stated that there had for a long time been an impression that the existing line from Sydney to Wallerawang was overburdened with the traffic that had to be carried. That was recognized some time ago, when a survey was authorized from Richmond to Wallerawang for the purpose of finding an easy alternate line, and this route offered two advantages; it would relieve the traffic on the Western Line, and also develop the Kurrajong District. Two or three surveyors were engaged, but the work was hurriedly done, and they asked that the route might be gone over more carefully. The line they suggested left the Richmond Line at a point 38 miles from Sydney, and then crossed the Kurrajong and intervening country until it touched the present Western Line at Mount Wilson, 83 miles from Sydney, or 79½ by the route they advocated. They then proposed to use the existing line for about 2½ miles before branching off, and would finally touch the Western Line at Wallerawang. The survey disclosed that the sharpest curve would only be 15 chains, and the ruling grade 1 in 50 and 1 in 55. This would enable a locomotive to take seventeen trucks loaded. There would be four bridges and three tunnels of a total distance of 3 miles 60 chains. They estimated leaving a wide margin, the cost would be £23,500 per mile, and a portion of the line was so situated that it would run along an easy ridge called "Bell's Line," which offered exceptional facilities for a railway, and for many miles the cost would be small. It was to meet troublesome points they had fixed so high an estimate. He hoped the resurvey would be granted; the matter, he understood, was urgent, as the traffic was increasing so fast on the present Western Line that the need of an alternate line was a pressing necessity.

*Mr. Dean* stated that it was well known the existing Western Line was overworked, and the traffic was so great that something would have to be done. Duplication had been proposed, but that would be a most expensive work, and he thought the scheme of an alternate line far preferable. He had been long convinced that a line out to Wallerawang would be one of the best ways to relieve the Western Line, and he supported the request for an improved survey. In addition to relieving the Western Line the route suggested would open up an enormous and valuable tract of country.

*Mr. Sutherland*: Knowing that you were coming this morning I had made inquiries in the matter, but I find the papers are mislaid and at the present moment are not available. I have learned, however, that a survey has been made, and, in the opinion of the Engineer-in-Chief, the route is almost impracticable for any amount of money that the country can possibly lay out on it. In the first instance, a large bridge would have to be made across the Hawkesbury, and that would involve a heavy expenditure; and then the grade was not 1 in 50, but 1 in 40, and the summit level would be 200 feet higher than any point on the Western Line; the matter of the grade was a most important one. I had great trouble in getting the easiest grades I could for the future railways of the country; this country could never go on constructing railways at the expensive rates that had been incurred in the past, we wanted something cheaper, and the matter of the first cost was not the only consideration, as the expense of working was regulated by the ruling grade. We had great difficulty at present in designing the engines and rolling stock most suitable for working our present grades.

*Mr. Bowman, M.P.*: Mr. Sharkey was one of the surveyors, he could get a grade of 1 in 53.

*Mr. Sharkey* stated that he was on the survey under Mr. Whitton; the survey was merely a trial one, carried out with great haste. They were hurried to a great extent, and no trial survey over difficult country could be expected to show the best possible line, and no attempt had been made to improve the survey of the Kurrajong. Every officer had done his best in making the trial survey, but he would stake his reputation on it that it was possible to so improve the line as to get grades of 1 in 50, and curves of 15 chains radius. The surveyors had neither time nor opportunity when they were previously engaged.

*Mr. Sutherland*: I should like to have the matter further considered, so as to prove or disprove what you have said. The matter is an important one, affecting the cost and working of the railway. What do you estimate would be the cost of the survey?

*Mr. Sharkey*: I made an estimate some months ago, and put the cost down at £200.

*Mr. Griffin*: He said he did not think it would exceed £200. He thought there were a few points particularly that required careful resurvey, but a great deal was so palpably easy, it would be a waste of time to go over it a second time. Mr. Sharkey had had great experience, was a capable engineer, and had served under Mr. Whitton with great credit. He was well qualified to report on the improved route. Mr. Sharkey was so satisfied the route could be improved that he had stated if his assertion was not borne out he would bear the expense himself.

*Mr. Sutherland*: What does the deputation wish me to do if Mr. Sharkey will do this himself, or if you would find the money, because, as residents and land-owners, you would all be benefited. Do you want authority for this from the office?

*Mr. Griffin*: Undoubtedly. We ask you will grant the survey as far as the difficult portions are concerned. The gentlemen interested are prepared to give whatever land is required.

*Mr. Sutherland*: That is a matter for after consideration. What I want now is this—it will cost £200 to make this survey, suppose you provide £100 and the Government the other.

*Mr. Griffin*: Would it be done by a Government officer?

*Mr. Sutherland*: If I understand you, you want it done by authority of the Government. You can have it done yourself, but you think you would not have the same standing.

*Mr. Griffin*: Undoubtedly. The Department might not afterwards recognize it, and it might be money wasted. Mr. Sharkey might be employed.

*Mr. Sutherland*: As I agree to pay half, it can be done under the Government; and as you will pay half, you have some claim to make some recommendation. I have no objection to Mr. Sharkey undertaking this under the control of the proper officer. I suppose he would produce a proper plan, showing grades, &c.

*Mr. Sharkey*: I will produce evidence sufficient for all purposes.

*Mr. Griffin*: We will subscribe half the estimated cost.

*Mr. Sutherland*: Mr. Sharkey may then undertake the matter. I am only anxious to get the fullest information in this matter.

Richmond to Wallerawang.—As my report on this survey appears to have been mislaid, I enclose a copy for the Minister's information. From the Minister's remarks to the deputation I understand that £100 is to be paid by this Department towards the cost of this survey, and then the payment by the Government is to cease.—J.W., 22 March, 1888. Under Secretary, B.C.

13

[Enclosure.]

Minute by The Engineer-in-Chief to The Honorable The Minister for Works.

Subject:—Richmond and Wallerawang Trial Survey, *via* Bell's Line.

Department of Public Works, Railway Branch,

Engineer-in-Chief, Sydney, 5 September, 1884.

THIS trial survey has been completed, and the plan and section have been plotted. Herewith is a plan showing the Western Railway part of the Mudgee Line, and this line to Wallerawang. I also forward tracings of the section of the Western Line, and of the trial survey for comparison. No quantities have yet been computed from the section; but when this has been done I think it will be found that the construction of a railway by this route would be a very costly undertaking. No grade worse than 1 in 40 has been adopted on the section, and no curves of less than 12 chains radius need be used, except perhaps in one or two instances at Mount Tomah. The length of this proposed route would, with a few alterations that would probably be made in the event of its adoption be almost the same as that of the line already constructed. The length of tunnels will be about  $4\frac{1}{2}$  miles. Several viaducts, from 100 feet to 200 feet in height, will be required; also a viaduct, of about a mile in length, over the river Hawkesbury at Richmond in addition to exceedingly heavy earthworks throughout. The summit level is about 200 feet higher than that of the Western Line.

J. W.

The Commissioner for Railways.—J. R., B.C. 23/3/88.

Ask accountant to say what the expenditure has been in the trial line which is described as having been conducted hastily and to be incomplete.—Ct.A.G., 24/3/88. [Urgent.]

The survey referred to cost, as per returns to this office, £2,459 17s.—J.V., 26/3/88.

For Minister.—Ct.A.G., 28/3/88. We have received the £100 from those interested in the survey. Is it to be supplemented as suggested.—Ct.A.G., 6/4/88. Approved—J.S., 6/4/88. The Engineer-in-Chief, B.C. Memo. to Messrs. Lloyd and Cummings.

No. 33.

Mr. J. P. Sharkey to The Engineer-in-Chief for Railways.

Sir, Mercantile Chambers, 195, Castlereagh-street, Sydney, 22 March, 1888.

I do myself the honor to request you will be good enough to cause instructions to be issued for the preparation of tracings of the plan and section of the trial survey Richmond to Wallerawang, in order that I may be able to proceed with the resurvey of this line without delay.

I have, &amp;c.,

JOHN P. SHARKEY.

Will you please permit Mr. Sharkey to make tracings of the plan and section of the trial survey from Wallerawang to Richmond? Mr. Sharkey will probably call at the Branch Office to-morrow with reference to this matter.—W.H.Q., 4/4/88. Mr. Beckett.

No. 34.

Mr. T. H. F. Griffin to The Under Secretary for Finance and Trade.

Sir, Richmond, New South Wales, 28 March, 1888.

I have the honor, by instruction from the Honorable the Secretary for Public Works, to transmit to you herewith a draft for £100, to be placed to a suspense account for railway survey, Richmond to Wallerawang.

The accompanying telegram from the Minister will further explain the matter.

Your acknowledgment will oblige

Yours, &amp;c.,

T. H. F. GRIFFIN,

Hon. Sec. Richmond-Wallerawang Railway League.

[Enclosure.]

Telegram from The Secretary for Public Works to T. H. F. Griffin, Esq.

PAY amount into Treasury Suspense Account for Railway survey.

Sydney.  
JOHN SUTHERLAND,  
Secretary for Works.

The sum of £100 has this day been received at the Treasury.—G.E. The Under Secretary for Works, B.C., 29 March, 1888.

No. 35.

Mr. T. H. F. Griffin to The Secretary for Public Works.

Sir, Commercial Banking Company of Sydney,  
Richmond, N.S.W., 28 March, 1888.

I have the honor to report that I have this day forwarded a draft for £100 to the Colonial Treasury, on account of the promised donation of that sum towards cost of resurveying line Richmond to Wallerawang.

You will confer a favour upon us by kindly instructing Mr. Sharkey to proceed at once with the survey.

I have, &amp;c.,

T. H. F. GRIFFIN,

Manager.

## Telegram from Mr. T. H. F. Griffin to The Secretary for Public Works.

10 April, 1888.

SHARKEY says requires certain papers, Mr. Whitton's office, absolutely necessary. Please order them to be lent to Sharkey at once. It seems most unfair to us that Railway Department should throw any obstacles in Sharkey's way when you have promised he should have all he required.

T. H. F. GRIFFIN,

Secretary, Railway League, Richmond.

Minister wishes to have papers, 11/4/88. Mr. Quodling, B.C., 11/4/88.—A.R. [Urgent.]

## No. 37.

## Mr. J. P. Sharkey to A. Bowman, Esq., M.P.

Mercantile Chambers, 195, Castlereagh-street, Sydney, 7 April, 1888.

Dear Mr. Bowman,

I beg leave to report that at last I have been allowed access to the plans, &c., of the trial survey, Richmond to Wallerawang, by a minute from Mr. Quodling.

On examining the plans and sections of Mr. Cumming's surveys I find that they are unfinished and incomplete, and of little value for any purpose.

The sections only show the datum and surface lines, being in fact skeleton drawings. They have no particulars whatever of locality or features, and are ungraded. The plans are similarly incomplete. In their present unfinished state they are of no practical use for any purpose.

The attention of the Engineer-in-Chief has been drawn by letter to the above facts to-day, with a request that draughtsmen may be placed on the work of completing the plans and sections without delay, from the field-notes of the surveyor who executed the work.

One deduction can be made from the unfinished state of the plans and sections, viz., that the survey was only a blind, there being no sincere desire to find a practicable line over the route. Otherwise, why should the plans, &c., be left unfinished and incomplete; and above all, why should not the possible grades over a difficult length have been ascertained before this date?

It would have been well could the Honorable the Minister for Works have seen the sections, &c., in their present state, for then he could judge whether justice had been done to the route in the past, and whether reasonable diligence had been used to procure and conserve the information expected from a trial survey. There are no plans or sections of any other survey in the Colony in a similar state. Query—wherefore?

I remain, &amp;c.,

JOHN P. SHARKEY,

C.E., Licensed Surveyor, &amp;c.

Will Mr. Sutherland oblige me by having the information required by Mr. Sharkey furnished to him without delay, as it appears to me that unnecessary obstruction is being put in his way by officers of the Department.—Yours truly, ALEXANDER BOWMAN, 10/4/88.

Dear Mr. Bowman,

195, Castlereagh-street, Sydney, 9 April, 1888.

I would like to meet you to-morrow morning, at 10:30, at the Works Department. Since we saw the Minister together I have been unable to get any satisfaction, though each day I have interviewed several officers of the Works Department.

Since 24th ultimo I have lost my time in paper-hunting in this case. It does not seem worth my while to continue it, and unless the difficulties besetting me are removed I shall have to return to my proper employment—a position I relinquished to take up the survey, Richmond to Wallerawang.

At present I receive no recompense for my time and trouble, and I am sure the people of Richmond and the Minister for Works do not expect me to continue much longer in this unsatisfactory position.

Yours, &amp;c.,

JOHN P. SHARKEY.

Please treat no letters of mine as private unless specially merked as such.

## No. 38.

## Mr. J. P. Sharkey to The Engineer-in-Chief for Railways.

Sir,

Mercantile Chambers, 195, Castlereagh-street, 7 April, 1888.

I do myself the honor to report that neither the plans or sections of Mr. Cumming's lengths of the survey, Richmond to Wallerawang, have been completed. The sections only show datum and surface lines, without further information, except, indeed, the mileage, which is only in pencil, and are ungraded.

The plans are devoid of all information relating to localities, &c., which renders it impossible to make identifications on the ground.

May I therefore request that the plans and sections may be completed with all possible haste, from Mr. Cumming's field-notes, to enable me to make tracings that could be of use to me on my resurvey.

The plans and sections, in their present unfinished state, are valueless for any purpose.

I have, &amp;c.,

JOHN P. SHARKEY.

Mr. Beckett.—W.H.Q., 9/4/88. These plans and sections were put away in a very incomplete state by Mr. Palmer's instructions. The sections are now being graded, and, together with the plans, finished up. I anticipate they will be ready for Mr. Sharkey when required, who consequently will not be inconvenienced. The only field-notes I can find of Mr. Cumming's length are in his level-books.—G.J.B., 9/4/88. The Engineer-in-Chief. Mr. Sharkey informed.

No. 39.

## Memo. from The Chief Clerk to Mr. J. P. Sharkey.

Engineer-in-Chief's Office, Sydney, 10 April, 1888.

In reference to your letter of the 7th instant, the officer in charge of the Survey Branch reports that the plans of the Richmond-Wallerawang route were put away in a very incomplete state by Mr. Palmer's instructions. The plan and section are being finished up, and it is expected they will be ready for you when required.

W. H. QUODLING.

No. 40.

## The Secretary for Public Works to The Engineer-in-Chief for Railways.

*Subject*:—Survey, Richmond to Wallerawang.

I HAVE received a mass of papers consisting of memoranda, telegrams, and accounts of interviews on the subject of the difficulty experienced by Mr. Sharkey, who has been employed to improve the original survey of the line over the Kurrajong by Bell's line, in proceeding with this work.

The Government and the country are as much interested in a matter of this kind as are the residents of Richmond, who have contributed to the cost of this service, and I altogether deprecate the tactics of Mr. Quodling, as shown in Mr. Sharkey's account of his interview with him, in attempting to foil, as I take it, the determination to have this resurvey.

It is stated further by Mr. Sharkey that the plans which Mr. Whitton stated in his minute of 5th September, 1884, had been plotted are in such an incomplete state as to be worthless, and that it is impossible that any reliable information as to the result of this survey could have been obtained.

I shall be glad if the Engineer-in-Chief will let me see the plans which were placed before Mr. Sharkey. I do not think that it is at all necessary that they should be copied. If they are sufficiently complete to admit of Mr. Sharkey obtaining from them the information he desires, it should not be incumbent upon him to take copies. Mr. Sharkey has been an officer of the Department for many years, and I can see no possible objection to his being entrusted with the originals on his giving a receipt for them, but as they are said to be in an incomplete and useless state I shall be glad if they are submitted to me in the first instance.

JOHN SUTHERLAND.

The Engineer-in-Chief, B.C., 12/4/88. Urgent. Plans and sections forwarded to the Minister about 12 o'clock on 13th April, 1888.—W.H.Q.

Interview with Mr. Quodling, as representative of Mr. Whitton. Time, 11:30 a.m., 4/4/88.

*Mr. Sharkey.*] I came, Mr. Quodling, to inquire has anything been done in my matter.

*Mr. Quodling.*] I have only received the Treasury notification this morning that the £100 was paid. I will send instructions to the other office that you are to be allowed the use of the plans, but first I will go and show this [a document in his hand] to Mr. Whitton. [Exit Mr. Quodling.] On returning he said:—You can have the use of the plans, Mr. Sharkey, for the purpose of copying them.

*Mr. Sharkey.*] Could I have the services of one draughtsman. He would do the work faster for me, and would better understand what has to be done than a stranger.

*Mr. Quodling.*] On no account. You will have to provide your own men for this purpose. You have nothing to do with this Department. If you want any draughtsman, I have the names of several here who will be glad to get employment. If we did the work we would have to charge it against the £100.

*Mr. Sharkey.*] I would be satisfied with this. Surveyors, when taking the field, are supplied with all the necessary plans and information, and I merely require the same facilities for doing my work as others.

*Mr. Quodling.*] It can't be done on any account. We cannot recognize you as a Government officer in any way.

*Mr. Sharkey.*] I will put on men to do the work, but wished to save expense if possible. I want an advance of £20 to enable me to complete my equipment for the purpose of carrying out the work. I am prepared to furnish the bonds usual in such a case—similar to those supplied by railway surveyors.

*Mr. Quodling.*] You are not a Government officer, and I cannot recognize you in any way. You will have to apply to the people of Richmond for it.

*Mr. Sharkey.*] Why should not I be allowed the same privileges as Government surveyors? What is the use of me undertaking work unless I am allowed to use the money provided for the purpose? How am I to pay my men?

*Mr. Quodling.*] I do not know. It does not affect me. I have nothing to do with that. I suppose the money will be handed over when the work is done.

*Mr. Sharkey.*] I must have satisfactory arrangements made before I leave Sydney. I will see the Minister to-morrow, as I must have all these matters settled before I could start on such an undertaking. [Exit Mr. Sharkey.]

Note.—All railway surveyors are allowed an advance of £50 when taking the field. I only asked £20. Evidently there is no desire or intention that I should be allowed to carry out this work untrammelled.

The above is a true report, taken down immediately.

JOHN P. SHARKEY.

No. 40½.

## Minute by The Chief Clerk to The Engineer-in-Chief for Railways.

*Subject*:—Mr. Sharkey's misrepresentations.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 13 April, 1888.

If the Minister had been pleased to have referred to me instead of accepting Mr. Sharkey's *ex parte* statement as being correct, I think he would not have censured me, as I most emphatically deny that Mr. Sharkey has been in any way obstructed.

I

I did not consider that I should be justified in giving Mr. Sharkey permission to have access to the plans and sections of the Richmond-Wallerawang route until I had been officially notified that the sum of £100 had been paid by the Richmond people, as I was of opinion that this was a condition to be fulfilled prior to any action being taken by the Department, and is a practice which has been followed for years.

The money was paid to the Treasury on the 29th March, but the papers were not sent to this office until the 3rd instant.

Immediate instructions were given to the officer in charge of the Branch Office to allow Mr. Sharkey to have access to the plans.

To show that no obstruction has been offered to Mr. Sharkey, I may mention that he called at my office a few weeks ago and asked if I thought Mr. Whitton would be offended if he undertook to make a resurvey of the line, as he had no employment and must do something. I replied that I thought he would not be, but I would ask him. I accordingly did so, when he (Mr. Whitton) said he had not the slightest objection, and Mr. Sharkey was so informed.

W. H. QUODLING.

---

No. 41.

Memo. from The Chief Clerk to Messrs. Surveyors Cumming and Lloyd.  
Richmond-Wallerawang Survey.

10 April, 1888.

MR. J. P. SHARKEY, in a deputation that waited on the Minister in reference to a resurvey of the above route, made the following statement:—

“He was on the survey under Mr. Whitton; the survey was merely a trial one, carried out with great haste; they were hurried to a great extent, and no trial survey over difficult country could be expected to show the best possible line, and no attempt had been made to improve the survey at the Kurrajong; every officer had done his best in making the trial survey, but he would stake his reputation on it that it was possible to so improve the line as to get grades of 1 in 50, and curves of 15 chains radius; the surveyors had neither time nor opportunity when they were previously engaged.”

Please report as to the correctness or otherwise of the above remarks as regards your work on this survey.

W. H. QUODLING.

---

No. 42.

Mr. Surveyor Lloyd to The Engineer-in-Chief for Railways.

Railway Survey Camp, Myrtle Creek, Lawrence and Casino Road,

Sir,

via Lawrence, 13 April, 1888.

I have the honor to report, with reference to memo. 88-286, concerning statements made by Mr. Sharkey in regard to the trial survey, Richmond to Wallerawang, that so far as I am individually concerned there is no foundation for what he said—that the survey was unduly hurried.

In July, 1883, I received instructions verbally from the late Mr. Wade (acting during your absence) to make a survey of a portion of the ascent of the Kurrajong Range and of the north side of Mount Tomah, this in accordance with my preliminary report and the recommendation therein contained that to avoid unnecessary expense such portions should first be tried, they being the key to the worst of the difficulties to be encountered.

Subsequently I received from Mr. Palmer orders to make a through survey from Richmond to Wallerawang, as you did not approve of any piecemeal survey. On the occasion of a visit from Mr. Palmer to my camp I consider that I was unfairly used by that gentleman, as he assumed that certain rough traverses he saw represented on my plan were intended as a trial line, in lieu of what they were—just feelers to obtain some insight into the country. This, however, was a matter between that gentleman and myself, and before I left the Department I recommended that a test should be made of the country up to the top of the Kurrajong and near Mr. Comry's house, which Mr. Cumming received orders to do. On my return to the N.S.W. Railways I was put in charge of the western end of the survey, and can state that every facility was afforded me by the Department to examine the country, nor was any expense for guides denied me or cavilled at.

With reference to Mr. Sharkey's statement “that grades of 1 in 50 could be obtained, and curves of 15 chains radius,” I unhesitatingly affirm that such assertion is absurd, at all events as regards the western descent. During the whole time I was engaged upon the survey of the descent from Bell's Line to Wallerawang Mr. Sharkey never visited my camp, nor, I am convinced, did he ever make any exploration in the direction of it. I have examined, with competent guides, and with a care born of an intense desire to succeed with that portion of the survey, all the possibilities between Lithgow and the Walgan Gap, and I will stake my reputation as a surveyor (whatever it may be worth) that if any fresh survey be carried it will be in the direction I marked mine. Mr. Sharkey gives no indication as to where he proposes to obtain the 1 in 50 grade; but I can assure him that from Wallerawang to the Walgan Gap he will find one wall of rock several hundred feet in height, broken only by Kangaroo Creek and M'Andrew's Gully, the former being useless for any practicable railway, and the latter that I adopted for a distance. I was sanguine that I should be able to reach the top of Bell's Ridge by means of M'Andrew's Gully, but the sure test of instruments undeceived me, and I had to take the survey into a tributary of the Walgan, showing a tunnel of, I think, 2 miles, with an ascending grade of 1 in 40, and even then had the greatest difficulty in reaching the table-land, using several curves for no purpose other than to improve the grade. It is possible that Mr. Sharkey has been over a line of country from the bottom of the big Zig-zag to the Bald Hill. I have also been over the same, and am sure no chance exists there.

The

The "get-away" from the main line at Wallerawang could be improved. (It was surveyed, under orders from Mr. Palmer, to avoid a creek crossing.) I think also certain places on top of the ridge (Bell's Line)—at least as regards earthwork, cross-sections, too—will show where local improvements could be effected; but all this will not touch the question of grade from Wallerawang to Bell's Line, which is as good as can be found; and this I state, being well aware of the disgrace that will attach to me should a better line, with such grades as Mr. Sharkey mentions, be discovered.

With regard to the grades up the Kurrajong, I write only from memory, but, whatever they be, I know 1 in 40 enters largely; they cannot be materially improved. Mr. Cumming continued my survey from the Little Weeney Creek in the direction I suggested by tunnelling under Mr. Comry's place, and so working on to Bell's Line. Whatever grade Mr. Cumming obtained from his junction with my survey is the best obtainable with a tunnel of the length his section showed. Easier grades must mean a longer tunnel. Generally I may state that much care was taken in picking the route, so far as I am concerned, and I had more to do with the survey than any of the gentlemen employed on it, and I am positive that, while cross-sections will show local improvements, no general alteration in the route, giving grades such as Mr. Sharkey states possible, can be found.

I have, &c.,

OCTAVIUS LLOYD.

No. 43.

Mr. Surveyor Cumming to The Engineer-in-Chief for Railways.

Sir,

Bundarra, 14 April, 1888.

Enclosed I send you a report on the Richmond and Wallerawang trial survey; as I have not access to the plans and sections, there may be some discrepancies in it with regard to time, distance, &c., as I have to trust entirely to memory.

I have, &c.,

JOHN CUMMING.

[Enclosure.]

Sir,

Bundarra, 14 April, 1888.

In reply to your memo. of the 10th instant, *re* the Richmond and Wallerawang trial survey, and Mr. Sharkey's statements to the Minister, I have the honor to report as follows:—

I do not understand what Mr. Sharkey means by this survey being merely a trial one; all railway surveys at first must be trial ones; working surveys are never necessary till the proposed line is intended to be constructed.

The surveyors on this survey were not hurried in any way to my knowledge; an inspection of the journals or the plans and section (as the dates of commencement and end of surveys on them) will prove that there was plenty of time given.

Mr. Lloyd was about eight months engaged surveying from Richmond to the Kurrajong and rough traversing to Mount Tomah; I was about six months doing from the foot of the Kurrajong to Mount Tomah, and from Mount Tomah to Mount Wilson, and Mr. Sharkey was about six months surveying across the Mount Tomah portion. It is very evident the surveyors had plenty of time to make an exhaustive survey. Mr. Sharkey states that no attempt had been made to improve the survey at the Kurrajong, and immediately after, that every officer had done his best. If I made my best and made no attempt to improve the survey at the Kurrajong, I must either have scamped my work or been grossly incompetent. A ruling grade of 1 in 50 and minimum curves of 15 chains radius against grades of 1 in 40 and 12 chain curves, will about double the cost of construction of this line; on this point, as it seems to be the fashion, I am also willing to stake my reputation.

The route from Richmond to Mount Wilson is along or quite close to Bell's Road, which runs along a range starting from the main watershed at Mount Wilson, and running in a pretty straight direction to Richmond. From the character of this range it is evident that a trial survey along it is very simple, as the route must follow the range and the formation level must be everywhere near the summit, as the range is in many places only 2 or 3 chains wide, and throughout its whole length spurs branch out on both sides, with immense ravines between, consequently if the formation level is 150 or 200 feet below the general summit of the range, the construction will be nearly all tunnels and viaducts on account of numerous spurs and immense ravines between them. The Kurrajong is a gigantic spur about 1,000 feet higher than the range and extending several miles on each side.

If it is considered that the section *via* the Cut Rock is the general section of the Bell's Range—that no length can be gained, as the range is so narrow—and that the formation must be close to the summit, as the sides of the range are so rugged and impracticable, it can easily be shown that 1 in 50 will enormously increase the cost of construction by drawing this grade on the section, starting at the foot of the Kurrajong, or rather at the commencement of Mr. Lloyd's last 1 in 40. By doing this you will find the length of tunnel increased and that the 1 in 50 grade will not gain the summit of the range till near Mount Tomah.

The survey from Richmond to Mount Wilson is very easy, except about 10 miles at Mount Kurrajong and about 6 miles at Mount Tomah.

I commenced at the foot of the Kurrajong on the summit of the range, where Mr. Lloyd left off, contoured along the Kurrajong with a grade of 1 in 40, crossed the road near the Public School, tunnelled through the mountain at the Cut Rock, crossed to the right of the range at the foot of the Kurrajong, with a cutting of 70 feet, and contoured along the side for 3 miles before I gained the summit. If I had used 1 in 50 from the commencement the tunnel would be about half a mile longer and the formation would be about 150 feet (that is, impracticable ground) for miles. I do not remember Mr. Lloyd's grade; it is likely he used 1 in 40 for miles, as he would be anxious to strike the Kurrajong at as high a level as possible. If he has done this then 1 in 50 is out of the question.

Before continuing the survey I tried an alternative line, commencing again at the foot of the mountain, going through the Devil's Gap, crossing the Burralo Creek, with a viaduct about 320 feet high, which I found necessary to regain the summit, and joining the Cut Rock line about 3 miles from the Kurrajong. If I had used 1 in 50 on this route I would require a viaduct across the Bunalow 400 feet high.

I could not see any other likely route across the Kurrajong, although I explored the country for miles and inquired from the local residents likely to know.

On the first 3 miles of Mr. Sharkey's length at Mount Tomah he shows two viaducts 300 x 150 feet deep and one 8-chain curve. I think it would be better to tunnel through this part, as the total distance would be  $1\frac{1}{2}$  mile against 3 miles. The deepest viaduct would be done away with, and the 8-chain curve would be changed to about 12 chains. It is not necessary to have further surveys made here, as Mr. Sharkey's plan and section gives enough information to determine the length of tunnel and grade.

I have been constantly engaged in railway survey and construction for fifteen years in England, Scotland, America, and Cape Colony, and ten years on railway surveys in this Colony. This is the first time I have been accused of doing slovenly work. I hope in justice to all parties that the matter will be inquired into.

The Minister seems to be under the impression that the plans and sections for this line cannot be found. They were certainly in the office a few months ago, as I had a look over them.

I have, &c.,

JOHN CUMMING.

Engineer-in-Chief, Railway Department, Sydney.

## No. 44.

## Mr. J. P. Sharkey to The Secretary for Public Works.

Sir,

Mercantile Chambers, 195 Castlereagh-street, Sydney, 18 April, 1888.

I do myself the honor to forward herewith for your information schedule of all existing plans and sections in Railway Survey Branch relating to the trial survey, Richmond to Wallerawang, with individual reports as to their condition of usefulness.

I most respectfully draw your attention to the incomplete state of some of these plans and sections from which it is impossible to procure the simplest information expected from such sources. In their present condition they represent blanks or breaks in the survey to Wallerawang. At this date all the sections are incomplete, being ungraded, or only so in pencil.

It is impossible for me to make use of portions of these plans or sections for the purpose of amending the survey, as in point of fact they represent nothing, except indeed it be a waste of time and public money.

I have, &amp;c.,

JOHN P. SHARKEY.

I can scarcely credit the statements made in this paper. I would be glad to have a report on it.—  
JOHN SUTHERLAND, 20/4/88. The Engineer-in-Chief, B.C., 21/4/88.

## [Enclosure.]

SCHEDULE of all existing plans and sections in the Railway Survey Branch relating to the trial survey, Richmond to Wallerawang:—

Plan No. 1.—From 37 miles 40 chains to 52 miles—Surveyor O. Lloyd.

THIS plan shows one line of direct survey with a few cross-sections to 49 miles 40 chains, giving meagre information relating to alienated lands, features, and localities. The mileage bench levels and traverse stations are all fixed. This plan also shows two deviations, one with bench levels and traverse stations; the other is a skeleton outline without any particulars as to features, locality, or bench levels, and is therefore valueless in its present form, except to show that a survey has been made for some purpose. The plan of through line first mentioned can be used for amending the section and route, though the scale is inappropriately small for rough country, being 10 chains per inch.

Plan No. 2.—From 49 miles 40 chains to 67 miles—Surveyor John Cumming.

THIS plan shows two lines of survey—one *via* Burrulo Creek, and one *via* South Kurrajong. There are no characteristics or headings by which an observer can distinguish one line from the other; the points of divergence and convergence are not distinguished, so that without great trouble the plan is unintelligible. It took myself and the officer-in-charge of draughting-room a considerable time to make head or tail of this plan. It is unfinished and incomplete; there are but few cross-sections; the hills, where marked, are in pencil; features and localities are not well or sufficiently delineated. A centre line has been marked thereon in blue (curves and straights) and as this line in many places is situated considerable distances from the traverse line over which the levels were taken, and as there are little or no cross-sections, I fail to see how it was possible to determine what manner of section is obtainable over this projected line in blue. Still, I am told by the chief draughtsman that the section noted in this schedule as No. 2, represents the ground surface of the projected railway line (straights and curves) in blue. What an absurdity. How could it be possible to determine the levels or section of this line without direct levels or cross-sections, situated as it is, in places 10 to 16 chains removed from the actual line of levels, and this in very rough and difficult country? This portion of the survey therefore is so defective in point of information and necessary detail that it can be of but little use for any purpose. No field-book has been kept for this portion of the survey, and all the notes discoverable relating to it are in the level-books and are unintelligible to any person. I am quite sure the surveyor who executed the survey could not now supply the information wanting from this plan and equally wanting from the notes entered in the level-books. The memory of no man could make good the deficiency. Therefore this plan is of no practical use, and exhibits a lavish waste of public money.

Plan No. 3.—From 67 miles to 72 miles—Surveyor John P. Sharkey.

THIS plan is perfect of its kind. It supplies all the information possible to be obtained from a trial survey. The features are well and plainly delineated, and all possible details as to locality are supplied. The field-book is well and properly kept. Both field-book and plan will repay inspection. They have been exhibited before the Board of Examiners for Licensed Surveyors and highly approved by them. I defy any surveyor or engineer to gainsay the above.

Plan No. 4.—From 72 miles to 80 miles 40 chains—Surveyor John Cumming.

THIS is very similar to plan No. 2. It is unfinished and incomplete; the hills, where shown, are in pencil; the features and localities are not delineated, nor has the information naturally to be expected from a trial survey been either procured or conserved. The field-notes, as in plan marked No. 2, are valueless, being insufficient and unintelligible notes in the level-books. There are only a few cross-sections shown. A centre line has been marked thereon, by straights and curves in blue, but from what data the corresponding section has been prepared it is hard to determine, the cross-sections being deficient and there being no direct levels taken over that line. Still the section in existence for this length is supposed to represent the surface level of the straights and curves which can only be accepted as imaginary. This plan is not what it should be, and would be a disgrace to any institution in the world.

Plan No. 5.—From 80 miles 40 chains to 103 miles—Surveyor O. Lloyd.

THE plan of this length has been well and properly prepared, and reflects credit on Mr. Lloyd.

Section No. 1.—From 37 miles 40 chains to 52 miles—Surveyor O. Lloyd.

THIS section is complete except that it has not been graded, and that the scale is too small for rough country, viz., 100 feet vertical and 10 chains horizontal per inch. Draughtsmen are now busy grading this section, a work that should have been done four years since. It has been the practice for all sections to be graded in the office by the engineer in charge of railway surveys.

Section No. 2.—From 49 miles 40 chains to 67 miles—Surveyor John Cumming.

THIS is merely a sheet of paper with an irregular line marked longitudinally along it. An insect could have been made to mark a line equally as valuable. It exhibits no writing of any kind, no features, no localities, no levels, no distances or mileage, nothing to indicate head or tail of it except what may be taken by an expert as a datum line, which denotes it to relate to a section. It now appears after investigation by the officer in charge of this office that the line on this paper represents the ground surface of the blue line on plan (straights and curves), but by what means this was plotted does not appear in the absence of cross-sections or direct levels. This survey was over very rough and difficult country, and I fail to see under the circumstances how it was possible to determine what might be the levels of this imaginary line, situated as it is 10 to 16 chains removed in some places from the traverse line, over which the levels were actually taken. By preparing this section in this form the paper has been lost without corresponding benefit. Distance, 17½ miles.

Section No. 3.—From 67 miles to 72 miles—Surveyor John P. Sharkey.

THIS section is complete, levels having been taken over the straights and curves as delineated on plan. It has only been graded in pencil, a work usually done in office.

Section

Section No. 3a.—From 67 miles to 72 miles.—Surveyor, John P. Sharkey.

THIS is section taken over traverse survey, and gives all usual and necessary particulars as to levels, features, localities, and bench levels.

Section No. 4.—From 72 miles to 80 miles 40 chains.—Surveyor, John Cumming.

THIS section is similar to No. 2 with the exception that faint lines of grading in pencil existed. It is equally as valueless as that section, though it is now being graded in ink in this office. In fact all the sections are being graded with all possible despatch, but this will not render them of more value where the surface line has been fixed by guess or unexisting data. This section represents a complete loss of public money. Length, 7 miles 40 chains.

Section No. 5.—From 80 miles 40 chains to 103 miles.—Surveyor, O. Lloyd.

THIS section has been well and properly prepared so far as it has been completed. There are no surface levels marked nor has it been graded, except in part which is in pencil. When these deficiencies are made good the section will contain the information that should be procured and conserved from every trial survey. All railway surveys are expensive, and it is only right to expect that all resulting plans and sections should contain all information possible to be procured from such surveys. Information conserved in this way may be turned to great advantage in future years for purposes that may not now be apparent.

Total length of survey, 65 miles 60 chains.

Cost of survey, £2,459 17s.

Cost per mile, £37 8s.

Survey representing plans and sections incomplete and useless, 26½ miles at £37 8s. per mile = £981 2s.

JOHN P. SHARKEY.

Mercantile Chambers, 195, Castlereagh-street, Sydney, 18 April, 1888.

No. 45.

Memo. from The Chief Clerk to Mr. Surveyor Cumming.

Richmond-Wallerawang Survey.

I FORWARD herewith a copy of certain statements made by Mr. J. P. Sharkey in reference to your plans of the above survey.

Please report fully as early as possible.

W. H. QUODLING.

[Same to Mr. O. Lloyd, Surveyor.]

No. 46.

Minute by The Engineer-in-Chief for Railways to The Secretary for Public Works.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 9 May, 1888.

Subject:—Richmond to Wallerawang Survey.

I FORWARD reports from Mr. Lloyd and Mr. Cumming on Mr. Sharkey's statements with reference to the comparative uselessness of their surveys on the above line.

From these reports it appears that there was no justification for Mr. Sharkey's condemnation of their work, and that every necessary information could have been obtained from these plans.

I also attach a tabulated return of the cost of this survey by Mr. Lloyd, Mr. Cumming, and Mr. Sharkey, from which it will be seen that Mr. Lloyd surveyed 37 miles, at a cost per mile of £30 2s. 5d., and Mr. Cumming 26 miles, costing per mile £17 6s., while the cost of Mr. Sharkey's survey of 5 miles was £86 6s. 7d. per mile.

A portion of this cost, I presume, was incurred by Mr. Sharkey wasting his time in sketching hill features, which are in no way necessary on a trial survey.

Mr. Beckett has also reported on these plans, and I annex a copy of his report.

JOHN WHITTON.

Office of Engineer-in-Chief for Railways, Sydney, 9 May, 1888.

W.H.Q.

Railway Survey Camp, Myrtle Creek, Laurence and Casino Road, via Laurence, 1 May, 1888.

The Engineer-in-Chief, Railway Department, Sydney,—

Sir,

I have the honor to acknowledge the receipt of your memo. 88/331, and to report relative to plan and section from 37 m. 40 ch. to 52 m. (Richmond to Wallerawang Railway) that the scale 10 chains to the inch was that I was instructed to work to by Mr. Palmer. When I was sent to Richmond I understood that it was with a view to try whether a railway line was in any sense feasible over the Kurradjong Ranges, and regarding the matter as very problematical, I pushed on with the traverse without wasting time on detail survey that might never be wanted, or, if required, could be supplied if the result of the first survey justified a more extended one. Moreover, my connection with the Department was severed before the completion of the length referred to by Mr. Sharkey. The two deviations mentioned by Mr. Sharkey (see first page of his letter and bracketed) were of rough trials run and abandoned.

On

On resuming work at the Wallerawang end, Mr. Palmer (Messrs. Sharkey and Cumming being then employed on the survey) instructed me to plot to a 4 chain scale, as there seemed some probability of the survey being a partial success. This I did, and took some rough cross-sections. I did these, however, (cross sections) in a perfunctory manner, as to have thoroughly cross-sectioned my length would have taken months of labour, and I knew that it was not customary to expend time on such work until the line was being properly worked up for a permanent survey.

More cross-sections, however, would have been taken but for my having been recalled to town by Mr. Palmer in mistake. He wrote to me in answer to a letter informing the Engineer-in-Chief of the progress of the work (see letter book for July, 1884) to return to Sydney, which I did, when I mentioned to Mr. Palmer that my letter to the Engineer-in-Chief stated that I was still engaged on cross-sectioning, he did not believe that he had given me orders to break up my camp until he had consulted the press copy of his letter. I mention this as although I regard the absence of a few cross-sections in so rough a survey as of small value, I left bush pegs in lieu of permanent pegs in most places, and several bench marks unnumbered, also station pegs unnumbered.

I have, &c.,

OCTAVIUS LLOYD.

Richmond and Wallerawang Trial Survey.

Sir,

Railway Survey Camp, Uralla, 28 April, 1888.

I duly received your memo. of the 26th instant, with Mr. Sharkey's report on the plans and sections of the above survey.

I scaled the lengths on the dotted blue line from the plan, and calculated the heights from cross-sections of the traverse lines, taken by angles of elevation and depression. From long practice I found this the best method of making trial surveys in rough country, and well suited to carry out the working survey afterwards.

By traversing, levelling, and cross levelling the dotted blue line, the best possible line can be found for construction. Mr. Chalmers, who was with me during the whole survey, can certify that I thoroughly examined the ground and that my section was made by hard work and laborious calculation. The engineers who were engaged on the working surveys of the Newcastle and Illawarra Lines, can also testify that my trial surveys were made over the best routes and always found accurate.

Mr. Sharkey has staked his reputation that he will find a line at a moderate cost with 1 in 50 grades, when I could only find an expensive line with 1 in 40 grades. He might possibly make some improvements by going over the old routes with the same grades, but that he can do so with 1 in 50 every engineer in the Railway Survey Department knows to be absurd and impossible. We have yet to learn that he has discovered a better route; if he has made this happy discovery let him prove it, if he means business, by actual survey. Mr. Sharkey could have got his order for the plans and sections from the Minister, when he got permission to make his survey on the 16th of March, he could have made his field tracings and got his equipment ready in a week, and have by this time several miles of his survey completed. Instead of commencing his work in this usual way, he is up to the 18th of April engaged making statements to the Press, writing abusive reports and getting the old plans and sections finished up. Why finish up the old plans and sections, better for his purpose to leave them as they are, his new and improved survey will then compare more favourably with them.

My survey of 26 miles took 5 months, and cost £20 per mile. Mr. Sharkey's survey of 5 miles took 6 months, and cost £102 per mile.\*

If he is to make the new survey of 65 miles at the same rate, it will take him 6 years 6 months, at a cost of £6,630, taking the most favourable view it will take him say half the time, 3 years 3 months, at a cost of £3,315. I wonder if the Richmond people are prepared to pay the half of this sum?

Mr. Sharkey's plan and section may be as he reports perfect of their kind, in my opinion they are a poor specimen of engineering skill—his being compelled to use an 8-chain curve is a manifest confession of failure. It can be proved by his own plan and section that a better and cheaper line can be got, by tunnelling through Mount Tomah, shortening the distance by a mile and a half, and doing away with the 8 chain curve.

The diagram, plans, and sections were finished and a preliminary report made out. The Minister for Works at the time must have considered those sufficient evidence to abandon the scheme.

An inspection of the comparative sections of both lines will show that the construction of this proposed route will cost considerably more than that of the existing line over the Blue Mountains, consequently our proposed line was condemned, and our plans left unfinished and forgotten.

If Mr. Sharkey will now find a line with 1 in 50 grades, at a moderate cost (as he has pledged his reputation to do), he will have the pleasure of having his plan properly finished and also the honor of getting his line constructed.

I have, &c.,

JOHN CUMMING,

Railway Surveyor.

Engineer-in-Chief, Railway Department, Sydney.

Report on the Richmond to Wallerawang plan and sections of trial survey.

The Engineer-in-Chief for Railways,—

Railway Survey Office, Works Department,

Sir,

Sydney, 28 April, 1888.

In reply to Mr. J. P. Sharkey's letter of the 21st inst., I have the honor to state that Messrs. Cumming and Lloyd's plans and sections are completed, with the exception of one of Mr. Lloyd's sections of a deviation of the line, commencing on the plan, from Richmond to Little Weeney Creek, at a point marked A on plan, which junctions again with the through line at about 9½ miles. This section is now being plotted, and is almost finished, the original was mislaid amongst the numerous plans and sections in this office, and has since been found but is not quite completed.

I may state that the quantities in the cuttings and embankments have not been computed, as the plans and sections were ordered to be put away by Mr. Palmer, on account of the great stress of work occasioned by the number of lines being permanently staked.

The following is a report in detail on the different plans and sections of the trial survey from Richmond to Wallerawang:—

No. 1.—Mr. Lloyd's plan and section of trial survey which leaves the Windsor and Richmond Line at 37 miles 39.75 chains, to Little Weeney Creek, 52 miles 15.75 chains, are complete, and give all necessary information; the cross-sections are plotted on both plan and section. A section of one deviation shown on the plan, starting from a point marked A about 28 chains north of the Hawkesbury River, to a point 9 miles 67 chains, on the through line was mislaid, but has since been found, a new section of this part of the line has been plotted in the meantime, and is about finished.

No. 2.—Mr. Cumming's plan, from his junction with Mr. Lloyd at Little Weeney Creek to Mount Tomah, shows a traverse of his two trial surveys, one *via* "Burrall Creek," and the other *via* "The Cut Rock." The heights are written on at each peg, which are numbered. The bench marks and their values are given, together with a few cross-sections.

The notes of this part of the line have been kept in his level-books, which I have examined, and found quite intelligible. The features have been sketched on the plan by Mr. Cumming, whilst the survey proceeded in the field where the plan was plotted. The projected straights and curves, which are shown on the plan by a dotted blue line, were put on by Mr. Cumming from cross-sections. The dotted blue line of projected straights and curves has not been marked on the ground.

There are not many names of localities on this or any part of the line, so consequently the information on the plan in this subject is meagre.

Mr. Cumming's section is a section of the projected straights and curves, tracings from which were forwarded to the office from time to time as the work progressed, from which the diagram section was plotted.

No. 3.—Mr. Sharkey's plan, from the base of Mt. Tomah, where he junctions with Mr. Cumming's line from Little Weeney Creek, to his junction with Mr. Cumming's second length of trial survey, Richmond to Wallerawang, from Mt. Wilson platform to the Bald Hill, shows his traverse and all necessary information.

The projected straights and curves are marked in a firm blue line, which have also been staked on the ground.

The

\* Mr. Cumming has over-estimated the cost of Mr. Sharkey's portion of this survey. A detailed statement of the cost of the survey is appended.—W.H.Q.

The bench marks and the names of localities are given, the features are also very plainly delineated. There are two sections of Mr. Sharkey's length of trial survey, one of his traverse, and the other of the straights and curves shown in blue on the plan. The section is graded, and supplies all necessary information.

No. 4.—The next part of the line was surveyed by Mr. Cumming, commencing at a point 83 miles 10 chains on the Great Western Railway, Mount Wilson platform, and ending about half a mile north-east of Bald Hill, where he junctions with Mr. Sharkey's line. His plan of this part of the trial survey shows his traverse, with numbered pegs, and the heights thereof; also the bench marks, cross-sections in a few places, and the names of localities along the route. The features have been sketched on in the field from time to time as the work progressed.

The projected straights and curves are shown in a dotted blue line plotted by Mr. Cumming from cross-sections, but they have not been marked on the ground.

The section corresponding with this length of trial survey is a section of the projected straights and curves shown by a dotted blue line on the plan of trial survey, tracings from which were received as the work proceeded, from which the diagram section of this part of line was prepared.

No. 5.—The Great Western Railway Line is adopted from 83 miles 10 chains to 103 miles, at which point Mr. Lloyd's trial survey commences, which junctions again with the Great Western Line at Wallerawang. The plan of this part of the line shows his traverse, the mileage radii of curves, bench marks, cross-sections, details of portion and roads, and the names of localities and features. The section of this part of the route has been graded, and gives all necessary information relative to stations, localities, &c.

It may not be out of place, in conclusion, for me to give the total length of distances traversed and levelled, together with the time occupied respectively by each surveyor engaged on the trial survey, including the time spent by each in plotting his plans and sections, which are as follows:—

Names.	Distances.	Dates.	Total length of time engaged.
Mr. Cumming.....	42 miles 68 chains .....	Commenced, 18th March, 1884; finished, 25th July, 1884.	4 months and 1 week.
Mr. Lloyd .....	55 miles 45 chains .....	Commenced, 14th July, 1883; finished, 29th August, 1884.	13 months and 2 weeks.
Mr. Sharkey .....	12 miles 45 chains .....	Commenced, 2nd April, 1884; finished, 8th October, 1884. Unwell from 19th August, 1884, to the 8th September, 1884, inclusive.	6 months and 1 week, less three weeks unwell, 5 months and 2 weeks.

I have, &c.,  
GEO. J. BECKETT.

#### No. 47.

#### Mr. J. P. Sharkey to The Under Secretary for Public Works.

Sir,

195, Castlereagh-street, Sydney, 21 April, 1888.

I do myself the honor to forward to you herewith for the information of the Honorable the Minister for Works my comments on certain minutes of the Engineer-in-Chief for Railways written in September, 1884, on the subject of the trial survey, Richmond to Wallerawang, from which it will be observed that I have ventured to differ from some of Mr. Whitton's statements, and that I am unable, in other instances, to understand how he has arrived at his conclusions in view of the present incomplete state of the plans and sections.

I may be pardoned for stating that I am moving in this matter chiefly in the interests of the people of the Richmond district by whom I have been specially retained with the concurrence of the Honorable the Minister for Works, and whose interests are largely affected in the determination of the important issues involved.

I am, &c.,  
JOHN P. SHARKEY.

[Enclosure.]

REMARKS of J. P. Sharkey on Minutes of Engineer-in-Chief for Railways, *re* Trial Survey, Richmond to Wallerawang, submitted in September, 1884, to the Honorable the Minister for Works.

Extract from Minute of the Engineer-in-Chief for Railways.	Remarks thereon.
<p>The trial survey has been completed, and the plan and section have been plotted. Herewith is a plan showing the Western Railway, part of the Mudgee line and this line to Wallerawang.</p> <p>I also forward tracings of the sections of the Western line and the trial survey for comparison.</p>	<p>It will be seen from my report on the condition of the plan and section, also my letter to Mr. Whitton, dated 7th instant, and Mr. Beckett's minute thereon, which says "these plans and sections were put away in a very incomplete state by Mr. Palmer's instructions. The sections are now being graded and together with the plans finished up," that the original surveyor's plans and sections have not yet been completed although Mr. Whitton states that this has been done.</p> <p>It is now reported by the draughtsmen in the office that they are unable to complete either plan or section as there is no information in the office to enable them to do so. The inability of the draughtsmen to complete the plans and sections has been reported to the Engineer-in-Chief by letter from me.</p> <p>As portion of the original section of this survey, representing 26½ miles, was only a mere surface line on the 7th instant, it is difficult to understand how a tracing of same could have been submitted to the Minister in 1884.</p> <p>Draughtsmen have been exercising their best energies at these sections since 9th instant, and now declare their inability to complete them as there is no information in the office to enable them do so.</p> <p>I would respectfully ask that Mr. Whitton be invited to state from what data the tracings in question were prepared, so that I may be favoured with the information for my guidance in the matter.</p> <p>It will be noticed that Mr. Whitton says he forwards certain tracings for comparison, but in this case, as I have endeavoured to show, there seems to have been no complete original sections with which a proper comparison could be fairly instituted.</p>

Extract from Minute of the Engineer-in-Chief for Railways.	Remarks thereon.
<p>No quantities have yet been computed from the section, but when this has been done I think it will be found that the construction of a railway by this route would be a very costly undertaking.</p> <p>No grade worse than 1 in 40 has been adopted on the section; and no curves of less than 12 chains radius will be used except perhaps in one or two instances at Mount Tomah.</p>	<p>It is respectfully submitted that it should be explained why no quantities have been computed, even to the present date. Mr. Whitton thinks the line will be a very costly undertaking, but as he has not apparently seen the original section in any complete form it is not clear how he could have arrived at this conclusion.</p> <p>There was no occasion to adopt a steeper grade on this route than 1 in 40, this being the grade limit on every new line at present.</p> <p>I may state that a grade of 1 in 40 will not condemn my project while that grade exists further ahead, though I fully anticipate having a ruling grade of 1 in 50, or equal thereto by compensation.</p> <p>It has, I understand, been stated that my route will rise 200 feet higher than any point on the Western line; but in answer thereto I would desire to say that my highest point will be on the Western line, and that one of my deviations leaves that line at Dargan's Creek, and thence runs into Eskbank, having falling grades all the way.</p>

JOHN P. SHARKEY,  
21/4/88.

Mercantile Chambers, 195, Castlereagh-street,  
Sydney, 26 April, 1888.

Dear Mr. Jones,

I am desired by the Richmond folk to ask your assistance under the following circumstances:—  
I am blocked, as the plans and sections are incomplete, unfinished, and useless for 26½ miles. These plans, I presumed, were complete when I said £200 would do the resurvey. Now there will be a new survey necessary to make good the deficiency.

I reported fully on the disgraceful state of plans, &c., on 18th instant, which has been referred to Whitton for reply. What I want is that Whitton's reply on the state of these plans should be submitted to Minister at once, so that the matter may be dealt with without further delay. Mr. Whitton has had over a week to reply. I am losing my time. I gave up £10 10s. per week (besides other matters) on 24th ultimo to take up this survey. I am now unpaid, and wish to lose no more time. I request that Whitton be asked to make the matter urgent.

Travers Jones, Esq., M.P., &c.

Yours, &c.,

JOHN P. SHARKEY.

If you could possibly see Mr. Sutherland to-day it would oblige. Presented on behalf of the Richmond Railway League.—T.S., 27/4/88. To the Secretary for Works, Sydney.—T.S.

#### No. 48.

#### Mr. J. P. Sharkey to The Engineer-in-Chief for Railways.

Sir,

195, Castlereagh-street, Sydney, 21 April, 1888.

I do myself the honor to state that the draughtsmen engaged upon the plans and sections of the trial survey, Richmond to Wallerawang, report that they are unable to complete these plans and sections in the absence of field-books or other sufficient information. They say 26½ miles of Mr. Cumming's work and 12 miles of Mr. Lloyd's cannot be completed on this account. May I therefore request you will be good enough to direct Mr. Beckett to furnish you with a full and complete report on the above subject at once, so that I may not be further delayed or inconvenienced by waiting for plans and sections that can never be completed, as stated by your own draughtsmen. During the last week I reduced my draughtsmen from three to one waiting for these plans and sections.

I have, &c.,

JOHN P. SHARKEY.

Memo. to Mr. Beckett, Officer-in-Charge of Draughting Room, Railway Survey Office.

11 April, 1888.

THE Minister expressed his intention of viewing Mr. Cumming's plans and sections in their present state. May I request that these plans and sections relating to the line, Richmond to Wallerawang, may be left as they are until after the Minister's inspection. At noon to-day the Minister expressed this intention.

JOHN P. SHARKEY.

Mr. Quodling. Submitted for instructions.—G.J.B., 11/4/88.

#### No. 49.

#### Minute by The Engineer-in-Chief for Railways to The Secretary for Public Works.

*Subject:—*Mr. Sharkey's statements re Richmond-Wallerawang survey plans.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 27 April, 1888.

I AM not aware that it is the duty of this Department to take instructions from Mr. Sharkey, or to complete plans which he says are incomplete, but which, in my opinion, are sufficiently complete for any ordinary purposes of reference.

It was Mr. Sharkey who proposed to improve the surveys of this line, so as to obtain inclines of not less than 1 in 50, instead of 1 in 40.

The Minister may not be aware that Mr. Sharkey called here, as he had no employment, to ask if I should be offended if he advocated a resurvey of the Richmond-Wallerawang line. I

I said I had no objection to his doing so, and as a deputation from Richmond waited on the Minister, there is no doubt Mr. Sharkey had sought their assistance to supply him with funds, as I understand they paid £100 to the Government to enable him to commence this work. The Government also promised to give another £100.

Therefore Mr. Sharkey undertook to improve the gradients on this line from 1 in 40 to 1 in 50 for the sum of £200.

As I was not consulted in this matter I did not interfere, but I may now inform the Minister that no reasonable amount of money expended upon this survey could improve these gradients as stated by Mr. Sharkey.

As Mr. Sharkey is well aware that he cannot improve this line for the sum of £200, and as he only advocated the work because he had no employment, he has been throwing difficulties in the way of commencing the survey by finding fault with the work of the other surveyors, copies of whose reports with reference to Mr. Sharkey's statements I append.

Mr. Sharkey's letter to me is most offensive and impertinent, and I shall decline to have any correspondence with him whatever.

JOHN WHITTON.

No. 50.

Mr. J. P. Sharkey to The Secretary for Public Works.

Richmond to Esk Bank.

Sir,

Clarence Siding, 1 June, 1888.

I do myself the honor to forward herewith plan and section of a portion of the above mentioned proposed deviation, by which the steep grades approaching and forming the Clarence Zigzag are avoided.

The plan now submitted forms part of the proposal placed before you on 16th March last by a deputation from the district of Richmond, by whom it was asserted that a comparatively cheap, short, and easy line could be procured *via* Bell's Line of road from Richmond to Wallerawang. The original Government trial survey went from near Mount Wilson to Wallerawang, a distance of about 22 miles, and reached 200 ft. above any point on the Western line. I now substitute this short deviation, which, in my opinion, gives a practicable aspect to the whole route, as it was on the deviation to Wallerawang that the greatest difficulties were pronounced to exist.

The present survey diverges from the existing line at Dargan's Creek 86 miles 59 chains 5 links, and follows a valley on surface or in cutting for 32 chains 95 links, when it enters a tunnel for 1 mile 73 chains 40 links. It is then carried by a bridge, with span of 2 chains 50 links, to the present railway bank at bottom points of Zigzag, which it follows for 2 chains and 10 links to point of junction, making the whole length of deviation to be constructed 2 miles 30 chains 95 links. This deviation converges with the Western line at 91 miles 75 chains existing mileage from Sydney, thus making a saving in distance of 2 miles 65 chains.

The line of route is nearly direct, divergence therefrom being only made to suit the formation of the ground. A careful survey has been made over the whole length, and levels and check levels have been taken as on similar surveys of the Railway Department. The grades used are only three, viz., 1 in 113.52 level, and 1 in 60. The low level of Dargan's Creek is made use of, and thus I am able to present such satisfactory gradients.

The radii of curves adopted are three, 30 chains, 40 chains, and 12 chains respectively. There is but one bridge required having a span of 2 chains 50 links, with one low abutment, the other being the edge of the tunnel, and does not form any important item of expense. There is no other opening of any kind required.

The tunnel, having an extent of 1 mile 73 chains 40 links, will pass through solid seamless sandstone rock for most of the distance, and is not likely to require lining except for, say, 38 chains at the beginning and 2 chains at the end. Two sets of borings taken along the route in search of coal show that at the level of the tunnel solid seamless sandstone rock can be expected. The cores of these borings can be inspected.

From my point of junction with the existing line onward the grades are 1 in 42, 1 in 80, and 1 in 150. The grade of 1 in 42 I propose to amend by connecting my point of junction 91 miles 75 chains with 94 miles 17 chains 50 links by one grade line, which will then give a gradient of 1 in 56.6 for the whole distance. The stuff removed from the tunnel will be more than sufficient for raising the line in this manner. This alteration will not interfere with the station arrangements, yard, &c., at Esk Bank, which will remain as they are at present; nor will it interfere with the working of the Zigzag line should it be desired to use it for tourist or other purposes.

The curves onward from 91 miles 75 chains, four in number, are of 10 and 8 chains radii. These I would suggest should be altered to 12 chains radii. My examination shows this to be possible without much expense and without in any way interfering with the Zigzag line.

The advantages to be gained by making even this portion of the proposed route from Richmond to Esk Bank would be many, as it is acknowledged by the public generally and by the Traffic Branch in particular that the Clarence Zigzag is the chief cause of delay, difficulty, and expense in the working of the Western Railway.

The load limit between Esk Bank and Mount Wilson, over the Zigzag, is 17 trucks, or 150 tons, while the load limit between the same points on the proposed deviation would be 28 trucks, or 250 tons.

The cost of working the 9 miles from Mount Wilson to the Bottom Points—83 miles to 92 miles—may be estimated from the station hands at present employed, whose chief or only duty is to shunt, signal, and telegraph the position of trains. Such is the precaution necessary on a zigzag line to secure freedom from accident and complication.

Station hands employed between 83 and 92 miles:—

Mount Wilson	...	2	...	Salaries, £260, with fuel, &c. (say)	£320
Clarence Siding	...	2	...	"	320
Top Points, Zigzag	...	2	...	"	250
Bottom Points, Zigzag	...	2	...	"	320

£1,210

By

By the proposed deviation all difficulty of working the length will be removed, and no station hands will be required except where profitable traffic may arise.

Might I be permitted to suggest that reference be made to the Existing Lines, the Traffic, and the Locomotive Branches for reports as to the cost of maintenance, cost of working line, wear and tear of engines and rolling stock, &c., as well as delay and difficulty in working the length from 86 miles 60 chains to 93 miles.

On my return to Sydney I will submit a statement of quantities and an estimate of the cost of construction.

I have, &c.,

JOHN P. SHARKEY,  
Railway Surveyor, &c.

#### No. 51.

#### Mr. J. P. Sharkey to The Under Secretary for Public Works.

Sir, Mercantile Chambers, 195, Castlereagh-street, Sydney, 30 July, 1888.

I do myself the honor to bring under your notice that on the 1st June ultimo I forwarded to the Honorable the Minister for Works a plan, section, and report of a proposed line of railway from Dargan's Creek to the Bottom Points of the Clarence Zig-zag, by which that zig-zag and the steep grades approaching it were cut out, and have not received any acknowledgment of their receipt.

Will you be good enough to supply the deficiency by stating whether these documents have been duly received.

I have, &c.,

JOHN P. SHARKEY.

Will Mr. Barling please inform me if the Minister ever received these plans, and where they are to be seen, and oblige yours, &c., ALEXANDER BOWMAN, Reform Club, 30 July, 1888. I have seen Mr. Bowman. Send on plan to Railways.—J.R., 31/7/88.

#### No. 52.

#### Mr. J. P. Sharkey to The Secretary for Public Works.

Railway Survey—Richmond to Esk Bank.

Sir, Mercantile Chambers, 195, Castlereagh-street, Sydney, 13 August, 1888.

I do myself the honor to bring to your recollection that on the 1st June last I forwarded to you plan, section, and report of a short railway line from Dargan's Creek to the Bottom Points of the Zig-zag, forming part of the abovenamed railway scheme, and by which the steep grades approaching and forming the Clarence Zig-zag will be avoided.

It may be desirable for me to state here that, in addition to that survey, I made two flying surveys from Dargan's Creek, both of which proved practicable for railway construction, but each of which would be more costly, with longer tunnel way, and with greater length of line to construct, than that for which plan and section have been already submitted.

After completing the above work I removed to Mount Wilson, from which point I explored the route to 3 miles on the Richmond side of Mount Tomah, over a distance of 17 miles.

It will be borne in mind that when I undertook for a small sum to prove the practicability of the route to Richmond I was under the impression that I would be able to make use of the plans, sections, and surveys that I naturally concluded were in existence as the result of the trial survey, the cost of which is set down at £2,459 17s. But on the 18th April last I reported for your information that the plans and sections for nearly all the distance were found to be valueless for any purpose, being incomplete, and the deficiencies not being remediable, as no field-notes were kept, nor did the section represent any actual levels but those apparently existing in the mind of the surveyor, which he considered might be possible. It is needless to point out that sections based on such unrecorded data are absolutely useless for any practicable purpose, and in this case have proved to be so.

The original survey was only marked by pickets 3 feet long, inserted 1 or at most 2 inches in the ground, and which could not be expected to last even for a period of one month; consequently, at the date of my present survey, four years afterwards, only a few of these marks or pickets were in existence, so that the original survey, which cost so much, has been actually lost to the country. Not one peg of a permanent or durable character was placed in position, nor was there any attempt made to blaze or mark the line in the way usual to render the most ordinary survey of use for future reference. Under these circumstances I was, of course, compelled to make an entirely new survey, with fresh levels and check levels.

My exploration shows that for 17 miles from Mount Wilson, towards Richmond, no steeper grade than 1 in 60 need be adopted, and that for the whole of the length no opening of more than 4 feet will be required.

The earthworks will not be heavy, nor, with the exception of at Mount Tomah, will tunnels of any magnitude be required. A tunnel of 70 chains will pass Mount Tomah.

I now submit plan and section of portion of the Bell's line of route, starting from Mount Wilson, and extending for 4 miles 50 chains. This plan shows the following curves:—Three of 12 chains, two of 14 chains, one of 15 chains, five of 16 chains, one of 40 chains, and one of 20 chains radii. The three 12-chain curves can be transformed into curves of 15 chains radii by slightly increasing the earthworks, and were only adopted in the first instance to reduce the quantities.

The grades are two in number, viz., 1 in 96 and 1 in 63.

Of tunnels there are three, viz., 404·8 yards, 132·2 yards, and 297 yards, making a total of 825 lineal yards, or 55 yards less than half a mile.

It will be remembered that one of the chief reasons why this route was condemned in the first instance was because the original trial survey showed long grades, extending in some places for over a mile and a half, of 1 in 40. Over the same length, for which plan and section are now submitted, two grades of 1 in 40 are shown on the original trial section for lengths of 26 chains 40 links and 1 mile 44 chains respectively.

It

It will appear strange to any experienced engineer that I should be able to submit to you, over practically the same country and route on which these grades of 1 in 40 exist, such favourable grades as 1 in 96 and 1 in 63; and I have no hesitation in saying that equally favourable results would be obtained over the whole of the route to the low levels of the Hawkesbury River.

It is but reasonable to expect that when a survey is made at the instance of the Government, by men presumed to be experts, that the existing features of the country over which the survey is executed for a railway would be used to the best advantage for determining the easiest possible grades. This was not done over this route, or I could not have succeeded in laying before you, at present, plan and section, which, in my opinion, entirely upsets the original survey, and proves beyond a doubt the unreliability of the plans and sections representing the first trial survey.

It may be urged that the length now submitted by me is short, when compared with the whole distance; but I wish, however, most respectfully to submit that the average difficulties, and particularly as relating to grades defined by the original survey, are fully represented on this length. It should not be possible for me or any other surveyor to convert two grades of 1 in 40, extending for 1 mile and 70 chains, into grades of 1 in 96 and 1 in 63. I confidently assert that it is a matter of mathematical certainty that my grades cannot be improved one iota; and it is my contention that this should have been the result of the original survey.

By the section you will observe that the earthworks do not present any feature of magnitude. There is somewhat more bulk in the cuttings than in the embankments, but this has been determined upon as the surplus earth is most easily placed to spoil at the nearest embankment, as most of the ground traversed is sideling. The surface slopes of these sidelings are even and unbroken, as proved by the cross levels, the steepest rise or fall on either side being 1 in 4, the general average being much flatter. No openings on this length greater than 2 feet will be required, these being sufficient to carry off the water from the side-drains. The gathering ground is all on one side, and only extends from 2 to 6 chains. So flood-water on this line by my intended route need not be provided for in any more extensive form than by 2 or 4 feet openings until the Kurrajong slopes are met with.

The section has been plotted from actual levels, which were taken both over the traverse line (in blue) and the railway line (in red), the curves having been first carefully laid out. So that on this section the surface of the ground is truly and faithfully delineated.

Under the circumstances above described it will be admitted that with the small sum at my disposal (£200) more than the usual amount of work has been done, and at a season most unpropitious for mountain work, when bad weather might be expected to prevail, and which did prevail to a considerable degree.

That plans and sections for the whole length have not been now submitted is no fault of mine. Had the original survey been properly marked, and therefore available for reference with the plans and sections, it would have been possible for me to submit amended plans and sections determined and plotted from cross levels—a system in general and every-day use in the Railway Department of this Colony and elsewhere.

I would wish again most respectfully to bring under your notice that what has been practicable on one length will be practicable over the whole, and that by using with skill and advantage the natural features of the country that exist at every point a survey can be made that will meet all my previous anticipations.

It will appear patent from my survey alone, though short it be, that the route is virtually untested. So far as the money at my disposal (£200) allowed me to prosecute the work (and Blue Mountain work is slow and tedious at best), the route has proved eminently practicable.

In conclusion I would desire to submit for your information the following detailed statement of actual work done since the 5th May, viz.:—

- (1.) Survey of railway route with levels from Dargan's Creek, 86½ miles to 94 miles, near Eskbank, via Reedy Creek; length, 8 miles.
- (2.) Survey of railway route, with levels from Dargan's Creek, 86½ miles to 92 miles 40 chains, via Brown's Creek; length, 4 miles.
- (3.) Survey of traverse route, Dargan's Creek to bottom point of Zig-zag. Plan, &c., submitted for this length; 2 miles 40 chains.
- (4.) Set out and staked centre line over last-named traverse line, with levels and check levels and cross levels; length, 2 miles 30 chains.
- (5.) Prepared comprehensive plan and section of the last-named survey; value, £30.
- (6.) Explored route from Mount Wilson to 3 miles the Richmond side of Mount Tomah, making an aneroid survey of same; length, 17 miles.
- (7.) Traverse survey, Mount Wilson to 6 miles 10 chains, with levels and check levels taken at every chain and change of surface; length, say 6 miles.
- (8.) Centre line set out with curves and levelled 4 miles 50 chains.
- (9.) Prepared plan and section of this survey, which is now submitted.

I have, &c.,

JOHN P. SHARKEY.

No. 53.

The Secretary for Railways to Mr. J. P. Sharkey.

Sir,

24 August, 1888.

Referring to your letter of the 13th instant, addressed to the Honorable the Secretary for Public Works, on the subject of surveying railway route between Richmond and Eskbank, I am desired by the Commissioner to inform you that Mr. Secretary Sutherland has written the following minute relative to this matter:—

"I can do nothing more for the present. I directed Mr. Sharkey to take up the Richmond end in the first instance, as the question of road and train at this point was under consideration. He has not done so; and as I understand the funds authorized have been expended, I cannot approve of additional funds being provided at present."

D. VERNON.

## No. 54.

## Mr. J. P. Sharkey to The Secretary for Railways.

Sir, Mercantile Chambers, 195, Castlereagh-street, Sydney, 28 August, 1888.  
I have the honor to acknowledge receipt of your letter of 24th instant—No. 88-14,684—forwarding for my information copy of a minute written by the Honorable the Secretary for Public Works on the subject of my letter of 13th instant, reporting on survey of railway route between Richmond and Eskbank, from which the following is an extract, viz:—

\* \* \* "I directed Mr. Sharkey to take up the Richmond end in the first instance, as the question of road and train at this point was under consideration. He has not done so." \* \* \*

With reference to this extract, I most respectfully desire to state that I have no recollection whatever of any such direction being given to me by Mr. Sutherland on any occasion whatever, nor have I received any letter or document to indicate that such was the Minister's wish. I must therefore most respectfully submit that there is evidently a misapprehension in regard to the nature of the instructions given to me by Mr. Sutherland on the point in question, as it is obvious that if they were such as indicated in Mr. Sutherland's minute I could not possibly have misconceived or forgotten the purport of same, and it is equally clear that I should not have neglected to carry out the views of the Minister if conveyed to me as stated.

In further vindication of my action in this matter, I desire to point out, for the Minister's information, that I commenced my survey at the point which seemed to me to present the most difficult natural features, and where previous surveys, at heavy cost to the country, had utterly failed to discover any more practicable route than the present Clarence Zigzag. It certainly would have lightened rather than increased my labours and difficulties had I commenced such survey at the Richmond end.

I may be allowed to remind the Minister that in Mr. Whitton's report on the subject of the Richmond and Wallerawang survey special stress is laid on the fact that the summit level on that route rose 200 feet higher than any point on the present Western line; and in my opinion, I considered that if the apparently insuperable difficulties pointed out by Mr. Whitton could be overcome I should be in a much more advantageous position to prove the practicability of my proposed scheme.

I cannot conclude this letter without expressing my unfeigned regret, and, I may perhaps be allowed to add, surprise, that Mr. Secretary Sutherland should have considered for one moment that I could, with my long official experience, have been culpably neglectful of specific instructions, which, if issued, it is needless to state, it would have been my plain duty to have adhered to and carried out to the letter.

I have, &c.,

JOHN P. SHARKEY.

## No. 55.

## Mr. J. P. Sharkey to The Secretary for Public Works.

Sir, Mercantile Chambers, 195, Castlereagh-street,  
Sydney, 3 September, 1888.  
I do myself the honor to request you will be good enough to permit me the use of my plans and sections of the trial survey Richmond to Eskbank.

I have, &c.,

JOHN P. SHARKEY.

Mr. Sharkey has made no plans and sections nor any trial survey of the route from Richmond. I see no objection to his having temporarily the plans he has made, viz, of a survey from Dargan's Creek to Lithgow, and for about 4 miles of road from near Mount Wilson towards Richmond.—C.A.G., 3/9/88.

Received from the Hon. the Secretary for Works:—Plan and Section—1 and 1a Dargan's Creek to B. P. Zig-zag, and 2 and 2a Mount Wilson towards Richmond. To be returned within ten days, or when called for if required earlier.—JOHN P. SHARKEY, 3/9/88.

If they have not been returned, let Mr. Sharkey be asked for them, please.—A.R., 17/9/88. Plans received to-day.—2/10/88.

Richmond, 29 August, 1888.  
DEPUTATION will attend Friday. Please arrange for 11 o'clock.

T. H. F. GRIFFIN.

Please arrange for a deputation on Friday next at 11 o'clock, on railway from Richmond to Lithgow, via Kurrajong.—A.B., 29/8/88. Appoint. Minister has approved.—J.B., 29/8/88.

## No. 57.

## Minute Paper.

Department of Public Works, Sydney, 31 August, 1888.

*Subject*:—Trial Survey from Richmond to Wallerawang.

A DEPUTATION, consisting of Messrs. Bowman, M.P., Donkin, Griffin, Bowen, Holdsworth, and Sharkey, waited upon me this morning with reference to the completion of the trial survey from Richmond to Esk Bank and Wallerawang. Mr. Bowman introduced the deputation, and stated that their object was to ask for the continuation of the survey.

Mr. Griffin stated that they had waited upon me in this matter on the 16th March last to ask that the trial survey might be made. They had heard the survey which was made was taken 200 ft. above the summit level of the Western Line, and that the grades were most severe. They then stated that they believed if the line were properly explored that a better grade could be found at little extra expense. Mr. Sharkey offered to run a trial line over the route they proposed at an estimated expense of £200, and arrangements were made whereby that sum was divided between the people of Richmond and the Department. The estimate was based on the fact that the plans of a previous survey would be available, but it was subsequently found that the original plans were of no assistance, and the work had practically to be done as if no previous information was obtainable, and an entire resurvey would have to be made. It had been completed to a point 3 miles on the Richmond side of Mount Tomah, and it had been proved that the line would not be as stated, 200 ft. above the Western Line; and it had also been demonstrated that a better route could be found for the Lithgow Zigzag, eliminating the severe grades of 1 in 30 and 1 in 40. The money had been well spent, and a further sum was now required to carry the work on to Richmond. They looked upon it as a national undertaking, and that it should be undertaken by the country, as the success of the survey would open up new country and afford a payable route for the carriage of the western traffic. They therefore asked that Mr. Sharkey should be allowed to complete the survey; the distance to be finished was about 21 miles, 9 miles of which, known as Bell's Ridge, was almost a dead letter. A portion of the survey completed proved that whereas the original survey showed 1 in 40, Mr. Sharkey had been able to improve the line and reduce the grades to 1 in 60; and anyone acquainted with railway working would know the practical value of such a reduction. At the present time the largest engines could only take 16 trucks over the mountains, but by Mr. Sharkey's route 32 trucks could be taken in one load, and the saving in working expenses would be enormous.

Mr. Bowman, M.P., stated that he understood a survey was being made for a line from Blacktown *via* Cox's River. They would be glad if the Richmond to Wallerawang survey could be undertaken under the same terms. They were not aware of the principle that was being followed in this case.

Mr. Sutherland: On what principle does Mr. Sharkey propose to finish the survey, and the probable cost?

Mr. Sharkey stated that he did not know the principle to be followed, but he considered he could get a line over the Kurrajong with grades probably as good as he had got on the line further on. The Government owned a large portion of the land, which contained some of the most beautiful sites that existed in the Colony, and he thought that if the line were made the proceeds from the sale alone would pay for the railway; he did not apprehend any serious difficulty of an engineering character. In the continuation of the survey he was so anxious to carry out the work that he was prepared to lose by it, and he had already given up lucrative private employment to carry out the work. He would take it on any terms.

Mr. Griffin stated that the Government owned large areas of land on the proposed route, and if the trains were run a large population would be induced to settle there. A few years back there was no settlement on the Western Mountains, but the advent of a railway had located a population adjacent to the line.

I said that Mr. Bowman had stated that they wished this survey to be done on the same principle as I had agreed to make a trial line from Blacktown to a certain point in the Western district, but that could not be done because that survey was being carried out by Mr. Whitton, and he would not employ Mr. Sharkey. There was a very large quantity of Government land along the proposed route, which it was said was rich in minerals, and the country had a right to know as to what truth there was in this, so that the land might be reserved instead of allowing it to pass into private hands.

Before I could do anything with their survey I should require to know what it would probably cost. Mr. Sharkey had pointed out that only 10 miles of the distance to be traversed passed through difficult country. I was informed in the first instance that £200 would cover the cost of the work.

Mr. Griffin said they counted upon having complete plans of the previous survey, but these they could not obtain, and consequently a resurvey had been made which could not be carried out for £200. They looked upon it as a national work, which should be continued at the expense of the Government. If successful it would enable them to make the Great Western Railway pay—the wear and tear on the Western Line with its severe grades was so severe as to render it a most costly line to work. The leading tyres of engines were worn out in a few weeks, the consumption of coal was abnormally heavy, while the engines could not carry a full load owing to the grades and curves, and in coming down the inclines the engines could not travel at their full speed in consequence of the sharpness of the curves, and he understood that the Traffic Branch were daily complaining of the difficulty and expense of working. They had, therefore, to look at the enormous expense in the way of fuel, repairs to locomotives, and the maintenance on the 1 in 30 and 1 in 33 grades, and the 8-chain curves, and—as he pointed out—fast travelling could not be done, owing to the danger of trains running off the line. They asked that the continuation of this survey might be undertaken as a national work to avoid the expense of this Western Line; and, in addition, the line they proposed passed through country which would furnish traffic of a remunerative character. For instance, if they had this line at the present time its use with the present strike in bringing coal from Lithgow would be invaluable.

Mr. Sharkey said he thought he would be safe in saying that the work could be finished for £500. He would deliver the plans and have the line staked out for that sum.

I stated that, when approving of the work being done in the first instance, I had been anxious to have the surveys commenced from the Richmond end first, so that I might have got the plans of that section, but for that particular part I had got nothing. I believed that that section would pay if we never went further.

Regarding

Regarding the influence of the line in connection with the strike, I stated in passing that its use would probably not be so great as they anticipated, as I had heard on very good authority that all the miners engaged in the coal trade would be brought out in a week's time. I felt bound to say that the Government would be compelled to take a stand to carry on their works, as the railways could not be allowed to stand still and the whole commerce of the country paralysed. The running of the trains would have to be maintained at any cost. I had no desire to interfere in any way with the men, but if they interfered to stop the trains the Government was bound to take a stand in the interests of the whole community, and they would take that stand for the other colonies as well—as the Victorian lines, for instance, would not be allowed to stand still.

Referring again to the object of their interview, I stated that I would have to submit the matter for the consideration of the Cabinet, but would be glad to know if they would be prepared to pay anything towards the extra cost.

The deputation stated they looked upon it as a national undertaking, and did not feel inclined to contribute any further sum towards the cost of the survey.

Mr. Donkin pointed out that it would serve the interests of the Government to make the survey on account of the large amount of Crown lands that would be effected. There was, for instance, 90,000 acres of Government land in the Grose Valley which had been reserved years back for water supply purposes, and had never been cancelled.

I promised to take an early opportunity of submitting the matter to the Cabinet.

JOHN SUTHERLAND.

No. 58.

Memo. from T. Colls, Esq., M.P.

Deputation, Railway route, Richmond to Eskbank.

SOME gentlemen from Richmond are anxious to make an appointment with the Hon. the Minister for Works for a deputation on Thursday next, the 23rd inst., relative to the railway route, Richmond to Eskbank. Their Member, Mr. Bowman, is absent at Singleton.

Appoint 10.30. 23rd May, 10.30 a.m. Alex. Bowman, Esq., M.P., 17/5/89. A very careful statement must be prepared in this case.—J.B., 17/5/89.

No. 59.

*Précis* of papers respecting Trial Survey, Richmond to Wallerawang.

Minute Paper.

*Subject*:—Railway Trial Survey, Richmond to Eskbank.

Department of Public Works, Sydney, 3 June, 1889.

IN September, 1884, the Engineer-in-Chief for Railways submitted plans and sections of a trial survey which had been carried out for a line of railway as above. These showed the lowest grade to be 1 in 40, with curves of 12 chains radius, and Mr. Whitton pointed out in regard to the line that  $4\frac{1}{2}$  miles of tunnelling would be required, several viaducts of from 100 to 200 feet in height, and one of about a mile in length over the Hawkesbury River; further, that the length of the proposed route would be almost the same as that of the line already constructed; and moreover, that its construction would be very costly; also, the summit level was about 200 feet above that of the Western line. No further steps appear to have been taken in the matter until in March, 1888, when a deputation of residents of Richmond district waited upon the Minister (Mr. Sutherland) to urge that a resurvey of this route should be made on the ground that an alternative route to relieve the western traffic was necessary, and that the previous trial survey had been carried out in a very incomplete and hurried fashion, they being convinced that a resurvey would show much easier grades and that at most the cost would not exceed £23,500 per mile. Mr. J. P. Sharkey, who had been formerly employed on the survey of this line under Mr. Whitton, was present with the deputation, and stated it was possible to so improve the line as to get grades of 1 in 50, and curves of 15 chains radius. He further said that the resurvey could be carried out for about £200. Upon the representations then made Mr. Sutherland consented to contribute £100 towards the cost, provided the Richmond people found the other £100, and in consideration of their doing this further consented to Mr. Sharkey being employed to do the work. The sum of £100 having been accordingly contributed by the Richmond people a further £100 was added by the Department, and Mr. Sharkey proceeded to carry out the resurvey. For this purpose he was given access to the plans, &c., previously prepared, and he then complained that these were in such an incomplete state as to be perfectly useless, and that therefore work would have to be again done which he had not contemplated when making his estimate, viz., of £200. His remarks in reference to these plans were exceedingly disparaging to all engaged in their preparation (except himself), but his allegations were totally denied by the officers concerned. Mr. Sharkey however proceeded with the work, and on the 13th August submitted to the Minister plan and section of survey he had made from Mount Wilson for about 4 miles 50 chains towards Richmond, he having previously submitted plans, &c., of survey from Dargin's Creek to the bottom points, Zigzag. This he stated was as far as the funds at his disposal had allowed him to go, and Mr. Sutherland refused to provide anything further. On the 31st August a further deputation waited upon the Minister to urge that funds should be provided for the completion of the survey. They stated that owing to the plans of the original survey being useless an entire resurvey had to be made, and hence the insufficiency of the amount previously estimated, viz., £200. They estimated that a further sum of £500 would be required, but were not prepared to contribute anything further themselves. The Minister promised to submit the matter for the consideration of the Cabinet, but no further action appears to have been taken.

## No. 60.

## Deputation.

## Minute Paper.

*Subject* :—Proposed route Richmond to Esk Bank.

THE deputation respecting the above has been postponed until 6th June. Will the Engineer-in-Chief for Railways please report upon the enclosed?

[Enclosure.]

*Précis.*

## Railway route Richmond to Esk Bank.

On 16 March, 1888, the Honorable the Minister for Works, Mr. Sutherland, granted to a deputation £100 for the survey of the above railway route, the deputation agreeing to find an equal amount. This survey was carried out by Mr. John P. Sharkey, C.E., and was so far successful that a practicable and easy line was surveyed and marked from the bottom points of the Zigzag, near Esk Bank, to near Mount Wilson on the Western Line, which completely cuts out the Clarence Zigzag, and its steep approach of 1 in 33, which extends for 1 mile and 30 chains. The steepest grade adopted by Mr. Sharkey is 1 in 60, and the sharpest curve 12 chains, which can be enlarged to 20 chains radius.

From Mount Wilson the survey was successfully continued, and the line explored for 17 miles towards Richmond, the steepest grade on this length being 1 in 63, and the sharpest curve 12 chains radius. At this point the money in hand (£200) was expended, and the work discontinued.

This route strongly recommends itself to the public, as it would effectually ease the traffic on the Western Railway, without cutting out any important traffic centre; would admit of very much increased speed; would allow of forty-five loaded trucks being drawn by one engine, fifteen being now the limit; would permit of coal and other heavy freights being carried between Lithgow and Sydney at one-half the present rates; would be worked at one-sixth the cost of the existing mountain section; would reduce the distance, time, and inconvenience of travelling. In fact it would pay for itself in a few years by the facilities it would afford to traffic.

There is an abundance of unoccupied Crown land on this route (the survey principally passes through such) the sale of which would go far to pay the cost of construction.

A deputation will wait on the Honorable the Minister for Works, on Thursday, the 23rd inst., at 10.30 a.m., having for its object the granting of £500 for the continuance of the survey, and your presence at such deputation is most respectfully solicited.

T. H. F. GRIFFIN,  
Hon. Secretary, Richmond-Esk Bank Railway League,  
(Per J.L.),  
20 May, 1889.

A. Bowman, Esq., M.P., Parliament House.

NOTE.—The deputation will meet at the Minister's waiting-room at 10 a.m. sharp, on the 23rd inst., for the purpose of consultation.

## No. 61.

## Minute by The Acting Engineer-in-Chief for Railways to The Under Secretary for Public Works.

*Subject* :—Proposed route from Richmond to Esk Bank.

Department of Public Works, Railway Construction Branch, Sydney, 6 June, 1889.

I HAVE the honor to make the following report on the accompanying *précis*, plans, and sections.

These latter, I find, consist (1) of a plan and section of a deviation of the present line between 86 miles 60 chains and 92 miles, to avoid the Clarence Tunnel, and (2), a plan and section of a portion of a trial line, 4 miles 50 chains in length, junctioning with the main line at Mount Wilson Siding and purporting to form part of a line from that point to Richmond.

The length of the proposed deviation is 2 miles 30 chains, while that of the main line for which it is to be substituted, is 5 miles 20 chains, so that the shortening of the line effected is 2 miles 70 chains. The heavy gradients on the main line of 1 in 33 are thus avoided and a grade of 1 in 60 substituted.

Mr. Sharkey must be perfectly well aware that if there is any merit in the discovery of this line, he himself can lay no claim to it.

The idea of shortening the line and cutting out the heavy gradients near the Clarence Tunnel, was suggested more than four years ago, and on 16th of March, 1886, the Engineer-in-Chief reported to the Minister, condemning the proposal as being too costly. [*Vide* report annexed.]

The advantage of abolishing the 1 in 33 gradient in this way has been over-estimated.

It is claimed that the new line has a gradient of 1 in 60, and that consequently engines would be able to draw three times the load they do at present. The advantage of the gradient of 1 in 60 as against 1 in 33 is as 2 to 1, not 3 to 1.

This gradient of 1 in 60, however, terminating as it does at the lower point of the Zig-zag, would have no effect upon determining the loads to be drawn, for the gradient immediately following it is 1 in 42, and this will still be the ruling gradient on this part of the line, not 1 in 60, and the advantage in its favour as compared with that of 1 in 33, is as 19 to 15 only.

It will, I think, scarcely be claimed that it would be worth while to incur the expenditure mentioned in the Engineer-in-Chief's report, viz., £400,000, or even half that sum, in order that the train loads may be increased from 15 to 19 waggons over this part of the line.

The other plan and section show a length of 4 miles 50 chains of the proposed line to Richmond, and thus a fractional part only of the whole distance.

No conclusion whatever can be arrived at from their inspection, and it would be useless to attempt to report on Mr. Sharkey's survey before its completion from end to end, the advantage of carrying out which is still very doubtful.

Mr. Sharkey has now furnished plans for 7 miles only of the line which he undertook to survey, and of this length nearly 2½ miles were entirely unnecessary, as he has only given information already in possession of the Department.

I also beg to refer the Minister to the reports of the Engineer-in-Chief of 27th April and 9th May, 1888, on Mr. Sharkey's suggested improvement of the trial survey from Richmond to Wallerawang. I may mention for the Minister's information that the greatest attention is devoted to the improvement of railway trial surveys before permanently staking a line, and this course would be pursued in the case of the Richmond-Wallerawang Line, if it be decided to construct a railway.

H. DEANE.

[Enclosure.]

[Enclosure.]

## Minute by The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch,  
Engineer-in-Chief's Office, Sydney, 16 March, 1886.

Subject:—Proposal by Mr. W. S. Targett, M.P., to avoid the Zig-zag on the Great Western Line by a deviation via Dargan's Creek to Bottom Points.

THE tunnel proposed on the Western Line from Dargan's Creek to the lower points of the Lithgow Zig-zag will be about 2 miles in length, and if constructed for a double line (which no doubt it should be) will cost about £400,000. This would only dispense with  $1\frac{1}{2}$  mile of incline of 1 in 33, and 2 miles 35 chains of 1 in 42, leaving still to be worked 17 miles of 1 in 30 and 33, and about 8 miles of 1 in 40 and 42.

I therefore do not consider that it would be judicious to incur such an outlay for so small an improvement in the line.  
JOHN WHITTON.

## No. 62.

## Minute by The Secretary for Public Works.

Trial Survey—Richmond to Wallerawang.

Sydney, 6 June, 1889.

A DEPUTATION consisting of Messrs. Bowman, Colls, and Hurley, M's.P., with the following residents of the Richmond district, viz., Mr. J. E. Onus (Mayor of Richmond), Messrs. M. M'Mahon, T. Griffin, and J. P. Sharkey, waited upon me to-day to request a grant of £509 to complete a resurvey of the above line, which had already been partly carried out by Mr. Sharkey.

Mr. Bowman, M.P., introduced the deputation and stated their object. He said that some time ago the sum of £200 was subscribed, one-half by the residents and the other by the Government, to carry out this work, and the further sum of £500 was now required to complete it. They had made the same request to Mr. Sutherland, who, however, left office before deciding whether to give it or not.

I then asked, "What does your deputation represent? Has there been any public meeting? What has been done lately to bring about this further deputation? Has there been any expression of opinion from the inhabitants?"

Mr. Griffin replied that nothing further had been done. Mr. Sutherland had promised that the matter should be laid before Cabinet, and they had waited so long without hearing anything further that they had decided to see me. He further said that the proposed line had a great deal to recommend it; it was superior in every way to the existing line. The original survey disclosed a very bad line, in fact he said it was "an inspired line," the surveyors were told what kind of a report would be acceptable. Mr. Sharkey consequently found that the plans were useless for the further survey and, therefore, he had to make an entirely new survey. He had eliminated the 200 feet above the Western Line, had obtained a line from the bottom points of the Zig-zag, which completely cut out the Clarence Zig-zag and its steep approach of 1 in 33. The steepest grade Mr. Sharkey had adopted was 1 in 60, and the sharpest curve 12 chains radius. For another £500 he proposed to get a good line throughout. The Government would thus get for £700 what had previously cost £2,500.

Mr. Hurley, M.P., wished to point out that the deputation represented not merely the Richmond district, but the whole of the country, the work he considered was a national one, and the question of relieving the great tax upon the Western Line was one of immediate necessity. The sum asked for to complete the survey was a small one.

In reply, I said the request of the deputation involved a principle I could never recognize, viz., for the Department to contribute a sum in order to show that a survey already made by the Department was wrong. I found that Mr. Sutherland had consented to advance £100, but I was bound to say that I should never have done such a thing, I should oppose a proposal of this kind in every possible way. If the deputation wished to advocate the line as a loop line from Richmond, that was a practical matter which could be taken into consideration. The Railway Commissioners were the proper persons to deal with such a matter, they being unbiassed. I said I would induce the Commissioners to go into the matter and express an opinion as to the probability of the proposal as a future line. If the opinion was favourable, I would then go into the question of a survey more fully. But this survey would have to be done by the Department. I could never admit that the officers of the Department were not competent to do the work, and I must, therefore, refuse point blank to give one penny towards outside engineers preparing competitive surveys. I was sure that we had officers in the Department who were quite as competent as those outside, and I did not see how any Minister, with any self-respect or regard for the reputation of his officers, could do otherwise.  
BRUCE SMITH.

“Copies of all plans, sections, and reports of Mr. Surveyor Cumming on  
“Mr. Gipps’ proposed line of railway between Blacktown and Blayney,  
“together with all documents bearing on the subject, addressed to the  
“Minister for Works.”

(Mr. Kidd.)

SCHEDULE.

NO.	PAGE.
1. Petition from the inhabitants of Blayney to the Hon. the Minister for Public Works, urging that a trial survey be made of a line from Blacktown to Blayney, via Cox’s River and Rockley.....	2
2. Minister for Lands, forwarding petition from residents of Burragorang, asking him to use all endeavours to further the project. 11 May, 1888.....	2
3. Engineer-in-Chief for Railways to Secretary for Public Works that he will, if considered desirable, send an officer to explore the country, and report in detail as to the practicability of the route. 19 May, 1888.....	3
4. Secretary for Public Works.—Report of deputation asking for an examination of the country to be made. 16 May, 1888.....	3
5. Mr. F. B. Gipps to the Engineer-in-Chief for Railways, asking on what conditions he was expected to give his information on this line. 27 August, 1888.....	4
6. Secretary, Construction Branch Department, to Mr. F. B. Gipps, requesting him to call upon the Engineer-in-Chief. 30 August, 1888.....	4
7. Mr. F. B. Gipps to Engineer-in-Chief for Railways, agreeing to accompany the Government Surveyor and show him the route for a fee of £5 5s. per diem, inclusive of all personal expenses. 3 September, 1888.....	4
8. Secretary of Railway Construction Department to Mr. F. B. Gipps, to state definitely the terms upon which he would be willing to point out the route of the survey. 6 September, 1888.....	4
9. Mr. F. B. Gipps to the Engineer-in-Chief for Railways, stating his readiness to guide the Government Surveyor over the line for a fee of £5 5s. per diem, and to accept whatever payment might be made as a portion of his full claim of £300 for discovery of the route. 7 September, 1888.....	4
10. Secretary for Railways to Mr. F. B. Gipps, informing him that the Secretary for Public Works did not recognize his claim for £300. 19 September, 1888.....	5
11. Mr. F. B. Gipps to Secretary for Public Works, making a definite offer to accompany the Government Surveyor over the route for £5 5s. per diem, inclusive of all personal expenses. 21 September, 1888.....	5
12. Engineer-in-Chief for Railways to Secretary for Public Works, reporting upon the result of his interview with Mr. F. B. Gipps, as to his terms for pointing out route, and stating that Mr. Surveyor Cumming had been waiting for Mr. Gipps for more than a fortnight to commence the exploration. 25 September, 1888.....	5
13. Hon. Secretary of Blacktown-Blayney Railway League to Under Secretary for Public Works, asking to arrange for Minister to receive deputation. 14 September, 1888.....	5
14. Secretary for Public Works—report of deputation urging that a survey of the proposed route be at once undertaken. 25 September, 1888.....	5
15. Secretary for Public Works to Engineer-in-Chief for Railways, stating that he had agreed to pay Mr. Gipps £5 5s. per day, including all expenses, for his services in showing the route, and that the service was to be commenced at once. 25 September, 1888.....	6
16. Mr. F. B. Gipps to the Engineer-in-Chief for Railways, asking to be informed when he can meet the Government Surveyor, and arrange to commence operations. 25 September, 1888.....	6
17. Secretary of Railway Construction Department to Mr. Gipps, informing him that Mr. Surveyor Cumming, who was to accompany Mr. Gipps on the exploration, was at present engaged on important work on Marrickville-Liverpool Line, but would be ready to start in a few days. 27 September, 1888.....	6
18. Secretary of Railway Construction Department to Mr. F. B. Gipps, stating that Mr. Surveyor Cumming would be in readiness to accompany him on 3rd proximo. 28 September, 1888.....	7
19. Mr. F. B. Gipps to the Engineer-in-Chief for Railways, stating that he had seen and arranged with Mr. Cumming to start on the exploration. 29 September, 1888.....	7
20. Engineer-in-Chief for Railways to Secretary for Public Works, forwarding report of Mr. Surveyor Cumming upon the line recommended by Mr. Gipps, and stating that he could not advise that a trial survey be made of the line. 6 October, 1888.....	7
21. Mr. Jno. Redshaw to Railway Commissioners, suggesting the desirability of an alternative route from Liverpool, via Hoxton Park, Luddenham, and Mulgoa, crossing the Nepean River at Bains. 7 November, 1888.....	8
22. Mr. James Inglis to the Secretary for Public Works, asking him to arrange to receive a deputation, re proposed railway. 30 May, 1889.....	8
23. Secretary for Public Works—report of deputation asking that a trial survey be made. 6 June, 1889.....	9

## RAILWAYS.

## No. 1.

## Petition from the Inhabitants of Blayney.

To the Honorable the Minister for Works,—

The humble Petition of the Inhabitants of Blayney, in Public Meeting assembled,—

SHOWETH :—

1. That your humble Petitioners have reason to believe that the inadequacy of the present single line of railway over the Blue Mountains to the present and rapidly increasing traffic on the Great Western Railway is fully recognized, and that the question of duplicating the present line, on the one hand, or the construction of the second line by some other route on the other, must shortly be decided.

2. That, in order to find a line which would answer the requirements of the traffic, and ease the mountain line of the present strain, a survey was made from Emu to Rylstone, via Colo Valley, thence to tap the Great Western line at Dubbo. This line, known as the Colo Valley route, your Petitioners learn, is estimated to cost £3,500,000, by one authority, and £7,000,000 by another.

3. That, since the Colo Valley survey was made, a competent engineer has explored a line from Blacktown to Blayney, *via* Cox's River and Rockley, which appears to give considerable advantages over the Colo Valley route, and gives a section showing no grade greater than 1 in 70, and only one tunnel of 300 yards in length, and the estimated cost is only £750,000.

4. That the actual cost to the country of the Cox's River route is practically reduced to nothing, as the line would pass quite close to the Jenolan Caves, Rockley, Tuena, Burruga, Trunkey Creek, and would thus do away with the necessity for the contemplated lines from Tarana to the Caves, and Perth to Rockley, besides bringing the mining centres referred to within reach of a railway.

5. That the Cox's River route, having its junction at Blayney, would answer the purpose of easing the mountain line of the heavy traffic, better than the Colo Valley route, junctioning at Dubbo, as all the traffic coming from the Western line, together with all from the feeders of that line (*i.e.*, the Molong, Cowra, and Forbes lines), concentrates at Blayney, already a junction of the Cowra line; whereas at Dubbo the only traffic which could be dealt with and diverted from the present mountain line would be that from Bourke to Dubbo, thus leaving the present mountain line still to carry the bulk of the traffic of the Great Western line and all its feeders.

6. That the following gives, in a tabulated form, a comparison of the two routes as relieving lines for the mountain traffic :—

Traffic	Colo Valley to Dubbo.		Cox's River to Blayney.
	Townsend's.	Whitton's.	Gibbs'.
Distance .....	214 miles.	214 miles.	150 miles.
Cost .....	£3,500,000.	£7,000,000.	£750,000.
Rate per mile .....	£16,192.	£33,000.	£5,000.
Available for what traffic .....	Bourke to Dubbo only.		Bourke to Blayney. Molong to Orange. Forbes to Orange. Cowra to Blayney.
Tunnels .....	20½ miles.	20½ miles.	300 yards.
Grade—not greater than.....	1 in 100.	1 in 100.	1 in 70.

Your humble Petitioners would pray that you will be pleased to take the foregoing into your most favourable consideration, and cause a trial survey to be made under the direction of your officers, to see whether a route, as represented, can be obtained, with a view to the permanent survey and construction of the railway line, if such is found to be the case.

And your Petitioners will, as in duty bound, ever pray.

On behalf of the meeting,  
 JACOB RUSSART,  
 Mayor of Blayney.

Minister would be glad to have a report, 15/5/88.  
 (Commissioner), B.C., 15/5/88.

The Engineer-in-Chief.—A.R., (for Com-

## Petition from certain Electors.

To the Honorable Thomas Garrett, M.L.A.,—

Sir,

We, the undersigned electors, respectfully request that you will use all your endeavours to further the project of the proposed railway through Burragorang, and we will continue the solid support we have always accorded you.

[Here follow eighty-nine signatures.]

Forwarded to the Minister for Works for his favourable consideration.—T.G., 11/5/88.

## No. 3.

## Minute by The Engineer-in-Chief to The Secretary for Public Works.

*Subject* :—Survey from Blacktown to Blayney.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,  
Sydney, 19 May, 1888.

It is possible that a practicable line of railway may be found from Blacktown to Blayney, but nothing has yet been done to justify any statement either as to its cost or gradients.

Aneroid readings only have been taken, and the line, I am informed, explored; but that is all.

A sketch was shown to me on a scale of 5 miles to an inch horizontal, and 500 feet to an inch vertical, which, of course, was useless either to determine an estimate or gradient.

I have heard that the district through which this line is projected abounds in minerals and timber of excellent quality.

If the Minister considers it desirable I will send an officer from this Department to explore the country and report more in detail than has yet been done as to the practicability of the route and the mineral value of the district through which it is proposed to carry the line before a trial survey be undertaken.

JOHN WHITTON.

Railways.—J.B., B.C., 21/5/88.

## No. 4.

## Minute by The Secretary for Public Works.

*Subject* :—Railway—Blacktown to Blayney.

A DEPUTATION, consisting of Messrs. Jago Smith, Garland, Jeannerett, Campbell, and Penzer, M.S.P., Gibbs, and others, waited upon me this morning with reference to the construction of a line from Blacktown to Blayney as an alternative line over the Blue Mountains.

It was pointed out that this line would leave Blacktown and pass through easy country to Penrith. Near Penrith it would cross the Warragamba and Cox Rivers, and then by a gradual ascent pass up the ranges. The rivers would be crossed by bridges of one span. The line would then pass by way of Colong Gap, Bendoc Pass, and Werong to Shooter's Hill, where it would attain its greatest altitude, but in no instance would the rise be severe, the greatest being equal to 75 feet per mile or 1 in 70. Section and rough plan of country were produced and are herewith.

Mr. Gibbs stated that the span of the bridge over the Warragamba would be about 600 feet, and it would be about 120 feet above water level. He could not certify that the figures given in the section would be strictly correct. He had only made an examination of the country, and his observations were taken with the aid of an aneroid barometer. It was impossible for him to state cost, but he thought it would not be more than £10,000 per mile in any part with the exception of the bridges and the entrance to the Warragamba. He could only draw general conclusion from his examination, but he was convinced there was nothing to prevent the line being made, and apparently all grades would be remarkably easy. As the rise was gradual from the Cox's River, the range itself threw out a lot of lateral spurs, and if required the grades could be reduced to 1 in 90 instead of 1 in 75, so that the line could be made more easily than the line submitted.

One great reason in favour of the line was that it would be payable from the start. Directly it went over the Warragamba it entered a large coal-field—two seams had been seen, one 12 the other 5 feet. Beyond that the line tapped one of the finest forests in the Colony, consisting of cedar, mahogany, blackbutt, &c., and in addition there was splendid agricultural land. At Yerong and Shooter's Hill there were indications of gold and silver. At the present time the route was practically unknown, owing to the difficulty of traversing it, but the land passed through, if made available, would become valuable, and as it was Crown lands the State would greatly benefit. They proposed that the Crown should reserve the land for 2 or 3 miles on either side of the line.

The line would pass within 12 miles of the Jenolan Caves at Shooter's Hill, and would therefore attract a large passenger traffic. There was excellent water all along the route. Mr. Penzer, M.P., pointed out the economic advantages of the line in allowing three times the load being hauled than was now taken on the Western line. They thought the matter of so much importance that a trial survey should be given, especially in view of the fact that £12,000 had been spent in making a survey up the Colo Valley.

I informed Mr. Penzer that his figures were not accurate, and the amount that had been spent had been well spent. Mr. Smith, M.P., pointed out a survey would not be difficult or costly, as the route could be ridden over. They asked that I would institute some inquiry, and if I was satisfied as to the merits of their case I would order a trial survey.

I stated that I believed we should have a trial survey in this district, but I could not make any promise. I would have to see Mr. Gibbs further after I had consulted Mr. Whitton. The Government should have full information as to all parts of the country, and as there was a large area of Crown lands in the locality that this proposed line would affect, the survey might be made to serve a double purpose, viz., to show the practicability or otherwise of the line and the nature and value of the Crown lands. Personally I was favourable to the country being examined, especially in view of the new light thrown on the subject. When it was first brought under attention the Cabinet was unfavourable, but if it would not cost too much I would have it reconsidered. The question of reserving land would also have attention. I should like to see Mr. Whitton in the matter when he has had time to look into it.

JOHN SUTHERLAND,

16/5/88.

The Engineer-in-Chief, B.C. Received.—W.H.Q., 23/5/88. I have already reported on this matter on another paper (*vide* 88-1,276).—J.W., 28/5/88. Under Secretary, B.C.

## No. 5.

F. B. Gipps, Esq., to The Engineer-in-Chief.

Sir,

61, Castlereagh-street, Sydney, 27 August, 1888.

With reference to my proposed Blacktown and Blayney line, which I have previously had the honor to submit to your attention, as it has been intimated me from your office that Mr. Cumming is now at liberty to examine the country it would traverse with me, I should be obliged if you would inform me on what conditions I am expected to give my information on this line, and to assist Mr. Cumming in its examination. When a deputation first brought it to the notice of the Honorable the Minister for Works I asked the sum of £300 for a flying survey of it, and I am now prepared to accompany Mr. Cumming, and point out the position of the line on those terms, subject to conditions you may deem fit to impose in the interests of the public.

I have, &amp;c.,

FREDK. B. GIPPS.

## No. 6.

The Secretary of Railway Construction Department to F. B. Gipps, Esq., C.E.

Sir,

30 August, 1888.

In reply to your letter of the 27th instant, I have the honor, by the direction of the Engineer-in-Chief, to request that you will have the goodness to call at this office on Monday next, the 3rd proximo, at 11 o'clock a.m.

I have, &amp;c.,

W. H. QUODLING,

Secretary.

## No. 7.

F. B. Gipps, Esq., C.E., to The Engineer-in-Chief.

Sir,

61, Castlereagh-street, Sydney, 3 September, 1888.

With reference to your request to be advised as to the terms, I would guide your surveyor over my proposed railway line from Blacktown to Blayney, I beg to inform you that I will agree to accompany him for such purpose on account of a fee of £5 5s. daily, inclusive of all personal expenses, hire of horses, &c.

I have, &amp;c.,

FREDK. B. GIPPS.

## No. 8.

The Secretary, Railway Construction Department, to F. B. Gipps, Esq., C.E.

Sir,

6 September, 1888.

With reference to your letter of the 3rd instant, I am directed by the Engineer-in-Chief to inform you that he is not quite clear as to the terms upon which you would be willing to point out the route of the survey from Blacktown to Blayney.

He understood you to say that you might point out this line without making any survey for £300, which would include all claims in full which you might consider that you had against the Department.

In your letter of the 3rd instant, however, you state that you would be willing to accompany the surveyor for a fee of £5 5s. a day, inclusive of all personal expenses, hire of horses, &c.

I am further directed to say that the Engineer-in-Chief considers that it would be more satisfactory if the terms were made clearer in a further communication from you.

I have, &amp;c.,

W. H. QUODLING,

Secretary.

## No. 9.

F. B. Gipps, Esq., C.E., to The Engineer-in-Chief.

Sir,

61, Castlereagh-street, Sydney, 7 September, 1888.

In reply to your letter, No. 88-692, of the 6th instant, requesting for clearer terms relative to service in connection with the survey of my proposed Blacktown and Blayney railway route, I beg to inform you that I am prepared to guide your surveyor over this line for a fee of five guineas per diem, inclusive of all personal expenses, and to accept whatever payment may be so made as a portion of my full claim for £300 for discovering such route, should it be found practicable.

I have, &amp;c.,

FREDK. B. GIPPS,

Civil Engineer.

Mr. Gipps it appears considers that he has a claim upon the Department of £300 for his previous services in this matter. As I am not aware that Mr. Gipps was in any way authorized to make the original exploration of this line, but so far as I know undertook the duty as a pure speculation, I shall be glad to know if the Minister considers Mr. Gipps should be engaged to point out the line recommended by him on the terms stated in his letter of the 7th instant.—J.W., 10/8/88. Under Secretary, B.C.

Railway.—D.C.McL. (*pro* U.S.), B.C., 12/9/82. For Minister.—Ch.A.G., 13/9/88. Inform that he has no claim for £300.—J.S., 15/9/88.

## No. 10.

The Secretary for Railways to F. B. Gipps, Esq., C.E.

Sir, Railway Department, Sydney, 19 September, 1888.

With reference to your letter of the 7th instant, in which you offer to guide a Government Surveyor over your proposed Blacktown and Blayney route for £5 5s. per diem, and to accept whatever payment may be made as a portion of your claim of £300 for discovering such route, I am desired by the Commissioner to inform you that the matter has been brought under the attention of Mr. Secretary Sutherland, who decides that you have no claim for £300.

I have, &c.,  
D. VERNON,  
Secretary for Railways.

## No. 11.

F. B. Gipps, Esq., C.E., to The Secretary for Public Works.

Sir, 6, Castlereagh-street, Sydney, 21 September, 1888.

In reply to yours of the 19th instant, referring to survey of line from Blacktown to Blayney, I have the honor to make a definite offer to accompany your surveyor over the line for £5 5s. per diem, including all my personal expenses.

I make this offer without prejudice to your position in regard to any claim I may have in respect to the discovery of this route.

I have, &c.,  
FREDK. B. GIPPS,  
Civil Engineer.

## No. 12.

Minute by The Engineer-in-Chief.

*Subject* :—Blacktown to Blayney Survey.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,  
Sydney, 25 September, 1888.

By request of the Minister, I had an interview with Mr. Gipps with reference to his pointing out the suggested line from Blacktown to Blayney.

I offered Mr. Gipps, £5 5s. per day, to include all his expenses, such as horses, camp equipment, hotel expenses, &c., and this he accepted conditionally, as part payment of the £300, which he said had been promised to him by the Minister. As I knew nothing of this matter, I forwarded Mr. Gipps' letter to the Minister, who states that Mr. Gipps has no claim for £300. In his letter of the 21st instant, Mr. Gipps repeats his claim for this amount.

Mr. Surveyor Cumming has been waiting in town, for more than a fortnight, to accompany Mr. Gipps; but, in consequence of the claim made by him, the exploration has not been commenced.

JOHN WHITTON.

The Secretary for Public Works.

## No. 13.

The Hon. Secretary, Blacktown-Blayney Railway League, to The Under Secretary for Public Works.

Dear Sir, Blayney, 14 September, 1888.

I have the honor to request that you will kindly inform me at what hour on Tuesday, 25th September, it would be convenient for the Honorable the Minister for Works to receive a deputation re the proposed railway line from Blacktown to Blayney *via* Rockley, Jenolan Caves, &c.

I have, &c.,  
C. R. BARRY,  
Hon. Secretary, Blacktown-Blayney Railway League.

Submitted.—J.B., 19/9/88. Say Friday week.—J.S., 19/9/88. Telegraph.—J.B., 19/9/88.  
Hon. Sec., Blacktown-Blayney Railway League, 19/9/88.

(*By telegram*) :—Cannot Minister receive deputation Tuesday 25th, instead of Friday.—C. R. BARRY, Hon. Secretary, Blacktown-Blayney Railway League.  
Minister approves. Say Tuesday, at 2 p.m.—J.B., 20/9/88.

## No. 14.

Minute by The Secretary for Public Works.

*Subject* :—Railway from Blacktown to Blayney.

Department of Public Works, Sydney, 25 September, 1888.

A DEPUTATION from Blayney was introduced to me to-day by Mr. Garland, M.P., with reference to the survey for a proposed railway from Blacktown to Blayney. Messrs. Fremlin, Shand, Glasson, and Gipps were present.

It

It was represented that the line proposed was a most desirable one to undertake. It would relieve the existing Western Line and provide, so far as gradients were concerned, a much better line for working the traffic. In addition, it would open up a large area of rich country which had large resources in the way of minerals and timber. Three routes were projected for the relief of the Western Line, *i.e.*, the Colo Valley, the line *via* the Kurrajong, and the present route advocated, and they believed, that taking into consideration the cost of construction, the nature of the country passed through, and the grades, that the Blayney-Blacktown route would be found preferable to any other. It was stated that interested parties had recently been opening up coal measures near the junction of the Cox and Warragamba Rivers. One seam of good coal had been touched which was 20 feet thick, and 6,000 tons per week could be sent from the one mine alone.

In reply, I stated that when this matter was first brought before me it was stated that the proposed route would traverse rich mineral districts and run through large timber reserves. I had asked Mr. Gipps at that time what the cost of a survey would be, with a view of submitting it to my colleagues and to advise the work should be done as a national matter, to know the nature of the country the proposed line would pass through. Mr. Gipps then stated that the cost would be about £300. The question had been discussed in the Cabinet, but nothing had been done, because Mr. Whitton would not recognize any survey made by Mr. Gipps; but as I wished the proposition to have full consideration Mr. Gipps was asked what fee he would require to go over the ground with Mr. Whitton's surveyor, and point out his route, as I recognized that Mr. Gipps should have some recompense in the matter; but the question of his full recompense was one which would have to be settled hereafter, when the merits of his line were decided; but I made no promise to Mr. Gipps in the matter. No doubt the country would not be ungrateful if the line turned out so successful as he anticipates. If Mr. Gipps was prepared to go away to-morrow and accompany the surveyor, and point out his line, I would be willing to allow him £5 5s. per day, including all expenses, for his trouble; but no consideration could be given at the present time to any larger claim, nor could any promise be made.

I was anxious to have a line surveyed as I wished to ascertain the nature of the country and its resources, so that the land could be reserved at any time for the people, rather than to allow it to be taken up by private speculators, and the whole of the advantages pass into private hands.

Mr. Gipps stated that he was quite prepared to accept the Minister's proposal, and he had intimated this in his last letter, dated the 21st instant.

I stated that that was all I required, and Mr. Whitton would be informed at once, so that the surveys could be at once undertaken.

JOHN SUTHERLAND.

F. B. Gipps, Esq., C.E., to The Engineer-in-Chief.

Sir, 61, Castlereagh-street, Sydney, 29 September, 1888.

I have the honor to acknowledge the receipt of your letters of the 27th and 28th instant respectively, and with reference thereto to inform you that I have arranged with Mr. Cumming to start with him on Monday next for the purpose of examining my proposed line from Blacktown to Blayney.

I have, &c.,  
FREDK. B. GIPPS,  
Civil Engineer.

Mr. Alexander.—W.H.Q., 1/10/88. Mr. Cumming left with Mr. Gipps last Monday, the 1st inst.—S.H.A., 2/10/88.

No. 20.

Minute by the Engineer-in-Chief.

Subject :—Proposed Railway from Blacktown to Blayney, suggested by Mr. Gipps.—Length, about 152 miles.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,  
Sydney, 6 November, 1888.

As directed by the Minister, I instructed one of the surveyors in my department (Mr. Cumming) to accompany Mr. Gipps over the line recommended by him, and to prepare a report on the practicability of carrying it out at the cost and with the gradients named by Mr. Gipps.

One deputation stated to the Minister that the cost would not be more than £5,000 per mile, while another said £10,000 per mile, and that the worst gradient throughout the entire length would not be less than 1 in 70.

From Mr. Cumming's report, which I enclose, the cost per mile would, I consider, far exceed the larger amount stated, and the gradients for a considerable distance would be more severe than those over the existing Western railway.

Up to the River Cox, a distance of 37 miles from Blacktown, Mr. Cumming considers that easy gradients can be got; but from this point commences the ascent of the Kowmung Range. From 37 miles, the crossing of the Cox River, to 39 miles, the aneroid readings show an incline of 1 in 40; from 39 miles to 41 miles, 1 in 25; from 41 to 42 miles, 1 in 53; from 42 miles to 46 miles, 1 in 35; from 46 miles to 51 miles, level; from 51 miles to 57 miles, 1 in 63; from 57 miles to 65 miles, 1 in 70; and from 65 miles to 71 miles, 1 in 31.7.

In addition to these steep and undesirable gradients, I gather from Mr. Cumming that the works would be of a very expensive character; but this could only be determined by making a proper survey.

I cannot advise that a trial survey be made of this proposed line, as the information already obtained is sufficient to show that the works would be of a very costly character, and the gradients extremely objectionable.

The Secretary for Public Works.

JOHN WHITTON.

[Enclosure.]

REPORT on Mr. Gipps' Proposed Railway from Blacktown to Blayney.

Sir, 26 October, 1888.

I have the honor to report that I have been with Mr. Gipps over his proposed railway from Blacktown to Blayney.

The line goes nearly straight over easy country to the Nepean; crosses that river about a mile above the junction with the Warragamba at about 18 miles from Blacktown; crosses the Warragamba at 20 miles; runs along the north-west bank of the Warragamba and Cox's River, crossing the latter at 37 miles; follows a long range, forming the watershed between the Kowmung and Butcher's Creek to the main dividing range at 77 miles; follows the main dividing range to Shooter's Hill at 87 miles; thence runs along the range forming the watershed between the Abercrombie and Macquarie Rivers to Blayney. The total distance, measured on the county map, is about 152 miles.

The line crosses the Nepean at right angles; the viaduct will be about 480 feet in length and 120 feet in height. The viaduct over the Warragamba will be about 600 feet in length and 90 feet in height, and will probably require to be built on a curve. The crossing of the Cox's River is nearly square, and will require a viaduct about 600 feet long and about 30 feet high; the foundation of these viaducts is sandstone rock.

A tunnel, from 40 to 50 chains in length, will be required between the Nepean and Warragamba Rivers.

The total rise from Blacktown to the crossing of the Cox's River is about 150 feet; easy grades can be got up to this point. From the Cox's River, at 37 miles, to the Little Plains, at 71 miles, the total rise is 3,450 feet. Assuming the range to rise uniformly, this will give a grade of 1 in 52; unfortunately the range rises very irregularly;—the height at the river at 37 miles, is 150 feet; at 39 miles, 380 feet; at 41 miles, 800 feet; at 42 miles, 900 feet; at 46 miles, 1,500 feet; at 51 miles, 1,500 feet; at 57 miles, 2,000 feet; at 65 miles, 2,600 feet; at 71 miles, 3,600 feet. It is very evident that even with 1 in 40 grades, the formation will be considerably below the summit of the range for the greatest part of this distance.

distance. The cost of these 35 miles will be very great, as the slopes of the range are made up of spurs and deep ravines, requiring heavy cuts and banks, and probably short tunnels and viaducts. From 73 miles to Blayney the range is more level and the slopes smoother. The highest level is on the main dividing range from 77 miles to 93 miles (about 4,000 feet above sea level). The height at Blayney is 2,800 feet.

From Blacktown to the Nepean the route is through easy suburban country, the ranges being low and flat, and nearly all under cultivation; the next 2 miles will be very expensive, requiring two viaducts and a tunnel. The Warragamba is remarkably straight from the crossing at 19 miles to 27 miles, and its banks have very regular slopes, averaging from 1 to 1, to  $1\frac{1}{2}$  to 1, as the banks are so steep the hollows and creeks will require viaducts or retaining walls. There is undoubtedly an immense coal-field on the Cox's River, as a 20-foot seam crops out in several places, from 30 to 36 miles. From 27 miles to 37 miles the banks of the river for about half-a-mile on each side, are flat, and nearly all cultivated.

The first 30 miles of the line will, I think, pay as a branch line, as it would open up an immense coal-field, and a great area of valuable land suitable for farm, orchard, and country residences.

The whole of the route is over useful country, except about 9 miles along the Warragamba River, and nearly divides the country between the Great Western and Great Southern Railways, thus opening up an immense area of good grazing, farming, and mining country, with plenty of good timber.

The fate of the proposed line depends on whether a practicable line can be got in the ascent of the eastern slope of the main dividing range, from 37 miles to 72 miles; this can only be decided by a trial survey of this portion.

I have, &c.,

JOHN CUMMING,  
Railway Surveyor.

Engineer-in-Chief, Railway Department, Sydney.

#### No. 21.

J. Redshaw, Esq., to The Railway Commissioners.

Care of Australian Mutual Provident Society, 87, Pitt-street,

Gentlemen,

Sydney, 7 November, 1888.

During a recent visit in the country I had brought under my notice by the inhabitants about Bringelly, what is considered to be an oversight on the part of the railway authorities, and which, from personal knowledge and other reasons, I consider should receive early attention.

In the proposals for new lines of railway is one branching off at Blacktown, and thence, I think, to Blayney. This line would, for a considerable distance, run parallel about 2 miles distant from the present Western line, and would cross the Nepean River at a point known as "Bains."

Now, it is considered that this line should branch off at Liverpool, and thence out through Hoxton Park, Driver's Estate, Luddenham, and Mulgoa, and still cross the Nepean River at "Bains."

The reasons why this line would be of more benefit are:—

1. It would be slightly shorter, as far as the Nepean River, than the Blacktown one.
2. It would open up better country, and, above all, would pass through more settled population.
3. It would be more easy of construction, as only one small cutting would require to be made.
4. It would pay better, as, from the haulage of wood alone, of which there would be immense quantities, the Department would reap a large return.
5. It would be about midway between the Southern and Western lines, which would be of greater advantage than that running parallel a couple of miles distant from the existing Western line.

My remarks will only apply to this line as far as the Nepean River; the route it would then take (after crossing the river) would be the same as at present.

You will kindly understand that I am not interested in any way by the railway taking this route; but consider, if from a survey being made, and it being found that greater advantages can be gained by taking this route and the country be benefitted by the alteration, I am justified in pointing the matter out.

Any other information desired will be gladly supplied.

I am, &c.,

JOHN REDSHAW.

Submitted.—J.B., 30/11/88.

#### No. 22.

J. Inglis, Esq., M.P., to The Secretary for Public Works.

4 and 6, Dean's Place, George-street, opposite Mercantile Bank,

Dear Sir,

Sydney, 30 May, 1889.

I hope it will be convenient for you to meet the deputation, *re* proposed survey of railway route, Blacktown to Blayney, on Thursday next, 6th June, at noon sharp. You will remember this interview was postponed from last Thursday owing to the Queen's Birthday levée having taken place on that day.

Your early reply would much oblige.

Yours, &c.,

JAMES INGLIS.

Say 12:15, as there is another deputation at noon.—J.B., 31/5/89.

## No. 23.

## Minute by The Secretary for Public Works.

## RAILWAY FROM BLACKTOWN TO BLAYNEY.

A DEPUTATION, accompanied by Messrs. J. Inglis, J. Kidd, W. P. Crick, M.S.P., and the Hon J. H. Cox, M.L.C., waited upon me to-day to request the carrying out of a trial survey for a line of railway from Blacktown to Blayney.

Mr. Inglis stated the object of the deputation, and said that Mr. Surveyor Cumming had made a hurried survey, which disclosed in parts steep gradients, but since then fresh facts had come to light, showing that a feasible route could be obtained with grades of not less than 1 in 60.

The Hon. G. H. Cox said he was well acquainted with the country through which the proposed line would run, on which for want of a railway settlement had been very small.

Mr. Cumming's survey had disclosed grades as low as 1 in 27, but Mr. Gipps had been making explorations, and found he could get a route with grades of not less than 1 in 60.

Splendid seams of coal had been found on the route, which would make it the nearest coal-field to Sydney, except that at the National Park. Coal could, therefore, be put on the markets very cheaply, and the benefits to the whole community would be very great.

The trial survey would not cost more than £2,000, and they thought the Government were justified in carrying it out. If it proved a practicable route the money would not be thrown away. The line would also tap Mulgoa Forest, where there were large quantities of splendid timber for railway purposes.

Mr. Kidd, M.P., desired to point out the national importance of the construction of a line to save the present mountain line.

The necessity for an alternative route was becoming very pressing. The proposed line would open up a large amount of agricultural and mineral land, and would supersede the proposed lines from Perth to Rockley, and Mount Victoria to Jenolan Caves.

Mr. Crick said he regarded the line from a national aspect. Another line to relieve the mountain line was absolutely necessary. The proposed line would be 5 miles shorter than the present line. There were 50 miles of level country from Shooter's Hill to Blayney. The proposed line was a more serviceable one than the Colo Valley line, and could be constructed at about one third of the cost.

Mr. Gipps said he had accompanied Mr. Cumming on his trip. There was no survey made. Since then he had found he could get a grade of 1 in 60.

In reply, I said they could not expect me to give them an immediate definite answer. £2,000 was a small sum in one sense, but if the line was not constructed it would be thrown away. The only information on the subject before me was a report from Mr. Cumming, and one from Mr. Whitton. Mr. Cumming's report was of a very favourable character, indeed I thought he had gone outside the interests of the case in speaking of the line.

I had a much less ardent report from Mr. Whitton, who looked more at the engineering features of the case. All I could promise them that I would confer with the Railway Commissioners (who had to manage our railways and make them pay) in regard to the proposal, and if they satisfied me that the matter was really worth considering, I should have no hesitation in having the survey made with Mr. Gipps' assistance I would take steps to have the matter settled at an early date.

BRUCE SMITH.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

RESUMPTION OF LAND BY THE GOVERNMENT FOR  
RAILWAY PURPOSES AT BEXLEY.

WEDNESDAY, 9 MAY, 1888.

Present:—  
MR. SYDNEY SMITH, | MR. THOMPSON.  
JOHN HURLEY, ESQ., IN THE CHAIR.

John Williams, Esq., called in, sworn, and examined:—

1. *Chairman.*] You are Crown Solicitor and Solicitor for Railways for this Colony? Yes.
2. You produce a deed in reference to land resumed by the Government for railway purposes at Bexley? I do not; I was not summoned to produce it. I produce two abstracts of title. [*Vide Appendix A 1 and 2.*] Three parcels of land, part of the Bexley Estate, were taken, and the third abstract of title, I think, is with the certificate of title at the Railway Office. They are all under the same certificate of title.
3. *Mr. Thompson.*] Under whose title? They are under Torrens', and in the name of William Anthony Kingscote. I know nothing of the title beyond the fact that it seems to be vested in Mr. Kingscote.
4. I suppose the abstract simply shows that? That is all. We have a certificate of title for the land we have taken. If I have any doubt as to a title, we petition and pay the money into Court under the provision in that respect in the Railway Act; but where there is a certificate of title in the name of the person from whom we have taken the land, and he executes a transfer to us, and it is duly recorded, there is no reason to pay into Court. I never go behind the certificate of title.

J. Williams,  
Esq.

9 May, 1888.

Mr. John Garsed called in, sworn, and examined:—

5. *Chairman.*] You were the possessor of some land at a place called Bexley? Yes.
6. How did you become possessed of it? Here is a certified copy of the abstract of title which I got from the Registrar-General's Office the other day.
7. *Mr. Thompson.*] That is not an abstract of title; it is an attested copy of a conveyance made from yourself to one Hutchinson? Yes.
8. *Chairman.*] You were the possessor of certain land at Bexley which was recently resumed by the Government for railway purposes? Yes, a portion of it.
9. Do you produce the deeds in reference to that land? I hold the deeds in my hand; but I cannot leave them, as I have occasion to use them from time to time.
10. They are the original deeds in regard to the land which is under the consideration of the Committee? Yes. On the 4th February, 1858, a bill was filed in the Supreme Court in Equity to set aside the three deeds, on the ground that they were fraudulent.
11. The case was tried? The plaintiff died suddenly, and the bills were not dismissed.
12. This land is the same land, or a portion of the land, which became mortgaged to Mr. S. H. Terry? Yes.
13. Was the mortgage ever redeemed? It was not redeemed by me. A mortgage in September, 1857, was secured upon 1,050 acres of land at Bexley. I had power under the mortgage to sell any portion of the land on certain considerations of terms. Mr. Terry during the first nine months received £750 sterling in part payment of the mortgage.
14. *Mr. Thompson.*] The result of sales? No; I happened to have the money, and I paid it to him. It left a balance of £1,250; then this conspiracy through Mr. E. Ashdown brought the case to a deadlock. Mr. Terry positively refused to receive the quarter's interest on behalf of my wife's trustee upon the £1,250. Nothing would satisfy him but to sell the land. He sold his mortgage to Dean & Co., and it was conveyed to Francis Michael Stokes. On the 1st February, Mr. Ashdown, in the name of William Dean & Co., instructed plaintiff to file a bill in Equity to set aside the three deeds which are before you, on the ground that they were fraudulently executed with the intention of defrauding that firm in the action. After the bill was filed Dean & Co. tried to sell the land at public auction; but every time they attempted to do so a protest was read against the sale in the sale-room, and the purchaser would have nothing at all to do with the title. He sold 188 acres 24 perches to William Wolfen for something like 25s. per acre. Mr. F. M. Stokes conveyed to Wolfen, and here is an attested copy of the deed. 15.

Mr.  
J. Garsed.

9 May, 1883.

- Mr. J. Garsed.  
9 May 1888.
15. *Mr. Sydney Smith.*] What was the area of the land altogether? 1,100 acres.
16. *Mr. Thompson.*] You appear to have entered into three separate deeds with Hutchinson on one day, the 4th February, 1858? Yes.
17. A covenant, an agreement, and a conveyance? Yes.
18. Was your object to enable Mr. Hutchinson to set aside certain encumbrances on your various properties? On Mrs. Garsed's private property. I had borrowed £4,700 secured on her estate.
19. Who was her trustee? Mr. Hutchinson.
20. With regard to Sixsmith's title, it is indisputable that you and Hutchinson both conveyed to him and made his title absolute as far as he was concerned? Yes; I instructed and advised him to bring his title under the provisions of the Real Property Act, which he did. So I gave information to the Examiner of Titles, as well as to the Registrar-General, which I can prove by letters, that there was a bill pending in Equity affecting applicant's title. I could not lodge a caveat against his title.
21. Who filed the bill? The bill was filed to upset three deeds.
22. *Chairman.*] This bill was filed against Mr. Terry to prevent him from selling these identical properties? Yes; here is the advertisement of sale, and here is the caution to the public not to purchase the properties mentioned in the three deeds. Mr. Terry would not accept the quarter's interest on behalf of my wife's trustee, and a bill was filed to prevent the sale.
23. We want a statement as to how the properties passed into other hands, and as to how you became powerless to recover them? I hand in a copy of an affidavit that I made on the 21st October, 1862, and in which the facts of the case are set forth. It was filed in the Supreme Court on the same day. [*Vide Appendix B.*]
24. You are not bringing this matter before the Select Committee with any vexatious desire to interfere with the Government's possession of the property? I can assure you that if the Government were to offer me a million of money as compensation I would pass it. I depend upon getting my compensation in the next world, not in this. I have offered to give a title for the property resumed by the Government without getting a shilling in return.
25. Your chief object is to remove an information that is filed against you, and confute a charge of perjury that has been made against you? Yes.
26. You wish to remove from the file a matter that has been a reproach to your honor for so many years? Yes.
27. With regard to the land, Mr. Stokes then sold it? Dean & Co. paid the money for the balance of the mortgage to Mr. Terry. The bill was filed against Terry on the 1st November, 1858, affecting their title; then another bill was filed to set aside, the grounds were fraudulent; and then they began to sell.
28. That was after Mr. Terry and the solicitor, Mr. Dick, positively refused to receive the £25 on behalf of your wife's trustee? Yes; it was tendered in gold, and both refused to accept it.
29. I understand that Mr. Smart tendered the money? Yes; on behalf of my wife's trustee, Mr. Hutchinson. All the money in the world could not prove that the Attorney-General's statement is true.
30. *Mr. Thompson.*] We are distinctly to understand that what you wish is to remove from the file this information of the Attorney-General against you for perjury, on the ground that you are now in a position to prove that you did not commit perjury? Yes.
31. On that accusation for perjury you were found guilty, were you not? Yes.
32. What sentence did you get? Three years.
33. How much of it did you serve? To get rid of me every petition was refused, although so highly recommended. Within four months of the expiration of the sentence they released a number of prisoners. They told me that I was released, and I left with them.
34. You served two years and eight months out of the three years? I was in prison nine months before they put me on my trial. They brought four distinct charges against me in one day. They sent Pritchard out of the Colony. They filed an information for perjury against me. When I came up before Mr. Justice Dickinson they refused to put me on my trial when I produced the joint affidavit of Ashdown and Pritchard. Mr. John Williams, who was the prosecutor, served me with a notice to produce the red-ink account of Pritchard. It never existed. I was ordered to produce Ashdown and Pritchard's joint affidavit. It was not in Court; it had been stolen out of Court. Then they gave me a fresh notice to produce a copy. I did; and then they refused to put me on my trial. They put me on my trial on a charge of mutilating a deed. I defended myself against the Attorney-General, who was assisted by Mr. John Williams and Mr. Holroyd. I stood alone. I made them abandon the Equity suit; I upset every charge; and at the end of the fifth day the jury, in half a minute, returned a verdict of not guilty. Mr. Justice Dickinson told the jury that it was the most important trial that he had ever been on in his life. Nothing would do then but they must let Mr. Holroyd prosecute me for perjury, in the name of the Crown. It was Mr. Holroyd that set the case in motion at the Police Court, in April, 1858. I upset the perjury case. There was a struggle for seven days to get the concocted account, said to be a copy of Pritchard's red-ink account, in evidence, and to keep the books out of evidence. On the fourth day I had the books in evidence, and five minutes later I proved the concocted account to be untrue. I appealed to the jury to return a verdict in my favour, but it was in vain.
35. *Mr. Thompson.*] How long was it after the prosecution for perjury that you were prosecuted for fraudulently altering the deed? It was before.
36. How long before? On the 1st August, 1859, after they had refused to put me on my trial but previously I was tried and found guilty for a cross-entry.
37. On that charge you were found guilty? Yes.
38. Who gave evidence against you in the perjury case? The witnesses were Mr. Ashdown and Mr. R. J. Want. They were obliged to make Mr. Want a second witness, but his evidence proved that I was innocent in the Police Court. He was absent from the Colony when the case was tried in the first instance.
39. Did he give evidence against you when you were tried for perjury? Not at all, only in the Police Court.\*
40. Who gave evidence against you on your trial? Mr. Ashdown. Mr. Want was called as a witness against me, but his evidence was in my favour at the Police Court, and was also read in the criminal case.

\* NOTE (on revision) :—Yes; he was a witness for the Crown, and gave evidence in the Police Court also.

## LAND RESUMED BY THE GOVERNMENT FOR RAILWAY PURPOSES AT BEXLEY.

## APPENDIX.

[To the Evidence of John Williams.]

## A 1.

ABSTRACT of the title of William Anthony Kingscote to two roods twenty perches of land situate in the parish of Saint George, County of Cumberland, part of the Bexley Estate.

1881, January 19.—By certificate of title of this date, William Anthony Kingscote, of Bective, Tamworth, is registered as proprietor in fee simple of all those the lands as therein described and as shown on the map or plan endorsed thereon, and therein coloured red, and situated in the parish of Saint George, County of Cumberland, subject to such incumbrances as are endorsed or notified thereon. Certificate registered as volume five hundred and sixteen (516), folio two hundred and thirty-one (231).

*Memorandum of Incumbrances.*

1882, April 21.—Mortgage number sixty thousand seven hundred and ninety-five (60,795), of this date, to Robert Raworth Doyle, of Lochinvar.

NOTE.—The mortgagee will consent to the transfer.

## A 2.

1882, April 21.—Mortgage number sixty thousand seven hundred and ninety-five, of this date, to Robert Raworth Doyle, of Lochinvar.

The mortgagee will consent to the transfer.

[To the Evidence of John Garsed.]

## B.

In the Supreme Court of New South Wales. In Chambers.

In the matter of Randolph John Want, *ex parte* John Garsed. Affidavit of John Garsed. Filed 21st Oct., 1862.—G.J.C. On this twenty-first day of October, one thousand eight hundred and sixty-two, John Garsed, of Edgelif Road, near Sydney, in the Colony of New South Wales, gentleman, being duly sworn, maketh oath and saith as follows:—

1. On the ninth day of February, one thousand eight hundred and fifty-eight, a certain action was commenced in the Supreme Court of New South Wales on a bill of exchange for six hundred and eighty pounds fifteen shillings and three-pence, in which said action one William Dean and one Archibald Ashdown were the plaintiffs, and I, John Garsed, was the defendant.

2. I took the opinion of counsel and defended the action on equitable grounds, that is to say, the plea filed to the declaration of the said plaintiffs amounted to a plea of want of consideration on the part of William Dean and Company.

3. An application was made to take the said plea off the file, on the grounds disclosed in the joint affidavit of Archibald Ashdown and one Charles Pearson Pritchard, clerk and book-keeper in the employ of Ashdown and Garsed, sworn and filed in the Supreme Court, on the second day of March, one thousand eight hundred and fifty-eight.

4. The above application came on to be heard before Mr. Justice Dickinson, the Judge sitting in Chambers, on the third day of March, one thousand eight hundred and fifty-eight, when the said application was dismissed; and before the said cause came on to be heard the said Archibald Ashdown lodged an information against me on a charge of perjury, when the Bench declined to recognize the case at that time, and the same was dismissed.

5. Afterwards, on the twenty-second day of April, one thousand eight hundred and fifty-eight, the said action on the said bill of exchange came on to be tried in due form of law in the Supreme Court aforesaid, before His Honor Mr. Justice Dickinson and a Jury of four, and was continued to the twenty-third and twenty-fourth days of the said month of April, and was adjourned to the eighteenth, nineteenth, and twentieth days of the following month of May, on which last-mentioned day the Jury retired for about three hours to consider their verdict, and on their return in open Court, the foreman, Mr. T. M. Stokes, returned a verdict for plaintiffs, damages six hundred and ninety-six pounds two shillings and sixpence; they also added a rider to their verdict expressing their opinion that this bill had been given in settlement of the accounts with the firm. This finding amounted to a declaration of their belief of the said Archibald Ashdown's version; that is to say, that the said Charles Pearson Pritchard did deliver to me, on the twenty-fourth day of September, one thousand eight hundred and fifty-seven, in the presence of Archibald Ashdown, a red ink memorandum in his (Pritchard's) handwriting, showing the settlement between myself and Ashdown on the thirtieth day of September, one thousand eight hundred and fifty-seven.

6. At an early stage in the said action His Honor Mr. Justice Dickinson endeavoured to bring about a reference to arbitration. These efforts were, however, unsuccessful—the plaintiff's counsel would not consent to a reference, and it was found that His Honor had unfortunately no power to compel a reference in a case of this description; but in summing up, His Honor expressed his opinion that a case of this nature was one which did not come legitimately within the province of a Judge and Jury to decide, and that in England a reference to arbitration would, under similar circumstances, have been at once assented to when recommended by the Judge.

7. My counsel certified for a new trial.

8. I received from Charles Pearson Pritchard a red ink memorandum in his (Pritchard's) handwriting, relating to certain bills of exchange payable to W. Dean & Co., R. J. Want, and others, which said bill of exchange was not included in Ashdown's list of liabilities mentioned with agreements signed "A. Ashdown." The said red ink memorandum was found subsequent to the said action, and now, I believe, deposited in the Crown Solicitor's office, and I verily believe if that memorandum had been produced at the trial the verdict would have been in my favour.

9. I never received from Pritchard, as stated at the trial, in the presence of Ashdown, in his office, a red ink memorandum in the handwriting of the said Pritchard, showing the settlement of transactions between myself and Ashdown.

10. The settlement was made by an agreement, dated thirtieth September, one thousand eight hundred and fifty-seven, signed A. Ashdown, witness, R. J. Want, solicitor. At the end of the said agreement are the following words, in the handwriting of R. J. Want:—"The above agreement is in full satisfaction and discharge of all previous agreements or undertakings relative to the sale or purchase of the above properties between the above parties. September 30th, 1857.—A. ASHDOWN."

11. On the seventeenth of December, one thousand eight hundred and fifty-eight, Randolph John Want, on his oath, states:—"A bill was given for the balance by Garsed to Ashdown at a short date, payment of which was to be secured by the depositing of the deeds. I can't tell whether I prepared the agreement dated thirtieth September, one thousand eight hundred and fifty-seven. I am the attesting witness to the agreement; it contains nothing false that I know of. Sworn before D. Forbes, J.P."

12. Andrew Mackechnie, on his oath, states:—"I am one of the Clerks of the Supreme Court; I have not got an affidavit sworn before Mr. Pownall on or about the second March, one thousand eight hundred and fifty-eight, by Pritchard and Ashdown; I am not aware that any such affidavit was ever filed; if it had been filed, it would have been in the hands of the Prothonotary, and then in my custody; there would be no record kept of any such affidavit having been filed; I know nothing about the affidavit."

13.

13. Pritchard stated at the trial, he entered the bill of exchange, £680 15s. 3d., mentioned in the said joint affidavit of Ashdown and Pritchard, in his account books, payable to Ashdown—Ashdown individually. After the thirtieth September, one thousand eight hundred and fifty-seven, he had ceased to be acting for Garsed; he was then in the employ of Archibald Ashdown, and received his salary from Archibald Ashdown, at the rate of £500 a year, for nine months, from the first of April, one thousand eight hundred and fifty-seven. Pritchard's account books in evidence, deed dated eighteenth March, one thousand eight hundred and fifty-seven, in evidence; on reading His Honor Mr. Justice Dickinson ruled partnership transactions between Ashdown and myself proved; and that W. Dean & Co. are bound by the account books kept by Pritchard at W. Dean & Co.'s office.

14. The account books kept by Pritchard are, I believe, in the possession of Mr. J. P. Mackenzie, Official Assignee.

15. Archibald Ashdown stated at the trial,—“There was an arrangement that his name should not have appeared at all.” The agreement dated thirtieth September, one thousand eight hundred and fifty-seven, meant him. He kept his private accounts in firm books (meaning W. Dean & Co.'s account books). There is no entry of £2,000 in firm books. There was no account kept showing how the balance was to be struck between us (meaning Ashdown and myself). Our books (meaning W. Dean & Co.'s books) will not show Garsed's debt to W. Dean & Co. in September, one thousand eight hundred and fifty-seven. Our books at that time showed a balance of £754 18s., and overdue bill for £329 3s. 6d., and £150 and £250, making £400, the payment provided for in the fifteenth July, one thousand eight hundred and fifty-seven, agreement; £9,830 15s. 3d. includes the £2,000. Garsed's bill of exchange for £1,900, due eleventh August, one thousand eight hundred and fifty-seven, was dishonoured. My cheque for £1,900 was not drawn until twelfth, might have been thirteenth. I dated it eleventh August, one thousand eight hundred and fifty-seven. I did not get the two bills, £1,300 each, discounted until the twelfth. I received from Garsed two notes, £1,300 each, to retire. £1,900 and £700 (due eleventh and fourteenth August, one thousand eight hundred and fifty-seven). I had something to do with Chippendale (meaning seven cottages); so had Garsed. I was at one time entitied to half-share.” The above form my counsel's notes of evidence, and my attorney's notes of evidence, in their handwriting, delivered to me in February, one thousand eight hundred and fifty-nine, and will be read in support of this motion.

16. I have read the two informations “on charges of perjury,” lodged against me by the said Archibald Ashdown, at the Central Police Office, Sydney, and more particularly the one lodged on the ninth December, one thousand eight hundred and fifty-eight. Ashdown says—“On the second day of March, in the year aforesaid, the said William Dean and Archibald Ashdown took out of the said Supreme Court a summons calling upon the said John Garsed to show cause, on the third day of the said month of March, why the said plea filed therein should not be struck out, with leave to the plaintiff to sign judgment as for want of plea, on the grounds that the said plea was so framed as to prejudice, embarrass, and delay the fair trial of the said action, and that the said plea was wholly false, and on the further grounds stated and disclosed in the joint affidavit of the said Archibald Ashdown and one Charles Pearson Pritchard, sworn in support of the said application.”

17. I have read the joint affidavit of Pritchard and Ashdown, filed in the said cause, and particularly parts of the paragraphs numbered three, eleven, and fourteen. The two first said paragraphs say:—“The settlement of the transaction between Archibald Ashdown and John Garsed was carried into effect by an agreement, a copy of which is annexed to this affidavit, marked A, meaning the said agreement dated thirtieth September, one thousand eight hundred and fifty-seven. The said last paragraph says:—“The bill of exchange for the sum of six hundred and eighty pounds fifteen shillings and three-pence was the balance found to be due on the accounts between Archibald Ashdown and John Garsed,” and I say so much of the said paragraphs are true.

18. I have read the paragraphs numbered one and ten of the said joint affidavit, and I say the same is totally untrue.

19. Parts of five and six paragraphs of the said joint affidavit say:—“The title-deeds of some property of the said John Garsed were harded as a collateral security for due payment of the said sum of £680 15s. 3d., but the said Dean & Co. never had any power of sale on the said property. The title-deeds of the said Rosherville estate have been in my hands since the month of April last or thereabouts as the joint owner of the same with John Garsed.” I say so much of the said paragraphs are true.

20. My counsel exhibited to the Court and Jury in the said action a number of documents, accounts, also Pritchard's journal and ledger. I believe not one of my said documents and accounts was in evidence at my trial before His Honor the Chief Justice, in October, one thousand eight hundred and fifty-nine.

21. I will produce, in the handwriting of Mr. Robert Hamilton Sempill, his letter dated “Sydney, January 25th, 1861.” Mr. Sempill says the documents relating to the civil action—Dean and another v Garsed. I must inform you that I took particular care of the documents put in evidence. I believe that I have vouchers to show that I disposed of all those documents that came to my hands in that action to the places appointed for their custody by law, with the exception of one book produced from the office of Dean & Company, to whom I returned it because their daily business could not have gone on without it.

22.

“Supreme Court, Sydney, January 3rd, 1861.

“John Garsed.

“I am directed by the Acting Chief Justice to acknowledge the receipt of your letter, dated 29th December, 1860. His Honor further directs me to state that he has made all due inquiries regarding the documents to which you allude but has not been able to learn their whereabouts.

SEDGWICK S. COWPER.”

23. In my letter addressed to the Acting Chief Justice, dated 29th December, 1862, I say:—“Feeling the greatest anxiety about my exhibits, I hope your Honor will be pleased to send me word if the above documents are returned to their proper places of deposit (meaning the following documents in evidence, August, 1859, viz.—Cancelled conveyance, Garsed to Hutchinson; Newtown allotments; copy of affidavit, Ashdown and Pritchard, signed Want; a book made up by Mr. Humphrey, accountant, from journal kept by Mr. Pritchard at Dean & Co.'s office; copy of correspondence between the Honorable J. Montefiore and myself respecting machinery at Rosherville); also, if my exhibits in evidence at my trial before your Honor in April and May, 1858—Dean and Ashdown v. Garsed—are still records of the Supreme Court; and will your Honor be pleased to inform me the number and purport of each.”

24. I will produce a letter, dated from Supreme Court Office, Sydney, 14th March, 1861, signed S. Raymond, Prothonotary.

25. I will produce a letter dated from Lyons Terrace, 5th April, 1861, signed Cecil B. Stephen, and the statement referred to in the said letter.

26. I will produce certain papers published in Sydney, more particularly the *Empire*, dated 12th October, 1859, and *Sydney Morning Herald*, dated 12th October, 1859.

27. I will produce all my exhibits I received from Mr. Andrew Mackechnie, Clerk of the Supreme Court, since my release from confinement.

28. On or about the tenth June, one thousand eight hundred and fifty-seven, I had entered into a joint building speculation, in writing, with the said William Dean, but the said Ashdown prevented the said building speculation being carried out, by stating to me that his partner William Dean had no money except in the business, and he (Ashdown) would not allow his partner to draw money out of the business for speculation, and that the property about to be built upon belonged to the said William Dean's wife. The said writing drawn up by the said William Dean is I believe deposited in the Crown Solicitor's office.

29. Ashdown not being able to retire at maturity a certain bill of exchange for nineteen hundred pounds, due eleventh of August, one thousand eight hundred and fifty-seven, the said Ashdown asked me to give him two fresh bills of exchange or promissory notes for thirteen hundred pounds each, for discount, to place him in funds to enable him to retire the said bill of exchange, a promissory note, and also one due for seven hundred pounds on the fourteenth of the said month; but in consequence of the private conversation I had with him respecting his partner William Dean, I refused to give the said Ashdown the said fresh bills or notes unless he signed a fresh agreement in substance “that all my deeds and writings relating to the lands and properties respectively,” which said lands and properties are mentioned in a certain agreement dated fifteenth of July, one thousand eight hundred and fifty-seven, signed A. Ashdown and John Garsed, shall remain in the hands of my solicitor, R. J. Want, Ashdown being at liberty to sell the said lands and properties, or any of them, upon paying the proceeds of such sale respectively, or harding over the bills of exchange or notes mentioned in the said July agreement, or so many thereof as shall be equivalent in value to the proceeds of such sales, unto myself, the real value or cost of the said lands and properties to be mentioned in the agreement, the total amount, eight thousand eight hundred pounds, also the balance of Ashdown's liabilities to the firm of W. Dean & Co., “after payment of the said two bills of exchange or notes for nineteen hundred and seven hundred pounds” to be mentioned in the agreement, the total amount four thousand eight hundred and five pounds sixteen shillings and ten-pence or thereabouts.

30. Ashdown agreed to sign a fresh agreement in terms before mentioned. On the eleventh of August, in the year aforesaid, I called on my solicitor, Mr. R. J. Want, to have an agreement made out between Ashdown and self as the basis of the said agreement; left the said agreement, dated fifteenth of July, in the year aforesaid (signed A. Ashdown and John Garsed), and a memorandum in the handwriting of the said C. P. Pritchard, with my said solicitor, R. J. Want; my solicitor stated the contract between Ashdown and self correctly, in the original draft agreement drawn up on the eleventh of August in the year aforesaid. Ashdown approved of the original draft; no alteration was to be made in figures, but with my consent the following words to be left out, "Provided nevertheless that the lands and properties so sold shall be sold for their respective value or thereabouts." I then accepted two fresh bills or notes for thirteen hundred pounds each in favour of W. Dean & Co., and requested Pritchard to see that Ashdown signed the agreement.

31. The sums mentioned in the said draft agreement—Bexley, 1,040 acres, more or less, at £5 per acre, £5,200—I had previously sold several small farms, a part of the said Bexley estate, at fifteen pounds per acre; and to the best of my belief not one acre had been sold by me for less than fifteen pounds per acre. Land, Canterbury Road, near Petersham Station, £900—I had previously lent upon this property eight hundred pounds, and a large sum was due for interest. Four houses, Cooper-street, Glebe, £1,200—I believe I purchased this property for twelve hundred pounds. Lavers's mortgage, £600—I lent upon this property £600. Eggleton's mortgage, £900—I lent upon this property nine hundred pounds.

32. Some time about the beginning of September, one thousand eight hundred and fifty-seven, P. A. Thompson, solicitor, informed me that Mr. Want, my attorney, had left out the value of my properties in figures in the said agreement signed Ashdown.

33. I called on Mr. R. J. Want to see the agreement I had signed, and the draft was given to me by one of Mr. Want's clerks. I believe the draft or copy of the draft is deposited in the Crown Solicitor's Office; the original was among my private papers, July the 3rd, one thousand eight hundred and fifty-eight, or in possession of my attorney. On seeing the agreement signed I instantly instructed Mr. Want to restrain Ashdown from selling any of my said properties, and to procure an alteration of the said agreement, but Mr. Want refused, stating he was then acting for Mr. Ashdown, and told me to employ some other solicitor.

34. I called upon Ashdown to reconvey my properties; this he refused to do, unless I gave him the two thousand pounds in excess of his liabilities mentioned in the said July agreement. At first I refused to give Ashdown two thousand pounds, and consulted P. A. Thompson, solicitor; after several meetings, and against the advice of my solicitor, P. A. Thompson, I agreed to give Ashdown a bonus of two thousand pounds.

34. I paid R. J. Want balance of mortgage, Glebe, mentioned in said July agreement, and by correcting the first item of Ashdown's liabilities, £730—correct amount, £754 18s., it left a balance of £7,830 15s. 3d., and by adding to that amount a bonus of two thousand pounds will give the exact amount mentioned in the said agreement, dated thirtieth of September in the year aforesaid, signed A. Ashdown, witness—R. J. Want, viz., the sum of £9,830 15s. 3d.

35. I paid the said sum of nine thousand eight hundred and thirty pounds fifteen shillings and threepence, in terms of the said agreement, that is to say: first paragraph—sterling money, £5,650; second paragraph—land as a cash payment of £900; third paragraph—transfer to Eggleton, mortgage as a cash payment of £900; fourth paragraph—transfer of Lavers's mortgage, as a cash payment of £600; the sum of £1,780 15s. 3d., residue of the said purchase money or sum of £9,830 15s. 3d., in the following manner, namely:—Six hundred pounds part thereof shall be secured by a mortgage for the sum of one thousand one hundred pounds upon "Russell's Arms," Ashdown covenanting with me to pay off five hundred pounds charged thereon, with all interest to accrue due thereon from the date of the said mortgage; the sum of five hundred pounds secured by a mortgage upon the Newtown Foundry; and the sum of six hundred and eighty pounds fifteen shillings and three pence shall be secured by a promissory note and a memorandum and deposit by way of equitable mortgage of deeds and documents relating to land of mine.

36. I have been informed and verily believe that the agreement of the eleventh of August, one thousand eight hundred and fifty-seven, made between Archibald Ashdown of the one part, and John Garsed of the other part, is not a legal document, and that the said Archibald Ashdown can give no title to any of the properties mentioned in the said agreements dated the eleventh of August and thirtieth of September, one thousand eight hundred and fifty-seven.

37. Mr. Want in his evidence says—"He believed the properties mentioned in the said July agreement, signed A. Ashdown and John Garsed, did cost me the sum mentioned in the said agreement, that is to say, fourteen thousand eight hundred pounds, and that he first acted for Ashdown on the fourteenth of August, one thousand eight hundred and fifty-seven." (The above copied from my notes of evidence.)

38. I have read the evidence of Ashdown, sworn at the Police Office, Sydney, on the seventeenth and twentieth of December, one thousand eight hundred and fifty-seven, before D. Forbes, Esq., J.P., more particularly that part of Ashdown's evidence in which he says—"I engaged Pritchard to look after the accounts between Garsed and self. The books kept by Pritchard were kept by him in the building occupied by W. Dean & Co. The alteration from £730 to £754 18s. 0d. was made in the agreement of the thirtieth of September, one thousand eight hundred and fifty-seven, in the correction of the accounts of the 15th July, 1857; the alteration was made in the accounts as soon as the error was discovered. The bills for nineteen hundred pounds and seven hundred pounds were retired by fresh bills given by Garsed. Those bills under that agreement of the 15th July, 1857, became a liability of my own. Two of the notes renewed by Garsed were given to Dean & Co., as between Garsed and self; I only was liable, not Dean & Co. The bills making up the seven thousand eight hundred and thirty pounds fifteen shillings and three pence are all paid. If under all my said agreements with Garsed I had been a loser, Dean & Co. would not have participated in the loss. I never took from Garsed yet any bills in my own name except two for fifty pounds each on account of Pritchard's salary." And I say so much of the said evidence is true.

39. Ashdown in his evidence says in substance,—“He purchased the Upper Garden, Glebe, with the improvements thereon, and also one-third part of my properties after the payment of the incumbrances, for the sum of two thousand eight hundred pounds.” And says,—“I paid all notes at maturity between the fifteenth of July and thirtieth September, one thousand eight hundred and fifty-seven. There was not a fresh agreement between Garsed and self on the eleventh August (meaning eleventh August, one thousand eight hundred and fifty-seven), but a letter passed. About the twenty-third or twenty-fourth September, one thousand eight hundred and fifty-seven, Garsed received the account like that marked 'N.' It was in red ink.” I say the said evidence is not true.

Copy in the handwriting of Archibald Ashdown, marked Dean and another v. Garsed.—D's., Ex., 22/4/58, R.S. (Read.)

“Mortgage to Want on the entire Glebe property for four thousand two hundred and fifty pounds at five per cent. for two years.

“A.A. (meaning Archibald Ashdown) purchased a portion of the above property for two thousand eight hundred pounds, which was duly conveyed and released by Want.

“A.A. (meaning Archibald Ashdown), then borrowed and secured by mortgage on his portion three thousand pounds, which three thousand pounds with a cheque for two hundred pounds, in all three thousand two hundred pounds, was paid to Mr. Want in part liquidation of the mortgage for four thousand two hundred and fifty pounds, leaving the sum of one thousand and fifty pounds with accrued interest remaining due upon the balance of the property, viz., “Oak and Willow Lodge.”

Copy in the handwriting of Archibald Ashdown, dated October 3rd, 1857 (both received same date), marked Dean and another v. Garsed.—D's., Ex., 22/4/58, R.S.

“Interest on purchase at Glebe from second April to first June, say on two thousand eight hundred pounds, at five pounds per cent., twenty-three pounds six shillings and eight pence.

A. ASHDOWN.”

## Copy received from Crown Solicitor's Office.

Reg. v. John Garsed, 5/10/59, E.L.

Endorsed "Pritchard's red ink account or memorandum."

Particulars of settlement of account with John Garsed, in terms of agreement dated 30th September, 1857.

To John Garsed, liabilities to W. Dean & Co., consisting of—		1857.				£ s. d.		
July 14.	To balance of account rendered.....	754	18	0	Cash .....	5,650	0	0

40. Marks, Glebe account, advance account do. are written with the pencil on the original "N," deposited in the Crown Solicitor's Office. Archibald Ashdown kept five distinct accounts in my name in W. Dean & Co.'s account books, viz., Garsed's advance account, Garsed's Glebe account, Garsed's open advance account. The above three accounts are Ashdown's private accounts. The bill of exchange for £2,500, due November second, one thousand eight hundred and fifty-seven, mentioned in N, is in my possession. I retired the said bill by my own cheque, now in possession of the English, Scottish, and Australian Chartered Bank. Ashdown paid the firm of W. Dean & Co. the said two thousand five hundred pounds in manner following:—Mortgage "Russell's Arms," £1,100; Eglington's mortgage, £900; mortgage Newtown Foundry, £500. Copied from my notes, afterwards examined at W. Dean & Co.'s office, balance of accounts kept by Ashdown in my name in W. Dean & Co.'s account books, 15th July, 1857.

Special account .....	500	0	0
General account.....	40	6	8

Ashdown's evidence all cheques he paid me on his private account, with the exception of one for a small amount he signed W. Dean & Co.

41. Mr. Daintrey, solicitor, evidence. He says:—"In the month of December, one thousand eight hundred and fifty-seven, Garsed and Ashdown came to my office together; I think Garsed asked Ashdown if he had sold Rosherville or Onion's Point; I believe it was Ashdown said it was a bad time to sell, because of the elections. I have had transactions with Pritchard, which Ashdown afterwards acknowledged. Pritchard told me of a long negotiation which had been going on between Ashdown and Garsed, and said that Garsed had given, or had at last given, or was to give, Ashdown a bonus of £2,000. I prepared the deeds, and they were executed by Garsed on his own behalf contracting between himself and Ashdown. I afterwards sent the deeds to Ashdown. That both Ashdown and Garsed acknowledged in effect that Pritchard was their agent. I understood that Ashdown took all the securities in deeds or cash—I am sure Pritchard told me he did."

42. Mr. F. M. Stokes' evidence. He says—"I was one of the jurymen; I am at present in Mr. Dean's employment; I have known Mr. Dean for many years; I went into Mr. Dean's employ when Mr. Ashdown left the firm."

43. Mr. Joseph Carroll, Dean & Co.'s principal bookkeeper, published a letter in the *Empire* before my trial at Darlinghurst was terminated, in which said letter Mr. Carroll says W. Dean & Co.'s account books will not show the said red ink account marked N.

44. The ninth paragraph of the said joint affidavit says—"I, Charles Pearson Pritchard, for myself, say, I have been fully acquainted with the whole of the transactions between the said John Garsed and the said Archibald Ashdown, and have been employed by the said John Garsed and the said Archibald Ashdown," and I say the said statement is true.

45. The eighth paragraph of the said joint affidavit the said Ashdown says—"I believe that the said defendant is making away with his property, for the purpose of avoiding the payment of this bill of exchange (meaning the said bill £680 15s. 3d.)

46. I say my interest in Rosherville House and grounds and my other lands mentioned in the said joint affidavit were, on the thirtieth of September, one thousand eight hundred and fifty-seven, of greater value than the amount of the said bill of exchange for £680 15s. 3d.

47. Copy in the handwriting of Piddock Arthur Thompson, my solicitor—

Marked Reg. v. Garsed, examined 6th September, 1859. R.S.

	£	s.	d.
Fort-street, subject to mortgage of £1,200 .....			
Willow Lodge } subject to mortgage of £3,500 .....	4,700	0	0

Camperdown Bligh Terrace properties free from incumbrances.			
Conveyance showing no trust.			
Not to be registered.			
Trust deed to realize and apply.			

Proceeds in discharging the £4,700 and after payment of the same to account to Mr. Garsed for one-half of the profit.

48. In May, 1858, it was the opinion of P. A. Thompson, my solicitor, Willow Lodge and Oak Lodge did not belong to Mrs. Garsed; the equity of this property was sold to Mr. Terry; he offered Mrs. Garsed an annuity for life of ninety pounds a year, or the sum of fifteen hundred pounds. The annuity was refused, on the ground if Mrs. Garsed was entitled to the annuity she was legally entitled to the property; and the fifteen hundred pounds was paid to Mr. Terry in reduction of other mortgage debts, viz., Bexley Estate and one hundred and fifty-seven allotments of land situate at Camperdown; on this property is built the "Alma Inn."

49. I positively deny the charge of making away with any portion of my property; and it was my wish to have the said trust deed registered. I am prepared to produce other memorandums in the handwriting of P. A. Thompson, my solicitor, to the same effect as before.

50. My said equitable plea says that, before the commencement of this suit, I and Ashdown were in partnership together in various transactions (proved by Ashdown's evidence and deed of trust) in settlement of those transactions, except Rosherville; I gave Ashdown a bonus of two thousand pounds (bonus proved by agreements and Mr. Daintrey's evidence.) The bill of six hundred and eighty pounds fifteen shillings and three-pence was, at the request of Ashdown, drawn in favour of W. Dean & Co. (Ashdown's evidence proves the said two thirteen hundred pound bills was, at Ashdown's request, drawn in favour of W. Dean & Co., and that he signed his private cheques, paid me, W. Dean & Co.) To secure the payment of the said bill, I handed certain title-deeds of lands belonging to me (Ashdown and Pritchard's joint affidavit says W. Dean & Co. never had any power of sale in the said property.) The bill of exchange six hundred and eighty pounds fifteen shillings and three-pence was the balance due on the accounts between Ashdown and myself. I requested Ashdown to sell my interest in Rosherville and apply the proceeds in or towards liquidation of the said six hundred and eighty pounds fifteen shillings and three-pence

three-pence (Mr. Daintrey's evidence proves conversation between Ashdown and myself about sale of Rosherville, in the month of December, one thousand eight hundred and fifty-seven). I aver it was the duty of plaintiffs to sell Rosherville and the other lands which on the third of October, one thousand eight hundred and fifty-seven, were, and still are, of greater value than the amount of the said bill; and that until having exhausted the securities they were not entitled to proceed against me for the said amount.

The three said agreements signed Ashdown, dated in July, August, and September, one thousand eight hundred and fifty-seven, confirm the truth of my equitable plea; also the said joint affidavit, Pritchard's account books, and W. Dean & Co.'s account books; also Ashdown and Pritchard's evidence; also memorandum in my possession in the handwriting of Ashdown and Pritchard, but which last was not in evidence at my trial at Darlinghurst.

51. The information sworn by Ashdown, at the Police Office, in December, one thousand eight hundred and fifty-seven, contains some hundreds of words and figures in the said information. The perjury is assigned on my equitable plea, my affidavit in reply to the said joint affidavit, and my evidence in the civil action.

52. The information filed 1st August, one thousand eight hundred and fifty-nine, only discloses the following words:—"I gave Ashdown a bonus of two thousand pounds or thereabouts, of which the six hundred and eighty pounds fifteen shillings and three-pence, the amount of the bill of exchange now sued upon, forms part."

53. I have frequently called at Mr. Want's office about the said records, printings, accounts, writings, bills, deeds, and agreements, and other papers relating to the several matters referred to in my affidavit. Mr. Want informed me he could not find them, and that he had not seen them since his return from England.

54. Affidavits sworn respectively by Hugh Dixon, on the twenty-third of May, one thousand eight hundred and fifty-eight, and Archibald Ashdown, on the twenty-eighth of the same month, were filed in the said cause, and in consequence thereof I was called upon to find further security to meet the necessary expenses of a new trial, such said security to be given to the satisfaction of plaintiff Ashdown's solicitor, the late Mr. George Want.

55. I offered the deeds of Bezley House and grounds to meet the necessary expenses of a new trial, which offer was refused, and all other securities offered were also refused.

56. To protect my properties—to stay actions for what I believed and still believe to be fraudulent claims, and to have Ashdown's private accounts kept by him in my name in W. Dean & Co.'s books examined in the Insolvent Court—I gave instructions to my attorney, P. A. Thompson, to prepare my schedule.

57. My attorney, P. A. Thompson, informed me it was necessary to meet the regulations of the Insolvent Court that I should show a deficiency.

58. I paid all bills of exchange or notes, with the exception of the said £680 15s. 3d., and I believe two small bills I gave my attorney, my attorney promising to deliver in detail his account for law charges; I had previously paid my barrister's fees, with the exception of one which by forgetfulness was left unpaid.

59. I borrowed from Mr. Clark Irving the sum of one hundred and sixty pounds upon my Commercial Chambers, Pitt-street, opposite the Exchange.

60. I paid with the money I had borrowed from Mr. Clark Irving the sum of eighty pounds due to that gentleman for interest, I paid the balance of one hundred pounds I promised Ashdown towards Pritchard's salary, and all other sums due for interest.

61. P. A. Thompson, my attorney, to meet the regulations of the Insolvent Court, valued all my properties mortgaged at the mortgage debts and interest only, but added a rider to my schedule—all claims I disputed the sums of each claim mentioned—all sums owing to me but disputed—sums not to be mentioned in my schedule—and by undervaluing other assets I by this means showed a deficiency. All I possessed is mentioned in my schedule; my assignee received in writing the value of each of my properties and the true nature of each claim disputed. My schedule was filed on the 3rd July, 1858.

62. Before filing my schedule, my attorney, P. A. Thompson, was fully aware that a certain mortgage deed purporting to be a mortgage over the "Alma Inn" was cancelled, and that my assignee received the rent of the "Alma Inn" from the third day of July, one thousand eight hundred and fifty-eight.

63. My attorney, P. A. Thompson, did in writing instruct W. R. Smart, conveyancer, not to register a certain trust deed and articles of agreement dated, I believe, fourth February, one thousand eight hundred and fifty-eight.

64. On the third day of July, one thousand eight hundred and fifty-eight, W. R. Smart, conveyancer, was in possession of three deeds belonging to my wife's trustee, dated, I believe, fourth February, one thousand eight hundred and fifty-eight, lent in consequence of two of the said deeds not being registered. I received the said deeds from W. R. Smart, and lent the said deeds to my assignee for his examination; the said deeds have not been returned, and I believe the said deeds are now in the possession of my late attorney, P. A. Thompson.

65. Mr. Husband, solicitor, informed me he received written instructions to go with Mr. Shea and take possession of all my papers and documents, private as well as those referring to my estate, which they did on the evening of the fifth July, one thousand eight hundred and fifty-eight, searching every room. I followed my private papers late the same night to Mr. Shea's residence.

66. Copy of one of my private papers taken away from my private residence on the fifth July, one thousand eight hundred and fifty-eight:—

"Mr. John Garsed,—

"My dear sir,

"With reference to Mr. Walton's book-keeper's remarks touching your account with my late firm of Constable, Bushel, & Co., I have no hesitation in assuring you that all transactions between us of payment of cash were always settled to a point at the time, and in no way can you be in debt to the firm for any amount or charges as alluded to; but this question now arising must be caused by some irregularity in the entries in our books.

"Yours faithfully,

"M. CONSTABLE."

67. In consequence of my private papers being out of my possession, Mr. Constable proved in my estate a false debt of seven hundred pounds or thereabouts.

68. At my first meeting in July, one thousand eight hundred and fifty-eight, I disputed the following persons' claims, viz., W. Dean & Co., H. Dixon, C. H. Storey, W. Bradridge, and one Thos. Fellow.

69. After my first meeting, and before my second meeting, Thomas Fellow instructed Mr. W. P. Moffat, solicitor, to lodge an information against me for disputing his account. Ashdown, C. H. Storey, W. Bradridge, and H. Dixon guaranteed Mr. Moffat his expenses, and the said Ashdown, C. H. Storey, W. Bradridge, and H. Dixon were Fellow's witnesses.

70. I appeared at the Police Court, Sydney, at the suit of the said Thomas Fellow; the said Thomas Fellow, after being in the witness-box about three hours, the case was dismissed without calling a single witness or my attorney, P. A. Thompson, to reply.

71. Two days were set apart by His Honor the Chief Commissioner to have W. Dean & Co.'s account books examined in the open Court (Judge's orders served for that purpose), but that examination never took place.

72. On the twenty-third September, one thousand eight hundred and fifty-eight, my attorney, P. A. Thompson, M. Constable, and my assignee, filed a memorandum addressed to His Honor the Chief Commissioner, in substance that the said P. A. Thompson, M. Constable, and my assignee had examined the accounts kept by Ashdown in my name and found them correct. My attorney, P. A. Thompson, says "I am perfectly satisfied that Messrs. Dean & Co.'s books are correct. I attended as a creditor upon the estate. (Signed) P. A. THOMPSON."

73. I am prepared to produce my attorney's, P. A. Thompson's, notes of Ashdown and Pritchard's evidence in his (P. A. Thompson's) handwriting. My attorney, P. A. Thompson, informed me he never could understand book-keeping kept by double entry.

74. After the said memorandum was filed, on the 23rd of September, one thousand eight hundred and fifty-eight, certain accounts disputed by me and mentioned in my said schedule, filed July 3rd, one thousand eight hundred and fifty-eight, was against my consent allowed to be proved.

75. On the twenty-third of September, one thousand eight hundred and fifty-eight, my first examination commenced, and was adjourned from time to time until the third day of December, one thousand eight hundred and fifty-eight; my attorney, P. A. Thompson, examined me about certain deeds dated on or about fourth February, one thousand eight hundred and fifty-eight; two of the said deeds not registered are the same deeds before mentioned.

76. On the third of December, one thousand eight hundred and fifty-eight, and at the request of my official assignee, I filed an amended schedule. I say in my amended schedule the bill of exchange is not disputed as payable to Ashdown, but not payable to the firm of W. Dean & Co.

77.

77. A certain meeting took place at the office of my assignee on the eighteenth October, one thousand eight hundred and fifty-eight, at which said meeting Marmaduke Constable was called upon by those present at the said meeting to preside. The other persons present were P. A. Thompson, H. Dixon, C. H. Storey, W. Bradridge, W. Dean & Co., by their agent, C. H. Storey.

78. I have read twenty-two resolutions passed at the said meeting, eighteenth October, one thousand eight hundred and fifty-eight, and adjourned from time to time, which said resolutions were filed in my insolvency some time after the third day of December, one thousand eight hundred and fifty-eight, and more particularly the 2, 3, 5, 6, 7, 11, and 17.

79. The second and third resolutions say that the creditors authorized the Official Assignee to file the bill in equity now handed over to the meeting, such bill being against Mrs. Garsed and Mr. Hutchinson, to set aside fraudulent deeds (meaning the before-mentioned deeds, dated on or about 4th February, 1853), and to institute such other proceedings as shall appear to be proper. That the furniture and effects which belong to the insolvent, except the bed, bedding, and wearing apparel, be forthwith taken possession of by the Official Assignee and sold, in order to put the Official Assignee in funds to carry on the suit in equity and other proceedings which the acts of the insolvent have rendered necessary.

80. The fifth, sixth, and seventh said resolutions say, "That the Official Assignee be authorized to sell Bexley House and the town of Coventry privately, as he and any three of the creditors of the estate shall agree upon. That all the available property be forthwith put up for sale at public auction. That the offer of Hugh Dixon of seven hundred and fifty pounds for the property at Camperdown (including the 'Alma Inn') be accepted, and that the sum of seven hundred and fifty pounds be applied in discharging seven hundred and fifty pounds of Mr. Terry's mortgage debt of two thousand pounds."

81. The eleven and seventeen said resolutions say, "The correspondence between Mr. Terry, the Official Assignee, and their solicitors having been read, that the Assignee be directed to intimate to Mr. Terry in writing (as he has over and over again done verbally), that in pursuance of the 39th section of the 5th Victoria, No. 17, he has exercised the option to take an assignment of the securities held by Mr. Terry for the benefit of the creditors, on payment of the value estimated by Mr. Terry's proof out of the first assets of the insolvent's estate. That Mr. Samuel Henry Terry, a creditor in this estate, having denied on oath the exercise of right of election in accordance with the 39th section of the Insolvent Act, as sworn by Mr. Adam Wilson, Mr. P. A. Thompson, and M. Constable, and corroborated by the affidavit of Mr. G. L. Wilson, it be suggested to the Official Assignee to hold no communication with Mr. Terry except in writing.

82. After I was sent to prison, my furniture and other persons' property was taken possession of and sold, as I am informed, by public auction, in some back street on the Riley Estate.

83. I borrowed from Mr. Samuel Henry Terry upon the Camperdown estate, the "Alma Inn," as built upon, the said property, £1,500, and in May, one thousand eight hundred and fifty-eight, I reduced the original mortgage on the said property by payment of seven hundred and fifty pounds.

84. June the seventeenth, one thousand eight hundred and fifty-five, Richard Walton & Co. made an assignment. I was a creditor for six hundred and seventy pounds two shillings and eight-pence, and eight hundred pounds, lent on mortgage. Same date Marmaduke Constable made an assignment of his private estate; I was a creditor for eight hundred pounds, but on mortgage registered 465, book 64. I never received one shilling out of either estate.

85. I believe William Hellyer, Esquire, is in possession of the said assignment deeds, and that the account books belonging to the late firm of Richard Walton and Co. are the property of the said William Hellyer.

86. I am certain if my late attorney P. A. Thompson's law charges had been delivered in detail, and taxed, his account delivered to my assignee would have been found for more than the balance which would have been found due; and if on the assumption the deeds mentioned in the second resolution before mentioned are fraudulent deeds, my attorney, P. A. Thompson, I believe must have been a party to the fraud, on the ground that my attorney P. A. Thompson gave W. R. Smart, conveyancer, instructions in writing, and I have forwarded a copy of the said instructions to his Honor the Chief Commissioner of Insolvent Estates.

87. There are mutual debts between H. Dixon and myself, and I believe the balance is in my favour.

88. Among my private papers in possession of my late assignee are letters in the handwriting of C. H. Storey. Moreover his account delivered to my late assignee is not a just account, and I am informed and believe that C. H. Storey is not the agent of W. Dean & Co., and I am also informed and verily believe C. H. Storey stated to a solicitor of this city it was necessary to convict me.

89. I paid William Bradridge the sum of eight pounds weekly. About eighteen months after his discharge Bradridge sent in an account for commission. I disputed the account; it came on for trial, and a verdict was given against me for about one-third of his claim. On the third of July, one thousand eight hundred and fifty-eight, I believe Bradridge v. Garsed was down for a new trial to set aside the said one-third of his claim.

90. I am not indebted to the firm of W. Dean & Co., and the said joint affidavit of Ashdown and Pritchard states that the bill is payable to Ashdown individually.

91. My third examination was fixed for thirteenth December, one thousand eight hundred and fifty-eight.

92. On the morning of the ninth of December, one thousand eight hundred and fifty-eight, I received three summonses, each containing one or more counts, to appear at the Police Court to answer charges of fraudulent insolvency.

93. On the evening of the ninth December, one thousand eight hundred and fifty-eight, I received a summons to appear at the Police Court, at the suit of Ashdown, to answer charges of perjury; the perjury is assigned on two affidavits in the said cause, and my evidence given at the said trial April and May, one thousand eight hundred and fifty-eight.

94. I am informed and believe C. P. Pritchard did, on the ninth December, one thousand eight hundred and fifty-eight, leave the Colony; at the time he left he was insolvent. C. P. Pritchard's assignee was Mr. Adam Wilson.

95. On the thirteenth of December, one thousand eight hundred and fifty-eight, I appeared at the Insolvent Court, to make an offer of twenty shillings in the pound on all just and equitable debts, and release my estate from sequestration. My assignee informed me in the open Court it was an adjourned second meeting, and not my third meeting—nothing done. The Chief Commissioner informed me he had nothing to do with the criminal charges preferred against me by Adam Wilson.

96. On the sixteenth of December, one thousand eight hundred and fifty-eight, I appeared at the Police Office to answer the said charge of perjury.

97. I believe it was the intention of the Police Magistrate to dismiss the case, but at the close of the examination of witnesses I requested the Magistrate to have the books kept by Pritchard produced in Court, and the Magistrate for that purpose adjourned the Court for one hour. The Magistrate, on looking at the book and not finding an account entered showing two separate accounts, viz., the sum of seven thousand eight hundred and thirty pounds fifteen shillings and three-pence, and two thousand pounds, committed me to take my trial.

98. I was committed on every charge brought against me for fraudulent insolvency.

99. One of the said charges for delivering some boards after the third of July, one thousand eight hundred and fifty-eight, my assignee having previously received the money for the same.

100. One of the said charges a cross entry made by my clerk, in December, one thousand eight hundred and fifty-seven, in Pritchard's books, with a balance in my favour of fourteen thousand four hundred and twenty-three pounds fifteen shillings and three-pence. I received Pritchard's books from Ashdown on the twenty-second December, and closed them on the thirty-first December, one thousand eight hundred and fifty-seven.

101. One of the said charges for mutilating the before-mentioned deed purporting to be a mortgage deed over the "Alma Inn."

102. One of the said charges for writing with a pencil in a certain book to explain a certain entry to my assignee after the third of July, one thousand eight hundred and fifty-eight.

103. One of the said charges for conveying, on the third of December, one thousand eight hundred and fifty-seven, to Mr. Terry or his solicitor, with the knowledge of my assignee, seven days trust I held in ninety-nine years leases, my assignee having previously conveyed the said seven days to the same parties.

104. In April, one thousand eight hundred and fifty-nine, I was arraigned before the Chief Justice on three charges—one for filing the before-mentioned amended schedule on the third of December, one thousand eight hundred and fifty-eight, and found guilty on the said cross-entry made in Pritchard's books, and not guilty on the other two charges.

105. August, one thousand eight hundred and fifty-nine, I was tried for mutilating the said deed, and a verdict of not guilty was returned, and at that trial proved my innocence of the said cross-entry.

Sworn by the deponent, on the day and year first above mentioned, at Sydney, before me,

JOHN GARSED.

FRANCIS G. AUSTEN,  
A Commissioner for Affidavits.

## No. 2.

## The Crown Solicitor to The Secretary for Lands.

Sir,

Crown Solicitor's Office, Sydney, 3 April, 1884.

I have the honor to return herewith the papers forwarded to me to prepare notification of resumption under the Public Railway Land Resumption Act of 1874, Orange to Molong, and to forward the form of notification of resumption for execution by His Excellency the Governor.

I have, &amp;c.,

JOHN WILLIAMS,  
Crown Solicitor.

For E.C. minute.—J.D.

## Minute Paper for the Executive Council.

*Subject*:—Recommending resumption of land for Railway purposes—Orange to Molong.

Department of Lands, Sydney, 5 April, 1884,

It is recommended to His Excellency the Governor and the Executive Council that the lands particularized in the enclosed Declaration of Resumption be resumed under the provisions of the "Public Railway Land Resumption Act of 1874," in connection with the railway from Orange to Molong.

His Excellency the Governor and the Executive Council.

JAMES S. FARNELL.

## [Enclosure.]

Extract from *Government Gazette*, 15th May, 1884.

Department of Lands, Sydney, 5 May, 1884.

DECLARATION of Resumption by His Excellency the Governor, under the Public Railway Land Resumption Act of 1874, of land required for the construction of the railway from Orange to Molong.

[Ms. 84-7,932]

JAMES S. FARNELL.

HIS Excellency the Right Honorable Sir Augustus William Frederick Spencer Loftus (commonly called Lord Augustus Loftus), Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

To all to whom these presents shall come,

## GREETING :

WHEREAS the parcels of land mentioned, set out, or referred to in the first and eighth columns of Schedule of lands hereinafter written, are portions of certain parcels of land which have been purchased from the Crown, either absolutely or conditionally, within the period of five years immediately preceding the date hereof, and which lands so purchased as aforesaid are mentioned, described, or referred to in the second, third, fourth, fifth, sixth, and seventh columns of the said Schedule; and whereas the said parcels of land referred to in the first and eighth columns of the said Schedule are required for the construction and extension of Public Railways and for Railway Stations, that is to say, in and about the construction of the single line of Railway from Orange, in the said Colony, to Molong, in the said Colony; and the said parcels of land mentioned or referred to in the said first and eighth columns of the said Schedule are particularly set out and shown in the maps or plans relating to the said proposed railway, which are to be seen at the office of the Commissioner for Railways, in Phillip-street, Sydney, and at the Police Office at Orange aforesaid and Molong aforesaid, and in the said maps and plans are coloured blue, and are numbered as in the said eighth column in the said Schedule hereto is mentioned: Now know ye that I, the said Sir Augustus William Frederick Spencer Loftus, Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the said Colony and its Dependencies, with the advice of the Executive Council, do hereby, under and in pursuance of the powers in this behalf given by "The Public Railway Land Resumption Act of 1874," resume for and on behalf of Her Majesty, the said parcels of land mentioned, set out, or referred to in the said first and eighth columns of the said Schedule hereto, and which said parcels of land are coloured blue on the said maps or plans hereinbefore mentioned or referred to, in view of and for purposes connected with the construction and maintenance of the said line of Railway from Orange, in the said Colony, to Molong, in the said Colony as aforesaid: And to the intent that notice as provided in the third section of the said Act shall be served upon the parties interested in or entitled to the said lands, and that upon service, delivery, or advertisement of such notice as therein provided, the lands described therein, and the fee-simple and inheritance thereof shall thenceforth, with the yearly profits thereof, and all the estate and interest of every person therein, be vested in Her Majesty, her heirs, and successors, for the purposes of the said Act, absolutely free from all right of every easement, and other rights whatsoever, and that such lands shall thereupon become and be dealt with as Crown lands reserved for public railway purposes.

THE

## No. 3.

## Minute by Land-Valuer Byrnes to The Commissioner for Railways.

Orange to Molong Railway.

HEREWITH (to be forwarded to Lands Department) are tracings\* and descriptions of land on the above \* Appendix A extension resumed for the purposes of the "Public Railways Land Resumption Act of 1874," from the following persons:—Thomas Wright, M. J. Lemon, Mary Keenan, Samuel Lemon, Michael Madden, Thomas Keenan.

JAMES BYRNES, 7/4/84.

Under Secretary for Lands.—G.B. (*pro* Commissioner), B.C., 9/4/84. Any other papers in this resumption?—J.D., 18/4/84. Keep on hand, pending return of other papers from Executive Council.—J.D., 22/4/84. Instruction issued; parties informed, 8/5/84.

## No. 4.

## Appraisement of S. Lemon's Improvements and award.

Sir,

Department of Lands, Sydney, 1884.

Whereas under the Act 37 Victoria No. 18, the Government has resumed, for railway purposes, the land specified in the annexed Schedule; and whereas it is expedient that the improvements effected by the owner of such land should be appraised with a view to compensation being allowed for the resumption thereof; now I, the Under Secretary for Lands, having been duly authorized by the Minister for Lands, in pursuance of the powers vested in him, and by virtue of the Crown Lands Alienation Act of 1861, have appointed James Byrnes, of Sydney, in the Colony of New South Wales, to be appraiser on behalf of the Crown to appraise the value of the said improvements. If you are satisfied that the improvements shall be valued by him alone, you will please sign the form sent herewith marked A. If, however, you wish to appoint an appraiser to act on your behalf, you will sign the form B annexed. In this case you will be required to pay the costs of such appraiser and of the umpire who will then have to be appointed; and upon forwarding the same to Mr. Byrnes he will proceed herein to act on behalf of the Government. You will of course understand that unless an appointment in either form A or B be forwarded to him within sixty days from this date he will proceed with the appraisement in accordance with the 3rd clause of the 28th section of the Alienation Act—2. In appointing an appraiser you will be so good as to sign your name in full.

