PE CASTINGS:— Return showing prices paid by Government for, laid on Table, 486 LACING BUSINESS:— Sessional Order passed, 28. LEBISCITE ON THE FISCAL QUESTION:—	7	517
Motion made (Mr. Houghton) that the best and most effectual means of ascertaining the will of the people on the fiscal policy would be by the passage of a Bill authorising the Government to take a plebiscite vote of the adult male population on the basis of "one man one vote"; amendment moved in favour of having recourse to the principle of the Referendum, and negatived, 225; original motion negatived, 226.  DINTS OF ORDER:—		
That amendment on motion to make Monday an additional sitting day was out of order—sustained by Mr. Speaker, 154.  That amendment on motion in reference to Liquor Traffic was out of order—not sustained by Mr.		
Speaker, 162.  That motion in reference to Import Duties on Agricultural Produce was similar to a motion already decided by the House during present Session—sustained by Mr. Speaker, 163.  That Balranald Irrigation Bill should have been covered by message, and was beyond order of		-
leave—not sustained by Mr. Speaker, 182.  That Mining on Private Property Bill (No. 2) was beyond order of leave—sustained by Mr.		
Speaker, 240.  That question of referring seat of H. H. Brown, Esq., to Committee of Elections and Qualifications was not one of privilego—not sustained by Mr. Speaker, 257.  That amendment to add to a motion certain words in reference to a plebiscite vote was similar to question already decided during present Session—sustained by Mr. Speaker, 315.  That Law Practitioners Bill was beyond order of leave—not sustained by Mr. Speaker, 322.  That Diseased Animals and Meat Bill (No. 2) was beyond order of leave—sustained by Mr.		
Speaker, 333.  That resolution from Committee of Ways and Means was similar in effect to a resolution, already decided by the House during the present Session—not sustained by Mr. Speaker, 356.  That the subject of a proposed motion for adjournment (introduction of a Coal-mines Bill) had already been discussed this Session, and could not, therefore, be put—sustained by Mr. Speaker, 414.		
That on an amendment to omit words, it having been decided that the words stand, the debate on the original question was closed—sustained by Mr. Speaker, 431.  That Tolls on Stock Bill again presented for consideration a question the House had decided this Session in the Customs Duties Bill—sustained by Mr. Speaker, 449.  That Diseases in Sheep Acts Amendment Bill was beyond Order of Leave—not sustained by Mr.		
Speaker, 449.  Reported from Committee of the Whole and decided by Speaker:  Representation of the People Bill (No. 2), 79.  Klectoral Reform Bill, 288.  Customs Duties Bill, 399, 420 (*).  DLICE (See also "STATISTICS")

g	VOL.	PAGE.				
S PEAKER (continued):-						
Lays paper on Table in reference to Parliamentary Reporting Staff, 190.						
Lays on Table Minute of Executive Council, 459.  Reports presentation of Address of Congratulation to the Governor, 10.	ĺ					
Reports return of Writ for Bourke, 11, 329; for Balranald, 35.		ļ				
Unavoidable absence of, 49, 341.  Reports Governor's approval to Additional Standing Order (Limitation of Speeches), and makes	ĺ					
observations on application of, 81.		}				
Do do (interruption and renewal of proceedings of Bills), 595.  Reports issue and return of Writs, 119 (2), 251 (8), 252.						
Directs Clerk to amend Roll of Members, 137. States his intention to issue new Writ for Illawarra, 167.	ĺ					
Directs Member to discontinue his Speech, 203, 316 (*), 384.						
Quotes practice as to Members attending as witnesses before Select Committees when requested so to attend, 420.	•					
Gives easting vote, 443.  Declines to giving any ruling or direction in reference to removal of Mr. Tooliey from the Chamber	1					
during the sitting of the Committee of Supply, 478.						
Presents Bills to Governor for Royal assent in Legislative Council Chamber, 606 (3). RULINGS OF:—	¦ i					
That Contractors Lien Bill related to trade, and should have originated in a Committee of the						
Whole, 73.  That amendment to omit words in the Representation of the People Bill (No. 2) was within	i					
province of the Committee, and therefore in order, 79.						
That amendment on motion that Monday be an additional Sitting Day was out of order, 154.  That amendment to substitute Friday in motion that Monday be an additional Sitting Day was						
out of order, 154.	j					
That amendment on motion in reference to Liquor Traffic was in order, 162.  That motion in reference to Import Duties on Agricultural Produce was similar to one already						
decided during the present Session, and could not be put, 163.  That Balranald Irrigation Bill was properly before the House, 182.	Ì					
That Mining on Private Property Bill (No. 2) was beyond order of leave, 240.						
That Question to refer Seat of H. H. Brown, Esquire, to Committee of Elections and Qualifications was one of privilege, 257.						
That new clause proposed in Electoral Reform Bill was not relevant to subject matter or title of						
the Bill, 288.  That amendment proposed to add words in reference to plebicite on the fiscal question was similar						
to question already decided during the present Session and therefore inadmissible, 315.  That clauses of Masters and Servants Bill were beyond the order of leave, 322.						
That Law Practitioners Bill was not out of order, 322.						
That Diseased Animals and Meat Bill (No. 2) was beyond order of leave, 333.  That Resolution from Committee of Ways and Means for imposing new taxation differed	. {					
essentially from mere abstract Resolutions on the same subject (Import Duties on Agricul-	İ					
tural Produce), and was therefore in order, 356.  That a Member having spoken to a question, may not conclude by moving "That the question bel						
now put," 399.  That the subject of a proposed motion for adjournment, viz., the introduction of a Coal-mines	}					
Bill, had already been discussed this Session and could not therefore be put, 414.  That amendment to add words to Schedule C of Customs Duties Bill was inconsistent with previous						
decision in Schedule A. of same Bill, and therefore out of order, 420.						
That amendment to add word "water" to Schedule C of Customs Duties Bill was such as to turn Proceedings of the Committee into a farce, and therefore out of order, 420.	į					
That, on amendment to omit words, it having been decided that the words stand, the debate was						
closed, 431.  That Tolls on Stock Bill, again presented for consideration, a question decided by the House this	j					
Session, was contradictory of provisions of the Customs Duties Bill, and therefore out of	- [					
order, 449. That Diseases in Sheep Acts Amendment Bill was not beyond order of leave, 449.	ļ

# REPORT

OF THE

# MINISTER OF PUBLIC INSTRUCTION

FOR THE YEAR

1890.

Presented to Parliament, pursuant to Act 43 Vic. Po. 23, sec. 36.

SYDNEY: GEORGE STEPHEN CHAPMAN, ACTING GOVERNMENT PRINTER.

1891

[7s. 6d.] 22—a [1,203 copies—Approximate Cost of Printing (labour and material), £495–19s. 6d.]

## REPORT OF THE MINISTER OF PUBLIC INSTRUCTION.

To His Excellency the Right Honorable VICTOR ALBERT GEORGE, EARL OF JERSEY, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

My Lord,

I have the honor to submit to your Excellency the report of the Department of Public Instruction for the year 1890. The report deals fully with the educational work carried on under the provisions of the "Public Instruction Act of 1880," and embraces summaries of similar work done in State-aided Institutions of an educational character.

The number of schools on the list in the year was 2,423, embracing 2,630 separate departments, with accommodation for 198,898 pupils. The year's enrolment of pupils was 195,241, the mean quarterly enrolment 170,357, and the average attendance 116,665. The staff of teachers, all grades included, numbered 4,181. Towards improving school organization, a number of play-grounds have been enlarged, and lithographed plans of buildings, designed to meet the progressive requirements of different localities, have been introduced.

During the year 2,385 schools, or 2,592 departments, were inspected, and 128,098 pupils examined. Of these latter, 79,428 were examined in the course of instruction prescribed for Classes I and II; 48,387, in higher class courses; and 583 in the Public High School course. Of the total number examined in the different classes, 80 per cent. passed the prescribed standards in reading, 79 per cent. in writing, and 69 per cent. in arithmetic; while of the numbers examined in Superior School and High School subjects from 66 to 99 per cent. were successful. As regards discipline, all the schools inspected were satisfactory.

The Training Colleges for Teachers are still carried on under the arrangements described in last report, but steps have been taken towards the erection of college buildings, for male students, within the Sydney University. Scholarships and Bursaries for State Schools and the University have been made available for deserving students; workshops, cookery classes, garden work, tree-planting, bee-keeping, &c., have been established, with encouraging results, in connection with Public Schools; School Savings Banks continue in operation; and the Public Schools Cadet Force is in a healthy state. Satisfactory progress is also being made by the Technical Education Branch of the Department.

The total expenditure of the year under the Public Instruction Act has been £704,259; and, towards this sum, school fees amounting to £71,826 have been collected, and paid into the Treasury.