Mr. Samuel Lemon.

I have, &c.,

CHARLES OLIVER.

## (A)

WHEREAS under the 37<sup>o</sup> Victoria No. 18, the Government has resumed the land specified in the enclosed Schedule, upon which improvements have been effected by me, and whereas the Minister for Lands has intimated that he is willing to appoint Mr. James Byrnes, of Sydney, in the Colony of New South Wales, to appraise the value of the said improvements on behalf of the Government. And whereas I am desirous

desirous of concurring in the appointment of the said James Byrnes as such appraiser as aforesaid. Now therefore I, the said Samuel Lemon, of Tea-tree Creek, near Molong, do hereby nominate and appoint the said James Byrnes to be appraiser on my behalf to the intent that upon his being appointed by the Minister for Lands as appraiser on behalf of the Government, he may as sole appraiser determine the matters as aforesaid.

In witness whereof, I have hereunto set my hand, this 23rd day of June, A.D. 1884,—

Witness,—  
 JOHN BLACK, J.P. \_\_\_\_\_  
 his  
 SAMUEL x LEMON.  
 mark.

Notice of Resumption under the "Public Railways Land Resumption Act of 1874."

To Samuel Lemon,—

THE land hereunder described has been resumed for the purposes of the "Public Railways Land Resumption Act of 1874."

JAMES S. FARNELL,  
 Secretary for Lands.

Description of land resumed.

All that piece or parcel of land situate in the parish of Boree Nyrang, county of Ashburnham, and Colony of New South Wales, being part of portion 246: Commencing at the intersection of the south boundary of that portion with the north-eastern boundary of the railway from Orange to Molong; and bounded thence by the said boundary of railway bearing generally north-westerly 24 chains 62 links; thence by the west boundary of the said portion bearing south 3 chains 32 links; thence by the south-western boundary of the aforesaid railway bearing south-easterly 20 chains 62 links; thence by the south boundary of the aforesaid portion bearing east 2 chains 3 links, to the point of commencement,—containing 4 acres 2 roods and 5 perches, and numbered 135 on plan and book of reference.

Also, all that piece or parcel of land situate in the parish, county, and Colony aforesaid, being part of portion 231: Commencing at the intersection of the east boundary of that portion with the south-western boundary of the aforesaid railway; and bounded thence by the said boundary of portion bearing north 3 chains 10 links; thence by the north-eastern boundary of the aforesaid railway bearing north-westerly 84 links; thence by the north boundary of the aforesaid portion 231 bearing west 3 chains 3 links; thence by the south-western boundary of the aforesaid railway bearing south-easterly 5 chains 22 links, to the point of commencement,—containing 2 roods and 17 perches, and numbered 137 on plan and book of reference.

Orange to Molong—Appraisement of Improvements by single Appraiser.

To all whom these presents shall come—I, James Byrnes, of Sydney, in the Colony of New South Wales, send greeting:—

WHEREAS on the 4th day of May, in the year of our Lord 1884, I was duly appointed by the Minister for Lands, and on the 23rd day of June, in the year of our Lord 1884, by Samuel Lemon, of Tea-tree Creek, in the Colony of New South Wales, as the sole appraiser to fix and determine the value of the improvements said to exist on certain Crown lands described in the within schedule, which the Government has resumed for railway purposes under the Act 37<sup>o</sup> Victoria No. 18. And whereas I have entered upon the consideration of the value of the said improvements, and have heard and considered the evidence produced before me by or on behalf of the Minister for Lands and the said Samuel Lemon;—now I, the said James Byrnes, do hereby declare the sum of £4 to be the value of the said improvements at the date referred to, and do appraise and fix that amount as the value thereof.

In witness whereof, I have hereunto set my hand, this 14th day of November, A.D. 1884.

The Commissioner for Railways. JAMES BYRNES.

Under Secretary for Lands.—G.B. (*pro* Commissioner), B.C., 31/11/84.

No. 5.

The Under Secretary for Lands to The Under Secretary for Finance and Trade.

Sir, Department of Lands, Sydney, 28 November, 1884.

I have to request, with a view to the settlement of certain claims for compensation for loss of land resumed for railway purposes, that you will be so good to advise me of the amounts received up to the date of resumption, 15th May, 1884, in connection with the conditional purchases specified in the attached schedule,

I have, &c.,  
 F. H. WILSON  
 (For Under Secretary).

To the Crown Solicitor.

## No. 9.

## Mr. Licensed-Surveyor Ardill to The Commissioner for Railways.

Sir, Tipperary Brewery, Borenore, 21 April, 1885.  
As agent for Samuel and Mary Jane Lemon, in the matter of railway extension from Orange to Molong, I do myself the honor to inform you that neither of my clients are satisfied with the compensation mentioned in the deeds, which are returned to the Crown Solicitor. Neither Mr. nor Miss Lemon can write, and they both deny that they ever agreed to take the several amounts named in the deeds, or any other amount. In fact they state that the papers or diagrams were not sent to them for approval or otherwise.

I am not at present in a position to state how much land you take from either, but that mentioned in the deeds of Samuel Lemon seems to me to be entirely too little. Therefore, the diagrams showing the several areas would be very desirable. Some papers were left at their places by Mr. Byrnes, but which they sent back according, as they assert, to Mr. Byrnes' instructions; but since then, until the deeds arrived, no paper was ever sent to them. Molong being their post town, probably, as the deeds were directed to Borenore, other papers may have been sent there and went astray.

I have, &c.,  
JOHN ROCHE ARDILL,  
Licensed Surveyor.

Land Valuer.—D.C.M'L., 23/4/85.

## In re Samuel and Mary Jane Lemon.

Sir, Railway Department, Sydney, 8 May, 1885.  
In reply to your letter, of the 21st instant, addressed to the Commissioner for Railway, asking for information about the above-mentioned claims, I have the honor to inform you that notices, with tracings showing the land taken from Samuel and Mary Jane Lemon, were served on Mrs. Lemon, on the 3rd June, 1884.

The total area taken from S. Lemon is 12 acres 1 rood  $\frac{1}{2}$  perch, and the numbers on railway plan are 135, 137, 138, 139, and 140.

Nos. 138, 139, and 140, from which an area of 7 acres 20 $\frac{1}{2}$  perches is taken, are dealt with under the Railway Act of 1858, by which Mr. Lemon is required to make a claim before any further action can be taken by the Commissioner.

Nos. 135 and 137, for which deeds of conveyance have been sent to your client by the Crown Solicitor, are taken under the Railway Act of 1874, which fixes the compensation to be paid at double the amount per acre paid for it when purchased from the Crown.

Miss M. J. Lemon's land, No. 133 on plan, area required 5 acres 2 roods 21 perches, is taken under the Act of 1874, and therefore the amount of compensation in her case is also fixed by statute.

Form of claim is enclosed, in order that claim may be made for Nos. 139, 138, and 140.

J. R. Ardill, Esq., Tipperary Brewery, Borenore.

I have, &c.,  
JAMES BYRNES.

## No. 10.

## Statutory Declaration.

I, SAMUEL LEMON, of Chenseman's Creek, farmer, do solemnly and sincerely declare that I am the owner of certain pieces or parcels of land situated on the Orange and Molong railway line, Nos. 231 and 246, in the parish of Boree Nyrang, county of Ashburnham, portion of which land has been taken for railway purposes, and I have not been paid for the value of improvements thereon, consisting of stumping, clearing, and fencing, which I value at £250; and I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in the various Departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Made and signed before me, at Molong, this

26th day of February, 1886,—

JAS. HASLAM, J.P.

his  
SAMUEL x LEMON.  
mark.

Please

Please give me at least a week's notice if you intend to visit the land.—JOHN ROCHE ARDILL, L.S.  
This paper should have been sent to the Commissioner. It refers to a resumption under the Act of 1874, on the extension from Orange to Molong, upon which Mr. Byrnes, as appraiser, sent his award to the Commissioner, 19/11/84, having valued the improvements at £4.—J.B.T., 1/3/86. Commissioner.

Let me know exactly how this matter stands.—C.A.G., 6/3/86.

A portion of land was resumed under the "Public Railway Lands Resumption of 1874" from Samuel Lemon, who appointed Mr. Byrnes as appraiser. Mr. Byrnes awarded the sum of £4 for improvements, upon which the claim was scheduled by Lands Department. Instructions were then issued to Crown Solicitor, and deed prepared; but, upon being forwarded to Mr. Lemon for execution, he endeavoured to have the case reopened by making a statutory declaration that the improvements on the land taken consisted of stumping, clearing, and fencing, to the value of £250.—M.O'B., 7/3/86. Commissioner.—G.B., 10/3/86.

Is there any appeal from the award of the single appraiser, where appointment was concurred in by the claimant?—C.A.G., 10/3/86. Land Valuer, B.C.

According to sub-section 4 of section 28 of the Crown Lands Alienation Act 25 Vic. No. 1, under which appraisements are made in connection with lands resumed under the Railway Act of 1874, the award of any appraiser or appraisers shall be binding, final, and conclusive upon all persons, and to all intents and purposes whatsoever.—J.B.T., 24/3/86. Commissioner.

Cannot admit claim.—C.A.G., 26/3/86. Lemon informed, 5/4/86. Land Valuer.—D.C.M'L., 7/4/86. Noted.—J.B.T., 12/4/86. Commissioner.

Sir,

Railway Department, Sydney, 3 April, 1886.

With reference to the statutory declaration forwarded by you to this office, in which you set forth a claim to £250, by way of compensation for land taken from you in 1884, for the Orange to Molong railway, I have the honor to inform you that I am unable to entertain your claim, the award of your appraiser, dated 19/11/84, amounting to £4, being final and conclusive.

I have, &c.,

C. A. GOODCHAP,

Commissioner for Railways

(Per D. V.)

Mr. Samuel Lemon, Chenseman's Creek.

#### No. 11.

#### The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 7th May, 1888.

Samuel Lemon to you—Mary Jane Lemon to you.—Referring to my letter to you of the 7th instant, returning the papers in the matters, I have the honor to forward herewith copy letter received by me from Mr. Samuel Lemon.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

[Enclosure.]

Samuel and Mary J. Lemon to Crown Solicitor.

Sir,

Amaroo, 3 May, 1888.

I am in receipt of your letter of No. 88-86, dated 6th February, misdirected, which caused the delay, and in reply I do myself the honor to acquaint you that I will sign no such release, as I was no party to the valuation of the land, nor do I believe it to be just. I want the same as I got for the other portion.

This reply will answer for my daughter, Mary Jane Lemon.

I have, &c.,

SAMUEL LEMON

(By his Agent, JOHN ROCHE ARDILL, L.S.)

#### No. 12.

#### A. Ross, Esq., M.P., to The Commissioner for Railways.

Dear Sir,

Molong, 13 August, 1888.

Enclosed I have the honor to forward two affidavits touching the land now in dispute between your Department and Mary Jane Lemon and Samuel Lemon for compensation *re* resumption of land taken for railway purposes, and which I think they are entitled to your favourable consideration,—the claims being reasonable ones.

Yours, &c.,

DR. ROSS.

[Enclosure.]

I, SAMUEL LEMON, of Tea-tree Creek, Amaro, farmer, do solemnly and sincerely declare that I have never received any notice of the resumption of my conditional purchased land through which the Orange and Molong railway passes, in accordance with the provisions of the "Land for Public Railway Purpose Act," 37 Vic. No. 18, sec. 2 and 3; and that I, Samuel Lemon, still claim as compensation the sum of £156 for the resumption of the said land, viz., 5 acres 22 perches, and which remains up to this date unpaid and unsettled. The only notice ever received by me was a notice from the late Mr. Byrnes, but that notice was not signed by the Secretary for Lands, in accordance with the provisions of the above Act, and, therefore it was invalid, and the said notice contained no date on the document which I now hold.

And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

his  
SAMUEL x LEMON,  
mark.

Made and signed before me, at Molong, this 13th day of August, 1888.

The above document was first duly read over to Mr. Lemon and the contents fully considered by the same.

ANDREW ROSS,

Commissioner for Affidavits.  
Land

Land Valuer.—A.R., B.C., 14/8/88.

Mary Jane Lemon and Samuel Lemon, notwithstanding their affidavits to the contrary, were duly served with notices by Mr. Byrnes, and this is proved by each of them sending an intimation of concurrence in the appointment of Mr. Byrnes, on the 23rd June, 1884. Thereupon Mr. Byrnes made his award, in strict accordance with the Act.—J.B.T., 27/8/88. Commissioner.

Dr. Ross informed, 29/8/88.

Samuel and M. J. Lemon to Commissioner.

Sir,

Railway Department, Sydney, 29 August, 1888.

Referring to your letter of the 25th instant, with affidavits from the above-mentioned claimants, I am desired by the Commissioner to inform you that, notwithstanding their allegations to the contrary, Mr. and Miss Lemon were duly served with notices by the late Mr. Byrnes, this being proved by each of them sending an intimation of concurrence in the appointment of Mr. Byrnes, who thereupon made his award in strict accordance with the Act.

I have &c.,

D. VERNON,  
Secretary for Railways.

Dr. Ross, M.P., Molong.

### No. 13.

Mr. Licensed-Surveyor Ardill to The Commissioner for Railways.

Sir,

Amaroo, 19 October, 1888.

In reply to your letter of the 29th of August last, No. 5,088, addressed to Dr. Ross, M.P., in which you state that Samuel and Mary Jane Lemon concurred in the appointment of Mr. Byrnes as valuer of their respective areas resumed for railway purposes, I do myself the honor to state that this is correct, but yet to acquaint you that the notice necessary for resumption, which the Act sets forth should be signed by the Minister for Lands, was not served on my clients.

I enclosed you the only papers served in those cases, which I hope you will be good enough to return.

I have again to press the claim of each party for a speedy settlement.

I have, &c.,

JOHN ROCHE ARDILL,  
Licensed Surveyor.

Land Valuer.—D.V. (*per* M.O'B.), B.C., 25/10/88.

Mr. Ardill's principals having concurred in the appointment of Mr. Byrnes as appraiser, they cannot now object to that gentleman's award on the technical point raised by their agent, which is moreover incorrect as well as untenable.—J.B.T., 25/10/88. Secretary.

Inform.—M.O'B. (*pro* Secretary). Mr. Ardill informed, 26/10/88.

Samuel and Mary Jane Lemon to Commissioner.

Sir,

Railway Department, Sydney, 26 October, 1888.

I have the honor to acknowledge your letter of the 19th instant, in which you maintain your objection to the amount offered for your clients' land on the ground that "the notice necessary for resumption, which the Act sets forth should be signed by the Minister for Lands, was not served on them." In reply, I have to inform you that your principals having concurred in the appointment of Mr. Byrnes as appraiser, they cannot now object to that gentleman's award on a mere technicality, which is incorrect as well as untenable. I return herewith papers.

I have, &c.,

D. VERNON,  
Secretary for Railways.

Mr. John Roche Ardill, Amaroo.

### No. 14.

Mr. Licensed-Surveyor Ardill to The Commissioners for Railways.

Gentlemen,

Amaroo, 29 October, 1888.

I do myself the honor to inform you that I, as agent for Samuel Lemon, wrote on the 14th February last asking that a gate or overbridge might be erected across the railway line to give access to Mr. Lemon to cross from one portion of his 80 acres, resumed on the 8th of October, 1887, for railway purposes, Orange to Forbes, to the other portion of the said 80 acres, to which you replied, as noted in the margin, that there is a level crossing at 204 miles 54 chains and an overbridge at 204 miles 65 chains within Mr. Lemon's land, and this is considered ample provision for crossing the line. Mr. Lemon is not satisfied with these crossings, he maintaining that he should have accommodation to cross his 80 acres, and when I accepted the compensation of £54 1s. 8d. for 2 acres 1 rood 19 perches it was exclusive of gate or overbridge.

I therefore have to press for either a gate or bridge, or compensation for loss.

I have, &c.,

JOHN ROCHE ARDILL,  
Licensed Surveyor.

Presented by Dr. Ross, M.P. Awaiting an early answer, 14/11/88. Land Valuer.—D.V. (*per* M.O'B.), B.C., 14/11/88.

Sufficient means of crossing the line have been provided for Mr. Lemon's convenience, viz. :—Level crossing at 204 miles 54 chains, an overbridge at 204 miles 65 chains, and a level crossing at 205 miles 13 chains, all within a length of 65 chains, which is the distance from the entrance of the railway upon Mr. Lemon's property to its exit therefrom.—J.B.T., 17/11/88.

Secretary, 19/11/88. Informed.—D.V. (*per* M.O'B.), 19/11/88. Dr. Ross informed, 19/11/88.

Sir,

Sir,

Railway Department, Sydney, 19 November, 1888.

With reference to the letter of Mr. John Roche Ardill, forwarded by you with endorsement to this office, I have the honor to inform you that it is considered sufficient means of crossing the railway line have been provided for Mr. Lemon's convenience, viz., a level crossing at 204 miles 54 chains, an overbridge at 204 miles 65 chains, and a level crossing at 205 miles 13 chains, all within a length of 65 chains, which is the distance from the entrance of the railway upon Mr. Lemon's property to its exit therefrom.

I have, &amp;c.,

D. VERNON,

Secretary for Railways.

Dr. Ross, M.P., Sydney.

## No. 15.

## Mr. Licensed-Surveyor Ardill to The Commissioners for Railways.

Gentlemen,

Amaroo, 3 November, 1888.

I am in receipt of your letter (the number and date of which is shown in the margin), in which you say, "My principals having concurred in the appointment of Mr. Byrnes as appraiser, cannot now be objected to on a mere technicality, which is incorrect as well as untenable," I do myself the honor to acquaint you that though they did agree to the appointment of Mr. Byrnes, they thought at the time that he would come on the land and value their land; but he never came near the place, and was only once on the ground, when he gave the papers which you have now returned to Mrs. Lemon and Miss Lemon, and Lemon never saw him at all. Mr. Thompson having valued the land for which Mr. Lemon is paid (the 80 acres being Mr. Lemon's last take-up), and he is paid for both ends but not for the middle, and why he should not be paid for this as well as the two or three outer portions, is what neither he nor I can properly comprehend. I therefore hope that you will see the advisability of paying both my clients without much further delay.

I have, &amp;c.,

JOHN ROCHE ARDILL, L.S.

(Agent for SAMUEL and MARY J. LEMON).

Land Valuer.—M.O'B. (*Pro Secretary*), B.C., 6/11/88. Mr. Ardill appears to have abandoned his former contention, and there is no fresh argument urged in this letter calling for reply.—J.B.T., 8/11/88. Secretary. Inform that the matter has been finally decided, and that no advance can be made in the offer.—M.O'B. (*Pro Secretary*), 8/11/88. Mr. Ardill informed, 10/11/88.

Sir,

Railway Department, Sydney, 10 November, 1888.

With reference to your letter of the 3rd instant, asking that the claim of Samuel and Mary Jane Lemon in respect of land resumed for railway purposes may, under the circumstances mentioned therein, be reconsidered, I have the honor to inform you that the matter has been finally decided, and that no advance can be made.

I have, &amp;c.,

D. VERNON,

Secretary for Railways.

Mr. J. R. Ardill, Amaroo.

## No. 16.

## Mr. Licensed-Surveyor Ardill to The Secretary for Public Works.

Sir,

Amaroo, 9 February, 1889.

I do myself the honor to acquaint you that myself, Mr. Lemon, and Miss Mary Jane Lemon are about to go to Sydney, and will, with your permission, call on you on Wednesday morning, the 13th instant, relative to Mr. and Miss Lemon's claim for compensation for land resumed for railway purposes, Extension Orange to Molong, on which subject a good deal of correspondence has passed between me and the late Commissioner for Railways.

I have, &amp;c.,

JOHN ROCHE ARDILL, L.S.

Please let me know how this matter stands.—J.B., 11/2/89.

Mr. and Miss Mary Jane Lemon refuse to execute the releases forwarded to them by the Crown Solicitor, being dissatisfied with the amount awarded. The land was taken under the Act of 37 Vic., No. 18; which fixes the amount of compensation to be paid.—A.B. (*pro J.B.T.*), 12/2/89. Under Secretary, Public Works.

The Act provides that compensation for land conditionally purchased from the Crown shall, for a period of five years from the date of purchase be paid at the rate per acre the purchaser paid for or deposited on the land, with 100 per cent. added, and the value of all improvements taken.—D.C.M'L., 13/2/89.

## No. 17.

## Samuel and Mary Jane Lemon to The Secretary for Public Works.

Sir,

Sydney, 15 February, 1889.

Since Mr. Brown has handed in a written statement to the effect that we concurred in the appointment of Mr. James Byrnes as sole appraiser, we do ourselves the honor to inform you that we did so under the misapprehension, believing at the time that all appraisements were to be made alike and under the Act of 1858 for the following reasons:—

- 1st. There was no notice served as directed by the Act of 1874.
- 2nd. The last purchased portion of 80 acres taken up on the 29th of December, 1881, was paid for under the Act of 1858, while the 40 acres taken up on the 13th April, 1882, is not paid for, and two other portions taken up previously were paid for under the Act of 1858.
- 3rd. We therefore contend that as notices were not served as provided by the Act of 1874, that we should not be bound by the provisions of that Act.

The only notices served being those appended hereto.

I have, &amp;c.,

SAMUEL AND MARY JANE LEMON

(By their Agent—JOHN ROCHE ARDILL, L.S.)

## No. 18.

## Samuel and Mary Jane Lemon to The Secretary for Public Works.

Sir,

Tea-tree Cottage, Amaroo, 11 April, 1889.

We do ourselves the honor to inform you that in prosecution of our claim for land resumed for railway purposes, we will call on you on Thursday the 18th instant at 11 o'clock, if you have no objection, and we hope Mr. Thompson will be in his office so that he can give you the required information which was wanted when we were last in Sydney. If it would not be convenient for Mr. Thompson to attend or you to see us on the date mentioned, we hope you will be good enough so to inform us not later than Monday next.

We have, &amp;c.,

SAMUEL AND MARY JANE LEMON.

Land Valuer D.C.M'L. (*pro* U.S.), B.C., 12/4/89. I will be in attendance if required.—J.B.T., 15/4/89. Under Secretary Works. Postponed until Wednesday the 23rd.—D.C.M'L., 17/4/89. Land Valuer to see. Under Secretary Works.—J.B.T., 24/4/89.

## No. 19.

## A. Ross, Esq., M.P., to The Secretary for Public Works.

Dear Sir,

Sydney, 30 April, 1889.

In reply to my question last week *re* compensation to Samuel and Mary Jane Lemon for land taken for railway purposes on the extension of the railway from Orange to Molong, I have to state that the claim of Mr. Lemon and his daughter is a just and equitable one, and I do hope that on the Supplementary Estimates their case in respect to compensation will not be overlooked. I wish to draw your attention to the fact that Lemon is a poor man, a selector; and the land which was taken from them, viz., 5½ acres each, was the best part of their selections, and all cleared, fenced, grubbed, and improved, and fit for cultivation. The taking of the cultivation land from them is a great loss. Mr. Lemon, for other land also taken for railway purposes, received £26 per acre, and therefore he is also entitled to the same price for the 5½ acres, which is now due to him, or £149, and Mary Lemon also £149 for 5½ acres, at £26 per acre. Their case is a just, fair, and reasonable one, seeing that the resumption of the land by depriving them of the use of the land for cultivation is a great loss, say nothing of the heavy expenses incurred in improving the land. You have promised the cases your favourable consideration, and I will be glad if you will cause the above sums to be placed on the Supplementary Estimates to indemnify them for the loss of the land. It is time the cases were settled, as it has been going on now for several years, and I am sure you will see justice done to Lemon and his daughter in this matter.

Yours, &amp;c.,

DR. A. ROSS.

Inform how the case stands. The compensation to be paid is laid down by Act of Parliament, and the amount cannot be increased. Add that any delay that has taken place is not attributable to the Department, 6/5/89. Letter signed, 13/5/89. Put by.

Sir,

Department of Public Works, Sydney, 9 May, 1889.

With reference to your letter of the 30th ultimo, requesting that an amount be placed upon the Supplementary Estimates to indemnify Samuel and Mary Jane Lemon for the loss of certain land taken for the Orange and Molong Railway, I am directed by the Hon. the Secretary for Public Works to inform you that the amount of compensation having been determined in accordance with the Act 37 Vic. No. 18, under the provisions of which Act the land was resumed, the amount cannot be increased, and further that the delay in the payment of the compensation due is caused by the failure of the persons above named to sign and return the releases which were forwarded to them for execution on the 6th February, 1888.

I have, &amp;c.,

J. BARLING,

Under Secretary.

Dr. Ross, M.P., Sydney.

## Mary Jane Lemon.

## The Crown Solicitor to The Secretary for Lands.

Sir,

Crown Solicitor's Office, Sydney, 3 April, 1884.

I have the honor to return herewith the papers forwarded to me to prepare notification of resumption under the "Public Railway Land Resumption Act of 1874," Orange to Molong, and to forward the form of notification of resumption for execution by His Excellency the Governor.

I have, &amp;c.,

JOHN WILLIAMS,  
Crown Solicitor.

For Executive Council minute.—J.D.

Minute Paper for the Executive Council.

*Subject* :—Recommending Resumption of Land for Railway Purposes—Orange to Molong.

Department of Lands, Sydney, 5 April, 1884.

It is recommended to His Excellency the Governor and the Executive Council that the lands particularized in the enclosed Declaration of Resumption be resumed under the provisions of the "Public Railway Land Resumption Act of 1874," in connection with the railway from Orange to Molong.  
His Excellency the Governor and the Executive Council.

JAMES S. FARNELL.

[Enclosure.]

Extract from *Government Gazette*, 15th May, 1884.

Department of Lands, Sydney, 5 May, 1884.

DECLARATION of Resumption by His Excellency the Governor, under the Public Railway Land Resumption Act of 1874, of land required for the construction of the railway from Orange to Molong.  
[Ms. 84-7,932]

JAMES S. FARNELL.

His Excellency the Right Honorable Sir Augustus William Frederick Spencer Loftus (commonly called Lord Augustus Loftus), Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies,  
To all to whom these presents shall come,

GREETING :

WHEREAS the parcels of land mentioned, set out, or referred to in the first and eighth columns of Schedule of lands hereinafter written, are portions of certain parcels of land which have been purchased from the Crown, either absolutely or conditionally, within the period of five years immediately preceding the date hereof, and which lands so purchased as aforesaid are mentioned,

mentioned, described, or referred to in the second, third, fourth, fifth, sixth, and seventh columns of the said Schedule; and whereas the said parcels of land referred to in the first and eighth columns of the said Schedule are required for the construction and extension of Public Railways and for Railway Stations, that is to say, in and about the construction of the single line of Railway, from Orange, in the said Colony, to Molong, in the said Colony; and the said parcels of land mentioned or referred to in the said first and eighth columns of the said Schedule are particularly set out and shown in the maps or plans relating to the said proposed railway, which are to be seen at the office of the Commissioner for Railways, in Phillip-street, Sydney, and at the Police Office at Orange aforesaid and Molong aforesaid, and in the said maps or plans are coloured blue, and are numbered as in the said eighth column in the said Schedule hereto is mentioned: Now know ye that I, the said Sir Augustus William Frederick Spencer Loftus, Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the said Colony and its Dependencies, with the advice of the Executive Council, do hereby, under and in pursuance of the powers in this behalf given by "The Public Railway Land Resumption Act of 1874," resume, for and on behalf of Her Majesty, the said parcels of land mentioned, set out, or referred to in the said first and eighth columns of the said Schedule hereto, and which said parcels of land are coloured blue on the said maps or plans hereinbefore mentioned or referred to, in view of and for purposes connected with the construction and maintenance of the said line of railway from Orange, in the said Colony, to Molong, in the said Colony as aforesaid: And to the intent that notice as provided in the third section of the said Act shall be served upon the parties interested in or entitled to the said lands, and that upon service, delivery, or advertisement of such notice as therein provided, the lands described therein, and the fee-simple and inheritance thereof shall thenceforth, with the yearly profits thereof, and all the estate and interest of every person therein, be vested in Her Majesty, her heirs, and successors, for the purposes of the said Act, absolutely free from all right of every easement, and other rights whatsoever, and that such lands shall thereupon become and be dealt with as Crown lands reserved for public railway purposes.

THE SCHEDULE HEREINBEFORE REFERRED TO.

Declaration published, 15/5/84. Inform Crown Solicitor (return Declaration).—J.D. (*pro* J. G. BLAXLAND), 15/5/84. Crown Solicitor informed (Declaration returned), 17/5/84.

No. 3.

Minute by Mr. Land-Valuer Byrnes to The Commissioner for Railways.

*Subject* :—Orange to Molong Railway.

\* Appendix B. HEREWITH (to be forwarded to Lands Department) are tracings\* and descriptions of land on the above extension, resumed for the purposes of the "Public Railways Land Resumption Act of 1874," from the following persons:—Thomas Wright, Mary Keenan, Michael Madden, M. J. Lemon, Samuel Lemon, Thomas Keenan.

JAMES BYRNES,

7/4/84.

Under Secretary for Lands.—G.B. (*pro* Commissioner), B.C., 9/4/84. Any other papers in this resumption?—J.D., 18/4/84. Keep on hand, pending return of other papers from Executive Council.—J.D., 22/4/84. Instructions issued; parties informed, 8/5/84.

No. 4.

Appraisalment of Mary Jane Lemon's improvement and award.

Madam,

Department of Lands, Sydney, 1884.

Whereas under the Act 37<sup>o</sup> Victoria No. 18, the Government has resumed, for Railway purposes, the land specified in the annexed Schedule; and whereas it is expedient that the improvements effected by the owner of such land should be appraised with a view to compensation being allowed for the resumption thereof: Now I, the Under Secretary for Lands, having been duly authorized by the Minister for

for Lands, in pursuance of the powers vested in him, and by virtue of the Crown Lands Alienation Act of 1861, have appointed James Byrnes, of Sydney, in the Colony of New South Wales, to be appraiser on behalf of the Crown, to appraise the value of the said improvements. If you are satisfied that the improvements shall be valued by him alone, you will please sign the form sent herewith, marked A. If, however, you wish to appoint an appraiser to act on your behalf, you will sign the form B, annexed. In this case you will be required to pay the costs of such appraiser and of the umpire who will then have to be appointed; and upon forwarding the same to Mr. Byrnes he will proceed herein to act on behalf of the Government. You will, of course, understand that unless an appointment in either form A or B be forwarded to him within sixty days from this date he will proceed with the appraisement, in accordance with the 3rd clause of the 28th section of the Alienation Act—2. In appointing an appraiser you will be so good as to sign your name in full.

M. J. Lemon.

I have, &c.,

CHARLES OLIVER.

(A.)

WHEREAS under the Act 37<sup>o</sup> Victoria No. 18, the Government has resumed the land specified in the enclosed Schedule, upon which improvements have been effected by me; and whereas the Minister for Lands has intimated that he is willing to appoint Mr. James Byrnes, of Sydney, in the Colony of New South Wales, to appraise the value of the said improvements on behalf of the Government. And whereas I am desirous of concurring in the appointment of the said James Byrnes as such appraiser as aforesaid: Now, therefore, I, the said Mary Jane Lemon, of Tea-tree Creek, near Molong, do hereby nominate and appoint the said James Byrnes to be appraiser on my behalf, to the intent that upon his being appointed by the Minister for Lands as appraiser on behalf of the Government, he may, as sole appraiser, determine the matters aforesaid.

In witness whereof, I have hereunto set my hand, this 23rd day of June, A.D. 1884.

MARY JANE LEMON.

Notice of resumption under the "Public Railways Land Resumption Act of 1874."

To M. J. Lemon,—

THE land hereunder described has been resumed for the purposes of the "Public Railways Land Resumption Act of 1874."

JAMES S. FARNELL,  
Secretary for Lands.

Description of land resumed.

All that piece or parcel of land situate in the parish of Boree Nyranng, county of Ashburnham, and Colony of New South Wales, being part of portion 256: Commencing at the south-eastern corner of that portion; and bounded thence by its southern boundary, bearing westerly 1 chain 20 links; thence by the south-western boundary of the railway from Orange to Molong, bearing north-westerly 28 chains 64 links; thence by the north boundary of the said portion bearing east 2 chains 30 links; thence by the north-eastern boundary of the aforesaid railway, bearing south-easterly 26 chains 55 links; thence by the east boundary of the aforesaid portion bearing south 1 chain 90 links, to the point of commencement, containing 5 acres 2 roods and 21 perches, and numbered 133 on Plan and Book of Reference.

Orange to Molong—Appraisement of improvements by single Appraiser.

To all to whom these presents shall come—

I, James Byrnes, of Sydney, in the Colony of New South Wales, send, greeting:—

WHEREAS on the 8th day of May, in the year of our Lord, 1884, I was duly appointed by the Minister for Lands, and on the 23rd day of June, in the year of our Lord, 1884, by Mary Jane Lemon, of Tea-tree Creek, in the Colony of New South Wales, as the sole appraiser to fix and determine the value of the improvements said to exist on certain Crown land described in the within Schedule, which the Government has resumed for railway purposes under the Act 37 Victoria No. 18. And whereas I have entered upon the consideration of the value of the said improvements, and have heard and considered the evidence produced before me, by or on behalf of the Minister for Lands and the said Mary Jane Lemon. Now I, the said James Byrnes, do hereby declare the sum of nil to be the value of the said improvements at the date referred to, and do appraise and fix that amount as the value thereof.

In witness whereof, I have hereunto set my hand, this 14th day of November, A.D. 1884.

The Commissioner for Railways.

JAMES BYRNES.

Under Secretary for Lands.—G.B. (*pro* Commissioner), B.C., 22/11/84.

No. 5.

The Under Secretary for Lands to The Under Secretary for Finance and Trade.

Sir,

Department of Lands, Sydney, 23 November, 1884.

I have to request, with a view to the settlement of certain claims for compensation for loss of land resumed for railway purposes, that you will be so good as to advise me of the amounts received up to date of resumption, 15th May, 1884, in connection with the conditional purchases specified in the attached schedule.

I have, &c.,

F. H. WILSON

(For the Under Secretary).

Commissioner for Railways  
(*Per* D.C.M'L.), B.C., 23/3/85.

To the Crown Solicitor.

No. 10.

## Mr. Licensed-Surveyor Ardill to The Commissioner for Railways.

Sir,

Tipperary Brewery, Borenore, 14 May, 1885.

In reply to your letter of the 8th instant, in which you say that Mary Jane Lemon's 5 acres 2 roods 21 perches, numbered on plan 133, were taken under the Act of 1874, which fixes the compensation at double the price paid to the Crown, I do myself the honor to inform you that the price paid was £1 an acre, and that the loss by severance was most considerable, the line going diagonally through her land, and that she does not want more than her neighbours got. I enclose you her claim, which I hope you will consider reasonable.

I have, &amp;c.,

JOHN ROCHE ARDILL, L.S.

[Enclosure.]

Railway Extension from Orange to Molong.

I HEREBY offer to accept from the Commissioner for Railways, as purchase money for the land (including buildings and fences erected thereon) of which I am owner, delineated on the tracing plan attached to the notice of land taken, and numbered 133, which I hereby acknowledge to have received, containing 5 acres 2 roods and 21 perches, more or less, and as compensation for damage by severance, by the railway, or otherwise caused by the execution of the railway works, as particularly set forth in the subjoined Schedule of claim, the sum of £292 12s. 6d., which sum I declare to be my full claim in respect of the matters aforesaid.

Dated this 13th day of May, 1885,—

To the Commissioner for Railways, Sydney.

MARY JANE LEMON,  
Molong.

MARY JANE LEMON  
(By her Agent, JOHN ROCHE ARDILL, L.S.)

Land Valuer.—L.P.I. (*pro* G.B.), 15/5/85. Inform. This case was reported on 14/11/84 under the Railway Act of 1874, and forwarded to Head Office on that date.—J.B., 19/5/85. Commissioner. Mr. Ardill informed, 23/5/85.

Sir,

Railway Department, Sydney, 23 May, 1885.

With reference to your letter of the 14th instant, respecting the claim of Mary Jane Lemon for land resumed for railway purposes, I have the honor to inform you that the land having been taken under the Railway Act of 1874, will have to be specially dealt with as provided by that Act.

I have, &amp;c.,

C. A. GOODCHAP,  
Commissioner for Railways.  
(*Per* G. B.)

Mr. Licensed-Surveyor Ardill, Tipperary Brewery, Borenore.

No. 11.

## No. 11.

## Mr. Licensed-Surveyor Ardill to the Commissioner for Railways.

Sir,

Tipperary Brewery, Borenore, 21 April, 1885.

As agent for Samuel and Mary Jane Lemon in the matter of railway extension from Orange to Molong, I do myself the honor to inform you that neither of my clients are satisfied with the compensation mentioned in the deeds, which are returned to the Crown Solicitor. Neither Mr. nor Miss Lemon can write, and they both deny that they ever agreed to take the several amounts named in the deeds, or any other amount; in fact they state that the papers or diagrams were not sent to them for approval or otherwise.

I am not at present in a position to state how much land you take from either, but that mentioned in the deeds of Samuel Lemon seems to me to be entirely too little; therefore, the diagrams showing the several areas would be very desirable. Some papers were left at their places by Mr. Byrnes, but which they sent back according, as they assert, to Mr. Byrnes' instructions; but, since then until the deeds arrived, no paper was ever sent to them. Molong being their post town, probably as the deeds were directed to Borenore, other papers may have been sent there and went astray.

I have, &amp;c.,

JOHN ROCHE ARDILL, L.S.

Land Valuer.—D.C.M'L., 23/4/85.

In re Samuel and Mary Jane Lemon.

Sir,

Railway Department, Sydney, 8 May, 1885.

In reply to your letter of 21st instant, addressed to the Commissioner for Railways, asking for information about the above-mentioned claims, I have the honor to inform you that notices, with tracings showing the land taken from Samuel and Mary Jane Lemon, were served on Mrs. Lemon on the 13th June, 1884.

The total area taken from S. Lemon is 12 acres 1 rood  $\frac{1}{2}$  perch, and the numbers on railway plan are 135, 137, 138, 139, and 140.

Nos. 138, 139, and 140, from which an area of 7 acres 20 $\frac{1}{2}$  perches is taken, are dealt with under the Railway Act of 1858, by which Mr. Lemon is required to make a claim before any further action can be taken by the Commissioner.

Nos. 135 and 137, for which deeds of conveyance have been sent to your client by the Crown Solicitor, are taken under the Railway Act of 1874, which fixes the compensation to be paid at double the amount per acre paid for it when purchased from the Crown.

Miss M. J. Lemon's land—No. 133 on plan; area required, 5 acres 2 roods 21 perches—is taken under the Act of 1874, and, therefore, the amount of compensation in her case is also fixed by statute.

Form of claim is enclosed, in order that claim may be made for Nos. 138, 139, and 140.

I have, &amp;c.,

JAMES BYRNES.

J. R. Ardill, Esq., Tipperary Brewery, Borenore.

## No. 12.

## Mary Jane Lemon to The Secretary for Public Works.

Sir,

Tea-tree Creek, Amaroo, 21 May, 1887.

With regard to my claim for land taken from me for the extension of the railway line from Orange to Molong, 5 acres 2 roods 21 perches, for which you offer me £2 16s. 3d., I do myself the honor to state that my improvements were not taken into consideration, and pray that you may be pleased to have the case reopened, so that they may be valued, and just compensation given to me.

I have, &amp;c.,

MARY JANE LEMON

(By her Agent—JOHN ROCHE ARDILL, L.S.)

For attention.—28/5/87. Land Valuer.—A.R., B.C., 31/5/87. The Land Valuer cannot do anything in this matter unless instructed to submit an amended award.—J.B.T., 3/6/87. Secretary. How was amount calculated—was anything allowed for improvements?—C.A.G., 13/6/89. Land Valuer; B.C.: No improvements were included in this award.—J.B.T., 14/6/87. Commissioner. Were any improvements made? Ascertain to-day, and write letter corresponding with answer.—C.A.G., 16/6/87. Land Valuer.—A.R., B.C., 16/6/87. Urgent. I cannot say. The appraisal and award were made and furnished by the late Mr. Byrnes.—J.B.T., 16/6/87. We must assume that there was no improvement on this particular portion taken.—C.A.G., 18/6/87. Dr. Ross informed, 27/6/87.

Sir,

Railway Department, Sydney, 27 June, 1887.

With reference to the letter presented by you from Mrs. Mary Jane Lemon (agent, John Roche Ardill), in which she states that improvements were not taken into consideration in the valuation of her land resumed for railway purposes, I have the honor, by direction of the Commissioner for Railways, to inform you that the valuation of the land in question was made by an appraiser, in the appointment of whom Mrs. Lemon concurred, and under the Railway Lands Resumption Act of 1874, in terms of which the ground was taken, the matter of award cannot be reopened. It is assumed that there was no improvement on the particular portion resumed.

I have, &amp;c.,

A. RICHARDSON

(For the Secretary of Railways).

Dr. Ross, M.P., Sydney.

17

No. 13.

Mary Jane Lemon to The Commissioner for Railways.

Sir,

Amaroo, 9 July, 1887.

In reply to your letter, the number and date of which appear in the margin, I do myself the honor to state that when my land was valued the improvements were not taken into consideration; as a proof, the resumed area is 5 acres 0 roods 22 perches, and the amount is £2 16s. 3d., which is exactly 10s. an acre, and the line goes diagonally through my land, entirely rendering it almost useless.

I have, &amp;c.,

MARY JANE LEMON

(By her agent—JOHN ROCHE ARDILL, L.S.)

Land Valuer.—A.R., B.C., 11/7/87.

If authorized by the Commissioner, I will submit a report on this matter, which I would have an opportunity of doing very soon, as I must visit Molong to attend an arbitration in two or three weeks.—J.B.T., 18/7/87. Secretary.

Approved.—C.A.G., 21/7/87. Land Valuer.—A.R., B.C., 21/7/87. I have carefully inspected this land, and now beg to report that no improvements were taken, and that the award made by Mr. Byrnes is correct.—J.B.T., 2/9/87. Secretary. Inform.—A.R., 3/9/87. Mr. J. R. Ardill informed.—7/9/87.

Mary Jane Lemon to Commissioner.

Sir,

Railway Department, Sydney, 7 September, 1887.

In reply to your letter of the 9th July last, I have the honor, by direction of the Commissioner for Railways, to inform you that the Land Valuer has carefully inspected the portion of your client's property which was resumed, and find that no improvements were taken, and that the award made by his predecessor is correct.

I have, &amp;c.,

A. RICHARDSON

(For the Secretary for Railways).

Mr. J. R. Ardill, Amaroo.

No. 14.

Mr. Licensed-Surveyor Ardill to the Commissioner for Railways.

Sir,

Amaroo, 12 September, 1887.

In reply to your letter, number and date noted in the margin, in which you state "that the Land Valuer has carefully inspected the portion of your client's property which was resumed, and finds that the improvements were taken, and that the award made by his predecessor is correct," I do myself the honor to inform you that there was no value whatever placed on my client's improvements, the area resumed being 5 acres 2 roods and 21 perches, and the amount offered £2 16s. 3d., which is only 10s. per acre, and nothing given for severance, although the line runs diagonally through her land.

I have, &amp;c.,

JOHN ROCHE ARDILL,

Licensed Surveyor.

Land Valuer.—A.R., B.C., 14/9/87.

Mr. Ardill appears to have been misinformed. No improvements were taken and nothing can be given for damage by severance under the Act of 1874 under which this resumption was made.—J.B.T., 19/9/87. Secretary.

Inform.—A.R., 20/9/87. Mr. J. R. Ardill informed, 22/9/87.

Mary Jane Lemon to Commissioner.

Sir,

Railway Department, Sydney, 22 September, 1887.

In reply to your letter, 12th instant, I have the honor, by direction of the Commissioner for Railways, to inform you that no improvements were taken from your client, and that nothing can be allowed for damage by severance, under the Act of 1874, by authority of which this resumption was made.

I have, &amp;c.,

D. VERNON,

Secretary for Railways.

John Roche Ardill, Esq., Amaroo.

No. 15.

Mr. Licensed-Surveyor Ardill to A. Ross, Esq., M.P.

Dear Doctor,

Tea-tree Creek, Amaroo, 23 November, 1887.

I enclose you tracing of Mary Jane Lemon's land, by which you will see that the line goes diagonally through her land, completely destroying it, and all that they are allowing her is £2 16s. 3d.; whereas, by the same valuation of Mr. Lemon's land (£26 per acre) it would amount to £146 5s., without anything for severance, which should be at least £150 more, and there is nothing given for improvements, so that her case is really a hard one.

Yours, &amp;c.,

JOHN ROCHE ARDILL,

Licensed Surveyor.

Presented by Dr. Ross, M.P., and strongly recommended to favourable consideration, 6th December, 1887.

Land Valuer.—A.R., B.C., 8/12/87.

The land was taken under the Act of 1874, and the amount of compensation was fixed by that Act. Further, the Judges have decided that no damage by severance can be charged under that Act. A printed copy of the decision is herewith, and might be forwarded to Mr. Ardill.—J.B.T., 23/1/88. Secretary.

Inform and forward printed copy of decision.—A.R., 23/1/88. Dr. Ross, M.P., informed, 30/1/88.

Sir,

Sir, Railway Department, Sydney, 30 January, 1888.  
 In reply to the letter of the 23rd November last, addressed to you by Mr. Ardill, with reference to the valuation of land resumed by this Department from Mrs. Mary J. Lemon, I have the honor, by direction of the Commissioner for Railways, to inform you that the land referred to was taken under the Act of 1874, and the amount of compensation was fixed by that Act.  
 I am to add that the Judges have decided (*vide* copy of decision enclosed) that no damage by severance can be charged under that Act.

Dr. Ross, M.P., Molong.

I have, &c.,

A. RICHARDSON

(For the Secretary for Railways).

No. 16.

Mr. Licensed-Surveyor Ardill to The Commissioner for Railways.

Sir,

German's Hill, Orange, 14 February, 1888.

No. 67-7,367-48.  
 Date, 30 January,  
 1888.

In reference to your letter, addressed to Dr. Ross, M.P., the number and date of which appears in the margin, I do myself the honor to invite your attention to the 4th clause of the Act referred to in your letter, and the decision of the Judges in the said matter, which clause I quote for your more immediate convenience:—

"After the passing of this Act no compensation for land resumed under the authority of this Act shall be awarded under the provisions of the said Government Railway Act, and no claim or remedy of any person in respect of such land shall be allowed or entertained in any Court, or by any person whomsoever otherwise than under the provisions of this Act."

Not one word is said that compensation for severance should not be allowed, and with all due deference to the decision of the Judges, I think that here they were mistaken, and Judges have been known to differ, for if compensation for severance was not allowed would it not be as bad as open highway robbery, and most particularly in this case, where the line goes diagonally through the farm, cutting it into two triangles, rendering it almost unfit for cultivation, and most assuredly it could never be the intention of the Legislature to spoil an estate and ruin the proprietor, particularly in this case, where the area is only 40 acres, and 5 acres 2 roods and 21 perches of the very best of it, having been taken for the Railway, and only £2 16s. 3d. being allowed for it. Could this possibly be the intention of the Legislature? Were the whole 40 acres resumed it would be far better, and far more equitable.

I hope under the circumstances that you will reconsider the matter and see justice done.

I send this through Dr. Ross, who, I have every hope, will lay the cause before you far more lucid than I can by my pen.

I have, &c.,

JOHN ROCHE ARDILL,

Licensed Surveyor.

Presented by Dr. Ross.

Land Valuer.—D. VERNON (*per* J.P.), B.C., 16/2/88. I can add nothing to my former reports.  
 J.B.T., 20/2/88. Secretary. Inform.—A.R., 21/7/88. Mr. Ardill informed, 25/2/88.

*Re* Mary Jane Lemon's claim.

Sir,

Railway Department, Sydney, 25 February, 1888.

I have the honor to acknowledge your letter of the 14th instant, further respecting the above-mentioned matter.

In reply I am desired by the Commissioner for Railways to say that he cannot alter the decision in this matter communicated to you under date the 22nd September last.

I have, &c.,

D. VERNON,

Secretary for Railways.

Mr. John R. Ardill, German's Hill, Orange.

No. 17.

The Crown Solicitor to The Commissioner for Railways.

Samuel Lemon to you; M. J. Lemon to you.

Sir,

Crown Solicitor's Office, Sydney, 7 May, 1888.

Referring to my letter to you of the 7th instant, returning the papers in the above matters, I have the honor to forward herewith copy of letter received by me from Mr. Samuel Lemon.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

[Enclosure.]

Sir,

Amaroo, 3 May, 1888.

I am in receipt of your letter of No. 88-86, dated 6th February, misdirected, which caused the delay, and in reply I do myself the honor to acquaint you that I will sign no such release, as I was no party to the valuation of the land, nor do I believe it to be just. I want the same as I got for the other portion.

This reply will answer for my daughter, Mary Jane Lemon.

I have, &c.,

SAMUEL LEMON

(By his Agent,—JOHN ROCHE ARDILL, L.S.)

To the Crown Solicitor.

No. 18.

A. Ross, Esq., M.P., to The Commissioner for Railways.

Dear Sir,

Molong, 13 August, 1888.

Enclosed I have the honor to forward two affidavits touching the land now in dispute between your Department and Mary Jane Lemon and Samuel Lemon for compensation *re* resumption of land taken for railway purposes, and which I think they are entitled to your favourable consideration, the claims being reasonable ones.

Yours, &c.,

DR. ROSS.

[Enclosure.]

[Enclosure.]

I, MARY JANE LEMON, of Tea-tree Creek, Amaroo, near Molong, do solemnly and sincerely declare that I have never received any notice of the resumption of my conditionally purchased land, through which the Orange and Molong railway passes, in accordance with the provisions of the "Land for Public Railway Purposes Act," 37 Victoria No. 18, sections 2 and 3: And that I, Mary Jane Lemon, still claim as compensation the sum of £210 for the resumption of the said land, viz., 5 acres 2 roods 21 perches, and which remains up to this date unpaid and unsettled; the only notice ever received by me was a notice from the late Mr. Byrnes, but that notice was not signed by the Secretary for Lands, in accordance with the provisions of the above Act, and therefore it was invalid; and I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intitled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

MARY JANE LEMON.

Made and signed before me, at Molong, this 13th }  
day of August, 1888, —

ANDREW ROSS, J.P.,  
Commissioner for Affidavits.

Land Valuer.—A.R., B.C., 14/8/88.

Mary Jane Lemon and Samuel Lemon, notwithstanding their affidavits to the contrary, were duly served with notices by Mr. Byrnes, and this is proved by each of them sending an intimation of concurrence in the appointment of Mr. Byrnes on the 23rd June, 1884. Thereupon Mr. Byrnes made his award in strict accordance with the Act.—J.B.T., 27/8/88. Commissioner.

Dr. Ross informed, 29/8/88.

Samuel and M. J. Lemon to Commissioner.

Sir,

Railway Department, Sydney, 29 August, 1888.

Referring to your letter of the 25th instant, with affidavits from the above-mentioned claimants, I am desired by the Commissioner to inform you that, notwithstanding their allegations to the contrary, Mr. and Miss Lemon were duly served with notices by the late Mr. Byrnes, this being proved by each of them sending an intimation of concurrence in the appointment of Mr. Byrnes, who thereupon made his award in strict accordance with the Act.

I have, &amp;c.,

D. VERNON,

Secretary for Railways.

Dr. Ross, M.P., Molong.

## No. 19.

Mr. Licensed-Surveyor Ardill to The Commissioner for Railways.

Sir,

Amaroo, 19 October, 1888.

In reply to your letter of the 29th of August last, No. 88-9,671, No. 5,088, addressed to Dr. Ross, M.P., in which you state that Samuel and Mary Jane Lemon concurred in the appointment of Mr. Byrnes as valuator of their respective areas resumed for railway purposes, I do myself the honor to state that this is correct, but yet to acquaint you that the notice necessary for resumption, which the Act sets forth should be signed by the Minister for Lands, was not served on my clients.

I enclose you the only papers served in those cases, which I hope you will be good enough to return. Papers enclosed which please return.

I have again to press the claim of each party for a speedy settlement.

I have, &amp;c.,

JOHN ROCHE ARDILL,

Licensed Surveyor.

Land Valuer.—D.V. (*per* M.O'B.), B.C., 25/10/88.

Mr. Ardill's principals having concurred in the appointment of Mr. Byrnes as appraiser they cannot now object to that gentleman's award on the technical point raised by their agent, which is, moreover, incorrect as well as untenable.—J.B.T., 25/10/88.

Secretary. Inform.—M.O'B. (*pro* Secretary). Mr. Ardill informed, 26/10/88.

Samuel and Mary Jane Lemon to Commissioner.

Sir,

Railway Department, Sydney 26 October, 1888.

I have the honor to acknowledge your letter of the 19th instant, in which you maintain your objection to the amount offered for your clients' land on the ground that "the notice necessary for resumption, which the Act sets forth should be signed by the Minister for Lands, was not served on them." In reply, I have to inform you that your principals having concurred in the appointment of Mr. Byrnes as appraiser, they cannot now object to that gentleman's award on a mere technicality, which is incorrect as well as untenable. I return herewith papers.

I have, &amp;c.,

D. VERNON,

Secretary for Railways.

Mr. John Roche Ardill, Amaroo.

## No. 20.

Mr. Licensed-Surveyor Ardill to The Commissioners for Railways.

Gentlemen,

Amaroo, 3 November, 1888.

I am in receipt of your letter, the number and date of which are shown in the margin, in which you say "my principals having concurred in the appointment of Mr. Byrnes as appraiser cannot now be objected to on a mere technicality, which is incorrect as well as untenable." I do myself the honor to acquaint you that, though they did agree to the appointment of Mr. Byrnes, they thought at the time that he would come on the land and value their land, but he never came near the place, and was only once on the ground when he gave the papers which you have now returned to Mrs. Lemon and Miss Lemon, and  
Lemon

Registered No.  
88-6,080; No.  
6,695; October  
26, 1888.

Lemon never saw him at all. Mr. Thompson having valued the land for which Mr. Lemon is paid, the 80 acres being Mr. Lemon's last take up, and he is paid for both ends but not for the middle, and why he should not be paid for this, as well as the two or three outer portions, is what neither he nor I can properly comprehend. I therefore hope that you will see the advisability of paying both my clients without much further delay.

I have, &c.,

Land Valuer.—M.O'B. (*pro* Secretary), B.C., 6/11/88. Mr. Ardill appears to have abandoned his former contention, and there is no fresh argument urged in this letter calling for reply.—J.B.T., 8/11/88. Secretary. Inform that the matter has been finally decided, and that no advance can be made in the offer.—M.O'B. (*pro* Secretary), 8/11/88. Mr. Ardill informed, 10/11/88.

Samuel and Mary Jane Lemon to Commissioners.

Sir,

Railway Department, Sydney, 10 November, 1888.

With reference to your letter of the 3rd instant asking that the claim of Samuel and Mary Jane Lemon in respect of land resumed for railway purposes may, under the circumstances mentioned therein, be reconsidered, I have the honor to inform you that the matter has been finally decided, and that no advance can be made.

D. VERNON,

Secretary for Railways.

Mr. J. R. Ardill, Amaroo.

#### No. 21.

Mr. Licensed-Surveyor Ardill to The Secretary for Public Works.

Sir,

Amaroo, 9 February, 1889.

I do myself the honor to acquaint you that myself, Mr. Lemon, and Miss Mary Jane Lemon are about to go to Sydney, and will, with your permission, call on you on Wednesday morning the 13th instant, relative to Mr. and Miss Lemon's claim for compensation for land resumed for railway purposes (extension Orange to Molong), on which subject a good deal of correspondence has passed between me and the late Commissioner for Railways.

I have, &c.,

JOHN ROCHE ARDILL,

Licensed-Surveyor.

Please let me know how this matter stands.—J.B., 11/2/89.

Mr. and Miss Mary Jane Lemon refuse to execute the releases forwarded to them by the Crown Solicitor, being dissatisfied with the amount awarded. The land was taken under the Act of 37 Vic. No. 18, which fixes the amount of compensation to be paid.—A.B. (*pro* J.B.T.), 12/2/89. Under Secretary for Public Works.

The Act provides that compensation for land conditionally purchased from the Crown shall, for a period of five years from the date of purchase, be paid at the rate per acre the purchaser paid for or deposited on the land, with 100 per cent. added and the value of all improvements.—D.C.M'L., 13/2/89.

#### No. 22.

Mary Jane and Samuel Lemon to The Secretary for Public Works.

Sir,

Sydney, 15 February, 1889.

Since Mr. Brown has handed in a written statement, to the effect that we concurred in the appointment of Mr. James Byrnes as sole appraiser, we do ourselves the honor to inform you that we did so under a misapprehension, believing at the time that all appraisements were to be made alike and under the Act of 1858, for the following reasons:—

1st. There was no notice served as directed by the Act of 1874.

2nd. The last purchased portion of 80 acres, taken up on the 29th of December, 1881, was paid for under the Act of 1858, while the 40 acres taken up on the 13th April, 1882, is not paid for, and two other portions taken up previously were paid for under the Act of 1858.

3rd. We therefore contend that as notices were not served as provided by the Act of 1874, that we should not be bound by the provisions of that Act.

The only notices served being those appended hereto.

I have, &c.,

SAMUEL AND MARY JANE LEMON

(By their Agent—JOHN ROCHE ARDILL, Licensed Surveyor).

#### No. 23.

Mary Jane and Samuel Lemon to The Secretary for Public Works.

Sir,

Tea-tree Cottage, Amaroo, 11 April, 1889.

We do ourselves the honor to inform you that, in prosecution of our claim for land resumed for railway purposes, we will call on you on Thursday, the 18th instant, at 11 o'clock, if you have no objection, and we hope Mr. Thompson will be in his office, so that he can give you the required information which was wanted when we were last in Sydney. If it would not be convenient for Mr. Thompson to attend, or you to see us, on the date mentioned, we hope you will be good enough so to inform us not later than Monday next.

We have, &c.,

MARY JANE AND SAMUEL LEMON.

Land Valuer.—D.C.M'L. (*pro* Under Secretary), B.C., 12/4/89. I will be in attendance if required.—J.B.T., 15/4/89. Under Secretary Works. Postponed until Wednesday, the 23rd.—D.C.M'L., 17/4/89. Land Valuer to see. Under Secretary Works.—J.B.T., 24/4/89.

No. 24.

A. Ross, Esq., M.P., to The Secretary for Public Works.

Dear Sir,

Sydney, 30 April, 1889.

In reply to my question last week *re* compensation to Samuel Lemon and Mary Lemon for land taken for railway purposes in the extension of the railway from Orange to Molong, I have to state that the claim of Mr. Lemon and his daughter is a just and equitable one, and I do hope that on the Supplementary Estimates their case in respect to compensation will not be overlooked. I wish to draw your attention to the fact that Lemon is a poor man, a selector, and the land which was taken from them, viz., 5½ acres each, was the best part of their selections, and all cleared, fenced, grubbed, and improved, and fit for cultivation. The taking of the cultivation land from them is a great loss. Mr. Lemon, for other land also taken for railway purposes, received £26 per acre, and therefore he is also entitled to the same price for the 5½ acres, which is now due to him, or £149; and Mary Lemon also, £149 for 5½ acres at £26 per acre. Their case is a just, fair, and reasonable one, seeing that the resumption of the land, by depriving them of the use of the land for cultivation, is a great loss, say nothing of the heavy expenses incurred in improving the land. You have promised the cases your favourable consideration, and I will be glad if you will cause the above sums to be placed on the Supplementary Estimates to indemnify them for the loss of the land. It is time the cases were settled, as it has been going on now for several years, and I am sure you will see justice done to Lemon and his daughter in this matter.

Yours, &amp;c.,

DR. A. ROSS.

Inform how the case stands. The compensation to be paid is laid down by Act of Parliament and the amount cannot be increased. Add that any delay that has taken place is not attributable to the Department, 6/5/89.

Letters signed, 13/5/89. Put by.

Sir,

Department of Public Works, Sydney, 9 May, 1889.

With reference to your letter of the 30th ultimo, requesting that an amount be placed upon the Supplementary Estimates to indemnify Samuel and Mary Lemon for the loss of certain land taken for the Orange and Molong Railway, I am directed by the Honorable the Secretary for Public Works to inform you that the amount of compensation having been determined in accordance with the Act 37 Vic. No. 18, under the provisions of which Act the land was resumed, the amount cannot be increased, and further, that the delay in the payment of the compensation due is caused by the failure of the persons above named to sign and return the releases which were forwarded to them for execution on the 6th February, 1888.

I have, &amp;c.,

J. BARLING,

Under Secretary.

Dr. Ross, M.P., Sydney.

## NEW SOUTH WALES.

## PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND UNDER, FOR ADDITIONAL SHUNTING AND OTHER RAILWAY WORKS AT EVELEIGH.)

Presented to Parliament, pursuant to Act 51 Vic. No. 37, sec. 20.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. / } Right Honourable CHARLES ROBERT,  
BARON CARRINGTON, a Member of Her  
Majesty's Most Honourable Privy  
(L.S.) Council, Knight Grand Cross of the  
CARRINGTON, Most Distinguished Order of Saint  
Governor. Michael and Saint George, Governor and  
Commander-in-Chief of the Colony of  
New South Wales and its Dependencies.

WHEREAS the Railway Commissioners of New South Wales are desirous of constructing shunting works on the land described in the Schedule at the foot hereof, which is adjacent to land belonging to the Railway Commissioners aforesaid, for the purpose of erecting additional shunting and other railway works thereon: And it is estimated that the cost of carrying out the said works will not exceed the sum of ten thousand pounds: And whereas, under the provisions of the Public Works Act of 1888, I, the Governor aforesaid, with the advice of the Executive Council, have in due form directed that the said works shall be carried out under the provisions of the said Act by the Railway Commissioners aforesaid, who, in respect of the said works, I have declared shall be deemed to be the constructing authority; and also, that the land required for carrying out the said works shall be acquired under the provisions of the said Act: And whereas the land described in the Schedule at the foot hereof is the land required for carrying out the said works. Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid by this notification to be published in the Government Gazette, do declare that the said land in the said Schedule described has been and is hereby appropriated for the purpose of erecting thereon additional shunting works and other works, as additions to the railway works in connection with certain works on the railway land adjacent to the said land so hereinafter described. To the intent that upon the publication of this notification in the Gazette, the legal estate in the said land hereafter described, shall forthwith be vested in the Railway Commissioners of New South Wales, as the constructing authority on behalf of Her Majesty, under the provision in that behalf in the 21st section of the said Public Works Act of 1888. And I declare that the following is the description of the land hereinbefore referred to, that is to say.

All that piece or parcel of land, situate in the parish and Borough of Alexandria, county of Cumberland, Colony of New

South Wales, being part of the Waterloo Estate: Commencing at a point where the northern building line of Pickup-street abuts on the western building line of Phillip-street; and bounded thence partly on the south by part of the northern building line of Pickup-street, being lines bearing south eighty degrees six minutes west two hundred and eighty-three feet two inches, and south eighty-one degrees thirty-nine minutes west two hundred and ninety-five feet seven inches; thence on the west by a line bearing north eighteen degrees twenty-three minutes and thirty seconds west two hundred and eighteen feet ten and one-half inches to a Government lane thirty feet wide, dividing the Eveleigh Railway Yards from the land herein described; thence on the north by the Government lane aforesaid, being lines bearing north seventy-one degrees seven minutes east two hundred and ninety-one feet six and one-half inches, and north sixty-two degrees twenty-one minutes east nine hundred and fifty-seven feet seven and a quarter inches to Garden-street; thence on the east by part of the western building line of Garden-street, being lines bearing south one degree thirty minutes west two hundred and nine feet eleven inches, and south five degrees fifty-four minutes east one hundred and twenty-six feet three inches; and again on the south by lines bearing south sixty-four degrees twenty-one minutes and thirty seconds, west two hundred and forty-nine feet nine and one-half inches, and south sixty-four degrees forty minutes west three hundred and twenty-nine feet nine and three-quarter inches; thence again on the east by part of the western building line of Pickup-street, being a line bearing south twenty-four degrees thirty minutes east seventy-seven feet two inches, to the point of commencement, and containing by admeasurement seven acres three roods eleven and a quarter perches, be it a little more or less, and numbered 40A on the working plan of the railway from Sydney to Parramatta.

Given under my Hand and the Seal of the said Colony, at Government House, Sydney, this sixteenth day of March, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1889.

## NEW SOUTH WALES.

## LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION, TOWNSHIP OF NARRANDERA, FOR APPROACHES TO OVERHEAD RAILWAY BRIDGE.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable  
to wit. } CHARLES ROBERT, BARON CARRINGTON,  
a Member of Her Majesty's Most  
Honourable Privy Council, Knight  
(L.S.) Grand Cross of the Most Distinguished  
CARRINGTON, Order of Saint Michael and Saint  
Governor. George, Governor and Commander-in-  
Chief of the Colony of New South  
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the construction of a Railway Bridge in the township of Narrandera, in the said Colony, for and towards the completion of which said works public funds are available; and whereas the lands hereinafter described are required for approaches to the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification, published in the Gazette, and in a newspaper, that is to say, in the "Narrandera Argus," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the approaches to the above Railway Bridge, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act: And I declare that the following are the descriptions of the lands hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the township of Narrandera, in the county of Cooper, Colony of New South Wales, being portion of lot 6 of section 51, the reputed property of J. P. McIntyre, and containing by measurement 25 perches: Commencing at the south-east corner of said allotment No. 6, and bounded on the north-east by a line running north-westerly 2 chains 63 links to Church-street; thence on the west by the east side of the said street bearing southerly to its intersection with Audley-street; and thence on the south by the north side of Audley-street bearing easterly 2 chains, to the point of commencement as shown on plan herewith.

Also, all that piece or parcel of land situate in the township of Narrandera, in the county of Cooper, Colony of New South Wales, being portion of allotment No. 10 of section 52, the reputed property of J. P. McIntyre, and containing by admeasure-

ment 20 perches: Commencing at a point on the west side of Church-street, distant 1 chain 2 links north from its intersection with the north side of Audley-street; and bounded on the south-west by a line bearing north-westerly 2 chains 27½ links to a point in a lane of subdivision distant 27 links east from the north-west corner of allotment 10 aforesaid; thence on the north by the south side of the said lane bearing easterly to its intersection with Church-street; and on the east by the western side of Church-street, to the point of commencement.

Also, all that piece or parcel of land situate in the township of Narrandera, in the county of Cooper, Colony of New South Wales, being portion of allotments 1 and 2 of section 52, the reputed property of A. N. Jonsen, containing by admeasurement 2 roods and 6 perches: Commencing at a point on the south side of Twynam-street, distant 70 links westerly from the north-east corner of lot 2 aforesaid; and bounded on the north-east by a line bearing south-easterly 3 chains 55 links to a point on the western side of Church-street distant 2 chains 31 links southerly from its intersection with Twynam-street; then on the east by the west side of Church-street bearing southerly 19 links to a lane of subdivision; then on the south by the north side of that lane bearing westerly 2 chains 8 links; thence on the south-east by a line bearing north-westerly to a point on the western boundary of said allotment No. 2 distant 1 chain 64 links northerly from its south-west corner; then on the west by a line bearing northerly to Twynam-street, dividing it from allotment No. 3 of same section, to the north-west corner of lot No. 2; and on the north by the south side of Twynam-street bearing easterly, to the point of commencement.

Also, all that piece or parcel of land situate in the township of Narrandera, in the county of Cooper, Colony of New South Wales, being portion of allotment No. 3 of section 52, the reputed property of Samuel Gill, containing by admeasurement 7 perches: Commencing at a point on the south side of Twynam-street distant 99½ links easterly from the north-west corner of allotment 3 aforesaid; and bounded on the north by the said street bearing easterly to the north-west corner of allotment No. 2; thence on the east by the western boundary of said allotment, being a line bearing southerly 86 links; and on the south-west by a line bearing north-westerly 1 chain 32 links, to the point of commencement.

The above portions being delineated and shown in colours on plan herewith exhibited.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this first day of June, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

## NEW SOUTH WALES.

## LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION UNDER, AT TOWN OF WOLLONGONG, TO CONNECT HARBOUR OF WITH THE ILLAWARRA RAILWAY.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable CHARLES ROBERT,  
BARON CARRINGTON, a Member of Her  
Majesty's Most Honourable Privy  
Council, Knight Grand Cross of the  
Most Distinguished Order of Saint  
Michael and Saint George, Governor and  
Commander-in-Chief of the Colony of  
New South Wales and its Dependencies.

(L.S.)  
CARRINGTON,  
Governor.

WHEREAS the Railway Commissioners of New South Wales are desirous of constructing a Loop Line to connect the Harbour of Wollongong with the Illawarra Railway, on the lands described in the Schedule at the foot hereof, which is adjacent to land belonging to the Railway Commissioners aforesaid, for the purpose of constructing such loop line and other railway works thereon: And it is estimated that the cost of carrying out the said works will not exceed the sum of twenty thousand pounds: And whereas, under the provisions of the Public Works Act of 1888, I, the Governor aforesaid, with the advice of the Executive Council, have in due form directed that the said works shall be carried out under the provisions of the said Act by the Railway Commissioners aforesaid, who, in respect of the said works, I have declared shall be deemed to be the Constructing Authority; and also, that the land required for carrying out the said works shall be acquired under the provisions of the said Act: And whereas the land described in the Schedule at the foot hereof is the land required for carrying out the said works: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, by this notification to be published in the Government Gazette, do declare that the said land in the said Schedule described has been and is hereby appropriated for the purpose of erecting thereon a loop line to connect the Harbour of Wollongong with the Illawarra Railway, to the intent that upon the publication of this notification in the Gazette, the legal estate in the land hereafter described shall forthwith be vested in the Railway Commissioners of New South Wales, as the constructing authority on behalf of Her Majesty, under the provision in that behalf in the 21st section of the said Public Works Act of 1888: And I declare that the following is the description of the lands hereinbefore referred to, that is to say,—

1st. All that piece or parcel of land situate in the town of Wollongong, county of Camden, Colony of New South Wales: Commencing on the northern boundary of the Mount Keira Colliery Railway, at a point bearing south 2° 24' east 20 links from the south-western corner of allotment 21 of section 31 of the subdivision of the late Ch. Throsby Smith's 300-acre grant; and bounded on the south by part of the northern boundary of the Mount Keira Colliery Railway, being a line bearing south 87° 36' west 282 links; thence on the west by a line bearing north 1° 22' west 213½ links; thence on the north by lines bearing south 52° 24' east 34 links, south 59° 20' east 88½ links, south 66° 55' east 98 links, south 69° 21' east 41 links, south 52° 0' east 62 links, north 87° 4' east 103½ links; thence on the east by a line bearing south 2° 24' east 30 links; thence again on the south by a line bearing south 89° 16' west 100 links; and again on the east by a line bearing south 2° 24' east 20 links, to the point of commencement, and containing by admeasurement one rood twenty-two and a half perches, and numbered 205B on working plan of the railway from Sydney to Wollongong, Part No. 3, and said to be in the possession of the Wollongong Gaslight Co.

2nd. All that piece or parcel of land situate in the town of Wollongong, county of Camden, Colony of New South Wales: Commencing at a point bearing south 1° 22' east 142 links from the southern building line of Charlotte-street, at its abutment on the property of William M'Court; and bounded thence on the east by a line bearing south 1° 22' east 213½ links; thence on the south by part of the northern boundary of the Mount Keira Colliery Railway, being a line bearing south 87° 53' west 305½ links; thence on the west by part of the eastern boundary fence of the Illawarra Railway Line, being a line bearing north 0° 59' east 684 links; thence on the north by lines bearing south 16° 33' east 125½ links, south 23° 41' east 96 links, south 30° 50' east 91½ links, south 37° 59' east 92 links, south 45° 7' east 92 links, south 52° 24' east 58½ links, to the point of commencement, and containing by admeasurement one acre and twenty-six perches (1a. Or. 26p.) and numbered 205A on the working plan of the railway from Sydney to Wollongong, Part No. 3, and said to be in the possession of William M'Court.

3rd. All that piece or parcel of land situate in the town of Wollongong, county of Camden, Colony of New South Wales: Commencing at the south-western corner of allotment 23, section 31, of the subdivision of the late Charles Throsby Smith's 300-acre grant; and bounded on the west by a line bearing north two degrees twenty-four minutes west thirty links; thence on the north by a line bearing south eighty-two degrees five minutes east one hundred and fifty-two and a half links; and thence on the south by part of the northern boundary line of the Mount Keira Colliery Railway, being a line bearing south eighty-six degrees thirty-four minutes west one hundred and fifty links, to the point of commencement, and containing by admeasurement three and a half perches (3½p.), and numbered 205D on the working plan of the railway from Sydney to Wollongong, Part No. 3, and said to be in the possession of William Davies.

4th. All that piece or parcel of land situate in the town of Wollongong, county of Camden, Colony of New South Wales: Commencing at the intersection of the southern building line of Smith-street with the eastern building line of Young-street; and bounded on the north by part of the southern building line of Smith-street, being a line bearing north eighty-nine degrees thirty-one minutes east three hundred and forty-five links; thence on the south by a line bearing south eighty-three degrees twenty-four minutes west three hundred and forty-six and a half links to the eastern building line of Young-street; and thence on the west by part of the aforesaid eastern building line of Young-street bearing north one degree fourteen minutes west thirty-seven links, to the point of commencement, and containing by admeasurement ten and a quarter perches, and numbered 205C on the working plan of the railway from Sydney to Wollongong, Part No. 3, and said to be in the possession of W. G. Robertson.

Given under my Hand and the Seal of the said Colony, at Government House, Sydney, this twelfth day of September, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,  
W. MEMILLAN.

GOD SAVE THE QUEEN!

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

**RAILWAY LOAN REDEMPTION BILL.**

(MESSAGE No. 74.)

---

*Ordered by the Legislative Assembly to be printed, 2 October, 1889.*

---

CARRINGTON,  
*Governor.*

*Message No. 74.*

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision "for the payment, from the Consolidated Revenue Fund, of an annual sum in reduction of the Public Debt for Railways, and to authorize the application thereof."

*Government House,*  
*Sydney, 2nd October, 1889.*

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

LAND AT CIRCULAR QUAY.

(CORRESPONDENCE RELATING TO THE LEASING OF, TO MR. H. C. ARMSTRONG, BY THE LATE COMMISSIONER FOR RAILWAYS.)

*Ordered by the Legislative Assembly to be printed, 15 August, 1889.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, 10th July, 1889, That there be laid upon the Table of this House,—

“Copies of all papers, plans, and correspondence relating to the leasing to Mr. H. C. Armstrong, of land at the Circular Quay, by the late Commissioner for Railways, and the subsequent removal of Mr. Armstrong from the same by the Government.”

(*Mr. McMillan.*)

No. 1.

Memos. by The Commissioner for Railways.

LET me have copy of Bill now passed for sale of land at Pitt and George Streets taken for tramway purposes and for diverting Queen-street. The first step will be to give tenants notice, and to sell old material of buildings when vacated; then form new street, and subdivide for sale.

C.A.G.,  
24/7/88.

The Act says that, as soon as practicable after the passing of the Act, the Commissioner for Railways shall form the new street, &c.

Before the street can be formed, the tenants of the houses must vacate them, and the buildings be removed. Will the Minister, *pro forma*, approve of this course.

C.A.G.,  
29/7/88.

Approved.—J.S., 31/7/88. Write to Messrs. Woolcott and Saunders, and ask them to give the requisite notice.—M.O'B., (*pro SECRETARY*), 4/8/88.

No. 2.

The Commissioner for Railways to Messrs. Woolcott and Saunders.

Gentlemen,

Railway Department, 4 August, 1888.

I have the honor to request that you will, at the earliest moment, give the required notice to tenants of the property, Circular Quay, resumed for tramway purposes in 1882, that they must vacate the premises occupied by them, in order that the Department may proceed with the formation of a street in lieu of Queen-street, in conformity with the “Circular Quay Land Sale and Auction Act, 1888.” As short a notice as is possible must be given. Be good enough to say when it will expire.

I have, &c.,

CHAS. A. GOODCHAP,  
Commissioner for Railways.

## No. 3.

Messrs. Woolcott and Saunders to The Commissioner for Railways.

Sir, Sydney, 8 August, 1888.  
 We have the honor to acknowledge your favour of 4th instant, containing instructions  
*re* Circular Quay tenants.

We have given the necessary notices, and will advise you further in a few days.

We have, &c.,

WOOLCOTT AND SAUNDERS.

## No. 4.

Mr. H. C. Armstrong to The Secretary for Public Works.

*Re* Queen's Wharf Dispensary, 140 George-street.

Sir, Sydney, 15 August, 1888.

The following facts, having reference to the above property, will show the unfortunate position I am placed in by the present Government, they having passed an Act empowering them to sell the property (which was originally resumed for the Circular Quay Railway).

In November, 1885, I inspected the premises that had a short time before been rented by the English, Scottish, and Australian Chartered Bank, who left because they were not habitable. A six-penny restaurant keeper named Greenfield, had just entered into possession, but agreed to vacate if paid the sum of £100 5s. I then, in company with my brother Robert, visited Mr. Goodchap, who received us with his usual courteous and kindly manner, and I explained that I had thoughts of opening a wholesale branch of my business as a chemist and druggist to endeavour to establish a shipping business, that up to that time had gone principally to the Melbourne houses. I was told by Mr. Goodchap that there was not the faintest likelihood of the premises being required for many a year, that the Government finances would not admit of their thinking of the Circular Quay Railway, and that (although he was not in a position to order a long lease) I might rest assured there was no danger of being disturbed.

The dilapidated condition of the property was known to Mr. Goodchap, as well as his agent, Mr. Woolcott, who was also of the opinion that the Government would not want it for a long time. Being thus assured by Mr. Goodchap, whose reputation for straight and honorable dealing is so well known, that I was perfectly satisfied to spend the necessary capital to make the place habitable, I paid the £100 5s. to Mr. Greenfield to vacate the premises, and got myself accepted as the tenant in his stead at a rental of £208 per annum. I employed Messrs. Ellis and Slayter, a leading firm of architects, to prepare plans for the improvements, the contract for which took two months to carry out.

I have paid the Government over £550 rent, and am only beginning to form a connection, having spent upwards of £1,800 on improvements, fittings, advertisements, and circulars, to make known the address and to work up the business, in the hope of doing a good trade in the future.

I have now been verbally notified to vacate the premises without delay, as the property is to be cut up and sold by auction.

I was offered £2,600 cash for the business in April, 1887, and declined the offer. I value the business and good-will to-day, including the outlay named, at £4,000 (and could get it); and if I am to leave and go into other premises my loss will not be short of £3,000.

I draw special attention to the fact that before I took the premises I fully satisfied myself (and my brother can bear witness, and Mr. Goodchap will doubtless confirm) that I was safe for a considerable term of years, quite sufficient to compensate me for the necessary outlay for making the place habitable and safe to carry on my business in, and that the premises would not be wanted for the purpose for which it was resumed, viz., the Circular Quay Railway, for a long time to come.

I feel sure that justice will be done, as it cannot be the desire of the powerful and esteemed Government to ruin my prospects in this City. And I ask you, sir, if such a course of action as that intended by them is carried out in my case, would it be reasonable and in keeping with the actions of honorable men? Would it be just or right between man and man, and between the Crown and its tenant? In point of fact, is it a fair thing?

Leaving the matter in confidence for due consideration.

I have, &c.,

H. C. ARMSTRONG.

Railways, J. B., 23/8/1888.

I have given another month to the tenant to find another place. The material will be sold on 1st October, and the purchaser, will have to remove the buildings in a month from that date. The Act is mandatory and requires the Commissioner to take action at once.

As regards the interview the Messrs. Armstrongs are said to have had with me, I can only say that I held out no hope of a long tenancy, the facts give a contradiction to the statement, for at the very time the Messrs. Armstrong say I was making promises, or holding out to them the prospect of a lengthened tenancy, I was urging upon the Minister the desirability of bringing the property to the auctioneer's hammer and had the Bill prepared to provide for that action. To miss the present revival as regard the purchase by investors of City property would be a fatal mistake, and even if the Act permitted of it, I could not recommend that action be postponed.—C.A.G., 24/8/88.

I concur.—J.S., 28/8/88. Mr. Armstrong written, 4/9/88.

### No. 5.

#### The Secretary for Railways to H. C. Armstrong, Esq.

Sir,

Department of Railway, 4 September, 1888.

I have the honor to acknowledge your letter of the 15th ultimo, in which you deprecate the suddenness of the notice given to vacate the railway premises at the Queen's Wharf, and point out that you have laid out a considerable sum, in improvements.

In reply I am desired by the Commissioner to inform you, that he has given another month to the Circular Quay tenants to remove, viz., to the 1st proximo, when the materials will be sold by auction, and the purchaser will have to remove the buildings in a month from that date. I am to add that you will be allowed to remove any material property belonging to you.

I have, &c.,

D. VERNON,

Secretary for Railways.

I have seen Mr. Woolcott, and have told him to tell tenant he must vacate by 1st October, no more rent is to be taken from him for the period after the first notice he received expired.—C.A.G., 24/8/88.

Prior to auctioneer being appointed to sell material. The specification prepared by Engineer for Existing Lines should be referred to Mr. Woolcott, to ascertain if everything for sale has been indicated, or if there be anything included which we cannot fairly claim. I think we should be a little liberal with the tenants, *i.e.*, fixtures and additions which they have made should belong to them, and they should be allowed to remove them, or be credited with their value when sold by Department. Of course there may be good reasons why this concession should not apply generally, in this I should be in a great measure guided by the agents who have let the properties, and who are aware of all the circumstances. I am referring particularly to the case of Mr. Armstrong, who has gone to a large expenditure in improving the property leased by him.—C.A.G., 28/8/88.

Specification handed to Mr. Saunders in the absence of Mr. Woolcott.—M.O'B., 29/8/88.

### No. 6.

#### Memo. by Mr. J. E. Armstrong.

Sydney, 13 September, 1888.

*Re* Queen's Wharf premises occupied by H. C. Armstrong.

If the Government intend selling the property will they reserve a corner lot at reserve price, adding on any difference that may result from competition at fall of the hammer.

Can I purchase this building, and be allowed to remain pending the erection of premises on such lot reserved.

If the Government does not intend selling the property will they allow building to remain until required for the contemplated railway at the present rental, £208 per annum. I agreeing to put and keep all in a thorough state of repair.

Failing all as above, will the Government consider my case as one deserving of some thought seeing the disastrous result to myself, and the loss which will be occasioned by breaking up my business in Sydney, which loss means nearly £3,000.

I have, &c.,

G. E. ARMSTRONG.

In the subdivision of this property, will the building which Mr. Armstrong occupies be on any one allotment;—would its retention be injudicious in the interests of the sale generally. I do not know whether the building could remain standing, even if all the conditions were favourable, because a purchaser might want this particular piece of land with other land, and I believe that any condition of the kind proposed would prejudice the sale, but I should like to have the information I have asked for.—C.A.G., 15/9/88. Engineer for existing Lines.

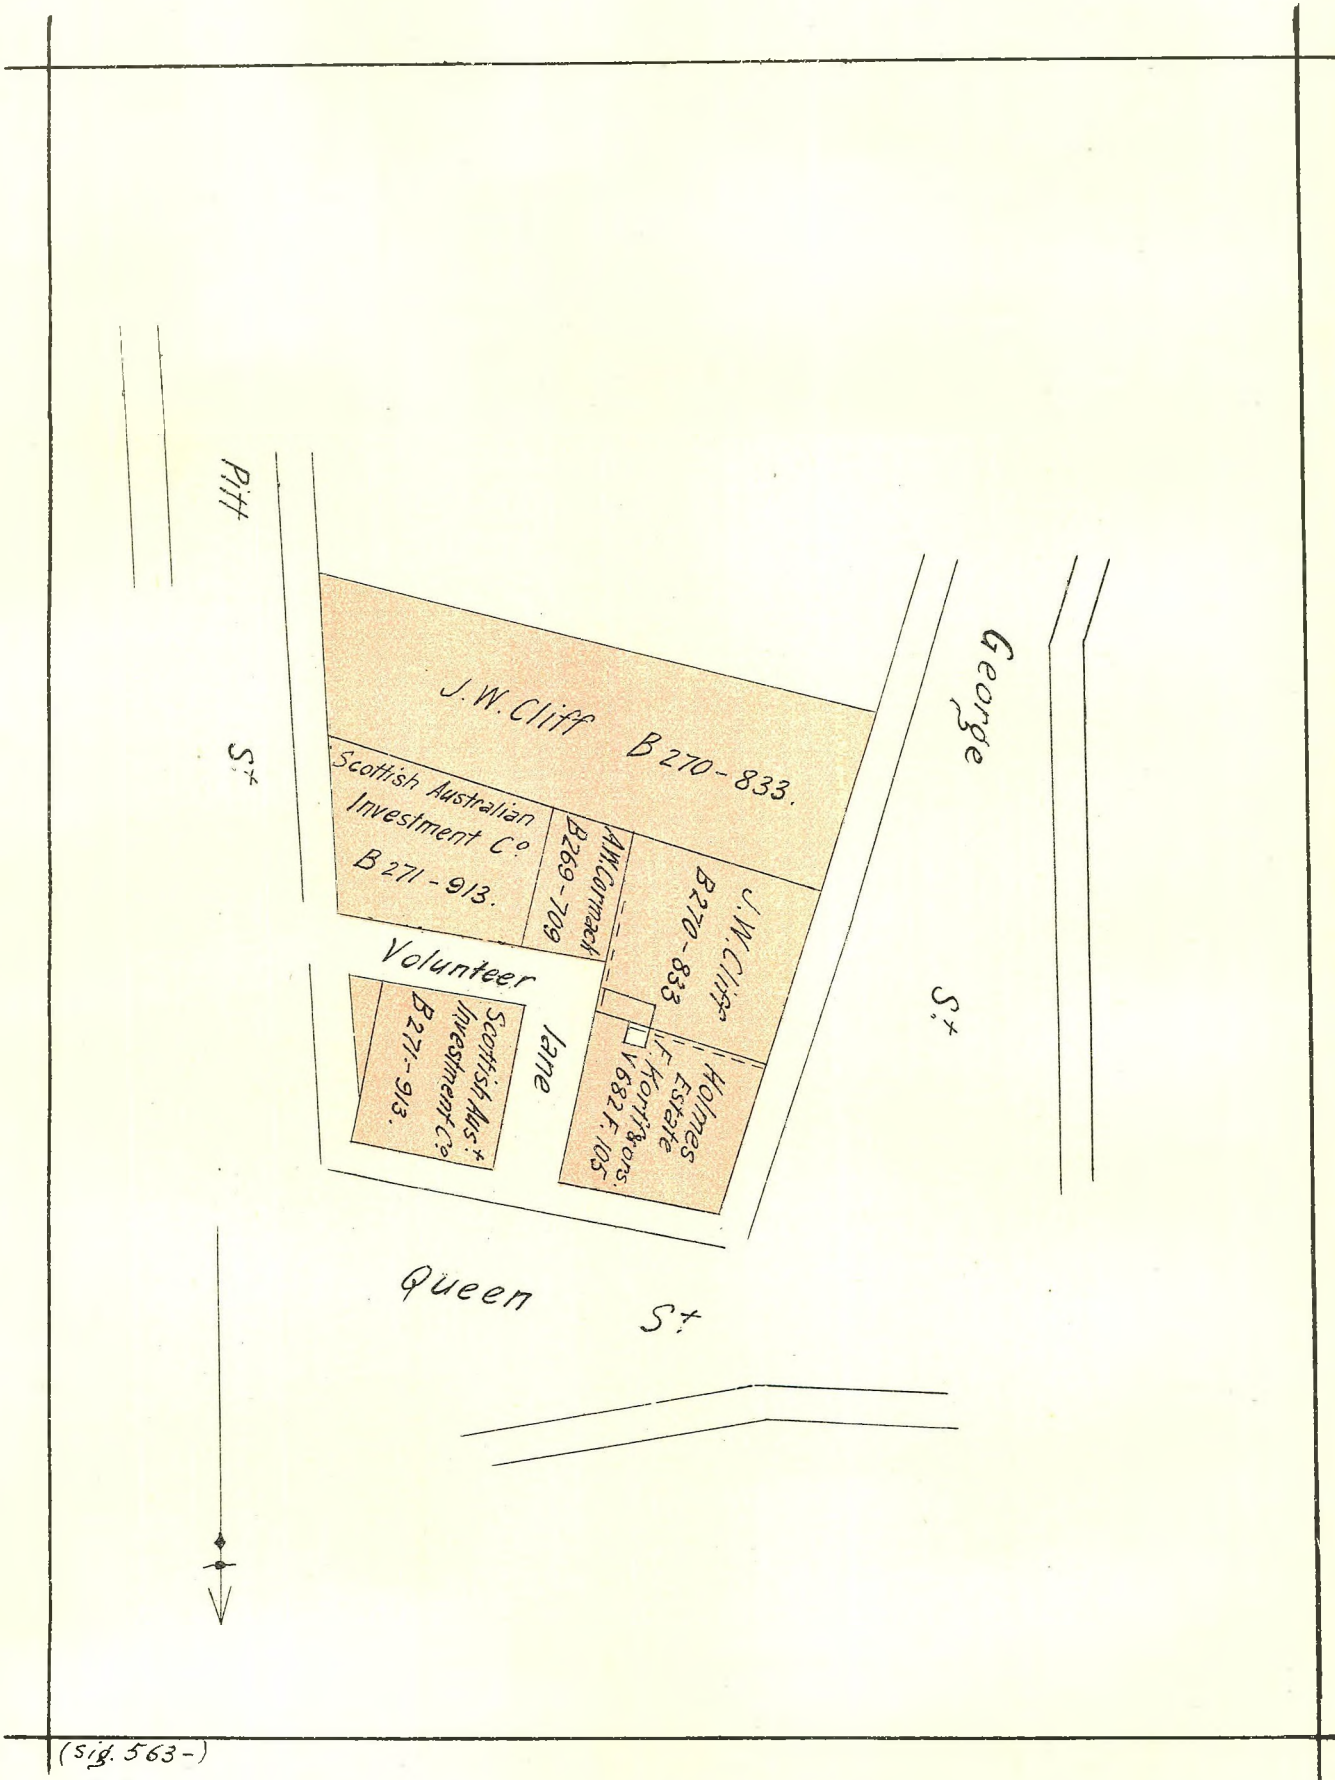

Plan of present street boundaries, and also showing the proposed subdivision, and the position of Mr. Armstrong's premises. The block occupied by Armstrong forms a single block for sale, and in that respect the retention of it would not be injudicious to the sale of the buildings; but, as will be seen from the plan, its retention will interfere with the proposed new street and subdivision.—M.T. (for Engineer Existing Lines), 18/9/88. The Commissioner.

Ask Mr. Armstrong to see me.—C.A.G., 20/9/88.

Mr. Armstrong asked to call, 21/9/88. I saw Mr. Armstrong, and informed him that the Commissioner can do nothing to help him, because to meet his wishes in any way would interfere with the whole project, it being imperative to the carrying out of the scheme that the premises occupied by Mr. Armstrong should be pulled down.—A.R., 26/9/88.

JOHN JACKSON,  
Manager, Public Wharves.

1889.

NEW SOUTH WALES.

PARLIAMENTARY STANDING COMMITTEE ON  
PUBLIC WORKS.

REPORT

TOGETHER WITH

MINUTES OF EVIDENCE, APPENDICES, AND PLANS,

RELATING TO THE PROPOSED

IMPROVEMENTS TO THE ENTRANCE

OF THE

RICHMOND RIVER.

---

Presented to Parliament in accordance with the provisions of the Public Works Act,  
51 Vic. No. 37, section 8.

---

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1889.

401—a

[8s.]

## NAMES OF MEMBERS OF THE COMMITTEE.

---

### LEGISLATIVE COUNCIL.

The Honorable JOHN LACKEY, Vice-Chairman.  
 The Honorable ANDREW GARRAN.  
 The Honorable FREDERICK THOMAS HUMPHRY.  
 The Honorable WILLIAM JOSEPH TRICKETT.  
 The Honorable JAMES WATSON.  
 The Honorable GEORGE HENRY COX.

### LEGISLATIVE ASSEMBLY.

JOSEPH PALMER ABBOTT, Esquire, Chairman.  
 JACOB GARRARD, Esquire.  
 HENRY COPELAND, Esquire.  
 JAMES EBENEZER TONKIN, Esquire.  
 WILLIAM SPRINGTHORPE DOWEL, Esquire.  
 JOHN SUTHERLAND, Esquire.  
 EDWARD WILLIAM O'SULLIVAN, Esquire.  
 JOHN HURLEY, Esquire.  
 CHARLES ALFRED LEE, Esquire.

[Shortly after the first meeting of this Committee, John Sutherland, Esquire, became deceased, and his place was filled by the appointment of Charles Alfred Lee, Esquire. At a subsequent stage of the inquiry the Honorable James Watson resigned his seat on the Committee, and the vacancy was filled by the appointment of the Honorable George Henry Cox.]

---

## LIST OF WITNESSES.

	PAGE.
Joseph Barling, Esq., Under Secretary for Public Works.....	1-2
Cecil West Darley, Esq., M.Inst.C.E., Engineer-in-Chief for Harbours and Rivers.....	2-13
Thomas W. Keele, Esq., M.I.C.E., District Engineer, Department of Harbours and Rivers .....	14-16
Henry Richard Carleton, Esq., B.E., M.I.C.E., Resident Engineer, Department of Harbours and Rivers .....	16-18
Edward William Knox, Esq.....	19-26
Bruce Baird Nicoll, Esq., M.P.....	26-31
Alexander Kethel, Esq. ....	31-40
Capt. James Matthew Banks, Marine Surveyor .....	40-43
Capt. Benjamin Alley, Master Mariner .....	43-48
Charles James Saunders, Esq., Chief Draftsman, Department of Lands .....	49
Walter Shellshear, Esq., C.E., District Engineer, Department of Railways .....	49-56
Charles Cowdery, Esq., C.E. ....	56-59
Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges, and Sewers, and late Acting Engineer-in-Chief for Harbours and Rivers .....	59-65

## APPENDIX.

To evidence of J. Barling, Esq.—Statistics of the Richmond River Trade .....	A
To evidence of J. Barling, Esq.—Vessels wrecked at the Richmond River.....	A1
To evidence of J. Barling, Esq.—Statistics of land in the Richmond River District .....	A2
To evidence of C. W. Darley, Esq.—Richmond River Breakwater: Estimate for Sir John Coode's Outer Section of North and South Breakwater .....	B
To evidence of C. W. Darley, Esq.—River Watersheds .....	B1
To evidence of C. J. Saunders, Esq.—Particulars relating to Lismore and Casino Land Districts .....	C
To evidence of C. J. Saunders, Esq.—Areas of land reserved from sale and conditional purchase within the Casino and Lismore Land Districts .....	C1
To evidence of R. Hickson, Esq.—Memorandum to the Engineer-in-Chief for Harbours and Rivers: Subject—Visit of Inspection of Tweed, Brunswick, Richmond, and Clarence Rivers, and Byron Bay Districts .....	D
Proposed Canal between the Clarence and Richmond Rivers—Report by the Engineer-in-Chief for Harbours and Rivers	E
Letter from Sir John Coode to Mr. C. W. Darley, with reference to the condition of the Richmond River entrance in May, 1889 .....	F
Borings made in the locality of the Proposed New Channel at the entrance of the Richmond River .....	G
Report, with Plans, by Sir John Coode, on entrance to Richmond River. ( <i>Ordered by the Legislative Assembly to be printed, 17th May, 1888</i> ) .....	H

## PLANS.

- Plan I.—Richmond River entrance, showing works proposed by Sir John Coode.
- Plan II.—Type Sections of Dyke and Breakwater, with quantities for each foot in depth.
- Plan III.—Sketch Plan showing Watershed, &c., of Richmond River.
- Plan IV.—Sketch Map of the Land Districts of Lismore and Casino.
- Plan V.—Plan of the Clarence and Richmond Rivers showing the Schemes proposed for connecting them by a Canal and Railway.
- Plan VI.—Proposed Canal between the Clarence and Richmond Rivers—Cross-section from Freshwater Creek to sea.
- Plan VII.—Tracing showing the position of Borings between the proposed Breakwaters at Richmond River Heads.
- Plan VIII.—Tracing showing position of Borings taken since 7th September, 1889.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

IMPROVEMENTS TO THE ENTRANCE OF THE RICHMOND RIVER.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the present Session of Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of carrying out certain improvements to the entrance of the Richmond River as per plans of Sir John Coode," have, after due inquiry, resolved that it is expedient that the works should be carried out, with the proviso that the Northern Breakwater should be the first proceeded with; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed improvements are those recommended by Sir John Coode in a report which has been presented to Parliament, and which was ordered by the Legislative Assembly to be printed on the 17th May, 1888, and they are required in consequence of the uncertain nature of the channel at the entrance of the Richmond River, and the tendency, under present conditions, of the sand bar at the entrance to become, in periods of adverse weather, so prominent as to make the mouth of the river shallow and dangerous. In his report Sir John Coode states that "the great drawback to the Richmond is the shifting character of its entrance channel, and the extent to which the passage of shipping in and out is hampered by reason of the bar and shoals which encumber its mouth;" and "these evils," he says, "are intensified by the conflict of the waters from the North Creek with those from the main river at their point of meeting between East and West Ballina."

The proposed  
Improvements.

2. The mouth of the Richmond River is peculiar, by reason of having but one rocky headland, the North Head, and between that headland and the point which forms the extremity of the land on the south side of the river a succession of sand banks through or over which the current of the river finds its way, sometimes by one route and at other times by another, to the sea, the uncertainty of the direction in which the stream forms a channel being increased by the water from North Creek, which is in the immediate vicinity of the entrance, and which discharges its stream in conflict with that of the river, and by occasional floods or freshets. There is also a rock in the neighbourhood of the North Head, called Beacon Rock, which has a marked influence upon the river stream, and largely assists in the formation of sandbanks.

Peculiar  
nature of the  
entrance to  
the Richmond  
River.

3. It thus becomes necessary in any permanent improvement of the river entrance to provide for four important requirements,—first, an entrance channel of sufficient width and depth, in a fixed position; secondly, the control of the main stream of the river, so that it shall find its outlet where this fixed entrance channel is formed; thirdly, the removal of the effects which arise from the existence of the Beacon Rock; and fourthly, the guiding of the waters of North Creek so that instead of meeting the main river stream in conflict they shall flow in the same direction, and assist in promoting a scour at the river entrance.

Require-  
ments for  
which pro-  
vision is  
necessary.

Sir John Coode's proposals.

4. These four requirements the works proposed by Sir John Coode are designed to meet. To "fix the channel, and to regulate its width, so that the scour may be confined to a definite track of proper proportions instead of its useful effect being partially lost, as at present," he proposes that a north and a south breakwater, with, if necessary, certain extensions, shall be constructed; to control the main stream of the river, so that it shall flow between these breakwaters, he recommends the construction of a training bank from a point on the southern margin of the river, nearly opposite to the eastern end of West Ballina, to the proposed southern breakwater; to neutralize the effect of the Beacon Rock, he proposes that the north breakwater shall be constructed to and beyond the rock, so as to shut it off from the currents of the river, upon which it has at the present time an unfavourable influence; and for dealing with the waters of North Creek he recommends the construction of a guide bank, which will confine the waters within narrower limits than they now cover and cause them to flow with the main stream between the two breakwaters.

Sir John Coode's estimate of the cost of the works.

5. Sir John Coode's estimate of the cost of the proposed works is £326,000, and he recommends that a portion should be first proceeded with, the cost of which would be £136,000, and subsequently, if found to be necessary, the remainder, which he estimates would cost £190,000.

Works recommended to be first proceeded with.

6. The works he recommends as those which should be first proceeded with are:—

	£
South Training Bank, 4,500 feet in length ... ..	43,800
South Breakwater, 2,000 " " ... ..	32,800
North Breakwater, 2,500 " " ... ..	48,300
Guide Bank, 2,000 " " ... ..	9,600
Lighting and buoying channel ... ..	1,500
Total cost of first instalment of works ... ..	£136,000.

The effect of constructing the first portion of the works.

7. These he considers "would create a fixed and permanent entrance channel, in which there should be a depth of from 16 to 17 feet at high water of spring tides"; they would, during and after freshets, provide a much greater depth than this, and maintain that greater depth for a longer period than under existing conditions; and they would generally have such an effect that "the occasions when traffic would be interrupted by bad weather and freshets would be comparatively few, and the periods of very much shorter duration."

Subsequent works.

8. He does not, however, regard these works which he recommends should be first proceeded with as likely to provide an absolutely perfect entrance, and therefore it will, in his opinion, be necessary ultimately to extend the two breakwaters in the manner which will be found indicated on the plans. This extension of the two breakwaters is the portion of the works estimated to cost £190,000, and it is set forth in his report as follows:—

	£
Prolongation of the South Breakwater for a length of 2,000 feet ... ..	100,000
Prolongation of the North Breakwater, also for a length of 2,000 feet ... ..	90,000
Total cost of the two breakwater extensions, if carried out hereafter ... ..	£190,000.

The point upon which the Committee differ from Sir John Coode.

9. The Committee, it will have been noticed in the Preamble to this Report, concur in the recommendations of Sir John Coode except in one particular. Sir John Coode considers that when it shall have been decided to carry out the works he proposes, the first work to be taken in hand should be the south training bank. The Committee are of opinion, from the evidence before them, that the first work undertaken should be the northern breakwater.

Information before the Committee during the inquiry.

10. In conducting their inquiry respecting these proposed works for the improvement of the entrance of the Richmond River, the Committee have had before them the report and plans of Sir John Coode, plans and documents relating to the subject from the Department of Harbours and Rivers, and plans and descriptions of works similar to those proposed which exist in Europe and America. In addition to this, they have examined as witnesses the officers of the Department of Public Works immediately concerned with the proposals; persons directly interested in the Richmond River and the Richmond River district; shipmasters and others intimately acquainted with the river entrance and with Richmond River trade; a responsible officer of the Lands Department with reference to land in the district; and

and an engineer, familiar with the subject of harbour works and with the requirements of the Richmond River, whose opinion was sought as that of a competent witness unhampered by any connection with the department directly connected with Sir John Coode's proposals.

11. The Committee have not visited the Richmond River, and they have not thought a visit of inspection necessary. The evidence which might have been obtained from persons resident near the river-mouth is not likely to have brought out any point of importance not apparent in the evidence taken from the witnesses examined in Sydney, several of whom have been intimately acquainted with the conditions of the entrance for many years.

A visit of inspection unnecessary.

12. Briefly stated, the scope of the Committee's inquiry has embraced the following points:—

The scope of the Committee's inquiry,

- I. The nature of the proposed works.
- II. The estimated cost, and whether the estimate is fairly accurate.
- III. The necessity or otherwise for the works (which includes the question whether all or only a portion is required).
- IV. Whether the proposals are concurred in by the Engineers of the Department of Harbours and Rivers.
- V. The extent to which the works are recommended by engineering testimony outside the Department of Harbours and Rivers, or by the results obtained from works of a similar nature in this colony or in other parts of the world.
- VI. Whether the proposals are supported by the opinions of persons intimately acquainted with the entrance of the Richmond River.
- VII. The extent to which the Government may expect to be recouped for the expenditure upon the works.
- VIII. The nature and resources of the Richmond River district, and whether its importance is such as to justify the proposed expenditure.

13. Some description of the proposed works has already been given. It may further be said that the breakwaters will be constructed of rubble and large stones, similar to what is to be seen at Newcastle, and will be 16 feet above high water; that the southern training bank, and the guide bank at North Creek, will also be formed of rubble stone; and that the entrance to the river through the breakwaters will be 1,150 feet in width, narrowing down to about 1,000 feet, with an average depth of water of 15 to 17 feet.

Description of the proposed works.

14. Sir John Coode estimates the cost of the proposed works at £326,000, and the Committee endeavoured to ascertain as satisfactorily as possible whether this estimate is a correct one. The result of this endeavour is evidence from the Engineer-in-Chief for Harbours and Rivers, Mr. C. W. Darley, showing that, in his opinion, the amount given by Sir John Coode is somewhat under what the probable cost of the works will be. For the portion of the works, the cost of which is estimated by Sir John Coode at £136,000, the Engineer-in-Chief's estimate is £148,000, and for the second portion or the outer section of the works, the cost of which is set down by Sir John Coode at £190,000, the Engineer-in-Chief's estimate is £208,350. Sir John Coode's total estimate is £326,000, and that of the Engineer-in-Chief £356,350. Mr. Darley explains that the difference may arise from the circumstance that Sir John Coode has not given any particulars as to the dimensions of the works, and his (Mr. Darley's) estimate may be for a somewhat larger section. Sir John Coode gives no quantities, but simply states the length of the work and the sum necessary for its construction. He does not say how much a ton or a yard the works will cost, and he may not have had in view maximum colonial prices. The Committee are of opinion that Mr. Darley's estimate may be taken as the more likely to prove correct.

Comparison of Sir John Coode's estimate with an estimate by Mr. C. W. Darley.

15. The necessity for the proposed works, or for works of a similar kind, is very clearly apparent. So uncertain and dangerous is the entrance to the river under present conditions, that serious disaster or delay to shipping is very frequent, and Sir John Coode points out in his report, that "in the absence of works for training and fixing the entrance and channels, the relative prevalence and strength of freshets, and the direction and force of gales, must of necessity determine the frequency and extent of the changes which are produced in the entrance and on the bar." Vessels have been totally wrecked, or temporarily stranded, and others have been delayed for weeks awaiting a favourable opportunity to cross the bar.

The necessity for the proposed works.

Added

Added to this the dangerous nature of the navigation at the entrance has led to largely increased insurance charges which heavily affect the shipping trade. Mr. B. B. Nicoll, M.P., a shipowner engaged in the Richmond River trade, gives evidence to the effect that since 1880, he has incurred expense to the extent of £22,000, and he and the Clarence and Richmond River Company, together, £40,000, through accidents to vessels on the bar. Mr. Alexander Kethel, who has had over thirty-six years experience of the bar, the river, and the district, says that the impediments to the entrance are as bad now as they were thirty-five years ago, when several vessels were kept in the river for nine months. In his own case he has known a vessel in which he has been interested detained, in consequence of the bad state of the bar, for from six weeks to two months. Captain J. M. Banks, marine surveyor, who is intimately acquainted with the bar at the entrance, states that as long as he can recollect it has been continually shifting, and he considers it to be the most dangerous on the coast. Similar evidence is given by Captain Benjamin Alley, master mariner, who has been trading to the Richmond continuously for the last seventeen years. With regard to insurance rates Mr. E. W. Knox, general manager of the Colonial Sugar Refining Company, states that the Company are taxed in their trade with the Richmond, as compared with the Clarence, to the extent of 2s. 6d. per ton of cargo inwards and outwards, by reason of the greater difficulty of navigation causing them to pay higher freights and higher insurance; and the evidence shows that the high insurance rate is a tax all round upon the industry of the district. There is nothing in the evidence before the Committee to lead them to the conclusion that the proposed works, or remedial works of the kind, are not required at the Richmond.

Whether the south training bank or the northern breakwater should be first constructed.

16. The question has arisen whether the construction of the works should be carried out in the order recommended by Sir John Coode. He proposes that the first work to be taken in hand should be the south training bank; the Committee are, however, of opinion that the first thing to be done in order to bring about an improved entrance is to construct the northern breakwater. In this opinion they are supported by the evidence of the principal engineers in the Department of Public Works, and by that of other competent witnesses. Mr. C. W. Darley, referring to the varying nature of the channel at the entrance to the river, says, in his answer to Question 15, that he recommends the construction of the northern breakwater from the Pilot Station to the Beacon Rock as the first work to be undertaken in order to prevent the river current from getting into Shaw's Bay, and he explains that he does this, notwithstanding Sir John Coode's recommendation, because Sir John Coode never counted upon the current going into Shaw's Bay, and its going there, as it does at present, it is absolutely necessary to prevent. Mr. R. Hickson, Commissioner and Engineer-in-Chief for Roads and Bridges, and lately Acting Engineer-in-Chief for Harbours and Rivers, goes so far as to say that the northern breakwater will in all probability be found in itself sufficient to provide a fixed channel with ample water for the class of vessels which can navigate the Richmond River; and generally the evidence of the witnesses examined upon this point is that it would be well to first construct the northern breakwater and ascertain its effect in producing a fixed and deep entrance before proceeding with the other works. Moreover, in the Appendix will be found a copy of a letter from Sir John Coode to Mr. C. W. Darley, dated 25th June, 1889, in which Sir John Coode, upon information supplied to him by Mr. Darley, concerning the movements of the channel since Sir John Coode's visit, and more particularly the condition of the bar last May, concurs in the view that the northern breakwater, and not the south training bank, should be first proceeded with. The northern breakwater, the Committee consider, should be the first work taken in hand, and the other works proposed by Sir John Coode can be undertaken as they are found to be necessary. All the works may ultimately be required, but it will be wise to proceed with their construction gradually, beginning with the breakwater in the north, and note the effect of each portion, rather than to commence all simultaneously.

Concurrence in Sir John Coode's proposals.

17. From what has already been said it will have been gathered that the proposals of Sir John Coode are concurred in by the engineers of the Department of Harbours and Rivers, except so far as relates to the order of procedure in the construction of the works. As to the extent to which they are recommended by the opinions of engineers outside the Department of Harbours and Rivers, or by the results

results obtained from works of a similar nature in this Colony, or in other parts of the world, the evidence shows that they are in accord with the principle of works of the kind intended to secure the objects sought at the Richmond, which have been constructed elsewhere and have proved successful. The evidence of Mr. Walter Shellshear, C.E., an engineer who has given a considerable amount of study to the question of improving bar harbours, and who, before Sir John Coode's visit to New South Wales, made proposals for the improvement of the entrance to the Richmond River similar to those subsequently made by Sir John Coode, may be quoted as strongly in support of the works which Sir John Coode recommends, and in the evidence of Mr. C. W. Darley, as also in that of Mr. Shellshear, will be found references to the harbour works at Newcastle, in this Colony, an analagous case to that of the Richmond, and to those at the Sulina mouth of the River Danube, and at one of the mouths of the Mississippi, where breakwaters similar to those recommended for the Richmond have been constructed for the purpose of confining the entrance and creating a scour, and have had the desired effect of producing an entrance channel suitable for the purposes of navigation.

18. While the proposed works have the approval of the engineers of the Public Works Department, as well as that of Mr. Shellshear, they are concurred in by all the witnesses examined before the Committee who have an intimate acquaintance with the Richmond River. Mr. B. B. Nicoll states that Sir John Coode's scheme is generally approved by people who understand what is wanted there, and that captains of steamers trading to the river say it will meet the requirements of the port. Mr. Kethel is of opinion that the works will be thoroughly effective in removing the obstructions to the safe navigation of the river, and Captain Banks and Captain Alley express the same view. There is nothing in the evidence of witnesses of this class to show, in any way, that the works have not been well designed, or that they are not likely to be in every respect successful.

Approval of persons intimately acquainted with the Richmond River.

19. As to the extent to which the Government may expect to be recouped for the expenditure upon the proposed works the Committee have endeavoured, as far as possible, to ascertain what charge might be imposed justly in the form of tonnage or harbour dues. Naturally witnesses, when questioned on this point, were reluctant to commit themselves to an expression of willingness to pay any excessive rate, but sufficient was elicited from them to show that a substantial sum may be obtained in this way. Mr. E. W. Knox states that the present disabilities in connection with the navigation are equal, as far as the Colonial Sugar Refining Company are concerned, to a tax of 2s. 6d. per ton, and he expresses the readiness of the company to pay harbour dues of an equivalent amount if, as he puts it, "the works had the desired end of making a navigable entrance with 12 feet of water in it," or, in other words, "if it reduced the cost of insurance." The position of this company is different from that of other traders to the Richmond River, and all might not be able to bear a similar charge, but Mr. Knox thinks the saving effected by the works, in relation to shipping charges generally, would be about equivalent to harbour dues at the rate of 3s. per ton, and on that basis the Government might incur the expenditure necessary to complete the first portion of the works with a reasonable expectation of being paid by harbour dues the interest on the amount. Mr. Nicoll says there is no doubt that shipowners would be willing to pay a tonnage charge, and though he does not think that would be sufficient to recoup the Government for their expenditure he points out that there would be a substantial return through the increased settlement in the district and the sale of land. In the same manner Mr. Kethel, speaking as an agent, and as one who has been a shipowner, states that he would be quite prepared to pay harbour dues in order to have a safer entrance made, and he has no doubt that the trade could fairly and without any harm to the district carry a tax equal to the interest on the money expended. There can be no question that when a safe entrance to the river shall have been established the present charges to which shipping are liable will be materially reduced, and to the extent of that reduction at least the imposition of a tax in the form of tonnage or harbour dues ought not to be found oppressive.

Extent to which the expenditure upon the works may be recouped.

Nature and resources of Richmond River District.

20. The nature and resources of the district of the Richmond River are, in the opinion of the Committee, such as to fully justify the expenditure upon the proposed works. The district is rich in agricultural land; and sugar and maize growing, dairying, and timber-getting are carried on extensively, and form important and valuable industries. The present population, according to a statement supplied by the Government statistician, is 22,000, and it has increased since 1880 by  $11\frac{1}{3}$  per cent. per annum, while the total increase of the whole Colony for the same period has been at the rate of  $4\frac{1}{2}$  per cent. The shipping statistics, according to the Collector of Customs, show that during the year 1888 as many as 208 sailing vessels and 200 steamers, of the aggregate tonnage of 96,600 tons, visited the river, and that the number of passengers during the same period, inwards and outwards, was 11,500. The total area of land in the Casino and Lismore land districts is, according to the Under Secretary for Lands, estimated at 2,670,000 acres, of which quantity about 258,000 acres have been sold in fee-simple, and 600,000 acres under conditional purchase. There is at the present time about 1,800,000 acres of unalienated land, and with facilities for the safe navigation of the river entrance, and the consequent speedy and cheap transit of produce to market, there will be every probability of additional settlement, a great extension of industries, and a largely increased trade.

A suggested counter proposal to those of Sir John Coode.

21. Before bringing this report to a close it is necessary to mention that in only one instance during the course of the Committee's inquiry was anything directly counter to Sir John Coode's scheme advocated, and that was a suggestion from Mr. C. Cowdery, C.E., to abandon all idea of expending money in the improvement of the Richmond River entrance and to connect the Richmond with the Clarence River by a canal. The suggestion will be found in Mr. Cowdery's evidence, and dealt with in a report by Mr. C. W. Darley published in the Appendix; and it is only necessary to say further that the suggestion does not commend itself to the Committee as one that should be adopted. The question of a railway to the district, and the extent to which it would meet trade requirements, also came up for consideration, but nothing was elicited which indicated that railway communication would in any degree make harbour improvements unnecessary.

Conclusion arrived at by Committee.

22. The conclusion at which the Committee have arrived in regard to the proposed works is expressed in the following extract from the minutes of proceedings of the meeting held on Tuesday, 24th September, at which the Committee considered the evidence with a view to reporting upon the subject to Parliament:—

Mr. Copeland moved,—“That the Committee consider it expedient to carry out the improvements to the entrance of the Richmond River as per plans of Sir John Coode, except that the Committee would advise that the northern breakwater be first proceeded with.”

Mr. Garrard seconded the motion.

Mr. Lee moved,—“That the motion be amended by omitting all the words after the word ‘expedient’ and inserting the following:—‘That the first instalment of the works, at a cost not exceeding £148,000, be proceeded with, but recommend that the northern breakwater be first constructed at a cost not exceeding £51,866 Gs. 6d., as estimated by the Engineer-in-Chief for Harbours and Rivers.’”

Mr. Humphery seconded the amendment.

The amendment was negatived on the following division:—

Ayes.	Noes.
Mr. Humphery,	Mr. Abbott,
Mr. Tonkin,	Mr. Lackey,
Mr. Hurley,	Dr. Garran,
Mr. Lee.	Mr. Trickett,
	Mr. Garrard,
	Mr. Copeland,
	Mr. Dowel,
	Mr. O'Sullivan.

The motion was then passed on the following division:—

Ayes.	Noes.
Mr. Abbott,	Mr. Humphery,
Mr. Lackey,	Mr. Tonkin,
Dr. Garran,	Mr. Hurley,
Mr. Trickett,	Mr. Lee.
Mr. Garrard,	
Mr. Copeland,	
Mr. Dowel,	
Mr. O'Sullivan.	

23. Accompanying this Report are plans which represent in detail the works it is proposed to construct; and others which show the result of borings made at the instance of the Committee to ascertain if any rock exists in such a position as to interfere with the depth of the proposed new channel. Plans are also appended to show the watershed of the Richmond River, the land districts of Lismore and Casino, and the schemes which have been suggested for connecting the Richmond and Clarence Rivers by a canal or railway. These, with various other appendices of interest, will be found to contain information of great use in considering the subject which the Committee have had under inquiry.

Plans and  
appendices  
accompany-  
ing this  
Report.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
30th September, 1889.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### IMPROVEMENTS TO THE ENTRANCE OF THE RICHMOND RIVER.

WEDNESDAY, 26 JUNE, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq., (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERT.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. JAMES WATSON.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

The Committee proceeded to consider the proposed Improvements to the entrance of the Richmond River.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] You desire to make a statement with reference to the proposed improvements to the entrance of the Richmond River? Yes; it is as follows:—Proposals for improving the entrance of the Richmond River have been before the Department for many years. As far back as the year 1860 or 1861 the late Engineer-in-Chief for Harbours and Rivers reported upon the subject, and made an estimate of the cost of carrying out the works he proposed. The papers in regard to this matter are unfortunately mislaid; but speaking from memory I think the estimate was something like £500,000. Since that time considerable attention has been bestowed on the matter as the result of urgent representations to the Department, resolutions arrived at by public meetings, and numerous deputations to different Ministers for Works, all drawing attention to the unsatisfactory state of the Richmond River entrance. Each year from the date mentioned the question has become more and more pressing as population has increased. Mr. Coghlan, the Government Statistician, informs me that the present population of the Richmond Electorate is 22,000, and that it has increased since the year 1880 at the rate of 11½ per cent. per annum, while the total increase of the whole Colony for the same period is at the rate of 4½ per cent. per annum. This gives some idea of the almost phenomenal growth which has taken place in this district. From a return kindly furnished me by the Collector of Customs, and which I will presently hand in [*vide Appendix A*] it will be seen that the number and tonnage of vessels entered inwards and outwards during the year 1888, is as follows, viz.:—Sailing vessels 208, steamers 200, having an aggregate tonnage of 96,600 tons, while the number of passengers during the same period, inwards and outwards, was 11,500. In the year 1885 Sir John Coode was commissioned to inspect the Richmond entrance and report as to the works of improvement required. His report was laid before Parliament in May, 1888. In it he points out that the great drawback to the river is the shifting character of the entrance channel, and the extent to which the passage of shipping in and out is hampered by reason of the bar and shoals which encumber its mouth. These evils are intensified, he further says, by the conflict of the waters from the North Creek with those from the main river at their point of meeting, between East and West Ballina. To show the shifting nature of the entrance channel, Sir John Coode points out with regard to the locality of the bar, that whereas in 1871 it was 1¼ mile to the south-east of the north headland, it was only 500 yards therefrom at the end of 1887. The latest information we have shows that the bar was about the same distance from the north headland, but the channel turns sharply north-west and round Shaw's Bay. The works designed by Sir John Coode to remedy this state of affairs may be divided into two distinct sections. The first deals with the works required to make a fixed channel, including lighting and buoysing it. The second section or instalment comprises the extension of the south and north breakwaters for the purpose of making the entrance perfect, that is, giving a uniform depth of water throughout. The first work proposed to be taken in hand is the construction of the south training bank. The total length of this is 4,500 feet, to be formed of rubble stone brought up to say 6 feet above high-water mark of ordinary spring tides. The second stage is the construction of the north breakwater from the Pilot Station, across the present deep water channel, thence from the south-west flank of the Beacon Rock, and seawards in the direction of about east south-east. The total length of the first instalment of this arm will be about 2,500 feet. When this last work is completed for a length of 1,200 feet, it is proposed to commence the south breakwater, which will be a continuation of the south training bank. The first instalment of this work is shown as 2,000 feet in length. It is proposed also to form a guide bank of 2,000 feet in length at the mouth of the North Creek, for the purpose of preventing the conflict of waters of that creek and the currents with the main river. The total estimated cost of these works is as follows:—South training bank, 4,500 feet in length, £43,880;

J. Barling,  
Esq.  
26 June, 1889.

J. Darling,  
Esq.  
26 June, 1889.

south breakwater, 2,000 feet, £32,800; north breakwater, 2,500 feet, £48,300; guide bank, 2,000 feet, £9,600; lighting and buoying channel, £1,600; total—£136,000. The second instalment of the works will comprise the prolongation of the north and south breakwaters for a length of 2,000 feet each, the total cost of the two works being £190,000, or a total cost for the whole of the works of £326,000. The works proposed would, it is contended, create a fixed and permanent entrance channel, in which there should be a depth of 16 to 17 feet at high-water spring tides. The area of the Richmond basin is 2,635 square miles. The principal tributaries which run into the main river are North Arm, having a basin of 610 square miles, the South Arm having a basin of 1,050 square miles, and Bungawalbin Creek having a basin of 650 square miles. I hand in a sketch plan [*vide Plan No. III*] showing the course of the Richmond River and tributaries, with the principal towns and distances marked thereon. The President of the Marine Board has furnished me with a statement of the wrecks which have taken place since June, 1879, and which I now hand in. [*Vide Appendix A 1*] From this it will be seen that there has been an approximate loss of over £24,000 from this cause, but this must not be taken as representing the total loss, as evidence will be placed before you to show that large sums of money have had to be expended in repairing vessels which have been seriously damaged while entering or leaving the river. Another serious item of loss will also be found in the frequent detention of vessels plying to this river. Mr. Nicoll, M.P., and others will be prepared to give evidence on this head. I have also obtained from the Under Secretary for Lands a return [*vide Appendix A 2*] which shows that the total area of land in the Casino and Lismore land districts is estimated at 2,670,000 acres. Of this about 258,000 acres have been sold in fee simple, and 600,000 acres sold under conditional purchase. The total number of conditional purchases made reaches 6,122. The unalienated land represents about 1,800,000 acres, of which about 470,000 are reserved. This return is of value as showing the importance of the district of which the Richmond River is the natural outlet. It may be interesting to state that Sir John Coode, on his visit, said that he was much struck with the richness and extent of the district through which the river passes, and he pointed out that its navigable length exceeds that of any other coast river in New South Wales. The Engineer-in-Chief for Harbours and Rivers, the late Acting Engineer-in-Chief, and one of the Assistant Engineers, who is acquainted with the district, are in attendance to give such professional evidence as may be required. In conclusion, I would point out that in 1888 a sum of £50,000 was voted on the Loan Estimates towards carrying out the works proposed by Sir John Coode. I may mention that the estimates which I have given are the estimates of Sir John Coode, and the order of the work is that arranged by him; but it is possible that Mr. Darley may give an amended estimate, with a slightly different arrangement of the work.

2. *Dr. Garran.*] What officer of the Department has been stationed on the ground? Mr. Keele, an officer, who will be before you, has just come from the Richmond.
3. He made the observations for Mr. Moriarty? No, I do not think he made those particular observations; but he has just come from the Richmond.
4. Who made the observations for Mr. Moriarty which were put before Sir John Coode? I can get the information for you. Several people had to do with that.

Cecil West Darley, Esq., M. Inst. C.E., Engineer-in-Chief for Harbours and Rivers, sworn, and examined:—

- C. W. Darley, Esq.  
26 June, 1889.
5. *Chairman.*] What is your position in the Public Service? Engineer-in-Chief for Harbours and Rivers.
  6. Have you inspected the Richmond River yourself? Not recently, though I have been there several times.
  7. When were you there last? Four years ago.
  8. Were you there with Sir John Coode? Yes.
  9. Of course you have read his report? Yes.
  10. What have you to say about that report generally? Generally I think the scheme laid down by Sir John Coode should be effective. Of course there are a good many details which he does not go into, such as the dimensions of the breakwater. Those we must lay down. The general principle of the scheme I think is the right one.
  11. Does the plan before the Committee show the scheme as proposed in Sir John Coode's report? Yes.
  12. And that is the scheme which you agree with? Yes, I agree with that design.
  13. In your opinion what effect will the construction of these proposed works have upon the entrance to the Richmond River? I think it will maintain a permanent depth of water there.
  14. What depth? 16 or 17 feet. Of course, whenever there is a fresh the channel will be scoured out deeper; but I think the depth mentioned is the one which will be maintained.
  15. What is the width of the channel at the present time? It varies. Sir John Coode mentions in his report that when he visited the locality the channel was further north than it had ever been known to be before. It was then about 500 feet south of North Head and passing on the north side of the Beacon Rock. Since then the channel has gone further north, into Shaw's Bay. When I went up with Sir John Coode the channel went through where the words "North Spit" are written on the plan. Now it passes into Shaw's Bay—which appears on the map as a lagoon—runs round close under the headland, and striking a patch of rocks upon which the "Ballina" was wrecked, turns south. Two months ago when the entrance was so bad that the navigation of the river was almost completely blocked, the north-east winds had swept the sand down south, and formed a bar; but it could not remain long in that position, and gradually worked north. Sir John Coode in his report suggests that the south training wall, which will have to be erected, should be commenced first; but when the entrance to the harbour was so bad the Minister asked me what I could do to remedy it, and I then suggested that we might commence upon the northern portion of the work, and build the breakwater from the pilot station to the Beacon Rock. The object of that was to prevent the current getting into Shaw's Bay. I now recommend that that part of the work be commenced first, notwithstanding Sir John Coode's recommendation, because he never counted upon the current going up there, and that I think it is absolutely necessary to prevent.
  16. Where does the current set from—from the sea? I am speaking of the ebb of the tide. It strikes the Beacon Rock and is deflected north, and then strikes the rock upon which the "Ballina" was wrecked, and is driven south, almost at right angles to the incoming wave. We propose to commence on this work while making preparations to get the stone down to construct the other portions.
  - 17.

17. You say that the current sets in to Shaw's Bay. I want to know where the current comes from—is it the current, from the river, or from the ocean? It is the ebb and flow of the tide. The ebb exceeds the flood tide by the quantity of water passing down the river. C. W. Darley,  
Esq.  
26 June, 1889.
18. Then the current is not caused by the water from the river? It is the outrush from the river.
19. The flow into Shaw's Bay took place in a time of drought, when the river was not in flood? It was caused by the south bank building up because there was not so much water passing down the river.
20. The lowness of the river tended to build up the south bank? Yes. The river scours out the sand.
21. *Dr. Garran.*] Was there a sand pit between the island and mid-channel? There is now; you could walk across there. We always find that the north-easters drive in the sand on the coast and help to build up the sand-banks, while the current scours them out again.
22. Is the current at the present time going out by the circuitous route you described? Yes.
23. Is the entrance obstructed? It is pretty good now since the heavy rain. It is very much better than it was two months ago.
24. *Mr. Lackey.*] How long have you been in charge of the works at the Richmond River? We have done no work there at all.
25. The charge of maintaining the entrance to the Richmond has always been considered a standing work? The department has done no work there at all; we have only been working on the Clarence.
26. Have you not had an officer on the Richmond? We have done nothing more than make surveys there. The construction of any works has not been attempted.
27. You have been carrying on dredging operations? Yes.
28. Those operations were carried on under your department? Yes, we have been doing a little dredging there; but most of that work has been done higher up the river.
29. Was your department ever asked to give an estimate of the probable cost of making a good entrance to the Richmond? I believe Mr. Moriarty made an estimate something like twenty-five years ago. I never saw it, but I know that the cost of the work was put down approximately at £500,000. He did not go into very full details.
30. Then in fact the proposed work has never been critically estimated by the department? No.
31. Has any recommendation at any time been made as to the best description of work to give a good entrance? No, a plan has never been made.
32. Have any of your officers been consulted with reference to the project of Sir John Coode? No.
33. Was Sir John Coode's proposal entirely the result of his own inspection of the locality? Practically so. He really worked it out in London after he had gone home, but he visited the spot and made a thorough investigation.
34. Is £136,000 Sir John Coode's estimate of the cost of the work? Yes, for the first portion of it. He estimates that the further extension will cost £190,000.
35. And that makes the total cost £326,000? Yes.
36. What does this work consist of—simply of excavations, or excavations with walls at the sides? Simply of the construction of breakwaters and training-walls.
37. What are the walls to be constructed of? Rubble stone.
38. Such as shown by the sections before the Committee? The sections were not prepared by Sir John Coode. I had them prepared. Sir John Coode in his report says nothing about the dimensions of the breakwater. In one place he mentions that the training wall would be 6 feet above high water, but that is the only reference he makes to the dimensions of the wall. But from our experience on the coast 6 feet above high water would not be sufficiently high for a breakwater. It is sufficient for inside work, where you get no sea; but 16 feet above high water is the least height to which we find it safe to carry a breakwater.
39. How far is the breakwater supposed to go into the ocean beyond the sand-bank? Sir John Coode, in his estimate of £136,000, only proposes to carry the southern training-wall to a point opposite the middle of North Head. That portion of the work is marked a deep red on the plan.
40. Would that be sufficient to maintain a scour? He is anxious to see the effect of the work before going on with the further extension.
41. Then the plan is not complete? Yes, it is complete; the extension is shown by red hatching.
42. How far will the expenditure of £326,000 carry the work? That sum is estimated to pay for the construction of the whole of the work.
43. Including the extension of the breakwaters out to the deep water? Yes.
44. *Mr. Garrard.*] Will it include the part of the work shown on the plan with red hatching? Yes. The portion of the work which is estimated to cost £136,000 is shown on the plan in solid red.
45. *Mr. Lackey.*] What will be the width of the channel if these works are carried out? 1,150 feet at the end of the first section, and then it narrows down to about 1,000 feet at the end of the breakwater.
46. What will be about the depth of the channel? Sir John Coode estimated that he would get an average depth of 15 to 17 feet.
47. Would that be obtained by dredging? By scour.
48. The maintenance of the channel after the walls are erected will depend upon the natural scour? Yes.
49. That will be governed by the quantity of water that has to pass in and out every day? Yes; and a depth of at least 16 feet will be required to compensate for the present surface area.
50. Does the result of your experience lead you to conclude that the tidal influence would be sufficient to effect the scour? It does.
51. Have you constructed other works on the coast of a similar character to this? We have not quite a parallel case at Newcastle, but very nearly so. There we did no dredging whatever on the bar, and the channel has deepened from 14 feet to 22 feet.
52. Is the tidal influence as great at the Richmond as it is at Newcastle? In proportion to the size of the river it is.
53. Have you not had some work of this description at Twofold Bay or Moruya? Yes; but it is only partly finished. The breakwater has not been extended out at all.
54. Has the tidal influence there resulted as you expected? The work has not been completed.
55. In what stage is it at present—is it regarded as a success? Anything but a success, because it is only in a half-finished state.
56. Is it not the fact that floods exercise an influence in the deepening of these channels? Undoubtedly.
57. Do you think that it is as great as that exercised by the tide? In the case of a flood you get the current

C. W. Darley, Esq.  
26 June, 1889.

current only one way, sweeping outwards. I might mention that in 1887 we had a straight channel out from the Richmond, with some 14 feet of water in it; that was while we were making the survey. I think that during the few (six) months that our officer was making the survey there he reported that 6 feet of rain had fallen.

58. You were saying that Sir John Coode, in his estimate and design, did not provide for the course which the current takes to the north round past Shaw's Bay? I gather from his report that he was not aware that the channel ever went there. On page 2 of his report, under the heading, "The River entrance under existing conditions," he says: "When visiting the site in November, 1885, I was informed that the entrance had never been known nearer the North Head than at that time."

59. At the present time then the channel goes up into Shaw's Bay, and is not as it is shown on the plan? Yes; it goes up into Shaw's Bay, and afterwards takes a southerly course.

60. Your opinion is that the work would be incomplete without the northern wall being carried further inland, so as to intercept the current going up into Shaw's Bay? Undoubtedly that is part of Sir John Coode's scheme. I said that I thought that portion should be first constructed.

61. I understood that Sir John Coode did not provide for the continuation of the wall? Not in the first instance. He thought that the southern wall should be commenced first. I only suggest the trifling alteration that the northern wall should be first commenced.

62. Is it your professional opinion that if this work is carried out it will do what is required in improving the entrance of the river? I think so, from what I know of similar works that have been carried out in other places. The work is similar in character to that carried out in the Mississippi Pass, which has been eminently successful, and it is also very like the North Sea Canal at Amsterdam, which I recently visited. That canal is cut through a sand bank.

63. Has your attention been specially called to the estimate of cost? I have gone into the estimate very fully.

64. Do you think it is a fair approximate estimate? My estimate is a little higher than that of Sir John Coode, but it is wonderfully near it. That portion which Sir John Coode estimates will cost £136,000, I estimate at £148,000. Sir John Coode has not given any particulars as to the dimensions of the work, and my estimate may be for a triflingly larger section. He gives no quantities, but simply states the length of the work and the sum necessary for its construction. He does not say how much a ton or a yard it will cost.

65. You were saying that Sir John Coode had not made the walls of sufficient stability to withstand the storm-water? I am afraid you misunderstood me. Sir John Coode mentions in one place that the height of the training-wall would be 6 feet above high water. That I consider sufficient, but he does not mention what height the breakwater would be. On page 3 of his report he says: "The total length of this bank, as shown, is 4,500 feet, and it would be formed throughout of rubble stone brought up to (say) 6 feet above high-water of ordinary spring tides." That is all he says as to the dimensions of the wall.

66. Does he not give the dimensions upon which he has based his estimate of the cost of the work? No; he neither gives the dimensions nor a cross section.

67. Your department has frequently constructed works of this kind? Yes.

68. And you have, I suppose, pretty well defined what the widths and the heights for work of this kind should be? We know now pretty well what is necessary.

69. If your department were called upon to give a design for the construction of this work at the Richmond would it not be similar in character to, or of the same character as, that proposed by Sir John Coode? That is a difficult question to answer.

70. Is it not the case that the entrances to the whole of these bar harbours are improved by making a strong scour;—is not that the theory? A strong scour and a confined entrance.

71. That is what is proposed in this case? Yes.

72. And in most other cases? Yes.

73. *Chairman.*] That is what was done at the Mississippi? Yes.

74. *Mr. Lackey.*] You have carried out similar works to this on a smaller scale on the coast? Yes; at Newcastle.

75. And at Lake Macquarie? Yes.

76. And to the south, on a smaller scale. Has the work been found effectual in those cases? At Newcastle it has been very successful; but the works at Lake Macquarie have not been completed.

77. Then something similar to the scheme proposed by Sir John Coode would have been suggested by the department if that gentleman had never visited the Colony? Yes. Not exactly on the same lines perhaps, but on the same principle.

78. Are you at all acquainted with the country behind the Richmond River entrance? Pretty well.

79. It is a large and rich country? There is very rich country lying to the north-tropical country.

80. Do you think the present difficulty of access has interfered with the settlement of the country in any way? I think that it has retarded settlement there very much.

81. You think that if facilities, such as would be given by the removal of this impediment to the entrance to the river were afforded, for getting at the land, settlement would take place to a larger extent than it has done in the past? Yes.

82. The lands are very rich? A great deal of the land has been taken up, but in many cases people find it hard to get a living out of it.

83. What is the principal town on the Richmond? Lismore. Ballina is the town just inside the Heads.

84. Is that on the north or south side of the river? It is on the north side just at the entrance. There is no town on the south side. Ballina is a comparatively small town.

85. Within your knowledge has there been a project to connect the Richmond and Clarence by means of a railway? Yes. There was also a project for connecting the two rivers by a canal.

86. Your professional opinion is that the construction of the proposed harbour works will be the best course to adopt of the three? It is.

87. *Mr. Copeland.*] Do you know the set of the current outside? As on most parts of the coast the current has a southerly set.

88. What is its rate? That varies at different times of the year from  $1\frac{1}{2}$  to  $2\frac{1}{2}$  knots.

89. Do you not think that the outflowing water from the river meeting the current at right angles will silt up the sand as it comes out between the breakwaters. You may notice that the outflow will be about east-

east-south-east, while the set of the current is south. Would it not be better to have the breakwaters bearing about south-south-east, so as to be more according with the current? I might explain that although the set of the current is to the south it is not felt very strongly immediately off the coast; the headlands keep it farther out.

C. W. Darley, Esq.  
26 June, 1889.

90. Does not the current sweep round the coast at this point? No. It is well known that there is not so much current in shore as there is a mile or two out, and hence ships going north hug the coast; consequently all the wrecks that have taken place on the coast have been those of vessels going north.

91. What rate of current is there near the coast? A good deal depends upon how near you are to a headland. I do not think there would be much current passing by these breakwaters.

92. If the outfall was in the same direction as the set of the current would not there be a better opportunity of getting rid of the sand in the channel? That difficulty could be overcome by keeping the southern breakwater a little shorter than the northern one, so that the northern water would project beyond and shelter the southern, but then again there is the difficulty that we get some of our worst seas from the south-east.

93. It seems to me that if the breakwaters were constructed as proposed the sand which was scoured out of the channel meeting with the current would be deposited near the mouth of the channel instead of being carried away by the current into deep water? I do not think you would gain much by altering the direction, because if you did the channel would face round more to the south, from which direction come most of the heavy gales.

94. Is it not a fact that the principal cause of our river entrances on the coast being silted up is that the outfall has a northerly tendency, and consequently meets the southern current; is not that the reason of the formation of bars at the mouths of our coastal rivers? I do not think the coastal current affects the rivers much.

95. Would it not be better, whatever current there is, for the river channel to turn in the same direction as the ocean current, instead of meeting that current? You must weigh that with the effect of the prevailing winds. You must not depend merely upon the direction of the current, but you must have regard to prevailing wind, for very often the wind will create a local current greater than the coastal current.

96. Where are the prevailing winds? We get the bad weather from the south and the south-east.

97. Is not that in the very mouth of the proposed channel which bears east-south-east? The channel is almost at right angles to the line of coast.

98. Would not the tendency of a south-east gale be to silt up the sand at the entrance of the channel;—if there were a goodebb tide going out of the channel and a south-east gale blowing at the same time, would not the channel become silted up? That would be the tendency, but after the gale the current in the channel would clear the sand away again. It is a very difficult thing to determine the precise effect which the action of the wind and current has upon the sand.

99. Still, if there were ever so little a current, would it not be better to give the channel a more southerly direction than that which it now has. Supposing you were to have the channel two points more to the south, making it face south-east or south-east by east, would not that afford more facilities for getting rid of the sand? No; I think it would be better to carry the channel out straight as it is proposed. The more you deflect it to the south, the more tortuous you make the course inside—the more you bend it round the more acute you make the angle inside.

100. You have a pretty straight channel in the North Creek? There is no navigation there.

101. What is the object of the guide bank there—is it to scour the North Creek and make it navigable? It is more to direct the course of the creek towards the channel.

102. How can that wall have any effect. Supposing there were sand and mud to the north-east of the wall, how would the water affect it? You mean the water going out of the North Creek. That creek receives a great deal of tidal water, so there is always a considerable amount of water flowing in and out of it. Unless there was this wall the tide would flow at right angles to the channel; but the wall directs it towards and with the channel.

103. If you wanted to make a scour would you not have to construct a parallel wall on the northern side of the creek, so as to prevent the water getting away by the eastern arm? The headland protects it there. The water coming down will strike the training-wall and run along it.

104. But the training-wall is not carried out into the river? It is supposed to be. We always find in works of this kind that the water invariably follows the hard side of the channel. The plan shows the state of the entrance at low water.

105. What is the width of the channel between the breakwaters? 1,150 feet, where it is proposed the first section shall terminate, tapering to 1,000 feet at the end of the breakwaters.

106. What is the average width of the river;—I suppose it will be a little more than twice the width of the channel? It is more than twice the width; but it narrows in in places.

107. If a channel is constructed only half the natural width of the river and there is a fresh, will it be sufficient to carry off the water? The channel will have a greater depth than the river has at present. Although the river is very wide it has only a depth of a few feet. The sectional area of discharge in the river and in the channel will be nearly equal.

108. Do you propose to deepen that part of the channel by excavation or simply by building up training-walls? The scour will deepen it.

109. Will not the other parts of the river deepen also? Yes, if the river is confined in width.

110. Will there not be a danger of the channel being flooded if there is a fresh in the river, seeing that you have compressed 2,500 feet of superficial area of water into 1,100 feet? The river now is 2,500 feet wide; and the average depth is but from 6 to 8 feet, whereas in the channel, though the width would only be 1,100 feet, there will be a depth of 15 or 16 feet.

111. But the water would not pile itself up, and you would therefore have no greater depth outside the channel than inside it? There are points where the river is not more than 800 or 900 feet wide, but there it is very deep.

112. In a narrow channel like that proposed, would not the current be so strong that if there were a fresh in the river it would be impossible for a vessel to get up;—could any vessel face the current that would be running out of the channel? There is no doubt that there would be a strong current there, if there was a fresh, which a sailing vessel could not face.

113. If a steamer attempted to get up the channel when there was a strong current flowing out of it, would

- C. W. Darley, Esq.  
26 June, 1889.
- would there not be a danger of her being turned out of her course;—a thousand feet is a very narrow channel for a sailing vessel to make when the current is setting against her? In very heavy weather it would be better for a sailing vessel to stand off.
114. Then we should not be making a harbour of refuge by constructing these works, but rather a ship trap? You could never call a harbour of this kind a harbour of refuge. Vessels have to stand off Newcastle in heavy weather.
115. If the channel was bell-shaped at the mouth would it not be easier of access? That would lessen the scour.
116. You would not lose your tidal scour if you diverted your channel more to the south. I am still harping on the question of the current. I know there is a strong current setting south, and I am strongly of opinion that the channel should be diverted more to the south. That being the case, if you took the breakwaters further apart, into the deep water, I do not see that the sand would silt up by making the mouth of the channel bell-shaped, so as to give a vessel an opportunity of entering it. If the channel were bell-shaped at the mouth, would it not be easier for a vessel to make the entrance? The first section of the channel is practically bell-shaped. The width of the channel is only reduced to 1,000 feet at the extreme end; it widens very rapidly at the beginning of the first section.
117. What is the width of the channel between the breakwaters at Newcastle? From the northern breakwater to Stony Point is I think about 1,200 feet, but there is an indication of that width being too much, because a spit of sand has formed against the northern breakwater which has reduced the width available for navigation to not more than 600 or 700 feet. That is what we want to avoid. If you make the channel too wide you will have sand-spits formed within it.
118. What is the volume of water coming out of the Hunter River compared with that coming out of the Richmond? There is no doubt it is much less than in the Hunter, but I could not give the number of feet per second.
119. You think it would be no advantage to have the training-walls bearing more to the south? I do not think it would.
120. The proposed bearing is that laid down by Sir John Coode? Yes.
121. Do you think that the breakwater goes sufficiently far out? I think it goes quite far enough out.
122. You would not have to take it further out? I think not. In fact we may find—and Sir John Coode indicates this—that it is not necessary to go quite so far out.
123. What depth of water is there at the end of the breakwater? I think there is at present 22 feet at the end of the southern breakwater.
124. How much at the end of the northern breakwater? About 18 feet.
125. Considering the quantity of sand you will have to scour out, would it not be better to continue the breakwaters into deeper water;—is there not a danger of the sand only being removed from the river to silt up again at the mouth of the channel? I think not. I think the channel is sufficiently narrow to create a scour outside.
126. Can you tell me whether the water deepens rapidly outside, or does it continue shallow? It deepens very rapidly.
127. Do you expect that all the sand-banks inside the river will be scoured out by the channel? I do not say that they will all be scoured out, but the river will have one good channel. Some dredging may be necessary.
128. Have you made any borings? Yes.
129. Did you find it all sand and mud? It is all sand on the southern side.
130. Is there no gravel or shingle? No.
131. And no rock? There is no rock within 24 feet.
132. What is the explanation of the different colours on the map? Those portions of the map coloured yellow indicate sand; the pink tint shows the channel which Sir John Coode proposed should be improved by dredging. Probably the greater part of it will be scoured out, but it will be helped by dredging.
133. *Mr. Garrard.*] You have had some years experience of the harbour works at Newcastle? Yes.
134. You have had personal supervision of the works there? Yes.
135. Those works are similar in principle to the works which it is proposed to construct at the Richmond River, where a channel is to be formed by training-walls? Yes.
136. A very great improvement is being made at Newcastle through the works which have been carried out there? Yes.
137. Can you tell us why the northern breakwater of the Richmond takes a bend where it touches the coast instead of going straight? It is really shortened by that—there is nothing to be gained by carrying it out straight.
138. It could, I presume, be as well taken to the point south of that to which it is proposed to take it? Yes.
139. Will not the sand silt up in the pocket which is formed at that end of the breakwater? That corner very likely will silt up and form a beach, but that will not matter. In fact, to some extent, a beach in a position like that is desirable, because it forms a wave-trap.
140. A cushion for the wave? Yes. If a wave comes in it is a good thing to have a beach for it to break upon, instead of letting it run up into the harbour.
141. Will not the sand silt up at the end where the southern training bank touches the shore? You must have a point for this wall to touch the shore. Sir John Coode turned it in there because he thought it had gone far enough.
142. Will not the sand silt up there? Just at this place the river makes a bend round.
143. I understand that the map shows the position of the channel at the time Sir John Coode visited the locality? Not quite. It shows the state of the entrance when we made the survey in the beginning of 1887. Sir John Coode visited the place at the end of November, 1885, and we were not able to undertake the survey for a year afterwards.
144. Mr. Copeland was asking you just now as to the desirability of extending the channel more to the south-east. Is it not a fact that our heaviest coast rain comes from the south and south-east? Coast rains, I think so.
145. Are you aware that the last heavy rainfall came from the south-east? Some of the heaviest weather we get is from the south-west.

146. But as a rule, is it not the fact that our coast rains are usually from the south-east, and accompanied with heavy weather? Yes, as a rule.
147. More frequently than heavy rains are accompanied by north-east weather? Yes.
148. North-east winds are the exception with heavy rains? You do not get continuous rains from the north-east, as a rule.
149. Therefore with south-east weather and a heavy rainfall, if the channel were diverted to the south-east, as suggested by Mr. Copeland, the evil which he wished to prevent would take place? I think Sir John Coode in fixing the direction of the channel took all that into consideration. He took a great deal of evidence and obtained a large amount of information as to the prevailing winds at this place.
150. As a rule it is not desirable in carrying out works of this sort to have the entrance of the channel facing a prevailing wind? No, you want to avoid that as far as practicable.
151. As the channel is now, it would be at right angles to the south-east and north-east winds? Yes.
152. I understand that Sir John Coode recommended that the southern walls should be commenced first? Yes.
153. But you consider he was ignorant at the time that the channel ever worked round into Shaw's Bay as it does at present? Yes.
154. You therefore urged that the portion of the northern wall between the pilot station and the Beacon Rock should be commenced first? The department urged that.
155. If the work is commenced between the pilot station and the Beacon Rock, will it not block up the present channel? As the work advances the channel will run to the south of the Beacon Rock.
156. That is to say, that every load of stuff you tip in will probably make it run more as it appears on the plan? It will make it run south of the Beacon Rock.
157. Where do you propose getting the material for constructing the breakwaters from? From a quarry above Wardell—about 18 miles up the river.
158. Do you propose to go on with the guide bank at the North Creek simultaneously with the other work, or to leave it until afterwards? I think we should commence it during the progress of the other work. It is not of so much importance.
159. North Creek does not drain a large area? Not a very large area.
160. The proposed deep water channel inside, I presume, will have to be assisted by dredging? Yes.
161. *Mr. Humphery.*] In checking Sir John Coode's estimate of the cost of the two sections, have you taken into consideration the difference between the 6 feet above high-water-mark which he mentioned, and the 16 feet which you think will be necessary? Yes. I have based my estimate on the sections before the Committee.
162. What is your estimate of the cost of the second portion? I have not brought the figures for the second portion with me; I only dealt with the first portion, because it is not contemplated to go on with the second portion for some time.
163. Do you know whether the £190,000, which is Sir John Coode's estimate for the second portion of the work, will provide for breakwaters 6 feet, or 16 feet, above high-water-mark? I judge that it will provide for 16 feet, seeing how closely my estimate for the first portion agrees with his. I fancy he must have proposed to take the outer portion of the work to a considerable height.
164. The first portion is only 6 feet? Part of it; but a good part of it will be a breakwater which will have to be 16 feet above high-water.
165. Would not a difference of £12,000 account for that portion? No; it would not account for it. Because, I might point out, I propose to commence the northern wall from the pilot station with a height of 6 feet above high-water, and to let it go to a height of 16 feet very soon after it passes the Beacon Rock. With the southern breakwater, I propose to commence with a height of 6 feet and bring it up to 16 feet at the end of the first 4,500 feet.
166. Then 2,000 feet of the wall will be 16 feet above high-water? Yes; and quite 2,000 feet of the northern breakwater.
167. The probability is that Sir John Coode's estimate of £190,000 will be very near yours? If £20,000 were put on to it; but I will have the exact figures next meeting.
168. Sir John Coode in his report says: "Before commencing the first instalment of the works proposed, it will be desirable to put down a series of borings on the precise line of the new entrance and channel;"—has that work been done? No, we have made borings in part of the southern channel, and in the northern channel; but as there has been no vote we have not done anything further.
169. Should not that preliminary work be done before the Committee recommend that these works be carried out? It might be well. From the borings we have already obtained I do not anticipate that we will find any rock.
170. Sir John Coode continues: "Although occasional borings of the old series were made within this area and gave favourable results, it is only prudent, in a matter of such moment, that the bottom within the limits proposed to be scoured should be fully investigated before operations are commenced." It appears that the Committee are considering the carrying out of the work before preliminary steps have been taken? —
171. *Mr. Garrard.*] I understood Mr. Darley to say that borings had been made in the northern channel? From the borings we have made I think the chance that we shall come upon rock is very remote. We have worked all over the patch of rocks in the northern channel.
172. *Mr. Humphery.*] Sir John Coode in his report further says: "The observations which have been made show that the throttling of the flood discharge mainly occurs above the elbow;"—what part of the channel is that? It is some distance up the river above Woodburn.
173. It is not any portion of the proposed channel? No, it is between Woodburn and Coraki Junction.
174. It is not marked on the plan? No.
175. I think you said that at Newcastle the channel between the training-walls was about 1,200 feet wide? Yes.
176. And it has been found that that was too wide? 400 or 500 feet of that width is very shallow indeed.
177. Would it not have been better if instead of having a channel of 1,200 feet between the breakwaters there had been one only of 600 or 800 feet? I do not know that we would have gained anything. The velocity of flood waters would have been increased.
178. It would not have been any advantage? I do not think it would have been much advantage.
179. Therefore you do not think that the 1,100 feet will be too wide for the channel at the Richmond? I do not think so.

C. W. Darley,  
Esq.  
26 June, 1889.

- C. W. Darley, Esq.  
26 June, 1889.
180. Mr. Copeland, I think, referred to the increased danger that vessels approaching the port would run if this channel were completed? During heavy weather there is no doubt there will be a very great scour.
181. There is at the present time? It is almost impossible to enter at present.
182. So the danger would not be increased? No; it would be lessened.
183. *Mr. O'Sullivan.*] You think it is safer to have this channel constructed across the south spit than it would be to follow what appears to have been the natural channel for many years between the north and south spits? Our object is to get away from the rocks.
184. Beacon Rock? Yes; that rock works south.
185. Could it not be blown up? That would be very costly.
186. Mr. Garrard asked you just now if the navigation of the river could go on while you were filling up. At the present time the waters flow round Beacon Rock into Shaw's Bay, but when you begin to fill up where will it go? The channel will open out south of Beacon Rock.
187. You think that the navigation can go on while you are doing the work? I think so. The water will always keep a channel open for itself.
188. The total cost of this work is to be £320,000? Yes, that is Sir John Coode's estimate.
189. Do you not think, in view of all the dangers surrounding this proposition, that the money could be better expended in constructing a railway to the district? A railway will not open up the navigation. Carrying goods by water is cheaper than taking them by rail.
190. You are aware that a railway is going to this district? I am aware that it is proposed.
191. Would not communication by railway be safer and more certain than it could possibly be by water, even if this harbour were a success? No. To some extent it may be safer—but a railway can never beat a good water-carriage.
192. You do not anticipate that this scheme is likely to be a failure, notwithstanding the many difficulties in the way of constructing a harbour? I do not. I think that the work can be successfully carried out.
193. Do you consider it an urgent work? I think it is, and I think that it is well worth the expenditure.
194. *Mr. Tonkin.*] I should like to ask whether there are any rocks on the south spit to prevent a channel going south? No, there are not.
195. Then can you explain why you prefer to bring the channel straight from the North Creek, so as to cut through the northern part of the south spit? One reason was that it should not be taken too far from the North Head.
196. But is there any object in having the channel as proposed instead of bringing it further to the south? If it were brought further to the south the construction of the northern breakwater would be more difficult, and there would be more work in it.
197. I am asking you this question because I think Mr. Copeland's idea is wrong. His idea is that the entrance of the channel might just as well be made further to the south, but I think that as the current is from the south it would be necessary to have the entrance to the channel more to the north? The current Mr. Copeland asked me about has a southerly set; it runs towards the south.
198. It is the set of this current that silts up our river harbours and forms bars? Not always. I do not think the current has so much to do with the silting up as the winds have. The north-east wind causes more injury to the harbours along the coast than a southerly wind does.
199. Then that would not be the reason why Sir John Coode suggested that the entrance to the channel should be shown on the plan? By keeping the channel more to the north you do not have to place the northern breakwater in such deep water.
200. But if that breakwater were brought straight to the south would you not have a greater scour? No; because the breakwater would then be at right angles to the channel, and there would be a confusion of the currents.
201. Does not the current go south now? Yes.
202. And before it takes its course to the north it strikes against the south spit;—if the channel were cut through that spit would it not provide a more natural outlet? Then what would you do with the North Creek?
203. The northern breakwater could come quite south, and then the outflow of the creek would help to scour the channel? [*Witness explained that the current should be led in the way it was proposed to take it, and that if the northern breakwater were constructed, as suggested by Mr. Tonkin, all the water coming down the river would be piled up against it.*]
204. *Mr. Trickett.*] Could you give the Committee any idea as to what would be a reasonable time for carrying out the work? I think it will take between six and seven years. It will naturally take a long time to bring the stone such a distance.
205. Would the outer breakwaters be constructed merely by depositing stone, or would they have to be built? By depositing stone.
206. Concrete blocks, such as those used at Newcastle? We did not use concrete blocks there, but large blocks of stone, as large as we could handle.
207. With regard to the question asked by Mr. Humphery, do you think the Committee would be justified in considering this work without having borings made at the proposed entrance;—do you think that it is absolutely necessary to have those borings made? I really do not think so.
208. Do you think the Committee would be justified in considering the matter without having those borings made? I think they would be quite safe in doing so. We have not made borings over the whole area, but we have made what we call spot borings without detecting rock.
209. From your general knowledge of the river, do you think this proposal for improving the entrance is the best one that presents itself? You could vary the direction of the channel a little, but I do not think that you could better the general scheme.
210. You think that the navigation of the river will not be disturbed while you are building the breakwater between the Beacon Rock and the mainland? I do not think it will. If we got out 50 feet or so the current would be sent across the Beacon Rock and would gradually work round it.
211. *Mr. Douel.*] What is the nature of the foundations of the proposed south breakwater? Nearly all sand bottom for a great distance.
212. If a portion of the northern breakwater were constructed, as you suggest, would it not have the effect of destroying the foundations of the southern breakwater by scouring out the sand? That short length would have no effect.

213. How do you intend to provide for the traffic, if you block up the existing channel by the construction of the northern breakwater? I think I have already answered that question by saying that the current will work a channel for itself to the south of the Beacon Rock, where it has frequently been before. In fact they have never had a bad channel when it has been south of the Beacon Rock, but when the channel is north of the Beacon Rock it is bad. C. W. Darley,  
Esq.  
26 June, 1889.

214. What is the estimated cost of removing this rock? I have not made an estimate; but it would not be wise to remove it. If you wanted to make the channel in that direction you would have to remove not only Beacon Rock, but the spit in the North Head.

215. If the Beacon Rock were removed would not the whole difficulty be got over, and would not a better channel be formed than that which it is proposed to construct? No; I do not think so.

216. Has it not been suggested that as the point at the pilot station is rocky, and as the North Head is rocky, if a wall were constructed across from one point to the other so as to cut off the spit at the North Head, a more complete, safe, and less expensive channel would be formed than that which it is proposed to construct? I do not know that it would lessen the expense much, because you would have to bring the southern breakwater further north. You could not do anything without confining the channel. I think it would be more expensive because of the necessity for lengthening the southern breakwater.

217. Would not the outlet be more direct;—the channel would still be confined, and there would be a more direct and perfect scour? I do not know that.

218. When your proposed works are completed what depth of water will you have? From 15 to 17 feet.

219. What is the depth in the present channel? About 6 feet.

220. And it has a sandy bottom? The present channel has a rocky bottom. Wherever there is rock the channel is deep.

221. I suppose you have taken the bearings where the north spit is? Yes.

222. What is the nature of the ground? Near Beacon Rock and round Shaw's Bay the bottom is rocky. As you go north you get on to the rock, but going south you leave it. I might mention that it is intended to build the north breakwater upon the rock.

223. *Mr. Humphrey.*] How do you propose to get the material for the construction of the two breakwaters? There has not been much said as to how we propose getting the stone. At Newcastle we had to bring it down by two railways—a private company's railway and the Government railway.

224. Perhaps you would explain how you propose to do in this case? There are two quarries available, one on the north side and the other on the south side of the river, a few miles above Wardell, and about 18 miles from the entrance. The stone could be conveyed to the south breakwater by the construction of a tramway or a railway 16½ miles in length; but it would then have to be taken across in punts to the northern breakwater. As that length of railway would cost over £40,000, and as fully one-half of the stone would have to be reloaded into punts, and carried to the other side of the river, it is proposed instead to construct four large punts which would hold 30 tip-trucks—strong waggons that are used for tipping the stone. We would lay three lines of rails on the punts, and I estimate that we could keep three steam-tugs at work towing the punts. Each tug would make about one trip a day. We would also require four lighter punts to convey the stone that could be handled. This stone would be discharged from the punts so as to cover the bottom stones of the breakwater and prevent a scour. We should require 150 tip-trucks—four sets for actual use, and one set to be used in case of emergency. We would also require landing stages at the quarries and at the breakwaters, together with cranes, equipment, and plant.

225. *Mr. Garryard.*] What would be the life of the plant? I would only expect it to last out the first portion of the work, though at the end of the time it would still be available. I think in an estimate like this it is better to wipe it off altogether.

226. You treat the plant as being of no value at the end of the work? Yes. The following is a detailed estimate of the cost of quarrying and carrying the stone to the breakwaters:—

ESTIMATE OF PROBABLE COST OF CARRYING OUT FIRST SECTION OF SIR JOHN COODE'S PROPOSALS.

Length in feet.	Quantity of Stone.	Tons.	
2,500	North Breakwater	=	230,517
4,500	South Training Wall	=	187,576
2,000	South Breakwater	=	190,000
2,000	North Creek Guide Bank	=	42,957
	Total.....		651,050

Estimated cost of plant necessary to carry out this work, including tug-boats, punts, tip-waggons, landing-stages, rails and sleepers, cranes, weighbridges, offices, &c. (say) £42,000

As the plant will require a considerable expenditure in repairs and renewals owing to the heavy nature of the work, I propose to charge the whole cost of the plant against the above amount of work, and thus practically write it off.

Therefore, £42,000 amounts to (say) 651,050 tons is. 3½d. per ton.

I estimate the cost of quarrying, loading, haulage, unloading, stores, supervision, and contractors' profit @ 3s. 2½d. per ton.

Total estimated value of stone in place @ 4s. 6d. per ton.

From the foregoing figures I estimate the value of the first section of the work proposed by Sir John Coode as follows:—

	Tons.	s. d.	£	s. d.
North Breakwater .....	230,517	@	4 6	= 51,866 6 6
South Training Wall and Breakwater .....	377,576	@	4 6	= 84,954 12 0
Guide Bank .....	42,957	@	4 6	= 9,655 6 6
Lights and buoying, as estimated by Sir J. Coode .....				1,500 0 0
				£147,986 5 0
				(Say).....£148,000

Estimating that the work will progress at the rate of 450 tons per day, once all the plant is ready, and allowing for 270 working days in the year, the whole work should be completed within six years from acceptance of the contract.

THURSDAY, 4 JULY, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.  
 The Hon. ANDREW GARRAN.  
 The Hon. FREDERICK THOMAS HUMPHERY.  
 The Hon. WILLIAM JOSEPH TRICKETT.  
 HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.  
 WILLIAM SPRINGTHORPE DOWEL, Esq.  
 EDWARD WILLIAM O'SULLIVAN, Esq.  
 JOHN HURLEY, Esq.  
 CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Improvements to the entrance of the Richmond River.

Cecil West Darley, Esq., Engineer-in-Chief for Harbours and Rivers, sworn, and further examined:—

C. W. Darley, Esq. 227. *Dr. Garran.*] I understand that there is always a southerly current along the coast? Further off the coast. It is not much felt under the lee of a headland, such as the entrance to the mouth of the River Richmond.

4 July, 1889. 228. But is not the effect of that current gradually to create sand-drifts as it goes south? No; we do not detect the sand drifting immediately along the coast. You see the entrance to the Richmond is sheltered by Cape Byron, the eastern point of Australia. It would lie considerably to the west of a line drawn south from Cape Byron, so that the ocean current is not much felt; in fact we often have a back eddy.

229. Where is Cape Byron from there? It is about 15 miles north.

230. And it breaks the current? Yes; and sends it out to sea. In some of these bays, off the Richmond particularly, there is, if anything, a slight northerly set.

231. A little eddy? Yes.

232. So far as there is a current at all it is an advantage to have the north head projecting slightly beyond the south head? Yes.

233. It is always an advantage at our bar harbours to have the north head a little projecting beyond the south head? Where the south head projects the harbour is best.

234. But the north head projects at Sydney? There are two headlands at Sydney, but there is no bar. Here there is only one headland. Where there is only one headland the best bar is when the headland is on the south side of the entrance. Take Newcastle and the Clarence for examples. The worst bars are those where there are no headlands at all, the next where the headland is on the north side, and the best where the headland is on the south side of the entrance.

235. Would there be any advantage, other things being equal, in making the entrance as near to the north headland as possible? I think so. I think it would be wise to keep it as near to the north headland as possible.

236. Here we have a long strip of sand, at any one point of which we can make an artificial entrance, and I understand that nature has shifted the channel from the north headland to the extreme south of the south spit? Yes; it has been down there.

237. In the plan showing the state of the place in 1871, the entrance is close to the south end of the south spit? That is so.

238. Do you know from the statements of the captains trading to this place, whether, while the channel under the influence of the tides and currents has been shifting north and south, there has been one place better than another? They always say that the best water is when the channel is further south; but of course it was not good when it was so very far south as in 1871, because it then really broke out in two places.

239. So that there were then two bad entrances instead of one? Yes. I have no doubt that Sir John Coode would have put the channel further north, but what has governed the position has been the rock bottom.

240. What I was going to ask was this: If we were to go quite under the cliff at North Head, would we have to blast the rock away? In the bottom of the channel?

241. Yes. Would the advantage of having a channel near to the North Head be sufficient to justify us in going to the expense of blasting the rock away? No, we would have to go through not merely the patch of rock you see, but through rock all the way from that to Beacon Rock. There is rock under the patch of sand marked "the middle spit."

242. The rock, which is really an outcrop of the North Head, practically goes to a line drawn through the middle spit? It very nearly follows the contour of what appears on the plan like an island.

243. There is no available entrance between the northern breakwater and the north head, in consequence of the underlying rock? No.

244. And to make a channel you would have to go to a very great expense in blasting the rock? Yes.

245. For other reasons it would be an advantage to go as close under north head as possible? I think so. I should certainly have put the channel further north had it not been for the rock, and I am certain Sir John Coode would have done so also.

246. At present the channel goes round under the north head. I see wrecks marked there? They were thrown up there. The channel has never been over the rock that projects. The wrecks were thrown up on the rock by the heavy seas.

247. For the sake of avoiding the submarine difficulty we are practically bound to bring the channel further south; we have no option to make it follow the course it now takes? Nothing short of moving the rock.

248. Our only choice lies between the proposed entrance and one further south? Yes.

249. One of Sir John Coode's objects in suggesting that the channel should be in the direction proposed, was to give a straight run for the waters of North Creek? I do not know that he placed any importance on that, although he proposes to guide the flow, to give it a larger scouring influence. There is a considerable tidal influence there, and it will help the scouring very greatly.

250. Is there any other reason, besides hitting the North Creek so exactly, why you go so far north? No other reason, except to get near the north headland.

251. You want to get as near the North Head as you can? Yes, as near as is practicable.

C. W. Darley,  
Esq.  
4 July, 1889.

252. And the proposed channel is as near as you can go? Yes.
253. And it suits the sweep of the main river as well as any other outlet would? It will make a good channel.
254. The curve is no disadvantage? No. It is nothing to the curves further up the river, and it will always maintain good water along the line of breakwater.
255. Mr. Copeland asked you on a former occasion if there would not be an advantage in carrying out the northern breakwater; but, if you are right in saying that where you have a projecting south headland the bar is best, would it not be better to bring the southern breakwater out? I do not think so, when we have got past the sand.
256. You think nothing will happen if you have them both the same length? Not when you get out a good distance.
257. The portion marked on the map "constant break" is not rock? No, sand.
258. And also the portion between the breakwaters? We have spot borings about there which show that we can get 27 feet of water.
259. Have you made any borings in the portion of sand which is to be washed away by the current? There is one about the middle; but the only place where we want a few more borings is further in on the bend. From the borings we have got, there is nothing to indicate that we shall find rock.
260. We shall have to run a little risk? I propose to get the borings put down at once.
261. And make sure there is no rock? And make quite sure. We have a line of borings from the Beacon Rock across the harbour and some spot borings between the breakwaters.
262. And you have found no rock? None.
263. I understand that an entrance has been made at the place where the proposed channel is to be excavated? The scour has made an entrance in every position on the sand spit.
264. At the time there was a natural entrance at this place, was it as good an entrance as others have been? The pilot reports that when the entrance has been down about this position they have always had good water.
265. Nature has tested the whole locality, and experience has shown that the proposed channel will be in the best possible position? About the best position.
266. How many years did the natural entrance remain in this position? The entrance was in this position about the year 1875.
267. It was in that position long enough to make a good test? Yes.
268. And the pilot said it was the best channel? He says there was no trouble when the entrance was about there.
269. In dealing with all sand bar harbours the great object of the breakwater, I presume, is to get out to a point beyond which the sands make a bar? Yes.
270. And you will go out deep enough here to prevent any possibility of the sand silting across the mouth of the entrance? I am told that there has been about 34 feet where the head of the breakwater will be.
271. Your breakwaters will be built on the sand? Yes.
272. Will you have any protection for the end of the wall? We will have big stones at the end.
273. As at Newcastle? Yes.
274. How does the work stand at Newcastle? It stands very well.
275. Nearly as well as a regular facing of stone? Almost better. With the Jersey breakwater they had a great deal of trouble, because of the small stone washing away from under the built work.
276. You propose to put only large stones down and to make the ends strong? Yes.
277. You are not afraid of the work being damaged by the sea? No. I have often watched the action of the sea on the breakwater at Newcastle; it comes up and goes through the big stones with a thud, whereas with a smooth wall it would go over.
278. Then you would have large spaces between the stones? Yes; in using large blocks of stone you must have voids.
279. You are not afraid of the breakwaters being hurt by a large sea? Not after they have settled down.
280. In dealing with the sand bars generally there is no better plan known to engineers than to make a confined channel, and to run breakwaters out to a sufficient depth? That has been found successful.
281. Where has it been tried in corresponding localities? It has not been tried in localities in every way corresponding to this, because it is not everywhere where there is a coast like ours, but I can mention one place, the Sulina mouth of the Danube. There is a very large pass there which has been narrowed in. The Danube has two other mouths, but the Sulina mouth is the one which is used for the purposes of navigation.
282. The bottom there is more mud than sand? Yes; and the same is the case at the Mississippi, where it is principally mud.
283. It is, in fact, the delta of the river? Yes.
284. You have nothing but sand here? No.
285. Sand is harder than mud? Yes; and for this reason the entrance to the Richmond would hardly compare with the other two I have mentioned.
286. Practically if we open up the mouth of this river at all we are shut into a scheme of this kind; we have nothing to do but to narrow the entrance and carry out breakwaters; no cheaper plan will do? I do not think so.
287. If we begin by making the line of wall to the extension of the southern breakwater, that to some extent will improve the entrance? I think we shall get a good result as we get to that point.
288. You are trusting to nature to scour out the channel? Entirely.
289. If you begin with the southern breakwater you think the water will run along the wall and commence to scour the channel? Yes.
290. That will gradually fill up the northern part of the entrance? Yes; above the northern breakwater it will all gradually silt up.
291. The current running down will make beaches there? Yes.
292. When the whole of that is filled up will there be any danger of the sand coming down in front of the channel? We trust to the scour to keep the channel open.
293. At Newcastle you have a bank of sand that narrows the entrance? Simply because the Newcastle entrance may be a little wider than is required. The entrance there has narrowed down, but while it is narrow it is deep.

- C. W. Darley, Esq., 294. You think if you had made the entrance at Newcastle the width which nature has made it you would have a better harbour? You would then have too great a current in flood-time.
295. Could you not have the breakwater so low that the flood-water would run over it? There would be a difficulty in making it so low.
296. Could you not make a small piece low near Beacon Rock, over which it could run? The sand would silt up behind and prevent the water getting away. With the proposed channel there would be an ample width.
297. But if your object is to narrow the channel, could you not make a weir to enable the flood-water to escape? No; the sand would pile up and block the water from getting away.
298. After a long drought and no scour the sandbank might cross the mouth of the channel? The tidal influence will keep the channel open.
299. How many miles does the tide go up the river? Almost 60 miles—up to Lismore.
300. What is the rise of the tide? The tide rises 3 feet 16 miles up the river.
301. Then you do not trust to floods; the natural tide will scour out the channel and keep it deep enough? Yes. I might mention that at Dublin the tide influence has given a good mouth at the entrance of the Liffey, where it was previously very bad.
302. What kind of rock have you got to make the walls? It is coarse sandstone.
303. Pretty hard? We have not opened the quarry up very far.
304. Is it as hard as the Newcastle stone? Rather harder.
305. And quite as good? Quite as good.
306. Will it stand the work? I am putting down a shaft now to make sure.
307. You have no reasonable doubt? No.
308. In estimating the prices for the carrying out of the work you think you have given fair maximum prices? Yes.
309. You say that the whole work will cost £350,000? Yes. I have got my estimate here for the second portion of the work.
310. You do not think the cost of the work will go to £400,000? No.
311. You make full estimate for Colonial prices? Yes.
312. You think we shall be pretty safe to keep the expense within £400,000? Yes.
313. If we sanction the work you think the country may rely on its not exceeding £400,000? At my last examination I said that my estimate for the first section of the work, which Sir John Coode says will cost £136,000, is £148,000, and for the outer section my estimate is £208,350, whilst Sir John Coode's estimate is £190,000. My estimate for the whole work is £356,350. [*Vide Appendix B.*]
314. *Chairman.*] You estimate for retaining-walls 16 feet high, as against Sir John Coode's 6 feet? I do not know what height he proposes to make his breakwaters; 6 feet would not be sufficient. You must raise the work a sufficient height to enable the men to work safely. For three parts of the year the seas would be rolling over a breakwater 6 feet high.
315. *Mr. Copeland.*] What do you estimate the wall along the North Creek will cost? £9,000. I do not think it will be necessary to carry it out at once, but it would be advisable to carry it out in the course of time. The plan before the Committee is rather misleading, as the water does not follow the course shown there. All the part marked yellow is covered with water before half-tide, so that the current coming out of North Creek falls due south, and you get a conflicting action of the currents. The wall would give the water a turn towards the mouth of the channel.
316. Is not the pink part near the training-wall also covered with water? As you go on with the construction of that wall you will find that the water will follow it. It invariably follows any solid work of that description.
317. But is the water there at the present time? At the present time the best water—it is only a matter of about 18 inches altogether—is the lower of the two blue tracks.
318. *Dr. Garvan.*] If the water clings to a stone wall on a sandy bottom, is there not a danger of the wall becoming undermined by its action? It will to some extent.
319. You will have to keep building up the wall for some time? We have estimated to take the wall down 12 feet. Not only will the water cling to the wall, but it will scour out a channel, and we shall be tipping into several feet of water the whole way. On the spit, in the construction of the south breakwater, I estimate that we shall have to go down 22 feet where there is now dry land. We know pretty well the depth to which we shall go in constructing the northern breakwater, because we will take it to the rock all the way—30 feet. I think I have estimated a sufficient depth for the southern breakwater. As we get out to the end I have estimated for the stone going down 30 feet.
320. *Mr. O'Sullivan.*] I find that in some of the breakwaters that have been successful in the Old World and at the Mississippi the stones have been linked together with iron bands. I see no provision for that here? That is only when you go in for solid dressed blocks like a quay wall, such as Dover pier. That has been built with large blocks of masonry or concrete, but it is not proposed to do anything of the kind here, because the cost would be simply enormous. Dover pier is only a few hundred yards long, and it cost more than the whole of this work will do.
321. At the Mississippi the stones are linked together with iron bands? On the Mississippi they put a small length of coping with concrete blocks upon the rough work.
322. At the mouth of the Rhone training-banks have proved a failure, as the water decreased there from 13 feet to 4½ feet in sixteen years, and side canals had to be resorted to. Do you think a side canal in this case at Ballina would be of any assistance? I do not remember the particulars of the Rhone entrance.
323. At the mouth of the Rhone they have a side canal leading into the sea? That would make a second mouth, and if you can make one mouth good you can make the other good also.
324. It appears that this side canal was resorted to because of the failure of the training-walls? We have had a pretty good experience of the training-wall system at Newcastle, where there is as heavy a sea as we have on any part of our coast. The breakwaters have been standing now for some years. The end is in about 30 feet of water, and during the late gale hardly a stone moved.
325. *Mr. Copeland.*] What are the bearings of the breakwater at Newcastle? East by north. In a great many cases in the old country they have made breakwaters with small stones at the bottom and a solid superstructure built upon them. Holyhead was made in this way, but it has not proved a success. Sir John Coode, who carried out that work, would not attempt to do anything of the kind again. The small stone

stone is always moving, and threatens now to block up the mouth of the harbour. Alderney Harbour has been almost completely wrecked by this system. The small stone wears away and drifts up, while the big stones which have been placed on top slip about like on marbles.

C. W. Darley,  
Esq.  
4 July, 1889.

326. *Dr. Garran.*] Is not the breakwater at Port Said one of the most recent? Port Said breakwater is built with big blocks of concrete.

327. You do not propose to use any concrete here? No; it would be too expensive.

328. *Mr. Trickett.*] You will commence the rubble walls with large stones? We shall use all the stone that comes from the quarry, quarrying it as large as possible. We find that the larger the stone the cheaper it is.

329. I see by reference that at the Sulina mouth they commenced with small stone and afterwards built a concrete top. Here you propose only to use the large stones? We will use all that comes from the quarry, quarrying it as large as possible.

330. You think there will be no fear of its shifting? I think not. From my experience of the coast I do not think it will shift much.

331. *Mr. Lee.*] Will the scour that is provided be sufficient to carry the sand entirely out to sea, or will there be any danger of sandbanks being formed outside the north and south breakwaters? I do not think that it is likely that they will form there. There is 33 feet of water at the points where we propose to have the ends of the breakwaters, and it deepens very rapidly. I may mention that the 30-fathom line on the coast is nearer to the entrance of the Richmond than it is to any river on the northern coast. It is very close off Sydney.

332. There is a deep slope there? Yes.

333. *Mr. Dowel.*] What time do you estimate it would take to construct these works? I think six years for the first section.

334. When constructing, I understand that you think there will be no difficulty, and that a good straight run for the current will be created? I think so. I think that we shall get a good result.

335. What width are the walls you propose to construct? Sixteen feet on top. The training wall would have a slope of 1 to 1, and the breakwater of  $1\frac{1}{2}$  to 1, and  $1\frac{1}{2}$  to 1 on the seaside, and, as it goes out further,  $1\frac{1}{2}$  to 1 on both sides.

336. The wall as constructed would have a natural batter made by the fall of the stone? The fall of the stone and the draw of the waves. The stones are only tipped at a slope of about 1 to 1. A good deal of the Newcastle breakwater is standing at a slope of not more than 1 to 1, except at the very end. I have estimated for a slope of  $1\frac{1}{2}$  to 1 here, to allow for the drawing action. We could not put it at that slope by tipping.

337. You anticipate that there will be no danger of the foundation of that wall being scoured out by the currents? Under the stone?

338. Yes? The stone will slide down as the scour takes place. The scouring action will take place as we advance with the work. It will keep deepening the foundations, and the stone will have to go to a considerable depth.

339. The walls will go down as the work proceeds? Yes. Where it is now dry land I anticipate that there will be a depth of 20 feet, which will be made by the scouring of the water in front.

340. You propose to use both small and large stones as they come from the quarry? Everything that comes.

341. What is the distance of the quarry from the works? Eighteen miles by water. A comparison was made the other day between the Richmond and the Hunter River. I have a statement here which I should like to put in. The watershed of the Hunter is 8,072 square miles, and that of the Richmond, 2,635 square miles—just one-third. [*Vide Appendix B 1.*]

342. *Dr. Garran.*] Is the velocity of the Richmond greater—is the slope greater? No, not on the lower part; it is about equal. For the first 30 miles, from Woodburn down, the slope is not so much in the Richmond; but at Casino it is very rapid, because the river is there confined in a narrow gorge.

343. The tide goes so far up the Richmond that at the mouth you get no advantage of this rapid descent? You get a descent equal to that of the Hunter.

344. In the Richmond the tide goes so far up that you get no benefit, at the mouth, of the steep slope in the upper portions of the river? At Wardell the tide rises 3 feet while the flood-level is 7 feet.

345. Which of the two rivers has the better natural fall? I could hardly compare the two in that respect.

346. Has either river any advantage over the other through the slope of the river bed? Not in the last 15 miles; they are about equal.

347. It is only the last 15 miles that will effect the scour at the entrance? Yes.

348. So far as you can see the flow of the stream is about equal in both rivers? Yes; except that the flood velocity of the Hunter is three times that of the Richmond, all things being equal, since it has a larger catchment.

349. Apart from the flood-flow, your experience of the Hunter will be available for the Richmond? I think so.

350. So we are not commencing an entirely new enterprise? No; the Newcastle work would be a substantial guidance.

351. *Mr. Dowel.*] Has any information reached the Department recently that suitable stone could be procured about 8 miles from the works? I may mention that I am getting the whole matter thoroughly investigated. We have been opening up a quarry about 8 miles from the entrance, but the stone has turned out very small and breaks up easily. We cannot get any stone larger than a man's head from it, so I have moved a gang of men up to Wardell.

352. If suitable stone could be got at this place it would lessen the cost of construction? For one side, of course, it would. The difficulty is that we have works on each side, and you would still have to punt across the stone from one side or open up another quarry.

353. *Dr. Garran.*] Are these quarries on public or on private land? Upon public land; they are upon a reserve.

Thomas W. Keele, Esq., M.I.C.E., District Engineer, Department of Harbour and Rivers, sworn, and examined:—

T. W. Keele, Esq. 354. *Chairman.*] What is your position in the Government service? Engineer.

355. *Mr. Lackey.*] Where are you at work? On the Richmond.

356. Have you been there long? I have been only three weeks there.

4 July, 1889. 357. You have not been in any way engaged in connection with these proposed works? Only in searching for stone.

358. You have been engaged in that? Yes.

359. Have your investigations resulted satisfactorily;—have you got good stone? We have got good stone 18 miles up the river—sand-stone. I searched up the coast, and also at the back of Ballina; in fact, I searched over the whole district within a radius of 18 miles towards the south, and 5 or 6 miles west and north.

360. Is the stone of good quality for the purpose intended? It is very hard and durable.

361. Have you gone into the matter of conveying the stone from the quarry to the entrance of the river? I have been assisting Mr. Darley in the matter.

362. Do you think the stone could be conveyed from the quarry to the works within the cost estimated? I think so.

363. How is it proposed to convey the stone;—by punt? To punt it the whole distance from Riley's Hill.

364. How close is the quarry to the river? It is on the river side.

365. The cost of carrying the stone would come within Sir John Coode's estimate? Very nearly.

366. If you take the stone from the locality which you have discovered it will not increase the cost of the works? Only to a small extent. I think Sir John Coode must have intended to go to that place for the stone.

367. He knew where the stone was? It seemed so. The figures work out within a few thousand pounds.

368. You have been there only for three weeks? That is all.

369. Were you ever there before? No; never.

370. You do not know much about the country there except from the information which you gained during that period? No; I was simply instructed to go up there to start the works to the Beacon Rock, and to search for stone and report upon it.

371. Have you given any attention to the engineering part of the scheme? No; I have not studied it very deeply. Of course I have gone through Sir John Coode's report; but I have taken that as a settled thing.

372. Have you given special attention to this branch of the engineering profession? I have had to do with harbour works before.

373. In this Colony? Not with the actual carrying out of works. I have had to report upon many bar harbours. I surveyed Newcastle Harbour, Lake Macquarie, the Clarence, Moruya River, and other places.

374. From your professional knowledge you think this scheme a good one, and one which it is desirable to carry out? Yes.

375. You think that the scour would be sufficient to remove all impediments and to maintain a clear channel? Yes.

376. *Mr. Copeland.*] What is the general velocity of the ebb tide? From Sir John Coode's report I believe about three knots at the Beacon Rock. I think that is the greatest velocity. There is a very strong rip there, but I have not tested the speed of the tide myself.

377. Do you think the channel between the breakwaters would be sufficiently wide to allow of the flood waters running out, supposing there should be a fresh? I have not gone into the question.

378. Judging from the width of the present entrance, which is two and a-half times that of the proposed channel? I have not studied the question. The matter is one which would require considerable attention before one could form an opinion upon it.

379. Have you paid any attention to the set of the current outside? No.

380. Have there been any observations made since you have been connected with the work? Not outside the heads, not beyond the bar.

381. You are not aware whether or not there is a current outside? There is an ocean current—a southerly set. The direction of that has been taken from Captain Sydney's chart, I think.

382. What is the velocity of the current? I think about 2 miles an hour all down the coast.

383. Do you know whether the current comes near to the land at this part of the coast? No.

384. Would it set off from Cape Byron? It would be likely to set off from Cape Byron, since that is the most easterly point.

385. Do you think the breakwaters have the best bearings they could have, or do you think there is any chance of their being improved. They are about east-south-east now. Supposing they were to come two points—20 or 25 degrees—further south so as to allow the river current to discharge in the same direction as the set of the ocean current, do you think it would be an improvement; there would then be two currents combining to carry the sand out to the ocean? I would not like to give an opinion without going further into the matter. It has evidently been well considered by Sir John Coode, but I have not given it any consideration.

386. Do you think it would be better if the water had a straighter run, instead of making a curve as there will be in the proposed channel? The North Creek has to be taken into consideration, and I presume that is the reason why the breakwaters are placed in the position in which they are shown on the map.

387. If the breakwaters were placed further south, would not that make a straighter run for the North Creek? I think not, without an alteration in the direction of the training bank. The velocity of the discharge of that creek being less than that of the river, I think the meeting of the two waters would create a disturbance at its mouth.

388. Is not the river current, being stronger than that of the creek, likely to jam it back? I would not like to give an opinion about that without further study.

389. I suppose you have not been long enough at the work to know much about it? No. For some years previous to going to the Richmond I was engaged on water works. I have not been engaged upon harbour works for some time.