The whole work carried on, and the results achieved, are shown in detail under the divisions which follow:—

### I .- Schools, Accommodation Provided, Attendance.

The total school population between the ages of 4 and 14 years, estimated as in previous reports, was 292,997; and, of this number, 63,635 were from 4 to 6 years, and 229,362 from 6 to 14 years, the statutory school age. 2,423 schools, containing 2,630 departments, were in operation, as compared with 2,373 schools and 2,574 depart-During the year 117 schools, or 124 departments open in 1889. ments, were established, comprising 40 Public, 46 Provisional, 12 Half-time, 16 House-to-house, and 10 Evening Schools. Twenty-five Provisional and 3 Half-time Schools were raised to the rank of Public Schools, and 11 Half-time and 6 House-to-house Schools to the rank of Provisional Schools; while 25 Public and 45 Provisional Schools were reduced to Half-time or House-to-house Schools. of the schools in operation during the whole or some portion of 1889 do not appear on the list of schools open in 1890, and of those actually in operation in that year, 57 were closed before the last quarter. number of schools open at the close of 1890 was 2,366, containing 2.573 departments. The net increase for the last quarter of 1890, as compared with the last quarter of 1889, was 49 schools, or 55 departments; and the whole school accommodation available was equal to 193,898 places.

The schools in operation in 1890 were organized and classified as follows:—

### Schools :-

- 5 High Schools, 2 for boys and 3 for girls.
- 1,551 Public Mixed Schools for boys and girls.
  - 53 Public Schools of two departments each.
  - 75 Public Schools of three departments each.
  - 1 Model Public School of five departments (including Practising School and Kindergarten).
  - 333 Provisional Mixed Schools for boys and girls.
  - 289 Half-time Mixed Schools for boys and girls.
  - 95 House-to-house Mixed Schools for boys and girls.
  - 21 Evening Public Schools for boys only.

## Departments:--

- 5 High Schools, 2 for boys and three for girls.
- 1,551 Public Mixed Schools for boys and girls.
  - 40 Separate Primary Departments for boys and girls.
  - 117 Separate Infants' Departments (including 4 Kindergartens).
  - 90 Separate Departments for boys (including a Practising School).
  - 89 Separate Departments for girls.
  - 333 Provisional Mixed Schools for boys and girls.
  - 289 Half-time Mixed Schools for boys and girls.
  - 95 House-to-house Mixed Schools for boys and girls.
  - 21 Evening Schools for boys only.

2,630

218 applications for the establishment of new schools were received, namely, 49 for Public Schools, 111 for Provisional Schools, 23 for Half-time Schools, 22 for House-to-house Schools, and 13 for Evening Schools. Of these, 123 were granted, and 65 were declined, while 30 remained under consideration at the close of the year. The total number of children to be accommodated in the new schools granted is 3,393. The Department has erected, or is taking steps to supply, buildings for 2,612 children. For the remaining 781 children the local promoters are to provide school-rooms, this accommodation being required chiefly in connection with Half-time and House-to-house Schools.

The number of applications received, and the action taken with regard to them, are shown in the following table:—

Applications for the cstablishment of Schools.

Schools.		Number received.	Number granted.	Number declined.	Number still under consideration.
Public Schools	***	49	20	17	12

• Decrease.

From the foregoing table it will be seen that, Evening Schools excepted, all kinds of schools received very considerable increases in numbers for the period under notice. In ordinary Public Schools the increase for the nine years has been 683, and in Superior Schools it has been 104. Provisional and Half-time Schools show increases respectively of 87 and 196, while of House-to-house Schools, first started in 1883, there are now 95. During the nine years referred to the Evening Schools have decreased from 57 to 21.

In addition to the schools established and maintained under the Public Instruction Act, the following State-supported or aided schools are still in operation, namely, the Sydney Grammar School, the two Industrial Schools, and the School for the Deaf and Dumb and the Blind.

School

School Premises, Sites.—The number of new school sites obtained during the year was 100. Of these, 45 were government grants; 28 were resumed under the "Lands for Public Purposes Acquisition Act" (44 Victoria No. 16); 18 were purchased; and 9 were gifts from private individuals. The cost of the sites purchased was £7,703 10s. 4d., and the sum of £1,128 13s. 5d. was paid on account of those resumed. The balance still due for these latter is, approximately, £4,262. Full particulars of these will be found in Appendix XV.