390. You have made no personal observations? No.

390½. Your time has been occupied in finding stone? Yes.

391. *Dr. Garran.*] What kind of rock is the north head composed of? That is basalt. There is about 15 feet of face to it, and it dips rapidly back in a north-westerly direction, and is seen just on the edge of the North Creek; it continues to dip back for three miles, and then rises up and presents a face of 30 feet, and finally dips back again.

T. W. Keele,  
Esq.  
4 July, 1889.

392. You say you have been up and down the coast? Yes.
393. Have you come across any stone like that found at the quarry? No.
394. There is no stone exposed to the action of the sea by which you could test the quality of the other stone? The stone used in the construction of the Newcastle breakwater which came from Waratah is similar to that I found.
395. Could you make any test before you used it by exposing some blocks of stone to the action of the sea? It would take some time to make a test in that way; but it could be done.
396. How do you test its quality at the present time—simply by its look? By its appearance, and by its strength when we are blasting. Of course we could analyse it.
397. You have not made a chemical analysis yet? Not yet.
398. Does the cleavage promise fairly for getting out large blocks? I think so, almost to any size you may require.
399. Is it perpendicular? The stone dips in a north-westerly direction.
400. It is a horizontally stratified rock? At the present time we have not opened it up sufficiently.
401. You have not made a good face to fairly test? No.
402. It will make good large blocks you think? Yes.
403. As far as you can see the quarry is a good one? Yes.
404. Will the other quarry, eight miles up, compare with it? There is a basalt quarry three miles north-west from Ballina. Since I have been away the men have reported to me that they have opened it up, but that they could not get any large size stone from it.
405. Is basalt good? Yes; if it can be got out in large blocks.
406. Better than sandstone? Its specific gravity is greater.
407. The sandstone which was obtained from Waratah wears well? Yes.
408. Have you been engaged on the Newcastle work? In 1875 and 1876 I was employed under Mr. Darley there, and saw something of that work.
409. Did you help to construct it? Yes; I was engaged upon it for about a year.
410. When you were making that breakwater did you find that the stone settled down in it? I do not recollect that it did so.
411. While it was being constructed? The bottom scoured away from the toe.
412. Did the stone spread out at the bottom or sink straight down? As the breakwater proceeded the sand was scoured away at the toe.
413. Did the base of the wall spread out and make a broader foundation, or did it begin to sink? I think it did. The heavy surf on the sea-side brought it down to a flatter slope.
414. And it sank more deeply into the sand? I think so.
415. How much did it sink in the course of two or three years? I have not heard since I left. I think the scour in the first instance provided a foundation, and that it did not go beyond that.
416. When it once found a bottom it kept it? I think so.
417. You do not anticipate a further difficulty at the Richmond? I think not.
418. The conditions are not more unfavourable—the sea has not a heavier break? I think not.
419. You have seen the surf at Newcastle and at the Richmond? Yes.
420. And it is not heavier at the Richmond? I think not.
421. *Mr. O'Sullivan.*] Do you notice on the plan the reef between the two extended breakwaters;—is that likely to impede the navigation at all? That is not a reef. It is intended to represent a rip on the bar, the constant break of the sea.
422. *Mr. Humphery.*] Is there an unlimited supply of stone at the quarry you speak of? There seems to be; it is over 100 feet in height, and I should say a quarter of a mile in length.
423. *Mr. Hurley.*] The distance from the proposed works you say is something like 18 miles? Yes.
424. Can you tell us the difference between the estimated cost of carrying the stone by railway and carrying it by water? We did not go thoroughly into the question of taking the stone by railway. We started to do so, but when Mr. Darley found that we should have to punt the stone across for one side, he thought it would be better to punt it altogether.
425. Do you recognize the fact that the cost of bringing the stone from the quarry to the proposed works will be a very important item? Yes.
426. Would it not be better to construct a railway line 16½ miles long in order to convey the stone, instead of using four punts which could only make one trip a day? You could not tip more than a certain quantity per day off the breakwater, and the punts would carry that quantity.
427. Still the actual difference between the cost of carriage by rail and water has not been estimated? I do not know whether Mr. Darley has since gone into the matter; but I have no doubt he has done so. I have had nothing to do with it.
428. There is no doubt in your mind of the durability of basaltic rock as compared with sandstone? There is no question about it.
429. There being rocks of basaltic formation at a short distance from the proposed works would it not be possible to obtain large blocks from North Head instead of going 18 miles up the river? I do not think the nearest headland would contain sufficient stone to complete the work. I do not think it would take the work much beyond the Beacon Rock. The rock at the North Head dips rapidly back; it presents a face of 15 feet, and the stripping would be enormous. I saw a shaft 40 feet in depth at a distance of 100 feet back from the cliff; it went through decomposed material which would form the stripping. There is a very small quantity of rock in the hill. In the next hill, Black Head, there may be a slightly larger quantity of rock, but it has been taken up by a syndicate for mining purposes.
430. You could not term the rock basaltic if it is a decomposed formation? There is decomposed material above and below the basalt, and it is in that material that they have found gold.
431. How far from the proposed works is the basaltic formation to which you referred in answer to Dr. Garrahan? That is at Chilcott's Hill; it is in a north-westerly direction from Ballina.
432. How far is it? A little over 3 miles from the end of the North Creek training wall.
433. In your opinion, knowing the relative value of these two kinds of rock, would not the basaltic rock be more useful in constructing a work of this character, even if it cost a little more, than sandstone rock? If we had sufficient of it, and it would come out in large blocks. The hill at Chilcott's has been tested, and we find we cannot get large blocks out of it. It flies like glass.

- T. W. Keele, Esq.  
4 July, 1889.
434. You think the country round there for 18 miles has been sufficiently explored, and that you have secured the most suitable place for obtaining stone? I think so. I do not know of any more suitable stone about the district. I searched the coast as far as Lennox Head back in a north-westerly direction, and then up the river. I think I have seen all the places where stone can be obtained.
435. *Mr. Dowel.*] What is the character of the country between the quarry and the proposed works? Through which a railway line will have to be made?
436. Yes? It is very flat on each side of the river for a short distance.
437. Is it good country? Remarkably good.
438. What do you estimate the cost of construction of that line will be? About £3,000 a mile.
439. When constructed, will it open up good country? It will have to pass along the sea-beach. We could not take it in a direct line, because it would pass through farm lands. If we made it at all, we should have to take it within the 5-chain reserve, along what is called the Beach Terrace, for a distance of about 12 miles, and then make a curve towards the quarry for a distance of about 4 miles.
440. Are you aware that the landowners of that part of the country are prepared to give the Government any land they may have to acquire for the purpose of making this railway? I have not heard of it.
441. If the stone were carried to the works by railway, instead of on punts, could they not be constructed in a much shorter time? We could bring down a larger quantity of stone, but there is a limit to the tipping of it. You cannot get rid of the stone at the breakwater very fast. Not more than 200 or 300 tons a day could be tipped from each breakwater, and that quantity could be brought down by punts.
442. What is the difficulty? Very often these large blocks of stone, after they have been tipped from the waggon, have to be moved into their place by means of crowbars. I remember that when the Newcastle breakwater was being constructed blocks of 10 or 15 tons took some time to get into their places. They often stuck on the edge, and there was a good deal of time lost in many ways. They do not fall into place rapidly. Of course with a double line, making the top of the breakwater wider, you would be able to get rid of more stone, but the work would be more costly, because you would have a larger cross-sectional area and the progress would not be greater.
443. But that would only be for a certain portion of the line? If you had a double line to the extreme end of the breakwater you would have to have a much wider top, and that would require more stone.
444. Do you not think, from your own knowledge, that the work would be done in about half the time by rail? The railway line would take about a year or eighteen months to construct in a district like that, where they have to convey everything by means of bullock-drays along very bad roads.
445. *Mr. Copeland.*] Would such a railway be of any service after the construction of the breakwater? I think not.
446. So that after the breakwater was finished the railway would have to be abandoned? I daresay it would. It would only lead to Broadwater, where the Sugar Company's mill is. It would pass through no farm land.
447. And they would not be likely to make any use of the railway if the river was navigable? They would be more likely to use the river.
448. *Dr. Garran.*] Is the quarry on the north bank, or on the south bank? It is on the north bank.
449. Then you will have to punt the stone over to the south side? You would have to punt it across. Of course there is stone on the south side; but I do not think there would be a sufficient quantity there to complete the work.
450. If you had another quarry on the south side you could work both breakwaters at the same time? Yes. It might be possible to use some of the stone in the North Head for carrying on the north breakwater, but there would not be sufficient to carry the work out very far.

Henry Richard Carleton, Esq., B.E., M.I.C.E., Resident Engineer, Department of Harbours and Rivers, sworn, and examined:—

- H. R. Carleton, Esq.  
4 July, 1889.
451. *Chairman.*] What is your position in the Department? Resident Engineer, Lake Macquarie Harbour Works, but at present I am at Orange, in charge of the construction of a concrete dam.
452. *Mr. Copeland.*] How long were you at the Richmond? I was there about six months making a survey.
453. And taking borings? Yes. That was in the summer of 1887.
454. In the channel shown on the map, I suppose when the sand is cleared away there will be no rocks or other impediments to navigation? The portion between the breakwaters has not been completely bored, but the borings that have been taken lead one to believe that rocks will not be found there above 24 feet below low water. The rock dips away to the south-east from Beacon Rock.
455. You say that borings have not been made in the proposed channel? A few borings have been taken; but it has not been so completely bored as the other portions have.
456. Do the borings show that there is no rock? I do not think any will be found between the breakwaters down to 24 feet below low-water.
457. What does the bottom consist of—sand, or shingle? Sand, and a band of indurated sand, hard black sand which varies in thickness from 5 to 14 feet.
458. Is that the black sand in which they wash platinum and gold? It is somewhat harder. There is some difficulty in putting the drill through it at times.
459. Do you think the scour will take it away? It will not be found in the proposed entrance.
460. What is the direction and rate of the ocean current? I have not tested it. I have made observations of the current over the area shown on the plan; but I have not gone outside.
461. From the observations which you did take, did you find that the current has a southerly set? I took no notice of the ocean current. I merely made observations of the river current, which, of course, follows the channel approximately.
462. There is a considerable rise and fall of the tide at the Richmond, is there not? About 5 feet 6 inches outside the bar, decreasing to 4 feet at the pilot station, and to 3 feet higher up the river, at Ballina.
463. Taking into consideration the width of the river entrance, do you think the channel between the breakwaters will be sufficiently wide to carry away an ebb tide when there is a fresh in the river? I do. I was there at the time of one of the highest floods, and the water at that time was passing through a channel narrower than that which it is proposed to construct. That flood rose to 70 feet at Casino.
464. You cannot give any information with reference to the ocean current outside? I think it is from the south along the beach.

465. From the south or to the south? From the south, along the beach.
466. Is not that different to the other current on the coast? Yes; but it is simply so close to the shore.
467. Did you notice anything with reference to the prevalent winds? I collected all the information with regard to that from the pilot's log book, and put it in a tabulated form. The greatest number of the winds come from the south-east. It is two years since I made the survey.
468. Had you anything to do with the scheme;—I suppose you had not? I had nothing whatever to do with it.
469. Can you see what benefit the guide bank on the North Creek would be? To prevent the two currents from opposing one another, and to make them unite at a sharp angle and concentrate on the bar.
470. I suppose one of the objects of the guide bank is to help to scour away the sand bank at the mouth of North Creek. Would not the effect be better if another wall were constructed on the opposite side of the North Creek, so as to send the water right through the sand banks? No.
471. What is that part on the plan marked pink? It is sand, and is all covered at high water.
472. Supposing you had another wall opposite the proposed wall, would it not force the water through the sand banks and scour out the channel? Yes; but you could not get the same body of water through at flood tide. You want to impound a large body of water in the creek at high-tide.
473. If there was a clear course for the ebb-tide would there not be a clear course for the flood-tide? If you contracted the channel you would not get so large a body of water in at flood tide. At present there is a rip from the meeting of the currents, which I take it is the object of the guide bank to prevent.
474. Would it not have been better to have had the breakwaters bearing further south, so as to force the channel through the south spit;—it would give a less curve, and instead of the river having to make a bend it would take a clear course? You cannot go through the south of the spit, because of the indurated sand there. I think the proposed channel is at the softest part.
475. You do not know of any obstacle in the channel to prevent the scour? No.
476. As a matter of fact the channel has not been bored? Not completely. I went down 24 feet below low water, and made borings in two or three places. I have tables of the borings in the office.
477. Do you remember what they show? Sand, shingle, and indurated sand.
478. *Dr. Garraan.*] How far south on the spit is the indurated sand? 1,500 feet south of the northern breakwater.
479. It does not reach as far north as the southern breakwater? No.
480. Do you know how many bores have been made across the channel between the breakwaters? Five or six on the eastward side of the spit.
481. Can you give us any idea of the sections of those bores? They are all sand.
482. No shingle? A small amount of shingle perhaps, but as a rule the bore was put down in half a minute. The boring was done from a steam punt.
483. Have you made any bores north of the northern breakwater, between it and the North Head? Yes; we got rock there.
484. It is all rock? Not quite up to the northern breakwater, but the rock extends 500 feet south from the cliff.
485. Is it altogether too rocky to think of making a channel there? Yes; I should say so.
486. Does that rock dip towards the south? Both the Beacon Rock and the rock at the North Head dip towards the south-east.
487. By the time you get as far south as the northern breakwater the rock has dipped so much as to be beyond your reach? It is 24 feet below low water.
488. Have you struck the rock between the breakwaters? No.
489. You are still engaged in boring there? No; it is two years since we made the borings.
490. Are any borings going on now? Not that I am aware of.
491. Do you think it would be desirable to make more borings before we gave our decision upon the work? I am satisfied in my own mind that no rock will be found.
492. Where was the channel before you went up there? Close to the north headland.
493. Did you hear anything at all about its having been where it is now? I have seen old plans showing it almost down to the green patch on the south.
494. As far as you could see while you were there the proposed entrance is in as good a position as it could be? I could not suggest any better.
495. You do not think it would be any advantage to have it further south? You could not get it further south because of the indurated sand.
496. Then we are pinched between the rock on the north side and the indurated sand on the south side? Yes.
497. And there is not above 1,500 feet of choice altogether? No; you cannot move the proposed channel much from the position in which it is shown at present.
498. When the south entrance was open the water used to go over the indurated sand? It is said that they had 17 feet of water over it, but there is no record of that.
499. Did any vessels go in then? Yes; vessels went in.
500. They must have gone over the bar of indurated sand? Yes.
501. That could be blasted away by dynamite? The draft of those vessels could not have been more than 8 or 9 feet, and they could therefore have gone in at high-water.
502. As far as you have had an opportunity of observing there is no better position for the channel than that marked on the map? I know of no better.
503. *Mr. O'Sullivan.*] What is the cause of the rip between the breakwaters? That is a break of the ocean on the sand; the water shelves rather abruptly. The sand has been thrown up by the sea.
504. Would it not be better to make the channel across the extreme south of the south spit? No; because of the indurated sand.
505. *Mr. Humphery.*] Sir John Coode suggests that "the bottom within the limits proposed to be scoured should be fully investigated before operations are commenced." You are apparently not of that opinion? The borings that have been taken lead me to believe that no rock will be found between the breakwaters.

H. R.  
Carleton, Esq.  
4 July, 1889.

H. R.  
Carleton, Esq.  
4 July, 1889.

506. *Chairman.*] The borings have been made since Sir John Coode's visit? They were made for Sir John Coode.
507. *Mr. Humphery.*] Sir John Coode says, "Before commencing the first instalment of the works proposed it will be desirable to put down a series of borings on the precise line of the new entrance and channel. Although occasional borings of the old series were made within this area and gave favourable results, it is only prudent, in a matter of such moment, that the bottom within the limit proposed to be scoured should be fully investigated before operations are commenced." Do you think that Sir John Coode's recommendation should be dispensed with? It would not cost very much to have these borings made, and perhaps it would be better to have it done.
508. Within what period could it be done? If the westerly winds were caught it would only take a few days.
509. What do you think the cost of the investigation suggested by Sir John Coode would be? I could not give an estimate of it.
510. Could you do so in the course of a few days? Easily.
511. You could also estimate what time it would take? You must wait for westerly winds. We might have men waiting for months without getting an opportunity to take the punt out. If you caught the westerly winds you might get the whole work done in a week.
512. Westerly winds are prevalent in the winter-time, so that it would not take long to make the borings now? Yes.
513. *Dr. Garran.*] When the sand is dry you can make the borings at any time? Yes; anywhere along the beach.
514. *Mr. Dowel.*] Do you know the nature of the country between the quarry and the proposed works? I have been up and down the river very often, and have sounded the whole of it. It is between Riley's Hill and the entrance.
515. Is it good country—is it pretty level? It is very flat country. There are one or two small hills near the Colonial Sugar Company's works, but the country on the whole is flat.
516. There would be no engineering difficulty in the construction of the line from the quarry to the works? I should say not, though it would be costly.
517. *Mr. Leo.*] You have read Sir John Coode's report, have you not? Yes.
518. On page 4 he says, "Upon the completion of the south training bank the breakwaters and the guide bank at the entrance to the North Creek, which will be presently described, a new channel may be expected to be formed and permanently maintained by scour to the westward of the south spit in the position shown. A fixed depth of 12 feet in this channel at low-water of spring tides may be confidently looked for." Since this report was written you have visited the entrance to the Richmond? No; I collected this information for Sir John Coode, and it was sent home to him.
519. Then the borings of which you spoke just now were made prior to the writing of the report? Yes. Sir John Coode asked for this information, and it was sent home to him.
520. The wording of the paragraph I read is rather indefinite. It says, "A new channel may be expected." From your knowledge of the formation of that part of the entrance, the nature of the borings, and the influence of the wind, tides, and currents, have you any reason to suppose that a new channel will not be formed or that a permanent depth of 12 feet will not be maintained? No.
521. Are there any existing impediments such as reefs or bands of indurated sand, or anything of that kind, which would divert the channel? Between the breakwaters?
522. Yes? I think not; nothing down to 24 feet below low-water.
523. So far as your experience has gone, you are of opinion that a fixed depth of 12 feet could be maintained? I cannot say to what depth the channel would be scoured out. I saw 14 feet on the bar during the time I was making a survey. I should think the channel ought to scour out to 12 feet when the training walls are erected.
524. Then I understand it is problematical whether this depth of water will be maintained if the works are constructed? I think it is pretty certain.
525. What other information had Sir John Coode supplied to him by yourself to lead him to confidently look for that depth of water? The soundings, the depth of water which had been on the bar heretofore, and the way in which the sand was scoured out in flood-time. The depth increased, as well as I recollect, from 8 feet to 14 feet, during the time I was making the survey.
526. Sometimes it was shallow and sometimes deep? Yes; but there was rather good water at the time I was there.
527. Do I understand that Sir John Coode bases his opinion on the fact that if the guide banks and breakwaters are constructed the scour will be sufficient to create and maintain a depth of 12 feet? That is what he thinks, I suppose.
528. He says he confidently looks to that;—I want to know why he does that? I cannot say.
529. You prepared the information for him? The soundings and the borings. I made a survey of the entrance and put down borings, and collected the information he asked for.
530. *Dr. Garran.*] Did the borings all go 24 feet deep? Yes; or until rock was struck.

WEDNESDAY, 10 JULY, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq., (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Improvements to the entrance of the Richmond River.

Edward William Knox, Esq., sworn, and examined:—

531. *Chairman.*] What are you? General Manager of the Colonial Sugar Refining Company.
532. Do you know the Richmond River District? I have been several times through the district.
533. Have you had an opportunity of considering Sir John Coode's scheme for deepening the entrance to the Richmond? I have read all the papers in connection with the matter to which I could get access.
534. Do you know anything of the entrance to the Richmond? I have no personal knowledge of the entrance.
535. Is there a necessity for facilitating navigation at the entrance of that river? I think it is very desirable that the entrance should be improved.
536. Are there any industries there which depend to a great extent upon the facility with which vessels can enter and leave the river? Yes. The extension of the dairying industry in the district renders it very desirable that there should be better and speedier means of communication than have existed hitherto.
537. Do you think dairying is likely to become a valuable industry there? Yes, very valuable.
538. Is it affected at the present time by the want of facilities for communication—by reason of the delay and uncertainty of obtaining a market? It is affected by the delays which occur. In a warm climate it is very unsatisfactory for shippers of dairy produce to have it detained for some time on board a steamer.
539. Does the dangerous state of the bar affect the cost of carriage, or the cost of insurance, to any great extent? Speaking with regard to our own business, I should say that the extra freight and insurance which we have had to pay on the sugar we have taken from the Richmond, as compared with that taken from the Clarence, during the past eight years, has been 5s. or 6s. per ton against the Richmond.
540. What about maize and timber—do you think the trade in those commodities is likely to be more developed if greater facilities are given for getting them away? I think that improved communication might to a certain extent increase the output of maize and timber, but I imagine that the extra cost for freight and insurance to which shippers of these products are subjected is less than that which shippers of sugar have to pay, by reason of the smaller value of the maize and timber.
541. Looking at the proposed scheme as a commercial undertaking, do you imagine that dues could be levied at the Richmond which would recoup the Government the interest on the money expended in the construction of the works? I think that if the works were to be constructed only on the condition that the interest on them should be recouped by dues on the produce, it would not be worth while for the residents of the district to subject themselves to the taxation, because, although the additional freight on sugar is so great, comparatively speaking, no additional freight has to be paid on the coals which are required by sugar manufacturers. I think the disadvantage under which they labour may, on the whole, be taken to be about 2s. 6d. per ton for each ton of cargo carried inwards and outwards. I think that at least 3s. per ton would have to be paid as dues in order to cover the interest and the up-keep of the works proposed by this scheme; that is to say, on the first portion of the works proposed.
542. They are estimated to cost £136,000? Yes; and you cannot put the interest and up-keep at less than 5 per cent. per annum, which would represent £6,800 a year. This amount, I think, would be at least 3s. per ton on all cargo taken into or out of the river, including coal.
543. How many mills have your Company on the Richmond? One—a very large mill.
544. Has the Company been put to any inconvenience owing to the difficulty of navigation? No. On the whole I think the inconvenience has been somewhat exaggerated, for during the nine years we have been there we have not, to my knowledge, suffered any special inconvenience by reason of the bad navigation of the entrance.
545. What quantity of sugar have you taken away from the district during that period? 32,000 tons.
546. Did you lose any of it, or has any of it been damaged? No; we have never lost a bag or had one damaged. For that reason I think the rate of insurance charged so far has been unduly high.
547. Do you think there is any necessity to carry out the whole of Sir John Coode's scheme at the present time? No; I think there would be no warrant whatever for going beyond the first portion of the scheme, and for two reasons: the first being that the trade in the district is not likely to increase to such an extent as to warrant the additional expenditure; and the second, that a depth of 12 feet of water is ample for serving a district like the Richmond, where the products exported or imported are of such a character that large steamers are not needed for the trade.
548. Is not the district capable of being developed to a very much greater extent than it is at the present time? I think it is. It is, I believe, the richest and the largest of all the agricultural areas on the rivers north of the Hunter.
549. Do you think Sir John Coode's scheme, if carried out, would have the effect of improving the navigation of the North Creek? Yes; and the navigation of that creek wants improving very badly. The North Creek runs parallel with the coast, and the land on both sides of it, I think—certainly on one side—is extremely rich. It is very suitable for the cultivation of sugar-cane, because it is so near the coast, and is therefore almost exempt from the attacks of frost. We have been compelled, however, to allow the contracts we made with farmers there to expire, because of the extreme difficulty of navigating the entrance.

E. W. Knox,  
Esq.

10 July, 1889.

- E. W. Knox, Esq.  
10 July, 1889.
550. *Mr. Lackey.*] How long have your Company carried on operations on the Richmond? It is nine years since we commenced to erect a mill there. We have worked the mill for eight years.
551. You crush at the mill, and buy cane from the farmers? Yes.
552. Is there much land under cultivation to supply you with cane? Speaking under correction, 8,000 acres.
553. Do you suppose the area is likely to increase? The land under cultivation produces about as much as the mill can take.
554. Is there a probability of other mills being built by your Company, or by any one else? Well, we might enlarge our mill if inducements were offered to us to do so.
555. What are the principal industries on the Richmond besides cane-growing? I think the value of the sugar exported is the largest. Then come timber, maize, and dairy produce, in, I believe, the order named; but the increase in dairying of late has been so great that that order may be wrong.
556. Dairying is an industry which has only recently begun to be developed there, I think? Yes.
557. Are there any saw mills on the river? Yes; some very large saw mills.
558. Is the timber of a valuable character? It is what is known as Richmond River pine.
559. Do they cut much cedar there? I think most of the cedar is gone now.
560. There is a large area of alluvial country on the banks of the river? The area of alluvial country on the banks of the river is large, and in addition to that there is a very large and important district known as the Big Scrub, which extends parallel with the river for some distance, and then along the coast to the Tweed. It is the district which the proposed railway from Lismore to the Tweed would traverse.
561. Is it the case that the difficulty of entering the river is becoming greater every year? No; I think not.
562. Do you think it is becoming less? No; I do not think there is any change. The entrance varies from year to year, but I do not think there is any indication that it is better or worse than it was twenty or thirty years ago.
563. Do you think it would be desirable to carry out the scheme for improving the entrance proposed by Sir John Coode? Not the outer portion of the scheme. I think it would be desirable to carry out the inner portion of the work.
564. Have you had any experience from a scientific point of view of the result of confining the channels of rivers at their entrances? I have seen nothing of it, except at the Clarence, where a quarter of a million has been thrown away in trying to make a good entrance.
565. You understand that the object of Sir John Coode's scheme is to confine the outrush of water so as to make a scour, which it is supposed will give a permanent depth of water; does your knowledge of works of that sort enable you to form an opinion as to the likelihood of this result being attained? I know that the flood waters of the northern rivers when passing over the bars sweep out a channel, and I conclude from what I have seen of that, that if the water is confined within a moderate limit it will always maintain a channel of a fair depth.
566. That is the object of the proposed works? Yes.
567. Is it your opinion that the value of the public estate on the banks of the Richmond is sufficiently great to warrant the expenditure of the proposed amount in approving the entrance? Yes; I think it is.
568. You think if the district were a large private estate there would be no hesitation in constructing these works to give proper access to the river? Not if there were a certainty of the end aimed at being achieved. There is a certain amount of uncertainty however. I do not know of any place on the eastern coast of New South Wales where a south head at the entrance of a river has been artificially formed. With reference to that I may explain that those rivers on the coast which run into the sea alongside a south headland generally have fair entrances, while those which have a north headland, or run into the sea at the south of a rocky headland, have almost invariably bad entrances.
569. Is that the case at Newcastle? Yes; I think the entrance to the Hunter was comparatively good.
570. Originally? I think there was always 12 or 14 feet of water, before any improvements were effected there.
571. But I think it was frequently silting up. You have no hesitation in giving it as your opinion that it is desirable in the interests of the public that these works should be carried out? I should say it was.
572. *Mr. Copeland.*] Did I understand you to say that there are 8,000 acres of land being cultivated for the purpose of supplying your mills with cane; do you take the produce from 8,000 acres? Yes.
573. Do you know what other land is being cultivated besides that from which you obtain your cane? Practically, the whole of the river frontage, from Ballina to Lismore and Casino, is under cultivation.
574. How many other mills are there on the river besides your own? I cannot say exactly. I think there are about eight working besides ours.
575. Can you give the Committee any idea of the total amount of cane produced on the average each year? In 1887, I think, there must have been 140,000 tons crushed on the Richmond.
576. What is the general value of the cane in its uncrushed state? 12s. a ton on the field, before it is cut, or anything done to it.
577. Have you any reason to believe that if the proposed works were carried out there would be a greater production? Only through the district being rendered more accessible.
578. During the three years you have had your mill at work, have you suffered any loss or delay because of the entrance to the river being blocked up? I have answered that question already. I said that we had experienced no special inconvenience, and that we had not lost a cargo on the bar outwards. We lost one or two small cargoes of coal inwards.
579. As a matter of fact, I suppose the production goes on just as prosperously now as it would do if the entrance were more navigable? No. At present we are taxed as compared with the Clarence to the extent of 2s. 6d. per ton of cargo inwards and outwards.
580. What for? By reason of the greater difficulty of navigation, causing us to pay higher freights and higher insurance.
581. You have to pay 2s. 6d. a ton? Yes. As far as our business is concerned, it amounts to a difference of £1,000 or £2,000 a year.
582. How does it affect the producers themselves; I suppose if you have to pay that large amount extra for freight, you are only able to give them a less price for their cane than you would be able to give them under other circumstances? Practically we pay them the same price for their cane as we pay the producers on the Clarence, and the loss sustained is paid out of our own pockets. 583.

583. It is only the large amount of business that you do that makes the thing profitable? We could not fairly pay the growers on the Richmond a lower price than that which we pay the growers on the Clarence. E. W. Knox,  
Esq.

584. Would you be able to pay them a higher price on their cane if the proposed works were carried out? It would make a difference to us of from 3d. to 6d. for every ton of cane we worked; but as we are already giving that to the farmers, I do not see how we could pay them any more. 10 July, 1889.

585. Then we should be carrying out this public work for the especial benefit of your Company and other mill-owners? No; because I think these works are more required by the people who do not grow sugar-cane than by those who do. The farmers who grow sugar-cane have no interest in the improvement of the entrance except in the matter of being better able to obtain supplies from Sydney. Their crop is bought and paid for on the spot. It is the men who grow maize, make butter, or cut timber who are interested in the improvement of the entrance.

586. You think the cane-growing industry would not be developed to any material extent by the carrying out of these works? No; I do not think they would have any effect upon it, except that if the district were made more accessible a larger number of people might be induced to go and settle there.

587. Is there any land unoccupied? There is no Government land unoccupied, but a great deal of land has been taken up which has not yet been cleared and planted.

588. Supposing the land were cleared and planted with cane, would you be able to purchase the cane from them? It would only be a matter of increasing our plant.

589. You would be prepared to increase your plant? If we saw that the increased production of cane would be permanent.

590. The present state of the navigation of the river in no way impedes them from increasing their production of cane? No; and it does not affect us to nearly the same extent as it does other producers, because we are never in a hurry for our sugar. It does not matter to us whether the sugar is two days or two weeks coming to Sydney.

591. Then I suppose we may assume that the carrying out of these works will not materially benefit the sugar industry? It would to the extent I have named.

592. I do not see that you have named any extent? I mentioned from 3d. to 6d. a ton of cane.

593. I asked you before whether, if the works were carried out, you would be prepared to pay a higher price for the cane which you purchased? You said, "The sugar industry." I did not know whether you meant the manufacturing or the growing industry.

594. I understand that you would not be prepared to pay a higher price for the cane you purchased? We already give the higher price.

595. Therefore the carrying out of these works will not materially benefit the cane producing industry? No.

596. There is at the present time plenty of land uncultivated which would grow cane? Yes.

597. Can you tell the Committee whether cane growing at the present time is a profitable employment? I imagine so from the eagerness with which the farmers increase their plantations.

598. Have you any idea of what the proportion of good land under cultivation is;—out of so many acres of good land how many are under cultivation? I could not tell you that.

599. Still it is a fact that there is a large area of good land uncultivated which would be capable of producing cane? Yes.

600. And if the cane were produced your Company and others would be willing to erect mills to crush it, irrespective of any improvement in the navigation of the river? Yes.

601. You mentioned that there was a large amount of money thrown away at the Clarence; how does it strike you that the Clarence bar works are objectionable? The money spent there has never effected any improvement in the entrance, and I see that Sir John Coode now proposes to wipe all the works out. I therefore assume that there is nothing to show for the money expended.

602. And is it your impression that a similar result would be brought about at the Richmond if the proposed works were carried out there? No. These works proceed on an entirely different system. Well, perhaps I am hardly justified in saying that, but they are laid out in a different way.

603. Supposing these works were carried out, would it, in your opinion, be necessary to construct a railway to the Clarence? I do not know what useful purpose a railway from the Richmond to the Clarence could serve.

604. Do you think it will be necessary to construct a railway to—say the table-lands of New England, if the works are carried out? I do not know what purpose that would serve either.

605. Have you connection with any other branch of trade besides the manufacture of sugar? No.

606. I suppose the whole of the natural products of the place at the present time come out of the river to Sydney by sea? Yes.

607. *Mr. Garrard.*] How many months in the year do your Company use the river entrance? We ship coal more or less during the whole year, and we remove the sugar between the end of July and the middle of January.

608. During about six months of the year? Yes.

609. The months between July and January are the spring and summer months;—is the bar usually better during those months than during the other months of the year? I think it is usually worse during the first half of the year. I think it is the north-easters that close the bar, but on that point I am not certain.

610. On your inward trips you have lost several colliers? We have lost one or two cargoes of coal; that is all.

611. Can you tell me in what months of the year they were lost? No, I cannot. We never lost anything on the outward trips.

612. You stated just now that it cost you somewhere about 2s. 6d. per ton on your outward and inward cargoes owing to the extra insurance, and so on, and that you could not see your way to give an increased price for cane. Had you not in your mind's eye the harbour dues which would bring the cost up to 2s. 6d.? I said that we already gave the farmers on the Richmond the same price as we paid to the farmers on the Clarence. We are virtually paying the difference out of our own pockets.

613. But surely if the entrance were improved your profits would be increased unless you gave them to the growers—you would save 2s. 6d. per ton upon the insurance. Would your Company be prepared to

pay

- E. W. Knox, Esq.  
1 July, 1889.
- pay harbour dues to the extent of 2s. 6d. per ton? If the works had the desired end of making a navigable entrance with 12 feet of water in it.
614. In other words if it reduced the cost of insurance? Yes.
615. Do you know the average depth of water in the river;—vessels drawing what depth can get up to Lismore? Practically any vessel that can cross the bar.
616. There would be no object in having a greater depth at the bar than there is at the shallowest part of the river? No.
617. How many mills have your Company on the Clarence? We had two; but we have thrown them into one now.
618. You have a larger interest on the Clarence than on the Richmond? No, I think we have on the whole more money expended upon the Richmond than upon the Clarence.
619. Where is your mill situated;—on the south or on the north bank of the Richmond? On the south bank.
620. That is the bank nearest to the Clarence River? Yes. I think it is about 16 miles from the entrance of the river.
621. At the present time do you get any of your supplies across from Chatsworth, on the Clarence? None whatever.
622. No trade exists across country between the two rivers? Only passengers go that way.
623. I suppose your Company would as soon see the Richmond develop as the Clarence? I think the Richmond is the more valuable district.
624. To the Company? No, to the Colony.
625. Has your Company any interest in seeing the Clarence develop as against the Richmond, or the contrary? I do not think the Clarence needs developing. It is good enough as it is.
626. *Dr. Garran.*] You say you have never lost a bag of sugar going out of the river? Yes.
627. You have therefore never lost a steamer? That is so.
628. Do you run your own steamer there? Not to the Richmond. We have done a large portion of our carriage by sailing vessels.
629. You say you are handicapped at the Richmond to the extent of 5s. a ton? On the sugar.
630. If the proposed works were carried out, and you had to pay 5s. a ton on your trade, you would be no worse off than you are now? If the works enabled us to carry the sugar at 5s. a ton less.
631. Supposing you saved in time and insurance the 5s. by which you are now handicapped, you would be no worse off than you are now if you had to pay that sum to the Government instead of to the insurance companies? No.
632. Therefore you could afford to pay 5s. a ton on your exports? Yes.
633. Do you think all the other traders and importers there could afford to pay the same amount? No, not so much, because the value of the products they import is much less, so that the insurance they have to pay is not so heavy as that paid by us. You see maize is worth £7 a ton, whereas sugar is never insured as worth less than £20 a ton.
634. Taking the trade for what it is at present would 3s. a ton on all inward and outward cargoes pay the interest on the first portion of the work, and the cost of maintenance? Making a guess, I should say the total quantity of cargo inwards and outwards at the present time does not exceed 50,000 tons.
635. That would be only £7,500 a year? Yes.
636. Then, as a speculation, it would not pay to go into this work with the trade as it is? No, not as a speculation.
637. But if the work were carried out it is reasonable to suppose that the trade of the district would increase? Yes, because of the development of that important tract of country known as the Big Scrub.
638. You attach the greatest importance to the development of that part of the district? I think it is the richest piece of country in New South Wales.
639. Is the timber on it worth anything? Yes.
640. If a railway were run through it do you think there would be a large timber trade? I could not say that; but that there is good timber on it there is no doubt.
641. The land itself is extremely rich? It is extremely rich land.
642. Would it grow sugar-cane? Some portions near the coast would; but it is uncertain to what extent the frosts would affect it.
643. The whole of it would grow Indian corn? Unquestionably.
644. At present is there a market for the produce which the Big Scrub might yield? There is always a market for corn, but the Big Scrub is not cultivated now because of the absence of roads.
645. If a railway were run through it do you think it would come under cultivation? I think it would.
646. And the Richmond is the natural port for the Big Scrub? Yes, because the Tweed, at the other end of the scrub, is much more inaccessible.
647. Apart from the Big Scrub, is there not a large quantity of land on the banks of the river which can be taken up? It is all taken up. Virtually the whole of the river frontage is cleared, but there is a large quantity of good land on the southern bank, between Broadwater and the entrance of the Richmond, which is yet to be cleared.
648. There is a large opening for the settlement of an industrious population in the district? The district would support a large agricultural population.
649. Supposing there were a market for the produce? Yes.
650. And the opening of the river to commerce would greatly stimulate the industry? It would very much.
651. Do you think that the district as a whole will pay for the complete work, which will cost nearly £400,000? I do not think that there is a chance of its doing so.
652. Supposing the whole district belonged to a syndicate would it be worth their while to pay £400,000 to develop it? No.
653. Would it be worth while for the State to do it? No, I do not think there is any justification whatever to provide for the navigation of steamers drawing more than 12 feet of water. I may also say that I think there is very great uncertainty as to whether the breakwaters which will run out into the sea will stand against heavy south-east gales.
654. You think that it is a critical work altogether? Yes, the extension, not the first part of it, because you will see by looking at the map that the first portion of the work is backed up by sand.

E. W. Knox,  
Esq.  
10 July, 1889.

655. But is the sea at the Richmond heavier than it is at Newcastle? No, I do not think so.
656. The Newcastle breakwater stands? It is sheltered by Nobby's, is it not?
657. This place is partly sheltered, we are told, by Cape Byron? Not from the south-east seas.
658. But from the north-east? The heavy seas come from the south-east.
659. The Newcastle breakwater gets a good trial with the south-east gales? I think the Newcastle breakwater does not run 200 yards straight into the sea.
660. You do not think the Newcastle breakwater is a fair test of what this is likely to be? No.
661. You think there is a certain amount of novelty in this experiment which there is not at Newcastle? Yes, in the outer portion of the work.
662. Do you think it would be advisable to establish a harbour trust at the Richmond, to deal with the harbour works there? No; because the population is almost purely an agricultural one.
663. As a person interested in the district you would not like to undertake the responsibility? I think I should sooner pay the extra 2s. 6d. freight and insurance.
664. Do you think it would be possible so to endow the harbour trust with valuable land, as it is proposed to do at Wollongong, that the endowment would pay for the work? I doubt whether there is any land available.
665. *Chairman.*] The total area of land in the Casino and Lismore land districts is estimated at 2,670,000 acres. Of this about 258,000 acres have been sold in fee-simple, and 600,000 acres under conditional purchase. There are about 1,800,000 acres unalienated, of which about 470,000 are reserved? The best of the land is all gone. I do not know how far the Richmond electorate extends, nor do I know anything about the country away from the river.
666. *Dr. Garra.*] The most suitable land with which to endow a harbour trust would be land improved by the harbour improvements? I imagine so.
667. Is there any land near the mouth of the Richmond which would greatly increase in value in consequence of the harbour improvements? I do not know of any in the hands of the Government, unless it is the reserves in the Big Scrub.
668. The benefit of the harbour improvements would be spread over the whole district? The harbour improvements will be mainly to the advantage of the people residing on the river, the back country being almost entirely in the occupation of graziers.
669. But if the river were improved grazing would give way to farming? I know nothing of the land away from the river.
670. Is there not a point at which the Richmond comes within 20 miles of the Clarence? Yes, at Woodburn.
671. It is 20 miles from Woodburn to Woombah? Yes.
672. That is pretty level country? Yes.
673. Supposing a railway were run across there—is the country fertile? No; extremely barren.
674. Sandy? Sand and pipe-clay.
675. Not very likely to tempt farmers to settle down? I think no one could live on it.
676. Supposing such a railway were constructed, and that the mouth of the Richmond were closed by the bar, would it pay you to send your sugar across to the Clarence by railway? No.
677. It would not pay you to pay 1d. a ton per mile to send it by such a railway, instead of waiting until steamers could get out of the river? No, because from previous experience I think we should not have to wait long for the bar to open.
678. Your produce does not deteriorate by being kept on board a steamer? No.
679. It would only be perishable produce that would be sent across by railway? Yes.
680. Still, with such a railway, if the mouth of the river were closed, there would be an exit by way of the Clarence? Yes; if the bar were closed.
681. The Richmond bar in your experience has never been absolutely closed, I suppose? I do not think it has ever been absolutely closed.
682. There has never been a week in which something could not get in and out? It has only been a matter of the draft of vessels.
683. What is the greatest detention your produce has ever had? I could not say.
684. Has it exceeded a week? Oh, yes. Quite recently no vessels went in and out of the Richmond for three or four weeks.
685. That happened quite recently? Quite recently; but I may add to that that I think it was partly due to the absence from the river of the powerful tug which is generally stationed there.
686. Not due to nature? Not altogether.
687. You think if the tug had been there, in spite of the condition of the entrance vessels could have got in and out? Vessels of a light draft could have done so.
688. You do not think it would be a good thing to connect the Grafton and Richmond districts by railway? I do not see how such a railway would pay for grease for the wheels.
689. You think both passengers and produce would prefer to wait at the mouth of the Richmond, instead of going by railway to the Clarence? Produce would certainly wait there. I could not speak for passengers.
690. Then this line would only be a passenger line? Certainly.
691. Would it not pay storekeepers to send up their produce that way if they could save a week? No.
692. Cheapness of freight is of more importance than a saving of time? Yes.
693. It would always be cheaper to send produce by the Richmond than to take it by railway to the Clarence? Yes, I think so; because there are always a number of vessels going to the Richmond for timber, which carry up cargo very cheaply.
694. Then, if the Richmond is to be made more accessible, it is your opinion that we must not seek to get to it from the Clarence, but through a separate entrance up the river itself? Certainly.
695. Do you think the inhabitants there would be willing to bear the charge of the interest on the proposed works, and the cost of maintenance? I do not suppose they would show more anxiety to be taxed in that way than the residents of any other part of the Colony would.
696. We are promised large local Government arrangements. Supposing the Government said, "We shall expend £400,000 in improving the entrance to the river if the residents will agree to pay 4 per cent. upon the money borrowed, plus the maintenance?" I am sure the district could not pay 4 per cent. on £400,000.
697. Will it have to double its population before it can pay that? More than double it. 698.

- E. W. Knox, Esq.  
10 July, 1889
698. Do you think they could pay half of it? No. I think if they had to pay 4 per cent. on half that amount they would prefer to stay as they are.
699. You, as one of the people interested in the district, would prefer to do so? Yes, because of the uncertainty of the desired result being achieved.
700. If half the work were carried out, and the entrance made twice as good as it has hitherto been, what new industries, and what larger industries, would be stimulated in the district? Chiefly the dairying industry, I think.
701. Is there not a mineral district upon the upper branch of the river? Not on navigable water.
702. And I suppose mineral explorations do not depend upon the facilities of river navigation? That I cannot speak of, as I know nothing about the subject.
703. You are of opinion that the Richmond is more valuable than the Clarence? Much more valuable.
704. If it is much more valuable it is surely desirable to give it some encouragement? That is why I advocate the carrying out of the first portion of this scheme.
705. If the first portion were carried out, do you think the entrance would be for vessels that trade there comparatively as good as that to the Clarence is now? I do not think it would be as good as the entrance to the Clarence; but it would be good enough.
706. You think all the district can fairly claim is the carrying out of the first portion of the scheme? Yes.
707. You think it has a fair claim to that? I do, apart altogether from my individual interest in the district.
708. You have sugar-mills in both districts? Yes.
709. Is there any difference in the quality of the sugar grown in the two districts? None whatever.
710. Is there any difference in the fertility of the soil? The Richmond soil on the whole is stiffer and less suitable for maize, but more suitable for sugar than is the Clarence soil.
711. Would it pay a planter better to go to the Richmond than to the Clarence? The Richmond land has been much less worked than the Clarence land, and I think a man would do better on the Richmond.
712. How far up the river do the steamers go which carry your produce? I think a little above Lismore, and up the south arm as far as Tomki.
713. What is the limit to their draft? I do not know. I think Sir John Coode's report gives more information on that point than I can give.
714. What is the maximum depth which you think is at present required on the bar? Twelve feet.
715. If you get 12 feet the entrance will be deep enough? I think so.
716. But even if the works were constructed you could not get in during an easterly gale? I do not think so.
717. Whenever an easterly gale is blowing, ships must stand off the coast? Yes.
718. All that the carrying out of the proposed scheme could do, would be to make a depth of water sufficient to enable vessels to come in when there was no gale blowing? Yes. I may say that I have only once seen the Clarence bar so that it could not be crossed, except when a flood was running out. When a flood is running out, there is not only the difficulty of stemming the current, but the muddiness of the water prevents you from seeing where the channel is.
719. You said our coast harbours were always better when the south headland projected beyond the north headland? Yes.
720. Do you know the reason of that? It is due to the set of the winds and currents.
721. When the south head projects most, there is less risk of a sand bar being formed? There is more water on the bar.
722. Is not the drift of the sand always to the south? The current is always to the south. I could not say about the sand.
723. If the current is to the south, whatever sand there is must go to the south with it? Yes, except that the tide in the river helps to sweep it out beyond the south head.
724. There is no part of the coast where there is a natural headland north and south, projecting about equally into the sea? Not to my knowledge.
725. Either the north or the south headland always projects? Yes.
726. I judged from some answers you gave that there is a doubt as to the stability of the breakwaters? As to the stability of the outer portion of the work.
727. I call that part the breakwaters to distinguish it from the other part which consists of training walls. You doubt whether there would be any practical benefit from completing the work, instead of leaving it half finished? No, I would not venture my opinion against that of Sir John Coode. He says that there will be a greater improvement by the construction of the whole work. I know nothing about that. I only said that the greater improvement is not wanted.
728. As one connected with the trade of the river, you would be quite content if the work were only half carried out? Yes.
729. Do you think the people in the district generally would be content with that? I could not say.
730. If the first half were done the other portion could be added at any time? Yes.
731. The work would be complete in itself, simply by the erection of training walls? Yes.
732. And the mouth of the river would be kept open? I think so.
733. It would make a better entrance than was ever made by nature? No, you cannot say better, because after heavy flood, the entrance is very deep for a short time.
734. But it would keep the entrance all the year round in a better state than it was ever in for a whole year? Yes.
735. And the district is worth the expenditure? Yes.
736. And if pressed it can afford to pay interest upon it? It could afford to pay it.
737. Without losing money? Yes.
738. *Mr. O'Sullivan.*] If the extensions are not carried out, is there not a danger that a bar will form at the end of the first section of the work? I do not think I could venture to answer that question. I do not like to express an opinion about engineering matters, of which I have no knowledge.
739. You see by the map that there is a rip in the centre of the proposed extension? Do you mean that a bar would form across the entrance of the channel?
740. Yes? I could not express any opinion about that.

741. What effect would the abolition of the sugar duties have upon the sugar industry in that district? E. W. Knox, Esq.  
I am afraid a very disastrous effect.
742. In view of the probability that the abolition will take place, shall we be justified in incurring a large expenditure upon these works, having for its object the benefit of the sugar industry? I have explained that I think the works will be justified by the general improvement of the district, and of the various industries there. The sugar industry is the least concerned in the carrying out of the works.
743. But still if the sugar industry were to suffer disaster, I presume there would not be a very rapid increase of population there? The sugar industry is a very important one there, by reason of the large amount of money which it circulates in the district, but I think the breakwater ought to be made in the interests of the district generally, apart altogether from any individual interest.
744. But is not the sugar industry the most important at the present time? In money value I believe it is.
745. Do you know the limit of the navigation of the Richmond river? Do you mean the length which can be navigated?
746. Yes? The river is navigable to Lismore, on the one arm, and to Casino on the other.
747. Can you call to mind the distance of those places from the mouth of the river? I think the river is navigable for something over 100 miles, but I believe that information is given in the report.
748. How many hands have you employed in your sugar mill and connected with it? I think we have had about 500 in our pay there. That, of course, is entirely independent of the men employed by the growers.
749. If the river were made more accessible, and a large population settled there, and more sugar was planted and grown, you would be able to employ a larger number of persons in the mill? Yes, if we had more work to do, we should want more men to do it.
750. *Mr. Humphery.*] Could the land under cane at the present time be used for growing maize, or for dairying? Yes, but it is not so suitable for maize as it is for cane. It does not grow large crops of maize.
751. Is it suitable for dairying? Yes; but dairying can hardly give the same return per acre as agriculture.
752. If it were used for dairying, it would not give such a good return as if cane were grown upon it? No.
753. What tonnage did you say passed through the Richmond heads annually? I do not know anything about the tonnage. The tonnage is greatly in excess of the cargo carried. I believe 40,000 or 50,000 tons of cargo are carried.
754. Inwards and outwards? Inwards and outwards.
755. You think that could bear 3s. harbour dues, assuming that the improvements gave a depth of 12 feet of water on the bar? I think the saving effected would be about equivalent to that.
756. That would be about £7,500 per annum? Yes.
757. If the cost of the first portion of the work were less than £150,000, 4 per cent. upon the amount would only be £6,000? But the up-keep would be something considerable.
758. That would allow £1,500 for the up-keep? Yes.
759. So that the Government might incur the expenditure necessary to complete the first portion of the work with the reasonable expectation of being paid by harbour dues the interest on the amount? Yes, if the Richmond River were singled out as the only district in which no Government money was to be spent unless it was repaid by the inhabitants.
760. But it could afford to pay by reason of the saving which would be effected by the improvements? I think the saving effected would be equivalent to the interest on the expenditure.
761. What quantity of sugar do you anticipate this year? Between 6,000 and 6,500 tons.
762. *Mr. Tonkin.*] What towns would be principally benefited by the proposed works, in addition to the sugar-growing lands on the river? The principal towns on the river are Ballina, Lismore, Casino, Coraki, Woodburn, and Wardell; I think in the order named.
763. Have you any idea of the population of those towns? No.
764. Do you think that if the proposed works were carried out the residents would be prepared to pay, by taxation, interest on the outlay incurred, in consideration of the benefits which they would derive? I should certainly advise them not to undertake to do it.
765. Do you think that the construction of these works would be more beneficial to them than the construction of a railway from the Tweed to the Clarence? I think that this work is of infinitely more importance to the district than a railway from the Richmond to the Clarence, but the construction of a railway from the Richmond to the Tweed would add greatly to the necessity for it, because it would induce communication from a large district which is at present cut off from any port because of the want of roads.
766. Have you any idea of the distance between the Tweed and the Richmond? I think the railway projected is 60 miles; but I am not sure of it.
767. Is the whole of the land through which it would pass valuable land? I believe so.
768. *Mr. Trickett.*] What distance up the river are the Sugar Company's works? 16 miles from the heads.
769. What is the name of the place—Broadwater? Yes.
770. Do you ship by sailing vessels, or by steamers? By both.
771. What freight do you pay per ton to Sydney? I think 10s. by sailing vessels, and 14s. by steamer.
772. The navigation of the river after it is entered is fairly good? Except that there is sometimes a difficulty at the lower parts near the sand banks marked on the chart.
773. After passing those sand banks there is no difficulty? No.
774. Can you tell us about the average draft of the vessels which go up and down the river? I think between 9 and 10 feet.
775. Do you know a place on the river called Wardell? Yes.
776. Can you tell the Committee whether you think it would be any advantage, other than affording convenience for carrying the material required in the construction of the breakwater, to construct a railway from the mouth of the Richmond to above Wardell? No. It would, I fancy, run parallel to the river, and I do not see what advantage would be gained, because the stone will be wanted on both sides of the river, and at the point between North Creek and the river.
777. The object I had in asking you the question was to ascertain whether it would be better to convey the stone from Wardell to the works by punts, or by railway? I should say by punts.

- E. W. Knox, Esq.  
10 July, 1889.
778. With regard to the entrance of the Richmond;—is it not a fact that it is always a difficult port to enter? Always very difficult, but it has been much more easy of recent years, since the Government established a subsidized tug service there.
779. All sailing crafts have to be towed in? Yes, and steamers too.
780. Is it not a fact, as far as your knowledge goes, that when there is a fresh in the river vessels have to stand off? They have to stand off all the rivers on the coast in such a case.
781. Until they see that it is safe for them to enter? Yes.
782. *Mr. Lee.*] Have your sailing vessels been detained any time outside the bar, because they were unable to get in? Yes, I fancy so.
783. For how many days at a time? I never had the curiosity to inquire. We do not own any sailing vessels.
784. Have your steamers been detained inside the bar? We have no steamers trading there either.
785. You convey your produce in other peoples' vessels? Yes.
786. Can you furnish the committee with the data which led you to estimate the annual tonnage going in and out of the river? No; it is simply a rough estimate.
787. I understood you to say that during the last eight years you received 32,000 tons of sugar? Yes.
788. That would be equal to an annual return of 4,000 tons? Yes. The most we ever received in one year was 9,000 tons.
789. And you estimate that you will receive this year about 6,500 tons? Yes.
790. That would be equal to  $\frac{1}{3}$ th of the estimated tonnage going in and out of the river during the year? Yes. I think that our business is about one-fourth of the Richmond trade.
791. Does that include coals? Yes; practically we have 1 ton of cargo inwards for 1 ton outwards.
792. Therefore, if the proposed works were carried out, they would not be essentially for the benefit of the sugar growers? Not to the individual growers.
793. Is there not a shipbuilding yard on the Richmond? They build small launches there, I think, but I never heard of them building a large vessel.
794. Are there not large cattle stations there? There are some large stations on the upper portions of the river, and on some of them dairying has been commenced on a large scale.
795. Are the cattle shipped from there to Sydney? No; I never heard of cattle being shipped from the Richmond; but I have seen plenty shipped from the Clarence.
796. Supposing the first portion of the work were carried out and there were a permanent depth of 12 feet, would the entrance not be available in all weathers? No; you cannot enter Newcastle in all weathers, and there is 25 feet on the bar there, I think.
797. Can you tell the Committee whether the shipping industry has increased on the Richmond during the last year or two? Very much.
798. You look upon the Richmond as a permanently settled district? Yes.
799. And you think the settlement is likely to increase? Yes.
800. And consequently the tonnage is likely to increase, and the freight on the goods carried? Yes.
801. It is not likely to be less than it is at the present time? No; it will continue to increase.

Bruce Baird Nicoll, Esq., M.P., sworn, and examined:—

- B. B. Nicoll, Esq., M.P.  
10 July, 1889.
802. *Mr. Lackey.*] You represent the electorate of the Richmond in Parliament? Yes; I am one of its three representatives.
803. Have you been long connected with the trade of the Richmond? I think for twenty years.
804. Have you resided on the Richmond during part of that time? I have never resided on the Richmond at any time; but on the average I make two or three journeys there a year, and I have been through the district twenty or thirty times.
805. You have had commercial relations with it during the whole of that time? Yes.
806. Have you vessels trading between the Richmond and Sydney? I have two steamers trading there at the present time. I have had steamers and sailing vessels trading there since 1871.
807. Then you are alive to the great inconvenience caused through the bad state of the entrance to the river? I am very much alive to it, because I have suffered very heavily. I have made a memo of the losses which I have sustained there, and I find that since 1880, through wrecks and repairs to steamers, I have spent the sum of £22,500.
808. *Mr. Garrard.*] Was the damage caused by the bad state of the navigation of the river? Through the vessels going ashore at the entrance.
809. Repairs were necessary because of the vessels going ashore—they were not ordinary repairs? No; they were not ordinary repairs. I might also state that the Clarence and Richmond River Company, another company which runs steamers there, told me that they had lost £15,000 in the same way. That would make a total loss of nearly £40,000 since 1880.
810. *Mr. Lackey.*] Do you insure your vessels? Up to 50 per cent. Ship owners generally insure their vessels to that extent.
811. Is the trade of the district developing largely? It has increased very much during the last few years, notably during the last five years. When first we opened up the district and gave communication to it, the population was about 2,000 altogether; now I believe it is about 20,000. That shows a large increase.
812. And it is still going on increasing? It is increasing fast.
813. Do you think that if the entrance to the river were made easier trade would increase at a still greater ratio? My opinion is that if we had a good entrance to the river the trade would double itself in a very few years.
814. What are the principal industries there now? A very large industry is timber getting. I suppose the Richmond district has supplied more timber to the Australian colonies than any other district in the Colony. Then there is the sugar industry, and a very large and important industry it is. Maize is also grown very extensively. In some places they grow maize where they cannot grow sugar. There is a variety of climate there, and some places are not fit for sugar-growing at all, while they are very suitable for maize. Arrowroot was grown in considerable quantities two or three years ago. Tobacco and coffee are also grown there. I have seen very good coffee produced there. The residents are now going in for butter-

butter making. I suppose at the present time 300 kegs of butter come from the Richmond every week, and in another twelve months or two years there will be as much butter produced there as comes from the whole of the Illawarra district. About three years ago there were not five kegs sent from the district.

B. B. Nicoll,  
Esq., M.P.

10 July, 1889.

815. You are aware that there is considerable emigration from the Illawarra district to the Richmond? Yes; nearly every week the steamers take up live stock and settlers.

816. Is it the case that some of the large stations there are being turned into cheese producing establishments? There is a station at Woorewoolgen where at present they milk 500 cows and produce good butter. They also produce very good cheese. I saw that last week it brought a price equal to that of New Zealand cheese.

817. You think the industry is likely to increase? I am sure it must do so.

818. There is plenty of room for it? Yes.

819. Is the timber industry increasing, or diminishing? The output is about the same. I can hardly remember the amount of timber exported, but it can be obtained by looking up the exports from the district.

820. It is principally hardwood, is it not? There is a great deal of pine and cedar, and some beech. These are the principal timbers exported, but there are many other valuable timbers there which are not shipped away. They have mahogany and teak. The district is very rich in timbers.

821. Is the teak there the same as American teak? I do not know the American teak, but it is not the same as the Indian teak. It is, however, good durable wood.

822. Have you given any attention, from a scientific point of view, to the proposed works at the entrance to the Richmond? I have given a little attention to the scheme; having crossed over the bar so many times, of course I could not help noticing the effect of the storms that occur on the coast. It is a notable fact that whenever we get a south-easterly gale of wind the bar generally shoals up to 6 or 7 feet. I might say in support of that, that about a fortnight ago there was 10 feet on the bar there, and to-day there is only 7 feet at high-water, showing that it has shoaled up 3 feet through the last south-east wind.

823. A good deal of the sand is washed up by the south-easters? It is washed up by the sea on to the bar. Besides this, the tide running down from North Creek carries with it a certain amount of sand, which goes into the channel over the bar. When the south-east wind meets this current, of course there is a shoaling up.

824. Then there is an accumulation of sand from both sides—from the sea side and from inside the entrance? Yes. The westerly winds tend to clear the channel out.

825. Have the floods any influence upon the bar? A big flood has several times made a really good entrance, lasting twelve or nine months; but we have not had one for five or six years. A small flood very often makes the channel worse. It generally shoals it up altogether, and then it takes some time before a new channel is formed. Frequently there is a depth of only 7 feet there.

826. Is it your opinion that if the channel were confined in the manner proposed a sufficient scour would be obtained to keep the bar navigable? It is certainly my opinion that if you could confine the water there is no doubt that you will get permanent depth there. At present, the entrance is 2 or 3 miles wide, if you confine water within a narrow channel you get fifty times the power which you would get if it were spread over a large surface. It is my opinion, and the opinion of most of the gentlemen to whom I have spoken, that by a small outlay we should get a permanent depth of 12 or 15 feet of water there.

827. Do you think that that result could be obtained by carrying out that portion of the proposed scheme indicated on the map by red lines, or would the scheme have to be carried out to its full extent? I think if the north wall only were constructed we should get from a depth of from 10 to 12 feet.

828. Do you mean the north wall only as far as the red lines on the map, or to its full extent? As far as the red line goes—that is the opinion of captains trading to the place and of people who have lived there for a number of years and watched the entrance. The great drawback is that the bar always goes to the North Head, and we have noted that whenever it is at the North Head the channel is shallow. Where the bar is at present it is very dangerous. There are rocks close to the channel, and I have suffered several times through my steamers striking against rocks in shallow water and getting holes knocked into them.

829. Instances have occurred where lives have been lost there? There may have been one or two lives lost; but it is not so dangerous to life as is the Clarence bar.

830. You think, on the whole, the Government would be warranted in undertaking the work, considering the value of the property concerned? I think it is very necessary, and that the large trade that will spring up will warrant a large sum of money being spent upon the entrance. Of course, there is no doubt you would have a very large trade there in the future. The place is partially settled now; but, to my knowledge, there is room for a million of people to settle there. The district is only in its infancy.

831. You are decidedly of opinion that the work is essential? I think that it is absolutely necessary. If something is not done, the district, of course, will go back.

832. I suppose you know the opinions fairly well of the persons engaged on the river in similar commercial transactions to those in which you are engaged;—are their opinions the same as yours? There is no doubt that the burning question with the people there is the improvement to the entrance of the river.

833. They think, as far as you are capable of judging, that the proposed scheme is the best way of dealing with the entrance? Sir John Coode's scheme is generally approved of by people that I have spoken to;—by marine surveyors, and others who know a little about it. Captains of steamers trading to the river say that Sir John Coode's scheme is a good one, and that it will meet the requirements of the port.

834. *Dr. Garran.*] So far as you have heard from your captains, do they approve of the proposed scheme? I think so.

835. I gather from you that the work may be done in sections, and that if the north training-wall alone is constructed, a great improvement will be effected? Yes; but there is no doubt, because of the importance of the district, that the whole scheme is necessary.

836. The present entrance is north of the proposed training-walls? I believe so. I have not been to the river for some months, and the entrance shifts sometimes every week or every fortnight.

837. The channel at present is as dangerous as it can be? It is very dangerous. It has been even more dangerous when further north. We have to use the tug-boat in and out in order to guide the steamer. The channel is so narrow that with the least deviation, she might go ashore on the rocks.

- B. B. Nicoll, Esq., M.P.  
10 July, 1889.
838. Have you seen the entrance where the proposed channel is marked on the plan? Yes.
839. Is it pretty good there? I have known the entrance near there.
840. So far as you know that would be as good a place for an entrance as any? I think so.
841. Have you heard the opinions of the pilot on the subject? Yes. The pilot is of opinion that the entrance should be made towards the southern head.
842. As near to the southern head as it is marked on the plan, but not nearer? Looking at the proposed entrance, it strikes me that its position is very suitable.
843. Do you know Cape Byron? Yes.
844. Do you think it is capable of being made into a harbour? Yes; but it would take a large sum of money.
845. Is the land between Cape Byron and the Richmond suitable for the construction of a railway? As far as I can judge it is fairly level, and there are not many engineering difficulties.
- 845½. Would the making of a railway to Cape Byron, dispense with the necessity for improving the entrance to the Richmond? I do not think so. A large portion of the Richmond River would not be benefited at all by such a railway.
846. Would the construction of a railway to the Clarence dispense with the necessity for improving the entrance? No; because the people could never pay the cost of haulage from the Richmond to the Clarence.
847. Then you do not think a railway to Cape Byron on the north, or to the Clarence on the south, would be an improvement? I admit that the construction of a railway is very important. A railway would touch sections of the country which cannot be reached at present.
848. If railways are made it must be for the purpose of bringing produce to the Richmond, not for the purpose of taking produce from it? Yes. There is no doubt that if a railway were made to the Tweed, the Richmond would be its shipping port for a good deal of its produce.
849. You do not think the trade would stop at Byron Bay? If a large amount of money were spent on a breakwater there it might become a shipping port.
850. Would it pay the people there to send their produce to the Richmond? From the Richmond to the Tweed is a distance of 75 miles. The people living near Lismore would send their produce to the Richmond, while those living at the other end of the line would send their produce to the Tweed. There is no doubt that the construction of the railway is a very necessary work; but, as I mentioned before, it would not affect Ballina and the Lower Richmond—that country depends upon the bar.
851. So far as the Richmond district itself is concerned, you look upon the Richmond River as the natural outlet? Certainly.
852. And you think the one thing wanted is the improvement of the entrance? Yes.
853. You think that would be the best investment of public money on behalf of the district? Yes.
854. You think the district is important enough at the present time, and that its future will justify the expenditure? Yes. I may state that the river is navigable 75 miles from Ballina. It is studded with farms, and if you go back 40 or 50 miles the land is all first-class, and the soil very good. A great deal of it is not under cultivation yet; but of course when the entrance is made, and the country more settled, there will be an immense trade through the mouth of the river.
855. You feel quite sure that if the entrance to the river is improved the development of the district will be greatly stimulated? I feel certain of that, because at the present time people are frightened to ship live stock or perishable goods. Sometimes a steamer is kept at the bar ten days. I have had them waiting three weeks to get out, because of the shallowness of the water on the bar, or the heavy seas outside. I might mention that a number of years ago I had two sailing vessels detained behind the Richmond bar for six months. At that time there were about fifty or sixty vessels there. Things are not so bad now, because steamers going backwards and forwards deepen the channel. There is no doubt that steamers crossing in and out make a difference. The tug service at the Richmond is rather an expensive item to shipowners, and it comes to a considerable charge at the end of the year. I had one steamer for which I had to pay £500 a year to the tug proprietor, for towing in and out.
856. Do you think that the development of the district is distinctly retarded by the want of river communication? I think that there can hardly be any doubt about it. There is no doubt that it has been retarded for many years from that cause.
857. The inconvenience is chiefly felt by people who wish to ship perishable articles? It is felt by everyone. I have known passengers time after time to wait for a fortnight, and then have to go back, not being able to get over the bar. People are frightened to ship perishable produce. The inconvenience is also felt by shipowners and people trading to the district. The insurance on goods that have to pass over the Richmond bar is higher than that upon goods which have to pass over the Clarence, or any other good bar. It is a tax all round upon the industry of the district. I might point out another way in which shipowners lose very heavily. At the present time there are only 7 feet of water on the bar, and the steamers have to come out half empty because they draw 9 feet of water. Sometimes we can only bring perhaps one-third cargo. When the bar has been bad I have known produce to spoil on the wharf, and I have known farmers to have their maize weevil-eaten because they cannot get it away.
858. You say the present state of the entrance to the river is a heavy tax upon the people of the district? Because they have no certain communication.
859. Could they afford to pay interest on the cost of making the improvements, and then be no worse off than they are now? That is a question which it is very hard to answer. There is no doubt that the Government would benefit very much if the district were opened up. If the district were opened up and railways made, a great deal more land would be taken up, and the Government recouped by the sale of it.
860. I understood you to say that the Clarence and Richmond River Company and your Company had together been put to an unnecessary expense, amounting to £40,000, during the last nine years, for repairs to steamers? Yes.
861. That is over £4,000 a year? Yes.
862. Supposing the harbour dues amounted to £4,000 a year you would be in no worse position than you are in now? The underwriters bear half of our loss. If the improvements were made to the entrance, I believe our steamers could get in and out in every weather. At present they are detained sometimes a week or more because of the lowness of the water, or by heavy weather.
863. The present state of the entrance has been equivalent to a tax of between £4,000 and £5,000 annually, borne by the two Companies and the Underwriters? Yes. 864.

864. So that the insurance companies and steamship owners could afford to pay £4,000 a year for a good entrance? Judging by the past, but I hope we shall not have a repetition of that experience. If I thought I should lose in the future what I have lost in the past, I should give up the trade altogether. It would not pay me to continue it.
865. Do you think the inward and outward commerce would bear a moderate tax? I estimate that the tonnage there is about 80,000 tons per annum, and there is no doubt that shipowners would be willing to pay a tonnage charge, because, at the present time, they have to pay the owner of the steam-tug there, and what we pay to the steam-tug proprietor they would perhaps be willing to pay in dues.
866. How much would that come to on 80,000 tons? It is very hard to give the figures. There is no doubt that ship owners, like other people, would be very well pleased if they had not to pay any taxes, but they are perfectly willing to pay a reasonable charge.
867. You think the district is prepared to pay a reasonable charge? I think so, but I do not think the district would be willing to pay for these improvements unless the Clarence district and other places were treated in the same manner. I do not think the Richmond should be treated differently from other places.
868. Supposing we had a provincial system in which each district repaid some portion of the Government money expended in it, would the Richmond be willing to pay then? The shipowners would have to pay;—the people would not.
869. You think the district tax is no good? Certainly.
870. If it is levied at all it must be levied on ship owners? Yes.
871. Do you think it would be a good thing to have a Harbour Trust for the Richmond? Certainly. I think it would be a good thing if there were a Harbour Trust for the northern rivers.
872. Do you think there is public spirit enough? I think a Harbour Trust for the whole of the northern rivers would be much better than a single trust for each river.
873. But that would get rid of the local interest? I think the northern rivers could be taken together.
874. But the interest of the Richmond is not the interest of the Clarence? You could have representatives from each river.
875. But would not there be quarrelling about the money spent in the different districts? I think it would be better for the Government to levy a tonnage rate. I do not think they would recoup themselves by that for their expenditure, but they would in other ways through the increased settlement in the district and the sale of land.
876. Are you of opinion that the training walls alone, without the extensions, would give a good entrance? I think if the first section of the work were carried out it would give a good entrance, though there is no doubt that the additions would be a great improvement.
877. You think the district would be fairly content if the first portion only were done at the present time? I do not think any district is ever content. I think you know as well as I do that districts like to get as much money as they can spent upon improvements within them so as to increase their prosperity. There is no doubt that the second extension would make a really good entrance, but I believe the first section would make a fair entrance. I think Sir John Coode mentions in his report that he expects to get three or four feet more water in the channel by carrying out the second extension.
878. So far as you are concerned as a steam-boat proprietor, you would be content with the training walls only for the present? For the present I should be satisfied if only the first section of the work were carried out.
879. You think that the Government would be justified in waiting to see the effect of the first portion of the work before going on with the extension? I am not prepared to give an opinion about that. I think Sir John Coode wishes the whole work to be done at once.
880. But it can be done in sections? I believe so.
881. It would be a legitimate experiment to try the effect of the training walls first, and see how they answered? I think so. I think we should do well to have training walls carried out.
882. *Mr. Garrard.*] Have the captains in charge of your vessels been trading to the port long? One has been trading there over twenty years, and the other about fifteen.
883. Continuously? Almost continuously.
884. What are their names? Captain Alley is the name of one.
885. Is that the gentleman who has been trading there for twenty years? Yes; over twenty years ago he had charge of sailing vessels belonging to my brother and myself.
886. What is the name of the other? Captain Macarthur.
887. Is Captain Alley in port? Yes.
888. Will he remain in port long? His vessel is laid up, so he will be here for a week.
889. And he will be able to give evidence before the Committee? I am sure he will be very glad to give evidence.
890. *Mr. Humphery.*] What would be the reduction in insurance and the saving in freight if a good entrance were made to the Richmond? We pay 9 per cent. now, but I think we ought only to take 7 per cent. if the improvements were effected.
891. What is the insurance for vessels trading to the Clarence? I think about 7 per cent.
892. There is a difference of 2 per cent. between the insurance on vessels trading to the Richmond, and on those trading to the Clarence? I think so.
893. And there would be a considerable saving of time, if the improvements were made? There is no doubt that there would be a considerable saving of time. The vexatious delays which now occur would be avoided, and a steamer could make the trip with regularity and despatch.
894. What is the difference between the freight to the Clarence and that to the Richmond? The difference between 7s. 6d. and 10s. per ton.
895. What do you think would be the saving in freight, if the improvements were made at the Richmond? I think the freight could be reduced from 10s. to 7s. 6d. per ton.
896. If there were so great a saving as that, do you think Mr. Knox's estimate of 3s. per ton harbour dues is a moderate one? Well, the steamers make quick trips. If there were a good harbour a steamer would make a trip a week, and the dues would then press very heavily.
897. Would there not be a very considerable saving to ship owners even if they had to pay 2s. 6d. per ton harbour dues? It would be a saving one way.
898. I mean in insurance? It would all depend upon the competition. Sometimes there is more tonnage

B. B. Nicoll,  
Esq., M.P.  
10 July, 1889.

B. B. Nicoll, Esq., M.P.  
10 July, 1889.

tonnage afloat than is required, and you have to run your ship nearly empty. If you were always sure of good cargoes both ways you could afford to pay those dues easily. When there is an overtonnage your earning power is reduced very much, and you are not in the position to pay heavy dues which you would be in if you were doing well.

899. Do you estimate the present trade of the Richmond at 80,000 tons a year? I think there are 70,000 or 80,000 tons go there every year.

900. You mean inwards and outwards? Yes, inward and outward. Of course sailing vessels go to Melbourne, Brisbane, and Newcastle, and other places with timber—they do not all come to Sydney. There is a large number of sailing vessels trading there.

901. You do not think your estimate is excessive? I do not think so. I think it is a fair estimate. I may state in connection with this that I made an estimate the other day of the value of cargo carried inward and outward at the Richmond, and I put it down at £1,000,000 per annum. I think that estimate is within a few thousand pounds of the correct amount.

902. *Mr. O'Sullivan.*] Did I understand you to say that you have had to pay £22,000 for repairs needed by accidents on the bar since 1880? Yes.

903. Have you lost any steamers there? Two, and one went ashore. One or two of my steamers have gone ashore several times, but have been got off again. Sometimes £500, sometimes £800, and sometimes £1,200 is needed to effect the necessary repairs, according to the extent of the damage.

904. Were the wrecks total wrecks? The "Lismore" was a total wreck; I valued her at £10,000 in my books. I could have sold her for that. Another vessel went ashore which had cost £1,000 to repair, and another £1,500. I have also had repairs costing £500, £600, and £700.

905. Is the cost of the wrecks included in the £22,000? Yes.

906. For how long a time is the bar closed;—how long are vessels bar-bound? It varies. Sometimes, in heavy weather when the bar is shallow, it is very dangerous to attempt to cross the bar, and ships have to wait a fortnight for the spring tides, which rise 2 feet higher than ordinary tides do. The detentions vary from three days to a fortnight, and sometimes they have been as long as three weeks.

907. The Tweed River is not navigable at all? I heard recently from a captain trading there that there was 6 feet 6 inches of water on the bar when he crossed out a few days ago. Sometimes there is only 5 feet.

908. Do any timber vessels go into the Tweed? A good deal of timber comes from the Tweed, principally cedar. Sugar and a little maize are also grown there.

909. I suppose the railway between Lismore and the Tweed is absolutely essential to the development of the trade of the district? It would open up an immense tract of country that cannot be used now. The people there do not grow produce, because they cannot get it shipped.

910. *Mr. Tonkin.*] You say that you believe that more timber has been taken from the Richmond district than from any other part of the Colony;—does not that lead you to believe that there is not much left behind? Twenty years ago it was said that the Richmond was done, but millions of feet per annum have been taken out since, and I believe there is any quantity left. I think there is twenty years supply left yet.

911. From your own knowledge do you believe the shipowners themselves would be prepared to pay, say, a shilling a ton, if the improvements were carried out? I think the shipowners would be prepared to be treated in the same way as they are at Wollongong, Newcastle, and other places. I think if they were put on the same basis as shipowners trading to other places they would be satisfied.

912. Do you think the amount I mentioned would be too much for harbour dues? I think it would.

913. I ask you that question because you say that the tonnage there is 80,000 tons per annum—a shilling a ton on that would be £4,000, and that would pay only about 1 per cent. on the outlay? I do not think the harbour dues ever paid interest on any work undertaken in this Colony.

914. Do you think that if the northern training wall alone were constructed it would make a channel deep enough for ordinary purposes? I think it would give 10 or 11 feet of water, and I think that that would be an immense benefit.

915. Do you think that if that wall could be built for £50,000 it would be advisable for the Government to build it first, without incurring the whole expenditure of £400,000? My opinion is that the place is worthy of a good entrance, but at the same time, if the north training wall were constructed, I am sure that it would give us a depth of 10 or 11 feet of water. I should not go against Sir John Coode and say that the remaining part of the work should not be done, because I think it should; but I believe that if the first section were done it would give us immediate relief.

916. You think under any circumstances it would be better to erect the north training wall first? I think the north training wall should be gone on with at once, and that is also the opinion of every captain to whom I have spoken on the subject.

917. There is a training wall at North Creek;—is that put there to prevent the creek breaking through the sand bank to the south? I think that that wall should also be constructed, because I think the tide coming out of the creek has a great deal to do with the shoaling of the bar. It forms an eddy, and the sand seems to run down and block up the channel.

918. *Mr. Trickett.*] You know a place called Wardell? Yes.

919. Do you know the quarries there from which it is proposed to take the stone to form the breakwaters? There is a place called Chilcott's some distance from Wardell, and another place called Riley's Hill, which is further up the river than Wardell.

920. Considering the question of bringing the material required for the breakwaters from the quarry near Wardell to the scene of operations, do you think it would be advisable to bring it by punt, or by railway? I think if it were brought down by punt it would not cost one third of the amount needed to carry it by rail, and a large saving would be effected. There would be no trouble in punting the stone down, because I understand the quarry is alongside the river bank; it would only have to be placed on board the punts and taken down to the entrance.

921. Looking at the scheme as a revenue producing one, I think I understood you to say that it was not desirable to go beyond the inner breakwaters? I did not say that. I merely said that if the first section of the works were constructed it would give a depth of 10 or 12 feet of water, but the trade in a few years would be a very large one, and possibly you may want steamers drawing 15 or 16 feet to trade there then.

922. Your opinion of the district generally is that it is a progressive one? I certainly think that there is a large amount of land still to be taken up and reserves to be thrown open, so that there is room for a great many people to settle there. As I said before, there is room for 1,000,000 people.

B. B. Nicoll,  
Esq., M.P.

923. Therefore the prospective value of the country is greater than the present value? Yes.

10 July, 1889.

924. *Mr. Dowel.*] For what distance up are you acquainted with the Richmond? I am acquainted with the whole of it.

925. What length is it? It is 75 miles from Ballina to Lismore, and that length is navigable for ocean steamers.

926. Can you go further up than that? Small steamers drawing 3 and 4 feet of water can go up 30 miles. There is a creek called Wilson's Creek up which you can go for 40 miles, and another, Leicester Creek, up which you can go for 30 miles in a small vessel.

927. Your knowledge of the Richmond then extends over something like 200 miles? About 125 miles. Then of course you can go up the south arm which branches off at Coraki. You can go 45 miles from Coraki to Casino in a small steamer. All that country is settled upon.

928. During your long experience of the river you have had many opportunities of judging of the character of the soil, timber, and minerals? Yes.

929. Is the character of the ground particularly good? It is admitted, I think, to be the richest soil in the Colony. A great deal of it is a rich chocolate and black loam, 20 and 30 feet deep.

930. And there are large quantities of timber in the district? Yes, I think there is a fifteen or twenty years supply.

931. Some portion of the country is mineral country, is it not? Yes. They have found gold in different parts of the district; in fact, miners have been working for several years, and getting gold from near Ballina. There are one or two reefs in the district. Near Casino there is a mining district, towards Tabulam, Drake, and those places.

932. Do you know anything of the stone at North Head? I believe the stone is very good there, but it is limited in quantity. I believe there is not sufficient stone there to carry on the whole of the works, or that if they took the stone away they would encroach rather close upon the lighthouse. The lighthouse is built upon the North Head.

933. You know the character of the country between the quarry from which it is proposed to get this stone and the entrance;—does it present any engineering difficulties to the construction of a railway? I understand that they are going to take the stone from a place called Riley's Hill, 18 or 20 miles up the river.

934. Do you know the character of the country? I know the character of the country, and I know that the stone is very good stone.

935. Are there any engineering difficulties in the construction of a railway from the quarry to the South Head? Certainly not.

936. What is the draught of your steamers? They draw about 7 feet when light, and when loaded about 9 feet.

937. That is with the full cargo? They draw between 7 and 10 feet.

938. Do any larger steamers trade regularly on the river? ———

939. Your steamers are frequently detained outside and inside of the bar, because of the bad state of the entrance? Yes; I have had steamers detained ten days outside the bar.

940. Is there any opposition to the proposed scheme? No.

941. Is it not a fact that the people of the district have been agitating for years to have the entrance improved? Yes, for the last fifteen or twenty years.

942. Sir John Coode is of opinion that when the first section of the work is completed there will be a permanent depth of 12 feet of water in all weathers? Yes. I may say that I am of the same opinion as Sir John Coode.

943. That being the case, would your steamers be able to get in and out of the entrance in all weathers? There is no doubt of it.

944. With a heavy south-easterly gale? Yes, as they do at the Clarence. You can get in there at all weathers.

945. Can sailing vessels get in? No, not without a tug. If a vessel were drawing 9 feet of water, and there were 12 feet of water on the bar, she would have 3 feet for the rise and fall.

946. If there were a heavy sea on? If there were 12 feet of water on the bar a vessel could cross it in any weather provided she did not draw more than 8 or 9 feet of water.

#### THURSDAY, 11 JULY, 1889.

Present:—

The Honorable JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Improvements to the entrance of the Richmond River.

Alexander Kethel, Esq., sworn and examined:—

947. *Vice-Chairman.*] You are a resident of Sydney? Yes.

948. And have been for a great number of years? Yes.

949. You know the nature of the proposed improvements to the entrance of the Richmond River? Yes.

A. Kethel,  
Esq.

950. You have had some experience in the Richmond River trade, have you not? I have a very good general knowledge of the bar, the river, and the district.

11 July, 1889.

951. Over what period does that experience extend? Over about thirty-six years.

952. You are aware of the great inconvenience that the public have suffered from the want of proper means of access to the river during the time that the sand has accumulated and made a bar in the harbour? I am aware of the inconvenience.

953.

- A. Kethel, Esq.  
11 July, 1889.
953. The accumulation of sand occurs periodically? It has done so ever since my first acquaintance with the river.
954. Is it your opinion that the impediments to the entrance have increased with time, or were they as bad as far back as your knowledge of the river goes as they are now? They were as bad thirty-four years ago as they are now. About that time several vessels were kept in the river for nine months. The only communication which then existed was by means of a small flat-bottomed vessel that was enabled to go in and out and bring supplies to the district.
955. Have you formed any opinion as to the cause of the obstruction? I have.
956. What is your theory about the cause of it? I account for it by the waters flowing out of the North Creek meeting the waters of the main river and being thrown out of their natural course, but the primary cause is the prevalence of easterly weather during nine months of the year.
957. Then you think the sand which forms the obstruction is brought from two opposite sources—from the river inside and from the ocean outside? I do.
958. Would the outside influence be easterly or south-easterly? Easterly.
959. The heaviest gales you get outside are from the south-east? From the southward—from the south-west round to the south-east.
960. You think they have a great deal to do with the accumulation of the sand at the entrance of the river? They are the primary cause of the silting up of the bar.
961. Have you given some attention to the proposed works? I have.
962. Is it your opinion that they would be effective in removing the obstructions? It is my opinion that they would be thoroughly effective.
963. Does that remark apply to the whole scheme, or to that portion of it marked red on the map? It applies to the whole work.
964. You think the work would be effective if the design were carried out in its entirety? Yes.
965. The object of the scheme is, of course, to create a scour which will wash the sand away from the entrance to the river? And to confine the tidal water passing inwards and outwards, in a limited channel.
966. Have you seen during your experience any similar works on our coast? Not on this coast; but on the coast of England there is, I believe, a place almost identical with this. I refer to the entrance of the river Tyne. It was my fortune to visit that place occasionally when very young, and it was then the terror of navigators, because of the many casualties in the shape of wrecks and strandings that occurred there. At that place there is a rocky headland to the north, and a sandy headland to the south. It looks out on to the German Ocean or North Sea, easterly. Since I have been in the colony I have been informed by shipmasters that works have been carried out there similar to those which it is proposed to construct at the entrance of the Richmond, and that the entrance to the Tyne is now one of the safest harbours in the north of England.
967. Have you heard or read of any other similar instances? No, I have not.
968. You are aware that a similar scheme has been tried upon our own coast;—at Lake Macquarie on a smaller scale, for one place? I hardly think the entrance to Lake Macquarie would bear any comparison with this, because of its leading features. There the south head is rocky, and the sandy beach spreads away to the north.
969. But is it not the case that they are confining the channel—the egress and ingress of the water—for the purpose of keeping it clear? That must inevitably be the result. Wherever water flowing through sand comes into contact with a rock or pile it deepens at once. Water always begins to scour out the sand when it comes into contact with a hard, solid substance.
970. You are acquainted with the Richmond River district generally, I suppose? I have traversed the greater part of it.
971. It is a very large and productive district, is it not? Yes.
972. Is the land fertile? Very much so.
973. Several industries are carried on there? Yes.
974. What are the principal industries? First and foremost is the industry with which I am identified, the timber-getting industry. I believe that that industry, though not the greatest in value, is the greatest in bulk and magnitude. For years past I have been receiving from the Richmond annually from 4,000,000 to 6,000,000 feet of timber.
975. Do you think the trade is increasing, or diminishing? I do not think it is either increasing or diminishing; but in the future, as agriculture extends, and the forests are felled, it must decrease.
976. What other industries are there besides the timber-getting industry? Sugar and maize growing, and dairying, I believe, are the only industries that are developed there.
977. Dairying is an industry that has only been lately developed? It has been carried on more or less during the last twelve years.
978. But it has been developed to a greater extent during the last three years? Yes; and judging from the number of butter factories which have come into existence recently, I anticipate an almost phenomenal increase during the next few years.
979. Is it the case that one large station on the Richmond has been converted into a cheese manufactory? I could not speak on that point.
980. You know the Griffiths-Fanning property at Woorooloolgen? I have visited it.
981. Are you aware that it is now being used as a large cheese factory? I have been so informed.
982. Then on the whole you think that in the interests of the public it would be desirable to carry out these works? Yes, and the northern training walls should be commenced at once. The present outflow of the river from the pilot station takes a circuit through Shaws' Bay, then outwards to North Head, and finally goes in a south-easterly direction. The map does not indicate the bar as it at present exists.
983. *Mr. Garrard.*] Have you any vessels of your own trading to the Richmond River? I have not at present though I have had vessels trading there. I am agent for a number of vessels trading there; but at the present time I have none of my own.
984. Do you think the bar is as good now as it has been for some time? No, I do not.
985. Because of its going into Shaw's Bay? Yes. The result of its flowing round Shaw's Bay is that the ebb tide is sent in a south-easterly direction, instead of running straight out as the training walls indicate that it will do. It does not reach deep water until it is  $1\frac{1}{2}$  mile from the North-Head.

A. Kethel,  
Esq.

11 July, 1889

986. What is the greatest detention when vessels in which you have been interested have suffered because of the bad state of the bar? From six weeks to two months. There was one detained there last year or the beginning of this for six weeks.

987. Owing to the shallowness of the water? Owing to the shallowness of the water.

988. Then you are of opinion that the north wall should be constructed first? Yes.

989. Do you think that the taking of it out to where the red line on the plan terminates would be sufficient, or that it would be necessary to take it out to the full extent, where it is hatched? My opinion is that it ought to be continued right out, so as to continue the scour through the outer break.

990. Do you not think, in view of the largeness of the undertaking, that it would be well to see the effect of carrying out the first portion of the scheme before you went on with the extension? I should commence at the pilot station, and continue outwards. We would thus get the full benefit of the work as it proceeded.

991. But if the work were commenced at the pilot station would not that close the present channel? Yes, and all the better.

992. Do you think there would be a period between the closing of the present channel and the opening of a new one during which traffic would be stopped? No; immediately the water was impeded it would flow in an easterly direction, and scour out a new channel for itself.

993. Are there any rocky impediments further up the river? I do not think there are any which are materially important. There are some flats on which the dredge has been at work for the last few years; but I think they have been almost removed, and that the channel is navigable as far as Lismore.

994. What water do vessels trading on the river draw? I do not think any of them exceed a 10 feet draught.

995. Is there a rocky bar opposite Wardell? There is a shoal across the river there; but any vessel that can cross the bar can cross that.

996. Taking into consideration the depth of the river, what depth of water on the bar would be sufficient for all practical purposes? I can hardly answer that question, because I believe that when the bar is scoured to its natural depth the flow of the tide up and down the main channels of the river will have the effect of deepening the river also. There is a shelf of rock which extends from the North Head some miles to the south, under the sand. 16 to 18 feet below the surface of the water there is a natural bed of rock upon which the sand rests.

997. Have you known the channel to be further south than the proposed channel marked on the plan? No; not further south than the channel indicated by the red lines; but I have known it as far south as that.

998. What was the nature of the channel when it was so far south as that? The further south the better the channel.

999. Has the trade of the Richmond increased very much during the last few years? The steamer trade has increased; but the number of sailing vessels trading to the river I think has decreased. I think there are only twelve or fourteen sailing vessels trading there now, while twenty years ago there were between twenty and thirty. Since then, however, the trade carried on by steamers has quadrupled, and that more than counterbalances the numerical decrease of the sailing-ships.

1000. Is it true that the insurance on vessels trading to the Richmond is higher than on those trading to other places? I think there is a difference of from 1 to 1½ per cent. on goods.

1001. Do you think vessels trading to the Richmond will be prepared to pay reasonable harbour dues for the purpose of recouping the expenditure incurred in the improvement of the harbour? Speaking as an agent, and as one who has been a shipowner, I should be quite prepared to pay harbour dues in order to have a safer entrance made.

1002. Do you know of a quarry situated at Wardell—Riley's Hill? Yes; it is beyond Wardell, at Broadwater. I have not examined the quarry; but I have it on good authority that there is a large quantity of stone there suitable for the construction of any class of breakwaters.

1003. Have you had any experience of the Clarence River works? I have not. I have been in and out of the Clarence frequently; but I cannot speak with authority on the subject.

1004. When were you last at the Richmond? I went over the Richmond bar six weeks ago in the tug steamer on purpose to have a look at it.

1005. Is it a fact that steamers going in and out of the river require the services of a tug-boat? Yes.

1006. For the purpose of getting them round the bends? Yes. When I was up there the "Coraki" had been waiting a day and a half for the tug to take her in.

1007. Would that be because there was a fresh in the river, or because of the weather outside? The detention was caused by the shallowness of the water on the bar. The shallower the water on the bar the more the sea breaks, and in rough weather with screw steamers, when their sterns are "lifting to the sea," as seamen call it, the propeller and rudder are lifted out of the water and lose their propelling and governing powers.

1008. *Mr. Copeland.*] Have you noticed the set of the current on this part of the coast? No; I have not.

1009. Do you remember whether there is anything like a strong current? In the immediate vicinity of the coast I am not aware; but a short distance out the current for three parts of the year sets in a south-easterly direction. The equatorial current striking the coast of Australia is sent off from it and flows to the south east.

1010. Do you think the entrance shown on the plan would be sufficiently wide to make it safe for vessels which wanted to come in in bad weather? I do; and I believe that the wider the channel is the less effective will the scheme be for deepening it. The one great result to be achieved is to confine the waters within the channel so as to give them scouring force sufficient to keep it open.

1011. Do you think with an ebb tide and a strong wind outside that it would be possible for a sailing vessel to safely make the entrance;—in an ebb tide I suppose a sailing vessel would hardly venture to attempt it? No. It is a rule with seafaring men never to take a bar on an ebb tide, unless under very exceptional circumstances.

1012. They would rather lay-to outside? Yes. As a rule at every bar harbour on the coast, with the exception of the Clarence and Newcastle, the pilot signals to vessels to stand off until the tide has commenced to flow.

A. Kethel,  
Esq.  
11 July, 1889.

1013. Do you think the proposed bearings of the breakwaters are the most suitable that could be obtained? I should scarcely give an authoritative opinion, because that is a question which would rest with scientific men who had studied engineering in connection with rivers and harbours.

1014. You stated a little while ago that the further the channel was to the south the deeper the water? Yes.

1015. Would not that go to show that if the channel were brought still further south, with a more southerly bearing, you would be likely to get deeper water? It would be the case, were there not such a place as the North Creek in existence, but having to deal with the tidal flow in and out of that creek, it qualifies the position of the entrance.

1016. If the channel were placed further south would not the North Creek have a straighter outflow? No. The North Creek at its confluence with the main channel of the Richmond, creates what is called a crossing place—a shoal inside the bar.

1017. Run your eye down the main river channel; you see the curve the water will have to take. It will actually meet the water coming from the North Creek. If the proposed channel were placed further to the south, the main channel of the river would not require to curve so much to the north, so that the two waters would join without so much opposition? At the present time the water of the river flows north until it strikes Beacon Rock Point, which consists of basalt boulders, and the water of the North Creek is trained to flow past Pilot Station Point in the same way as the water of the river. I think the proposed entrance will get rid of the water in the best way, because Pilot Station Point and Cemetery Point, from which the northern training wall will start, consist entirely of basalt boulders. There is never any sand deposited upon them, because they are kept clear by the rush of the current.

1018. I suppose there is no chance of diverting the North Creek in any way? There is a possibility of doing so by a small creek that flows from North Creek into what is known as the Fisheries Creek, but in times of flood it would be impossible to divert the whole of the water through that course. Therefore I observe that Sir John Coode and the Harbours and Rivers Department have wisely decided that it is not practicable to divert the waters of the creek into that channel.

1019. I think you said that the other parts of the river were clear and quite navigable? Yes.

1020. All the way to the head of the river? To the head of the north arm. The south arm is not navigable except for small river boats. Of course there are bars and shoals here and there, in one or two places, especially at Broadwater, where there is a rocky obstruction, but nothing at all to interfere with the navigation of the river.

1021. Irrespective of the water on the bar, what depth could be assured in the shallowest parts of the river? I do not think the matter has ever been properly tested. Just as deep as you like to dredge them.

1022. So that if you make the entrance deep there is no other impediment to the navigation? No. It is necessary that the entrance should be deepened in order that vessels of larger tonnage and greater capacity and power may enter and leave the river.

1023. I suppose that the depth of the entrance would regulate the draft of vessels making use of the river? With the occasional service of the dredge. I might say that the freshes that occur more or less frequently always bring down sediment, which is deposited in the still parts of the channel, and the services of a dredge are then required to clear out the channel and remove any impediment to navigation.

1024. I suppose you think that the country would be justified in going to the proposed large expenditure at the Richmond? I do, most undoubtedly, and I believe moreover that if the work were carried out the Richmond River would be the largest harbour north of Sydney, with the exception of Newcastle, and certainly the richest.

1025. *Dr. Garran.*] What about Port Stephens? Port Stephens has very little good country behind it.

1026. *Mr. Copeland.*] I suppose as a general thing the farmers and other producers have no difficulty in getting their crops away to the Sydney market? They can generally get them away somehow or other. Up to the present time the great difficulty is to get the produce to the river banks. When they get to the river they can get it away easily enough. I know scores of settlers who are almost obliged to pack their stores.

1027. That is for the want of good roads? For the want of good roads.

1028. With the river as it is, I suppose the farmers have not suffered any great inconvenience in not being able to get their produce away? The principal inconvenience they have suffered is that for the last two years, with a few exceptions, steamers have only been able to carry half cargoes. If they took fuller cargoes they would be certain to be bar bound. Thus a steamer with a carrying capacity of 500 tons has been compelled to leave with only 200 tons of cargo. To my knowledge produce has been left on the wharves for months without there being any means of bringing it to Sydney. I myself am receiving timber now that has been waiting for transit to Sydney for three months, and the result is that much of it is spoilt by the marine worm, known as the cobra or *teredo navalis*. That is the greatest inconvenience we have suffered—the steamers running with half freights.

1029. I suppose if the works were carried out, you would be able to carry produce at a cheaper rate? Unquestionably, because vessels of a larger capacity could enter the river.

1030. About how much cheaper could you carry maize? I should hardly like to give an opinion; but it is a well known fact that the larger the ship the lesser the freight. I have a little vessel at present running to the Brunswick River carrying cargo, which we cannot take at less than £2 a ton, and timber at less than 6s. per 100 feet, whereas if the bar were in a fit state we could carry the timber and general goods for less than one-half those amounts. I give this as an evidence of the truth of my remark.

1031. Do you think that reduction in the freight would be sufficient to make it worth the while of the farmers to increase their production? There can be no question of that, because three-fourths of the best land is lying idle, and in a state of nature.

1032. Do you consider that the land is lying in that state because the produce could not be taken away if it were grown? That is the principal cause, in my opinion.

1033. You think that those who are cultivating 20 acres now would cultivate 80 or 100 acres, if the entrance were improved? I do.

1034. What do you reckon would be the difference in the price they would obtain for their produce, if the entrance were improved, so as to make it worth their while to produce on a larger scale? I should not care to venture an opinion on that, because I have never dealt extensively in produce; I have confined myself to timber.

A. Kethel,  
Esq.  
11 July, 1889.

1035. Do you think the timber trade would be developed? No, I do not; because the forest reserves have been wilfully and criminally despoiled of their wealth, and are being despoiled at the present time, through the imperfect administration of the Forest Department. As settlement and agriculture extend the timber industry must decrease.

1036. You mean that in clearing the land for cultivation the timber is destroyed? Yes. As the Crown lands, upon which the timber-getters have worked in the past, and are working upon now, become alienated, the timber will be cut down, and cereals or grass grown instead.

1037. Do you think the timber market would be in any way materially affected if the entrance were improved—would the selling price of timber be affected? I do not think it would. I do not think the improvement, or otherwise, of the harbour would have any effect upon it.

1038. You do not think the improvement of the harbour would increase the trade, or reduce the freight? No; because I reckon that by the end of the present century the timber trade of the Richmond will be a thing of the past. Therefore, in dealing with this question, we must look to the development of the district as far as agriculture and dairying are concerned, rather than to the development of the timber trade. The timber-getter is the pioneer, and when he has marked out the way for the settler to follow he steps aside, and becomes a farmer, or moves to another part of the country.

1039. Have you any knowledge of agriculture? I have never done any, except as an amateur.

1040. I suppose you cannot give us any idea as to the amount of unalienated land fit for cultivation? I believe that 19-20ths of the whole land from the banks of the Richmond to the summit of the Macpherson Range is fit for agriculture in the most extensive sense. The worst land of the Richmond, which none of our countrymen thought fit for settlement, was taken up by Italians, who came out in the Marquis de Ray's expedition to form a Colony. The place is called New Italy, and they have created a perfect paradise of it. They grow grapes, olives, and other fruit such as is grown in the southern parts of Italy.

1041. *Mr. Garrard.*] Is that on the road to the Clarence? At the back of Woodburn, near the road to the Clarence. It is the poorest land in the district.

1042. *Mr. O'Sullivan.*] Have any vessels owned by you, or for which you are the agent, been wrecked on the Richmond bar? No; I do not think I ever had a wreck on the bar. I had one or two cases of stranding, but we succeeded in getting the vessels off.

1043. After they had suffered considerable damage? Yes.

1044. Have you any idea of the cost to which you have been put owing to the dangerous state of the entrance? I could not say from memory. If I had known you were going to ask the question I should have been prepared with the information.

1045. Did I understand you to mention just now that mining was carried on in the district? I am not aware that any mining operations have been carried on with success so far, but it is an unquestionable fact that there are mineral deposits, not of precious metals but of those metals to which we look for commercial prosperity. I myself visited, some years ago, a coal deposit in the district, and though the seam was only some 4 feet thick the coal was as good as any I have ever seen. It was within 5 miles of navigable water.

1046. What kind of metals do you refer to? I believe tin, silver and gold, antimony, and, it is stated, cinabar and quicksilver, are all to be found in the district; but I cannot speak positively about any of them. Gold deposits have been found in the North Head, and a large number of men have made good wages by washing the hard black sand between the Richmond and the Brunswick.

1047. With an increase of population there is a likelihood of these metals being developed? Yes, or the worthlessness of the deposits will be proved.

1048. I presume that when the railway from the Richmond to the Tweed is constructed there will be a large increase of trade? The limits of it can scarcely be anticipated, because the land is very rich and capable of producing not only all the necessities but also many of the luxuries of human life.

1049. Then a system of harbour dues, with an increased trade like that, would probably return a good revenue to the State? Until the shipping there increases very largely a system of harbour dues cannot be relied upon to raise sufficient to pay the interest on the expenditure upon the works. As far as I can ascertain the present annual tonnage entering and leaving the river is about 50,000 tons, more or less. It has been about the same for several years. About the same amount of tonnage leaves the river. A penny a ton harbour dues would pay about £200 per annum, or if the harbour dues charged were 4d. a ton, which I believe is the amount generally levied as harbour dues in Australian ports, it would only pay about £800 a year. That would be a very small portion of the amount required to meet the interest on the money expended on the proposed work.

1050. If only the first section of the work were carried out do you think there would be any danger of a bar forming at the end of the channel? No, I do not. When the tidal waters are confined into one narrow channel they flow in and out with such velocity that it is impossible for a bar to form. They scour out the channel. A vessel going out at the present time would go up through the patch of sand represented on the map to the north and close in by the North Head. She would then have to sail for a mile, or a mile and a half, in a south-easterly direction, with the sea breaking on her port beam, until she was able to get into the deep water. If the channel were confined the water would scour out the sand and give a straight entrance.

1051. Can you tell us the reason of the rip in front of the proposed channel? It is because the tidal waters at present flow due north, until they strike the rocky point at the pilot station. They then continue round to the North Head in an easterly direction, and from the North Head in a south-easterly direction, so that the water spreads itself over the outer break like a fan, and thereby loses its scouring properties.

1052. The rip would disappear if the proposed works were carried out? Unquestionably.

1053. You say you have no knowledge of the works at the entrance to the Clarence? I have seen them, and my opinion is, and you may take it for what it is worth, that the training-walls are too far apart, and that the water has been allowed to spread itself so that its scouring power has been lost.

1054. As a matter of fact the works which have been carried out on the Clarence have not been a success? The success has not been adequate to the expenditure.

1055. *Mr. Copeland.*] Do you know the width between the breakwaters at the Clarence? I think it is the better part of a mile.

1056. *Mr. O'Sullivan.*] Do you think it would be essential to carry out the works at Byron Bay, as well as these works? I have my own opinion about Byron Bay, and I question whether anything that has been devised for the improvement of that place will be of any efficacy. I spent several days inspecting the locality, and I have my doubts about its utility.

1057.

- A. Kethel,  
Esq.  
11 July, 1889
1057. You have no doubts about the success of the Richmond works? No.
1058. Do you know that at the Rhone, in France, works of a similar character have failed? I am not aware of it.
1059. *Dr. Garran.*] I understood you to say that the tonnage at the Richmond was 50,000 tons out and in per annum? Yes.
1060. Making altogether 100,000 tons? Yes. I believe it is rather more than that; but I give it in round numbers.
1061. At 1s. a ton that would give us £5,000 a year? Yes, but I do not know anywhere in the world where such heavy tonnage dues as those are levied.
1062. Do you think the present disability of the trade is equal to 1s. a ton? Yes.
1063. Counting the loss of time and of produce, it is equal to that? More than equal to that.
1064. If the settlers and traders there paid 1s. a ton harbour dues, and had a complete harbour, they would not be worse off than they are now? They would not; but I should not like to give that as my opinion, because it is a hazardous thing to charge dues at the rate of 1s. a ton.
1065. Supposing that with a magician's wand I could make the improvement to-morrow, would you sooner pay 1s. a ton, or remain in your present position? If I could get the same freight as I do now I should pay 1s. or 2s. a ton for the greater facilities of ingress and egress.
1066. But I suppose as we increase the facilities we shall increase the trade? Yes.
1067. I suppose a great many people are debarred from entering into the trade at the present time in consequence of the risk attending it? Yes.
1068. And it is only a few adventurous people who are willing to face the risk that are in the trade at the present moment? Yes.
1069. And the tendency of competition would be to bring the freights down for the farmers? Yes, thereby benefiting the district. The improvements in that way would be a great blessing.
1070. Then 1s. a ton would not be a tax? No.
1071. 1s. 6d. would not? No.
1072. What is the maximum charge that would not? It is hardly fair to put that question to me, because I should not like to commit myself.
1073. As things are now, the disabilities are equal to a charge of 1s. 6d. per ton? They are quite equal, as compared with the adjoining river, the Clarence.
1074. I ask these questions, not because I am in favour of putting these people to any hardship, but because I think that if they are suffering hardships now in consequence of the nature of the entrances, and the Government removed their disabilities, such a charge would be only nominal? It would be so.
1075. And on principle you think it a fair thing if the Government saves these people money to levy a tax upon them equal to the amount of the saving? Up to the present time our paternal Government has improved many of the ports of New South Wales, and it has never attempted to face this phase of the question before. Newcastle, Wollongong, Shoalhaven, Moruya, Lake Macquarie, and the Clarence have all been largely benefited by public expenditure; but, as far as I am aware, the question of levying special dues to pay for the facilities which have been granted has never been considered, and I am not prepared to say that the inhabitants of the Richmond should be specially taken advantage of.
1076. I am only asking you whether, as a question of political economy, if in the future the Government sought in every case to get a revenue from an improvement which it made, it would be a hardship for the producers to pay as much to the revenue as they are now taxed by the inconvenience which they suffer? No. And were it the custom I should be willing to render any moral and intellectual assistance I could to carry it into effect.
1077. If we let bygones be bygones they would not suffer any disadvantage? No. They would pay on the same principle as I pay special rates to have good streets made to my residence. A man who gets good access to rich land, which he bought at a nominal price, should not grumble if the Government charges him for the communication which it has afforded him.
1078. Therefore this taxation would not be a burden upon the country but only a nominal charge? Yes.
1079. You think that the Richmond River, supposing the principle were applied universally, is sufficiently productive to be able to deal with a tax which would really pay interest on the expenditure incurred on improving the entrance to the river? I do. In fact I should scarcely trust myself to express my opinion, because I am more familiar with it than with any other part of the world, but I do not know any place like it.
1080. Knowing the place as you do, you think it is one of the finest provinces in New South Wales? I believe it is the finest province.
1081. Leaving the Metropolitan area out of the question, there is no equal extent of country which could support so large a population as the Richmond district? Not only is the quality of the land excellent but there is a splendid rainfall. The district has the finest rainfall in Australia, and the rainfall is distributed throughout those months of the year when it is most needed. A season of drought is most unusual there. Letting alone the quality of the land, the frequent and copious rainfall renders the district more fertile than it would be if subjected to the same conditions as other parts of the colony.
1082. Are you willing to sustain the statement of a previous witness that the district is quite able to support 1,000,000 people? Yes. It would carry on the average one and a-half to two bullocks an acre, and if it will carry two bullocks to the acre it must be able to carry two men to the same area.
1083. In your judgment, if we put the total cost of the works at £400,000, which is allowing an ample margin beyond the amount estimated by the engineers, you do not think the outlay will be extravagant? I do not, and moreover I desire to say that if the Government refrain from cancelling the reserves in the district until they have decided upon their railway policy there, and upon making the improvements to the harbour, I think the increased price they will receive for the land will recoup their expenditure on both works.
1084. You are of opinion that the reserves in the district should not be thrown open until the railway policy is decided upon? Yes.
1085. And that, if they are sold for a fair price, they will nearly pay for the construction of the railway and the carrying out of the harbour improvements? Yes.
1086. That is, there is a wealth of capital in the unimproved land that will pay for the construction of these works? That is my opinion, and I took the opportunity of suggesting it to the Secretary for Lands several years ago.
- 1087.

1087. If we were to levy a tax upon the tonnage in and out we should not have to interfere with the actual producers? You would leave it to the shipping agents to do that.
1088. And they would distribute the taxation? Yes.
1089. Practically the freight would be the same to the producers, competition apart, if we levied upon the shipowners a tax equal to the amount which they now lose through the bad state of the entrance as it is now? Yes.
1090. The producer would be in the same position, except that his means of communication would be reliable? Yes.
1091. That alone would be a great gain to him? Yes, especially in the case of perishable goods.
1092. Therefore, if we levy a heavy tax upon the conveyers, the producer would gain by having constant and speedy communication? Yes. I have known many instances where perishable products have been delayed till they have become useless, and have had to be thrown overboard or carted away as a nuisance.
1093. And the producer would not only gain by having regular access to market, but he would also use the whole of his land? Yes.
1094. So there would be a gain to him, and no loss? Yes.
1095. Do you think we could get from the traders an amount equal to the interest on the money expended? All you have to say is that we must pay it, and you can bleed us as much as you like.
1096. Do you think the trade could fairly carry such a tax? I have no doubt about it.
1097. Without any oppression? Without any oppression.
1098. You say you know Byron Bay? I do.
1099. You are quite of opinion that no railway from Byron Bay to the Richmond would meet the wants of the district? I did not say that. I think it would be a good thing if there were a reliable bar at all times.
1100. It would be supplementary to the bar? Yes, having its terminus at some point on the Richmond where the river was navigable.
1101. It would never supersede the necessity of an entrance to the Richmond? No.
1102. Nor would the railway to the Clarence? No. I believe that such a railway would be one of the greatest blunders that could be committed.
1103. You think that the best thing to be done is to open the mouth of the river? To open that first, and to construct a railway afterwards.
1104. The present channel is about the worst you have had, is it not? Yes.
1105. You think that the first thing to be done is to close that channel? Yes.
1106. That will prevent the water from going into Shaw's Bay, and force a channel lower down? Yes. I believe if a hundred yards of the breakwater were constructed the effect would be felt.
1107. Nothing else but the construction of a breakwater will prevent the water from going into Shaw's Bay? I do not know of anything else.
1108. Would you recommend, after that, the making of the north training wall? I should make them simultaneously. North Creek training-wall could be carried on without interfering with the other work. About  $2\frac{1}{2}$  miles from the commencement of the training wall on the North Creek, there is a hill of basalt from which blocks of stone could be obtained, not sufficiently large for the construction of that part of the work which would be subjected to the action of the waves, but sufficient for making the North Creek training-wall.
1109. Then a much smaller stone will do for that? Yes.
1110. That wall will not be subject to the same wear and tear as the outer walls? No. The stone is a kind of conglomerate. I was in the district with Mr. Keele, and I advised him to inspect the quarry. It is at Chilcott's Hill. He said the stone was quite good enough for the training-wall at North Creek; but that it was not obtainable in sufficiently large blocks for the outside work.
1111. Then, although you look upon that piece of work as a detached and minor part of the general undertaking, you do not think it should be left to the last? No.
1112. You think if it were done at first it would greatly assist in scouring the channel? Yes.
1113. By giving the water a direct run? Yes.
1114. Have you ever known the entrance to be where it is proposed to construct the artificial channel? Yes; some years ago it was there.
1115. When it was in that position was it pretty good? Yes.
1116. Have you ever known it in any other position where it was better? No, I have not. It has been further south I believe than that, but it was when I was resident in Sydney; I did not see it myself.
1117. Have you known anyone to say that there has been a better entrance further to the south? No.
1118. As far as your experience goes, there is no better position between the north head and the south for the construction of a channel? No.
1119. Would this position be better for the outlet of the North Creek? Yes.
1120. And it would be equally good for the main river? Yes.
1121. Are you familiar with the Newcastle breakwater? I have seen it, and I have gone over it to have a look at it—taking an interest in it as one who is connected with nautical matters.
1122. You think a rough stone breakwater would stand here? It is some two or three months since I was at Newcastle, and up to that time there were no signs of anything giving way. The breakwater there seems to be a perfect success.
1123. You have no fear of the stones being washed down and filling up the channel? No.
1124. You think the training-walls could be made without the breakwaters? Training-walls would indicate the success of the scheme, and might be extended out afterwards. I do not think the sea would be very heavy here, because when the wind is south or south-east the waves run along the coast, and then turn in towards the shore, and run on to the sand. They would strike the breakwaters at their outer ends, and run along them.
1125. Sir John Coode's estimate for what we call the training-walls—the first portion of the scheme—is £136,000? Yes.
1126. Supposing we were to put that at £180,000, leaving a margin for the amount to be exceeded, would the expenditure give a better entrance than you ever had there yet? It would.
1127. And a constant and reliable entrance? Yes.
1128. Do you think the trade could at present, without overstraining, bear a taxation equal to the interest on £180,000? I believe it could.
1129. It would do no harm to the district? No.

A. Kethel,  
Esq.  
11 July, 1889.

- A. Kethel, Esq.  
11 July, 1889.
1130. And you strongly recommend that the works be carried out with as little delay as possible? Yes.
1131. You think that the improvements would be a clear gain to the producers? Yes.
1132. That the rate of insurance would be diminished? Yes.
1133. That the losses would be diminished? Yes.
1134. That the danger would be diminished? Yes.
1135. And that the production of the whole district would be increased? Yes.
1136. Settlement would also be increased? Yes; it would be quadrupled in a dozen years.
1137. What is the greatest natural depth you have ever known in the channel? I have known it to be from 12 to 16 feet on the bar. There has frequently been a depth of 12 and 14 feet, and though I am not very sure on the point, I think it has reached 16 feet.
1138. The mere construction of the training-walls would not give you much more than that? It would enable you to scour the sand down to the bed rock.
1139. But there is no rock? Yes, there is.
1140. At what depth? 18 feet below the level of the water.
1141. We have been led to believe that it is 24 feet below the level of the water? I hope it is, but the rock is there to the north and south, for vessels wrecked there have remained for years with just the upper portions of them visible above the sand, and that, in my opinion, indicates the presence of rock, because if there were no rock the wrecks would have gone out of sight, as they have done at the Clarence.
1142. They worked to the rock, and could get no lower? Yes.
1143. With an increased scour we shall always have the same depth? Yes. At present there is only 7 feet 6 inches of water on the bar, and we need a greater depth of water than that.
1144. If there were a sea on, would it not be easier to get into the entrance when only the training-walls were constructed than when the breakwaters were finished? I do not think so. I think it would be easier to get in if the breakwaters were run out, because they would allow the sea to run in fair, instead of there being a cross-break.
1145. Then with the flood-tide, the moment you were in, you would be quite safe, and would be carried along with the rush of water? There would be the danger of broaching to, which no human skill at times can avert.
1146. Would not that danger be diminished with the short distance of the training-walls? I think not. The sea would be more confined within two breakwaters than if it had an open break.
1147. But it would have a less distance to run? You would not have to run; there would not be the same liability to broach to.
1148. But the distance between the two walls would be greater? The further you went in the more the seas would lose their power when confined.
1149. You do not think there would be any greater facilities for getting in and out with a short break-water than with a long one? No; I think it would be better to extend the breakwaters.
1150. Still you are satisfied that the construction of the training-walls would effect a great improvement? Yes. I suggest you should watch the effect the training-walls had before constructing the breakwaters.
1151. Do you know the Big Scrub? Yes.
1152. Is there much timber on it? Only on the forest reserves.
1153. How far is it from Ballina? It is 6 miles from Ballina.
1154. And it runs north? It runs north for 60 miles, to the Macpherson Range, and west beyond Lismore.
1155. Then a railway through that scrub would not benefit the timber trade much? No; it would rather stop it. It would develop the timber trade on the forest reserves, and on the alienated lands beyond the Night Cap Range. Between that and Macpherson Range there are large tracts of country so remote that no person will take them up at present.
1156. Where do you get your timber from now? The pine from various parts of the Upper Richmond, the cedar from the Night Cap Range and towards the Tweed. The timber I am getting now from Casino they are drawing 70 miles, from up near the Queensland Border, parallel with the head waters of the Tweed.
1157. Everything near the navigable water has been cleared out? Except what has been secured by owners of mills there. They have secured large tracts of country, which they are reserving.
1158. Your timber-getters have cleared a great quantity of land? They have prepared the way for selectors, and many of them have become selectors themselves.
1159. The selectors would have much heavier work to do if you had not cleared the ground for them? Yes.
1160. *Mr. Humphery.*] Do you thing the width between the training-walls—1,150 feet—is sufficient, or is it too great? I should not say it was too wide. Of course, if it were wider, it would lessen the danger to a vessel coming in or out in heavy weather; but it would also extend the area over which the tidal waters would flow, and thus lessen the scour in the channel.
1161. You have no opinion to offer as to the desirability of increasing or lessening the width? I would rather not give an opinion.
1162. Do you think that the cost of maintaining the dredge service would be diminished if the proposed improvements were carried out? I believe it would, because a large portion of the time the dredge is at work is spent in removing the inner bar, commonly known as the crossing-place. This is mainly caused by the confluence of the waters of the North Creek and those of the main river. The meeting of the waters causes the sand carried down by the ebb tide to settle. The dredge has been largely employed in removing the crossing-place, but, if the channel were improved, the necessity for this work would be done away with.
1163. The dredge service could be dispensed with? The dredge could be taken away to other parts of the river where it would be of more service.
1164. There is also a tug service there? Yes.
1165. Could that be dispensed with? I should not like to give an opinion upon that. I believe it is the only efficient tug service in Australia. If we had tug services on the other rivers on the coast, conducted by steamers as well fitted for the work as the steamers subsidised for the Richmond are, there would be far less trouble and fewer wrecks than there have been. I wish to offer my tribute of praise to the man who conducts the service, for its efficiency and for the way in which it is conducted.

1166. Do you think that that service could not be done away with? I believe in time it would maintain itself without a subsidy from the Government.
1167. Did the Committee understand you to say that at the present time the tonnage of the trade passing through the Richmond Heads was 100,000 tons per annum? No. 50,000 tons inwards and 50,000 tons outwards—the same vessels appearing twice.
1168. Does that represent the tonnage of the vessels, or the tonnage of the trade? The tonnage of the vessels—the registered tonnage.
1169. What do you think is the tonnage of the trade? A vessel constructed on good lines, with anything like a good carrying capacity, will always carry one fourth or one third more than her registered tonnage, and therefore, if the vessels left the port loaded to their full carrying capacity, the tonnage of the cargo would exceed the registered tonnage by one fourth.
1170. Then, in your opinion, the tonnage of the trade of the Richmond, inward and outward, exceeds 100,000 tons? I should not like to say that, for the reason I stated just now, that for the last two years ships have had to leave the river with half or two third cargoes; but if the entrance were such that they could load to their full capacity it would be so.
1171. *Mr. Trickett.*] When you were at the Richmond the other day the entrance was to the northward of the Beacon Rock? Yes.
1172. Do you think the construction of the north breakwater and of the guide bank of the North Creek will be sufficient to create a scour and to make a good entrance? I expressed myself in favour of that being done some two years ago to the officers of the Harbours and Rivers Department, and I believe now that the work would be largely effective if carried out. It is impossible to say with any degree of confidence what would be the actual result if the work were carried out; but I believe that it would have a good effect. I think that that should be the first part of the work commenced, and that the two walls should be carried out simultaneously.
1173. Do you think that those two works should be the first undertaken? That is my opinion. I have very strong opinions on the subject. I believe they would almost of themselves be sufficient to scour a channel.
1174. Do you know the district very well? Yes.
1175. Do you know a place called Wardell? Yes.
1176. But do you know the stone quarries near there? The stone quarries are at Broadwater—some 6 miles above Wardell. I think the place is called Riley's Hill. The stone there is something between trachyte and sandstone, and it looks more like trachyte than anything else. Mr. Keele showed me the specimens he had obtained, and informed me that he could obtain from the quarry blocks of sufficient size and weight to withstand the action of the sea, and that there was sufficient stone to do the whole work.
1177. Do you know the nature of the country between the quarry and the scene of operations where the training-wall and the northern breakwater will be constructed? The country from there to the south is in sandy ridges, and some of the land is swampy. A tramway could be laid at a very reasonable rate. There are no physical obstacles in the way, such as creeks; the country is flat and swampy, and covered with ti-tree and swamp oak.
1178. A tramway could be laid easily? Yes; and the timber felled, and the sleepers split where they were wanted.
1179. Besides enabling the stone to be carried from the quarry, would the tramway be of any advantage to the district? I do not think it would, because it would have to run nearly parallel to the river. The river for 2 miles goes in a westerly direction, and then trends to the south; and at Broadwater it is only 2 or 3 miles from the sea. Hence, if the tramway were constructed, it would have to run parallel to the river, and close to the coast; and, therefore, I do not think it could be of any service in carrying trade or passengers, either while the work was in progress, or after it was finished.
1180. *Mr. Tonkin.*] If the work were carried out successfully, could you give us any idea what the reduction in freight per ton would be? I could not. I would not like to give an opinion on the subject, because I have never considered the question. I am not in a position to give an answer.
1181. *Mr. Dowel.*] You stated that you strongly advise that the training-wall on the north should be constructed first. Are you aware that Sir John Coode strongly recommends that the south training-wall should be built first? I believe he does; but I believe it is all the worse for Sir John Coode, because I think he did not understand the local bearings. Had he inspected the place, and seen the river at various times, he would never have recommended the erection of the southern wall first. Evidently Sir John Coode was afraid that if the southern training-wall were not erected the tendency would be for the water to go over at Lewis' Corner, and effect an outlet there; but the people who have lived there longest, and who have an intimate knowledge of the river, do not apprehend that it would do so.
1182. As I understand you, you strongly recommend the Committee to take your opinion in preference to Sir John Coode's? I should not like to say that, although I hint to that effect. I am confident that if Sir John Coode had been at the place and had seen the effect of the ebb tide flowing round the Beacon Rock and Pilot Station into Shaw's Bay, and thence from the North Head, trending in a south-easterly direction, carrying ships parallel with the breakers for a mile and a half, he would never have recommended that the southern wall should be erected first.
1183. Are you in a position to say that if the southern training-wall were constructed it would not have the effect of removing the sandbank in a much better manner than if the north training wall were first constructed? It would remove the sandbank, but the river would continue to flow in the same direction as it goes now. By running a training-wall from Pilot Point the water would be prevented from following the channel it takes now, and would be turned south.
1184. Is it not a fact that the present channel against the North Head has a rocky bottom? The greater part of it has.
1185. And is it not a fact that where it is proposed to make an entrance there is chiefly sand and indurated sand, and that if that were removed there would be a deeper and better channel? It is just possible that it might be. I apprehend that the great thing to be done is to keep the channel from the broken water until the ship can reach the deep water beyond the outer break. With the water running as it does now round the boulders and shelving rocks of Shaw's Bay, it is spread all over the spit which forms the outer bay, and cannot form a channel. We think that it is more important to have a good entrance in and out than to continue the channel through Shaw's Bay.

A. Kethel,  
Esq.

11 July, 1889.

- A. Kethel, Esq.  
11 July, 1889.
1186. Have you visited North Head, where the stone quarries are supposed to be? There are a number of basaltic boulders there, but I believe that the lower portions of the stone are soft, and would fret away, and cannot be got out in blocks large enough to form a breakwater.
1187. You are not aware that trials have been made to ascertain the size of the blocks which could be got out? When I was in the district Mr. Keele was there with his exploring party, and I think he put down several shafts. I was staying at the same hotel as he was, and he informed me that on putting in shafts at the North Head he found the stone below, which ought to have been hard and reliable, very soft.
1188. Knowing as you do the locality especially well, do you not think that a railway from Broadwater would facilitate the construction of the work? We could bring the stone by tramway to the southern breakwater, but you would have to take it across in punts.
1189. For the construction of the north training-wall? Yes.
1190. I am speaking more specially of the south training-wall. Supposing that sufficient stone could be obtained at the North Head for the purpose of constructing that training-wall, do you not think that the works would be constructed in about half the time if the stones were conveyed by rail, than if it were taken down the river by punts? I do. Unquestionably the most expeditious and inexpensive way of obtaining the stone would be by a good tramway worked by steam.
1191. You stated that sugar, maize, and timber were some of the chief products of this part of the country;—is it not also the fact that a large number of cattle are bred there? Yes, bred and fattened.
1192. And that very few of them come to the Sydney market by steamer? Very few. In fact, nearly every steamer takes up a quantity of live stock, because the district is very imperfectly stocked.
1193. Stockowners have an objection to sending their cattle by steamer, because of the difficulties of navigation, and I understand that at the present time they are sending them by way of New England? A stockowner on the Richmond, I presume, would prefer to take them to the Clarence, as large quantities are sent from there. I apprehend that the stockowners in the present state of the market would prefer to run their cattle across the 26 miles of intervening country to the Clarence, and ship them on board the steamers for Sydney.
1194. Do you not think that a large amount of that trade could be diverted direct to the Sydney market, if the bar were made safe? Yes.
1195. *Mr. Lee.*] Do you know Byron Bay? Yes; I have a slight knowledge of it.
1196. Would any of the works contemplated there in any way affect the works on the Richmond? I think not.
1197. Is not the trade on the Richmond itself sufficient to demand that the port be kept open? Yes.
1198. Irrespective of any works that may be carried out at Byron Bay? Yes.
1199. The construction of any works there could not possibly do away with the necessity for these works? No.
1200. The local traffic demands that the river should be kept open? Yes. Its probable development, and the vast amount of beautiful country awaiting to be cultivated, are sufficient inducement to warrant the expenditure.
1201. Most of the sugar is grown on the banks of the Richmond? Yes, because it has been proved that the chocolate soil in the Big Scrub lacks some of the essential elements necessary to growing good sugar.
1202. Supposing that at any future time large works were carried out at Byron Bay, would that neutralize the work being carried on here? No, I believe not. There is trade enough for both.

Captain James Matthew Banks, Marine Surveyor, sworn, and examined:—

- Capt. J. M. Banks.  
11 July, 1889.
1203. *Vice-Chairman.*] You are a Marine Surveyor? Yes.
1204. You have had considerable experience of the harbours on the coast? Of a few of them.
1205. How long have you followed your profession here? Twenty-two years in Sydney.
1206. During that time has your occupation called you to inspect various places on the coast of New South Wales? It has.
1207. Do you know the Richmond River? I do, to a limited extent. I have been up both arms of the river, but my profession has made me principally acquainted with the bar at the entrance.
1208. How long is it since you were at the bar? The last time I was there was about two months ago. I went down and took the "Coraki" off the bar. The first time I was there was nineteen years ago, when I took off the stranded brigantine "Helen." The next time was twelve years ago, when I visited the wrecked steamer "Waimea," and floated the steamer "Platypus."
1209. Were both those vessels wrecked on the bar? They were supposed to be wrecks on the bar, but I got them off.
1210. Do you know of other wrecks there? There have been a good many others in which I have been interested. These are the only three cases in which I personally superintended the business.
1211. You know where it is proposed to construct an entrance to the river? Yes.
1212. Was it near there where the wrecks occurred, or at the point? [*Witness explained the position of the wrecks on the plan before the Committee.*] When I went down two months ago the channel was very much as it is now, viz., close round the rock-bound shore of Shaw's Bay.
1213. It is a generally shifting bar? It is.
1214. And as long as you recollect the entrance has been continually shifting? The bar has been continually shifting. From what I can learn the sand is continually shifting north, until it reaches North Head, when a new channel breaks out at the south. This channel then begins to work its way up to the north again. There is a rocky bottom at the north of the entrance, but the rest is all sand.
1215. To what do you attribute the collection of the sand—to the action of the sea outside, or of the current inside? It is due to the action of the sea outside and the current running down inside. Of course all the rivers on our coast have only a small tidal rise, of about 6 feet. A big fresh makes a new channel.
1216. Do you think the proposed scheme would be effectual? Doubtless it would.
1217. Have you had experience in your profession of works similar to this anywhere else? I have seen works of a similar character.
1218. In this Colony? No. I have seen the works at the Clarence and at Newcastle; but I am not of opinion that they are very great works.
1219. The project is to confine the water so as to make a scour? Yes. I remember going into the river Tyne when I was a boy. I was on board one of three vessels which left Liverpool. Two of them were lost  
on

on the bar, which was at that time named the "Herd Sand." When last there, twenty-six years ago, this "Sand" had disappeared, owing to the scour of the tidal waters rushing between the breakwaters, over which I then walked. Since that time I have read a report of one of Her Majesty's ships drawing twenty-five feet of water being anchored on the spot where the Herd Sand existed.

Capt. J. M. Banks.  
11 July, 1889.

1220. You think the scheme would be quite effectual? I think so.

1221. From your point of view do you think it would be desirable to construct the whole of the work, or only a portion of it? I think that to attain the object desired, viz, to remove the bar and make a safe deep entrance, the principle laid down by Sir Jchn Coode, as shown in his plans, should be strictly adhered to. The northern breakwater alone would not remove the bar, though it would block up the Shaw's Bay, or north channel, and might make a straight south channel, but that is uncertain; while, were the south breakwater alone made and carried farther north, following the curvature of Shaw's Bay, the scour through that channel would annihilate the bar, but would not secure a safe entrance into the river, as Shaw's Bay is thickly studded with sunken rocks; hence the necessity of two breakwaters as shown in the plan.

1222. Do you think it would be essential to begin at the south;—do you think it would be sufficient to carry out the work to the point marked on the plan by the red lines, for the present? I think so. If that portion of the work were carried out you could make the extensions if you did not get the desired result. I think the effect you wish to obtain would be gained before you reach the end of the red lines, and when that end is gained the question of opening out bell-mouthed, to make an easier approach, or leaving them as they are, will have to be determined by the practical experience then obtained.

1223. You think if you carried out the southern wall it could withstand the influence of the south-east storms? I think it is very likely. The object we wish to achieve is to get a good channel.

1224. With an additional force of water that object would be gained? A channel would be scoured out.

1225. Have you formed any idea about the estimated cost? I have not heard what it is.

1226. Do you think that a width of 1,200 feet of water in the channel would be sufficient for all practical purposes? Yes. The vessels that trade there are very small in size. For steamers it would not matter.

1227. They would be likely to increase, if greater facilities were given to trade? I do not think so. I am afraid the days of sailing ships are numbered.

1228. I am speaking of vessels generally? Yes; they would be larger vessels, but they would be steamers, and the breadth of the entrance would not affect them so much. They could always go in. The sailing vessels are very different; they have to tack in. At Havre the entrance between the breakwaters is much narrower than 1,200 feet, and large vessels experience no difficulty in entering there.

1229. Works have been constructed there on lines similar to these? I cannot speak of the works from my own personal knowledge; but I have walked over the works of the Tyne, and know by personal experience that the bar in that river was entirely removed.

1230. Have you given any attention to the character of the country behind the harbour? I cannot speak with any authority about it.

1231. Regarding it from a commercial point of view? I have been over the country a good deal.

1232. You know there is a large area available for settlement? I do. I do not know that there is a large area of Crown land, but I know that there is a large area of agricultural land.

1233. A large area of productive land? Yes.

1234. You think the productiveness of that land would be increased by giving facilities to the trade? Doubtless.

1235. *Mr. Garrard.*] I understand that you have not had much to do with the upper portions of the river? I have been up it once or twice, and have rowed down from Lismore.

1236. Your work has brought you up to deal with casualties that have occurred at the entrance? Yes.

1237. You are of opinion that it would be desirable to carry on the two walls simultaneously? Certainly.

1238. You do not think it would be best to carry out the north wall first? I certainly do not.

1239. Why? On the north the bottom is formed of hard rock, but on the south it is entirely of sand.

1240. You think that in the event of the north wall being constructed first it would bank up the water and force it to cut out another channel at the south? Yes, unless it is trained out where the proposed entrance will be.

1241. Are you aware that there is a large body of water coming down the North Creek? Yes, but it is infinitesimal to the water in the main river.

1242. The present channel through Shaw's Bay is, as you know, very dangerous, owing to the rocky bottom? Yes.

1243. You are of opinion that the proposed entrance will be in the best position, and that the walls should be carried out simultaneously? Yes. The rock has never been exposed on the spit.

1244. Do you know the depth of water on the bar now? I think about 8 or 9 feet. I think that it was in March that I went down to get the "Coraki" off, and we were then three days outside the bar before we could get in. I think there was about 8 feet 6 inches or 9 feet of water on the bar then, and for a short time afterwards vessels could not enter the river.

1245. Do you know the longest time during which vessels have been delayed inside through the bad state of the bar? They have not been delayed so much since they got a tow-boat there; but previously to that I have known them to be for three or four months at the back of the bar, and perhaps they could not take advantage of a good bar for want of wind.

1246. Which do you think is best, a projecting north head, or a projecting south head;—do you usually find the better channel when the north head projects beyond the south, or *vice versa*? Here you have only one headland.

1247. But in some cases there is a north head and in some a south;—have you given any attention to see whether the position of the headland makes any difference to the channel? I cannot say that I have.

1248. Take Sydney for instance: there the North Head projects more than the South Head? Yes; but I do not think there is any analogy between the two places. Sydney is an estuary of the sea. The Parramatta River has no effect upon the harbour.

1249. Do you know the works at Newcastle? Yes.

1250. Do you think they have been successful? So far they have been, but they are not yet completed. The northern breakwater should be carried out to the Oyster Bank. You would then have a thoroughly good scour.

Capt.  
J. M. Banks.  
11 July, 1889.

1251. There has been a very great improvement there during the last twelve years, because of the works? Yes. I remember when only one vessel could lie in the Horseshoe.
1252. I suppose you are basing your opinion of the probable success of the Richmond works on the success that has attended the carrying out of the work at Newcastle? I have not Newcastle in my mind. In fact I do not give our colonial engineers so much credit. I do not think our success has been commensurate with the expenditure.
1253. You have not been in command of vessels trading to the Richmond; you have only had to do with the entrance as a marine surveyor? More than that. I have gone up for vessels and brought them back myself.
1254. *Mr. Copeland.*] What are the prevailing winds in the neighbourhood? The wind along the coast in the summer months is north-easterly, and westerly in the winter time.
1255. Where do you get the bad weather from? All along the coast with south-east gales. South-westerly gales also cause a heavy sea.
1256. Do you think the proposed direction of the breakwaters is the best they could take? I suppose so. The plan is Sir John Coode's, and he has had large experience of works of this kind.
1257. But taking into consideration the current, which I suppose has a southerly set? There is no southerly set close in shore. The great equatorial current, as far as I can judge, is 4 miles off the coast, and extends from 22 to 30 miles. It has been the cause of a good many disasters, because vessels go close in shore to keep out of it.
1258. Do you think we have anything to fear from the proposed channel running at right angles with the southern current? I think not.
1259. Do you think it would be any improvement if the mouth of the channel were made bell-shaped? I think ultimately it might be, but I think it would be a very dangerous thing to interfere with the plans laid down by Sir John Coode.
1260. Would it be any benefit to a sailor who was trying to make the entrance in bad weather? I do not think I would interfere with the plan. On the termination of the breakwaters you will have lights, and there will be a breadth of 1,200 feet, so that a man will be in safety immediately he gets between the breakwaters. If there is a depth of 3 or 4 fathoms there, there will not be such a heavy sea as there is now. The sea now is caused by there being only a few feet of water. There would never be a sea against a vertical column.
1261. *Mr. O'Sullivan.*] In your capacity as marine surveyor you have frequently to make visits to the Richmond River? I have made visits.
1262. For the purpose of surveying wrecked vessels? No; to get them out of difficulties. I am the surveyor for a company of underwriters.
1263. I suppose you consider this bar one of the most dangerous in the Colony? I consider the Richmond the most dangerous bar on the coast.
1264. It is absolutely essential to carry out these works if we desire to make the Richmond River easy of access? You require some such work.
1265. Can you state how many times you have been down to the Richmond? I have only been down there three times myself, and I have sent down others there, and given them instructions what to do. I have been twenty years and upwards a surveyor for insurance offices, and when our risks are in jeopardy, if the case is a small one, I send down others, but if the danger is very great I generally go myself, such as in the case of the "Coraki," which was in danger of being totally lost by the wreck of the "Sarsfield" lying very close to her. In spite of all our efforts, she struck it in coming off.
1266. *Dr. Garran.*] If the works were carried out as far as the solid red lines, as shown on the plan, would not the rate of insurance be diminished? Certainly.
1267. By how much? That I cannot say. The works would certainly improve the bar, but to what extent they would diminish the insurance rates it is impossible to say.
1268. In diminishing the insurance rates you are guided practically by the number of wrecks that take place? Certainly.
1269. And after the works were carried out, and the wrecks ceased, the insurance rates would proportionately diminish? They would be diminished if it were found that no wrecks occurred within a certain time.
1270. How long a time would have to elapse before they were diminished? I do not think any underwriting office would consider an experience of six months sufficient.
1271. Would you want twelve months? I think so.
1272. It would be twelve months after the works were completed, before the rates would go down? I think not. I think from the time the breakwater was actually in progress the rates would go down, but they would not reach their minimum until twelve months after the work was completed.
1273. There would be a substantial decrease? There has been since a subsidized steam-tug service has been established there.
1274. If the rates were diminished it would be a gain to the steam-boat proprietors? I should require to give some consideration to the matter before I could say whether it would be a saving to the steam-boat proprietors. It would be more a saving to the general public, because the less the expense, and the more the competition, the freights would come down.
1275. But the steam-boat proprietors in the first instance pay the insurance companies, and they would be the first people who would feel the gain? No doubt.
1276. And if they had to pay harbour dues equal to the amount they saved by the lessening of the insurance they would not suffer? Certainly.
1277. When a work like this is carried out is there any danger of a vessel coming in with the swell going on to the wall? I think not. I think the danger is very remote. No sailing vessel would attempt to go into a channel only 1,200 feet wide without a leading-wind. Sailing vessels do not go in there now without a tow-boat. If the works were carried out I do not think the necessity for a tug service would cease, because when vessels got inside the river they would have to employ a steamer to tow them up. It would be the same here as it is at Sydney, where the tug-boats go outside and bring the vessels in. But no subsidised tug-boat would be required.
1278. You think practically all vessels will be towed in? Yes, with this difference—steam vessels will then not

- not require the assistance of a tug, and sailing vessels will not find it, as at present, imperative to take one though, practically, as at present in Sydney, tug-boats will tow vessels from sea to secure the river towage.
1279. Could they be towed in in moderately heavy weather? Yes.
1280. With a south-easterly gale? If the sea were breaking right across, as it was at Newcastle the other day, it would be very dangerous.
1281. We do not get those gales two or three times in a year? Not more than three or four times in twenty years.
1282. You would not get a gale twice a year in which it was impossible to get in a vessel? Possibly not once a year.
1283. And if the wall were constructed, practically any vessels could be taken in? Yes.
1284. The swell would not run in? I think the swell would cease inside the breakwaters; but the swell is nothing. It is the break that causes the danger.
1285. The breakwater would go outside the break? Yes; I think there will, under ordinary weather, be no break in existence.
1286. The vessel would be in smooth water as soon as she came inside the entrance? Probably before she got to the entrance.
1287. Did you think it would be easier to get in if the breakwaters were constructed than if retaining walls only were constructed? Most certainly. The further you carry the works out into deep water the less the sea will be. If the inner portion ceases at a depth of 10 or 12 feet a sea running in from possibly a depth of 6 or 8 fathoms would overflow and make the entrance dangerous.
1288. If we carry out only the retaining walls the vessels will have to go through a certain amount of break? I cannot say, but I am under the impression that as you carry the walls out the bar will be dispersed.
1289. If we did not carry out the breakwaters vessels would still have to come through a break? I think you would find that when the works were carried out the bar would disperse, and the sea would be more equal and regular.
1290. You would recommend that we should do the first portion first? Certainly. The remaining portion would be very cheap, and could be added on without any difficulty afterwards. My opinion is that if the breakwaters were carried out as they are laid out on the plan, before twelve months are over ocean steamers would be able to get right up the river.
1291. You say that if the breakwater is carried right through the break you think that will disappear? I think so. The breakwaters will not require to reach the present break, for, as they narrow the distance between them, the scour will disperse the sands and cause the break to cease.\*

Capt.  
J. M. Banks,  
11 July, 1889.

WEDNESDAY, 17 JULY, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Improvements to the entrance of the Richmond River.

Captain Benjamin Alley, Master Mariner, sworn, and examined:—

1292. *Mr. Lackey.*] You are a master mariner? Yes.
1293. Have you been so long? I have been a master mariner for about fifteen years.
1294. Have you been longer in the trade in other capacities? I was an officer for two years and a half.
1295. During that time have you not had a great deal to do with the Richmond River trade? I have been running to the Richmond for the last seventeen years continuously.
1296. Of course during that time you have had an opportunity of noting the effect of floods and storms upon the entrance? Yes.
1297. You have known great difficulties to exist there in the way of crossing the bar, both going in and coming out? Yes; I have been blocked there, so that I could not get in, for three or four weeks at a time, and I have had to go to the Clarence.
1298. Have you ever had any mishap in going in and out? I lost the "Lismore" there going in.
1299. When was that? About five or six years ago—five years, I think.
1300. Was the steamer a total wreck on that occasion? Yes.
1301. Were any lives lost? No; there were no lives lost.
1302. Whereabouts did the accident happen? On the patch of rock at the North Head.
1303. Is it not the case that the channel is continually altering, because of the influence of the winds and floods? Yes. The first time I went into the river—sixteen years and a half ago—the channel was in the same place as it is now, round by the North Head and through Shaw's Bay. We then had a flood which lasted for about three weeks, and that brought the channel to about where the proposed channel is shown on the map.
1304. And since then it has continually shifted? It has continually shifted. Every flood has a tendency to drive the entrance further to the southward, while in fine weather the bar keeps working north until it gets to the rocks, and cannot get any further.
1305. How far do you go up the river with your vessel? About 75 miles.
1306. Are there any impediments to navigation higher up the river than the entrance? There is an average depth of water on the crossings of 9 or 10 feet of water at low tide.

Capt.  
B. Alley,  
17 July, 1889.

\* NOTE (on revision):—In giving the above opinions I have assumed that the 1,200 feet channel has been determined on calculations estimated on the volume of water to be carried off each tide, and that the scour will not be of such velocity as to endanger navigation. Having experienced the Richmond River during a flood, I think the south breakwater should be formed with a by-wash or by-washes to carry off the flood waters.

Capt.  
B. Alley.  
17 July, 1889.

1307. Had you had any experience of bar harbours in other parts of the world, before you came to this Colony? No.
1308. Have you given any attention to the proposed remedy for the bad state of the entrance? Yes; I think the works are a very good style of thing.
1309. Do you think they will prove an effectual remedy, and effect the object which it is sought to attain? I am sure it will be an effectual remedy.
1310. You think the scour that will be created will be sufficient to keep the channel open? Yes. There is one difficulty—the crossing near the middle spit. That is caused principally through the ebb tide running out between Beacon Rock and the pilot-station, while part of the flood tide comes at the back of Beacon Rock, depositing the sand in the channel, and thus forming a crossing.
1311. Do you think the proposed channel would be well situated to receive the flow of water from the North Creek? Yes; it would catch the water from the North Creek.
1312. And you think it is fairly well situated as far as the main branch of the river is concerned? Yes.
1313. Have you given any attention to the estimated cost? No. When the channel is where it is at present it is the most dangerous that we can have, because there are so many rocks there. There are patches of rock where the water is shown to the north of the plan. There was only 5 or 6 feet of water over there a few months ago. Whenever the channel has been south of Beacon Rock there have been no obstructions except sand.
1314. Is it the case that the commerce and trade of the Richmond are largely increasing? They have increased largely. We used first to make a trip only once in three weeks, with the small steamer; but now there are three small steamers a week when the bar is open.
1315. Has your attention been directed to the prospect of a large trade growing up in that part of the Colony? Yes. People are continually coming to the river.
1316. There is a large area of valuable land on the banks, is there not? Yes, and not only on the river banks but also on the northern side, where there is what they call the Big Scrub.
1317. It is rich agricultural soil, and fit for dairying purposes? Yes.
1318. There are a number of large sawmills in the locality? Yes.
1319. And dairies? Yes.
1320. You think on the whole the Government will be quite justified in going to the large expenditure which will be necessary to carry out the proposed works? I think so. I do not think it would be necessary to carry the works out to their full extent at present.
1321. You think it will only be necessary to carry out the work as far as the red lines on the plan go? Yes.
1322. Do you think it would be wise to try the effect of that portion of the work before the additional works were carried out? Yes.
1323. You would recommend that the first portion of the work only be carried out in the first instance? Yes.
1324. Do you think the work on the northern side of the channel would be sufficient of itself, or would it be necessary to construct both the northern and the southern walls? I think if the northern wall only were carried out the first flood might wash away the spit and make a channel to the south.
1325. Then you think it would be better to have both works constructed at the same time? Yes.
1326. The storms outside and the floods inside have a great influence on the collection of sand on the bar, have they not? Yes. Every sea brings up more or less sand.
1327. You believe, I suppose, that the sandbar is produced by the piling up of the sand by the storms outside and the tides inside;—would the construction of the breakwater prevent that? Yes. At the present time the flood-waters do not flow in exactly the same way as the ebb tide runs out. When the tide is low it goes in a narrower channel, but the flood tide coming in, especially with a southerly wind and a heavy sea, spreads right over the spit, and does not confine itself to the smaller channel.
1328. What is proposed to be done by these works is to confine the channel? Yes.
1329. *Mr. Copeland.*] Have you any knowledge of the ocean currents in that neighbourhood? Yes; I have noticed them along the coast.
1330. What has been your experience with reference to the current near the entrance to the river? Very often what little current we feel there sets to the northward, close in to the entrance.
1331. At what rate does it flow there? At about half a mile an hour, or something like that. Three or four miles out we get a southerly current.
1332. Do you think if the breakwaters were carried out to the distance proposed you would be able to make the entrance with safety in a gale of wind blowing strong? What is to be the width?
1333. About 1,100 feet? I should prefer myself to see the breakwaters constructed on a similar principle to that at Newcastle, so that one would overlap the other. Then a vessel coming in with a southerly wind could get behind the point of the breakwater, and be in smooth water immediately. Here you would have to come in with the full force of the sea.
1334. What would be a remedy for that? To carry the southern breakwater further out than the northern, if anything with a slight curve.
1335. To make the entrance bell-shaped? To make it bell-shaped.
1336. So that you would be able to go in on a wind? Yes. You could then haul up into shelter immediately.
1337. Do you know of any similar channels that have bell-shaped mouths? No. I know the Newcastle entrance; but that is the only bar harbour which I have been in on the coast.
1338. I suppose you have not come across rocks in any part of the proposed channel? I have come across no rocks in the piece between the part marked green at the lower end of the map and the Beacon Rock. A little this side of where the northern breakwater starts there is a patch of rock about 8 feet at high-water.
1339. That would be excluded by the training-wall? Yes; the training-wall would go right over it.
1340. What are the prevalent winds on that part of the coast? From the southward, south-west, south-east, and occasionally, but very rarely, we have an easterly gale.
1341. With south-east wind blowing strong, and a sea running in, would you be able to take the channel? Yes, if it were 1,100 feet wide.
1342. That is with a steamer? Yes.
1343. What class of vessel do you command? A steamer.
1344. Do you think an entrance like that could be entered by a sailing vessel, with a south-east wind? Yes; but they are not under such command as steamers are. They are liable to run up in a heavy sea; but the breakwaters would have a tendency to make the sea smoother. 1345.

Capt.  
B. Alley.  
17 July, 1889.

1345. Would the seas follow up that channel? Not with their full force.
1346. They would expend themselves? Yes. But the channel, in my opinion, would be better ell-shaped, because when the breakwater is open the water has a chance to smooth out, which it has not in a narrow channel like the one proposed.
1347. Have you entered the river when the channel has been somewhere about the position of the proposed channel, as shown on the map? Yes.
1348. Do you remember what depth of water there was then? The depth varied. I have seen as much as 12 or 13 feet of water on the bar when it was in somewhere about the position shown on the map.
1349. Do you think the channel will be wide enough to carry off the body of water in the river;—supposing you had to take the entrance on an ebb tide when there was a fresh in the river, would you not have to meet a very heavy current? A narrow channel would have a tendency to back up the water in the river.
1350. Do you think if the breakwater and the training-walls were brought further to the south there would be any advantage? The inside portion?
1351. Yes, so as to take out the curve? Yes; there is too much of a curve in it at present.
1352. I suppose when once you get inside the river there is plenty of water right up to Lismore? At low-water there is about 10 feet in the shallowest parts. There are only a few patches like that.
1353. What vessel do you command? The "Wyralla."
1354. What water does she draw? We can load up to 10 or 11 feet, but we never load beyond 8 feet 6 inches or 9 feet.
1355. Yours is not the largest steamer that trades to the river? No.
1356. What do the larger boats draw? We have to trim the vessels to about 9 feet; that is about as deep as we care to risk.
1357. What depth of water would you want under the keel to go in safely in rough weather? About 2 feet, although we have often gone in drawing the same depth of water as there was on the bar. We would land now and then, and be picked up again and thrown further along.
1358. It is estimated that there will be 12 feet of water in the proposed channel? That would be at low tide. At high tide there would be 3 feet more.
1359. Is there 3 feet rise and fall in the tide? In the spring tide.
1360. On the whole, you think the works would have a beneficial effect, and would make the river quite navigable for ordinary traffic? Yes.
1361. And you think the business of the port would increase considerably if they were carried out? I am sure it would.
1362. Do you think they would have the effect of reducing the freights? Yes.
1363. By creating competition? The people would expect their goods to be carried at the same rate of freight as they are now carried from the Clarence.
1364. What is the difference between the rate of freight from the Clarence and that from the Richmond? I think 5s. a ton.
1365. Would the steamboat companies be prepared, if the works were carried out, to take cargo at the same freight as is now being charged on the Clarence? I think so. They could make their trips with more regularity, and bring larger cargoes.
1366. I suppose 5s. a ton on maize, potatoes, and those things would make a considerable difference? Yes; and a good many would go in for maize who do not grow it now.
1367. *Mr. Trickett.*] What does your cargo generally consist of? Do you mean what we bring from the river?
1368. Yes? Timber, maize, sugar, butter, and other dairy produce.
1369. Have you had any conversation with the residents and importers of the district about the payment of harbour dues, supposing the works were carried out? No.
1370. You have never heard whether they would be willing to pay anything for the construction of the works? No.
1371. You have not heard the matter talked of? No.
1372. The whole trouble with regard to the navigation of the river occurs at the entrance—when you once get in there is no difficulty? That is so.
1373. Have you often been bar-bound? Yes.
1374. For what length of time? For three weeks.
1375. *Mr. Hurley.*] Do you think it would be necessary to construct the extensions if the north wall were constructed? I think it would be better to go on with it, because a heavy flood has a tendency to go through the spit.
1376. That being so, is it necessary to construct the southern wall, supposing the northern wall will cause a scour? Yes. If a flood were to occur it would take the channel away from the northern wall, through the south end of the spit.
1377. Do you not think that the construction of the southern wall should remain in abeyance for a time? I have seen the channel shift half a mile in one flood.
1378. Therefore you consider it will be necessary to carry out both works at the same time? Yes.
1379. Do you think that greater facilities for entering the river will lead to an increase in the population of the district? I believe they will.
1380. And they will cause a greater freight? They will cause a lower freight.
1381. What do you think will be the decrease per cent. in the rate of freight charged? About 20 per cent. I daresay—about 4s. in the £.
1382. Have you any knowledge of the country between the Heads and 75 miles up the river—have you been over it? I have been across the country once. It is all good agricultural land from Ballina to Lismore.
1383. Do you know anything about the quarry 18 miles up the river? No. There are several hills up there which contain stone.
1384. Have you taken into consideration the difference between the cost of conveying the stone from the quarries up the river to the work by punts, as against conveying it by railway? I have not taken that into consideration.
1385. You said that you had one wreck at the entrance? Yes.

Capt.  
B. Alley.  
17 July, 1889.

1386. You have had several narrow escapes, I understand? I have had some close shaves.
1387. Have not the ships of which you have had charge been considerably damaged and needed a large expenditure for repairs? Yes. I put the vessel which I lost ashore outside the Heads, but we got her off again.
1388. Did she cost you much for repairs? About £7,000, I believe.
1389. *Mr. O'Sullivan.*] You are aware, I suppose, that the works when completed will cost about £400,000? I see by the papers that that is the estimated cost.
1390. Do you think the Government will be justified in laying out that large amount of money to make the entrance good? I think the inner works would do for the present.
1391. The training-walls? The portions marked deep red.
1392. Would the north breakwater alone suffice to make an entrance? If the channel would keep over at that side, but the chances are that a flood may occur that will bring the channel further to the southward away from the northern breakwater.
1393. Do you think it better to expend the whole amount, and carry out the work proposed to its fullest extent? Yes, the inner section.
1394. When these breakwaters are completed, will the entrance be a safe one for sailing vessels in all weathers? In a very heavy gale I do not think it would be safe, but with an ordinary breeze I think it would be safe enough.
1395. I suppose if the weather were bad a ship would stand off until she got a favourable breeze? Or until the weather moderated.
1396. When the "Lismore" was wrecked, what drove you up to the position marked on the map? The vessel touched the bottom and ran on to the rocks, running against her helm.
1397. There is another wreck marked there? Yes; the "Waimea."
1398. And there is the "Sarsfield?" Yes; and the "Frances Hixson." The remains of those wrecks are there now.
1399. The "Sarsfield" is wrecked between the proposed breakwaters,—was the entrance there at that time? Yes; the entrance was there then.
1400. At that time the proposed entrance was the natural entrance to the river? Yes. Just where the breakwaters are now on the plan there has been an entrance to my knowledge.
1401. What depth of water had you then? About 11 feet.
1402. I suppose you can notice the rip between the breakwaters? Yes.
1403. Do you think that is likely to be improved if a good scour is established there? I am sure there will be a good channel between the breakwaters.
1404. *Mr. Garrard.*] Are there any rocky obstructions further up the river? There are some rocks, but there are narrow channels alongside of them.
1405. Is there not a bar somewhere near Woodburn? There is a bar there, but there is a channel alongside close into the bank.
1406. Is it very narrow? It is about 200 feet wide.
1407. What depth of water have you in that channel? It has been shoaling up lately. I believe there is 9 feet at low-water. The dredge has been working there.
1408. What depth is there before you come to the rock? I could not tell you that.
1409. What is the greatest depth that you have ever had alongside the bar there? I never sounded it. We never touched till lately.
1410. Any vessel that can get over the obstruction at the entrance will get up the river safely to Lismore? Yes.
1411. You are not aware of any obstructions except that at Woodburn? There are flats.
1412. I mean rocky obstructions? There is another bar just before we get to Broadwater; but there is a channel alongside the bank there like that at Woodburn.
1413. Then it would only require dredging alongside the reef of rocks to give you a good channel? Yes.
1414. You think it would not be safe to try experiments by merely constructing the northern breakwater. Do you think that the two breakwaters should go on together? Yes.
1415. Have you known the channel to be further south than the proposed channel? Yes; near to the green patch.
1416. How long ago is that? Sixteen and a half years ago.
1417. The channel ever since has been going northwards? It is almost always going northward in fine weather.
1418. How long is it since you knew the channel to be further south than the proposed channel? About five years ago the channel was where the training-walls are marked on the map.
1419. I understood you to say that when the channel was in that position it was about the best that ever existed? Yes.
1420. You are not aware of any rocky obstruction there? No.
1421. Do you think it is likely that the rock will obtrude there? There is no rock there at a depth of 11 or 12 feet.
1422. The present channel, I suppose, is the worst you could possibly have? Yes; because it is in amongst the rocks. It is dangerous and very tortuous.
1423. You see that it is proposed to make the breakwater from the pilot-station to the Beacon Rock;—do you think if that work were constructed the present channel would be stopped, and that another channel would open out? A channel would open out on this side of the Beacon Rock.
1424. You do not think that the traffic on the river would be stopped, but that another channel would immediately be available? I do not think the traffic would be stopped. Vessels could go out in slack water in the narrow channel that would be left.
1425. I suppose under the most favourable circumstances sailing vessels would require the assistance of a steam-tug? They could sail in with a south-east or north-east wind.
1426. Would they not have to brace very sharp up with a south-east wind? They would be in smooth water, and they could let go their anchors.
1427. They could not get up the river very far? They could get up with a flood tide.
1428. Are the sandbanks marked on the plan in existence now? Yes.
1429. But I suppose they would be scoured away by the water? Yes.
1430. You are not aware of any rocky obstruction in the entrance as far south as the green patch other than the Beacon Rock? No.

Capt. ?  
B. Alley.  
17 July, 1889.

1431. Do I understand you to say that you favour the making of the entrance bell-shaped? More than it is at present; it is too straight now.
1432. You are aware that it is narrower at the entrance than it is further back? Yes.
1433. The engineers therefore had some reason for narrowing it? I suppose so.
1434. Have you read the evidence of the engineers or Sir John Coode's report? No.
1435. Unless there were sound engineering reasons for contracting the breakwaters at the entrance you would prefer to have the entrance bell-mouthed? Yes.
1436. But if, on the other hand, there were sound engineering reasons why that should not be done, you would not place your opinion against that of the proposer of the scheme? No.
1437. *Dr. Garran.*] You say that in fair weather the channel has always a tendency to work northwards? Yes.
1438. Do you know why that is? The channel varies in width. Sometimes a strong tide will form a spit further out in another part of the channel. It is always altering; but the average width is somewhere about 600 feet.
1439. I want to know why in fine weather the channel works northward, and in heavy weather southward? I cannot tell the reason of that, unless it is because the tide strikes against the green patch at the south and deposits the sand there, and that that goes on until the channel finds its way north.
1440. You only know that it is a fact that the channel works north, and you cannot explain it? Yes. The current banks up the sand on the inside and the tide on the outside.
1441. In fine weather is the current along the coast more distinct than it is in heavy weather? I have not noticed that. Very often you do not feel any current at all.
1442. You do not think there is much of the coast sand working up—is there a drift of sand? No.
1443. You say that when the channel is where it is now, close under the North Head, it is the most dangerous? Yes.
1444. And you have known it to be in every position between its present position and the extreme south of the south spit? Yes.
1445. Do you know any better position for an entrance than that indicated by the red lines on the plan? I do not. I think that position is as good as it could be.
1446. You have practically been over the bar at every point? Yes.
1447. And you never found a better entrance than when the channel was where the proposed channel will be? That is so.
1448. Supposing the training-walls only were made, going as far as the breakwaters, you would still have a broken bit of surf to go through? I think the force of the current in a confined space would have a tendency to deepen the channel.
1449. And you would not have much broken water? No.
1450. You think there would be a good entrance, and not much of a rip? Yes.
1451. Supposing the breakwaters were carried out, and you were going in with a heavy sea, would there be any danger of your being dashed against the wall? I should wait for the flood tide. I should not like to try it with an ebb tide.
1452. The current would carry you into the middle of the channel? Yes.
1453. The current would go into the centre of the channel? Yes.
1454. And you would trust a good deal to the centre current to keep you away from the walls? Yes.
1455. And, whether there were a due easterly gale or a south-easterly gale, you think there would be no danger of striking the walls? Not with a channel 1,100 feet wide.
1456. The channel shown on the plan as the existing channel when the plan was drawn is about as wide as the proposed channel? Yes.
1457. The then existing channel was nature's channel? Yes.
1458. So that nature's channel was about 1,100 feet wide? Yes.
1459. Sir John Coode's proposed channel is, then, about as wide as nature's channel? Yes.
1460. And it was proved that that was wide enough? Yes.
1461. The scour in the proposed channel will not be greater than it was in what we call nature's channel? No.
1462. The scour in nature's channel gave you about 12 feet of water? Yes, about 12 feet; but the sand is continually being washed from the sides and dropping in.
1463. Then, if we had the current confined between stone walls we should have a better scour going than between the sand-walls? Yes; because the sand would not be washed in.
1464. If you have two stone walls instead of sand walls you will get a deeper scour? Yes.
1465. So that the effect of substituting stone for sand will be to give a better channel, and to keep it in the same place? Yes.
1466. You are of opinion that if the breakwaters were carried out to the extreme points it would give a better entrance? Yes.
1467. Have you been there in any weather in which, you would be afraid to enter if the complete works were finished? Yes; I have been there in heavy weather, when it would be unsafe to enter any port. With an ordinary gale I should not hesitate about entering.
1468. Such a gale as we had a month or two ago you do not get more than every three or four years? Yes.
1469. With an ordinary south-easterly gale you would not mind taking the bar with 12 feet of water? No.
1470. *Mr. Humphery.*] When you say that the present channel is about the same depth as the proposed channel will be when the training-walls are erected, do you mean to say that there is a depth of 9 or 10 feet over the whole of it? When the channel was where the proposed channel will be there was about 11 feet.
1471. For the whole width of 1,100 feet? I could not say that it was that width, but it was pretty wide. It did not last long.
1472. What do you think is the width of the channel at the present time? I have not been there for a couple of months. The channel varies in width. When I was there I daresay it was 600 or 800 feet wide at the entrance, and about 200 feet wide at the patch of rocks where the "Lismore" was wrecked.
1473. There is no uniform width? There is no uniform width.
1474. It is proposed to assist the scour after the training-walls are built, or even before, by means of guiding wall at the North Creek? Yes.

Capt.  
B. Alley.  
17 July, 1889.

1475. Is it your opinion that the water of the North Creek, if it were trained so as to meet the outward current nearer the northern training-wall, would be an assistance in scouring out the channel? It would be a help, if the training-walls led it so as to assist the water from the main river.
1476. Is there a dredge working in the river at the present time? Yes.
1477. On what part of the river? She was working at Woodburn when I was there.
1478. That is a considerable distance from the entrance? About 30 miles.
1479. Do you know that the dredge works pretty frequently near the entrance? She was working for a long time at the crossing.
1480. How far from the entrance? Close to the entrance, just as you get round the Beacon Rock.
1481. How many months in the year was she working there? Nearly twelve months.
1482. How long is it since she was moved to Woodburn? Three or four months, I think.
1483. She goes backwards and forwards? Yes. As the crossing shelves up, she leaves off work in the river and goes there.
1484. *Mr. Tonkin.*] During your sixteen years' experience, you say that you have known several channels to be formed south of the proposed channel, even as far south as the green patch;—have all those channels been good ones? Yes. We always took the bar in any weather when the channel was there. We might touch the sand and get off next tide. Where the channel is now there are so many rocks that we dare not take it except in fine weather.
1485. As a rule the channels south of the proposed channel have been deeper than those north of it? Yes.
1486. If the northern training-wall were built first, what objection would there be if it created a channel south of the proposed channel. You were asked whether it would be advisable to erect both walls simultaneously, or whether it would not be advisable to erect the northern training-wall first. You answered "No" to the second question, because you said it would probably create a channel south of the proposed channel. Would there be any objection to having a channel south of the proposed channel—would it not be as good as the proposed channel? It would be quite as good as the present channel.
1487. Would it be as good as the proposed channel? No.
1488. Do you not think, for the sake of saving expense, that it would be advisable to merely erect in the first instance the north training-wall; do you not think it would make a good channel by itself? The northern wall would have a tendency to keep the channel from the dangerous position in which it is now, and in fine weather the current would strike the wall and make a channel up against it.
1489. Then you would not want the southern wall? Not if the weather kept fine.
1490. Do you not think it would be advisable to try the northern wall first, to see how it would act? It would save a lot to try the northern wall first.
1491. But you say that a channel south of the proposed channel has always been one which you can get in and out of? Yes.
1492. *Mr. Dowel.*] Are you aware that Sir John Coode has recommended the construction of the southern breakwater first? No.
1493. Is it your opinion that if the southern training-wall were constructed first it would have the effect of removing the sand and forcing the channel more to the north? Yes.
1494. Giving you a channel more quickly than the construction of the north retaining-wall would? The southern breakwater being constructed first would have a tendency to keep the channel where it is now.
1495. *Mr. Lee.*] The present entrance is round by the North Spit and between the Beacon Rock and the pilot station, is it not? Yes.
1496. You see the commencement of the red line marking the north breakwater? Yes.
1497. If that work were decided upon, it would necessarily be commenced at the shore end, and if it were constructed from the shore to the Beacon Rock would it not block up the present channel? It would.
1498. Is it likely that another channel will be opened out? Yes.
1499. Do you think the commencement of the work will be likely to close the bar altogether? No; it could not.
1500. If the present entrance were closed, in all probability another channel would be opened out? Yes.
1501. Do you know the ordinary rise of the flood tide in the Richmond? It depends upon the part of the river.
1502. Is there any perceptible rise near the entrance—say about Ballina? About 3 feet with an ordinary spring tide.
1503. In flood-time there is an enormous volume of water rushing down over the present spit, is there not? Yes.
1504. If the training-walls were constructed that volume of water would be confined between them? Yes.
1505. And consequently there would not be much possibility of the flood-waters depositing sediment when they were passing out so rapidly? I do not think there would.
1506. You think the tendency of a large volume of water, although heavily charged with sediment, would be to create a scour and wash everything out to the sea? Yes.
1507. Do you think there would be any danger of a deposit being made outside the walls;—do you think there would be any danger of a bank being formed at the end of the walls? No.
1508. Do you think the scour would be sufficient to drive the sand out and keep the channel clear? Yes.
1509. Is there much timber and *debris* coming down the river at flood-time? Yes; there are logs and dead trees.
1510. Do they impede the navigation? The channel would be sufficiently wide to allow them to pass.
1511. In your opinion, if the works were commenced on the northern side first the navigation would not be stopped? No.
1512. It is thought that the construction of these works will take some years, and consequently it would be a serious matter if the passage were blocked? I do not think it would be.
1513. If the present passage were blocked up the current would open another? Yes.
1514. *Chairman.*] You said a little while ago that you thought it would be better if the mouth of the entrance were made bell-shaped. Do you not think that that would give greater facilities for the distribution of sand than exist with the narrow mouth; would there not be a tendency for the sand swept in and out to shoal up more rapidly than if the channel were narrow? It might have a tendency to shoal up, but I do not think that it would do so.

Charles James Saunders, Esq., Chief Draftsman, Department of Lands, sworn, and examined:—

C. J.  
Saunders, Esq.  
17 July, 1889.

1515. *Chairman.* What is your position in the Lands Department? I am Chief Draftsman there.
1516. Do you produce any maps of the Clarence and Richmond districts? I produce a sketch map of the land districts of Lismore and Casino, showing the relative portions of alienated and reserved lands. [*Vide Plan No. IV.*] I also hand in a statement as to the area of the districts, the areas alienated and leased, and the character of the land. [*Vide Appendix C.*]
1517. *Mr. Copeland.* Can you give the Committee any idea of the area of land in the reserves, especially in the resumed areas? I cannot give a complete return yet, part of the information being on its way from Grafton. I hope by to-morrow to be able to give you a complete statement of the area of land in the different reserves. I think, on the whole, there are about half a million acres reserved. The great proportion of these reserves are timber reserves. [*Vide Appendix C1.*]
1518. I suppose you are aware that some time ago the district surveyors were asked to furnish reports as to the nature of the land in each reserve in their district, with a view to the land being thrown open for conditional purchase. If those reports are in the Department I should think you would be able to tell what percentage of the land was agricultural. That is a point upon which the Committee would like to be informed? In a number of those cases the Minister has approved of subdivisions of the reserves being made, and the reports are now in the hands of the surveyors, so as to enable them to make the subdivisions.
1519. In the statement you handed in you say that there are coal deposits in the district;—what authority have you for that? The authority of the Mines Department. They sent me a rough sketch which shows that the whole valley of the Richmond is of coal formation.
1520. Are you aware what number of miners are working gold on the coast? No; I have no information. The principal gold mining centre is Fairfield.
1521. That is on the Clarence, is it not? It is on the Clarence watershed; although it is in the Casino Land District. It is connected with Casino as far as land business is concerned.

Walter Shellshear, Esq., C.E., District Engineer, Department of Railways, sworn, and examined:—

W.  
Shellshear,  
Esq., C.E.  
17 July, 1889.

1522. *Mr. Copeland.* What are you? An Engineer, belonging to the Railway Department.
1523. Have you any personal knowledge of the entrance to the Richmond River? I have.
1524. How have you gained your knowledge? I have visited the river.
1525. With a view to railway purposes? No. I may state that the question of improving these bar-bound rivers is a favourite study of mine. I have taken a great deal of pains with it. Some time before Sir John Coode came out here I wrote several papers dealing with the subject, and it is gratifying to find that my paper on the Richmond River contains a very similar proposal to that of Sir John Coode. I have a copy of it here. [*Produced.*]
1526. Have you ever been stationed there in an official position? No, I was never stationed there in an official position.
1527. You have not made any surveys there with reference to the proposed railway? No.
1528. Are you acquainted with other river works in the Colony—do you know the Clarence? I have visited the Clarence, Newcastle, and Lake Macquarie.
1529. What is your opinion with reference to the works being carried on at the Clarence? Well, I certainly do not agree with the lines on which the works are being carried out there.
1530. Have you carefully looked at the proposed workings of Sir John Coode? Yes. I examined those workings closely.
1531. Do you approve of them? Undoubtedly, if those works are carried out, you will succeed in making a good entrance to the river. This is the only principle upon which the river can be improved.
1532. Have you had any experience in connection with this kind of work in any other country? As I say, I have taken great interest in it, and have collected a large number of facts. I have visited various places in other parts of the world where such works have been carried out, though I have never been connected with any.
1533. What reason have you for believing that it would be better to have the opening of the channel a little further south than is proposed on the plan? I believe it would be advantageous for this reason, that you would get a much better run into the main river. I had not the opportunity of getting minute particulars of the borings; but from the general contour of the country I infer that there is no risk of meeting the rock except at a considerable depth.
1534. Have you noticed the dip of the strata? The rock seems to be dipping to the south.
1535. The rock at the North Head is volcanic? It is basalt, but it is overlaid with a sort of rotten sandstone. The principal part of it is a sort of rotten sandstone. At Black Head, a headland beyond North Head, there is a large quantity of very excellent basalt, and there is very little rubbish on the top of it.
1536. Is there any sandstone to the south of the entrance? No; it is all low-lying sand country with mangrove swamps.
1537. There is nothing to show you that the dip of the strata is to the south? From the indication of the country I think it is probable that the rock is a considerable depth below the surface towards the south; but of course, in the absence of borings, I could not speak positively.
1538. When did you first begin to pay attention to the Richmond River? About 1883 I first began to pay attention to it. I came out here in 1879, and I heard a great deal of talk about these bar-bound harbours, so I thought I would go in for the subject and study it. It is a thing I have always been interested in, having visited a number of works at Home. Knowing the principle upon which other harbours had been improved, I prepared a paper on the subject, which I read before the Royal Society on the first Wednesday in June, 1884.
1539. What works have you visited in Europe? I have seen the works at Dublin and at Newcastle. I was brought up at the Clyde, and saw the large harbour works there, though there is nothing similar to the Richmond entrance at the Clyde. I have also been in Belfast, and in Liverpool, and in pretty well all the ports of England. I might say that the first really successful treatment of a bar was at Dublin, and the principle upon which that harbour was improved is the principle upon which all the bar harbours which have been successfully improved were dealt with.
1540. You have never been employed at any of these works? No.
1541. I suppose you approve of the design shown on the plan, and believe that it will have the desired effect? I am certain it will have the desired effect of creating a permanently deep channel.

W.  
Shellshear,  
Esq., C.E.  
17 July, 1889

1542. Can you suggest to the Committee anything which you consider would be an improvement? I am of opinion that it would be an advantage to have the entrance a little further south; but, of course, that does not affect the principle in any way. I think that the abrupt turn in the channel is objectionable to a certain extent; but still the plan proposed would give a good entrance. The principal reason in my mind for bringing the channel to the south is that there is a risk of the works being undermined if there is a sharp curve in the training-walls inside.
1543. You have no objection to the bearings of the training-wall? I have no objection whatever to the bearings of the work. The principle of the scheme is the principle which has succeeded in other works which have been carried out.
1544. Do you think the channel would be wide enough to carry off the waters of the river? I think so; but in Sir John Coode's report he states that the width of the channel will have to be regulated as circumstances dictate during the carrying out of the work. The channel shown in my sketch is slightly wider than his; but you can regulate the width as you think necessary as the works progress.
1545. Have you seen any harbour works in the old country where the entrance is bell-shaped? The great disadvantage of a bell-shaped entrance is that the velocity of the outgoing ebb tide at the point where the conflict takes place between the waves and the tide is lessened. I think that where you have a bell-shaped entrance the tendency of the waves is to intensify as the entrance narrows, whereas with an entrance like that proposed the tendency is for the waves to decrease in force.
1546. What about the flood tide;—would it not take in sand with it? There is less danger of a flood-tide taking in sand with a narrow entrance than if the entrance were bell-shaped. If the entrance were bell-shaped it would have a decided tendency that way. One of the main objects of the scheme is to so construct the works as to give every facility for taking the sand out, and as little as possible for letting it in. That to a large extent is secured by the particular form of entrance proposed.
1547. The only change you would suggest would be to bring the channel further south with a view to strengthening the run? I do not throw that out as a suggestion; but it is my opinion that it would be advantageous to have the channel further south.
1548. So as to get rid of the sharp curve? I consider that curve an objection, because I believe it would be difficult to navigate. I believe if the channel were made in the position shown in my sketch you would get a very much better run.
1549. You see the training-wall at North Creek;—do you think that that wall would have the desired effect for scouring out the entrance to the creek? It will have that effect. The great difficulty, as I pointed out in my paper, is the formation of eddies at the entrance. The sandbanks at the entrance are, to a large extent, caused by the eddies which take place there. The tide running out of the North Creek meeting the tide from the main river makes a considerable disturbance. I noticed that when I was up there. Wherever there are eddies the sand is deposited. The great advantage of the North Creek training-wall will be to bring the water from the entrance of the creek through the channel, and so destroy the chance of a deposit being made. In my plan the same result is obtained by the altered position of the entrance. On this plan my entrance is plotted out on a larger scale. [*Produced.*] The channel has shifted about within a range of 7,000 feet.
1550. What is the nature of the rock to the south? It is all sand there.
1551. Even where the township is surveyed? Yes; it is covered with low-lying ti-tree scrub.
1552. And there is no stratified rock at all? No signs of rock at the south of the North Creek; but there is rock at the pilot-station, and there is basaltic rock, overlaid with sandstone, at the North Head.
1553. What kind of rock is that at the pilot-station? There is a basaltic reef right round where the present channel goes.
1554. *Dr. Garran.*] You have paid some attention to our bar harbours on the coast? I have.
1555. And you are of opinion that where there is a long stretch of sand between two headlands there is no alternative than to pinch the current between two solid walls? You must have two solid headlands. Wherever you have two solid headlands there is no bar. Take Sydney, Botany, and Broken Bay, for example; at those places you have no bar. The sand has no chance of forming one. Where you have a sandy entrance the only thing is to confine the channel between artificial headlands.
1556. To imitate nature by making a north and south head? Exactly.
1557. You not only must pinch the channel, but you must carry out your walls to a certain depth? You want to carry them out sufficiently far to prevent the sand from following them out. The great difficulty they have experienced on the coast of France, in the English Channel, is that as they push out the breakwaters so the sand follows them, and a bar forms in front; but a peculiarity of our coast is the enormous depth of the sea at a moderate distance from the shore. The bottom shelves down, comparatively speaking, perpendicularly, so that our bars are purely local. If you can succeed in tipping them over the edge of the submarine cliff you have done with them. Here is a copy of the Admiralty Chart [*Produced*] which shows the depth of the sea at this part of the coast. It is no distance before you get out to the ten-fathom line there; whereas in the English Channel you can go out several miles before you come to the seven or eight fathom line.
1558. You must go out far enough to throw the sand on to the sea bottom? Yes.
1559. What depth will that be? As the beach dips so rapidly here of course the current will follow out to some considerable distance. I do not consider there will be any occasion to go out more than 1,000 or 1,500 feet from low-water mark.
1560. The distance out depends upon the depth? Yes.
1561. What depth do you want to go to? I do not think there would be any danger of the sand following you out when you got into 17 or 18 feet of water. It is considered that about 23 feet is the depth they should go to.
1562. That is in England? In England.
1563. You think that if we get to 18 feet no sand-bar will form across the mouth? I feel certain that no sand-bar would form across the mouth, even if we only went out 10 or 12 feet.
1564. The rush of the water, carrying the sand with it, sweeps it out into the sea? Yes; and the sea has an unlimited capacity for taking it.
1565. If there were any tendency to form a bar it would be just at the mouth? At a short distance from the end of the jetty, where the tide begins to lose its strength.
1566. Just outside the mouth? Just outside the mouth. In the case of shallow seas a bar forms 1,000  
or

W.  
Shellshear,  
Esq., C.E.

17 July, 1889

or 1,500 feet beyond the training-jetties; but in the case of our harbours there is such a depth of water at that distance that there is no danger of that happening.

1567. The stronger the scour the less chance there is of a bar forming? Certainly.

1568. That is a good reason for pinching the channel? Yes; you want to have it such a width that it will not cause a race, but will yet have a sufficient scour to cause the removal of the sand. In the case of Dublin the water runs down at about the rate of 3 miles an hour, and that does not interfere with the navigation. If it were increased beyond that it would be dangerous.

1569. You have to hit the happy medium between too strong a race and too wide a channel. Yes. If the race is too strong it impedes navigation, and if it is too weak the sand is deposited in the channel.

1570. In making this mouth and adjusting it in that way to the current, how will you deal with the difficulty of only having the natural flow of the current at one time and at another a terrific flood? In my scheme I propose to carry the walls only above half-tide level, so that in the event of a heavy fresh the water would spread over the walls.

1571. Your banks would form a weir? Yes, at about half-tide mark.

1572. You would let the water go over them? I might state that I read a paper before the Engineering Association some time ago, before Sir John Coode made his report, showing the form of work which would be necessary. I think it would be both cheap and suitable.

1573. You think no disturbance of the stone walls would be occasioned by letting the floods go over the top? There would be no disturbance. The further out you got, as the work became more exposed, larger stones would have to be used, and the extreme ends would have to be protected by large blocks of concrete to prevent them being beaten down. Near the shore smaller blocks would do.

1574. Do you know to what depth the breakwater goes out? From an old chart I have here, I think about 23 feet.

1575. You think that superabundant? I think that depth would be ample. In fact, I do not think there would be any occasion at present to take the breakwaters out to the extreme length shown on the plan. I think that some middle position between the red line and the end of the dotted line would answer everything. This chart gives the soundings at this particular part of the coast. [Produced.]

1576. Have you considered the expediency of carrying out the training-walls without the breakwaters? You will get beneficial results from the training-walls undoubtedly, but then you will probably have to contend with a bar out beyond them.

1577. Do you think there would be a danger of a bar forming at the ends of the training-walls? There would be almost certain to be a bar, unless the works were carried out sufficiently far.

1578. And if there were a bar, would there be a break? There would be a break.

1579. If we were to make only the training-walls first we could see the effect of them before going on with the extension? Certainly.

1580. The work would be permanent as far as we went? Yes.

1581. We could carry it out yard by yard slowly, and see the effect as we went out? There is one objection to carrying it out yard by yard, and that is that the rapid changes at the ends of the breakwaters, especially when you are dealing with sand, cause a waste of material.

1582. But I understand that the end is not to be finished off—it is simply to be left rough? But still you would have to protect the bottom. The eddying of the water round the end of the breakwater causes an enormous waste of material.

1583. But in any case the breakwater would sink as the scour went on? It is not necessary to make it sink to any extent. The great secret is in thoroughly protecting the bottom. The Dutch protect the bottom with fascine mattresses, and at the Amsterdam ship canal the bottom was protected with 3 feet of fine stone, which prevents the sand from coming up through the large stone. The bottom should be protected by either small stone or by fascine mattresses, as otherwise the eddies cause the sand to rise and the stone to fall.

1584. Supposing that the training-walls were carried out, and it was found that they were not quite enough, and that it was desirable to do something more, you say it would not be desirable to carry the extensions out yard by yard;—what length would it be desirable to go at a time? From 400 or 500 to 1,000 feet.

1585. You are of opinion that it would not be worth while to construct less than 400 or 500 feet at a time? It would not be worth while to construct a less length than that.

1586. 400 or 500 feet would make a good experiment? It would undoubtedly improve the entrance.

1587. And then you could go on experimenting in lengths of 400 feet? Yes; but of course it would cost more than if you undertook the work to a certain fixed point.

1588. But in making a breakwater like that it always is made foot by foot and yard by yard, and is subject to storms and displacements of every kind? There are various ways of carrying out the work. My opinion is that these works should be more in the nature of training-walls than of breakwaters. The object of a breakwater is to secure perfectly still water inside, while that of a training-jetty is to divert the current in one direction, and to prevent sand being deposited in a channel. Having smooth water is of little importance as compared with the making of a deep channel and preventing the sand being deposited in it.

1589. You see the design of the breakwaters on the plan—stone blocks are to be thrown in to find a natural bottom;—could not that work be carried out in lengths of 100 yards? A wall like that would have to be carried out foot by foot as you tipped in the stone. The stone would have to sink until it found its natural bottom. But the question is, if the work is carried out in that way, will it not require a much larger quantity of stone than should be necessary.

1590. You think it would use more than sufficient stone? My opinion is that a much lighter description of work would answer every purpose.

1591. Would you use a wooden framework? I would for a time, and protect it with solid stone. The principal thing is to secure a permanent channel, and when you have secured that you can consolidate your works. If you simply drop the stones in one by one it may take years before any result is secured; whereas, if you run out the work in timber, protecting the timber with stone as you go on, you get a result at once. Of course you have to run the risk of a considerable portion of the work coming to grief before it is protected by the stone; but you get the results quicker. In the case of the entrance to the Danube, the works were the cheapest of the kind ever carried out. They were carried out in timber at the start, and protected with stone. I have a diagram of them here. [Produced.]

1592. [Chairman.] You refer to the Sulina Mouth? Yes.

1593.

W.  
Shellshear,  
Esq., C.E.  
17 July, 1889.

1593. *Dr. Garran.*] If you had timber staging, could you put in large blocks;—would they not smash the staging? Heavy blocks of stone are only necessary for the sea-face and for the exposed parts of the work. On the part marked as a training-jetty small stone should do—stones of 4 or 5 cwt.
1594. But I am speaking of the outside breakwaters. As you go along you are exposed to the full force of the sea? Well, it depends. On the Danube they protected them with large blocks of concrete as the staging decayed.
1595. But if you were to use timber staging for the breakwater and small stone, would it not get washed out and flattened down? The stone would be flattened down considerably. You must protect the extreme end with large blocks of concrete or stone.
1596. But the extreme end will be where you leave off at night? The further you get out into the ocean the heavier will be the material you will require.
1597. When we get out a little from the sand we must use very large stones? Well, for the principal part, as the works rise from the bottom. At the bottom the smaller the layers of stone the better; but when you get up some little height you will have to use larger stones than need be used inside. When you get near the surface the larger the stones you can use the better. In many cases concrete blocks weighing 100 tons are used.
1598. Then your policy is to make a base of smaller stone and a coping of thick stone? To protect the bottom with small stone, and make the superstructure with as large stone as we can get.
1599. Have you paid any attention to the working of the sand up and down by the current? At the Richmond the sand has a constant tendency to work north, and at the Clarence to work south, according to the position of the headlands and the rocky bottom.
1600. How will that affect the opening at the entrance when the works are completed? The works will cause a beach to form to about where the light red line is shown on the plan. A certain amount of sand will be washed up to the entrance; but with a heavy scour the channel will be kept clear.
1601. Will the sand work up to the extreme point of the breakwater? It will follow it up for a considerable distance; but on account of the shelving nature of the bottom it will not work out to the end, to 23 feet.
1602. If it would not work to the end there would not be much danger of a bar forming at the mouth? No; but unless you took it well out it might.
1603. Then if we crept out slowly the sand would follow us, and there would be a tendency for a bar to form? Until you get out to deep water there will always be that tendency.
1604. That is equivalent to saying that we shall always have the risk of a bar forming until we get out to a depth of 23 feet of water? Yes.
1605. That implies that the work will have to be taken out to a depth of 23 feet in order to make a complete job of it? Yes. If you only went out to 9 or 10 feet there would be always some sort of entrance; but to get a good entrance you would have to go out to 23 feet.
1606. You see the southern training-wall proposed by Sir John Coode;—we understand that the object of that is to prevent the water making a rush across the sandspit and forming a southerly channel? Yes.
1607. Would not that be sufficiently protected against by having a rough tree piling across the inside? Well, on account of the peculiar bend there, there is always a tendency for the water to deepen and to recede from a reverse curve. If you did not take it out some little distance the water would scour out the piling, and you would have an excessively deep hole there. In fact, I believe that the water is very deep there at the present time.
1608. But if the sole object is to prevent the water from rushing over the sandbank, could we not do that with cheap timber piling until we needed the stone? Cheap piling, or fascine work similar to that at Cook's River, or timber protected with stone, is necessary there.
1609. Is there any necessity for a stone breakwater? None whatever. We only need a dam.
1610. Any kind of thing which would prevent the water going over there? Anything to keep the sand from washing away.
1611. You think that we might make the work cheaper at this point instead of making a stone training-wall? I think something cheaper than the material proposed should be used.
1612. Then if we began with solid stone at the inside of the spit and ran out from there, that would be sufficient? I do not think you need to use heavy stonework until you begin to leave the beach.
1613. But we must have the part across the spit protected, because that will be the entrance? You could have the timber protected by stone, as on the Danube.
1614. As I understand you, if we used timber, and filled it in with stone, that would be sufficient? You would have to protect the water-face with a quantity of loose stone to prevent the water from scouring it and undermining the piling. You would have to have an apron of stone.
1615. Do you think the whole of the southern breakwater from the beach inwards could be constructed on a cheaper scale than that proposed, and would still be as effective? I think so. If timber were largely used you could get the desired effect much more rapidly than by a system of end-tipping the stone.
1616. You think we would get a result quicker? Yes. Of course the timber would want a certain amount of maintenance, and when the channel had made its position it would be necessary to protect it. The timber would not last more than a few years, because the sea worm there is very destructive. Still, as far as inside work is concerned, I think you could get a good result with timber, and when a perfect channel was formed, and the bank filled in, there would be no difficulty consolidating the work, as was done at the Danube.
1617. You could follow the timber up with stone? If you followed it up with concrete it would make the work permanent.
1618. Do you think it could be done much more cheaply that way without invalidating its utility? I think so.
1619. Supposing the north training-wall were made,—evidence has been given to us to show that whenever a stone wall is made the water has a tendency to cling to it? Undoubtedly, because of the nature of the river entrance.
1620. If that wall were made would the water not have a tendency to cling to it and follow it along? Yes, under ordinary circumstances.
1621. If the current were caught that way would not the tendency to rush across the spit be checked? It is in times of heavy floods that the water goes across there.
1622. The ordinary current does not? The ordinary current does not. There is always a deep channel at that place. As far as I have been able to trace the history of the entrance it is only after exceptionally heavy

heavy floods that the water runs through the south spit, when the flood-water is a good deal stronger than the tidal influence.

1623. You think there would be a risk of the flood-water going over there? Undoubtedly, and you might have an entrance 2,000 or 3,000 feet wide with a depth of only 2 or 3 feet. If by a sudden fresh in the river a certain channel were opened, the entrance might be so wide that it would be perfectly useless.

1624. Then your opinion is that the south training-bank should be carried out simultaneously with the north? They must both be carried out together. You must protect the south spit before you go to any length with the northern wall, for otherwise if you get a fresh the river will be blocked.

1625. It has been pointed out to us that the current at the present time flows round under the North Head and through Shaw's Bay, and that the first thing to be done is to stop it from taking that direction by making the breakwater as far as Beacon Rock;—do you recommend that? That would have the desired effect.

1626. Then the channel must go south? It might flow over the middle spit.

1627. It might cut a new channel through there? Yes, and go out towards the Heads.

1628. If it did that it would not be as bad as it is now? No; the present channel is the worst you could get.

1629. Then you agree in the suggestion that that portion of the breakwater should be the first piece of work undertaken? Yes, providing of course that you protect the southern spit before you carry out the northern wall to any distance.

1630. You would not recommend the northern breakwater being carried further than the end of the middle spit before work was commenced on the southern wall? No; although, if you carried out the northern breakwater, and were sufficiently lucky not to have a heavy flood, a good channel might be formed in a couple of years; but, on the other hand, you might get a heavy flood, and the channel would be spoilt.

W.  
Shellshear,  
Esq., C.E.  
17 July, 1889.

THURSDAY, 18 JULY, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Improvements to the entrance of the Richmond River.

Walter Shellshear, Esq., C.E., District Engineer, Department of Railways, sworn, and further examined:—

1631. *Mr. Humphery.*] Yesterday, when under examination, I think you expressed an opinion that the training-walls need not be higher than 2 feet below high tide? About half-tide mark.

1632. I think you said the rise and fall of the tide was 3 feet? From 3 to 5 feet.

1633. That would be about 2 feet above low water? Two feet above low water. Of course you would have to regulate the height to a certain extent, according to the result you got from the works as they proceeded. In cases where works have been carried out at a low level they have been successful; but they have also been successful when carried out at a high level. The lower you can keep the works down the less are they exposed to the force of the sea, and, therefore, a lighter description of work will do for them.

1634. Is it your opinion that the training-wall as far as the entrance should be between high and low water? The training-walls are not exposed to the action of the waves; they are merely retaining-walls to keep the sand from encroaching, and it would be necessary to take them above high water level. But in the case of breakwaters—

1635. I am not speaking of breakwaters, I am speaking of the training-walls—that portion of the work indicated on the plan by the red lines? In the case of the training-walls it would be necessary to keep them above high-water mark, as otherwise you would have the sand tumbling over and blocking up the channel.

1636. Then you were not referring to the training-walls yesterday, but to the breakwaters? The question is whether the breakwaters should not be training-walls. There are a number of works carried out where the outer portions are training-jetties. The distinction between a breakwater and a training-jetty is that a breakwater is intended to completely destroy the action of the waves, while the training-jetties are to guide the incoming and outgoing tide into one fixed channel.

1637. I do not remember whether you expressed an opinion as to whether it would be better to have breakwaters, or training-jetties, at the Richmond? Perhaps I did not express it very clearly. I think training-jetties might be found to answer the purpose, and they would certainly cost less than breakwaters. Of course, if low level training-jetties did not succeed they would do as foundations for the breakwaters. You could always raise a training-jetty, although if you built a breakwater you could not lower it.

1638. Then you do not quite agree with that portion of Sir John Coode's scheme where he recommends that breakwaters should be constructed? Well, I think it would be advisable to try the cheaper plan first, and simply construct training-jetties. If they did not give the desired effect they could always be added to and raised to any height required. The money would not be thrown away in making them. They would do as foundation for the breakwaters.

1639. The training-jetties will be below high-water mark? They would come to about half-tide mark at the extreme ends—that is, the ends facing the sea. Towards the shore you would have to bring them up sufficiently high to prevent the sand from getting into the channel.

1640. The whole of the works inside will have to be above high-water mark? They will have to be above high-water mark, or otherwise the sand will be drifted over into the channel. They act there in two ways—as retaining-walls to keep the sand back, and as training-walls to direct the current on the other side of them.

1641. What height above high water do you think the training-walls should be? The sand there drifts very freely. I think it would be necessary to go 3 or 4 feet above high-water mark with them.

1642,

W.  
Shellshear,  
Esq., C.E.  
18 July, 1889.

W.  
Shellshear,  
Esq., C.E.  
18 July, 1889.

1642. With regard to the north training-wall, Sir John Coode recommends, and so does Mr. Darley, that the portion between the Pilot Station and Beacon Rock should be 6 feet above high-water mark, and the remaining portion 16 feet above it? Of course, it would only mean the expenditure of a little more money to bring it up to the additional height.

1643. Is it your opinion that the training-wall should be 16 feet above high-water mark? Certainly not, if it is constructed as a training-jetty. For inside work a training-wall should certainly go 3 or 4 feet above high-water mark.

1644. You think 16 feet would be too high? I think it would be unnecessarily high.

1645. What height should the training-walls go above high-water mark—I am speaking of that portion of the work marked with red lines? I think if they went 3 or 4 feet above high-water mark it would be sufficient; you would then be able to see what results you got from them, and it would be a very simple matter to increase the height afterwards. I believe for the purpose of training the channel a height of 3 or 4 feet above high-water would be sufficient.

1646. Had you an opportunity of meeting Sir John Coode? I had.

1647. Had you an interview with him? Yes, and I gave him copies of my papers.

1648. He had your papers before him while in Sydney? All that were then published; I have written one or two since.

1649. Do you know whether he fully considered your proposals? I am sure I could not say.

1650. You could not say from his report whether he did;—you have read it? I have read his report. The general principles, and the lines upon which the works are to be constructed, are similar, and, as far as the Richmond is concerned, I do not know of any other principle except that laid down by Sir John Coode in his report, and mentioned in my papers, by which there would be a reasonable chance of getting an entrance.

1651. Did Sir John Coode see your sketch which you handed to the Committee yesterday? I handed him a copy of my pamphlet with a sketch attached.

1652. Did you suggest anything to him about having training-jetties instead of training-walls—did you discuss the matter with him? I did not discuss it at any length with him. I may say that I did not have a very long interview with him as he was busy. I met him at the Australian Club; but he had to go away to keep an appointment at some meeting, so I only saw him for 10 minutes or a quarter of an hour.

1653. That was the only interview you had with him? That was the only interview I had with him.

1654. *Mr. Tonkin.*] Do you think it would be necessary to start both the training-walls at the same time? I think it would be advisable to start them both at the same time, as I explained yesterday. If you construct the northern wall first there will always be a risk of a flood coming down and breaking through the spit to the south of it, and you may then have a wide entrance which will be perfectly useless for navigation. So, unless the south is protected at the point at which you wish the entrance to be, there is a risk of the channel widening, and of the place being completely closed to navigation.

1655. But do you know that when there has been a channel south of the proposed entrance it has invariably been a good one, without the assistance of art? While it lasts; but according to the charts and records that channel does not last very long. The first heavy southerly or south-easterly gale will completely close it up.

1656. But it does not close absolutely at once; it silts up gradually, and works towards the north? According to the charts the tendency is to close up gradually, and the channel works towards the north.

1657. If that is the case, and the northern breakwater were constructed, when a flood had ceased running would not a gradual scour be created against the northern wall;—if the northern wall were in position, would not a channel be scoured out without the help of a southern wall? There would be a tendency for the channels to return to the northern wall; but then the great object of works at bar entrances is to keep the channel to one fixed spot, so as to let the action of the sea and the rise and fall of the tide act continuously upon the entrance. If you only made a wall on one side, you would have no guarantee that the channel would not break out at any point within 6,000 or 7,000 feet from the wall, and during the change from one channel to another you would have no guarantee that there would be a navigable channel. The charts show that there has been an entrance through the spit at almost every point between the portion coloured green at the south and the North Head.

1658. And it has been shown that whenever the channel has been south of the proposed channel it has been a good one? I take that to show that there is no rock there for a considerable depth down, and that the probabilities are that you could secure a very deep channel through the southern portion of the spit.

1659. Do you not think, under the circumstances, that it would be advisable to erect the northern wall first, and see whether that would not give us a channel; the outlay would be much less, and if we could not get a good channel by that work alone it would not prevent the southern wall being made afterwards? I am certainly of opinion that it would be very desirable to carry them both out together. I think you could not expect a permanent fixed channel with only one wall, because, as I said before, the charts and the records of the place show that the water has broken through the spit at every point between the extreme south and the north head. Supposing in a period of dry weather you had a good channel under the north wall, and a heavy flood broke through the south spit, there might be a time between the closing up of the south channel and the reopening of the north when you could not enter the river at all, and you would then be no better off than you are now.

1660. *Mr. Lee.*] If I remember correctly, you referred to a system of pile-driving as forming part of the south training-bank;—would that be pile centres with stone outers? Yes.

1661. As a matter of cost, do you think that that would be less expensive than making a permanent work with stone in the first instance? If you carry out the work combining the piling with stone-work you can use the piling as a stage from which to tip the stone, and in bringing up the wall you can tip the stone evenly; whereas, with a system of end-tipping, there is a tendency to make a scour at the end, which forms a deep hole that you have to keep filling up. If the bottom is protected by a layer of small stones the sand has not such a tendency to blow up.

1662. As a matter of cost do you think the piling would be more expensive? I think it would be cheaper, because, in my opinion, that plan would require very much less stone.

1663. But having in view the short time that the piles would last in that water, and knowing how destructive the sea worm is there—knowing that the piles will not last more than ten years, do you think that it would be cheaper? The main value of the piles is to construct a retaining-wall. The stone will form an apron in front of them, and by the time the wood has decayed the work will be so solidified that the support of the piles will not be required.

1664.

W.  
Shellshear,  
Esq., C.E.

18 July, 1889.

1664. Would not the centre require filling up when the piles have decayed? Yes; but that could be done comparatively cheaply when you had something solid to work on, which you would when the stone had solidified.

1665. But looking at this as a permanent work, do you not think it would be more advisable to construct it of stone in the first instance, instead of making a temporary job, partly of stone and partly of wood? You can always consolidate the work afterwards, and the cost of making what I might call provisional works, and subsequently consolidating them, would not be so great as if you consolidated the works at the start.

1666. What would be the difference in cost between making the work of piling and stone, and of making it entirely of stone, say for a chain? Of course that would depend very largely upon how the works were carried out. If they were carried out by a system of end-tipping, and made entirely of stone, twice as much stone would have to be used as with the other system.

1667. The piles would have to be driven, I suppose? Yes.

1668. To a rocky bed? No. If they were driven 4 or 5 feet into the sand, and then protected with a layer of small stone to keep down the sand, it would be sufficient.

1669. *Mr. Trickett.*] Have you considered what would be the best mode of bringing the stone from the quarries to the breakwaters, and the expense of that undertaking? I have not gone into that question. There seems to be plenty of good stone on the north, at what they call Black Head, to do a considerable portion of the work. They probably could not get sufficiently large blocks for the extreme ends of the work, but the greater part of the work could be carried out with the stone. Black Head is to the north of the light-house, and the stone there is basalt.

1670. Would not a great deal of the stone have to be obtained from the quarries at Broadwater? I cannot say. Unless you make a very close examination of the quarries you cannot tell exactly what stone you can get out of them.

1671. I suppose the wooden piles of which you have spoken will be used for the purpose of tying the structure together? Of tying the structure together, and giving a staging from which to work.

1672. That is the principle which has been usually adopted at places in the old country where breakwaters have been constructed? It is not the principle adopted in the construction of breakwaters; it is often adopted in the case of training-jetties. There is a distinction between the two. Breakwaters like that at Holyhead, and at similar places, are to provide smooth water; but to scour out a bar you have only to concentrate the flow of the tide in one channel, and it is not necessary that you should have absolutely smooth water, provided that the works are sufficient to maintain the channel.

1673. Would the timber have to be renewed from time to time? When you have got a result from the works it would be better to consolidate it with concrete, or to protect it with large stone, as large stone as you could get. You could not renew the lower portions of the piling, because they would be buried in the stone bank.

1674. The piling, I suppose, would be pretty soon destroyed by the *teredo navalis*? It would probably last at least three or four years.

1675. By that time the structure would have solidified so that there would be no necessity to have the wooden addition? Judging from what has taken place in other instances, I imagine that the work would be well consolidated in that time.

1676. *Mr. O'Sullivan.*] In your plan you merely suggest a north breakwater and a short breakwater from the south head? Yes.

1677. Do you think those two works would be sufficient to keep the channel clear? Yes; they would suffice to keep a good channel. The south wall would be necessary to protect the spit.

1678. What would be the cost of carrying out your proposal? I estimated it at the time—of course this is only an approximate estimate—at £220,000 for the whole work.

1679. Do you not think that if a north breakwater alone were constructed at first we could judge whether it would be advisable to construct other works;—could we not ascertain whether the north breakwater alone would drive the channel down to where it is proposed to make it, between the two extensions? Judging from the results obtained in other places I feel certain that, unless both walls were carried out, you would get very unsatisfactory results here.

1680. You have read of the works at the mouth of the Mississippi? Yes.

1681. Did not the construction of a dyke there shift the channel 2,000 yards? A low dyke was made at the Missouri—not at the mouth, but in the river itself, which shifted the channel from the west to the east bank. The deep channel was on the west bank.

1682. Would not the construction of the northern breakwater have a considerable effect in keeping the channel open long enough to enable us to judge whether it would be desirable to carry out the other works? The northern breakwater would bring the channel southward; but there is a vulnerable piece of ground between it and the extreme south which is liable to be cut through by a flood at any moment.

1683. Then you think it necessary to have a southern wall in order to prevent that taking place? Yes; I consider it absolutely necessary for the complete success of the work.

1684. I suppose if the works were carried out you would be still at the mercy of the wind, floods, and freshes? You would have a deep channel to get in and out of. A sailor is not much afraid of the waves; he is more afraid of bumping on the bottom, or of getting stuck on a sand bank.

1685. I suppose you have read of the works at the mouth of the Rhone, which are similar to these? I have.

1686. They failed? They failed, but under different circumstances. There is comparatively no rise or fall of tide in the Mediterranean. I think there is only a rise and fall of one or two inches there, so that they were entirely dependent upon the upland waters for a scour, and upon freshes, and as these are extremely irregular they have not succeeded in keeping the entrance open. At the Richmond we should depend upon the tidal scour brought about by the training-walls.

1687. Do you think we should be justified in incurring an expenditure of £400,000 on a work of this character when works sufficiently safe could be constructed for half that sum? I should not like to express a positive opinion about that. My personal opinion is that it would be very desirable to try something lighter and less expensive before carrying out the works proposed. Such works would enable you to see the results you were likely to get, and you could always solidify them at extra expense. If on the other hand you construct solid work at first you may spend far more money than is necessary.

1688. With regard to the breakwaters, I notice that in some of the American works, and also, I think, in France,

W.  
Shellshear,  
Esq., C. E.  
18 July, 1889.

France, they have banded the stone together with iron? In some of the works the large concrete or stone blocks are being kept together with iron dowells and clamps, to keep them from being separated.

1689. Do you think we could dispense with that in the outer works here? The work, as shown on the plan, is simply a rubble mound of large stone, and of course it would be very difficult to dowell them in the same way as if it were constructed of concrete blocks.

1690. But would this class of work be perfectly safe in the ocean—is there no fear of its being destroyed? It would be as safe as the Newcastle breakwater, and that has answered very well.

1691. Sir John Coode estimates that it will take at least 6 years to construct these works? I forget the exact time mentioned in the report; it is sometime since I read it through.

1692. I suppose there are means by which the work could be carried out very much quicker than that? The works on the Mississippi were carried out I think in about two years. At the end of that time there was a depth of about 30 feet.

1693. The works at Kurrachee, in India, were extended 710 feet in 4 months? Yes, I think that was the rate at which they were made.

1694. And blocks of stone, 27 tons in weight, were used? They were laid by a special crane. The breakwater was constructed very rapidly.

1695. Can you explain what is meant by the building of the breakwaters at the Mississippi with large mattresses? That is similar to what they have done in Holland. They made large mattresses of brushwood, 50 or 60 feet wide, using long faggots. A series of these were bound together with ropes and willow, and, in some cases, were 1,000 feet long. They were then floated down to the required position, and sunk with stones, to form the base course. A very favorable day is required for the operation. The object of the mattresses is to make a bottom where the sand is fine. If the stone is tipped in at once it sinks and disappears in the mud, and in many cases you require almost an indefinite amount of stone to raise the works at all; but if mattresses like those in Holland, at the Mississippi, and at Charleston, are used, a base to work on is obtained, and after the stone has been at the bottom for a short time the work becomes solidified.

Charles Cowdery, Esq., C.E., sworn, and examined:—

C. Cowdery,  
Esq., C.E.  
18 July, 1889.

1696. *Chairman.*] What are you? A civil engineer.

1697. Living in Sydney? My office is in Sydney.

1698. You wrote to the Committee saying that you had evidence to give them with regard to Sir John Coode's scheme for improving the entrance to the Richmond River? Scarcely that. I simply gave a suggestion. I have very few data to work upon.

1699. The Committee are inquiring into the advisableness of carrying out the work indicated on the map by red lines—can you offer them any evidence as to the advisableness or otherwise of carrying it out? My impression was that it would be better to join the Richmond and the Clarence Rivers.

1700. How long did you spend in the district? I only passed through it.

1701. And you came to the conclusion then that it would be better, instead of having two ports, one at the entrance of the Clarence and another at the entrance of the Richmond, to throw the waters of the Richmond into the Clarence, and let the entrance of the Richmond silt up or do what it liked? Yes.

1702. What would be the advantage of that? You would be making the country between Woodburn and the Clarence accessible, and you would also be shortening the distance between the town and Sydney by some 40 miles. Further, you would be improving the Clarence River by letting more water run through it. From Woodburn there is a creek running in a southerly direction for some distance, and from the Clarence there is a river running in a northerly direction.

1703. *Mr. Garrard.*] From where—Chatswood? From Malagua—from the River Esk.

1704. How far is that from Chatswood? It is nearer the mouth of the Clarence than Chatswood is. The land lying between the creek and the river is only some 8 miles by the map, and could easily be excavated for a ship canal. That would allow a certain proportion of the waters of the Richmond to run into the Clarence, and thus help to keep the Clarence open by increasing the quantity of water passing through it. I think the work should be carried out considerably cheaper than the proposed improvements to the Richmond entrance.

1705. *Mr. Copeland.*] The creek you alluded to, running from the Richmond, is the Rocky Mouth Creek? Yes; and the land intervening is, in rainy seasons, nearly all under water, so that the cost of excavation could not be great.

1706. *Chairman.*] This is a mere theory of yours. The land would have to be surveyed. You put it forward as a suggestion. You cannot say that the scheme is practicable, and could be carried out? I am sure it could be carried out.

1707. You have no idea as to what it would cost? Roughly speaking, I think it could be done under £200,000.

1708. Have you examined the south arm of the Richmond River;—you perceive that the south arm comes nearer to the Esk, and there seems to be a clear piece of country across? I have, and I have a map here showing lagoons all the way [*Produced*]. The distance from Woodburn to the Richmond Heads is some 26 miles. You would save that distance, and you would also save about 16½ miles along the coast; thus bringing the town 42½ miles, or, in rough figures, 40 miles, nearer Sydney.

1709. *Mr. Copeland.*] You would be robbing the Richmond of its water to give it to the Clarence? Yes; and improving the upper parts of the river by making the places there 40 miles nearer Sydney. It struck me when passing over the ground that the plan was feasible.

1710. You have not gone into anything like a reliable calculation? Well, I have taken the distance, and would make the channel 30 yards wide.

1711. Have you any knowledge of the kind of rock that would have to be cut through? I should cut through no rock.

1712. Nothing but sand? There is no rock, and the country is very fine.

1713. If I remember aright, are there not quartz ridges there? I think you could go round those. I have no survey or levels of the district.

1714. *Mr. Garrard.*] Would not the Richmond lose by this? That would not matter if the entrance were closed up.

1715. *Chairman.*] What about the people up the river? The people up the river would be better off than they are now. It would be only the Ballina people who could possibly object. 1716.

1716. *Mr. Copeland.*] They would have to go up against the current? There is really no current. The tide rises for many miles up. I believe the set of the ocean current outside is southerly, so that you would gain there again.

C. Cowdery,  
Esq., C.E.

18 July, 1889.

1717. Have you taken the trouble to work out what the cost would come to, assuming that the country was most favourable? I do not think the actual excavation would come to more than £150,000, and the other works would bring the total cost up to £200,000.

1718. Have you had any conversation with the people up there about the scheme;—do you think the Richmond River people would be likely to support this scheme? I have not had any conversation with them about it. With regard to the improvement of the entrance, you must remember that work done in the open sea is always liable to be destroyed.

1719. Are you in the Government service? No.

1720. Have you resided in the Richmond district for any length of time? No.

1721. Are you well acquainted with it? No. I have only passed across two or three times. The creek and the River Esk would have to be improved in places. I do not think any of the land there is very high.

1722. *Mr. Lackey.*] You have not had very much experience on these rivers? I have not.

1723. How often have you been there? Twice.

1724. Have you examined the mouth of the Richmond? I have not. I have never been through the mouth.

1725. Have you been on the Richmond? Yes, from Woodburn upwards.

1726. And at what point do you propose to connect it with the Clarence? I propose to make the connection from Woodburn to near the mouth of the Clarence, to the River Esk.

1727. How far is Woodburn from the mouth of the Richmond? About 26 miles.

1728. What distance would the canal be between the rivers? About eight miles.

1729. Do you think it would be better for the people up there if it were done, instead of expending money on two distinct entrances? I do certainly. It would also open up a new district.

1730. Would the canal you propose go through a fertile part of the country? From the appearance of the country, when I passed through it, I should think a very fertile country.

1731. What would become of the residents on the lower parts of the Richmond? They would be as well accommodated as they are now.

1732. But I take it that they are asking for better accommodation than they have now? Well, it would be better. They could always get out through the Clarence Heads.

1733. They would have to go up the river to get into the canal which communicated with the Clarence? The Richmond at that particular part runs nearly south, so that going into Sydney they would not be losing any distance.

1734. Have you considered what the relative costs of the two works would be? I think the canal could be constructed easily for £200,000.

1735. Do you know what is the estimated cost of the proposed works at the mouth of the Richmond? I believe £400,000.

1736. Have you examined the works at the entrance to the Clarence? I have not.

1737. Have you formed any opinion of them from what you have seen in passing through? I cannot say that I have.

1738. The entrance there is better than at the Richmond? Yes.

1739. When the works at the Clarence are carried out, do you suppose that there will be good access to the river? I understand so.

1740. Have you considered the proposal of railway communication between the Richmond and the Clarence? I have not.

1741. You have heard that it is proposed to make such a railway? I know that it was proposed, and it struck me at the time that it would be cheaper to cut a ship canal.

1742. You think if a channel were constructed a railway would be unnecessary? Yes.

1743. Supposing works were carried out at the entrances to both rivers, do you think railway communication would be necessary? I hardly think so.

1744. Did you go much about the district while you were there? I only travelled by coach from one river to the other.

1745. Did the country between impress you as being a valuable belt of land;—was it rich land capable of carrying a large population? Very rich land; in fact as good as that on the Richmond or the Clarence, and the land in those places is particularly rich and fertile.

1746. You have not gone into the merits of the proposed scheme at the entrance to the Richmond River at all? I have not.

1747. *Mr. Trickett.*] What size do you propose that the canal should be? It should have a depth of 12 ft., and be, say, 30 yards wide.

1748. What is the actual distance between the Richmond and the Clarence—I understand that you propose to strike into some creek? The distance between the two rivers is, I believe, 20 or 21 miles.

1749. When you strike the creek you refer to, do you get good navigable water? Both the creek and river would have to be improved—that is part of the work.

1750. You have gone into that question? Yes.

1751. What depth of water is there in the creek at the present time? Of course you get various depths. In some portions I believe it is as deep as the river. I have not gone into the matter in detail.

1752. Is part of the creek left high and dry at high tide—it may be that it will cost hundreds of thousands of pounds to make it navigable? It is all alluvial country, so that it could not cost a great deal.

1753. Is your estimate of £200,000 for the canal exclusive of the expense of improving the creek? No, it includes the whole work.

1754. What reason have you for making that estimate? It is a very rough estimate. I have merely travelled through the district.

1755. You could not arrive at the cost of a work of that kind merely by travelling through the district;—you must have gone into the matter more fully? Once, when I was travelling through, nearly the whole country was under water, so I could judge roughly as to the levels.

1756. But as to the quantity of stuff to be taken out, have you gone into that with any degree of accuracy? Not with any degree of accuracy, but I estimate the total excavation at 3,000,000 cubic yards.

- C. Cowdery, Esq., C.E.  
18 July, 1889.
1757. Have you been engaged in any work of a similar character elsewhere? No, I have not; I have done railway work.
1758. You have never done any canal work? No.
1759. I understand that this is a mere suggestion of yours—a primitive suggestion without any detailed information? Yes, I have not gone into details.
1760. *Mr. Hurley.*] How did you come to the conclusion that a canal between the two rivers would be more serviceable than an improved entrance like that proposed by Sir John Coode? Simply because you will give accommodation to a new part of the country as well as to the country that would be served by the proposed entrance. The major part of the Richmond River would also be carried nearer to its market, which, I presume, is Sydney. Thirdly, there would be only one entrance to deal with in place of two.
1761. Have you thought out the proposition set forth on the map? I have not gone into that matter at all.
1762. You have had no experience, except by reading, I suppose, of the cost of the construction of the canal, and of what its dimensions should be? I know what earth work should be shifted for, or masonry built.
1763. But you have no idea of the difficulties you will be likely to encounter,—whether you will have to go through sand, earth, or rock, in the construction of the canal? Judging from the appearance of the country I think there will be no engineering difficulties whatever.
1764. There will be no rock or other engineering difficulties in the way? I think not.
1765. It is all level country there? It is fairly level the whole way.
1766. If we construct such a canal, will it not require a very large annual expenditure to keep it in order? I think nothing at all. It would simply be like a portion of the river and would not cost more than the present river does.
1767. I suppose that you have seen the Panama and the Suez Canals? Yes; the Suez Canal.
1768. You formed your opinion as to the probable success of this canal because you had seen those? Just so.
1769. Would not the flood waters going through the canal cause a great wash and cut into the banks? I think not more than they do into the alluvial banks of the present river.
1770. You would not be surprised if it were to cost £400,000, I suppose? I should be very much surprised.
1771. The country on both sides is good agricultural country? I imagine so. I made no inquiries.
1772. If it is under water, what use would it be to an agricultural population? When I saw it under water it was after excessive rain. The major part of the Richmond is under water at times.
1773. May I ask what was your object in visiting the river,—was it to inspect any particular part of the country? No; I had business at Lismore; I went up the Richmond to Lismore, where I was professionally engaged for a short time.
1774. You have not taken into consideration the cost of constructing a railway from Ballina to 18 miles up the river, where a quarry exists? I have not. I have not gone into the matter of improving the heads at all.
1775. *Mr. O'Sullivan.*] Your proposed canal is not to connect the Richmond with the Clarence, but to connect the Rocky Mouth Creek with the Esk River? Quite so, and to improve the river and the creek.
1776. Is the Esk River navigable? That I could not say.
1777. You have not been up it at all? I have not.
1778. Nor have you been along the Rocky Mouth Creek? No; I have been round the mouth, but have not gone up it.
1779. You have made no survey? I have not. I wish you to treat this simply as a suggestion. It would be necessary to survey the country, and take levels, before any accurate information could be given.
1780. *Mr. Garrard.*] From what points on the Richmond and the Clarence did you travel? From Woodburn to Chatswood, or rather to Harwood.
1781. The Esk River is very much to the south of that? Yes, nearer the mouth.
1782. How many miles, roughly? Three or four miles I should take it, by the scale on the map.
1783. In travelling from Woodburn to Harwood did you notice any stony ridges for a considerable height over which you had to travel? There is one; but as far as I could see a canal could easily be taken round that.
1784. You do not know whether those stony ridges extend to the sea board, thus forming a bar? I think they would go more inland than towards the sea. There the land is low as far as I could see.
1785. Are you aware that in the opinion of the Clarence and Richmond River people that country is very poor, so poor that no one ever took it up until Little Italy was established? I am not aware of that.
1786. Are you aware that there is an Italian settlement some short distance from Woodburn? There are several settlements along the road.
1787. But a settlement called Little Italy, which was formed by a portion of the Marquis De Ray's expedition? I could not say.
1788. How would you let the flood waters of the Richmond get away? What would not go, down the canal would go through the natural mouth.
1789. Do you not think it would be very dangerous to let flood water go down a canal where the banks were not protected? I think not. I do not think the current would damage it. It might widen it, but that would be no more objectionable than the widening of the Richmond or the Clarence.
1790. You do not know of any difficulty at the mouth of the Esk where it joins the Clarence? I do not.
1791. How far is the mouth of the Esk from the Clarence Heads? Three or four miles.
1792. *Mr. Humphery.*] This is merely an idea that occurred to you while travelling through the district, is it not;—you made no calculations, but you thought it was worth while considering? Just so.
1793. *Mr. Dowel.*] How did you arrive at your estimate of £200,000 for the cost of the work? Seeing how flat the country was I allowed for a certain width of canal, with a certain depth. The estimate is a very rough one.
1794. Did you make an estimate of the probable cubic contents? I estimated them at about 3,000,000 cubic yards.
1795. At how much a yard? Is a yard. A great portion could be done considerably cheaper.

1796. You state that the country between the two rivers is of an exceedingly good character? I imagine so from what I saw as I passed over it.
1797. You estimated the length of the canal, together with the two rivers that would have to be improved, at 16 miles? I think the whole work would be nearly 20 miles.
1798. Are not those rivers at the present time very tortuous, requiring a great deal of work in order to be made navigable? The Esk is rather winding, and would require a lot of work.
1799. Do you think your estimate is within bounds? I think so, although it is only a rough estimate. I could not give a correct estimate without having the levels.
1800. *Mr. Copeland.*] You would hardly like to put it forward as an estimate? I should not; it is merely a suggestion. The Committee can decide whether it is worth while going into the matter.
1801. *Mr. Lee.*] You made no borings? No.
1802. You do not know the nature of the country under the surface? No.
1803. You made no estimate as to the volume of water going down the Richmond in flood time? No.
1804. You never made any detailed inquiries? No.
1805. This is simply an idea which occurred to you when on the spot? Yes.
1806. Were you there in any official capacity for the Government? No.
1807. Are you aware that the Harbours and Rivers Department inquired into this scheme? No.
1808. You were not aware that Mr. Darley inquired into it and condemned it as impracticable? I was not aware of it.
1809. You made no inquiries of the Harbours and Rivers Department? I did not. It struck me that it was practicable.
1810. You never heard that Mr. Darley inquired into it? I did not.
1811. You never heard that he had declared it to be impracticable? I did not.
1812. *Mr. Copeland.*] Have you considered the question as to whether the water would run from the Clarence to the Richmond instead of from the Richmond to the Clarence? I do not think that is possible. I think the Clarence is at a lower level than the Richmond. Besides, the ocean current would help it.
1813. It has been given in evidence that there is very little ocean current immediately along the coast. A few miles off the coast the current has a southerly set; but near the shore it has rather a northerly set? If the two rivers were on the same level the Richmond water would have less distance to travel to get out of the Clarence Heads than it would to get out of the present entrance.

C. Cowdery,  
Esq., C.E.  
18 July, 1889.

Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewers, and late Acting Engineer-in-Chief for Harbours and Rivers, sworn, and examined:—

1814. *Mr. Lackey.*] I think you have inspected the proposed works at the entrance to the Richmond River? Yes. I had charge of that district for some years.
1815. Were you then Engineer for Harbours and Rivers? Assistant Engineer.
1816. Now you are Engineer for Roads and Bridges, I think? Yes.
1817. You were impressed with the value of the works proposed by Sir John Coode? Yes.
1818. You think they would carry out the purposes for which they are intended? I think so.
1819. I see that you have written a report in reference to these works. [*Vide Appendix D.*]? Yes. I was up there about three months ago.
1820. A witness has suggested that an alteration of Sir John Coode's scheme might be adopted, and the Richmond and the Clarence connected at a point some 26 miles above the entrance of the former river, by taking a canal from the Rocky Mouth Creek on the Richmond to the Esk River which flows into the Clarence? Yes.
1821. Do you know those localities? I was across there once, some years ago.
1822. Have you given any attention to the scheme? I made a preliminary report for Mr. Moriarty.
1823. Did you think it was practicable? No; I did not think there was much in it. It is swampy country most of the way, and there is a ridge which you would have to cut through. I did not take levels, but I fancy a pretty deep cutting would have to be made through the ridge. The canal would not be at all near the road between Harwood and Woodburn; it would be near the sea.
1824. Some 26 miles from the entrance to the Richmond? I think something like that.
1825. Then you think that the scheme suggested by Sir John Coode for improving the entrance is the one which it is more advisable that the Government should adopt? I think so certainly.
1826. Have you given any attention to the principle upon which these works will be carried out—the construction of training-walls and breakwaters? Yes.
1827. Do you think it will be necessary to construct the whole of the work? I am rather inclined to think that it would only be necessary to carry out the northern breakwater first.
1828. And the training-wall? The north breakwater marked on the plan red. I am inclined to think that that portion of the work would be sufficient in the first instance, and I am not at all sure that it would not ultimately be enough. You would be almost certain to have to go a little further than the red line; but I doubt whether it would be necessary to go to the full length.
1829. You would be guided by the influence of the current upon the channel? Yes.
1830. Would you carry out the southern wall at the same time? No; I think not. I would devote all my energies to running out the northern breakwater. I believe a very great improvement would be made simply by constructing it as far as the Beacon Rock, so as to divert the channel to the southern side of that rock. When I was there three months ago the channel went close in under the cliffs, and under the rocks at the north spit. Those rocks diverted it in a southerly direction, and it then went right down south over the wreck of the "Frances Hixson," and along the beach, going out nearly opposite to the town of Ballina. I telegraphed down to the Minister at the time that some steps should be taken to stop this, and felt the matter of such importance that I thought of suggesting that vessels should be sunk in the channel between the Beacon Rock and Pilot Point, and so get the channel to run out straight.
1831. But the proposed work would be mere complete? This would be part of the proposed works.
1832. Do you think that it would be desirable to carry out the whole project ultimately? It is a very expensive project, and will cost a great deal of money.
1833. You know the estimate, of course? Yes.
1834. When you say a great deal of money, do you consider that that estimate would be exceeded? I think it will be exceeded, although it is nearly £400,000.

R. Hickson,  
Esq.  
18 July, 1889.

- R. Hickson, Esq.  
18 July, 1889.
1835. Then, I understand that your proposal is to carry out the northern breakwater first? I should do so.
1836. And you would be guided in your future action by the effect of the work on the river current? Yes.
1837. You think it is just possible that if the northern breakwater were constructed the southern wall would not be necessary? I think it is possible.
1838. In that case there would be a considerable saving? A very considerable saving.
1839. You do not think that if the current were diverted by the northern wall it would interfere with the south spit? The current will always tend to keep along the north breakwater. I think there will always be comparatively deep water along the northern breakwater, irrespective of the southern breakwater.
1840. You think it would not be absolutely essential to carry the northern breakwater out to the full length shown on the map? That is a very difficult question to answer, but I think that it is more than likely that it would not. I think if the wall were run out from the shore, from the point south of that where it is shown on the map to join the land, it would not have to go out to the full extent.
1841. Do you think that the alteration would be an improvement? I think so, and I think Mr. Darley has suggested it.
1842. Is there any rock there? There are boulders. There is very little rock, and nothing worth speaking of.
1843. You know the river generally? Yes.
1844. And the country? Yes.
1845. Is it valuable country? Yes.
1846. You think the value of the country would warrant an expenditure sufficient to make the river navigable and approachable? Certainly.
1847. *Mr. Lee.*] You know a good deal about the river, do you not? Yes. It was my district for five or six years.
1848. And you have had ample opportunities of travelling over it? Yes.
1849. You are well acquainted with the rich nature of the land, and the large quantity of Crown land? I know that there is very fair land there.
1850. Has settlement increased there largely during the last five or six years? It has increased a good deal.
1851. More in proportion than it did during the previous four or five years? I have only known it during the last seven years.
1852. In addition to the rich land on the river banks there are many thousands of acres of good land extending back for some miles? Yes, on the north side towards Byron Bay and the Tweed.
1853. That would be directly influenced by the opening of the river? A great deal of it would.
1854. You think that the value of the district itself is sufficient to justify an expenditure which would keep the bar permanently open? I think so. The country is practically blocked in now.
1855. If works were carried on at Byron Bay in the future, would they in any way interfere with the proposed works at the Richmond, or detract from their value? I think the Richmond would stand upon its own merits. There is sufficient traffic on the river and enough good land in the locality to warrant the expenditure of a sufficient sum of money to make an entrance there at a considerable depth. The traffic from the north I believe would pass through Byron Bay.
1856. Do you think that the river itself is of sufficient importance to justify the expenditure? I think so. When I was up there last vessels were wind bound for ten days. They could not get in or out.
1857. If that part of the northern breakwater to which you have just referred were constructed, would it be likely to block up the present channel? It would.
1858. Would it open another channel? Yes; I think there is no doubt about that.
1859. What do you think the average depth of water on the bar would be if the works were constructed? That is a very difficult question to answer. I should say there ought to be 10 or 12 feet.
1860. At low-water? Yes.
1861. That will be sufficient for the class of vessels trading to the port? I think so. The class of vessels trading there now are very handy, and could go in easily with that depth.
1862. How would it act as a port of refuge? Not at all.
1863. Notwithstanding that, you are of opinion that the district is of sufficient importance to justify the expenditure? Yes.
1864. You speak with a local knowledge of six or seven years? Yes.
1865. *Mr. Dowel.*] You are aware that Sir John Coode has recommended that the south training-wall should be carried out first? Yes.
1866. Do you know what reason he had for recommending that that portion of the work should be constructed first? So that the water would not break across the south spit.
1867. If the southern wall were constructed, would it not have the effect of removing the sand-spit in the middle of the proposed channel? I do not think the construction of that wall would have that effect. The water would pass it and run along the side of the northern breakwater. If there were a heavy flood, and the water could not get away easily, it might wash away the sand there; but in the ordinary condition of the river I do not think that the construction of the southern training-wall would affect that portion of the spit. I believe that if both breakwaters were constructed there would still be a spit on the southern side of the channel.
1868. Do you think it would be advantageous to bring the south breakwater out more in a southerly direction? That is to say to make the entrance wider.
1869. Yes? I do not think so. I do not think you would gain much by that, because you would not necessarily make the navigable portion of the entrance wider.
1870. Is it not a fact that towards the northern wall there is a rocky bottom? There is rock at the Beacon Rock. The borings that have been taken, though I do not remember how far out they go, show that the rock dies out to the south. There is no rock near the proposed entrance, that we could find.
1871. You are strongly of opinion, in opposition to that of Sir John Coode, that the northern breakwater should be constructed first? Yes; I think the northern wall should be constructed first.
1872. How long do you estimate it would take to construct the work? The whole of it?
1873. The northern portion? I think it would take over two and a half years. They are very unfortunately situated for stone. If stone could be got from the North Head it would be a very simple matter; but the whole of it would have to be taken from a quarry 14 or 15 miles up the river.
- 1874.

1874. Has very much labour been expended in endeavouring to ascertain whether there is not stone at the north? Yes. I went there on three occasions, and I spent two days there. I had trial shafts sunk in the North Head. The rock is very poor and dies away. At the point near the Pilot Station there are only boulders.

R. Hickson,  
Esq.  
18 July, 1889.

1875. How many shafts did you have put down, and to what depth? I could not tell you from memory. I think there must have been four or five shafts put down.

1876. To what depth? Until we came to the rock, and on the top of the hill we went down such a depth that I knew it would be of no use to go further. If we did get the stone it would be below sea-level.

1877. You know that the stone there is basaltic? Yes.

1878. Could not a great deal of it be used in the construction of the work? I do not know about taking it from there, because it would mean laying a tramway. It is a matter upon which I do not like to express an opinion; but I do not think it would be worth while to make such a tramway.

1879. Some large blocks should be obtained? There is no really good stone there.

1880. You have tried it? Yes.

1881. How far up the river is the quarry on the southern bank? I think it is 14 miles by water.

1882. Are there any engineering difficulties to prevent the construction of a tramway or railway from it to the entrance? There are no engineering difficulties, except the crossing of a number of navigable creeks.

1883. What do you estimate would be the cost of the construction of a railway or tramway per mile? I think £3,000 a mile.

1884. I think that you proposed that punts should be constructed to convey the stone? That was my suggestion—punts to carry the waggons.

1885. Do you not think the work could be done in a much shorter time by a railway? It could be done much quicker, no doubt.

1886. You estimate that the construction of the punts would be something between £47,000 and £50,000? I never went into the matter; but I hardly think it would come to that.

1887. On your estimate, the cost of constructing a railway would be about £45,000? Yes.

1888. And the work would be done in considerably less time, and at a great advantage as regards cost? I think it would be cheaper.

1889. *Mr. Tonkin.*] Have you ever seen the channel south of the northern breakwater? No.

1890. Have you heard of it being south of that? Yes. It has been out as far south as the green patch on the plan.

1891. That entrance has been caused by a fresh? Yes.

1892. Supposing there were a channel at the extreme south of the spit which was making towards the north, what would be the effect to the northern breakwater;—would not the water make a channel close to the breakwater, even if the southern breakwater were not constructed? I think so.

1893. The channel has a tendency when the river is sluggish to go northward? Yes.

1894. When it was obstructed by the breakwater would not the tendency of the water be to make a channel along the wall? Yes.

1895. There would be a deep channel along the wall? Yes, along the breakwater.

1896. I am speaking now of only one wall, so that we could do away with the expense of the other if possible? Yes.

1897. You think the water would have that tendency? I do.

1898. The only reason for constructing the southern breakwater is to prevent a heavy fresh from making a channel through the south spit? Yes.

1899. But according to the evidence of people who thoroughly know this part of the country, all channels south of the northern breakwater have been invariably good; so would you see any reason for constructing the southern wall? When I was there I asked about the breaking out of the channel through the south spit, and the reply I received to my questions was, "We never have a shallow bar when there is a southerly channel."

1900. Supposing, after the erection of a northern breakwater, a fresh channel were made further south, the navigation would not be obstructed? No. In a heavy flood you would most likely have a deep channel to the south, but if the flood were not heavy enough to make a deep channel there, the water would run along the northern wall.

1901. When the channel is making its way northward it remains deep until it gets to the North Head? Yes. I have been told so. When the southern channel is closing a deep water channel is being made near the present channel.

1902. And if the northern breakwater were made there would be a scour against the wall? Yes.

1903. *Mr. Humphery.*] How long will it take you to construct the first portion of the northern breakwater, the guiding wall at the North Creek, and the southern training-wall? I suppose there is three years work there.

1904. You think the southern training-wall might be dispensed with at first? I think it might.

1905. Should it be dispensed with, how long would it take to construct the north breakwater? I think the northern breakwater ought to be done in about two years. There is less work in it.

1906. How long would it take to construct the railway referred to by Mr. Dowel? It is nasty country. You would have to make two or three draw-bridges to cross navigable creeks. I suppose you would not construct it under two years. That would be quick work.

1907. As a matter of fact it would take as long to construct the railway as to build the breakwater? That is hardly a fair way to look at it, because it would take nine months to get the punts together. There would be a difference of twelve or fifteen months.

1908. But if the stone has to be carried by means of a railway, the proposed improvements will have to be postponed for two years? Yes. But in any case you could not commence for nine or ten months.

1909. That would make a difference of fifteen months between the two? Something about that.

1910. I think that you said that the portion of work which you would recommend to be carried out first would occupy about two years? Yes.

1911. Would there be a saving of fifteen months in two years if you had a railway instead of punts? I do not think you could make that saving in a work which it would take two years to construct.

1912. It would be more expeditious to use punts than to construct a railway? I think it would.

1913. Did you say it would be less costly? No; I did not know that an estimate of the cost of the works had been made before.

1914.

- R. Hickson, Esq.  
18 July, 1889.
1914. We have obtained from Mr. Darley an estimate of the cost of the work, and it averages 4s. 6d. per yard;—have you any means of checking that calculation? Yes; I dare say it is about right. It is about a shilling more than the Newcastle breakwater cost. There we had not the difficulty of carriage
1915. Have you made an estimate as to what would be the cost of making the necessary punts? I made a rough estimate when I was there the other day. My idea is that you could put the punts on to the ground for about £20,000.
1916. Then there would be a difference of about £25,000 between the cost of the punts and that of a railway? A railway, I think, would come to about £45,000. These estimates are very rough. I have not gone over the ground, nor has a section been taken.
1917. Have you considered whether it would be more desirable to construct a railway, or to convey the stone by means of punts? I came to the conclusion that punts would be the best. I was in communication a good deal with Mr. Moriarty upon the subject, and that was his idea too.
1918. Are you still of the same opinion? Yes.
1919. Do you know Mr. Shellshear? No.
1920. He was of opinion that the northern breakwater should not be carried above high-water mark. Have you considered whether the breakwater should be 6 feet, or 16 feet above high-water level? You must be at least 4 feet above high-water to be able to work. I do not think we have any training-wall less than 4 feet above high-water. That is as low as they can be made.
1921. How far would you carry that wall—4 feet above high-water? Do you allude to the northern breakwater?
1922. Yes? There you would have to commence almost at once, at a high level, on account of the sea. It might be sufficient to make a southern training-wall only a few feet above high-water mark, because there would be no sea there; but in an exposed position you must raise the wall.
1923. What would be the height of the wall at Beacon Rock? You would be quite safe in making the wall 4 feet there, gradually increasing it as you went out.
1924. To what height would you raise it? The breakwater at Newcastle is 16 feet; but of course that is more exposed. I think 12 feet, or perhaps 10 feet, would do here.
1925. I ask you the question because there appears to be some difference of opinion as to what the height of the breakwater should be. You think from 4 to 10 feet? Yes. If you went right out to the end of the extensions you would have to raise it to the full height.
1926. Have you made any calculation as to what would be the cost of that portion of the work, which might be carried out as an experiment? No.
1927. *Dr. Garran.*] If you only made the northern training-wall, do you admit that there would be a risk of the water bursting across the south end of the spit? Yes. In a heavy flood it has broken out there.
1928. I understood you to say that the residents of the locality say that when there is a south entrance they have always a good bar? Yes.
1929. But is it not against reason to suppose that when we have two entrances we shall have a better scour than with only one? You would not have a good entrance all along. I have not gone over the ground very carefully; but I understand that the waters break through with a rush, and that a channel closes up again very quickly. The northern channel always remains open to a certain extent, and the water making its way up there closes the southern channel. When a southern channel is open it is very deep.
1930. That is because a large quantity of water is running down and there is scour enough to keep both mouths open? Yes.
1931. It is the experience of the people there that a southern channel does not remain open long? Yes.
1932. It is only a flood mouth? Yes.
1933. Nature does not choose it as a permanent mouth? No.
1934. If there should be a scour there, it would be of no great importance? I do not think so, because there is deep water, and before the channel closes up there is deep water at the north.
1935. If the southern training-wall is only to prevent a southern channel being made, and that channel is only formed in flood time, and silts up again directly after the flood is over, there would be no great harm done if the southern wall were not made? Yes; but the southern wall is designed for two reasons—one to prevent the water breaking through the spit, and the second to keep the sand bank from going across the entrance; though my idea is that the river itself would prevent that.
1936. You think that the attraction of the water to the northern training-wall would always be sufficient to draw the stream on that side, and that there would be no danger of its working to the south and making another opening? I think not.
1937. The deepest water is sure to be close to the training-wall? Yes.
1938. When you have two training-walls does the water cling to them both? No. I think in most cases there would be a sand spit along the south wall.
1939. When there are two parallel walls, where is the deepest water? Wherever the current impinges. In this case it will impinge against the north wall.
1940. In that case it will not go right across the middle? It will keep along to the north, until it strikes the north training-wall. It will then follow that wall along.
1941. Then you think the northern training-wall will always get the strike of the water? Yes.
1942. And that it will slide more slowly along the southern wall? Yes, and probably when the river is low a sand bank will be formed along there.
1943. Then the tendency will be for the deepest water to be on the northern side, and not in the centre? Yes.
1944. If a sand-bank is formed it will be on the southern side? Yes.
1945. And will there be any danger of its working out, and making the bank near the mouth? No; the sand will only collect along the wall.
1946. Practically that will narrow the channel as it does at Newcastle? Yes. The sand will form a bank along the southern wall.
1947. I understand that at Newcastle a bank has been formed which narrows the channel? We have two breakwaters at Newcastle—a southern one which takes the place of the northern breakwater at the Richmond, and a northern breakwater for collecting the sand that comes down the North Bight.
1948. Then practically, in your opinion, the southern training-bank is of very little use? I will not go so far as that; but I think you could make a sufficiently good entrance for the traffic of the Richmond by having only a northern wall.
- 1949.

1949. I understand from your memorandum that £100,000 spent upon the northern wall would make a practically good opening? I think it would.
1950. If anything more were wanted we could add it afterwards? I think so. I think £100,000 would make a good entrance.
1951. Would that £100,000 include the cost of the North Creek training-wall? No. I do not think there is very much in that.
1952. You do not attach much importance to that? No.
1953. You think that if the northern breakwater were made, the water of the North Creek would find its way along it? I never could exactly follow Sir John Coode on that point, although I have talked the matter over with him. I could never exactly understand the use of that wall, because the North Creek water never flows across to the south.
1954. We are told that it forms an eddy—that it is more sluggish than the other current, and is caught by it and whirled round, so that it makes sand-banks? That may be due to the fact that the other current is at present going at right angles to it. If the breakwater is constructed it will go more in the same direction. There may be a silting up there.
1955. Then you think that if we make the northern training-wall the North Creek will take a straight course out, and not make eddies? Yes.
- 1955½. You are clearly of opinion that we can improve the entrance by an expenditure of £100,000? Yes.
1956. And you are of opinion that we can try the effect of that work before carrying out the other portions of the scheme? I am.
1957. You have never seen the entrance at any other point except where it is shown on the plan? Never further south. I have seen it to the north of that.
1958. As far as you have heard from the people of the locality, where the entrance is proposed to be made will be as good as any other place? I think so. I do not think you could get a better place.
1959. And that is the best place for hitting the water of the North Creek? Yes.
1960. There is no objection to it on any other grounds? None that I know of.
1961. *Mr. Copeland.*] Have you been located at any other bar harbour besides the Richmond? I had charge of the whole of the northern district from Newcastle to the Queensland Border. The Richmond was included in that.
1962. You are well acquainted, I suppose, with the Newcastle work? Yes.
1963. Do you know the depth of water all the way up the Richmond River? I could not tell you it from memory, though I have been up it several times, and have taken soundings here and there. It varies very considerably.
1964. *Mr. Lockey.*] You have records? There is a survey showing it.
1965. *Mr. Copeland.*] Do you remember whether there is a rocky bar in any part that would shallow the water sufficiently to prevent large vessels from going up the river? There are rocky bars that we know of. There are some very hard gravelly bars.
1966. Shingle? Yes; two or three very hard bars.
1967. What depth of water is there on them? I think I know one with 8 feet of water on it.
1968. Whereabouts is that? I think it is about 2 miles on the down-stream, south of the Sugar Company's mill.
1969. What length is the-shoal;—would it be a difficult matter to deepen the water there? The river is a series of shoals the whole way up.
1970. What depth of water could you make sure of getting up to, say, Lismore on the North Arm? About 10 feet.
1971. Therefore the shallowest place would be about 10 feet? About 10 feet. I think that is the ruling depth.
1972. You may reckon upon any vessel not drawing more than 10 feet being able to navigate any part of the river? Yes.
1973. I suppose the shallow parts could be dredged? Yes; but it would be very expensive, because there is a great deal of it shallow.
1974. Then you may reckon upon 12 feet as the depth of the river? I think so.
1975. What depth do you propose to scour the channel? I think Sir John Coode proposes either 12 or 14 feet. I have seen his plans, and I think that is the depth he proposes. I think if you had 11 feet of water on the bar it would be sufficient.
1976. I suppose if you could reckon on 10 feet of water in the river you would want at any rate 12 or 13 feet between the breakwaters, so as to make allowance for the rise and fall of the seas? Under those circumstances you would get 14 feet. Ten feet at low water would give you 14 feet at high water.
1977. But would it be desirable to limit the entrance simply to high water? I do not think it is much drawback in a long trip like that to wait two or three hours, and it makes a considerable difference in the cost.
1978. How could the cost be diminished? If the training-walls were constructed, the depth of water would be left to the river itself. But if you wanted to get 14 feet of water instead of 10 feet you would have to bring one training-wall, or both, out very much further, so as to push the sand into deep water.
1979. If there were only 10 feet of water in the river a vessel could not draw more than 9 feet, and you would require 3 feet of water under the bottom, at least, to come in? Yes; you would want 13 or 14 feet on the bar at high water.
1980. The river would not be navigable then at low water, or at anything like half tide? Well, a great many of the ketches that trade there only draw about 7 feet.
1981. Have you been long in the Service? Eight years.
1982. Have you had any experience in any other part of the world? Yes.
1983. What positions did you hold in other parts of the world? I was Engineer for the works at Barrow-on-Furness, in Lancaster, for seven years I was in charge of the Carlingford harbour works, and for four years I was in charge of harbour works in South Australia.
1984. Are any of the works of which you have had charge similar to these proposed works? I was never engaged on the Dublin works; but I know them very well. The works at Barrow-on-Furness were not like these.

R. Hickson,  
Esq.  
18 July, 1889.

1985. I suppose the principle is so certain in a case like this that there is no need to experiment;—you can reckon to an absolute certainty upon the result which will follow upon the carrying out of the works? I do not know that we can be so certain as that. It depends very much upon the floods in the river.

1986. Are not similar works carried out upon the same principle in other parts of the world? But here there is not so much water in the river to scour away the bar as we have in other parts of the world. For ten out of twelve months our rivers are sluggish streams, with little or no water in them, and dependent altogether upon the ocean water. The rise and fall of the tide is so slight here—it is between 2 ft. 6 in. and 5 feet—that it is of not much effect.

1987. Is the water in the Richmond more sluggish than that in the Hunter? A great deal. We have always a strong current in the Hunter.

1988. Then we may infer from what you say that this work will only be an experiment? I think all harbour works depending, as I say, so much upon the flow of water in the river, must be experiments. There is no doubt that in making the north training-wall you will be able to carry the channel along it, and deepen the water; but it is very hard to say what the depth will be.

1989. For that reason you would prefer to feel your way by building a northern wall first? Yes.

1990. It has been given in evidence on several occasions that the further south you go on the southern spit the deeper the channel. If that is the case, would it not be better to bring the northern training-walls and breakwater further south, so as to let the water from the North Creek have a straight course, and thus cut out the bend in the lower wall? Do you mean to alter the direction, or to go in a different position?

1991. Would it not be better to bring the northern training wall more south? You would get a worse channel, because there would be a very sharp turn going in. By having it as it is I think it is better for the sea. It is end on to the sea. You would also get a better run in for vessels.

1992. Then, as far as your opinion goes, the works are laid out in the best fashion possible? I think so.

1993. You do not think there could be any improvement upon the scheme? No.

1994. The only difference you would make would be to construct the north breakwater first, before expanding the whole amount? Yes.

1995. That would prolong the agony for a number of years? I do not think so. I think you would get a far better result from it.

1996. Do you think the guide bank on the North Creek will have the effect of drawing the water to it, and of scouring out the sand;—would it not be necessary to have a parallel wall to the north? No; I do not think so. The object of the wall, as far as I can see, is to give the water a tendency to go straight out, but I think it would do that of itself. I do not think there is anything to make it go south.

1997. The channels coloured blue on the plan show the course the water takes now? Yes. At high tide all the sand there is under water.

1998. How can those channels be affected by a wall which does not go near them? The map only shows the condition of the place at low water. At high tide the water is right across the sand.

1999. You have had a good many years experience in the old country in connection with engineering works? I have been twenty years in charge of harbour works.

2000. And you have worked for some considerable period under Sir John Coode? He was my inspecting officer for seven years.

2001. *Mr. Garrard.*] Did I understand you to say that you could hardly see any use for the guide bank on the North Creek? I know what it is intended to do; but I do not think it is necessary.

2002. In flood time the water going down North Creek, unless there were some guide, would impinge upon the rocky point near the Pilot Station, and flow from there in a southerly direction away from the proposed entrance? I do not think so. The tendency of the stream is not to go south but to go north. If it were met by a current going north, I do not see how it could be made to go south.

2003. If the current of the North Creek has a southerly direction, and that in the main river has a northerly direction, there must be a violent conflict, and if a guide bank which would only cost the small amount of £9,000 would help in any way to scour the channel, it would be advisable to make it? Yes; it might help, and could do no harm.

2004. In the event of there being no southern wall, would the sand not have a tendency to bank against the northern breakwater? No; the current would wash it out.

2005. Is it not a fact that when sand is banked up against anything solid it becomes harder than ordinarily? Well, I do not know that it makes much difference. Some sand is naturally harder than other sand.

2006. We have it in evidence that the corner near the Pilot Station will fill up with sand;—will that sand not become much harder than ordinary sand? I dare say. It will not drift away.

2007. The proposed breakwaters run almost due east? A little southerly.

2008. The formation of bars is caused more by the influence of the waves than by anything else? By the waves, and because of the want of a strong current in the river.

2009. Therefore an entrance directly open to the prevailing winds would not be advisable, because the wind would carry the sand straight in? It is an advantage to have it open to prevailing winds to assist vessels coming in.

2010. But independently of that, what about the scour? I do not think it makes much difference. A wind coming up the coast would bring more sand with it than one straight in from the sea, because of the depth of the water over which the latter wind would blow. I think it is better to have the breakwaters straight out.

2011. You know the quarry from which it is proposed to bring the stone? Yes, I found it.

2012. Is the bar you spoke of, near the Sugar Company's mill, rock, or merely hard clay? It is gravel. There are several gravelly bars on the river.

2013. Any vessel drawing 10 feet of water which got over the bar would meet with no obstruction on the river? I think a vessel drawing 10 feet could get up the river.

2014. I think you told Mr. Lee that even if works were constructed at Byron Bay something would have to be done to the entrance of the Richmond? I think so.

2015. Byron Bay would serve a district of its own? It would serve a district of its own.

2016. I suppose it would act as a shipping port and a harbour of refuge? Yes, there would be a harbour of refuge there; but the main thing would be the shipping port.

2017. *Mr. O'Sullivan.*] You said that the works with which you were connected at Barrow-on-Furness resembled these? One portion of the work, where a training wall runs out, resembles this. 2018.

2018. Have those works proved successful? Yes. Large American vessels go in there. The place is, of course, very much larger than this. R. Hickson,  
Esq.

2019. Is there a tidal influence there? Yes, we had a rise and fall of 28 feet.

2020. Even if these works are carried out at the large expenditure of £400,000, it is problematical whether they will be successful? Problematical as far as the depth of water is concerned. We hope to get 16 feet. 18 July, 1889.

2021. I notice in the memorandum which you addressed to the Engineer-in-Chief for Harbours and Rivers that you say, "It must not be lost sight of that though elaborate plans may be got up for breakwaters, training-walls, &c., for the improvement of our rivers, still we are largely depending on freshes and direction of winds to maintain a deep bar." I suppose you will still have to depend on that, even after an expenditure of £400,000 has been gone to? There is no doubt of it.

2022. And it is your opinion that a sufficiently wide and deep channel could be created and maintained by the erection of the north breakwater? Yes. I think that if you can get a depth of 10 feet at low water that will be sufficient for the requirements of the place, and I think you could get that depth with only one breakwater.

2023. Have the works on the Clarence up to the present time been a success? I do not know that very much change has been made there yet.

2024. *Mr. Trickett.*] In the memorandum which you addressed to the Engineer-in-Chief for Harbours and Rivers you state that you believe Sir John Coode has under-estimated the expense. Does that apply to these works? I think so. I think his price per cubic yard for the stone is too low.

2025. Can you give the Committee any idea as to what would be the expense of the whole scheme if carried out? No, I cannot.

2026. Have you seen Mr. Darley's figures;—they considerably exceed those of Sir John Coode? His estimate for the first portion is £148,000, I think.

2027. Can you tell us whether you consider that that expenditure would be sufficient? I think the prices are about fair. I cannot say as to the quantities, but I presume that they are correct. There is a great difficulty in estimating the quantity of stone which would have to be put into breakwaters like those, as with end-tipping the scour deepens the water in front, and instead of tipping into 10 feet we might be tipping into 15 feet, so that we would require much more stone. We found that to occur at one place in the Clarence. The prices are no doubt correct.

2028. You are not prepared to give the Committee any more definite statement than is contained in your letter? No.

2029. I understand that you are still of opinion that £100,000 expended on the construction of the northern breakwater would in all probability be sufficient? I think it would.

2030. I should like to draw your attention particularly to this paragraph in your memorandum: "At the Richmond, I believe, an expenditure of, say, £100,000 on a breakwater from Pilot Point, in the direction laid down by Sir John Coode, would give ample water for the class of vessels which can navigate the river." Is that still your opinion? Yes.

2031. *Chairman.*] Supposing that breakwater were made, and the bar shifted further south, the breakwater could still be utilized for the carrying out of the whole scheme,—it would not be wasted? Of course it would not be wasted.

## STATISTICS OF THE RICHMOND RIVER TRADE.

Custom House, Sydney, 24 June, 1889.

Dear Mr. Barling,

The enclosed may help you to form an idea of the Richmond River trade, and gives you the reason why more accurate information cannot be afforded by this Department.

The figures given understate rather than overstate the trade, and the amount of revenue stated is merely collections for local tonnage dues, all duties of customs being paid in Sydney.

Of course, being a bar-river foreign trade is very small.

Do not fail to ask for any further information you may require, and which I may be likely to afford.

Yours, &c.,  
JAMES POWELL.Joseph Barling, Esq.,  
Department of Works.

Memorandum from F. H. Elliott to the Collector of Customs.

22 June, 1889.

As the 129 section of the Customs Regulation Act empowers the masters or owners of coasters to make coasting voyages for three months without requiring a clearance each voyage, I have been unable to obtain from the documents of the department the information sought by Mr. Barling. With the view, however, of ascertaining some particulars relative to the Richmond River trade, I caused inquiries to be made from the known owners of vessels trading to the port. The parties applied to were Messrs. Nicoll, C. B. Bond, Corrigan and Reidy, P. Hogan, A. Kethel, and the Manager of the Clarence and Richmond River Company. It has been elicited from these gentlemen that twelve sailing vessels, averaging a fraction over seventeen trips a year, and with an average capacity of 95 tons, trade to the Richmond from ports within the Colony, and eight steam vessels, averaging twenty-five trips a year, and with an average tonnage of about 300 tons, also trade to the River.

The import, export, shipping to and from places beyond the Colony, and revenue particulars, are from departmental official papers.

F. H. E.

STATEMENT showing the number and tonnage of vessels arriving at, and departing from, the Richmond River during the year 1888; description and value of imports and exports from and to places beyond the Colony; and the revenue received for the year.

## VESSELS WRECKED AT THE RICHMOND RIVER.

Department of Public Works, Sydney, 21 June, 1889.

My dear Captain Hixson,

As I shall be called upon in the course of a day or two to give evidence before the Public Works Committee in regard to the improvements to the Richmond River entrance, I shall be obliged if you can furnish me with a return of the number, tonnage, and approximate value of vessels that have been wrecked at the Bar during the past ten years.

May I further ask for the information by Monday next.

Yours faithfully,  
J. BARLING.

Captain Hixson, Marine Board.

Mr. Laurence to prepare return at once.—G.S.L., 21/6/89.  
The Under Secretary, Public Works.

Information asked for herewith.—G.S.L., 24/6/89.

## STATISTICS OF LAND IN THE RICHMOND RIVER DISTRICT.

24 June, 1889.

My dear Sir,

In reply to your letter of Friday, Mr. Freeman desires me to furnish you with the following particulars: The total area of land in the Casino and Lismore land districts is estimated at 2,670,000 acres. Of this about 258,000 acres have been sold in fee simple and 600,000 acres sold under conditional purchase. The total number of conditional purchases made reaches 6,122. The unalienated land represents about 1,800,000 acres, of which about 470,000 are reserved.

Yours faithfully,

H. CURRY.

J. Barling, Esq.

[To Evidence of C. W. Darley, Esq.]

## C.

## PARTICULARS RELATING TO LISMOBE AND CASINO LAND DISTRICTS.

	Acres.
Estimated geographical area .....	2,670,000
Alienated in fee simple, about .....	258,000
Conditional purchases made, about .....	600,000
Area under pastoral lease .....	956,000
Area under occupation license .....	746,000
Area under conditional and annual lease .....	64,000
	£
Pastoral leaseholds return an annual revenue of .....	6,120
Occupation licenses .....	3,080
Conditional and annual leases .....	1,170
Total.....	£10,370

During the year 1888, 162 applications to conditionally purchase land were made, for a total area of 21,780 acres, upon account of which the sum of £2,815 was deposited.

In addition, a large amount is annually paid by selectors as instalments and balances on their conditional purchases.

Reference to the run-appraiser's reports in 1887, upon the Crown lands within leaseholds, show the country to be generally mountainous, and, in many places, heavily timbered.

The average grazing capacity of the leaseholds is from 30 to 40 acres per beast, and they are generally classed as good breeding country.

The average rental is 1½d. per acre.

A large area is reserved from sale on account of timber, a great many varieties of which are procurable.

The whole of the valley of the Richmond River is reported by the Mines Department to be of coal-bearing formation, and coal-seams have been discovered in the vicinity of Coraki, Tabulam, and Lismore. Gold is found on the coast, and also on the western boundary of the district; the chief mining centre at the present time being Fairfield.

## C1.

## AREAS OF LAND RESERVED FROM SALE AND CONDITIONAL PURCHASE WITHIN THE CASINO AND LISMORE LAND DISTRICTS.

Memorandum from Chief Draftsman to The Secretary, Public Works Committee.

Lands Department, 25 July, 1889.

I now forward you a complete statement showing the areas reserved from sale and conditional purchase, within the Casino and Lismore Land Districts, under the different purposes of reservation. I have only just been able to finish this return, as certain information necessary to complete it was only received this morning, although it was posted in Grafton nine days ago.

You will observe that the gross area reserved is considerably in excess of the previous estimate, which was made on the assumption that the area reserved from sale *within* leaseholds was in about the same proportion as the *outside* leaseholds, which proves incorrect, the reserved area *within* the leaseholds being proportionately to the total area much greater.

The other information required by Mr. Copeland, viz., the extent of agricultural land within unnecessary reserves, cannot be obtained from our records, as many of the surveyors' reports are not now in the office, some being in other Departments and others in surveyors' hands.

From reports supplied by the District Surveyor in 1888 I gather that the agricultural land in these districts, including unnecessary reserves and unreserved Crown land on both leasehold and resumed areas is about 100,000 acres. This can only be regarded as an approximation, however.

C. J. SAUNDERS.

## EASTERN DIVISION.

## RESERVES from Sale and Conditional Purchase in the Land Districts of Casino and Lismore.

Purpose of Reserve.	Land District of Casino.		Land District of Lismore.		Total.

[To Evidence of R. Hickson, Esq.]

## D.

Department of Public Works, Harbours and Rivers Branch, Newcastle, 4 May, 1889.

MEMORANDUM TO THE ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.

Subject:—Visit of Inspection of Tweed, Brunswick, Richmond, and Clarence Rivers, and Byron Bay Districts.

I SUBMIT herewith for your information a report on my recent tour of inspection over the districts in the immediate neighbourhood of the rivers Tweed, Brunswick, Richmond, and Clarence, and Byron Bay.

I arrived at the Tweed Heads on the 18th April, and met Messrs. Eddy and Oliver, Railway Commissioners, and Mr. Ewing, M.P., on the following morning. I gathered from Messrs. Eddy and Oliver that they were impressed with the fertility of the country between the Richmond and the Tweed, and that it only wanted to be opened up and connected with a market to make it one of the most thriving districts in the Colony.

The

The question as to how that is to be done, whether by railway or opening up the rivers, is one that requires careful consideration. My own idea is that the Tweed and Brunswick entrances are not worth spending much money upon.

The Tweed entrance is fairly good for small ketches, &c., but considering the shallow water there is in the river for a considerable distance from the entrance, and the great expenditure required to make the river navigable for the class of vessels that would have to be used to deal with the enormous traffic there must eventually be in the neighbourhood of this river, I do not think the river can be looked upon as the channel through which this traffic should go.

The Brunswick is a much smaller river, commanding a less valuable country, and with a very poor entrance. I think, however, an expenditure of £3,000 or £4,000 would make it about equal to the Tweed, and would be an advantage to the place in allowing small ketches to get in for timber, &c.; but, like the Tweed, it can never be expected that the river itself will be the highway for the traffic.

Byron Bay is an open roadstead, quite unprotected, but capable of being made a very superior shipping-place, and with a vast extent of fine country in its virgin state, not only in its immediate neighbourhood, but for a considerable distance back.

The Richmond River, with its extensive and valuable back country, is already well known, and I am satisfied that the river itself is the natural and proper outlet for the produce of its own district; whether it is also the natural channel for the produce of the whole district up to the Tweed is the question;—I am of opinion it is not.

The Clarence is a fine river with a very fair entrance, as far as depth of water is concerned, but difficult to navigate owing to a reef of rocks close to the entrance, necessitating a very sharp turn for vessels going in or out.

Nearly all the agricultural country in the neighbourhood of the Clarence being already taken up, I do not really see where a very much increased traffic is to come from; consequently it is difficult to comprehend what would warrant the expenditure of nearly £600,000 at the entrance.

The Richmond River is quite a different case. There, there is a vast extent of virgin country, and if proper facilities were given for the getting away of the produce the traffic would be enormously increased. It is proposed to spend a sum (according to Sir J. Cooke's estimate, which, I fear, is very much under-estimated) of about £900,000 on the Clarence and Richmond Rivers, neither of which, to my mind, are the natural outlets of the country, three-quarters of which, at least, lies to the north of the Richmond. The Clarence River must stand by itself. I think the Richmond River will also command only its own traffic, and that all the traffic over the country north of the Richmond to the Tweed will centre in Byron Bay.

I am satisfied an expenditure of £100,000 at Byron Bay would make it a first-rate shipping-place; and being deep water it is not dependent upon freshes in rivers or direction of winds to provide a navigable channel for vessels; for it must not be lost sight of that though elaborate plans may be got up for breakwaters, training-walls, &c., for the improvement of our rivers, still we are largely depending on freshes and direction of winds to maintain a deep bar.

At the Richmond, I believe, an expenditure of, say, £100,000 on a breakwater from Pilot Point, in the direction laid down by Sir J. Cooke, would give ample water for the class of vessels which can navigate the river. At the Clarence, I believe, an expenditure of, say, £200,000 on the "south and north training-banks," and a portion of the north and south breakwaters, would do all that is required—in fact, it is very questionable, to my mind, if, after the "south and north training-banks" were made, and the current consequently directed straight on to the bar, whether any further extension of the breakwater would be required.

At the Brunswick, as already stated, I would recommend the expenditure of £3,000 or £4,000 on a small training-wall, as indicated in a previous report.

At the Tweed I cannot recommend any expenditure at the bar; but the river itself might be very much improved by introducing a system of "fascine banks" in connection with the dredging.

ROB. HICKSON.

Forwarded for the information of the Minister. I quite concur with Mr. Hickson in thinking that Byron Bay will in future be the best outlet for produce from the Brunswick and part of the Tweed River districts. I will, in a few days, submit a proposed scheme and estimate for a protecting breakwater at Byron Bay.—C. W. DARLEY, 4/6/89. B.C., Under Secretary, Public Works.

## E.

### PROPOSED CANAL BETWEEN THE CLARENCE AND RICHMOND RIVERS.—REPORT BY THE ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.

Sir,

Harbours and Rivers Branch, Sydney, 22 July, 1889.

I observe from the *S. M. Herald* of Friday last, that your Committee have been hearing evidence respecting the construction of a canal to connect the Richmond River with the Clarence River; and from the published statement, the witness appeared to be under the impression that the work he advocated would be a simple matter.

I have the honor to inform you that I, acting under instructions from the Engineer-in-Chief (Mr. Moriarty), investigated this scheme sixteen years ago. My report will be found published at pages 8 and 9 of a Parliamentary Paper, headed "Railway Trial Surveys," ordered to be printed 25th May, 1876, on the order of Mr. Nelson.

The difference in opinion as to probable cost between myself and Mr. Cowdery is so great that I thought it my duty to bring the report referred to under the notice of your Committee.

I have, &c.,

C. DARLEY.

### Iluka to Woodburn.

No. 2.

#### MR. C. DARLEY TO THE ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.

SIR,

Harbours and Rivers Department, Newcastle, 19 November, 1873.

In accordance with your minute dated 19/8/73 (M.P. 73/263), instructing me to make a reconnaissance of the country between the Clarence and Richmond Rivers, with the view of ascertaining the practicability of opening communication between them by a canal or tramway,—I have the honor to report that upon completion of the surveys for the northern breakwater at the Clarence Heads, I proceeded to make the required examination. I took into consideration three ways in which this work might be accomplished—

1st. By a ship canal from river to river.

2nd. By opening tributaries of the Clarence and Richmond as far as practicable to navigation, and connecting their heads by a tramway.

3rd. By a railway from river to river.

The first method, a ship's canal, would undoubtedly best meet the requirements of the district; but I fear the extent of the undertaking excludes all possibility of the work being carried into effect. I will, however, describe the nature of the country and extent of work required: On the map (Admiralty chart) attached to this report it will be seen that the shortest distance from river to river is from the southern entrance of the north arm of the Clarence to the southern bend of the Richmond at Woodburn, and at each of these places tributaries join the respective rivers—that which falls into the Clarence is known as the Esk or Freshwater Creek, and that which falls into the Richmond as the Tuckimbil Creek; these creeks, the former having a southerly course and the latter a northerly course, lie in nearly a direct line from river to river, leaving only 10 miles of land between their heads. The total distance from river to river is about 28 miles.

Of this distance the north arm would be navigated	...	...	...	...	...	...	3 miles.
Freshwater Creek would be navigated about	...	...	...	...	...	...	10 "
Canal requiring to be cut	...	...	...	...	...	...	10 "
Tuckimbil Creek available if deepened	...	...	...	...	...	...	5 "

Total	...	...	...	...	...	...	28 miles.
-------	-----	-----	-----	-----	-----	-----	-----------

To

To open these creeks, however, alone would be a work of some magnitude. To commence with the Freshwater: It will be seen on reference to the attached tracing [*vide Plan No. VZ*] that this creek falls into the north arm of the Clarence at a point about 3 miles from the main river, and as the lower end of the north arm is shallow, the dredging operations should commence at the south entrance; the creek also being rather tortuous and shallow would require straightening, widening, and deepening nearly all the way; however, I do not think any rock would be met with to interfere with the dredging operations. At 13 miles up, and at a point marked "broad-arrow" on plan, the creek comes from a westerly direction and becomes so tortuous to be made any further use of at this point; therefore the cutting for the canal should commence.

The banks of the creek here are from 14 to 21 feet high, and the country generally lying between the creeks and the sea is about 26 feet over level of water in the creek.

I attach a section taken on line, marked "broad-arrow and B," from the creek to the sea, which may be taken as showing a fair average of the level of the country for some miles north and south.

From point marked "broad-arrow," going north, the ground rises gradually for about 5 miles, when the dividing range between the two rivers is met with, and the lowest point I could find along this range is about 80 feet over water level of the creeks; on the north side again the ground falls gradually to the Tuckimbil Creek. The depths of cutting required would be approximately 35 feet at the ends, increasing to 95 or 100 feet at the centre; therefore assuming a canal with a 50 feet base, I estimate the quantity of material in this cutting would amount to 30,000,000 of cubic yards, which at 1s. 6d. would alone cost some two and a quarter millions of money; this is assuming the absence of rock. However, I have reason to believe rock would be met with at the summit before reaching a great depth, as I noticed some cropping out of the hills on either side.

From where this canal would terminate at the north end, the Tuckimbil Creek would require considerable improvement to straighten, widen, and deepen it, before it would be available for navigation. I noticed the bed of this creek is nearly all rock, there being several shallow rock bars crossing it; and the mouth is almost closed by a reef at low water.

Improving this creek would therefore in itself be a costly undertaking.

In the face of the extent of work required to open this ship canal I think I am justified in pronouncing it impracticable.

Scheme No. 2. By opening the creeks as far as practicable to navigation, and connecting their heads by a tramway.

I think this project may be disposed of with the objections to No. 1 scheme, namely,—the great cost of improving the creek. Were this even not a consideration I would still doubt the expediency of such a plan, not only on account of its requiring a transshipment of the goods, but chiefly owing to the expense of navigating, inasmuch as the vessels would require to be towed at each end, while for the purpose of working them a harbour or dock would have to be excavated at the head of each creek.

I am now brought to the consideration of scheme No. 3, which is a railway from river to river. This I think is certainly the most feasible project. The length of line required would be 27 miles to take it from deep water on the Richmond, at Woodburn, to deep water near the entrance of the Clarence River, at Iluka; but as 2 miles of this line is about being constructed from the North Head of the Harbour works, the total length required would only be 25 miles.

The works would be of the lightest description, nothing but mere formation for miles, and with the exception of perhaps 1 mile along the Tuckimbil Creek none of the land is alienated from the Crown, nor are the allotments in Woodburn or Iluka township yet sold.

I estimate that the railway might be constructed and supplied with a light and suitable rolling-stock for about or under £100,000. Suitable appliances and stores should be provided at either end to handle and receive the corn and other produce passing over the line.

I feel satisfied that should it be determined not to attempt to improve the entrance of the Richmond River, so that the produce might be taken through the natural outlet, that the only other way by which the district can be relieved and saved from the fate that is most inevitably awaiting it, that of abandonment as an agricultural district, is to provide means of conveying produce at a cheap rate to the shipping on the Clarence, and as far as I can see this can only be done by means of a railway.

It might not be out of place here to remark that when going down the Richmond, from Woodburn to Ballina, some 30 miles, I observed that fully one half the farms along the banks were deserted, and the land which had been cleared is again growing up with brush, almost assuming its original appearance. This state of affairs, I was informed, is wholly due to the farmers being unable to get their crops to market—the cane lying on the ground from year to year rotting.

While in the district my attention was directed to the Evans River as an outlet for the Richmond, and at the request of several of the residents I made a hasty examination of its features. This river flows into the sea 17 miles south of the Richmond; the entrance is well protected by a bold south head, which shelters the bar effectively from a south-east gale.

The river, however, is not much more than a tidal estuary, there being little drainage or fresh water flowing into it; it commences abruptly in a swamp, only about 1 mile from the Richmond, at Woodburn, the distance to the sea being rather under 7 miles; it is of considerable width throughout its course, but owing to the absence of freshes passing down to scour it out it is very shallow in places; the shoals being composed of sand brought up with the flood tide, at a very trifling outlay, if thought desirable, a small canal could be cut into it from the Richmond, which if it did nothing else would effectively save a good portion of the district from damage during floods in the Richmond.

If the current thus sent through it was found to scour it out, I believe with a little further improvement a very good and safe entrance to the Richmond could be obtained by this means for vessels of a reasonable draft.

I had only time to make a hasty examination, but from what I saw I think the expense of a survey and further examination would be justified; the bar is so very smooth that although there was only 4 feet on it at low water I was able to go out over it in a small boat, and take soundings during any state of the tide safely, although at the same time the Richmond bar had a heavy break on it.

There is a reef of rocks apparently crossing the entrance inside the bar, over which there is now 9 feet of water, but probably 3 or 4 feet more would be obtained when the sand scours away, as the rock does not show up in the bottom, only appearing on each shore.

The head is a granite formation, so that any amount of most durable stone could be obtained for works if required.

I only throw out this suggestion as a matter for consideration, for it would certainly require a most careful examination and inquiry before venturing to tap the Richmond at 30 miles from its mouth, without seeing how far it would affect the bar—injuriously or otherwise.

I have, &c.,

CECIL DARLEY.

## F.

LETTER FROM SIR JOHN COODE TO MR. C. W. DARLEY, WITH REFERENCE TO THE CONDITION OF THE RICHMOND RIVER ENTRANCE IN MAY, 1889.

Sir,

Department of Public Works, Harbours and Rivers Branch, Sydney, 6 August, 1889.

I have the honor to forward herewith, for your information, a copy of a letter received this mail from Sir John Coode with reference to the Richmond River Entrance Works, in reply to a letter from me informing him of the state of the bar last May.

I have, &c.,

C. W. DARLEY,

Engineer-in-Chief for Harbours and Rivers.

The Chairman of the Parliamentary Standing Committee on Public Works, Sydney.

## RICHMOND RIVER.

My dear Mr. Darley,

5 Westminster Chambers, London, S.W., 25 June, 1889.

Thanks for your letter of 9th ultimo, relative to the extraordinary condition of the entrance to the Richmond.

I thoroughly concur in your view that no work of a temporary nature could be undertaken that would prove beneficial under such adverse conditions, and that the proper course, under the circumstances, is undoubtedly to proceed with the first portion of the proposed north breakwater, so as to close the channel between the pilot station and the Beacon Rocks. This work will undoubtedly direct the obb current straight out, and cannot fail to effect an important improvement in the abnormal state of things which prevailed at the date of your letter.

I

I trust the Government will not stop with the short length sanctioned, but will carry on the works without break in the order of procedure. The first instalment of the undertaking shown on the drawings and described in my report, contemplates works of the minimum extent necessary for fixing the entrance, and, as I explained in the report, after their execution, and until the extensions have been completed, partial blockings and interruptions in the traffic might sometimes be caused by abnormal conditions.

The absence of sufficient stone close to the works for a complete undertaking is a serious matter.

C. W. Darley, Esq.

I am, &c.,  
JOHN COODE.

### G.

#### BORINGS MADE IN THE LOCALITY OF THE PROPOSED NEW CHANNEL AT THE ENTRANCE OF THE RICHMOND RIVER.]

LETTER FROM THE SECRETARY OF THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS TO THE HON. BRUCE SMITH, ESQ., SECRETARY FOR PUBLIC WORKS.

Sir,

Sydney, 5 July, 1889.

I am directed by the Chairman of this Committee to state that at the meeting of the Committee held yesterday a resolution was passed that the officers of the Department of Harbours and Rivers be requested to make the series of borings recommended by Sir John Coode in the first paragraph on the fifth page of his printed report on the entrance to the Richmond River. That paragraph is as follows:—

“Before commencing the first instalment of the works proposed it will be desirable to put down a series of borings on the precise line of the new entrance and channel. Although occasional borings of the old series were made within this area, and gave favourable results, it is only prudent in a matter of such moment that the bottom within the limits proposed to be secured should be fully investigated before operations are commenced,” &c.

I am to express the desire of the Committee that the full investigation recommended in the foregoing extract from Sir John Coode's report be made at once, and the result communicated to the Committee with as little delay as possible.

I have, &c.,  
CHARLES LYNE,  
Secretary.

The Honorable Bruce Smith, Esq., Secretary for Public Works.

LETTER FROM THE UNDER SECRETARY FOR PUBLIC WORKS TO THE SECRETARY OF THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Sir,

Department of Public Works, Sydney, 8 July, 1889.

I am directed to acknowledge the receipt of your letter of the 5th instant, conveying the request of the Parliamentary Standing Committee on Public Works, that certain borings recommended by Sir John Coode in the first paragraph on the fifth page of his printed report on the entrance to the Richmond River may be carried out, and to inform you that the Secretary for Public Works has authorized a compliance with the request of the Committee.

I have, &c.,  
J. BURLING,  
Under Secretary.

The Secretary, Parliamentary Standing Committee on Public Works.

#### DETAILS OF THE BORINGS.

Sir,

Department of Public Works, Harbours and Rivers Branch, Sydney, 23 September, 1889.

I have the honor to transmit herewith a copy of the result of the borings taken over the inner portion of the proposed new entrance to the Richmond River.

It will be observed that, with the exception of a small portion at the northern side, where the tail of the reef passes under the proposed breakwater, no rock has been met with. The depth to the rock on the tail of the reef referred to is from 17½ to 22½ feet; so it is well below the depth sought to be maintained in the channel eventually, namely, from 16 to 17 feet.

From my officer's (Mr. Keele's) report it will be seen that the heavy weather has rendered it impossible to obtain outside borings, but, from the spot borings already taken, I have no hesitation in saying that there is not the least chance of rock being found anywhere within line of the proposed channel.

I have, &c.,  
C. W. DARLEY,  
Engineer-in-Chief for Harbours and Rivers.

The Chairman of the Standing Parliamentary Committee.

#### BORINGS on centre line of proposed channel at entrance of Richmond River.

T. W. K., 7/9/89.

Nos. 1 and 2 borings on the Spit were bottomed on shingle, which could have been passed through if broken up with the chisels, but not having them at the time the tubes were removed; if considered necessary, however, these borings will be retaken.—T. W. K.

*Subject.*—Borings on centre line of proposed channel at entrance of Richmond River, required by the Parliamentary Standing Committee on Public Works.

I FORWARD herewith a tracing showing position of borings completed since date of my last report, on September 7th (see M.P. 89/4,129), together with a detailed statement of the material passed through. Advantage was taken of a calm day to take the punt outside the Bar, but owing to a Spit (shown in dotted lines) it was not possible to get many borings in the proposed channel. During the next spring tides, however, I hope to obtain a few more on the Spit, at extreme low water, by hand-boring.

The Engineer-in-Chief.

THOMAS W. KEELE, 21/9/89.

The report and list of borings just to hand complete the borings required in proposed line of channel, and shows in a most satisfactory manner that there is nothing in the way of rock to prevent the channel being opened in the direction laid down by Sir John Coode. Forwarded for the information of the Chairman of the Parliamentary Standing Committee on Public Works.—C. W. DARLEY, 24/9/89. The Secretary.

## H.

### REPORT, WITH PLANS, BY SIR JOHN COODE ON ENTRANCE TO RICHMOND RIVER.

The Secretary of Public Works,—

Sir,

5, Westminster Chambers, London, S.W., 27 February, 1888.

After my inspection of the Entrance and lower portion of the Richmond River in the early part of November, 1885, I took the evidence of Mr. George Easton, who had known the Port intimately for a long time, he having been a licensed Pilot for about thirty years, and for nearly seven years previously thereto master of a vessel trading between this place and Sydney. I also took the evidence of Mr. Fenwick, who informed me that he had been in and out over the Bar about every other day for ten years as master of the tug belonging to the Port.

Mr. Ross, J.P., of West Ballina, kindly furnished me with some facts bearing upon the subject of my inquiry which had come under his own observation during his long residence there, and Staff-Commander Howard, who was on the spot at the time of the heavy "fresh" in the Richmond, which occurred in January, 1883, gave me useful information as to the levels attained by the River at different points on that occasion.

On returning to Sydney I prepared and placed in the hands of Mr. Moriarty, C.E., a detailed memorandum of the technical particulars necessary to enable me to study this important case in all its bearings. The plans and documents prepared in accordance therewith reached me on 29th November last, and after careful consideration of the whole matter, I have the honor to submit the following report thereon, accompanied by three explanatory drawings, numbered 1, 2, and 3 respectively.

Drawing No. 1 is a general plan of the river from Coraki to the sea, compiled from a survey made by Lieutenant Accompanying Gowland, R.N., in 1871; the depths, which are indicated by contour lines at each fathom, have been plotted from sound-drawings taken at the date named, and form the most complete information which is available throughout the length of the River. It is possible that slight changes may have since occurred in the depths, but not to such an extent, except at the Entrance, as to affect, in any material degree, the points to be considered in this report.

Drawing No. 2 is an enlarged plan of the Entrance, plotted from a survey prepared by Staff-Commander Howard, R.N., in 1883. On this sheet the soundings, which were specially taken at my request in 1887, are shown by red figures.

Drawing No. 3 consists of four views giving the position of the Channels at the Entrance, and the configuration of the sand-spits there at the respective dates named.

The points which these sheets are intended more particularly to illustrate will be referred to hereafter.

General

*General description of the River.*

Mr. Moriarty has furnished me with a general description of the Richmond River and its tributaries, which is so full of useful and valuable information, both with regard to the present inquiry, and for reference hereafter, that I have considered it desirable to annex hereto in the form of an appendix a copy of this description, together with the tracings to which it refers. It will not, therefore, be requisite that I should here do more than touch very briefly upon the tidal compartment of the River, and the principal features in connection therewith, except with regard to those special matters which bear on the improvements hereinafter described.

When visiting the site I was much struck by the richness and extent of the agricultural district through which the Richmond River passes, and to and from which it forms the principal highway. I gather that in this respect it is one of the most important rivers in Australia, and that its navigable length exceeds that of any other coast river in New South Wales.

The great drawback to the Richmond is the shifting character of its entrance channel, and the extent to which the passage of shipping in and out is hampered, by reason of the bar and shoals which encumber its mouth. These evils are intensified by the conflict of the waters from the North Creek with those from the main river at their point of meeting between East and West Ballina. Once within the Entrance, and clear of the shoals and conflicting currents to which I have referred, there is a good channel having a width of 400 feet and upwards at low water, to Coraki, a township distant about 40 miles from the Entrance. At this point the River bifurcates into the North and South Arms, the town of Lismore, 62½ miles from the Entrance, being on the former, and Casino, 71 miles from the Entrance, on the latter.

A navigation for vessels drawing 10 feet is available as far as Lismore, on the North Arm, and to within 2 miles of Deep Creek, or 18½ miles below Casino, on the South Arm. The termination of the navigation on the North Arm is at Clancy's Falls, 68½ miles from the Entrance, up to which point there is water for craft drawing 4 feet. On the South Arm the navigation ends at Irvington Wharf, 2 miles below Casino, where a depth of not less than 4 feet is available.

The rise of tide at different points on the River is as follows:—

Rise of spring tides at sea, 4' 4" in winter.
Do. do. 5' 6" in summer.
Do. at Coraki, 2 feet.
Do. at Lismore, 1 foot.

High water at Coraki occurs at 4½ hours, and at Lismore at 6½ hours after high water at the Heads.

Bungawalbin Creek, one of the principal tributaries of the Richmond, which joins the latter at a point about 4 miles below Coraki, is navigable for vessels drawing 10 feet for a distance of 14 miles from the Main River (or 34 miles from sea), and is then obstructed by a short reef of rocks, which (as will appear from the Appendix), if removed, would open the navigation for a further length of 5 miles.

The shoalest "crossing" on the River occurs at Wardell Flat; having passed this point vessels cannot fail to reach Lismore without further obstruction.

Large quantities of cedar and other timber are rafted through the North Arm tributaries to the saw-mills on the main stream, and sugar-cane is plentifully grown on the lands in the vicinity of the River and its creeks generally, and conveyed to the several mills on the banks for crushing. There are therefore present all the elements for a growing internal trade carried on by means of barges and small craft, for which ample facilities are available as regards the depth in the channel.

The great defect is, as I have before stated, to be found at the Entrance, and it is to this important feature, and to the causes which produce the fluctuations and obstructions there, that I propose now to direct attention.

*The River entrance under existing conditions.*

Fluctuations in depth and position of Entrance.

When visiting the site in November, 1885, I was informed that the Entrance had never been known nearer the North Head than at that time. It had been as far south as Ti-tree scrub, viz., 7,200 feet from the North Head. The channel had broken through the South Spit three times within the last thirty years, on each occasion after a freshet, and always in the vicinity of Ti-tree scrub. When the southern entrance is thus formed, the north entrance generally closes within two or three days.

Pilot Easton informed me that on one occasion the South Channel was navigable for twelve months, and that three months was the shortest period for which it was open. These southern entrances had generally a depth of about 12 feet at high water of medium tides, although 17 feet is stated to have existed on one occasion. Looking, however, at the character of the bottom, as shown by the new borings on the site of the said channel, it is doubtful whether such a depth was ever really formed.

It will be seen from the Appendix that the Bar and Entrance at the Richmond, which are in a state of continual fluctuation as to depth and position, are therein stated to have considerably improved during the previous six months, and had then a depth of 14 feet at low water; it is evident, however, that this exceptionally favourable condition, in the absence of remedial works, could only have existed for a comparatively short period.

Mr. Easton informed me that on a few occasions it had not been possible for a vessel to cross the Bar either inwards or outwards in consequence of the uncertainty which existed as to the position of the channel, and that this untoward state of things had been experienced for six weeks continuously, the strength of the stream and force of the sea preventing the taking of soundings.

With regard to the locality of the bar, it would appear that, whereas in 1871 it was 1¼ miles to the south-east of the north headland, it was only 500 yards therefrom at the end of last year.

Drawing No. 3 shows the condition of the Entrance in 1871, 1883, January, 1887, and June, 1887. In 1871, it will be observed that two channels are shown to exist, but looking at the tortuous line of the southern outlet, and the shoals at its mouth, it is evident that at the date of the survey this channel was not navigable. In 1883, the South Spit was continuous, the entrance channel being 600 yards to the southward of the north headland, but divided into two internal branches, one on either side of the Beacon Rock, and the middle spit overlying the same. In January, 1887, the channel was still further north, the point of the South Spit having extended to, and gathered around, the Beacon Rock, forming a considerable accumulation to the southward. The only approach to the River at this time was between the north-western shoulder of the beacon and the rocky foreshore immediately under the Pilot Station, the navigable width at low water being about 160 feet, the gorge at this spot scouring out the bottom to a depth of 30 feet. In June, 1887, a further change had occurred, the point of the South Spit at its junction with the Beacon Rock having been reduced in bulk in the interval. It will be observed that in all four cases the Beacon Rocks have exercised a paramount influence in determining the configuration of the channel within the Bar, and it is desirable that this point should be kept prominently in view as affecting the character of the remedial works.

Conditions which govern the fluctuations of the Entrance

The prevailing winds during summer months are from east and south; these create the worst seas upon the bar. In the winter west and south-west winds prevail, and produce comparatively smooth water in the entrance channel, although there is always a constant break on either side of this channel in the finest weather, irrespective of the quarter from which the wind may be blowing.

Records show that of the gales occurring on the eastern half of the compass, during the eleven years from 1876 to 1886 inclusive, 370 were over the quadrant from east to south, and fifty from east to north, thus proving that the gales, and therefore the resultant force of the seas, come from the south rather than from the north.

The fluctuations in the Entrance and on the Bar are due to the action of the freshets trying to cut through the South Spit, and to curtail and keep back the northern end thereof on the one hand, whilst on the other there is the wave action with its preponderating force from the south tending to heap up and accumulate the sand along the shore, and to prolong the spit to the northward. The closing of the Southern Channel and the changes in the configuration of the South Spit are due to the same causes.

In the absence of works for training and fixing the entrance and channels, the relative prevalence and strength of freshets, and the direction and force of gales, must of necessity determine the frequency and extent of the changes which are produced in the Entrance and on the Bar.

Conflict of currents to and from the North Creek with those of the main river.

I would here direct attention to Drawing No. 2, which shows on a large scale the embouchure of the River, and brings out the very remarkable configuration of the Entrance as regards the indentation of Shaw's Bay, between the North Head and the Pilot Station, and a little further west the mouth of the North Creek, the waters from this arm being discharged almost in direct antagonism to those from the Main River, thereby creating conflicting currents and weakening the effect of the ebb in scouring the Entrance and Bar,

Similarly,

Similarly, the mouth of the North Creek in its present condition, must of necessity create baffling currents on the flood tide, which are detrimental to the navigation, and tend to the formation of sand accumulations. One point therefore which I have kept in view in designing the works of improvement has been the training of the currents, both flood and ebb, into and out of the North Creek, so that they may harmonize with, instead of being antagonistic to, those of the river proper, the waters being jointly discharged seaward, so that they may both be fully utilized in the maintenance of the Entrance.

As stated in the Appendix, "the Richmond Bar is at all times a difficult one to cross, but especially so in east or south-easterly weather. No vessel attempts to pass either in or out except at flood tide, and all sailing craft are towed; for this purpose a tug is subsidized by the Government. Whenever a fresh occurs in the River the "stand-off" signal is hoisted against all vessels until the water has cleared, and the tides commence to make in again. Vessels in crossing the Bar are chiefly guided by steering for where there appears to be the least break, as it is very rarely the pilot is able to sound the Bar or fix the position of the deepest water."

Under such peculiarly adverse and trying conditions, it will be readily understood that the sea-going trade is only carried on with difficulty, attended with delays, and not a little danger, as is evidenced by several wrecks lying in and about the sites of former entrance channels.

I have already referred to the injurious effect which this mass of rock exercises under existing conditions. Its conformation has been fully determined by the extensive series of borings which were so admirably put down under Mr. Moriarty's direction. Without the information thereby afforded it would have been absolutely impossible to have devised works for the improvement of the Entrance with any degree of certainty.

The extent and configuration of this rock having now been accurately determined, it appears that its area, at a depth of 12 feet below low water, is  $6\frac{1}{2}$  acres, and at 15 feet, 12 acres. To remove the overlying mass to the former of these depths would necessitate the blasting of 45,000 cubic yards of rock, whilst to carry the removal still further to 15 feet under low-water level, 98,000 cubic yards would require to be blasted.

Such removal would be entirely out of the question on the ground of cost, and, looking at the position of the rock with regard to the shore lines and headland to the northward, a partial execution of this deepening would not suffice for the creation of a true run for the River currents. It has therefore been requisite, in framing the design, to provide for permanently shifting the position of the Entrance to the south-west, so that the flood and ebb streams may pass entirely clear of these Beacon Rocks, which have hitherto proved so obstructive.

#### *Proposed Works for the improvement of the River Entrance.*

Having described the River in general terms, and referred at length to the fluctuations in the position and depth in the Entrance and on the Bar, and to the causes thereof, it becomes desirable that I should now describe the extent and character of those remedial works which appear to be called for under the circumstances.

The works which I have to recommend for adoption are shown by red colour on the accompanying drawings; they all refer to the improvement of the Entrance and the Channels immediately in connection therewith, and have been designed with a view to effect the following important objects:—

- 1st. To fix the Channel and to regulate its width, so that the scour may be confined to a definite track of proper proportions, instead of its useful effect being partially lost, as at present, in opening fresh channels and in the removal and cutting through of the Sand Spit.
- 2nd. To neutralize the obstruction to the ebb and flood currents which is now offered by the Beacon Rocks.
- 3rd. To prevent the conflict of the waters from the North Creek with those from the Main River.
- 4th. To so devise the works that the cost of the first instalment of the undertaking may, if possible, be brought within the sum which will be available, indicating, however, the character of extensions, to be executed hereafter, when justified by the requirements of trade, and when more perfect accommodation is demanded.

The first work to be taken in hand should be the South Training Bank. It would commence at the bight on the southern margin of the River, nearly opposite to the eastern end of West Ballina, and proceed therefrom towards the western face of the South Spit upon the curved line indicated on the drawings. The total length of this bank, as shown, is 4,500 feet, and it would be formed throughout of rubble stone brought up to say 6 feet above high water of ordinary spring tides. Its primary object is to prevent in future the cutting by freshets of a channel through the South Spit where passages have been formed on three occasions within the last thirty years, as before explained. This bank would also create a true run for the currents, the main force of the ebb being diverted from the sharp angle in the bight near the inner and weak portion of the South Spit, upon which it now directly impinges. A bank of this character would effectually protect the South Spit from the scouring effect of river freshets, and sand may be expected to accumulate at the back or seaward side thereof, thus securing the permanence and continuity of the Spit. Upon the accretion of this sand it will be desirable to fix the new surface by sowing "bent" or other marine grasses thereon.

The second stage in the operations to be undertaken after the completion of the South Training Bank for the length above named will be the construction of the North Breakwater from the Pilot Station across the present deep-water channel, thence over the south-west flank of the Beacon Rock, and seaward in a direction about east-south-east. The total length of the first instalment of this arm, which is indicated by red colour on the drawings, would be 2,500 feet.

When the last-named work has been completed for a length of 1,200 feet or thereabouts, the South Breakwater should be commenced in continuation of the South Training Bank on a curve of 1,600 feet radius, the works on the north and south sides being thereafter carried on simultaneously. The first instalment of the South Arm is shown as 2,000 feet in length.

Each of these Breakwaters would consist of rubble stone deposited in the form of a mound, and if fairly large stones are available there is every reason to anticipate that it will be practicable to carry them out for the lengths proposed without the employment of temporary staging.

It will be observed that the curved lines which have been adopted admit of the regulation of the width between the outer ends of the moles, as experience may show to be desirable, and as the works advance, the point to be aimed at being the confining of the currents to such an extent as will utilize them in the fullest degree for scouring purposes, without unduly creating a gorge during periods of flood discharge. As far as can now be ascertained the proposed width of the entrance between the ends of the moles when the first instalments have been completed, viz., 1,150 feet, will prove about correct.

It will be observed that the North Breakwater would be carried across the deep-water channel between the north-west face of the Beacon Rocks and the headland at the Pilot Station. Drawing No. 3 shows that in 1871 and in 1887 this channel formed the only outlet to the Richmond. Looking, however, at the obstructive position of the Beacon Rocks, and the certainty which exists that the sand to the southward thereof would be readily removed by scour during the closing of the course between the Beacon and the Pilot Station, there need be no apprehension as to any injurious results of a permanent nature being produced on the navigation by the adoption of this mode of procedure. In fact the course proposed is the only one whereby the obstruction hitherto experienced from the Beacon patch can be effectually overcome at a reasonable outlay.

Upon the completion of the South Training Bank, the Breakwaters and the Guide Bank at the Entrance to the North Creek which will be presently described, a new channel may be expected to be formed and permanently maintained by scour to the westward of the South Spit in the position shown. A fixed depth of 12 feet in this channel at low water of spring tides may be confidently looked for.

For the indication of the new entrance by night I propose to erect two leading lights near the mouth of the North Creek on the centre line of the opening between the moles, and in about the position shown on the Drawing No. 2. These lights would be sufficient for the first stage of the works, but should the moles be extended hereafter an additional light on the end of the North Breakwater would also be required.

It will be observed on Drawing No. 1 that the centre line of the proposed entrance points slightly to the northward of a right angle from the shore. I have adopted this direction in view of the great exposure of the site, and in order to lessen as far as practicable the conflict between the outgoing currents and the on-shore waves, which now create dangerous seas, necessitating, as before explained, the departure of the vessels from the River during the flood tide, when the current and waves are running in the same direction, and the seas are then relieved of their "bursting" tendency.

For the training and regulating of the waters to and from the North Creek, and the prevention of the conflict between them and the currents in the Main River, I propose to form a Guide Bank of 2,000 in length at the mouth of the creek, in the position and on the line shown upon the drawings. This bank, like the works previously described, would be constructed of rubble stone, deposited *a pierres perdues*, the top of the mound being 4 feet above the level of high water of spring tides.

Navigation of Entrance under existing conditions.

Beacon Rock.

South Training Bank

North and South Breakwaters.

Guide Bank at mouth of North Creek.

The

The bank is shown with a concave face towards the creek along which the deep-water channel would be formed by scour. The length of this bank has been determined so as to admit of such traffic as is now carried on between the North Creek and the Main River being hereafter conducted with increased facility and convenience.

Estimated cost of proposed works.

I estimate the cost of the works above described as follows:—

	£
South Training Bank, 4,500 feet in length ... ..	43,800
South Breakwater, 2,000 " " " " " " " " " " " "	32,800
North Breakwater, 2,500 " " " " " " " " " " " "	48,800
Guide Bank, 2,000 " " " " " " " " " " " "	9,600
Lighting and buoying channel... ..	1,500
<b>Total cost of first instalment of works</b> ... ..	<b>£136,000</b>

Effect of proposed works, and future extensions

The works proposed would create a fixed and permanent entrance channel, in which there should be a depth of from 16 feet to 17 feet at high water of spring tides. During and after freshets there would be a much greater depth than this, and such increase would be maintained for a longer period than under existing conditions. Again, the occasions when traffic would be interrupted by bad weather and freshets (which generally occur together) would be comparatively few, and the periods of very much shorter duration.

It will be apparent upon looking at the drawings that an absolutely perfect entrance could not be expected from the action of Breakwaters of the comparatively short lengths of those proposed. Some irregularities in depth may therefore be looked for upon the completion of the works consequent upon sand being driven into the channel from the southward. The only complete remedy will be found in the extension of the arms in the manner indicated on the drawings by crossed red lines. These extensions can be executed at any future time when the requirements of the trade are such as to justify the additional outlay.

My aim has been not so much to provide perfect accommodation in the first instance, although this would have been done if possible, as to bring the first expenditure within reasonable limits, and such as may be approved under the circumstances, indicating the nature of the additions to be made hereafter if and when desired.

I estimate the cost of the two extensions shown on the drawings as follows:—

	£
Prolongation of the South Breakwater for a length of 2,000 feet ... ..	100,000
Prolongation of the North Breakwater, also for a length of 2,000 feet ... ..	90,000
<b>Total cost of the two breakwater extensions, if carried out hereafter</b> ... ..	<b>£190,000</b>

Before commencing the first instalment of the works proposed, it will be desirable to put down a series of borings on the precise line of the new entrance and channel. Although occasional borings of the old series were made within this area and gave favourable results, it is only prudent, in a matter of such moment, that the bottom within the limits proposed to be scoured should be fully investigated before operations are commenced. Looking, however, at the results now available, I do not consider that there is any cause for apprehension on this head; nevertheless, as I have just said, it should be tested in order to remove all doubt.

Curves on the river.

There are two curves on the river between the entrance and Coraki which are abnormally abrupt, one of them specially so. I refer in the former case to the bend just below the mouth of Dungarouba Creek, and in the second to the elbow opposite the entrance to the lagoon about halfway between Woodburn and Bungawalbin Creek. It is probable that some improvement at the last-named bend will be called for at no distant date.

Floods.

It is stated in the Appendix that "very heavy floods occur in the Richmond District, and, although causing great damage and disaster at the time, are nevertheless beneficial to the land on account of the large deposit of silt which is left upon it after the flood-waters subside, this deposit reinforcing the land and enabling it to produce abundant crops."

The following table shows the level of the water during the flood of January, 1887, taken at the points named, with the heights of such floods above the banks.

Point of observation.	Distance from entrance in statute miles.	Height of flood above high water ordinary spring tides.	Height of flood above or below river banks respectively.
<i>Main River.</i>			
Wardell .....	13 miles.	4 feet.	2 feet below.
Woodburn .....	26 "	10 "	1 foot below.
The Elbow.....	33½ "	11 "	1 "
Coraki Junction .....	40 "	18 feet 3 inches.	3 inches below.
<i>North Arm.</i>			
Coraki.....	40 "	19 feet.	4 feet above.
M'Innes Farm .....	47 "	20 "	1 foot above.
Wyrallah .....	52½ "	23 "	Level with banks.
Gunderimba .....	59½ "	30 "	2 feet above.
Lismore .....	63½ "	34 "	1 foot above.
<i>South Arm.</i>			
Coraki .....	40 "	19 "	1 foot below.
Codrington .....	49 "	26 feet 9 inches.	1 foot above.
Deep Creek .....	55½ "	39 feet	6 feet above.
Tomki Station .....	65 "	55 "	3 "
Irvington Wharf... ..	69½ "	70 "	4 "

The observations which have been made show that the throttling of the flood discharge mainly occurs above the elbow, therefore the improved entrance would only exert a minor influence thereon. The question of the mitigation of flooding in the Richmond Basin is a large one, and could only be dealt with after special investigation, which does not appear to be called for, at all events for the present.

Conclusion

In conclusion, I may observe that during my visit to the Richmond River Entrance,—as in the case of the other rivers and ports inspected when in the Colony,—I had the great advantage of being accompanied by the Engineer-in-Chief of the Harbours and Rivers Department, Mr. Moriarty, as also by the Assistant Engineer, Mr. Darley, and Staff-Commander Howard, R.N., each and all of whom greatly facilitated my inquiry and examination of the locality.

I have, &c.,

JOHN COODE.

## NEW SOUTH WALES HARBOURS AND RIVERS.

### RICHMOND RIVER.

General description of the Richmond River and its tributaries, with accompanying tracings.

*Appendix to Sir John Coode's Report, dated 27th February, 1888.*

1. The Richmond River is situate in the counties of Rous and Richmond, and flows into the South Pacific Ocean in latitude 28° 51' 20" S., and longitude 153° 36' 33" E. Is the principal highway to a large agricultural and farming district, and is one of the most important rivers in Australia,—its navigable length being greater than any other coast river in New South Wales.

Area of watershed.

2. The area of the Richmond Basin is 2,635 square miles, and the principal tributaries which join the main river are the North Arm, having a basin of 610 square miles, the South Arm, having a basin of 1,050 square miles, and Bungawalbin Creek, having a basin of 650 square miles.

3. Very heavy floods occur in the Richmond District, and, although causing great damage and disaster at the time, are nevertheless beneficial to the land on account of the large deposit of silt which is left upon it after the flood-waters subside, this deposit reinforcing the land and enabling it to produce abundant crops.

Floods are beneficial.

4. The rainfall of some portions of the Richmond District was obtained, the average of which for the last ten years is about 42 inches. Nothing has been done to ascertain the permeability or otherwise of the strata forming the basin; it cannot therefore be said how much of this rainfall reaches the river, or how much is lost by filtration or evaporation; but it is supposed that a very small percentage of the rainfall finds its way to the river directly, from the fact that the velocity and sectional area of the channel at the entrance was but slightly increased during the time of the last heavy rains which occurred while the survey was being made.

Rainfall.

Absorption and evaporation.

5. In order to comply with the conditions of Clauses 21 and 22, Sir John Coode's general notes, a careful examination was made of the Richmond River and its branches, as well as taking cross-sections, flood-levels, and soundings.

Cross-sections, flood-levels, soundings.

6. The Richmond River is divided into two main branches at the township of Coraki, distant about 40 miles from the Entrance, called the North and South Arms, and leading respectively to the townships of Lismore and Casino.

7. The North Arm is divided at Lismore, 62½ miles from the Entrance, into Wilson and Leicester Creeks; Leicester Creek again dividing at 67½ miles from the Entrance into Terrania and Hanging Rock Creeks.

See lithographs, parishes in the County of Bous for the North Arm. Extent of navigation North Arm. No tidal influence 62½ miles from Entrance.

8. Commencing then with Wilson Creek, the most eastern of these branches, it was found to be navigable for vessels drawing 4 feet and under up to Clancy's Falls, 68½ miles from the Entrance, and 6 miles above the township of Lismore. There was no appearance of tidal influence at Clancy's Falls.

9. About ¼ mile below Clancy's Falls a cross-section was taken (shown on tracing\*), and from thence a continuous line of soundings down to the township of Lismore. The creek has a mean width of 100 feet, and the soundings showed an average depth of 7 to 8 feet in the reaches and 15 to 20 feet in the sharp bends, of which there are several, until Geraghty Flat is reached, 66½ miles from the Entrance. At this flat there is an extremely sharp bend, having only a depth of 5 feet upon it, the bottom being composed of shingle; from Geraghty's to the north-west corner of section 41 of the township of Lismore, 63½ miles from the Entrance, the soundings show a depth of 7 to 22 feet, when another shallow flat is reached, having only 5 feet of water upon it; this point is the limit of navigation in Wilson Creek for vessels drawing 6 feet and upwards. Wilson Creek is principally used for rafting cedar and other timber, of which large quantities are brought to the several saw-mills established lower down the river.

\*Drawing No. 9.

Limit of navigation, Wilson Creek, for vessels drawing 6 feet.

10. The township of Lismore, the population of which is 5,500, is situated on the left bank of Wilson Creek, at its junction with Leicester Creek. Wilson Creek is here crossed by a large lattice bowstring bridge having in it an opening span, the deck level of this bridge is 43 feet above summer level of the river and 9 feet above the highest flood level ascertained, which flood occurred in the winter of 1871. The banks here are about 33 feet above summer level. The rise and fall of tide at Lismore appeared to be about 1 foot, but it is difficult to say how much of this is due to slight freshes coming down the river, and how much to tidal influence. High water full and change at Lismore occurs at 4 p.m., or about 6 hours 45 minutes later than at the Heads. There is 150 feet of wharf accommodation, and also a storage shed about ¼ mile below the junction, principally used by the Clarence and Richmond Rivers Steam Navigation Company's and B. B. Nicoll's steamers, which vessels run bi-weekly between here and Sydney; there are also river-boats running daily between Lismore, Ballina, and Casino, calling at the several townships situated on the river banks. A cross-section of Wilson Creek was taken at the junction.

Lismore population.

Highest flood-level, 1871.

Tidal influence, about 1 foot rise and fall.

Shipping.

Drawing No. 9.

11. Terrania and Hanging Rock Creeks are both navigable for vessels drawing 4 feet to about 2 miles above their junction, and 69½ miles from the Entrance. They are both used, as is also Leicester Creek, for rafting cedar and other timber; there are also brick-kilns established on Terrania Creek at ¼ and 2 miles from its junction with Leicester Creek. A cross-section of Leicester Creek was taken at 1 mile up stream from its junction with Wilson Creek.

Drawing No. 9.

12. It was not thought necessary to go above this point as the steamer, which was drawing 4½ feet, had grounded shortly before reaching here. From here (Griffith's farm) to the junction of Wilson and Leicester Creeks the soundings showed 6 to 20 feet, with the exception of one short flat about ⅓ of a mile from the junction, upon which 4½ feet was found. At the junction Leicester Creek is spanned by a large queen-post truss timber bridge; this and the iron bridge leading from Lismore meet upon the point formed by the junction of the two creeks, the bridges being at the same height above summer level. A cross-section was also taken about ¼ mile below the junction of Wilson and Leicester Creeks (shown on tracing). Starting now from the township of Lismore, soundings were taken along the navigable channel of the North Arm, which showed at Snow's Flat, about ⅓ of a mile below Lismore, a depth of 11 feet, and, as no shallower water was found in the North Arm or between here and the Entrance, Lismore may be said to be the limit of navigation for vessels drawing 10 feet and under, supposing the bar to be sufficiently deep to admit of such a vessel crossing. Some dredging has been done on Snow's Flat by the dredge "Archimedes," the material excavated being sand and mud. There is a large saw-mill situated on the right bank near this flat; at 60½ miles from the Entrance there is a Government wharf on the right bank, the depth of water at it being 14 feet; and from here to the township of Gunderimba, 58½ miles from the Entrance, there is a depth of 15 to 18 feet of water in the reaches, and 20 to 30 feet in the bends. The banks of the river along here are about 25 feet to 30 feet high, and are greatly overhung with willows.

Limit of navigation for vessels drawing 4 feet 6 inches.

Drawing No. 9.

Limit of navigation for vessels drawing 10 feet.

Dredging operations.

Gunderimba township.

Drawing No. 9.

13. At Gunderimba there is a sharp bend in the river. A cross-section was taken here, and the flood levels obtained from the oldest inhabitants. The highest flood reached 30 feet 6 inches above summer level, and about 2 feet above the bank of the river. There is a Government wharf and also a ferry punt at this township. Large quantities of sugar-cane are grown on the surrounding land and taken to the several mills upon the river for crushing.

14. From Gunderimba to Wyrallah, which township is 51½ miles from the Entrance, there is deep water, but the river has two very sharp bends in it about halfway between the townships. At Wyrallah, a cross-section was taken and flood levels obtained, the highest flood recorded being 24 feet above summer level, and the banks at this place are about the same height. At Wyrallah there is a saw-mill on the left bank, and from here large quantities of colonial pine are shipped. From Wyrallah to 46 miles from the Entrance the same depths of water were found in the reaches and bends, viz., 15 to 20 feet and 20 to 30 feet. At 46 miles a cross-section was taken, and the highest flood was found to be 20 feet above summer level (1871); the banks are here about 19 feet high. For the next 6 miles down stream there is a depth of water varying from 15 to 27 feet, until the bend above the Coraki junction is reached; here 11 feet of water was obtained on a rocky bottom in the bend, but there is better water in the centre of the channel. Some of the rock here has been removed; from here to the junction there is 20 feet of water, the banks are 15 feet, and the highest flood reached 19 feet above summer level. A cross-section was taken here (shown on tracing).

Drawing No. 9.

Highest flood record.

Drawing No. 9.

Drawing No. 9.

15. Starting again in the South Arm, the limit of navigation for vessels drawing 4 feet and upwards is at Irvington Wharf, distant 69 miles from the Entrance and 2 miles down stream from the township of Casino. The Grab dredge is working one mile below Irvington Wharf.

South Arm.

16. Casino is the oldest town upon the river, and is the centre of a large pastoral district. Above Irvington Wharf the river consists of a series of rapids and falls in wet weather, and a chain of waterholes in dry weather. In the South Arm the floods reach a much greater height than in the north, and at Irvington Wharf, in January, 1887, the floods rose 70 feet above summer level, and 39½ feet in July, 1887.

Floods are higher in the South Arm.

16a. The banks of this arm are of an extremely unstable nature, and portions of them are constantly slipping into the river and carrying with them large trees and stumps. At Irvington Wharf a cross-section was taken, and a line of soundings along the channel from here to the junction at Coraki, distant 29 miles. The soundings showed a patch of rock at 67½ miles from the Heads, on which there was only 5½ feet of water, and this point is the limit of navigation for vessels drawing 6 feet and upwards in the South Arm. From this point to Tomki Station homestead, which is on the left bank, distant 63½ miles from the Heads, the least depth found was over 6 feet. Here a cross-section was taken, and January, 1887, flood-level obtained, which was 55 feet above ordinary summer level.

River banks very friable.

Drawing No. 10.

Patch of rock.

Limit of navigation for vessels drawing 6 feet.

Drawing No. 10.

16b. From Tomki to Deep Creek, which is 64½ miles from the Entrance, the least available depth is over 6 feet, and a cross-section taken at Deep Creek gives a very fair approximation of the average channel of the river for some considerable distance on either side of it. Deep Creek is decidedly a misnomer, as it was found that a boat could only be pulled up it a short distance. As an instance of the circuitous course of the river between the last two cross-sections, the distance by water is 9½ miles, and in a direct line 3½ miles. The January, 1887, flood rose to 39 feet above summer level at Deep Creek.

Drawing No. 10.

This part very circuitous.

Flood level, January, 1887.

17. From Deep Creek to 52½ miles from the Entrance there is good water, but at this point there is a shallow flat, having only 7 feet upon it, and this is the limit of navigation for vessels drawing 10 feet and upwards. There is over 10 feet from here to the junction, and the cross-section taken at Codrington township, distant 47 miles from the Heads, gives a good general idea of the stream from there to Coraki. The 1887 flood at Codrington was 27 feet, and the banks are 25½ feet above summer level. This is the same flood which reached a height of 70 feet at and near Casino, and the highest flood which has taken place in the district for over 30 years. A section was taken on the South Arm at the junction, and the flood-level here was 19 feet, the banks being 20 feet high.

Drawing No. 10.

Flood level at Codrington, 1887.

Highest flood for 30 years.

Drawing No. 10.

Coraki Town-  
ship.

18. Coraki is situated on both banks of the river, at the junction of the North and South Arms; it is a rising town, ship, and is the centre of a large sugarcane-growing district. There is a ferry punt established here, crossing both arms, also good wharf and storage accommodation. The rise and fall of tide is 2 feet, and high water at full and change occurs at 1.30 p.m. A cross-section was taken here about 1,000 feet below the junction, and the 1887 flood-level obtained showed a drop of 9 inches in this distance.

Drawing No. 10.

19. From Coraki, distance 40 miles from the Bar, the river runs south-east about 1 mile, and the least available depth in this reach is 12 feet. It then takes a rectangular bend to the right, and runs south-west about 2 miles; this is a fine straight reach, and has at least 13 feet of water in the shallowest part; from here the River runs east-south-east about 1½ miles, and has an available depth of 12 feet, when it again turns to the right and runs ¾ of a mile in a south-south-east direction to its junction on the right bank with Bungawalbin Creek.

Bungawalbin  
Creek, called  
South Arm on  
county map.

May be made  
navigable for  
vessels drawing  
10 feet for dis-  
tance of 19 miles.

20. Bungawalbin Creek, called South Arm on county map, is one of the principal tributaries of the Richmond; it is navigable for vessels drawing 10 feet for a distance of 14 miles from its mouth, and is then obstructed by a short reef of rocks, which, if removed, would open the navigation 5 miles further. The least depth obtained was 14 feet, the general run being from 20 to 25 feet. Unlike the South Arm, the banks of this creek are sound and the channel clear of trees and snags. There is a sandstone quarry at the head of navigation on the right bank, and a large amount of hardwood timber is brought down this creek. Several lesser creeks flow into Bungawalbin, and are used by settlers for conveying produce, &c. The largest of these is Sandy Creek, which joins Bungawalbin at 1½ miles from the mouth; it is navigable about 5 miles for vessels drawing 4 feet.

Drawing No. 10.

Drawing No. 10.  
The Elbow.

21. Cross-sections of Bungawalbin were taken at the mouth, and 6 miles from there up stream, the highest flood-level on this portion was 12 feet above summer level, which is also the mean height of the banks. A section was also taken of the Main River a short distance below the junction. From this point the river runs south-east 2½ miles to the Elbow; this is the longest straight reach on the river, and is a fine sheet of water, there being nothing less than 12 feet in the channel. At the Elbow the river is joined on the right bank by an almost circular lagoon called Swan Bay. There is 8 feet of water in the narrow channel connecting this lagoon with the river, and 14 to 22 feet inside. Large quantities of sugar-cane and timber (for piles) are brought out of this bay. A short distance below the Elbow there is a Government wharf and punt. From the Elbow to the township of Woodburn, distant 4¼ miles, the river makes two semi-circular bends. There is a flat about 1½ miles below the Elbow, which has only 10 feet at low water upon it. The bottom is soft and muddy, the deep water being close to the left bank. At 28½ miles from the Heads there is a shingly patch, having only 11 feet of water upon it, and from here to Woodburn there is 14 feet available. At Woodburn there is a rocky patch just above the township, the least depth upon which is 11 feet in the channel.

Drawing No. 11.

Woodburn  
Township.

Drawing No. 11.  
Sandstone  
quarry.

22. The township of Woodburn is situated on the right bank, distant 27 miles from the Heads. The head waters of the Evans River lie to the south-east of the township of Woodburn, distant 1½ mile, and the intervening space is low and flat. From Woodburn to the junction of the Main River and Dungaroba Creek, distant 20½ miles from the Heads, the least available depth is 11 feet. There is good sandstone showing in the high ground on both sides of the river here. The surface samples indicate stone of good quality, but no tests have been made by sinking trial shafts. There is every reason, however, to believe it to be the best site for a quarry in the district.

Drawing No. 11.

Important  
industry.

23. At this point a cross-section was taken, and from here to 17½ miles from the Heads the least depth obtained in the channel was 12 feet.

24. At this point the Colonial Sugar Company's mill is situated on the right bank. This is a very large and important industry, employing 500 hands in the season and about 250 permanently. They have also about ten steamers at work upon the river. At 1 mile below the mill the Broadwater joins the river on the left bank. It is a large shallow lagoon used chiefly for conveying the punts laden with sugar-cane to the mill. There is only 4 feet of water at the entrance to this bay.

Wardell Flats, a  
difficult crossing.

25. From Broadwater down stream there is good water until Wardell Flats are reached, distant 13 miles from the Heads; this is the worst crossing on the river, having a bare 10 feet upon it at low water; there is however between 2 and 3 feet of tide at this place. A vessel having crossed here cannot fail to reach Lismore without further obstruction.

Wardell tide  
gauge.

Drawing No. 12.  
Immigrant.  
Creek entrance  
shallow.

26. Immediately below the flats is situated the township of Wardell on the right and left banks of the river; there is good wharf and storage accommodation and a ferry punt here, and a large amount of timber is sawn at the mills in this place. Wardell is one of the positions fixed by Sir John Coode for erecting a tide gauge, the next being at Pimlico, 4 miles down stream, and between which place there is good water, the least being 12 feet. From Pimlico to Immigrant Point, where another gauge was erected, there is from 15 to 40 feet of water; here Immigrant Creek joins the river on the left bank. The entrance to this creek is shallow, only 5 feet, but once inside there is good water for over 20 miles; like the other creeks, it is principally used for conveying sugar-cane to the mills. From Immigrant Creek to the township of Ballina, situated on the left bank, the least depth at present is 14 feet, but the river may be here said to enter upon its variable or unstable portion.

The bar has  
improved.

26a. From Ballina to the bar the distance by the present channel is about 2¼ miles, but this channel is constantly shifting its position and varying its depth; the bar, which in 1871 was 1¼ miles to the south-east of the north headland, is now only 1,500 feet from it.

27. The Richmond bar has improved in depth very much during the last six months, and has at present a greater depth of water upon it than any other bar harbour on our coast (14 feet at low water).

North Creek  
opposes the  
current on main  
river.

28. Ballina is situated on the left bank of the river about 2¼ miles from the Entrance, and the deep-water channel runs close along this bank until it reaches the south-eastern extremity of the township. Here the river widens into a large bay, and the deep-water channel turns away towards the South Sand Spit. The general direction of this spit is north-east and south-west, and the channel follows its western shore until it reaches the Beacon Rock, which is 500 feet south from the high rocky point on the north side, upon which the pilot station is situated. The current is here met and directly opposed by the waters of the North Creek, which waters flowing in almost the same line as that of the channel, but in a contrary direction, must weaken considerably the ebb current on its way towards the bar, and this fact is fully exemplified, for, although the channel is immediately below this contracted to 780 feet in width, the ebb current does not receive a corresponding increase in strength, being very little greater than when it is flowing in the wide open space above. After passing through this narrow channel the river again widens out into Shaw's Bay. Skirting round the shores of this bay the deep water makes a segmental bend on its way to the bar, when it is again deflected southward by the patch of rocks lying on the foreshore of the north headland, and upon which the wreck of the "Lismore" is now lying. Passing here the current again bends to the eastward and runs directly out to sea, the deep-water channel being about 1,500 feet south of the north headland; on this headland the lighthouse and signal station are situated at a height of 117 feet above high water.

Patch of rocks  
causing deflec-  
tion.

Statements  
respecting  
former entrance.

29. It is stated that when the Entrance was much further to the south, or at the end of what is known as the Ti-tree scrub, that there was 17 feet of water upon the Bar, and it is not improbable that this was the case, as with the channel in this position the waters of the North Creek and Main River would combine to assist one another in their scouring action, instead of each exerting a retarding influence on the other, as they now do.

Difference in  
time of tides.

29a. A curious fact is noticed with regard to the tides in the North Creek and Main River. The flood commences in the former nearly one hour earlier than in the latter, and the same occurs at the ebb tide, which may be attributed to the greater momentum in the waters of the Main River (on account of its greater volume) requiring a longer time to be overcome by the incoming flood, and this flood meeting with less resistance from the smaller body of water coming from the North Creek consequently strikes off in that direction. The same reasoning would apply to the ebb tide.

Bar most difficult  
to cross in east  
or south-easterly  
weather.

30. The Richmond Bar is at all times a difficult one to cross, but especially so in east or south-easterly weather. No vessel attempts to pass either in or out except at flood tide, and all sailing craft are towed; for this purpose a tug is subsidized by the Government. Whenever a fresh occurs in the river the stand-off signal is hoisted against all vessels until the water has cleared and the tides commence to make in again.

Winds.

31. The most prevalent winds during the summer months are from the east and south, and these create the worst sea upon the Bar. In the winter the west and south-west winds which prevail produce comparatively smooth water in the deep-water channel, but there is always a constant break on either side of the channel in the finest weather, independent of where the wind may be blowing from at the time.

Constant sea-  
break in all  
weathers.

32. Vessels in crossing the bar are chiefly guided by steering for where there appears to be the least break, as it is very rarely the pilot is able to sound the Bar or fix the position of the deepest water.

29 September, 1887.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**THE RIVER MURRAY.**

(REPORT OF MR. J. E. F. COYLE, C.E., ON EXAMINATION OF.)

*Ordered by the Legislative Assembly to be printed, 22 August, 1889.*

Colonial Secretary's Office,

Sydney, 4 June, 1889.

Sir,

On behalf of this Government, I hereby authorize you to proceed to Albury, and from that point make a careful and thorough examination of the river Murray, so far as it waters the soil of New South Wales, mainly in respect, to the conditions here specified:—

1. The condition of the navigation.
2. The character of the craft employed on the river, especially as to ownership and nature of trade.
3. Whether any works undertaken by private persons or companies or other causes exist which operate in diminishing the waters or otherwise injuring the river.
4. What actual arrangements are made by the officers of Customs of Victoria or of New South Wales for the performance of their duties as such officers.
5. The situation of all Custom-houses of either Colony.
6. Whether licenses are issued at any place on the river, Echuca for example, to steamers or other vessels to trade, &c.
7. Whether any evidence presents itself of smuggling being carried on at different places upon the river.
8. Whether any proclamations or notices are posted on the banks of the river, and, if so, their nature.
9. Whether any improvements of the navigation of a practicable nature suggest themselves to your experience as an engineer.
10. Whether you observe any circumstance or authorized action on the part of any persons whatever which appears inconsistent with the ownership of the river-way by the Colony of New South Wales. And of course you will report on any other matter of relative significance, though not specifically expressed above.

Before leaving Albury it will be well to make such enquiries as may be practicable as to what is being done on the river above that point.

You must determine for yourself when you reach Albury by what means you will perform your journey of inspection and examination, and should you deem it expedient to charter a small vessel for the purpose, at any reasonable expense, your action in so doing will be approved. But as the post as well as the telegraph is conveniently at your service, it will be best to advise me on any proposal of special expenditure.

A further communication will be addressed to you in a day or two.

I have, &c.,

HENRY PARKES,  
Colonial Secretary.

J. E. F. Coyle, Esq., C.E.

---

Norwich Chambers, Hunter-street,  
Sydney, 17th August, 1889.

The Hon. the Colonial Secretary,  
Sydney,—

Sir,

I have the honor to state that, in compliance with the instructions contained in your letter of the 4th June last, I have made an examination of the River Murray, from Albury to the South Australian border, and I now beg to submit the following report in reply to the questions set forth in your letter above referred to.

In a further report the timber trade of the Murray forests will be dealt with, and the matters referred to in the present report more fully touched upon.

I have the honor to be,

Sir,

Your most obedient servant,

J. E. F. COYLE.

## RIVER MURRAY.

### 1. The condition of the Navigation.

IN 1853 Captain Francis Cadell brought the "Lady Augusta," a steamer of 72 tons burthen, through the river mouth. In the following year he succeeded in reaching Albury in that vessel, and in subsequent years did much towards making the Murray and its tributaries navigable with safety.

The first operation was the removal of timber from the waterway by cutting off at summer level, allowing the heavier portions to sink, and removing the lighter to the river banks. Thus, for each foot of rise above summer level there was a foot of clear fairway free from obstruction. In a few years after commencing operations Captain Cadell succeeded in making the river fairly navigable for about eight months in the year, to vessels drawing 4 feet 6 inches of water, from Albury to Goolwa, a distance of 1,468 miles by the course of the river; and the system he initiated forms the groundwork of all that has since been done in the way of river improvement.

In 1857 ten steamers, with barges, were trading between Albury and South Australia, and greater demands were made year by year on the capabilities of the fairway, for which special snagging boats were provided.

In 1864 railway communication was established between Melbourne and Echuca, and the Upper Murray trade from Albury to the Murrumbidgee Junction became concentrated on Echuca.

In 1872 the Victorian railway system was extended to Wodonga, and subsequently to Wahgunyah, Yarrawonga, and Cobram, points upon the Murray between Albury and Echuca, and the navigation of the river between these places may be said to have then ceased, save that four or five trips are made in the course of the year with wool from Tocumwal and the Goulburn to Echuca, and that a few boats engaged in the timber trade ply between the depôts and the saw-mills. Since the opening of the railway to Wodonga but little, and of late years nothing, has been done to maintain the navigable condition of the river between Albury and the Goulburn Junction. From the latter point to the junction with the Murrumbidgee two snagging steamers with tenders are provided by the Victorian Government for removing timber from the bed and banks of the river, while on the Lower Murray, from the Darling Junction to the sea the Government of South Australia remove timber, construct training walls over shallow reaches within their own territory, and otherwise maintain the fairway for navigation.

The general trading boats now employed draw from 4 to 6 feet of water. This may appear an excessive draught, but experience has shown that it is impossible to get a boat of sufficient displacement to perform the work required on a less draught, without increasing the length to such an extent as to render the passage of the sharp bends difficult or impracticable.

From Albury to Tocumwal the river is much impeded by timber, and the landing stages at the various places along the route were removed some years ago. From Tocumwal to Echuca the condition is somewhat improved by the occasional operations of a Victorian snagging steamer, while the fairway between Echuca and the South Australian boundary is good, and safely navigable for the largest boats trading, when its waters stand at, or over, 12 feet above summer level on the Echuca gauge, a condition that usually obtains from the beginning of June until the middle of December; and it is fairly navigable to vessels drawing 5 feet of water for eight months in the year, that portion below the effluent of Lake Victoria having sufficient depth for one month longer. A few small boats on a draught of 2 feet and under make occasional trips in any state of the river, when inducement offers.

As the water falls below 6 feet on the Echuca gauge, navigation becomes difficult for trading boats, and as it approaches summer level, impracticable, by reason of the numerous obstructions which present themselves in the waterway—as timber, wide shallow reaches, isolated rocks, and sandstone or conglomerate bars. The following places.

places are specially noted, all distances being estimated along the course of the river, commencing at Albury :—

- 12 miles (Jindera Hill).—A wide shallow reach, with timber partially embedded.
- 43 miles (Howlong).—Present bridge across the river too low to admit of the ordinary class of steamers trading on the Murray to pass under it.
- 46 miles (Devil's Elbow).—A sharp bend, with shallow water by reason of a short anabranch taking off there.
- 54 miles (Keogh's Island).—River divided into two channels, with much timber in the waterway.
- 112 miles.—A narrow cut and sharp elbow, formed by river breaking through neck of bend during the flood of 1870.
- 131½ miles (Mulwala Cut).—Shallow water ; soft, sandy bottom.
- 159 miles (Darwood's Island).—Sharp bend with much partially embedded timber.
- 190 miles.—A wide shallow reach of soft sand.
- 209 miles (Wharparanah).—A recent cut, much impeded by timber.
- 211 miles.—A wide shallow reach of soft sand.
- 249 miles (Nine Panel Bend).—A very sharp bend, with quantities of partially embedded timber.
- 263 miles (Lake Moira).—Channel narrow, and much impeded by timber.
- 265 miles (Wahgunyah Bay).—River shallow, with timber in waterway.
- 270 miles (Bama Creek).—A very shallow reach of river with much timber.
- 271 miles.—Long shallow reach, with sandstone bars, having timber partially embedded between them.
- 285 miles (Cape Horn).—A sharp shallow bend with much timber.
- 290 miles (Goulburn Junction).—A stretch of shallow water with timber.
- 294 miles (Boiling Down Reef).—A sandstone bar in which a narrow channel has been artificially cut in midstream.
- 297½ miles (Pound Reef).—A sandstone bar with narrow channel amidstream.
- 301 miles (Echuca).
- 307 miles (Boyces).—A flat bed of shale, 300 ft. wide, crosses the river for two-thirds of its distance.
- 312 miles (Murrumbidgee Reef).—A sandstone bar extends from the Victorian side to within 35 ft. of the opposite bank. There is a narrow channel about midstream, too shallow for trading vessels to pass in a low state of the river.
- 316, 318, 321, and 323 miles.—Wide reaches of shallow water. During low-water a channel is scoured through these flats, but is again filled as the water rises.
- 407 to 412 miles.—Several reaches of wide shallow water of uniform depth across the river.
- 418 miles (Clump Bend).—A sandstone bar extending across the river, wide and shallow section.
- 419½ miles (Waradgery Reef).—A flat sandstone bar, 200 feet wide, extends from the New South Wales side to within 35 feet of the opposite bank.
- 431 miles (Campbell's Islands, Kelpie Leap).—Reach of shallow water.
- 441 to 443 miles.—Several reaches of shallow water.
- 442 miles.—A sandstone bar extending from the Victorian side to within 30 feet of the opposite bank.
- 492 miles (Hospital Bend).—A sandstone bar extends for two-thirds of the width of the river from the Victorian side.
- 496 to 514 miles.—Numerous wide reaches of shallow water, with soft bottom.
- 546 to 554.—A number of sandstone bars.
- 555½ miles (Mud Island).—A hard sandstone bar extends from the Victorian side across to Mud Island. Between this and the New South Wales bank is the channel, 40 feet wide, which is impassable in a low state of the river. On the upper side a flat bed of hard sand extends across the river.
- 601½ miles (Jeremiah Rocks).—A sandstone bar extending across the river, slightly depressed in midstream.
- 611 to 612½ miles.—Four sandstone bars having channels, which silt up when the river is high, and are scoured out at low water.

- 624 to 627 miles.—Two sandstone bars, with a shallow reach of sand between them.
- 628 miles.—The river bed is composed of sandstone for a length of half-a-mile, and has a wide cross-section. The channel through this bed is narrow and intricate.
- 659½ miles.—A bar of conglomerate extends from the Victorian side to within 50 feet of the opposite bank. The channel has a hard sandy bed, and is difficult to navigate by reason of the current deflected by the bar setting into the channel at an acute angle.
- 681½ miles.—A flat sandstone bar, 200 feet wide, extends from the New South Wales side to within 30 feet of the opposite bank.
- 684½ miles.—A bar of conglomerate extends for two-thirds of the river's width from the New South Wales side, with hard bottom in channel; wide cross-section.
- 695½ miles.—A sandstone bar, 300 feet wide, extends from the Victorian side to within 50 feet of the opposite bank.
- 697½ miles (Gell's Island).—A conglomerate bar extends from the New South Wales side to within 50 feet of the opposite side.
- 738½ miles.—A hard sandstone bar, 150 feet wide, extends across the river; wide cross-section.
- 755 miles (McGrath's Island).—An irregular conglomerate reef, 150 feet wide, extends from the Victorian side to within 40 feet of the opposite bank. For a distance of a mile below this point there is a wide shallow reach, and navigation is difficult by reason of the intricacy of the channel.
- 789 miles (McFarlane's Reef).—A sandstone bar extending across the river, with a narrow depression in midstream; cross-section of river wide.
- 798 miles (Rocky Point).—There are three conglomerate reefs at this place, two running out from the New South Wales bank, and one from the Victorian side. The navigation is dangerous by reason of the tendency of the current to carry the vessel on to the New South Wales reef in endeavouring to avoid the Victorian.
- 840 miles (Cowana Reef).—A conglomerate reef, 300 feet wide, extends from the Victorian side for two-thirds of the distance across. Immediately below this are several isolated rocks in the riverway; then a second reef, 70 feet wide, extending from the New South Wales side to within 50 feet of the opposite bank.
- 851 miles.—From the Cowana Reef to the Darling Junction (Wentworth) there are no further special obstructions beyond the sandspits on the inner sides of the various bends which obtain throughout the river's course.
- The bars and reefs enumerated above, with the exception of those at Clump Bend (418), Jeremiah Rocks (601½), and McFarlane's Reef (789), have channels through or past them, and may be said to act as weirs in raising the water-level upstream in low states of the river.
- Continuing from Wentworth to the South Australian border the next obstruction met with is at—
- 894 miles (Moorna).—A wide shallow reach of soft sand ½ mile in length.
- 924 miles (Cadell's Reef).—A sandstone reef 600 feet wide extends across the river with tortuous channel through projecting points of rock.
- 949-954 miles (Rufus Reach).—A wide shallow reach of soft sand extends for about 900 feet.
- 969 miles (Little Elbow Reach).—A shallow reach extends for 200 feet.

No further special obstructions occur from this point to the South Australian boundary, which is reached at a distance of 1,004 miles by the river's course from Albury.

The action of floods is greatly moderated, and the navigable condition of the river prolonged by the numerous lakes, expansions, anabranches, billabongs, and lagoons along its course. These receive a large proportion of the flood-waters, distribute them over hundreds of square miles, and discharge them again into its bed as the waters recede. The discharge from Lake Victoria alone maintains sufficient depth for trading vessels below the junction of its effluent, the "Rufus Creek," with the Murray, for five weeks after the navigation is closed above it.

A similar cause of the navigation being prolonged is produced by artificial means. The banks are invariably higher than the land for some distance back from the river, and through these banks numerous channels have been cut, which admit the waters on the rise at a level frequently several feet below the banks, and, as the water recedes, permit of its flowing again into the channel of the river instead of forming shallow lakes, from which the only escape would be by evaporation. When it is stated that an area of over 500 square miles of country was under water an average depth of 4 feet during the present season, between Corowa and the Murrumbidgee junction, of which a considerable portion would have been impounded, some conception may be formed of the effect which these apparently unimportant works produce in maintaining the normal volume of water in the river, and as many of these openings are provided with gates, the influx and reflux can be regulated at pleasure.

## 2. The character of the craft employed on the river, especially as to ownership and nature of trade.

The trade of the Murray, apart from the timber industry, consists of carrying supplies to the stations, stores, and settlers of the Riverina district, from Melbourne and Adelaide, and bringing back wool, hides, and tallow, and is performed by steamers towing one or two barges, and carrying from 60 to 300 tons each trip. There are engaged in the trade 143 steamers, and a similar number of barges, of which sixty-seven are owned in Victoria, fifty-five in South Australia, and twenty-one in New South Wales.

The extension of railways to Hay in 1882, and to Bourke in 1885, as well as the connection of Silvertown with the railway system of South Australia in 1888, has materially affected the Murray trade. Victoria, again, has recently touched the river at two points below Echuca, viz, Koondrook and Swan Hill, and it may be anticipated that when the rails are laid to the latter place, and the necessary accommodation is provided, the trade of the Upper Murray will centre there instead of at Echuca as at present.

The trade of the Lower Murray and the river-borne trade of the Darling centre in Morgan, a town on the Murray, 100 miles below the South Australian border, and connected by rail with Adelaide, Wentworth, at the junction of the rivers, being the port of entry for New South Wales.

Formerly the trade between the Darling country and Melbourne was of equal importance to that with Adelaide, but in 1874 a reduction in cost of freight to Adelaide took place, and a large portion of the Victorian trade was diverted to South Australia.

The Upper Murray trade, which includes the river-borne trade of the Murrumbidgee, Edwards, and Wakool Rivers, centres in Echuca, where ample accommodation exists for the discharge and shipment of goods, as wharfage 1,123 lineal feet, sheds 620 feet by 31 feet, 6 hydraulic cranes, lifting up to 10-tons, hand crane, railway connection, and extensive sidings, fully sufficient to meet the requirements of the trade of the port.

Goods come direct from Melbourne by rail to the wharves, and are transferred from the wagons into the steamers and barges. Wool, again, from the Riverina is loaded directly on to the railway trucks from the vessels lying alongside the wharves, without delay or inconvenience.

Vessels leaving Echuca are said to clear for Moama, a New South Wales port across the river. They do not, however, go there, but the Customs Officers at Moama come to Echuca wharf and clear the vessel before she leaves. At Moama a wharf 120 feet long was erected a few years ago in a blind billabong off the river. It is awkwardly situated, and, in its present state, is inaccessible at ordinary water-level, and vessels are unable to swing except in times of flood. There is no railway connection nor are there appliances or accommodation of any description for the shipment or storage of goods. The wharf has not been used, and under existing conditions is of no service whatever for any purpose.

To accommodate the coastwise trade and the trade of the Murray proper, there are wharves at Tocumwal and Wentworth, on the New South Wales side, and at Koondrook and Swan Hill, on the Victorian bank. When the river is in good condition

condition the time occupied and the cost of carriage per ton, including railage, steamer, and insurance, between Melbourne, Adelaide, and Sydney, and the chief ports on the Murray and its tributaries in New South Wales, is as follows:—

						£	s.	d.
Melbourne to	Echuca,	1 day, return journey	1 day, freight	...	2	11	0	
"	Balranald,	4 days	6 days,	"	5	6	0

NOTE.—Whenever a falling off in the imports and exports in the years is observed, it may be attributed to the unnavigable state of the Darling, as well as, during the past three years, to the opening of the Bourke Railway, and the introduction of supplies from South Australia to Silverton direct by rail for consumption in that as well as in the Darling district.

Diversion of trade from Victoria to South Australia beginning in 1875, occasioned through reduction of freights from £2 10s. to £1 5s. on the Adelaide to Morgan Railway, thereby offering inducement to Victorian exporters to forward their general supplies *via* South Australia for the Darling, instead of by the Echuca route, the freights by which were, and still are, considerably higher.

Licenses.—Six hawking steamers have obtained licenses for trading in New South Wales waters. Steamers plying for freight require none, but care has been taken that they are duly registered.

RETURN showing No. of steamers and barges, and their tonnage, employed in the South Australian and Victorian trades respectively, on the Lower Murray and Darling Rivers, as well as the name of the Colony as far as can be ascertained where owners reside:—

\* Several occasionally trade from South Australia on the Darling. † The 42 domiciled in Victoria.

### 3. Whether any works undertaken by private persons or companies, or other causes exist which operate in diminishing the waters or otherwise injuring the river?

The works undertaken by the various Trusts constituted under the Irrigation Act, 1886, in force in Victoria, those of Chaffey Bros. (Limited), under a special Act of the Victorian Legislature, those of the municipalities of Albury, Yarrawonga, Echuca, Swan Hill, and Wentworth, as well as numerous pumping plants and irrigation works owned and constructed by persons on both sides of the river, operate now, and in future will operate largely, in diminishing the waters of the river. Several woolscouring establishments are situated on the river banks.

The greater part of the sewage of Albury, Corowa, Wahgunyah, Yarrawonga, Echuca, Moama, Koondrook, Swan Hill, and Wentworth is discharged in an unpurified state either into the Murray or streams leading immediately into it.

The schedules showing the various works operating prejudicially to the river are appended, save those important diversions of water from the tributaries on the south side, for irrigation and other purposes, which will be dealt with more particularly in a final Report.

4. What actual arrangements are made by the officers of Customs of Victoria or of New South Wales for the performance of their duties as such officers?

*Tintaldra*.—90 miles above Albury. An officer of the Victorian Customs acts by permission of his Department for New South Wales, from which Colony he receives £25 annually. He visits the different crossings at uncertain times, collects duty on sawn timber and other dutiable articles, and supervises the crossing of duty-paid goods sent under certificate from the Albury Customs.

*Wagra*.—30 miles above Albury. A New South Wales Customs officer acts for Victoria, receiving £25 annually from the latter Colony. He performs similar duties to those performed by the officer at Tintaldra. The duty collected at both stations amounts to only a few shillings yearly, the supplies being furnished from Albury duty-paid.

*Albury*, the first Customs Station on the Murray. A Sub-collector and four men perform the duties, one acting as locker and attending on Victorian trains, one as watchman at road bridge, and the others as clerk and messenger. 95 per cent. of the dutiable goods arriving in Albury come from Melbourne in sealed trucks under bond, and duty is paid or accounted for before they are released. Butter, cheese, bacon, and other small articles such as would not come under the Victorian export regulations, are brought by rail or dray, checked at the railway station or road bridge, and the duty paid at the Albury Custom House. Entries are presented in duplicate, one copy being forwarded to the Auditor-General, and the other retained for inspection by a Treasury Inspector, and entered in the cash-book, which book shows the daily, weekly, and monthly receipts. Cash is paid into the bank daily, and once a week a cheque is drawn in favour of the Under-Secretary for Finance and Trade, and a draft is purchased and forwarded to him. This is the ordinary practice which obtains at the various New South Wales Customs stations along the Murray.

By reason of the differential rates obtaining on the Victorian Railways, the freight from Melbourne to Albury is much less than to Wodonga, consequently the goods required within a radius of 30 miles of the latter place, on the Victorian side, come through to Albury, and are at once transhipped to their destination *via* Wodonga, thus avoiding the excess railway rate.

*Wodonga*,

*Wodonga*, on the bank opposite to Albury, has a sub-collector, and two men of the Victorian Customs, who collect the revenue by rail, and attend at the Albury Railway Station, and examine all passengers' luggage for Victoria. An officer and a night-watchman are also stationed at the Victorian end of the road bridge, who collect revenue on, and check goods passing into that Colony.

The searching of passengers' luggage at the Albury railway station by Victorian Customs officers has been arranged by the railway authorities of the two Colonies, in order to facilitate the intercolonial passenger traffic, the search being performed at the time the luggage is being transferred from one train to another, on account of the break of guage.

*Howlong*.—Foreign dutiable goods come to Albury from Melbourne in bond. A carrier, specially licensed to carry bonded goods, receives an order from the Sub-Collector at Howlong, on the Sub-Collector at Albury, to deliver certain goods to the said carrier. On arrival of the goods at Howlong, entries are passed and the duty is paid. A watchman at the bridge checks all dutiable goods passing either way.

*Gooramadda*, on the Victorian bank, opposite Howlong.—One officer stationed at the bridge examines all goods passing into or out of Victoria.

*Corowa*.—Foreign dutiable goods come to the Wahgunyah Station, on the Victorian side, by rail from Melbourne in sealed trucks, under bond. The seals are broken by the Wahgunyah railway stationmaster, who is a Victorian officer of Customs, and the goods are discharged into the railway goods-shed, from which they are removed by specially-licensed carriers across the bridge, to the Custom-house at Corowa, where entries are passed and duty is paid.

Victorian-produced dutiable goods, as beer, butter, cheese, bacon, &c., come in small quantities by dray or cart direct to the Custom-house, which is situated near the end of the bridge, and are there dealt with in a similar manner to foreign dutiable goods.

There is no watchman at the Corowa bridge on the New South Wales side.

*Wahgunyah*, on the Victorian bank, opposite Corowa.—A sub-collector and a watchman perform the duties, the latter is stationed at the end of the bridge and examines all goods passing into Victoria.

*Mulwala*.—Foreign dutiable goods come to Yarrawonga Railway Station in bond, and are conveyed by a Victorian Customs Agent in licensed carts across the river by punt. As soon as the railway trucks are opened, the Customs Agent makes proper entries from invoices, and these entries he presents to the New South Wales Customs Officer, at the same time paying the duty.

Victorian-produced dutiable goods are crossed by punt, and duty paid at the landing-place where the Customs Office is situated.

*Tocumwal*.—Foreign dutiable goods are carried from Melbourne by rail to Strathmarton and Yarrawonga, 12 and 8 miles distant respectively, in bond, and thence across the river in the Tocumwal punt by Victorian licensed carriers of bonded goods, to the Customs Office, where entries are passed, and duty is paid in the usual way.

Victorian-produced dutiable goods pass entries and pay duty as they are crossed by the punt.

Dutiable goods by steamer from Echuca, cleared from Moama, come under bond. On the vessel's arrival the master delivers the manifest and papers from the Customs Officer at Moama to the officer at Tocumwal, who compares them with the goods landed; entries are passed and duty is paid.

The owner of the punt at Tocumwal, with two sureties, has entered into a bond for £1,000 with the Customs authorities that he will only cross goods under supervision of the Customs Officer, and between stated hours.

A Victorian Customs Officer, who also acts as Stock Inspector, is stationed on the Victorian bank, at the crossing-place opposite Tocumwal.

*Moama*.—Foreign dutiable goods from Melbourne come by rail under bond to the Echuca wharves for the Murray trade, and to the Moama Station of the Deniliquin and Moama Railway for Deniliquin and local trade, at which two points entries are passed and duty is paid, or the goods are forwarded under bond to another Customs station.

There is a branch office of the New South Wales Customs at the Echuca wharf, on the Victorian side of the river, where all matters relating to the shipment of goods to places in New South Wales, by way of the Murray, are dealt with.

Two

Two Customs Officers from the Moama station perform the duties here, under the Moama sub-collector, who devotes one-half of his time to directing the Customs work at the Echuca wharves.

At the Moama Customs Station, on the New South Wales bank, are three officers, acting respectively as clerk, attendant on the Deniliquin and Moama trains, and watchman at bridge, under the supervision of the sub-collector. The duty on Victorian-produced dutiable goods is collected in the same manner as that already described in the case of other stations.

*Echuca* has seven Victorian Customs Officers, whose principal duties are to see that bonded goods are cleared for New South Wales, and to collect duty on articles crossing the bridge into Victoria.

At this port no cognizance whatever is taken by the New South Wales Customs Officers of boats clearing coastwise to any other port in Victoria.

*Barham*.—A New South Wales officer, who acts also as assistant forest ranger, collects the small amount of duty arising from goods crossed from Koondrook into New South Wales.

*Koondrook*, on the Victorian bank. A sergeant of police performs the duties of Customs officer.

*Swan Hill Crossing*.—The New South Wales sub-collector lives in Swan Hill, on the Victorian side of the river, and transacts his business in his dwelling-house. Dutiable goods for the district around this station on the New South Wales side come under bond from the Moama station by steamer. On arrival of the goods consignees pass entries and pay duty.

A certain quantity of dutiable goods may be obtained in bond, at Swan Hill, on the New South Wales officer signing the Victorian export entry. The purchaser passes import entries, pays duty, and clears his goods through.

Victorian-produced dutiable goods are dealt with in a manner similar to that already described in the case of other stations. The duty from this source does not exceed £5 in the year.

*Swan Hill*.—One Victorian Customs officer has charge of goods in bond, and collects duty on articles crossed over by punt from New South Wales.

*Euston*.—One New South Wales officer collects the duty on goods received from Melbourne, by way of Echuca, consigned to Euston and the surrounding district.

*Euston Crossing*, on the Victorian bank.—One Customs officer, who lives in Euston, performs the trifling duties of this station.

*Mildura*.—A Victorian Customs officer is stationed at this place, who supervises the landing of goods, plant, and machinery, for the irrigation works, under bond from Melbourne, by way of South Australia.

There is no officer of the New South Wales Customs at Mildura.

*Wentworth*.—A sub-collector of Customs and one man are stationed here. All foreign dutiable goods from Adelaide and Melbourne for the Darling, by way of the Murray, come by steamer, under bond, to Wentworth. Here fresh manifests for goods consigned to stations further up the Darling are made out in duplicate by the sub-collector. One copy of the manifest accompanies the steamer, while the other is sent by post to the Customs Officer at the port of destination.

Duty is paid in Wentworth on goods consigned thither and to places coastwise between Wentworth and the next Customs station inwards.

Goods, such as bacon, butter, cheese, &c., taken on board at coastwise places inside the South Australian border and brought into New South Wales, are checked at Murthoo, near the boundary, by the acting officer, who searches each boat, compares cargo with manifest, and attaches a memorandum by seal showing goods on board not in the manifest.

There is no special Customs Officer representing Victoria at Wentworth, but the New South Wales sub-collector acts for the former Colony.

*Murthoo*, situated in South Australian territory, about 8 miles by the river's course from the boundary; and at this station a South Australian Customs Officer acts also for New South Wales and Victoria.

All dutiable goods coming from Adelaide into New South Wales or Victoria are consigned to Wentworth under bond. The officer at Murthoo examines the manifest and cargo, signs the manifest, and passes the steamer on to Wentworth.

The value of bacon, butter, and cheese passing into New South Wales amounts to only a few shillings in the year.

## VICTORIAN RAILWAYS.

*Regulations for the despatch of goods, via Echuca, to New South Wales.*

1. On and after 1st September, 1876, all goods brought to the railway-sheds, Melbourne, to be exported thence by railway, *via* Echuca, to New South Wales, whether free or dutiable there, must be accompanied by export entries, invoices, and such other documents as will enable the Department to furnish all necessary information to clear the goods with the officers of the New South Wales Customs at Moama and Deniliquin; otherwise the Railway Department will refuse to take delivery.

2. From these documents a transire for the New South Wales Customs will be prepared by the Department for the contents, whether free or dutiable, of each truck; and the said transire will be in lieu of the entries hitherto prepared and passed at Moama.

3. Export entries should be limited, if possible, to one truck-load, or 5 tons weight, in any one entry, so as to facilitate the preparation of the transire, which will accompany the truck.

4. Goods should be delivered at the railway-sheds, Melbourne, within twenty-four hours after receipt of the export entries, as the transire, invoices, and all necessary documents for goods actually despatched must reach Echuca before, or simultaneously with, the arrival of the goods.

5. The entries and shipping bill brought to the railway-sheds, Melbourne, for the export of goods under drawback and for bond must specify goods for one place only, and for one firm or person, not for a number of places and persons.

6. Goods intended to be river-borne from Echuca will not be received at Melbourne, unless the name of a steamer ready to ship them at the Echuca Railway Wharf is specified in the consignment-note.

7. The Department will not allow at Echuca any departure from or variation of the strict terms of the consignment-note, after the same has been received with the goods at Melbourne.

8. Goods accompanied by incorrect or defective invoices will be liable to forfeiture in New South Wales by the Officers of Customs.

9. The New South Wales duties on goods for intermediate stations on the Deniliquin and Moama Railway must be paid at Moama. The duties on goods for Deniliquin may be paid either there or at Moama.

10. On and after the 1st September, 1876, and subject to above conditions, goods for export by Railway to New South Wales will be way-billed through from Melbourne to any station on the Deniliquin and Moama Railway Company.

J. JONES,

Commissioner of Railways.

## 5. The situation of all Custom Houses of either Colony.

**6. Whether licenses are issued at any place on the river, Echuca for instance, to steamers or other vessels to trade, &c.?**

A person wishing to trade upon the Murray, Darling, and Murrumbidgee Rivers registers his steamer under the Merchant Shipping Act, either in New South Wales, South Australia, or Victoria. This is chiefly done in New South Wales where there is no fee charged.

Steamer and barge are surveyed by a surveyor of the Merchant Shipping and Under-writers' Association at Echuca, for which survey a yearly charge of £2 2s. is made.

A second survey is made by the Surveyor of the Steam Navigation Board of Echuca, Victoria, and a license granted to the steamer to trade "on the Murray and Darling Rivers and their tributaries."

Masters and engineers of boats trading on the Murray, Darling, and Murrumbidgee, excepting those owned in South Australia, hold their certificates of competency from the Marine Board of Victoria. Masters and engineers of South Australian boats hold their certificates from the Marine Board of that Colony.

In the event of an accident occurring in the navigation of these rivers it is reported to the Merchant Shipping and Under-writers' Association and to the local branch of the Marine Board of Victoria at Echuca. An inquiry is held into the cause of the accident by the latter body, and officers, if found guilty, are punished by suspension or cancellation of certificates.

The Marine Board of South Australia exercises powers similar to those exercised by the Marine Board of Victoria.

There is no representative of the Marine Board of New South Wales on the Murray, nor is any cognizance taken by that body of what happens on its waters, or on those of the Darling, Murrumbidgee, or Edwards rivers.

*Local Marine Board Fees, Echuca.*

Fees to be charged for the examination of Candidates for Certificates of Competency and upon issue of Certificates of Service.

	£	s.	d.
For Certificate as Master	3	0	0
For Certificate as Mate	2	0	0
For First-class Engineer's certificate	3	0	0
For Second-class Engineer's certificate	2	0	0
For Third-class Engineer's certificate	1	0	0

*Fees for Surveys of Steamers.*

For Steamers whose registered tonnage does not exceed 30 tons	2	0	0
For Steamers not exceeding 100 tons	4	0	0
For Steamers exceeding 100 tons and not exceeding 300 tons	6	0	0
For Steamers exceeding 300 tons and not exceeding 600 tons	8	0	0
For every additional 300 tons, an additional	2	0	0
For specially measuring and determining the number of deck passengers a steamer can carry	1	0	0

(If, however, the measurement is made at the same time that the ordinary survey on hull and machinery is held, this fee is not charged.)

**7. Whether any evidence presents itself of smuggling being carried on at the different places on the river?**

No evidence of smuggling of any importance was obtained that would bear examination.

Foreign dutiable goods, which comprise 95 per cent. of the whole dutiable goods of the Murray trade, arrive at the various railway stations in sealed trucks under bond from Melbourne and Adelaide, and, before the goods are released, the duty must be paid, or accounted for, to the Customs Officers of the Colony interested.

When taking goods out of bond, or claiming rebate on duty-paid goods sent out of the Colony, the signature of a Customs Officer must be obtained. No rebate duty may be claimed unless the goods are sent out of the Colony under bond. There seems to be a complete check here.

Foreign duty-paid goods may be smuggled across the river at any place where there is no Customs Officer. But little advantage is to be gained by doing so, as payment of the duty demanded by the Colony into which the goods are sent involves a refund or rebate of duty by the Colony whence they come.

Victorian-

Victorian-produced-excise duty-paid goods—as wine, beer, &c., may also be smuggled at any place where there is no Customs Officer, but no advantage is to be gained by such a course, as New South Wales wine, beer, &c., may be obtained at the same prices.

Bacon, butter, cheese, &c., may also be smuggled from one Colony to the other, and, in small quantities, probably are so smuggled.

Victorian-distilled excise duty-paid spirits, such as Warreneep whisky, may be shipped from Echuca coastwise, that is, to another port in Victoria, and may be landed with perfect impunity at any port in New South Wales where there is no Customs Officer. They may be landed at Balranald or Hay for instance, where there is sufficient outlet for a considerable trade, and where a profit of 8s. per gallon would result. These are the only places where it could be disposed of conveniently, and the profits would probably cover the risk.

There is very little check on the smuggling across the river of jewellery and small valuables.

There is no Customs boat on the river, and no patrol at the principal ports, nor are the Officers of the Customs stations in touch with one another.

**8. Whether any proclamations or notices are posted on the banks of the river, and if so, their nature?**

Notice posted on the New South Wales end of Echuca Bridge:—

*Deniliquin and Moama Railway.*

Victorian Railways.

Notice.—Persons trespassing on this line of railway are liable to a penalty of £20, and will be prosecuted under the provisions of the Public Works Statute, 1865.

Melbourne, March, 1883.

D. GILLIES,

Commissioner of Railways.

Notices as to careless use of fire are posted frequently along the Victorian bank of the river.

**9. Whether any improvements of the navigation of a practicable nature suggest themselves to your experience as an engineer?**

As shown in the first part of this report, the chief obstacles to navigation as the river approaches summer level, are timber in the waterway, isolated rocks, wide shallow sandy reaches, and hard bars extending across or partially across the river.

Timber in the waterway should be removed and placed above the level of highest floods, or burnt. Assuming that it were cut off at ordinary summer level, what remains would still form the principal impediment to navigation. There are 18 inches of water in the driest seasons over the bars and shallow reaches, while this timber projects above the surface, and its removal for that depth is necessary in order to make the water in the fairway available. Timber now being taken from the river bed is invariably hauled to the most convenient place on the bank, whence it is removed by the first annual rise to again obstruct the navigation.

The few isolated rocks may be easily and inexpensively removed by means of explosives, and it seems a matter of surprise that their removal has not been accomplished many years ago by the maintenance boats upon the river.

A channel may be scoured and maintained through the shallow sandy reaches that most impede the navigation, by concentrating the current between timber training walls, a few feet above summer level. In the Lower Murray, at Queen's Reach, Renmark, Kapunda Island, Pences Reach, and Horse Island, in South Australian territory, inexpensive training-walls have been constructed by driving two rows of piles 2 feet apart, in alternate spaces, on each side of the channel to be scoured, and filling in the interstices between the piles of each row with timber and brushwood. Wings are placed upstream, and the structure projects about 8 feet above summer level. The concentration of current in low states of the river is found to maintain the depth of channel effectively, and navigation is much benefited thereby. All the material used was found on the river banks.

Channels may be cut, straightened, or deepened, through the more objectionable of the hard bars that obstruct the waterway. This, however, should only be done

done after careful examination of the river bed above them, for, as the water-level is raised upstream by these bars, their partial removal by lowering the water-level may create other impediments equally or even more obstructive.

The suggestions for removing timber and isolated rocks from the fairway, and for improving the channel through the various bars and shallow reaches, would, if carried out, probably have the effect of prolonging the navigable condition of the river for trading vessels in ordinary seasons for a month or six weeks.

Of the tributaries, the Murrumbidgee takes its rise in the same mountainous region as does the Murray (and the periods of its rise and fall approximate to those of this river), the melting snows in spring and early summer sustaining the volume of water in both. The Darling, again, being dependent for supply on the rainfall within its gathering area, is essentially different in character, and its rise is uncertain and widely variable—sometimes sustained for two seasons, again entirely absent for a similar or even longer period of time.

The wool-season commences early in August, and terminates about the middle of December, and the present navigable condition of the Murray fairly meets the demands made upon it during the season. Any improvement, therefore, in its fairway would only benefit its trade in a limited degree, while the Darling, from which the greater part of that trade springs, remains in its present state.

As to rendering the Murray permanently navigable, the Darling and its tributaries, and in a lesser degree the Murrumbidgee and Edwards Rivers, must be considered; and at the outset the great questions of Water Conservation and Railway Construction demand consideration, as well as the importance to the Colony of acquiring and retaining as large a share of the trade of this territory as the geographical conditions will admit of. This aspect is only referred to here, as involving questions of policy it is deemed to be outside the limits of the present inquiry. It may, however, be stated that, as a great waterway, the general direction of the Murray is not in the line of communication with a market or seaport, and traffic on its waters involves additional handling of goods. The extremely sinuous nature of its course precludes rapid transit, or its navigation by larger steamers; and while it is believed that that river will in future be a most important factor in the settlement of a wide territory, it is submitted that this will not be as a main artery of communication.

**10. Whether you observe any circumstance or authorised action on the part of any persons whatever which appears inconsistent with the ownership of the riverway by the Colony of New South Wales?**

In dealing with this question the first difficulty that presents itself is the definition of the line which represents the boundary between the Colonies of New South Wales and Victoria.

Section 5 of the Constitution Act seems to comprise all the statute law bearing on the subject, and it may be here recited:—

“And whereas by the before-mentioned Act of the fourteenth year of Her present Majesty, chapter fifty-nine, it is amongst other things enacted that the territories therein described as bounded on the north and north-east by a straight line drawn from Cape Howe to the nearest source of the river Murray and thence by the course of that river to the eastern boundary of the Colony of South Australia should be erected into a separate Colony to be known and designated as the Colony of Victoria. And whereas doubts have been entertained as to the true meaning of the said description of the boundary of the said Colony. It is hereby declared and enacted that the whole watercourse of the said river Murray from its source therein described to the eastern boundary of the Colony of South Australia is and shall be within the territory of New South Wales. Provided, nevertheless, that it shall be lawful for the Legislatures and for the proper officers of Customs of both the said Colonies of New South Wales and Victoria to make regulations for the levying of Customs Duties on articles imported into the said two Colonies respectively by way of the river Murray, and for the punishment of offences against the Customs laws of the said two Colonies respectively committed on the said river, and for the regulation of the navigation of the said river by vessels belonging to the said two Colonies respectively. Provided also that it shall

shall be competent for the Legislatures of the said two Colonies, by laws passed in concurrence with each other to define in any different manner the boundary line of the said two Colonies along the course of the River Murray, and to alter the other provisions of this section."

No concurrent legislation seems to have taken place to define in any different manner the boundary line as described, nor does any decision of the Courts on this point appear to be recorded, and beyond the Pental Island arbitration and award of the Privy Council the question of the boundary between the Colonies of New South Wales and Victoria, as described in the section recited does not seem to have been submitted to judicial interpretation.

As it is necessary for the purposes of this report that some definite line should be adopted as the boundary of the river-way, it is, with submission, assumed that a line drawn through a series of points along the margin of contact between the water at ordinary flood level and the southern bank of the river, and where the water overflows the bank along the top of the said bank, would coincide with the boundary between the river-way or watercourse and the adjoining territory.

Should this definition be tenable then, in the absence of the concurrent legislation above referred to, the construction in the river-way of the Murray by the Government of Victoria, and by those acting under its authority, of wharves, sheds, breast works, reclamation works and channels, and the erection of plant and machinery, and such other works as are more particularly described hereunder, are inconsistent with the ownership of the river-way by the Colony of New South Wales. And it would further appear that the formation of any new effluent, or the widening and deepening of any existing effluent of the river below the ordinary flood level, would, save under certain improbable conditions, also be inconsistent with the ownership of the river-way by the Colony of New South Wales. The act of diverting water from the river is not dealt with here, but it may be pointed out that the constitutional aspect of the question has been recognized by the Government of Victoria in the limitation of authority to divert water granted to Messrs. Chaffey Brothers, which is expressed as follows:—

"And Her Majesty doth hereby in like manner grant unto the licensees,  
 " . . . . ., license and authority to divert and take water from the  
 " River Murray . . . . ., so far as Her Majesty can authorize the  
 " licensees, . . . . ., to divert and take the same."

The works constructed within and upon the water-way of the river for effecting the authorized diversion of water are set forth in the following statement:—

STATEMENT showing Authorized Works fixed in and constructed upon the Waterway of the Murray.

		Locality.	Person or Authority constructing.	Description of work.	Remarks.
1	73	Wahgunyah ...	The Government of Victoria.	Railway Water Supply	Inlet fixed in waterway of river.
2	130	Yarrawonga ...	Shire, Water Works Trust.	Town Water Supply	do do
3	174	Cobram .....	Shire Council .....	Town Water Supply	do do
4	297	.....	A. D. Jeffrey .....	Irrigation Pumping Plant.	Inlet fixed in riverway.
5	301	Echuca .....	The Government of Victoria.	Wharfage .....	1,123 lineal feet of wharfage resting upon piles, the greater number of which are driven into the riverway, supports five hydraulic cranes, one hand-crane, and about one-half of 620 lineal feet of goods sheds erected upon the wharf over the river bed.
6	...	" .....	do	Railway and Wharf Water Supply.	Inlet fixed in waterway of river.
7	...	" .....	Borough Water-works Trust.	Town Water Supply	do do
8	325	Turrumberry ...	Turrumberry Irrigation Trust.	Irrigation Pumping Plant.	do do
9	341 to 360	Gunbower Creek .....	Kow Swamp and Loddon Scheme.	Gravitation channels	Natural channels of Bago's Creek and Deep Creek widened and deepened, and a new channel formed for diverting Murray waters. Excavations in waterway.
10	363	Cobuna .....	Cobuna Irrigation Trust.	Inlet channel .....	Channel excavated in waterway for admitting water to timber-breastwork and tunnel leading into pump well.

STATEMENT showing Authorized Work, &c.—*continued.*

		Locality.	Person or Authority constructing.	Description of Work.	Remarks.
11	421½	Koondrook .....	Koondrook and Kerang Tramway Trust.	Pumping plant .....	Inlet fixed in waterway of river.
12	...	„ .....	Koondrook Irrigation Trust.	.....	Timber breastwork constructed in waterway protecting channel.
13	...	„ .....	The Government of Victoria.	Wharfage .....	150 lineal feet of wharfage resting upon piles, the greater number of which are driven into the riverway; supports loading crane and engine-pump.
14	435½	Murrabit.....	Benjeroop and Murrabit Irrigation Trust.	Inlet channel .....	Natural channel widened and deepened, excavation in waterway.
15	493½	Swan Hill .....	Borough of Swan Hill	Pumping plant .....	Inlet fixed in waterway of river.
16	...	„ .....	The Government of Victoria.	Wharfage .....	100 lineal feet of wharfage resting upon piles, about one-fourth of which are driven into the waterway of the river.
17	494	„ .....	Swan Hill Irrigation Trust.	Inlet channel .....	Channel excavated in waterway for admitting water to pump well.
18	805	Middara .....	Chaffey Bros., Ltd. ...	Reclamation.....	A site for pumping plant is being reclaimed from the riverway, and is protected by a timber breastwork constructed in the bed of the river. Several inlet pipes are fixed in the waterway.

The Government of Victoria employs two steamers on the river removing timber from the bed and both banks. The Government of South Australia also occasionally employs a steamer in performing similar work between Wentworth and the Border; and the various settlers on the southern bank take water for irrigation and other purposes from, and have portions of their works and plant fixed in the waterway of the river, as previously set forth in detail. These circumstances seem inconsistent with the ownership of the riverway by the Colony of New South Wales.

J. E. F. COYLE.

Sydney, 16th August, 1889.

1889.

NEW SOUTH WALES.

**DREDGING OPERATIONS.**

(REPORT OF ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.)

Presented to Parliament by Command.

The Engineer-in-Chief for Harbours and Rivers to The Under Secretary for  
Public Works.

Department of Public Works,  
Harbours and Rivers Branch,  
Sydney, 6 June, 1889.

THE report of the Dredging Operations to the 31st December, 1888, is herewith submitted for the information of the Honorable the Minister for Public Works.

To the Superintendent's report I have but little to add, as he has gone so fully into every branch of the subject.

Three sets of machinery for fitting up dredges on the sand-pump system are now on their way from England, and may be shortly expected. This form of dredge has been found to work so successfully in Holland, South Africa, and other places where sand similar to that met with on this coast has been lifted, that I look forward to seeing very good results accrue from their introduction here.

By this system the sand or silt can, in one operation, be lifted and deposited at some distance for making up reclamations.

I have myself witnessed this being done in San Francisco, where the silt was being lifted and delivered through pipes at a distance of 4,000 feet from the machine. The plant we are importing, however, is of much more modern and improved design than that which I saw working successfully.

If this system is once proved a success here, it will in a great measure get over the difficulty hitherto experienced in dealing with the numerous sand-banked embouchures to rivers along this coast.

A great quantity of the silt lifted by the bucket and ladder dredges and now sent to sea will, I hope, be hereafter profitably used by depositing it in front of reclamation works, then relifting and depositing it with the sand-pumps within the areas being reclaimed. I anticipate that by keeping a pump-dredge continuously at work in this way, all the silt raised in the harbour by the ladder dredges may be utilised in reclaiming land.

Four of our dredges are now working sixteen hours a day in double shifts. I believe it will be better to increase the capabilities of the plant already at our disposal in this way rather than increase the number of large dredges; and until I see this arrangement fairly tried, I do not propose recommending the construction or purchase of any more ladder dredges.

CECIL W. DARLEY.

Department of Public Works,  
Harbours and Rivers Branch,  
Sydney, 31 March, 1889.

Report of Superintendent of Dredges to The Engineer-in-Chief for Harbours  
and Rivers.

Dredging work during 1888, &c., by Ladder Dredges.

THE custom which has obtained during the past seven years of submitting exceptionally minute details of the cost per ton dredged in relation to all stores used, has, in compiling last year's work, been departed from; and although, from the delay in obtaining cost of repairs, &c., the attached statement has been somewhat deferred, it is presented early enough to be read with advantage and with some interest.

The most noticeable feature of the past year's work has been the adoption of the system, at Newcastle and Lake Macquarie, of working sixteen hours per day, an arrangement carried out with marked success and economy from 1874 to 1879. Twelve years ago the eight-hour system was unknown in the dredge service. Work was started at midnight on Sunday, and, with two crews, was carried on, with intervals for meal hours only, until the following Saturday. The recognition of the eight-hour principle necessitated a departure from this system, and on resuming double shift work, in May last, dredging was started at 4 a.m., and carried on for the day, without any stoppage for meals, until 8 p.m. During the dark mornings and evenings, towing to sea was carried on in the crowded harbour of Newcastle without a single accident, and the cost of the work has been much lessened notwithstanding that the material dealt with has been difficult to dredge. The "Newcastle" has been removing deposits (opposite Stockton) with which the buckets cannot be filled; the "Vulcan" has been working over rocky bottom at the lower end of the ballast dyke; and the "Hunter," now withdrawn from work for new ladders, was working with the old ones in a partially crippled condition.

The dredge "Minos," at Lake Macquarie entrance, has been steadily cutting her way through the sand banks towards the sea. Necessitated to start from the lake, owing to the impossibility of getting rid, except in the lake, of the material dredged, the dredge in February last had, after 4 miles working, reached the inner end of the Breakwater, when, the bar having slightly improved, it was determined that a second small tug should be employed, and a second shift of men, to push on the work (which had reached a critical stage) more rapidly, and to get as much sand away to sea as possible. Owing to the bar being fairly sheltered by the Breakwater, and outlying island, the "Minos" is now working well out towards the ocean, and the bar has deepened sufficiently to permit of a large percentage of the sand dredged being sent to sea. Necessarily the work is costly owing to the risk of working a bucket and ladder dredge with punts alongside in rough water; it is at places such as this that the sand pump system, urged to be adopted, could be applied advantageously.

Its natural advantages, as far as deep water is concerned, have not in the past been wholly beneficial to the city of Sydney. The temptation which the deep water of the harbour offered long ago to those who sought a ready solution to the sewage difficulty could not be withstood, and dredges which should be employed in the interests of commerce, have now to be set apart for maintaining the original depth of water continually encroached upon by the contents of the city sewers. Add to this the continually recurring requests of coast district members of Parliament to lend Sydney dredges for urgent northern or southern requirements, and the explanation is clear as to why the deepening of many parts of our harbour has not been carried on as briskly as it might have been. However, with the limited dredging appliances at disposal, much has recently been accomplished. Darling Harbour has been sufficiently deepened to admit of the long jetties, building near Pyrmont Bridge, being used for large ships. Blackwattle Bay, albeit still far from healthy, has been sufficiently dredged to be, from a sanitary point of view, endurable, and around its eastern and southern boundaries berthing accommodation has been made for the many steamers

Alteration in compiling cost of work.

**Newcastle Harbour.**  
Dredges working sixteen hours daily from May, 1888.  
Quantities dredged and cost, including repairs, but exclusive of towing.

Dredge "Newcastle" lifted in 1888, 575,200 tons; cost of dredging, 3-241d. per ton.

"Hunter" lifted in 1888 382,120 tons; cost of dredging, 2-899d. per ton.

"Vulcan" lifted in 1888 357,606 tons; cost of dredging, 2-329d. per ton.

**Lake Macquarie Bar.**  
"Minos" working sixteen hours daily from February, 1888.  
"Minos" lifted, chiefly near bar, 275,060 tons; cost of dredging, including repairs, but exclusive of towing, 4-594d. per ton.

**Sydney Harbour.**

Dredging at Darling Harbour, Blackwattle Bay, Cockatoo Island, &c., eight hours per day.  
Quantities dredged and cost, including repairs, but exclusive of towing:  
"Samson" lifted 240,550 tons; cost of dredging, 5-114d. per ton for 1888.  
"Hercules" lifted in 1888 101,590 tons; cost of dredging, 8-328d. per ton.

and

"Charon" lifted in 1888  
140,940 tons; cost of  
dredging, 3-672d. per ton.

and sailing vessels using the Government and private wharfs recently built. The removal of sewage led by pipes into this bay, requires the services of a dredge for more than six months in the year. During the year 1888, the dredge "Samson" has removed over 160,000 tons of silt from the approach to the new dock, leaving a depth of 28 feet at low water. A berth at Johnson's Bay has likewise been deepened for cattle ships. The "Hercules" and "Charon" have been chiefly employed at Darling Harbour and Island and Blackwattle Bay. Dredging to the extent of £2,056 15s. paid to Treasury has been performed for private firms in 1888.

**Dredging in Shoalhaven district.**

Improvements to dredge "Pluto."  
"Pluto" worked only part of year. Quantity lifted, 55,080 tons; cost per ton, including expenditure on converting dredge as described, 17-346d. per ton.

A reference to the attached schedule will show that an exceptionally large amount has recently been spent on the Shoalhaven dredge "Pluto." For upwards of twenty-five years this dredge has been constantly working on the Shoalhaven and Crookhaven rivers at much disadvantage, owing to the limited depth the vessel was capable of working to. In July last the dredge was brought to Sydney and converted from a stern delivery 12-feet to a side delivery 20-feet depth one. Owing to this alteration the channels can now be cut sufficiently deep to last for several years, and the services of the "Pluto" can then be availed of elsewhere. While the dredge was in Sydney the attendant tug had her engines compounded, giving an increase of speed and lessening the fuel consumption by 40 per cent. During the first half of the year 1888 the "Pluto" completed the deepening of Broughton Creek, and the steamers now ply without delay to the town of Berry.

**Moruya Heads.**  
Dredge "Archimedes."

Of all the ports of our seaboard there is none more unsatisfactory to report upon than Moruya. Thirty years ago the river was in a far better condition than it is to-day. At that time there was comparatively deep water as far as the township. Now there is nothing to be seen but a continuation of sandbanks. The altered condition has been caused by the tearing up of the river bed and its banks by gold-diggers and sluicing parties seeking for gold from Araluen to Moruya, as well as by the deposit of debris sent down from hydraulic sluicing claims on the upper tributaries. This blocking up of the river has been most prejudicial to the entrance, the volume of flood tide water being lessened, the ebb scour is correspondingly diminished, hence the shallowed bar and the tortuous channel inside of it. In California a similar result arose from hydraulic sluicing, and navigation was so much interfered with that injunctions were granted to prevent sluicing which interfered with river channels. Had a suitable short twin-screw steamer of light draft been placed in the Moruya trade, no dredging would have been required; but the I.S.N. Co. persisted in sending to the port a vessel which her captain admits will not come round the natural bends of the channel—bends which quickly form again after being dredged away. A fascine dyke, to be about a mile in length, is being constructed under Mr. Williams' supervision, and after dredging, which will take over a year, has been done parallel to it, there will be a straight channel for the Illawarra Company's steamers. The Sydney dredge "Archimedes" was taken eighteen months ago from Sydney sewage work to Moruya, and has been working for the past year under the greatest possible disadvantages. The punts could only go to sea during certain conditions of tide; but little silt could be advantageously deposited in the river, and sand dredged was not suitable for the fascine dyke, therefore the work done by the "Archimedes" for 1888 is far from satisfactory. A channel is now being cut to enable steamers to reach Mynora, about 1½ miles from Moruya township.

**Moraya.**

Dredge "Archimedes,"  
in 1888, lifted 69,945 tons;  
cost, including repairs,  
but excluding towage,  
8-073d. per ton.

**Manning River.**  
Dredge "Ulysses."

Quantity lifted in 1888,  
218,640 tons; cost per  
ton, including repairs,  
but excluding towage,  
2-873d. per ton.