During the year special attention was directed to the necessity for enlarging the areas of the play-grounds attached to Public Schools. Concurrently with the growth of schools in point of attendance, this matter has been felt to be one of increasing importance year by year, and it became apparent that, particularly at some of the larger schools. situated in thickly populated centres and attended by hundreds of children, the play-ground space was wholly inadequate, and that the need for ameliorating the conditions in this respect was a pressing one. Many of the sites for these schools were secured during the administration of the late Council of Education, and that body was necessarily restricted in its choice of areas, firstly, by the comparatively limited supply of funds under its control, and, secondly, by the fact that it did not possess the powers now vested in the Government of the Colony of resuming lands for the purpose. Under the circumstances, the Council could, as a rule, do no more than provide sufficient land to meet the then existent demands for accommodation. These areas in course of time were encroached upon by the erection of additional buildings, rendered necessary by increase in the number of scholars, and consequently, as the schools grew larger the space available for pupils' recreation often became smaller. The effect of having confined playgrounds is injurious, inasmuch as the ordinary pastimes and outdoor exercises so requisite for the health and well-being of the young cannot be indulged in, and children are compelled to seek their amusement in the streets and throughfares—in some cases the only play-ground possessed by those who live in towns—with results most hurtful to their characters, and conducive in a high degree to habits of Moreover, to carry out instruction in drill and cadet larrikinism. exercises, it is essential that ample ground space be provided, while room is further required for tree-planting, horticulture, and agriculture, as well as for extending the system of technical education in schools.

As it was therefore very desirable that steps should be taken to remedy the evils and provide for the wants herein referred to, instructions were caused to be sent to all the Department's Inspectors, directing their special attention to this subject when visiting schools. They were required to aim at obtaining areas up to 4 acres wherever possible, and also, when recommending new sites, to endeavour to secure the advantage of having them adjacent to public parks or recreation reserves. In addition to this, having in mind the fact that a large proportion of the sites are taken from Crown lands, I sought an understanding with the Secretary for Lands with a view to minimum

areas of 4 acres being set aside, as required, for the purpose of school sites, together with reservations of about 10 acres for paddocks to accommodate the horses of children who ride to school from a distance. It was felt that a portion of the public estate could not be put to a better use than, in this way, for the furtherance of so important a public purpose as the State education of the young. Although I regret to say that the arrangements to this end have not been concluded, yet the wisdom of the course proposed will doubtless lead to a satisfactory settlement.

Notwithstanding that action in the direction thus indicated was commenced only in the latter half of the year, additions have been made, or authorised to be made, to 55 existing sites, comprising a total increase in area of not less than 70 acres. These acquisitions have been made at a cost of about £36,060. Negotiations are also in progress for enlarging 54 other sites, to the extent of 100 acres, at a probable cost of £19,155. Moreover, the Department of Lands has been applied to for additions to 70 sites, containing a total area of 170 acres of Crown land.

Buildings.—131 new school-houses, and additions to provide increased accommodation in 48 existing buildings, were completed in the year. Eighteen teachers' residences and 35 weathersheds were also erected, and repairs and improvements were effected in connection with 916 schools. Places for 11,567 children were provided in the new buildings and additions. The erection of 95 of the new school-houses, 15 of the additions, 5 of the residences, and 22 of the weathersheds, and also the repairs to 458 buildings, were carried out under the supervision of Inspectors of Schools. The other works specified were executed under the Architect for Public Schools. Of the total number of new places, 7,834 were provided by the Architect's buildings, and 3,733 by the buildings erected under the Inspectors' supervision.

At the close of 1890 existing school premises afforded room for 198,898 pupils, 95 per cent. of this accommodation being in vested premises. Of the school places counted in 1889, about 438 were lost in 1890, by the closing of schools and by the giving up of old buildings. The net increase for 1890 was 11,129.

Taking the building work done in the last two years, it may be observed that, in 1890, 49 new schools and residences were erected under the Architect's supervision, as compared with 44 built in 1889; while the additions numbered 23 as compared with 28; the premises repaired, 458 as compared with 309; and the places provided 7,834, as compared with 7,561 for the same period. It may also be noticed that the number of small school buildings and residences erected under the Inspectors' supervision were 100, as compared with 115 put up in 1889, and that the number of places provided in 1890 was 3,733, as compared with 2,760 in the previous year. The total number of places made available in 1890 shows an increase of 646, as compared with the number provided in 1889.

At the close of 1890 the following additional works were in progress:—63 new buildings, 10 additions, and 14 buildings for small country schools, the whole to provide for about 6,000 children. Seven new weathersheds were also in course of construction, and repairs and improvements were being carried out in 162 existing buildings.