The dredge "Ulysses," during the first eight months of the past year, was employed between Taree and Wingham. After undergoing an overhaul the plant was removed to the Manning Heads to improve the channel formerly cut there. This has been done, and the steamers use the channel. The dredge has again returned to the work between Taree and Wingham. Although the steamer "Rosedale" has been to Wingham through the channel cut by the "Ulysses," it will be some months before it is completed sufficiently to admit of the steamers using it to the best advantage. The material dredged, chiefly shingle, has been deposited in selected places near the flats, and the dredging is not therefore delayed, consequently the cost is low.

**Macleay River.**  
Dredge "Fitzroy."

Quantity lifted by  
"Fitzroy" in 1888,  
163,210 tons; cost of  
dredging, including  
repairs, but exclusive  
of towing, 3-357d. per  
ton.

The work performed by the dredge "Fitzroy" during the past year has been nearly equally divided between the upper and the lower reaches of the Macleay River, that at the former being in the neighbourhood of Kempsey, and in the latter at Fisherman's Channel, Shark Island, and Long Reach. In the early part of the year there was some detention, owing to an accident to the machinery, and the cost of work is not as low as usual. Here, as at the Manning River, the facilities for discharging

charging the material dredged are favourable, and the plant therefore usually works to the best advantage. No inconvenience to the ocean steamers plying on the river has been felt, and the "Fitzroy" can now throughout the long course of the Macleay River, about 25 miles, keep the flats well under control without any extra expenditure.

Early in the year the "Titan" was employed at some distance from the Bellinger Heads deepening M'Ateer's Crossing, and afterwards returned to the work of cutting a channel in the main river, north of the island, near the Heads. It is intended to extend this cutting to the steamers' wharf, the outer edge of it to be protected with a dyke. The back creek was deepened sufficiently for punts, but as a light draft sea steamer is now on the line it is proposed to still further improve it as a temporary channel to allow the "Avon" to go up to Fernmount.

**Bellinger River.**  
Dredge "Titan."  
Quantity dredged in 1888, 83,900 tons; cost per ton for lifting, including repairs, but exclusive of towing, 5'35d. per ton; working sixteen hours per day during part of November and December.

The dredge "Clarence" was employed in the south arm of the Clarence River until February, 1888, when dredging at the elbow, Lawrence, was resumed.

**Clarence River.**  
Dredge "Clarence."  
Quantity lifted in 1888, 191,260 tons; cost per ton, including repairs, but exclusive of towing, 8'16d. per ton.

From January to June of last year the Richmond River dredge "Alcides" was dredging near Ballina. Afterwards the channel, which was partly dredged by the grab-dredge "Zeta," was completed, and the plant was removed up the river to deepen the flats at Swan Bay.

**Richmond River.**  
Dredge "Alcides."  
Quantity lifted during 1888, 175,700 tons; cost per ton, including repairs, but exclusive of towing, 2'958d. per ton.

The whole of the dredging plant has been maintained in its usual efficient state; and in addition to the extensive alterations before referred to in connection with the "Pluto," the steamer "Ajax" has been fitted with new compound engines and boiler of nearly 500 indicated horse-power; the tug "Athena" has been lengthened, and a larger boiler fitted; the tug "Cyclops" has been altered by compounding the engines. In all these tugs the success of the alterations has been all that could be desired.

I look forward with much confidence to the adoption of the principle of dredging and reclaiming land by the use of sand pumps, worked by powerful engines. The new pumps and piping now being made in Holland for our steam hopper-barges "Juno" and "Neptune" will soon arrive in the colony, and I feel satisfied from the results recently achieved in Europe and America by pump dredges, that we may reasonably anticipate a radical and most satisfactory change in our system of dredging and reclamation.

Conversion of steam barges into sand pump dredges.

A. B. PORTUS.

The Engineer-in-Chief for Harbours and Rivers.

## General Regulations for the Management of the Dredge Service.\*

*Regulation 1.*—The Dredge Service, which will be considered as a whole, shall be divided into the following grades, viz:—

1st. The Engineer's grade, comprising—

<i>A.</i> Engineer's, 1st, 2nd, 3rd class (excluding the Chief Engineer's of the Dredges) with wages ranging from... ..	£20 per month to £12 per month.
<i>B.</i> Engine-drivers ... ..	13 „ 10 „
<i>C.</i> Firemen ... ..	12 „ 9 „

2nd. Mechanical grade, comprising—

<i>A.</i> Blacksmiths, carpenters, fitters, and boilermakers, &c., with wages from £15 per month to £11 per month.
<i>B.</i> Striker's boilermaker's assistants, machine attendants, &c., with wages varying from £10 per month to £6 5s. per month.

3rd. Nautical grade, comprising—

<i>A.</i> Masters of Tugs, from ... ..	£20 per month to £12 per month.
<i>B.</i> Mates, from ... ..	14 „ 10 „
<i>C.</i> Coxswains and winchmen ... ..	10 „
<i>D.</i> A.B. seamen, including watchmen and cooks ... ..	8 13s. 4d. per month to £8 per month.
<i>E.</i> Boys ... ..	4 per month to £6 5s. per month.

*Regulation 2.*—The whole of the men at present in the Service shall be classified according to the foregoing grades; the position to be assigned to each particular employé shall be determined by fitness and length of service. As vacancies occur, the senior hands shall be promoted until they reach the top of their respective grades, provided they are competent, and nothing has been recorded against them in the "Conduct Book," referred to in Regulation 3. In the case of Engineers, however, it shall be indispensable that those to be appointed to the 1st class shall hold 1st class certificates; those to the 2nd class, 2nd class certificates; and to the 3rd class, 3rd class certificates. With regard to the nautical grade, all masters shall hold masters' sea-going certificates, and mates shall hold mates' certificates.† On and after the 1st February, 1889, the qualifications of employés to be appointed to positions for which the salaries do not exceed £156 per annum, whether mates of dredges, masters of small tugs, or engineers of small tugs, shall be in the cases of mates or masters, the holding of a master's Harbours and Rivers Certificate from the Marine Board, and for engineers, the holding of a 3rd class engineer's certificate.

The qualification for all positions above £156 per annum to remain as before.

*Regulation 3.*—There shall be entered in a "Conduct Book" the name of every employé in the Dredge Service, giving the date of his entry therein, age, and such particulars of his service (whether of good or bad conduct) as will determine promotion or otherwise; it being distinctly understood that nothing will be recorded against any employé in such book, except after due inquiry and on the report of the Superintending Engineer approved by the Engineer-in-Chief, and after an opportunity shall have been afforded the accused of appeal.

*Regulation 4.*—All new appointees shall enter at the bottom of whichever grade they may be nominated to, except in the case of vacancies which cannot be filled from the Service; but none shall be eligible who are over thirty-five years of age, and who cannot produce a certificate from the Medical Officer of the Department (for which such officer shall be entitled to be paid a fee of 2s. 6d., to be paid by the nominee) that they are physically fit for the position sought, together with satisfactory references from previous employers.

*Regulation 5.*‡—From the 1st May to the 1st September the working hours shall be from 6:30 a.m. to 5:30 p.m., and during the remaining months of the year from 6 a.m. to 6 p.m. Three-quarters of an hour will be allowed for breakfast, and 1 hour for dinner. Owing to the shortened breakfast hour, work will terminate on Saturdays at 1 p.m. When circumstances render it necessary for the tugs to work continuously from 6 to 6 the meal hours must be taken while the steamers are towing.

*Regulation 6.*—Should any employé, by reason of accident occurring in the discharge of his duty, and by no fault of his own, be physically incapacitated for work, he shall be entitled (if his absence shall necessarily extend to that time) to two months' pay, or any lesser proportion, as the case may demand. If he is absent more than two months, such case thereafter will be specially dealt with on its merits. In the event of absence through sickness, not being the result of accident as before described, half-pay to the extent of one month will be allowed, if necessary, provided such sickness has not been brought about by misconduct on the part of such employé, to determine which a certificate to that effect shall be required from the Government Medical Officer, if the employé reside in Sydney or Newcastle. If he reside elsewhere, he must furnish from a properly qualified medical practitioner a certificate stating the nature of the disease from which he is suffering, which will be referred to the Government Medical Officer for report. For every examination or report such Officer shall be entitled to a fee of 2s. 6d., which shall be paid from any money due or to become due to the patient, except in case of accidents occurring in the discharge of duty, when the fee shall be paid by the Department. A medical report will be required at least once each week, if absence from duty should extend beyond that time; for a period less than three days the certificate of the Dredge Master, endorsed by the Superintending Engineer, shall be held to be sufficient.

*Regulation 7.*—Nothing in the foregoing Regulations shall prevent the Minister from dealing in the way of promotion or otherwise with any specially meritorious case which may be brought before him.

*Regulation 8.*—Any person who has been in the Dredge Service, but whose services have been dispensed with owing to a reduction in the number of hands, shall be eligible for reappointment to any suitable vacancy, anything in these Regulations to the contrary notwithstanding.

*Regulation 9.*—In the event of any misbehaviour being proved against any employé, but not of such a serious nature as to demand dismissal from the Service, the Engineer-in-Chief shall have the power to punish by fine or disratment as the circumstances of the case seem to him to warrant.

14th January, 1889.

\* Nothing in these Regulations shall be held to apply to the Masters of Dredges, respecting whom a wider choice of selection may be necessary.  
 † In the case of those already in the Service who do not hold such certificates, it shall be considered that they have "Service" certificates; but they will not be eligible for promotion unless they can obtain and produce certificates of "competency."  
 ‡ Since the original Regulations were passed, the summer working hours have, by direction of Mr. Secretary Lackey, been reduced from ten to nine hours per day, and a temporary increase of 10 per cent. on wages, after having been on two occasions voted by Parliament, was submitted during the last Session and passed as a permanent rate. On 10th October, 1888, Mr. Secretary Wright directed that the working hours be 48 per week.  
 NOTE.—Special attention is drawn to Regulation 2, as amended.

\* The cost here given does not include an expenditure of £8,231 8s. incurred in entirely renewing the "Ajax" in all parts except part of the plating and frame of the hull. Compound engines of 450 indicated horse-power were fitted, also new decks, bulwarks, and cabins. The speed of the vessel was increased 2 knots per hour, and the consumption of fuel reduced by 50 per cent.

\* These dredges worked sixteen hours per day during portions of the year.  
 † This cost does not include the sum of £2,713 2s. 7d. expended in converting the "Pluto" from a shallow working stern-delivery dredge to a deep dredging side-delivery machine. As altered this vessel can now cut a channel through dry sand-banks.

\* The cost here given does not include an expenditure of £3,231 8s. incurred in entirely renewing the "Ajax" in all parts except part of the plating and frame of the hull. Compound engines of 450 indicated horse power were fitted, also new decks, bulwarks, and cabins. The speed of the vessel was increased 2 knots per hour, and the consumption of fuel reduced by 50 per cent.

THE material lifted by the dredges marked S was wholly deposited at sea, and the cost of dredging has been enhanced by detentions during stormy weather, a disadvantage which the other dredges have not laboured under. The dredgings from the "Hercules," "Archimedes," and "Charon," were partly sent to sea and partly used for reclaiming water frontages.

1. The "Newcastle" first started work in Newcastle Harbour in May, 1875. Night-work began in June of that year, and continued until April, 1879, when a collision at night took place between the "Ajax" and the ship "Durat Bay," entailing, with other smaller collisions, a loss to the Department of £1,527 13s. 1d., which amount, although debited to the work of 1879, together with £597 0s. 5d., the cost of a collision with the "Eagle," charged against 1878, might very fairly, as contingencies of night-work, be distributed over the whole period embraced by the return. The outfit of the dredge is included in the working expenses. Extensive repairs to dredge and to tug's boiler in 1880.

2. The "Samson," from 1875 until October, 1878, was deepening the Sow and Figs Channel, and was thereby subjected to much detention, owing to damage to buckets and to the water being too rough for dredging. The charges for 1876 and 1877 include the sum of £1,637 12s. 5d. paid for recovery and repairs to a punt wrecked at the Heads during the "Daandenoug" gale, and in 1878 and 1879 special votes of £1,693 6s. 10d. and £2,987 13s. 9d. for new boilers fitted in the "Thetis" and "Samson," together with a thorough overhaul of dredge punts and machinery, are a charge against the expenses of these years, but may fairly be distributed over the period (eleven years) from 1868 to 1879. Deducting cost of these renewals paid by special vote, the rate of the "Samson" and "Thetis" work for 1879 was 7-62d. per ton, the rate shown in the details of expenditure. The employment of the "Thetis" upon services not connected with dredging has increased the cost of the "Samson's" work chiefly by the impossibility of obtaining a substitute tug equal to the dredge's requirements. From 1875 until October, 1878, the "Samson" worked night and day.

3. The "Vulcan," built in 1864, underwent an extensive overhaul in 1875, and was supplied with a new boiler in 1878, the cost of which is charged against the work of the latter year, but is a legitimate charge to be spread over fourteen previous years. Much of the sand lifted by the "Vulcan" was towed long distances; in some cases the depositing place was over 12 miles away from the dredge. The "Vulcan" worked night and day from 1875 until August, 1878.

4. The "Hunter" worked night and day dredging sand in Newcastle Harbour during 1875 and 1876, when it was found necessary to supply her with new boilers, renew much of the woodwork, add a hurricane deck, and thoroughly overhaul the machinery. The heavy expenditure of 1877 and 1878 is in all fairness a charge distributable over each year's work, since 1869, the year the "Hunter" first started to work. The high rate per ton, and the small quantity of work performed in 1879, is owing to the employment of the dredge at rock work. [See foot-notes p.

39

5. The "Hercules" is the oldest dredge in the service, having been at work nearly forty years. Like the "Hunter," she was most extensively repaired in 1878, much of the hull having been rebuilt and new hurricane deck fitted. Employed chiefly in dredging clay, rock and silt (used for reclamation in Sydney Harbour), it is not to be wondered at that the quantity of work performed is so much less than that of other dredges not having the same difficulties to contend with.

6. The dredge "Fitzroy" has been since 1876 steadily employed, day work only, lifting sand at the Macleay River. The only detentions have been for repairs or from floods in the river. The material dredged in 1881 was deposited at an easy distance from the dredge.

7. The "Pluto," employed at Shoalhaven for five years, dredging sand, underwent extensive repairs in 1876. This dredge was built in 1862, and has never worked at night. Cost of new boiler and extensive repairs to "Pearl" included in expenses of 1881.

8. The "Titan," built for coast lakes, &c., was employed up to October, 1876, at Brisbane Water, and from February, 1876, until June, 1880, she was occupied deepening the entrance and tributary creeks of Lake Macquarie. The increased work of 1879 is owing to the dredge working night and day during that year. The material lifted at the lake was chiefly sand, with some mud and gravel.

9. The "Clarence," built in 1877, commenced working at the Clarence River Heads in October of that year. For a short time previous to leaving Sydney, some work, as a trial, was performed at Woolloomooloo Bay. Night and day work was carried on for two years after her arrival at the Clarence; the material lifted was sand, which was deposited behind islands and out of the main channel. The expenditure for 1877 includes the outfit of the dredge.

10. The "Archimedes," designed specially for the removal of sewage deposits and jetty deepening in Sydney Harbour, started to work early in 1878, and was employed for a considerable time at the mouths of the Corporation sewers. After the completion of this work she was removed to Rushcutters' Bay, where deepening and reclaiming the water frontage by the silt lifted in the bay and elsewhere has been steadily going forward.

11. The "Charon" started work in Blackwattle Bay early in 1881, and was wholly employed removing sewage and material deposits.—A.B.P., 31/12-82.

12. The "Ulysses" has been dredging at the Manning River since starting to work in January, 1882.

13. The "Minos" has been dredging at the Moruya River since starting to work in May, 1882.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## WOLLONGONG HARBOUR TRUST BILL.

(PETITION FROM LANDOWNERS, FARMERS, &c., OF WOLLONGONG, IN FAVOUR OF.)

*Received by the Legislative Assembly, 26 June, 1889.*

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled,—

The humble Petition of the landowners, farmers, storekeepers, tradesmen, miners, workmen, labourers, and others, the inhabitants of the town of Wollongong and electorate of Illawarra,—

RESPECTFULLY SHOWETH:—

That enormous deposits of coal are found in the Illawarra Mountains within the electorate, which also extend beyond its area, both to the north and south; these several coal-seams are situated generally above sea-level, and can be most cheaply raised and brought to the sea-side. Seams of rich iron ores and other valuable minerals also exist in the "coal measures."

That the only shipping port on the coast adjacent to these vast coal-seams is that of Wollongong, which has been much improved by the wise and judicious expenditure voted by your honorable House, and which has made that port suitable and safe for accommodating shipping drawing fourteen to fifteen feet of water.

That the development of the local coal industry (now employing nearly one thousand five hundred hands) in Illawarra is very much hindered and retarded for want of space and depth of water at Wollongong Harbour, to receive and load the large class of vessels used in modern commerce.

That the Illawarra Railway, now in parts open for traffic, runs nearly parallel with the Illawarra Mountain range, which contains the valuable coal-seams and other minerals referred to above, and that by use of the said railway every colliery in the district would be enabled to send its coals to Wollongong Harbour for exportation direct to intercolonial and foreign markets.

That the engineers of the Harbours and Rivers Department, Sir John Coode, and other engineers experienced in harbour construction, concur in the opinion that Wollongong Harbour can at reasonable cost be enlarged and deepened to safely accommodate and load the largest class of modern ships of Her Majesty's Navy and mercantile marine, including what are termed the ships of the age. That experience in Great Britain and Colonies of New Zealand and Victoria proves that the enlargement, extension, and improvement of harbours for promoting trade and commerce have been most successfully carried out by establishing local harbour trusts for such purposes. And that such improved harbours under the management of trusts have been the principal factors in economically extending the carrying trade of ports and advancing the prosperity of communities.

That for the establishment of a harbour trust at Wollongong the inhabitants, in public meeting assembled, on Thursday, December 22nd, 1887, formed a society called "The Wollongong Harbour Trust League," having for its object the improvement of the harbour accommodation at that port.

That due inquiry having been made into the various commercial interests and local industries that will be promoted, advanced, and benefited by harbour enlargement, and also the best and most prudent means to adopt to foster and duly protect general public interests from and against private encroachments that might eventually drift into vested rights, to the injury and hindrance of public progress and improvements, the result of said inquiries is embodied in a Bill now before your Honorable House for establishing a harbour trust at Wollongong, said Bill being principally founded on the Act of the Imperial Parliament 10th Victoria, chapter 27, passed May 11th, 1847, for improving harbours, docks, and piers in the United Kingdom, the Harbour Improvement Acts in force in New Zealand, and the Melbourne Harbour Trust Act of 1876, and its amended Act.

That your Petitioners most respectfully ask your Honorable House to give an earnest and careful consideration of the various provisions in the Bill, and humbly pray that you will, at the earliest moment, give your assent to a measure for establishing a local harbour trust for enlarging, deepening, and improving the harbour at Wollongong.

And your Petitioners, as in duty bound, will ever pray.

## NEW SOUTH WALES.

## LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR DOCK AT CUNDLETOWN, MANNING RIVER.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16.

### NOTIFICATION OF RESUMPTION OF LAND UNDER 44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable  
to wit. } CHARLES ROBERT, BARON CARRINGTON,  
a Member of Her Majesty's Most  
(L.S.) Honourable Privy Council, Knight  
CARRINGTON, } Grand Cross of the Most Distinguished  
Governor. } Order of Saint Michael and Saint  
George, Governor and Commander-in-  
Chief of the Colony of New South  
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the construction and erection of a dock at the Manning River, for and towards the completion of which said works public funds are available under the provisions of the "Appropriation Act of 1888;" and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette, and in a newspaper, that is to say, in the "Manning and Hastings Advocate," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the docking and repairing of vessels, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estates, interest, contracts, charges, rates, rights-of-way, or

other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act. And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the private township of Cundletown, parish of Cundle, county of Macquarie, and Colony of New South Wales, being allotments 16 and 17 of section 32 of the subdivision of the above private township, comprising portion of a grant of 15,000 acres to Francis Fisher: Commencing at the north-western corner of allotment 18, section 32, on the south-western boundary of a lane; and bounded thence on the north-east by part of that lane bearing westerly 132 feet; on the north-west by the south-east boundary of allotment 15, section 32, bearing southerly 165 feet to Albert-terrace; on the south-west and south by part of that terrace bearing easterly to the Dawson River; and by that river downwards to the south-western corner of allotment 18, section 32; and thence on the south-east by the north-west boundary of that allotment bearing northerly, to the point of commencement, containing 31 perches, more or less,—exclusive of area of 100 feet reservation above high-water mark, referred to in the above-mentioned grant, and said to be in the possession and occupation of G. K. Holden.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this ninth day of February, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

JAMES FLETCHER.

GOD SAVE THE QUEEN!

## NEW SOUTH WALES.

## LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR WHARF NEAR GHINNY GHINNY, MANNING RIVER.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable  
to wit. } CHARLES ROBERT, BARON CARRINGTON,  
a Member of Her Majesty's Most  
(L.S.) } Honourable Privy Council, Knight  
CARRINGTON, } Grand Cross of the Most Distinguished  
Governor. } Order of Saint Michael and Saint  
George, Governor and Commander-in-  
Chief of the Colony of New South  
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with wharf accommodation and approaches thereto, at the Manning River, near Ghinny Ghinny, for and towards the completion of which said works public funds are available under the provisions of the "Appropriation Act of 1887." And whereas the land hereinafter described is required for the construction of the said works: Now I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification, published in the Gazette, and in a newspaper, that is to say, in the "Manning and Hastings Advocate," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the loading and discharging of vessels to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-

mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interest, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee, with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situated in the parish of Cundle and county of Macquarie, being part of a grant of 50 acres to Francis Longworth, portion 9, of Jones' Island: Commencing at a point on the north-western boundary of the land resumed for wharfage purposes, distant 480 feet, and bearing south 53 degrees 35 minutes west from the south-eastern corner of the said grant; and bounded on the south-east by land previously resumed bearing south 41 degrees 16 minutes west 12 feet 7 inches; thence on the south by land previously resumed, bearing north 86 degrees 3 minutes west 547 feet to a reserved road 1 chain wide; thence by that road north-easterly 11 feet 2 inches; thence by a line bearing south 86 degrees 3 minutes east 549 feet 8 inches to the point of commencement,—containing 20½ perches or thereabouts, and said to be in the possession and occupation of Francis Longworth.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this ninth day of February, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

JAMES FLETCHER.

1889.

NEW SOUTH WALES.

ABORIGINES.

(REPORT OF BOARD FOR PROTECTION OF, FOR 1888.)

Presented to Parliament by Command.

The Aborigines Protection Board to The Principal Under Secretary.

Sir, Office of Aborigines Protectorate Board, Sydney, 12 April, 1889.

In accordance with the usual practice we have the honor to transmit, for the information of the Colonial Secretary, the following report respecting the work of the Board during the year 1888, together with a detail of the expenditure of the funds voted by Parliament.

Mr. Hugh Robison, who served as a member of the Board from the 5th June, 1883, resigned on the 15th October last.

The position of Secretary to the Board became vacant by the death of Major T. Gethin Coote on the 29th April last, and the duties have since been discharged by Mr. A. Berkelman, a clerk in the office of the Inspector-General of Police, who receives an allowance at the rate of £60 per annum for the work, which is chiefly, and as far as possible, performed after his other duties are over for the day.

Though the arrangement is an anomalous one, it is found in operation so extremely convenient that we recommend its continuance, at any rate for the present. The Board has to depend so largely upon the officers and members of the constabulary throughout the Colony for cheerfully and effectively carrying out its operations (which services we take the opportunity of gratefully acknowledging), that business is greatly facilitated by the knowledge possessed by the Acting Secretary of the country districts, and the facility of access he has to our Chairman at all times.

It will be seen by the subjoined census return (Appendix A) collected by the police, that there has been a total decrease in the aboriginal native population during the year of 417 (324 full-blood and 93 half-castes), although the births outnumber the reported deaths by 16. This decrease has been chiefly caused by large numbers of the aborigines on the borders leaving their districts for the adjacent colonies, owing to the dryness of the season and to the discontinuance to a large extent of the rabbit trapping and hunting; for instance, at Silverton, where the number in 1887 was given as 77, there are now only 13, a decrease of 64, whilst at Barrington, Mogil Mogil, and Yetman, on the Queensland Border, the numbers show a large falling off, and early in October last, just prior to the taking of the census, a company of about forty aborigines was taken by speculators from the Richmond and Clarence River districts to Melbourne for the purpose of holding corroborees, a proceeding which the Board would have been glad to have had in their power to prohibit.

As far as can be ascertained, there are at the present time 379 children (full-blood and half-castes) receiving school instruction, 323 in the Public Schools and 56 privately. A school for aboriginal children has been erected by the Board on the native reserve at Brungle, and a teacher provided by the Department of Public Instruction, and, as will be seen by the following extract from a report by the District Inspector of Schools, the result so far has been very gratifying. The Inspector states:—

It is very pleasing to be able to report that the children are regular and punctual, and seem very willing to attend school. I chatted with nearly all the parents, who seemed greatly delighted to have a school, and they make laudable efforts to send their children clean and tidy. The children themselves are extremely docile, and one would be astonished to see the progress they have made in drill in so short a time. One girl of fifteen years of age (a half-caste) can read and write fairly well. She reads the I.N.B. 2nd Book to the end. The rest are all beginners, having never been at school before. Most of the pupils have mastered the alphabet, and make a fair attempt at spelling words of three letters. They also write words of the same kind on slates. Very satisfactory work has been done in the short time (one month) they have been receiving instruction.

Another

Another similar school-house is about to be built at Maloga Lake, where some thirty children will be taught who have hitherto had some instruction in a hut lent for the purpose by Mr. Bate.

It would be extremely desirable to extend similar advantages to other districts, notably to the Clarence and Richmond River Districts where there are a large number of neglected aboriginal children; but up to the present time the Board have not been able, from various causes, to make the necessary arrangements.

Many aborigines are fairly well employed in the districts last referred to, in such work as maize-pulling, binding and stripping sugar-cane, clearing and burning off scrub, ringbarking, &c., whilst in the Macleay, Hastings, and Manning districts they are occupied farming on reserves dedicated by the Government for their use. Along the southern coast they are provided with fishing-boats, and some are employed in farming pursuits, at saw-mills, and on wharves loading and unloading cargo. Inland they can find work on the stations, for which they receive fair wages, the men shearing, shepherding, boundary-riding, horse-breaking, &c., &c.—the women as domestic servants. In the Shoalhaven district about twenty-five are engaged as farm labourers and stock-keepers by Mr. David Berry, and receive wages at the rate of from 10s. to 13s. per week, with rations and quarters.

In some parts of the Colony, for example, at Yass, the Barrington, and Brungle, the aborigines are now living in comfortable huts built of slabs with galvanized iron roofs, the material having been supplied by the Board. Some of these huts are neatly kept, and the people fairly industrious. The children at Yass are taught in the Convent School.

Appendix D contains a statement of boats in the possession of the aborigines, showing their present condition and the purposes for which they are used.

During the year 8,290 blankets were forwarded from the Government Stores Department to the various Benches of Magistrates for distribution. The blankets have hitherto been issued on the Queen's Birthday in each year; but it having been brought under the notice of the Board that in many places such issue is rather late in the season, a circular was forwarded to each Bench of Magistrates, requesting that the blankets be distributed not later than the 1st May in each year if practicable.

The increased provision voted by Parliament has by no means proved in excess of requirements during the past year, and the necessities of the aboriginal population will probably be on the increase notwithstanding the probable diminution in numbers, as many of the older people are becoming from disease and other causes too infirm to work for the support of themselves and their children. It therefore becomes necessary that they should be provided with food and clothing, and in some instances shelter also.

Appended will be found the Annual Report of the Aborigines Protection Association for the past year.

We have, &c.,

EDMUND FOSBERY, Chairman.	} Members of the Board.
RICHARD HILL, M.L.C.,	
PHILIP GIDLEY KING, M.L.C.,	
SYDNEY BURDEKIN, M.L.A.,	
A. M. HUTCHINSON.

## APPENDIX E.

REPORT of the Aborigines' Protection Association, for 1888, including Cumeroogunga (late Maloga), Warangesda and Brewarrina Missions.

## OFFICE BEARERS.

*Hon. Treasurers:*

MR. U. W. CARPENTER, 53 West-street, Darlinghurst. | MR. JAMES GREEN, 511 Bourke-street, Surry Hills.

*General Secretary:*

MR. G. E. ARDILL, Temperance Hall, Pitt-street.

*Council:*BISHOP OF RIVERINA,  
ARCHDEACON GUNTHER,  
REV. J. BARNIER,  
REV. A. J. CLARKE,MR. U. W. CARPENTER,  
MR. JAS. GREEN,  
MR. A. MENZIES,  
MR. J. G. TRESEDER,MR. C. E. WIGZELL,  
MR. THOMAS PEPPER,  
MR. MOSES WEYMARK,  
MR. A. FOX.*Bankers:*

THE COMMERCIAL BANK.

*Collector:*

MR. JAMES DRUCE, Jamieson-street.

At the close of another year we present to our subscribers an account of the work of the Association during that term. We have again to recognise the gracious dealing of a covenant-keeping God, whose faithfulness has been manifested, and whose guidance we have recognised.

While we have been face to face with great and grave difficulties, and have at times felt much perplexity in dealing with the work entrusted to our care, we have to record our thankfulness to Almighty God for the renewed tokens of His favour, and the amount of effective work we have been enabled to perform.

Cumeroogunga

*Cumeroogunga (late Maloga).*

Since our last report the work at this station has made good progress, notwithstanding the difficulty of securing a suitable site upon which to erect the mission buildings. At the close of the previous year application was made to the Minister for Lands for the reservation of 100 acres of high land on the river bank in addition to the present reserve. The application was granted, but much delay in the gazetting of the reservation has caused us a considerable amount of inconvenience, as, being uncertain of the tenure of the land, we have not felt free to erect so many buildings as we otherwise would have done. There is now, however, prospect of the speedy settlement of this matter.

The cultivation of the land has proved most successful. About 53 acres have been brought under cultivation, and we have returns for 117 bags wheat and 20 tons of hay, valued at £200. This is really the first full year of harvesting, and bids fair as an augury for the future operations in this direction. While the buildings were on the conditional purchase land of Messrs. Matthews Brothers no work was done on the reserve, therefore no return for the labour of the aborigines came to the Council.

Spiritually, we cannot give that glowing account which has been rendered in previous reports, but we believe that the Spirit of God is working amongst the people, and some who have passed away have left clear testimony as to their faith in Christ as their Saviour. Many of those now on the mission profess faith in Christ, and some manifest by their lives that they are followers of the Lord Jesus Christ.

Much improvement is shown by the children in the Public School—specimens of their work exhibit much proficiency.

*Warangesda.*

The work at this station has not shown the vigour that we could have wished. The failure of the wheat crop has again to be noted. However, on the other hand, a small orchard has been laid out, and all the trees look well. An area of 5 acres on the river bank has been cleared and got ready for the plough. Sundry improvements have been made in the erection of drafting yards, &c. The kitchen and bakehouse were destroyed by fire: these are now in course of re-erection, as also an extra wing to the dormitory, which is to form the sub-matron's apartment, so that constant supervision of the children can be maintained.

As to the spiritual results, the Bishop of Riverina writes:—

"I held a service there on the 20th December, and was much cheered by the reverence shown outwardly by all, the hearty responding and singing of the aborigines—the hymns being really well sung—and the intelligent interest with which the address was listened to, of course very simple and with a good deal of illustration.

The school was much to be praised likewise, the order being good, and the teaching efficient, so far as I could judge.

I saw some improvements, notably the fence round the girls' playground. The general appearance of the place was satisfactory, everything neat and tidy."

We have to acknowledge the liberal support received from the Diocese of Riverina. We are also grateful to His Lordship the Bishop of Riverina, and to the Rev. S. J. Lowdell, who visits the station and holds services regularly.

*Brewarrina.*

This station has manifested considerable improvement of late. Through the instrumentality of the Rev. J. B. Gribble, who was appointed Travelling Missionary, and the Overseer, a large number of aborigines, men, women, and children, were gathered into the station. Cultivation has been commenced, a fruit orchard being planted, the trees show signs of vitality. The children are gathered together by the Overseer and taught daily. Application has been made for the establishment of a Provisional School on the Reserve. We believe that in the future this station can be made very beneficial to the aborigines of the district. Religious services are conducted regularly, and some marked signs of the influence of the Gospel are to be seen.

*New Stations.*

An endeavour was made during the year to improve the condition of the aborigines resident near the city. Martin Simpson, an aboriginal, was employed to work amongst his brethren and influence them against the drink. However, his efforts were considerably nullified by the easy facilities for law-breaking and also the evil influence of the whites. Necessity exists for legislation with a view to cause the aborigines to camp out of the city. We still realise the necessity of providing adequate supervision at La Perouse, and hope to be able to arrange matters during the early part of the present year.

A deputation visited the Barrington, at the request of the Government Board, and advised the formation of a station there. After consideration it was resolved to proceed with the establishment of a mission, providing funds were supplied. Under the circumstances the Board decided to proceed with the erection of huts and to appoint a teacher and overseer under their own direction.

We should be glad to form a station on the Clarence, where a most suitable reserve has been gazetted, but lack of funds prevents further development.

*Employment.*

We would again revert to the necessity for training the youths and maidens to learn useful employments. The children are being carefully educated in the Public Schools, and many show great aptitude and are good scholars. However, there will be no outlet for them, thus educated, unless we can train them to industries and afterwards apprentice them. Immediate action is necessary to provide a Training Home for the girls for domestic service. We trust that during the present year we shall be enabled to commence this very important sphere of labour, which we feel confident would prove of vast importance for the well being of the girls now growing up on the stations.

*Control of Children.*

It is of primary importance that some action be taken to constitute the Government Board *ex officio* guardians of all the children, and giving them full power to remove to the mission stations such of the children, as they deem necessary, from the control of their parents or professed guardians, who continue to roam the country or live in those hot beds of immorality—camp-life near large towns.

*Further Facilities.*

To successfully cultivate a large area of the land on the several stations, the council should be in a position to erect an irrigation plant at each station. Much could be done in this way to bring under cultivation the land that is now idle, and also to provide work on the stations for the aborigines. Application has already been made to the Government, for a special grant for this purpose. The matter will receive further attention at once.

*Visits of Inspection.*

Deputations from the Council have visited Warangesda and Cumeroogunga, and reported upon the condition of these stations. The Rev. J. B. Gribble was also appointed travelling missionary, and instructed to visit the several stations and report. His reports have been received and fully considered by the Council.

*Finances.*

We regret to have again to remind our subscribers and friends that with increased work undertaken, the amount of subscriptions received by your Council have been altogether inadequate to enable the Council to claim sufficient Government subsidy to thoroughly perform all the work needed at the present stations, and undertake necessary and important work as already indicated. We would appeal for extended help. While missionary effort in foreign lands receives so much attention, the heathen at our own doors are perishing for lack of the knowledge of Christ.

*Our Aim.*

Our aim is not simply to feed and clothe the remnants of the tribes, but to preach the glad tidings of a Saviour crucified. We want to claim in our Saviour's name, the heathen for His inheritance. Those on our stations are directly under christian influence, but much might be done by the regular and systematic visitation of the various camps throughout the Colony. What we require is a missionary, who would take with him one or two of the aborigines already influenced by the Gospel of the Grace of God, and hold meetings amongst those in camp, and by personal contact endeavour to lead them to a knowledge of the truth. He could also be employed to advocate the claims of the Association to support when passing through the several townships.

The council appeal for continued and increased support to enable them to develop more extensively the missionary aspect of the work. For this they must look to the christian and philanthropic public, and do so with confidence that the response will be worthy of the well known liberality of those who long to see the kingdoms of this world become the kingdoms of our God and His Christ, and who are waiting for the approach of the time when they shall be gathered from the east and the west, the north and the south, to sit down at the marriage supper of the Lamb, and when every kindred, nation, tribe, and tongue shall yield their quota of praise to Him who lifted up, draws all men to Himself.

MANAGER'S REPORT of the Brewarrina Mission, for the Year ending 31 December, 1888.

JUST a year has elapsed since we took up our residence at the reserve set apart for this Mission, and it has been one fraught with unceasing labour, but attended with infinite pleasure in the satisfactory results that have been the outcome. When we started the year it was without a single native resident on the reserve, but before the first month had elapsed we had the pleasure of welcoming about twenty to their future home, most of them old people with a few children. Since their arrival the number steadily increased, as natives within reach heard they were well treated, until by the end of November we had a roll of forty-five natives. At this time the Rev. J. B. Gribble arrived from Bourke with a number, brought from that town and picked up *en route*. This, with three or four who arrived after his coming and a contingent from Milroy, enabled us to start this year with eighty-three residents.

The health of the natives on the place has been good. There have been five deaths, four being from extreme old age and one from consumption.

The attention required from these people and multiplicity of their wants has taxed our time and patience, as well as resources, to an extent that could hardly be credited by anyone not experienced in dealing with them, but in many ways has shown their unmistakable desire to make the station their permanent home.

We have found employment for the able-bodied men in fencing off two bends of the river to form two paddocks, building a school-house, forming a garden, &c. And more latterly they have been engaged in making bricks, with which we are intending to build cottages, dormitories for the children, &c.

The roll of natives on the place stands thus:—Adults, fifty-six; children, twenty-seven, of the latter twenty-three being of school age.

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MEDICAL ATTENDANTS TO ABORIGINES AT CUMEROONGUNGA  
MISSION STATION.

(CORRESPONDENCE, &c., RELATING TO APPOINTMENT OF.)

*Ordered by the Legislative Assembly to be printed, 8 May, 1889.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 25th April, 1889, That there be laid upon the Table of this House,—

“Copies of all correspondence between Dr. G. R. Eakins and the Aborigines Protection Board; also copies of all correspondence relating to the appointment of Dr. Sergeant as Medical Attendant to the Aborigines at the Cumeroogunga Mission Station.”

(*Mr. Chanter.*)

The Government Medical Officer, Moama and District, to The Aborigines Protectorate Board.

Echuca, Victoria, 1 February, 1889.

I HAVE to report that since my first visit one of the patients ailing with typhoid has died at the Cumeroogunga Camp.

I assume that my first report, which I sent to the Board of Health, Sydney, has been read by you. On yesterday, the first of this month, I again visited the station, in company with Senior-constable Robertson, of Moama, N.S.W., and found the camp disorganized, and a good deal of discontent and disapproval of the management. I advised the immediate removal of the healthy and unaffected families to a camp about a mile away from the present one. I also wish to state that about twenty or more canvas tents are necessary. I advised the closing of the school, and have acquainted the Minister of Public Instruction with my action.

The cause of the outbreak has been the neglected insanitary state of the camp. A good deal of sickness prevails amongst them. I have taken every precaution to prevent the further spread of the disease. I have this date forwarded my second report to the Board of Health. I will continue to look after them, and superintend the sanitary arrangements, which ought to have been looked after long ago, considering the habits and mode of life of these people.

GEO. REGINALD EAKINS, M.D.,

Health Officer and Government Medical Officer, Moama and District, N.S.W.

P.S.—The patients under treatment are so far progressing satisfactorily, and the best is being done for them under the existing state of affairs.—GEO. REGINALD EAKINS.

The Secretary, Aborigines Protectorate Board, to The Secretary, Aborigines Protection Association.

Sir, Office of Aborigines Protectorate Board, Sydney, 5 February, 1889.

With reference to papers forwarded from this office to you on the 30th ultimo, relative to an outbreak of typhoid and other sickness at the Cumeroogunga Mission Station, I am now directed to acquaint you that the Board request to be informed, without delay, what action the Association intend taking, the desired information not having been furnished, as promised, for consideration at the meeting of the Board on Monday.

I have, &c.,

A. BERCKELMAN,  
Secretary, Aborigines Protectorate Board.

The General Secretary, Aborigines Protection Association, to The Secretary, Aborigines Protectorate Board.

The Aborigines Protection Association,

Sir, Temperance Hall, Pitt-street, Sydney, 9 February, 1889.

I am instructed by the Council of the Aborigines Protection Association to inform you that immediate action was taken upon the report of Dr. Eakins regarding the outbreak of typhoid at Cumeroogunga Station. The Manager was instructed to provide necessary accommodation and food for the sick, and also to use every precaution for the prevention of the spread of the disease. Twelve extra tents have been purchased, so as to provide ample accommodation and means for the isolation of the sick from those who have not been affected. A special order has been repeated regarding the number of dogs upon the station, and no householder will be allowed to keep more than one dog. Instructions have been given to preserve the place in thorough cleanliness, and to provide ample w.c.'s. with proper conveniences.

The Manager reports that the typhoid was brought on to the station by some blacks who were visiting Melbourne.

The unfinished condition of the huts is due to the fact that the reservation of the 63 acres of land granted by the late Government has not yet been made or notified in the Government Gazette, and that much uncertainty as to the tenure of the ground has thus been caused. The immediate gazetting of the full 63 acres would place us in a position to complete the buildings without fear of the necessity for removal.

The question of the appointment of a doctor to visit the station periodically has received consideration, and will be finally dealt with at next meeting of the Council. Arrangements had already been made for an occasional visit of inspection, and Doctors Singleton and Dames, of Melbourne, had visited and reported to the Council.

I have, &c.,

G. E. ARDILL,  
General Secretary.

The Government Medical Officer, Moama and District, to The Aborigines Protectorate Board.

Echuca, Victoria, 5 February, 1889.

I HAVE to report that since my visit on the 31st January, and up to my visit on the 3rd February, two more cases of typhoid have died. Two fresh cases presented themselves on my visit of the 3rd. Another death has been reported to me this date. The patients, all three, are children. The adults are more amenable to treatment, and is more easily carried out. The school is now closed, and there is a diminution in the amount of sickness. What cleansing that can be done is being carried out by the Manager. Wet weather and very heavy rains having set in to-day, the poor people will be obliged to return to their former homes, and the old camp, which will cause further infection, besides giving rise to other illness, such as diarrhoea, congestion of the lungs, &c.

I shall pay another visit on the 7th, and report accordingly. I hope some tents will be at once procured. It would be advisable, if it could possibly be done, to have it brought under the notice of the Minister of Public Instruction, to have the necessary alterations and additions and sanitary changes effected while the school is closed. The teacher, Mr. James, has shown great willingness to assist me in carrying out the necessary sanitary reforms.

I have, &c.,

GEO. REGINALD EAKINS, M.D.,  
Government Medical Officer, Moama and District, N.S.W.

The Government Medical Officer, Moama and District, to the Aborigines Protectorate Board.

Echuca, Victoria, 10 February, 1889.

I VISITED the Cumeroogunga Aboriginal Station again on the 8th, and have to report that two fresh cases of fever had developed since my last visit. I have to ask that instructions be wired to the Manager to procure at once a supply of milk in such quantities as may be required for use in feeding the sick; the supply now doled out is totally inadequate. It is more than a farce to pretend to help the sick and give them nourishment when the very article of diet most suitable is not available. I have written to your Board on this matter already, and no steps have as yet been taken to remedy the grievance. No death has as yet occurred amongst the adult patients, but several have taken place amongst the children. I beg to suggest that a trained nurse be appointed to superintend the nursing and preparation of alimentary food for the sick. I feel I cannot succeed in my treatment and successfully stamp out the epidemic unless such aid is forthcoming. I have now to state that there is absolutely no nursing assistance or intelligent supervision rendered to the unfortunate patients, and I hope the Board will instruct me to obtain a trained nurse from Bendigo Hospital, and such instructions be at once wired me.

GEO. REGINALD EAKINS, M.D.,

Government Medical Officer.

A copy of the above report was forwarded to the Aborigines Protection Association on the 13th February, 1889.—A. BERCKELMAN, Secretary A. P. Board.

Telegram

Telegram from The Secretary, Aborigines Protection Association, to The Manager,  
Cumeroogunga Mission Station.

13 February, 1889.

PROCURE sufficient milk for patients, as per doctor's order. What nursing and attention is given?  
Mrs. D'Lany should give supervision.

G. E. ARDILL.

The General Secretary, Aborigines Protection Association, to The Secretary,  
Aborigines Protectorate Board.

Aborigines Protection Association, Temperance Hall,

Sir,

Pitt-street, Sydney, 12 March, 1889.

I am directed to convey to you the following information concerning the station at  
Cumeroogunga:—

*Extracts from Letters.*

"There are no serious cases of sickness here now, although there are in bed now the following cases of fever:—  
four adults, one boy, and one little girl."

"Mrs. M'Lean was supplied with everything which Dr. Eakins would allow her to have up to the time of her death,  
at the expense of the Association."

"I am glad to state our patients are getting on. The little orphan, Ada, got fever, and by myself I got her over it.  
She was seven days out of her mind. She was the worst case we had, and several children and men showed symptoms,  
and with Dr. Singleton's medicine-chest I had victory with all—not me, but God blessed the means and restored them.  
Dr. Eakins comes, and all the children (six or seven) died he had. If he had not come I would not have been afraid to  
superintend all if they got it, at present, for I have deep experience with fever cases."

"Rest assured we shall do all in our power for them. It is not spreading."

I have, &c.,

G. E. ARDILL,

General Secretary.

The General Secretary, Aborigines Protection Association, to The Secretary,  
Aborigines Protectorate Board.

Sir,

The Aborigines Protection Association, Temperance Hall, Sydney, 6 April, 1889.

I am directed to acquaint your Board with the fact that a deputation from this Council has  
recently visited the Mission Station at Cumeroogunga, and report that much difficulty is being experienced  
in the working of the station in consequence of the action of the doctor in sending the people away from  
the station to camp down the river, and also in closing the school for so long a time, especially now when  
the sickness has entirely disappeared.

Further, the Council have now appointed Dr. George Sergeant as medical officer to the station.

I am, &c.,

G. E. ARDILL,

General Secretary.

The Government Medical Officer, Moama and District, to The President, Aborigines  
Protectorate Board.

*Re Cumeroogunga Aboriginal Station.*

Sir,

Echuca, Victoria, 12 April, 1889.

I have the honor to report that I have now paid sixteen visits to the Cumeroogunga Station,  
and have succeeded in suppressing the present outbreak of typhoid. On my last visit, April 10th, there  
were two patients (adults) recovering. Although the disease is now stamped out during the cold weather, a  
similar outbreak may certainly be anticipated when next hot season arrives. I have also to report that  
the camp is now assuming its wonted filthy appearance. My instructions have been disregarded with  
respect to providing proper sanitary arrangements. The cesspits are still in existence, and the filthy habits  
still continue. I have been most indifferently assisted by the management throughout the epidemic. My  
instructions were resented as irksome, and considerable supineness was exhibited. Because I advised the  
closing of the school as a necessary sanitary precaution, and insisted on the people who were not affected  
removing to a healthy camp, for similar sanitary reasons, I have been, I believe, represented as unduly  
interfering with the prerogative of the management, who held different views on the matter, and who  
wished the people to remain at work in the infected camp, although in doing so they ran fearful risks.  
This statement is borne out by the fact that when the tents were obtained they were only given to those  
who followed the dictum of the Manager. I applied for a trained nurse to your Board, but did not  
receive any reply to my application; I was given the services of an ignorant aboriginal. I believe that  
when I applied for tents the Manager represented there were tents enough on the station. He, it seems,  
was displeased because the people carried out my instructions (with the intelligent assistance of Mr. James,  
the school-teacher), and remained away from the infected camp. He refused, I am informed, to give those  
people rations because they did not absolutely do as he wished. I beg to refer you to my former reports;  
also as to the corroborative evidence of the visiting police constables; also the representatives of the  
Press, who are independent witnesses.

Referring to a copy of letter with extracts signed by G. E. Ardill, dated Pitt-street, 12th March,  
1889, and addressed to Secretary, Aborigines Protectorate Board, I have to state that it is a tissue of  
falsehoods, and diametrically opposed to the truth. With reference to the girl Ada referred to, she was  
under my care for at least a fortnight, and up to that time had not any treatment whatsoever, and, if any,  
must have been injurious. I had to call the attention of the woman Delany to the disgustingly dirty  
state of her house and environs in presence of Senior-constable Robertson. With reference to the  
statement that all the children under my care died, I have to point out that these were the cases of  
children suffering from typhoid in various stages, and who had no treatment, and were allowed to walk  
about and eat improper food, and as a natural sequence nearly all succumbed before my assistance was  
availed of, the advanced state of the disease precluding recovery. As to the statement that the individual,  
skilled

skilled as the writer of the document referred to appeared to be, that individual's audacity in uttering such a statement to anybody is only equalled by the amount of lying. I wish to state that the Manager refused to give the M'Lean family rations in my presence when requested to do so by Senior-constable Robertson. I wish to point out the danger to your Board of entrusting to any one person the power of an autocrat, and the urgent necessity of appointing a committee of local gentlemen to see that the management is efficiently carried out, and that the caprices of an individual may not injuriously affect a community so helpless as the aborigines. I shall be glad to assist your Board with a further report *re* appointing a responsible committee. I have also to state that the men for the greater part have an intense dislike to the management, principally on account of harsh and arbitrary acts. He refused to my knowledge to lend a buggy to the parents to fetch the body of a child that was dead in Echuca to their own burying-ground.

I make this and similar statements without fear of successful contradiction.

I may add that Mr. Ardill, the Secretary of the A. P. Association, although in Echuca, did not call on me, or make me aware of his arrival. Had he done so, I could have pointed out various grievances that the blacks at present labour under.

Petitions from the aborigines, containing some of the treatment they receive, have been forwarded to Sydney, whether to your Board or the A. P. Association I cannot now say; and I hope, however, that the matter of appointing a local committee of management, and other things, will receive due consideration, and that statements like the extracts in the letter referred to will not pass unchallenged.

I have, &c.,  
 GEO. REGINALD EAKINS, M.D.,  
 Government Medical Officer and Health Officer, Moama and District.

This letter is now under the consideration of the Board.—A. BERCKELMAN, Secretary A. P. Board.

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MEDICAL ATTENDANTS TO ABORIGINES AT CUMMERA-  
GUNGA MISSION STATION.  
(FURTHER CORRESPONDENCE RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 31 July, 1889.*

FURTHER RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 25th April, 1889, That there be laid upon the Table of this House,—

“Copies of all correspondence between Dr. G. R. Eakins and the Aborigines Protection Board; also, copies of all correspondence relating to the appointment of Dr. Sergeant as Medical Attendant to the Aborigines at the Cummeragunga Mission Station.”

(*Mr. Chanter.*)

Extract from Votes and Proceedings.

LEGISLATIVE ASSEMBLY, 9 July, 1889.

(5.) Medical Attendants to Aborigines at Cummeragunga Mission Station:—*Mr. Barbour*, for MR. CHANTER, asked the Colonial Secretary,—

(1.) Referring to the Return to Order, made 25th April, 1889—“Medical Attendants to Aborigines at Cummeragunga Mission Station,”—is it not a fact that the said Return to Order does not include the whole of the papers asked for?

(2.) Did he receive a letter from J. M. Chanter, M.P., dated 5th June, 1889, setting forth that certain papers had been withheld, and asking for their production?

(3.) Will he at once request the Aborigines Protectorate Board to supply him with the papers hereinafter mentioned, and lay them upon the Table of this House:—(a) The whole of the reports from Dr. Eakins to the Minister of Public Instruction; (b) the whole of the reports from Dr. Eakins to the Board of Health; (c) the report of the senior-constable stationed at Moama; (d) the petition forwarded to the Aborigines Protectorate Board, or the Aborigines Protectorate Association, by the Aborigines at Cummeragunga Mission; (e) the whole of the letter from which extract was taken and forwarded by G. E. Ardill, Esq., on the 12th day of March, 1889; (f) reports from the Board and Association, showing upon whose recommendation Dr. Sergeant was appointed; (g) the reasons from the Board and Association that caused them to sanction the appointment of Dr. Sergeant as medical attendant?

SIR HENRY PARKES answered,—I will cause the papers to be obtained and copies to be made, for the purpose of being laid upon the Table.

(A.)

Telegram from Doctor Eakins, Echuca, to The Minister for Public Instruction.

1 February, 1889.

ADVISED closing school, Cummeragunga. Cause, typhoid. Wire instructions.

GEO. R. EAKINS, M.D.,  
Health Officer, Moama.

Sir,

Echuca, Victoria, 1 February, 1889.

In consequence of an outbreak of typhoid fever amongst the aborigines at Cummeragunga Station, I have taken upon myself to advise the teacher, Mr. James, to immediately close the school, as those children who are now lying sick of typhoid have been in attendance at the school until obliged to take to bed, and it is absolutely necessary, in order to prevent any further spread of the disease, that it should be closed.

515—A.

[920 copies—Approximate Cost of Printing (labour and material), £4 10s. 2d.]

I wired to-day to you that you might send the necessary instructions to Mr. James.

*Re* the school itself, it is much too small for the number of children in attendance, and inadequately ventilated, the ceiling is too low, no ventilators in it either.

There is no pretention to modesty in the construction of the closets, which will have to be removed or destroyed by burning as a sanitary precaution.

I have, &c.,

GEO. REGINALD EAKINS, M.D.,

Health Officer and Government Medical Officer, Moama and District.

The Minister of Public Instruction, Sydney.

Sir,

Echuca, Victoria, 18 February, 1889.

I have to report that the fourteen days which has now expired, which was granted to the Cummeragunga Aboriginal School in this district in consequence of an outbreak of typhoid, has now expired, and it is advisable to keep the school still closed until the disease is stamped out. I have, on my own authority, advised the teacher to still keep the school closed, and beg you will sanction the step and communicate such to the teacher.

GEORGE REGINALD EAKINS, M.D.,

Health Officer and Government Medical Officer, Moama and District, N. S. Wales.

The Minister of Public Instruction, Sydney.

Sir,

Echuca, Victoria, 12 April, 1889.

I have the honor to report that the outbreak of typhoid has now been stopped, and that it will be safe for the teacher to again open the school at the Aboriginal Station, Cummeragunga.

I paid my last visit there on Wednesday, 10th April. I have to point out that nothing has been done to destroy or disinfect the closets in connection with the school, which had been in use previous to the outbreak.

I have, &c.,

GEO. REGINALD EAKINS,

Health Officer, Moama and District, N. S. Wales.

The Minister of Public Instruction, Sydney.

(B.)

Telegram from The Government Medical Officer, Moama and District, to The Government Medical Adviser.

25 January, 1889.

EPIDEMIC typhoid amongst aborigines, Cummeragunga. No medical attendance. Several now attacked. Wire instructions.

GEO. REGINALD EAKINS, M.D.,

Echuca.

Telegram from Medical Adviser to Dr. Eakins, Echuca.

26 January, 1889.

KINDLY visit aboriginals at Cummeragunga and report.

H. N. M'LAURIN,

Medical Adviser.

Sir,

Echuca, Victoria, 27 January, 1889.

According to instructions received by telegram from you on the 26th instant, I have to report that I visited this date Cummeragunga Aboriginal Station. I find that the houses, which are built of wood or rough slabs, are for the most part in a very unfinished state. There is no street or other drainage, the earth in and about the dwellings being saturated with domestic liquid refuse. No ash-heaps or provision for the removal of manure; bones, rags, dead animals, and garbage of all kinds lying about festering in the heat of the sun, covered with flies, ants, and other insects, and emitting sickly odours; the houses in a good many cases being dirty both inside and outside, with no conveniences for comfort or cleanliness. There are no closets, with a few exceptions, and these are mere holes dug in the ground, and are more dangerous than none at all. Numerous complaints were made to me of the character of the food supplied. A sample of the sugar submitted to me looked more like inferior cement than anything else. The supply of milk is totally inadequate. There are numerous dogs (old, young, and diseased), with their attendant fleas. I find there are eight cases of typhoid scattered about the camp. I was informed a good many more were ailing of pains and diarrhoea, strongly suspicious of typhoid, who were walking about the neighbourhood, that I did not see at the time of my visit. There is no provision for isolation or treatment of infectious cases, and no medical attendance whatever. In my opinion, the disease typhoid having now got into the camp, it will be very hard to get rid of, and numerous deaths may be expected, on account of the existing state of things and the uncleanly habits and ignorance of the poor people. There were no medicines, with the exception of what was contained in the small medicine chest, and none of any use. No disinfectants; no adjunctives, or nursing. The women and children are for the most part sickly. Ulcers, phthisis, pneumonia, dyspepsia, hydatids, diarrhoea, exist among them. For the purpose of isolation and treatment, I beg to suggest that a temporary hospital be at once erected, with proper medical attendance and nursing, and that a good supply of milk be at once available, and an immediate wholesome check placed on the number of dogs now roaming about the camp, as in consequence of these dogs licking the hands, faces, and bodies of infected children, they must spread the disease.

I have, &c.,

GEO. REGINALD EAKINS, M.D., L.R.C.P., Edin., &c.,

Health Officer, &c., Moama, N.S.W., and Echuca, Victoria.

The Chief Medical Adviser, Government of New South Wales.

Board of Health Office, 127, Macquarie-street, Sydney, 30 January, 1889.  
Cummeragunga Aboriginal Station.

THIS report discloses a very sad state of matters, and I forward it for the consideration of the Aborigines Protectorate Board, who will probably be able to take some action in the matter.

In the meantime, I have instructed Dr. Eakins to continue in medical attendance for the present. I should be glad if the Aborigines Protectorate Board would favour me with its opinion as to the erection of a hospital.

The Secretary, Aborigines Protectorate Board. H. N. M'LAURIN,  
Medical Adviser to the Government.

Telegram from the Secretary, Board of Health, to Doctor Eakins, Echuca.

REPORT on Cummeragunga Aboriginal Station has been forwarded to the Aborigines Protectorate Board for the necessary action. The Medical Adviser desires in the meantime you will continue in medical attendance on the station for the present, and report to him the circumstances at each visit.

EDMUND SAGER,  
Secretary, Board of Health.

Sir,

Echuca, Victoria, 1 February, 1889.

Re my former report on the outbreak of typhoid at Cummeragunga Aboriginal Station, I have to state that one of the children then ailing died on the 28th January. I paid a visit again on the 31st. I find several fresh cases developing symptoms of same disease.

I have recommended the removal of all the unaffected and healthy families to a different camp, about 1 mile away from the present one. I have given directions for the closing of the school, and communicated my recommendation to the Minister of Public Instruction; and the destruction of the closet pits by burning wood and charcoal, so as to destroy all excrement and chances of infection. I have also caused all filth, garbage, rags, bones, and everything unsanitary about the dwellings to be destroyed by burning. In the new camp I have advised that a portion of the camp be dug out and used as a latrine, and that no excreta of any kind be deposited except in those trenches, so as to prevent the camp becoming like the old one.

I shall pay another visit on the 3rd, and report again. I have left the necessary instructions for those now sick, with medicines, &c. Every sanitary precaution is being adopted that is possible to carry out.

About twenty tents are required for the new camp, and ought to be at once provided.

I have given instructions to Police Constable Robertson of Moama to communicate with the Police authorities in Deniliquin.

The cause of the outbreak has been undoubtedly the crowded and filthy condition of the camp.

I have, &c.,

The Secretary, Board of Health.

GEO. REGINALD EAKINS, M.D.,  
Health Officer, and District Government Medical Officer.

For the information of the Aborigines Protection Board.—H.N.M., Medical Adviser, 4/2/89.

Sir,

Board of Health Office, 127, Macquarie-street, Sydney, 4 February, 1889.

I have the honor to acknowledge receipt of your report of the 1st instant, re the blacks' camp at Cummeragunga, which has this day been forwarded to the Aborigines Protectorate Board.

I have, &c.,

G. R. Eakins, Esq., M.D., Echuca.

EDMUND SAGER,  
Secretary.

(C.)

Telegram from the Secretary, Aborigines Protectorate Board, to The Superintendent of Police, Deniliquin.

30 January, 1889.

REPORTED that serious outbreak of typhoid and other sickness has occurred at Cummeragunga Mission Station, and that camp generally is in a most wretched and filthy state. Please cause inquiries to be made at once, and wire result. Could tents be procured in district, and at what price? Would it be advisable to erect a few on a separate portion of the reserve? Dr. Eakins is medically attending them. Very urgent.

A. BERCKELMAN,  
Secretary, Aborigines Protectorate Board.

Telegram from the Superintendent of Police, Deniliquin, to The Secretary, Aborigines Protectorate Board.

31 January, 1889.

SENIOR Constable wires as follows re condition of Mission Station:—Have just returned from Cummeragunga. Camp in state of disorganization. Dr. Eakins was there. Eight cases typhoid, also several others ill. About forty have left and gone up river. Tents cannot be procured here; about twenty-five tents would be required. Dr. Eakins recommends school be closed; also that these men remain where they are camped up river.

ALFRED COMBER,  
Senior-Sergeant  
(pro Superintendent, absent).

Telegram from the Secretary, Aborigines Protectorate Board, to The Superintendent of Police, Deniliquin.

1 February, 1889.

Re Cummeragunga Mission Station. Carry out instructions of Medical Officer.

A. BERCKELMAN,  
Secretary, Aborigines Protectorate Board.  
Police

Police Station, Moama, 31 January, 1889.

SENIOR-Constable Robertson most respectfully begs to report, for his Superintendent's information, that the senior-constable went out to Cummeragunga Mission Station. Dr. Eakins was there also.

The camp seems in a great state of disorganization. There are eight cases of typhoid fever, and a great many more cases of sickness. Dr. Eakins recommends that the Mission School be closed. There are about forty people left the Mission and gone about 2 miles up the river, to be out of the fever, and are camping out. It would take about twenty-five tents. They could not be got here. The doctor recommends they stay out at camp, away from the Mission, to be away from the fever. There is an aboriginal named Whyman M'Lean who made a complaint to me. Mr. Bellinger refused him his rations. M'Lean has a consumptive wife. M'Lean summoned Mr. Bellinger for poisoning his two dogs; the Bench gave a verdict against Bellinger, 20s. for dogs, 42s. costs, 5s. 10d. costs of Court, in all, £3 7s. 10d. I asked Mr. Bellinger if he had refused Whyman M'Lean his rations. He replied he had done so.

I think it would be advisable to have some tents erected some distance away from fever.

JAMES ROBERTSON,  
Senior-Constable.

The Superintendent of Police, Deniliquin.

2 February, 1889.

Senior-Constable Robertson has instructions to see that the doctor's directions are carried out, and wire when that is necessary. I have not heard whether any tents have been provided or authority to purchase. When I visited the place on the 24th of last month I went through several of the buildings with the manager, Mr. Bellinger. I saw two or three who appeared to be ill, one in particular, a young man, who, Mr. Bellinger said, was suffering from lung complaint. In justice to the establishment, I must say I did not see any of the buildings dirty or filthy; but not one word was said about typhoid fever. As for disorganization, I cannot say anything; but, in my opinion, Mr. Bellinger does not seem a fit person to have charge of the Mission Station.

J. DOWLING BROWN,  
Superintendent.

The Chairman, Aborigines Protectorate Board.

Telegram from the Chairman, Aborigines Protectorate Board, to The Officer in charge of Police, Moama.  
4 February, 1889.

REPORT at once cost of twenty suitable tents, to be procured either from Echuca or Melbourne. Other suggestions of Medical Officer should be promptly given effect to.

EDMUND FOSBERY,  
Chairman, Aborigines Protectorate Board.

Telegram from the Officer in charge of Police, Moama, to The Chairman, Aborigines Protectorate Board.  
5 February, 1889.

DRILL tents, 8 x 10, can be procured at Echuca from Melbourne; price, 30s.

JAS. ROBERTSON,  
Senior-Constable.

Telegram from the Officer in charge of Police, Moama, to The Chairman, Aborigines Protectorate Board.  
6 February, 1889.

ABOUT ten tents at Mission Station, Cummeragunga. Twelve more required badly for people camping out.

JAS. ROBERTSON,  
Senior-Constable.

A copy of the above telegram was forwarded on date received to the Secretary, Aborigines Protection Association, who promised to have the tents procured.—A. BERGKELMAN, Secretary, Aborigines Protectorate Board.

Police Station, Moama, 5 February, 1889.

SENIOR-CONSTABLE ROBERTSON most respectfully begs to report, for the Inspector-General's information, that the senior-constable made another patrol to Cummeragunga Mission Station. The aborigines are a great deal better, and the doctor's orders are being carried out as far as they can practically be done.

Mr. Bellinger, the manager, is having the places cleaned up. The doctor recommends that some of the closets and cesspits be burned. Some tents are badly wanted for the blacks that are camping out; drill-tents, 8 x 10, would cost 30s. each.

JAMES ROBERTSON,  
Senior-Constable.

The Chairman, Aborigines Protectorate Board.

Telegram from The Chairman, Aborigines Protectorate Board, to The Superintendent of Police, Deniliquin.  
12 February, 1889.

INSTRUCT Senior-Constable Robertson to visit Cummeragunga again, and report present condition of affairs. He should see Dr. Eakins before reporting.

EDMUND FOSBERY,  
Chairman, Aborigines Protectorate Board.

Police Station, Moama, 14 February, 1889.

SENIOR-CONSTABLE ROBERTSON most respectfully begs to report, for his Superintendent's information, that the senior-constable visited the Aboriginal Mission Station, Cummeragunga, to-day. There are five cases of typhoid fever; names are Bertha Murray, William Charles, Leonard Kerr, Henry Foster, Eliza Allen; also others suffering from consumption. The doctor has ordered a large supply of milk, which has been got by the manager, Mr. Bellinger. The rubbish is all being raked up and burnt. The doctor's orders are being carried out as far as practicable. Mr. Bellinger informs me he has got authority to get twelve more tents, which are badly required. The school at the Mission has been closed for the present by Dr. Eakin's orders.

There have been ten deaths taken place since they first went to Melbourne, namely—Clara Anderson, aged 1½ years, died 28th December, 1888, at Brighton Beach, Victoria; Bartlet Cooper, died 10th January, 1889, at Cummeragunga, inflammation of the lungs; Mary Stuckey, died 15th January, 1889, Prahran,

Prahran, Victoria, from burns received at Brighton Beach; Edith Stuckey, aged 1 year, died 28th January, 1889, at Cummeragunga, from typhoid fever; John Atkinson, aged 2 years, died 1st February, 1889, at Cummeragunga, from typhoid fever; Annie Cooper, aged 20 years, died at Sandhurst Hospital, 19th January, 1889, from typhoid fever; Robert Cooper, aged 2 years, died at Cummeragunga, 4th February, 1889, from typhoid fever and congestion of the lungs; Sam. Barber, aged 2 years, died at Cummeragunga, 9th February, 1889, from typhoid fever; Caroline Morgan, aged 40 years, died 18th January, 1889, at Caranderrk, Victoria, from a cold; Maria Morgan, aged 1½ years, died at Caranderrk, Victoria—no date of death given, or cause of death.

On my visit some of the sick seemed better, others were in a very high state of fever. Dr. Eakins visited Cummeragunga on Monday, 11th February; goes out again on 14th February.

JAMES ROBERTSON,  
Senior-Constable.

The Superintendent of Police, Deniliquin.

Submitted for the information of the Chairman of the Aborigines Protectorate Board, with reference to telegram of 12th instant.—ALFRED COMBER, Senior Sergeant, *pro* Superintendent (absent), Deniliquin, 15/2/89. The Chairman, Aborigines Protectorate Board, Sydney.

(D.)

Sir,

Cummeragunga Aboriginal Mission, 16 February, 1889.

We, the undersigned aborigines, members of this Mission, do most respectfully beg to submit the following facts to your kind consideration, begging that you will, with the co-operation of the other members of the Board, give our case your valuable attention, and that, by your influence and decision as representatives of the Government, you will at once, and for ever, remove the causes of dissatisfaction that have been so long robbing us of our peace and impeding our progress as a community.

First.—We are led to understand that according to the rules of the Aborigines Protectorate Association, no aboriginal is entitled to any rations unless he works six hours a day. If a man absent himself from work through illness, or other circumstances over which he has no control, which must occasionally happen, the absentee and all his family are deprived of food, because the Superintendent considers the reason for absence unsatisfactory. We are sensible to admit that there are some on the Mission who cannot always give satisfactory reasons for absence; but even some of these are excusable when we remember the fact that nearly all the aborigines are more or less affected with some insidious diseases, or the withering consumption which deprives them of energy to do any kind of manual work. Further, if a man refused to perform work which he is unaccustomed to, he must suffer likewise—that is, to do without his food. In short, the Superintendent has all the rations in his own hands, and he can do just as he likes; and there is no one on the mission or in the district to question whether justice is done to the aborigines, or whether they receive the rights conceded to them by the Government.

We humbly state that we consider it very unfair and unsatisfactory that the distribution of rations should be left to the discretion of the Superintendent only. We have always understood that the Government, having dispossessed us of our land, hunting grounds, &c., gave us rations as compensation, without any condition that we should work a certain number of hours for it. We believe that rations are freely issued to the aborigines, through the Police Magistrate, &c., in many parts of New South Wales.

We beg for similar concessions here through the Superintendent or some other responsible person. When we say rations, we mean the bare necessaries of life, viz., flour, meat, tea, sugar, and salt. We do not wish to lead an indolent life, for there are other things that are absolutely necessary to render our homes comfortable, such as rice, sago, potatoes, oatmeal, also boots and clothing, the value of which we now realize, and for these we are heartily willing to work.

Secondly, we beg that Dr. Eakins, who has for the last three years given us his services freely, without charge, and who has been recently appointed to attend to several cases of typhoid on the Mission, may now be permanently appointed to visit us regularly once a month, and also supervise the sanitary arrangements of the Mission. Moreover, that he who takes charge of the medicine should receive a systematic course of instruction as to dispensing medicine, either from the visiting doctor or from some chemist in the nearest town; and we may mention that Mr. James, the present school-teacher is willing to undertake the work and undergo the necessary training, as he has kindly promised to do this for us.

We also regret to have to state that we are afraid that we will never be able to work in harmony with our present Superintendent, Mr. Bellingier. We consider that he has treated us very badly during our present time of trouble. During the sickness we have received neither help nor sympathy from him. He may be able to manage the Mission efficiently in a pecuniary sense—that is, working the Mission at a small cost, by depriving us of our rations without any cause, thus destroying all our respect for him and our love for the Mission as our home. In fact, in our opinion, we have too many officers altogether.

Finally, we beg that a number of these well-known and respected gentlemen, whose names follow, be appointed to visit the Mission periodically, and give reports of their visit to the Board. This, we consider, will keep the officers from neglecting their duties, and us from abusing the rights conceded to us by the Government:—

— Scott, Esq., P.M.  
T. Watson, Esq., J.P.  
— Manton, Esq.  
Wm. Warren, Esq., J.P.  
G. Redman, Esq., J.P.  
G. Durwent, Esq., J.P.  
— Lewis, Esq.  
— Evans, Esq.

Trusting you will accede to our urgent request herein,

We have, &c.

[Here follow the signatures of 19 Aborigines.]

The Chairman of the Board for the Protection of Aborigines.

A copy of this petition was forwarded to the Aborigines Protection Association for any observations they might wish to make.—A. BERCKELMAN, Secretary, Aborigines Protectorate Board.

The

The Aborigines Protection Association, Temperance Hall, Pitt-street,  
Sydney, 18 April, 1889.

*Re* Petition from Aborigines at Cummeragunga.

Sir,

A deputation from the Council of the Aborigines Protection Association visited the Station during the month of March, and inquired fully into all causes of complaint, with the result that all matters have been settled satisfactorily. The Association are firm in the matter of not granting rations to able-bodied blacks (men), who refuse to work. It is only by this system that due control can be exercised and the Stations approximated to a self-supporting basis.

Yours, &c.,

G. E. ARDILL,  
General Secretary.

The Secretary, Aborigines Protectorate Board.

(E.)

Dear Sir,

Cumeragunga Mission, Moama, 27 February, 1889.

I am glad to state our patients are getting on. My little orphan, Ada, first got fever, and by myself got her over it. She was seven days out of her mind. She was the worst case we had, and several children and men showed symptoms, and with Dr. Singleton's medicine chest I had victory with all; not me, but God blessed the means and restored them. Dr. Eakins comes, and all the children (six or seven) died he had. If he had not come, I would not have been afraid to superintend all if they got it, at present, for I have had deep experience in fever. Mrs. Briggs attends with me. Three men and three cases at the other side Mrs. Swift attends, and I see all. Before you wrote I was doing it. Rest assured we shall do all in our power for them. It is not spreading. Mr. Bellinger is very attentive to them. Dr. Eakins went too far in what he represented. He was true in our houses not being finished, but that difficulty is only got over in time. Our places were not truthfully represented.

I thank you and the Council for granting us the comforts for them.

I am, &c.,

FRANCES DEL'ANY.

The Secretary, Aborigines Protection Association, Sydney.

(F. & G.)

The Aborigines Protection Association, Temperance Hall, Pitt-street,  
Sydney, 12 July, 1889.

Sir,

I have the honor to inform you that the appointment of Dr. Sergeant to the position of Medical Attendant at Cummeragunga was made on the verbal recommendation of the Rev. A. J. Clarke and myself, who attended as a deputation and inspected the Mission Station, hearing of and having an interview with Dr. Sergeant during a brief stay in Echuca.

The reasons that caused the Council of the Association to sanction the appointment of Dr. Sergeant as Medical Attendant are:—

1. His evident qualifications as a medical man, as witnessed to by his testimonials submitted to the Council.
2. His evident interest in the work of the Association.
3. The moderate sum at which he was willing to pay regular visits of inspection and prescribe for the wants of the aborigines, as well as render reports upon the health of the people and the sanitary condition of the Station.

The amount paid to Dr. Sergeant is £50 per annum, whereas the sum mentioned by other medical men in Echuca, for less frequent visitations, was £100 per annum.

The services of Dr. Sergeant have now been rendered to the Station for a period of three months, and the Council have every reason to be perfectly satisfied with his conduct, and consider that the appointment has been in every way satisfactory to the interests of the Station.

I have, &c.,

G. E. ARDILL,  
General Secretary, Aborigines Protection Association.

The Secretary, Aborigines Protectorate Board.

1889.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## ASYLUMS FOR INFIRM AND DESTITUTE, PARRAMATTA.

(PURCHASE OF LAND FOR BRANCH ESTABLISHMENT.)

*Ordered by the Legislative Assembly to be printed, 8 March, 1889.*

## The Colonial Secretary to The Colonial Treasurer.

My dear Burns,

Chief Secretary's Office, New South Wales, 27 November.

We have to pay Mr. John Taylor £3,600 for the lands for quarters for married couples (Asylum), and the deeds are the same thing as completed. Mr. Taylor wants £600 advance, which would be of special value to him to-day. I see no reason why it should not be paid.

Yours sincerely,

HENRY PARKES.

## The Principal Under Secretary to J. Taylor, Esq.

Sir,

Colonial Secretary's Office, Sydney, 6 August, 1888.

In reference to letters offering the two separate properties shown on tracing within red lines for the respective sums of £3,200 and £400, I am directed by the Colonial Secretary to inform you that the Government is prepared to purchase these properties at the prices stated, namely, for the whole, £3,600.

You will be good enough to furnish the necessary documents for submission to the Crown Solicitor with a view to the completion of the purchase.

I have, &amp;c.,

CRITCHETT WALKER.

No tracing received with these papers.—J. WILLIAMS, Crown Solicitor, *per* C.S.P. There are other papers connected with this matter; collect all together.—H.P.

## Dr. H. N. MacLaurin to The Principal Under Secretary.

Sir,

Board of Health Office, 127, Macquarie-street, Sydney, 7 June, 1888.

I have the honor to inform you that, in accordance with instructions, I yesterday visited Parramatta and inspected the Carriage Bazaar, the property of Mr. John Taylor, which has been placed under offer to the Government with a view to its being turned to account as a branch establishment of the Asylums for the Infirm and Destitute. I am of opinion that the property is not suited for this purpose, and I would recommend that the purchase be not carried out.

I have, &amp;c.,

H. N. MACLAURIN.

Submitted, 13/6/88. Plan returned herewith. Inform Mr. Taylor of the purport of this report.—H.P., 18/6/88. Mr. Taylor, 29 June, 1888.

## The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 21 January, 1889.

I have the honor to inform you that I have received from Mr. Levien, solicitor, a letter, which I forward herewith, relating to the purchase from Mr. John Taylor of land at Parramatta.

You are aware that upon a complete abstract having been forwarded to me I transmitted same with the papers to you under cover of a letter of date the 24th November last, and that I also wrote to you on the 26th idem, since which date the papers have not been returned to me, nor have I received any further instructions in the matter from your Department.

I would particularly call your attention to the threat made by Mr. Levien that his client would take possession of the land, and, I suppose, would repudiate his contract for sale, notwithstanding it is said buildings have been put thereon.

70—A

If,

If, as I am informed is the case, with a knowledge of the defect in the title to a portion of the land, you have taken possession of the property, and altered its condition by removing old buildings and erecting new ones thereon, Mr. Taylor can claim that all objections to the title have been waived by the Government, and that the matter ought to be completed.

In the third paragraph of Mr. Levien's letter he intimates that the Bank's mortgage not having been paid off the Bank will sell as mortgagees, or Mr. Taylor will sell to defray his account with the Bank.

Whether, as stated in the concluding paragraph of that letter, the matters in dispute as to a small portion of the land have been arranged between Mr. Deering, the Government, and Mr. Taylor's surveyor, I am not aware.

Mr. Maxted, who is acting herein on behalf of the Government, was informed that there was a difficulty in the title, and that it would not be safe for the Government to remove the old buildings on the land and to proceed with the new ones. Whatever, therefore, has been done in altering the condition of the land has been done by the Government with the knowledge of the legal difficulties in the matter.

As any further delay in completing the matter may lead to serious difficulties, will you please cause the question referred to in my letter of the 26th November last to be dealt with at your earliest convenience.

I have, &c.,

JOHN WILLIAMS,  
Crown Solicitor.

[Enclosure.]

John Taylor to The Queen.

John Williams, Esq., Crown Solicitor, Sydney,—

Phillip-street, Sydney, 16 January, 1889.

Dear Sir,

So long a time has elapsed since you were furnished with all information for the completion of this business without any progress being made as to settlement that I must urge you to prepare the necessary conveyances without further delay, as my client will repossess himself of the land, notwithstanding any buildings erected by the Government thereon.

An abstract was sent you early in October last, which was returned for correction, and this corrected abstract was supplied to you in the same month. The Government, on the purchase being made, took possession of the land; debarred Mr. John Taylor from carrying on his business as a stock and produce auctioneer on the premises; pulled down his stables, through which he was deprived of the profits on letting horses and buggies; and, in fact, took from him a considerable portion of his income. Moreover, the property was under mortgage to the Bank, and he has had to pay interest on his advances from October without any means of realizing from his property profits to keep down such interest; and as there appeared no prospect of a speedy settlement the Bank has called upon him to discharge his indebtedness to it with the least possible delay.

I have to request, therefore, that you will get on with this conveyance, or otherwise the Bank will sell as mortgagees, or Mr. Taylor dispose of his property as it now stands to defray his account with the Bank.

On Mr. Taylor's part I claim interest on purchase money from date of Government taking possession of the land and commencing building thereon, such interest being at the rate charged by the Bank of New South Wales.

I am instructed that all matters connected with a small portion of the land, over which there was some discussion, have been arranged between Mr. Deering, the Government, and Mr. Taylor's surveyor in a satisfactory manner.

I am, &c.,

HENRY LEVIEN.

The Under Secretary for Lands would oblige by expediting this matter.—C.W., B.C., 22/1/89.

The papers in this case are M.S. 89-190, sent to Mr. District-Surveyor Deering on 14th. It is stated by District Survey Office that on the 19th the papers were sent to Mr. Surveyor Ebsworth for field action.—R.H.D., 23/1/89. Submitted.

The case is one in which the Colonial Secretary's Department has purchased land for purposes connected with "Charitable Institutions," and the papers have been referred here simply on a point of boundary and survey matters. The request of the Principal Under Secretary would be met by Mr. District-Surveyor Deering requesting Mr. Surveyor Ebsworth to treat the case as a special one, and to deal with it at once.—R.H.D., 23/1/89.

Will the Metropolitan District Surveyor please hasten action as indicated?—G.F., B.C., 23/1/89.

Mr. Ebsworth will be good enough to complete the instruction with the least possible delay. The circumstances demand immediate action.—W.F. (for Metropolitan District Surveyor), B.C., 23/1/89. Mr. Surveyor Ebsworth.

### The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 16 January, 1889.

Referring to my previous letter of date the 17th ultimo, No. 88-7,803, asking for the return of the papers relating to the purchase of land at Parramatta from Mr. John Taylor for homes for destitute children, I have the honor to forward you copy of a letter I have to-day received from the Manager of the Commercial Banking Co. of Sydney. Will you be so good as to inform me what is delaying the matter.

I have, &c.,

JOHN WILLIAMS,  
Crown Solicitor.

[Enclosure.]

The Crown Solicitor, Sydney,—

Commercial Banking Co. of Sydney, Parramatta, 15 January, 1889.

Dear Sir,

On the 30th November last we received from the Treasury a letter, No. B 575, in which it was stated that the Government had purchased from Mr. John Taylor, of Church-street, Parramatta, certain land near the railway station, Parramatta, on which to erect cottages, for the sum of £3,600, and in such letter it was promised that if we would pay to Mr. J. Taylor £600 that sum should be kept back out of the payment the Government were to make to Taylor. This £600 was paid and the Treasury advised to that effect; as yet the £600 has not reached us. I am told that the deeds are in your office. Would you kindly say if the matter is likely to be completed ere long.

Yours faithfully,

W. W. M'CUSHAM,  
Manager.

Papers with Lands Department.

Newspaper

## Newspaper Extracts.

From the *Evening News*, Wednesday, 13th February, 1889.

LAND BOUGHT FOR THE HOMES OF THE OLD COUPLES AT PARRAMATTA.

*To the Editor.*

Sir,

With reference to your paragraph of this date, I desire to say that no land was purchased by the late Government from Mr. Hugh Taylor at any time. As to the title in this case or any other, no purchase is completed by the Government until the title has been examined and approved by the Crown Solicitor. I send you a copy of Mr. Dibbs' letter addressed to me, by which you will see that he does not inquire about any missing documents affecting the title of the land purchased, but about "two letters offering two separate properties to the Government." I informed Mr. Dibbs that my recollection did not enable me to identify the letters referred to, but that I recollected that other land was offered, which was declined because it was not required.

12 February, 1889.

Yours, &c.,  
HENRY PARKES.

Sir,

Colonial Secretary's Office, Sydney, February, 1889.

In looking through the papers regarding the purchase of land from Mr. John Taylor, at Parramatta, I notice a reference to two letters offering two separate properties to the Government. As these documents cannot be traced amongst the papers regarding the purchase, and as there is no record of them, I should be glad if you would kindly inform me whether they have been by mistake gathered up with your private papers when leaving office; and if so, would you kindly forward them to me at your early convenience.

I have, &amp;c.,

GEORGE R. DIBBS,  
Colonial Secretary.

Sir Henry Parkes, M.P., G.C.M.G., Balmain.

*To the Editor.*

Sir,

You published a paragraph yesterday on the subject of the Parramatta Cottage Homes for Destitute Couples containing an error with regard to myself, which I trust you will permit me to correct. You state, in fact, that the land on which the homes are built was purchased from me by the late Government. I merely wish to say that this land was not so purchased, and that I never, either directly or indirectly, had at any time any interest in it. Neither have I had any communication with reference to it with the late Government by correspondence or otherwise. I have, of course, no doubt that Sir Henry Parkes' action in connection with this matter has been perfectly honest and straightforward, as it has been proved to be in all others in which the public interests have been concerned; but it is not my province to say anything further on that head.

Parramatta, February 11.

Yours, &c.,  
HUGH TAYLOR.

Keep on hand.—C.W., 21/2/89.

The Under Secretary for Finance and Trade to The Manager, Commercial Bank,  
Parramatta.

Sir,

The Treasury, New South Wales, Sydney, 27 November, 1888.

I am directed by the Colonial Treasurer to inform you that the Government are the purchasers of a block of land at Parramatta from Mr. John Taylor, for the sum of £3,600. Some short time must elapse before the conveyance to the Crown is executed. Meanwhile I am to state that if Mr. Taylor is able to arrange with you for an advance of £600 (six hundred pounds), the Treasury will, with the consent of Mr. Taylor, reserve that amount for your reimbursement out of the purchase money.

I have, &c.,  
G. EAGAR.

The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 24 November, 1888.

I have the honor to return herewith papers in connection with the purchase of land at Parramatta from Mr. John Taylor, for the homes for destitute children, and also to forward a letter I have this day received from Mr. Levien, together with the surveyor's report therein referred to, and to request that they may be referred to Mr. Deering for further report, and as to whether the abstract now comprises the whole of the land agreed to be purchased. I may mention that upon investigating the title it appeared that a portion of the southern end of Fitzwilliam-street was embraced in the land offered for sale.

It will be seen from Mr. Levien's letter that Mr. Taylor has merely a possessory title to this piece, and that he proposes seeing the Colonial Secretary on Monday upon this question.

At present, although it is not stated what the proposals Mr. Taylor intends to make will be, I do not think that Mr. Taylor will be able to produce a satisfactory title to the land.

I have, &c.,  
JOHN WILLIAMS,  
Crown Solicitor.Will the Under Secretary for Lands be kind enough to have the further report asked for made.—  
C.W., P.U.S., B.C., 25/11/88.

The abstract now appears to comprise the 1r. 4p. previously apparently not so comprised. The question of how the small portion of Fitzwilliam-street (not clearly indicated on tracing) shall be transferred to the Crown, if necessary, should probably be considered after Mr. Taylor's proposals, on the subject are known.—W. FREEMAN (for Metropolitan District Surveyor), 26/11/88. Under Secretary for Lands.

Returned.—C.S.O., 26/11/88. The Crown Solicitor.—C.W., B.C., 27/11/88.

R. H. Levien, Esq., M.P., to The Crown Solicitor.

John Taylor to the Queen.

Dear Sir,

George-street, Parramatta, 23 November, 1888.

I was duly favoured with your letter of 19th instant, and this morning with your letter of 22nd November.

On receipt of your first letter I got Mr. Brown (of Messrs. Chatfield and Brown) to see Mr. Deering, as I felt certain that I had supplied you with full particulars of the 1r. 4p. of land under the "Real Property Act" and contained in larger certificate.

Mr. Brown's report is enclosed. You will thus see that the delay as to that portion did not rest with me.

With reference to title of other parts of the land,—on 16th October I sent you amended abstract (which was, I regret to say, sent you at first in a defective state through an error of the surveyor), and it was not until 21st November that I received requisitions thereon, and then only by return of abstract.

It is useless, however, to discuss the question of errors which may have been unavoidable on the side on which they occurred, but it is very desirable that this matter should be completed.

Mr. Taylor has, through some assumed right, taken possession and occupied a piece of the land (something under a perch) without having more than a possessory title, and when I sent you abstract I was unaware of this.

I have suggested his seeing the Colonial Secretary on Monday, for it was with that gentleman directly, I believe, the sale was made, and submitting to him two proposals by which a settlement could be arrived at on either of the two being accepted.

Meanwhile you could send draft for approval, subject to such arrangements, so that no time need be lost when that matter is adjusted.

I return abstract by this post, and although you will be out of time in making requisitions will cheerfully answer any you please to make.

Truly yours,

R. H. LEVIEN.

[Enclosure.]

R. H. Levien, Esq., Solicitor, Parramatta.

Parramatta, 23 November, 1888.

Dear Sir,

In compliance with your request our Mr. Brown saw Mr. Deering yesterday with regard to a paragraph in his report to the Crown Solicitor to the effect that the portion of 1 rood and 4 perches (on the south side of Parkes-street) did not form part of the land described on page 23 of the abstract of title. It is, however, now admitted that an error was made in Mr. Deering's report, and that the portion of 1 rood and 4 perches does form part of the land described on page 23 of the abstract of title furnished the Crown Solicitor.

We are, &c.,

CHATFIELD & BROWN,

### Minute by the Chief Clerk, Department of Public Works.

Resumption of land at Parramatta for Asylum purposes.

Department of Public Works, Sydney, 27 December, 1888.

In connection with the Asylum for the Destitute, at Parramatta, certain land has recently been purchased by the Colonial Secretary's Department from Mr. Jno. Taylor. On the particulars of title being furnished by the vendor it was discovered that he had a possessory title only to a small portion of the land at the southern end of Fitzwilliam-street; and as the Crown Solicitor considers the title unsatisfactory, he has recommended that this portion of land be resumed under the Lands for Public Purposes Acquisition Act, and of this the Colonial Secretary has approved. The papers have now been forwarded to this office, with a view of the resumption being carried out; but this cannot be done until a description has been furnished, which does not yet appear to have been prepared.

D.C.M'L.

Mr. Thompson, for the description and plan required.—J.B., B.C., 28/12/88.

\* See Appendix A.

A plan\*, giving the lengths and bearings of the boundaries of the land to be resumed, together with a connection to some established point, is required before a correct description can be furnished.—A.B., pro J.B.L., B.C., 2/1/89. Under Secretary for Public Works. Will the Under Secretary for Lands kindly obtain this for us?—J.B., B.C., 2/1/89. Mr. District-Surveyor Deering.—R.H.D., pro U.S., 14/1/89.

Site for Asylum at Parramatta.—Purchase from Mr. John Taylor, and resumption of part of a street.

19 January, 1889.

MR. SURVEYOR EBSWORTH is requested to survey immediately the portion of Fitzwilliam-street included within the area edged red on tracing with these papers, for resumption as proposed. Plan to be transmitted. Mr. John Taylor can probably (if necessary) supply Mr. Ebsworth with a lithograph of the Wentworth Estate (Harris Park), of which this land forms part.

This matter, being very urgent, must take precedence of all other work.

JOHN W. DEERING.

It is understood that the Colonial Secretary requires these papers, which therefore have been obtained from the surveyor.—W.M. FREEMAN (for Metrop. Dist. Sur.), 6 Feb., 1889. The Under Secretary for Lands. The Principal Under Secretary.—S.F., B.C., 6/2/89. Returned.—C.S.O., 6/12/89.

### The Director of Government Asylums to The Principal Under Secretary.

Sir,

Government Asylums Office, Sydney, 2 August, 1888.

In accordance with the direction of the Hon. the Colonial Secretary, I have examined the property of Mr. John Taylor, which is now under offer to the Government, for the purpose of ascertaining how far it can properly be utilised as an auxiliary to the Government Asylums for Infirm and Destitute.

2.

2. I first proceeded to ascertain the value of the property, the situation and boundaries of which are indicated on the accompanying tracing\*. One allotment of 1 acre and 1 rood, on which are erected a four-roomed brick cottage and substantial brick buildings, at present used as a horse and carriage bazaar, is offered for £3,200; and another lot of 1 acre 2 roods 9 perches is offered for £400. The total amount thus asked for the two lots, embracing upwards of 2½ acres, is £3,600, including the buildings, which are valued at about £1,500.

3. I believe this is a low valuation. Adjoining Mr. Taylor's property there is a vacant allotment of less than 1½ acre, bounded by the railway line (marked "Terry's Land" on the tracing), which I have ascertained from the owner's solicitor cannot be obtained for less than £3,700, and the reports of Messrs. Mills & Pile and Messrs. Richardson & Wrench, annexed hereto, copies of which I have procured from the Bank of New South Wales, respectively, fix the value of Mr. Taylor's allotment of 1 acre 1 rood and the buildings thereon at £4,000 and £3,843, without reference to the 1½ acre valued by Mr. Taylor at £100 and included in his offer.

4. With regard to Mr. Taylor's property, I am of opinion that it would not be advisable to establish in this locality a branch asylum for old men, whose habits might in many cases make their close proximity to the railway station objectionable, but I think the present buildings could, with extensive alterations and additions, be converted into a refuge for a long time to come for respectable destitute aged and infirm couples who cannot now be provided for in any of the public institutions without that the buildings be so constructed that each couple may have the use of two small rooms and a kitchen, separating husbands and wives. I have always strongly advocated the application of the home system as far as practicable to the management of our asylums, and if it is determined to make the provision here suggested, I recommend that the buildings be so constructed that each couple may have the use of two small rooms and a kitchen. In this way from twenty to thirty little homes, sufficiently separated to secure privacy to and preserve harmony among the occupants, could be arranged in the one premises. This and other matters of detail can, however, be dealt with hereafter if the principle of the proposal is approved.

5. Some sanitary defects exist in the neighbourhood, but they are being removed by the Borough Council. The main objection in the matter appears to be the limited area of Taylor's land. This could be overcome by the resumption, for railway purposes, of Terry's land, which would include the existing right-of-way (marked "Fitzwilliam Avenue" on the tracing) between it and Taylor's property, and thus make one compact block of nearly 3 acres available, in addition to the separate lot valued at £400. There can be little doubt, I think, that both properties will eventually be required for railway purposes, and they can probably never be more advantageously secured than at the present time. In the meantime, Terry's land could be attached to the temporary asylum for aged couples, as a recreation ground, and for other purposes. I trust I shall not be held to have gone beyond my instructions in making this suggestion, which seems to me to be necessary in dealing with the matter I have been directed to report upon.

6. All the properties referred to will, with alterations, probably cost about £10,000, namely:—Taylor's land and buildings, £3,600; Terry's land, £3,700; alterations to buildings (which could ultimately be converted into goods sheds), say £2,700. If the properties are purchased for railway purposes they can be paid for from the Loan Vote, and the interest on the cost would thus represent an annual rental of about £350, while the State would secure cheaply a most valuable asset.

I have, &c.,

SYDNEY MAXTED,

Director of Government Asylums, &c.

## DESCRIPTIONS.

### No. 1.

ALL that piece or parcel of land containing by admeasurement 1 acre 2 roods and 5 perches, situate, lying, and being in the town of Parramatta, parish of St. John, county of Cumberland, and colony of New South Wales, being a portion, lots 48, 49, 50, 51, 52, and 53, of the subdivision of the Wentworth Estate. Commencing at a point on the south-eastern side of Park-street, and distant 135 feet south-westerly from Cowper-street, and bounded thence on part of the north-west by the aforesaid Park-street, being a line bearing south-westerly 169 feet 7 inches, and again bearing north-westerly 26 feet; thence on part of the south-west by a line bearing south-easterly 210 feet; thence on the remainder of the north-west by a line bearing south-westerly 4 feet 2 inches; thence on the remainder of the south-west by a line bearing south-easterly 212 feet 10 inches, and again by a line bearing south-easterly 102 feet; thence on the south-east by a line bearing north-easterly 55 feet 3 inches; and thence on the east by a line bearing northerly 529 feet 3 inches to the point of commencement, be the said several dimensions a little more or less.

Parramatta, 16 October, 1888.

CHATFIELD & BROWN,

Licensed Surveyors.

### No. 2.

ALL that piece or parcel of land containing by admeasurement 2 roods 24 perches, situate, lying, and being in the town of Parramatta, parish of St. John, county of Cumberland, and colony of New South Wales, being lot 13 and a portion of lots 44, 46, and 47 of the subdivision of the Wentworth Estate. Commencing at a point on the north-western side of Park-street, and distant 129 feet 4 inches south-westerly from Valentine Avenue; and bounded thence on part of the south-east by the aforesaid Park-street, being a line bearing south-westerly 50 feet 5 inches; thence on part of the south-west by a line bearing north-westerly 290 feet; thence on the remainder of the south-east by a line bearing south-westerly 46 feet; thence on the remainder of the south-west by a line bearing north-westerly 81 feet 9 inches to the aforesaid Valentine Avenue; thence on the north-east by the aforesaid Valentine Avenue, being lines bearing south-easterly 63 feet 9 inches, again bearing north-easterly 13 feet 8 inches, and again bearing south-easterly 132 feet 9 inches; and thence on the east by a line bearing southerly 250 feet 9½ inches to the point of commencement, be the said several dimensions a little more or less.

Parramatta, 16 October, 1888.

CHATFIELD & BROWN,

Licensed Surveyors.

Abstract

\* See Appendix B. Mr. Taylor's properties enclosed in red on the tracing.

Mr. Taylor's valuation, £3,200. Richardson & Wrench's, £3,843. Mills & Pile's, £4,000. [This valuation does not include the 1½ acre offered separately by Mr. Taylor for £400.]

### Abstract of the Title of Mr. J. Taylor to land situate in town of Parramatta.

Abstract of the Title of Mr. John Taylor to land at Parramatta, being lots 10 to 13, section 2, and lots 44, 46, and 47, section 2, of the Wentworth Estate, Parramatta; also lots 48, 49, 50, 51, 52, 53, 54, and 55, same estate.

1875, February 25th (not given up). By indenture of this date made between Fitzwilliam Wentworth, therein described, of the one part, and John Taylor, therein also described, of the other part, reciting seizin in fee-simple, and reciting contract for sale for £50, it was witnessed that in consideration of £50 paid, &c., the receipt, &c.

HE, the said F. Wentworth, did thereby grant, bargain, sell, release, and confirm unto the said J. Taylor and his heirs, all that piece or parcel of land situate in the town of Parramatta, parish of Saint John, county of Cumberland, in the Colony of New South Wales, being lots 46 and 47 of section 2 of the subdivision of Fitzwilliam Wentworth, Esq., Parramatta Estate: Commencing on the east side of Wentworth-street, at the south-west corner of lot 45, sold to W. O. Ward, and bearing south 200 feet; on the south by the boundary line between lot 47 and portion of lot 48, bearing east 198 feet 6 inches; on the east by a line bearing north-easterly 206 feet; and on the north by a line bearing westerly separating lot 46 from lots 13 and 45, 253 feet, to the point of commencement. Together with a right-of-way through Wentworth-street, as shown on plan of the Wentworth Estate (also Fitzwilliam-street), together with all buildings, &c., and the reversions, &c., and all the estate, &c. To have and to hold the said parcel of land and hereditaments and premises unto the said J. Taylor and his heirs, to the use of the said John Taylor, his heirs and assigns for ever; covenant by said F. Wentworth. For good right to convey, for quiet enjoyment, for further assurance, to produce deeds in Schedule thereto. Defeazance clause.

#### The Schedule.

1819, August 31st—Crown grant of this date in favour of D'Arcy Wentworth; reg. Col. Secretary's Office, page 58, No. 7.

1861, August 3rd—Indenture of this date between W. C. Wentworth and Sarah, his wife, first part, and F. Wentworth, second part, and James Norton, the elder, third part; reg. No. 730, book 80.

Duly executed and attested; receipt for £50, signed and witnessed; reg. No. 811, book 148.

1876, October 30th (not given up). By indenture of this date made between Fitzwilliam Wentworth, therein called vendor, of the one part, and John Taylor, therein called purchaser, of the other part, reciting that Darcy Wentworth, late of Homebush, in the said Colony, deceased, being seized of the lands and hereditaments thereafter described for an estate of inheritance in fee-simple in possession, departed this life on or about the day of 1827, having first duly made and published his last will and testament, bearing date the 5th day of July, 1827, whereby he gave and devised (*inter alia*) the lands and hereditaments thereafter described unto Thomas Campbell, William Lawson, William Redfern, and his son William Charles Wentworth, and the survivor of them, and the heirs and assigns of such survivor upon trust (*inter alia*) to allow his son W. C. Wentworth to have, possess, and enjoy (*inter alia*) the lands and hereditaments thereafter described for and during the term of his natural life, with remainder to go and descend to his the said W. C. Wentworth's first and other son, and daughters, in tail, in the order of primogeniture, males to be preferred to females, and to the several and respective heirs of their bodies so that each possessor should only take a life estate and interest in the same with an ultimate remainder over in case of death of said W. C. Wentworth without issue: And reciting that said will was duly proved in the Supreme Court of New South Wales, in its Ecclesiastical Jurisdiction, on the 22nd day of May, 1828, and probate thereof granted on the same day by the said Supreme Court to the said J. T. Campbell, W. Lawson, and W. C. Wentworth: And reciting by an indenture or disentailing deed, duly executed and acknowledged as by the law required, bearing date the 3rd day of August, 1861, and made between the said W. C. Wentworth and Sarah his wife first part, the said vendor of the second part, and James Norton therein described of the third part, the said W. C. Wentworth and the said vendor, for the consideration therein mentioned did thereby grant, bargain, sell, alien, release, and confirm, and the said Sarah Wentworth did remise, release, and quit claim unto the said James Norton and his heirs (*inter alia*) the lands and hereditaments thereafter described, to hold the same unto the said James Norton and his heirs to the use of the said W. C. Wentworth and his assigns for life with remainder to the use of the said vendor, his heirs, and assigns, for ever: And reciting that said William Charles Wentworth departed this life on or about the 20th day of March, 1872, leaving his eldest son the said vendor him surviving: And reciting seizin in fee of said F. Wentworth: And reciting contract for sale for the sum of £188. It was witnessed that in pursuance of said contract, and in consideration of £188 paid, &c., the receipt, &c., he, the said vendor, did thereby grant, bargain, sell, alien, release, and confirm unto the said purchaser and his heirs, all that piece or parcel of land described and comprised in the second schedule thereunder written, together, &c., and the reversions, &c., and all the estate, &c.; to have and to hold the said land and hereditaments, and all and singular other the premises thereinbefore expressed, to be thereby granted, released, and assured, with the appurtenances, unto the said purchaser and his heirs, to the use of the said purchaser, his heirs, and assigns for ever; covenants by said vendor, for good right to convey, for quiet enjoyment, for further assurance, to produce deeds in first schedule thereto.

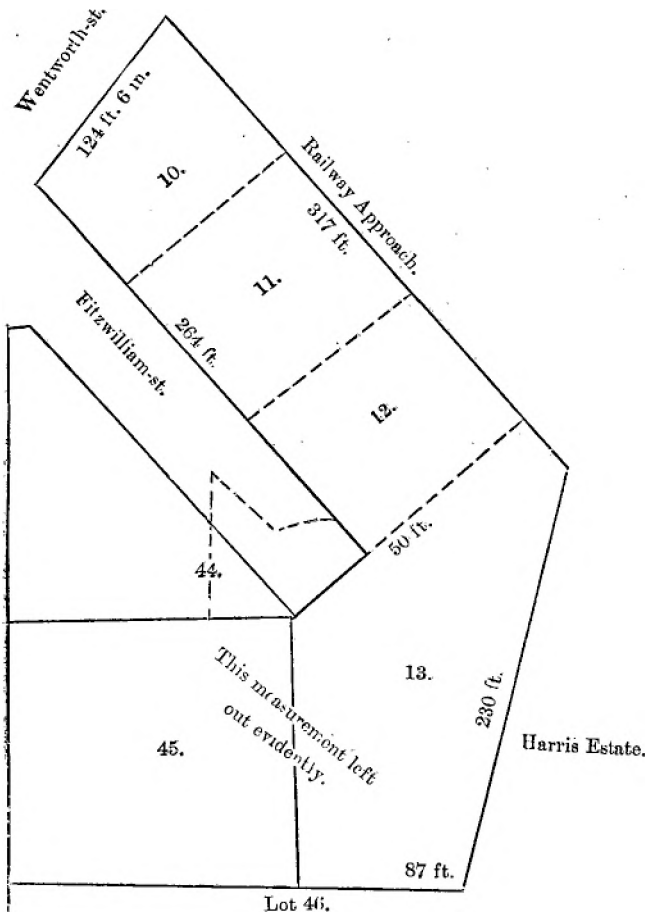

The

## The First Schedule referred to.

1819, August 31—Grant to Darcy Wentworth, 31 acres, district of Parramatta; reg. Colonial Secretary's Office, page 58, reg. No. 7.

1861, August 3—Disentailing Deed, before recited, of this date; reg. No. 730, book 80.

## The Second Schedule referred to.

All that piece or parcel of land situate, lying, and being in the town of Parramatta, parish of Saint John, county of Cumberland, in the said Colony: Commencing at the north-east corner of the junction of Wentworth and Fitzwilliam Streets, and bounded on the west by Wentworth-street aforesaid, bearing northerly 124 feet 6 inches; on the north by the railway approach, bearing easterly 317 feet; on the east by the Harris Estate, bearing south 230 feet; on the south by lot 46 of section 2, bearing westerly 87 feet; on the west by Fitzwilliam-street, bearing north-easterly 50 feet; on the south-west by the said Fitzwilliam-street, bearing north-westerly 264 feet to the point of commencement, and containing 1 acre 1 rood and 7 perches, being lots 10 to 13 inclusive of section 2, Wentworth Estate, Parramatta, and part of 31 acres granted to Darcy Wentworth on 31st August, 1819.

Duly executed and attested; receipt for £188, signed and witnessed; registered No. 411, book 164.

1877, March 15th (not given up.) By indenture of this date made between Fitzwilliam Wentworth, therein called vendor, of the one part, and John Taylor, therein called purchaser, of the other part. Reciting seizin of Darcy Wentworth, deceased; and reciting that probate was granted on 22nd May, 1878; and reciting before-mentioned disentailing deed; and reciting death of W. C. Wentworth; and reciting contract for sale for £ : It was witnessed that in

consideration of £188 paid, &c., the receipt, &c., be, the said vendor, did thereby grant, bargain, sell, alien, release, and confirm unto the said purchaser and his heirs all that piece of land described in second schedule thereto, together, &c., and the reversions, &c., and all the estate, &c., to have and to hold the said land and hereditaments and all and singular other the premises thereinbefore expressed, to be thereby granted, released, and assured, with the appurtenances, unto the said purchaser and his heirs, to the use of the said purchaser, his heirs, and assigns for ever. Covenants by said vendor for good right to convey, for quiet enjoyment, for further assurance, to produce deeds in schedule thereto.

## The First Schedule.

1819, August 31st. Grant to D'Arcy Wentworth of 31 acres, district of Parramatta. Registered Colonial Secretary's Office, page 58, No. 7 Register.

1861, August 3rd. The hereinbefore-recited indenture of this date. Registered No. 730, Book 80.

## The Second Schedule referred to.

All that piece or parcel of land situate in the town of Parramatta, parish of St. John, county of Cumberland, Colony of New South Wales, being lot 44 of section 2, in the subdivision of the Wentworth Estate, Parramatta. Commencing at a point in Wentworth-street, at the north-west corner of lot 45, and bounded on the north by lot 45 by a line bearing north-easterly 252½ links to lot 13; on the north-east by a line bearing north-westerly 389 links to Wentworth-street; and on the west by that street southerly 298½ links to the point of commencement, containing by admeasurement 1 rood 22 perches.

Duly executed and attested. Receipt for consideration signed and witnessed. Registered No. 204, Book 167.

1873, August 17th (not given up.) By indenture of this date made between Fitzwilliam Wentworth, of the one part, and John Taylor, of Parramatta, auctioneer, of the other part, reciting seizin of said F. Wentworth to land thereafter described, and reciting sale by auction of said land, when said J. Taylor became the purchaser thereof at the sum

Parramatta, auctioneer, of the other part, reciting seizin of said F. Wentworth to land thereafter described, and reciting sale by auction of said land, when said J. Taylor became the purchaser thereof at the sum

sum

sum of £25, it was witnessed that in consideration of £25 sterling to the said F. Wentworth paid, &c., the receipt, &c., he, the said F. Wentworth, did thereby grant, bargain, sell, release, and confirm unto the said J. Taylor and his heirs all that piece or parcel of land, situated at Parramatta aforesaid, commencing at a point on the east side of Wentworth-street, distant 150 feet southerly of its northern angle; and bounded thence on the west by the east side of Wentworth-street aforesaid, bearing southerly 100 feet; on the south by a line dividing this lot from lot 51, bearing easterly 334 feet; on the east by a fenced line separating this lot from Harris' grant, bearing north-easterly 103 feet; and on the north by a line separating this lot from lot 49, bearing westerly 358 feet 6 inches, to the point of commencement; containing 3 roods and 7 perches, and being lot 50 of section 2 in the town of Parramatta, together, &c., and the reversions, &c., and all the estate, &c., to have and to hold the said parcel of land, hereditaments, and premises unto the said Jno. Taylor and his heirs, to the use of the said John Taylor his heirs and assigns for ever. Covenants by said F. Wentworth, for good right to convey, for quiet enjoyment, for further assurance, for production of deeds in schedule thereto.

The Schedule referred to.

1819, August 31st—Crown grant of this date in favour of D'Arcy Wentworth. Registered Col. Sec.'s office, page 58, No. 7.

1861, August 3rd—Indenture, W. C. Wentworth and Sarah his wife first part, said F. Wentworth second part, and Jas. Norton the elder third part. Registered No. 730, book 80. Duly executed and attested, receipt for £25 signed and witnessed. Registered, No 163, book 137.

1876, October 30th (not given up). By indenture of this date made between said F. Wentworth, therein called vendor, of the one part, and John Taylor, therein called purchaser, of the other part. Reciting that Darcy Wentworth, being seized of the lands and hereditaments hereinafter described, departed this life in the year 1827, having first made and published his last will and testament, bearing date the 5th July, 1827, whereby he gave and devised (*inter alia*) the lands and hereditaments hereinafter described unto Thos. Campbell, Wm. Lawson, Wm. Redfern, and his son Wm. Chas. Wentworth, and the survivor of them, and the heirs and assigns of such survivor, upon trust (*inter alia*), to allow his said son, W. C. Wentworth, to have, possess, and enjoy (*inter alia*) the land and hereditaments thereinafter described for and during the term of his, the said W. C. Wentworth's, natural life, with remainder to go and descend to his, the said W. C. Wentworth's, first and other sons and daughters, in tail, in the order of primogeniture, males to be preferred to females, and to the several respective heirs and their bodies, so that each possessor shall only take a life estate and interest in the same, with an ultimate remainder over, in case of death of said W. C. Wentworth without issue: And reciting that probate was granted to said J. T. Campbell, Wm. Lawson, and W. C. Wentworth, on the 2nd May, 1828: And reciting an indenture or disentailing, and dated 3rd August, 1861, and made between said W. C. Wentworth and Sarah (his wife) of the first part, the said vendor second part, and James Norton third part; the said W. C. Wentworth and the said vendor, for the consideration therein mentioned, did thereby grant, bargain, sell, and release, and the said Sarah Wentworth did remise, release, and quit claim unto the said Jas. Norton and his heirs (*inter alia*) the lands and hereditaments thereinafter described; to hold the same unto the said James Norton and his heirs, to the use of Wm. C. Wentworth and his assigns for life, with remainder to the use of the said vendor, his heirs and assigns, for ever: And reciting death of said W. C. Wentworth on 20th March, 1872, leaving his eldest son, the said vendor, him surviving: And reciting seizin of vendor and contract for sale for £90 5s.: It was witnessed that in pursuance of the said agreement, and in consideration of the premises and of the sum of £90 5s. in hand paid, &c., the receipt, &c., he, the said vendor, did thereby grant, bargain, sell, alien, release, and confirm unto the said purchaser and his heirs,—All those pieces or parcels of land described in the second schedule hereunder written; together, &c., and all the estate, &c.; to have and to hold the said land and hereditaments, and all and singular other the premises thereinbefore expressed to be thereby granted, released, and assigned, with the appurtenances, unto the said purchaser and his heirs, to the use of the said purchaser his heirs and assigns for ever. Covenants by said vendor for good right to convey, for freedom from incumbrances, for further assurance, for production of deeds in first schedule.

The First Schedule.

1819—August 31.—Grant to D'Arcy Wentworth of 31 acres, district of Parramatta. Registered in Colonial Secretary's Office, page 58, No. 7 Register.

1861—August 3.—The hereinbefore-recited indenture of this date. Register No. 730, book 80.

The Second Schedule.

All that piece or parcel of land situate, lying, and being in the town of Parramatta, parish of Saint John, county of Cumberland, in the said Colony: Commencing at the south-east corner of the Wentworth Estate; and bounded on the east by the Harris Estate bearing north 516 feet; on the north by lot 50 bearing westerly 334 feet; on the west by Wentworth-street bearing southerly 494 feet; on the south by the Harris Estate bearing easterly 250 feet, to the point of commencement, containing 3 acres 33 perches, being lots 51 to 55 inclusive of section 2 of the Wentworth Estate, Parramatta, and part of the 31 acres granted to D'Arcy Wentworth on the 31st August, 1819. Also, all that piece or parcel of land situated in the town, parish, county, and Colony aforesaid: Commencing at the south-east angle of the land in Wentworth-street, and bounded on the west by the said Wentworth-street, bearing southerly 150 feet; on the south by lot 50, bearing easterly 358 feet 6 inches; on the east by the Harris Estate, bearing north 155 feet; and on the north by lot 47, and by part of Wentworth-street, bearing westerly 397 feet to the point of commencement, containing 1 acre, 1 rood, and 9 perches, and being lots 48 and 49 of section 2 of the Wentworth Estate, Parramatta, and part of the 31 acres granted to D'Arcy Wentworth on the 31st day of August, 1819.

Duly executed and attested. Receipt for £90 5s. signed and witnessed. Registered No. 410, book 164. 1879, March 5th (not given up). By indenture of mortgage of this date, made between said John Taylor, therein called mortgagor, of the one part, and Richard Rouse Terry, therein called mortgagee, of the other part, it was witnessed that in consideration of £1,600 paid, &c., the receipt, &c., he, the said John Taylor, did thereby covenant with the said mortgagee that he, the said mortgagor, his heirs, executors, or administrators, would pay to the said mortgagee, his executors, administrators, or assigns, the sum

sum of £1,600, on the 5th March, 1882, with interest at the rate of £3 per centum per annum, by equal quarterly payments, without any deduction, the first quarterly payment to be made on the 5th day of June then next. And it was further witnessed that for the consideration aforesaid, he, the said mortgagor, did thereby grant, bargain, sell, alien, release, and confirm unto the said mortgagee and his heirs, all and singular the lands and hereditaments more particularly described in the schedule hereto, together, &c., and all the estate, &c. To hold the said premises unto and to the use of the said mortgagee, his heirs and assigns for ever. Proviso for redemption on payment of the said principal and interest moneys as therein set forth. Power of sale in case of default. Application of the purchase money. Receipt clause. Covenants by said mortgagor. For good right to convey. Further assurance. To insure in the sum of £1,000. Proviso, that if said John Taylor shall sell any of the land in Wentworth or Cowper Streets, and for such sums as they were valued for in the second schedule thereto, and upon payment to the said mortgagee of the several sums in part satisfaction of the money thereby secured, together with 1 per cent. upon the gross value of all such sales made aforesaid; the said mortgagee, his heirs and assigns, would thereafter at the request of the said mortgagor, his executors and administrators, discharge the said lands and hereditaments so sold from the security of these presents, and would re-convey the same to the said mortgagor, his heirs, executors, administrators, or assigns, or as he or they shall direct.

The First Schedule.

(*Inter alia*) all those pieces or parcels of land more particularly described in before abstracted indentures.

The Second Schedule.

Lot 44, sec. 2—Wentworth Estate, valued at £750; lots 48 to 55, sec. 2—Wentworth Estate, valued at £606; lots 26, 28, 30, 32, and 38, Cowper-street, Parramatta, valued at £210.

Duly executed and attested; receipt for £1,600; signed and witnessed; registered No. 852, book 188.

1880, October 19 (not given up). By indenture of reconveyance of this date made between said R. R. Terry of the one part and said John Taylor, reciting lastly abstract indenture of mortgage, and reciting that the value of the land and hereditaments thereafter described was in the second schedule of lastly-recited indenture fixed at the sum of £200, and reciting desire of said J. Taylor to pay off the said sum of £200, and of having such reconveyance as is therein contained in accordance with the agreement in said recited indenture contained, it was witnessed that in consideration of the premises, and of £200 then paid, &c., the receipt, &c., he, the said R. R. Terry, did thereby grant, bargain, sell, alien, release, and confirm unto the said John Taylor, his heirs and assigns, all that piece or parcel of land described in before abstract indenture of 30th October, 1876, being lots 48 and 49, section 2, Wentworth Estate; also all that piece or parcel of land described in before abstract indenture of 7th August, 1873, being lot 50 of section 2 of the Wentworth Estate, together, &c., and all the estate, &c. To hold the said premises unto the said J. Taylor, his heirs and assigns, to the use of the said John Taylor, his heirs and assigns for ever. Discharged from the said mortgage debt of £200, and all interest for the same, and from all claims under the hereinbefore recited indenture. Covenant by said R. R. Terry, that he had done no act to incur.

Duly executed and attested receipt for £200; signed and witnessed; registered No. 499, book 209.

1880, December 5th (not given up). By indenture of further charge of this date (endorsed on aid mortgage deed) made between said John Taylor, therein called mortgager, and Richard Rouse Tesry, therein called mortgagee of the other part, reciting lastly abstracted indenture of reconveyance, and reciting that there was then due £1,400 on the said security, and reciting agreement to lend further sum of £600 on having the repayment thereof, with interest at the rate of £7 per cent. per annum, payable quarterly, set forth in the before-recited abstract of indenture of mortgage, secured in manner appearing, it was witnessed that in pursuance of such agreement, and in consideration of £600 paid, &c., the receipt, &c., he, the said mortgagor, did thereby covenant with the said mortgagee that he would, on the 5th March, 1882, pay to the said mortgagee the sum of £600, with interest at the rate of £7 per cent., as therein contained: And that premises should not be redeemed but upon payment of £1,400, as well as the said sum of £600: And that all powers, provisions, and trusts, and also the power of sale in the within indenture should extend and be applicable so as to be a further security for the said sum of £600 and interest as if it had formed part of the principal money secured by the within mortgage.

Duly executed and attested; receipt for consideration signed and witnessed; registered No. 724, book 211.

1880, December 18th (not given up). By indenture of reconveyance of this date, made between said R. R. Terry, of the one part, and the said John Taylor, of the other part, reciting before abstract indenture of mortgage, and reciting that the value of the lands and hereditaments thereafter described was in the second Schedule of the before-recited indenture fixed at £406, and reciting desire of said J. Taylor to pay off said sum, and of having such reconveyance as is thereafter contained, in accordance with the agreement contained in the before recited indenture of mortgage, it was witnessed that in consideration of the premises, and of £406 then paid, &c., the receipt, &c., he, the said R. R. Terry, did thereby grant, bargain, sell, alien, release, and confirm unto the said J. Taylor and his heirs, all that piece or parcel of land, being lots 51 to 55 inclusive of section 2, Wentworth Estate, more particularly described in before-recited abstract of indenture of 30th October, 1876. Together, &c. And all the estate, &c. To hold the said premises unto the said J. Taylor, his heirs and assigns, to the use of the said John Taylor, his heirs and assigns, for ever. Discharged from the said mortgage debt of £406 and all interest for the same, and from all claims under the hereinbefore recited indenture. Covenant by said R. R. Terry—That he had done no act to incur.

Duly executed and attested; receipt for £406, signed and witnessed; registered No. 767, book 211.

1885, June 5th. Statutory discharge of this date endorsed on before-recited abstract of mortgage. Registered No. 412; book 311.

1885, June 10th (not given up). By indenture of this date made between the said John Taylor of Parramatta, in the Colony of New South Wales, auctioneer (therein designated mortgagor), of the one part, and the Bank of New South Wales of the other part: Reciting that the said Bank of New South Wales had granted to the said mortgagor a cash credit for £2,700, secured by bond or obligation of even date therewith in a sufficient penal sum, and the said mortgagor agreed to execute the now abstracting presents as a security collateral with the said bond: It was witnessed that in pursuance of the said agreement, and in consideration of the premises and of five shillings paid by the said Bank of New South Wales to the said mortgagor, the receipt, &c., he, the said mortgagor, did thereby appoint and also grant and release unto the said Bank of New South Wales its successors and assigns all those the pieces or parcels of land, messuages, or dwelling-houses, hereditaments, and premises comprised in and conveyed by the deeds and documents particularly described in the Schedule thereto, together with the appurtenances belonging thereto. To hold the same unto and to the use of the said Bank of New South Wales its successors and assigns for ever upon trust for securing to the said Bank of New South Wales the payment on demand of all moneys which should be lent or advanced to the said mortgagor by the said Bank upon the security of the said bond, or which should become due or payable by him to the said Bank under or by virtue of the said bond with interest thereon at the rate expressed or referred to in the said bond. Covenants by the said mortgagor, that he would pay all moneys secured by the said bond; to make and execute further assurances, if required, by the said Bank; power of sale in case of default; receipt clause.

The Schedule contained.

1875, February 25th—Conveyance, F. Wentworth to J. Taylor, lots 46 and 47, section 2, Wentworth's subdivision. Registered No. 811, book 148.

1876, October 30th—Conveyance, F. Wentworth to J. Taylor. Lots 10, 11, 12, 13, section 2, of said subdivision. Registered No. 411, book 164.

1877, March 15th—Conveyance, F. Wentworth to J. Taylor. Lot 44, section 2, said subdivision. Registered No. 204, book 167.

1879, March 5th—Mortgage, J. Taylor to R. R. Terry. Part of lots 46 and 47, containing 2 roods  $\frac{1}{4}$  perch; lot 13 and part of 12, containing 2 roods 21 perches, and lot 44. Registered 852, book 188.

1880, December 5th—Further charge, J. Taylor to R. R. Terry, over said lots. Registered 724, book 211.

1885, June 6th—Discharge of mortgage and further charge. Registered 412, book 311. Duly executed and attested by said J. Taylor, and attested and schedule signed. Registered No. 911, book 313.

1888, January 17th (not given up). By Indenture of reconveyance of this date made between the said Bank of N. S. Wales of the one part, and said J. Taylor of the other part. It was witnessed that the said Bank of N. S. Wales acknowledged to have received from the within-named J. Taylor, full payment and satisfaction of all moneys secured by the within mortgage, dated 10th day of June, A.D. 1885, registered as No. 911, book 313, and doth hereby grant, release, and enfeoff all the lands, hereditaments, and premises comprised or referred to in the said mortgage, unto and to the use of the said J. Taylor, his heirs and assigns, discharge from the said mortgage and from all claims in respect thereof.

Duly executed by three directors of the said Bank, and attested and seal of said Bank attached thereto. Registered No. 428, book 379.

1888, January 17th (not given up). By indenture of mortgage of this date made between John Taylor, thereafter designated mortgagor, of the one part, and the Bank of New South Wales of the other part, reciting that said Bank of N. S. Wales had granted to the said mortgagor a cash credit for £2,200, secured by bond or obligation of even date therewith, in a sufficient penal sum, and the said mortgagor had agreed to execute those presents as a security collateral with the said bond: It was witnessed that in pursuance of the said agreement and in consideration of the premises and of 5s. paid by the said Bank to the said mortgagor (the receipt, &c.), he, the said mortgagor, did thereby appoint and also grant and release unto the said Bank of N. S. Wales, its successors and assigns, all those the pieces or parcels of land, messuages, or dwelling-houses, hereditaments and premises comprised in and conveyed by the deed and documents particularly described in the schedule thereto, together with the appurtenances belonging thereto: To hold the same unto, and to the use of the said Bank of N. S. Wales, its successors and assigns, for ever upon trust, for securing to the said Bank of N. S. Wales the payment on demand of all moneys which should be lent or advanced to the said mortgagor by the said Bank upon the security of the said bond or which should become due or payable by him to the said Bank under or by virtue of the said bond, with interest thereon at the rate expressed or referred to in the said bond. Covenants by said mortgagor: That he would pay all moneys secured by the said bond; to make and execute further assurances if required by the said Bank; power of sale in case of default; receipt clause.

The Schedule contained.

1875, February 25—Conveyance, F. Wentworth to J. Taylor, lots 46 and 47, sec. 2, of Wentworth's subdivision; reg. 811, book 148.

1876, October 30—Conveyance, F. Wentworth to J. Taylor, lots 10, 11, 12, 13, sec. 2 of said subdivision; reg. 411, book 164.

1877, March 15—Conveyance, F. Wentworth to J. Taylor, lot 44, sec. 2, said subdivision; reg. 204, book 167.

1879, March 5—Mortgage, J. Taylor to R. R. Terry, part of lots 46 and 47, containing 2 roods  $\frac{1}{4}$  perch, lot 13 and part of lot 12, containing 2 roods 21 perches, and lot 44; reg. 852, book 188.

1880, Dec. 5—Further charge, J. Taylor to R. R. Terry, over said lots; reg. 724, book 211.

1885, June 6—Discharge of mortgage and further charge; reg. 412, book 311.

1885, June 10—Mortgage, J. Taylor to Bank N. S. Wales, said land; reg. 911, book 313.

1888, January 17—Discharge of said mortgage; reg. 428, book 379; duly executed and attested, registered No. 429, book 379.

Certificate of Title—John Taylor, of Parramatta, auctioneer.

THAT piece of land situated at Parramatta, in the parish of Saint John and county of Cumberland, containing 1 rood 14 $\frac{3}{4}$  perches or thereabouts, commencing on the north-western side of Parkes-street, at its intersection with a lane 20 feet wide; and bounded thence on the south-east by Parkes-street bearing south-westerly 1 chain 96 links to other land of John Taylor; on the west by that land bearing northerly 3 chains

3 chains 78½ links to the lane 20 feet wide; and on the north-east by that lane bearing south-easterly 3 chains 54 links, to the point of commencement. Together with a right of way and passage at all times and for all purposes for the said John Taylor, his heirs, executors, administrators, or assigns, and his or their servant, workmen, tenants, agents, visitors, and all other persons having occasion to go into, upon, or over the same, and either on foot or with horses and vehicles to pass and repass, journey or travel into, upon, and over the road 50 feet wide and called Marion-street on a plan.—Dated the 25th day of May, 1856. Regd. vol. 789, folio 83.

Memorandum of mortgage, 17th January, 1888. John Taylor to the Bank of New South Wales. Land above referred to, No. 136529. To secure, £2,200.

Certificate of Title.—John Taylor, of Parramatta, auctioneer.

THAT piece of land situate at Parramatta, parish of Saint John, county of Cumberland, containing 1 acre 13½ perches or thereabouts. Commencing on the north-western side of Marion-street, at its intersection with the eastern boundary of J. Harris' 8 acres; and bounded thence on the south-east by that street bearing north-easterly 19 feet to lot 1; on the east by that lot and lots 8, 10, 12, 14, 16, 18, 20, 22, and 24 bearing northerly to the north-west corner of lot 24; again on the south-east by said lot 24 bearing north-easterly 178 feet to Cowper-street; on the north-east by that street bearing north-westerly about 29 feet to Parkes-street; on the north-west by that street bearing south-westerly 135 feet to W. C. Wentworth's 31 acres; and on the west by part of that land and part of J. Harris' 8 acres aforesaid, in an all bearing southerly 887 feet, to the point of commencement,—being lots 26, 28, 30, 32, and 33 on plan 255. Together with a right of way over Marion-street aforesaid.—Dated 4th March, 1879. Regd vol. 395, folio 222.

### Valuation.

Land Sale Rooms, 130, Pitt-street, Sydney, 18 May, 1885.

Valuation of the land and buildings, comprising the livery stables and sale-yards, owned by Mr. John Taylor, Parramatta.

THIS block of land is situated close to the Parramatta Railway Station, and has 365 feet frontage to the Avenue and 165 feet to Parkes-street.

The buildings comprise a brick cottage of four rooms, fronting Parkes-street, and a series of well-built commodious livery stables and carriage-houses of brick erection with loft over, also offices and harness-room. The whole fitted in the most convenient manner, with water and gas laid on, and the sale-yards are well designed.

The whole is leased to Messrs. Mackenzie & Lamb, and we were informed by Mr. Lamb the rent pay is £6 per week—£312 per annum.

We estimate that the land (1 acre 2 roods) with the buildings, and in connection with the business for which the whole has been specially designed, is worth at the present time £4,000.

MILLS & PILE.

### The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 8 October, 1888.

With reference to your personal inquiry as to the position of the matter of the purchase of land at Parramatta from Mr. John Taylor, I have the honor to state that in compliance with the suggestion of Mr. Deering, to whom the matter was referred for identification of the land purchased with the land to which Mr. Taylor had shown a title, I have written to Mr. Taylor's solicitor requesting him to furnish further particulars.

I have, &c.

JOHN WILLIAMS,  
Crown Solicitor,  
(Per C.S.P.)

### R. H. Levien, Esq., M.P., to The Crown Solicitor.

Taylor to The Queen.

Dear Sir,

George-street, Parramatta, 13 October, 1888.

The abstract and tracing forwarded by me to the Colonial Secretary in this matter I received from you yesterday afternoon.

I find the abstract of lots 48 to 55 of the subdivision (of which you have bought portions of lots 48 to 53) was not forwarded through some mistake on part of surveyor.

I forward abstract by this post corrected.

I also return tracing showing the different lots thereon, as marked out by surveyor, which will I think render Mr. Deering's identification of the land sold an easy matter.

The whole of the 1 rood 14¼ perches has been sold to the Crown, which bought all the land occupied by Mr. Taylor as his sale-yards.

By the corrected sketch I think you will find the apparent discrepancy in the boundaries of lot 44 explained. A portion of lot 13 appears to have got "mixed up" with lot 44, but as the vendor purchased both parcels from the original owner (Mr. Wentworth), and the Crown purchases from him, if such discrepancy does exist or has existed it will not affect title.

You will please observe that on the tracing now returned the parcels the Crown have purchased are coloured red.

I trust we can now push through this matter without any further delay.

Truly yours,  
R. H. LEVIEN,  
(Per T.W.R.)

Perhaps I should mention that the Crown purchased without reference to area the block of land and buildings thereon as fenced in or otherwise occupied by Mr. John Taylor as his sale-yards.

R.

R. H. Levien, Esq., M.P., to The Crown Solicitor.

John Taylor to The Queen.

Dear Sir,

George-street, Parramatta, 21 November, 1888.

This morning I have your letter of 19th instant herein with abstract returned for correction.

I have gone carefully over this matter with the surveyor this morning, and we cannot find any variance in the land brought under the Real Property Act, and the tracing shows the parcel set forth in page 23 of abstract.

I have requested the surveyor, Mr. E. J. Brown, to meet Mr. Deering to-morrow (Thursday) morning in Sydney, that the surveyors together may confer.

Apart from this matter, I have supplied you with the abstract of all the land not brought under the Real Property Act which passed by deed into Mr. John Taylor's possession.

Yours, &c.,

R. H. LEVIEN,

(Per T.W.R.)

R. H. Levien, Esq., M.P., to The Crown Solicitor.

John Taylor to The Queen.—Land, Parramatta.

Dear Sir,

George-street, Parramatta, 20 November, 1888.

I have not received the requisitions on title promised in your last letter.

I have the vendor daily about the progress of settlement, and also communications from the Department erecting the buildings on the land.

As you have taken possession, the vendor will unquestionably be looking for interest on the purchase money. Pray push this a little.

I am, &c.,

R. H. LEVIEN,

(Per T.W.R.)

R. H. Levien, Esq., M.P., to The Crown Solicitor.

John Taylor to The Queen.

Dear Sir,

George-street, Parramatta, 16 October, 1888.

Herewith I return you the abstract completed as regards the particulars of the 1 rood 4 perches land under the Real Property Act.

The certificate you will find lying in the office, where it has been since 14th December, 1881.

Until your application for a sketch, I understood that, in addition to the tracing I forwarded to the Colonial Secretary's Department in August, a complete description had been furnished when the land was sold.

I also forward, attached to abstract, surveyor's description of land 2 roods 24 perches and 1 acre 2 roods 5 perches respectively.

Yours, &c.,

R. H. LEVIEN,

(Per THOS. W. RAWLING).

R. H. Levien, Esq., M.P., to The Colonial Secretary.

John Taylor to The Crown.

Sir,

George-street, Parramatta, 29 August, 1888.

Herewith I forward the surveyor's tracing of the land recently purchased by the Government.

The area of each parcel is shown, and the parts under the Real Property Act and the old system duly distinguished and noted.

I have, &c.,

R. H. LEVIEN,

(Per THOS. W. RAWLING).

The Crown Solicitor.—C.W., P.U.S., B.C., 26 Sept., 1888.

The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 17 October, 1888.

I have the honor to forward herewith abstract of title and tracing of land at Parramatta purchased from Mr. John Taylor, also copies of two letters, dated respectively 13th and 16th idem, in relation thereto, and to request that these documents may be forwarded to the Metropolitan District Surveyor, in order that the land purchased may be identified with that comprised in the abstract of title, and, if it should be deemed desirable, that a survey of the land may be made.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor,

(Per D.D.)

The Metropolitan District Surveyor.—C.W., B.C., 19/10/88.

The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 22 August, 1888.

I have the honor to return herewith papers relating to the purchase of land at Parramatta in connection with the Government Asylum for the Infirm and Destitute, and also abstract of title therein, and to request that I may be informed (1) whether the land purchased is comprised in the abstracted deeds. (2) I should also be informed whether the whole of the land comprised in the certificate of title referred to in the abstract on p. 14 is purchased; if not, it will be necessary that I shall be supplied with a plan and description of so much as is purchased, in addition to which (3) I shall require a separate description of the land purchased and comprised in the abstracted deeds referred to in the first 13 pp. of the abstract.

I have, &c.,

JOHN WILLIAMS,  
Crown Solicitor.

Refer to Lands for report.—C.W., 28/8/88. Will the Metropolitan District Surveyor kindly furnish a report in this case. The Under Secretary for Lands.—C.W., B.C., 28 Aug., 1888, Mr. District Surveyor Deering.—R. H. DE LOW (*per J.D., pro U.S.*), 29/8/88.

The Under Secretary for Lands to The Principal Under Secretary.

Sir,

Department of Lands, Sydney, 15 January, 1889.

Referring to your communication of the 20th ultimo (88-13,973) covering a letter from the Crown Solicitor respecting the purchase of land at Parramatta from Mr. John Taylor, I have the honor to inform you that the papers (88-15,737 miscellaneous) were forwarded to the Works Department on the 22nd ultimo as to necessary resumption under the Public Acquisition Act.

I have, &c.,

JNO. WILSON,  
(For the Under Secretary).

Reports by Mr. Metropolitan District Surveyor Deering to The Under Secretary for Lands.

Purchase of land by Government at Parramatta for Asylum from Mr. John Taylor.—Three items of information required by Crown Solicitor in connection with conveyance.

No. 2,354, 31st August, 1888.

1. With reference to the first, viz., whether the land purchased is comprised in the abstracted deeds (*vide* abstract of title with these papers), there is no statement in these papers defining or describing what is the land purchased; and a tracing, referred to by Mr. Maxted and in the draft letter by Sir Henry Parkes, as showing the land purchased, is not now with these papers. \*See Appendix C.

2. With reference to the second, whether the whole of 1 rood 14½ perches referred to on page 14 of the abstract is purchased, Mr. Levien's letter of 13th August mentions this area as "forming part of the land sold to the Government."

3. The third item requires a separate description of the land purchased and comprised in the abstracted deeds referred to in the first thirteen pages of the abstract.

4. Although Mr. Levien's letter before-mentioned implies that a surveyor's description of the land purchased had been supplied, no such description is now with the papers; and the tracing forwarded with his letter of 29th August, purporting to show "the land recently purchased by the Government," does not compare with the particulars in the abstract.

5. It is therefore recommended that in order to satisfy the Crown Solicitor's requisition, Mr. Levien be requested to indicate—

- (a) What is the land purchased, lots, area, &c., and whether it is comprised in the abstracted deeds.
- (b) Is the whole of the 1r. 14½p. purchased; if not, to supply a plan and description of so much of it as is purchased.
- (c) And furnish a separate description of the land purchased and comprised in the first thirteen pages of the abstract.

If a plan or tracing can be furnished showing clearly the lots, &c., purchased, it will materially simplify the case.

JOHN W. DEERING,  
Metropolitan District Surveyor.

Submitted that this report be referred to the Department of the Colonial Secretary.—R.H.D., 11/9/88. Approved.—J.W.B., 20/9/88. The Principal Under Secretary.—R.H.D. (for the Under Secretary), B.C., Lands, 21/9/88. Returned.—C.S.O., 25/9/88. Inform Crown Solicitor.—C.W., 25/9/88.

Further report from the Metropolitan District Surveyor to the Under Secretary for Lands.

Purchase of land by Government at Parramatta for Asylum from Mr. John Taylor. Crown Solicitor desires the land purchased to be identified with that comprised in abstract of title.

No. 3,039, 26 October, 1888.

1. In my former report, No. 2,354, dated 31st August last, on Miscellaneous Lands 88-10,846 (not now herewith), I pointed out that there was no statement or tracing with those papers describing or defining the land purchased.

2. Mr. Levien's letter of 13th instant herewith states that the land the Crown has purchased is coloured red on tracing now herewith; from the abstract and surveyor's description attached thereto, it must, however, be inferred that such land is coloured and edged red; the tracing intimates that coloured tinted red as being under Torrens Act.

3. The abstract and descriptions now appear to comprise and agree with the land tinted and edged red on tracing, with the exception of the 1 rood 4 perches tinted red, which does not appear to be so comprised; p. 23 of the abstract, moreover, appears to be outside the present transaction, and may possibly have been added in mistake for one referring to the 1 rood 4 perches.

4. I think survey is not necessary for this transaction, and the papers might be returned to the Colonial Secretary's Department with this report for the information of the Crown Solicitor.

JOHN W. DEERING,  
Metropolitan and Coast District Surveyor.

May be forwarded to Colonial Secretary's Department.—R.F.D. Submitted, 5/11/88  
G.F., 7/11/88. Approved.—J.W.B., 8/11/88. The Principal Under Secretary.—R.H.D., for the  
U.S., Lands, B.C., 8/11/88. Other papers with Crown Solicitor. The Crown Solicitor.—C.W., P.U.S.,  
B.C., 19/11/88.

R. H. Levien, Esq., M.P., to The Colonial Secretary.

Purchase of Land from Mr. J. Taylor, Parramatta.

Sir,

George-street, Parramatta, 13 August, 1888.

With reference to the letter of the Under Secretary apprising Mr. John Taylor of the purchase by the Government of his land approximate to the Railway Station, Parramatta, I herewith transmit for your inspection,—

Abstract of his title to lots 10 to 13, 44, 46 and 47, of the Wentworth Estate, particulars for transfer of 1 rood 14 $\frac{1}{4}$  perches, now under Real Property Act, and forming part of the land sold to the Government.

I understand you are in possession of a surveyor's description of the land purchased.

I shall be glad to hear from you as to the speedy completion of this business.

I have, &c.,

R. H. LEVIEN,  
(Per THOMAS W. RAWLING.)

The Crown Solicitor.—C.W., B.C., 15/8/88.

The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 27 November, 1888.

I have the honor to return herewith the papers relating to the purchase from Mr. John Taylor, of land at Parramatta, which were left with me this morning by a clerk from your Department, with a verbal request, as I understood it, that I would indorse upon them a memo. as to whether I thought the title shown was such as to warrant an advance on account of the purchase money being made to Mr. Taylor.

As the memo. of Mr. Wm. Freeman's for the Metropolitan District Surveyor, of date 26th instant, is to the effect that the abstract now comprises the 1 rood 4 perches previously omitted, I think Mr. Taylor does show a satisfactory title to all the land agreed to be sold, excepting the small portion of Fitzwilliam-street, which, as suggested, will have to be resumed under the Land for Public Purposes Acquisition Act, and as to this I may state the fee-simple is no doubt vested in some one other than Mr. Taylor, but that, as the public has a general right of way over it, its value to the owner of the fee-simple cannot be said to be of any great amount.

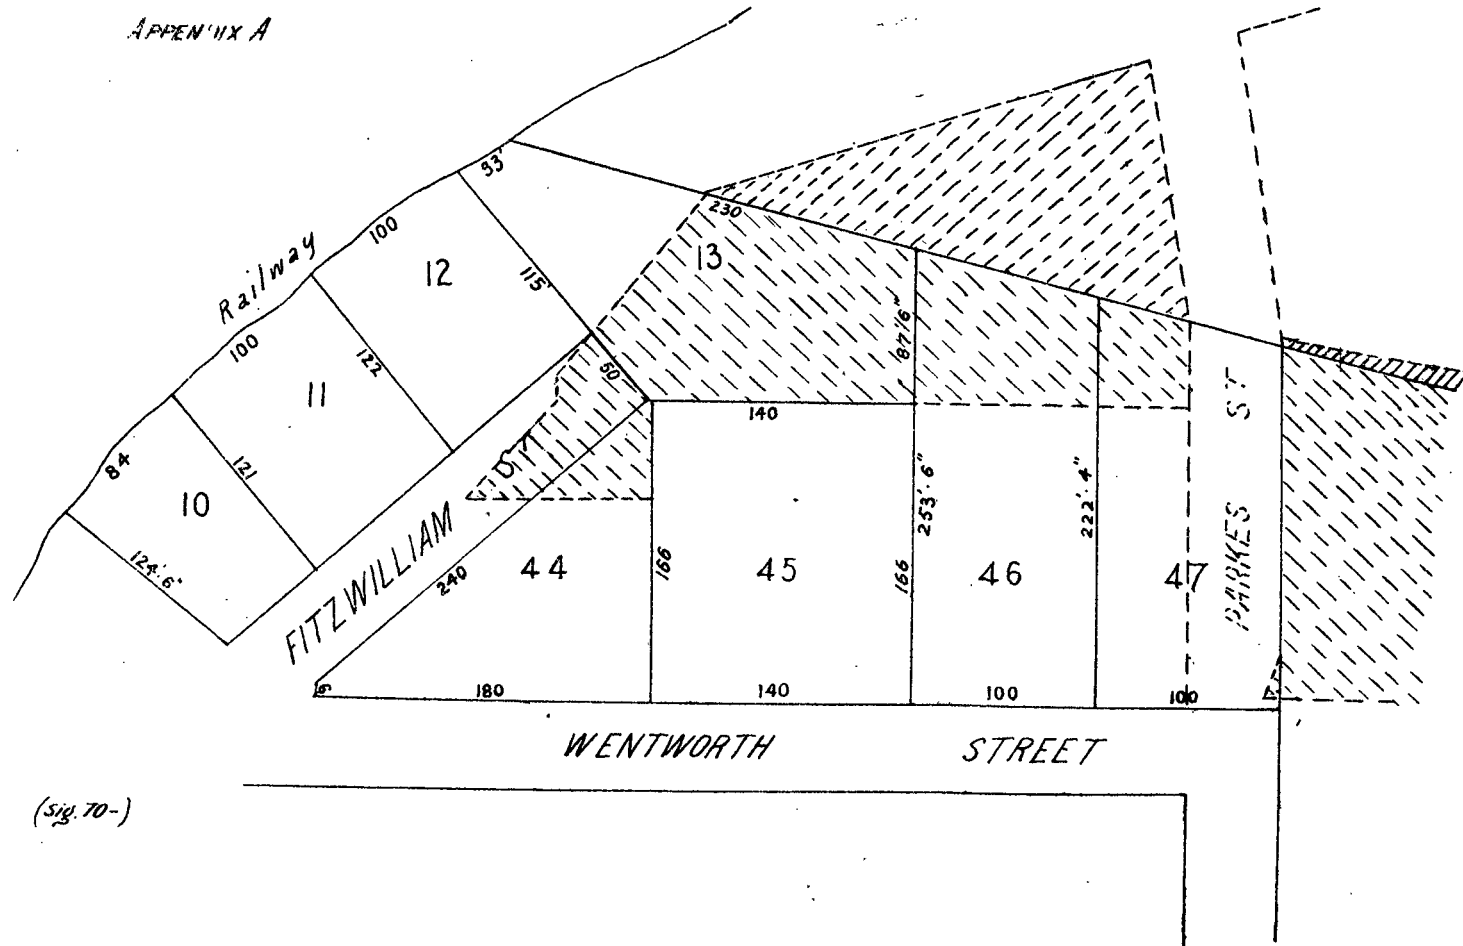

I have, &c.,

JOHN WILLIAMS,  
Crown Solicitor.

Submitted.—28/11/88. The portion of land herein referred to may be resumed as recommended by the Crown Solicitor.—C.W., 5/12/88. Approved.—H.P., 5/12/88. Will the Under Secretary for Lands be kind enough to take the necessary steps to carry out the Colonial Secretary's decision.—C.W., B.C., 5/12/88. Immediate.—J. W. O'DWYER. Resumptions under the Lands for Public Purposes Acquisition Act are effected by the Works Department, to which these papers may perhaps be forwarded.—R.H.D., 18/12/88. S.F.—20/12/88. Approved.—J.W.B., 21/12/88. The Under Secretary for Public Works.—R.H.D., for the Under Secretary, B.C., Lands, 21/12/88. Make short statement.—D.C.McL., 22/12/88. Very urgent.

1889.

## NEW SOUTH WALES.

## COAST HOSPITAL, LITTLE BAY.

(REPORT ON, FOR 1888.)

Presented to Parliament by Command.

## The Medical Adviser to the Government to The Colonial Secretary.

Sir,

Health Department, New South Wales, 20 May, 1889.

I do myself the honor to submit the Annual Report on the working of the Coast Hospital for the year 1888, with an appendix containing the usual returns.

The reports for previous years have set forth how this institution, designed as a quarantine station and sanatorium, was, when no longer needed for its original purpose, used as a Convalescent Hospital for patients from the Sydney and Prince Alfred Hospitals, and has gradually grown into a general hospital to supplement the work and supply the shortcomings of the other metropolitan hospitals. The need for accommodation for acute cases has rendered it impossible, during the year 1888, to admit convalescents, and the Carrington and Walker Convalescent Hospitals are now more than ever necessary to meet the need for accommodation for this class, and to relieve the wards of the Metropolitan Hospitals.

The Hospital is now—(1st) a fever hospital; (2nd) a hospital for infectious diseases, scarlet fever, measles, diphtheria, &c.; (3rd) an erysipelas hospital; (4th) a general hospital for medical and surgical cases; (5th) a lock hospital for males; and (6th) a home for lepers. Every class of disease is admitted and treated, except small-pox, insanity, and lock cases in female patients.

From Table I it appears that the total number of patients admitted has been 1,694, which, with 23 remaining from last year, make a total of 1,717 under treatment. Of these 1,203 were discharged recovered, 311 improved, and 41 unchanged; 46 were transferred to Government Asylums for the Infirm and Destitute, 8 to general Hospitals to undergo operations or for other causes, and 9 to Hospitals for the Insane; whilst 95 died and 4 remained on the books at the date of this return. The average stay in Hospital was 40·23 days, and the average daily number under treatment 197·12.

TABLE I.—General Statement, showing total admissions, transfers, discharges, deaths, average stay, and average daily number in Hospital, 1888; mortality, per cent., 5·55.

Remaining in on date of last Return.		Admitted.			Discharged.			Transferred.			Died.*		Remaining in on date of Return.		Average stay in days.	Average daily number.†

11	12	1,214	480	1,717	1,203	311	41	46	8	9	27	68	3	1	40·23	197·12
		1,694														

\* The deaths of persons dying in 1889 who were admitted in 1888 are included.

† This number includes lepers.

Although convalescent cases have not been admitted, and the average number in Hospital has been 197, as against 198 last year, the proportion of patients discharged recovered to those discharged improved and unchanged has increased by nearly 100 per cent. Only 95 of the cases treated have died, as compared with 157 in the previous year, and the average stay in Hospital has been reduced by two days.

Table II shows the channels through which the patients admitted during the year reached the Hospital.

It will be seen that 316 cases were admitted by orders from the Medical Adviser's Office; 1,317 from the Hospital Admission Depot, the organization and administration of which was described in the report of the Hospital for 1887; 24 from the Metropolitan Hospitals; and 6 from the Benevolent Asylum; whilst 31 patients applied for admission direct and were received. Only 30 patients were received from

the Metropolitan Hospitals and the Benevolent Asylums, as compared with 243 last year. This marked difference is due to the exclusion of convalescent cases, as already mentioned. The 30 cases admitted were nearly all suffering from infectious fever or erysipelas, for which the other Hospitals do not provide special accommodation.

TABLE II.—Showing the channels through which all patients admitted during the year 1888 reached the Hospital, and the number received through each channel.

316	1,317	8	1	2	13	6	31	1,694

Tables III, IV, and V, deal with the statistics of typhoid fever during the year. In Table III typhoid fever cases are shown distributed under age and sex. The total number was 241, and the mortality 6.20 per cent., or, after deducting 1 death, which occurred during the first 48 hours, 5.81 per cent. only. The average stay in Hospital was 42.61 days. It will be seen that, compared with the year 1887, the number of typhoid fever cases admitted was somewhat less—241 as against 286,—and that the mortality decreased by 50 per cent., being 6.20 over all cases as against 12.58 in 1887. This marked decrease in the death rate has not been arrived at by including cases of febricula in the returns, as these, numbering 60, or equal to one-quarter of the number of cases of typhoid fever, are excluded and specially classified, as will be seen on reference to table, Appendix A. It would appear to be due, to some extent, to the patients being sent for Hospital treatment at an earlier stage of the malady, and also to some judicious exclusion of certain cases in too precarious a condition to bear the long journey to the Coast Hospital; but the main reason for the highly satisfactory result shown in this year's statistics is, I believe, the special care bestowed and skill displayed in dealing with these cases by the medical officers of the Hospital.

From Table V it appears that in the majority of the cases—174 out of the total—admission has been sought by medical practitioners or by the friends of patients, on the certificates of medical practitioners, through the Medical Adviser's Office, and that 56 presented themselves at the Hospital Admission Depot.

By Table V it is shown that patients have been received from nearly all parts of the Metropolitan and Suburban area, and from Prospect, Potts' Hill, and Ryde. This table shows a decided increase in the number of cases admitted from the North Shore (St. Leonards, North Willoughby, Gordon, &c.), and points to the necessity for some special provision for typhoid fever patients on that side of the harbour, as the journey from this district to the Sydney hospitals, and especially to the Coast Hospital, is long and wearisome, and militates against the recovery of the patients.

TABLE III.—Showing the total acute cases of Typhoid Fever distributed under sex and age, and the deaths at each age, which were admitted during 1888:—

(Average stay in Hospital, 42.61 days; mortality, per cent. 6.20. Mortality after deducting 1 death during the first 48 hours, 5.81 per cent.)

\* NOTE.—Two of these patients, who were admitted in 1888, died during 1889.

Table VI deals with infectious diseases, and shows the forms of disease, the number of cases of each disease admitted, and the localities from which they were received. It will be seen that erysipelas is included in this list for the first time, the number of patients treated being 45. The other infectious diseases treated were—Scarlet fever, 52; measles, 33; diphtheria, 1; and chicken-pox, 3. No cases of death occurred among the total of 134 cases treated, although the scarlet fever was of a severe type, and was frequently followed by nephritis and other sequelæ. In the absence of any law to isolate and deal with infectious diseases, the increasing tendency on the part of the public to seek isolation and special treatment should undoubtedly be encouraged as tending towards the relief of suffering and the saving of life; but by the increasing number of patients the present resources of the Coast Hospital are taxed to the utmost, and it will be impossible to continue to receive the increasing numbers without some special provision is made for this class of diseases. Plans for a complete hospital for infectious diseases, to contain fifty beds, are now being drawn by the Colonial Architect, on sketch plans prepared by Dr. Ashburton Thompson, and it is hoped that the necessary Parliamentary appropriations may be soon made for this important and necessary work. On its completion the pavilion now used for these cases will serve for the accommodation of ordinary hospital cases. The increasing number of cases of infectious fevers is shown by the following figures:—

	1884.	1885.	1886.	1887.	1888.
Cases admitted ... ..	12	17	50	63	89*

\* exclusive of erysipelas.

Table VII shows the age and sex, together with other particulars of the General Hospital cases, under treatment during the year. The total number was 1,472 cases, and the deaths were 80, giving a percentage of 5·43. Excluding 8 deaths, which occurred within 48 hours of admission, the death rate was 4·89 per cent. The death rate for these cases is 3 per cent. less than during the year 1887.

TABLE VII.—Showing the general cases distributed under sex and age, and the deaths at each age, during the year 1888.

(Average stay in Hospital in days, 39·84. Mortality, 5·43 per cent. Mortality, after deducting 8 deaths\* during the first 48 hours, 4·89 per cent.)

\* 2 deaths from phthisis, 1 from acute rheumatism, and 1 from asthenia after phagedena, during the first 48 hours after admission; and 1 from purulent peritonitis, 1 from mitral valve disease, 1 from aneurism, and 1 from congenital debility, during the first 24 hours.

† The deaths of persons dying during 1889, but who were admitted during 1888, and of those remaining in from 1887, are included.

Table VIII deals with the lepers, and shows an increase in 4 during the year. There were no deaths or discharges, and the number at the close of the year was 11.

The quarters set apart for these patients are now overcrowded and inadequate, and the site of them in the highest degree objectionable, being close to the main water supply of the Institution.

The Medical Superintendent has repeatedly submitted for consideration his objections to the site and to the general arrangements for these unfortunate patients, and it is clearly time that some change in the following directions was made:—

1. The provision of larger rooms which will admit of some classification on a better chosen site.
2. The passing of an Act for the compulsory detention and treatment of this class.

TABLE VIII.—Showing the number of Lepers who remained in Hospital at the end of 1887, who were admitted and discharged, and who died in 1888.

Number remaining in on 31st December, 1887.	Admitted.	Discharged.	Died.	Number remaining in on 31st December, 1888.
7	4	.....	.....	11

The financial returns (Tables IX and X) show that the cost of treatment, including the expense of ambulance and repairs, was 2s. 7d. per head per diem, or £47 10s. 2d. per head per annum, as against 2s. 7½d. and £47 18s. 5d. for the year 1887. As the ambulances are not only used for conveying patients to the Coast Hospital, but also for the services of the Health Department generally, and for the occasional removal of Government patients to the other metropolitan hospitals, it is necessary for the purposes of comparison with other institutions that the sum paid for maintaining the ambulance service, £1,152 1s. 3d., or £5 17s. per head per annum, should be deducted, thereby reducing the cost to £41 13s. 2d. per head per annum, or 2s. 3½d. per diem.

It is satisfactory to note that since the buildings at Little Bay were opened as a general hospital in January, 1884, the annual cost of maintaining patients there has been decreased from £64 1s. 4½d. in the first year to £47 10s. 2d. in the year now under review. It is not expected that the latter rate can be further reduced consistently with the efficient working of the institution.

TABLE IX.—Statement of the Total Expenditure of the Coast Hospital for the Year 1888, showing how the amounts have been paid.

Expenditure.		How paid.

In the report on this Hospital for the year 1886-7, my predecessor called attention to the fact that, being built as a sanatorium, it was without adequate closet and bath-room accommodation, and that the absence of a proper drainage scheme was a serious deficiency. Detailed plans and sketches for the necessary alterations and additions were prepared, and an estimate showed the probable expenditure to be £2,300. The necessity of larger and better store-rooms, of better accommodation for the medical officers, of rooms for the isolation of patients suffering from the delirium of fever or alcohol, or from temporary insanity, and of a hall for church services, has been also pointed out; but these works have not yet advanced beyond the stage of plans and estimates, and ministerial authority for the much-needed improvements is still wanting. For the sum of £6,000 all the more immediately necessary works could be carried out, and the Hospital thus altered be able to render more efficient and useful public service.

The position of Assistant Medical Officer, to which Dr. Young was appointed in March, 1887, was vacated by him on June 4th, and held by Dr. C. J. Weekes from that date to October 11th, when he was succeeded by Dr. R. U. Russell, who still occupies the position.

Miss Dickson resigned her position as Matron in January, and Mrs. Mackay was appointed in her place, and held office at the close of the year.

Dr. Peirce, who has prepared the statistics for the year, and to whose zeal, energy, and skill, the successful results of the year are mainly due, continues to hold the office of Medical Superintendent.

I have, &c.,

F. NORTON MANNING.

## APPENDIX C.

## PATIENTS' DIET SCALES:—

*Diet No. 1.*

Extra— { Milk (at discretion).  
Beef tea.  
Custard.

*Diet No. 2.*

Bread, 8 oz.  
Butter,  $\frac{1}{2}$  oz.  
Tea,  $\frac{1}{4}$  oz.  
Sugar, 3 oz.

And extras.

*Diet No. 3.*

Bread, 1 lb.  
Butter, 1 oz.  
Broth, 1 pt.  
Potatoes,  $\frac{1}{2}$  lb.  
Pudding,  $\frac{1}{2}$  lb. twice a week.  
Tea,  $\frac{1}{2}$  oz.  
Milk,  $\frac{1}{2}$  gill (condensed).  
Sugar, 1 oz.

No extras.

*Diet No. 4.*

Bread, 1 lb.  
Butter, 1 oz.  
Meat, 1 lb. (uncooked, bone included).  
Potatoes,  $\frac{1}{2}$  lb.  
Vegetables,  $\frac{1}{2}$  lb. twice a week.  
Tea,  $\frac{1}{2}$  oz.  
Milk,  $\frac{1}{2}$  gill (condensed).  
Sugar, 1 oz.  
Oatmeal, 2 oz.  
Treacle,  $1\frac{1}{2}$  oz.  
Pudding,  $\frac{1}{2}$  lb. twice a week.  
Milk, fresh, 1 gill.  
No extras.

## MATERIAL to be used for preparing some items of the different diets:—

*Diet No. 1.*

Beef tea—1 shin to 12 pints of beef tea.  
Beef tea—(extra strong) 1 lb. beef to 1 pt.  
Custard— $1\frac{1}{2}$  egg,  $\frac{1}{2}$  pt. milk, 1 oz. sugar.

*Diet No. 2.*

Extras—Custard as above.  
Beef tea as above.  
Sago, } 2 oz.; milk (condensed), 1 gill;  
Arrowroot, } sugar,  $\frac{1}{2}$  oz.  
Eggs—raw, boiled, or poached.  
Milk.  
Bread and milk—milk, 1 gill.  
Rice, boiled, 2 oz.; milk (condensed), 1 gill.  
Chicken—according to size—1 full-sized fowl for 4.  
Chicken broth—1 to 3 pts.  
Cocos, 1 oz.  
Mince  
Chops }  $\frac{1}{2}$  lb. uncooked meat with bone.  
Boiled mutton }  
Rice pudding { 2 oz. rice, 1 egg, 1 gill (condensed)  
milk,  $\frac{1}{2}$  oz. sugar.

*Diet No. 3.*

Broth { 4 oz. mutton; vegetables, 2 oz.; barley, as  
required.  
Pudding { Rice, 2 oz.; bread; milk (condensed)  
1 gill; 1 egg;  $\frac{1}{2}$  oz. sugar.  
When bread pudding,  $\frac{1}{2}$  oz. currants extra.

*Diet No. 4.*

Pudding—similar to No. 3 diet.

1889.

## NEW SOUTH WALES.

## INSPECTOR-GENERAL OF THE INSANE.

(REPORT FOR 1888.)

Presented to Parliament, pursuant to Act 42 Vic. No. 7, sec. 73.

## The Inspector-General of the Insane to The Colonial Secretary.

Sir,

Lunacy Department, Inspector-General's Office, Gladesville, 22 March, 1889.

I do myself the honor to forward for your information, in accordance with the 73rd section of the Lunacy Act of 1878, a report on the Hospitals and the Institutions for the Insane for the year 1888.

I have, &amp;c.,

F. NORTON MANNING,  
Inspector-General.

On December 31st, 1888, the number of insane persons in New South Wales under official registration was 2,898, and their distribution was as follows:—

	Number on Register.			Number on Leave.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville.....	492	280	772	16	22	38
Do Parramatta (Free) .....	651	338	989	3	3	6
Do do (Criminal) .....	54	9	63	.....	.....	.....
Do Callan Park .....	427	308	730	6	6	12
Do Newcastle .....	133	108	241	1	.....	1
Licensed House for the Insane, Cook's River.....	19	83	102	4	1	5
Do do Picton .....	.....	1	1	.....	.....	.....
Total.....	1,776	1,122	2,898	30	32	62

The number on the register at the close of 1887 was 2,821. The increase during the year was therefore 76, made up of 41 males and 35 females. This increase is below the average, which for the five years ending December, 1888, was 99 per annum.

From the returns from the Institutions it appears that there was an increase of 62 at Callan Park, 20 at Parramatta (Free), 1 at Newcastle, 1 at Parramatta (Criminal), and a decrease of 6 at Gladesville, and 2 at Cook's River. A house at Picton was licensed for a single patient admitted during the year.

The population of the Colony on 31st December, 1888, was 1,085,356, and the proportion of insane to population was therefore 1 in 374, or 2.67 per thousand. The ratio of insanity was less among women than men, being 1 in 433 of the former, and 1 in 337 of the latter. Although the insane population of the Colony is rapidly increasing, and has indeed doubled since 1872, there has been no increase during the last 16 years in the proportion of insane persons to the general population. From 1872 to 1881 there was a slight increase, but since that time the proportion has fallen, and is now exactly what it was in the years 1871 and 1872.

88—A

The

[1,353 copies—Approximate Cost of Printing (labour and material), £71 18s. 0d.]

The proportion of insane to population in New South Wales for the last twenty years, and also the proportion in England for the same period, is shown in the following return:—

Year.	Population of New South Wales.	Total Number of Insane in New South Wales on 31 Dec.	Proportion of Insane to Population in New South Wales.	Proportion of Insane to Population in England.
			Per M.	Per M.
1869	485,356	1,226	1 in 395 or 2·53	1 in 403 or 2·48
1870	502,861	1,280	1 in 389 or 2·57	1 in 400 or 2·50
1871	519,182	1,337	1 in 374 or 2·67	1 in 394 or 2·53
1872	539,190	1,440	1 in 374 or 2·67	1 in 387 or 2·58
1873	560,275	1,526	1 in 367 or 2·72	1 in 381 or 2·62
1874	584,278	1,588	1 in 367 or 2·72	1 in 375 or 2·66
1875	606,652	1,697	1 in 357 or 2·80	1 in 373 or 2·68
1876	629,776	1,740	1 in 361 or 2·77	1 in 368 or 2·71
1877	662,212	1,829	1 in 362 or 2·76	1 in 363 or 2·75
1878	693,743	1,916	1 in 362 or 2·76	1 in 360 or 2·77
1879	734,282	2,011	1 in 365 or 2·74	1 in 363 or 2·75
1880	770,524	2,000	1 in 367 or 2·72	1 in 353 or 2·83
1881	781,265	2,218	1 in 352 or 2·84	1 in 352 or 2·84
1882	817,468	2,307	1 in 354 or 2·82	1 in 348 or 2·87
1883	869,310	2,403	1 in 361 or 2·77	1 in 345 or 2·89
1884	921,129	2,524	1 in 364 or 2·74	1 in 345 or 2·89
1885	980,573	2,643	1 in 374 or 2·67	1 in 348 or 2·87
1886	1,030,762	2,717	1 in 379 or 2·63	1 in 349 or 2·86
1887	1,042,919	2,821	1 in 369 or 2·71	1 in 346 or 2·88
1888	1,085,356	2,898	1 in 374 or 2·67	

The following tables show the number of admissions, discharges, and deaths; the proportion of recoveries; the rate of mortality; the causes of insanity in those admitted; those who recovered and those who died; the causes of death; the length of residence of those who recovered and those who died; and also the ages, condition as to marriage, religious profession, native countries, and previous occupations of those admitted, and of all under care, and the form of mental disorder in those admitted, those who recovered, and those who died.

TABLE 1.

SHOWING the admissions, readmissions, discharges, and deaths in the Hospitals and Licensed Houses for the Insane during the year 1888.

	Male.	Female.	Total.
In Hospital on 31st December, 1887	1,735	1,086	2,821
Admitted for the first time during the year	333	196	529
Readmitted during the year	32	27	59

#### Admissions.

The number of patients admitted to all the Institutions during the year, was 588—365 males, and 223 females, and of these 529 were admitted for the first time, and 59 had been at some former period under treatment.

The number of admissions is larger than during any former year, and is in the proportion of 1 to every 1,845 of the general population, in other words, 1 person out of every 1,845 of the population of the Colony, became so insane during the year as to require Hospital care and treatment.

The papers on which patients were admitted have received close scrutiny, and 28 of the medical certificates were found defective. Of these 16 were amended under the 13th section of the Lunacy Act, and 10 were rejected and fresh certificates obtained. In two cases the medical practitioners declined to amend their certificates, and others were obtained. A number of other papers have been amended in minor particulars.

All the patients admitted were found to be insane, so that the diagnosis of the medical practitioners certifying was in all cases correct, though the reasons set forth in the certificates as leading to the diagnosis were not infrequently feeble and inadequate, or were informally stated. A closer study of the medical certificates on the part of medical practitioners, and more attention to the details necessary to render them valid and satisfactory, would save much trouble to patients and their friends, as well as to the officers of the Lunacy Department.

#### Discharges.

The number of patients discharged during the year as recovered, was 275, and as relieved 31. The former giving a percentage of 46·76, and the latter one of 5·27 on the admissions and readmissions.

The recovery rate was greater than the average for the last 10 years—42·23. Omitting the figures from the Hospital at Newcastle, which is devoted to idiotic and imbecile patients, the recovery rate for the year was 47·98.

The percentage at Cook's River, was 68·18; at Gladesville, 60·37; at Callan Park, 46·57; at Parramatta Free, 33·33, and at Parramatta Criminal, 12·50.

#### Transfers.

During the year 51 patients were transferred from one Institution to another, under the provisions of Section 80 of the Lunacy Act. These transfers were made at the wish of friends; to afford the patients change of air and surroundings; to relieve overcrowded wards; to improve the classification, or for other departmental reasons.

#### Escapes.

*Escapes.*

The number of patients who escaped and were not retaken during the period allowed by the statute, was 5.

*Deaths.*

Of the 200 patients who died, 132 were males and 68 females, and the death-rate calculated on the average number resident, was 7·10, a trifle over the average for the 10 years, from 1879 to 1888.

The percentage at the different Institutions was as follows:—Newcastle 10·46; Callan Park 8·26; Gladesville, 7·55; Cook's River, 5·94; Parramatta Free, 5·45; and Parramatta Criminal, 5·08. As in former years, excluding the Institution devoted to weak-minded patients, the death-rate has been highest in the Institutions where the proportion of acute cases was largest. The causes of death are shown in Table 4. More than one half were due to cerebral disease, 3 deaths were due to typhoid fever, and 1 to measles.

*Leave of Absence.*

The system of granting leave of absence has been continued during the year, and the particulars are shown in the accompanying return:—

## RETURN showing the numbers allowed leave of absence from each Institution:—

Institution.	Remaining on leave, 31st Dec., 1887.			Granted leave during 1888.			Discharged recovered.			Returned to Hospital.			Died whilst on leave.			Remaining on leave, 31st Dec., 1888.		
	M.	F.	Total	M.	F.	Total	M.	F.	Total	M.	F.	Total	M.	F.	Total	M.	F.	Total

Do Parramatta..	4	1	5	4	10	14	4	4	8	1	4	5	...	...	...	3	3	6
Do Callan Park.	7	5	12	9	10	19	5	6	11	5	2	7	...	1	1	6	6	12
Do Newcastle...	...	1	1	2	...	2	1	...	1	...	1	1	...	...	...	1	...	1
Licensed House, Cook's River.....	4	4	8	4	3	7	3	4	7	2	1	3	...	1	1	3	1	4
Total .....	25	26	51	49	53	96	20	24	44	19	19	38	...	4	4	29	32	61

At the beginning of the year 51 patients were on leave. Leave was granted for various periods to 96, and 61 remained absent at its close. As a means of testing the self-control of patients, as affording a change preliminary to discharge or as an adjunct to recovery, and as enabling chronic cases to spend a few days or weeks with friends, the system has been found most useful, and the results most satisfactory and encouraging.

*Total number under care.*

The total number of patients under care during the year has been 3,460 (2,137 males and 1,323 females), a larger number than during any former year. The average daily number resident has been 2,815, or 93 more than during 1887.

The number on the registers of the Government institutions at the close of the year was 2,795 (1,757 males and 1,038 females); and at the licensed houses at Cook's River and Picton, 103 (19 males and 84 females), making a total of 2,898.

*Age and Nationality of the Patients.*

In table 6 the ages of the patients under care are shown. It will be seen from this that insanity is a disease mainly of middle life, the large majority of the cases being between 20 and 60 years of age. Only 5·27 per cent. of the patients under care were under 20 years of age, and 13·73 per cent. over 60. The percentage of patients over 60 is, however, decidedly greater now than it was 10 years ago, owing to the chronic cases growing old in the hospitals. The following figures show the percentages of the ages of patients under care during 1888:—

## RETURN showing the percentages of the ages of patients under care during the year 1888.

Ages.	Percentage.	Ages.	Percentage.
1 to 5 years .....	0·09	40 to 50 years.....	24·88
5 to 10 „ .....	0·67	50 to 60 „ .....	18·53
10 to 15 „ .....	1·39	60 to 70 „ .....	9·02
15 to 20 „ .....	3·12	70 to 80 „ .....	4·02
20 to 30 „ .....	15·14	80 to 90 „ .....	0·69
30 to 40 „ .....	22·40		

The most noticeable fact in connection with the nationality of the patients under care, is the steady rise in the number and proportion of those born either in New South Wales or the neighbouring Colonies in the ten years, from 1879 to 1888. The number of those of Australian nationality rose from 634 to 1,143, or nearly doubled; whilst those born in Great Britain and Ireland only increased from 1,575 to 1,946, or considerably less than 25 per cent.; and those of foreign nationality, including France, Germany, China, and other countries, from 260 to 371, or less than 50 per cent.

#### *Sudden Deaths and Accidents.*

No institution for the insane can expect an immunity from accident and sudden death. The nature of the malady from which the patients are suffering renders them specially liable to sudden death from epilepsy and brain disease, and accident from falls and other causes in epileptic and aged patients will occur despite all precautions and care. Five cases of sudden death occurred during the year—2 from epilepsy, 1 from hæmorrhage from the basilar artery, 1 from heart disease and embolism, and 1 from a blow in the pit of the stomach by a fellow patient. In this last case the Coroner's Jury returned a verdict of manslaughter, and the patient who struck the blow was transferred to the Hospital for the Criminal Insane to await trial.

There were 6 fractures and 1 dislocation from falls—2 of the former being of the neck of the thigh-bone in very aged persons; 6 fractures—1 of the thigh, 1 of the leg, and 4 of the ribs, occurred in quarrels with or interference by other patients resulting in falls; and in addition to these, there was 1 case of injury to the head, 1 burn (not severe), and 1 self-inflicted injury to the scrotum.

The accidents have, on the whole, neither been more numerous nor more severe than during former years, though the increased overcrowding of the wards has rendered quarrels between patients more liable to occur.

All accidents were reported as soon as they occurred, and inquiries were held, in all cases, either by the Medical Superintendents or myself.

There has been no case of suicide during the year.

#### *Changes among Staff.*

There have been no changes among the officers of the hospitals.

The changes among the attendants, nurses, and servants have been somewhat numerous, though less so than in former years. Of the total number, 4 attendants, 15 nurses, 2 artisans, and 10 servants, a total of 31 resigned; 13 attendants, 4 nurses, 1 artisan, and 6 servants, a total of 24, were dismissed; 1 attendant and 1 servant died; and 1 attendant retired under the provisions of the Civil Service Act. Of the dismissals, 5 (2 attendants, 1 nurse, and 2 servants) were for neglect of duty, 10 (5 attendants, 3 nurses, and 2 servants) for incompetence, 5 (3 attendants and 2 servants) for insubordination, 3 attendants for drunkenness, and 1 artisan for dishonesty.

The resignations were tendered for very various causes. In some cases the individuals found themselves unsuited for their special duties, and in others were unwilling to submit to the discipline necessary in large public institutions.

A considerable number of the nurses as usual left to be married.

No difficulty has been experienced in filling the vacancies caused by dismissal and resignation.

Both the deaths occurred at Gladesville, one was due to an operation necessary for the removal of cancer of the tongue; the sufferer being an old and valued servant of the Institution. The other death was due to typhoid fever, which there is reason to believe, was not contracted within the Hospital.

#### *Training of Attendants and Nurses.*

The importance of training the attendants and nurses for their special duties to which I alluded in my last report has received attention during the year, and Drs. Sinclair and Chisholm Ross have delivered courses of lectures, and given special instruction as to their duties to classes of nurses and attendants. At Dr. Sinclair's request, the written and *viva voce* examinations were conducted by myself, and I was not a little gratified to find to how marked an extent the nurses had profited by the instruction given them, and to realize how their usefulness was increased by the knowledge so gained.

I have lately been in communication with Dr. Mc'Laurin, the Medical Adviser to the Government, with a view of completing the system of training, which Drs. Sinclair and Ross have so happily initiated and are carrying out, by supplementing the special training for mental cases by practical instruction for some months in a General Hospital, and hope soon to receive the Colonial Secretary's authority to allow nurses selected from Gladesville to undergo further training at the Coast Hospital in the nursing of such maladies as are only occasionally seen in Hospitals for the Insane, but which the nurses employed there should be competent to deal with.

#### *Licensed House for Single Patient.*

The difficulty mentioned in my last report with regard to 2 patients being kept in an unlicensed house at Picton, has been met as regards one of them by the issue of a license under section 42 of the Lunacy Act for the reception of a single patient, whilst the special authority of the Supreme Court has been granted for the residence of the other in the house where she was placed by the Committee of her person and estate.

#### *Necessity for Additional Accommodation.*

The year commenced with 76 patients more than there was room for, and the need of additional accommodation was much felt as time went on, and the number of patients increased month by month. During the year a property adjoining the Hospital reserve at Gladesville was purchased, on which were a large house and a cottage, and these, after some alterations, afforded room for 44 patients, and relieved the overcrowding at Gladesville to a slight extent. Later in the year the buildings formerly occupied as a Protestant Orphanage at Parramatta were handed over to this department, and, as a temporary measure, were gazetted as a branch of the Hospital for the Insane, Parramatta. To these buildings about 100 acres of land are attached, and the site is a fine and healthy one. The buildings, however, are for the most part in very bad repair, the majority being unfit for occupation, and it was found impossible to use them as a residence for insane persons until alterations and repairs, involving a considerable expenditure, had been effected. Plans and estimates of the required alterations have been prepared, and await the necessary Parliamentary appropriations. In the meantime a small portion of the buildings have been made habitable, and 30 patients, carefully selected, have been sent to them with a view of keeping the buildings, yards, and gardens clear and in proper order, and, as far as possible, preventing further dilapidations.

The following return shows the number of patients on 31st December, 1888, and the accommodation at that date:—

RETURN showing the number of Patients in Hospitals for the Insane on 31st December, 1888, together with the accommodation on that date.

Institution.	Number of Patients in Hospitals for the Insane, 31st December, 1888.			Accommodation in Hospitals for the Insane, 31st December, 1888.

				231		231†
Total .....	1,703	1,033	2,741	1,862	1,003	2,865
Parramatta Criminal .....	54		54	56		56‡

\* The rooms for 78 patients are of a very temporary character and much dilapidated. † Not yet available owing to need for repairs and alterations. ‡ For criminal patients only.

It will be seen that, setting aside the Hospital for the Criminal Insane, in which there was room for two additional patients only, and which had been several times quite full during the year, the accommodation at present available is for 2,634 patients, whilst there are already 2,741 or 107 more than there is room for. The buildings at the Orphanage, Parramatta, when repaired and altered, will hold 231, and raise the accommodation to 2,865, or 124 more than the number of patients at the close of 1888. By the close of 1889 at least 100 additional patients will have accumulated if the ordinary rate of increase is maintained, as there is every reason to expect, and the institutions will again be full and overcrowding again commence. It is time, therefore, and more than time, that something more than temporary and make-shift expedients were adopted to meet the needs of the increasing insane population, and the erection of a new hospital, either on the property purchased for the purpose at Goulburn, or in some other suitable site, should no longer be delayed. The urgency is the greater as buildings at Gladesville, built more than twenty years ago of flimsy material to meet a temporary need, are decayed and must soon be removed. If the wards of hospitals for the insane are in an overcrowded condition, efficient and satisfactory management is all but impossible. Such a condition of matters is unfair to the patients as impairing their general health and militating against their chances of mental restoration, and unfair to officers and attendants who are expected to produce results in the way of cure, and to maintain efficient administration, which are simply impossible under the circumstances.

#### Cost of Maintenance.

The receipts of the Department from all sources amounted to £10,949 9s. 5d., an increase of £653 11s. 10d. on the receipts of the preceding year.

The collections by the Master in Lunacy amounted to £10,031 12s. 10d., the sum of £8 5s. was paid towards maintenance of patients in the Reception House, the Imperial Treasury contributed £484 5s. 4d. for maintenance of patients, £359 2s. 6d. was received for the sale of fat and condemned stores, and £66 3s. 9d. for rent of land.

The details are shown in the following return:—

TABLE showing total receipts on account of Institutions for the Insane during the year 1888.

Name of Institution.	Collected for maintenance of Patients.	Paid from Imperial Treasury for maintenance of Patients.	Sale of fat and old Stores.	Rent of Land.	Total.
Hospital for the Insane, Gladesville.....	£ s. d. 4,178 10 7	£ s. d. .....	£ s. d. 116 13 1	£ s. d. .....	£ s. d. 4,295 3 8

Do Callan Park .....	2,371 3 4	.....	102 2 7	.....	2,973 5 11
Do Newcastle .....	452 5 10	30 5 4	18 5 11	.....	500 17 1
Licensed House for the Insane, Cook's River.....	215 14 2	.....	.....	.....	215 14 2
Reception House for the Insane, Darlinghurst .....	8 5 0	.....	.....	.....	8 5 0
Inspector-General's Office .....	.....	.....	.....	66 3 9	66 3 9
Total .....	10,039 17 10	484 5 4	359 2 6	66 3 9	10,949 9 5

The total expenditure was £89,895 19s. 1d. (being £682 1s. 4d. more than in 1887), and was made up as follows:—Maintenance of patients in Hospitals for the Insane, £82,506 15s.; maintenance of Government patients at the licensed house, Cook's River, £2,928 2s. 6d.; maintenance of patients in the Reception House, £1,642 5s. 7d., and general expenses, including cost of Inspector-General's Office, payments to official visitors, maintenance of steam launch, &c., £2,818 16s.

The cost of maintenance in Hospitals was £666 17s. 10d. more than in 1887, but the average daily number of patients resident was 2,713 as against 2,629 in 1887, so that the average maintenance rate was less, being £30 8s. 2½d. in 1888 as against £31 2s. 7d. in 1887, without deducting collections, and £26 9s. 7½d. in 1888 as against £27 6s. 6d. in 1887, collections being deducted.

The cost of the Reception House amounted to £25 18s. 5d. more than in 1887, and each patient treated therein cost £2 10s. 4d. as against £2 17s. 6d. in 1887. The number of patients was 652 in 1888, and 562 in 1887.

The

The following tables give the particulars of expenditure in the Hospitals:—

\* First year, and including cost of stores and outfit.

† Opening of new hospital.

*Reception House for the Insane, Darlinghurst.*

The number of patients in this institution at the close of 1887 was 11, of whom 10 were under remand, and 1 under lunacy certificate.

During the year 641 patients were admitted—270 under remand and 371 under lunacy certificate, making a total of 652 under care and treatment. Of these 101 were admitted twice, being sent first under remand and subsequently certified and readmitted. Of the cases under remand admitted under section 1 of the Lunacy Act Amendment Act, 280 in number, (including 10 remaining at the close of last year), 172 were discharged as sane, 101 were certified and returned to the Reception House, 3 died, and 4 remained at the close of the year. Of the cases under lunacy certificate admitted under section 49 of the Lunacy Act, 372 in number, including 1 remaining from last year, 331 were sent to Hospitals for the Insane, 31 recovered, 4 died, and 6 remained at the close of the year. Of the total number under care 203 were discharged recovered. The admissions were not unusually numerous. Four patients under certificate, and

and 19 under remand were admitted twice during the year, and 40 were readmitted during the year who had been inmates during some former year. The number under treatment was 90 more than during the year 1887, but less than during the years 1884-5-6. I visited this Institution on January 23rd, February 28th, March 15th, April 10th, May 10th and 29th, June 18th and 29th, July 17th, August 7th and 29th, September 18th, October 23rd, and November 24th and 30th, and at these visits saw all the patients and inspected all parts of the Institution. On several occasions I saw the patients at dinner, which was properly cooked and neatly served.

The building has been kept in excellent repair and all necessary alterations have been carried out. At all my visits I found it clean and in good order.

The Institution continues to do good and useful work, as is shown by the number of patients who recover in it without being sent on to hospital, and its management is highly creditable to the officer in charge. No suicide or serious accident has occurred during the year.

The following tables give the statistics of the Institution.

TABLE showing the number of Patients under certificate received at the Reception House for the Insane during the year 1888, and their disposal.

Table with 12 main columns: Year, Remaining 31st Dec. 1887, Received, Sent to Gladesville, Sent to Parramatta, Sent to Callan Park, Sent to Newcastle, Sent to Cook's River, Discharged of sound mind, Discharged to friends, Died, Remaining 31st Dec. 1888. Each column has sub-columns for M, F, and Total.

TABLE showing the number of Patients received at the Reception House for the Insane during the year 1888, under section 1 of the Lunacy Act Amendment Act.

Table with 7 main columns: Year, Remaining 31st Dec. 1887, Received, Sent to Police Court and discharged as sane, Sent to Police Court, certified as insane, and returned to Reception House, Died, Remaining 31st Dec. 1888. Each column has sub-columns for M, F, and Total.

TABLE showing the number of Patients received at the Reception House for the Insane for the years 1868 to 1888 inclusive, and their disposal, &c.

Large table with 12 main columns: Year, Remaining, Received, Sent to Gladesville, Sent to Parramatta, Sent to Callan Park, Sent to Newcastle, Sent to Cook's River, Sent to Police Court and discharged as sane, Sent to Police Court, certified as insane, and returned to Reception House, Discharged of sound mind, Discharged to care of friends, Died, Remaining on 31st December. Each column has sub-columns for M, F, and Total.

## Hospital for the Insane, Gladsville.

The number of patients on 31st December, 1887, was 778—500 males and 278 females. During the year 135 were admitted for the first time, 24 were readmitted, and 10 were transferred from other hospitals, making altogether 947—606 males and 341 females—under care and treatment. Of these 96 were discharged as recovered, 8 as relieved, 12 were transferred to other hospitals, 3 escaped, 56 died, and 772—494 males and 280 females—remained at the close of the year. The average daily number resident was 741.

The recoveries give a percentage of 60.37 on the admissions and the deaths a percentage of 7.55 on the average number resident. Taking the quinquennial period 1884—1888, inclusive, the recovery-rate was 54.12 and the death-rate 8.06.

The full statistics of the hospitals for the year will be found attached to the Medical Superintendent's report (*Appendix A*).

The general health of the patients has been on the whole satisfactory; but during the year occasional cases of typhoid fever have occurred, and two deaths resulted from this cause. Early in the year it was ascertained that the surroundings of the dairy from which the milk supply was obtained were not as clean as they should be, and all the milk received till the contract could be terminated was boiled. There was very little doubt, however, but that some of the cases of typhoid were due to the water supply. The creek from which the main supply of water is derived and the dams into which it falls have for a long time been more or less polluted, and care has been taken to restrict the use of this water as far as possible to the laundry, the baths, the gardens, and for ordinary cleansing operations, and to use water from underground tanks for drinking and culinary purposes. It has, however, not been possible to altogether and at all times prevent the more demented patients from drinking the dam water, which is often quite clear and free from offensive taste or smell; and until a more satisfactory system of water supply can be obtained and the present dual system abolished this danger is likely to continue.

During

During the prolonged drought the fresh water failed, and it became necessary to fetch a supply from Sydney in tanks and pump from these to the hospital by steam power. The quantity thus obtained was inadequate, and for cleansing purposes salt water was to some extent used. It is hoped that within two years the Nepean supply will be within reach of the hospital. There were two cases of sudden death, one from heart disease and embolism and one from hæmorrhage from the basilar artery, but no suicide occurred, and the accidents call for no special report.

The wards have, as in former years, been overcrowded.

The official visitors inspected the Hospital about once a month, and forwarded a report to the Colonial Secretary after each visit. These reports express a general commendation of the state and condition of the Hospital. I visited the Hospital on February 2nd and 8th, April 18th and 19th, June 20th and 21st, July 26th, September 10th, October 10th and 12th, November 22nd, and December 29th, and the following are extracts from my reports at some of these visits :—

April 18th and 19th.—I visited this hospital on both these days ; and on the first, carefully inspected the wards, and saw the patients in them ; and on the second saw the laundry, kitchen, stores, workshops, gardens, and grounds. Since the last official visit eleven patients have been received ; one of these has died since from serous apoplexy ; the remainder I saw and spoke to separately, satisfying myself in each case that they were fit cases for hospital care. The papers on which they were received were all correct in form.

The statutory books were in proper order, and written up to a recent date.

The admission and discharge registers call for no comment. In the Medical Journal the particulars of a sudden death from cerebral hæmorrhage, are noted. Notice of death was sent to Mr. Bowden, the coroner for Farramatta, who declined to hold an inquest or give any directions in the matter. The patient was buried, and a special report sent to the Colonial Secretary, through my office, in which the necessity for a coroner or special magistrate for the Ryde district, the former coroner having resigned, was pointed out. From the Medical Journal it further appears that restraint has recently been used in two cases—in one to prevent self-injury, in the other for extreme destructiveness.

I visited all the wards in both divisions, including the Hill Branch, and am glad to be able to express a general satisfaction with their order and cleanliness, and with the condition of the patients in them. The female division and the Hill Branch leave little to be desired, and some of the wants of the wards in the male division are being met. In several of these painting is in progress ; and in the hospital room and in the day room, in No. 1, substantial improvements are being made. There seemed to me a want of invalid chairs in No. 4 ward. The patients were (except in one ward in the female division which contains several acute cases) quiet, and, though I spoke to a number of the patients and gave all who so wished an opportunity of speaking to me, I heard no complaints except of detention, and in none of these did I feel called on by the nature of the case to interfere. I found no one in seclusion or restraint, and there was practically no sickness. With a population of 750, there was only one patient in bed, and this was a case of maniacal excitement. The beds and bedding were clean and in good order. On examining the day and night reports, I find that 253 men and 172 women are usefully employed, and that 233 men and 143 women attend Church services. The number wet at night is 27 males and 24 females, whilst 10 men and 2 women are reported as dirty.

I saw and destroyed all the letters detained by the Medical Superintendent, as unfit for the reasons marked on them for transmission, having on examination found that only a judicious censorship had been exercised.

The case-books are fully and properly written up as regards recent cases, but entries are required in accordance with the case-book order in a number of those of longer standing.

The recreation yard in the female division has been put in good order, and that for men is now in progress. The paths and steps are being attended to and the fences painted and repaired. The front garden and slopes have recently received some attention, which was much needed, but the very dry weather has prevented some necessary work being completed.

I regret to find that the water supply is gradually failing, and that the Medical Superintendent has been obliged to place both wards and gardens on a limited allowance.

In the laundry, I found a considerable number of patients employed. Some attention is necessary to the wood work and other parts of these buildings, and the fine laundry and some of the surroundings were not as tidy as they might have been. The new cottage for laundresses is approaching completion, and will be a great improvement.

The kitchen and stores were in fair order, and I saw no reason to object to any of the provisions supplied by the contractors.

There were only three patients in the tailors shop, a very small number and not likely to cope with the necessary work. I visited the wood-yard, stables, out-buildings, and shops. The latter are very much too small, and the necessity of a complete reorganization of these is more and more apparent. With spacious and well-arranged workshops, the number of patients employed might be much larger, and the carpenters, mattress-makers, bookbinders, and other work be carried out under much better supervision. The new sewing room answers admirably, and is a model for future workshop buildings.

The kitchen, stores, and other out-buildings at the hill branch, as also the gardens in this division, were in commendable order, and show evidence of constant care and attention.

September 10th.—On the 8th instant I visited this institution, and inspected all the wards and some of the out-buildings and offices.

I saw and signed the statutory books, which call for no particular comment. From the Medical Journal it appears that no male patient has been under restraint since July 15th, and that only one female has been restrained since that time, and that this was for surgical reasons. There appear to have been 7 deaths since the last official visit, but all were from natural causes. The number of recently admitted cases was 10—8 males and 2 females. I saw all these, except one, and I examined the papers on which they were received. The letters written by patients and detained by the Medical Superintendent were all submitted to me, and, after examination, I directed all to be destroyed as unfit for transmission.

In visiting the wards I saw all the patients, inquired into special cases, and listened to all complaints made. I did not hear any complaints requiring investigation, but one patient handed me a letter containing charges of harsh treatment against the attendants at the Reception House, which will be duly inquired into. The patients in all the wards, except Nos. 3 and 4 male, were reasonably tidy, but in both these wards there was certainly room for improvement. I found one female patient in restraint by camisole for reasons which appeared to me sufficient and satisfactory. In the male division 5 patients were in bed, 1 in a single room and 4 in associated dormitories, and in the female division 6 were in bed all in single rooms. Two of these were cases of typhoid fever, one convalescing, and the other in an early stage. The present condition of the water supply is deplorable ; all has to be brought from Sydney by barge, and pumped up to the hospital, and salt water is used for baths, &c. ; the latter is so very unsatisfactory that I think it imperative that a larger supply of fresh water, to the amount in fact which the force pump will raise, should be obtained and the salt water dispensed with. In the female division, I found fewer patients than usual in the sewing room, and the amount of work is falling off. There appeared besides to be very little sewing going on in the wards. From the day reports it appears that 172 females and 281 males are usefully employed, and from the night reports that the number of patients with faulty habits is as follows :—Female, 19 wet and 2 dirty ; Male, 29 wet and 5 dirty.

The new electrical recording clock in use in all parts of the main building, is reported to be working satisfactorily.

The laundry work was over for the week, and the patients were cleaning up the rooms, &c. There is some need of a general smartening up of the laundry surroundings, the paths, borders, &c., all want attending to, and some painting is required. A decided improvement has been made in this division by forming a delivery window, so that the attendants and nurses need no longer enter the laundry yard.

October, 12th.—On the 10th and 12th instant I visited this Hospital, inspecting on the first day the female division, kitchen, laundry, and offices, and on the second, the whole of the male division, including the Hill branch and the Priory.

Since the last official visit, 12 patients, 10 males and 2 females have been admitted, and I took care to see all the papers on which they were received, and examined all the patients except 2. Since the last visit, also there have been 12 discharges, and 1 death.

The statutory books are properly kept, and the Medical Journal contains no entries calling for special comment.

I am glad to see that P.M. examinations are held in almost every case of death. From the ward returns, I find that the percentage of patients employed is keeping up. The number with faulty habits is now recorded as 31 males and 11 females wet and 7 males dirty. The wards in the male division are very full, but there are a few vacant beds in the female division. The general health must be regarded as satisfactory only 6 men and 1 woman being in bed, but I regret to find that there are still occasional cases of typhoid fever. One female patient is convalescent from it, and 1 male died on the 10th. There does not appear to be any new cases in the hospital at present, but with the present unsatisfactory condition of the water supply, it is to be feared that the disease may again make its appearance in the hot weather.

I found 2 patients—both women—in restraint, owing to persistent attempts at self-injury. In visiting the wards, I saw all the patients, and have to express a general satisfaction with their condition. The few complaints I heard were either due to delusion, or were of undue detention, and in these latter cases, such of the patients as I saw were manifestly unfit for discharge. One patient was in seclusion owing to noise and violence at the medical visits.

At the Hill Branch no one was in bed, in seclusion, or restraint, and the condition of the wards, as also of the out-buildings, gardens, borders, &c., was most satisfactory.

At the Priory, the arrangements are now so far complete that 17 patients are accommodated. The place is getting into order, and the house and grounds will prove a most valuable acquisition to the hospital. A cottage at the hospital gates, which has for some years been occupied by patients, has been given up on the occupation of the Priory.

The kitchen and laundry, as also the flower borders and paths around and about them show signs of some want of care and attention. I am convinced that it will be advisable to tar-pave a large part of the laundry-yard, and to attend to the borders as soon as possible. The cooks have both resigned, and after the constant trouble and the frequent changes of the last two or three years, it seems advisable to try if female cooks cannot be obtained—3 of these, with the assistance of patients, should be able to do the work.

The project, so long in anticipation, of extending the farming operations, is being gradually carried out. A cottage is now being erected for the farm attendant. There are 5 cows, which are soon to be doubled in number, and the new pigsties are working well, and without being in any way a nuisance.

The bread, cheese, and other articles of provision, which I saw in the stores, were satisfactory in quality, and the mutton at the Hill Branch, which I saw on the 12th, was thoroughly good. There have, however, been frequent complaints as to the way in which the contractor for meat is carrying out his contract, and he has been recently fined £5 on the complaints of the Medical Superintendent. The nurses and attendants are now wearing their new patterned uniform, and the change is decidedly an improvement.

November 22nd.—The number of admissions since the last official visit has been 28—19 males and 9 females, an unusually large number. I examined the papers on which the patients were received, and saw all the patients except 3—one of whom had died, one was absent on leave, and the other was working in a quarry at some distance from the hospital. I saw and signed the statutory books, which are correctly kept. I visited the whole of the wards in the male and female divisions, and at the Hill Branch, and I saw also the stores, wood-yard, and workshops, and paid a short visit to the Priory.

I have to express a general satisfaction with the condition of the hospital, which is, except in some minor respects, in good order. The female division is throughout clean and in admirable order. The repainting of some of the wards and the enlargement of windows now in progress will be a very decided improvement and make the rooms both more cheerful and more healthy. The Hill Branch is in good order and thoroughly clean but the patients are in some respects not as tidy as they might be, and the same remark applies though, in a greater degree, to the patients in the male division of the main hospital. In this part also the furniture (clothes, presses, commodes, chairs, &c.) is shabby and old and must be as soon as possible renewed or repaired.

The Priory is in working order and contains seventeen patients, the furniture is however both ancient and sparse and there are at present neither pictures nor ornaments. As soon as the gas is laid on it is proposed to repaper some of the rooms, and in other ways to make the place more homely and cheerful. I found the patients as a rule quiet, and no complaints except of detention were made. One female patient was in seclusion for noise and violence, and another for denuding herself whilst men were working in the ward. There was only one patient in restraint, a woman who has inflicted injuries on her head and is restrained to prevent further mischief. Nine males and one female were in bed from various causes but only two of these were seriously ill. One male patient has his arm in a sling and on a splint owing to an injury (the nature of which has not been fully diagnosed) caused by an accidental fall. I saw a number of patients employed in the wood-yard and workshop. The latter are miserably inadequate, and as it appears useless to expect any assistance though the Colonial Architect's Department, it is clearly advisable to try and carry out some of the additions necessary by means of labour and funds furnished from the votes of the Department.

The provisions in the store seemed good and the meat supply is decidedly better since the contractor was for the second time fined £5.

I propose to visit the laundry and the outdoor works in progress on an early day.

An estate adjoining the Hospital, containing an area of 20 acres, and on which was a large and substantially built dwelling house and a commodious cottage, which in 1887 was offered to the Government rent free for one year with the option of purchase, was purchased by the Government during the year, and forms a most desirable addition to the hospital estate. This property is surrounded on all sides by the Hospital Reserve, and was alienated before the remainder of the land was set apart for hospital purposes. The buildings afford accommodation for 44 patients, and are now occupied, with the result of relieving some of the overcrowded wards. The land is a substantial addition to the area available for cultivation by the patients.

There have been no large alterations or additions to the hospital during the year, but various minor improvements have been made. A new cottage has been built for the laundresses and another for one of the attendants employed at the farm. The drains at the Hill Branch have been relaid and improved and those at the main building better ventilated.

The windows of a number of single rooms have been enlarged, and the new workshops, so long and so urgently needed, have been commenced.

The hospital buildings generally have been kept in good repair, but the range of wooden dormitories are perishing by slow decay and must soon be replaced by more permanent structures.

#### *Hospital for the Insane, Parramatta (Free).*

The number of patients in this hospital on 31st December, 1887, was 969: 634 males and 335 females.

During the year 90 were admitted for the first time, 6 were readmitted, and 16 transferred from other hospitals, making altogether a total of 1,081—717 males and 304 females—under care and treatment. Of these 32 recovered, 1 was discharged relieved, 6 were transferred, 53 died, and 989—651 males and 338 females—remained at the close of the year. The average daily number resident was 972.

The recoveries give a percentage of 33.33 on the admissions, and the deaths a percentage of 5.45 on the average number resident.

The full statistics of the institution are given with the report of the Medical Superintendent (*Appendix B*). The general health of the inmates has been remarkably good, and the death-rate, considering the advanced age of a number of the inmates—upwards of 225 being over 60 years of age—very small.

One

One case of typhoid fever occurred, but the patient had been recently admitted, and the disease was probably contracted outside the institution. Such accidents as have occurred call for no special comment; but 2 cases of sudden death during the night from epilepsy pointed to the necessity of some rearrangement of the nursing staff, so as to allow of the better supervision of these cases during the night, and such rearrangement has, at my suggestion, been carried out.

The hospital has been visited once a month by the official visitors, who forwarded reports to the Colonial Secretary after each visit. In one of these reports the visitors pointed out the overcrowding of the wards and corridors, which has since to some extent been remedied, and in two reports attention was again called to the deplorable condition of some of the buildings.

The Colonial Secretary soon after visited these buildings, and approved of their removal, and of the plans and estimates for buildings to replace them, which were prepared more than two years ago by the Colonial Architect. Political exigencies have, however, delayed the appropriation of the amount required, and the buildings still remain a discredit to the Department, a perpetual eyesore to the medical officers, a standing difficulty to the management, and a danger to the patients. Unless speedily removed, some of them will inevitably collapse and fall.

The chief improvements which have been carried out during the year have been the reroofing of some of the weatherboard buildings with iron, the better lighting of the ironing-room, and the fitting of rooms formerly used as quarters for the Assistant Superintendent as dormitories for some of the more quiet, orderly, and convalescing patients.

A large number of requisitions on the Colonial Architect's Department remain unfulfilled, and the provision of an additional day-room for the more feeble female patients, the better drainage of the laundry, and the erection of a blacksmith's shop, and of new closets in the weatherboard division, are among the more urgent and pressing of these.

The water supply during all the earlier part of the year and throughout the long drought was satisfactory, but with the heavy rains came some pollution of the corporation supply, and for weeks the water was brown and turbid, nauseous to taste, unpleasant to smell, and decidedly unwholesome to drink, so that the whole of the water for cooking and drinking purposes had to be obtained at considerable inconvenience from other sources.

On May 2nd, the buildings at Subiaco, near Parramatta, formerly occupied as a Protestant Orphanage, were gazetted as a Branch of the Hospital for the Insane, Parramatta, and twenty patients, with the necessary attendants, were soon after sent to reside in one of the detached cottages, and were employed in clearing the institution from rubbish, executing minor repairs, guarding against further dilapidations, and cultivating the garden.

A contract was taken for repairs urgently needed to some part of these buildings, and these, when completed, will enable the Medical Superintendent to transfer about sixty more patients, as the increase in numbers at the main hospital may render this necessary.

I visited and inspected the hospital on January 19th, March 20th, May 15th and 30th, July 17th and 24th, September 13th and 20th, October 17th, November 29th, and December 6th, and the following are extracts from my reports at some of these visits:—

March 20th.—I have to-day paid a visit of inspection to this hospital, which now contains 979 patients, which, together with 5 on leave, make up 984 on the register—a larger number than on any former visit. The wards are, in consequence, somewhat overcrowded, and there are patients in corridors which are required at times as day-rooms. The general health of the hospital is, however, remarkably good. One woman and nine men were in bed, and the most of these from chronic ailments, such as ulcers of the legs, &c. There has been a case of typhoid fever, but the patient is now convalescent. He had only been recently admitted when attacked, and, it is possible, may have been infected before admission. Any way, there are no local causes for the malady, and no other cases have occurred. I passed through all the male wards at the weatherboard division and in the main buildings, and found all in fair order and the patients reasonably tidy in dress. No complaints of moment were made, and in the few instances in which I noticed bruises these were accounted for by falls or other accidental causes.

I regret that I cannot express satisfaction with the condition of the bedsteads and bedding in any part of the male division. Even in No. 1 ward there are evidences that sufficient care is not exercised. I think that a gradual but complete change is necessary, and that very much more care is required than is now given to this matter. It is impossible to keep the bedsteads and bedding clean and in good order without a complete overhaul at least once a fortnight, and at these times the bedsteads should be taken to pieces and scalded. At present the condition of the bedsteads and bedding is in decided contrast to what it is at other institutions in this Department, or even at some of the asylums for the infirm and destitute. I visited all the wards in the female division, and am satisfied with its general condition. The whole of it is thoroughly clean, and the repainting, now nearly completed, is a great improvement. I visited the laundry, in which the gratings spoken of in my report of January 19th are not yet provided. As the winter is approaching, I think these should be furnished without delay. I noticed with regret that the gardens around the laundry, which were formed and planted with some care and labour, and which were a great addition and ornament to this part of the institution, have been overrun, eaten down, and spoiled by calves, which might, I think, be kept elsewhere if kept at all.

The kitchen and stores which I visited were in their usual good order; but I hear that the supply of several articles of clothing is very short, and the Superintendent of Stores should be specially requested to make a speedy supply. As soon as possible the rooms lately occupied by the Assistant Superintendent should be painted and put in good order, and new bedsteads, side carpets, &c., should be procured.

I saw and signed the statutory books which are correct, and examined several patients with a view to their discharge.

May 30th.—I visited to-day, accompanied by the Medical Superintendent and Assistant Medical Officer, the whole of the wards for female patients, the kitchen, laundry, stores, and other offices in the weatherboard division, and the single rooms for men at the weatherboard division. In visiting the different parts of the Institution I saw the patients in the wards and other places and though, the usual requests for discharge were made, there were no cases in which it seemed to me right to comply with them. No complaints of harsh or unkind treatment were made, and I saw no bruises which were not satisfactorily accounted for. No one was in seclusion and the only case in restraint was one, a persistently destructive and dirty patient, for whom a camisole was necessary. The general health of the patients, considering the number of old and feeble folks among them, was good, two were in bed with catarrh, two from weakness of extreme old age, and one from fractured neck of thigh bone, which was due to an accidental fall some weeks ago. The patients' clothing was as a rule sufficient and clean, but a number of the hoods did not look as clean and nice as usual. The bedding was clean, sufficient, and in good order, except in a number of the single rooms. In these the bed ticks for patients of faulty habits were far too narrow, and it would be impossible for patients to be comfortable on them. They should certainly be made much wider. The interior of all the dormitories have recently been painted and decorated, and are now bright and cheerful, and the dormitories have been ornamented with texts and pictures. The paths in the airing-courts are being dressed with tar after being properly made up and levelled, and when completed will be much cleaner and look much better. The sewing rooms were both full of patients, but I think more sewing or knitting might be done in the wards in which there are a number of idle women. The laundry was in fair working order, though not as tidy as usual. The floor is very wet and sloppy, and must either be better drained or more grating should be supplied. About the usual number of patients were employed. The gardeners about the laundry and round the wards in this division require attention, and a number of new shrubs and plants should be put in and kept in order.

The Medical Superintendent pointed out the necessity for a blacksmith's and painter's shop attached to the engine-house. This could be provided at comparative small cost, and should be at once made the subject of requisition.

The kitchen and stores were in their usual good order, and such provisions as I saw were of proper quality.

The Medical Superintendent, however, reports irregularities both as to quantity and quality in the milk supply, which must be remedied or fines inflicted on the contractor.

In this division and also in the single rooms for men at the weatherboard division there is need of painting to woodwork which is bare and suffering for want of attention.

July 24th.—I have to-day visited the female division of the hospital, and the various outbuildings attached. I visited also the farm and garden, and subsequently went to the Branch with the Medical Superintendent. The female division was in its usual good order, and the wards clean, bright, and cheerful looking. The painting is finished, and considerable progress has been made in asphaltting the paths of the airing-courts. I saw all the patients and spoke to a number of them. There was very little noise or excitement, and no complaints of harsh or unkind treatment were made. I found one woman in muffs, owing to denuding herself and destroying her clothing. No one was in seclusion, and only four in bed. These were suffering from old age, epileptic status, congestion of the lungs, and hæmorrhoids respectively.

The bedding was clean and in good order, but some of the beds were more tightly filled than is desirable. The clothes generally were clean and sufficient.

Among the outbuildings visited were the sewing-rooms, laundry, kitchen, stores, all of which were in good working order. The kitchen floor requires recementing in places, and several of the rooms should have ventilating openings under the floor, as the boards are buckling.

The new amusement hall is progressing slowly. I regret to find that further damage has been done to the trees and gardens by horses and cattle, but the Medical Superintendent is taking steps to prevent any recurrence of this. On looking over the returns I find that 182 women and 320 men, including criminals, are usefully employed. The number attending Church is very small; 80 women and 102 men only. The night reports show that 20 women and 26 men are wet, and 6 women and 14 men dirty at night. Four women are placed in camisole at night for special reasons. Care should be taken so as to keep the number under treatment in this way as small as possible. On inquiry I find that there are no recording clocks in use in the female division and in the main part of the male division. This should be immediately remedied. The visits of night attendants and nurses cannot possibly be checked without these, and a sufficient supply of clocks in good order should be always kept.

The excavation for the large lake at the back of the hospital is nearly complete, and further employment for the patients may be found in levelling the adjoining paddock and removing the old bridge. The new pigsties appear to answer well, but are not sufficient to contain all the stock; and the Medical Superintendent proposes to erect others as soon as funds are available. The cow-sheds are in good order. The garden is extremely bare, there being fewer vegetables (owing to the dry season) than at any former time in my recollection. The necessity for a windmill and irrigation is shown by dry seasons like the present, and one should be procured as soon as funds are available.

September 13th.—The number on the register is 972 (633 males and 334 females); and of these, 20 males are at the branch establishment, and 3 males and 1 female are absent on leave.

I visited all the wards in the main building, and, with the exception of the hospital ward, consider the condition to be generally satisfactory. No complaints requiring investigation were made to me, and in two cases in which I noticed bruises these were satisfactorily accounted for. I found one patient in restraint, and in this case think its employment necessary. The number sick was unusually small.

The quarters near the gate are now comfortably filled and furnished, and afford comfortable accommodation for a number of quiet and convalescent patients, some of whom much appreciate the better lodging afforded them. The asphaltting of paths, already so great an improvement, is slowly progressing. There are still a number of outstanding requisitions on the Colonial Architect's Department which require more or less urgent attention. I saw and signed the statutory books. From the Medical Journal I find that two men and five women are in restraint at night; and it appears to me that the proportion of women is large, and that this exceptional mode of treatment should be watched, and not allowed to increase beyond what is absolutely necessary.

The provisions in the store appeared good; but the Medical Superintendent reports unfavourably of the supply of milk and butter, and the contractors have been warned that the conditions of contract will be insisted on.

I visited the branch, the patients at which are quiet and industrious. The alterations and repairs are progressing very slowly, and some steps must be taken to urge a more speedy action.

September 20th.—I have to-day visited the whole of the wards in the female division of this hospital, and inspected also the laundry, kitchen, stores, and outbuildings in this department of the hospital. I have also visited the tailors' shop, the farm buildings, and some part of the gardens and grounds.

The number of female patients is 341, and of these, 178 are usefully employed; 25 are wet, and 2 of dirty habits at night. I found in bed 3 only, 1 owing to epilepsy, 1 from sub-acute mania, and 1 owing to a fractured leg. This accident happened only a short time previous to my visit, and inquiry showed that it was caused quite by accident the patient having caught her foot in the bed clothes when getting up in the morning and falling. No one touched her, or was in any way responsible for, or contributed towards the accident. One patient was in a camisole, and one in muffs at my visit, and the returns show 5 in restraint at night. A number unusually, if not unduly, large.

The general condition of the division was satisfactory. I note, however, a very great delay in finishing the tarpaving of the wards. Repairs to new paths are required in places, and the want of the tiles to protect and define the edges is urgent. In some of the wards the bedsteads show signs of unnecessarily rough usage, and when broken repairs are evidently not executed as promptly as they should be.

The Medical Superintendent pointed out the desirability of having recesses off the ward for the night commodes, instead of allowing them to remain in the wards as at present, and the suggestion appears so reasonable that I think one such recess should be constructed at once, either by the hospital staff or paid labour, and the remainder for which the completed one would form a pattern then asked for by requisition in the usual course.

The condition of the laundry called for no special comment. The kitchen and stores were in their usual very excellent order, and such articles of provision as I saw in both were wholesome and satisfactory. The milk supply recently complained of is somewhat better, the supply fulfilling the conditions of the specific gravity and cream tests, and keeping better.

Improvements are still in progress in the grounds and gardens, but I have to suggest the desirability of a more general care of small garden patches, creepers, and trees throughout the institution. At present a number of things are planted only to be neglected and destroyed, instead of being fostered and taken care of as they should be.

I visited the weatherboard division for men which is still lacking in the attention to details which seem to me necessary. In this division I found only 2 patients in bed. At the branch establishment the patients are comfortably provided for and contented. The repairs and alterations are making only slow progress, but Mr. Coles, of the Colonial Architect's Department, who met me at the establishment, promises more speedy action. The garden is improving, and there is already some show of vegetables.

It is clearly desirable that the land should be resurveyed, and the fences properly placed as they do not appear at present to be on the boundaries.

#### *Hospital for the Insane, Callan Park.*

On 31st December, 1887, the number of patients in this Hospital was 668—398 males and 270 females. During the year 252 patients were admitted for the first time, 25 were readmitted, and 8 were transferred from other institutions, making altogether 953—569 males, and 384 females—under care and treatment. Of these 129 were discharged recovered, 18 were discharged relieved, 17 were transferred to other institutions, 2 escaped, and 57 died, leaving 730—427 males, and 303 females—under care at the close of the year. The average daily number resident was 702, and the increase during the year 62. The recoveries show a percentage 46.57 on the admissions, and the deaths of 8.26 on the average number resident. The full statistics of the Institution are given in the report of the Medical Superintendent (*Appendix C.*)

The general health of the Institution has been excellent, and there have been no cases of typhoid fever or other epidemic ailment.

One

One case of sudden death was due to nervous shock from a blow with the fist in the stomach delivered by a fellow patient during a quarrel. At the inquest a verdict of manslaughter was returned; and the aggressor after becoming sane was tried at the Criminal Court, and acquitted on the ground of insanity at the time the offence was committed.

Among other accidents during the year were a fracture of the leg through a fall in an epileptic fit, a fracture of two ribs, and a severe injury to the head from a fall.

During the year the old mansion house, purchased with the estate, and a cottage recently built and adjoining it have been fitted and furnished for male patients paying for their maintenance for whom they form a comfortable home. The cottages for female patients paying for their maintenance are now nearly ready for occupation, and will probably be opened during the current year.

The additions made to the Institution during the year include additional workshops and visitors rooms, those already in use being found too small, and among the alterations have been verandahs to the laundry and workshops, and the better ventilation of some of the closets.

Very serious leaks have been discovered in several of the drains, and these have been taken up and relaid, the work originally having been very badly done. There are still some leaks which require attention.

There has been a gradual improvement in the condition of the garden and grounds, in which a large number of persons have been usefully employed, but the dry season has rendered the garden less productive than usual.

The official visitors have visited the hospital about once in each month, and their reports forwarded to the Colonial Secretary call for no comment. My visits of inspection were paid on January 12th and 16th, March 14th, May 3rd and 8th, June 26th and 30th, August 8th and 11th, October 13th, and December 5th, 12th, and 15th. The following are copies of entries at some of these visits:—

May 3rd.—I have to-day visited this hospital, which contains 691 patients—421 males and 270 females. The numbers have not increased so rapidly during the last two or three weeks as they did formerly. I saw and signed the statutory books, which are properly kept and in which the entries do not call for comment. From the Medical Journal it appears that restraint has lately been employed in two cases at night, in both by means of camisole. In one the patient is a demented epileptic who inflicts on himself severe self-injury, and in the other the patient suffers from delusions and hallucinations under which he makes violent attacks on the night attendants. Restraint has not for some time been used during the day.

From the reports it appears that 242 men and 238 women are usefully employed, the number of women having lately much increased. The night reports show that 25 men are wet and 10 men dirty at night, and that 13 women are wet and 4 dirty. The number of faulty habits among the men is large, but is fully accounted for when the number of demented and the acute cases are taken into consideration.

I visited the whole of the wards in the male division accompanied by the Medical Superintendent and found all parts of them in really excellent and most commendable order. The patients were everywhere tidy, and except in No. 2 remarkably quiet. I heard no complaints of harsh or unkind treatment, though I spent some time in each ward and spoke at length to all patients who addressed me. I noticed one bruised face, and this was at once satisfactorily accounted for by the patient himself. No one was in seclusion or restraint, and the number in bed was nine only. Of these 3 were epileptics, 2 general paralytics in an advanced state, 2 cases of advanced dementia, 1 stupor, and 1 hernia which had recently been strangulated. The dormitories were clean and the bedding ample and in good order. The old house and the attached cottage are nearly ready for occupation, and the Medical Superintendent is arranging to send patients to them at an early date. I visited the gardens and grounds, which, in spite of the very dry weather are looking well; the piggeries and fowl yards which are being improved, and the vegetable garden where a very large number of the patients are engaged in wheeling silt and levelling, and laying out the additions to the area of garden ground. Some of the more noisy and boisterous patients are engaged in this work with great benefit to themselves, and with the result of making the wards much more peaceful and pleasant to the more quiet inmates.

I visited the engine and boiler house, and the blacksmith's shop, and found all in good order. The new work-rooms have not yet been commenced, and various minor alterations, notably the glass in verandahs for the better lighting in the day-rooms, have not yet been carried out. The water supply is now reported to be satisfactory, and the pressure sufficient, and a leak long suspected has at last been found and stopped.

May 8.—I have to-day inspected the female division of this hospital, and visited also the laundry, sewing-room, kitchen, stores, carpenters, tailors, and mattrassing shops, and also the stables and other outbuildings.

Four wards are open in the female division, and part of a fifth is open for dormitory accommodation; but there has been little or no increase in the number of female patients for some months, and it has not been found necessary to thoroughly organize the 5th ward. The total number of patients is 270, and in passing through the wards I saw most, if not all of these. Except in No. 2, where there are 3 particularly noisy patients, there was little excitement, and no complaints were made except of detention. In all cases of this kind I satisfied myself as to the necessity for this. The general health of the division is good, but there were 2 or 3 cases of severe diarrhoea, in which the patients were confined to bed. In addition to these there were 4 cases in bed in the hospital, and 3 in single rooms. I saw no one in restraint, but 3 patients were in seclusion owing to noise and excitement. The wards generally were in commendable order, and No. 1, and the hospital room have been improved, and made more homely and comfortable by curtains and additional furniture. It is proposed by the Medical Superintendent to commence the painting and asphaltting of all the wards as soon as possible.

The Medical Superintendent pointed out the want of light and ventilation in 4 out of the 5 ward pantries in this division, and I am decidedly of opinion that additional windows should be cut, and other means taken to render these rooms less gloomy. The laundry was in full working order and well kept, but the yard and surroundings require some attention. The kitchen I found in good order, as were the store-room, and such provisions as I saw in both stores and kitchen were of good quality. In visiting the shops I saw all the patients employed in them.

I examined the case books. The recent cases are all entered on admission, but the subsequent entries are not made quite as regularly as they should be.

August 8th.—I visited this hospital to-day, and inspected the female division, the number of patients in which is now 231. The gradually increasing number has rendered it necessary to open and organize the fifth ward which is already in good working order. I found the wards clean and in excellent order throughout. The asphaltting of the walks is nearly completed, the repainting of the dormitories is making good progress, and the whole of this division is becoming more homelike and comfortable. Blinds are still much needed in the dormitories and should be fitted before the summer. In passing through the various wards and dormitories I saw all the patients, and those recently admitted, 11 in number, were pointed out to me. The general health is good. No one was in seclusion or restraint. Thirteen were in bed, 7 in single rooms, and 6 in hospital, the majority for comparatively minor ailments. The most serious case was a compound fracture of the leg, due to a fall whilst in an epileptic fit. The patient is receiving every attention, but is not progressing so well as could be wished. No complaints of importance, except of detention, were made, and in all the cases in which patients pressed for discharge, neither the report of the Medical Superintendent, nor my own knowledge and observation of the cases, warranted any immediate action. In one case a patient complained very much of not being able to get her boxes, or examine their contents. In this as in other cases the need of a spacious room for patients' spare clothes is apparent, but despite requisitions and remonstrances no action has been taken by the Colonial Architect's Department.

The laundry yard needs some further attention, and it will clearly be advisable to raise with stone chippings and asphalt the whole of the space covered with laundry posts and lines.

I visited the pumping and engine-room, blacksmith's shop, &c. The whole department is nicely kept and in good working order. Defects have been discovered in the drains in the female division, which probably account for the leaks noted in the report made at my last visit. These appear to be due to seampel workmanship, and must receive immediate attention.

On examining the statutory books (which I signed), I found nothing calling for very special comment. One male patient was in restraint, owing to an attempt at emasculation. From the returns from the female division, it appears that 169 patients were actively employed, and that 14 were wet and 2 dirty at night. The number showing faulty habits is small, and speaks well for the care and attention bestowed. The number employed is not yet quite what it should be, and there is still room for improvement. I hope every effort will be made to reduce the number of idle patients.

August 11th.—I have to-day visited all parts of this Institution occupied by male patients, including the wards, dormitories, workshops, gardens, and grounds. I found the wards in excellent order throughout, and the patients clean, tidy, and properly dressed. The number of sick was small. No one was in seclusion, and the only case of restraint was one of self mutilation, in which a camisole was necessary, to prevent removal of stitches and dressings. No complaints of any moment were made to me. I specially saw the patients (17 in number) admitted since the last official visit. The number of patients in the male division is now 437; and as the total accommodation is for 445 only, this division is practically full.

Among the recent improvements are a verandah to the carpenter's shop, and the asphaltting of paths, &c., in the wards for demented patients. Defects have been discovered in the drains at the new cottages, and it will be necessary to take them up and relay them. In the garden and grounds work is in progress for planting around the outside walls, and a large party of patients are employed in moving silt and forming the garden. A new vineyard has been planted, and the garden is in good order.

The house and cottage for paying patients is now in full working order, and makes a bright, cheerful home.

October 13th.—I to-day visited this hospital, and, with the Medical Superintendent, have inspected the whole of the wards in both divisions, and have seen also the kitchen, stores, and other administrative buildings.

The number of patients admitted since the last official visit was 10 (9 females and 1 male). I saw all these, and examined the papers on which they were received. In one case, two new medical certificates were obtained, the original ones being defective and unsatisfactory. The recent discharges are 13 in number, 12 on recovery, and 1 by transfer to Gladesville. There have been no deaths very recently, but the mortality last month was somewhat large, though not due to preventable disease. I saw and signed the statutory books. From the Medical Journal it appears that there has been no restraint for more than a month, and no seclusion since September 25th, an excellent record for an institution admitting large numbers of acute cases. The general health of the patients is very good. I found 13 males and 5 females in bed, but several of the men were in the third stage of general paralysis, and there were no cases of severe or epidemic disease. The wards are wonderfully quiet. One patient only was in seclusion, and there were very few complaints, and these mainly of detention. One patient, an epileptic boy, complained that the attendants treated other patients roughly, and the Medical Superintendent undertook to thoroughly investigate this.

I have to express the greatest satisfaction with the general condition of the male division, which is most creditable to the officers in charge. The rooms were clean, and free from all offensive smell; the airing courts admirably kept, and the patients clean and tidy. The female division is rapidly improving. Three of the wards are now painted throughout, the ward gardens show care and attention, and the nurses are exhibiting greater aptitude for their work. Several of the wards are much improved by curtains, &c., but the dormitory still requires blinds. Three of the closets in the male division have been much improved by increasing the opening for light and air, and by extra ventilation, and it is clearly desirable that the remainder, as well as those in the female division, should be treated in a similar manner.

Contracts for new visiting-rooms, mattressing-rooms, &c., have been recently taken, but there are still a number of outstanding requisitions delayed for want of funds. The drains in the female division, which are in a leaky and very unsatisfactory state, require attention. The quarters for better class patients are in excellent order, and this division appears to be working quite satisfactorily, and with encouraging results.

In the kitchen I saw the dinner ready for serving to the wards. The meat was fairly good, but thin, and the mutton supplied lately has been far from satisfactory, and has been the subject of expostulation and complaint to the contractor. The bread and such other articles of provision as I saw were good. The kitchen and stores appeared well kept in all particulars.

I saw a number of female patients starting for the Women's Industries Exhibition, and find that the amusements generally are well attended to, and sufficiently frequent. The library requires enlarging, and the Medical Superintendent proposes to ask for a special grant this year for the purchase of books. At present the number of volumes is far too small for an institution of such a size and character.

*Hospital for the Insane, Newcastle.*

At the close of 1887 there were 240 patients in this Institution—127 males and 113 females. During the year 17 patients—10 males and 7 females—were admitted direct, and 12—9 males and 3 females—were transferred from other hospitals, making a total of 269—146 males and 123 females—under care and treatment.

Of this number 1 was discharged as recovered and 1 as relieved, 1 was transferred, 25 died, and 241—133 males and 108 females—remained in the Institution at the close of the year.

The average daily number resident was 239. The death-rate was 10.46 on the average number resident, and was larger than usual. The causes of death are shown in Table 3.

During the year 2 cases of typhoid fever occurred, 1 of which resulted fatally. In April scarlet fever made its appearance, but the patients—2 in number—were at once isolated, and the disease did not spread. In August and September, a time when measles were very prevalent in the neighbourhood, a serious epidemic occurred, in which 54 patients—27 males and 27 females—were attacked; 1 patient died from measles, and 3 subsequently—1 from cerebral irritation, 1 from marasmus, and 1 from bronchitis following measles. The remainder recovered, though several were for a long time in a very feeble condition. There were no serious accidents, and no case of sudden death necessitating special inquiry.

The Institution was visited and inspected on February 13th, 14th, and 15th, April 24th and 25th, July 4th, September 3rd and 4th, and November 15th and 16th, and at these visits the patients were seen and closely examined and the registers duly checked. At each visit the bedding and clothing of the patients and the provisions in the kitchens and stores were examined, and at four visits the patients were seen at dinner in all the wards.

The official visiting-books show that the visits of the medical officer and chaplains are paid regularly and with sufficient frequency, and the Superintendent is careful to attend to the recreation and amusement of the patients.

No steps have yet been taken towards a systematic educational training of the children, but the advisability of, and indeed the necessity for, this is becoming yearly more apparent, and should not longer be delayed. The Victorian Government has lately commenced a system of special education for feeble-minded children after English and American models, and the work so far has been a distinct success and tended greatly to the improvement of this unfortunate class.

The buildings have been kept in good repair and have been painted throughout, and most of the paths and roads have been tar-paved.

No steps have yet been taken to carry out the alterations in the hot water supply, the necessity for which has been pointed out in previous reports. A mortuary, new stables, and other out-buildings are much needed, and the boundary fences are so old and dilapidated in some places as to be beyond repair.

Dr. Richard Harris, who had held the position of visiting medical officer to the institution since it was established in the year 1871, died early in the year, and was succeeded by Dr. John Harris, who had for some months been performing the duties of the office.

The changes on the staff of attendants and nurses have been exceptionally few.

The following tables give the main statistics of the year :—

*Hospital for the Criminal Insane, Parramatta.*

At the close of 1887 there were 62 patients in this hospital (53 males and 9 females); and during the year 16—14 males and 2 females—were admitted direct, and 1 was transferred from Callan Park, making a total of 79—68 males and 11 females—under care. Of these 2 recovered, 11 were transferred to other hospitals on expiry of sentence or other sufficient reason, 3 died, and 63 were on the register at the close of the year.

The proportion of recoveries to admissions was 12·50 per cent. only, and the death-rate was 5·08 on the average number resident.

The following Table shows the classification of the patients remaining in hospital on 31st December, 1888:—

CLASSIFICATION of the crimes of patients remaining in the Hospital for the Criminal Insane at Parramatta, on 31st December, 1888.

Crime.	Classified with reference to the period at which insanity was recognized.															Total number in Hospital, 31st December, 1888.		
	Certified to be insane whilst awaiting trial.			Found insane by Jury on arraignment.			Acquitted on the ground of insanity.			Relieved on the ground of insanity.			Certified as insane whilst serving sentence.

The statistics of the hospital will be found with the report of the Medical Superintendent (*Appendix D*).

In reporting on this Institution for the year 1887, I pointed out that the accommodation for male patients was fully occupied, and that it was absolutely necessary to provide additional accommodation. The Institution has been kept quite full throughout the year, such vacancies as have occurred being immediately filled by transfers from the gaols; but it has not been possible to receive all prisoners who have required special hospital treatment; and at the close of the year there were prisoners obviously insane and requiring special treatment in Darlinghurst, Parramatta, and other gaols.

No steps have as yet been taken to provide further accommodation, but it is obvious that this cannot much longer be delayed without serious inconvenience to the Department of Prisons.

I beg to repeat the recommendations contained in my last report, viz., that special accommodation for prisoners becoming insane whilst undergoing sentence should be arranged in connection with one of the gaols, and that the Governor's pleasure patients and those awaiting trial, for whom there would be sufficient room on the removal of the prisoners under sentence, should be accommodated in the Hospital for the Criminal Insane, Parramatta, as at present. The Existing Lunacy Statutes do not appear to be in any way opposed to this arrangement; and should they prove to be so, the necessary amendments could be made in them. The hospital was visited and inspected on March 20th, May 15th and 31st, July 17th, September 13th, and November 29th. There have been no serious accidents or cases of sudden death, and the general health of the patients has been satisfactory.

The number usefully employed has for some months been upwards of 75 per cent. of the total. The chief forms of employment are gardening, sawing and cutting wood, picking hair and coir, cleaning and general ward work.

Additional gas-lights have been placed in the main corridor, and it has been repainted in light colours; but it is still gloomy, and steps should be taken to light it more satisfactorily. A ball-court has been arranged in the airing-court, and the paths have been tar-paved throughout. The vegetable garden has been greatly improved, and is now growing large crops.

*Licensed House for the Insane, Cook's River.*

The number of patients at this Institution on 31st December, 1887, was 104—23 males and 81 females. During the year 22 patients were admitted, and 4 (all females) were transferred from other hospitals, making altogether 130—31 males and 99 females—under care and treatment. Of these, 15—6 males and 9 females—were discharged recovered, 3—2 males and 1 female—were discharged relieved, 4—2 males and 2 females—were transferred to other hospitals, 6—2 males and 4 females—died, and 102—19 males and 83 females—remained in the Institution at the close of the year. Two patients discharged during the year were again readmitted and discharged; and 2 others discharged during the year were readmitted.

The percentage of recoveries on the admissions for the year was 68·18, the highest yet attained; and in addition to this, 13·63 per cent. were discharged as relieved.

The percentage of recoveries for the quinquennial period, 1884 to 1888, was 48·64. The death-rate for the year was 5·94, and for the quinquennial period 4·30. Of the deaths, 3 were due to cerebral disease, 1 to inflammation of the lungs, 1 to disease of the liver, and 1 to cancer. On the 1st May last, the license for this Institution expired. The Medical Superintendent and proprietor thereupon submitted a plan

Observation Ward, H.M. Gaol, Darlinghurst.

This ward was inspected under the provisions of the Lunacy Act on February 28th, May 29th, August 29th, and November 30th, and on each occasion all the inmates were examined, the register checked, and the rooms and corridors visited. The treatment of the inmates was judicious and satisfactory, no complaints demanding investigation were made, and the registers and journal were found in good order and written up to date.

I found it necessary to object, at the visit paid in February, to the yard in which the inmates of the ward were allowed for exercise, as much too small and so placed as to be beyond the close observation of the officer in charge of the ward, and suggested that some other arrangement should be made. Owing to departmental difficulties it was not possible to provide another yard until the close of the year, but one has now been provided adjoining the ward, and so arranged as to give all proper facilities for air and exercise under the conditions necessary.

At the close of last year there were 3 patients remaining, and 48 were admitted during the year, coming under the provisions of 63rd Section of the Lunacy Act and Section 4 of the Lunacy Act Amendment Act, making altogether 51 under observation and treatment. Of these, 24 were discharged of sound mind, 10 were sent to the Hospital for the Criminal Insane, 9 were discharged to the Police Courts, and 8 remained at the close of the year. In addition to these 116 persons were received into the ward, and 3 remained from last year, who displayed some signs of mental disturbance whilst in gaol. Of these, 10 were awaiting trial at Superior, and 78 were under remand from Police Courts, whilst 31 were serving Police Court sentences.

Of this number 37 were discharged of sound mind, 75 were sent to the Police Courts and discharged, and 1 was sent to an Hospital for the Insane, and 6 remained at the close of the year.

The following return, furnished by the Comptroller-General of Prisons, gives the statistics of the ward for the year.

RETURN showing the number of persons received into the Observation Ward, H.M. Gaol, Darlinghurst, during the year 1888, the place whence received, and their disposal.

There being as yet no special institutions in country districts in which persons suffering from symptoms of insanity in its early stages can be received and treated, these cases are still received in gaol, and the accompanying return, for which I am indebted to the courtesy of the Comptroller-General of Prisons, shows the number received and treated during the year 1888. Of 387 under treatment, 230 were discharged as sane, 123 were transferred to Hospitals for the Insane, 24, being under some criminal disability, were transferred to other gaols, 2 died, and 8 remained at the close of the year.

## APPENDIX A.

Sir,

Hospital for the Insane, Gladesville, 6 March, 1889.

I have the honor to forward, for your information, a report upon this hospital for the year 1888.

At the beginning of the year there were 778 patients in the hospital. During the year 169—106 men and 63 women—were admitted. The whole number under treatment was 947, and the average number resident 741. There were discharged 175, of whom 96 had recovered, 8 were relieved, 12 were transferred to other hospitals, 3 escaped, and 56 died. There remained at the close of the year 492 men and 280 women, a total of 772.

The usual statistical tables are appended to this report; they call for no special comment. The proportion of recoveries is satisfactory, being 60% of those admitted. The death-rate is about the average for the last ten years—7.58%.

During the year, a neighbouring property, "The Priory," was added to the hospital estate by purchase by the Government. This property consists of a house, numerous outbuildings, cottages, and 20 acres of partly cultivated land. It is entirely surrounded by the hospital reserve, and contains the best—and, indeed, almost the only—land suited for farm purposes at the disposal of the hospital.

As soon as the purchase was concluded, such alterations to the house as were necessary to fit it for use by patients were made, and a number of patients and their attendants were sent to occupy it. The outbuildings and cottages were fitted up as cow-sheds, milk-house, farm overseer's residence, &c.; cows were purchased, and the new land and the reserve utilized as cow pasture. Already one-third of the milk used in the hospital is supplied by the farm. It is proposed during the present year to still further increase the number of cows, and it is hoped that soon all the milk required may be procured from the hospital farm.

The wards still continue much overcrowded, the average number resident being 57 in excess of the accommodation. This condition of crowded wards not only interferes with the comfort of the patients and the good management of the hospital, but it also prevents the staff giving to the recent and acute cases the individual care and attention necessary to ensure the highest recovery-rate. It seems, therefore, that additional accommodation must be provided by the erection of new buildings; and advantage might be taken of this to construct a hospital ward suited both for the treatment of the acute cases and for the proper training of the attendants in their duties,—to provide, in fact, at the same time, an acute hospital and a training school for the staff, as is done in general hospitals.

The water supply is still a source of great anxiety. The water which collects in the dam is of so polluted a nature as to be highly unsafe, and, though every precaution is taken to prevent it being drunk by the patients, its presence and use in the wards for cleansing purposes is always a source of danger. Until the Nepean water scheme is extended to the hospital it will be impossible to avoid using water from the dam, the underground tanks for rain water holding only sufficient for drinking and cooking purposes. During the drought in the early part of last year the local supply entirely gave out, and for some time it was necessary to procure water (at considerable expense) from Sydney.

I regret to have to record that Michael Cashman, outdoor attendant, died in the Prince Alfred Hospital, after an operation for removal of cancer of the tongue. He was an old and valued servant, and his place will not easily be filled. For thirty years he has been connected with the Hospital, and was the member of the staff who had been longest in its service.

The following donations have been received, and I take this opportunity of thanking the donors for their gifts:—Illustrated papers from the Proprietors of the *Tribune* newspaper, Mr. E. O. Smith, Mr. J. H. Adger, Dr. Lovel, and Mr. Morton; a large number of books from the members of the Sydney Rowing Club; a peacock and gold-fish from Mrs. Alex. McDonald; 2 bags of oranges from Rev. S. Wilkinson; a large quantity of clothing, &c., from Mr. R. Smith; £1 from Mrs. Shearman; £1 1s. from Dr. Lloyd; £2 2s. from Dr. Manning; £10 from the Executors of the late Mrs. West, through Dr. Manning; £5 from Mrs. Willis; £2 2s. from Dr. Ross; £20 from Mr. J. McPhillamy.

I have, on behalf of the Hospital, to tender thanks to those who kindly gave entertainments, theatrical performances, and concerts, viz.:—The Adelaide Militia Band; the Lotus Dramatic Club; Rev. Samuel Wilkinson and friends; Rev. W. Carruthers; the Gladesville Amateur Minstrels.

The proprietors of the following newspapers—*Bathurst Free Press*, *Deniliquin Chronicle*, *Weekly Advocate*, *Bathurst Daily Times*, *Burrangong Argus*, *Dubbo Dispatch*, *Goulburn Herald*, *Maitland Mercury*, *Queanbeyan Age*, *Manaro Mercury*, *Wagga Wagga Express*, *Western Post*, *Yass Courier*, *St. Leonard's Recorder*, and *Sydney Daily Telegraph*—have generously forwarded a copy of each issue free during the year.

To the officers and staff, I beg to tender my hearty thanks for the willing and efficient assistance they have rendered me during the year.

I have, &amp;c.,

ERIC SINCLAIR,

Medical Superintendent.

The Inspector-General of the Insane.

TABLE

TABLE 1.

SHOWING the admissions, readmissions, discharges, and deaths, in the Hospital for the Insane, Gladesville, during the year 1888.

Table with columns for Male, Female, Total. Rows include: In Hospital on 31st December, 1887; Admitted for the first time during the year; Readmitted during the year; Transferred during the year; Total under care during the year; Discharge or removal—Recovered, Relieved, Transferred, Escaped (and not recaptured), Died; Total discharged or died during the year; Remaining; Average number resident during the year; \* Persons under care during the year; \* Persons admitted; \* Persons recovered.

\* Persons, i.e., separate persons in contradistinction to "cases" which may include the same individual more than once. † Total cases minus readmission of patients discharged during the current year.

TABLE 2.

SHOWING the admissions, readmissions, discharges, and deaths, with the mean annual mortality and the proportion of recoveries, &c., per cent., at the Hospital for the Insane, Gladesville, from the year 1869 to 1888 inclusive.

Large table with columns for Year, Admitted (M, F, Total), Transferred from other Hospitals, etc., Discharged (Re-covered, Re-lieved, Total), Transferred to other Hospitals, etc., Escaped and not recaptured within 28 days, Died, Remaining in Hospital 31st Dec., Average number resident, Percentage of recoveries on admissions and readmissions, Percentage of patients relieved on admissions and readmissions, Percentage of deaths on average numbers residents.

TABLE

TABLE 3.

APPENDIX B.

Sir, Hospital for the Insane, Parramatta, 4 March, 1889.

I do myself the honor to forward, for your information, a report upon this hospital for the year 1888, with the statistical tables for the same period.

On the 31st of December, 1887, there were 969 patients in the Hospital—634 men and 335 women; of that number 83 men and 29 women—total 112—were admitted during the twelve months, making the total number under care 1,081—717 men and 364 women. Of this number 32 recovered, 6 were transferred to other hospitals, 1 was sufficiently convalescent to be discharged to the care of her friends, and 53 died, leaving 989 patients—651 men and 338 women—in the Hospital on the 31st of December, 1888, this being an increase of 20 patients during the year, *i.e.*, 3 women and 17 men.

The percentage of recoveries on admissions and readmissions is higher, and the death-rate lower than during 1887.

The escapes have been very few, and in all cases the patients were returned to the hospital either by the attendants, or police authorities, within a few hours of getting away.

The general health of the patients as a whole, has remained good; two sudden deaths from epilepsy occurred during the latter part of the year, both being women, and in each case a report was immediately sent to the District Coroner, who, however, did not consider an inquiry necessary. A report also was forwarded to your office according to instructions received from you.

The epileptics, suicidal cases, and other patients, who from various causes require extra and continuous supervision, are now placed in a separate ward at night-time under the care of a nurse, whose special duty it is to look after them.

The accidents that have occurred have been more numerous and of a more serious nature than in the previous year, but none were attended with fatal results. One member of the nursing staff was injured in a struggle with a violent patient to such an extent that she was, and is still incapacitated from performing her duty.

I am pleased to be in a position to report that a portion of the male weatherboard division has been roofed with galvanized iron, but the dormitories still have their shingle covering only, and so remain a dangerous element, and liable to fire.

A number of patients have as usual been employed under the supervision of the several artizans connected with the establishment.

I desire to draw your attention to the fact that the carpenter has more work on his hands than he can perform, the large area of wooden buildings requiring more attention and repair as year succeeds year. The number of patients who are able to do carpentering work, even of the roughest description, is limited, and had it not been for the extra help given by one or two attendants, the work must have fallen sadly in arrears. I should be glad if authority could be granted for the employment of an additional attendant or assistant carpenter, more especially as I have been unable to spare any of the staff for the mattressing-room, the extra help being needed in the carpenter's shop.

The work of excavating, &c., at the back of the hospital, where an artificial lake is being formed, is still proceeding, but a great deal remains to be done.

The brickwork of the Amusement Hall is almost completed, and the carpenters have commenced work on the roof.

The customary Sunday services have been regularly conducted, and amusements of various kinds organized, and duly appreciated by those taking part in them.

The hospital and epileptic wards remain in the same condition as at my last report, and the single room accommodation is still much too small to allow of the necessary separation of violent, dangerous, and noisy patients during the night. Very little has been done on the farm in connection with the Institution during the year. The pig-styes are only half completed, owing to the want of funds and labour, but I hope to be in a position to finish them within the next twelve months. The pigs as usual have been very profitable; the fruit has been small in quantity, and poor in quality; and the vegetables have been anything but plentiful owing mainly to the excessive dryness of the season.

A much better supply of fruit and vegetables could be obtained by irrigation even in ordinary seasons, and plans for carrying out this in a satisfactory manner are under consideration.

The supply of milk has not been so large as usual owing to the drought, and the very small amount of grazing ground at disposal.

I again venture to suggest that the piece of ground formerly belonging to the Roman Catholic Orphanage, and in close proximity to this hospital, should be handed over and utilized for dairy purposes.

About the middle of the year the buildings formerly known as the Protestant Orphanage were transferred to the Lunacy Department, and immediately occupied by a few patients and the attendants in charge of them.

A great many alterations and repairs have been effected, and accommodation is now being arranged for nearly a hundred patients, and will, I anticipate, be ready by the end of the current year.

Already the overcrowded wards of this Hospital have been relieved by the transfer of 30 patients who are now comfortably housed, and are engaged in carrying out improvements in the gardens and other parts of the estate.

In concluding my report I have again to thank Dr. Williamson, Mr. Colley, and the officers and members of the staff generally, for their efficient aid during the year.

I have, &c.,  
EDWIN GODSON,  
Medical Superintendent.

The Inspector-General of the Insane.

TABLE 1.

Showing the admissions, readmissions, discharges, and deaths, in the Hospital for the Insane, Parramatta, during the year 1888.

	Male.	Female.	Total.
In Hospital on 31st December, 1887 .....	634	335	969

*Persons admitted .....	69	26	95
*Persons recovered .....	24	8	32

\* Persons, i.e. separate persons in contradistinction to "cases" which may include the same individual more than once.

† Total cases minus

readmission of patients discharged during the current year.

TABLE 2.

SHOWING the admissions, readmissions, discharges, and deaths, with the mean annual mortality, and the proportion of recoveries, &c., per cent., at the Hospital for the Insane, Parramatta, for the years 1876 to 1888 inclusive.

Table with columns: Year, Admitted (M.F. Total, Re-admitted), Transferred from other Hospitals, Discharged (Re-covered, Re-leased), Transferred to other Hospitals, Escaped and not recaptured, Died, Remaining in Hospital, Average number resident, Percentage of recoveries, Percentage of patients relieved, Percentage of deaths. Rows 1876-1888.

TABLE 3.

SHOWING the causes of insanity\*, apparent or assigned in the admissions and readmissions in the Hospital for the Insane, Parramatta, during the year 1888.

Table with columns: Cause of insanity, As predisposing cause, As exciting cause, Total. Rows include MORAL (Domestic trouble, Adverse circumstances, etc.), PHYSICAL (Intemperance, Venereal disease, etc.), PREVIOUS ATTACKS, HEREDITARY INFLUENCE, CONGENITAL DEFECT, OTHER ASCERTAINED CAUSES, UNKNOWN.

\* These "causes" are taken from the statement in the papers received with the patients on admission, and are verified or corrected as far as possible by the Medical Officers.
† No cause is enumerated more than once in the case of any patient.
‡ The aggregate of the totals exceeds the whole number of patients admitted, the excess being due to the combinations.

## APPENDIX C.

The Medical Superintendent, Hospital for the Insane, Callan Park, to The Inspector-General of the Insane.

Sir,

Hospital for the Insane, Callan Park, 4 March, 1889.

I do myself the honor to submit for your information a report on this hospital for the year 1888, and to forward the usual statistical tables.

On the 31st December, 1887, there were in the institution 668 patients—398 males and 270 females. During the year 1888, 252 patients were admitted for the first time—150 males and 102 females,—25—14 males and 11 females—were readmitted, and 8 were transferred from other hospitals for the Insane, making a total of 953—569 males and 384 females—under care.

The average number resident was 702—422 males and 280 females. 129—81 males and 48 females—were discharged as recovered, 18—11 males and 7 females—as relieved, and 57—37 males and 20 females—died, making a total of 223 discharges, deaths, &c., and leaving a total of 730 patients in hospital at the end of the year—427 males and 303 females.

The percentage of the recoveries on the admissions and readmissions was 46·57, and the percentage of deaths on the average number resident was 8·26.

Fifty-eight deaths occurred during the year, 38 being due to cerebral disease, 7 to consumption, and 5 to general debility and old age.

I am glad to state that the general health of the patients has been exceedingly good throughout the year.

During the year a serious accident occurred, being the outcome of a sudden quarrel between fellow-patients. The case unfortunately ended fatally, and formed the subject of a coroner's inquest, which resulted in a verdict of manslaughter being brought in against the patient striking the fatal blow. This patient was shortly afterwards transferred to the Hospital for the Criminal Insane at Parramatta.

There were several other minor accidents, the most serious being: 1st, a compound fracture of both bones of the left leg, sustained by a female patient whilst struggling in an epileptic fit; 2nd, an intracapsular fracture of the right thigh bone, received by an elderly female patient through falling during the night; 3rd, a dislocated shoulder, received by a female patient whilst fighting with another at night-time; 4th, the fracture of two ribs in an old man who fell against the edge of a bath; and 5th, a severe injury to the head from a fall. These cases formed the subject of reports to you at the time they occurred.

The escapes numbered eight, but with the exception of two all were retaken within the statutory period, and none call for particular remark.

Only one patient was received this year direct from ships arriving in the Colony.

The detached cottage and building set apart for paying male patients were tenanted for the first time in May. The patients residing in these buildings have special accommodation. Their meals and their surroundings are more in consonance with their usual manner of living before entering the hospital, and they evidently appreciate what is done for their comfort.

The wards generally in both divisions have assumed a more home-like and cheerful appearance. The whole of the day rooms and dormitories are now painted in bright and pleasing colours. Curtains to the windows in three of the day-rooms in the female division have wonderfully brightened them, and with a few pot plants and cut flowers on the tables they have a cheerful and comfortable look.

All the airing courts attached to the wards are now nicely laid out in flower beds and grass plots, and the nurses and attendants take special pride in having them carefully tended and in inducing the patients to interest themselves in the work also, often I am pleased to say with great success. In addition to the flower gardens, the wards are plentifully supplied with tame pets of all kinds. Parrots, magpies, wild-ducks, seagulls, gold-fish, &c., all receive their share of attention, and I am glad to say that seldom, if ever, is any harm done to them by even the most irritable of the patients; many indeed make special favorites of them.

Much anxiety and heavy and continuous work have been caused by the discovery of leaks from drainage and other pipes in the wards of the female division. In one ward the sewage from some of the drainage pipes found its way into the overflow pipe of the fresh-water tank, owing to the pipes in each case being badly joined. From this there was, of course, the danger of the fresh water being contaminated with the sewer gas, and it was found necessary to lift and relay nearly the whole of the pipes in the ward, and to build a tongue trap in the overflow pipe close to where it is connected with the tank. The labour (as most of the pipes were several feet underground) occupied a considerable time, involved some expense, and destroyed and damaged the flower-beds and paths, which had only recently been laid out, and planted. Other leaks in various places can be noticed, all evidently due to the same cause, the faulty laying and jointing of the pipes, and the source of the leakage will be searched for as soon as labour is available for the purpose.

On the completion of the new hospital it was found that no provision had been made for heating and furnishing the Turkish bath-rooms, and, as I am anxious to have these started as soon as possible, as an important adjunct to the treatment of the patients, I have forwarded a requisition to the Colonial Architect through your office, asking that the necessary work may be carried out. It is also advisable that swimming baths should be erected at some suitable spot in the bay, at an early date.

The connection of the central wards and offices by telephone is now nearly completed, and will be a of great assistance in bringing patients and their friends together on visiting days in a shorter time than has hitherto been possible, as each patient had formerly to be sent for by a special messenger. I am also glad to report—after the large cost and constant trouble in connection with the electric bells—that the contractor for the telephones has agreed to keep them in good working order for twelve months after his contract is finished.

During the year new fowl-yards have been fenced in and laid out, fowl-houses erected, and everything done to try and secure a bountiful supply of eggs for the patients.

It was discovered during the year that pilfering of bran, bones, vegetables, &c., from the farm buildings had been carried out with some measure of success, and it is therefore advisable that a cottage for the farm attendant should be erected close to the farm buildings, which are at present quite unprotected and are situated close to the road, so that it is in the power of anyone so disposed to carry on a systematic course of pilfering without much risk of discovery. A requisition for the erection of this cottage has already been forwarded to your office.

The

The accommodation provided for friends of patients on visiting days, and for the patients working in the tailor's shop, have proved quite inadequate, and additional rooms are now being erected and will shortly be completed. In conjunction with these, store-rooms have been erected for the boxes, clothing, &c., received with patients on admission, and also a bed-room for another laundress.

An asphalt tennis court has been laid out in a corner of the cricket ground, and several new plantations have been trenched and fenced, and will shortly be planted, in the grounds outside the female division and near the engine house; and a rosery has been planted on a blank space outside No. 1 male. This work, together with the repairing and formation of roads, and the work of reclamation and drainage at the Bay, has kept the outdoor staff fully occupied and given many patients healthy employment.

A fair proportion of the patients have been usefully employed during the year, and the attendance at Divine service has been satisfactory, both chaplains—Church of England and Roman Catholic—attending regularly.

Amusements of various kinds have been provided for the patients throughout the year, and the usual fortnightly dances were held during the winter.

I am indebted to Mr. F. Russell for his kind and regular attendance at the harmonium during the Church of England services on Sunday, and to the several ladies and gentlemen who gave gratuitous musical and dramatic entertainments for the amusement of the patients.

I have also to acknowledge with thanks the following gifts and donations to the hospital:—Books, periodicals, music, &c., from Mr. Johnson, Mrs. J. Norton, Mrs. Whitton, Mrs. Thring, Messrs. J. Fairfax and Son, Mr. W. H. Paling, and Anonymous; 1 crow and gold and silver fish from Dr. Cox; 2 bags oranges from Rev. S. Wilkinson; 1 pair wood ducks from Mr. Shortland; black and mountain ducks from Mr. F. Blaxland and Mr. A. Betts; framed picture from Dr. Manning; and £1 ls. from the Northern Assurance Company.

The following bands have performed gratuitously during the year in the Cricket Paddock or Amusement Hall:—Naval Volunteer Artillery Band, Balmain Alliance, Randwick, and St. Benedict's Fife and Drum.

To the officers and staff I tender sincere thanks for their cordial assistance throughout the year.

I have, &c.,

HERBERT BLAXLAND,  
Medical Superintendent.

TABLE 1.

## APPENDIX D.

Sir, Lunacy Department, Hospital for the Criminal Insane, Parramatta, 12 March, 1889.

I do myself the honor to forward herewith a report upon this hospital for the year 1888, together with the usual statistical tables.

The number of patients remaining in hospital on the 31st of December, 1887, was 62—53 men and 9 women; 15 men and 2 women were admitted during the year, making the total under care and treatment 79—68 men and 11 women. Two men were discharged, 9 men and 2 women were transferred to the Hospital for the Insane, and 3 men died, leaving a total of 54 men and 9 women in the institution on the 31st of December, 1888, or 1 more than on the same date of the previous year.

I have appended two tables to this report—one showing the classification of the crimes committed by patients admitted during the year, and the other those of patients remaining in the hospital on the 31st of December, 1888.

The percentage of recoveries on admissions was 12.50, and the death-rate, calculated on the average number resident, 5.08.

Death in two instances was caused by the natural decay of old age, both patients having passed the three score years and ten. The third was due to phthisis. The general health of the patients has been good.

The only accident that occurred was due to a quarrel between two patients, one of whom sustained a fracture of the radius.

A large proportion of the patients are occupied in the cultivation of vegetables, sawing and splitting wood, &c., and many more, who, from various causes, are not permitted to leave the airing-courts, are engaged in teasing the hair and coir with which the mattresses are filled.

The three corridors have been repainted from top to bottom by the inmates of this division, and the airing-courts have all been coated with tar, the advantages of which are fully appreciated both by patients and attendants during wet weather.

The small seclusion yard mentioned in my last report, and which is now never used, remains in the same condition; and I would again venture to urge the advisability of its being transformed into a small dormitory which could be utilized for hospital purposes in connection with this division, as at present there is no special accommodation for patients who may be attacked by acute physical disease.

Nine patients were transferred to the Hospital for the Insane on the expiration of their sentences, no improvement having taken place in their mental state; and two were transferred under section 62 of the Lunacy Act.

The following tables show the admissions, &c.

I have, &c.,

EDWIN GODSON,  
Medical Superintendent.

The Inspector General of the Insane.

1889.

NEW SOUTH WALES.

NAUTICAL SCHOOL SHIP "VERNON."

(REPORT FOR 1888-9.)

Printed in accordance with Resolution of both Houses of Parliament.

The Superintendent N.S.S. "Vernon" to The Under Secretary of Public Instruction.

Sir,

Nautical School Ship "Vernon," Sydney, 2 May, 1889.

I have the honor to submit my annual report upon the Nautical School Ship "Vernon," for the year ended the 30th April, 1889. The Institution was established at the commencement of May, 1867, and has thus completed its twenty-second year.

2. The work of the Institution continues to steadily increase, and the year's operations showed a larger number of admissions and discharges than in any previous year. 209 boys were admitted and 207 left the ship. In all, 436 boys were dealt with on board during the twelve months.

3. The accommodation has been severely strained throughout, and the ship has been overcrowded. Notwithstanding, the health has been excellent. No deaths have occurred and no serious sickness. An unusual number of new-comers were found suffering from itch on arrival, and that complaint has principally made up our sick-list. At the present time we are entirely free from any illness whatever. It may be here mentioned that only two deaths have taken place during the last thirteen years, out of 1,784 boys who have been on board. Both deaths were from heart disease, with which the two lads were severely suffering when admitted.

4. The conduct of the inmates has been admirable. No abscondings have taken place. The gravest offences have consisted of apprentices having to be returned to the ship for misconduct at their situations. There are now only eighteen lads, including new-comers, in the lowest conduct class. The boys have been cheerful and contented, and a healthy public feeling has been maintained amongst them.

5. The apprentices have increased and the daily average of these under my control was 450. Few complaints have reached me respecting them, and the reports of a recent inspection, together with the letters of masters, visitors, and boys, give the following results:—

Total number of apprentices	...	...	...	...	450
Favourably reported upon	...	...	...	...	420 = 93 per cent.
Unfavourably reported upon	...	...	...	...	30 = 7 "

Some of these lads have been upwards of five years away, and some of them now doing well, were unfavourably reported upon in the preceding year. These latter were brought back to the ship, and after another period of probation were placed in other situations with good results. That so many of our boys do well at service is very largely attributable to the great assistance rendered by the Inspector-General of Police, and by the benevolent persons who so kindly visit the lads.

6. Particulars of the school work done on board will be found given in table I. Nearly a third of the new-comer lads received no education prior to being sent on board; and three-fourths of the remainder could barely read. Every boy receives three hours school instruction daily. Mr. District-Inspector McCredie, in his recent inspection, made the following remarks:—"Order—good. Discipline—good. Proficiency—tolerable."

7. A considerable reduction has taken place in the expenditure per head. The ship cost £300 less than the preceding year, notwithstanding more boys were dealt with. The lads on the ship cost £23 each. Altogether, including the apprentices, 669 boys was the average daily number under my control, and the cost for the year £7 18s. 9d. each, which is the lowest sum yet reached.

8. Religious instruction has been conducted on board by the Rev. W. Charlton, Rev. J. Hagarty, Rev. A. Turnbull, Rev. A. Boyle, the Sisters of St. Joseph, Mrs. Ford, and occasionally by other ladies and gentlemen. The religious instructors are worthy of all praise for their kindness and earnest labours. On Sundays the boys landed and marched to their respective places of worship.

9. A large number of ex-"Vernon" apprentices visited us during the year, and a correspondence has been maintained to the extent of many hundreds of letters, with a still larger number of former inmates. It is one of the most pleasant things in connection with the ship to find that such a friendly feeling prevails.

10. The officers continue to perform their duties in a cheerful, hearty spirit. They have shown an interest in their work, and have been patient and kind to the boys.

I have, &c.,

FREDK. W. NEITENSTEIN,

Commander and Superintendent.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**SYDNEY AND PRINCE ALFRED HOSPITALS.**  
(PARTICULARS RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 11 September, 1889.*

[Laid upon the Table in accordance with promise made in answer to Question No. 12, of 29 August, 1889.]

Questions.

- (12.) Sydney Hospital:—Mr. JOSEPH ABBOTT asked the COLONIAL SECRETARY,—
- (1.) What amount of subsidy has been paid by the Government to the Sydney Hospital for the year 1888, exclusive of all sums paid for the maintenance and treatment of paupers?
  - (2.) What amount was paid by the Government for the maintenance and treatment of paupers in the Sydney Hospital for the year 1888, exclusive of the sum paid as subsidy?
  - (3.) The same information in both cases for the seven months ending 31st July, 1889?
  - (4.) What was the number of patients admitted for treatment at the public expense, under Government orders, to the Sydney Hospital during the year 1888?
  - (5.) The same information for the seven months ending 31st July, 1889?
  - (6.) What was the daily average number resident of patients treated at the public expense in the Sydney Hospital during the year 1888?
  - (7.) The same information for the seven months ending 31st July, 1889?
  - (8.) What was the daily average number resident of all patients treated in the Sydney Hospital during the year 1888?
  - (9.) The same information for the seven months ending 31st July, 1889?
  - (10.) What was the average length of residence in days of each patient treated at the public expense in the Sydney Hospital during the year 1888?
  - (11.) The same information for the seven months ending 31st July, 1889?
  - (12.) What is the rate per diem allowed by the Government for the maintenance and treatment of pauper patients in the Sydney Hospital?
  - (13.) Similar information to the foregoing, in all its details, to be supplied with reference to the Prince Alfred Hospital?

Sir HENRY PARKES answered,—I will lay a Return, giving the required information, upon the Table next week.

Answers.

- (1.) Subsidy paid for year 1888:—Sydney Hospital, nil; Prince Alfred Hospital, £4,000.
- (2.) Paid for pauper patients during 1888:—Sydney Hospital, £5,985 Os. 6d.; Prince Alfred Hospital, £5,208 16s. 3d.
- (3.) Subsidy paid for seven months ended 31st July, 1889:—Sydney Hospital, nil; Prince Alfred Hospital, nil. Paid for paupers for seven months ended 31st July, 1889:—Sydney Hospital, £3,906 4s. 6d.; Prince Alfred Hospital, £2,162 16s.
- (4.) Number of pauper patients admitted at Government expense during 1888:—Sydney Hospital, 1,122; Prince Alfred Hospital, 766.
- (5.) Number of paupers admitted at Government expense during seven months ended 31st July, 1889:—Sydney Hospital, 691; Prince Alfred Hospital, 302.
- (6.) Average daily number of Government patients during 1888:—Sydney Hospital, 112; Prince Alfred Hospital, 85.
- (7.) Average daily number of Government patients during seven months ended 31st July, 1889:—Sydney Hospital, 122; Prince Alfred Hospital, 61.
- (8.) Average daily number of all patients during 1888:—Sydney Hospital, 218; Prince Alfred Hospital, 198.
- (9.) Average daily number of all patients during seven months ended 31st July, 1889:—Sydney Hospital, 245; Prince Alfred Hospital, 201.
- (10.) Average length of stay of pauper patients during 1888:—Sydney Hospital, 35\* days; Prince Alfred Hospital, 43 days.
- (11.) Average length of stay of pauper patients during seven months ended 31st July, 1889:—Sydney Hospital, 37\* days; Prince Alfred Hospital, 42 days.
- (12.) Rate per day allowed for pauper patients:—Sydney Hospital, 3s.; Prince Alfred Hospital, 3s.

\* Including patients treated at Moorecliffe Ophthalmic Hospital. The length of stay of Government patients in the Sydney Hospital, excluding Moorecliffe, was, for 1888, 28 days; and for the seven months ended 31st July, 1889, 27 days.

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

INFANTS' HOME AT ASHFIELD AND THE NIGHT  
REFUGE FOR WOMEN.

CORRESPONDENCE, &c., REGARDING STATEMENTS MADE BY HIS EMINENCE CARDINAL MORAN, RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 20 June, 1889.*

The Principal Under Secretary to The Secretary to His Eminence Cardinal Moran.

Reverend Sir,

Colonial Secretary's Office, Sydney, 13 June, 1889.

I am directed by the Colonial Secretary to request that you will be good enough to ask His Eminence the Cardinal to kindly mention the institution to which he referred in his recent address at Petersham, as after careful inquiry no trace of any such inhuman acts as His Eminence described can be found in connection with any asylum under the control of, or subsidised by, the Government.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

The Secretary to His Eminence Cardinal Moran to The Principal Under Secretary.

Dear Sir,

St. Mary's Cathedral, Sydney, 14 June, 1889.

In reply to your kind favour of yesterday's date I am directed by His Eminence the Cardinal to forward to you, for the Colonial Secretary, the enclosed letter, published in this morning's *Sydney Morning Herald*, and in which His Eminence explains the principal facts of one of the two cases referred to in his utterances at Petersham on the 9th inst. The other institution to which His Eminence referred is the Sydney Night Refuge.

His Eminence the Cardinal desires me to convey to you his grateful thanks for the trouble you have taken in having these matters investigated.

I have, &c.,

DENIS F. O'HARAN,  
Secretary.

[Enclosure.]

CARDINAL MORAN AND THE INFANTS' HOME.

To the Editor of the *Herald*.

Sir,—The letter which appears in your issue of this morning, over the signature of Mrs. Ada Docker, does not set in their true light all the facts connected with the case of the Ashfield Infants' Home, to which I referred at Lewisham on Sunday last.

The pastor in charge of the Ashfield district was informed by a Protestant gentleman that there were Catholic inmates, some of them in a dangerous condition, in the Infants' Home, who were desirous of receiving religious consolation at his hands, and in particular that there was one who belonged to his immediate pastoral charge. The priest presented himself at the institution, and requested permission to visit the Catholic patients. The Lady Superintendent, Miss Crowley, received him with every courtesy, but said she should consult the ladies' committee before she could grant him the desired permission. He insisted that, as the institution was supported by public funds, it was within his right, as it was his duty, to visit at least the inmate who was one of his own spiritual flock and desired his sacred ministrations. The lady superintendent then permitted him to see this particular patient, but with the understanding that the ladies' committee was to be consulted before he would visit any of the other inmates. In a few days Miss Crowley forwarded to the priest the following note:—"Dear Sir,—The enclosed is a copy of instructions received with regard to the Catholic girls. Faithfully yours, M. CROWLEY, Lady Superintendent, Infants' Home. [Enclosure]—Dear Miss Crowley,—The committee wish me to tell you that they do not approve of allowing the Roman Catholic girls to see a priest at the Home. Neither will they permit Roman Catholic girls to go out to mass. They must conform in all these matters to such rules as are laid down for the Protestant girls, and go only where the Lady Superintendent directs."

Such instructions would be considered intolerant in any Christian land, and I trust that the ladies' committee will see fit to cancel them without delay.

Mrs. Docker writes that about half of those who are admitted to the institution are Catholics. The Official Report on Public Charities further informs us that the children inmates are, as a rule, in a sickly and often in a dying condition, and, on an average, more than 50 deaths are registered there every year. Nevertheless the priest is not admitted to baptize the children, or to administer the sacraments to the Catholic mothers. It is true that the inmates are poor and miserable, but the greater their

their misery and poverty the more pressing is the need for bringing to them the consolations of religion. A sum of £1,000 a year is granted by Government to the Infants' Home, but assuredly it is not the intention of the Legislature that the institution should be administered in such a spirit of irreligious intolerance. The Protestant clergyman visits the institution and baptizes the children of the Catholic mothers. Those who die, for whose interment the institution provides, are all interred in the Protestant cemetery. Thus, in their sickness, they are deprived of the consolations which their faith provides for them, and they are denied the rites of religion after death.

The intolerance, however, of the Infants' Home does not end here. The children that survive and are cared for by the institution are transferred to Protestant homes in Begg-street or elsewhere, and are all reared Protestants.

More than twelve months ago I publicly referred to the intolerance prevalent in the Infants' Home, but no attention was paid by the Protestant public to my words. If greater interest has been extended to my remarks on the present occasion, I probably owe it to the criticism of the *Herald*, and to the considerate attention shown to my speech by Mr. Abigail in the Legislative Assembly.

I am, &c.,

† PATRICK FRANCIS CARDINAL MORAN,  
Archbishop of Sydney.

St. Mary's Cathedral, Sydney, June 13.

### Francis Abigail, Esq., M.P., to The Colonial Secretary.

My dear Sir Henry,

589, George-street, 13 June, 1889.

May I direct your attention to the letter of Ada M. Docker, hon. treasurer of the Infants' Home, Ashfield, which appears in to-day's *Herald*, having reference to Cardinal Moran's remarks. It gives a flat denial to the Cardinal's statements so far as that institution goes, and gives an additional reason for a searching inquiry into the truth of the statements. May I ask to be informed when the inquiry is completed, and the result, for as I stated in the House that having given fourteen years' service to many of our public charities, and knowing that the fullest measure of liberty and kindness has always been shown to the inmates, without considering which church they belong to, I feel much interested in the result of the inquiry. I feel sure if it be proved that any of the officials of any institution I am connected with have acted as stated by the Cardinal, they will be severely punished. Hoping it may turn out to be a mistake.

I am, &c.,

F. ABIGAIL.

### Minute by The Principal Under Secretary.

*Subject* :—Infants' Home, Ashfield.

THE Director of the Government Asylums reported yesterday that he could not find any instance of improper treatment of inmates in any of the asylums under his immediate control, nor in any of the other charitable institutions receiving partial aid from the State; but, in view of the statements made in this morning's *Herald* by Cardinal Moran, regarding the conduct of the Committee of the Infants' Home at Ashfield towards its inmates, I would recommend that Mr. Maxted be appointed to make a full and searching inquiry into the whole matter.

C.W.,

14/6/89.

Approved.—H.P., 14/6/89.

### The Principal Under Secretary to The Director of the Government Asylums.

Sir,

Colonial Secretary's Office, Sydney, 14 June, 1889.

I am directed by the Colonial Secretary to request that you will be good enough to make a full and searching inquiry regarding the statements made by His Eminence Cardinal Moran, respecting the Infants' Home at Ashfield and the Night Refuge for Women.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

[Enclosures.]

EXTRACT from Address delivered by His Eminence Cardinal Moran, on Sunday, 9th June, in connection with the Children's Hospital at Lewisham.

HE was sorry that in some of the institutions around them which received the subsidy of the State the same spirit of charity did not prevail. A few days ago, whilst the terrible hurricane was sweeping over the city, a good Catholic lady, being penniless, far away from home, and fearing to encounter the storm, entered one of those night asylums. Having rested for a time she was summoned to night prayers. She said that she was a Catholic and could not conscientiously join in any worship that was not in accordance with her Church. She was told that if she did not join in the prayers the door was open and she must go out. Nothing remained for that woman but to face the pitiless storm rather than do that which was against her conscience. They had another instance of the same kind of spirit almost at their doors, in an institution known as the Children's Home. Some time ago a poor Catholic woman who was there was anxious to have the assistance of a priest. The secretary gave word to the priest that priests could not be admitted. At his (the Cardinal's) request the priest wrote inquiring whether any mistake had been made in that matter, and he got an official reply stating that a majority of the ladies had approved of the rule, and no priests would be admitted. He trusted that neither in that institution nor any single Catholic institution throughout the length and breadth of the land would such bigotry be shown. (Cheers.) The only thing they desired to do was to treat those who treated them in that way, and poured out offensive tirades every day in the papers against their holy faith, with the greatest charity. Should those who differed from them require their aid they would willingly give it. (Applause.)

Extracts from the *Sydney Morning Herald*, Thursday, 13 June, 1889.

IN reply to the statement made by Cardinal Moran, to the effect that upon a Catholic woman at the Children's Home applying for a priest, the secretary gave word that no priest could be admitted, Mrs. Wilfred Docker, the hon. treasurer to the Home, writes :—"No woman in the Infants' Home ever asked to see a priest, but a priest called at the Home, requesting to see one of the inmates. He was allowed to do so, when he questioned her as to other women who were there, and asked to see them one by one. The Lady Superintendent told him that she had never before had such a request made to her, and she must decline to let him see them."

CARDINAL MORAN ON OUR CHARITIES.

To the Editor of the *Herald*.

Sir,—I had not thought of replying to the remarks made upon the Infants' Home, Ashfield, by Cardinal Moran on Sunday last, but I see Mr. Abigail has raised the question in the House, and I think the public and those who are interested in the work done by the Committee of the Infants' Home may perhaps like to hear my statement if you will kindly find room for it in the columns of the *Herald*.

It is nearly two years ago since a letter was sent to us by a Roman Catholic priest from a poor girl in the country who had asked him to ascertain if her child, whom she had deserted and left on the door-step of the Home, was still alive. It was a most heartrending letter, dated a whole year before, in which the writer told him how sorely she regretted the step she had taken, and begged for some news of her infant. Every attention and courtesy were shown in this matter, but as no sex was mentioned, and no reliable date given, and the letter had been written so long before, it was impossible to identify the infant, and we could only say that all the foundlings admitted about that time were dead. No woman in the Infants' Home ever asked to see a priest; but shortly after the letter above referred to was answered that same priest called at the Home requesting to see one of the inmates. He was allowed to do so, when he questioned her as to the other women who were there, and asked to see them one by one.

The Lady Superintendent, who considered this a breach of the privileges extended to those who sought refuge in the Home, told him that she had never before had such a request made to her, and she must decline to let him see them. The Infants' Home at Ashfield is for the reception of destitute and motherless infants, and for the reception of those women who have fallen for the first time, with their infants. They remain in the Home until these children are of an age to do without them, when situations are obtained for the mothers, in many cases with their children, or the children are retained in the Home, according to circumstances. The Home is not a hospital; when the women fall ill they are taken to the ordinary hospitals. The Home is not a prison; the women are allowed to go out when they please. The Home is in fact a refuge for those who are in sorrow and trouble. There are in the Home at the present time nearly 60 children and about 25 women. A large proportion, if not more than half, of the applicants admitted are Irish Roman Catholics, and this has been the case ever since the Home was established.

Out of the larger number of wealthy Roman Catholics of Sydney I think I am quite correct in stating that there are not half a dozen who have been generous enough to subscribe to this charity, which so largely helps their own people.

I think this is a sufficient comment upon the Christian charity and good taste of Cardinal Moran in denouncing an Institution which has always thrown open its doors widely to receive Irish Roman Catholics.

I am, &c.,

ADA M. DOCKER,

Hon. Treasurer.

June 12.

Extract from the *Sydney Morning Herald*, Friday, 14 June, 1889.

CARDINAL MORAN AND THE INFANTS' HOME.

To the Editor of the *Herald*.

Sir,—The letter which appears in your issue of this morning, over the signature of Mrs. Ada Docker, does not set in their true light all the facts connected with the case of the Ashfield Infants' Home, to which I referred at Lewisham on Sunday last.

The pastor in charge of the Ashfield district was informed by a Protestant gentleman that there were Catholic inmates, some of them in a dangerous condition, in the Infants' Home, who were desirous of receiving religious consolation at his hands, and in particular that there was one who belonged to his immediate pastoral charge. The priest presented himself at the Institution and requested permission to visit the Catholic patients. The Lady Superintendent, Miss Crowley, received him with every courtesy, but said she should consult the ladies' committee before she could grant him the desired permission. He insisted that as the Institution was supported by public funds it was within his right, as it was his duty, to visit at least the inmate who was one of his own spiritual flock, and desired his sacred ministrations. The Lady Superintendent then permitted him to see this particular patient, but with the understanding that the ladies' committee was to be consulted before he would visit any of the other inmates. In a few days Miss Crowley forwarded to the priest the following note:—"Dear Sir,—The enclosed is a copy of instructions received with regard to the Catholic girls. Faithfully yours, M. CROWLEY, Lady Superintendent, Infants' Home. (Enclosure)—'Dear Miss Crowley,—The Committee wish me to tell you that they do not approve of allowing the Roman Catholic girls to see a priest at the Home. Neither will they permit Roman Catholic girls to go out to mass. They must conform in all these matters to such rules as are laid down for the Protestant girls, and go only where the Lady Superintendent directs.'"

Such instructions would be considered intolerant in any Christian land, and I trust that the ladies' committee will see fit to cancel them without delay.

Mrs. Docker writes that about half of those who are admitted to the Institution are Catholics. The official Report on Public Charities further informs us that the children inmates are, as a rule, in a sickly and often in a dying condition, and, on an average, more than fifty deaths are registered there every year. Nevertheless the priest is not admitted to baptize the children or to administer the sacraments to the Catholic mothers. It is true that the inmates are poor and miserable, but the greater their misery and poverty the more pressing is the need for bringing to them the consolations of religion. A sum of £1,000 a year is granted by Government to the Infants' Home, but assuredly it is not the intention of the Legislature that the Institution should be administered in such a spirit of irreligious intolerance. The Protestant clergyman visits the Institution and baptizes the children of the Catholic mothers. Those who die, for whose interment the Institution provides, are all interred in the Protestant cemetery. Thus, in their sickness, they are deprived of the consolations which their faith provides for them, and they are denied the rites of religion after death.

The intolerance, however, of the Infants' Home does not end here. The children that survive and are cared for by the Institution are transferred to Protestant homes in Begg-street or elsewhere, and are all reared Protestants.

More than twelve months ago I publicly referred to the intolerance prevalent in the Infants' Home, but no attention was paid by the Protestant public to my words. If greater interest has been extended to my remarks on the present occasion, I probably owe it to the criticism of the *Herald*, and to the considerate attention shown to my speech by Mr. Abigail in the Legislative Assembly.

I am, &c.,

+ PATRICK FRANCIS CARDINAL MORAN,

Archbishop of Sydney.

St. Mary's Cathedral, Sydney, June 13.

Extracts from *Sydney Morning Herald*, 15 June, 1889.

THE INFANTS' HOME AT ASHFIELD.

IN connection with the statement and letters published from his Eminence Cardinal Moran, a representative of the *Herald* had an interview with Miss Taplin, the Lady Superintendent of the Infants' Home, at Ashfield, yesterday. Miss Taplin stated she had been in charge for the past 18 months. She denied that the Roman Catholic inmates were refused permission to go to their chapel or mass, and said that she had had no instructions from the committee to that effect. The average death-rate was 33·7, and not over 50. In fact the deaths have never yet reached 50 per annum; last year the rate was only 19·4 per cent. The committee and herself had always told the mothers of children that the infant must be baptized, and it was for the mothers to see that that was done. There was no need for the priest to go to the Home, as the mothers take the children out to be baptized. As to the priests not being allowed to administer sacraments to mothers, the assertion was misleading, because if mothers were very ill they were removed to one of the hospitals. The women were allowed on Sundays to go to what churches they pleased. The Government grant was nothing like £1,000 per year—in fact, last year, it only amounted to £286 19s. 10d. The question of religious persuasion was never considered in granting admission. It was usual to baptize all foundlings as Protestants. With reference to the statement "that the Protestant clergyman visits the Institution and baptizes the children of the Catholic mothers," Miss Taplin explained that upon one occasion the Rev. Dr. Corlette was baptizing a child, when a woman asked that her child should also be baptized. The statement that all children

children whose burial the institution paid for were buried in Protestant burial-grounds was contrary to fact. The undertaker's accounts were produced. These showed that 14 children were interred in the Roman Catholic Cemetery last year, and, out of 12 deaths this year, 4 were interred in the same cemetery. In one instance the mother left the home with the intention of going to a friend's place for some clothes in which to attend the funeral. As she did not meet them as promised, the undertaker buried the child in mistake with a Protestant infant. As to "depriving the children of the consolation of their faith before death," Miss Taplin was at a loss to understand what consolation could be afforded to the helpless infants whose ages ranged from 14 days to a year and 10 months. When children came to the age of about four years they were transferred to the boarding-out officer's control. At the time of the visit the Home was in a thoroughly clean condition, and only one or two cases of minor sickness were under treatment in the hospital ward. In all 102 children are sheltered by the Home, and all appeared to be happy and contented. At the last meeting of the committee five applications for admission were made by women, but only three could be admitted, and these three proved to be Roman Catholics.

To the Editor of the *Herald*.

Sir,—In reply to Cardinal Moran's letter in to-day's *Herald*, I beg to state that I am totally at a loss to understand how any "Protestant gentleman," visiting the Infants' Home, Ashfield, could possibly have made such a statement as that any of the inmates were "in a dangerous condition, and were desirous of receiving religious consolation," for, as I said in my former letter, we do not have any sick women in the Home. There is no accommodation for sick adults, and when, unfortunately any of the mothers fall ill, they are at once removed to the ordinary hospitals. The only inmates who are retained in sickness are infants under two years of age. I can only repeat that to the knowledge of the committee no woman has ever asked to see a priest. With reference to regular pastoral visits to inmates, as proposed by the Rev. Father Long, the committee determined that the circumstances of the Home did not make it convenient that these should be allowed from any quarter; at the same time no difficulty has ever been put in the way of any inmate who expressed a desire to go to see a minister of religion. The going to mass at the time at which the letter to Miss Crowley was written entailed a long walk and prolonged absence from the Home, and it will be easily understood that this was not desirable among a number of nursing mothers such as those for whom alone the Home provides a temporary refuge. The letter referred to was intended to give the purport of the following minute:—

"September, 1887.—The committee think it advisable that Roman Catholic girls cannot be allowed to go to mass, as there are so many difficulties to be overcome in permitting them to leave the Home, besides which the Lady Superintendent can never be quite sure that they really do go to mass, nor whom they meet when out. Altogether, under existing circumstances, it is thought more prudent for them to keep as retired as possible. The Home does not lay itself out to procure religious instruction for the young women, but desires simply to secure a quiet refuge for them." This same rule applied to church-going for all denominations.

For some time past the present Lady Superintendent has found it possible to let a certain number of the mothers attend church every Sunday.

It is only a side issue, but may be noticed, that the deaths referred to by the Cardinal as averaging over fifty per year, and which are solely of very young sickly infants, in most cases motherless or foundlings, only one year reached fifty-four, and last year, when ninety-six infants passed through the Home, there were only twenty-four deaths.

Every Roman Catholic applicant is requested to have her baby baptized by the priest before admission, but in cases of omission the mothers have been sent to their own church. The only occasions on which the rite of baptism has been administered in the Home have been to dying infants. On four or five such occasions, extending over ten years, Dr. Corlette has baptized in the Home. One of these infants thus baptized (at its mother's request) was the child of a Roman Catholic, but this fact was discovered subsequently.

A grant of £1,000 is voted by Government for the institution on the usual conditions. Last year the Committee, through the falling off of donations and subscriptions, only received from the Government grant £286 19s. 10d.

The rites of the Roman Catholic religion are not denied to the infants after death by any rule of the institution. For the past 14 months, to my certain knowledge, all Roman Catholic children have been buried in the Roman Catholic Cemetery. With the boarding-out of the children after they leave the Infants' Home the Committee have nothing whatever to do, as they are then handed over to the Government officer.

With regard to the intolerance complained of by Cardinal Moran, I hope my letters will fully convince the public that no institution could be managed in a more liberal and tolerant spirit; and may I add, as an instance of this, that at the last committee meeting, out of five applicants to fill three vacancies, three Roman Catholics were admitted in preference to two Protestants, because their cases were considered more necessitous. The committee will be delighted if Cardinal Moran will come and pay the Infants' Home a visit, and see for himself the work which is done. This invitation they gladly extend to those of the general public who feel a real interest in the institution.

I am, &c.,

ADA M. DOCKER,

Hon. Treasurer.

Myrambla, June 14.

### His Eminence Cardinal Moran to The Principal Under Secretary.

Sir,

St. Mary's Cathedral, Sydney, 15 June, 1889.

My attention has been called to an inaccuracy which has crept into the report of my words at Lewisham, given in the *Morning Herald*, which has been copied into the other newspapers. In regard to the Sydney Night Refuge it represents me as saying that "nothing remained for that woman but to face the pitiless storm rather than to do that which was against her conscience." What I did say was "nothing remained for that good woman but to face the pitiless storm or to do that which was against her conscience."

What I complained of was that such an alternative would have been proposed in an institution supported by public charity. As a matter of fact, I believe that she did remain there for the night, joining in the prayers as required, but left next day.

As I see from the statement made by the Premier that an inquiry shall be made regarding those institutions to which I referred, I would wish it to be clearly understood that I have no hostility to them, and that I only desire their rules and regulations to be so amended as not to clash with the religious convictions and spiritual interests of the poor Catholic inmates. It appears to me that this should hold good of all institutions of benevolence receiving State support.

Yours, &c.,

† PATRICK F. CARDINAL MORAN.

### The Colonial Secretary to His Eminence Cardinal Moran.

My Lord Cardinal,

Sydney, 17 June, 1889.

I have received your letter of the 15th, explaining an inaccuracy in the report of your speech at Lewisham. The matters to which you made allusion are now under investigation, and so soon as I receive report I will communicate to you the result of the inquiry.

I have, &c.,

HENRY PARKES.

The

The Director of Government Asylums to The Principal Under Secretary.

Department of Charitable Institutions, Begg-street,  
Paddington, 18 June, 1889.

Sir,

In compliance with the direction of the Colonial Secretary I have made a full and searching inquiry into the statements recently made by His Eminence Cardinal Moran in reference to the Infants' Home at Ashfield, and the "Open-all-night Refuge for Women," and I now have the honor to report upon the matters which have been referred to me in connection with those Institutions :

#### THE INFANTS' HOME.

In order that the purposes of this Institution may be clearly understood, it is necessary to refer briefly to its constitution and progress. The Home was opened in Sydney in May, 1874, for foundlings only, under the title of "The Sydney Foundling Hospital," and with the avowed object of lessening the crime of infanticide, of which there had been numerous cases early in that year.

The following four regulations were adopted, and these have since been practically adhered to, so that no rule has yet been presented to the public to indicate that the Home should be conducted on sectarian lines :—

- (i.) Each application for admission shall be dealt with on its own merits.
- (ii.) The age of the infant shall not exceed three months.
- (iii.) The mother shall produce satisfactory testimony as to her previous respectability.
- (iv.) The father shall have deserted his child, and be beyond the reach of the law to enforce him to support it.

During the first year it was found expedient to admit mothers with their infants, and this practice has since continued without reference to creed.

The Home did not receive aid from the Government until 1876, when a sum of £1,000 was voted to the building fund by Parliament, and this, with the liberal public contributions of that period, and a gift of £2,000 from the late Mr. Thos. Walker, enabled the Committee to purchase the premises at Ashfield, in which their operations have since been carried on. No further aid was received from the Government until 1880-81, when there was additional State endowment to the extent of £1,901 4s. The Government subsidies have since continued annually, and at the end of 1888 the contributions from the Treasury amounted altogether to £9,064 16s. 5d.

The Home has seldom been used by the Government for admissions. Altogether only forty-three children have been passed in at the request of the police, and on the order of the Principal Under Secretary. It may not be out of place to state here that although quite 50 per cent. of the inmates are stated to profess the Roman Catholic faith, that particular denomination never appears to have been represented on the Committee, nor are Roman Catholic officials employed on the managing staff.

The charges preferred against the Infants' Home by His Eminence the Cardinal are as follow :—

- (i.) That the Roman Catholic inmates are not allowed to see their clergyman at the Home ; neither are they allowed to go out to mass.
- (ii.) That no priest is admitted to baptize the children, or to administer the sacraments to the Catholic mothers.
- (iii.) That the Protestant clergyman visits the Institution, and baptizes the children of the Catholic mothers.
- (iv.) That children who die, for whose interment the Institution provides, are all interred in the Protestant cemetery.
- (v.) That children who survive, and are cared for by the Institution, are transferred to Protestant homes in Begg-street or elsewhere, and are all reared Protestants.

In reference to these charges, which are all based upon alleged occurrences of nearly eighteen months ago, I have had interviews with and received statements from the Cardinal ; the Rev. Dr. Corlette, Church of England, and Rev. Mr. Long, Roman Catholic, clergymen of Ashfield ; Drs. Collingwood and Thring, the visiting medical officers to the Home ; Mrs. Docker, hon. treasurer ; Miss Murray, hon. secretary ; Miss Taplin, Superintendent of the Institution ; and the undertakers  
who

who have conducted the interments of children since February, 1885. I have also held an inquiry at the Home, at which the Superintendent and twenty-two inmates (including fourteen Roman Catholic girls) gave evidence. The statements, which have been signed in each instance by the girls, are appended, and indicated by numbers, the names being for obvious reasons withheld. I have no doubt that their evidence generally is reliable; as, although classed as fallen women, they are girls who have thus sinned a first time only, and they could apparently have no motive for concealment or misrepresentation. They were all examined apart from the Superintendent, who was, however, afforded an opportunity of questioning them subsequently.

The Cardinal's first charge is made in the following words, reported to have been uttered on the occasion of the opening of the Roman Catholic Children's Home at Lewisham:—

Some time ago a poor Catholic woman who was at the Ashfield Home was anxious to have the assistance of a priest. The Secretary gave word to the priest that priests could not be admitted. At his (the Cardinal's) request the priest wrote, inquiring whether any mistake had been made in that matter, and he got an official reply stating that the majority of the ladies had approved of the rule, and no priests would be admitted. He trusted that neither in that institution nor any single Catholic institution throughout the length and breadth of the land would such bigotry be shown.

His Eminence supplemented this statement by a letter in the *Sydney Morning Herald* on June 14th, in which he says:—

The pastor in charge of the Ashfield district was informed by a Protestant gentleman that there were Catholic inmates, some of them in a dangerous condition, in the Infants' Home, who were desirous of receiving religious consolation at his hands, and in particular that there was one who belonged to his immediate pastoral charge. The priest presented himself at the institution and requested permission to visit the Catholic patients. The Lady Superintendent, Miss Crowley, received him with every courtesy, but said she should consult the ladies' committee before she could grant him the desired permission. He insisted that as the institution was supported by public funds it was within his right, as it was his duty, to visit at least the inmate who was one of his own spiritual flock and desired his sacred ministrations. The Lady Superintendent then permitted him to see this particular patient, but with the understanding that the ladies' committee was to be consulted before he would visit any of the other inmates.

The facts in reference to charges one and two are that Dr. Collingwood, one of the visiting medical officers, gave the Rev. Mr. Long (R.C.) a general letter of introduction to the Home without reference to any particular case (see Dr. Collingwood's statement attached in evidence), which was duly presented on August 18th, 1887. The priest states that he asked the then Superintendent (Miss Crowley) for a copy of the rules, and he was informed that she could not give them without consulting the Committee; he then asked to be permitted to see a girl who was an inmate, and the Superintendent replied that it would be better to wait until she consulted the Committee; he next asked her how the Home was supported, and was informed partly by voluntary subscriptions, and partly by public funds. He thereupon said that he did not see there could be any reasonable objection to his seeing any of the inmates of his denomination, to which the Superintendent replied that she could not allow that without consulting the Committee, but that the girl he had come to see should be sent for. This was done, and he then heard that a baby belonging to another Roman Catholic girl was very ill, and that the mother had asked to have it baptized by a priest. He applied to see this girl also, and she was sent for. He told the girl that he would baptize the sick baby either at the Home or at the Ashfield Church. This he also told to the Superintendent (Miss Crowley), who, he says, refused to permit him to baptize the child at the Home, and said the ceremony must be performed at the church. The child was ultimately baptized at the church. On leaving the Home he asked the Superintendent if Roman Catholic girls were allowed out to mass, and she said, "No; there is nothing in the rules about it."

A few days subsequently the Committee of the Home passed the following resolution in reference to Rev. Mr. Long's visit and requests:—

September, 1887.—The committee think it advisable that Roman Catholic girls cannot be allowed to go to mass, as there are so many difficulties to be overcome in permitting them to leave the Home, besides which the Lady Superintendent can never be quite sure that they really do go to mass, nor whom they meet when out. Altogether, under existing circumstances, it is thought more prudent for them to keep as retired as possible. The Home does not lay itself out to procure religious instruction for the young women, but desires simply to secure a quiet refuge for them.

Upon

Upon this resolution a reply was sent to the Rev. Mr. Long by the Superintendent, enclosing a letter from the hon. Secretary, in the following terms:—

Dear Sir,—The enclosed is a copy of instructions received with regard to the Catholic girls. Faithfully yours, M. CROWLEY, Lady Superintendent, Infants' Home. [Enclosure]—Dear Miss Crowley,—The committee wish me to tell you that they do not approve of allowing the Roman Catholic girls to see a priest at the Home. Neither will they permit Roman Catholic girls to go out to mass. They must conform in all these matters to such rules as are laid down for the Protestant girls, and go only where the Lady Superintendent directs.

It has been alleged, and the evidence is unquestionable on the point, that no Protestant clergyman has been permitted to visit the Home, to hold services, or to have interviews with the girls; although the Rev. Dr. Corlette, Church of England clergyman, appears to have on five occasions during ten years baptized children who were dying there.

Mrs. Docker (hon. Treasurer and principal Director of the Home) and Miss Murray (the hon. Secretary) both state that the resolution upon which the letter just quoted was based, applied to church-going for all denominations; and that at that period none of the inmates were permitted to go to church, because a number of them were very difficult to manage, and it was not considered desirable to let them out. So far as the alleged refusal of the Superintendent to permit a sick Catholic baby to be baptized on the premises is concerned, both the hon. Treasurer and hon. Secretary deny all knowledge of it; and state that if such a thing occurred it was an unwarrantable act of the Superintendent, was not authorized by the committee, and was not in accordance with any rule or resolution. They also state that any Catholic mother who desired to have her sick baby baptized at the home by a clergyman of her own faith would have had her wish granted. No such case, so far as the Committee know, has yet occurred. The mothers are always requested to have their babies baptized before being admitted. The former Superintendent cannot now be questioned as to the circumstances of Rev. Mr. Long's statement, as she is absent in Melbourne; but that gentleman has shown me his report of the occurrence which, he says, was written immediately afterwards; and there can be no doubt that his statement is correct.

Mrs. Docker says that in the few cases where Roman Catholic mothers have omitted to have their babies baptized before admission they have subsequently been sent to their own church to have the ceremony performed there.

Dealing with the Home in its relation to the charges during the past fifteen months (the period of office of the present Superintendent, Miss Taplin) as to the conditions of things prevailing since she took charge, the evidence is more clear. That lady, who seems to possess the confidence and affection of all the inmates in a remarkable degree, has found it possible to permit them to attend church, and has urged them to do so. There can be no doubt, from evidence quoted below also, that she has on various occasions urged the Roman Catholic girls to attend their own church; but for reasons which I have been unable to satisfactorily account for they have not done so. There appears to be an impression, but it is impossible to find any substantial ground for it, that "the Committee would not be pleased" if these girls attended a church of their own faith. The present Superintendent must be exonerated, as extracts from the evidence will show, from having used any influence of that kind.

*Witness No. 2, Roman Catholic*, states:—That she had asked to go to church on Sunday night, but was refused because it was so far away; she had not asked the Superintendent, but the housemaid; the housemaid admitted that she had asked the girl to go to the Church of England, believing her to be Protestant, but on finding her to be Roman Catholic had not asked her since.

*Witness No. 5, Roman Catholic*, had been told she might go to church, but understood the Church of England was meant; thought so because the girls went out together to go to the Church of England; had never been told which Church, and believed she could have gone to mass if she had wished to do so.

*Witness No. 6, Roman Catholic*, had been told by "the girls" that she might go to mass if she wished.

*Witnesses Nos. 7 and 8, Protestant*, had heard the Superintendent ask the girls to go to church without reference to their religion.

*Witness No. 9, Roman Catholic*, had been told by the Superintendent (Miss Taplin) that she might go to mass; this was said so that the other girls could hear it.

*Witness No. 10, Roman Catholic*, had been told by Miss Taplin to go to the Roman Catholic Church, but did not go because she had a delicate baby; was told so repeatedly by Miss Taplin.

*Witness No. 11, Roman Catholic*, states:—That she had never asked to go to mass or been told to go; never asked, because the housemaid (Eliza Richardson) told her the Committee did not allow Roman Catholic girls to attend their own Church; never spoke to the Superintendent about the matter, because of what the housemaid said; the hon. secretary was in charge of the Home when this occurred, the Superintendent being away for a holiday.

*Eliza*

*Eliza Richardson*, examined on this point, says:—Never told No. 11 or any other girl that the committee did not wish Roman Catholic girls to go to their own church; No. 11 did ask when the hon. secretary was in charge if she might go to her own church, and the hon. secretary replied, "No, it is too far."

[NOTE.—The Roman Catholic Church is within 5 minutes' walk of the Home.]

The hon. Secretary denies all knowledge of this matter.

*Witness No. 13, Roman Catholic*, had never been told to go to Church of England, but went there because the other girls went; Superintendent told girls to go to church, but did not say which church.

*Witness No. 14, Roman Catholic*, had been told by *Eliza Richardson*, housemaid, that she might go to church; understood that the Roman Catholic Church was meant.

*Witness No. 15* said the Superintendent read the Protestant prayers every night to all the girls; there were no separate prayers for Roman Catholics; some of the girls (witness could not name any) said Committee would not be pleased unless they all attended the prayers.

*Witness No. 16, Roman Catholic*, had attended the prayers.

*Witness No. 17, Roman Catholic*, had gone to Church of England and to the prayers because the other girls did so; attended of her own freewill; had heard inmates say, but could not name them, that Superintendent would like Roman Catholic girls to go to their own church on Sunday morning.

*Witness No. 18, Roman Catholic*, had been told to go to church, and understood that her own church was meant, but did not go because her baby was cross.

*Witness No. 19, Protestant*, fifteen months in the Home, said the girls were all told to go to church, but not to any particular church; only knew of one Roman Catholic girl having gone to her own church in fifteen months; thinks they went to Church of England because it was so near.

[All these girls stated that no person had attempted to interfere with their religion, and that they had never seen a clergyman talking to any girls.]

*Miss Taplin*, Superintendent of the Home, states in her evidence (see Appendix A):—I have had charge of the Home for fifteen months, there are now fifteen Protestant and fourteen Roman Catholic mothers in the Home; no separate provision has been made for prayers for the Roman Catholic mothers; the only prayers which are read are "Family Prayers, by the Right Rev. Dr. Oxenden, Bishop of Montreal; and the Rev. C. H. Ramsden, Vicar of Chilham, Kent"; the Roman Catholic girls are not compelled to attend these prayers; they do so voluntarily. I have heard some of the Roman Catholic girls say they attended the Church of England; I do not know whether they have done so or not; if they have done so it has been of their own freewill; have had no directions from the committee in that matter; the Roman Catholic girls have understood they were at liberty to attend their own church; indeed I have pressed several of them to do so, as I saw they were in trouble, and thought it would comfort them; allow the girls to go out one whole day a month, and more frequently if they ask me; I insisted on one Roman Catholic girl having her baby baptized at the Roman Catholic convent, although she did not wish it.

So far as the Home services are concerned, *Miss Taplin's* evidence makes it clear that the family prayers of the Church of England are used for all the inmates, and that no separate provision is made for the Catholic girls. She denies that any Roman Catholic inmate had been refused permission to go to church or mass during the past fifteen months; and her evidence on that point is amply substantiated. None of the girls who were at the Home during *Miss Crowley's* term of office are now there. The women, *Miss Taplin* states, are permitted on Sundays to go to which church they please. The statements that the priests were not allowed to administer the Sacraments of their Church to inmates of the Home, she says, is misleading. They never required the Sacraments, as if they were seriously ill they were removed to one of the hospitals. This statement was endorsed by *Dr. Thring*, one of the visiting medical officers, and by the hon. treasurer and hon. secretary; and I could not find an instance of any necessity of the kind ever having arisen at the Home.

Charge No. 3—"That the Protestant clergyman visits the Institution and baptizes the children of the Roman Catholic mothers"—is replied to by the hon. Treasurer as follows:—"The only occasion on which the rites of baptism have been administered in the Home has been to dying infants. On four or five such occasions, extending over ten years, *Dr. Corlette* has baptized in the Home. One of these infants, thus baptized, at its mother's request, was the child of a Roman Catholic; but this fact was discovered subsequently."

I carefully investigated this charge, and discovered that it had reference to the case of a girl who had left the Institution some time ago. I found her, and she made the following statement which is embodied in her evidence in Appendix A. (*Witness No. 21*):—

I am a Roman Catholic, and went into the Infants' Home with my baby, then nine days old; it was too ill to be christened before I took it into the Home; I was ill at the same time; I thought the child was going to die in the night it was admitted; *Dr. Corlette* visited the Home that same evening, and thinking my child was about to die, I asked him to christen it; I knew he was a Protestant clergyman; I was not asked to have the child christened by *Dr. Corlette*, but as its father was a Protestant I did not think it mattered; the Superintendent told me I could if I wished go to the Catholic church in the morning and have it christened; *Dr. Corlette* was not sent for to christen my baby; I am quite sure of that; there was a little Protestant child dying that evening, and *Dr. Corlette* came to christen that one.

No trace can be found of any other case of the kind having occurred. All the Roman Catholic inmates at present at the Home have had their babies baptized by clergyman of their own faith at their churches. No children appear to have died at the Institution unbaptized by their own clergyman.

His Eminence's charge No. 4, "That children who die, for whose interment the Institution provides, are all interred in the Protestant Cemetery," so far as it refers to the system of interments prevailing from 24th February, 1885, to July 30th, 1888, is borne out by official records. The plan adopted was to bury the children by contract, and the undertaker was left to select the ground, except in cases where the parents desired special arrangements to be made and paid for them. During the period mentioned there were 112 burials, including a number of Roman Catholic children, and all were interred in Protestant ground, except one Catholic child, who was buried at its father's request and cost in the Roman Catholic division of the Petersham Cemetery. Eight children were buried in the Church of England ground, and the remainder were interred in the Presbyterian division at Rookwood. The Committee do not seem to have attached any special importance to this matter; and it was to the undertaker's interest to conduct the funerals as economically as possible. He selected the Presbyterian ground as being cheapest.

Since Miss Taplin was appointed a new system has prevailed, and after comparing the undertaker's accounts during her time with the books at the Home, I find that the Protestant and Roman Catholic children have all been buried in the cemeteries of their respective denominations. This plan, I am informed, will be strictly adhered to in future.

*Charge No. 5*, "That children who survive and are cared for by the Institution are transferred to Protestant homes in Begg-street and elsewhere, and all reared Protestants," appears from the records of the Home to be true in two cases, in which a former Superintendent—not Mrs. Crowley—may either have acted deliberately or been guilty of carelessness; I believe the latter from my knowledge of the lady. From my knowledge of the manner in which the transfers were effected from the Home at that time, I think it most improbable that the Committee knew anything of this matter. The two cases referred to are those of children who were transferred in 1883 to the State Children's Relief Department to be boarded out. Their religion was returned by the Superintendent to the Boarding-out Department as "Protestant," and it turned out to be Roman Catholic. I am aware that the Ashfield Home Committee did not interfere in any way with the boarding-out of their children, or the compilation of the returns, and the Superintendent referred to should therefore be held solely responsible for the blunder.

#### SUMMARY.

A SUMMARY of my investigation into the charges made by his Eminence the Cardinal against the Ashfield Home, and matters incidental thereto, shows:—

*Charge 1.*—That in accordance with the rule of the Home, from its initiation, neither Protestant nor Roman Catholic clergymen have ever been permitted to visit the Home officially. The only exception made in regard to this matter occurred on the five occasions during ten years, when the Rev. Dr. Corlette was sent for to baptize Protestant infants who were supposed to be in a dying state. The evidence of the Protestant and Roman Catholic girls, as well as of the managers of the Home, is conclusive upon this point. Further, neither Catholics nor Protestants were allowed to go out of the Home to church until the practice was altered by the present Superintendent.

*Charge 2.*—That although the late Superintendent must have been aware that the Rev. Dr. Corlette (Church of England) thus baptized Protestant children, she refused to allow the Rev. Mr. Long (Roman Catholic) the same privilege on the only occasion on which he applied to baptize a sick Catholic infant. It would appear that the Committee had no knowledge of this occurrence, and that the Superintendent acted upon her own responsibility. From the evidence of the authorities, it would further appear that if the occasion should arise the priest would be allowed to baptize any dying Catholic children at the Home.

*Charge 3.*—That on one occasion only a Roman Catholic child was baptized at the Home by the Protestant clergyman, at its mother's request (its father being a Protestant), because she thought it was dying, and the Protestant clergyman happened to be present baptizing a Church of England baby.

*Charge 4.*—That the children who died (including a number of Roman Catholics), for whose interment the Institution provided, were, with one exception, interred in Protestant ground, between 24th February, 1885, and July 30th, 1888; but that since that time all children have been interred in the cemeteries of their respective denominations. The practice originally followed seems to have arisen from a desire to save expense.

*Charge 5.*—That in 1883, two Roman Catholic children were erroneously discharged to the State Children's Relief Department by the Superintendent of the Infants' Home, as being Protestants, and were boarded-out accordingly.

I have not been instructed (although, if so instructed, I am prepared) to make any recommendations in connection with the management of the Infants' Home, but simply to investigate the charges preferred against it, and I therefore respectfully present my Report without comment.

#### OPEN-ALL-NIGHT REFUGE FOR WOMEN.

I AM not quite prepared to report finally in reference to this Institution in consequence of the difficulty I am experiencing in tracing the persons who have furnished the information upon which the charges preferred against the Refuge by His Eminence the Cardinal are founded. I have no doubt, however, that the statements thus far made to me are reliable, and I now accordingly send in a brief progress report, subject to any corrections which further particulars may render necessary.

From the evidence I have already obtained it appears that on Sunday, June 9, at the opening of the Children's Home at Lewisham, His Eminence stated :—

He was sorry that in some of the institutions around them which received the subsidy of the State the same spirit of charity did not prevail. A few days ago, while the terrible hurricane was sweeping over the city, a good Catholic lady, being penniless, far away from home, and fearing to encounter the storm, entered one of those night asylums. Having rested for a time she was summoned to night prayers. She said that she was a Catholic and could not conscientiously join in any worship that was not in accordance with her Church. She was told that if she did not join in the prayers the door was open and she must go out. Nothing remained for that woman but to face the pitiless storm rather than do that which was against her conscience.

His Eminence has informed me that these remarks had reference to the Night Refuge for Women in Sussex-street, carried on in connection with the Blue Ribbon Army, but that he had not been quite correctly reported. The Catholic lady had been offered the alternative of joining in the prayers or going out; and for the words "rather than" the word "or" should be substituted in the newspaper report. As a fact the woman was not turned out, but remained for several days at the Refuge—the condition being that she should join in the religious services; and she left ultimately to go to a situation. I may state at once that this Institution is not subsidised by the State, but is supported wholly by voluntary contributions, and is one of the organizations carried on under the direction of Mr. Ardill. No deception appears to be practised in reference to the religious observances of the inmates. They are all given to understand when admitted that attendance at the religious meetings is compulsory, and they may either enter the Home on that condition or otherwise remain out. The services are those usually held by the Blue Ribbon Army.

I was informed in the course of my inquiries that about 50 per cent. of the inmates are Roman Catholics.

I have, &c.,  
 SYDNEY MAXTED,  
 Director of Government Asylums.

## APPENDIX A.

*COPY of Evidence taken at the Infants' Home.*

No. 1, *Protestant*, states:—I have been three months in the Institution; I have not been to a church during that time; no clergyman has been to see me; Miss Taplin has asked me to go to church, but I did not go.

No. 2, *Roman Catholic*, states:—I have been in the Institution three months; no clergyman has been to see me; never asked to go to mass, but asked to go to church on Sunday night and was refused, because the church was so far away; I asked the housemaid to ask Miss Taplin, and the housemaid said Miss Taplin said the church was too far away; was never told that I could go to mass.

*By Miss Taplin*: I did not ask you myself, because my baby was too cross; I have not a good memory.

No. 3 (housemaid), *Church of England*:—No. 2 did not come to me and ask if she might go to church on any occasion; I have asked her on Sunday nights if she would go to church; I went to the Church of England; I did not know what religion she was; I found out one week ago that she was a Roman Catholic, and have not since asked her to go to church.

No. 4, *Protestant*:—I have been at the Home nine months; I have been once to church during that time; no clergyman has visited me; Miss Taplin has given me permission to go to church on Sunday evenings.

No. 5, *Roman Catholic*:—I have been six months in the Home; have never asked to go to mass; was never told that I might go to mass; have been told that I might go to church; I understood by that that the Church of England was intended; Miss Taplin told me I might go to church, but did not say which church; Miss Taplin never asked what religion I was, and may not have known; I thought the Church of England was intended because the girls went out together to go to the Church of England; no clergyman has been to see me; Miss Taplin has never interfered with my religion in any way; I could have gone to mass if I wished.

No. 6, *Roman Catholic*:—Have been in the Home for the last six months; no clergyman has visited me; I have never been to mass since I came here; have never asked to go to mass; have been told I might go to mass if I wished; I understood from the girls, but was not told by the Superintendent, that I might go to mass; did not go, because I was ashamed of my trouble; have never heard Miss Taplin interfere with the religion of the girls; I must have known if she had interfered.

No. 7, *Protestant*:—I have been here seven months; no clergyman has been to see me; have never been to church; have been told by Miss Taplin that I might go to church; have never heard Miss Taplin or anyone else interfere with the religion of the girls; have heard Miss Taplin ask the girls to go to church without reference to their religion.

No. 8, *Protestant*, states:—I have been nine weeks in the Home; no clergyman has visited me during that time; Miss Taplin has told me and other girls that we might go to church; have never heard Miss Taplin or anyone else interfere with the religion of the girls; have never gone to church.

No. 9, *Roman Catholic*, states:—Have been six weeks in the Home; no clergyman has visited me at the Home; have not been to mass; have been told by the Superintendent that I might go to my church on Sunday morning; this was said so that other girls could hear it; no one has attempted to interfere with my religion since I have been at the Home; have not seen any clergyman at the Home.

No. 10, *Roman Catholic*, states:—Have been here about six months; no clergyman has visited me; have never been to mass; have been told by Miss Taplin to go to my own church; but did not do so on account of having a delicate baby; have been told so repeatedly; no one has ever spoken to me about my religion; have not seen any clergyman visiting the girls.

No. 11, *Roman Catholic*, states:—Have been at the Home three months; no clergyman has visited me; have never been to mass; have never asked to go to church, nor have I been told to go; the housemaid (Eliza Richardson) told me the Committee did not allow Roman Catholic girls to attend their own church; I never spoke to Miss Taplin about this matter, because of what this girl told me; no person has ever interfered with my religion; have never seen any clergyman talking to the girls since I have been here; Miss Murray was in charge of the Home when Eliza told me about going to church.

No. 12, *Eliza Richardson, Protestant* (housemaid), states:—I never told No. 11 or any other girl that the Committee did not wish the Catholic girls to attend their own church; No. 11 asked me when Miss Murray was in charge, whether she might go to her own church; I went to Miss Murray and asked her; Miss Murray said, "No, it is too far"; the Roman Catholic Church is near the railway station, I think.

No. 13, *Roman Catholic*, states:—I have been in the Home eleven months; no clergyman has called to see me nor have I seen any clergyman talking to the girls; have never been to mass, but have been to the English Church, because the other girls went; was never told to go to the Church of England; Miss Taplin told the girls to go to church, but did not mention any particular church; do not know whether the girls I went with were Catholics or Protestant; did not attend my own church, because I did not know where it was; I know Eliza Richardson; she never said anything to me about the Committee and Catholic girls; no one has ever interfered with my religion while I have been in the Home; have never known anyone to interfere with the religion of the girls since I have been here; I do not know of any girls having gone to mass since I have been here.

No. 14, *Roman Catholic*, admitted 11th June, 1889, states:—I have been told by Eliza Richardson that I might go to church; she did not mention any church in particular; I understood that I might go to my own church; no one has attempted to interfere with my religion; have not seen any clergyman since I have been here.

No. 15, *Roman Catholic*, admitted 13th June, 1889, states:—No one has interfered with my religion since I have been here; have not seen any clergyman about the Home; Miss Taplin read Protestant prayers to all the girls every night; Catholic and Protestant girls attend together; there are no separate prayers for the Catholic girls; some of the girls, but I cannot state their names, said the Committee would not be pleased unless we all attended the prayers.

*No. 16, Roman Catholic*, admitted 11th June, 1889, states:—No one has interfered with my religion since I have been here; have not yet been told anything about going to church; have not seen any clergyman about the home; have attended prayers every evening since coming here; Catholics and Protestants attend together; Miss Taplin reads prayers; the prayers are Protestant prayers.

*No. 17, Roman Catholic*, states:—I have been eleven weeks in the home; have not been to my own church during that time, but have been to the Church of England; went for company with other girls, but was not compelled to go to Church of England; no clergyman has visited me, nor have I seen any clergyman at the Home; no one has interfered with my religion; have attended prayers every night at the Home; the prayers that are read are Protestant prayers; attend these prayers of my own freewill; have not been asked by any one to come in; did not attend my own church because of having another baby besides my own to nurse, and did not know where church was; have heard the girls say (but cannot name any of them) that Miss Taplin would like the Roman Catholic girls to go to Roman Catholic Church on Sunday morning.

*No. 18, Roman Catholic*, states:—I have been 3½ months in the Home; have not been to church since I have been here; have been told to go, but baby was too cross; understood I could go to my own church; I attend prayers at night at the Home; all the girls listen to the same prayers; I understand Catholic prayers; they are Protestant prayers that are read; have never seen any clergyman about the place; no one has interfered with my religion.

*No. 19, Protestant*, states:—I have been at the Home fifteen months; I go to Church of England; the Roman Catholic girls go to Church of England whenever they go to church; they go of their own freewill; have never heard of any of them being told to go to the Church of England particularly; they have simply been told to go to church; only know of one Catholic girl having gone to her own church since I have been here; think the Roman Catholic girls went to the Church of England because it was so near.

*No. 20, Church of England*, states:—I have been ten months in the Home; no clergyman has visited me during that time; have attended Church of England; no one has interfered with my religion; I cannot say whether the Roman Catholic girls go to the Church of England; have never known the religion of any girl to be interfered with.

*No. 21, Roman Catholic*, formerly an inmate of the Infants' Home, states:—I went into the Home with my child, then nine days old on the 4th July; it was too ill to be christened before I took it into the Home; I was ill at the same time; I thought the child was going to die on the night it was admitted; Dr. Corlette visited the Home that same evening, and thinking my child was about to die, I asked him to christen it; I knew he was a Protestant clergyman; I was not asked to have the child christened by Dr. Corlette, but as the child's father was a Protestant I did not think it mattered; the Superintendent told me I could if I wished go to the Catholic church on the following morning and have it christened; Dr. Corlette was not sent for to christen my baby—I am quite sure of that; there was another little child dying that evening—a Protestant child—and Dr. Corlette came to christen that one; it was after 7 o'clock in the evening when the Doctor christened the babies; I was nearly a year in the Home; no person attempted to interfere with my religion whilst I was there; Dr. Corlette never came to talk to any of the girls while I was at the Home; I used to go to the Church of England occasionally at night with the other girls, because it was handy; I was never asked to go there; I believe if I had wished to go to my own church I could have gone; nobody asked me when I came home from church, or at any time, which church I had been to.

*Louise Taplin, Church of England*, states:—Have been in charge of Home for the last fifteen (15) months; have seen the description of the Infants' Home in this day's (15th June) *Herald* which is accurate, excepting in two particulars, viz., that the total number of inmates is 102, including 67 children, 29 mothers, and the number of children stated to have been buried in Roman Catholic ground is erroneous, but still I repeat that all Roman Catholic children are buried in their own cemetery; there are at present 14 Roman Catholic and 15 Protestant mothers in the Home; no separate provision has been made for prayers for the Roman Catholic mothers; the only prayers which are read are "Family Prayers, by the Right Rev. Dr. Oxenden, Bishop of Montreal, and the Rev. C. H. Ramsden, Vicar of Chilham, Kent"; the Roman Catholic girls are not compelled to attend the prayers; they do so voluntarily; I heard some of the Roman Catholic girls say they have attended the Church of England; I do not know whether they have done so or not; if they have it has been of their own freewill; have had no direction from the Committee with reference to the particular churches the inmates should attend; the Roman Catholic girls have understood that they were at liberty to attend their own church; indeed, I have pressed several of them to do so, because I saw they were in great trouble, and thought it would comfort them; although permission has been given to the inmates to attend church, very few of them, either Roman Catholics or Protestants, availed themselves of the privilege; I have seen the statements made by Mrs. Docker, hon. treasurer, in her letters to the *Herald* of the 13th and 15th June, and know them to be correct, as far as my period of office is concerned; in the event of any woman requiring the last Sacrament of her Church, I would send for the clergyman, or the priest, as the case may be; I allow the girls to go out one day a month for the whole day, and more frequently if they ask me; I insisted on getting N. M. to have her baby baptized at the Roman Catholic convent, although she did not wish it.

*Dr. Thring* states he has been attending the Home two and a half years; there never has been a death of an adult during the last fourteen years; every case of severe illness of an adult is sent on to an hospital.

*Dr. Collingwood* states:—The Cardinal is in error in stating that I informed Father Long that an inmate was ill and desired his attendance; it is no part of my business at the Home to attend to any matters connected with the religion of the inmates, and I certainly did not on that occasion; on one occasion Father Long asked me about a woman who had written to him, and about whom I could not give him any information; I referred him then to the Lady Superintendent; on another occasion I asked Father Long why he did not call at the Home, saying that if he did he would be courteously received; on this occasion I gave Father Long a general introduction to the Lady Superintendent.

The Director of Government Asylums to The Principal Under Secretary.

Department of Charitable Institutions,

Begg-street, Paddington, 20 June, 1889.

Sir,

I have the honor to present my final report upon the statements of his Eminence Cardinal Moran, in reference to the Open-all-night Refuge for Women.

I have but little to add to my progress report of yesterday's date, which accurately states the case referred to by his Eminence.

Mr. Ardill, the Director of the Refuge, has furnished the following statement of the lines on which that establishment is conducted :—

“The Institution is conducted on Protestant principles, though admission is granted to women of any creed. In fact there is no other Institution in the city which meets the needs of friendless women by providing shelter. The proportion of Catholics sheltered from time to time will show that none are refused because of religious belief. It is a rule of the Institution that all inmates in the Refuge at the time of holding the evening meetings shall attend same. This we consider gives us much more control over the inmates, and helps towards good management.”

The inmate particularly referred to by his Eminence the Cardinal was a Roman Catholic, and was informed upon her admission that she must conform to the conditions that all inmates (whether Protestant or Roman Catholic) should attend the Protestant religious services, and she did so. She remained in the Home from the 17th of May until the 5th of June.

I am informed that on the evening of the 29th of May she requested permission of the Matron to go out for an hour or so. She was told that she must return in time for the meeting. She did not return to the meeting, but was re-admitted to the Home on that same night. She was, however, reprimanded, and again informed that she must comply with the conditions under which she had been first admitted. She remained in the Home for several days after this occurrence, and attended the religious services.

Mr. Ardill takes the ground that as the Refuge is not subsidised by the State the Managers have a right to impose what conditions they please with regard to the religious observances.

I have, &c.,

SYDNEY MAXTED,  
Director of Government Asylums.

1889.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.  
(RESUMPTION OF LAND, IN CONNECTION WITH THE ERECTION OF COTTAGE HOMES, AT  
PARRAMATTA.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable  
to wit, } CHARLES ROBERT, BARON CARRINGTON,  
a Member of Her Majesty's Most  
(L.S.) } Honourable Privy Council, Knight  
CARRINGTON, } Grand Cross of the Most Distinguished  
Governor. } Order of Saint Michael and Saint  
George, Governor and Commander-in-  
Chief of the Colony of New South  
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the erection of Cottage Homes at Parramatta, in the said Colony, for and towards the completion of which said works public funds are available; and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification, published in the Gazette, and in a newspaper, that is to say, in the "Cumberland Mercury," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purpose hereinafter mentioned, that is to say, for and in connection with the erection of Cottage Homes, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple

in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the town of Parramatta, parish of Saint John, county of Cumberland, and Colony of New South Wales, containing 9 $\frac{3}{8}$  perches: Commencing at the north-eastern corner of lot 45 of section 2 of the Wentworth Estate; and bounded thence by the south-western boundary of Fitzwilliam-street bearing north-westerly about 72 feet; thence by a line bearing northerly about 29 feet; thence by a line bearing south-easterly 63 feet 9 inches; thence by a line bearing easterly 13 feet 8 inches; thence by the north-eastern boundary of Fitzwilliam-street aforesaid bearing south-easterly about 23 feet; thence by the south-eastern termination of Fitzwilliam-street bearing south-westerly 50 feet, to the point of commencement, and said to be in the possession of John Taylor.

In testimony whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this second day of August, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,  
BRUCE SMITH.

GOD SAVE THE QUEEN!

1889.

[1,453 copies—Approximate Cost of Printing (labour and material), £212 1s. 3d.]

THE POSTMASTER-GENERAL TO HIS EXCELLENCY THE GOVERNOR.

ANNUAL REPORT FOR THE YEAR 1888, ON THE POST OFFICE,  
MONEY ORDER, GOVERNMENT SAVINGS BANK, AND ELECTRIC  
TELEGRAPH DEPARTMENTS.

MY LORD,

I have the honor to transmit to your Excellency the Annual Report for the year 1888 on the Departments under the Ministerial control of the Postmaster-General.

COMBINED REVENUE AND EXPENDITURE.

		1887.		1888.	
<i>Revenue.</i>					
Post Office	...	£342,093	14 4	£368,956	0 11
Electric Telegraph Department	...	164,510	15 3	185,965	5 7
Money Order and Government Savings Bank Department—					
Commission on Money Orders	...	14,960	7 6	15,879	5 6
Interest on Investments	...	55,493	10 11	63,804	14 1
Total	...	£577,058	8 0	£634,605	6 1

		1887.		1888.	
<i>Expenditure.</i>					
Post Office	...	£458,923	14 7	£447,939	13 4
Electric Telegraph Department	...	156,779	15 3	154,875	19 3
Money Order and Government Savings Bank Department—					
Salaries and Contingencies	...	11,447	6 1	10,749	12 7
Interest added to Depositors' Accounts	...	50,717	4 10	58,483	7 9
Total	...	£677,868	0 9	£672,048	12 11

The above are the particulars of expenditure out of the votes of Parliament directly at my disposal, except in the case of the Government Savings Bank item of "Interest added to Depositors' Accounts," which is specially provided for out of the interest accruing from investment of funds on the same account.

The following are the items of expenditure paid from votes under the control of other Ministers:—

		1887.		1888.	
Stores and stationery	...	£8,095	3 7	£4,833	5 4
Repairs and additions to Buildings	...	7,835	12 10	11,796	16 7
Furniture (including carriage)	...	3,677	17 1	1,353	2 0
Printing, bookbinding, Gazette advertisements, Gazettes, &c.	...	9,126	3 2	9,499	10 2
Printing postage stamps...	...	5,034	7 0	5,592	4 5
Municipal rates	...	1,425	12 0	1,419	19 0
Postage	...	1,131	0 0	1,642	0 0
Advertising in newspapers	...	947	15 8	731	7 9
Fuel and light	...	3,087	8 1	1,818	16 2
Total	...	£40,360	19 5	£38,687	1 5

The interest on the cost of construction of Electric Telegraph Lines is estimated at £28,196, and the interest on the cost of buildings owned by the Government, and used as Post and Telegraph Offices in various parts of the Colony, is estimated at £24,950, which will make the total expenditure of the Departments under my control £763,881 14s. 4d.

POSTAL

\* These items do not include the proportions chargeable against the Electric Telegraph and Money Order and Government Savings Bank Departments, of the salaries of officials in charge of combined Post and Telegraph Offices, the full amount of which salaries are included above in the expenditure of the Post Office Department. Apportioning the cost of salaries, the Electric Telegraph expenditure would be £180,675 8s. 3d., the Money Order and Government Savings Bank expenditure, £17,498 4s. 3d. (exclusive of interest added to depositors' accounts); and the expenditure of the Post Office Department, £415,391 12s. 3d.

## POSTAL CONFERENCE.

One of the main features of the year 1888 was the Conference held in Sydney, in the month of January, at which the following Ministerial representatives of the various Colonies were present, viz.:—The Hon. C. J. Roberts, New South Wales; the Hon. F. T. Derham, Victoria; the Hon. J. C. F. Johnson, South Australia and Western Australia; the Hon. Sir William Fitzherbert, New Zealand; and the Hon. B. Stafford Bird, Tasmania. The following permanent heads of Departments were also present at this Conference, and assisted the Ministers on the matters discussed relating to their Departments, viz.:—S. H. Lambton, Secretary, Post Office, New South Wales; James Smibert, Deputy Postmaster-General, Victoria; Charles Todd, Postmaster-General, South Australia; John M'Donnell, Under Secretary, Post and Telegraph Office, Queensland; A. C. Douglas, Secretary to Post Office, Tasmania; Robert Henry, Superintendent of Telegraphs, Tasmania; and W. Gray, Secretary to Post and Telegraph Office, New Zealand. At this Conference the following important questions were considered, namely:—The Federal Ocean Mail Service, *via* Suez; Intercolonial Parcel Post; Postal Note System; the position of the Cable Service between Australia and England, including branch services respectively to New Zealand and Tasmania; proposals of the Eastern Extension Telegraph Company for a reduction of the tariff between Europe and Australia, and proposal that the Imperial Government should contribute to the cable subsidy; the proposed telegraphic communication between England and Australia by way of the Pacific and Vancouver Island; uniform postal regulations among the various Colonies; exchange of post-cards between the Australian Colonies and Great Britain; reduction of the Indian Telegraph Transit Rates; and some other questions of a less important character.

As the Minutes of the Proceedings at this Conference, and the resolutions arrived at have already been presented to Parliament, and as my predecessor, Mr. Roberts, at some length alluded to this Conference in his Report for the year 1887, it only remains for me to notice what has since transpired in reference thereto.

## I.—POST OFFICE DEPARTMENT.

## INLAND SERVICE.

THE new postal routes opened during the year 1888, as shown in the annexed return, amounted to 1,351 miles, viz.:—

Postal Line.	No. of times per week.	Postal Line.	No. of times per week.
<i>In the Western Country.</i>		<i>In the Southern Country—continued.</i>	
From Carcoar Railway Station to Post Office .....	12	From Broken Hill Platform to Post Office .....	6
Cobar to Cudal .....	3	Broken Hill to Rockwell .....	3
Cobar to Gilgunnia .....	1	Broken Hill to South Broken Hill .....	6
Esrom to Millamurra .....	1	Camden to Mount Hunter .....	3
Eugowra to Galwary .....	1	Canley Vale to St. John's Park .....	6
Forbes to Mares' Water Hole .....	1	Clifton Railway Platform to Post Office .....	12
Genanagie to Wallan Billan .....	1	Cungegong Railway Platform to Post Office .....	6
Mandurama Railway Station to Post Office .....	12	Dapto to Brownsville .....	6
Marsden's to Waroo .....	1	Dapto Railway Station to Post Office .....	6
Mount M'Donald to Reid's Flat .....	1	Euriowie to Cobham Lake .....	1
Mount Victoria to Upper Run .....	3	Ginninderra to Walleroo .....	1
Orange to Lewis Ponds .....	6	Holt's Flat to Cathcart .....	1
Parkes to Ten-mile Reef .....	1	Kiama Railway Station to Post Office .....	6
Parkes to Trundle .....	1	Lake Bathurst to Bronti .....	3
Sheet of Bark to Wood's Flat .....	6	Liverpool to Moorebank .....	6
Shooters' Hill to Porter's Retreat .....	1	Milperinka to Mount Browne .....	1
Trunkey Creek to Coppahanna .....	1	Narrandera to Darlington Point, on south side of river .....	3
Tuena to Mount Costigan .....	3	Pinnacles to Thackaringa Mines .....	3
<i>In the Southern Country.</i>		Pullitop Station to Upper Pullitop .....	3
From Albion Park Railway Station to Post Office .....	6	Queanbeyan to Williamsdale (re-established) .....	2
Austinmer Platform to Post Office .....	18	Rookwood to Potts' Hill .....	6
Barellan to Yalgogrin .....	2	Shellharbour Railway Station to Post Office .....	6
Booligal to Oxley .....	1	Silverton Railway Platform to Post Office .....	12
Broken Hill to Euriowie .....	2	Thackaringa Mines to Cockburn .....	3
Broken Hill to Menindie .....	1	Timbery Range to Bungarby .....	1
Broken Hill to Pinnacles .....	3	Walla Walla to Walla Walla Homestead .....	2
		Yass to Good Hope (re-established) .....	2

The communication existing on the following lines was decreased :—

Postal Line.	No. of times per week.		Postal Line.	No. of times per week.	
	From	To		From	To
<i>Western Roads.</i>			<i>Northern Roads.</i>		
Between Mundooran and Merrygoen.....	5	3	Between Rouchell Brook and Davies Creek.....	2	1
<i>Southern Roads.</i>					
Between June Junction and The Reefs Young and Temora .....	2	1			
	3	1			

The extent of postal route traversed in the Colony on the 31st December, 1888, was 28,160 miles, as compared with 27,514 miles traversed in 1887 :—

	1887.	1888.
On horseback ...	12,135 miles	11,530 miles.
By coach, &c. ...	13,305 „	14,411 „
By railway... ..	2,052 „	2,201 „
By tramway ...	22 „	18 „

The extension of mail route by railway during 1888 was as follows :—

Cockburn to Broken Hill ...	35 miles.
Mullet Creek to Gosford ...	10 „
Tenterfield to Wallangarra ...	11 „
Blayney to Cowra ...	47 „
Waterfall to North Kiama ...	46 „

The Clifton and North Kiama portion (34 miles) of the last mentioned section was opened for traffic in 1887, but was not utilized for mail conveyance owing to the time-table being unsuitable.

With a view to afford an earlier delivery of mails at Waverley than could be given under the tramway time-table, then in operation, a contract was entered into for their conveyance by cart, or other suitable vehicle, from the 1st May, thus making the mail route traversed by tramway 4 miles less than in 1887.

The number of miles travelled in the year 1888 was 7,144,500, being an increase of 128,900 on the mileage of the previous year.

The number of Post Offices established was fifty, viz. :—Alexandria, Balgowlah, Billeroy, Blakebrook, Blakehurst, Bringagee, Broken Hill Railway Station, Byron Bay, Clive, Cockle Creek, Cordillera, Dry Lake, Dundee Railway Station, Fassifern, Five-mile Creek, Galong, Geurie, Hall, Humula, Kenthurst, Lake Albert, Lewis Ponds, Lilyfield, Malebo, Merewether, Mitta Mitta, Mount Costigan, Mount Hunter, Mullengandra, Mumbil, Narara, Narrawa, North Yanco, Numbugga, Pinnacles, Potts' Hill, Robbinsville, Rockwell, Rydalmere, Sandy Hill, Shaw, Sherbrooke, South Broken Hill, Thornleigh, Upper Run, Wallangra, West Wallsend, Winduella, Woodstock, and Yarrowyck.

The number of Post Offices re-established was three, viz. :—Duramana, Gullen, and Meroe.

The number of Post Offices discontinued was seventeen, viz. :—Buggil, Carlisle Gully, Cawley's Creek, Eulourie, Foxlow, Garah, Glebeland, Kingstown, Long Swamp, Mount Carmel, Murraguldrrie, Nana Creek, Rankin's Springs, Sheet of Bark, Spring Ridge, Turee Creek, and Woodford.

It was found desirable to change the designations of the following Post Offices, viz. :—Blue Gum Flat to Ourimbah, Broughton's Creek to Berry, Cockle Creek to Davis Town, Eversleigh to Dumaresq, Mitchell to Sunny Corner, Monica Vale to Koorawatha, Morton's Creek to Beechwood, North Bulli to Austinmer, Onebygamba to Carrington, Park Village to St. Aubyns, and subsequently to Parkville, Peat's Ferry to Brooklyn, and Winding Creek to Teralba.

In the Appendix will be found a list of the 1,203 Post Offices in the Colony on the 31st December, 1888.

191 changes of Postmasters occurred during the year.

In

In the information contained in Appendix A is given a return of buildings for the transaction of the Postal, Money Order, Savings Bank, and Telegraph business possessed by the Government, as well as of the places where premises are rented or otherwise provided for the purpose. Government buildings at the following places were completed and occupied during 1888, viz. :—Junee Junction, Louth, Morangarell, Wagga Wagga, and Wee Waa. Appendix A.

Receiving Offices were established at the following places, viz. :—Albion Town, Argenton, Bachelor's Rush, Bargo Platform, Barry, Boggy Creek, Bronti, Brookvale, Bullenbong, Bungarby, Burnt Yards, Cattia Creek, Cawley's Creek, Coramba, Cordillera, Cundle Flat, Dudauman, Dundee Railway Station, Duri, Emerald Hill, Galwary, Garah, Garland, Genanagie, Good Hope, Jerangle, Kiah, Kingstown, Linden, Long Swamp, Macdonald River, Mares' Water Hole, Matheson, Maybole, Moorebank, Morisset, Mount Browne, Mount Costigan, Mulbring, Narrabeen, Narraburra, Nemingha, North Pimlico, Peakview, Riverview, Rossiterville, St. John's Park, South Mount Hope (re-established), Stott's Creek, Ten-mile Ridges, Turee Creek, Upper Orara, Wallan Billan, Wallaroo, Warge Rock, Warrell Creek, White Stamp, Wilga Vale, Williamsdale, Woodford, Wyec, and Wyong Railway Station.

The names of the Receiving Offices at Berrima Colliery, Woodford, Riverview, and Bargo Platform, were changed to Great Southern Colliery, Thornton, Wallace, and Balmoral respectively.

The Receiving Offices at the following places were converted into Post Offices :—

Bringagee, Byron Bay, Cockle Creek, Cordillera, Dry Lake, Dundee Railway Station, Five-mile Creek, Gullen, Kenthurst, Mitta Mitta, Mount Costigan, Mullengandra, Mumbil, Narrawa, North Yanko, Numbugga, Ponto Railway Station (Geurie), Sandy Hill, Selmes' (Winduella), Shaw, Sherbrooke, Thornleigh, Wallangra, and Yarrowyck.

The Receiving Offices at the undermentioned places were discontinued, viz. :—

Belmore River, Buckenbour, Cawley's Creek, Donald, Lower Temora, Nickelville, Ponto Railway Station, Uley, Upper Lewis Ponds, Wallandry, Wallaroo, Wardry and Waverley Station.

In the Appendix will be found a list of the Receiving Offices in existence at the close of the year, showing the number to be 288. Appendix B.

During the year 1888, one newspaper pillar and eight pillar letter-receivers were erected in different parts of the Colony, and six were removed to different sites. Seventy-eight small iron letter-receivers were placed, ten were removed to new sites, and four withdrawn. Of other kinds of receivers, three were placed and two withdrawn.

On the 31st of December the number of letter-receivers erected in the Colony (both large and small) was 659, and the number of newspaper-receivers 16.

At Auburn, Bathurst, Ben Bullen, Deniliquin, Eskbank, Grafton, Hexham, Lithgow, Marrickville, Newtown, Orange, Parramatta, Petersham, Redfern, and St. Leonards the letter-receivers are cleared by special messengers, who are respectively paid an annual sum for the performance of this work. At other places this duty is fulfilled by persons regularly attached to the staff of the Department.

The number of licenses for the sale of postage-stamps issued in 1888 to persons other than postmasters or receiving-office keepers was 211; the number transferred, 42, and the number cancelled, 7.

In the Appendix is given a list of the persons holding these licenses, throughout the Colony. Appendix C.

On the 31st December the number of locked private letter-boxes let at the General Post Office was 1,140, besides 64 allotted to Public Departments, for which no fees are paid. The system is now in operation at the following offices, viz. :—Adelong, Albury, Armidale, Ballina, Balranald, Bathurst, Bega, Bombala, Bourke, Braidwood, Broken Hill, Casino, Cobar, Coonamble, Cootamundra, Dubbo, Emma-ville, Forbes, Glen Innes, Goulburn, Grafton, Gunnedah, Hay, Haymarket, Inverell, Jereelderie, Junee Junction, King-street, Lismore, Manly, Moruya, Moss Vale, Mudgee, Muswellbrook, Narrabri, Narrandera, Newcastle, Newtown, Nymagee, Orange, Parramatta, Queanbeyan, Silvertown, Singleton, Tamworth, Temora, Tenterfield, Uralla, Wagga Wagga, Walgett, Wentworth, West Maitland, Wilcannia, and Young.

Five additional letter-carriers were appointed during the year 1888, and ten were transferred from the temporary to the permanent staff. The staff carrier at Lismore

Lismore, and one of those at Bathurst, were transferred, and their places filled by the appointment of lads at small salaries. There were, at the end of the year, 191 letter-carriers, distributed throughout the Colony as follows:—134 Sydney and Suburbs, 3 Albury, 1 Armidale, 2 Bathurst, 1 Bourke, 3 Broken Hill, 1 Corowa, 1 Deniliquin, 1 Dubbo, 2 East Maitland, 1 Forbes, 1 Glen Innes, 4 Goulburn, 2 Grafton, 1 Granville, 2 Hay, 1 Inverell, 1 Lambton, 1 Liverpool, 1 Morpeth, 1 Mudgee, 1 Narrabri, 3 Newcastle, 1 Orange, 4 Parramatta, 1 Silvertown, 1 Singleton, 2 Tamworth, 3 Wagga Wagga, 2 Wallsend, 1 Waratah, 2 West Maitland, 1 Wickham, 1 Wilcannia, 1 Windsor, 1 Wollongong, 1 Young.

Under special arrangements a house-to-house delivery of correspondence is also afforded in the following localities, viz.:—Adamstown, Arncliffe, Ballina, Bega, Berry, Bingera, Blayney, Bowral, Braidwood, Camden, Campbelltown, Canterbury Carrington, Casino, Cobar, Concord, Cooma, Coonamble, Cootamundra, Cowra, Croydon, Drummoyne, Dungog, Gladesville, Grenfell, Greta, Gundagai, Gunnedah, Hamilton, Hill End, Homebush, Hurstville, Islington, Junee Junction, Katoomba, Kempsey, Kiama, Kogarah, Lawrence, Lismore, Lithgow, Macdonaldtown, Maclean, Minmi, Mittagong, Moama, Molong, Moree, Muswellbrook, Narrandera, New Lambton, North Ryde, North Willoughby, Nowra, Nyngan, Parkes, Penrith, Queanbeyan, Raymond Terrace, Richmond, Rockdale, South Grafton, Springwood, Stockton, St. Peters, Strathfield, Sunny Corner, Taree, Tenterfield, The Junction, Watson's Bay, Wellington, Wentworth, West Tamworth, Wingham, and Yass.

The number of persons employed in connection with the Postal Department for the year 1888, was as follows:—1 Postmaster-General, 1 Secretary, 1 Chief Clerk, 1 Superintendent, Mail Branch; 1 Accountant, 1 Cashier, 1 Postal Inspector for Missing Letters and Irregularity Branch; 2 Postal Inspectors, 1 Assistant-Superintendent, Mail Branch; 3 senior clerks, 91 clerks, 14 temporary clerks, 1 probationer, 35 mail guards, 30 letter-sorters, 40 stampers and sorters, 191 letter-carriers, 39 mail-boys, 46 messengers, porters, female servants, &c., 1 detective, 1,203 postmasters, 2 relieving officers, 111 postal assistants, 195 temporary postal assistants, 11 temporary sorters, 28 temporary receiver-clearers, 118 temporary letter-carriers, 44 mail-carriers, 288 receiving office-keepers, 611 mail contractors; total, 3,112. 209 of the above also hold the position of station-master, operator, messenger or probationer in the Electric Telegraph Department, and are included in the return of employes under that Department given on page 24. Of the remainder, 300 hold the dual appointment of official Post and Telegraph Master.

The Honorable C. J. Roberts, C.M.G., M.L.A., retired from the position of Postmaster-General on the 16th January, 1889, consequent on the resignation of the Ministry of which he was a member, and was succeeded by the Honorable Henry Clarke, M.L.A., who retired on the 7th March, when I undertook the Ministerial charge of the Department.

The following officers retired under the provisions of the Civil Service Act, 1884, viz:—

G. de Milhau, Postal Inspector.

L. F. Stephen, Postmistress, Manly.

W. H. Thompson, Postmaster, Newcastle.

J. W. Emblin, Postmaster, Armidale, and

H. Sims, Stamper and Sorter.

Eight deaths occurred, viz:—W. Owen, Postmaster, Deniliquin; R. J. Barr, Postmaster, Mungindi; W. M. Sherriff and E. Chapman, mail guards; P. A. L. Bernasconi, and G. F. M'Donough, postal assistants; H. Williams, letter-carrier; and F. Purkis, office-cleaner.

Forty-one resignations took place, and thirteen officers were removed from the service. Of the latter one—a postmaster—received a sentence of 12 months' imprisonment for embezzlement; another—a postal assistant—one of 2 years for stealing a letter; and a third—a clerk—one of 18 months for tampering with a letter. The remainder were dismissed for the following offences:—

A postmaster, for irregularities in his accounts.

Two letter-carriers, for delaying the delivery of letters; another, for irregular performance of duty; and a fourth, for having in his possession a letter addressed to another letter-carrier's beat.

Two mail-boys, for general unsatisfactory conduct.

A postmaster and two postal assistants, for neglect of duty and improper dealing with the public money.

The Postal Inspectors travelled over and inspected 26,804 miles of postal route, and visited 453 Post Offices.

The

The rate of postage upon letters posted at the Kempsey, East Kempsey, or West Kempsey Post Office, for delivery within the limits of the town of Kempsey, in which the post offices mentioned are situated, was, in March, reduced from 2d. to 1d. per half ounce.

In July the regulation regarding the transmission of packets by post was so amended as to allow "old" or "spent" letters to be forwarded throughout the Colony, and to such other colonies and countries as might agree to reciprocate, at packet rates.

Arrangements were made in August for the supply to box-holders on payment in advance of 2s. 6d. per annum, or the delivery by letter-carriers on their first round in the city on payment in advance of 5s. per annum, of a copy of the Ships' Mail Notice published each day.

In accordance with one of the resolutions agreed to at the Postal Conference held in Sydney in January, 1888, viz. :—

"That, with a view to the introduction of the post-card system into New Zealand, negotiations be entered into with the Steam Companies as to the charges for carriage,"

negotiations were opened, through the New Zealand postal authorities, with the Union Steamship Company—by whose vessels the conveyance of mails between the Australian Colonies and New Zealand is principally performed—and resulted in the several Colonies agreeing to the terms on which the Company offered to convey this class of mail matter. It was proposed to bring the system into operation on the 1st March, 1889, but shortly prior to that date an intimation was received from the New Zealand Post Office that it found that it could not legally establish the system without special legislation, and that the matter would, therefore, have to be deferred until July.

#### FOREIGN SERVICE.

##### *Federal Mail Service.*

The Federal Mail Service between Australia and England, by way of Suez, particulars of which are fully given in my predecessor's Report for the year 1887, came into operation on the 1st February, 1888, and has so far worked satisfactorily, as will be seen later on in this Report on reference to the details of the time kept by the steam-packets of the two Companies performing the service, and by the returns showing the diminished cost to the Colony of the ocean mail service *via* Suez. The only matter for regret in connection with the service is that the Imperial authorities and some of the authorities of the Steam Companies have not seen fit to accede to the desire of the Colonies as regards the day of departure of the mail from Adelaide.

On the 1st January, 1889, the public were afforded the advantage of a cheap rate of postage, namely, 4d. per  $\frac{1}{2}$  oz. for letters conveyed by this service between the Colonies and England all the way by sea; and from the same date the transmission of post-cards was also introduced between the Colony and England in connection with this Federal Service, such cards being conveyed at 3d. each *via* Italy, and at 2d. each by way of the long sea route. The proportion of letters sent by this cheap route to those sent by the quicker route, *via* Italy, is estimated to be as follows :—

By long-sea route during 3 months ended 31st March, 1889	...	...	3,600
<i>Via</i> Italy during same period	...	...	128,650

It would not seem from this that there is any such urgent demand for cheaper postage between the United Kingdom and New South Wales as many persons imagine.

##### *San Francisco Mail Service.*

Mail communication has been maintained for a very long period between Australia and the United Kingdom, by way of America. In the year 1865 a service *via* Panama was established; but for many years this route has been abandoned in favour of that to San Francisco, and on by rail through the United States of America to New York, and thence across the Atlantic to England.

At

At the present time the mail contract service is as follows :—Between Sydney, Auckland, Honolulu, and San Francisco, once in every four weeks, performed by the Union Steamship Company, under contract with the Governments of New South Wales and New Zealand, for a total subsidy of £37,000; New South Wales providing £12,333 6s. 8d. of this amount, and New Zealand £24,666 13s. 4d. This contract was originally taken for three years from the 21st November, 1885, and was subsequently extended for one year.

The question of the nature of future communication *via* America is now under consideration. Whilst the existing arrangement has afforded satisfactory communication, some difficulties arise in connection with negotiations for a future service. The Government of New Zealand, owing to the action of the Parliament of that colony, finds its power so curtailed that it would seem to be unable at present to take the prominent position in regard to this particular mail service which it has hitherto held; while there is considerable activity being manifested in Canada and England towards establishing a means of communication between Australia and the United Kingdom by way of Canada instead of by way of the United States of America.

In view of the unsettled condition of affairs both in New Zealand and America, it would seem desirable that measures should be taken for the continuance of a service between Sydney and San Francisco, for a period not exceeding a year after November, 1889, when the present contract expires; but, as I have already indicated, it has not yet been determined what precise arrangements shall be made.

The performance by the Union Steamship Company of the Mail Service between Sydney and San Francisco during the year 1888 is shown in the following returns :—

*Colombo-Briudisi Service.*

Statement showing the approximate net cost to the Colony of the Peninsular and Oriental Mail Service for portion of the year 1888, *i.e.*, to the termination of the contract between the Victorian Government and the Peninsular and Oriental Steam Navigation Company:—

<i>Dr.</i>		£	s.	d.	£	s.	d.
To payment to Victoria for the carriage of mail-matter from and to New South Wales	...	1,915	11	2			
Overlanding, special trains, &c.	...	192	8	1			
		<hr/>			2,107	19	3
<i>Cr.</i>							
By share of postage from the United Kingdom, Italy, &c.	...	520	0	0			
Estimated postages collected in and retained by the Colony	...	500	0	0			
		<hr/>			1,020	0	0
Estimated net cost to the Colony	...				£1,087	19	3
The estimated net cost for 1887 was	...				£5,221	2	10

The following statement shows the approximate net cost to the Colony of the Federal Mail Service, per the vessels of the Orient and Peninsular and Oriental Steam Navigation Companies, for the portion of the year 1888 during which it was in existence:—

<i>Dr.</i>		£	s.	d.	£	s.	d.
To New South Wales proportion of Colonial share of subsidy for period from the 1st February to the 31st December, 1888	...	27,612	2	8			
Overland transit of mail-matter through European countries	...	3,300	0	0			
Overland transit of mail-matter through Australian Colonies, and special trains	...	1,700	0	0			
		<hr/>			32,612	2	8
<i>Cr.</i>							
By estimated postages collected in and retained by the Colony	...	24,200	0	0			
Estimated share of contributions from non-contracting Colonies, &c.	...	4,200	0	0			
		<hr/>			28,400	0	0
Estimated net cost to the Colony	...				£4,212	2	8

Statement

Statement showing the net cost per pound weight of mail matter to and from New South Wales conveyed by the Pacific, Orient, Peninsular and Oriental, and Federal Mail Services, respectively, during the year 1888:—

Pacific	...	...	Net cost per lb.	4	pence.
Orient	...	...	"	"	" 38½ "
Peninsular and Oriental	...	...	"	"	" 11½ "
Federal	...	...	"	"	" 2½ "

I find that in the Annual Report for 1887 it was estimated that the net cost for that year of the Peninsular and Oriental and Orient Mail Services was £32,396, and that about £25,496 per annum would be the saving to the Colony resulting from the new mail contracts and arrangements in connection with the Federal Mail Service, *via* Suez.

According to the returns which I give above, the net cost of, or, in other words, the loss on this service for the period from 1st February to 31st December, 1888 (during which it was in operation), was £4,212, or at the rate of £4,595 per annum; so that a saving of about £27,800 per annum has been effected.

I think I may congratulate the Colony upon the satisfactory financial effect of this new Mail Service, and upon the accurate foresight of those who calculated the cost of the service in question.

The amount paid by each contributing Colony, on the basis of population, towards the cost of the Federal Ocean Mail Service, for the period from the 1st February to the 31st December, 1888, was as follows, viz:—

	£	s.	d.
New South Wales	27,612	2	8
Victoria	27,641	16	2
South Australia	8,610	3	7
Tasmania	3,781	5	0
Western Australia	1,104	12	7

The amount paid by the United Kingdom for the same period was £87,083 6s. 8d.

In January arrangements were entered into with the postal authorities of Victoria, South Australia, and New Zealand, for an exchange between those Colonies and New South Wales, of packets containing articles of merchandise not exceeding 16 oz. in weight at the inland rate of 1d. for every 2 oz. or fraction thereof.

Authority was given in April for the collection of the following rates of postage on mail matter posted in this Colony for transmission to German New Guinea, viz:—

Letters	...	...	...	5d. per ½ ounce.
Other articles	...	...	...	1d. for every 2 ounces.

These rates were in August altered to 2d per ½ oz. on letters, and 2d. for every 2 oz. on other articles.

In May and June, 1888, the Postmaster-General of the United Kingdom and the Minister for Public Works of Italy entered into an agreement for regulating the postal relations of Italy and the rest of Europe, *via* Italy, with Australia, New Zealand, Tasmania, and the Fiji Islands. In the Appendix hereto is given the English text of this agreement.

In June the rates of postage on mail matter for the countries of the Continent of Europe (except France), *via* Italy, were assimilated to the rates charged on correspondence for the United Kingdom, viz:—

Letters—For every ½ ounce or fraction thereof	...	...	6d.
Newspapers, each...	...	...	1d.
Book Packets, &c.—			
Not exceeding 1 ounce	...	...	1d.
Exceeding 1 ounce, but not exceeding 2 ounces	...	...	2d.
Every additional 2 ounces or fraction thereof	...	...	2d.

As a temporary measure it was agreed, in August, that this Department should undertake the conveyance through New South Wales, free of charge, of correspondence from German New Guinea for the other Australian Colonies, on condition that the German Post Office conveyed New South Wales correspondence for German New Guinea from Cooktown (Queensland) to destination on the same terms.

FOREIGN

## FOREIGN PARCEL POST.

The Parcel Post system, which was inaugurated between this Colony and the United Kingdom, in August, 1886, and subsequently extended to certain other countries, was, during the year 1888, extended to the following places, through the medium of the United Kingdom, subject to special rates of postage, prohibitions and limitations as to size and weight, viz.:—Spain, Portugal, Madeira, Azores, West Coast of Africa (Bathurst, Cape Coast Castle, Sierra Leone, Quittah, Accra, Lagos), Cameroons, Tripoli, Tunis, Senegal, French Guiana, Reunion, Martinique, Guadeloupe, Diego Suarez, Mayotte, Nossi Be, St. Marie de Madagascar, Austrian and French Post Offices in Turkish Ports (Alexandretta, Caifa, Candia, Canea, Cavalla, Dardanelles, Dedeagh, Durazzo, Gallipoli, Ineboli, Jaffa, Keresun, Lagos, Latahia, Leros, Mersina, Mytilene, Prevesa, Retimo, Rhodes, Salonica, Samsoun, San Giovanni de Medua, Santi Quaranta, Scio, Tenedos, Trebizond, Tripoli (Syria), Valona, Vathi), Adrianople, Janina, Jerusalem, Phillipopolis, Danish West Indies, Beyrout (British Post Office), Columbia, Bulgaria, Servia, Costa Rica, Bosnia, Herzegovina, Novi Bazar, and Little Popo.

Arrangements were made in August for a direct exchange of parcels between this Colony and Belgium and Germany by German packets.

In view of the offer of the Peninsular and Oriental and Orient Steam Navigation Companies to reduce the charge for the conveyance of parcel mails to and from Australia and the United Kingdom, provided the public were given the benefit of a postage rate of 8d. or 9d. per lb., the Imperial authorities proposed the reduction of the rate from 1s. to 9d. per lb., which was agreed to from the 1st July, as was also the following apportionment of the amount:—2d. per lb. to the steam companies for carriage, 2½d. per lb. to the Imperial Post Office, and 4½d. per lb. to this Colony.

Proportionate reductions were at the same time made in the rates to other countries, through the United Kingdom, and consequent thereon this Colony agreed to accept the following reduced share of the postage on parcels to and from countries of the Continent of Europe, *via* the United Kingdom, and per British packet, namely:—

	s.	d.
On each parcel not exceeding 2 lb. in weight ... ..	0	9
"    between 2 and 7    "    ... ..	2	3
"    "    7    "    11    "    ... ..	3	9
And on each parcel to and from Germany per German packet not exceeding 11 lb. in weight ... ..	3	9

The following return shows the number and declared value of parcels received and despatched, and the amount of postage paid thereon during the years 1886, 1887, and 1888:—

*Received.*

Year.	Number of Mails.	Number of Parcels.	Declared Value.	Amount of Postage.
			£ s. d.	£ s. d.
1886 (from 1st August).....	19	2,874	4,889 18 1½	456 5 0
1887.....	52	8,421	17,036 6 5	1,412 17 3

At

At the Postal Conference, held in Sydney in January, 1888, the following resolution was agreed to, viz.:—

That this Conference would view with satisfaction the establishment of an Intercolonial Parcels Post, and recommends that the question receive the early consideration of the various Australasian Governments; and that those Colonies possessing the power to introduce the system are desired to do so as early as convenient; and it is recommended that parcels should be carried at a rate of 5d. per lb., with a minimum of 10d. to cover a 2 lb. parcel, exclusive of cost of carriage (which would be added in each case), and the same general regulations be adopted as are in operation between Great Britain and the Colonies.

I find that this resolution received consideration by my predecessor (Mr. C. J. Roberts), and it was determined that until the needful legislation was obtained for the establishment of a parcel post between places within the Colony of New South Wales, it was inexpedient to establish the system between New South Wales and the other Australasian Colonies. Later on in this report I make allusion to the need for fresh legislation for postal and other purposes.

#### LETTERS, NEWSPAPERS, PACKETS, & POST-CARDS POSTED THROUGHOUT THE COLONY.

The following is a return of the estimated number of Letters, Newspapers, Packets, and Post-cards posted in the Colony during 1888, as compared with the number posted in the preceding year:—

	1887.	1888.
<b>LETTERS.</b>		
Posted for delivery within the Colony .....	39,221,900	42,783,200
"    Australian Colonies and New Zealand .....	1,889,600	2,184,400
"    Foreign despatch .....	760,400	771,800
Total.....	41,871,900	45,739,400
<b>NEWSPAPERS.</b>		
Posted for delivery within the Colony.....	29,437,200	28,500,400
"    Australian Colonies and New Zealand.....	1,988,600	2,429,500
"    Foreign despatch.....	679,300	792,100
Total.....	32,105,100	31,722,000
<b>PACKETS.</b>		
Posted for delivery within the Colony.....	4,549,900	5,560,300
"    Australian Colonies and New Zealand.....	548,100	676,600
"    Foreign despatch .....	100,000	101,500
Total.....	5,198,000	6,338,400
Total number of Post-cards posted .....	442,100	520,920

It has been the custom for many years to get particulars from the various city newspaper proprietors of the number of newspapers posted. In the year 1887 the information so obtained disclosed a very large increase in the circulation of these newspapers, but the information was at the time stated to be correct. From similar information furnished for the year 1888, it would appear that there has been a large decrease in the number of papers posted, and it is now believed that the information for 1887, supplied by the newspaper proprietors in question, was incorrect.

Owing to this, in the above return, the number of newspapers posted for delivery within the Colony, for the year 1888, shows a decrease compared with the figures for 1887; but there has really been a steady increase in the number posted since the year 1886, when the figures were 25,256,100.

#### DEAD LETTER BRANCH.

Year.	Number of ordinary letters (except those containing articles of value) returned to the writers as unclaimed.					Number of registered letters returned as unclaimed.	Number of letters unregistered but containing articles of value returned as unclaimed.	Number of letters returned to the following places as unclaimed.				Number of letters returned as unclaimed or insufficiently addressed.
	Originally addressed to places within the Colony.	Originally addressed to the Australasian Colonies.	Originally addressed to the United Kingdom.	Originally addressed to other Countries.	Total.			Australasian Colonies.	United Kingdom.	Other Countries.	Total.	
1887 ...	311,263	34,409	3,541	1,027	350,240	2,608	1,149	20,213	10,388	2,335	33,536	28,673
1888 ...	322,794	50,139	4,032	1,057	378,022	2,310	1,010	21,668	9,480	3,210	34,358	31,317
Increase.	11,531	15,730	491	30	27,782	.....	.....	1,455	.....	275	822	2,644
Decrease.	.....	.....	.....	.....	.....	298	139	.....	908	.....	.....	.....

Of the registered letters mentioned in the above return 1,646 originated in New South Wales, and on being opened previous to return to the writers, were found to contain, besides correspondence and valuable enclosures, such as watches, gold, rings, and jewellery, £2,250 0s. 8d. in coin, notes and cheques. The remaining 664 were from places beyond the Colony, and returned unopened as follows:—348 to London, 137 to other Colonies, and 179 to other countries. In 1,010 unregistered letters were found valuable enclosures representing £14,045 8s. 3d.

Out of about 17,500 packets and letters passed on to the Dead Letter Office imperfectly addressed, the addresses of two-thirds were rectified and the letters forwarded, and the remainder were returned to the writers. In addition to the foregoing 1,380 Chinese letters imperfectly addressed were forwarded to the intended addresses through the assistance of the Chinese Interpreter employed by the Department.

Of 145 packets containing articles of clothing, merchandise, &c., received with the addresses torn off, postage refused, &c., 6 only were applied for and delivered. Of the unstamped letters 3,176, which could not be returned to the writers through insufficient addresses and not being signed, were delivered to the addressees, who were specially communicated with by the Department. 117 letters posted without addresses, 6 of which contained valuable enclosures, were returned to the writers. 57 letters and 24 packets containing obscene addresses were destroyed.

About 833 per cent. of the total number of letters posted in the Colony during 1888 were unclaimed.

The number of letters, &c., delivered by the letter-carriers attached to the head office during the years 1887 and 1888 was as follows:—

	1887.	1888.
Unregistered letters ... ..	9,052,116	9,352,986
Registered letters ... ..	93,605	188,701
Books ... ..	86,555	95,573
Newspapers ... ..	1,293,736	1,271,278

#### REGISTRATION BRANCH.

The number of registered letters which passed through the General Post Office in 1888 was 555,207, against 419,388 in 1887, giving an increase of 135,819.

#### NUMBER OF MAILS RECEIVED AND DESPATCHED.

The following return shows the number of Mails received at, and despatched from the General Post Office during the years 1887 and 1888:—

Year.	Received.		Despatched.		Total number of Mails which passed through the office.
	Inland.	Foreign.	Inland.	Foreign.	
1887 .....	136,826	19,592	131,768	9,460	297,646
1888 .....	148,772	20,075	144,193	10,431	323,471
Increase .....	11,946	483	12,425	971	25,825

#### RECORD BRANCH.

The number of written communications received from the public during 1888, intimating changes of address, or requesting letters, &c., to be forwarded, was 20,474, against 19,617 in 1887.

The number of communications addressed to the Department, relating to the extension and improvement of the Service, to irregularities connected with the performance of mail contracts, and to the transit of letters, &c., through the post, and recorded in the year 1888, was 38,433, against 36,806 in 1887.

REVENUE

## REVENUE AND EXPENDITURE.

The following statement shows the Revenue and Expenditure for the year 1888.

REVENUE.			EXPENDITURE.			
	£	s. d.	£	s. d.	£	s. d.
Sale of postage stamps .....	376,964	9 3			Salaries* .....	167,330 7 0

					Via Colombo-Brindisi .....	8,679 8 4
					„ San Francisco .....	13,158 3 9
Balance of expenditure over revenue .....			46,435	11 4		248,403 7 4
			£415,391	12 3		£415,391 12 3

\* Under regulations made in 1885, in conformity with section 7 of the Civil Service Act, the Post Office Department pays the full salaries of officers in charge of amalgamated Post and Telegraph Offices, who were previously remunerated partly by salaries from the Post Office and Telegraph Departments, and partly by commissions on the sale of postage-stamps, and for the transaction of Money Order Office and Government Savings' Bank business. These commissions were, however, discontinued to the officers mentioned, and their salaries so increased as to compensate them for the loss thereof. It was then arranged that when an amalgamated office transacted Money Order Office and Government Savings' Bank business, the Money Order Department should be debited with one-ninth and the Post Office and Telegraph Departments each with four-ninths of the salary of the officer in charge of such office, and also, that when an amalgamated office did not transact Money Order Office and Government Savings' Bank business, the Telegraph Department should be debited with four-ninths, and the Post Office Department with five-ninths, of the salary of the officer in charge of such office.

The amounts to be debited to the Money Order and Telegraph Departments, under the arrangement referred to, are £6,748 12s. 1d., and £25,799 9s. respectively, leaving a sum of £134,732 5s. 11d. to be charged to the Post Office Department, under the heading of Salaries for the year 1888.

† Comprising the cost of fuel, light, rent, repairs, furniture, forage, carts, horses, uniforms, stamps and seals, receivers, travelling and relieving expenses, overtime—sorting English mails, extra clerical aid, servants' wages for cleaning General Post Office, and incidental expenses.

The following return shows the number, description, and value of Postage-stamps issued at the General Post Office during the years 1887 and 1888:—

Number.		Description.	Value.	
1887.	1888.		1887.	1888.
			£	s. d.

#### NEW POSTAGE-STAMPS.

In the Annual Report for 1887, the fact was mentioned that the Centenary of the Colony was commemorated in the Postal Department by the determination to issue eight new postage-stamps, and that premiums had been awarded for the designs of certain artists, which were received in November of that year. The work of making the dies and electroplates for these new stamps was entrusted to the Government Printer, and he succeeded during the year 1888, and the early part of 1889, in getting the whole executed in the Colony in a very creditable manner, considering the difficulties that stand in the way of producing work comparable with that performed with the superior mechanical appliances available in a few of the older cities of the world. In some instances the original designs of the artists have been modified so as to enable the engraving to afford a more satisfactory result. The following is a description of these new stamps with the dates of their issue for the public use, viz:—

##### TWENTY-SHILLING STAMP.

The stamp is printed in light blue. It represents the Governors of New South Wales in the respective years 1788 and 1888, viz:—Captain Phillip and Lord Carrington. They appear as if on two coins, one partially hidden behind the other. The coin in the front bears the portrait of Lord Carrington; it is clearly and strongly defined, and near its edge are printed the words Twenty Shillings (the value of the stamp) and the figures 1888. The second coin bears the portrait of Captain Phillip and the figures 1788; it is smaller than the other, as if far off, and is surrounded by clouds to convey the idea of distance and space of time. Floating between the coins, amongst the clouds, is a fluttering banner with the words "One Hundred Years." The spaces surrounding the coins are filled in with Australian ferns and Christmas bells (*blandfordia nobilis*), the latter being appropriately suggestive of ringing in the glad Centennial time.

Until special paper could be procured, the stamp was printed on that used for the Five-shilling Stamp. Issued 1st May, 1888.

##### ONE-PENNY STAMP.

Inside a circle is a view of Sydney, taken from Mossman's Bay. Above the circle rests an Imperial Crown, and around the circle are the words "New South Wales Postage" and "One Hundred Years." The surrounding space is filled with Australian ferns and the words "One Penny." The stamp is printed in violet lake. Issued 9th July, 1888.

##### TWO-PENNY STAMP.

The stamp is printed in deep blue. The design represents an Emu surrounded by a shaded oval band, on which the words "One Hundred Years" and "Two Pence" are inscribed. The four corners bear the words "New South Wales Postage," with which are interwoven the berries of the Lilly-pilly, the Corea or Native Fuchsia, and feathery sprays of Wattle. Issued 1st September, 1888.

##### FOUR-PENNY STAMP.

The stamp is printed in chocolate-brown. The design consists of a portrait of Captain Cook, surrounded by an oval band on which the words "New South Wales Postage" are inscribed, within the oval the words "Captain Cook" are printed. At the foot of the portrait is the Australian Coat of Arms resting on a cross band, on which the words "Four Pence" are printed. The whole is fitted into a fancy square, the top bar of which bears the words "One Hundred Years." Issued 8th October, 1888.

## SIX-PENNY STAMP.

The colour of the stamp is rosine. The design consists of the Queen's head in the left hand upper corner, to the right of which are four stars representing the Southern Cross; beneath these and on the right is the New South Wales Coat of Arms surrounded by Australian flowers, viz., the waratah, wattle-blossoms, eucalyptus, ferns, and heath, and surmounted by a small scroll bearing the words "One Hundred Years." This small scroll is surmounted by a larger one running diagonally through the centre of the design and bearing the words "New South Wales Postage." The value of the stamp is denoted by the word "Six Pence" legibly inscribed on a broad bar at the foot of the design. Issued 26th November, 1888.

## EIGHT-PENNY STAMP.

The stamp is printed in plum colour. The design consists of a representation of the Australian Lyre-bird in an oval which occupies the centre of the stamp. At the foot of the oval and within, on a white ground, the words "One hundred years" are printed. The oval is surrounded by native flowers, the waratah and honeysuckle, and encircled at the top by the words "New South Wales Postage." The value of the stamp is denoted by the words "Eight Pence" legibly inscribed on a broad bar at the foot of the stamp. Issued 17th January, 1889.

## ONE-SHILLING STAMP.

The stamp is printed in purple brown. The design consists of a representation of a kangaroo, surrounded by waratah, flannel, and other native flowers and shrubs. A scroll above the design bears the words "One Hundred Years." Along the left-hand edge of the stamp are printed in large characters the words "New South," and in a corresponding position on the right-hand edge the words "Wales Postage." The value is denoted by the words "One Shilling" printed in large characters on a broad white band at the foot of the stamp. Issued 21st February, 1889.

## FIVE-SHILLING STAMP.

The stamp is printed in mauve lake. The design consists of an outline map of Australia, showing the Colonies of New South Wales, Victoria, Queensland, South Australia, and Western Australia. The map is surrounded by an octagonal band, on the upper half of which are printed in large characters the words "New South Wales Postage," and on the lower half the words "Five Shillings." On the right-hand side of the stamp, and placed over the above-mentioned octagonal band, is a representation of the New South Wales shield, and in a similar position on the left-hand side is one of the Imperial shield. Immediately beneath the map the words "One Hundred Years" are printed in small characters. Issued 13th March, 1889.

The establishment of a postal-card system between New South Wales and the United Kingdom, on the 1st January, 1889, necessitated the issue of suitable cards. A Post-card of the value of twopence was therefore issued for use by the contract packets of the Peninsular and Oriental and the Orient Steam Navigation Companies only, by what is termed the *long sea route*, i.e., conveyed all the way from Australia, *by sea*, to England. A Post Card, of the value of Threepence, was also issued for use between this Colony and the United Kingdom *overland, via Italy*.

As the year 1888 happened to be the fiftieth since the introduction of postage-stamps in the Colony of New South Wales, the necessity that arose for the issue of special Post-cards was availed of to commemorate this jubilee event by including in the design of these Post-cards a reference to the occasion.

The size of the Post-card of the value of two pence is  $6\frac{1}{8}$  by  $3\frac{9}{16}$  inches, and it is printed in blue.

The size of the Post-card of the value of three pence is  $6\frac{1}{8}$  by  $3\frac{9}{16}$  inches, and it is printed in light green.

The design (which is the result of the joint effort of Dr. Houison, President of the Philatelic Society, Mr. Dalgarno, of the Post Office, and Mr. Potter, the Government Printer) of both stamps is the same, except in the value indications, and may be described as follows:—

In the centre is a similitude of the first stamp issued in the year 1838, containing Royal arms, with motto "Dieu et mon droit," and words "General Post Office, Sydney, New South Wales," surrounding the same. This similitude is enclosed by two circles containing the words "In commemoration of the fiftieth year of the issue of postage-stamps in the Colony," and "Design of the first postage-stamp." This rests upon a St. Andrew's Cross, the upper limbs of which contain the figures denoting the value of the postage with rings containing words "Jubilee" and "Stamp." The lower limbs of the cross respectively bear the figures "1838" and "1888." Through the design and enclosing it is a wreath composed of oak and eucalyptus leaves, with band at foot containing words indicating the value of postage.

To the left of the design above described are the words "Post" in large capitals, and below this in smaller type "The address only to be written on this side of the card." To the right are the words "Card," and in the one case "For the United Kingdom by the long sea route," and in the other "For the United Kingdom overland via Italy." The whole is enclosed in an ornamental double-lined border.

## INLAND MAIL CONVEYANCE.

In the year 1888 the average cost per mile of the Inland Mail Conveyance was about  $5\frac{2}{5}$ d. against  $5\frac{1}{5}$ d., the price per mile paid in the year 1887. The particulars as to the Mail Contracts for the Conveyance of Inland Mails will be found in the Appendix.

## II.—MONEY ORDER DEPARTMENT.

Money Order Offices were established during the year 1888 at the following places, viz. :—Alexandria, Allandale, Auburn, Blacktown, Blackwall, Captain's Flat, Craigie, Fassifern, Gordon, Hillgrove, Hornsby Junction, Kangaloon, Krambach, Lewis Ponds, Marshall M'Mahon's Reef, Mogo, Moonbi Railway Station, Mount Gipps, Narramine, Nevertire, North Willoughby, Pinnacles, Rockdale, Smithfield, Sutherland, Tabulam, and Tweed Heads. The office at Eulourie was closed.

The number of Money Order Offices in the Colony on 31st December, 1888, was 495.

The number of Money Orders issued during the year was 388,416, and the value £1,215,132, against 360,759, of the value of £1,131,884, in 1887, the difference showing an increase of 27,657 in the number, and £83,248 in the amount.

The number of Money Orders paid was 368,081, and the value £1,116,353, against 330,594, of the value of £1,010,297, in 1887, being an increase in the number of 37,487, and £106,056 in the amount.

The amount of Revenue received as commission on Money Orders issued was £15,879 5s. 6d., being £918 18s. in excess of the amount collected in 1887.

The following comparative return will show the various countries where the Money Orders issued in New South Wales were made payable, and also the issues of other countries on New South Wales.

Comparative

Comparative Return showing the Number and Amount of Money Order Transactions in New South Wales with various countries for the year 1888 compared with the year 1887:—

In the information contained in Appendix A will be found a detailed statement of the business transacted at each office in the Colony. Appendix A.

An additional Convention, the terms of which are given in the Appendix, Appendix F. was during the year entered into with the Post Office Department of the United States of America, reducing from three-fourths to one-half of 1 per cent. the rate of commission payable by each country to the other on Money Orders issued.

### III.—GOVERNMENT SAVINGS' BANK DEPARTMENT.

The following Branches were opened during the year 1888, viz.:—Alexandria, Arncliffe, Barrington, Blackwall, Canterbury, Copmanhurst, Euston, Hillgrove, Laurieton, Lawson, Louth, Moonbi Railway Station, Murwillumbah, Nevertire, Old Junee, Palmer's Island, Stockton, Tabulam, Tinonee, Tuena, Wanaaring, and Wattle Flat.

During the year 31,444 new accounts were opened, and 23,881 accounts were closed. The number of accounts remaining open at the close of the year was 71,265.

The number of deposits received was 196,120, and the amount £1,219,000 12s. 5d., being an increase of 23,297 in the number and £192,730 16s. 10d. in the amount on the business of the previous year. The interest added to depositors' accounts was £58,483 7s. 9d.

The number of withdrawals was 89,961, and the amount £1,041,233 19s. 11d., being an increase of 5,851 in the number and £42,395 6s. 3d. in the amount of the previous year. The balance at the credit of depositors at the close of the year was £1,737,703 14s. 6d., being an increase of £236,250 0s. 3d. on the previous year.

The average amount of each deposit was £6 4s. 3 $\frac{3}{4}$ d., and of each withdrawal £11 11s. 5 $\frac{3}{4}$ d.

The average balance at the credit of each depositor at the close of the year was £24 7s. 8d.

The following return will show the annual progress of the Government Savings' Bank system, from 1st January, 1879, to 31st December, 1888:—

Year.	Number of Deposits.	Interest added to Depositors' Accounts.	Amount of Deposits.	Number of Withdrawals.	Amount of Withdrawals.	Balance at Credit of Depositors.
		£ s. d.	£ s. d.		£ s. d.	£ s. d.

Appendix A.

In the information contained in Appendix A is given a detailed statement showing the business transacted at each branch in the Colony. A statement of the Liabilities and Assets, with the Auditor-General's certificate thereon, will be found in the Appendix.

Appendix G.

The expenditure of the Money Order and Government Savings' Bank Department for salaries (exclusive of its proportion of the salaries of officers in charge of combined Post and Telegraph Offices, *vide* explanation on page 16) was £9,560 8s. 4d.; for contingencies, £1,189 4s. 3d.; total, £10,749 12s. 7d.

The number of persons employed in connection with the Money Order and Government Savings' Bank Department was as follows:—

1 Superintendent and Controller.	3 Assistant Tellers.	7 Probationers.
1 Chief Clerk and Examiner.	4 Money Order Ledger-keepers.	1 Store-keeper.
1 Examiner.	8 Savings' Bank Ledger-keepers.	4 Messengers.
5 Assistant Examiners.	21 Clerks.	
1 Teller.		
Total ... ..		57

F. W. Hill, Esq., Superintendent, Money Order Office, and Controller, Government Savings' Bank, retired on the 5th June, 1888, under the provisions of the Civil Service Act of 1884. Mr. Hill entered the Public Service of this Colony in the year 1850, and was considered one of its most valuable officers.

Mr. A. J. Doak, Chief Clerk, was appointed to perform Mr. Hill's duties until a successor was determined upon, and continued to act in that capacity during the remainder of the year.

One death occurred, *viz.*:—W. T. Whitley, Ledger-keeper, attached to the permanent staff, and one officer was removed from the Service for serious neglect of duty.

#### IV.—ELECTRIC TELEGRAPH DEPARTMENT.

The following return shows the extent of the Electric Telegraph Lines and the number of Stations in the Colony on the 31st December, 1888; also the revenue and expenditure of the Department for the year 1888 (including receipts and expenditure on account of the Telephone system) as compared with similar information for 1887:—

Year.	Extent of electric telegraph wire in actual use.	Number of stations.	Number of messages transmitted during the year.	Revenue.	Expenditure (exclusive of interest on cost of construction of lines).
	Miles chns.			£ s. d.	£ s. d.
1887 .....	21,444 45	434	2,876,504	164,510 15 3	156,779 15 3*

Stations were opened during the year at the following places:—Alexandria, Appin (reopened), Auburn, Bermagui, Borenore, Brooklyn, Byron Bay, Beechwood, Carrington, Castle Hill, Cessnock, Collarendabri, Euriowie, Eurobodalla, Grosvenor Hotel, Hargraves, Hillgrove, Laggan, Lyndhurst, Merewether, Newport, Ourimbah, Purnamoota, Rolland's Plains, Teralba, and Tilba Tilba.

The only telegraph line in course of construction, but not completed during the year 1888, was that between Tumberumba and Tintalra, *via* Tooma, an estimated distance of 27 miles.

The Staff attached to the Electric Telegraph Department for the year 1888 was as follows, viz.:—1 superintendent, 1 assistant superintendent, 1 accountant, 1 manager, 1 assistant manager, 1 continental clerk, 1 cable clerk, 1 ledger-keeper, 1 cashier, 1 telegraph instructor, 1 clerk in charge of correspondence, 1 check-clerk, 10 clerks, 23 booking clerks, 2 receiving clerks, 1 mechanic, 7 instrument fitters, 5 inspectors, 1 inquiry clerk, 56 station-masters\*, 410 operators, 36 line repairers, 3 messengers' overseers, 423 messengers, 1 clerk in charge of stores, 3 clerks in stores, 3 battery-men, 1 groom, 1 manager (telephones), 3 overseers (do.), 7 assistant overseers (do.), 1 line overseer (do.), 18 switch-board attendants (do.), 1 messenger (do.), 1 battery-man (do.), 3 engineers (electric lights), 6 assistants (do.); total, 1,038.

As already explained, 209 of the above are included in the return of persons employed in connection with the Postal Department.

The following Officers retired under the provisions of the Civil Service Act, 1884, viz.:—J. T. Morrison, instrument fitter, Sydney; W. J. Aubin, operator, Sydney.

Five deaths occurred, viz.:—R. T. Usher, clerk; W. McIlrick, line repairer, Deniliquin; Mrs. H. Roberts, operator, Largs; J. E. Gale, operator, Paddington; and one messenger at Hay.

Eighty-one resignations took place:—9 operators, 67 messengers, and 5 switchboard attendants.

The removals from the Service numbered 11:—1 clerk, for intemperance; 3 operators and 7 messengers for general neglect of duty.

In

\* In addition to the 300 who hold the dual appointment of Official Post and Telegraph Master, and who are included in return on page 6.

In July the following amended regulation was substituted for the one previously in force, under which a telegraphic message partly composed of cypher words was charged the same rate as a message wholly in cypher (namely, 50 per cent. above the ordinary rate):—

Every message in secret language or consisting of words in any admitted language (English, French, German, Italian, Dutch, Portuguese, Spanish, and Latin), having no connective meaning, groups of letters or figures, shall be regarded as a cypher message, and be subject to an additional charge of 50 per cent.; and in a message containing one or more words in cypher, every such word shall be counted as two words and the extra charge be added to the minimum rate for a message, provided that such extra charge shall not exceed 50 per cent. on the ordinary rate which would be payable on account of the said telegram. Groups of five letters or five figures shall count as one cypher word.

The following interruptions to cable communication with Europe took place during the year:—From 30th June to 18th July; from 10th to 12th, and from 20th to 28th October.

At the Intercolonial Conference, held in Sydney in January, 1888, the following resolution was arrived at (the representative of the Colony of New South Wales dissenting):—

That this Conference is of opinion that it is desirable a survey should be made of a suitable route for an ocean telegraph cable by way of the Pacific, via Vancouver Island, the cost of the survey to be defrayed by Great Britain, Canada, and the Australasian Colonies, represented at this Conference. This, however, is not to bind any of the countries named to accept the proposals of the Pacific Cable Company, and that the subject of the resolution be communicated to the various Australasian Governments.

In July following, a despatch was received by His Excellency the Governor of New South Wales from the Secretary of State for the Colonies, dated the 1st May, 1888, transmitting a copy of a letter which Lord Knutsford had caused to be transmitted to the Lords Commissioners of the Admiralty, "respecting the survey which Her Majesty's Government have been requested to make of a route for a cable telegraph between Canada and Australia across the Pacific Ocean, together with an extract from their Lordships' reply," and stating that "Her Majesty's Government concur in the opinion expressed in the letter from the Admiralty that the question of accelerating the survey must remain open until there is a prospect that the funds for the construction of the cable will be found."

In an enclosure to this despatch, it is stated that "the annual cost of H.M.S. 'Egeria' is about £12,000, and that if a similar vessel is provided especially for the purpose of making a complete survey of the best ocean route and landing-places, the cost would be about £36,000, irrespective of the value of the vessel and the cost of fitting her out."

Some proposal has, I understand, since been made by the Canadian authorities for a Conference of Delegates from the Colonies and the Canadian authorities on the subject, but no determination has yet been arrived at in regard either to this proposal or to the question of the Colonies contributing to the cost of an official survey of the route.

One of the matters considered at the Postal Conference in January, 1888, was the desirableness of assimilating the postal and telegraphic regulations of the various Australasian Colonies, and, with this object in view, draft regulations were prepared by Messrs. Charles Todd, Postmaster-General and Superintendent of Telegraphs for South Australia; S. H. Lambton, Secretary, Postal Department, New South Wales; E. C. Cracknell, Superintendent of Telegraphs, New South Wales; W. Gray, Secretary, Post Office and Telegraph Department, New Zealand; and Robt. Henry, Superintendent of Telegraphs, Tasmania; but I find that it has not yet been possible to secure agreement between the Colonies in regard to these draft regulations, owing mainly to differences in local legislation, and I am afraid that uniformity in these regulations, &c., will not be accomplished until fresh legislation has been obtained in several of the Colonies.

In order to enable many desirable reforms to be effected, the revision of the Laws relating to the Post Office, Electric Telegraph Department, Money Order Office, and Government Savings Bank is absolutely necessary. I trust the state of the public business in Parliament will at an early date permit of the needful legislation being accomplished. In this legislation provision will be made for a clearer definition of the term "newspaper," so as to meet the attempts that are too frequently

frequently made by mere advertisers, who announce the goods they have for sale in printed sheets made up in the form of a newspaper, with a few scraps of news inserted therein so that they may circulate the matter throughout the Colony without any charge for postage. A newspaper will be defined as a publication printed *for sale*, and subjected to clearer conditions than have hitherto appertained to this class of mail matter. Provision will be made for the parcel-post system. The new Bill will provide for all communications on Government business going through the post without charge, and so prevent the waste of time now involved in placing stamps on these letters and keeping accounts thereof. Telegraphic messages will, under the new legislation, be sent for transmission by post without extra charge for postage. A large saving of time and expenditure could be effected in the discontinuance of the practice now adopted of advertising unclaimed letters. These letters cannot be delivered, mainly because the addresses have not been correctly furnished in the first instance by the senders, and under the present system, through this want of care, the Government is put to the expense of advertising, with very little result as regards the ultimate delivery of the letters. The sender of an incorrectly addressed letter pays twopence in the shape of postage, and the cost of clerical labour and advertising may be stated as, at least, one shilling, so that the Government loses tenpence on every letter of this kind. Under the present system a very long time elapses before the sender of an unclaimed letter becomes aware of the fact. To remedy this, provision will be made in any new Bill within a reasonable time to return the unclaimed letter to the writer, whenever he expresses on its cover his wish to have the letter so returned. A penalty will be provided for in regard to masters of vessels conveying mails leaving the port before the expiration of the twenty-four hours' notice they are now required to give. Hitherto there has been no penalty for this conduct, and the Department has consequently been powerless in the matter. In the present Act there is no provision made for the postal-card system. This will be remedied. Provision will be made for the introduction of a system by which small sums of money can be transmitted through the post by means of what are termed postal-notes. In regard to the Electric Telegraph Department, provision will be made for the systems of telephones and pneumatic tubes, for which there has hitherto been no legislation. The present Acts require amendment in several minor particulars, so as to enable the departments to be better worked, and to be allowed to develop in conformity with the progress and requirements of this age. In a word, when a Bill is introduced it will be made in all respects as elastic as possible, and many details which are now governed by enactment will be made the subject of regulations, sanctioned by the Governor and Executive Council, so that necessary changes can be made from time to time without the needless delay of special legislation.

I have the honor to be, my Lord,

Your Lordship's most obedient servant,

DANIEL O'CONNOR,

Postmaster-General.

*General Post Office,  
Sydney, 13th June, 1889.*

APPENDIX A.

RETURN showing names of Post Offices and Telegraph Stations, Salaries paid, number of Letters posted, Telegrams transmitted, Money Orders issued and paid, Savings' Bank Deposits and Withdrawals, Revenue received from each Office, and arrangements regarding premises during the year 1888.

## APPENDIX D.

AGREEMENT regulating the exchange of correspondence between Italy and the British Colonies of Australia, New Zealand, Tasmania, and the Fiji Islands, as well as the cost of conveyance of mails sent from Italy, or any other European Country *via* Italy, to the above-mentioned British Colonies and *vice versa*.

The Postmaster-General of the United Kingdom of Great Britain and Ireland, of the one part, and the Minister of Public Works of Italy, of the other part;

Having regard to the Universal Postal Union Convention signed at Paris, the 1st of June, 1878;

And the additional Act of that Convention signed at Lisbon, the 21st of March, 1885;

Have agreed as follows:—

## ARTICLE I.

There shall be paid to the British Post Office for the conveyance by sea of correspondence forwarded by British Packets, either from Italy or from other European countries *via* Italy, for Australia, New Zealand, Tasmania, and the Fiji Islands, the sum of 25 francs for each kilogramme of letters and (if any) of post cards, and 1 franc for each kilogramme of other articles.

In case Italian Packets calling at Australasian ports are established, such Packets shall be at the disposal of Great Britain and of the Colonies in question on the same terms.

## ARTICLE II.

The Italian Postal Administration and the Postal Administration of each of the British Colonies of Australia, New Zealand, Tasmania, and the Fiji Islands, shall be at liberty to hand over to each other reciprocally, either *à découvert* or in closed mails, correspondence for those countries in regard to which they can reciprocally make use of each other as intermediaries.

In such case the despatching office will have to pay the cost of the further conveyance, which shall be determined by the intermediary office as far as possible in accordance with the rules of the Universal Postal Union, whenever the service employed is not an extraordinary one.

As to mails from or for the same British Colonies carried by the service known as the Indian Mail Service, their conveyance through Italy will continue to be governed by special conditions arranged for that purpose.

## ARTICLE

## APPENDIX D—continued.

## ARTICLE III.

There may be exchanged between Italy and the British Colonies of Australia, New Zealand, Tasmania, and the Fiji Islands:

Ordinary letters prepaid to destination or unpaid, according to the wish of the senders;  
Commercial papers, trade patterns without value, and printed papers of all kinds prepaid to destination. Such articles shall not be forwarded unless prepaid at least in part.

The postage payable on the correspondence in question shall be levied in accordance with the Table A annexed to the present Agreement.

On correspondence prepaid in accordance with this tariff, no postage can be levied from the addressees.

Unpaid letters shall be charged on delivery with double the postage at the prepaid rate.

Insufficiently prepaid correspondence of all kinds shall be charged with double the deficient postage.

## ARTICLE IV.

Correspondence of every kind shall be transmissible as registered, on payment by the sender of a fixed registration fee, which each Administration shall determine for itself, in addition to the postage payable on an ordinary article of correspondence of the same nature and the same weight.

No special condition as to the shape or method of closing is prescribed for registered articles.

Registered articles must be clearly marked by the despatching office with a special mark or stamp.

The corresponding Administrations shall notify to each other the registration fee which they adopt, and shall furnish specimens of the impression of the special stamp applicable in their service to registered articles.

## ARTICLE V.

Prepayment of postage on all descriptions of correspondence can be effected only by means of postage stamps valid in the country of origin.

Each Administration shall bear the whole cost of the intermediary conveyance of the correspondence which it shall hand over to another Administration, and shall keep entirely the postage which it collects, on despatch for prepaid correspondence, and on arrival for unpaid and insufficiently prepaid correspondence.

## ARTICLE VI.

The present Agreement shall be regarded as having come into force on the 1st of February, 1888, and shall abrogate from that date all earlier stipulations which are contrary to it.

It shall remain binding until one of the Parties interested shall have announced to the other, six months in advance, its intention to terminate it.

Nevertheless, the adhesion of one of the Colonies of Australia, New Zealand, Tasmania, or the Fiji Islands, to the Convention of the Universal Postal Union shall entail, as a matter of course, the abrogation of the regulations of the said Agreement as regards the Mails to or from that Colony from the time of its entry into the Union.

Done in duplicate, and signed at London the 31st of May, 1888, and at Rome the 27th of June, 1888.

The Postmaster-General of the United Kingdom.

(Signed) HENRY CECIL RAIKES. (L.S.)

## A.

RATES OF POSTAGE for the prepayment of correspondence sent from Italy to Australia, New Zealand, Tasmania, and the Fiji Islands, and *vice versa*.

Nature of the Correspondence.	Rates of Prepayment.		Special Conditions to be fulfilled.
	In Italy.	In Australia, New Zealand, Tasmania, and the Fiji Islands.	
Ordinary letters.....	60 centimes per 15 grammes or fraction of 15 grammes.	6d. per $\frac{1}{2}$ ounce or fraction of $\frac{1}{2}$ ounce.	
Commercial papers, not enclosing any letter or manuscript note of a personal character.	60 centimes up to 300 grammes. Above 300 grammes 10 centimes per 50 grammes or fraction of 50 grammes.	6d. up to 12 ounces; above 12 ounces, 1d. per ounce or fraction of an ounce.	Maximum weight— 2 kilogrammes.
Patterns of merchandise, without commercial value.	10 centimes per 50 grammes or fraction of 50 grammes.	1d. per ounce or fraction of an ounce.	Maximum weight— 350 grammes. Maximum dimensions— 30 centimetres in length. 20     "     breadth. 10     "     depth.
Newspapers and printed papers of all kinds.	10 centimes per 50 grammes or fraction of 50 grammes.	1d. per 4 ounces or fraction of 4 ounces.	Maximum weight— 2 kilogrammes.

NOTE.—Commercial papers, patterns, newspapers, and other printed papers, must be placed in movable wrappers, in open envelopes, in bags, boxes, or cases easily opened so as to render it possible to verify the contents. Such articles must not be closed with wax, with gum, or in any other way.

Correspondence of this kind must not have on it, either outside or inside, other *manuscript* writing than the names and addresses of the sender and the addressee, the date of despatch, numbers and prices, and a simple dedication by the author. Passages in a printed text may be underlined.

## APPENDIX E.

\* Whenever floods prevent the mails from being conveyed between Welaregang and Tintaldra, Contractors are required to leave the Tintaldra mail at Welaregang Station (Gray's), and proceed on their journey without waiting for the flood to subside, and on their return to Tintaldra, from either Tooma or Bowna, bring the mail on if it has not in the meantime been conveyed to its destination by other means.

† Contractors allowed £30 per annum extra to convey mails once a week extra between Hay and Gunbar, from the 1st March, 1888; also allowed £30 per annum, from the 1st July, 1888, to convey a mail on Sundays from Hillston to Hay.

‡ Mount Gipps and Silvertown portion of contract discontinued, and £44 per annum deducted from subsidy, from 12th March, 1888.

§ Contractor allowed to continue service at same subsidy until the 31st December, 1888.

## APPENDIX F.

ADDITIONAL Articles to the Money Order Convention between the General Post Office of the Colony of New South Wales, Australia, and the Post Office Department of the United States of America, dated October 29th, December 6th, 1881.

THE Postmaster General of New South Wales and the Postmaster General of the United States of America have agreed upon the following additional Articles to the Money Order Convention of October 29th, December 6th, 1881, between the General Post Office of New South Wales and the Post Office Department of the United States of America:—

## ARTICLE 1.

The words "one-half of one per cent." shall be substituted for the words "three-fourths of one per cent." in Article 3 of the abovenamed Convention, and also in the account, Form G., annexed to that Convention, both under the heading "To credit of United States Office," and under the heading "To credit of New South Wales Office."

## ARTICLE 2.

The foregoing Article 1 shall take effect from the 1st day of October, 1888.

Done in duplicate and signed in Sydney, on the 12th day of July, 1888, and in Washington, on the 23rd day of May, 1888.

(L.S.)

CHARLES J. ROBERTS,  
Postmaster General of New South Wales.

(L.S.)

DON D. DICKINSON,  
Postmaster General of the United States of America.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER

1889.

**Commission.**

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth,—

To our trusty and well-beloved—

CHARLES EDWARD PILCHER, Esquire, Q.C.,—

Greeting :—

KNOW YOU, that We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorize and appoint you to inquire into and investigate the charges made by JOHN DEASY, Esquire, M.P. (England), that letters addressed to him have been opened or tampered with in the Post Office of this Colony, including any matter or thing arising out of or having any relation to such charges, or affecting in any way the character and integrity of the Post Office authorities and servants: And We do by these presents grant to you full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And our further will and pleasure is that you do within one month after the date of this Our Commission certify to us, in the office of our Colonial Secretary, under your hand and seal, what you shall find touching the premises: And we hereby command all Government officers, and other persons whomsoever within our said Colony, that they be assistant to you in the execution of these presents: And we do hereby declare this Our Commission to be a Commission for all purposes of the Act 44 Victoriae No. 1, intituled "An Act to regulate the taking of evidence by Commissioners under the Great Seal."

In testimony whereof, We have caused these Our Letters to be made patent, and the Great Seal of our said Colony of New South Wales to be hereunto affixed.

Witness, Our Right Trusty and Well-beloved Councillor, CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twenty-first day of June, in the fifty-third year of Our Reign, and in the year of Our Lord one thousand eight hundred and eighty-nine.

[L.S.]

CARRINGTON.  
By His Excellency's Command,  
HENRY PARKES.

Entered on record by me, in REGISTER OF PATENTS, No. 13, pages 385-6, this twenty-second day of June, one thousand eight hundred and eighty-nine.

For the Colonial Secretary and Registrar of Records,  
CRITCHETT WALKER  
(Principal Under Secretary).

## REPORT.

To His Excellency the Right Honorable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

As Her Majesty's Commissioner, appointed by Letters Patent under the Great Seal of the Colony, dated the twenty-first day of June, 1889, to inquire into and investigate the charges made by John Deasy, Esquire, M.P. (England), that letters addressed to him have been opened or tampered with in the Post-office of this Colony, including any matter or thing arising out of or having any relation to such charges, or affecting in any way the character and integrity of the Post-office authorities and servants, I have the honor to submit to your Excellency the following Report :

The only charge made in this matter is contained in a letter from Mr. Deasy, addressed to the postmaster at Branxton. Mr. Deasy's letter (*Exhibit A*) is dated the 10th day of May, 1889, and is in the following words :—

Sir,

Royal Hotel, George-street, 10 May, 1889.

I beg to give you notice that I have *conclusive evidence* that letters addressed to me, and posted at Branxton, have been opened at the Branxton post-office. Whether I shall institute criminal proceedings against you or not is a question I am now considering.

Yours faithfully,

JOHN DEASY, B.L., M.P., West Mayo.

Mr. Deasy in his evidence, taken before me, says that he does not suspect the postmaster himself, but believes that some other person at the office opened his letters.

This charge is undoubtedly a most serious one, and is made against a person, who, upon the evidence both of Mr. Lambton and Mr. Drinan, senior, has always borne a high reputation, and has hitherto, at any rate, been a person of unimpeachable character. Under these circumstances Mr. Deasy's charge must be established beyond all reasonable doubt.

It will be observed that Mr. Deasy, in his letter of 10th May, 1889, states that he has conclusive evidence that certain letters have been opened at the Branxton post-office. And further, it is clear that the conclusive evidence which he alleges he then possessed pointed to the postmaster at Branxton as the guilty party.

From Mr. Deasy's evidence, taken before me, it appears that no letter reached him in an apparently improper condition until after his stay at Branxton, with his cousin, Mr. Drinan. The first time his attention was drawn to the envelopes of certain letters received by him was at Adelaide, and he believed that they had been  
tampered

tampered with. The next letters which aroused his suspicions were some received either at Sydney or Melbourne.

He particularly speaks of three letters from Ireland, which he received in the month of May, two of them either at Sydney or in Melbourne, and the third he alleges he received at the General Post Office, Sydney.

It will also be seen, on reference to Mr. Deasy's evidence, that he cannot be certain that all the letters which appeared to have been tampered with were not either from his cousin at Branxton or from a member of his family in Ireland.

The letter of 10th May, 1889, evidently refers only to letters posted at Branxton, and not to letters which had arrived there from Ireland. This letter, Mr. Deasy says, he wrote after receiving the Irish letters in Sydney, and in consequence of his observation of the state they were then in. If Mr. Deasy's recollection be not defective upon this point, it is curious that in his letter of 10th May, 1889, he only made reference to letters posted at Branxton. Further, although in his letter Mr. Deasy only charges the postmaster, he now says that he does not suspect the postmaster at all, but some person in the office. The conclusive evidence referred to in his letter of 10th May is that certain letters, some of which were posted at Branxton, and some of which passed through that post-office reached him in a condition which, he says, showed that they had been tampered with. The envelopes of all the letters, the subject of the charge, were destroyed by Mr. Deasy, after an interview which he had with the Postmaster-General, upon the 17th May. At this interview and at a banquet on the preceding evening it appears that the Postmaster-General urged Mr. Deasy to prosecute his charge. On the 17th May, after the interview with the Postmaster-General, Mr. Deasy wrote declining to take further steps in the matter. [*Exhibit D.*]

The destruction of the envelopes, it is alleged by Mr. Lambton and Mr. Davis, both of the Post Office Department, was a complete denial of justice to the Department, because it prevented them from tracing the officers through whose hands those letters passed, and from determining the condition of the letters at any time. Further, Mr. Davis, who has had very large experience in the Post Office of New South Wales, and whose duty for many years has compelled him to deal with charges similar to the present, says, that broken seals and torn envelopes, especially where the letters are sealed, are matters of not uncommon occurrence, and that in every case the production of the envelope is absolutely necessary to determine whether the injuries to the stamps or envelopes are the result of accident or design.

Mr. O'Connor, the Postmaster-General, certainly corroborates Mr. Deasy as to the state of certain envelopes which were shown to him upon the 17th day of May. It must, however, be remembered that Mr. O'Connor would not be such a good authority upon the nature of the injuries as Mr. Davis; and further, if Mr. O'Connor at the time thought that the appearance of the envelopes indicated malpractice in his Department, he certainly would have taken steps to secure the envelopes for further inquiry. There can be no doubt that, although Mr. O'Connor did notice that at least one of the envelopes had apparently been interfered with, he did not think that it pointed to any malpractice in his Department. Further than this, when Mr. O'Connor saw the envelopes they had already been in Mr. Deasy's hands. This is important, because Sir Thomas Esmonde, who only speaks of two envelopes, says that when shown to him by Mr. Deasy they were closed, and his  
recollection

recollection of the condition of those two envelopes does not tally with Mr. Deasy's recollection. However this may be, the envelopes may, and probably did, present the appearance of having been injured, as described by both those gentlemen; but it is consistent with the evidence that the injuries were received in transit, and the destruction by Mr. Deasy of the envelopes prevented the determination of two most material questions—(1) What were the nature of the injuries to the stamps and envelopes? (2) How were such injuries caused?

Now look to the conduct of the person charged with this offence. Immediately upon receipt of Exhibit A by Mr. Tulloch he at once forwarded that letter to the Postmaster-General and asked for a full investigation. [See *Exhibit B.*] The Department at once communicate with Mr. Deasy. [See *Exhibit C.*]

Then follow the two interviews between Mr. Deasy and the Postmaster-General, on the 16th and 17th May; and Mr. Deasy then writes his letter of 17th May. [See *Exhibit D.*] On the 23rd May Mr. Deasy is again communicated with from the Post Office Department. [See *Exhibit E.*] To this he replied on 4th June. [See *Exhibit F.*] In this letter it will be seen that he confines his charge to the Branxton post-office, and in the same letter makes a charge against the British Government, which, if true, may account for any injuries which were apparent upon the envelopes of the Irish letters.

Up to this time it will be observed that Mr. Deasy persisted in his refusal to prosecute his charge. Between this date and the 19th of June certain important matters occurred. It appears that Mr. Tulloch saw Mr. Drinan in Branxton, and spoke to him with reference to Mr. Deasy's charge.

Both these gentlemen have given their account of the interview. Mr. Tulloch's is to be found in Exhibit K, and Mr. Drinan's in his own evidence. From these two statements it is clear at least that Mr. Drinan suspected, and certainly, in my opinion, must have believed, that his wife was the delinquent, otherwise I cannot understand Mr. Drinan introducing his wife's name at all. Upon this point there is also the evidence of Mr. Bercini, contained in his declaration. [*Exhibit R.*] (This declaration, I wish to say, was put in evidence with Mr. Deasy's and Mr. Drinan's consent, in order to expedite the inquiry. The telegram attached to Exhibit R explains why Mr. Bercini was not called as a witness.) This evidence with reference to Mr. Drinan and the relation existing between Mr. Deasy and his cousin at least creates very grave doubts whether, if the letters posted at Branxton were tampered with at all, they were tampered with in the Branxton post-office. In my opinion, no one would be justified in even suspecting the Branxton post-office in the face of such evidence.

It appears that on the 13th June the Post Office Department, in consequence of certain representations made to the Minister by two Members of Parliament, communicated with Mr. Deasy in terms of Exhibit L. Upon the 17th June, Mr. Drinan wrote to the Postmaster-General. [See *Exhibit H.*] A comparison of this letter with Mr. Drinan's evidence given before me does not induce me to rely upon Mr. Drinan's recollection when it is opposed to that of Mr. Tulloch. It does not appear that Mr. Drinan's letter of 17th June [*Exhibit H*] was communicated to Mr. Deasy, but doubtless he became aware somehow of Mr. Drinan's statement. On 19th June Mr. Deasy wrote to the Postmaster-General [see *Exhibit N*] in reply to a letter to him from the Post Office Department, dated 14th June. [*Exhibit P.*]

Mr. Tulloch again wrote to the Department upon the 21st May. [*Exhibit M.*]  
Mr.

Mr. Tulloch's account of the letters received at his post-office is, shortly, as follows :—Certain letters arrived at Branxton whilst Mr. Deasy was staying with his cousin, which were delivered to a member of Mr. Drinan's family. After Mr. Deasy's departure Mr. Tulloch says he continued to deliver the letters to the Drinan family until he received an order from the head office to retain the letters at his office. During the time covered by that order he delivered two letters to young Mr. Drinan. These letters were retained by Mr. Drinan for about five days, and then returned to Mr. Tulloch. This took place upon receipt of an order from the head office to forward Mr. Deasy's letters to the head office. This order was followed by a telegram from Mr. Deasy [*Exhibit G*] to similar effect.

Mr. Tulloch then forwarded the two letters received by him from young Mr. Drinan to the head office, and all other letters of Mr. Deasy's.

Mr. Tulloch and his son distinctly swear that no letters of Mr. Deasy's were ever interfered with in any way in the Branxton office. And further, they deny the charge made by Mr. Drinan in his letter. [*Exhibit H.*] I should add here that that charge is not persisted in by Mr. Drinan in his evidence before me.

After weighing the whole of the evidence carefully, I have come to the following conclusions :—

That Mr. Deasy has not substantiated his charge against the Branxton post-office.

That no conclusive evidence has been adduced in support of the charge.

That Mr. Deasy himself destroyed the only reliable means of determining the cause of the injuries to the envelopes, if they existed.

That the evidence (with reference to Mrs. Drinan), under the circumstances should relieve Mr. Tulloch even of a suspicion of improper conduct, so far as the letters posted at Branxton are concerned.

And that the evidence as to the Irish letters is, for the reasons I have already stated, highly unsatisfactory, and certainly not such as would justify even a suspicion of malpractice on the part of the Branxton post-office.

I have the honor, in conclusion, to report to your Excellency, that, in my opinion, the charges made by John Deasy, Esq., M.P., that letters addressed to him have been opened or tampered with in the post-office of this Colony cannot be sustained, and that I see nothing in the evidence adduced before me to throw the slightest discredit upon Mr. Tulloch, the postmaster at Branxton, or upon the office under his control.

Certified under my hand and seal this 4th day of July, 1889.

CHAS. E. PILCHER,  
Commissioner.

## ALLEGED TAMPERING WITH LETTERS OF JOHN DEASY, ESQ., M.P.

## MINUTES OF EVIDENCE.

TUESDAY, 2 JULY, 1889.

Present:—

C. E. PILCHER, Esq., Q.C., Commissioner.

John Deasy, Esq., M.P., called in, sworn, and examined:—

1. *The Commissioner.*] I believe you are a Member of the House of Commons? Yes.
2. What place do you represent? I now represent the western division of the county of Mayo. I did represent the city of Cork for some years.
3. I believe that you are now on a visit to the Australian Colonies, in connection with the Irish National League? Yes; and primarily in connection with the Evicted Tenants Fund.
4. When did you arrive in the Colonies? I think I arrived in Tasmania about the 8th of March last.
5. When did you arrive in this Colony? About six days afterwards.
6. Who accompanied you? Sir Thomas Esmonde, as far as Tasmania. I came alone to this Colony.
7. And then did Sir Thomas Esmonde join you in this Colony? I joined him subsequently in Melbourne, and we both went to Adelaide to meet Mr. Dillon when he reached there. I might mention the reason I came to this Colony and stayed quietly. Both Sir Thomas Esmonde and myself were under a pledge to Mr. Dillon that we would not address public meetings until he joined us. It was for this reason that I stayed quietly during the few weeks that I was here. During the few hours I was in Sydney I was besieged with applications to attend public meetings and banquets.
8. Then you, Sir Thomas Esmonde, and Mr. Dillon came to this Colony together? No; we did not come together. I came before them.
9. Then you returned from Victoria when? On Thursday, the 9th May.
10. And when did Sir Thomas Esmonde join you? Two days after.
11. On the 9th May you arrived? I could not say for certain.
12. Approximately? Yes.
13. Then you were joined by Sir Thomas Esmonde on the 11th? Yes.
14. What did you do afterwards? I came down to see about our demonstration here. I came straight from Sandhurst.
15. I understand that you have made a charge with reference to the Branxton Post Office? Yes.
16. I will not trouble you with your experience in the Colony prior to that, but I will ask you to carry yourself to the time that you went to Branxton, and to say what you have to complain of with regard to the post office? While at Branxton I had nothing to complain of.
17. Would you kindly tell me when you went there? About the 14th of March.
18. And when you left? I left about the 4th April.
19. That would be before Sir Thomas Esmonde arrived in the Colony? Yes.
20. Can you give the exact dates? I arrived on the 14th March, and stayed until about the 4th April.
21. Where did you stay while there? I stayed with my cousin, Mr. Drinan.
22. What is Mr. Drinan? Well, he is a large landowner, and he has some vineyards besides.
23. And whilst there you had nothing to complain of? No.
24. Did you receive any letters whilst you were there? Yes, a large number.
25. About how many should you think? I could not say.
26. You have not counted them, but could you give me an idea? I suppose about half-a-dozen a week. It got into the papers that I was at Branxton, and a large number of people wrote to me about political matters.
27. Then you received a good many letters? Yes.
28. I suppose that we may say you received at least a dozen? Oh, yes—over a dozen.
29. Did they come through the Branxton Post Office? Yes.
30. These letters, I understand, were from different parts of the Colony, with reference to political matters? Yes; with reference to political matters, and some of them were from home.
31. And what you say is that they arrived perfectly safe through the Branxton Post Office? No; I say that, so far as I can judge, they did.
32. You did not notice anything that led you to believe that they had been tampered with? No.
33. You stayed there, how long—until what day? Until Thursday, the 4th April, I believe.
34. Where did you go then? I came on to Sydney.
35. Did you remain here long? I stayed here for some days.
36. Where did you stay? At the "Royal Hotel."
37. Whilst there did you receive any letters from Branxton? Yes.

John Deasy,  
Esq., M.P.

2 July, 1889.

John Deasy,  
Esq., M.P.

2 July, 1889.

38. How many? I should say a couple.
39. Had they been through the Branxton Post Office? Yes.
40. Had they been posted there? Yes.
41. Where were these letters written? At Branxton.
42. Was there anything the matter with them when they were delivered to you? No, not that I remember.
43. That is to say, they had not been interfered with or tampered with so far as you know or believe? Not so far as I know or believe.
44. Where did you go after you left Sydney? To "Menzies' Hotel," Melbourne.
45. When did you arrive there? I arrived there on the following Tuesday.
46. That would be the 9th? Yes. I think I left Sydney on the Monday night, and reached "Menzie's Hotel," Melbourne, on Tuesday, the 9th April. I will not pledge myself to these exact dates.
47. How long did you stay there? I think I left on the same evening.
48. For where? For Adelaide.
49. When did you arrive in Adelaide? On the Wednesday, I think, but I am not sure.
50. That would be the 10th? Yes.
51. Whilst you were in Melbourne did you receive any letters from Branxton? Yes; I think so.
52. Was it letters or letter? I could not say.
53. That is on the 9th April? Yes.
54. Is there anything that would enable you to state definitely? No; I think I received some, but if I did they were probably all right.
55. How long did you remain in Adelaide? Until the following Thursday week.
56. That would be the 18th? Yes.
- 56½. Whilst you were at Adelaide did you receive any letters from Branxton? Yes.
57. How many? Well, I received a number of letters enclosed in an envelope. These letters were readdressed to me by one of my cousins.
58. Were these letters from different parts of the Colony and from Home? Yes.
59. Touching political matters? Personal and political matters.
60. Personal matters would be communications from Home, I suppose? Yes.
61. And political matters from different parts of the Colony? Yes.
62. How did they come? They were enclosed in a big envelope.
63. And posted to you? Yes; that is my recollection.
64. Were they posted at the Branxton Post Office? Yes.
65. Had you any reason to complain of them? No; I had no reason to complain of them.
66. When did you leave Adelaide? On Thursday the 18th. I got a letter in Adelaide which Mr. Kelly has written about. That was the first envelope that I noticed anything wrong about that I got.
67. What date was that? On Thursday, the 18th, I received that letter.
68. Where had that letter been written—at Branxton? At Branxton.
69. Where posted? At Branxton.
70. Have you got the letter? No, unfortunately I have not.
71. Have you got either the letter or the envelope? No; that is a matter which I wish to explain.
72. Do you remember the date upon which the letter appeared to have been written? No. I was up country for a day or two and was flooded there and unable to carry out my political programme, and when I returned Mr. Kelly handed me this letter at the "Botanic Hotel," in Adelaide.
73. Who is Mr. Kelly? He is the proprietor of the "Botanic Hotel." The moment he gave it to me I handed it back, and said, "Is it not a shame to have a letter opened like that?"
74. Will you describe the appearance of the letter? In addition to the ordinary gum, the back of the letter was doubly gummed and sealed also, and when I got it the seal was broken right across. The colour of the sealing-wax on the top was different from the bottom. The sealing-wax was broken right across the centre, and the upper part of the flap of the envelope was gummed with more gum than would naturally be on the envelope. The lower part of the envelope was open—that is, the corner flap that does not open was open, and the upper corner of it remained under the sealing-wax, and was, of course, torn.
75. When did you receive that letter? On the 18th April, at Adelaide.
76. And it struck you at once that the letter had been tampered with? Yes.
77. Immediately you saw it? Yes.
78. You say that letter was written in Branxton? Yes.
79. And posted in Branxton? Yes.
80. Would you mind telling me the writer's name? The writer was my cousin.
81. One of the Miss Drinan's? Yes.
82. Would you mind telling me her Christian name? Miss Kate Drinan.
83. How old is she? I really do not know.
84. I mean approximately? Twenty-two or twenty-three.
85. When did you destroy the letter and envelope? Well, I suppose I destroyed the letter almost at once. I rarely keep letters for any length of time except business letters. I might have kept it a week and then destroyed it after I replied to it when I was getting rid of the superfluous correspondence accumulating in my pockets.
86. So you did reply to it? Yes.
87. Where—do you remember? It must have been from "Menzie's Hotel"—probably some days afterwards.
88. Have you any distinct recollection of destroying the letter and envelope? I have a distinct recollection of destroying the envelope after my interview with the Postmaster-General. That was after—on the Monday following my interview with the Postmaster-General.
89. When at Adelaide did you receive any letters of which you made complaint? I think I received some letters which aroused my suspicions.
90. Have you a distinct recollection of receiving them, or is it merely an impression? I have no distinct recollection.
91. Would you undertake to say that prior to this letter which you received on the 18th April you received letters which had been tampered with? No, I would not undertake to swear that; my memory is not so very clear.

John Deasy,  
Esq., M.P.

2 July, 1889.

92. On the 18th of April you returned to Melbourne? Yes.
93. And you arrived there on the 19th? Yes.
94. How long did you remain? I remained in Melbourne until the arrival of Mr. Dillon and Sir Thomas Esmonde.
95. When did they arrive? They arrived on the Saturday week following the 18th.
96. That would be the 27th? Yes.
97. Then you remained in Victoria until the 27th? Yes.
98. When did you leave? I left on the 7th May. I was about three weeks there.
99. Where did you stay while you were in Melbourne? I was almost the whole time at "Menzie's Hotel." Was ill for several days, under medical treatment, and unable to address meetings there.
100. Did you receive letters during the time you were in Melbourne with reference to which you make complaint? Yes.
101. How many? Well, there was one letter in particular.
102. Is that the one you showed to Mr. Dowden? Yes.
103. Where did you receive it? The letter was handed to me at the table at "Menzie's Hotel" by one of the waiters. The envelope of that letter was one of those you showed the Postmaster-General?
104. What was the date? It was early in Easter week, but I cannot fix the date. I handed the letter at once across the table to Mr. Dowden, and asked him to look at it. The letter was open. The seal was broken.
105. The letter was sealed? Yes; most of my letters are sealed. The seal was broken, but the corner part of the flap adhered to the envelope, but the other part was torn. The gum evidently would not adhere again except near the point.
106. Was there any appearance of fresh gumming on that? No.
107. Where was that letter written? I have been trying to think, whether it was written at Branxton or elsewhere, but I have not been able to satisfy myself.
108. Can you undertake to swear that it was not written by your cousin, whom you have already mentioned? I do not think it was, but I would not undertake to swear that it was not. Mr. Dowden, I believe, came from Cork, and I believe I showed the Cork post-mark to him.
109. Still you will not undertake to swear that even that took place? No; I cannot say absolutely.
110. Or that you are not confounding that with another letter? No; I cannot say where the letter was written.
111. Although you believe it was written in Ireland, you will not undertake to swear that it was? No.
112. And you will not undertake to swear that it was not written by your cousin? No.
113. Did you show that letter to Mr. O'Connor? Yes.
114. Did you show him the letter and envelope? Not the letter; I showed him the envelope that contained the letter.
115. Did you receive any other letters while in Melbourne? I received a number of letters; many of them bore traces of having been tampered with.
116. In what way? In the same way as the others. The upper part of the envelope was torn up. In many instances they were practically open, and I had not to go to the trouble to force them open or to cut the envelope.
117. In all cases you say that the seal was broken of these other letters that you received in Melbourne? Well, they were tampered with.
118. Were they sealed, and, if so, were the seals broken? Most of them were sealed, and the seals were broken, but I could not say that all of them were. In nearly every case the envelopes were open. All the letters I showed the Postmaster-General had the seals broken, and the greater number of the other letters of which I complain had the seals broken, but I am not positive as to the whole.
119. Can you say whether all the letters that you believe to have been tampered with were sealed? No; they were not all sealed—that I am positive of.
120. You received a number of letters in Melbourne, and some of them you believe to have been tampered with;—was there any difference between their appearance and the appearance of the two you particularly describe? No; except that some of them may not have been so glaringly and so clumsily done.
121. What was there on the other envelopes leading you to believe that they had been tampered with? Nothing beyond what I have said.
122. You said that some of them you believe had been tampered with—that it did not require much force to open them, and that you had not to cut the envelopes? Yes; and although some of them seemed closed it appeared to have been imperfectly done. I took the envelope in my hand to open the flap and I found little pieces of paper adhering to the lower parts of the envelopes. It did not require any force to tear away the gum.
123. Were all these letters sealed? I do not think they were.
124. Have you any of those letters or envelopes now? No; I might have a few of the letters left in my bag, but I would not be able by any possibility to identify them.
125. Did you show all the letters to the Postmaster-General? No.
126. How many did you show him? Only six. When I explained some time ago that I showed him letters I merely meant envelopes.
127. Now you have none of the envelopes left? No, none.
128. Did all the letters of which you speak go through the Branxton Post Office? Yes.
129. Where were they written? I think the greater number of them were written in Branxton. I think one or two received at Menzies were letters redirected from Branxton.
130. In fresh envelopes? No.
131. You say most of the letters of which you complain were written in Branxton? Yes.
132. Were most of the letters of the six you showed the Postmaster-General written in Branxton? Most of them were written in Ireland.
133. The one you showed to Mr. Dowden, was that written at Branxton? Yes.
134. By your cousin? Yes.
135. Would you undertake to pledge your oath—I do not mean anything offensive, but I wish to know whether you are absolutely certain—whether you can swear positively that any one single letter that raised

John Deasy,  
Esq., M.P.  
2 July, 1889.

raised your suspicion of having been tampered with had not been written by your cousin;—can you swear that? Yes. Three of the envelopes I showed the Postmaster-General were the envelopes of letters from my sister in Ireland, and they had been redirected by the postmaster in Branxton.

136. Had they been interfered with? Yes.

137. Will you undertake to swear that with the exception of the letters from your sister there was one of the letters that had been tampered with that your cousin had not written;—will you swear positively? I am perfectly confident that two or three of the letters were colonial letters. I am as sure as I can be of anything that two or three of the letters were colonial letters. I cannot go beyond that. In my communication with the Postmaster-General, when the matter was much fresher on my mind than now, I did say that they were colonial letters, and I am all but positive that this letter I showed Mr. Dowden was not from my cousin, but I would not undertake to swear.

138. You have told me your impression, but I want to know whether your recollection is such as to enable you to swear absolutely? No; not at this length of time.

139. May I take it therefore that, with the exception of three of your sister's letters, you will not swear absolutely, although your impression is the other way, that the other letters were not written by your cousin at Branxton? I could not be positive.

140. With reference to the three letters from your sister in Ireland, what appearance did they present? With reference to them, I should like to say that I got two of the letters together, and I made a declaration to the effect that I got them in Sydney. Since then I have been thinking where I paid for them; and I am utterly unable to say whether I got them with a number of other letters on Friday, the 10th May, here or not, or whether I brought them with me with a number of letters out of the Melbourne General Post Office. This I will swear absolutely, that I got two of the letters together, and opened them at the Royal Hotel, Sydney, on Friday, the 10th May, when I had some time to spare to wipe off my correspondence; and it was in consequence of the condition in which I found them that I sat down there and then and wrote to the postmaster at Branxton. That is the only thing I desire to correct in connection with anything I have written or said from the commencement.

141. Is this the letter to which you refer? Yes. [*Document put in and marked exhibit A.*]

142. If I understand you right, these two letters were from your sister? Yes. How it occurred that so many letters accumulated is this: I was, as I have said, ill in Melbourne. I had to go on to Sandhurst with Mr. Dillon and Sir Thomas Edmonde, and I came right through from there to Sydney, with the exception of a break of about three quarters of an hour in Melbourne. On arrival here, I was busily engaged in the city, and I had not time to look over my correspondence. It was not until the Friday that I opened the letters, and I found that these two had been tampered with. I became extremely indignant, and I wrote to the postmaster at Branxton—the letter dated the 10th May.

143. What appearance did the letters present? They both had been sealed. They were, as I have said, from my sister, and she almost invariably seals her letters. The seal was broken, and although it evidently had been firmly gummed, a portion of the envelope did not adhere at all. One was perfectly open.

144. And the seal was broken? Yes, and the gum did not adhere at all—that is, the lower part of the flap.

145. But the seal was broken? Yes.

146. Did you show these envelopes to the Postmaster-General? Yes.

147. And destroyed them? Yes.

148. You say that these had been redirected by the postmaster at Branxton? I thought so—that is to say, I wired him that any letters going through the Branxton post-office to me should be redirected to the General Post Office in Sydney. There they had instructions to redirect them to the General Post Office in Melbourne.

149. Anybody would see that these letters had been written by a lady by the address? Yes.

150. They would see also that they came from Ireland? Yes.

151. Were they of a private nature? Yes.

152. They were altogether private? Yes.

153. Such as sisters and brothers would write to each other? Yes. They would refer to many things—to politics in England, perhaps.

154. Where did you receive the third letter? The third letter I received on Tuesday, the 14th. I received it at the General Post Office, Sydney. I remember that because I paid for it in stamps. I offered either a two-shilling piece or half-a-crown, and the clerk had no change, so I paid him in stamps for the extra postage.

155. What appearance did the letter present? Well, it deceived me when I got it.

156. Was the letter sealed? I am not sure whether that letter was sealed or not, but my sister seals almost every letter. It is quite a common occurrence in England to have the letters of Irish Members opened. The lower part of the flap of the envelope in this case adhered pretty firmly to the envelope, and it was evident that it had been regummed. I showed that envelope to the Postmaster-General.

157. Did you draw the attention of the Postmaster-General to the envelope so that he could see where they came from? Yes.

158. You showed him what you considered the evidence of their having been opened? Yes.

159. Can you say whether that letter had been redirected? Yes.

160. Can you say by whom? Well, it must have been by the postmaster at Branxton, for this reason—that I wired him from Menzies Hotel before that asking him to redirect my letters to the Sydney post office.

161. You do not know his handwriting? No.

162. And you do not know, apart from the surmise, that he redirected them? No; I looked at the handwriting on the envelope, but not for the purpose of identifying it.

163. All these letters were destroyed? Yes.

164. After you had written to the postmaster, I believe you brought the matter under the notice of the Postmaster-General? Yes; but before coming to that I should just like to say that I think I have only described five of the envelopes I showed to the Postmaster-General. The sixth I have no recollection of. I do not know where it came from. I only know that there were six.

John Deasy,  
Esq., M.P.

2 July, 1889.

165. Your attention has been drawn to a letter of the 13th May, in which the postmaster at Branxton communicates the nature of your complaint to the Postmaster-General? Well, I have never seen the letter until now.

166. You are aware of the fact that he did send the letter to the Postmaster-General? I am aware from short telegrams I saw in the Victorian press, but I never saw the letter or heard it read before. [*Letter from Mr. Tulloch to the Postmaster-General, dated 13th May, 1889, put in and marked Exhibit B.*]

167. Then, on the 15th May, 1889, there is a letter from the Postmaster-General to you? Yes. [*Letter put in and marked Exhibit C.*]

168. Then, I think, on the 17th May, 1889, you wrote a letter in reply, in which you stated that you did not intend to take any further steps in the matter? Yes.

169. That was in reply to the letter asking you for particulars of this serious charge? Yes. [*Letter put in and marked Exhibit D.*]

170. Can you tell me why you wrote that letter? It was in consequence of a conversation with the Postmaster-General. I met the Postmaster-General at a banquet, on the Thursday after he wrote me the first letter, on the 15th May. He said, "You received a letter from me." I said, "Yes. I have not replied to it yet, but I will do so to-morrow, probably." I also said that perhaps it would be as well that he should see what evidence I had in my possession, in order that he might be satisfied that I was not making a charge frivolously. It was arranged that I should meet him at a quarter past 9 o'clock on the following morning, at his room, at the General Post Office. I went there, and he said he would have an investigation made into the matter. I said I did not wish to have any row out here, as in all probability the Press would say I was advertising myself; and I did not wish to have any person punished. I added that I did not believe Mr. Tulloch knew anything whatever about the opening of the letters—that he was far too respectable a man for that, but that the office there was very open. People had easy access to it and to the letters, and in all probability it was done by persons who were curious to know something about my private affairs without his knowledge. Mr. O'Connor said that if I liked there would be an investigation on the spot. I did not want an investigation, and we agreed to let the matter drop.

171. That is the reason why you did not keep the envelopes? Yes; and why I did not press the charge at the time. I may add that our conversation was very brief, because the Postmaster-General told me he had to attend a meeting of the Executive Council, which was to be held with regard to a man under sentence of death.

172. When was it that you came to the conclusion that the postmaster was not personally to blame? I never suspected him. I was obliged to write to him as the head of the office, but I never suspected him.

173. The reason I ask you is that in your letter to him you threaten to institute criminal proceedings? That was because I could only institute proceedings against the man in charge.

174. You say you never suspected the postmaster—whom did you suspect? Some members of his family who had access to the post-office.

175. Have you any reason for saying that beyond a mere idea that they are the most likely people? No.

176. You have no reason for saying that? No. Possibly some people who came into the office may have done so. I remember having been there ten minutes before I could get an answer to my question one evening. The door was open from the shop, and any person from the outside might have reached the letter-basket.

177. What was the next communication from the Department to you? The next was a communication I received at Echuca, Victoria, on 23rd May. [*Document put in and marked Exhibit E.*]

178. Did you reply to it? Yes; I wired a reply the moment I received it, and I afterwards replied by letter.

179. On what date did you reply by letter? The 4th June.

180. Is this the letter? Yes. [*Letter put in and marked Exhibit F.*]

181. What reply did you send by telegraph—do you remember? Yes; I wired that I would furnish as soon as possible all the information in my possession. The letter from the Department did not reach me for a week after it was dated. I was travelling up the Sandhurst line, and it followed me from town to town. The moment I got it I sent a telegram to the Postmaster-General. There was some difficulty in replying to it, because I did not know the address of Sir Thomas Edmonde, who was speaking in a different part of the colony.

182. After writing the letter dated the 4th June, what did you do? I do not think I did anything after that letter—oh, yes; I had an interview with the Postmaster-General.

183. When was that? I think it was last Thursday week.

184. What took place at that interview? I was going to Melbourne, to take up a number of meetings which I believe were fixed for me. I knew that an inquiry would be going on, so I came back to Sydney, thinking that my evidence would be taken at once, and that I would be able to attend to my political work in the future. With that view I left the train, I think at Cootamundra, and came back to Mittagong. I was having breakfast, and I found from the newspapers that notice to move for a Select Committee had been given in the House for to inquire into the matter. I then telegraphed to the Postmaster-General that I would meet him at 12 o'clock. I felt that if a Select Committee were appointed it would be impossible for me to be present during the inquiry, as it would necessarily be protracted. Moreover, I knew it was a very clumsy way of arriving at a conclusion. On my arrival in Sydney I saw the Postmaster-General, and he said he would appoint a couple of gentlemen to inquire into the matter. These gentlemen, he said, would be able to take my evidence at any time.

185. You had never been in the Colony before your present visit, I suppose? No.

186. Did you ever receive any letters from the same cousin you have mentioned before you came to the Colony—that is, letters addressed to you in Ireland? Yes.

187. For how many years had you been corresponding? About three years now.

188. About how many letters had passed between you? I could not say.

189. A letter a week? I should say about a letter a fortnight, probably.

190. As often as that? Yes. Sometimes it might be once in three weeks.

191. You mean to say that on the average you had a letter once a fortnight? Yes.

192. That was from your cousin Kate? Yes.

193. When you came to the Colony you stayed with your cousin, Mr. Drinan? Yes.

- John Deasy, Esq., M.P.  
2 July, 1889.
194. We have got the date as the 4th April upon which you left Branxton? Yes.
195. And the last letter that you received that had been tampered with was on the 10th May? The 13th May, I think.
196. Now, between the 4th April and the 13th May, how many letters did you receive from your cousin Kate? I should say eight or ten.
197. Or, I suppose, it might be a few more? Yes. It might be a few more, or it might not be so many.
198. I will ask you this. I do not mean anything offensive. Were you on very friendly terms with your cousin? Yes, I was on very friendly terms.
199. Were you paying her marked attention, or anything of that sort? That is a question I cannot answer. I may say that I left Branxton on the very best terms with the father, mother, and family—with all my cousins.
200. You quite understand I was not putting this offensively? Yes.
201. You understand the reason probably of my asking the question? Oh, yes.
202. If you decline to answer the question I shall, of course, not press you to do so? I would not answer a question of that kind on any account.
203. When was it, do you remember, that you destroyed the envelopes and letters? I do remember. It was on the Monday after my return to Sydney—after my interview with the Postmaster-General.
204. Why did you destroy them? I will tell you the circumstances.
205. That would be after you returned to Melbourne from Sydney? Yes. I left here on Friday, the 17th May.
206. You got to Melbourne on the Saturday, and on Monday the 20th you destroyed them? Yes. The reason I remember it is this, I was busy here during the week. I went over on political business, and was busy in Melbourne on the Saturday and Sunday, seeing people and arranging matters. I was idle on the Monday, and then I got all the letters I had to reply to and any superfluous envelope or letter was destroyed.
207. How did you destroy them? By tearing them up and throwing them into the waste-paper basket, or throwing them into the fire. I cannot say which.
208. Did anyone see any of these letters that were opened except the Postmaster-General? Yes.
209. You mentioned Mr. Dowden? Yes; and I showed the envelopes to Mr. Clinch in Melbourne. I showed them to Mr. Dalton of Orange, and Mr. Dalton of Sydney, and a reverend gentleman from Dublin, whose name I do not recollect. I showed one of them to Mr. Solomon, barrister, Adelaide, and to Mr. Cohen, a Member of Parliament in South Australia.
210. Did you tell any of them where the envelopes came from, or was that in any way communicated to the post office? No.
211. Are none of these gentlemen here? No; I have not had any communication with them. I carefully refrained from saying that this had occurred at Branxton or elsewhere; because I did not wish to wrong anyone, and I was not sure at the time who was to blame for it.
212. Are there any other explanations you wish to make? There is one explanation I have given, and that is the reason I did not reply earlier to the Postmaster-General's letter to Victoria. I was travelling, and the letter got delayed. Another explanation I wish to make is that in my interview with the Postmaster-General I did not say that I suspected my letters had been tampered with in any other colony. The Postmaster-General was under a misapprehension as to what I did say. I would like to add that although some very extraordinary statements have appeared in the newspapers I have not replied to them, because I thought I would be acting discourteously towards the Postmaster-General if I did not confine my communications to him. For that reason I confined my letters to him.
213. Are you perfectly certain that these two letters from your sister were tampered with? Yes.
214. And the three letters from your sister are three of those you showed the Postmaster-General? Yes.
- 214½. That is those of the 10th and 13th May? Yes. I would like to explain as to my mode of dealing with my letters. Yesterday, for instance, I burned and destroyed a number of letters at the Royal Hotel. I had all day to myself, and I got rid of my correspondence. Almost all letters that are not absolutely necessary for me to keep I destroy.

Thomas Drinan called in, sworn, and examined:—

- T. Drinan.  
2 July, 1889.
215. *Commissioner.*] What are you, Mr. Drinan? I am a wine-grower and grazier.
216. You live, I believe, at Branxton? Yes; I have been living there more than thirty years.
217. I believe you have a family? Yes.
218. What number? Four sons and one daughter.
219. Your daughter's name is Miss Kate Drinan? Yes.
220. Are you any relation to Mr. Deasy? Yes—first cousins. His father and my mother were brother and sister.
221. How long have you been living in Branxton? We came to live there, to the best of my recollection, in the latter end of November, 1856.
222. How long have you known Mr. Tulloch, the postmaster? I could not say exactly; I should say about fifteen years.
223. He is a storekeeper there, is he not? Yes.
224. Is he a man that holds a good position in his way of life? His circumstances are very good, I think.
225. I do not mean financially—I mean by reputation? Well, yes, he does.
226. Have you known him intimately at all? Yes; I have been accustomed to meet him almost every day.
227. Have you been good friends with him? I have always been good friends until very lately. I do not know whether we are friends now or not.
228. Do you remember Mr. Deasy arriving at Branxton? Well, I do. He came and stayed with us for about ten days, I think.
229. When was that? I do not exactly remember the time, whether it is two months ago or not.
230. Did you know him before his visit to Branxton? Yes. I saw him in the old country. I met him in Ireland—in Dublin.
231. Did you go alone at the time to Dublin? No; I had my wife and daughter with me.
232. How long ago is that? It is two years last January since we came back.
233. Then it is somewhere about two years and a half ago.

234. And were you staying with the Deasys in Ireland? No; we visited them at different times. We stayed with them half-a-day, or a night or so. T. Drinan,  
2 July, 1869.
235. While you were there you saw a good deal of one another? Yes; he and one of his sisters travelled a good deal in Ireland with us.
236. How long were you travelling together? About eight or nine days, I think.
237. I suppose he was taking you round to show you, the best things that could be seen? Yes. We went to the Lake of Killarney, and many other places.
238. When he came out here he stayed at Branxton some time? Ten days, I think—nine or ten days.
239. How old is your daughter? Twenty-six, I think.
240. Had she been corresponding with Mr. Deasy prior to his coming out here? Yes. She told me she was doing so. She used to tell me the news about Mr. Deasy.
241. Did she correspond with Mr. Deasy or with his sister? With both, I think; but she told me with Mr. Deasy.
242. Did you ever notice at any time whether Mr. Deasy was paying his addresses to your daughter at all? Well, I did not know until after he came out.
243. You knew it then? I did. Of course he gave me to understand that it was made up between my daughter and him when they met in Ireland. It was there they became attached to one another, and then during the time he was staying at Branxton they arranged about the marriage.
244. That was the time the arrangement was made? Of course they had an arrangement made in writing before he came out—so they gave me to understand.
245. But the first you heard of was after he came out here? Yes.
246. Then he and your daughter gave you to understand that they had arranged to get married? Yes.
247. In other words, that they were engaged? Yes.
248. Can you call to mind whether the date of the marriage was fixed? No; I never heard that.
249. There is no doubt about the marriage having been arranged? No; there is no doubt about it.
250. I presume you understood from your daughter? Yes.
251. That was done by letter before he arrived, and evidently the result of your visit to Ireland? Most probably it was.
252. Your daughter, of course, is his second cousin? Yes, I suppose she would be.
253. Did your wife know about this? I think she heard it before me—that is, so far as my impression goes.
254. Was your wife favourable to the match? My wife objected, and he asked her why she objected then any more than at any other time.
255. How did you know your wife objected? I learned from him.
256. Mr. Deasy told you that your wife objected and then he found fault with her because he was under the impression that she had consented, and he did not see why she should object now;—was that it? Yes; that is what I mean.
257. As a matter of fact, I believe your wife did object and she objects still? Yes.
258. She did not assign any other reason than the one I have indicated? ———.
259. I won't ask you any reason, because the one reason—that of the relationship—would be sufficient.
260. When you say your wife objected to the marriage, did she communicate that to the daughter? I believe so.
261. Did it lead to any misunderstanding between the mother and daughter? No; there was no misunderstanding, but my wife objected, and she told Mr. Deasy so, and Mr. Deasy told me. She told me Mr. Deasy would have to leave the house, and that if he did not leave the house she would have to tell him to go.
262. I suppose in consequence of that he did leave? He did leave, and I suppose that was the cause of his leaving.
263. How about the corresponding afterwards;—did your daughter write to Mr. Deasy and Mr. Deasy to her? I don't understand the question.
264. When your wife said Mr. Deasy should leave the house, did she intimate in any way whether the young people were to be allowed to correspond? I believe she said she would not allow any letters to go from her to him.
265. She would not allow any correspondence one way or the other? No.
266. Then there is no doubt when Mr. Deasy left the house, at your wife's request, she had determined to put an end to the engagement between him and your daughter? Yes.
267. Was the engagement terminated? Yes; so far as my wife was concerned. I had no objection myself.
268. Do you remember Mr. Tulloch receiving a letter from Mr. Deasy complaining of letters being opened? Yes.
269. You remember Mr. Tulloch telling you that? Yes.
270. Do you remember one day his being at Mr. Russell's? I remember one night.
271. By the way, who is Mr. Russell? He is a storekeeper and wine grower in Branxton.
272. You remember one night Mr. Tulloch being at Mr. Russell's? I do.
273. Was it after Mr. Tulloch told you about the letter he had had with Mr. Deasy's complaint? Yes.
274. Did you send in word that you wanted to see him? I did.
275. And then he came out, I believe? Yes.
276. Where was it you saw him? Just in the street in front of the store.
277. Do you remember what night it was? I don't remember the day of the month. It was the same night that Mr. Tulloch told me that Mr. Deasy accused him of opening his letters.
278. When he came out, what passed between you? Previous to my calling him out that way, he had informed me that Mr. Deasy had written to him saying that he had good authority—or some words to that effect—for accusing him of having been the cause of two of his letters having been tampered with in Branxton Post Office. Mr. Tulloch had told me this prior to my calling him out. When Mr. Tulloch told me that same day about Mr. Deasy accusing him of the opening of his letters, I hesitated a bit, and I said, "Nonsense; he would not do such a thing." There are two Mr. Deasys. There is another cousin of mine of that name living in Branxton; and I hesitated for a bit, as I said, and then I remarked that it would come to nothing, and said, "Never mind about that." "But," he said, "it is Mr. Deasy, the  
the

T. Drinan.  
2 July, 1889.

the member." "Oh," I said, "if it is Mr. Deasy, the member, I cannot say anything about him." I had got the other Mr. Deasy in my mind. Well, then Mr. Tulloch and I parted. After running the matter through my mind the supposition occurred to me that as my wife had got a bit cross she might have opened the letters. I then called Mr. Tulloch out of Mr. Russell's, and said it might have happened in that way.

279. What did you tell him, do you remember? I told him I thought it might have happened in that way. I said my wife is not very friendly with Mr. Deasy, and perhaps she may have opened the letters. Of course I have no authority for saying so—it was merely my idea.

280. Did you tell Mr. Tulloch that your wife was strongly opposed to the proposed marriage of Mr. Deasy with your daughter? I did.

281. Did you also tell him that that had caused the disturbance which had put an end to the engagement? No, I did not tell him that; I do not know whether there is an end to it yet or not.

282. You did not tell him that? No. It was not my opinion that there was an end to it.

283. Did you tell him that he might say to anyone that there was no such engagement? No; I did not tell him anything of the sort.

284. You told him, as I understand, that your wife was very much opposed to the intended marriage between Mr. Deasy and your daughter, and that she might have opened them in her motherly anxiety? I thought so, because a great number of Mr. Deasy's letters came to my place. It was only just a supposition on my part.

285. As a matter of fact you believed that at the time? No, I did not believe it. I could not say I believed it.

286. I do not wish to infer that you believed your wife to be guilty of anything dishonorable, but that merely in her motherly anxiety you suspected one might have done it, and that that was probably the solution of the matter? Well there was a probability that it might be so; but I could not say.

287. Do you remember Mr. Tulloch asking if you would put that in writing? Yes. He came in and asked me. I did not see very well how I could, as it was only a supposition of mine.

288. Do you remember telling him that it was not worth while. There was no occasion for it, because it was all over? No; I don't remember.

289. Did you happen to know then that Mr. Deasy had declined to proceed further with the matter? No; I never heard that Mr. Deasy declined to proceed with the matter at all.

290. Did Mr. Tulloch not tell you? No.

291. Did you hear anything said in your family that made you think it was possible Mrs. Drinan might have opened these letters—did you hear anything in your own house to suggest that to your mind? No. Only that my wife and daughter did not agree very well on this matter, and the daughter probably would not let her mother see the letters she wrote.

292. Did you hear anything said? No; I did not hear anything said. Of course my daughter would have letters addressed to herself, and she would open them.

293. I gather from what you said that you personally had no objection to the engagement? No.

294. And of course your daughter had not? No.

295. It was only your wife? Yes.

296. She went so far as to say that he must leave the house, and that communications must drop? Yes, I think I heard her say that.

297. That there should be no more letters? Yes.

298. How are letters delivered at your house—by the postman? No; we go to the post office ourselves, or send the servant.

299. Did Mr. Tulloch speak to you often about this matter? No; only once or twice.

300. Do you remember him telling you that Mr. Deasy had declined to proceed with the matter against him? I do not.

301. But perhaps he might have done so, although you cannot tax your memory with it? No; I do not think he did. I imagine I would remember it had he done so.

302. Do you remember any letters coming to your house to Mr. Deasy after he left? No; I never got a letter from Mr. Deasy myself. I would not know his handwriting. My daughter or some member of the family would tell me all the news.

303. Do you remember your son ever receiving any letters? No; there was a communication went through the *Herald*. I said it was a slander, and that this was a terrible thing.

304. What I want to get at is: do you remember the circumstance of your son having letters for Mr. Deasy? Yes; he told me he had two.

305. Did he tell you how he came to have them? I did not know anything about them until I saw this article in the *Herald*. He then told me that he held them until he gave them back to Mr. Tulloch. He had not got them in his possession when he told me about them. He told me there were two letters from Ireland addressed to Mr. Deasy. He thought they were from Mr. Deasy's sisters.

306. And these two letters your son said he had had in his possession for some time, and then gave them back to Mr. Tulloch? Yes. Mr. Tulloch, I think, came up to my place for them.

307. Do you remember whether it was two or three? He told me two. I never saw them at all.

308. Do you remember writing a letter of the 17th June, 1889, after you saw something in the *Herald*? I do. I wrote that letter after consulting with my solicitor.

309. What is his name? Mr. Kennedy, of West Maitland.

310. And you signed the letter? I did.

311. Now, did it occur to you, Mr. Drinan, at the time you heard of this—a charge made against a person whom you had known for many years,—did it occur to you that your wife, in her motherly anxiety for her daughter, might have opened these letters? That suspicion struck me.

312. Just tell me this—have you not heard something passing in your own house leading you to believe this? Nothing, but that my wife and daughter did not agree about Mr. Deasy.

James Alexander Tulloch called in, sworn, and examined:—

J. A. Tulloch.  
2 July, 1880.

313. *The Commissioner.*] What are you, Mr. Tulloch? I am post and telegraph master at Branxton.
314. How many years have you been there? I think about eighteen years.
315. You are a large storekeeper there, are you not? No. When I went to Branxton first I had a store, but for some years my two sons have been engaged in it—one in the store at Branxton, and the other in a branch store at Greta, about 2 miles distant.
316. Then is the post and telegraph office a Government building? No; my residence forms a portion of it, and the store carried on by my sons is at one end.
317. What is the arrangement of the building? The store is carried on at one end, the post and telegraph office is in the middle, and my residence is at the other end.
- 317½. What family have you got? I have a family of two sons and three daughters.
318. How old are they? The eldest is about 24, the next 22, and they go down to one 2 years old.
319. What is the next? The next is 9, and the other is about 14.
320. Then the ages are 2, 9, 14, 22, and 24? Yes; the two sons are 24 and 22 respectively, and the others are little ones.
321. You know Mr. Drinan and his family? Yes.
322. Have you been intimate? Yes.
323. And are your families intimate? Yes. Well, we never visit each other, but we are perfectly friendly and neighbourly.
324. And the members of your family;—are they the same? Yes.
325. Do you remember Mr. Deasy when he was up there? Yes.
326. During the time that he was there did many letters pass through your hands for him? Yes; there was a good few.
327. And after he left did letters pass through your hands from him and for him? After he left I received a notification from the General Post Office, with a letter from Mr. Deasy attached to it, stating that I was to re-direct his letters to the General Post Office.
328. Was this a telegram? No; it was a written communication from the secretary to the General Post Office asking me to re-direct all his letters. I noted it and returned it to the General Post Office. After I had forwarded a few Mr. Deasy then intimated to the secretary of the General Post Office that all letters addressed to him at Branxton were to remain there. I had a note of that also.
329. What interval was there between the two notifications? I really could not tell; but some days had elapsed.
330. Did any letters come before you got your first instructions? I cannot remember—Yes, I think there were.
331. What did you do with them? I sent them to Mr. Drinan's. Whilst Mr. Deasy was in Branxton I sent his letters up there, and I did so afterwards.
332. After he left, you say there were some letters? Yes.
333. Did you ever forward a number of letters in an envelope to Mr. Deasy anywhere? No; I would not forward them in an envelope. I would stick them together with the outside bordering from postage stamps—either that or tie them with a string.
334. After a certain time you got instructions what to do with them? Yes.
335. And then further instructions? Yes.
336. Apart from your instructions, did you forward any letters to Mr. Deasy anywhere? No.
337. Then, if any letters were forwarded, they must have been letters which you sent to Mr. Drinan's? Yes. I noticed letters passing through the post office, very bulky, addressed in Miss Drinan's handwriting to Mr. Deasy. I came to the conclusion that this bulky envelope contained some of the letters I had delivered.
338. You noticed this particularly? Well, as a matter of fact, if a bulky letter comes we are supposed to weigh it, and thus it attracts attention.
339. After your first instructions, what did you do with the letters? I sent them to the General Post Office.
340. After the second instructions, what did you do with them? After I received instructions for the letters to remain, Frank Drinan came down to the post office for his letters. I said to him, "There are a couple of letters here for Mr. Deasy; you might take them, as your sister will hear from him perhaps before I will, and he will get the letters the sooner." I handed him the letters, and he took them with him.
341. Did you notice the letters? I did not notice them particularly.
342. Can you say whether they were Irish letters? Yes; they were letters from Ireland, I believe.
343. Were they addressed in a woman's handwriting? I think one of them was. Both might have been. I know that there have been a good many letters from Ireland in the family's handwriting.
344. These letters that you handed to Frank Drinan, were they two letters or three? Two.
345. You are positive? I am quite certain.
346. What did he do with them? He took them with him, and then some few days afterwards I received a telegram from Mr. Deasy from Melbourne, asking me to forward all his letters to the General Post Office, Sydney.
347. That is the telegram dated 3rd May, 1880? Yes. [*Telegram put in and marked Exhibit G.*]
348. What did you do next? Some short time after I received that telegram, I went to Mr. Drinan's, knocked at the door, but could not make anyone hear me. I went towards the wine-cellars and met Frank Drinan. I said "Have you sent those letters to Mr. Deasy?" He said, "No; I did not know where to address them to him." I said, "I have just received a telegram asking me to forward his letters to the General Post Office. If you give them to me, I will re-direct them and send them." He said, "My hands are too dirty to handle them now. I will get them and bring them up presently?" "There will be plenty of time, I said, if you bring them down before the mail closes." A short time afterwards he came down and handed me Mr. Deasy's letters. I re-directed them, and taxed them with the usual tax of two-pence each letter, and sent them to the General Post Office.
349. Did you notice whether the letters were sealed? I could not say.
350. What condition were they in when you got them back from Drinan's—did they appear to have been tampered with? I do not think so. If they had been torn, or anything of that kind, I should have

- J. A. Tulloch. have noticed it. In fact, I am almost sure I would have noticed it, and I would have written on them, "Received in this condition." There was one I placed a label on. If we have three letters we tie the three together, and tax them at a 6d., and one label does for the three. I fancy that if that letter had been torn a person could see it, and if it had been so, I would have been in duty bound to endorse it so before sending it to the General Post Office, Sydney.
- 2 July, 1889
351. These two letters you sent to the General Post Office in Sydney? Yes. They were redirected to the General Post Office, Sydney.
352. Now, let me go back a bit. As I understand now, after Mr. Deasy left Branxton some letters came which were sent to Mr. Drinan's? Yes.
353. Then you got a notification from the General Post Office, enclosing a letter from Mr. Deasy, saying you were to forward his letters to the General Post Office, Sydney? Yes.
354. After that, you did send them to the General Post Office, Sydney? Yes.
355. Then you got an intimation through the General Post Office, Sydney, that you were to keep them at Branxton? Yes.
356. And I understand you did keep them at Branxton? Yes.
357. Then comes the story of the two letters? Yes.
358. After you got the intimation about keeping the letters at Branxton, were these the only two that came? These are the only two, so far as I can remember.
359. Then you got the telegram [*Exhibit G*], and after that you got the two letters back from Frank Drinan, and sent them to the General Post Office? Yes.
360. And those two letters were the last two ever sent? Yes.
361. And one or both might have been in a woman's handwriting? Yes.
362. Who had charge of the Branxton post office this year, during the time of the alleged opening? My son sometimes, myself principally, and sometimes my wife has been in the office.
363. Is your wife here? No. I do not think she was in the office during any of these times. I believe all Mr. Deasy's correspondence came under my own observation.
364. It passed through your hands? Yes, with the exception of some that my son might see in making up the mails.
365. Did you see any person, or did any person, with your knowledge, or any members of your family ever open or interfere with, in any way whatever, any of Mr. Deasy's letters? No. No person could possibly do it. We received the mails at nine o'clock in the morning. The mail was immediately made up, and Drinans people were there for the letters immediately. It would be impossible for a person to open a letter, read it, and close it up, and have it ready for delivery.
366. But apart from the possibility or impossibility, was it done? No.
367. Neither by yourself, nor any member of the family, nor any person in the employ of the office? No.
368. There was no interference in any shape or form with any of the letters? No; I am positive of that.
369. Can you give me an idea how many letters were forwarded to the General Post Office, Sydney, for Mr. Deasy, through your office, and through Drinan? I could not say.
370. As nearly as you can remember? As nearly as I can remember, I should not think there would be more than four or five—at the very outside, seven or eight.
371. You understand what I mean;—I want to know what letters, including the two you got back from young Drinan, you sent back to Sydney? There would be seven or eight.
372. That is the outside number? Yes.
373. I want you now to pledge your oath what the number is that you are certain was not exceeded? Not over seven, to the best of my recollection.
- 373½. For instance, you would remember whether you were accustomed to send bundles or handfuls? Oh, yes.
374. And you have no doubt in the world that you did not send more than a certain number and that that number was not more than seven? We have large numbers of letters redirected, and I could not recollect what the exact number of letters I sent would be.
375. I do not want the exact number—I want to know from you this: you sent certain letters to the General Post Office, to Mr. Deasy, and I want to know whether there is any number you can give me as the outside number that you sent? The outside number is seven.
376. In other words, you will swear you did not send more than seven? Yes; but I could not be certain to one letter for example. There is the difficulty. I want to speak the truth and the whole truth. There is nothing that would enable me to say the exact number.
377. I do not want the exact number; I want a number that you will say it did not exceed? Then, seven.
378. Amongst these letters that you sent down there were two from Ireland that you think were in a lady's handwriting; were there amongst the seven any other letters that were in a lady's handwriting? I could not say, but I think there were some in a lady's handwriting.
379. From Ireland? Yes.
380. Have you any recollection where the other letters were from? No.
381. What was done with them? They would remain in the office. They were simply sorted. They would be in the bundle of letters, and they were handed out when the Drinans came for them.
382. Do you remember receiving from Mr. Deasy the letter marked [*Exhibit A*] complaining of your office? Yes.
383. You replied to that by the letter marked [*Exhibit B*]? Yes.
384. After you received this letter [*Exhibit A*], did you see Mr. Drinan, and did you tell him of it? I told him I had received a letter from his friend Mr. Deasy, and told him the nature of the letter. I told him it contained a very serious charge against me—that of having letters opened at the Branxton Post Office, and that he had conclusive evidence that they had been opened there, and he added that whether he would prosecute me criminally or not was a matter for after consideration. Mr. Drinan asked what Mr. Deasy had done it—"Mr. Deasy of Rothbury?" I said, "No; Mr. Deasy, who has lately come out from Ireland." He said "That is strange." He said no more, and I passed on to one of the neighbours—Mr. Brayshaw's place and stayed there a few minutes and returned home. I then went across the street to Mr. Russell's place, which is just opposite to Mr. Drinan's. I had not been there more than a few minutes when some person rapped at the door. Miss Russell went to the door and opened it, and she came in and said that Mr. Drinan was outside

outside and wanted to see Mr. Tulloch. I went outside, and we walked a few paces from the door. He said, "Since I met you down the street this evening I have been considering about the opening of these letters of Mr. Deasy's. I have come to tell you that the letters were opened at my place." He said, "You know Mr. Deasy wanted to marry my daughter. Mrs. Drinan is strongly opposed to his marrying her, and it has caused great disturbance in the house, and that put an end to the marriage." He added, "You can tell anyone from me that there is no marriage to take place between Mr. Deasy and my daughter." He then said that Mrs. Drinan, seeing correspondence passing from her daughter to Mr. Deasy, wanted to know what was passing between them, and she had the letters opened and read, and then closed and posted them. He also said, "I won't see you blamed wrongfully. I will prove what I have said, and if required I will swear to it." I then thanked him and we parted. Then, on the night of the 13th June, he was at my house, and I said to him, "There is one thing I wish you to do, if you have no objection, and that is, to put in writing what you told me verbally outside Mr. Russell's place about the opening of Mr. Deasy's letters." He said, "Oh, I thought it was all over." I said, "No; Mr. Deasy has never withdrawn the charge." I also said, "If you give me this statement in writing I will forward it to the General Post Office, Sydney, and there will be an end to the whole thing." He said, "Well, if there is any more heard about the thing I will do so." I then said, "There is one thing that strikes me very forcibly, and that is, that some member of your family has communicated to Mr. Deasy the facts that you have told me about the letters having been opened in your place, and that is the reason why he declined to proceed any further with the charge he made against me." He said, "I won't say they did not." I asked him if he would say whether they did or did not. He said, "I won't say they did not."

J. A. Tulloch.  
2 July, 1889.

385. Do you remember anything being said as to whether he had seen his wife open them or not? He said, "You know I did not see Mrs. Drinan open the letters. It was from a conversation that was passing between members of my family that I got to know they were opened."

386. That is really what took place between you? I positively swear it.

387. Is it true what you have just said, or that he called you out of Russell's and told you about his wife—that he suspected it was his wife who had opened the letters;—was that the way he conveyed it—that his suspicion was that Mrs. Drinan had done it? Yes.

388. Then he subsequently told you that he had not seen Mrs. Drinan, but that it was from a conversation with his family that he had gathered it? Yes.

389. That was in June? Yes—a month afterwards.

390. Can you tell me this: You have seen that letter Mr. Drinan wrote to the Department after the publication of the paragraph in the *Herald*? Yes.

391. You know Mr. Drinan's signature? Yes. [*Letter of the 17th June, 1889, put in and marked H.*]

392. One of the paragraphs in that letter says, "I have reason to suspect that my own letters had been opened in the post office, and members of my family have complained to me of the same thing repeatedly";—is there any truth in that? None whatever. I distinctly deny it. I have never heard of anything of the kind. I have never heard it even rumoured or hinted at in any way.

393. What was the course of delivery there? People usually called for their letters.

394. Then there was no delivery from the post office at all? No. The letters were handed out from the window.

395. Is it true that letters are ever delivered away from the post office at all? No. Sometimes we might overlook a letter, but in the ordinary course everyone comes for his own letters.

396. Do neighbours call for each others' letters? Yes.

397. I will now ask you generally whether any letters of Mr. Deasy's, or of anybody else's, have been opened or tampered with by you or any person in your office in any way whatever? No. I will positively swear to that.

398. This is a statement which I believe you forwarded to the Department? Yes. [*Statement put in and marked Exhibit K.*]

399. Did you send that in after the conversation with Mr. Drinan? Yes.

400. When did you have the last conversation with Mr. Drinan? On the 12th June.

401. When did you have the first? On the night of the 13th May.

402. And on the 20th June you sent the report marked K down? Yes.

Sir Thomas Henry Grattan Esmonde called in, sworn, and examined:—

403. *The Commissioner.*] I believe you are a Member of the House of Commons? Yes.

404. For what constituency? South County, Dublin.

405. I believe you came to the colonies with Mr. Deasy and left him in Tasmania, and you and Mr. Deasy subsequently joined Mr. Deasy in Sydney? Yes.

406. On what date? I am not perfectly certain. It would be about the 11th May, but I am not quite certain about the exact date.

407. You know of course the nature of this inquiry—that Mr. Deasy charges that certain of his letters were opened;—of your own personal knowledge, do you know anything about that? I do not know much except so far as one letter is concerned—a letter that he received when we were here, which I saw for a minute or two. He received it at the Royal Hotel in Sydney.

408. Do you remember who handed it to him? It was one of the waiters, so far as I can recollect.

409. Do you remember what day that was? No; I do not remember.

410. Was it the day you arrived in Sydney, do you remember? No; it was a few days subsequently. I do not quite remember the date.

411. Did you attach any importance to it at the time? Not very much, because I had no idea that there was anything hanging on it.

412. You say you saw a letter for two or three minutes—how came you to see it at all? Well, the letter was handed to Mr. Deasy by a waiter, and then he handed it to me, and pointed out that it was tampered with. He handed me the letter, and drew my attention to it. On my looking at it, I saw that the seal had been broken, and it had been either resealed or sealed up again.

413. Do you remember whether the seal had been broken, or whether it was intact? I could not say whether it was the original seal or a new seal. It was intact then—that is to say, the letter was closed.

414.

Sir. T. H. G.  
Esmonde.  
2 July, 1889.

- Sir T. H. G. Esmonde.  
2 July, 1889.
414. That is the letter was closed and the sealing-wax was not broken? It was not broken then. It looked as if it had been sealed up again.
415. Was there anything else peculiar that you noticed about the appearance of the letter? The edges appeared to have been a little bit fingered, and sticking together;—that is the flap was a bit fingered and dirty.
416. Was there anything else that you noticed? Nothing else.
417. You say that the letter was closed? Yes.
418. There is no doubt about that? No.
419. So far as I can gather there were two things that you noticed;—the sealing-wax or the seal? Yes. I do not think there was any seal.
- 419½. And the edges of the flap of the envelope seemed to be smudged?
420. The envelope was firmly closed? The envelope was closed.
421. Can you recall to mind where the letter came from. Was it a Colonial letter or an Irish letter? I cannot say.
422. Have you any belief about it; any impression? I have a sort of impression it was a Colonial letter.
423. Can you recall to mind whether it was in a lady's or gentleman's handwriting? I would not be positively certain about that, but I think it was a lady's handwriting.
424. That is your impression? Yes. I could not be certain.
425. And you think it was a Colonial letter? Yes. That is my impression. I think it was a Colonial letter and I think it was in a lady's handwriting.
426. Was your attention ever drawn by Mr. Deasy to any other letters in a similar way? Yes; at Adelaide.
427. How many letters did he draw your attention to there? As well as I can recollect he drew my attention to one letter there. My recollection of the Adelaide thing is very hazy.
428. Can you recall to mind whether that was sealed; first of all was it opened or closed? It was closed I think.
- 428½. Was it sealed? I do not think it was sealed.
429. Was there anything remarkable about that letter so far as you can call to mind? As far as I can recollect it had a kind of frayed appearance about the flap.
430. Would such an appearance be produced by friction in a mail-bag if there was a heavy mail? I do not think so; the letter was dirty.
431. The whole letter was dirty? The back was dirty.
432. Was it dirty where the address would be? No; on the other side.
433. It was closed? Yes.
434. Do you think that was a Colonial letter? I think it was not.
435. Can you recollect whether it was in a lady's hand-writing or not? Well, as nearly as I can recollect it was not in the same handwriting as the other one. Of course I did not pay much attention to it.
436. Were there any other letters that Mr. Deasy drew your attention to? I do not recollect any other—only these two occasions.
437. Did you ever go with him to the General Post Office at Sydney to get a letter or anything of that sort? No.

John Yunie Tulloch called in, sworn, and examined:—

- J. Y. Tulloch.  
2 July, 1889.
438. *The Commissioner.*] You are the son of the postmaster at Branxton? Yes.
439. Are you the son who keeps the store there? Yes.
440. In the same building as the post office? Yes. Is that your business or your father's? It is mine and my brother's.
441. Do you assist in the post office. Yes.
442. Did you during the time Mr. Deasy was staying at Mr. Drinan's? Yes.
443. During that time do you remember letters coming through for Mr. Deasy? —
444. What became of them while he was there? Mr. Deasy called for some of them. They went up to Mr. Drinan's.
445. After Mr. Deasy left, what became of his letters? They still went to Mr. Drinan's.
446. Do you remember any orders coming from the General Post Office with reference to them? I remember that some orders did come.
447. You do not remember the directions given? No; I don't.
448. During the time that these letters were passing through the office in that way were they ever tampered with or interfered with to your knowledge by any person? No. Not by any person whatever.
449. Did you notice these letters particularly? I never took particular notice of them. I only remember a few of them going through. I generally attend to the telegraph, so I don't really see much of what goes through the postal department.
450. What I want to know is whether of your knowledge Mr. Deasy's letters were interfered or tampered with in any shape or form, in your office, either by you or anybody else? No.

John Fitzgerald Burns, Esq., M.P., called in, sworn, and examined:—

- J. F. Burns,  
Esq., M.P.  
2 July, 1889.
451. *The Commissioner.*] You are a member of the Legislative Assembly? Yes. One of the members for St. Leonards. I was formerly member for the Hunter, in which district is the town of Branxton, which will account for my having been communicated with by the postmaster at Branxton after a statement was made through the public prints that some letters passing through his office had been tampered with. Mr. Tulloch wrote to me on the subject, expressing a strong desire to have a local inquiry, and at the same time he wrote to Mr. Scobie, through whom also he sent me a message on the same subject, and through whom he made some statements as to the evidence he could give bearing upon the imputations upon his office. Mr. Scobie and I took steps to press upon the Postmaster-General the desirability of an inquiry upon the spot. We were delayed for a day or two before we could make an appointment with Mr. O'Connor. At last we did so, and met Mr. O'Connor at the Post Office. We explained to him what our business was, that as the character of Mr. Tulloch was in our opinion impugned by the statements made that the correspondence passing through his post office had

had been tampered with or opened, we thought it right to grant his request for an inquiry at Branxton; but as it appeared from his communication to us that Mr. Drinan, senior, had acted very straightforwardly towards him in stating that he would clear him of this charge, we made a request that nothing that we said then should be published by the Department. I suggested that before an inquiry was actually instituted it would be desirable to communicate by telegraph with Mr. Deasy, informing him of the statements we had made, believing it probable that he was then in possession of similar information himself, which might lead to his withdrawing the charge, and relieving Mr. Drinan's family of the unpleasantness that might arise from an inquiry on such a subject. Mr. O'Connor, in our presence, took down some statements we made, and said he would at once communicate with Mr. Deasy. We were quite satisfied then with his promise on the subject, and I think I might state that I had advised Mr. Tulloch, and requested Mr. Scobie, to give no information to the press on the subject. I was much surprised afterwards to see a paragraph in the newspaper about it. Both Mr. Scobie and myself observed very great reticence on the matter, but statements were made in the public press which must not only have annoyed Mr. Drinan and his family, but must prejudice the inquiry into the management of the post office at Branxton in connection with the charge.

J. F. Burns,  
Esq., M.P.  
2 July, 1889.

452. How long have you known Mr. Tulloch? I have known Mr. Tulloch for, I think, about twenty years, and Mr. Drinan still longer, and was friendly with them both, and my desire was to have the matter conducted in a way to excite as little ill-will between these residents of the same town as possible. At the same time I was desirous of seeing the charge withdrawn, both in the interest of Mr. Drinan and the postal service of this Colony, which I understood, from what appeared in the prints, had been attacked by the statements made by Mr. Deasy.

453. What was the communication that you and Mr. Scobie made to the Postmaster-General—is it in writing? No; it is not in writing, it was made verbally.

454. Are the statements fairly represented in that document marked Exhibit L? Yes, that fairly represents the statements Mr. Scobie and I made. It is not quite so full as it might have been on one point—that Mr. Deasy should withdraw the charge. I made a suggestion to the effect that at that time Mr. Deasy was perhaps well aware of the position of matters at Branxton in relation to the correspondence as we were, and he would see that it was his duty to withdraw the charge.

455. That is all you know about the matter? That is all I know.

Robert Scobie, Esq., M.P., called in, sworn, and examined:—

456. *The Commissioner.*] You are Member for The Hunter in the Legislative Assembly of New South Wales? Yes.

R. Scobie,  
Esq., M.P.

457. And as Member for the district you became aware of certain statements which were alleged to have been made by Mr. Drinan to Mr. Tulloch with reference to Mr. Deasy's letters? Yes. It occurred in this way: I was passing down High-street on the 17th of last month, and I met Mr. Tulloch, and had some conversation with him. We referred to the opening of Mr. Deasy's letters, and he told me that the matter was all right—that Mr. Drinan had waited upon him, and told him that some correspondence was being carried on between his daughter and Mr. Deasy, and that Mr. Drinan had waited upon him and told him this. Mrs. Drinan, he said, did not approve of the engagement, and had opened the letters. Mr. Drinan was prepared to substantiate that, and Mr. Tulloch asked me to tell this to three Members of the Legislative Assembly, and I told Mr. Burns and Mr. Gould. Mr. Burns and I conferred together, and from the nature of what was communicated to me, Mr. Burns thought it would be as well if the Postmaster-General communicated with Mr. Deasy, who might withdraw the charge, and clear the Post Office authorities. We laid the matter before Mr. O'Connor and Mr. Lambton, the Secretary to the Post Office. Mr. Lambton drew up a communication and sent it to Mr. Deasy, in our presence.

2 July, 1889.

Francis Augustus Drinan called in, sworn, and examined:—

458. *The Commissioner.*] You are the son of Mr. Drinan who was examined here this morning? Yes.

F. A. Drinan.

459. You live at Branxton, I believe, with your father? Yes.

460. I believe you are a second cousin of Mr. Deasy's? —

2 July, 1889.

461. You remember the occasion when Mr. Deasy stayed at your place about ten days this year? Yes.

462. During the time he was in your house, did he receive many letters? I could not say for certain. He received some, but I could not say how many.

463. Can you say whether after he left any letters came for him? Yes.

464. How many? I cannot tell you the number.

465. Do you remember after he left any letters being enclosed in an envelope to be sent to him? I do not.

466. That might have taken place and you would not have known it? Yes. I had some of his letters; he authorized me to keep them for him.

467. Had any other members of your family any? I cannot say.

468. That might or might not be? Yes.

469. There were some two letters given to you, I believe? Yes.

470. Do you know where they were from? They were letters from Cork, from his sister.

471. How did you come to get them? The postmaster gave them to me.

472. For what purpose did he give them to you? To keep. I was authorized to keep them for Mr. Deasy.

473. How long did you keep them? About five days.

474. What did you do with them? I kept them in my possession all the time.

475. What did you do with them afterwards? I gave them to Mr. Tulloch; he called for them. I was at work when he asked me, and I gave him the two.

476. Do you know why Mr. Deasy left your place? I could not say—I could not tell you that.

477. Did you know anything about his being engaged to your sister? Yes; I knew that.

478. When did you know that? I knew it before he came out.

479. How did you know it? —

480. I suppose you knew it from your sister? Oh, of course,

481.

Mr.  
F. A. Drinan,  
2 July, 1889.

481. By the way, is your mother well? She was ill when I left. She was confined to her room. She has been laid up for about three weeks.
482. Is she likely to remain unwell? I could not say. She was under medical treatment. I dare say she might probably be better in a day or two.
483. In what time do you think? I could not say.
484. Was she in bed? Well, she was not in bed. She was, on and off.
485. Moving about? Yes. Previous to that she had been laid up for more than a fortnight.
486. And she is in doctor's hands? Yes.
487. How old is she? I could not tell you.
488. I expect she must be about 60? No; I do not think so.
489. She is the mother of all of you, and your sister is about 26, your father says? That I could not tell you.
490. Is your sister the eldest? Oh, no.
491. How many are there older than your sister? Two.
492. At any rate that would bring her pretty well up to 50. Do you know whether your mother approved of the match or engagement? I could not tell you that for a certainty.
493. You don't know,—I mean from anything you heard in the house. Of course I hear little things now and again.
494. You do not know that she had any thorough objection to the engagement? I could not tell you.
495. You do not know how it was that Mr. Deasy came to leave your house? No; I could not tell you that. You see I am mostly away myself, and might not be two days in a week at home.
496. In point of fact the state of your mother's mind as to the engagement, and the reasons for Mr. Deasy's leaving the house you know nothing about? No; I know nothing about them.
497. You know nothing about Mr. Deasy's letters arriving at the house after he left? There was only those two that I knew about after he left.
498. You know nothing of any letters passing from a member of your family to Mr. Deasy? No.
499. Whether your sister or any member of your family wrote to Mr. Deasy from time to time; you could not tell me that? No.
500. You are in the wine making business are you not? I am more on the station.
501. I suppose you have got your hands pretty full? Yes.
502. And you have not got time to waste over things of the sort I have been asking you about? No.
503. The two letters which you received from Mr. Tulloch were letters from Mr. Deasy's sister? Yes.
504. Were they all right when you handed them back? Yes.
505. Were they sealed, do you remember? Yes; perfectly sealed.
506. Do you know of any third letter which Mr. Deasy received from his sister? No; I do not know of any other than I have mentioned. These were the only ones I had in my possession or that came under my notice at all.
507. You know personally nothing about how Mr. Deasy's letters were opened or who opened them? Nothing whatever.
508. If they were opened you know nothing in the world about it? No.
509. Nor how it could be accounted for? No.
510. Did you ever hear your mother say anything about them? No; I am perfectly certain she never received any of them.
511. I am referring more particularly, not to letters that were received, but to letters that were sent from Braxton? I know nothing whatever about any letters beyond these two.

WEDNESDAY, 3 JULY, 1889.

Present:—

C. E. PILCHER, Esq., Q.C., Commissioner.

Daniel O'Connor, Esq., M.P., called in, sworn, and examined:—

- D. O'Connor,  
Esq., M.P.  
3 July, 1889.
512. *The Commissioner.*] You are the Postmaster-General? Yes.
513. You know Mr. Deasy, I believe? Yes.
514. Do you remember Mr. Deasy having an interview with you respecting some letters that he alleges have been opened? Yes.
515. What date was that? I can fix the date in this way: There was a banquet held in West's room in the evening, and the next morning I had the interview with Mr. Deasy. I think it was on the 16th May.
516. What day of the week was the banquet? I think it was on Wednesday the 16th.
517. What banquet was it? It was a banquet given to the delegates—Mr. Dillon, Sir Thomas Esmonde, and Mr. Deasy.
518. That was on the 15th May? Yes.
519. On the following day he saw you;—where? At the post office. The interview was the result of a conversation I had with him on the night before.
520. What was said then? I said to him, "You got a letter from the post office to-day." He said, "Yes." I said, "Well, there are some very serious charges made by you, and I should like to have them inquired into." I should like to go back a little to explain. The first intimation I got of anything being wrong was the receipt of a letter from Mr. Tulloch.
521. That is the letter marked [*Exhibit A* and *Exhibit B*] from Mr. Tulloch? Yes.
522. That is dated the 13th May, and I presume you got it on the 14th May.
523. Upon receipt of *Exhibit B* you caused *Exhibit C* to be written? Yes. I told Mr. Lambton to write to Mr. Deasy, telling him that the fullest inquiry would be made. Then I met Mr. Deasy at the banquet on the evening of the 15th. I asked him if he had got that letter [*Exhibit C*]. He said, "Yes." I told him that as he had made these serious charges, every facility would be afforded him to prove the truth or otherwise of the charges. I regarded this, I told him, as little less than stealing letters, and if it were proved, the severest punishment would be meted out, no matter who the person concerned might be.
- Mr.

Mr. Deasy intimated that he did not intend to go any further in the matter. I pressed him very hard to go on with it, and besides the matter was being hinted at outside, and I desired to protect the men in the office. I pressed Mr. Deasy very hard to proceed with the prosecution, and he refused absolutely.

D. O'Connor,  
Esq., M.P.  
3 July, 1889.

524. What reason did he give? He said he would not like to leave any home in a worse condition than he found it when he came here. He would not like to bring misery to a family. He said, "I will come up to-morrow morning, and I will show you some of the envelopes."

525. Did he go to see you? He did come, and he brought eight or ten envelopes with him.

526. Are you sure it was eight, or ten, or six? I would not be sure at all. It might be six, or it might be eight or ten; but I think there were about eight.

527. Can you recall to mind anything about these envelopes—as to the handwriting? I never noticed the handwriting at all.

528. Did you notice whether they were colonial letters or foreign letters? Some of them, I think I am pretty safe in saying, came from Home.

529. Came from Ireland? They came from some part of the old world. Some of them, I think, were colonial.

530. By colonial do you mean New South Wales? I mean any of the Colonies.

531. Have you any distinct recollection about the matter? The only thing that I am positive about is that some of the letters came from Home.

532. Now, with respect to the letters that came from Home, did you notice anything particular about them? There were a couple of letters that were specially directed to my notice.

533. Were they letters from Home;—this is a particular thing that I am anxious to find out? What Mr. Deasy directed my attention to was the opening of the letters, and it was easily to be seen that they had been opened. There was evidence of the flap having been raised and turned down again; and then it was fixed again with some new stuff, but we could not tell—there was no evidence to prove whether the letter had been opened in New South Wales or Victoria.

534. Or it might have been opened by Mr. Deasy himself? The only thing I could tell was that the letter had been opened.

535. You said there were appearances of its having been fastened down again? Yes. In one case the opening was a clumsy affair, the letter having broken evidently over the seal, and when it had been closed again the sealing-wax seemed to have mixed. Whoever did it must have opened and closed that letter very clumsily, and there was a very wet kind of sealing-wax used. It was blended very clumsily with what had been used before.

536. That is one particular letter you speak of? Yes.

537. And do you think that letter was from Ireland? I think so, but I could not say for certain.

538. Were there any other letters that attracted your attention? There were several. All the letters shown me appeared to have been opened.

539. Were they colonial letters? They were letters he had got in this Colony—from various portions of the Colony, and from the Old Country. The only thing I was interested in was the opening of the letters—not as to the handwriting, or where they came from.

540. Your attention was not directed to the handwriting? Mr. Deasy never directed my attention, to the best of my belief, to the handwriting. He never showed me the handwriting at all. He showed me the gumming of the letters.

541. Could you undertake to say with reference to these letters—would you undertake to say absolutely that there were any from Ireland at all? I could not say that they were from Ireland, England, or Scotland, but one of them was from Home. Mr. Deasy was a man who must have been travelling about, but whether the letter was from Dublin, London, or Edinburgh, I could not tell you.

542. When you say "Home" you mean the United Kingdom? Yes; some portion of the United Kingdom.

543. That is the letter you have described? That is one of the letters. It took away a good deal of my interest in the letters when he said there was no intention of prosecuting, and there never would have been anything more about it—there is no doubt about that; but some people outside and the press went for Mr. Deasy. Mr. Deasy made a specific charge, and what was the good of me following it up when there was only the charge against the one man at Branxton. He made a specific charge against Mr. Tulloch and refused to go on with it, and I could not do more, as he would not go on. Mr. Lambton came in subsequently and said it would be utterly impossible to go on. Then I was asked a question in the Legislative Assembly with regard to the opening of the letters. There would have been a trial had Mr. Deasy proceeded with the matter, and then we would have seen whether the letters came from England, Ireland, or Scotland. If I had apprehended for one moment that there would have been any further investigation I would have adopted another course, but Mr. Deasy left the Colony, and I thought the matter had ended.

544. As a matter of fact, do you know what became of the envelopes? He took them away.

545. Did that particular letter present the appearance of the seal having been broken and re-waxed? It did.

546. Was any other letter sealed? There might have been one; I am not sure.

547. What I want to get at is, whether you have any recollection of there having been any others? My recollection is not good enough for me to say "yes," and it is not good enough for me to say "no." My interest in the letters was considerably lessened by the fact that Mr. Deasy positively refused to proceed with the matter any further.

548. Was that all that took place at that interview? Yes. He showed me the envelopes and withdrew.

549. You were under the impression then that this was a specific charge made against one postmaster, and that that specific charge Mr. Deasy declined to proceed with.

550. After this is *Exhibit D*, in which Mr. Deasy states that he does not intend to take further steps in the matter? Yes.

551. Following upon this, some question was asked in the House? Yes. By Mr. Dibbs.

552. What date was that, do you remember? I think it was on the evening of the day he wrote the letter—the 17th.

553. Are you certain? Well, it was that evening, to the best of my belief.

554. Was this letter written by him on the same day that he had the interview with you? Yes.

- D. O'Connor, Esq., M.P.  
3 July, 1889.
555. And that same day Mr. Dibbs put some question to you in the House? Yes. He asked me without notice as I was walking into the House.
556. Then I believe you received from Mr. Tulloch the letter of the 21st May? Yes. He wrote a letter in which he asked for leave to vindicate himself. [*Letter put in and marked Exhibit M.*]
557. What next? I wrote immediately, saying that I had no objection to comply with his request, nothing in the rules of the service preventing my granting it.
558. After the questions were put to you in the House by Mr. Dibbs, did you communicate with Mr. Deasy? After the questions were put in the House by Mr. Dibbs, there was an evident desire on the part of Parliament that there should be an investigation, and I think I instructed Mr. Lambton to write to Mr. Deasy.
559. That letter is not here, but it was written in accordance with the terms of your instructions? Yes.
560. And, in reply, you received the letter marked *Exhibit F* from Mr. Deasy? Yes.
561. After that I believe Mr. Burns and Mr. Scobie called upon you? Yes.
562. And made a statement which is substantially what appears in *Exhibit L*? Yes, that is my minute. I dictated and signed it, and then I instructed Mr. Lambton to write to Mr. Deasy, informing him that two Members of Parliament, one of them a very old member and ex-Minister of the Crown, had called at the office, and stated that they had information, which was beyond any power of contradiction, to the effect that the letters he complained of having been opened were opened by his own relatives; and also that this information had been communicated to Mr. Tulloch by Mr. Drinan. Then Mr. Burns and Mr. Scobie agreed with me—or rather I agreed—that the statements made by Mr. Burns should not be made public. As Mr. Drinan had made the statement so candidly, I was desirous of preserving the feelings of the family, and was anxious, in the interest of the family concerned, and in the interest of Mr. Tulloch, that Mr. Deasy should withdraw unconditionally his charge, and that things should be brought to an end. I therefore instructed Mr. Lambton to write a note to Mr. Deasy.
563. Before giving those instructions, did you cause the minute marked *Exhibit K* to be sent to Mr. Tulloch? Yes. A letter signed "Justice" had been published in one of the newspapers, and I caused a minute to be written to Mr. Tulloch, asking him that if he had any information to give which would elucidate the matter to furnish it to the Department.
564. Then Mr. Tulloch wrote, in reply, *Exhibit K*? Yes.
565. And it was upon receipt of that from Mr. Tulloch that you communicated with Mr. Deasy? Yes. It was really after Mr. Burns' interview that we wrote to Mr. Deasy.
566. Having written to Mr. Deasy, drawing his attention to the statements of Members of Parliament, in the terms you have mentioned, did you receive this letter from Mr. Deasy? Yes. [*Letter put in and marked Exhibit N.*]
567. Mr. Deasy declined to withdraw the charges? He said that in the face of the facts disclosed in the declarations of his friends he must decline to withdraw.
568. Before the appointment of the Royal Commission did *Exhibit H* come under your notice? Yes. It was on receipt of that letter and two statutory declarations that I appealed to the Cabinet, or rather to Sir Henry Parkes, to appoint a Royal Commission to investigate the matter. I said it was no good sending up an ordinary officer to Branxton in a matter of that kind. There was a plain statement on one side and a plain denial on the other, and I thought a gentleman like you ought to be appointed to investigate the matter as things had become so complicated.
- [At this stage of the inquiry Mr. Deasy was called in and the Commissioner drew his attention to a solemn declaration made by Joseph Percini, dated 1st July, 1889, and a telegram dated Branxton, 2nd July—documents marked *Exhibit R*—and in reply to the Commissioner Mr. Deasy said that he had no objection to the declaration being used, if necessary, to obviate the necessity for calling Mr. Percini, as a witness, to Sydney, as the issue of a summons to Mr. Percini would necessarily involve delay.]

Stephen Harbord Lambton, Esq., called in, sworn, and examined:—

- S. H. Lambton, Esq.  
3 July, 1889.
569. *The Commissioner.*] You are, I believe, secretary to the General Post Office? Yes.
570. When was your attention first drawn to the matter of the Deasy letters? On receipt of the letter from the postmaster at Branxton, marked *Exhibit B*, enclosing *Exhibit A*.
571. You have heard of three letters alleged to have come from Mr. Deasy's sisters in Ireland, and to have been received by him—one at the General Post Office, Sydney, and the other two either in Sydney or Melbourne? I am not quite sure about the number—I think it was two.
572. What makes you think it was two? Mr. Deasy's complaint was a general one, and I think the fact of its dwindling down to two letters appeared from one of the statutory declarations or from a report by the postmaster at Branxton upon an anonymous letter, signed "Justice," which appeared in a newspaper.
573. I have no recollection of the number of letters being specified in any document, and I think you must be mistaken. However, it is immaterial. There is no doubt there were more than two letters. Did you, on the 23rd May, send *Exhibit E* to Mr. Deasy? Yes.
574. And then, after two Members of Parliament had made representations to the Minister, you sent this letter to Mr. Deasy? Yes. [*Letter put in and marked Exhibit P.*]
575. And you received from Mr. Deasy this telegram? Yes. [*Telegram put in and marked Exhibit Q.*]
576. Is there any means of telling, or determining, or ascertaining who received those two letters that were sent down from Branxton to the General Post Office, re-addressed by the postmaster, or who delivered them to Mr. Deasy? Not without the covers or envelopes. We might, if we had the envelopes, be able to find out, but of that we could not be certain. If we saw the envelopes, we would know the clerk that would be on duty at the time.
577. Have you made any inquiry whether, as a matter of memory, any of the clerks have any recollection of these two letters? I have not, because I feel it would be useless to do so. There are nine or ten clerks in the room there, and letters pass through their hands from 9 in the morning until 9 in the evening. They come on in different shifts, and I suppose at that time they would not know even who Mr. Deasy was.
578. Upon application to Mr. Deasy for the envelopes, you did not receive them? I did not receive them.
579. As a matter of fact, can you carry out any inquiry with reference to the letters without the envelopes? We could not. 580.

580. Why is that? Because the envelopes have the post-office marks, and in the case of the marks in Sydney we could tell you who stamped the letters; and if we could not tell that, we could tell what hour they arrived, and so trace the person who delivered them.

581. And without the envelopes you could not do anything at all? Nothing whatever.

582. So that in the absence of the envelopes it would be absolutely impossible to trace these letters beyond Branxton for the purpose of getting any information? Quite impossible.

583. Do you know whether seals are apt to become mutilated in travelling-bags? In the case of letters coming from England they do. They do, and there is a circular warning people against using wax. I have known wax to get melted and to join letters together, and sometimes it is impossible to separate them without tearing them.

584. Is it a common or uncommon thing for seals to be broken while the letters are in transit in the bags? Well, since I have held my present position, I have not had much experience. In my old experience they were not often broken, but then letters were not often sealed.

585. How long ago are you speaking of? About twenty-five years ago.

586. If two letters were tied together would you think that what broke the seal of one of them would probably break the seals of both? Yes.

587. You remember that Mr. Deasy had an interview with Mr. O'Connor, on the 17th May? Yes.

588. If Mr. Deasy had handed the envelopes on that occasion over to the Department, would it have been easy to have ascertained whether these letters arrived in Sydney intact or not? Possibly we could not have ascertained if they had arrived in Sydney intact or not, but most likely we should. If they had been broken and tampered with they would have attracted the notice of the clerk, and it was the duty of the clerk to draw the attention of his superior if they had the appearance of being tampered with on arrival in Sydney.

589. They must have gone through Sydney first on the way to Branxton? Yes.

590. If you had got the envelopes on the 13th May, would there have been any difficulty in determining the condition in which they arrived at the Sydney Post Office? No, I do not think so; because had they arrived in Sydney in a mutilated condition the fact would have been endorsed there, and you could have arrived at a satisfactory conclusion upon it.

591. That is if the tampering had been such as to attract attention? Yes.

592. In the case of an attempt to break the flap of the envelope;—say, if it had been torn asunder, and pieces of it remained, would such evidence of tampering as that have been noticeable? I think so. The instructions are very stringent in matters of that kind.

593. And are they not only stringent, but carried out? Yes. I do not say but that an envelope of that kind might have been passed over once or twice.

594. But you would not expect all Mr. Deasy's letters, if they were in that condition, to escape observation? It would not be likely. Where we are not supplied with the envelopes we look upon an inquiry as hopeless; in fact, we have never undertaken one in cases of delay or of letters being tampered with. Where letters are reported wholly missing we could make inquiries for them. As a matter of experience we find that if an official intends to be dishonest, there is far less risk in taking a letter altogether than in tampering with it.

595. How long has the postmaster at Branxton been in the service of the Department? I could not say. I think about fifteen years.

596. How does he rank in the service? I have never heard of any complaints of anything like a serious character having been made against him.

597. May I take it that in the service he is a man of high character? Quite so. In fact, there is absolutely nothing against his character.

598. And that is after fifteen years' service? Yes.

599. At any rate you have been in the Department all that time, and if anything had been preferred against his character you would have known it? I certainly should.

Thomas Drinan called in and further examined:—

600. *The Commissioner.*] Do you know Mr. Bercini, at Branxton? I do—well.

601. What is he? He is a storekeeper and dealer.

602. Is he a man in a fair way of business at all? Yes; he is a man in good circumstances, and occupying a good position.

603. I mean is he a man of good character and reputation? Yes; that is my opinion of him.

604. Are you on friendly terms? On the most friendly terms.

605. There is no ill feeling between you, or anything of that kind? None whatever.

606. Do you remember getting the envelope containing subpoenas for you to attend the sittings of this Commission? Yes.

607. I think there was one for yourself, one for your son, one for your wife, and one for your daughter? Yes.

608. After this, do you remember seeing Mr. Bercini and having some conversation with him? I think I did.

609. About these subpoenas? Yes.

610. You told him that you received subpoenas for yourself and the members of your family in this matter? I believe I did.

611. Do you remember making use of the expression "There is a lot of bother about these letters"? I think I said so.

612. Do you remember Mr. Bercini saying "From what I have seen in the newspapers, I believe there is"? I think those words passed between us.

613. Do you remember saying then, "It was me who went to Mr. Tulloch, and told him that I believed that the letters were opened in my place on account of Mrs. Drinan and Mr. Deasy having a row"; and that Mrs. Drinan would do such a thing in a passion, or words to that effect? No. I will tell you what I did say. I said that I told Tulloch that I thought the letters were opened at my place, and my wife might have done it. I said that to Bercini, and several other people besides.

S. H.  
Lambton,  
Esq.  
8 July, 1889.

Mr.  
T. Drinan.  
8 July, 1889.

Mr.  
T. Drinan.  
3 July, 1889.

614. Do you remember saying to Bercini that you thought your wife would do such a thing in a passion, or words to that effect? I said I thought she might do it.
615. You mean in a passion? I said that she might do it in a passion.
616. Did he then say to you, "I have been informed you went to Mr. Tulloch two or three times, and made the statement to him that your wife had opened letters to Mr. Deasy," and you said, "No, I only went to his place once, and that was the occasion before referred to"? That is in substance what I said. I do not know whether I told him that I went once or twice.
617. You may have told him you went to Mr. Tulloch twice? Yes.
618. But you did mention it to several people? Yes. I mentioned it to Mr. Bercini and somebody else.
619. I asked you yesterday whether you had known Mr. Tulloch long, and whether you were on friendly terms? Yes.
620. I believe you also told me that he was a man of good repute? I thought so from all I had known of him.
621. Do you know anything yourself of the two letters that your son had? No. I never knew about those two letters at all until after the accusation made by Mr. Deasy. I was astonished when my son told me he had the letters. He kept it a secret. Nobody knew anything of it. I do not think any of the members of the family knew. [*Declaration of Joseph Bercini and telegram annexed put in, and marked Exhibit R.*]

Wyndham John Davies called in, sworn, and examined:—

Mr.  
W. J. Davis.  
3 July, 1889.

622. *The Commissioner.*] I believe you are an Inspector in the Post Office Department? Yes.
623. How many years have you been there? Twenty-seven.
624. As Inspector? No. Twelve years as Inspector.
625. Is it part of your business to inquire into charges against Post Office officials, the opening of letters, and so forth? Yes. I deal with all irregularities.
626. I suppose during that time you have had some experience in these matters? I have.
627. I want to ask you this. Where a charge of tampering with letters is made can you conduct an inquiry without the envelopes? We never attempt to do it, except, perhaps, we might refer to the Postmaster for a report, and that is unsatisfactory.
628. When you have not got the envelope you have to rely on the statement of the Postmaster? Yes. You see, a letter might pass through a dozen post offices, and it arrives at a post office where it has to be re-stamped, and there is something unusual about it—the seal broken or the envelope torn—and it is evident that it has been tampered with, it is the duty of the official to note the fact and to state upon the letter, "Received in this condition." In the Head Office, letters are sent in to the Dead Letter Office if they are badly tampered with to be enclosed in a fresh cover.
629. In your experience in the Head Office, have you found that that duty is always carried out? Not always.
630. There are omissions? Yes.
631. Do you think the omissions are so numerous that they would exceed six letters for the same gentleman received in the course of a few weeks; that is making allowance for mistakes of clerks and hurry of business and so forth;—do you think if that number of letters had been tampered with they would have passed through unnoticed, the tampering being so obvious that anybody could have noticed it? I do not think so. Somebody must notice it. The clerk making up the mail would notice it.
632. So that it comes to this, that in your experience of the General Post Office of Sydney such a thing as six letters addressed to the same gentleman—all manifestly tampered with passing through the office—such a thing could not happen without being noticed? It could not.
633. I want to ask you about another matter;—take the case of sealed letters;—is it a common occurrence for a seal to be broken in transit? Oh, yes, especially in the case of letters passing through the Red Sea. The wax gets melted and the letters adhere together. It frequently happens that the addresses get mutilated. I have seen that often myself.
634. Now, apart from the Red Sea, do sealed letters get frequently broken in travelling? Oh, yes. In our records we sometimes want to preserve the seals, and we have the greatest difficulty in preserving them. We have to wrap them up specially, and we find it is a most difficult thing to preserve them without injury.
635. Now, if two letters were tied together, both being sealed, and one seal was broken, would you expect to find the other broken? That would all depend upon the position; because one was broken, it need not, necessarily, affect the other.
636. Supposing they got a wrench in the bag? Yes.
637. In many cases of supposed tampering with letters, we find that clerks have dragged them out of the bundle to sort them up quickly, and the department gets blamed for tampering with them. Sometimes the whole edge of a letter would be torn, and nobody could account for it. Then there are other ways in which accidents of that kind might be accounted for. Letters are placed into a bag tied together, and if the letters were not tied up in wrappers they might be damaged. Letters would simply be placed in the bag with heavy newspapers and the bags might be trodden on.
638. Would that account for the seals being broken? In some instances. When, of course, letters at the Head Office being emptied on the floor might have the seals broken by being trodden on.
639. Do you think it is at all likely that a letter with a seal broken would pass through without notice, the letter being sealed up again with a different kind of wax? Yes; I think it might pass through.
640. I mean resealed, and the new wax could be seen? Yes; it might.
641. You have not seen these envelopes at all? No.
642. If you had had Mr. Deasy's envelopes on the 17th May, would it then have been an easy matter to have traced the letters from Branxton to Sydney? No.
643. Is it not a fact that the clerks, who have the stamping of the letters, do so in such a manner that you can tell who stamps them? No. Letters arriving by the early morning mails are not stamped at all.

644. Don't they get the Sydney stamp on them? No, not now, in the case of the first morning delivery. In order to get an 8 o'clock delivery it was abandoned; so that all letters coming in at 6 o'clock would not be stamped.

645. At any rate, if the envelopes had been produced, you would have been able to do something to find out how the opening was done, provided they were opened? Yes. We examine the envelopes with a microscope, and this assists us in detecting how it is done. In many cases we find that the opening is attributable to the flimsy material of the envelope.

Mr.  
W. J. Davis.  
3 July, 1889.

James Alexander Tulloch called in, and further examined:—

646. *The Commissioner.*] I understand that while Mr. Deasy was at Branxton letters that came to him were delivered to either himself, Mr. Drinan, or some member of the family? Yes.

647. And after he left for some time letters that came to him went to Drinan's? Yes; until I received the first notice from the Post Office, as to what I was to do with the letters.

648. First of all you got a notice to send them to the General Post Office. Did you send them to the General Post Office? Yes, whatever there were, and then I received intimation from the General Post Office that Mr. Deasy's letters were to remain at Branxton. Then I received *Exhibit G* from Mr. Deasy, asking me to redirect his letters to the General Post Office, Sydney.

649. Now, what I want to know is this, after the time of your first notice from the General Post Office, did you receive more than the two letters which you spoke of yesterday, and which you think came from Ireland? Yes, there were a number of letters.

650. The question is whether, after the first notice from the General Post Office, you received more than two letters for Mr. Deasy, which you think came from Ireland? Yes, I did.

651. How many more? Well, I daresay, as nearly as I can recollect, there might have been perhaps ten or eleven.

652. From Ireland? No.

653. I asked you this; after you got the first intimation from the General Post Office, did you receive more than two letters which you think came from Ireland? Well, there were several. There might have been perhaps three or four, to the best of my recollection, which came from Ireland.

654. Two of these letters you said you delivered to young Mr. Drinan and got back from him? Yes.

655. What did you do with the three or four, if there were three or four? They were sent with Mr. Drinan's post to his house.

656. I am talking of the letters that you received after you got that first notice; what did you do with all those letters, including the two that you gave to young Mr. Drinan and got back again? They were re-directed to the General Post Office.

657. Now, those letters that you thought came from Ireland, which you have said would number three or four, perhaps, were they in good order? I believe them to have been so.

658. You did not notice anything wrong with them? No. If I had done so, I would have written on them, "Received in this state."

659. Did you notice any of these letters going through the Post Office in the condition complained of? No.

660. If there had been anything the matter with them would they have attracted your attention? I think so.

661. Now, I ask you this question—do you swear most positively that you never, either by yourself, or anyone else interfered, in any shape or form, with Mr. Deasy's letters, except to transmit them in the way required? If I were on my deathbed at this moment I would swear positively, distinctly, and conscientiously, that neither I, nor anyone else, to my knowledge, interfered with the letters.

662. Is there anything else you wish to say? Well, respecting Mr. Deasy's letter of complaint to me, I went up to see young Drinan, and showed him the letter, and he read it. I asked him what he thought of that. "Why," he said, "the d——d fellow must be mad; who would open his letters." I said, "We will see about that." I also said I thought he might mean the letters that I had given him, the letters mentioned in Frank Drinan's statutory declaration.

Mr.  
J. A. Tulloch.  
3 July, 1889.

## APPENDICES.

## ALLEGED TAMPERING WITH LETTERS OF JOHN DEASY, ESQ., M.P.

A.

Sir, I beg to give you notice that I have *conclusive evidence* that letters addressed to me, and posted at Branxton, have been opened at the Branxton Post Office.

"Royal Hotel," George-street, Sydney, 10 May, 1889.  
Yours faithfully,  
JOHN DEASY,  
B.L., M.P., West Mayo.

Whether I shall institute criminal proceedings against you or not is a question I am now considering.

The Postmaster, Branxton, *via* Newcastle.

B.

Sir, Herewith I enclose you a letter, with envelope attached, from a John Deasy, charging me with a very grave offence.

Post Office, Branxton, 13 May, 1889.  
I have, &c.,  
JAMES A. TULLOCH,  
Postmaster.

I now ask you to make a thorough investigation into the matter, and also to preserve the above letter and envelope, as I shall require its production further on, and oblige.

The Secretary, G.P. Office, Sydney.

C.

Sir, I am directed to inform you that the Postmaster at Branxton has forwarded to this Department your letter dated the 10th instant, addressed to him, in which you state that you have *conclusive evidence* that letters addressed to you and posted at Branxton have been opened at the Post Office there.

General Post Office, Sydney, 15 May, 1889.

The Postmaster-General desires me to ask that you will be so good as to furnish him with the particulars of your serious charge, when the fullest investigation will at once be made.

I have, &c.,  
Secretary.

John Deasy, Esq., B.L., M.P. for West Mayo, "Royal Hotel," Sydney.

D.

Sir, In reply to your favour of 15th instant, I beg to say that I do not intend to take further steps in the matter to which it refers.

Asche's "Royal Hotel," Sydney, 17 May, 1889.  
I am, Sir,  
JOHN DEASY.

E.

Sir, With reference to your representation to the Postmaster General, that letters addressed to you had been opened in this Colony, I am directed to state that Mr. O'Connor is of opinion that, in the public interest, and in order to vindicate the honor of this Department, it is of the utmost importance that a thorough investigation should be made into the matter, and I am therefore to request that you will be so good as to furnish me, at the earliest moment possible, with the envelopes of the letters in question, together with all information you possess in regard thereto.

General Post Office, Sydney, 23 May, 1889.  
I have, &c.,  
S. H. LAMBTON,  
Secretary.

John Deasy, Esq., B.L., M.P. for West Mayo, Melbourne.

F.

Sir, On receipt of your invitation to furnish you with information regarding the opening of my letters, I communicated with three gentlemen, and with three only, whose replies I enclose.

The envelopes in question I regret very much not having preserved; I threw them into the waste paper basket under the impression that our interview closed the matter. I do not, however, suppose that this will make any important difference, as you examined them carefully, and formed your own opinion; but I may add I am prepared, if you so desire, to name a number of gentlemen whose attention I drew to them, and who unhesitatingly declared that they had been tampered with.

More than twelve envelopes from various parts of the Colonies, as well as a few from home bearing the Branxton post-mark, were beyond any possibility of doubt opened before coming into my possession.

No letter of mine which had not passed through the Branxton office was interfered with.

Mr. Kelly is in error in stating that I said anything about the suspicions of my colleagues as to the Australian postal service. If I alluded to the matter at all I did so in connection with the systematic Grahamising of Irish Nationalist Members of Parliament letters by the English Government.

I am, &c.,  
JOHN DEASY.

The Honorable the Postmaster-General.

G.

Telegram from Mr. John Deasy, "Menzie's Hotel," Melbourne, to The Postmaster, Branxton.

PLEASE re-direct letters to General Post Office, Sydney.

H.

Sir, I have the honor to direct your attention to the libellous and grossly false statements which appeared in the *Sydney Morning Herald* of the 15th instant, to the effect that my wife opened the letters of Mr. Deasy, respecting which you instituted inquiries some time ago, that I, upon becoming aware of the facts, communicated them to the local postmaster. Now, sir, I desire to give these statements a straight denial. My wife never received nor opened the letters referred to, and I never made such communications to the local postmaster or any other person.

Branxton, 17 June, 1889.

My son, Frank A. Drinan, received two sealed letters from Tulloch, postmaster, for Mr. Deasy, and kept them in his possession four or five days, as instructed by Mr. Deasy (no other person having access to them). At the end of that time Tulloch came to my son and demanded the letters from him, and he handed them over to him, the same as he got them, there not being the sign of a break upon them. Tulloch, after being accused by Mr. Deasy, came to my son again, and said the letters were all right when he got them from him.

I

I live about 60 yards from the post-office, and have known Tulloch from between twelve and fifteen years, and for many years past I have reason to suspect that my own letters had been opened in the post-office, and members of my family have complained to me of the same thing repeatedly.

Two or three months ago I received a letter from the post-office which seemed as if it had just been opened and closed again.

I may mention that letters have been delivered from the office in question by four different persons—the postmaster, his wife, son, and daughter.

I have, &c.,  
THOMAS DRINAN.

To the Honorable the Postmaster-General, Sydney.

K.

“Daily Telegraph,” 11/6/89.  
MR. DEASY’S LETTERS.

(To the Editor of the Daily Telegraph.)

Sir,—To the residents of Branxton the question of who opened Mr. Deasy’s letters is not such an enigma as most people imagine; but the question when Mr. Tulloch, a worthy postmaster, is to have the investigation he has applied for is a subject of far more importance to them.

In the first place, may I ask has Mr. Tulloch received (excepting the copy of the letter he sent to his Department) any official communication regarding his request for an inquiry? Has any inquiry ever been made in Branxton regarding the opening of the letters in question, or has Mr. Tulloch ever been asked officially to report on any circumstances bearing on the case which may have come to his knowledge? The Postal Department have shown a shameful neglect in not sending an officer to Branxton to fully investigate the serious charge—a neglect that is most unfair to Mr. Tulloch, whose efficiency and probity are too well known in this district to be injured even by such an important personage as Mr. John Deasy, M.P.

If information that is the common topic of conversation in Branxton were known to the postal authorities (as it well might be had they but the desire to inquire), the reason for the letters being opened might be explained, and also Mr. Deasy’s anxiety to withdraw his charge.

It is possible that letters may be closed and reopened before they reach the post-office. At any rate, the postmaster at Branxton is wise in being careful. He is a Civil Servant, but there is no reason why those who know him best and know how baseless the charge is should not express the indignation the Branxton people feel regarding the apathy of his superiors.

Yours, &c.,  
JUSTICE.

8 July.

I now furnish the Department with the following facts, viz.:—On Monday night, the 13th May, I met Mr. Thomas Drinan, senior, in the street, nearly opposite Mr. Bercini’s store. We bid each other good evening, shook hands, and in conversation I mentioned that I had that morning received a letter from his friend Mr. Deasy, stating that he had *conclusive evidence* that letters addressed to him and posted at Branxton had been opened at the Branxton post-office, and whether he would institute criminal proceedings against me or not was a question he was now considering. Mr. Drinan passed a remark something like this, “That’s strange.” Soon after we parted, and I went to a neighbour’s house. On my return I called in at Mr. Russell’s, who resides opposite Mr. Drinan’s residence. I had not been there more than a few minutes when someone rapped at the door, and I was told that Mr. Drinan wished to see me. I went out; we walked a few yards from the door, when Mr. Drinan said, “Since I met you down the street I have been considering what you told me about Mr. Deasy’s letters being opened, and have come to tell you that his letters were opened at my house. You know Mr. Deasy wanted to marry my daughter, but Mrs. Drinan strongly opposed it, and there was a great disturbance in the house, and that put an end to the marriage” (and that I was at liberty to say from him to anyone that there was no marriage to take place between his daughter and Mr. Deasy); and that Mrs. Drinan noticing letters going to Deasy from her daughter, and wishing to know what was in them, had the letters opened, read, closed, and then posted. “I won’t see you blamed wrongfully, and I am prepared to prove what I have said, and, if required, swear to it.” I thanked him, and we parted.

On the night of 12th instant (Wednesday) Mr. Drinan was in my house, and I said to him, “Mr. Drinan, if you have no objections, I would like you to give me in writing what you told me verbally at Mr. Russell’s about the opening of Mr. Deasy’s letters in your house, and I would forward it to the Secretary of the General Post Office, Sydney. The charge has been so long pending that I wish to draw it to a close.” Mr. Drinan said, “I thought it was all over.” I assured him it was not; that Deasy had not withdrawn the charge. He then said, “If there is anything more about it I will do so.” He added, “Of course, I did not see Mrs. Drinan open the letters; it was from a conversation I heard passing between members of my own family that I knew the letters had been opened in my house.” I said, “There is one thing which strikes me very forcibly, and that is, that some of your family has communicated to Mr. Deasy the fact that you had told me about his letters being opened at your house, and that was the reason why he declined to proceed with the charges he made against me; don’t you think so?” He answered, “I won’t say they did not.” I said, “Will you say they did or did not?” He repeated, “I won’t say they did not.” This ended our conversation.

Branxton, 20/6/89.

JAMES R. TULLOCH, Postmaster.

L.

Memo. by The Secretary, General Post Office, Sydney.

General Post Office, Sydney, 13 June, 1889.

Mr. J. F. Burns, M.P., and Mr. Scobie, M.P., called on me to-day and stated that proof is forthcoming that the letters alleged by Mr. Deasy to have been opened by the postmaster at Branxton were opened, before being posted, by a member of the family, with one of whom Mr. Deasy was corresponding.

As an inquiry is demanded by the postmaster, which inquiry would probably be a matter of unpleasantness to the family referred to, I think Mr. Deasy might avert the necessity for such inquiry by publicly withdrawing the charge against the postmaster and against the postal service of New South Wales. Let Mr. Deasy be written to accordingly.

D.O.C. Jno. Deasy, Esq., B.L., M.P., West Mayo.—J.C., 14/6/89.

Sir,

General Post Office, Sydney, 14 June, 1889.

With reference to your communication of the 4th instant, relative to your complaint that letters addressed to you at Branxton were opened at the post office at that place, I am directed to inform you that two Members of the Parliament of this Colony have called upon the Postmaster-General and stated that proof is forthcoming that the letters, alleged by you to have been opened by the postmaster at Branxton, were opened, before being posted, by a member of the family there, with one of whom you corresponded. As an inquiry is demanded by the postmaster at Branxton, which inquiry would probably be a matter of unpleasantness to the family referred to, it is thought that you might avert the necessity for such an inquiry by publicly withdrawing the charge against the postmaster and against the postal service of New South Wales.

I have, &c.,  
S. H. LAMTON,  
Secretary.

John Deasy, Esq., B.L., M.P., West Mayo,  
“Meuzie’s Hotel,” Melbourne.

M.

## M.

Sir,  
 With reference to my letter dated 13th May, 1889, with a letter enclosed therein from Mr. John Deasy, charging me with a very serious offence, I beg to state that I consider my position and character is damaged by such, and up to the present I have not had an opportunity of defending myself. It is my intention to have legal advice upon this matter, and ask if you would please give me a copy of Mr. Deasy's charge against me, or the letter itself. Your early reply will greatly oblige.

Post Office, Branxton, 21 May, 1889.

I have, &c.,  
 JAMES A. TULLOCH,  
 Postmaster.

The Secretary, General Post Office, Sydney.

## N.

Sir,  
 In face of the facts disclosed in the accompanying declarations made by Mr. Drinan, I must decline to withdraw the charge referred to in yours of 14th instant.

"Royal Hotel," 19 June, 1889.  
 I am, &c.,  
 JOHN DEASY.

The Hon. the Postmaster-General.

## P.

Sir,  
 With reference to your communication of the 4th instant, relative to your complaint that letters addressed to you at Branxton were opened at the post-office at that place, I am directed to inform you that two Members of the Parliament of this Colony have called upon the Postmaster-General and stated that proof is forthcoming that the letters alleged by you to have been opened by the Postmaster at Branxton were opened, before being posted, by a member of the family there, with one of whom you corresponded.

General Post Office, Sydney, 14 June, 1889.

As an inquiry is demanded by the postmaster at Branxton, which inquiry would probably be a matter of unpleasantness to the family referred to, it is thought you might avert the necessity for such an inquiry by publicly withdrawing the charge against the postmaster and against the Postal Service of New South Wales.

I have, &c.,

 Secretary.

John Deasy, Esq., B.L., M.P. for West Mayo, "Menzies' Hotel," Melbourne.

## Q.

Mr. J. Deasy to The Postmaster-General.

Going Sydney. Will see you twelve o'clock. Please do nothing till then.

Mittagong, 20 June, 1889.

JOHN DEASY.

## R.

The Acting Postmaster, Branxton, to The Secretary, General Post Office.

DELIVERED message to Joseph Bercini. He states, through accident to his son this morning, unable to leave Branxton to give evidence.

Branxton, 2 July, 1889.  
 C. POWELL,  
 Acting Postmaster

## R.

## STATUTORY DECLARATION.

New South Wales, to wit,—

I, JOSEPH BERGINI, of Branxton, in the Colony of New South Wales, storekeeper, do hereby solemnly and sincerely declare as follows:—

1. I am well acquainted with Thomas Drinan, of Branxton, whom I have known personally for upwards of twenty years.
2. On Wednesday, the 26th day of June now last past, the said Thomas Drinan called at my store, at Branxton, between 4 and 5 o'clock in the afternoon, and showed me an official envelope, and said four subpoenas for himself and family had been served upon them to go to Sydney about Deasy's letters. He further said, "There's a lot of bother about these letters." I said, "From what I have seen in the newspapers I believe there is." He said, "It was me who went to Mr. Tulloch and told him that I believed the letters were opened in my place on account of Mrs. Drinan and Deasy having a row." He further said, "Mrs. Drinan would do such a thing in a passion," or words to that effect. I then said, "I have been informed you went to Mr. Tulloch two or three times and made the statement to him that your wife had opened letters to Mr. Deasy." He said, "No; I only went to his place once, and that was the occasion before referred to."

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at West Maitland, }  
 this 1st day of July, A.D. 1889,— }  
 JAMES D. PRENTICE, J.P.

JOSEPH BERGINI.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## POSTAL.

(CORRESPONDENCE RESPECTING ALLEGED OPENING OF LETTERS ADDRESSED TO MR. JOHN DEASY, B.L., M.P., FOR WEST MAYO.)

*Ordered by the Legislative Assembly to be printed, 28 May, 1889.*

The Postmaster, Branxton, to The Secretary, General Post Office, Sydney.

Sir, Post office, Branxton, 13 May, 1889.

Herewith I enclose you a letter with envelope attached, from a John Deasy, charging me with a very grave offence.

I now ask you to make a thorough investigation into the matter, and also to preserve the above letter and envelope, as I shall require its production further on, and oblige.

I have, &amp;c.,

JAMES A. TULLOCH,

Postmaster.

[Enclosure.]

Sir,

I beg to give you notice that I have *conclusive* evidence that letters addressed to me, and posted at Branxton, have been opened at the Branxton Post Office.

Whether I shall institute criminal proceedings against you or not is a question I am now considering.

Yours, &amp;c.,

JOHN DEASY,

B.L., M.P., West Mayo.

*Minute by the Postmaster-General.*

I advise that Mr. Deasy be written to at once, asking him to formulate his charge—when every facility will be afforded him to prove the truth or otherwise of his serious complaint.—D.O.C.—15/5/89.

The Secretary, General Post Office, to J. Deasy, Esq., &amp;c.

Sir, General Post Office, Sydney, 15 May, 1889.

I am directed to inform you that the Postmaster at Branxton has forwarded to this Department your letter, dated the 10th instant, addressed to him, in which you state that you have conclusive evidence that letters addressed to you and posted at Branxton have been opened at the Post Office there.

The Postmaster-General desires me to ask that you will be so good as to furnish him with the particulars of your serious charge, when the fullest investigation will at once be made.

I have, &amp;c.,

S. H. LAMBTON,

Secretary.

J. Deasy, Esq., B.L., M.P., West Mayo, to The Secretary, General Post Office, Sydney.

Sir, Asche's "Royal Hotel," Sydney, 17 May, 1889.

In reply to your favour of 15th instant, I beg to say that I do not intend to take further steps in the matter to which it refers.

I am, &amp;c.

JOHN DEASY.

As Mr. Deasy declines to furnish the particulars of his serious charge against the Postmaster at Branxton, it is of course impossible to investigate the matter. I suppose the only thing to be done is to forward this letter for the perusal of the Postmaster, who, perhaps, may fairly consider it as a withdrawal of the charge.—S.H.L., 20/5/89.

The

The Postmaster, Branxton, to The Secretary, General Post Office, Sydney.

Sir,

Post Office, Branxton, 21 May, 1889.

With reference to my letter dated 13th May, 1889, with a letter enclosed therein from Mr. John Deasy, charging me with a very serious offence, I beg to state that I consider my position and character is damaged by such, and up to the present I have not had an opportunity of defending myself; it is my intention to have legal advice upon this matter, and ask if you would please give me a copy of Mr. Deasy's charge against me or the letter itself. Your early reply will greatly oblige.

I have, &c.,

JAMES A. TULLOCH,

Postmaster.

Submitted.—S.H.L., 22/5/89. I see no objection to comply with Mr. Tulloch's request, if not against the rules of the Service.—D.O'C., 23/5/89.

The Secretary, General Post Office, to The Postmaster at Branxton.

General Post Office, Sydney, 23 May, 1889.

In reply to your communication of the 21st instant, I am directed to forward herewith copy of Mr. John Deasy's letter to you, in which he states that he has conclusive evidence that letters for him have been opened at the Branxton Post Office.

S. H. LAMBTON.

Remarks of The Secretary, General Post Office, upon a Leading Article in the  
*Sydney Morning Herald* of 23rd May, 1889.

It will be utterly impossible to make any investigation until Mr. Deasy furnishes particulars. The only courses I can suggest are, first, to ask Mr. Deasy in fairness to the Department to submit any envelopes or other information he possesses in support of his allegation, and the next course I suggest is, to publish the correspondence between Mr. Deasy, the P.M., Branxton, and the Department, including the letter now proposed to be written.

S.H.L., 23/5/89.

This seems to me to be the only way of eliciting the truth in this matter. I advise that you immediately communicate with Mr. Deasy to furnish us with the necessary particulars to prosecute this inquiry in the interests of the public, and in order to vindicate the honor of this Department. I am, however, of opinion that it is not expedient to publish any correspondence at present.—D.O'C., 23/5/89.

The Secretary, General Post Office, to J. Deasy, Esq., B.L., M.P. for West Mayo,  
Melbourne.

Sir,

General Post Office, Sydney, 23 May, 1889.

With reference to your representation to the Postmaster-General, that letters addressed to you had been opened in this Colony, I am directed to state that Mr. O'Connor is of opinion that in the public interest, and in order to vindicate the honor of this Department, it is of the utmost importance that a thorough investigation should be made into the matter, and I am therefore to request that you will be so good as to furnish me, at the earliest moment possible, with the envelopes of the letters in question, together with all the information you possess in regard thereto.

I have, &c.,

S. H. LAMBTON,

Secretary.

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

POSTAL.

(FURTHER CORRESPONDENCE RESPECTING ALLEGED OPENING OF LETTERS ADDRESSED TO  
MR. JOHN DEASY, B.L., M.P. FOR WEST MAYO.)

*Ordered by the Legislative Assembly to be printed, 7 June, 1889.*

John Deasy, Esq., to The Postmaster-General, Sydney.

Sir,

"Menzie's Hotel," Melbourne, 4 June, 1889.

On receipt of your invitation to furnish you with information regarding the opening of my letters, I communicated with three gentlemen, and with three only, whose replies I enclose.

The envelopes in question I regret very much not having preserved. I threw them into the waste-paper basket, under the impression that our interview closed the matter. I do not, however, suppose that this will make any important difference, as you examined them carefully, and formed your own opinion; but I may add I am prepared, if you so desire, to name a number of gentlemen whose attention I drew to them, and who unhesitatingly declared that they had been tampered with.

More than twelve envelopes from various parts of the Colonies, as well as a few from home, bearing the Branxton post-mark, were beyond any possibility of doubt opened before coming into my possession.

No letter of mine which had not passed through the Branxton office was interfered with.

Mr. Kelly is in error in stating that I said anything about the suspicions of my colleagues as to the Australian postal service. If I alluded to the matter at all I did so in connection with the systematic grahamising of Irish Nationalist Members of Parliament letters by the English Government.

I am, &c.,

JOHN DEASY.

[Enclosures.]

Dear Sir,

"Botanic Hotel," North Terrace, 30 May, 1889.

In reply to your telegram asking me if I recollect your remark on the occasion of your return from the North, when I told you there were some letters in the rack for yourself and Sir Thos. Esmond, on handling one letter (in particular) you remarked to me, "See this Mr. Kelly, this letter has been opened." We (meaning yourself and the other delegates) had a suspicion that our letters had been opened by Post Office officials (not mentioning any particular office or Colony). There was no doubt, whatever, that that letter had been opened, as where you handled it it required no force to open it. And one could see it had been tampered with, as the wax on the flap was of two different colors. You are at liberty to make whatever use you like with this statement.

I am, &c.,

C. KELLY.

J. Deasy, Esq., M.P., Melbourne.

Dear Mr. Deasy,

Malunna, Kew, 30 May, 1889.

In answer to your question as to whether I remembered your receiving, in my presence, a letter that had been opened, I can best reply by relating the circumstances as I remember them.

About the 24th of last month you called to see me at my office, and I returned with you to your hotel; soon after arriving at Menzie's a waiter handed you a letter which you at once passed over to me to look at; wondering why you did so I took it and immediately perceived that it had been opened before you received it, as, in addition to the sealing-wax being broken, the flap of the envelope showed evident signs of having been tampered with. I suggested that you should at once cut the envelope carefully and keep it, and have the matter inquired into. You replied that all your letters which came through a certain Post Office in New South Wales were tampered with, but that you would not mind if the contents were published in the *Argus*. You then cut the envelope open without further breaking the seal, and put it in your pocket. The letter had been sealed with red sealing-wax in addition to the ordinary gum on the envelope. Trusting you have quite recovered from your cold,

I remain, &c.,

WM. DOWDEN.

John Deasy, Esq., M.P.

My dear Deasy,

Colac, 31 May, 1889.

I have a distinct recollection of your showing me a letter at the "Royal Hotel," Sydney, forwarded to you from Branxton, which bore unmistakable marks of having been opened. You handed it to me before opening it yourself. One of the waiters was present at the time.

Yours truly,

THOS. H. GRATTAN ESMONDE.

Minute by The Secretary, General Post Office.

It seems to me to be unfortunate that having preferred a most serious charge against a public officer, Mr. Deasy should, under any circumstances, have destroyed what he believed to be the evidence in support of it, without either giving the official the opportunity of defending himself, or withdrawing the charge.

S.H.L., 5/6/89.

Minute by The Postmaster-General.

I ENTIRELY CONCUR with the minute of the Secretary *re* Mr. Deasy's oversight in destroying the envelopes whilst so grave a charge was preferred against an officer or officers of the Department.

It is a fact that envelopes were shown me by Mr. Deasy, and I believe, beyond doubt, such had been tampered with, but in what portion of the Colony or elsewhere it was impossible to decide.

My interview with Mr. Deasy upon the occasion stated in his letter would have closed the matter when there was no likelihood of discovering in what part of the Colony or Colonies the said letters had been opened, but for the action of some Members of Parliament who questioned me, and thus the matter was reopened, and I took the only course that seemed in the best interest of the public.

As it has been asserted, both in Parliament and out, that I induced Mr. Deasy to withdraw the charges, I desire to say this is wholly untrue—the contrary is the fact. I would also add that, as Mr. Deasy at his interview included the other Colonies, but has since withdrawn those charges, I think it would be only fair to treat this Colony in a similar manner—especially in the face of neither locality nor individual having been identified.

D.O'C., 7/6/89.

No. 1.

The Postmaster, Redfern, to The Secretary to the Post Office.

Redfern, 22 April, 1889.

I WAS informed yesterday by Police-sergeant Leadsman at 1:30 p.m. that Letter-carrier M'Namee had been arrested in consequence of having destroyed some letters that he should have delivered to their address. It appears he was seen by James Saul and Alf Dickson, on the Sewerage Road, Alexandria, to tear up and destroy certain letters. They informed Constable G. Harrison, who collected the torn letters and took them to the Police Station, Redfern. He then arrested Letter-carrier M'Namee.

I went to the Police Station at 1:35 p.m., and saw the torn letters. I requested the Police to put some of them together, if possible, to show that the persons to whom they were addressed resided in M'Namee's beat. M'Namee was there. I went there again at 5:30 p.m. I saw Sub-inspector Potter, who asked me to sign the charge against M'Namee, i.e., of destroying a quantity of letters, the property of the Postmaster-General, which I did, as the two young men, J. Saul and A. Dickson, who saw the letters destroyed, were not there. The Police think the case will come on at the Redfern Police Court to-morrow, the 23rd instant.

I have arranged with Thomas Madden, formerly a letter-carrier, to attend to M'Namee's beat until another carrier is appointed.

V. MOYSE,  
Postmaster.  
The

The attached is a list of a few of the letters destroyed by Letter-carrier M'Namee, and secured by Constable Harrison, and put together by the Redfern Police. That marked No. 1 should have been delivered by Letter-carrier Wood as the Alexandria Post-office is not in M'Namee's beat. Nos. 2 and 3 should have been delivered by Letter-carrier M'Namee, as Mr. H. Bailey and Mrs. Catherine Hassen reside in his beat.—V. MOYSE, Postmaster.

[Enclosure.]

No. 1.—O.H.M.S.—The Postmaster, Alexandria, from Money Order Office, acknowledging remittance of £60. 16th April.  
 No. 2.—O.H.M.S.—Mr. H. Bailey, Victoria-street, Alexandria, from Water Supply and Sewerage Department, enclosing receipt for 2s. 6d. 16th April.  
 No. 3.—Mrs. Catherine Hassen, oyster-shop, Botany Road, Alexandria, from G. W. Dunn, solicitor, 39, Castlereagh-street, stating what day her case will be heard. 13 April.  
 A receipt for £61 17s., from Savings' Bank Department, Sydney, dated 12th April. Not known to whom addressed.  
 A Tattersall's Sydney Cup consultation ticket, No. 3,985, in name of Mr. W. Dwyer.  
 Mr. Hogan—From Superintendent of Public School, Crown-street, a letter complaining of his boy not attending school. 16th April.  
 A letter from J. R. Justin, "Zetland Hotel," Waterloo. Not known to whom addressed.

Submitted for the Postmaster-General's information.—S.H.L., 23/4/89. I think you had better send some one to watch the case for this office.—D. O'C., 23/4/89. Read. I have already done so.—S.H.L., 23/4/89.

No. 2.

Memo. from Detective Abbott to The Secretary to the Post Office.

24 April, 1889.

WITH reference to the arrest of Letter-carrier M'Namee, of Redfern, Detective Abbott reports that he, yesterday, made inquiry into the matter, and finds the following to be the facts: On Wednesday, the 17th instant, between 11 a.m. and noon, M'Namee was seen by James Saul and a young man named Dickson, passing along what is known as the Sewer Road; Dickson and Saul were about 100 yards off the road at work. Saul first saw M'Namee walking and leading his horse and throwing some paper away; he called Dickson's attention to it; Dickson went on to the road and finding it was portions of a letter, watched M'Namee for some distance doing the same thing until he got upon his horse and rode out of sight. Later, they picked up pieces of about twenty letters, amongst them being part of one given to him, the letter-carrier, to post shortly before. The matter got talked about and reached the ears of Constable Harrison, who lives near, who then went to Saul's place and got the portions of letters, and arrested M'Namee. This was not until Sunday. There seems no possible chance of M'Namee clearing himself, as he has endeavoured to settle with the persons finding the letters and also with the constable at the time of arrest. He was by some means allowed bail before getting a hearing, and is now on bail (£300), to appear next Thursday; that being the case, detective thought it advisable to get the statements of the two principal witnesses in writing, which, in company with the arresting constable, was done yesterday. The letters are so far torn up that it would be useless to attempt to put them together for future delivery, but if the Secretary thinks it necessary, an effort might be made after Thursday's Court to trace out the addressees of some, with a view to steps being taken to inform senders or the addressees.

CHAS. J. ABBOTT.

Letter-carrier M'Namee, should, I presume, be suspended.—W.J.D., 26/4/89. Approved as regards the steps suggested by Detective Abbott. I think M'Namee has already been suspended by the Postmaster; if not of course he should be.—S.H.L., 26/4/89. M'Namee should be suspended, pending the result of trial.—D. O'C., 2/5/89.

No. 3.

Memo. from The Secretary to the Post Office, to The Postmaster, Redfern.

26 April, 1889.

BE good enough to hand to Letter-carrier M'Namee the enclosed letter, informing him of his suspension.  
 S. H. LAMBTON.

No. 4.

The Secretary to the Post Office, to Letter-carrier M. M'Namee, Redfern.

General Post Office, Sydney, 26 April, 1889.

LETTER-CARRIER M. M'Namee, Redfern, is hereby suspended from duty, pending inquiry into the charge preferred against him of destroying a quantity of letters, the property of the Postmaster-General.

S. H. LAMBTON,  
 Secretary.

No. 5.

Extract from the *Evening News* of the 2nd May, 1889.

LETTERS DESTROYED.

AT the Central Police Court on Wednesday morning a man named Michael M'Namee, 59, a letter-carrier, was charged, on remand, with destroying a quantity of letters, the property of the Postmaster-General. This case was commenced before Mr. O'Malley Clarke, S.M., in the Redfern Court, and the earlier portion of the evidence has already appeared in the *Evening News*.

James

*James Saul* deposed that he was employed in a dairy adjoining the Sewer-road, Alexandria. On the 17th ultimo he saw the accused on the Sewer-road; he took a number of letters from a bag he was carrying, and tore them up; he continued his route, and tore up letters as he went; witness proceeded along the road sometime afterwards, and picked up a number of pieces of paper; he recognised a number of pieces or scraps of letters produced as among those picked up by him.

*Alfred Dixon Chisholm*, employed by Mr. Saul, dairyman, at Alexandria, remembered the 17th ultimo; in consequence of something the last witness told him, his attention was drawn to the Sewer-road; he there saw the accused, who was walking along the road leading a horse; he (the accused) had his bag in front of him, and was tearing up some pieces of papers and dropping them along the road; witness went over to the road, and picked up a small piece of a letter with the words "Wynne Roberts" upon it; before leaving the road witness saw the accused get on his horse and ride away; witness next saw him the following morning, when he went to Mr. Saul's and inquired if that gentleman was in; witness replied, "no," and asked him why he tore up the letters; he did not answer; witness then told him if he did not answer he would inform on him; he (the accused) then said, "Don't for my son's sake."

*Joseph Saul*, dairyman at Alexandria, remembered the 17th ultimo; on the afternoon of that date, shortly after 3 o'clock, he and his son went out on a milk-cart, and upon arriving at the Sewer-road the son got down and picked up a number of fragments of paper which were lying on the side of the road; witness identified the exhibits produced as those picked up.

*Charles Dalgarno*, clerk in the Money-Order Office in the department of the Postmaster-General, recognised exhibit B, which document was filled in by him; it bears the post-office stamp, also the money-order stamp, dated April 16.

*John Justin*, proprietor of the "Zetland Hotel," corner of Bourke and Elizabeth Streets, Waterloo, recognised exhibit "K," which was part of a letter written by his wife and given to the accused by him to post; it was addressed to Mrs. Kummel, Cleveland-street, Ashfield; witness had noticed that a few mornings previous to this the accused had been drinking heavily.

*William Dyer*, fireman on the Government dredge, and residing at Queen-street, Alexandria, said that on April 15 he forwarded a registered letter containing £1, addressed as on the registration receipt produced; he had never received a consultation ticket on the Sydney Cup in return.

Further corroborative evidence having been given, the accused, who reserved his defence, was committed for trial, bail being allowed, self in £200 and two sureties of £100.

When is his trial to take place? It seems to me that this is a case in which, even if acquitted on the criminal charge, he should not be retained in the Service.—S.H.L., 3/5/89. May 23rd is the day the Sessions commence.—CHAS. J. ABBOTT, 6/5/89.

#### No. 6.

#### Memo. from Detective Abbott to The Secretary to the Post Office.

2 May, 1889.

I HAVE to report that the charge preferred against Letter-carrier M'Namee, of Redfern, was yesterday finished at the Central Police Court, M'Namee being committed for trial.

CHAS. J. ABBOTT.

#### No. 7.

#### Extract from *The Daily Telegraph*, 31st May, 1889.

METROPOLITAN QUARTER SESSIONS.

Thursday, 30 May.

(Before JUDGE WILKINSON.)

Mr. W. L. Merewether prosecuted on behalf of the Crown.

#### DESTROYING LETTERS.

MICHAEL M'NAMEE (letter-carrier) surrendered to his bail upon a charge of tampering with fifty letters, the property of the Postmaster-General, at Alexandria on April 17. There was a second count of opening the letters. Mr. J. H. Want, Q.C. (instructed by Mr. T. M. Williamson), defended. The accused, a man advanced in years, was a carrier attached to the Alexandria post-office, and on the day mentioned, when riding on his round in the public street, was seen to tear up letters from his bag as he rode along. The defence was that the accused had been on a "drinking bout" at the time and for some days previous. In support of that a very long list of witnesses was called. One stated that the accused was almost insane at the time. Mr. Vickers Moyses, postmaster at Alexandria, was recalled during Mr. Want's address to give rebutting evidence to the plea of intoxication. He stated that M'Namee was never drunk under his observation. Accused signed the attendance book on the morning of April 17. The Senior-sergeant of Police at Alexandria was then called and deposed that M'Namee was drunk at the post-office on several occasions about the time in question.

Mr. Want raised the point that the prosecution should fail on the ground that it was brought for tampering with the letters, thereby meaning that he had opened them with intent, whereas the evidence went to show that they were entirely destroyed by tearing them wholus bolus. A section of the Act provided for the destruction of the letters, but the Crown had not prosecuted under that clause.

Mr. Merewether, in replying, contended that the letters had been tampered with by the accused.

The Judge, in directing the jury, held that on the evidence it was his duty to direct them that tearing the letters up was a tampering with them. Dealing with the question of drunkenness from a common sense point of view, it was for them (the jury) to consider the accused responsible for what he did. But under the circumstances they could consider whether the man was capable of performing a specific intention. He quoted learned authority (Russell on Crime) on the point.

The

The jury returned a verdict of not guilty on the ground that the accused was not responsible for his actions at the time.

His Honor intimated to the jury that he could not accept such a verdict unless they altered it to a ground of insanity.

The foreman of the jury accepted the directions of the Judge in regard to the point of insanity.

The Judge then ordered the accused to be detained in custody awaiting the pleasure of the Governor.

No. 8.

Memo. from Detective Abbott to The Secretary to the Post Office.

1 June, 1889.

WITH reference to the attached report of trial of Letter-carrier M'Namee, I have been requested by the Clerk of the Peace to bring under notice the extraordinary contradiction in the evidence given by M'Namee's friends and the P.M. at Redfern,—witnesses on one side swearing he (M'Namee) was continually drunk—helplessly drunk,—and that they had seen him drunk in the office; on the other hand, Mr. V. Moyses, the P.M., swears as distinctly that he never saw him in the office drunk, or anywhere, or he should have at once reported him; further, that he was most regular in attendance. The legal point raised by Mr. J. Want was that he should have been charged with destroying under the 69th section, instead of for tampering under the 70th section. However the Judge overruled it, and seemed displeased at the verdict, refusing to accept it unless altered, which was done, M'Namee being then remanded to gaol.

CHAS. J. ABBOTT,  
Detective.

No. 9.

Extract from *The Suburban Times*, 1 June, 1889.

DESTRUCTION OF LETTERS.

MICHAEL M'NAMEE was charged at the Quarter Sessions on Thursday last with having on the 17th April, at Alexandria, he then being a letter-carrier, unlawfully tampered with 50 letters sent by post, the property of the Postmaster-General. Under a second count the accused was charged with opening the same 50 letters. Mr. Want appeared on behalf of the accused. For the defence several witnesses were called, who stated that for some time prior to the date of the offence the accused had been a teetotaler. On the 15th and 16th he commenced drinking excessively, and on the 17th, being almost insane, he was thoroughly unfitted to perform his duties. After this evidence had been taken the Redfern postmaster was recalled, and he stated in reply to the Crown Prosecutor that he had never seen the accused under the influence of liquor. A senior sergeant of the police, called by the defence, asserted that only two or three days before the date of the charge he called at the Redfern post-office on business. He then saw the accused drunk in the office, and in the presence of the postmaster, and the accused was so unfit to perform his duties that he (the witness) directed the attention of other letter-carriers to his condition.

Mr. Want, in his address to the jury, contended that the offence which the accused had really committed, namely, destroying the letters, did not come within the meaning of the section under which the indictment was laid, and which related to "opening and tampering" only. His Honor overruled the point. In summing up, his Honor impressed upon the jury that, unless the accused, through the agency of others, had become subject to insanity, as he would be if suffering from *delirium tremens*, he was, in the eye of the law, responsible for his actions; and he observed that there was no evidence to support the belief that the accused, while under the influence of liquor, had arrived at that stage.

The jury, after briefly deliberating, brought in the accused "not guilty, on the ground that he was not responsible for his actions" at the time he committed the offence.

His Honor, on hearing the decision, remarked that he was sorry the jury had given that verdict. Turning to the foreman, he said, "You find the accused not guilty on the grounds of insanity?"

The Foreman: No, your Honor, we find him not guilty on the ground that he was not responsible for his actions at the time.

His Honor: I cannot accept that verdict. You must find the accused not guilty on the ground of insanity, and unless you do I am afraid I must ask you to again retire.

The Foreman: On the ground of insanity, then.

His Honor: I don't see any evidence to justify such a verdict. I will read what the Act says. It says that the jury shall be required to find specially "that such person was insane at the time he committed such offence." I understand that is exactly what you find?

The Foreman: Yes, your Honor.

His Honor: You find that this person was insane at the time of the commission of the offence? You declare that he is acquitted on the ground of insanity?

The Foreman: Decidedly.

His Honor: All I have to say is that the prisoner must be kept in strict custody until the Governor has been communicated with.

Mr. T. M. Williamson (in the absence of Mr. Want) said the Governor would be communicated with on the morrow.

His Honor: I have nothing to do with that.

---

The Secretary, G.P.O., for his information.—V. MOYSE, P.M., 1/6/89.

See statements of

assistant operator and letter-carriers in Redfern office.—W.J.D., 3/6/89.

Memo.

Memo. to Postal-assistant Clinch,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office? Did Senior-constable Bradwell ever call your attention to the fact that Letter-carrier M'Namee was drunk in the post-office?—V. MOYSE, P.M., 31/5/89.

No, I have never at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office. Senior-constable Bradwell has never called my attention to the fact that Letter-carrier M'Namee was drunk in this office.—J. T. CLINCH, Postal Assistant, 31/5/89.

Memo. to Letter-carrier Madden,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office? Did Senior-constable Bradwell ever call your attention to the fact that Letter-carrier M'Namee was drunk in the post-office?—V. MOYSE, P.M., 31/5/89.

I beg to state that I have not seen Letter-carrier M'Namee intoxicated in the Redfern post-office during the last two years. Senior-constable Bradwell told me after M'Namee was arrested that he noticed M'Namee was under the influence of drink one day in the Redfern office. I have no recollection of the day the constable refers to.—D. MADDEN, L.C., Alexandria, 31/5/89.

Memo. to Letter-carrier Wood,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office? Did Senior-constable Bradwell ever call your attention to the fact that Letter-carrier M'Namee was drunk in the post-office?—V. MOYSE, P.M., 31/5/89.

I have not noticed Letter-carrier M'Namee under the influence of drink in the Redfern post-office. He has always assisted us in sorting the letters and papers when the mail arrived at our office for delivery, and always was capable to do his work while in the office, and I have not seen him intoxicated in the office. Senior-constable Bradwell has not called my attention to Letter-carrier M'Namee being drunk in the post-office, Redfern.—J. WOOD, L.C., Alexandria.

Memo. to Letter-carrier Root,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office? Did Senior-constable Bradwell ever call your attention to the fact that Letter-carrier M'Namee was drunk in the post-office?—V. MOYSE, P.M., 31/5/89.

I beg to state that I never saw Letter-carrier M'Namee intoxicated in the Redfern post-office. Senior-constable Bradwell never called my attention to the fact that Letter-carrier M'Namee was drunk in the Redfern post-office.—JAMES ROOT, Letter-carrier, Waterloo, 31/5/89.

Memo. to Mail-boy Wood,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office?—V. MOYSE, P.M., 31/5/89.

I have never seen Letter-carrier M'Namee intoxicated in the Redfern post-office this last two years.—THOMAS WOOD, Mail-boy, 31/5/89.

Memo. to Mail-boy M'Grath,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office?—V. MOYSE, P.M., 31/5/89.

I have never seen Letter-carrier M'Namee intoxicated in the Redfern post-office this last two years.—MICHAEL M'GRATH, mail-boy, 31/5/89.

Memo. to Operator M'Donald,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office?—V. MOYSE, P.M., 31/5/89.

No.—J. C. M'DONALD, 31/5/89.

Memo. to Operator Samuel,—Have you at any time during the last two years seen Letter-carrier M'Namee intoxicated in the Redfern post-office?

No.—J. SAMUELS, 31/5/89.

## No. 10.

### Minute of The Secretary to the Post Office.

I do not think it is possible to take any other course than at once dismiss M'Namee. It is not denied that he opened and destroyed these letters, and if, as the jury "found," he did the deed whilst in a state of insanity, it is clear that the Department cannot employ insane men as letter-carriers. If he did it, as some of his witnesses seem to have affirmed, either whilst drunk or whilst suffering from the effects of drink, this is perhaps a still stronger reason why he should not be retained, whilst if, when he destroyed the letters, he was neither insane nor drunk, the crime is even a still worse one. S.H.L., 4/6/89.

How long has M'Namee been in this Service, and what has been his general character up to the trial referred to?—D.O.C., 5/6/89. Schedule of irregularities herewith.—W.J.D., 7/6/89.

[Enclosure.]

[Enclosure.]

Letter-carrier Michael M'Namee appointed as Letter-carrier on 1st July, 1873.

No. of Paper.	Complainant.	Irregularity.	Result.
C 76-4310	M. A. Fitzhardinge, 117, King-street.	Failure to redirect a letter .....	Fined 2s. 6d.
C 77- 452	J. Ward, Sydney.....	Asking in an offensive way for a Christmas-box.	
C 77- 398	P. M., Paddington .....	Wrong delivery of two letters at residence of Mr. Long, Point Piper Road.	
C 81-6592	C. Jesson, Alexandria.....	Fined 40s. and costs at the Central Police Court for abusive language.	
C 81-7052	„ .....	Further complaints as to M'Namee's conduct towards him.	
C 83- 802	„ .....	M'Namee canvassing for votes in connection with Municipal election at Alexandria.	
C 86-5944	J. P. Dacey, Alexandria .....	(1) Using his position to canvass for votes at Alexandria election for Alderman.	M'Namee suspended and removed from the beat. Proved that he had been drunk while off duty. Report on C. 86-7,028.
		(2) Letting others do his work, in consequence of which a letter was wrongly delivered.	
		(3) Using obscene language .....	
		(4) Being drunk while on duty.....	
C 88-6818	Mrs. C. Tasker, Alexandria .....	Conduct of M'Namee .....	Suspended and fined 10s.
C 88-8322	W. Williamson, Waterloo (two complaints).	Wrong delivery of a letter .....	Fined 5s.
C 88-4530	P.M., Redfern .....	Tearing up letters given to him to deliver ...	Suspended. Matter under consideration.

This Schedule shows that M'Namee has been charged with serious irregularities, and that he has been three times suspended.

I think it will meet the justice of the case to call upon M'Namee to resign.—D. O'C., 7/6/89.

## No. 11.

The Secretary to the Post Office to Letter-carrier M. M'Namee.

(Registered.)

General Post Office, Sydney, 10 June, 1889.

With reference to the matter of your destroying letters on the 17th April last at Alexandria, and with reference to the fact of your having been cautioned, for irregularly delivering letters on the 17th October last, and warned that if your conduct was again brought under notice, you would be severely dealt with, I have to intimate that the Postmaster-General has decided that you be called upon to resign your position as letter-carrier within four days.

S. H. LAMBTON.

A week has now expired, but no word has been received from M'Namee.—G.F.R., 17/6/89. If M'Namee's resignation is not to hand, say by 20th inst., I think he should be dismissed.—S.H.L., 17/6/89. Write to M'Namee again, and if he fails to send in his resignation within one week from to-day let him be dismissed.—D. O'C., 18/6/89.

## No. 12.

The Secretary to the Post Office to Letter-carrier M. M'Namee.

General Post Office, Sydney, 18 June, 1889.

ADVERTING to my letter of the 10th instant, I am directed by the Postmaster-General to request you to send in your resignation without delay. If the same is not received within one week from this date you will be dismissed the Public Service.

S. H. LAMBTON.

## No. 13.

Messrs. Ellis and Makinson to The Postmaster-General.

Sir,

49 Elizabeth-street, Sydney, 21 June, 1889.

We have the honor to acknowledge receipt of memorandum of the 18th instant, sent to Letter-carrier M'Namee (and numbered C 89-6,643) calling upon him to send his resignation in within a week from that date, or he would be dismissed the Public Service. We wish to point out the fact, that M'Namee is at present detained in the Receiving-house at Darlinghurst, waiting the pleasure of His Excellency the Governor, and has not seen this memorandum, the same having been received by his wife, who instructs us to respectfully request that you will allow the matter to stand over till after the release of her husband.

We have, &amp;c.,

ELLIS &amp; MAKINSON.

I advise that no steps be taken to finally deal with M'Namee at present.—D. O'C., 27/6/89.

No. 14.

No. 14.

Letter-carrier M. M'Namee to The Secretary to the Post Office.

Sir,

3 July, 1889.

In reply to your letter, calling upon me to resign my position in the postal service, I would most respectfully ask that the Honorable the Postmaster-General should, in view of my long services without a shadow of reproach \* until the unfortunate occurrence of last April, reconsider his decision and give me an opportunity, however slight, of retrieving my character from the disgrace and actual want that my resignation or dismissal would now entail.

\* This is not correct.—S.H.L.

I would respectfully point out that I have been seventeen years in the service of the Post Office, after a previous service of ten years in the Railway Department; that I am now fifty-nine years of age, unfitted at my time of life to take up any fresh employment, even if I could get it now under the circumstances that would attend my leaving the Service, and with a wife and two children entirely dependent on me for support.

I have had only seven weeks leave of absence since I first entered into the Government Service, and would, at the expiration of another twelve months, be entitled to retire under the provisions of the Act.

Seeing that my fault, grievous as it was, has already been severely punished by my having had to stand my trial, and that the jury acquitted me on the ground, which I solemnly believe true, that I was not responsible for my actions at the time of the offence, I beg for a merciful consideration of my case.

I am willing gratefully to accept any punishment, short of dismissal or resignation, as either of these courses would result not so much in my own punishment as in that of my unfortunate and innocent family.

Asking therefore for a merciful dealing for their sakes,

I am, &c.,

MICHAEL M'NAMEE.

Submitted, but I can make no different recommendation from the previous one.—S.H.L., 4/7/89.

After carefully considering M'Namee's case I have come to the conclusion of reducing him to some position in the head office, at a lower salary. I am fully convinced of the heinous offence committed by M'Namee, but there was strong palliating evidence in his favor; moreover, it was the dying request of the late Honorable John Sutherland, who knew M'Namee for nearly thirty years, and thought highly of him, that he should get another chance to retrieve himself.—D.O.C., 6/7/89.

Salaries of stamper and sorter and letter-sorter, at £120, are the only ones available, or rather will be when the Estimates are passed. If reappointed he could in the meantime be paid from contingencies. His pay as letter-carrier was £148. I presume he will not be paid salary during his suspension.—S.H.L., 8/7/89.

Appoint M'Namee to one of the vacancies named, his salary to commence from this day.—D.O.C., 8/7/89.

Memo.

THE following testimonials in M'Namee's favor were handed to the Postmaster-General.—S.H.L.

THIS is to certify that I have known Michael M'Namee for nearly twenty years, and during that time I had many opportunities of forming an opinion of his qualification as a public official and as a citizen. I can say without hesitation that I never knew or heard of a wrong action having been committed by him; but on the contrary he bears an excellent reputation in this district for honesty, punctuality, and a faithful discharge of his duty as a public servant.

Waterloo, 23 May, 1889.

J. P. HOWE, M.P.

THIS is to certify that I have known Mr. Michael M'Namee for a number of years, during which time I have found him a steady and industrious man, and to the best of my knowledge he has borne an excellent character.

Redfern, 23 May, 1889.

JOHN CROWE,  
Mayor of Redfern.

THIS is to certify that I have known Mr. M'Namee for these last thirty years—twenty-seven years in the Government Service, ten years as colleague of mine in the Alexandria Council—and during all that time he was always very well regarded by all in the Council, and I have never known him to do a dishonourable act. He is a most enterprising, respectable man. It gives me great pleasure in bearing testimony to his excellent character.

Boundary House, Boundary-street, Alexandria, 21 May, 1889.

JOHN OSBORNE,  
Ex-Alderman.

I HAVE known Mr. M'Namee for the last thirty years—twenty-seven years in the Government Service, and several years as alderman in the Alexandria Council. I have always found him straightforward and honest in all his dealings, a good citizen, and a worthy master of society in every manner.

Boundary-street, Redfern, 21 May, 1889.

CORNELIUS HANNAN,  
Alderman.

THIS is to certify that I have known Michael M'Namee for over twenty years, and have always known him to act fair and honest in all his dealings, and never heard any complaints. For several years he was a colleague of mine in the Alexandria Council, and always found him strictly honest and attentive in his various duties; and believe him to be a kind husband and father, and a good citizen.

Henderson Road, Alexandria, 15 May, 1889.

STEPHEN JOHN FOSKETT,  
Alderman.

THIS is to state that I have known Mr. M'Namee for twenty-five years, and always found him an honest and an obliging, industrious man.

Perbeck House, 108, Botany Road, Alexandria, 21 May, 1889.

JOHN HARDEN,  
Alderman.

I HAVE known Mr. M'Namee for the last twelve years. He has delivered all my private and business letters. I am agent for the Beaconsfield Estate, and received letters daily. I have never missed one. He has been civil, obliging, and has given universal satisfaction to all the residents of the estate in the performance of his duties.

Beaconsfield Estate, Botany Road, Alexandria, 22 May, 1889.

WILLIAM ALLEN,  
Alderman.

Victoria-

Victoria-street, Beaconsfield Estate, 22 May, 1889.

I HAVE known Mr. M'Namee for many years. I have resided in Melbourne for a considerable time, and sent several letters to my family containing money. I never missed one. I have found him always punctual in delivery, sober, honest, civil, and obliging, and in every way good and respectable, and he has given general satisfaction in the discharge of his duties.

F. MOLYNEUX.

Botany Road, Alexandria, 16 May, 1889.

LETTER-CARRIER M'Namee has delivered my business and private letters for the last fifteen years at my sugar-works and private residence, and many thousands have passed through his hands, and I have never missed one. He was sober, civil, and obliging, and attentive to his duties.

ISAAC PECK.

Dear Sir,

This is to certify, that I have known you as postman, and that you have delivered my letters since I have resided in Waterloo over 10 years; during that period I have received a great number of business correspondence, especially this last 5 years, during which time I have been Secretary of the Eureka Lodge, Oddfellows. I often receive money in orders, cheques, and bank-notes, by post, from the members of my lodge and others. I have never known any correspondence to be delayed by you in the delivery, neither have I lost any, to my knowledge. You are at liberty to make what use you like of this.

MATTHEW PRIDEAUX,  
Waterloo.

Epsom Road, Waterloo, 15 May, 1889.

This is to certify, that I have known you as postman, and that you have delivered my letters since I have resided in Waterloo over 10 years; during that period I have received a great number of business correspondence, especially this last 5 years, during which time I have been Secretary of the Eureka Lodge, Oddfellows. I often receive money in orders, cheques, and bank-notes, by post, from the members of my lodge and others. I have never known any correspondence to be delayed by you in the delivery, neither have I lost any, to my knowledge. You are at liberty to make what use you like of this.

MATTHEW PRIDEAUX,  
Waterloo.

Sir,

I have known Mr. M'Namee for about 12 years, and have always found him to be a honest man; he was an Alderman of our Borough for a long time, and therefore I had a very good opportunity of seeing what manner of man he was. It is now about 7 years since he retired; he has always been living in the Borough, and has been a very good citizen.

C. JESSON,  
Alderman.

Buckland-street, 14 May, 1889.

I have known Mr. M'Namee for about 12 years, and have always found him to be a honest man; he was an Alderman of our Borough for a long time, and therefore I had a very good opportunity of seeing what manner of man he was. It is now about 7 years since he retired; he has always been living in the Borough, and has been a very good citizen.

C. JESSON,  
Alderman.

Fairview House, Botany Road, 14 May, 1889.

I HAVE known Michael M'Namee for about 14 years as letter-carrier, during which time as ranger for Sir Daniel and Mr. William C. Cooper, on the Waterloo and Alexandria Estates. I have received letters almost every day and he has delivered them in every way correct.

PATRICK HAYES.

Waterloo Pottery Works, 10 May, 1889.

I HERE certify that I have known Mr. M'Namee as letter-carrier here for the last 7 years, during which time I have received many thousands of letters, &c., from his hands. I have pleasure in being able to testify to his uniform punctuality and courtesy. I never had occasion to complain of him in any way whatever, and I never, during all that time, knew of any of our letters to be missing.

WILLIAM TOSH,  
Manager.

Reeves-street, Waterloo, 20 May, 1889.

I HAVE been a resident of the Redfern district upwards of fourteen years, and during the major portions of that period I have been intimately acquainted with Mr. M'Namee. I have always found him an honest, upright man; one who has given a great deal of his time in endeavouring to ameliorate the conditions of his fellowmen, and wherever good was to be done he was ever foremost in it. It is with pleasure that I am able to subscribe the foregoing testimony.

JAMES W. SPIGER,  
Alderman, Waterloo.

Alexandria, 21 May, 1889.

I HAVE known Mr. M'Namee, letter-carrier, eleven years, during which time I have had business transactions with him weekly. I have always found him honorable in his dealings and *strictly honest*. He has always to my knowledge taken a lively interest in the welfare of his fellow-man, and I have always found him a good citizen.

ALDERMAN J. RALPH,  
Alexandria.

Bourke Road, Alexandria, 21 May, 1889.

I HAVE known Mr. M'Namee for a period of ten years, during which time he has delivered my letters, and I have no reason to complain. I have always found him civil, sober, and obliging, &c.

D. MUNRO,  
Tannery, Alexandria.

Zetland Estate, Bourke-street, Waterloo, 21 May, 1889.

I HAVE been living in this district this last fourteen years and M'Namee has been letter-carrier during that time. We have always found him very careful and sober, and he bore an excellent character by every one that I have spoken to, and I have made inquiries as to character, &c.

I am, &c.,  
THOMAS LAMOND,  
Alderman and Horse-trainer.

38 Botany-street, Waterloo, 22 May, 1889.

THIS is to certify that I have known Mr. M'Namee for a period of ten years, and always considered him to be a straight-forward honest man. I never heard anything detractive to his character up to the present unfortunate occurrence, which I believe drink to be the cause, and not for dishonest motives.

I am, &c.,  
ALD. M. SMITH.

Public School, Botany Road, Waterloo, 21 May, 1889.

I HAVE known Mr. M'Namee for a period of two years, during which time he, as letter-carrier, has delivered both my private and official correspondence daily. On no occasion did I have any reason to complain, and the whole of the teachers in this school (thirteen) speak in the highest of his civility, sobriety, and unquestionable kindness.

My letters were always promptly delivered; and during the whole time he has been letter-carrier here I never missed a letter or had occasion to inquire about late delivery or expected correspondence. I cannot but speak in the highest terms of Mr. M'Namee.

M. CORNISH,  
Head Master.

Public School, Gardener's Road, South Waterloo, 21 May, 1889.

I HAVE read what Mr. Cornish has stated in this letter respecting Mr. M'Namee, and on behalf of my assistants and myself fully endorse his statement.

J. MOLONEY,  
Teacher.

Sir

Sir and Gentlemen,

I have much pleasure in writing this note on behalf of Mr. M'Namee. I have known him for the last eight years, and I have had dealings with him in contracts and other business, and I have always found him to be a honest and just man in all my dealings, and I must say that I am very sorry to hear of his misfortune.

Lawrence-street, Alexandria, 12 May, 1889.

ALDERMAN W. MARR,  
Alexandria.

HAVING frequently seen Mr. M'Namee during the last seven years, I desire to state that I have not at any time seen anything in his conduct other than would be becoming in a honest and respectable man.

51, Botany Road, Waterloo, 22 July, 1889.

I am, &c.,  
L. L. P. WILLIAMS,  
Alderman of Waterloo.

MR. M'NAMEE has delivered letters at our works here during the past three years; we have never missed a letter; on the contrary we have always found him careful and punctual in the performance of his duty as letter-carrier.

50, Clarence-street, Sydney, 11 May, 1889.

EDWIN GODFREY,  
(For the Sydney Soap Company, Limited.)

I HEREBY certify that letter-carrier Mr. M'Namee has always observed him, and paid strict attention to the discharge of his duties.

Zetland Joinery Works, Elizabeth-street, Zetland Estate, 14 May, 1889.

JOHN JAGGER.

THIS is to certify that I have known Mr. M'Namee, letter-carrier, for the past 18 (eighteen) months, during which time I have always received my letters punctually and have had no cause to complain.

Botany Road, Waterloo, 15 May, 1889.

FREDERICK C. LOVERIDGE,  
Wood and coal merchant, Botany Road, Alexandria.

THIS is to certify that I have known the said Mr. M'Namee for the period of five years. During that time I have found him to be a honest, sober, and punctual letter-carrier.

Botany Road Produce Stores, Alexandria, 13 May, 1889.

J. PARK.

WE have always for many years received our letters regular and have not missed any correspondence, or had we any cause to complain. Letter-carrier M'Namee, we found him always sober, civil, and obliging.

Boiling-down and Bone Merchant, Epsom Road, Waterloo, 15 May, 1889.

J. TESTER.

I HEREBY certify that I have known Mr. M'Namee as letter-carrier for the past two years, during which time I have received my letters regularly from him.

Post Office Store, Zetland Estate, 12 June, 1889.

W. L. MATTHEWS.

I HAVE known Letter-carrier M'Namee for many years as sober, civil, honest man, and he has always delivered my letters punctual, and I have never missed any or had I cause to complain in any way.

Salisbury Estate Tea Mart, Botany Road, Waterloo.

THOMAS ASH,  
Grocer, Botany Road, Waterloo.

I HAVE known Mr. M'Namee for a period of four years. During that time he has delivered both my private and business correspondence correctly. I have no occasion to make any complaints whatever; always found him sober and civil; never had occasion to inquire about any delivery.

Rainbow Cottage, Elizabeth-street, Zetland Estate, 22 May, 1889.

JOSEPH COOK,  
Horse-trainer, Zetland Estate.

THIS is to certify that I have known Mr. M'Namee for twelve months or more, and always found him straightforward and punctual in the delivery of my letters, not having missed any, to my knowledge, during that time.

14 May, 1889.

Yours, &c.,  
B. CLARK,  
Manager of Butterine Company, Alexandria.

THIS is to certify that I have known Mr. Michael M'Namee for several years. Transaction with him I found him thoroughly upright and honest in all his dealings with me.

Sydney, 20 May, 1889.

I am, &c.,  
J. RUBIE,  
Manager of St. Joseph's Investment and Building Society.

Sir,

I regret to hear of you having committed a most foolish act, viz.:—Destroying letters the property of the Government; an act of a lunatic, or one made from the effects of intoxicating liquor, which last you must have been, otherwise from what I and several others I have been speaking to know of your general good character, and the attention you always paid to your responsible duties, you would never have committed, only under the influence of drink. The three years you have been delivering my letters I did not find the slightest cause for complaint or else I would have been the first to have communicated with the Postmaster-General on the matter. The only cause I and others can assign for this act is that you were mad drunk. I, and others that have known you longer than me, unhesitatingly believe that what you did was done without the slightest fraudulent intent whatever. I am extremely sorry for the position you have placed yourself in, and if this is any service to you you are at liberty to make what use of it you think proper.

3, Victoria-street, Alexandria, 25 June, 1889.

I am, &c.,  
W. R. SHEPARD,  
(Late "Shepard & Co.," Land and Estate Agents.)

10

No. 15.

The Hon. Sir Henry Parkes to The Postmaster-General.

My Dear Mr. O'Connor,

6 July, 1889.

This note is from Mrs. Chapman, daughter of our dear departed friend, John Sutherland. For his sake will you see if you can serve the person alluded to.

I do not quite understand the memo. or the relation of the subject to Mrs. Chapman; but it would appear thus: I acting for P.M.-G. (Samuel) in 1872, appointed this person letter-carrier on the recommendation of Mr. Sutherland, who was then my colleague.

Kindly look into his case.

Yours, &amp;c.,

HENRY PARKES.

[Enclosure.]

Sir H. Parkes, K.C.M.G.,—

Pine Cottage, 4 July, 1889.

Dear Sir,

Will you give the enclosed your favourable consideration by speaking to Mr. O'Connor.

My poor father had he been spared intended trying to get him if possible spared from dismissal. I feel sure for my father's sake you will forgive me for troubling you.

Believe me, yours sincerely,

S. CHAPMAN.

[Enclosure referred to.]

HON. Sir Henry Parkes appointed Letter-carrier McNamee. (Acting Postmaster-General, 1872.) Recommended by the late Hon. John Sutherland; 17 years in the G.P.O.; 10 years Railways—27 years.

Suspended for tearing letters. Suffering from temporary insanity. Jury found him not guilty. Favour to reinstate him. Age, 59 years.

No. 16.

Telegram from the Secretary to the Post Office to The Postmaster, Redfern.

9 July, 1889.

SEE M'Namee, and tell him that Postmaster-General has given him employment as stamper and sorter at one hundred and twenty pounds (£120) a year, and to report himself at once to Superintendent mail branch.

S. H. LAMBTON,

Secretary.

Noted. M'Namee commenced work at the General Post Office this day.—A.D., 10/7/89.

No. 17.

F. Abigail, Esq., M.P., to The Secretary to the Post Office.

Dear Sir,

589, George-street, 11 July, 1889.

May I ask if the following statements be true? It is alleged that a man named M'Namee, a letter-carrier, was put on his trial for opening and destroying letters entrusted to him for delivery as letter-carrier. I am informed the evidence was very clear, but the jury took a merciful view of his case and acquitted him on the grounds that they thought he was wrong in his mind. On this the Judge said he thought it was a miscarriage of justice, and I understand you recommended his dismissal. It is said that this same man has been appointed a stamper over the heads of others against whom there is not the least suspicion. May I ask is this true? I seek the information thus in preference to asking for it in Parliament.

I am, &amp;c.,

F. ABIGAIL.

Submitted for the Postmaster-General's instructions as to what reply should be sent to Mr. Abigail. The Judge did not say there was a miscarriage of justice. What he did say, as reported in the Press, was that he did "not see any evidence to justify the verdict." It is not correct to say that M'Namee was reappointed over the heads of others; he was appointed to the lowest staff salary (£120), and only takes precedence of three temporary or probationary stampers and sorters. In other respects the statements in his letter are correct.—S.H.L., 11/7/89.

Inform Mr. Abigail in the spirit of the minute.—D.O'C., 13/7/89.

No. 18.

The Secretary to the Post Office to F. Abigail, Esq., M.P.

Sir,

General Post Office, Sydney, 16 July, 1889.

In reply to your communication of the 11th instant, on the subject of late Letter-carrier M'Namee, I am directed by the Postmaster-General to inform you that the Judge did not say there was a "miscarriage of justice," although he is reported in the press to have said that he did "not see any evidence to justify the verdict." It is not correct to say that M'Namee was reappointed over the heads of others. He was appointed to the lowest staff salary (£120 a year), and only takes precedence of three temporary or probationary stampers and sorters. In other respects the statements in your communication are correct.

I have, &amp;c.,

S. H. LAMBTON,

Secretary.

No. 19.

## No. 19.

F. Abigail, Esq., M.P., to The Postmaster-General.

Sir,

589, George-street, 20 July, 1889.

I desire to inform you that I wrote a letter to the Secretary of the Postal Department about ten days ago, asking certain questions about an employee of the Department named M'Namee, and up to the present I have not received any reply. I see the hon. Member for Bourke, Mr. Willis, has questions to be asked in Parliament next Wednesday, and I beg to inform you that if I do not receive a reply by that date I shall submit questions to you on the matters. I say with all respect that if the facts of the case be one half as bad as I am informed, I cannot conceive how promoting such a man can be justified, and I ask that the papers in connection with the case might be laid upon the Table of the House.

Awaiting the favour of your reply,

I am, &amp;c.,

F. ABIGAIL.

Mr. Abigail was replied to on the 16th instant; copy of letter herewith.—S.H.L., 22/7/89.  
Call his attention to the fact.—D.O'C., 22/7/89.

## No. 20.

The Secretary to the Post Office to F. Abigail, Esq., M.P.

Sir,

General Post Office, Sydney, 22 July, 1889.

With reference to your letter of the 20th instant, I am directed by the Postmaster-General to intimate that a communication relative to the reappointment of late Letter-carrier M'Namee, as stamper and sorter in this Department, a copy of which is herewith enclosed, was addressed to you on the 16th idem.

I have, &amp;c.,

S. H. LAMBTON,

Secretary.

[For enclosure see letter of 16th July, No. 18 of these papers.]

21. The Secretary to the Post Office to the General Secretary, Trades and Labour Council. 17 July, 1889 .....	6

No. 1.

Minute by The Secretary to the Post Office.

THE present contract with the Union Steamship Company for a four-weekly mail service between Sydney, Auckland, and San Francisco—to which New Zealand contributes a subsidy of £24,666 13s. 4d., and New South Wales one of £12,333 6s. 8d.—will expire in November next, or in nine months' time.

It will scarcely be possible to secure a new contract by tender in the usual way during this short period, and even if it were otherwise, there are difficulties in the way. In the first place, the New Zealand Parliament some time since passed a resolution against renewing the mail service to San Francisco; and in the next place, there have been proposals made to make Vancouver the terminus on the American side.

It would, however, be unfortunate if the service were allowed to fall through, and I suggest that the Postmaster-General, New Zealand—or the New Zealand Government—be asked if they would be willing to join us in asking the contractors to renew the present contract for another twelve months on same terms as at present.

S.H.L., 18/2/89.

Approved.—H.C., 19/2/89. Cabinet approve of opening negotiations with Government of New Zealand for an extension of present arrangements.—G.R.D., 9/3/89. Wire New Zealand Government accordingly, and stipulating for the non-employment of Chinese in the boats.—G.R.D.

## No. 2.

Cablegram from The Colonial Secretary, Sydney, to The Hon. Sir H. A. Atkinson, K.C.M.G., M.H.R., Premier, Wellington, New Zealand.

12 March, 1889.

Would you be willing to join us in asking Union Steamship Company to renew contract for a four-weekly mail service between Sydney, Auckland, and San Francisco, for another twelve (12) months on same terms as at present with the stipulation that no Chinese are to be employed on the steamers.

COLONIAL SECRETARY.

The above telegram was prepared in the Colonial Secretary's office, submitted to the Postmaster-General, who minuted on it:—"I concur in this telegram.—D.O.C., 12/3/89," and sent from the Colonial Secretary's office on the 12th March, 1889.

## No. 3.

Cablegram from Sir H. A. Atkinson, Premier, Wellington, New Zealand, to The Hon. the Premier, Sydney.

15 March, 1889.

REGRET that owing to action of Parliament last year we can do nothing towards renewal of Frisco Service without first consulting Parliament which will not meet until June.

H. A. ATKINSON.

The Postmaster-General.—H.P., 15/3/89. The Secretary to the Post Office.—B.C., 15 March, 1889. C.W., P.U.S.

## No. 4.

## Minute by The Secretary to the Post Office.

THIS telegram creates a difficulty. If we must wait until June before it can be determined whether or not the contractors are to be asked if they are willing to renew the present contract for a year, the probability is they will either decline to renew at all, or ask an increased subsidy.

It seems to me to be worth considering whether this Colony might not safely undertake the risk for the one year, single handed.

I attach an estimate, prepared as carefully as the materials at our command will permit, showing that as a set-off against the subsidy, we should receive about £20,000 in contributions from America and other colonies—irrespective of any payment which might be demanded from New Zealand.

I take it that the latter colony would make some use of the service, if only for American correspondence, and we might fairly ask it to pay a sum equal to that demanded by New Zealand from us when we retired in 1884 from the then existing contract, namely, £7,000.

This payment would reduce our net cost to about £12,000, but I am inclined to think that, if approached without much further delay, the Company, on being told that we contemplate renewing for the year on our own responsibility, might make some concession, if only to the extent of foregoing the premiums for early arrivals—amounting to about £2,000. This would further reduce our net cost for the year to about £10,000 (or about £8,500 in excess of the present net cost), and, I take it, that this net cost, or loss, to the Post Office would be more than recouped commercially.

Should the Government consider the suggestion now made a desirable one, it might be thought right—so as to avoid any appearance of discourtesy or sharp practice towards New Zealand—to tell them plainly that a delay until June would probably jeopardise the chance of obtaining a renewal on present terms, that this Government therefore contemplates asking for a renewal for the year on its own account, and to express a hope that the New Zealand Government will be able, in June, to notify its willingness either to join us, or to pay us a fair amount for the carriage of their correspondence for the ensuing year.

S. H. LAMBTON.

## [Enclosure.]

ESTIMATE alluded to in above Minute.

ESTIMATED cost of San Francisco mail service (proposed arrangement).

<i>Dr.</i>	£
To subsidy payable under present contract .....	37,000
To estimated amount of (full) premiums and demurrage, &c., less penalties .....	2,500
	£39,503
<i>Cr.</i>	£
By estimated postages collected in and retained by the Colony .....	5,400
By estimated amount that would be received from non-contracting colonies (excepting New Zealand) on basis of present payments .....	10,500
By share of contribution from the United States .....	4,000
By estimated amount that would be received from London .....	100
	£20,000
Estimated net cost .....	£19,503

Memo.

The estimated cost, above shown, would of course be reduced by any contribution which might be made by New Zealand, but this branch is not in possession of any information upon which to base an estimate thereof.

19/3/89.

W. L. C., Accountant.

## No. 5.

Cablegram from The Premier of New South Wales, to The Premier of New Zealand.  
29 March, 1889.

RE your telegram of 15th March. As delay in negotiating for year's renewal Frisco contract might be prejudicial to colonies interests we propose arranging for such renewal on our own responsibility, but hope after your Parliament has met in June, that you will see your way to rejoin us.

HENRY PARKES.

## No. 6.

Cablegram from The Premier of New Zealand, to The Premier of New South Wales.  
3 April, 1889.

AM glad to learn that you will arrange Frisco Service on your own responsibility can make no promise to rejoin but any proposal that may be received by Government will be submitted to Parliament.

H. A. ATKINSON.

The Postmaster-General, H.P. 3/4/89. The Secretary to the Post Office, E.W.McK.  
(pro P.U.S.) B.C., 3rd April, 1889.

## No. 7.

The Secretary to the Chamber of Commerce, Sydney, to The Postmaster-General.

Sir,

Sydney, 10 April, 1889.

By direction of my Committee, I have the honor to forward you copy of a resolution passed at their meeting, held on the 6th ultimo, in respect to the mail service *via* San Francisco, and to subscribe myself.

Yours, &amp;c.,

H. C. MITCHELL,

Secretary.

[Enclosure.]

RESOLUTION.

THAT in view of the expiry of the present San Francisco mail contract in November next, this Chamber is of opinion that immediate steps should be taken to keep the service from lapsing.

Submitted.—S.H.L., 11/4/89. Seen.—D.O'C., 13/4/89.

## No. 8.

The Secretary to the Post Office to The Secretary to the Chamber of Commerce, Sydney.

Sir,

General Post Office, Sydney, 16 April, 1889.

I am directed by the Postmaster-General to acknowledge the receipt of your letter of the 10th instant, forwarding the following copy of a resolution passed at a meeting of the Chamber of Commerce, held on the 6th March last, namely:—

“That in view of the expiry of the present San Francisco mail contract, in November next, this Chamber is of opinion that immediate steps should be taken to keep the service from lapsing.”

I have, &amp;c.,

S. H. LAMBTON,

Secretary.

## No. 9.

Cablegram from The Postmaster-General of New South Wales to The Postmaster-General of New Zealand.

9 April, 1889.

SHOULD we decide on renewing 'Frisco contract for another year, and should your Government be unable to rejoin, what sum do you think your postages would amount to at usual rates of twenty-five shillings and fourpence per pound, &c., supposing my Government agreed to carry your mails for such postages?

D. O'CONNOR.

## No. 10.

Cablegram from The Postmaster-General of New Zealand to The Postmaster-General of New South Wales.

12 April, 1889.

'FRISCO service. Should fortnightly service be established by direct steamers, and if decided, we shall not join you in renewal, our postages by 'Frisco at the rates you name are estimated at six or seven thousand pounds a year. Although vote of Parliament prevents us making an offer shall be glad to receive and submit to Parliament any proposal your Government may be disposed to make.

H. A. ATKINSON.

## No. 11.

Cablegram from The Postmaster-General of New South Wales to The Postmaster-General of New Zealand.

13 April, 1889.

MY telegram apparently misapprehended. What we asked was, should this Government decide upon renewing present contract for another year, what sum you thought your postages would amount to at the rates mentioned?

D. O'CONNOR.

No. 12.

## No. 12.

Cablegram from The Postmaster-General, Wellington, New Zealand, to The Postmaster-General, Sydney.

16 April, 1889.

SOBRY misapprehended your meaning. If services remain as at present our homeward postages about fourteen thousand, and on mails from London, about fifteen thousand, but if fortnightly direct service established and this must be dealt with by Parliament next session, as contract expired, December, postages would be as stated in my telegram of 12th.

H. A. ATKINSON

## No. 13.

Cablegram from The Secretary to the Post Office, Sydney, to The Secretary to the Post Office, Wellington, New Zealand.

17 April, 1889.

OUR telegrams still misunderstood. We want to know should we renew present contract one year, what amount may expect from your postages if unable rejoin, and if Government agree carry your mails for postages. Information important in negotiating.

S. H. LAMBTON.

## No. 16.

## Minute by The Postmaster-General.

THE contract with the Union Steamship Company, for a four-weekly service between Sydney and San Francisco, *via* Auckland and Honolulu, entered into jointly by this and the New Zealand Governments in 1885 (New Zealand paying two-thirds and New South Wales one-third of the annual subsidy of £37,000) expired in November last, and was renewed for another year, mainly to afford time for the colonies to consider whether the service across the Pacific should be to San Francisco, as heretofore, or to Vancouver in Canada—also whether the service should be a faster one—and whether it should be four-weekly, as at present, or fortnightly.

From various causes, none of these questions have yet been determined, and the New Zealand Parliament last year passed a resolution affirming the desirableness of abandoning the American route, in favour of what is termed the "direct" service (*via* Cape of Good Hope and *via* Cape Horn).

It is said that the New Zealand Parliament may possibly reconsider the matter during the session about to begin, but as it seemed necessary to ascertain whether the contractors were willing to renew for another year, I have had several interviews with the general manager (Mr. Mills of New Zealand) and the local manager (Mr. F. W. Jackson).

The

The result of these interviews is an offer to continue the service for another year from November next on the following terms:—

Subsidy to be £33,500 in lieu of £37,000. No premiums to be paid—and no penalties enforced, provided voyage does not exceed 648 hours each way—present time allowed being 600 hours.

United States contribution to be divided on same principle as at present.

If New Zealand joins, or contributes, either by postages or by direct subsidy, any sum in excess of £6,000, such excess to be allowed contractors to the extent of the £3,500 abated from the subsidy.

The contractors further stipulate that only European crews are to be employed on the steamers.

If this offer be accepted by New South Wales on its own responsibility, the net cost of, or loss on the service, for the ensuing year, will of course be greatly increased. Such net cost last year was but £2,050, but by taking the full responsibility of the service for another year, our net cost (or loss) would I estimate, be not less than £8,000—even if we continued to receive contributions from the United States at present rates. It is understood, however, that unless the American steamers owned by Mr. Spreckels, or other American vessels are employed, these United States contributions might not be paid, and if not paid, our loss would be increased by about £4,000, or about £12,000 in all.

I recommend, however, that we undertake, the service on the terms offered, for the one year, as it is most important, both postally and commercially, that direct mail communication between Australasia and the great Continent of America should be continued, and New South Wales, as the parent Colony, and the head of the Australian Group, may, in my opinion, fairly undertake the risk (even in the event of New Zealand determining to stand aloof) and so prevent the service from lapsing.

DANIEL O'CONNOR,

5/6/89.

Submission to Parliament. Limit of cost £8,000. Approved by Cabinet.—H. P., 20/6/89.

#### No. 17.

The Secretary to the Post Office, to The Manager of the Union Steamship Company of New Zealand (Limited).

Sir,

General Post Office, Sydney, 21 June, 1889.

With reference to our recent interviews on the matter, I am directed to inform you that—subject to the approval of Parliament—it has been decided to continue the service between Sydney and San Francisco for a further period of twelve months on the terms arranged, namely—the subsidy to be £33,500 for the period of the extension. The duration of the voyage to be 600 hours, but no penalties to be enforced provided the voyage does not exceed 648 hours. No premiums for early arrival to be paid. The contribution received from the United States Government to be divided on the same principle as at present. If the New Zealand Government should hereafter join in this extension of contract, or should contribute either in the shape of postages or by direct subsidy any sum in excess of £6,000, such excess to the extent of £3,500 shall be allowed to your Company as the contractors in consideration of the abatement of £3,500 you have agreed to make in the amount of the subsidy which you now receive for the San Francisco Service, namely—£37,000.

It is also distinctly understood that you agree to employ only European crews on the steamers, and that the spirit of the present contract in regard to the size of vessels, and in all other respects, shall be adhered to in the extended contract.

I have &c.,

S. H. LAMBTON,

Secretary.

#### No. 18.

The Manager of the Union Steamship Company of New Zealand (Limited) to The Secretary to the Post Office, Sydney.

Sir,

Sydney, 21 June, 1889.

I have the honor to acknowledge receipt of your letter of even date, accepting the proposal of this Company for the extension of the San Francisco mail service for a period of twelve months, subject to the approval of Parliament.

I have &c.,

F. W. JACKSON,

Manager.

#### No. 19.

Cablegram from The Postmaster-General, Sydney, to The Postmaster-General, Wellington, New Zealand.

22 June, 1889.

UNDER all circumstances this Colony has—subject approval Parliament—agreed to extend the San Francisco Service contract of The Union Steamship Company for twelve months. Subsidy thirty three thousand five hundred pounds with proviso for increase to thirty seven thousand pounds should postages or subsidy received from New Zealand justify increase. Am relying on your efforts to induce your Parliament to sanction your rejoining this contract on same terms as at present, failing which on your making such use of the service as will secure substantial contribution from New Zealand in shape of postages.

D. O'CONNOR,

Postmaster-General.

## No. 20.

The General Secretary to the Trades and Labour Council of New South Wales to  
The Postmaster-General, Sydney.

Sir,

Trades and Labour Council of New South Wales, Sydney, 15 July, 1889.

I am instructed by resolution to protest, on behalf of the above Council, against the proposal of the Government of this Colony to renew the San Francisco Mail Contract without the insertion of a clause prohibiting the employment of Asiatic labour on the steamers engaged in the service, and receiving a subsidy from the State.

At the same time I am to inform you that the Council is heartily in favour of the proposed new Canadian Pacific Mail Service, which has been promulgated by Messrs. Anderson.

Trusting you will bring this information under the notice of the Government,

I have, &c.,

THOS. J. HOUGHTON,  
General Secretary.

Might perhaps be informed that, in accepting the offer of the Union Steamship Company to continue the service for another year, subject to the approval of Parliament, it was expressly stipulated that only European crews are to be employed on the steamers.—S.H.L., 16/7/89.

I concur; and call attention to the deputation that waited upon me some time ago from the Seamen's Union, when the matter was discussed, and I gave them my assurance to this effect.—D. O'C., 16/7/89.

## No. 21.

The Secretary to the Post Office, Sydney, to The General Secretary to the Trades and  
Labour Council, Sydney.

Sir,

General Post Office, Sydney, 17 July, 1889.

With reference to your letter of the 15th instant, protesting, on behalf of the Trades and Labour Council, against the proposed renewal of the contract for the San Francisco Mail Service, without the insertion of a clause prohibiting the employment of Asiatic labour on the steamers, I am directed by the Postmaster-General to intimate that, in accepting the offer of the Union Steamship Company of New Zealand (Limited) to continue the service for another year, subject to the approval of Parliament, it was expressly stipulated that only European or American crews are to be employed on the steamers, in accordance with the assurance given to the deputation from the Seamen's Union which waited upon Mr. O'Connor some short time ago.

I have, &c.,

S. H. LAMBTON,  
Secretary.

No. 1.

Messrs. Hunter and Trude, Melbourne, to The Postmaster-General, Sydney.

Sir,

Masonic Club, Melbourne, 31 December, 1888.

We herewith beg to apply for the sole right, for the term of three years, to advertise on the back (gum side) of all adhesive postage and duty stamps issued by the New South Wales Government, for which we offer to pay the following consideration, namely:—For the first year, £8,000; for the second year, £10,000; for the third year, £12,000, payable quarterly in advance.

The first payment to be made and the first advertisements to be issued within three months of the granting of our application.

Trusting you will give the above your favourable consideration.

We have, &c.,

HUNTER AND TRUDE.

## [Enclosure.]

In view of the large increase in the revenues our application, if granted, would bring to your Government, we feel perfectly justified in making the application, and in support of which we would earnestly draw your attention to the following statements:—

It will be seen, by the acceptance of our proposals, the revenue will be increased during the first three years by £30,000 sterling, after which term it is more than probable that a much larger annual sum will be derived from the same source.

Such a scheme might not at first sight meet with your approval; but, after due consideration, it must present itself as a very feasible method of collecting a large and yearly increasing revenue from those able to pay it.

To prevent the Government incurring any expense or inconvenience, we would suggest the following course, namely:—The Government Printer to hand us the paper before the stamps are printed, on the back of which we would lithograph the advertisement, in such a way as to meet with the Government Printer's approval, or any other person appointed by you for that purpose, which inspection would be a safeguard against the impression or colour of our advertisement showing through or in any way damaging the face of the paper.

Our work would be lithographed in very light shade, in such a way as to meet our requirements without interfering with the beauty of the stamp.

Being the promoters of this original idea, we trust that ours will be the only application entertained for the first term.

HUNTER AND TRUDE.

Submitted.—S.H.L., 4/1/89.

Forward to the Colonial Treasurer, who, perhaps, will obtain a report upon the whole question from the Inspector of Stamps and any other officer he may think desirable. I should also be glad to know Mr. Burns' own views upon the matter.—C.J.R., 7/1/89.

The Under Secretary for Finance and Trade.—S.H.L., B.C., 8/1/89. For my successor.—J.F.B., 11/1/89.

## No. 2.

The Secretary to the Post Office, Sydney, to Messrs. Hunter and Trude, Masonic Club, Melbourne.

Gentlemen,

General Post Office, Sydney, 8 January, 1889.

I am directed by the Postmaster-General to acknowledge the receipt of your letter of the 31st ultimo, applying for the sole right to advertise on the back of postage and duty stamps for three years, and to state in reply that the matter has been referred to the Treasury Department for the report of the Inspector of Stamps.

I have, &c.,

S. H. LAMBTON,

Secretary.

## No. 3.

Messrs. Hunter and Trude, Melbourne, to The Postmaster-General, Sydney.

Sir,

Masonic Club, Melbourne, 25 January, 1889.

Referring to our application of the 1st instant, for the sole right for the term of three years to advertise on the back of stamps, as we find the Department might have a possible objection to allowing the water-marked paper leaving their premises, we beg to suggest the following amendment to our application:—Instead of the paper being handed to us, on which to print our advertisements, we are prepared to deliver to the Government Printer the lithographic stones, with instructions as to how many sheets to be struck off in each case, thus getting over the possible difficulty at a cost to the Department of not more than £200 per annum.

We enclose herewith a rough sample of the way in which we propose to do our work, and trust the same will meet with your approval.

We have, &c.,

HUNTER AND TRUDE.

Referred to the Under Secretary for Finance and Trade, with reference to previous papers forwarded on the 9th instant.—S.H.L., B.C., 28/1/89. Might be referred to the Government Printer for report.—G.E., 2/2/89. Forward for report.—J.P.G., 2/2/89. The Government Printer.—G.E., 4/2/89.

## No. 4.

The Secretary to the Post Office, Sydney, to Messrs. Hunter and Trude, Masonic Club, Melbourne.

Gentlemen,

General Post Office, Sydney, 29 January, 1889.

I have the honor to acknowledge the receipt of your letter of the 25th instant, further respecting your application to advertise on the back of postage stamps, and to state that it has also been referred to the Treasury Department. So soon as a decision has been arrived at, you will be duly informed.

I have, &c.,

S. H. LAMBTON,

Secretary.

## No. 5.

## Report of The Inspector of Stamps.

I HAVE seen the postage stamps issued by almost all the civilized countries of the world, and in no case that I am aware of are they made the medium for tradesmen's advertisements.

Apart from sentimental considerations, I am averse to acceding to Messrs. Hunter and Trude's request. Principally, because the advertisements would tend to obscure the water-mark in the paper, which is the chief security against forgery.

In addition to this risk the present admirable arrangement for the printing and security of the stamps would in a great measure be upset. There is no room in the Stamp Branch for a litho. machine such as would be required, and the advertisements would therefore have to be printed in another part of the building. This course would be open to the gravest objections. On

On no account would it be advisable to allow a private firm to have the handling or manipulation of the paper.

However, should the revenue to be derived be thought to outweigh the risk and inconvenience, I will cheerfully acquiesce in any arrangement it may be thought proper to make.  
The Under Secretary for Finance and Trade.

C.P., 7/2/89.

The Postmaster-General.—J.P.G., 11/2/89. The Secretary, General Post Office.—G.E., 12/2/89.

#### No. 6.

EXTRACT from the Joint Report of the Deputy Postmaster-General of Victoria, the Postmaster-General of South Australia, and the Secretary to the Post Office of New South Wales, who met at Melbourne on the 26th January, 1889.

#### No. 11—Hunter and Trude's offer.

SHOULD the Governments be disposed to entertain Messrs. Hunter and Trude's offer, we suggest that it should, tentatively, be accepted, with certain modifications, for a period of one year, and be restricted to stamps of the various denominations up to, but not exceeding, 1s. in value. The advertisements to be printed by the Government Printer of Stamps, the blocks being supplied by Messrs. Hunter and Trude, so as to avoid the necessity for the unprinted stamp-paper going out of the possession of the Government. The contract, if found unobjectionable in practice, might be renewed if thought desirable, say for another year, on the same or increased payments; but after that period, it should be open to competition, tenders being invited in the usual way. Payment to be made quarterly, in advance, as proposed.

Submitted, with former papers returned from the Treasury yesterday.—S.H.L., 28/2/89.  
Approved.—Should Cabinet agree to accept offer.—H.C., 28/2/89.

#### No. 7.

Telegram from The Postmaster-General, Adelaide, to The Secretary to the Post Office, Sydney.

2nd March, 1889.

GOVERNMENT have decided to accept Hunter and Trude's offer for three years, subject to the termination at end of year if found objectionable, the recommendations of recent Departmental Conference in respect to printing and conditions being approved. Nothing was said in our report as to whether Hunter and Trude should pay anything for printing, but in accepting offer it is understood that department pays for printing. Hunter and Trude, however, provide stones or blocks and other appliances. What do you think?

C. TODD.

#### No. 8.

The Deputy Postmaster-General, Melbourne, to The Secretary to the Post Office, Sydney.

Post and Telegraph Department, General Post Office,

Sir,

Melbourne, 30 April, 1889.

I have the honor, by direction, to request that you will be so good as to inform me whether your Administration has concluded an agreement with Messrs. Hunter and Trude as to printing advertisements on the blank side of postage stamps, and if so, upon what terms?

I have, &c.,

W. GALBRAITH

(For Deputy Postmaster-General).

Submitted, with papers.—S.H.L., 3/5/89.

Approved by Cabinet.—D.O'C., 6/5/89.

#### No. 9.

The Secretary to the Post Office, Sydney, to The Under Secretary for Finance and Trade, Sydney.

Sir,

General Post Office, Sydney, 10 May, 1889.

I am directed to enclose papers concerning an offer made by Messrs. Hunter and Trude, for the right of advertising on the back—gummed side—of all adhesive postage and duty stamps issued by the New South Wales Government for three years; they paying the following consideration, namely, for the first year £8,000, for the second year, £10,000; for the third year, £12,000; payable quarterly in advance; which offer has been submitted by the Postmaster-General to the Cabinet, and was approved by it on the 6th instant.

I am to request that you will be so good as to move the Colonial Treasurer to cause the necessary instructions to be given in this matter to the Government Printer, and I am to state that so far as the postage stamps are concerned the offer is to be accepted, on the distinct understanding that the advertising blocks are to be supplied by Messrs. Hunter and Trude, so as to avoid the necessity for unprinted stamp-paper going out of the possession of the Government.

If you will kindly return the papers to me when the action indicated has been taken by your Department, as regards the Government Printer, the formal acceptance of Messrs. Hunter and Trude's offer, which is addressed to the Postmaster-General, will be sent out by this Department.

I have, &c.,

S. H. LAMBTON.

For the present this only to apply to postage stamps.—W.McM., 13/5/89. The Government Printer to make the necessary preparation for printing the postage stamps.—G.E., 13/5/89. Noted. Arrangements will be made accordingly.—C.P., 31/5/89. The Under Secretary for Finance and Trade. The Secretary, General Post Office.—G.E., 31/5/89.

No. 10.

## No. 10.

The Secretary to the Post Office, Sydney, to The Deputy Postmaster-General,  
Melbourne.

Sir, General Post Office, Sydney, 10 May, 1889.

In reply to your letter, dated the 30th ultimo, inquiring what has been done in regard to the offer made by Messrs. Hunter and Trude as to the printing advertisements on the back—gummed side—of postage stamps, I have the honor to inform you that the Colonial Treasurer of this Colony has been requested by the Postmaster-General, with the approval of the Cabinet, to take steps for the acceptance of the offer made by that firm, as follows:—They being granted the right to print advertisements on the back of all adhesive postage and duty stamps issued by the New South Wales Government for three years, and paying therefor the sum of £8,000 for the first year; £10,000 for the second year; and £12,000 for the third year; such payments to be made quarterly in advance.

I am to add that the offer is to be accepted on the distinct understanding that the advertising blocks are to be supplied by Messrs. Hunter and Trude, so as to avoid the necessity for unprinted stamp-paper going out of the hands of the Government.

Messrs. Hunter and Trude have not yet been communicated with by this Department, but this will be done so soon as the necessary preliminary steps have been completed.

I have, &c.,  
S. H. LAMBTON,  
Secretary.

## No. 11.

The Under Secretary for Finance and Trade, Sydney, to The Secretary to the Post  
Office, Sydney.

Sir, The Treasury, New South Wales, Sydney, 14 May, 1889.

I have the honor, by direction of the Colonial Treasurer, to acknowledge the receipt of your letter of the 10th instant, and to inform you in reply that the Government Printer has been instructed to make the necessary preparation for the printing of the postage stamps only.

I have, &c.,  
G. EAGAR.

The Treasury should, I think, be requested to at once countermand the instructions to prepare for the printing on the postage stamps only. Messrs. Hunter and Trude's offer—accepted by Cabinet—was for duty stamps also, and, of course, does not hold good as regards postage stamps only, and it would seem that nothing can be done until the instructions be given with regard to duty stamps also.—S.H.L., 15/5/89.

I concur.—D. O'C., 16/5/89.

## No. 12.

The Secretary to the Post Office, Sydney, to The Under Secretary for Finance and  
Trade, Sydney.

Sir, General Post Office, Sydney, 16 May, 1889.

With reference to your letter, dated the 14th instant, intimating that the Government Printer has been instructed to make the necessary preparation for the printing of postage stamps only in connection with Messrs. Hunter and Trude's offer to pay for the privilege of advertising on the backs of stamps, I am directed to invite your attention to the fact that my letter of the 10th instant mentioned both postage and duty stamps, and to request, therefore, that you will be so good as to move the Colonial Treasurer to at once countermand the instructions to prepare for the printing on postage stamps only. Messrs. Hunter and Trude's offer—accepted by the Cabinet—was for printing on duty stamps also, and the offer, of course, does not hold good as regards postage stamps only, and it would seem that nothing can be done until the instructions be given with regard to duty stamps also.

I have, &c.,  
S. H. LAMBTON.

## No. 13.

The Under Secretary for Finance and Trade, Sydney, to The Secretary to the Post  
Office, Sydney.

Sir, The Treasury, New South Wales, Sydney, 17 May, 1889.

Referring to your letter of yesterday's date, I have the honor, by direction of the Colonial Treasurer, to inform you that instructions have now been given to the Government Printer to make the necessary preparations for printing on both postage and duty stamps.

I have, &c.,  
G. EAGAR.

## No. 14.

The Secretary to the Post Office, Sydney, to The Under Secretary for Finance and  
Trade, Sydney.

Sir, General Post Office, Sydney, 21 May, 1889.

Adverting to previous correspondence, and to papers referred to your Department on the 10th instant, relative to the offer of Messrs. Hunter and Trude to pay certain sums for the privilege of printing advertisements on the back of postage and duty stamps, I am directed to request that you will be so good as to favour me by returning the papers in the matter as early as possible.

I have, &c.,  
S. H. LAMBTON.

No. 15.

## No. 15.

## Minute of The Secretary to the Post Office.

The arrangement approved of by the Colonial Treasurer since the 13th May (see Treasury letter of the 17th May herewith) goes beyond that noted by the Government Printer on the 31st May. Perhaps the papers should go on to Mr. Potter again, who will also perhaps suggest any minor conditions he thinks necessary before I send the letter (draft herewith) to Messrs. Hunter and Trude.  
The Under Secretary for Finance and Trade, B.C., 4/6/89. S.H.L.

[Enclosure.]

Draft of letter to Messrs. Hunter and Trude, Melbourne.

Gentlemen,

Referring to your letters of the 31st December and 25th January last, applying for the sole right, for the term of three years, to advertise on the back—gummed side—of all the adhesive postage and duty stamps issued by the Government of this Colony, and agreeing to pay for this concession the sum of £8,000 for the first, £10,000 for the second, and £12,000 for the third year, such payments to be made quarterly in advance, I am directed by the Postmaster-General to inform you that on the understanding that the advertisements are restricted to stamps of the various denominations up to, but not exceeding, 1s. in value, and that the blocks and lithographic stones are supplied by yourselves—the printing being done by the Government Printer—the Government is willing to grant your application for a period of one year, and if the contract be found unobjectionable in practice, to renew it for another year, after which it should, it is thought, be open to competition, tenders being invited in the usual way.

Should you agree to these terms, I am to request that you will advise me as soon as possible of the date upon which you will be prepared to make the first quarterly payment.

I have, &amp;c.,

The Government Printer.—F.K. (*pro* U.S.), B.C.

In addition to what is made conditional in the draft letter, I should like it to be part of the agreement:—1. That the printing and issue of any postage or duty stamps shall not be delayed in consequence of the lithographic stones bearing the advertisements not being in readiness through the neglect of the contractors to supply them. 2. That the repetition of advertisements shall not be confined to any one of the denominations of stamps named in the agreement, if found inconvenient to do so by the Inspector of Stamps, but may be continued from one denomination to another until the number of sheets on which any block of advertisements is to appear has been completed. 3. That it be at the option of the Inspector of Stamps to decide that movable type or stereotype plates or blocks be substituted for litho. stones for the printing of the advertisements. This is in view of the possibility of printing the stamps and advertisements at the one time, and in the same machine. A machine that may render this possible has already been ordered from England. 4. Contractors to supply litho. stones or stereotypes, as the case may be, to suit the various sizes of stamps.—C.P., B.C., 7/6/89. The Under Secretary for Finance and Trade.

The Secretary, General Post Office.—G.E., B.C., 13/6/89. I think, in accepting Messrs. Hunter and Trude's offer, the conditions proposed above by the Government Printer should be stipulated.—S.H.L., 17/6/89. I see no objection.—D.O'C., 18/6/89.

## No. 16.

## The Deputy Postmaster-General, Melbourne, to The Secretary to the Post Office, Sydney.

Post Office and Telegraph Department, General Post Office,

Sir,

Melbourne, 4 June, 1889.

Adverting to your letter of the 10th ultimo, in reply to mine of the 30th April, respecting the offer of Messrs. Hunter and Trude for printing advertisements on the back of adhesive stamps, I have the honor, by direction of the Postmaster-General, to inform you that Messrs. Hunter and Trude have now withdrawn their offer and substituted a proposal—which Mr. Derham has declined—that the Government should call for tenders, making provision for Mr. Hunter's patent in the way of a royalty of 1s. per one thousand stamps tendered for.

I have, &amp;c.,

JAMES SMIBERT,

Deputy Postmaster-General.

Submitted.—S.H.L., 6/6/89.

Seen.—D.O'C., 7/6/89.

## No. 17.

## The Postmaster-General, Adelaide, to The Secretary to the Post Office, Sydney.

Post Office and Telegraph Department, General Post Office,

Sir,

Adelaide, 7 June, 1889.

I have the honor to ask whether Messrs. Hunter and Trude have commenced the printing of advertisements upon your postage stamps, or if not what is the state of your negotiations.

I have, &amp;c.,

CHARLES TODD,

Postmaster-General and Superintendent of Telegraphs.

## No. 18.

## The Secretary to the Post Office, Sydney, to The Postmaster-General, Adelaide.

Sir,

General Post Office, Sydney, 14 June, 1889.

With reference to your inquiry of the 7th instant, as to whether Messrs. Hunter and Trude have commenced the printing of advertisements on our postage stamps, I have the honor to state that we were disposed to accept the offer of the firm named, and the papers have been sent to the Government Printer with regard to the proposed printing of the advertisements, but no communication, accepting the offer in question, has been addressed to the firm.

I

I may mention that a communication has been received from the Melbourne Post Office to the effect that Messrs. Hunter and Trude have lately withdrawn the offer made to that office and have substituted another, which Mr. Derham has declined.

I have, &c.,  
S. H. LAMBTON,  
Secretary.

---

No. 19.

The Secretary to the Post Office, Sydney, to Messrs. Hunter and Trude, Masonic Club, Melbourne.

Gentlemen,

General Post Office, Sydney, 19 June, 1889.

Referring to your letters of the 31st December and 25th January last, applying for the sole right, for the term of three years, to advertise on the back—gummed side—of all adhesive postage and duty stamps issued by the Government of this Colony, and agreeing to pay for this concession the sum of £8,000 for the first, £10,000 for the second, and £12,000 for the third year, such payments to be made quarterly in advance, I am directed by the Postmaster-General to inform you that on the understanding that the advertisements are restricted to stamps of the various denominations up to, but not exceeding, 1s. in value, and that the blocks and lithographic stones are supplied by yourselves, the printing being done by the Government Printer, the Government is willing to grant your application for a period of one year, subject to the conditions hereinafter specified, and if the contract be found unobjectionable in practice, to renew it for another year, after which it should, it is thought, be open to competition, tenders being invited in the usual way.

The following are the conditions before referred to:—

1. That the printing and issue of any postage or duty stamps shall not be delayed in consequence of the lithographic stones bearing the advertisements not being in readiness, through the neglect of the contractors to supply them.
2. That the repetition of advertisements shall not be confined to any one of the denominations of stamps named in this agreement, if found inconvenient to do so by the Inspector of Stamps, but may be continued from one denomination to another until the number of sheets on which any block of advertisements is to appear has been completed.
3. That it be at the option of the Inspector of Stamps to decide that movable type or stereotype plates or blocks be substituted for litho. stones for the printing of the advertisements. (This is in view of the possibility of printing the stamps and advertisements at the one time, and on the same machine. A machine that may render this possible has already been ordered from England.)
4. That contractors shall supply litho. stones or stereotypes, as the case may be, to suit the various sizes of stamps.

Should you agree to these terms, I am to request that you will advise me, as soon as possible, of the date on which you will be prepared to make the first quarterly payment.

I have, &c.,  
S. H. LAMBTON,  
Secretary.

## No. 23.

The Secretary to the Post Office, Sydney, to The Postmaster-General, Adelaide.

Sydney, 22 July, 1889.

We informed Hunter and Trude, 19th ultimo, that we were willing to accept their application for advertising on stamps of various denominations up to, but not exceeding, 1s. in value for one year, subject to certain specified conditions, but have not yet received a reply to our letter.

S. H. LAMBTON,  
Secretary.

Reply, dated  
16th July (No.  
24), was received  
after the  
despatch of this  
message.

## No. 24.

Messrs. Hunter and Trude to The Postmaster-General.

Sir,

Brisbane, 19 July, 1889.

We have the honor to acknowledge your letter of the 19th June, *re* advertising on the back of postage stamps, and offering us the right for one year.

We were very sorry to learn that you did not see your way clear within reasonable time to grant our application.

The terms offered in the letter referred to above do not meet with our approval, and we beg, therefore, so much time having elapsed, to withdraw our application, surrendering any moral rights we may have for the introduction of this valuable scheme to Messrs. Tate and party of your city.

I have, &c.,

HUNTER AND TRUDE.

Submitted.—S.H.L., 22/7/89.

## No. 25.

Messrs. G. W. Tate & Co. to The Postmaster-General.

Sir,

72, Castlereagh-street, Sydney, 22 July, 1889.

We herewith beg to apply for the sole right, for the term of three years, to advertise on the back (gum) side of all adhesive postage and duty stamps issued by the New South Wales Government, for which we offer to pay the following consideration, namely:—For the first year, £2,500; for the second year, £3,000; for the third year, £3,500; payable as may be arranged. The first payment to be made and the first advertisements issued within three months of the granting of our application.

Trusting you will give the above your favourable consideration,

We have, &c.,

G. W. TATE & COMPANY.

Refer to Mr. Lambton.—D.O'C., 23/7/89.

The amounts offered by Messrs. Hunter and Trude were £8,000 for the first year, £10,000 for the second year, £12,000 for the third year, and this offer was only accepted subject to certain conditions mentioned in letter of 19th June last.\* Messrs. Tate & Co. offer less than one-third of the above amounts, and nothing is said about accepting the conditions imposed on Hunter and Trude, although they are aware of the nature of them. As the arrangement would involve considerable labour and expense, including, I believe, the purchase of a new machine by the Government Printer, I do not think it would be worth while accepting the proposal now made.—S.H.L., 25/7/89.

\* See No. 19 of  
these papers.

Write to Messrs. Tate & Co. to reconsider and submit a better offer. I do not feel disposed to refuse any means of income that will enable this Department to meet the large outlay that is inevitable in the construction of new post and telegraph offices which are required, and to purchase the land to put them on.—D.O'C., 6/8/89.

## No. 26.

The Secretary to the Post Office to Messrs. G. W. Tate & Co., Sydney.

Gentlemen,

General Post Office, Sydney, 8 August, 1889.

With reference to your application of the 22nd ultimo, for the sole right, for a term of three years, to advertise on the gum side of adhesive postage and duty stamps, for which you offer to pay £2,500 for the first year, £3,000 for the second year, and £3,500 for the third year, I am directed to point out that Messrs. Hunter and Trude, who also made application in this matter, and who have since intimated that they have "surrendered any moral rights" they may have, to you, offered for this privilege £8,000, £10,000, and £12,000 for the first, second, and third years, respectively, which offer the Postmaster-General was disposed to accept under certain specified conditions already known to you; but, as the arrangement would involve considerable labour and expense, he is of opinion that your offer—which is less than one-third of the original one referred to—is altogether unreasonable.

If, however, you are willing to submit a more liberal offer, Mr. O'Connor desires me to inform you that he will further consider the matter.

The favour of an early reply is requested.

I have, &c.,

S. H. LAMBTON,  
Secretary.

## No. 27.

Messrs. G. W. Tate & Co. to The Secretary to the Post Office.

Sir,

72, Castlereagh-street, Sydney, 9 August, 1889.

We beg to acknowledge receipt of your communication of the 8th instant, in reply to our application for the sole right to advertise on postage and duty stamps.

Referring to your remarks about the offer made by Messrs. Hunter and Trude, we beg to say that the reason of these gentlemen withdrawing was that they found the amount offered was greatly in excess of the anticipated returns from the advertisements when tendering.

After:

After further consideration, and in order to meet the views of the Postmaster-General, we beg to submit an increased offer of £500 (five hundred pounds per annum) upon the amount stated by us in our application of the 22nd ultimo.

We have, &c.,

G. W. TATE & CO.

This is still very far short of the offer of Messrs. Hunter and Trude. Perhaps the Government Printer might be asked to give an estimate of the actual cost to the Government that the acceptance of Messrs. Tate & Co.'s offer would entail.—S.H.L., 10/8/89.

I concur in the opinion that it would be prudent to communicate with the Government Printer. Let it be done without delay.—D.O'C., 10/8/89.

#### No. 28.

#### The Secretary to the Post Office to The Under Secretary for Finance and Trade.

Sir,

General Post Office, Sydney, 12 August, 1889.

With reference to correspondence on the subject of Messrs. Hunter and Trude's offer for the right of advertising on the gummed side of postage and duty stamps, I am directed to inform you that that firm has withdrawn their offer and intimated that they have "surrendered any moral rights they may have" to Messrs. G. W. Tate & Co., of Sydney, who have made an amended offer in the matter, namely, £3,000, £3,500, and £4,000, for the first, second, and third years respectively, as against Messrs. Hunter and Trude's offer of £8,000, £10,000, and £12,000.

Before considering this latter offer, the Postmaster-General would be glad if you would kindly cause the Government Printer and Inspector of Stamps to give an estimate of the actual cost to the Government that Messrs. Tate & Co.'s offer would entail, it being understood that the advertisements would be restricted to stamps of the denominations up to, but not exceeding, 1s. in value, and that the blocks and lithographic stones would be supplied by that firm.

Mr. O'Connor will be glad of an early reply.

I have, &c.,

S. H. LAMBTON.

The Government Printer.—G.E., 12/8/89.

The cost of printing would not exceed £250 per annum, except for the first year, which would be £450, as £200 would be required for the purchase and fixing of a lithographic printing machine.—C.P., B.C., 13/8/89. The Under Secretary, Finance and Trade.

The Secretary, General Post Office.—G.E., B.C., 15/8/89.

#### No. 29.

#### Minute by the Secretary to the Post Office.

THE amount now offered, namely, £3,000 for first year, £3,500 for second year, £4,000 for third year, though much less than offered by Hunter and Trude, might perhaps be accepted under the conditions laid down in my letter of 19th June last, with the additional stipulation that until the first quarter's instalment (£750) be actually paid. The Department incurs no expense whatever in connection with the matter.

It will of course be understood that no advertisements of a libellous or obscene tendency will be allowed. It is not likely that any such would be issued, but it would perhaps be as well to secure the Department from any risk of being made the medium of disseminating objectionable matter.

S.H.L., 19/8/89.

I concur.—D.O'C., 20/8/89.

#### No. 30.

#### The Secretary to the Post Office to Messrs. G. W. Tate & Co.

Gentlemen,

General Post Office, Sydney, 22 August, 1889.

With reference to your letters, dated the 22nd July and 9th August respectively, applying for the sole right for a term of three years, to advertise on the back (gummed side) of all adhesive postage and duty stamps issued by the Government of this Colony, on payment of, as stated in the last-mentioned letter, for the first year, £3,000; for the second year, £3,500; and for the third year, £4,000; payable as may be arranged; I am directed by the Postmaster-General to inform you that on the understanding that the advertisements are restricted to stamps of the various denominations up to, but not exceeding, 1s. in value, and that the blocks and lithographic stones are supplied by yourselves—the printing being done by the Government Printer—the Government is willing to grant your application for a period of one year, subject to the conditions hereinafter specified; and if the contract be found unobjectionable in practice, to renew it for another year, after which, it should, it is thought, be open to competition, tenders being invited in the usual way. The following are the conditions referred to:—

1. That the printing and issue of any postage or duty stamps shall not be delayed in consequence of the lithographic stones bearing the advertisements not being in readiness through the neglect of the contractors to supply them.

2. That the repetition of advertisements shall not be confined to any one of the denominations of stamps named in this agreement, if found inconvenient to do so by the Inspector of Stamps, but may be continued from one denomination to another, until the number of sheets on which any block of advertisements is to appear has been completed.

3. That it be at the option of the Inspector of Stamps to decide that movable type, or stereotype plates, or blocks, be substituted for litho. stones for the printing of the advertisements. (This is in view of the possibility of printing the stamps and advertisements at the same time, and on the same machine. A machine that may render this possible has already been ordered from England).

4. That the contractors shall supply litho. stones or stereotypes, as the case may be, to suit the various sizes of stamps.

5. That the payments to the Government be made quarterly in advance, and that until the first quarter's instalment (£750) be actually paid, the Department incurs no expense whatever in connection with the matter.

It

It will be understood that no advertisements of a libellous or obscene tendency will be allowed. It is, of course, not anticipated that any such would be issued, but it is thought right to secure the Department from any possible risk of being made the medium of disseminating objectionable matter.

You will perceive that the conditions contained in this letter are precisely the same as those in my letter of the 19th June last, addressed to Messrs. Hunter and Trude—of which you have a copy—with the addition of No. 5, and the stipulation as to the character of the advertisements.

Should you agree to these terms, I am directed by the Postmaster-General to request that you will be so good as to advise him as soon as practicable of the date upon which you will be prepared to make the first quarterly payment.

I have, &c.,  
S. H. LAMBTON,  
Secretary.

---

No. 31.

Messrs. G. W. Tate & Co. to The Postmaster-General.

Sir, 50, Victoria Arcade, Castlereagh-street, Sydney, 29 August, 1889.

We have the honor to acknowledge receipt of your letter of 22nd August, 1889, in reply to ours of 22nd ult. and 9th inst., and note contents thereof, and we beg to accept the terms contained therein, making the first quarterly payment, £750, on or before the 1st day of December, 1889.

*Re* clause 3 of the conditions (3)—“That it be at the option of the Inspector of Stamps to decide that movable type or stereotype plates or blocks be substituted for litho. stones for the printing of the advertisements”—we desire to call your attention to this clause, which we consider impracticable, as any printing other than by the litho. process on the back of the stamps is likely to be injurious to the face of the stamps, and would also incur much more expense on us, and impede our progress with the scheme. In view of which we trust you will see your way clear to omit this clause.

We have, &c.,  
G. W. TATE & CO.

Perhaps Mr. Potter will report on the proposed modification of our conditions.—S.H.L., 29/8/89.

The adoption of the modification proposed will not make a great deal of difference, as the end of the new machine it was contemplated to use for printing on the backs of stamps can be utilized for printing another denomination,—that is, it will be possible to print two denominations of stamps at the same time. It is assumed that Messrs. Tate & Co. will have to find sureties for the due performance of their part of the contract.—C.P., 2/9/89.

The modification proposed by Messrs. Tate & Co. might be agreed to. As regards security, I think that if the stipulation already imposed as regards payments being made quarterly in advance is insisted on the Department will be amply protected.—S.H.L., 3/9/89.

I concur.—D. O’C., 7/9/89.

---

No. 32.

The Secretary to the Post Office to Messrs. G. W. Tate & Co.

Gentlemen, General Post Office, Sydney, 10 September, 1889.

I am directed by the Postmaster-General to acknowledge the receipt of your letter of the 29th ultimo, agreeing to the terms, with the exception hereinafter alluded to, on which the Government is willing to grant you the sole right for a term of one year, and to grant an extension for another year should the contract be found unobjectionable in practice, to advertise on the back (gummed side) of postage and duty stamps, and intimating that the first quarterly payment of £750 will be made on or before the 1st December next.

In reply, I am to inform you that the condition to which you take exception, namely, that giving the Inspector of Stamps the option of requiring movable type or stereotype plates or blocks to be substituted for litho. stones for the printing of the advertisements, will not be insisted on.

I have, &c.,  
S. H. LAMBTON,  
Secretary.

No. 33.

Telegram from The Secretary to the Post Office, Sydney, to The Deputy Postmaster-General, Melbourne, and The Postmaster-General, Adelaide.

Sydney, 11 September, 1889.

*Re* advertising on postage and duty stamps: We have just concluded following experimental arrangement with Messrs. G. W. Tate & Co., of Sydney, to whom Messrs. Hunter and Trude have “surrendered any moral rights” they may have had in the matter, namely, for right to advertise on all adhesive stamps, not exceeding 1s. in value, issued by the Government, three thousand pounds (£3,000) for the first year, and, if arrangement continued, three thousand five hundred pounds (£3,500) for second year, payable quarterly in advance, and subject to Postmaster-General having power to prevent publication of advertisements of libellous or obscene tendency, and to his having power to control certain mechanical and other details connected with the printing.

S. H. LAMBTON.

---

No. 34.

The Deputy Postmaster-General, Melbourne, to The Secretary to the Post Office, Sydney.

Melbourne, 11 September, 1889.

THANKS for telegram in *re* printing on stamps. As Hunter and Trude withdrew their first proposals, the matter has been held over here.

JAS. SMIBERT.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## FORMATION OF STREET NORTH OF THE GENERAL POST OFFICE.

(FURTHER CORRESPONDENCE.)

*Ordered by the Legislative Assembly to be printed, 21 June, 1889.*

J. Thompson, Esq., to The Postmaster-General.

*Re Post Office street.*

Sir,

Vickery's Chambers, Pitt-street, Sydney, 1 June, 1888.

I have the honor to state that my attention has been called to the report of the Parliamentary proceedings in the *Sydney Morning Herald* of this morning, in which the Hon. Sir Henry Parkes is reported to have said that Mr. W. H. Jennings had been in communication with the Government as the selected agent of all the parties concerned, and I am instructed to write you that if Mr. Jennings ever was the agent of Messrs. Thompson and Giles that agency was determined and put an end to on the 10th May last. There was an agreement, dated 2nd March, 1888, between my clients—Messrs. Thompson and Giles—and Mr. Jennings which was dependent and conditional upon certain things being done by the 1st May, 1888. The things mentioned were not done, and in pursuance of the 9th clause of the agreement referred to, my clients exercised the right they undoubtedly had of cancelling the agreement of 2nd March, and declaring their obligations thereunder void. The letter announcing this cancellation was sent addressed to Mr. Jennings and to Messrs. Want, Johnson, & Company, his solicitors, and a copy of the same will be again sent to Mr. Jennings to-day.

Messrs. Thompson and Giles are not now prepared to deal with the Government except they do so themselves, and without the mediation of Mr. Jennings or any one else, and will repudiate anything that may be arranged with or through him on their behalf.

My clients are further considering the advisability of publishing for general information such of the correspondence as they may think fit, and this letter.

I have, &c.,

JOSEPH THOMPSON.

W. H. Jennings, Esq., to The Postmaster-General.

Sir,

Sydney, 5 June, 1888.

Adverting to my letter addressed to you, bearing date the 11th of April, 1888, in reference to the Post Office street, and adverting to a letter which, I am informed, Messrs. Thompson and Giles, through their solicitor, have sent in to you denying my authority to bind them to accept the terms embodied in the first-mentioned letter, I have the honor to inform you that the authority which gave me the right to send you the letter embodying the terms upon which this resumption was to be settled and compensation allowed is in writing, and forms the subject of a special agreement between Messrs. Thompson and Giles and myself; furthermore, that the authority so given is irrevocable, and that I had then, as I have now, in terms of that document, a full and indisputable right to close with the Government upon the terms which I have already proposed.

Although I, personally, have no doubt whatever with regard to my position, I have taken the precaution to procure the best legal advice, which confirms the views I have above expressed.

As to the owners of the freehold, namely, Mr. Perkins and the Honorable Thomas Holt, so far from repudiating my authority they have in every way assisted me to consummate the present negotiations, and are prepared now, as they have been all through, to perform and carry out to the letter the propositions which I have formulated. Messrs. Thompson and Giles, through their solicitor, are acting in strict defiance of their solemn engagement, and the agreement above referred to, in notifying to you that I have no longer a right to close this matter.

I have, &c.,

W. H. JENNINGS.

The Crown Solicitor to The Secretary to the Post Office.

Subject:—*In re* Mr. Jennings' authority to deal with the Government as to Post Office street.

Sir,

Crown Solicitor's Office, Sydney, 11 June, 1888.

I have the honor to return herewith the papers relating to the above matter which were forwarded to me from your Department on the 8th day of June, 1888, and to state that I have submitted them to Mr. Attorney-General Simpson, a copy of whose advising thereon will be found upon the other side\* of this letter.

I have, &c.,

JOHN WILLIAMS,  
Crown Solicitor.

[Enclosure.]

COPY OPINION.

I CERTAINLY don't think it would be safe for the Postmaster-General to complete the negotiation with Mr. Jennings whilst the dispute between him and Messrs. Thompson and Giles remains unsettled.

I have looked at the letter of Mr. Jennings of the 11th April—set out in *Hansard* 5167—and I see that he writes as representing Messrs. Thompson and Giles. They now repudiate his authority to negotiate for them, and contend that if he ever was their agent for the purpose that agency was determined and put an end to on the 10th May last. [See Joseph Thompson's letter, 1st June.]

Mr. Jennings states that the authority which gave him the right to send the letter of the 11th April is in writing, and forms the subject of a special agreement between Thompson and Giles and himself, and contends that the authority is irrevocable.

If Mr. Jennings refers to the agreement of the 2nd March, 1888,—as I presume he does—I entertain considerable doubt as to whether he had authority to write the letter of the 11th April. I am inclined to think he had not; but I have not very carefully considered this point, as I could not advise my colleague to complete a contract which would almost certainly plunge the Government into litigation. Even if Mr. Jennings had authority, the allegation is that it was withdrawn on the 2nd May, and the contention on the part of Mr. Jennings that the authority could not be revoked raises a very important and debatable question between the parties, in the settlement of which I don't think it would be wise for the Government to become entangled.

G. B. SIMPSON, A.-G.,  
9/6/88.

Submitted.—S.H.L., 11/6/88.

Minute by The Postmaster-General.

Post Office street.

SINCE the adjournment of the debate in Parliament on the morning of the 1st instant I have received the attached letter, dated the 1st June, 1888, from Mr. Joseph Thompson, solicitor for Messrs. Thompson and Giles, in which it is stated that if Mr. Jennings ever were agent for his clients that agency was determined and put an end to on the 10th May last; that there was an agreement dated the 2nd March, 1888, between Messrs. Thompson and Giles and Mr. Jennings, which was dependent and conditional upon certain things being done by the 1st May, 1888. Mr. Thompson goes on to say that the things mentioned were not done, and, in pursuance of the 9th clause of the agreement referred to, his clients exercised the right they (in the opinion of Mr. Thompson) undoubtedly had of cancelling the agreement of the 2nd March, and declaring their obligations thereunder void.

Mr. Thompson further stated that Messrs. Thompson and Giles were not now prepared to deal with the Government except they do so themselves, and without the mediation of Mr. Jennings or anyone else, and that they will repudiate anything that may be arranged with or through him on their behalf.

A day or two later Mr. Jennings called upon me and assured me that under clause 9 of the agreement referred to between himself and Messrs. Thompson and Giles he could compel Messrs. Thompson and Giles to carry out the terms of the said agreement, and that, if the resolution before the House were carried, he would be prepared to give up that portion of land in order to make the street of a uniform width of 70 feet. I told Mr. Jennings that I would have to be convinced beyond all doubt that he would be able to give effect to the matters mentioned in his letter of the 11th April last, or it would be my duty to consult my colleagues as to the desirableness of proceeding further with the resolution before Parliament. Subsequently I received from Mr. Jennings the attached letter, dated 5th June, 1888, which, together with previous papers, I discussed with the Crown Solicitor on Wednesday, the 6th instant—the day upon which it had been arranged that the debate in the House should be resumed; but the decision arrived at was that it would be better to seek the opinion of the Attorney-General, and the Crown Solicitor promised to obtain the same with as little delay as possible. This opinion reached me yesterday, and having carefully considered the same, I think that it would be unwise for the Government to proceed with the resolution now before Parliament for the present.

C.J.R., 12/6/88.

Messrs. Thompson and Giles to The Postmaster-General.

Re Post Office street.

Sir,

358-362, George-street, Sydney, 13 July, 1888.

We have the honor to inform you in reference to the letter to you from our solicitor, Mr. Joseph Thompson, of 1st June, that we have renewed our agreement with Mr. W. H. Jennings therein referred to, and he is now authorized by us to treat with the Government in this matter in terms of the proposition lately made to the Government.

We have, &c.,

THOMPSON AND GILES.

Minute by The Postmaster-General.

My honorable colleagues, Messrs. McMillan and Bruce Smith, and myself, have carefully considered the question of the Post Office street.

It seemed to us that the first point for determination was whether the street should be one for pedestrian traffic only, as on this would greatly depend the question of width.

Bearing

Bearing in mind that no connection of George and Pitt Streets exists between King and Hunter streets, and the great necessity for an intermediate connection; also recognizing the desirableness of vehicles being enabled to approach the main entrance of the building, as well as the posting boxes, inquiry and stamp sales office, and delivery room, and what is perhaps more important than all, the fact that enhanced value would accrue to the frontages on the north side, we unhesitatingly advise that the new street be one for vehicular as well as pedestrian traffic. Such being our opinion, we consider that a width of 70 feet would be insufficient, and we recommend that it be not less than 100 feet.

After mature consideration, we advise that the Government take steps to resume a sufficient depth of land to make the street a uniform width of 100 feet, and a further depth of *about* 100 feet, the frontages to the new street, by the proposed depth of about 100 feet, to be sold by the Government after the opening of the street, subject to the approval by the Government of the buildings intended to be erected by the purchasers.

The total distance between George and Pitt Streets is      feet, but this includes the Tank Stream, and we advise that a lane of about      feet in width be reserved for the present, so as to enable the question of opening a connection between the new street and Hunter-street to be considered.

In proposing the resumption of land to a depth of *about* 100 feet, in addition to the 100 feet for the street, we use the word "about," as it may be that by taking *exactly* 100 feet, small portions of perhaps some large and costly buildings might need removal, in which case a few feet short of the 100 might suffice, whilst on the other hand, taking a few feet more than the 100 might give us up to, or possibly include, some already existing right-of-way, or complete the area of some particular property.

The first step would probably be to obtain a survey of the land, showing how a depth of 200 feet would divide the various properties, with a view to determining the precise quantity of land to be taken. We think that in the meantime the opinion of the Attorney-General should be obtained on the question of whether the Government has power, under the existing law, to resume land not wholly required for public purposes, and to sell the portion not so required, or whether it would be necessary to bring in a Bill to enable the Government to deal with this special matter in the manner proposed.

As the resumption of 200 feet of land will necessarily occupy some time, I advise that steps be taken to pull down the old Railway Inquiry Office and open the street, an iron fence being erected along our present boundary, or rather, perhaps, some foot or two within it.

DANIEL O'CONNOR, 24/4/89.

#### The Postmaster-General to The Secretary to the Post Office.

Dear Mr. Lambton,

24 April, 1889.

Write at once to the Attorney-General and obtain his opinion in terms of my minute to the Cabinet, *re* Post Office street. Also have a survey of the place and different buildings connected in the locality. My colleagues have decided that instead of calling for tenders and letting the hoarding, that we put up an iron fence of our own, and afterwards decide as to whether we shall allow the use of the fence for advertising purposes. Give the necessary instructions to Mr. Barnet to proceed at once with erection of temporary fence to within a few feet of our boundary. I will see you early to-morrow morning.

I am, &c.,

DANIEL O'CONNOR.

#### The Secretary to the Post Office to The Crown Solicitor.

[Urgent.]

Sir,

General Post Office, Sydney, 24 April, 1889.

The question of opening the new street on the north side of the General Post Office having again been under consideration, it is now proposed that the Government should resume a sufficient depth of land to make the street a uniform width of 100 feet, and a further depth of *about* 100 feet, the frontages to the new street, by the proposed depth of about 100 feet, to be sold by the Government after the opening of the street, with the understanding that the buildings intended to be erected thereon are to be approved by the Government, and the street to be for vehicular as well as pedestrian traffic.

In these circumstances, the Postmaster-General will be glad of the opinion of the Attorney-General, at the earliest date, as to whether the Government has power, under the existing law, to resume land not wholly required for public purposes, and to sell the portion not so required, or whether it would be necessary to bring in a Bill to enable the Government to deal with the matter in the manner proposed.

I have, &c.,

S. H. LAMBTON.

#### The Secretary to the Post Office to The Under Secretary for Lands.

[Urgent.]

Sir,

General Post Office, Sydney, 24 April, 1889.

I am directed by the Postmaster-General to state that the question of opening the street on the north side of the General Post Office having again been under consideration, it is now proposed to make the street one for vehicular as well as pedestrian traffic, and that the Government should take steps to resume a sufficient depth of land to make the street a uniform width of 100 feet, with a further depth of about 100 feet, the frontages to the new street, by the proposed depth of about 100 feet, to be sold after the opening of the street by the Government.

In proposing the resumption of land to the depth of *about* 100 feet, in addition to the 100 feet for the street, the word "about" is specially used, as it may be that by taking *exactly* 100 feet small portions of perhaps large and costly buildings might need removal, in which case a few feet short of the 100 might suffice, whilst on the other hand, taking a few feet more than the 100 might give up to, or possibly include, some already existing right-of-way, or complete the area of some particular property.

In

In the circumstances, Mr. O'Connor desires me to request that you will be so good as to move the Surveyor-General, *at the earliest possible moment*, to obtain a survey of the land, showing how a depth of 200 feet would divide the various properties, with a view to the question of the precise quantity of land to be resumed being determined by the Government.

I have, &c.,  
S. H. LAMBTON.

P.S.—If the Surveyor-General will instruct the officer entrusted with the desired survey to call on me, I will be happy to show him a plan prepared by the Works Department of the portion of the land it was some time ago proposed to take, which may be of some service to him.—S.H.L.

Submitted on the request contained in last par.—R.H.D., 17/5/89. May be approved.—S.F., 17/5/89. Approved.—J.N.B., 20/5/89. Mr. Dist. Met. Dist.-Surveyor Deering (*pro R.D.L.*), 21/5/89. Report No. 1,320 of this date.—J. W. DEERING, 22 May, 1889.

Send reminder to Crown Solicitor *re* question of whether fresh legislation is needed before resuming the property on north side of G.P.O.—S.H.L., 30/4/89.

### The Secretary to the Post Office to The Crown Solicitor.

[Urgent.]  
Sir,

General Post Office, Sydney, 30 April, 1889.

Adverting to my letter dated the 24th instant, on the subject of the proposed opening of the new street on the north side of the General Post Office, and requesting that the opinion of the Attorney-General might be obtained as to the powers of the Government in regard to resuming land not wholly required for public purposes, and selling the portion not so required, I am directed to state that as the matter is specially urgent, Mr. O'Connor would be glad to receive a reply at the earliest possible moment.

I have, &c.,  
S. H. LAMBTON.

### J. Thompson, Esq., to The Postmaster-General.

*Re* Post Office street.

Sir,

Vickery's Chambers, Pitt-street, Sydney, 7 May, 1889.

With reference to the matter of the proposed new street in front of the General Post Office, you may possibly be aware that a letter was written by me on 16th May, 1888, to the Honorable the Colonial Secretary, and another on 1st June, 1888, to the Honorable C. J. Roberts, C.M.G., the then Postmaster-General, on this subject. Following these letters—an arrangement having been come to by the parties—some intimation was sent to the Government that Mr. William Henry Jennings was authorized to act on behalf of my clients, Messrs. Thompson and Giles, in making terms with the Government; whether the time for which such authority was limited was mentioned or not I do not know, but as a matter of fact it was limited by agreement between the parties to the 30th April, 1889:—I have now therefore to inform you that Mr. William Henry Jennings is not now authorized to act for or to bind Messrs. Thompson and Giles in any way, his authority to do so having expired on 30th April last.

At same time I am able to intimate that Messrs. Thompson and Giles will be quite willing to treat with the Government on their own behalf.

I have, &c.,  
JOSEPH THOMPSON,  
Solicitor for Messrs. Thompson and Giles.

Write to Mr. Thompson, and let him know that we are not in a position now for renewing Mr. Jennings' proposals in any shape or form.—D.O'C., 8/5/89.

### The Secretary to the Post Office to J. Thompson, Esq.

Sir,

General Post Office, Sydney, 10 May, 1889.

I am directed to acknowledge the receipt of your letter of the 7th instant, stating that Mr. William Henry Jennings is not now authorized to act for, or to bind Messrs. Thompson and Giles in any way, his authority to do so having expired on the 30th April last, and intimating that Messrs. Thompson and Giles will be quite willing to treat with the Government on their own behalf, and in reply I am to inform you that the Postmaster-General is not in a position to consider the renewal of any proposals of the character of those made by Mr. Jennings to which you refer.

I have, &c.,  
S. H. LAMBTON,

Secretary.

Referring to letters of 24th and 30th ultimo, write to Crown Solicitor, and say that as Mr. O'Connor learns with regret that the illness of the Honorable the Attorney-General is likely to be a prolonged one, he will be glad if the Crown Solicitor will be good enough to employ eminent counsel to advise on the question submitted.—S.H.L., 14/5/89. Urgent.

### The Secretary to the Post Office to The Crown Solicitor.

Sir,

General Post Office, Sydney, 14 May, 1889.

Adverting to my letter dated the 24th ultimo, and my subsequent communication of the 30th idem, relative to the proposed opening of the new street on the north side of the General Post Office, and requesting that the opinion of the Attorney-General might be obtained as regards the power possessed by the Government to resume land, &c., I am directed to state that as Mr. O'Connor learns with regret that the illness of the Honorable the Attorney-General is likely to be a prolonged one, he will be glad if you will be good enough to employ eminent counsel to advise on the question submitted.

I have, &c.,  
S. H. LAMBTON.

The

The Crown Solicitor to The Secretary to the Post Office.

Subject:—Street on north side of the General Post Office, and whether the Government has power under the existing law to resume, &c.

Sir,

Crown Solicitor's Office, Sydney, 16 May, 1889.  
I have the honor to return herewith the papers relating to the above matter which were forwarded to me from your Department on the 24th day of April, 1889, and to state that I have submitted them to Mr. Attorney-General Simpson, a copy of whose advising thereon will be found upon the other side\* of this letter. I have, &c.,

JOHN WILLIAMS,  
Crown Solicitor.

[Enclosure.]

COPY OPINION.

I AM of opinion that it will be necessary to pass an Act to enable the Government to deal with the matter in the manner proposed in the case submitted. It may be that there is power under the existing law (See *Galloway v. Mayor and Commonalty of London*, reported in Vol. 1 of English and Irish Appeals, page 34), but I don't think there is, and it is certainly wiser to introduce a Bill than run any risk of doing that which may be illegal. The Parliamentary Draftsman will prepare the necessary measure upon being instructed by the Postmaster-General to do so.

G. B. SIMPSON, 16/5/89.

J. Thompson, Esq., to The Postmaster-General.

Re Post Office street.

Sir,

Vickery's Chambers, Pitt-street, Sydney, 16 May, 1889.

You will, of course, be aware that Messrs. Thompson and Giles have for many years past been the lessees of the property owned by the late Mr. Thos. Perkins, and now by the devisees under his will. They have had renewals of their lease from time to time, as the old leases have expired, or new arrangements have been made. And they now hold a lease of the land for thirty years (granted in pursuance of an order of the Supreme Court made under the Settled Estates Act), which lease contains a building covenant, a copy of which I enclose for your perusal.

You will probably be aware further that for some years past Messrs. Thompson and Giles have at various times been threatened that the land leased by them, or some portion of it, would be resumed. In consequence of these repeated threats they have been put to excessive inconvenience, and have been hampered in their business in many ways, and have been unable to carry out the improvements which they desire to make, and which are absolutely necessary to enable them to carry on their business to advantage; indeed, to such an extent have they been hampered and inconvenienced that they have suffered to the extent of many thousands of pounds. It cannot be that the Government can by continual threats of resumption, to which they evince no desire to give effect, tie up this land, and prevent its being put to the uses for which it is required.

In view therefore of the former correspondence in this matter, on behalf of Messrs. Thompson and Giles, I have to give you notice that unless the Government resume the land before the 1st day of July, 1889, they will consider themselves fully at liberty to proceed with their intended buildings, in terms of the covenant contained in their lease, and must necessarily hold the Government responsible for any damage or loss they may incur by reason of any resumption after that date.

In order that you may be satisfied as to the position of my clients in this matter, and as to the nature of the correspondence on this subject, I would ask you to be good enough to let same have your careful consideration, especially the letters mentioned at foot hereof.

I have, &c.,

JOSEPH THOMPSON,

Solicitor for Messrs. Thompson and Giles.

- 25th Sept., 1883.—Letter written on behalf of Thompson and Giles to the Hon. the Colonial Secretary.
- 20th Oct., 1883.—No. 83-8,521. Letter to Joseph Thompson in reply.
- 19th Dec., 1883.—Letter from Messrs. Thompson and Giles to the Hon. the Colonial Secretary.
- 10th Jan., 1884.—Reply to same.
- 30th Nov., 1885.—Letter on behalf of Messrs. Thompson and Giles to the Hon. the Colonial Secretary, to which no reply has ever been received.

[Enclosure.]

Copy of Covenant contained in lease of premises in George-street, Sydney, to Messrs. Thompson and Giles.

AND also will at their own expense, within five years from the said first day of August last, erect buildings of brick or stone, or partly of one and partly of the other, upon the said parcel of land, according to the plans, drawings, elevations, and specifications to be approved of in writing by the said lessor, or architect appointed by the said lessor, before the same shall be commenced, such buildings, exclusive of fixtures, to be of the value of fourteen thousand pounds at the least, but of which sum of fourteen thousand pounds the lessees have already expended the sum of four thousand five hundred pounds in commencing the erection of the said buildings.

To accompany letter of 16th May, 1889, to the Hon. D. O'Connor, M.L.A., Postmaster-General.

Minute by The Secretary to the Post Office.

I AM afraid that the deep personal interest of Messrs. Thompson and Giles in the question prevents them from seeing the matter in a fair and impartial light.

Assuming, for argument's sake (although I do not admit the fact), that they have been threatened with the resumption by the Government of part of their land, it is by no means clear why these threats should have prevented them from carrying out their contemplated improvements, as they would expect, and would of course be entitled to, full compensation in the event of any resumption necessitating the demolition of these improvements, and the more costly the improvements the greater would be the compensation.

The

The documents quoted at the end of Mr. Thompson's letter are not recorded in this Department, nor have they ever been referred here; but three of them, namely, those of 25th September, 1883, 20th October, 1883, and 10th January, 1884, have been printed, and are with papers attached.

The notice as to resumption by 1st July may require some action, but it seems to me that the Government may safely leave it to Messrs. Thompson and Giles to carry out what improvements they desire on their leasehold; although it would, of course, be very desirable, and would greatly reduce the claims for compensation, if an early decision could be come to as to what quantity of land is to be resumed, and the necessary steps taken for the resumption with as little delay as possible.

S.H.L., 17/5/89.

Approved.—D.O'C., 17/5/89.

### The Secretary to the Post Office to The Under Secretary for Lands.

Sir,

General Post Office, Sydney, 21 May, 1889.

Adverting to my letter, dated the 24th ultimo, relative to the matter of resuming land for the new street on the north side of the General Post Office, and requesting that the Surveyor-General might be moved at the earliest possible moment to obtain a survey of the land, showing how the various properties would be divided, I am now directed by the Postmaster-General to inquire whether the survey asked for has yet been made.

I am to add that the matter is very urgent.

I have, &c.,

S. H. LAMBTON.

### Minute by Mr. Metropolitan District Surveyor Deering to The Under Secretary for Lands.

Department of Lands, Sydney, 22 May, 1889.

*Subject* :—Proposed resumption of land at north side of General Post Office for the purpose of opening a new street and obtaining frontages abutting thereupon.

\*Vide Appendix.

1. Enclosed is a plan\* showing a proposed resumption of land as above described.
2. A distance of 200 feet from the portico of the Post Office cannot be obtained without causing severance to substantial buildings; but, at a distance of 172 feet 8 inches along Pitt-street from the portico, and 178 feet 2 inches along George-street, a line of resumption can be adopted to include certain buildings entirely, and none other. Such a resumption, whilst providing for a street 100 feet in width, would give an average depth of 75 feet to the adjoining building sites.
3. Assuming that the present iron fencing erected by the Government is in a correct position, then the frontage to be resumed along Pitt-street is 126 ft. 2 in., and along George-street is 131 ft. 1 in. (E. & O. E.).

JOHN W. DEERING,  
Metropolitan and Coast District Surveyor.

The Secretary, Postal Department.—S.F., B.C., 22/5/89. I advise to instruct Attorney-General to prepare a Bill to submit to Parliament embodying Mr. Deering's recommendation.—D.O'C., 25/5/89.

Before these papers can be sent on to the Attorney-General it will be necessary for the Survey Department to state precisely the quantity of land to be resumed—that is to say, the number of feet frontage to George-street and to Pitt-street from our present boundary. The fence just erected is not, as is assumed, on such boundary, but the latter can, of course, be ascertained from the title deeds or from the published plans.—S.H.L., 27/5/89.

I concur in this minute. What we want is a technical description of what is necessary to be resumed under Mr. Deering's suggestion, and I hope this matter will be done immediately.—D.O'C., 28/5/89.

Very urgent. The Under Secretary for Lands.—S.H.L., 28/5/89. Referred to Mr. District-Surveyor Deering.—S.F., B.C., 29/5/89.

### Memorandum from Mr. District-Surveyor John W. Deering to Mr. Government-Surveyor S. E. Perdriau.

[Very Urgent.]

30 May, 1889.

Misc. 89-6,616—D.S. Report 89-1,320.

Proposed resumption of land at north side of General Post Office, for the purpose of opening a new street, and obtaining frontages abutting thereupon.

MR. SURVEYOR PERDRIAU is requested to be good enough to see the Secretary to the Postal Department at once, and obtain a plan or description of the land now the property of Government adjoining the General Post Office. The present galvanized-iron fence does not include the whole of the Government land.

Respecting the northern boundary of the land to be resumed by the Government (which has already been under the consideration of the Hon. the Postmaster-General, Mr. Lambton, and myself, upon the ground, and accompanied by Mr. Perdriau), it is necessary to first determine the boundary of the private property at the south side of the vacant land formerly known as Mort's Passage. That passage appears now to afford access to a range of offices or warehouses, and it is most undesirable to resume any part of it. In Pitt-street the resumption will extend to the south boundary of the building now occupied by Messrs. Hardie and Gorman. A plan will be required, and also a description for the Schedule of the proposed Bill to be presented to Parliament.

JOHN W. DEERING.

I will again visit the ground with Mr. Perdriau when he is prepared with the necessary information.—J.W.D., 30/5/89.

The

The Under Secretary for Lands to The Secretary to the Post Office.

Sir,

Department of Lands, Sydney, 1 June, 1889.

In reply to your letter of the 21st ultimo, relative to the matter of resuming land for the new street on the north side of the General Post Office, I have the honor to inform you that the Metropolitan District Surveyor has been requested to have the survey made but his report has not yet been received.

I have, &c.,

H. CURRY

(For the Under Secretary).

Read.—S.H.L., 3/6/89.

Mr. Government-Surveyor Stephen E. Perdriau, Sydney, to The Metropolitan District Surveyor.

Interim Report No. 1.—Proposed resumption of land adjoining Government land at the north side of the General Post Office, for a new street, and allotments fronting thereto.

Sir,

72, Bridge-street, 4 June, 1889.

Adverting to your instructions No. 89-1,371, dated 30th ultimo, on memo. covering Misc. 89-6,616, in compliance therewith I have to report as follows:—

2. The Postmaster-General being anxious to obtain leave to-morrow evening to introduce a Bill into the Legislative Assembly to authorize the resumption herein referred to, and it being necessary that descriptions of the areas proposed to be resumed should, on account of the enormous value of the land—undoubtedly the most valuable in New South Wales—be absolutely accurate, I have deemed it prudent to make this interim report, to mention some of the difficulties I have to contend with in carrying out such an important survey, and to forward the accompanying diagram, which shows approximately the land recommended by the Metropolitan District Surveyor, and approved by the Postmaster-General to be resumed, and which will, I submit, be sufficient information for the purposes of the introduction of the Bill.

3. No time will be lost in effecting the survey, and accurate descriptions will be prepared and forwarded at the very earliest opportunity, and if possible before the Bill goes into Committee. But I wish to point out that on account of the great traffic in George and Pitt Streets at this part, it is impossible to survey during any portion of the day except between 6 and 9 o'clock a.m., and also that the buildings on the land proposed to be resumed prevent direct survey and measurement of the boundaries, of which there are about twenty (20), and which must therefore be computed.

4. No less than three (3) full days were occupied by me in collecting necessary plans, papers, descriptions and information, from various Government Departments, in connection with this important work.

5. The value of the frontages to the proposed new street might be very greatly increased by connecting Chisholm Lane and Angel Place by a lane (about 15 feet wide) as shown on diagram, whereby a back entrance would be secured to all the allotments.

6. The right-of-way, 10 feet wide, leading from Pitt-street to the back of Thompson and Giles' premises, and owned by Mr. Perkins, is shown on diagram.

7. The frontage to Post Office available for sale, exclusive of the Tank Stream, will be about three hundred and forty six feet (346 feet).

I have, &c.,

STEPHEN E. PERDRIAU,

Government Surveyor. See Appendix.

Diagram enclosed.

It is recommended that this report be transmitted to the Secretary to the Postal Department, as the Postmaster-General desires it at once.—JOHN W. DREKING, 5/6/89. The Under Secretary for Lands. The Secretary to the Postal Department.—S.F., B.C., 5/6/89.

Perhaps, for the purposes of the proposed Bill, it will suffice to take power to resume land not exceeding the area which would be included in a line drawn from George to Pitt-street at a distance of 130 feet from our present boundary at the corner of each of those streets.—S.H.L., 5/6/89.

Approved.—D.O'C., 6/6/89. Forwarded to the Crown Solicitor with reference to former papers, by direction of the Postmaster-General.—S.H.L., B.C., 6/6/89. Urgent.

The previous papers were returned to your Department on the 16th ultimo, and have not since been received by me. I am informed by the Secretary to the Attorney-General that the Parliamentary Draftsman is preparing a Bill for the resumption under instructions from the Postmaster-General.—JOHN WILLIAMS, Crown Solicitor, B.C., 6/6/89. The Secretary to the Post Office.

The attached are the only papers I have, and probably they are all which the Parliamentary Draftsman will require. They are as follows:—Letter to Crown Solicitor of 24th April; letter to Lands Department of same date; three memoranda, with minutes thereon, from Lands Department. The only paper missing seems to be the Crown Solicitor's reply to ours of 24th April, advising the preparation of a new Bill.—S. H. LAMBTON, 6/6/89. The Parliamentary Draftsman.

The instructions in the Attorney-General's letter are "to prepare the necessary measure upon being instructed by the Postmaster-General to do so." So far I have no instructions in writing, and I would like to know in the first place whether the system of resumption prescribed by the Lands for Public Purposes Acquisition Act, as adopted by the Public Works Acts passed last Session, will be followed in this case. If so, a Bill on the same lines as that introduced by Sir A. Stuart several years back—and of which Mr. Perdriau has a copy—would, perhaps, be what is needed.—A.O., 7/6/89. The Secretary to the Post Office.

Approved as to Parliamentary Draftsman preparing a Bill for the resumption. With regard to the system, Mr. Oliver ought to be best qualified to know how we are to attain the object in view.—D.O'C., 7/6/89. The Parliamentary Draftsman, S.H.L., 7/6/89.

The

### The Parliamentary Draftsman to The Secretary to the Post Office.

*Re* resumption of land for Post Office approaches, and subsequent disposition of the frontages.

Parliamentary Draftsman Office, Sydney, 8 June, 1889.

It will be necessary that the descriptions of the various portions resumed be so prepared as to include such portions respectively as are the subject of separate ownership. As far as I can gather, there will be four such portions. I assume that the whole will be taken under the provisions of the Lands for Public Purposes Acquisition Act, as embodied in the Public Works Act, but without reference to the Public Works Committee. Will the Under Secretary be good enough to acquaint me with the general nature of the building conditions (if any) to be imposed on the builders of houses in the new frontage.

A.O.

Perhaps it would expedite matters if Mr. Deering could make it convenient to confer with Mr. Oliver on all but the last paragraph of this letter, as I am unable to afford the information asked for. I have copied the last paragraph, and will at once submit it to the Postmaster-General.—S. H. LAMBTON, 9/6/89.

Mr. District-Surveyor Deering.—S.F., B.C., 10/6/89. Mr. Surveyor Perdriau is requested to be good enough to see the Parliamentary Draftsman upon this matter.—J.W.D., B.C., 10/6/89.

I have seen the Parliamentary Draftsman, as requested, and have noted the fact that descriptions of the various portions to be resumed will be required separately. The matter is proceeding as rapidly as possible.—STEPHEN E. PERDRIAU, Gov. Sur., 13/6/89. The Metropolitan Dist. Surveyor. Observed. Place with previous papers.—J.W.D., 15/6/89. Mr. Sur. Perdriau.

### The Secretary to the Post Office to The Parliamentary Draftsman.

Dear Sir,

General Post Office, Sydney, 12 June, 1889.

With reference to your request of the 8th instant to be furnished with the general nature of the building conditions (if any) to be enforced on the builders of houses in the new frontage to the street on the north side of the General Post Office, Mr. O'Connor thinks that it would be better to settle what the building conditions shall be hereafter, *i.e.*, when the land has been resumed.

Yours, &c.,  
S. H. LAMBTON.

### Mr. Government-Surveyor E. Perdriau to Mr. Metropolitan District Surveyor Deering.

Forwarding descriptions of the four areas proposed to be resumed.

Interim Report No. 2.—Land to be resumed adjoining Government land north of the General Post Office.

Sir,

72, Bridge-street, 18 June, 1889.

In compliance with your instructions, No. 89-1,371, dated 30th May, on Misc. 89-6,616, I have the honor to report as follows:—

2. The descriptions of the areas proposed to be resumed are urgently required, to be attached as schedules to the special Bill proposed to be introduced into the Legislative Assembly to authorize the resumption, and are therefore forwarded herewith at the earliest possible date.

3. The plan is already partly drawn, and will be completed and forwarded without any delay.

4. It is my duty to report here two very serious discrepancies between my chainage and that given by Mr. Surveyor W. M. Cooper in descriptions prepared by him in connection with this matter in the year 1883 for the resumptions, then contemplated, which were almost identical with those at present proposed.

5. The most important discrepancy is in the frontage to George-street of Mrs. Perkins' property, occupied by Thompson and Giles. Mr. Cooper gives this length as 100.19 links, = 66 feet 1½ inches, and described it so for the purpose of resumption (*Vide* Schedule B of former Bill herewith), whereas, my chainage of the same distance is 99 links only, = 65 feet 4.08 inches, a difference of 9½ inches less. This distance is described in the Crown grant of the allotment No. 4, section 37, city of Sydney, as 63 feet. With regard to this increased frontage, I beg to point out that in the correspondence *re* purchase of Paling's property, ordered by the Legislative Assembly to be printed, 20th March, 1884, on page 5, Mr. Cooper, in a memo. to the Principal Under Secretary, forwards a letter from Messrs. Stephen, Lawrence, and Jaques, Mrs. Perkins' solicitors, stating that the proprietors could prove undisturbed occupation of a frontage of 66 feet 1½ inches to George-street for more than forty years.

There is nothing on the ground to show that their (the Perkins family's) occupation ever embraced any more than their present frontage, *viz.*, 99 links, = 65 feet 4.08 inches. I have conferred with Mr. Giles on the matter, and he says that their occupation since 1860 (the date of their first lease of the premises) has been the same as the present.

6. I can account for Mr. Cooper's falling into this error, for it is evident that he adopted Mr. Surveyor Wansbrough's survey. *Vide* Mr. Cooper's letter of 20/11/83, on page 4 in printed papers above referred to, in which he states, "I have obtained from the Trigonometrical Branch of the Surveyor-General's Department an exact plan of the two blocks of land held by the Perkins family and the Hon. Thomas Holt respectively." Mr. Wansbrough's plan of the property, Cat. S. 392,858, is the only one to which this could have referred as regards the Perkins' property, and on that plan the property is shown inaccurately by just the amount of the discrepancy (9½ inches), the width of the "old wall" at its extreme south-west corner. This "old wall" is the wall of a building which adjoined Perkins' building, standing on land already resumed by the Crown. Instead of the "old wall" terminating, as shown by Mr. Wansbrough, at about 20 links from the building-line of George-street, it really extends to where the other and wider "old wall" commences. Mr. Wansbrough has erroneously shown as part of Perkins' building a strip about 40 links long of what is really an old wall of an adjoining building.

7. From the above, and comparisons (which I have made by calculation) of my own work with the former surveys of the land under report, it is clear to me that Mr. Cooper did not make a survey himself, but trusted to those already made, and calculated from them the lines forming the boundaries.

8. The plan S 336-858 showing the area resumed adjoining Perkins' on the south, would lead to the inference that part of Perkins' own wall formed part of that resumption. See note, "Apparently centre line of party wall on plan."—S.E.P., 18/6/89.

Moreover, said plan, survey made in 1868, shows the distance of Perkins' south-west corner from "buildings in course of erection" (which, no doubt, means the General Post Office, the foundations thereof having been started in 1866) to be 43 feet 8 inches, 16 feet, and 3 feet 7 inches, = 63 feet 3 inches = 95.83 links, whereas my chainage of this distance is 95.09 links, which again goes to show that at least Government has already resumed up to Perkins' building on the George-street frontage, and did not at that time (1868) recognize their occupation of any land to the south thereof.—S.E.P., 18/6/89.

9. The second error, which is not quite so serious as the first, is in the length of the frontage of the more northerly allotment fronting Pitt-street proposed to be resumed. Mr. Cooper gives its frontage as 93.9 links, whereas, by chainage I make it only 93.34 links, a difference of .56 of a link (= 4½ inches) less.

\*The plan will illustrate these matters clearly.

\* See par. 8.

I have, &c.,

STEPHEN E. PERDRIAU,

Government Surveyor.

Four descriptions enclosed herewith; also, printed copies of four descriptions, schedules of former Bill.—S.E.P., 18/6/89. Papers, Misc. 89-7,255, enclosing diagram, enclosed herewith.—S.E.P., 18/6/89.

[Enclosures.]

SCHEDULES TO FORMER BILL.

SCHEDULE A.

WILLIAM HENRY PALING.

COUNTY of Cumberland, parish of Saint James; area, 30.2 perches: Commencing at a point in the eastern building-line of George-street, one hundred and ninety-four and ten-hundredths links north of the north-west corner of the base-course of the present structure of the General Post Office; and bounded thence on part of the west by that eastern building-line of George-street bearing north five degrees fourteen minutes, east seventy-five and ninety-seven-hundredths links to a right-of-way; thence on part of the north by that right-of-way bearing south eighty degrees fifty-four minutes, east one hundred and ninety-seven and sixty-eight-hundredths links; thence on the remainder of the west by that right-of-way bearing north eight degrees nine minutes, west eleven and fifty-nine-hundredths links; thence on the remainder of the north by a line bearing south seventy-nine degrees nine minutes, east forty-two and forty-nine-hundredths links to the Tank Stream; thence on the east by that Tank Stream bearing south one degree twenty-four minutes, east sixteen and forty-six-hundredths links, and south eleven degrees fifty-seven minutes, east seventy and thirty-two-hundredths links; and thence on the south by a line bearing north eighty-one degrees forty-three minutes, west two hundred and sixty and ten-hundredths links, to the point of commencement.

[NOTE.—All the bearings are taken from true north. Four descriptions—schedules A, B, C, D of former Bill transmitted to the Metropolitan District Surveyor, with four descriptions—schedules 1, 2, 3, and 4—for new Bill, and my letter, No. 89-40, of 18th June.]

STEPHEN E. PERDRIAU,  
Government Surveyor.

SCHEDULE B.

MRS. PERKINS' TRUSTEES.

(Thompson and Giles, occupiers.)

COUNTY of Cumberland, parish of St. James, area 1 rood 1.3 perches: Commencing at a point in the eastern building line of George-street, ninety-three and ninety-one-hundredths links north of the north-west corner of the base-course of the present structure of the General Post Office; and bounded thence on part of the west by that eastern building-line of George-street, bearing north five degrees nine minutes, east one hundred and nineteen-hundredths links; thence on the north by a line bearing south eighty-one degrees forty-three minutes, east two hundred and sixty and nineteen-hundredths links to the Tank Stream; thence on the east by that Tank Stream, bearing south eleven degrees thirty minutes, west fifty-two and seventy-eight-hundredths links, south twelve degrees forty-two minutes, west thirteen and seventy-seven-hundredths links, south twenty-two degrees fifty-three minutes, west twenty-three and fifty-seven-hundredths links, and south twenty-eight degrees forty-three minutes, west sixteen and sixty-hundredths links to the north side of Post Office Place; thence on part of the south by that north side of Post Office Place, bearing north eighty degrees forty-nine and a-half minutes, west one hundred and seventy-nine and twenty-five-hundredths links; thence on the remainder of the west by a line bearing north five degrees twenty-nine minutes, east five and seventy-five-hundredths links; and thence on the remainder of the south by the

SCHEDULE C.

THOMAS HOLT.

(W. P. Woolcott, occupier.)

COUNTY of Cumberland, parish of St. James, area, 35.7 perches: Commencing at a point in the western building line of Pitt-street, eighty-four and four-hundredths links north of the north-east corner of the base-course of the present structure of the General Post Office; and bounded thence on the east by that western building-line of Pitt-street, bearing north five degrees fourteen and a-half minutes, east eighty-four and thirty-two-hundredths links; thence on the north by a line bearing north eighty-five degrees forty-one minutes, west two hundred and sixty-seven and seventy-seven-hundredths links to the Tank Stream; thence on the west by that Tank Stream bearing south thirteen degrees one minute west, seventy-nine and fifty-eight-hundredths links to the north side of Post Office Place; and thence on the south by that north side of Post Office Place bearing south eighty-four degrees thirty-one and a-half minutes, east two hundred and seventy-eight and fifty-hundredths links, to the point of commencement.

NOTE.—All the bearings are taken from true north.

## SCHEDULE D.

THOMAS HOLT.

(Prince, Ogg, &amp; Co., occupiers.)

COUNTY of Cumberland, parish of St. James, area, 1 rood 6·3 perches : Commencing at a point in the western building-line of Pitt-street one hundred and sixty-eight and thirty-six-hundredths links north of the north-east corner of the base-course of the present structure of the General Post Office ; and bounded thence on the east by that western building-line of Pitt-street bearing north five degrees eighteen and a-half minutes, east ninety-three and ninety-hundredths links ; thence on the north by a line bearing north seventy-nine degrees, west one hundred and sixty-three-hundredths links, and north eighty-four degrees seven and a-half minutes, west one hundred and ninety-one and eighty-eight-hundredths links to the Tank Stream ; thence on the west by that Tank Stream bearing south eleven degrees three minutes, east eighty-five and fifty-hundredths links, and south five degrees four minutes, west twenty-seven and eighty-hundredths links ; and thence on the south by a line bearing south eighty-five degrees forty-one minutes, east two hundred and sixty-seven and seventy-six hundredths links, to the point of commencement.

NOTE.—All the bearings are taken from true north.

Minute by Mr. Metropolitan District Surveyor Deering to The Under Secretary for  
Lands.

19 June, 1889.

THIS matter is very urgent, as the Bill now awaits these descriptions. The Postmaster-General and the Secretary to the Postal Department will feel obliged if the Under Secretary for Lands will send these papers direct, and at once, to the Parliamentary Draftsman.

JOHN W. DEERING.

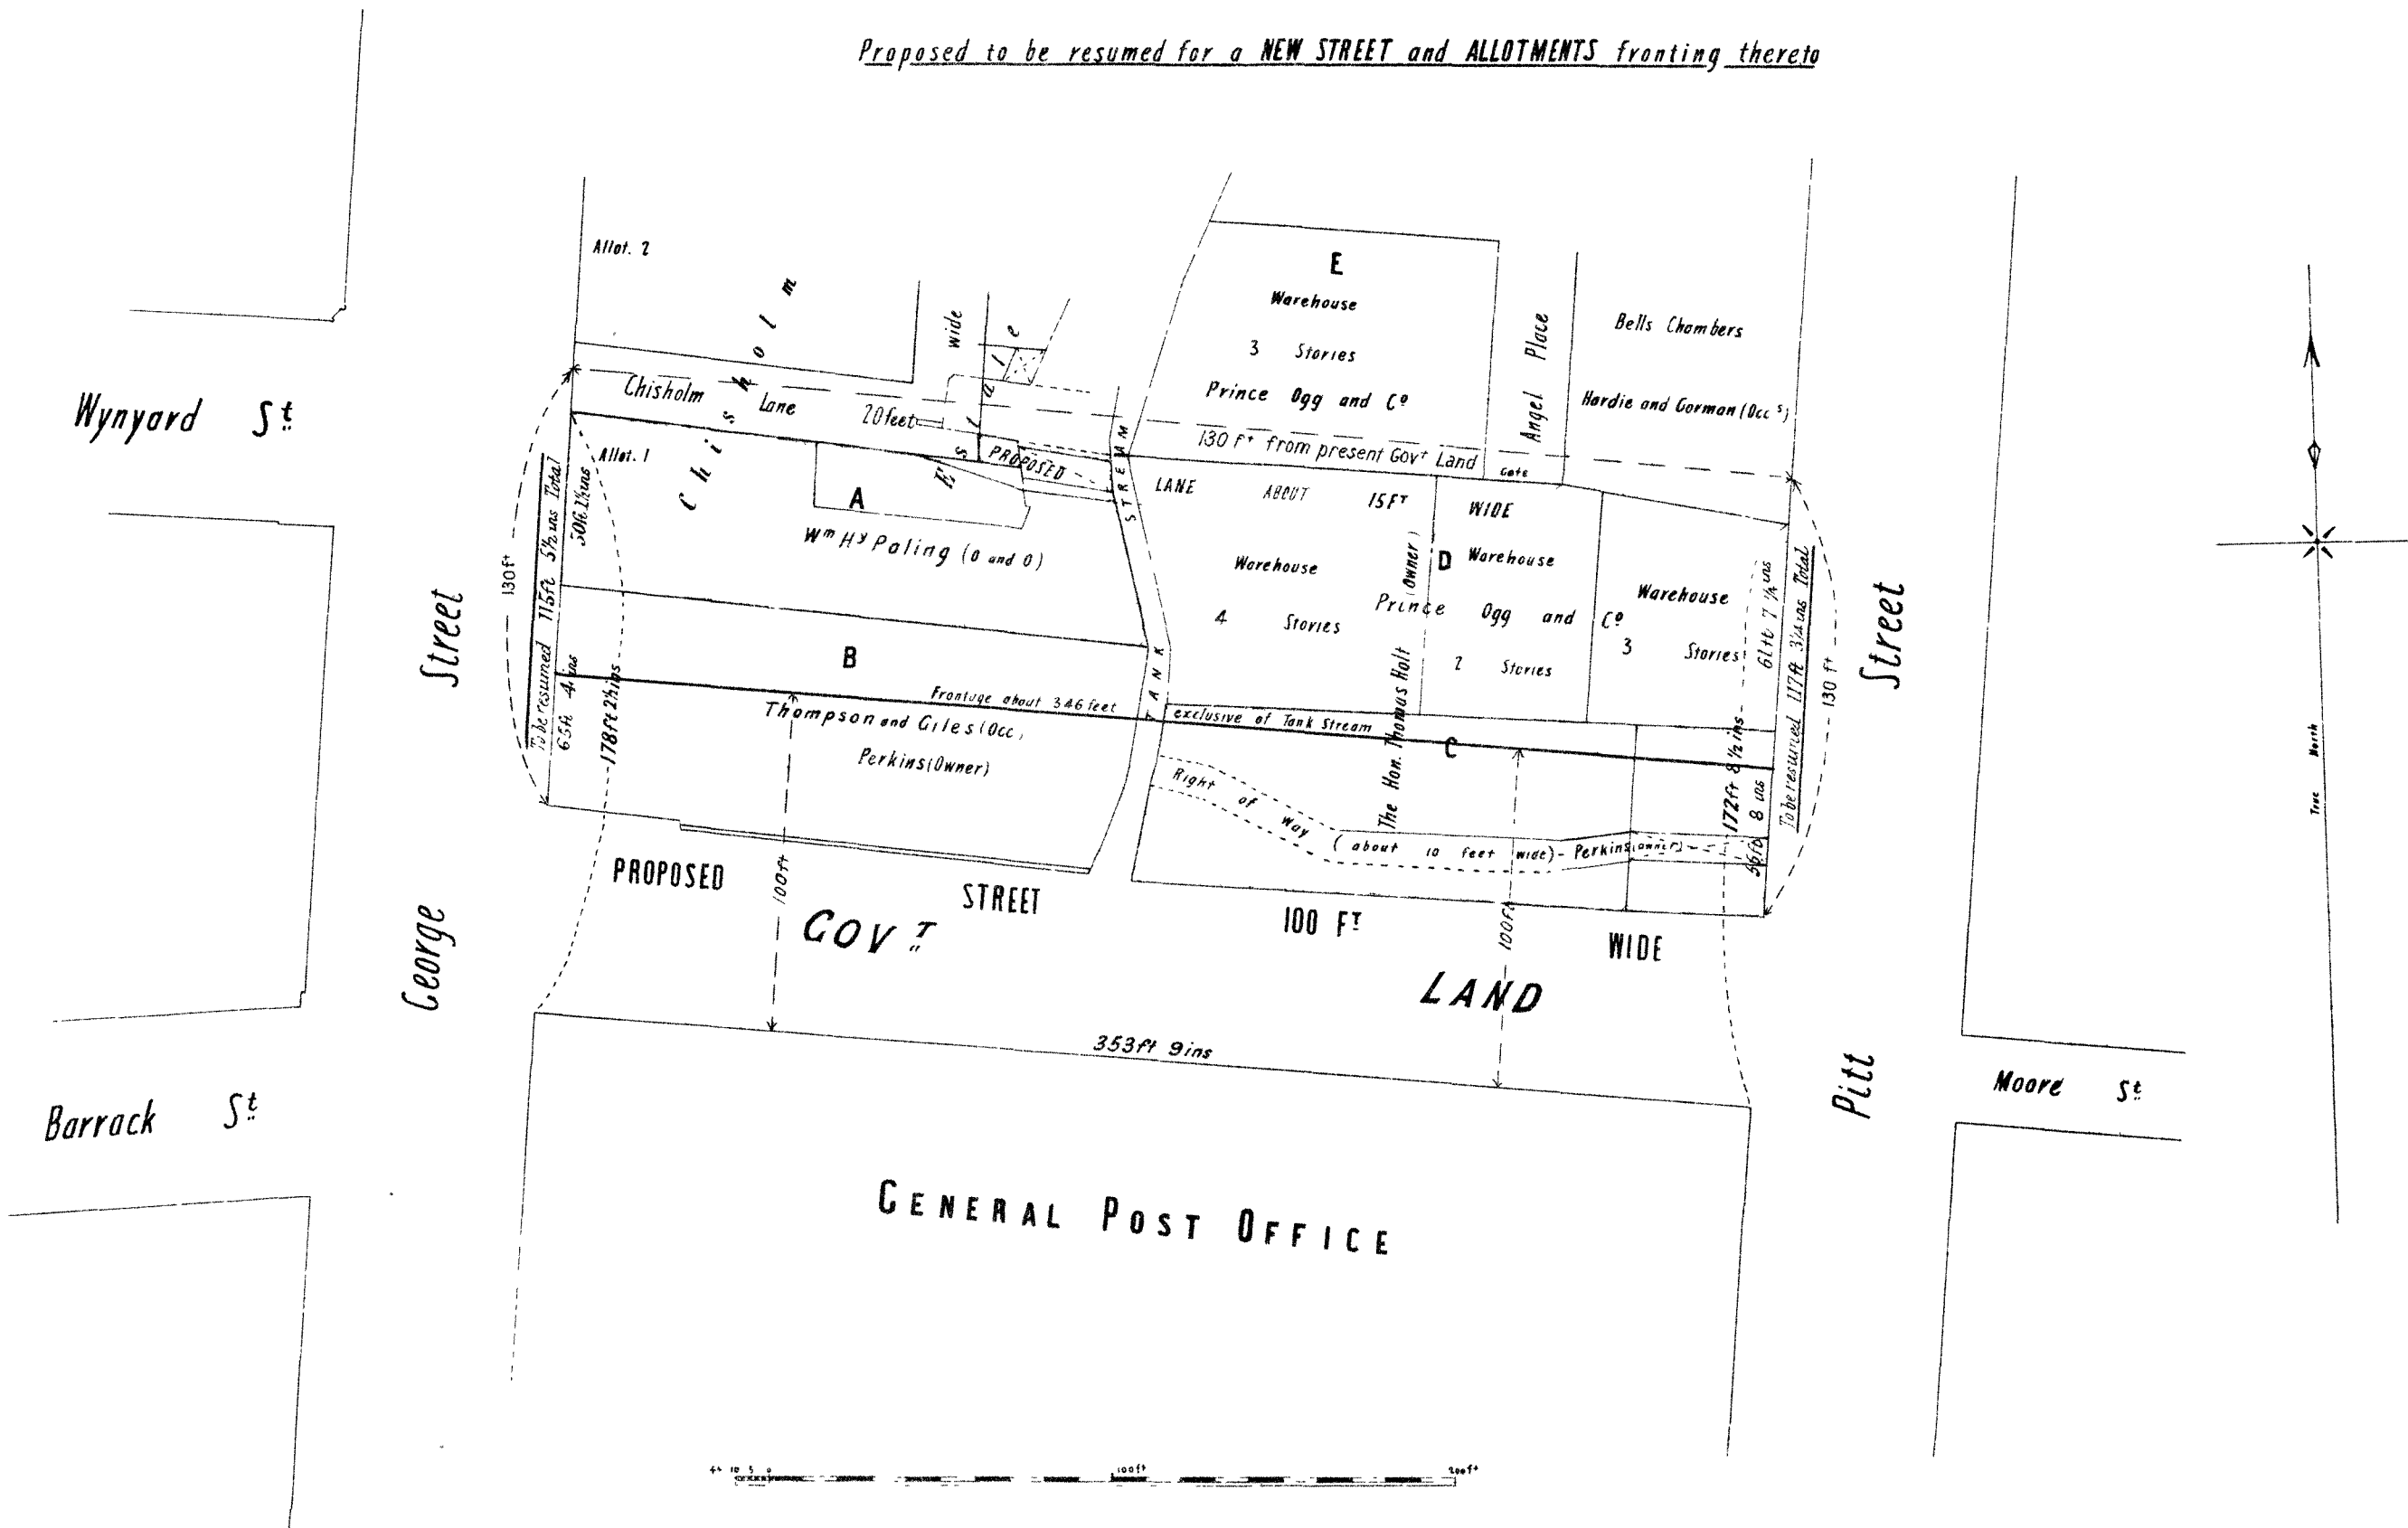

[NOTE.—The descriptions were seen by the Parliamentary Draftsman, and forwarded by him direct to Government Printer to be attached to the Bill—marked urgent.—S.E.P., 19/6/89.]  
The Secretary to the Postal Department.—S.F., B.C., 19/6/89.

Proposed to be resumed for a NEW STREET and ALLOTMENTS fronting thereto

Transmitted to the Metropolitan District Surveyor with my letter of the 4<sup>th</sup> June 89/39

*Stephen E. Perdrion*  
Gov. Surveyor

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

GENERAL POST OFFICE (APPROACHES  
IMPROVEMENT) BILL.

(PETITION FROM F. S. E. HOLT AND A. W. HOLT IN OPPOSITION TO.)

*Received by the Legislative Assembly, 25 June, 1889.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Frederick Samuel Ellis Holt, of Sutherland House, Sylvania, and Alfred William Holt, of Clifton, Saint Leonards,—

SHOWETH AS FOLLOWS:—

1. Amongst the business to be brought before your Honorable House on Tuesday, the 25th instant, is the following:—

“GOVERNMENT BUSINESS—ORDERS OF THE DAY:—

“1. General Post Office (Approaches Improvement) Bill; consideration in Committee of the Whole of the expediency of bringing in a Bill to authorize the resumption of certain portions of land, situate between George and Pitt streets, in the city of Sydney, for the purpose of improving the approaches to the General Post Office, for the disposal of portion of the land so to be resumed, and for other purposes in connection therewith.”

2. It is matter of notoriety that the land which the Government propose to resume for the above-mentioned purposes consists in great part of land in which your Petitioners and other members of their family are largely interested.

3. It is necessarily to be inferred from the language of the notice above set forth that the Government seek authority to resume more land than they have reasonable ground for believing will be actually and physically requisite for the approaches to the General Post Office; and, further, that they seek authority to dispose, presumably by selling or letting the same, of such portion of the land resumed as is not actually and physically requisite for the said approaches.

4. The principles which should govern the acquisition by the Government of the land of private owners for public purposes were thoroughly discussed when the Lands for Public Purposes Acquisition Act (44 Victoria, number 16) was before Parliament, and were considered to be finally settled by and embodied in that measure. One leading principle was that the Government should resume no more private land than they had reasonable ground for believing would be actually and physically requisite for the public work for the purposes for which it was resumed.

5. The Bill for the introduction of which authority is sought departs widely from the leading principle of the said Act, by proposing to enable the Government to resume not merely the land physically requisite for the formation of the intended approaches, but also a considerable area of the land in which your Petitioners are interested, which is not so requisite, but by trafficking in, which it is hoped that the Government will be enabled to defray, in whole or in part, the cost of their improvement scheme.

6. Your Petitioners have not raised, and do not seek to raise, any opposition to the resumption of so much of the property in which they are interested as may be actually and physically required for legitimate public purposes.

7. Your Petitioners submit that the principle involved in the proposed Bill is vicious, (1) as legalising an unnecessary invasion of the rights of private property, (2) as subjecting your Petitioners, and the other persons interested in the land now sought to be resumed, to an interference and to disabilities to which the other subjects of Her Majesty in this Colony are not exposed.

8. Your Petitioners further submit that the principle involved in the proposed Bill is dangerous, for if such Bill were to become law, and were to be followed as a precedent on the occasions of future special resumption Acts of a like character, the Government would be in a position to make themselves the largest holders of city property, and to traffic therein for all time.

Your Petitioners, therefore, most humbly pray that your Honorable House will be pleased not to affirm the expediency of bringing in the proposed Bill, unless the same be limited to the resumption of only so much land as the Government have reasonable ground for believing will be actually and physically requisite for the approaches contemplated by the said proposed Bill; or that your Honorable House will be pleased to grant your Petitioners such further or other relief in the premises as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.

Dated this twenty-fourth day of June, in the year of our Lord one thousand eight hundred and eighty-nine.

F. S. ELLIS HOLT,  
ALFRED WM. HOLT.

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**GENERAL POST OFFICE (APPROACHES IMPROVEMENT) BILL.**  
(PETITION FROM F. S. E. HOLT AND A. W. HOLT, PRAYING TO BE HEARD BY COUNSEL.)

*Received by the Legislative Assembly, 2 July, 1889.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Frederick Samuel Ellis Holt, of Sutherland House, Sylvania, and Alfred William Holt, of Clifton, St. Leonards,—

SHOWETH AS FOLLOWS:—

1. A Bill to authorize the resumption of "Certain portions of land situate between George and Pitt streets, in the city of Sydney, for the purpose of improving the approaches to the General Post Office, for the disposal of portion of the land so to be resumed, and for other purposes in connection therewith," has been introduced into and is now under the consideration of your Honorable House.

2. The preamble to the Bill recites that the present approaches to the General Post Office are insufficient and inconvenient, and it is expedient to authorize the resumption of certain portions of land lying between George and Pitt streets northward of the said Post Office, for the purpose of forming between the said streets and Post Office a street to be known as . . . . . And it is also expedient to provide for the disposal of such portion of the lands resumed as may not be required for the formation of the said street, subject to the conditions hereinafter mentioned, and to make such further provision in connection with the said purposes as is hereinafter contained. The second section of the Bill resumes the lands described in Schedules 1, 2, 3, and 4, and the fifth section provides (so far as it is material to state the same) as follows:—"The lands resumed by this Act shall be used for and applied to the purposes following, that is to say—(a) The formation and making of a public street in enlargement of the present thoroughfare between George and Pitt streets, of such width and with such approaches, and of such design as may be determined by the Governor. (b) The residue of the said lands remaining after the formation of the said street shall be sold or leased by public auction at such times, for such prices, and subject to such terms, conditions, covenants, and provisions for buildings (temporary or perpetual) and for the occupation thereof, as the Governor, with the advice aforesaid, may determine." Schedules 3 and 4 of the Bill comprise very valuable property, being the freehold of your Petitioners and other members of their family, as tenants in common, and having together a total frontage to Pitt-street of one hundred and seventeen feet six inches or thereabouts.

3. The principles which should govern the acquisition by the Government of the land of private owners for public purposes were thoroughly discussed when the Lands for Public Purposes Acquisition Act (44 Vic. No. 16), was before Parliament and were considered to be finally settled by and embodied in that measure. One leading principle was that the Government should resume no more private land than they had reasonable ground for believing would be actually and physically requisite for the public work for the purposes for which it was resumed.

4. The Bill now before your Honorable House departs widely from the leading principle of the said Act by proposing to enable the Government to resume not merely the land physically requisite for the formation of the intended approaches, but also a considerable area of the land in which your Petitioners are interested, which is not so requisite but by trafficking, in which it is hoped that the Government will be enabled to defray in whole or in part the cost of their improvement scheme.

5. Your Petitioners have not raised, and do not seek to raise, any opposition to the resumption of so much of the property in which they are interested as may be actually and physically required for legitimate public purposes.

6. Your Petitioners submit that the principle involved in the said Bill is vicious (1) as legalizing an unnecessary invasion of the rights of private property; and (2), as subjecting your Petitioners and the other persons interested in the land now sought to be resumed to an interference, and to disabilities to which the other subjects of Her Majesty in this Colony are not exposed. Your Petitioners further submit that the principle involved is dangerous, for if such Bill were to become law, and were to be followed as a precedent on the occasions of future special resumption Acts of a like character, the Government would be in a position to make themselves the largest holders of city property, and to traffic therein for all time.

Your Petitioners therefore most humbly pray that the Bill may not pass into law as it now stands, and that your Petitioners may be heard by counsel against such of the clauses and provisions of the Bill as affect their rights, interests, or property, by the application of the principle hereinbefore lastly referred to, and in support of the insertion in the Bill in case the same shall pass into law of such other clauses and provisions as may be requisite for the protection of your Petitioners; or that your Honorable House will be pleased to grant your Petitioners such further or other relief in the premises as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.

Dated at Sydney, this second day of July, one thousand eight hundred and eighty-nine.

F. S. ELLIS HOLT.  
ALFRED WM. HOLT.

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

GENERAL POST OFFICE (APPROACHES  
IMPROVEMENT) BILL.

(PETITION FROM J. G. THOMPSON, E. H. JOHNSON, AND JAMES GILES.)

*Received by the Legislative Assembly, 9 July, 1889.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John Gilbert Thompson, Edward Henry Johnson, and James Giles, carrying on business in George-street, Sydney, in New South Wales, as Thompson and Giles,—

RESPECTFULLY SHOWETH:—

1. That a Bill has been introduced, in pursuance of leave in that behalf given to and is now before your Honorable House, entitled, "A Bill to authorize the resumption of certain portions of land situated between George and Pitt streets, in the city of Sydney, for the disposal of portion of the land so to be resumed, and for other purposes in connection therewith."

2. That your Petitioners are tenants under a lease for thirty years, from 1st August, 1888, of the property adjacent to Post Office-street, and fronting George-street, and are tenants under a lease having six and a half years to run of the property also adjacent to Post Office-street, and fronting Pitt-street.

3. That your Petitioners have occupied the present position in George-street, and there carried on business for upwards of twenty-eight years past.

4. That the aforesaid Bill does not appear to your Petitioners to contain either in itself or by reference to other Acts—(1) Any provision for compensation to the tenants in case of the resumption by the Government thereunder of the whole of the land comprised in the tenants' leases. (2) Nor any provision for any compensation to tenants in respect of business arrangements.

5. That under the circumstances your Petitioners respectfully draw the attention of your Honorable House to the apparent omission aforesaid.

And pray that the interests of your Petitioners may be duly conserved.

And your Petitioners, as in duty bound, will ever pray, &c.

Dated this ninth day of July, 1889.

JOHN G. THOMPSON.  
E. H. JOHNSON.  
JAMES GILES.

1889.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

**GENERAL POST OFFICE (APPROACHES  
IMPROVEMENT) BILL.**

(MESSAGE No. 36.)

---

*Ordered by the Legislative Assembly to be printed, 25 June, 1889.*

---

CARRINGTON,  
*Governor.*

*Message No. 36.*

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision to meet the requisite expenses in connection with a Bill to authorize the resumption of certain portions of land, situate between George and Pitt Streets, in the City of Sydney, for the purpose of improving the approaches to the General Post Office, for the disposal of portion of the land so to be resumed, and for other purposes in connection therewith.

*Government House,*  
*Sydney, 21st June, 1889.*

1889.

## NEW SOUTH WALES.

**ELECTRIC TELEGRAPHS.**

(REGULATIONS FOR THE TRANSMISSION AND DELIVERY OF TELEGRAMS.)

Presented to Parliament, pursuant to Act 20 Vic. No. 41, sec. 6.

General Post Office,  
Sydney, 27th March, 1889.

In accordance with the provisions of the 6th section of the Electric Telegraph Act, His Excellency the Governor, with the advice of the Executive Council, has approved of the following amended Regulations for the transmission and delivery of telegrams being adopted in lieu of those hitherto in force.

DANIEL O'CONNOR.

**ELECTRIC TELEGRAPHS.**

## REGULATIONS.—NEW SOUTH WALES DEPARTMENT.

1. Messages must be written with ink, in a clear and legible manner, on the forms provided for that purpose, and must bear a proper date and address, the signature and address of the sender in each case being required in authentication of the Message, and as subscribing to the conditions imposed. All figures must be written in words.

2. Payment of charges in advance will be required, except for replies to interrogatory messages on which the sender has written "Reply paid here." In cases of emergency or distress, however, persons may be allowed to send messages to be paid for by the receiver. The senders of "Collect" telegrams will be required to deposit the cost of the message prior to the despatch thereof, such cost to be refunded to the sender upon payment by the addressee. In the event of non-payment by the latter from any cause the deposit will be retained by the Department. No charge will be made for the date, address, or signature of any telegram lodged for transmission within the Colonies.

3. Messages will be delivered free within one mile of the office; over that distance portage or cab-hire will be charged, and boat-hire on messages to be delivered on ship board. Telegrams requiring to be delivered beyond the limits by special messenger will only be accepted subject to the Department being able to procure such messenger; and in all cases telegrams will be forwarded at the sender's risk. If the address is more than three miles from the terminal office, portage is calculated at whatever rate is charged by the special messenger intrusted with the delivery. The sender is responsible for the portage; and when the address is not within the free delivery he must, if practicable, state the distance and pay the portage in advance. When the exact distance is not known a deposit must be paid. Should the sender undercalculate the charge, the deficiency is charged on delivery. If the sender pays too much, the excess is refunded. A deposit of five shillings for boat-hire is required on every telegram addressed to a ship, unless the ship be alongside a wharf, jetty, or pier. Any surplus is refunded.

4. Where an immediate reply to a message is required, the sender of such message is requested to append the words "Reply by Telegraph." The messenger charged with the delivery of the message will then be directed to wait five minutes for the reply, in order to facilitate its transmission to the sender of the message.

5. Every message in secret language, or consisting of words in any admitted language (English, French, German, Italian, Dutch, Portuguese, Spanish, and Latin) having no connective meaning, groups of letters or figures, shall be regarded as a cypher message, and be subject to an additional charge of 50 per cent.; and in a message containing one or more words in cypher, every such word shall be counted as two words, and the extra charge be added to the minimum rate for a message, provided that such extra charge shall not exceed 50 per cent. on the ordinary rate which would be payable on account of the said telegram. Groups of five letters or five figures shall count as one cypher word.

6. In order to provide against mistakes in the transmission of messages, every message of consequence ought to be REPEATED by being signalled back from office to office. No copy is, in such case, given to the sender. The charge for repetition is one half the ordinary tariff. The Government will not be responsible for mistakes in the transmission of unrepeated messages, from whatever cause they may arise; nor will the Government be responsible for mistakes in the transmission of a repeated message, nor for any delay in the transmission or delivery, nor for non-transmission or non-delivery of any message, whether repeated or unrepeated, to any extent above £5. Telegrams containing mercantile quotations or figures, and telegrams written in cypher, or according to a preconceived code, should always be repeated.

7. Except in cases of emergency, illness, &c., or messages on the service of the State, messages will be transmitted in the order in which they are received; and all messages will be held strictly confidential.

8. If from any circumstances a message is not sent within a reasonable time, sufficient to destroy the value of the despatch, the clerk is instructed to give the person sending the message information of the fact, with the reason of the delay; it will then be optional with the person to withdraw such message, and receive back the amount paid.

9. Telegrams will be available for inspection by the sender or receiver, or a copy thereof made, during a period of two years from the date of transmission, on payment of a search fee of 2s. 6d.

10. Messages will be kept in the strict charge of the Superintendent for the space of TWO YEARS, after which they will be burned in the presence of the Superintendent or authorized officer.

11. Offices are open for the transaction of business from 9 a.m. until 8 p.m., except those stations marked †, which close at 6 p.m.; those marked ‡, which close at 10 p.m.; and those marked §, which close at 8 p.m. on Saturdays, and 6 p.m. on other days of the week. (*Vide* Postal Guide.)

12. Inquiries respecting messages cannot be entertained unless copies are produced.

13. Telegrams redirected to a second address are liable, if any additional service is performed, to an additional charge of sixpence if the two addresses are within the same town; but if the addresses are in different towns the full inland rate is charged for the redirection. Removals and instructions for the redirection of telegrams at hours when the place of business is closed, are registered free on application by letter addressed to Superintendent of Telegraphs.

14. Copies of a telegram, other than Press, directed to more than one person in the same free delivery, are delivered at a charge of sixpence per copy.

15. Telegrams are, as a rule, delivered personally, but when attention cannot be gained, they are dropped into the letter-box, if there is one. If it is proposed that a house be shut up for some days, instructions should be given to the Department as to the disposal of telegrams. Under no circumstances will the Department accept any responsibility with regard to telegrams after they have been delivered at the address given.

16. Should a sender, upon being informed that his message cannot be delivered because the address is unknown, furnish a corrected address, or require the telegram to be presented the second time, he must pay the cost of a fresh telegram. Should it appear that the failure in the first instance was the fault of the Department, the extra charge will be refunded.

17. The sender may have his telegram cancelled, and if it be cancelled before the commencement of transmission the sum will be returned on application at the time; but if transmission has commenced the sum will not be returned. If transmission has been completed an official telegram, prepaid by the sender, will be sent to the clerk at the terminal office. If the official telegram should arrive too late, the sender will be informed that the attempt to cancel his telegram has failed; but the sums paid will not be refunded.

18. When telegrams are addressed to a Telegraph Office to be called for, they are kept for two clear days, and if no application be made for them within that time, the clerk is instructed to inform the sending office to this effect, of which the sender will be apprised.

19. Telegrams indecently or obscenely worded, or appearing to contain libellous or grossly offensive matter, will not be transmitted.

20. Offices on Public Holidays are OPEN from 9 a.m. to 10 a.m., and between the hours of 6 p.m. and 8 p.m., except offices marked thus †, which are only open from 9 a.m. to 10 a.m. (*Vide* Postal Guide.)

21. Messages for stations described as "Railway Telegraph Stations" (R.T.S.) can only be accepted subject to possible delay consequent upon the absence of officers on other duties, or other causes, and no responsibility can be accepted as regards delivery at any such stations.

22. Telegrams posted at any Post Office (which is not also a Telegraph Station) in the Colony will be forwarded by first mail to the nearest Telegraph Office, and be transmitted thence by wire to destination, provided unobliterated postage stamps are affixed to the form on which the message is written, sufficient in value to defray the cost of the message, and that the message be enclosed in an envelope prepaid with the requisite amount of postage, and directed to the Telegraph Stationmaster at—(give the name of the nearest Telegraph Station, which can be obtained from the Postmaster on inquiry). All telegrams for post must be written in a clear and legible manner on the form specially provided, and in accordance with the printed instructions on such form. Telegrams addressed to Post Towns to which there is no telegraphic communication will be transmitted by wire to the nearest Telegraph Station and forwarded thence to destination by first post without additional charge.

23. No person shall be entitled to send, or any proprietor, publisher, or agent of a newspaper to receive, at press rates, a telegraphic message or messages, in any one day, containing more than five hundred (500) words in the aggregate. This restriction shall not apply to Intercolonial or Foreign telegrams, or to messages transmitted between the hours of 6 p.m. and 9 a.m. If, during any other hours, the line on which a Press telegram is desired to be sent is clear and unoccupied, such telegram, of whatever length, may be sent at Press rates; provided that if, during the transmission of such telegram, any private or business telegram or telegrams is or are required to be sent on such line, the Press message so being sent shall be, from time to time, stopped to allow of the transmission of such private or business telegram or telegrams. No Press message, Intercolonial, Foreign, or otherwise, shall at any time be sent to a greater extent than 500 words, if there be any other Press message or messages required to be sent on the same line; but Press messages shall be sent in rotation as they come in to the extent of 500 words at a time.

## ELECTRIC TELEGRAPHS.

(REDUCTION IN RATES BETWEEN THACKARINGA AND SOUTH AUSTRALIA.)

---

Presented to Parliament, pursuant to Act 20 Vic. No. 41, Sec. 6.

---

General Post Office, 11 April, 1889.

IN accordance with the provisions of the 6th section of the Electric Telegraph Act, His Excellency the Governor, with the advice of the Executive Council, has approved of the rates for the transmission of telegrams from Thackaringa to any station in South Australia, being assimilated to those now charged for telegrams from Broken Hill and Silverton to that Colony, viz. :—1s. for the first ten words, and 2d. for every additional word.

NEW SOUTH WALES.

POLICE DEPARTMENT.

(REPORT FOR 1888.)

Presented to Parliament by Command.

The Inspector-General of Police to The Principal Under Secretary.

Sir, Police Department, Inspector-General's Office, Sydney, 9 January, 1889.

As requested by the Colonial Secretary's instructions, I have the honor to furnish, for his information, my usual Report respecting the Department under my control for the year 1888, which, however, is confined to the customary annual statistics, as I have been absent on leave during the greater part of the year.

Some small additions have been made to the strength of the police performing duty in the Suburbs of Sydney, and new stations have been formed at the undermentioned places, the total increase on the establishment being thirty constables.

District.	Station.
Metropolitan	{ Auburn. Gordon. Hillgrove. Harwood.
Northern...	{ Nerrigundah (reformed).
Southern...	{ Hornsby. Potts' Hill.
Eastern ...	{ Mullet Creek.
North-eastern	{ Thackaringa.
South-western	

The following stations have been broken up:—

District.	Station.
Northern...	Chatsworth.
Southern ...	Wheeo.
North-eastern	Woy Woy.
North-western	Wallabadah.

Appointments were made during the year to provide for the above increase, and to fill vacancies occasioned as under:—

Resignations	83
Discharges	17
Dismissals	20
Superannuations	12
Deaths	7

Three police pensioners died in 1888 who had been in receipt of pensions of £54 15s., £69 19s. 2d., and £70 per annum respectively.

Twelve members of the force were superannuated during the year, seven receiving pensions of from £101 17s. 11d. to £168 16s. 3d. per annum, amounting in all to £927 14s. 2d. per annum, and five members gratuities upon their discharge, which formed a charge of £377 5s. upon the fund. Five widows of members of the force were awarded gratuities from the Police Reward Fund, amounting in all to £958 10s.

The Police Reward and Superannuation Funds combined, exhibit for the first time for many years an excess of expenditure over revenue of some hundred pounds, a deficiency likely to be largely increased by the unavoidable expansion of the pension list. This is nothing more than was anticipated and mentioned in previous reports on the subject. Legislation will be necessary, unless the future excess in expenditure over receipts is to be defrayed from the public revenue.

Many of the officers have now reached an age when it must be expected that they will avail themselves of the liberal superannuation provided, and make way for younger and more energetic men.

The criminal statistics for the year are not yet available for reference, but I am in a position to state that there has been a decrease in the number of offences reported during the year. Incendiarism is, however, I regret to say, still on the increase.

The figures for the Metropolitan District for the year show a marked decrease upon those for 1887, but this must be to a considerable extent attributed to the diminution of the number of police employed in the city, caused by the protracted absence of a large force during the strike at the collieries.

\* Acting Sub-Inspector.

Police Department, Inspector-General's Office,  
Sydney, 9th January, 1889.

1889.

NEW SOUTH WALES.

POLICE ESTABLISHMENTS IN UNITED KINGDOM AND  
CONTINENT OF EUROPE.

(REPORT OF INSPECTOR-GENERAL OF POLICE UPON ORGANIZATION AND WORKING OF)

Presented to Parliament by Command.

The Inspector-General of Police to The Principal Under Secretary.

Police Department, Inspector-General's Office,  
Sydney, 26 December, 1888.

Sir,

In accordance with the Colonial Secretary's instructions conveyed to me in your letter dated the 16th February last, No. 88-1,021, I do myself the honor to report, for his information, that during my recent visit to Europe I made careful inquiries respecting the organization and working of various police establishments, for which purpose I was in communication with the following authorities:—

The Commissioner of the London Metropolitan Police.  
The Commissioner of the City of London Police Force.  
The Inspector-General of the Royal Irish Constabulary at Dublin.  
The Chief Constable, Glasgow.  
The Chief Constable, Edinburgh.  
The Chief Constable, Manchester.  
The Inspector of Police, Belfast.  
The Préfet of Police in Paris.

These officials, and many others with whom I communicated, received me with the utmost courtesy, and readily afforded all the information I sought.

As a matter of course, most of the arrangements coming under my observation were matters of detail, of interest in a departmental point of view, which will I trust prove of advantage in the administration of the Department under my control, but it is unnecessary that I should refer to them at length in this report.

My observations regarding the working of the police were not confined to the places I have mentioned, and I further informed myself respecting—

The constitution of the Fire Brigade Service in London and in several other cities.  
The system of Reformatories.  
The construction of places of public amusement.  
Street traffic.

And other matters of public interest more or less connected with the service.

As in the present day constant communication takes place between the police services all over the world, officers being appointed to one force after experience in another, improvements become speedily known and generally adopted, I was not surprised, therefore, to discover that there was but little in the modern arrangements and management of a novel character, indeed changes even of admittedly beneficial character are very gradually and guardedly adopted.

The most important and effective means of ensuring a thoroughly efficient police force are alike in all places and under all conditions. They are simply the selection of men for appointment of good character, possessing qualifications fitting them for an intelligent performance of their duties, and by unremitting watchfulness and care in the selection of superior officers of all grades, to ensure due instruction and supervision, in order that not only efficiency may be maintained but that there may be progressive improvement.

One difficulty invariably presents itself. Subordinate officers who have during a lengthened service performed their duties in a satisfactory manner have claims on that account, and by seniority, for higher rank, but having given the best part of their lives to arduous duty they are not in their advancing years possessed of the energy which is requisite to keep pace with requirements of the service. If to avoid the apparent injustice in passing over such deserving officers by promoting juniors over their heads the former are advanced to positions of greater responsibility, the result is commonly a deterioration in efficiency.

Such officials, whilst receiving every consideration to which their good behaviour and services entitle them, must, it seems to me, look forward to the liberal pensions to which they will become entitled as the ultimate recognition of their services.

Officers in the Royal Irish Constabulary are appointed after trial and instruction at the depôt as cadets, in the following manner:—Out of every five vacancies for junior officers, one is given to a head constable, two are nominated by the Government, and the remaining two are nominated by the Inspector-General by selection from the sons of officers in the constabulary.

As I have had occasion to represent when reporting upon the Police Reward and Superannuation Funds, the scale of retiring pensions in New South Wales is far more liberal than that authorized in any other country in the world, and apart from the consideration of the difficulties which must necessarily hereafter arise in meeting the rapidly-growing charges for this purpose, there are other reasons why the scale fixed by the Act of Parliament should be modified to assimilate more closely with that adopted in other places.

The rate of pay in this country is very liberal, certainly adequate to procure the services of a good class of men. It is about double that paid in London, where there is no difficulty in procuring the services of any number of eligible candidates.

The members of the London Metropolitan Police are allowed one day's leave each fortnight, which, considering the trying nature of their duties (without Sunday rest), is, in my opinion, only a reasonable concession—one I should be pleased to have it in my power to grant in Sydney, but before it could be arranged an increase to the establishment would be necessary.

The foot police here compare very favourably in physique and intelligence with the men in any other service, but as a matter of course the bush duty performed by the mounted police is of a nature wholly different to that undertaken by any mounted police out of Australia.

The police in England and Scotland are not armed, nor drilled to the use of arms, though many intelligent people think it would be a judicious measure. The Royal Irish Constabulary, however, partake more of a military organization than any other police service.

In this regard the custom in various places is widely dissimilar. The police in Paris on street duty are armed by day with a short sword, and by night with a revolver as well, but no baton. In London they have a baton only, now of an improved make, but not equal to the American leather "club" in use in Sydney. In Edinburgh, where street fights are not uncommon, and the police are frequently assaulted and illused in the execution of their duty, they are not permitted to use their batons, or even to carry them, and if disabled there is no assured provision for any compensation. In Greenock the police are supplied with canes, to be used on occasion upon the unruly and disorderly.

There is no improvement in the uniform worn by the Home police which could be advantageously adopted here. The helmet hitherto worn by the London Metropolitan Police has been changed to one precisely similar to that in use in New South Wales for some years. I was at considerable pains to inquire of various manufacturers if a more suitable and less expensive waterproof cape could be procured for our men, but I regretted to find that a moderately cheap stitched cape of one material sufficiently rain-proof could not be manufactured.

Though the modern stations built in Australia are better as a rule than those in London in some respects, the metropolitan watch-houses in Sydney are far behind the requirements. My opinion has always been that persons apprehended are entitled to decent places for confinement, as far as practicable, in separate cells. They are sometimes innocent, youthful, and even respectable citizens, and should therefore never be placed in ill-ventilated cells, or with persons of a criminal or otherwise objectionable type. To allow of this more cell accommodation should be provided, and of a better description. This matter will, however, be specially brought under notice in a separate communication.

Bricks, white, glazed or enamelled on one face, the use of which I have advocated, should invariably be used for lining cells, being readily kept clean, and in every way desirable in a sanitary point of view. Such bricks are always used in modern watch-houses in the United Kingdom.

In June last I wrote from Glasgow to the officer acting for me in Sydney to bring before the Colonial Secretary a strong recommendation that the larger lockups should be provided with an observation cell for the accommodation of prisoners who are in an insensible condition, possibly insane, or suffering from illness, or in other respects in a state to require that they should be watched until they regain consciousness, or are seen by a medical man. The plan of the cell I described is simple, and humanity demands some such means of observation should be provided.

Had such been available in Sydney a terrible catastrophe which subsequently happened would not have occurred.

It would also be in my opinion advisable to provide better sanitary arrangements, in some of the cells at least, similar to those now generally adopted in the United Kingdom, specifications of which, cost, &c., I also transmitted for reference to the Colonial Architect.

The accompanying article from *The Times* newspaper of the 28th July last will afford information regarding the condition of the accommodation of prisoners before trial in England.

The mode of dealing with drunkards varies in different places. In the City of London, for instance, an inebriate is only detained until sober, when he is discharged without being brought before a Magistrate. It is not difficult therefore to find a reason for our returns of apprehensions being apparently higher than those of other cities.

Although there are certain conditions which affect the comparison in a minor degree, it is important to notice the proportion which the police in various cities bears to the population.

The tabulated statement below affords information on this head, but it must be borne in mind that the very extensive area covered by the Metropolitan Police District of Sydney weakens the effective force of the police, rendering a larger number of men necessary than the percentage according to population; instead of this, however, the strength is considerably less.

City.	Population.	Strength of Police, all ranks.	One Police Constable to proportion of population as below.
Metropolitan Police, London .....	5,476,447	14,081	1 to 389
Glasgow .....	550,000	1,093	1 to 503
Edinburgh .....	250,000	500	1 to 500
Manchester .....	377,529	940	1 to 401
Belfast .....	230,000	800	1 to 287
Sydney .....	357,856	517	1 to 692

In London and most other cities barracks are provided for a certain number of single policemen, and it would be an advantage if my recommendation in this regard were to be approved in Sydney, as in case of fire, disturbance, or other emergency, the means of calling out men at a moment's notice might be of the utmost importance. On the other hand, I think the counter advantage of the police living amongst the citizens, and thereby acquiring a knowledge of localities and residents, renders it advisable that the majority of the police should live in private dwellings.

In the metropolis of London between two and three thousand police are exclusively employed controlling the street traffic, which is indispensably necessary to prevent congestion in the extremely thronged and narrow thoroughfares.

The licensed vehicles (omnibuses and cabs) being under the sole control of the police, obedience to instructions from the latter is unquestioningly and promptly rendered. It is at the same time clearly apparent that the good order and system which is maintained in the vehicular traffic is to a very large extent the result of extremely skilful and careful driving, regard for the rules of the road, and respect on the part of drivers, both of public and private vehicles, to the safety and convenience of others.

It is observable, however, that horses are not required to proceed at a slow place at street intersections; that the drivers of licensed cabs are permitted to wander about the streets almost at will looking out for fares, and that in many of the busiest and narrowest thoroughfares, Cheapside and Fleet-street for example, the roadways are greatly impeded by the numerous hawkers who stand their barrows in the streets; also that large vans discharge goods in crowded streets in the most leisurely way, even stopping to feed their horses, whereby the locomotion of other vehicles is made far more difficult than it need be.

With regard to public-houses and the drink traffic, I must confess that I am not assured that my information and observations have been sufficiently comprehensive to warrant the conclusions I have drawn. The question of the control and licensing of public-houses does not appear to be a matter occasioning any serious difficulty in the United Kingdom. I do not think intemperance is on the increase, the signs of it in the streets and at public gatherings are, to my mind, certainly less obvious than in former years. The public-houses are apparently fairly conducted. I visited some in low quarters late at night, and there was less exhibition of degraded persons of both sexes drinking and quarrelling than I remember in former years. I attribute this to the improved police supervision to a great extent, but also to the desire of the licensees to maintain respectable houses. The chief difficulty in Sydney, and that which brings the police into constant conflict with the licensed publicans and the public, is the Sunday-closing clauses of the Act. This is not experienced in London, where public-houses are allowed to be opened on Sundays from 1 to 3 and from 6 to 11 p.m., and in other cities for certain fixed hours. I am disposed to think that this has not the effect of increasing drunkenness, as persons purchasing drink do it openly under police observation, instead of doing so in a clandestine manner, and in contravention of the law, which it is almost a matter of impossibility to enforce.

The French system for ensuring the certain identification of criminals by photography and measurements of head, length of bones, &c., is very ingenious and perfect. Having about 70,000 of such records, it is by other means very tedious, if not impracticable, to identify any particular individual, but by a simple plan of recording and arranging the descriptions this is readily accomplished. This subject I have dealt with in a separate communication to you of even date.

Both in England and France I made inquiries regarding the working of the Contagious Diseases Acts, and acquired certain information which it would not be convenient to embody in this report, but which is, of course, at the disposal of the Government should the question be again brought under consideration.

The foregoing report contains merely an outline of the matters to which I devoted my attention, in obedience to the Colonial Secretary's instructions, but I have taken copious notes of all details of police administration, which I shall not fail to make use of in so far as they can be beneficially applied in the management of the service of this country.

I have, &c.,

EDMUND FOSBERY,

Inspector-General of Police.

[Enclosure.]

[Extract from the *Times*, Saturday, July 28th, 1888.]

THE ACCOMMODATION FOR PRISONERS BEFORE TRIAL.

In the course of last year a report was presented to Parliament of a Committee appointed by the Home Secretary to consider the accommodation at courts of assize and quarter sessions for prisoners whose misfortunes or misdeeds had led to their being brought up for trial or indictment. This report showed that the local authorities, whose business it is to make provision for this accommodation, had in a great number of cases utterly neglected their duty, and that extreme hardship, amounting sometimes to cruelty, was inflicted on these prisoners. The absence of proper provision for order and decency among them contrasted all the more strongly with the care which the same local authorities (under pressure of the law and the Government) had bestowed on the condition of prisoners in the prisons, because the unconvicted prisoner is clearly entitled to be relieved from any unnecessary hardship, and more especially at the moment when the issues before him demand that he should be free from every influence which might distract or incapacitate him.

These revelations, no doubt, suggested that a similar inquiry was necessary in the case of the minor courts of justice, and accordingly the present Home Secretary, continuing the work of his predecessors, appointed a committee in September last to inquire into the nature of the accommodation provided for prisoners in the police courts of the metropolis, and all buildings in England and Wales in which courts of summary jurisdiction are held, and to report what conditions such accommodation should satisfy, and what alterations are desirable in existing arrangements. The committee consisted of Mr. Justice Wills, Sir Robert Fowler, Sir Thomas Evans, Sir Edmund Du Cane, and Mr. Bushby, and their report has now been presented to Parliament.

The condition of things revealed with unsparing freedom in this report comes up to anything which the most sensational writer could desire if he were commissioned to produce something to throw the greatest amount of discredit and disparagement on "the authorities," and they make it abundantly clear that, with all our boasted progress in humanity, and all our discussion as to the principles which should regulate the treatment of prisoners, the "authorities" concerned in these matters are either very ignorant or very apt to neglect their duty, unless they are subjected to the stimulant provided by the being whom Sir William Harcourt, in the days of his more particular ignorance, before he had been Home Secretary, disparaged as a noxious reptile under the name of "Inspector Vastator."

For the facts relating to the present condition of these minor Courts and their requirements, so far as concerns the number of prisoners daily tried in them, the Committee were furnished with reports by the inspectors of prisons, giving, with full but dry precision, the number and sizes of the cells and rooms assigned to prisoners while awaiting their turn to be called up before the Justice who is to determine whether they are to be discharged as innocent, to suffer imprisonment for such period as he can order, or to stand the chance of trial by a higher Court, together with a statement of the necessary subsidiary accommodation,

accommodation, and the sanitary provision in each place. In the case of the Metropolitan and City police courts full tabular information was furnished to show the number of prisoners tried on various days, the time they were detained at the Court-house, and other necessary particulars; but Mr. Justice Wills seems to have undertaken to clothe their dry bones with life for the benefit of his colleagues, and to that end to have personally visited most of the Metropolitan police courts while the ordinary business was going on in them, so that he might thoroughly realize the condition of affairs, and be the better able to make such a graphic description as his practical pen could produce.

The report of the Committee is divided into three parts, which treat respectively of—

1. The Metropolitan and City Police Courts.
2. The Stipendiary Courts in the country.
3. Other Petty Sessional Courts.

The effect produced on the judgment of the Committee, by an examination of their material, so far as relates to the first division, is thus described in their report:—

“They appear to us to show that the present accommodation is extremely defective in almost every respect; that it is unworthy of a civilised country, and especially discredit to the metropolis of this country; and that a large measure of improvement is immediately and urgently called for. The results of the present arrangements may be shortly summarized as follows:—A great number of persons are habitually congregated in one cell, both before and after their cases are heard by the Magistrate. Classification of offenders is possible only to the smallest and most uncertain extent, and the attempt to carry it out must constantly break down in spite of any amount of goodwill. The offices of nature must be performed, if at all, under circumstances of disgusting publicity. The cells are, with few exceptions, most imperfectly lighted; many are quite dark. Communication from cell to cell is, in a very great number of instances, perfectly easy; in some as unrestricted as must be the intercourse between prisoners in the same cell. In some cases there is a mischievous facility of communication with the outside world, which can be, and sometimes is, made use of to defeat the ends of justice. In nearly all, respectable and innocent people, if they should be unfortunate enough to get there, must listen to the foulest language, and be exposed to contact with people of disgusting habits. Many cells, besides being dark, are most imperfectly warmed and ventilated. In short, preliminary detention carries with it punishment which, to persons of respectability or of decent habit, must be intolerable, and which is of a character that, if made part of a sentence, would raise an outcry throughout the land. To the young, to persons of weak morals, to people not wholly blameless or respectable, but still not belonging to the criminal classes, to those on the border-line between decency and depravity, this kind of association is calculated to do infinite harm; while to the really criminal, to the degraded and obscene, the opportunities of unchecked indulgence in licentious and mischievous conversation is not unlikely to afford positive enjoyment, and to afford some compensation for the loss of liberty. We are assured that many people of this class, and many others not sunk so low, and capable of being much damaged by intercourse of this kind, dread or dislike nothing so much as solitude, and beg to be locked up in company with others. To us it seems that solitude, however much it may be disliked, is a good thing for the guilty; and that for the innocent it is far better than liability to the degrading associations we have alluded to, and that it is desirable to aim at securing it rather than at avoiding it.”

Mr. Justice Wills then refers to the darkness in which these unfortunate prisoners are condemned to pass the day of trial:—

“The worst defect about the cells, however, is their almost universal darkness; usually speaking, they have no light except what is admitted through the door. The door has one little trap-door in its upper part, about 12 in. by 5 in. or thereabouts, not always open, and besides this, about 18 in. of the upper part of the door, and very often a space of a foot or so above that, is occupied by plates of iron perforated with circular holes from  $\frac{1}{4}$  in. to  $\frac{3}{8}$  in. in diameter. In nine out of ten of the cells this is the only light admitted. Sometimes in the part above the door a piece of glass about 6 in. wide is inserted in the middle between two bits of perforated iron plate. With very rare exceptions these are the only means of getting any light into the cell. If the cell-door happens to be opposite a window in the passage in front of it, a little light steals in, and if the trap-door were open a man could see to read a watch in many parts of the cell if the day were not dark. But if it be opposite another cell or a wall, the cell is to all intents and purposes effectually dark. I entered many in which, when the door was closed, I could not see the opposite wall. I should think the cells at Westminster, which are lighted by glass panes let into the wall on the side of Vincent Square, are very nearly, if not quite, the only ones throughout the metropolis in which a man could see to read if he had the chance. When the day wanes, or is overcast or foggy, most of the cells must be practically quite dark. The police cells are all efficiently lighted after dark by a gas-burner with a reflector behind it in front of a pane of glass above the door. Very few indeed of the court-house cells have anything of this kind, and commonly there are only two or three burners on the opposite side of the passage outside the cells. Even at Bow-street, where the court is of very recent construction, some of the cells are as nearly as possible absolutely dark, and those which are not so are yet lighted only by a trap-door and the perforated iron plates already described. Here it seems almost a wanton piece of hardship, for the small skylight which lights the passage in front of the cells might perfectly well be extended over the greater part of its length. At Westminster the upper plates of perforated iron above the door are absent, and only such iron bars are there as are necessary for security, and the difference in the amount of light inside is very great indeed.”

As to space, it appears that in the waiting-rooms the crowding is often so great that fifty or sixty prisoners are placed in a room or two with a space of about 5½ ft. to 6½ ft. each, less any space occupied by the police in charge. As regards the stipendiary courts in the country, twenty-one in number, the Committee enumerate several in which no alterations, or such as are of only a minor character, are needed, and they refer with particular praise to the magnificent courts in course of erection at Birmingham, where the humane treatment of prisoners under detention appears to have been thoroughly kept in view in the designs for the building. But they single out West Ham, Pontypridd, Liverpool, and Manchester county police courts for condemnation, saying with regard to the two last-named:—“At Liverpool and Manchester (county) the accommodation is bad. At Liverpool, before the hearing, the prisoners are placed in two corridors and two waiting-rooms; after the hearing they are placed in five cells, and generally about six in a cell. The cell has the inevitable water-closet, which can only be used under the disgusting conditions so often referred to. Under the circumstances described, any effectual classification is, of course, quite out of the question. At Manchester (county) there are but two cells, about 13 feet by 10 feet—one for men, into which sometimes twelve people are put; one for women, into which five or six are sometimes put. The only water-closets are one in each cell, to be used in public, if at all.”

They then proceed to say:—“The two places, however, distinguished by the greatest disregard of humanity and decency are the petty sessional courts of Hull and Manchester (city). At Hull the same cells which are used for quarter sessions do duty also for the petty sessional courts. There are four cells—two containing 965 cubic feet each, one containing 426 cubic feet, and one 400 only. Into each of these, when quarter sessions are not sitting, ‘three or four prisoners or more’ are reported as being commonly placed. They are all underground; they have no access to daylight whatever, and, although lighted and heated, are ‘infamously ventilated,’ and soon become noisome and offensive. At Hull sessions from twenty to forty prisoners are tried, and, as there is no other accommodation for them, it may be imagined to what a pitch overcrowding and promiscuous aggregation must be carried. It is difficult to think with complete calmness of the fact that such a state of things satisfies those responsible for its continuance, and that it fails to rouse any sense of the unfairness and cruelty of putting a man upon his trial who comes, after many hours of confinement in such a noisome den, to struggle in court for his liberty or his character.”

“At the Manchester City Court there are two rooms for men, about 21 ft. by 15 ft., and two for women, about 15 ft. by 14 ft. These are used for prisoners awaiting hearing. As many as thirty men are said to have been placed at once in each of the larger, and twenty women in each of the smaller rooms. After the hearing is over, prisoners sentenced or under remand are conducted to five rooms in the basement. There is a sixth, but it is so dark that it is never used. Three of these are used for men, two smaller ones for women. Those used for men are about 18 ft. by 15 ft., those for women about 18 ft. by 8 ft. They are faced with open bars. ‘In one of these’ says the Inspector, ‘I saw thirty-seven men huddled together, some sitting, others standing or leaning against the iron bars, looking out, talking and muttering words to one another that sounded very like oaths. In the middle of this crowd was a soldier in uniform, standing as far apart from the others as he could. In the women’s room there were eighteen associated. The whole scene reminded me of the barred cages at the Zoological Gardens, occupied by the lions and tigers, with this difference, that the wild animals were far better off. As many as forty to fifty men and from twenty to thirty women occupy these rooms at times. The three other rooms close by were not occupied at all.’”

The Committee’s report as regards the other petty sessional courts is not so detailed as in the other divisions, for, as they say:—

“In

"In the large majority of petty sessional courts the business is so small and the time occupied by a sitting so short that very limited accommodation for prisoners is needed. The reports now under consideration point to what might naturally be expected—that it is in the great centres of population that the worst abuses are to be found. They contain also abundant proofs that here also great improvements are in some places urgently called for. At Blackburn, for instance, 'there are two rooms or boxes at the top of the stairs leading from the cells and close to the dock, one for males, the other for females. They face one another, and are separated by a few steps (and a space) leading to the dock. Petty sessions occur daily, and the average number of prisoners tried does not exceed six. The room for males is 5 ft. by 4 ft. 7 in., and 6 ft. 11 in. high; cubical contents, a little over 160 ft. The room for females is 4 ft. long, 4 ft. 8 in. wide, and 6 ft. 3 in. high; cubical contents, a little over 118 ft.' A water-closet at the foot of the stairs answers for both sexes. 'Eight have been known to occupy the room or box for males, and as many as six women have been packed into the one set apart for females. There is no limit. These boxes are lighted and ventilated by keeping the doors open. There are also small square ventilated holes covered with wire netting—one at the top of each room or box.'

The Committee refer to another important defect in the arrangements which probably characterize almost all police courts and police cells. They say:—

"In our opinions also, it is utterly wrong that women prisoners should have no women about them at the places of detention, and should be obliged to appeal to a man when they want to make use of water-closet accommodation. There ought to be at each court a female officer to take charge, under the gaoler or constables, of the women—a provision which by law has to be made for women in custody in a prison."

Mr. Justice Wills says:—

"In no case and in no place is there a female warder or gaoler. People often have to wait several hours in the waiting-room, and any woman wanting to perform any of the offices of nature must ask a policeman's help. He will take her across the yard, and generally she must go for the purpose to one of the cells, which may or may not be tenanted by other women. If it be so, she must relieve herself in their presence, if at all."

It seems almost incredible that it should be necessary at this present time to enforce the desirability of having female officers to take charge of female prisoners in police cells; and if this security against obvious abuses cannot be obtained without legislation it is absolutely necessary that the provision required by law with regard to women in a prison should be extended to women in police custody. It may naturally be asked how it comes about that the condition of affairs which has been described can have existed for so long a time in the midst of this great metropolis and in buildings the management and construction of which are entirely in the hands of the Government. The answer is to be found in the divided control and responsibility under which the police courts are managed. The magistrate, sitting in the court, has, of course, full control therein, but has apparently nothing to do with that part of the building in which the prisoners are detained before appearing in the dock. During their detention they are in charge of the police, but the police have nothing to do with the building. The police-stations in which the prisoners are detained until they are brought up to court belong to the police, and are managed entirely by them; their condition met with the entire approbation of the Committee, but the police-court cells and rooms are provided by Her Majesty's Commissioners of Works. They are thus a kind of nobody's child; there is no competent inspection of them, the officers of the Department of Works are not charged with, or responsible for, the duty of guarding the interests of the unfortunate prisoners, nor have they, of course, any intimate knowledge of the technicalities of this duty. The natural result of this condition of affairs is therefore what is developed in the report.

The recommendations of the Committee seem to be such as would obviously commend themselves to any person who considers the subject by the light of the accepted maxims which regulate the treatment of prisoners, and which are throughout the United Kingdom applied to the treatment of convicted prisoners. The Committee require suitable accommodation for a full average of the number of prisoners likely to be in custody at the same time; that this accommodation should consist partly of small separate cells and partly of separate compartments in a room or rooms; that it should be properly warmed, lighted, ventilated, and cleansed; that women should be kept separate from men; and that suitable provision should be made for the wants of nature. These remedies are such as to present no difficulty in application, and the cost involved is not of an amount to shock the most strenuous advocate of economy. We cannot but believe that Her Majesty's Government will at once take such steps as will remove this foul blot from among us, and, having thus set an example to the local authorities, will enforce among them the adoption of a standard of treatment of their untried prisoners in conformity with modern ideas of decency and humanity.

#### SANITARY CONDITION OF POLICE CELLS.

Mr. C. GRAHAM asked the Secretary of State for the Home Department whether it was the intention of Her Majesty's Government to do anything to remedy the insanitary state of the cells at many London and provincial police stations.

Mr. MATTHEWS: Yes, Sir, it is the intention of the Government to do everything in their power to remedy the insanitary state of the cells in London and the provinces. Active communication is now proceeding with the various local authorities, and there is every prospect that it will be found possible to carry out the recommendations of the Committee.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## CONSTABLE MURDOCK, MURRUMBURRAH.

(CORRESPONDENCE, &amp;c., IN REFERENCE TO COMPLAINTS AGAINST.)

*Ordered by the Legislative Assembly to be printed, 18 September, 1889.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 11th September, 1889, That there be laid upon the Table of this House,—

“Copies of all papers and correspondence, in *re* inquiry held at Murrumburrah, in April last, by Sub-Inspector Walker, with reference to complaints made by Hung Foot, storekeeper, against Constable Murdock.”

(Mr. Mackinnon.)

### Police Reports.

Police Station, Murrumburrah, 29 March, 1889.

SERGEANT M'GEE begs leave to report that a Chinese storekeeper here named Hung Foot has circulated a report in town that Constable Murdock has been stealing things out of his store, and has made the following statement to the Sergeant and Constables Doerffer and Ottoway, viz.:—“One morning I was in the yard and the little boy Willie came and told me that Murdock was behind my counter putting things in his pocket; I came in and he was gone; after a short time I missed a new wooden pipe and a pocket-knife; I seen the pipe on the shelf sometime before the boy told me Murdock was there; I said nothing to him about it for a couple of days; I asked him for the knife; he said I have a knife, but do not know who it belongs to; he did not give me the knife; I sent the boy to his house for it; he did not give it then, but has since gave me another knife; I asked him then if he took a pipe, he said, I took no pipe; a few days after I went to the yard, and when I returned I caught him taking lozenges out of tin behind the counter; I made him put them back, and told him never to do that again; he put them back, and went away; I afterwards told him that I told Sergeant M'Gee about him; I have been losing money and goods out of my store”; the sergeant has seen the boy “Willie” on the 27th instant and asked him if it was true what he told Hung Foot about Constable Murdock; he replied “yes,” and pointed out the place where he seen him, and also pointed out where he had been watching him through a knot-hole in the partition; this statement has been talked over in the presence of Hung Foot, Constables Doerffer and Murdock; the latter admitted to having taken the knife in mistake, and to Hung Foot seeing him take the lozenges and making him put them back, but denies the statement of the boy Willie Sutton.

JAMES M'GEE,  
Sergeant.

Sub-Inspector Walker, Young.

Police Station, Murrumburrah, 30 March, 1889.

CONSTABLE J. G. MURDOCK, No. 4,651, begs respectfully to report for Mr. Sub-Inspector Walker's information in reference to Sergeant M'Gee's report, attached.

That the constable emphatically denies stealing anything from the store of Hung Foot, or any other person, and has not the slightest fear but that on inquiry being made into the circumstances of the alleged complaint contained in the sergeant's report, will be found to be an exaggeration of fact construed to suit the evil designs of the parties from whom it has emanated, and the constable cheerfully courts such inquiry, and trusts his superiors will be pleased to grant same, and that evidence on oath may be given, so as the constable may have the opportunity to redeem his good name, and with a view to prosecution of the party or parties who are so wilfully and maliciously slandering the constable, whose character is well known to public and police alike, and that he will leave it to his superiors to say, in justice to himself, whether such a stigma should be allowed to remain on the constable's name, and prays his superiors will take into their consideration the serious importance of the complaint, and respectfully requests an immediate investigation be made.

JAMES G. MURDOCK,  
Constable.

Mr. Sub-Inspector Walker, Young.

In

650—A

[870 copies—Approximate Cost of Printing (labour and material), £4 8s. 0d.]

In forwarding these reports, I would respectfully ask Mr. Superintendent Orridge to hold an investigation in this matter himself, as Sergeant M'Gee insinuated some short time since that I would not give him fair play, and as I am aware that he and Constable Murdock have not been on good terms for some time, I am very much afraid that this charge is made more through vindictiveness than for the good of the service.—ALEX. B. WALKER, Sub-Inspector, 31/3/89. The Superintendent of Police, Goulburn.

I think this is a matter that should be dealt with by the Bench of Magistrates, Murrumburrah; the Police Magistrate at Young being requisitioned to attend, and the storekeeper Hung Foot requested to lay an information and obtain a summons for Constable Murdock, whose defaulter's sheet I attach.—J. W. ORRIDGE, Superintendent, 1/4/89. The Inspector-General of Police.

Certainly, that is the proper course to follow.—E.F., 2/4/89. Superintendent Orridge. For Mr. Walker's information and guidance, who will be good enough to attend the Court when the case is heard.—J. W. ORRIDGE, Superintendent, 3/4/89. Sub-Inspector Walker, Young.

With reference to Hung Foot's charge against Constable Murdock, the Inspector-General has ordered that Hung Foot lay an information and obtain a summons for Constable Murdock. Have the summons made returnable for the 18th instant.—ALEX. B. WALKER, Sub-Inspector. Police Station, Young, 4/4/89. Sergeant M'Gee, Murrumburrah.

Sergeant M'Gee respectfully reports, in reference to attached memo., that he has seen Hung Foot, who positively refuses to lay an information against Constable Murdock, at the same time saying, "Murdock tells me he will leave the police in two months and keep a public-house."—JAMES M'GEE, Sergeant, Police Station, Murrumburrah, 7/4/89. Sub-Inspector Walker, Young.

Forwarded for Mr. Superintendent Orridge's information.—ALEX. B. WALKER, Sub-Inspector, Young, 9/4/89. J. W. Orridge, Esq., Superintendent of Police, Goulburn.

Under these circumstances I can only direct Mr. Walker to hold an inquiry, as I cannot go to Murrumburrah at present. If I did, I could not hold an inquiry on oath.—J. W. ORRIDGE, Superintendent, 10/4/89. Sub-Inspector Walker, Young.

### Evidence taken at Inquiry.

*Hung Foot* states:—I am a storekeeper, living at Murrumburrah; I never said Constable Murdock stole things out of my store, but I told Sergeant M'Gee and a man named Bill, who is groom for Mr. Marsden, that a boy told me he saw Constable Murdock putting things in his pocket behind the counter; I saw the pipe on the shelf before the boy told me Murdock was in the store, but I do not know how long after Murdock was in the store that I missed it; I told Sergeant M'Gee that I saw Murdock take some lollies and I made him put them back; people are in the habit of taking lollies when they come into the store; I missed a knife, and I asked Mr. Murdock if he had a knife, and he said "Yes, I have a knife, but I do not know who it belongs to"; he afterwards gave me a knife, but it was not the one I missed; I never said Constable Murdock took any lollies, but I gave Constable Doerffer a small piece of toffy and told him some person had taken a small box out of my store; I never told Constable Ottoway that Murdock stole things out of my store; I told "Bill," at Marsden's, to tell Murdock not to come inside my counter; I also told Constable Doerffer that the boy told me he saw Murdock behind the counter; the reason I told "Bill" to tell Murdock was that I intended to summons any person I caught taking anything from behind the counter; after I saw Murdock taking the lollies I said to "Bill," "You never told Murdock about going behind the counter"; I then said I caught Murdock taking lollies; Constable Murdock said he was going to leave the police and go into business; he said, "I think I will go and keep a public-house."

*By Constable Murdock*: I remember the day that Sergeant M'Gee and Constables Murdock and Doerffer came to my store; I then said that you did not steal knife, pipe, and tobacco; I showed the pipe-case to Constable Murdock and told him that some person had stolen the pipe; Murdock asked me who stole the pipe, and I said that I did not know; the first day of the races (20th February) I lost out of my store pipes, tobacco, boots, and one tin of lollies; my store was closed that day; I was away at the races; Mr. Cutcliffe asked me if Murdock had stolen things out of my store, and I said, "No; Constable Murdock is a customer, and all the police are in the habit of going to my store for goods"; I am in the habit of giving my customers lollies; it was lollies the boy said Constable Murdock put into his pocket, not store goods.

HUNG FOOT.

ALEX. B. WALKER, Sub-Inspector.

*Willie Sutton* states: I am 8 years of age; I was in Hung Foot's store one day, and was in a back room, behind the store, when Constable Murdock came in; I saw him take some toffy; he ate some and put some into his pocket; he went to the end of the counter and took the toffy off the shelf; I saw him through a hole in the wall; I did not tell Hung Foot, for he saw him too; Hung Foot told me next day that some person had taken some pipes, tobacco, and some toffy; Hung Foot told me to go up and ask Mr. Murdock for the pocket-knife, if he found it; he could not find it, and told me to tell Hung Foot that he would get him a new one; I often seen Constable Murdock at Hung Foot's, and I have often seen Hung Foot give Constable Murdock lollies; the day I saw Murdock take the toffy he came through the store into the room where Hung Foot and I were, and he was then eating the toffy.

WILLIE SUTTON.

18th day of April, 1889,— }

ALEX. B. WALKER, Sub-Inspector.

*Vivian Roberts* states: I am 7 years of age; I go to the same school as Willie Sutton; I saw Sutton take two cigars out of the box at Hung Foot's and put them into his pocket; I have seen him with half a pocket full of lollies; he never told me where he got the lollies from.

Frederick

*Frederick William Ottoway* states:—I am a constable, stationed at Harden; I have heard Sergeant M'Gee's report read; I was not at Hung Foot's store with Sergeant M'Gee and Constable Doerffer; on the 21st March ultimo I was at Hung Foot's store, ordering some goods, when he told me that Constable Murdock had taken a pocket-knife from his place, and that he had sent two boys after it, and that he had given him a new one in place of it, that Murdock could not find it; I asked him did he take the knife or did he steal it; Hung Foot replied, "Him no steal em, that he was cutting tobacco there, and put the knife into his pocket, and went away with it in mistake"; he also told me that he had lost several other articles—a tin of lollies, some boots, tobacco, cigars, and other things; he in no way inferred that Constable Murdock had taken any or either of them; I left his store then and came over to the Court; the next time I had a conversation with Hung Foot with reference to this matter was on the night of the 10th instant, when I saw him on the platform at the Harden Railway Station; he came there to see a friend off by train; he gave me a bill for 12s., which I was indebted to him; I told him to come up to the station and I would pay him; he came up and I paid him; he asked me how is that getting on about Murdock, and, knowing whatever was said about the matter prompted me to get a witness, which I did; he said, "I wanted to see you this morning when you were in Murrumburrah, when I asked you to bring Murdock with you to the store, but when you came I could not talk, because there was another man there; I never told M'Gee that Murdock stole anything"; I then told him that I did not want him to shield Murdock in any way if he was guilty and had taken anything from him, to show him no mercy, but tell the truth; he said, "The little boy came into the store, and M'Gee came in shortly after and asked him some questions; the boy said he saw Murdock take some lollies"; Hung Foot said, "I looked at the boy then, and the boy looked frightened and would not say any more"; Hung Foot said "I told M'Gee Murdock took the knife, and I missed it that day"; I asked Murdock if he saw the knife, and he said, "Yes, it is yours"; he said, "I never told anyone in Murrumburrah that Murdock stole from me"; he then said that M'Gee came to him with a statement and asked him to sign it, and he told M'Gee he would not sign it, and said, "I could not read and did not know what was in the statement"; M'Gee then said that Murdock would summons him for spoiling his character, and he had better sign it, but he still refused; he said, some days after, M'Gee came again and asked him to summons Murdock; he refused, and said Murdock never stole anything from him, and said another time M'Gee and Doerffer came and asked him to summons Murdock; he replied to them, "Suppose you no like Murdock, I cannot help that; you want to summons him, you summons him yourself"; they wanted me to go to Mr. Cutcliffe and get a summons, but I would not go; I told them to go away, and I said I would not have anything to do with them; he said, "Constable Doerffer came one day and told me that Murdock had sent a heap of letters to the Inspector at Young about the old sergeant, and said, 'Now you summons him Hung—if you do not, Murdock will have you for defamation of character'"; Hung Foot said, "I thought that Sergeant M'Gee wanted the boy to say that Murdock stole the things"; the boy looked frightened; M'Gee asked the boy if Murdock took anything else; the boy did not say; Hung Foot then said, "That sometime back a girl stole something from my store, and my countryman caught her and got them back; Murdock saw her, but would not lock her up; I do not like him for letting her go; he said 'I was going over to Young to see Mr. Walker, but M'Gee told him not to go'"; after Hung Foot had finished, he said, "do not tell anybody anything about what I have said," and said that he would go over to Young and tell Mr. Walker the same as he had told me; I asked him if he would mind me communicating with Mr. Walker on the subject, or if I would let him know that he was coming; he replied, "No, better not, I will tell him myself"; I have since heard that Hung Foot did not go to Young; I have been in Hung Foot's store with Constable Murdock, and I have seen him point to the lolly-tin and invite us to take some; I have seen Constable Murdock making purchases at Hung Foot's store; I have noticed before this case arose that an ill-feeling has existed between Sergeant M'Gee and Constable Murdock, and I have no hesitation in saying that it still exists; I was not in Hung Foot's store for a quarter of an hour with Constable Murdock last Thursday; we had no conversation about the case.

Taken by me at Murrumburrah, this }  
 18th day of April, 1889,— }

F. W. OTTOWAY.

ALEX. B. WALKER, Sub-Inspector.

*Frederick Doerffer* states:—I am a constable, stationed at Murrumburrah; about the 12th March last Hung Foot told me that Constable Murdock took a knife belonging to him and some lollies, and he took me in behind the counter and showed me an empty pipe-case, and said that he had lost a pipe out of it that day; he also showed me an empty cigar-box and a cigarette-box, and said that he had lost the cigarettes and cigars out of them; I asked him if he thought Constable Murdock had taken them, and he said "I do not know, but I think so"; he then said, "Do not say anything about it"; I am aware that Hung Foot lost some goods during the races, and a search-warrant was issued to search a cart belonging to a man named Cooper who was suspected; I remember the day that Sergeant M'Gee, Constable Murdock, and myself were at Hung Foot's store; I heard Constable Murdock ask Hung Foot if he accused him of stealing a pipe, tobacco, and knife, and he replied that he did not excuse him, from which I thought he meant that he did not accuse Constable Murdock of stealing these things; I was in Hung Foot's place when Constable Murdock came in; Hung Foot said, "You got em my knife"; Murdock replied, "I picked up your knife in mistake, I will bring you a new one in place of it"; this took place on the night of the 21st March last, and was before Sergeant M'Gee had spoken to Constable Murdock about Hung Foot circulating the report about the constable stealing from his store; Hung Foot stated at that time that he had told the sergeant about it; Hung Foot told me that he caught Murdock behind the counter taking lollies, and he told him to put them back, and if he wanted anything to ask for it; I heard Constable Murdock say in the presence of the sergeant and Hung Foot that he took two or three lollies, and you told me to put them back and I put them back; I know where the lollies are kept on the shelf near the end of the counter; it is not behind the counter; to get at the lollies you would have to get to the end of the counter; I was present when Hung Foot made a statement to the sergeant, who took it down in writing, and asked Hung Foot to sign it, and he refused, saying that he did not want to have any more about it; I was not with Sergeant M'Gee when he asked Hung Foot to summons Constable Murdock; I never told any person that Constables Ottoway, and Murdock were in Hung Foot's for two hours

hours last Thursday; after I first heard about this matter the sergeant came and asked me if I knew anything about it; it was about a week after; I said "Yes, Hung Foot told me a week ago," and he then said to me to say nothing about it; on the second occasion I had a conversation with Hung Foot he offered me a piece of toffy, and I said I did not eat sweets, and he said, "You take em, and see if you can find any like it with the children up at the lock-up"; I told Sergeant M'Gee about Hung Foot giving me the toffy, and he told me to keep it; I heard Hung Foot tell the sergeant that he told "Bill," the groom at Marsden's, about Murdock; I also heard him say that he told Constable Ottoway all about it; I heard the sergeant inform Constable Murdock that Hung Foot had circulated in the town that he (Murdock) had been taking things from his store, and that Hung Foot had told Constable Ottoway the same as he had told the sergeant, or more; I have heard the statement read contained in Sergeant M'Gee's report, and it is correct in substance, but not in words; I did not say to Hung Foot that Murdock had been writing letters to the Inspector at Young about the old sergeant; Sergeant M'Gee never told me that Murdock sent letters about him; I am in the habit of saying the old sergeant when I am speaking about Sergeant M'Gee; it is an expression that is generally used when people are speaking about the sergeant; I did not hear Sergeant M'Gee say to Hung Foot that if he did not summons Murdock that Murdock would take an action against him for spoiling his name.

FRED. DOERFFER.

Taken by me, at Murrumburrah, this }  
18th day of April, 1889,— }

ALEX. B. WALKER, Sub-Inspector.

*William Ernest Cooke* states:—I am a groom at "Marsden's Hotel" at Murrumburrah; about the 14th March last Hung Foot informed me that a boy saw Murdock take some things from behind his counter, and from what he said I should say he suspected Murdock of taking the pipe; he said Murdock was in the habit of going behind his counter; a couple of days after I again saw Hung Foot, and he said, "you did not tell Murdock what I asked you"; I told him I did not know what he meant; he then said, "I told you the other day to tell Murdock not to come behind my counter, I do not like it, Murdock came again behind my counter, and I wonder you did not tell"; he said, "I saw Murdock with lollies, and I spoke to him about it, when he put them back in the box again"; I was under the impression from Hung Foot's conversation that he was accusing Constable Murdock of stealing the lollies; people make free in Hung Foot's shop; after Hung Foot told me about Murdock I did not tell any person until Sergeant M'Gee came and asked me, and I then told him what Hung Foot had told me.

W. E. COOKE.

Taken by me, at Murrumburrah, this }  
18th day of April, 1889,— }

ALEX. B. WALKER, Sub-Inspector.

*James G. Murdock* states:—I am lock-up keeper at Murrumburrah; I have heard the statement in Sergeant M'Gee's report read; I deny the truth of that statement; I never stole anything out of Hung Foot's store at any time; with reference to the lollies he has stated I took from a tin on the shelf at the end of the counter; on the morning of the 13th March last, I entered Hung Foot's store; I went towards his bedroom, and I heard him coming through the room at the back of the shop; I met him at the door; I said, "Good morning, Hung"; at the same time I took a pace towards a lolly tin that was opened, and picked up three or four lollies in my hand; Hung Foot said, "Don't take em lolly, Mr. Murdock" I threw them back into the tin; I said to him, "What is vexing you this morning"; he said, "My word, me lose em pipe this morning"; he then went behind the counter and showed me an empty case; I asked him if he knew who took it, and he said, "me do not know"; a couple of days previous to this taking place Hung Foot asked me to write an address on an envelope for him, which I did; I remember cutting up some tobacco there, and then left; that evening, when at home, I found that I had two knives in my pocket; I showed them to my wife and another party that was there, and said, "I have found a knife"; my wife said, "Put it in the knife-box, you might find an owner for it"; on the following day I was at Hung Foot's, he said to me, "You see em my knife"? I said that I found one, and showed him my own knife, and said the one I found was similar to it, and he said, "All the same as mine"; I said, "When did you lose it"? and he said, "Yesterday"; I said, "I found this knife that I have at home yesterday, and if it is yours I must have taken it yesterday when cutting tobacco in mistake"; I said "I will bring it over to-morrow when I am coming"; that evening two boys came over to my place, and asked for Hung Foot's knife; I looked for the knife, and could not find it anywhere; I told the boy I could not find it; that I would give him another instead; I went to another store and purchased a new knife, and gave it to Hung Foot that evening; he took it, and said, "All right"; on the 28th of March last was the first I heard of this complaint; it was from Sergeant M'Gee, on the railway platform at Murrumburrah; he told me that Hung Foot was circulating a report about the town that I had stolen several articles from his store; he said that he would have to report it to the Department; I said, "That is the proper thing to do"; I was surprised at having such a serious charge made against me, and that I would ask for an inquiry into the matter, as it was the first time in my life I was ever accused of such a thing; I said to the sergeant that in the morning we would interview Hung Foot, which we did; I asked Hung Foot if he accused me of taking any pipes, tobacco, or anything else from his shop; he said, "me no excuse you"; meaning that he did not accuse you, excepting the lollies, when he said, "Me say you take em lolly"; I said, "Yes, you were looking at me taking them"; in reference to the boy's statement, I do not remember any such thing taking place; I have never been behind Hung Foot's counter; I have been a customer of his ever since I have been in Murrumburrah; he has frequently given me lollies, and has also pointed to tins, and told me to help myself; sometimes I have taken a few, and other times did not; Hung Foot has never accused me of taking anything from his shop to my face; the day after the sergeant, Doerffer, and myself were at the store I had occasion to go there, and Hung Foot said, "What about that affair"? and I said, "You will have to tell the truth about it, Hung, as there will be an inquiry into it"; he replied, "My God, me no accuse you of taking anything"; I said, "What did you tell people in the town about it for"? he replied, "Me only tell the sergeant and Bill and other police"; I said, "The sergeant has reported it, and you are the first man that ever brought my name up for the public to scandalise

scandalise"; I said, "I joined the police with a good character; when I leave I intend to leave it with the same"; he said, "What are you going to do?" I said, in a joke, "Going to keep the new public-house opposite," and he said, "When?" I replied, "In three or four months"; I have since recovered Hung Foot's knife, which is worth about a shilling; it was taken out of the box by my wife's brother, who is staying with her, and lost in the yard; he is 7 years of age.

JAMES G. MURDOCK.

Taken by me at Murrumburrah, this }  
18th day of April, 1889. }  
ALEX. B. WALKER, Sub-Inspector.

### Police Report.

Police Station, Young, 22 April, 1889.

I beg to report, for the information of Mr. Superintendent Orridge, that, in accordance with his instructions, I held an inquiry into the charge of stealing a knife, pipe, and lollies against Constable Murdock, of Murrumburrah, and alleged to have been circulated by Hung Foot, a Chinese storekeeper of that town. I am of the opinion that Constable Murdock did not steal these articles from Hung Foot's store, and that a wrong construction has been put on what the Chinaman said by Sergeant M'Gee for the purpose of injuring Constable Murdock. It will be seen from Sergeant M'Gee's report that he states that Hung Foot circulated a report in town that Constable Murdock has been stealing things out of his store, and would make it appear that the statement was made in the presence of Sergeant M'Gee and Constables Ottoway and Doerffer, which is not correct, as Constable Ottoway was not at the Chinaman's store with Sergeant M'Gee and Constable Doerffer.

\* Hung Foot has positively stated he never said Constable Murdock had stolen anything from him, and that the only persons he spoke to on the matter were Constable Doerffer and an ex-constable named William E. Cooke, until Sergeant M'Gee asked him. He stated that he told Cooke to tell Murdoch not to go behind his counter, that he did not like it, and that he was going to summons any person he caught behind the counter, as he was losing things out of his store. Hung Foot speaks and understands English very imperfectly, and if a person was so disposed he could frame questions that Hung Foot would say yes to, giving a different meaning altogether to what he intended, and I am afraid that has been done in this case by Sergeant M'Gee.

This matter was known to Sergeant M'Gee on the 21st March last, when I was at Murrumburrah prosecuting in the personation cases; yet he did not mention it to me. Mr. Orridge was also at Murrumburrah on the 26th March, and I presume the matter was not mentioned to him. I think that it will be seen from this that Sergeant M'Gee was waiting until the rumour received a wide circulation, for the purpose of shooting it home to Constable Murdock. There is no doubt Constable Murdock is very much to blame for making so free in the Chinaman's store—cutting up his tobacco, and helping himself to lollies. It appears this is a favourite place for the police to deal at, and in all probability go there for a quiet smoke and yarn, when they should be on duty elsewhere.

I attach the statements I took for Mr. Orridge's information.

ALEX. B. WALKER,

J. W. Orridge, Esq., Superintendent of Police, Goulburn.

Sub-Inspector.

I presume Sergeant M'Gee was present at the inquiry. He should now have the opportunity of reporting on the whole of the evidence, which should have been done at the same time.—J. W. ORRIDGE, Superintendent, 24/4/89. Sub-Inspector Walker, Young.

*Re charges of stealing against Constable Murdock from Hung Foot's store at Murrumburrah.* The Superintendent writes:—"I presume Sergeant M'Gee was present at the inquiry. He should now have the opportunity of reporting on the whole of the evidence, which should have been done at the same time." The evidence is now forwarded to Sergeant M'Gee for his report accordingly.—ALEX. B. WALKER, Sub-Inspector, Police Station, Young, 25/4/89. Sergeant M'Gee, Murrumburrah.

### Police Report.

Police Station, Murrumburrah, 27 April, 1889.

SERGEANT M'GEE respectfully reports, with reference to attached papers, that he was present at the inquiry, and has read the depositions, and he now states that Sub-Inspector Walker is entirely wrong in attributing the action taken by him to any personal feeling whatever, and he trusts his long service will exonerate him from such a puerile motive, and he relies on the following statement of facts to bear out his statement:—On the 19th March Hung Foot voluntarily made the complaint to him as reported, at the same time informed him that he had told the facts to Marsden's groom. The sergeant took no further notice until it was mentioned to him by a business man in town (Mr. Thos. Allsopp). When he found that it was common town talk he interviewed the groom (W. E. Cooke) and the boy Willie Sutton, and Cooke stated Hung Foot had accused Murdock of stealing from his store, and the boy Sutton stated as the sergeant reported. The sergeant then thought it his duty to interview Hung Foot in company with Constable Doerffer, when Hung Foot repeated his statement whilst the sergeant took it down in writing, and which Hung Foot refused to sign, saying, "Oh do not mind, do not do anything"; notwithstanding that, at the same time he remarked that "it was not right to put policeman to catch people steal and he steal himself." The foregoing can be verified on oath. Under the circumstances, the sergeant was of opinion that, to save a police scandal, he could not do otherwise than report the matter to his superior officers, and in doing so he was actuated solely by a desire to maintain the credit of the service. He further points out that had he withheld such a report he would have rendered himself liable to punishment.

With reference to the depositions of Hung Foot and the boy William Sutton, the sergeant can only say that the statements made to him and Constable Doerffer varied so much to the statements made at the inquiry by those parties that he can only be of opinion that Hung Foot felt sorry at the last moment

moment, and without making any charge he will leave any inference that may suggest itself to his superior officers, bearing in mind the statement and observation made by Hung Foot at the interview with the sergeant and Constable Doerffer.

As regards Constable Ottoway's evidence, there can be no doubt on the sergeant's mind that he was actuated by a desire to favour Constable Murdock, and to bring the sergeant into disrepute, as there are many statements that the sergeant has no doubt could be rebutted or contradicted had Hung Foot been present to be re-examined.

With regard to Constable Murdock's statement that he only said in a joke he was going to keep a new public-house, he told Hung Foot on the 28th March (the day after the sergeant told him of the report that was circulated) that he was going to leave the police and keep a public-house, and when the sergeant asked him if he did not tell Hung Foot he was going to leave the police he replied "Yes, why should I tell you what I am going to do, everyone up the town knows it." Constable Doerffer was present at the time the sergeant told Hung Foot that the Inspector-General of Police had directed that he should lay an information and obtain a summons for Constable Murdock. Hung Foot said he would not summons Murdock, and then said that Murdock told him two times that he was going to leave the police. It is the sergeant's opinion that the statement was made with a view to enlist the sympathy of Hung Foot.

The sergeant further states that when he said that Hung Foot made the statement to him, Constables Doerffer and Ottoway, he did not mean to have it inferred that all was present; but Hung Foot had told him that he told the Harden policeman, and Constable Murdock also stated that Constable Ottoway had told him the same as the sergeant told him.

Sub-Inspector Walker, Young.

JAMES M'GEE,  
Sergeant.

Sergeant M'Gee's statement forwarded to Mr. Superintendent Orridge before Constable Ottoway commenced his statement; he asked for Hung Foot to be kept so that he would hear what the constable had to say; but Hung Foot would not remain. In fact I had some trouble in keeping him to take his statement.—ALEX. B. WALKER, Sub-Inspector, 28/4/89.

These papers show a very unsatisfactory state of things at Murrumburrah. Sergeant M'Gee has before attributed unfairness to Sub-Inspector Walker, and now ill-feeling to Constable Ottoway, whilst it is shown that bad feeling exists between him and Constable Murdock. I think that both Sergeant M'Gee and Constable Murdock should be moved, but I do not know where to send the former. Senior-constable Goodhew has applied for a transfer from Frogmore, and would suit Murrumburrah; but Frogmore is only a constable's station, though Sergeant M'Gee might be allowed to retain his rank, receiving senior-constable's pay and the emoluments of Acting C.P.S.; or he might be succeeded by Senior-constable Moss, who is a smart man, being made acting-gaoler at Cootamundra, his wife matron, and receiving senior-constable's pay. I forward other papers having reference to Sergeant M'Gee, with his and Constable Murdock's defaulter's sheets. I doubt if a lock-up keeper, in addition to two mounted men, is required at Murrumburrah, and am inquiring.—J. W. ORRIDGE, Superintendent, 29/4/89. The Inspector-General of Police.

#### Memo. by The Inspector-General of Police.

Police Department, Inspector-General's Office, Sydney, 30 April, 1889.

THIS business is not only unsatisfactory but has now become complicated, as Mr. Orridge points out, by Sergeant M'Gee's animus against his Sub-Inspector and two of the constables serving under him. It will, therefore, be necessary to move him to some other station.

The best arrangement, undoubtedly, is that Mr. Orridge suggests: Senior-constable Moss to go to Murrumburrah; and M'Gee, with the rank of sergeant and pay of a senior-constable, to take charge of the gaol at Cootamundra; this, with allowances, will be better than his present position, and he would revert to his pay as sergeant when superannuated. If he will not accept that position, it might be desirable to place him, instead of a mounted constable, at Yass under another officer. I consider, apart from Mr. Walker's unfavourable report, that M'Gee's conduct has been extremely unsatisfactory, especially with regard to the charges against Constable Murdock—the latter, in my opinion, frivolous. But for the sergeant's service and good conduct I should have reduced him.

E. F.

Superintendent Orridge.

Sergeant M'Gee to see the Inspector-General's and my minutes. If he accepts the acting-gaoler-ship at Cootamundra I shall require to know his wife's Christian name, to have her appointed matron.—J. W. ORRIDGE, Superintendent, 1/5/89. Sub-Inspector Walker.

Constable Murdock to be informed that he is quite exonerated from the charges brought against him, but he must give up loafing about stores.—J. W. O., 1/5/89.

## NEW SOUTH WALES.

## PRISONS.

(REPORT FOR 1888.)

Presented to Parliament by Command.

The Comptroller-General of Prisons to The Minister of Justice.

Department of Prisons, N.S.W., Comptroller-General's Office,  
Sydney, 30 April, 1889.

Sir,

I have the honor to present my Report for the year 1888.

From the statistical information to be derived from the attached tables, the following comparison with the previous year is adduced.

The total number of persons in prison on the last day of the year was 2,353 as against 2,382 for 1887, while the population had advanced from 1,042,919 to 1,085,356, thus showing a material marginal decrease in support of the report of the Inspector-General of Police of general diminution of crime.

The entries and discharges number respectively, 18,060 and 18,089, and 18,858 and 18,976.

The number of distinct persons received in the prisons amounted to 10,890 as against 10,559, which seems to point to the non-return of many who have served sentences.

The reconvictions stand:—For 1st class offenders, being under sentences of 5 years and upwards; 2nd, 3rd, and more frequent—16, 17, 35, as against 18, 6, and 28. For 2nd class, under 5 years—136, 66, 113, as against 113, 52, 74. For the 3rd class, under sentences to imprisonment only, not penal servitude, and without hard labour—76, 40, 40, as against 79, 13, 20. Drunkards and petty offenders—1,071, 412, 528, as against 1,018, 443, 577.

The deduction from this return indicates that while the general balance, apart from the advance of population, affords no distinct advantage, the recurrence of the more serious crime by offenders who have undergone long courses of prison treatment has materially diminished.

The labour returns show for results of prison labour, inclusive of extensions and improvements to prison buildings and needful internal purposes, £38,242 19s. 6d. as against £42,016 13s. 9d.

It is difficult to explain the diminution; but in my opinion it is mostly to be attributed to two causes—one is that on the whole there have been fewer prisoners available for employment in the industrial branches, the other is that many offenders who have acquired the knowledge of trades in the prisons have found a means of self-support, formerly wanting, by which their relapse into crime has been obviated. There is further the loss in labour from the necessity of transferring from the organised labour prisons, for the objects of accommodation, prisoners to Biloela and other lesser prisons where no such organisation is practicable.

The means of bringing to the desired standard the working of our prison system (the objects to be attained being understood and carefully kept in view) are dependent upon cellular and other accommodation for workshops and the like; and the breaking up of the association of prisoners, which of necessity has hitherto prevailed, but is now rapidly diminishing.

The completion of the large new prison at Bathurst, containing 308 cells and commodious workshops, has largely conduced to the improved future position. This prison is not yet fully occupied by reason of the proper sewage arrangements, urgently sought by myself, not having been carried out.

The most noticeable and important departmental change in the past year was the passing of the Regulations for granting licenses for public works, a restricted ticket of leave, by which the conclusions of long sentences are served in a condition of semi-freedom at a small wage at Trial Bay for the construction of the breakwater, in preparation for final liberation. There are 111 men now so employed. They are located in huts in messes of 6. They are not dressed or treated as prisoners, but are kept under strict rule. The plan is an entirely new departure in prison administration, and is working admirably. I annex an extract from a report received from the officer in charge at Trial Bay.

A second change of less experiment, but perhaps more far-reaching in the arrest of criminal careers, has been introduced by the regulation for the entirely separate treatment of first offenders under sentences not exceeding 6 months—of ages from 16 to 25, under conditions both punitive and reformatory. This obviates the evil of young offenders being thrown into the influence of confirmed criminals. The isolation, and other rigorous conditions of the treatment for this class, could not well be extended beyond 6 months. There are now serving under this regulation 56 young men. I have found myself in a position as regards room to submit a further regulation providing for bringing under the same conditions all young offenders, irrespectively of previous convictions, which will remove the anomaly of a more rigorous treatment—certainly devised for their own sakes—of the lesser or first offenders.

[1,178 copies—Approximate Cost of Printing (labour and material), £8 4s. 2d.]

There

There has been a general idea that prisoners have been too well treated—that is to say over-fed, for there is no other ground for the idea. At my instance the late Minister for Justice appointed a committee, consisting of Drs. MacLaurin, Manning, and O'Connor, and myself, to revise the dietary scale. This we did to the full approval of the Government, and the new scale came into operation on the 1st of the present month. There is in it a rearrangement, but no material difference to that formerly existing, save that the rations for short sentenced prisoners had to be increased in order to maintain strength, and support them for such labour as can be assigned to them.

I do not think it desirable to repeat the views expressed in my former reports on the general question of penal administration, or the exceptional expenditure to which the Colony is subjected by having to maintain small and expensive establishments in connection with the wide extension of Circuit and Quarter Sessions Courts throughout the vast extent of this Colony.

I can as before speak highly of the general discipline and efficiency of the officers, and also of the general conduct of the prisoners.

The Shaftesbury Reformatory for girls needs no renewal of my former notices of the admirable success of the Institution.

No definite steps have yet been taken towards the establishing of a Reformatory for Boys, but you have yourself taken up the subject upon which I have submitted a report.

I have, &c.,

HAROLD MACLEAN,  
Comptroller-General.

Extract of a report from the officer in charge at Trial Bay:—

"Sir,

I beg to report for the information of the Comptroller-General of Prisons that there are 111 license holders and 23 ordinary prisoners here at present.

The license men are all employed on the new breakwater, except a few who are finishing the new road.

The foreman of works here informs me that about three-fourths of the license holders work as well as the average free men, and all are willing to do what they can. I think this is very satisfactory when taking into consideration that a number of them are clerks, &c., who have never done any manual labour before.

And up to the present time their conduct has been everything that could be desired; only one man has been punished for insolence to his warder. I have granted passes to four license holders, and they have all returned to prison in good time."