Full particulars respecting the building work completed in the year, and that in progress at its close, are given in the following tables:—

School Attendance.—School returns for the year show a gross aggregate enrolment of 221,864, as compared with 217,289 under instruction in 1889. Deducting the usual 12 per cent. for multiple enrolments, it will be seen that the number of individual pupils at State schools was 195,241. This number equals 16.68 of the total population of the Colony.

The gross and corrected enrolments for the last nine years, taking 12 per cent. as representing the multiple enrolments in each year, are given in the following table:—

			Apparent	Corrected Aggregate	Increase	or Decrease.

<sup>\*</sup> Numbers given in previous reports corrected by deducting 12 per cent. (for multiple enrolments.)

In addition to the 195,241 enrolled in schools under the Public Instruction Act, there were 1,088 in attendance at other State-aided schools, namely:—

The Sydney Grammar School					,	526
The Industrial Schools	** ***	2.11	7311 3	•••		463
The School for the Deaf, and	Dumb,	and the	Blind	***	•••	99
Total		•••			]	1,088

On the 31st December, 1890, the estimated population of the statutory school age (6 to 14 years) was 229,362. Of this number, 160,877, or 70.2 per cent., attended State Schools; and 68,485, or 29.8 per cent., received instruction in private schools and at home, or else remained altogether untaught. From the latest published returns of private schools' attendance it appears that the total enrolment was 41,265, namely:—At 377 undenominational private schools, 10,000; at 47 Church of England private schools, 2,655; at 267 Roman Catholic private schools, 28,546; and at 9 Presbyterian, Wesleyan, and Lutheran private schools, 334. Estimating that 34,000 pupils in the private school enrolment were between the ages of 6 and 14 years, it will be found that, of the total statutory population of 229,362, about 194,877, or 85 per cent., were enrolled at State and private schools, while 34,485, or 15 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 26,447 under 6 years of age and 16,270 over 14 years were also enrolled for school attendance—35,472 at State Schools, and 7,245 at private schools. Thus, of 316,342 children in the Colony between the ages of 4 and 15 years, 196,329 attended State Schools, and 41,265 attended private schools; while the remainder, 78,748, received instruction at home, had completed their education, or were untaught. 195,241 children were enrolled in schools under the Public Instruction Act—848 in high schools, 914 in evening schools, and 193,479 in ordinary day schools; and of these, 21,867 were from 4 to 6 years, 160,488 from 6 to 14 years, and 12,886 over 14 years of age. \*85 per cent. of the statutory school population attend school, but the total enrolment is only 75.2 per cent. of the estimated school population between 4 and 15 years, as compared with 76.4 per cent. in 1889, 78 per cent. in 1888, and 79 per cent. in 1887. As pointed out in last year's report, this decrease may, possibly, be accounted for by the proportion of school population between 4 and 15 years being less now than it was in 1881. This will be definitely ascertained from the new census to be taken in the current year. Improvement continues to be shown in the length of time pupils remain at school.

The average quarterly enrolment was 170,357, and the average attendance 116,665, showing increases respectively of 5,656 and 2,096. The regularity of attendance, as tested by comparing the average attendance with the enrolment, was 1 per cent. less than in 1889. This falling off was wholly due, however, to the very irregular attendance of the first quarter, during which the weather was exceptionally wet. For the other three quarters the attendance in point of regularity showed satisfactory improvement. In the last quarter the average daily attendance reached 71.2 per cent. of the enrolment, the highest percentage yet recorded in the Colony.

In the first half of the year, 97,831 pupils, and in the second half 123,924 pupils, attended the ordinary day schools 70 days or more; while the number who attended 140 days or more in the year was about 111,250. The very unfavourable weather which prevailed during a part of the first half-year caused the number of pupils attending 70 days or more to be comparatively small, but a very satisfactory increase in the statutory attendance was shown in the second half year. The percentages of the enrolment attending 70 days or more in each half year, and 140 days or more in the year since 1886, are as follow:—

	70 days or above in first half-year.	70 days or above in second half-year.	140 days or above in the year.
1886	64.2 per cent. 56.9 ,, 65.5 ,, 68.8 ,, 58.4 ,,	69.0 per cent. 71.7 ,, 76.1 ,, 71.5 ,, 72.3 ,,	59.8 per cent. 60.6 ,, 64.8 ,, 67.8 ,, 65.7 ,,

The enrolment, average attendance, and attendance for the number of days required by statute are shown, and compared for the last ten years, in the following tables:—

## (a) Quarterly Enrolment and Average Attendance for 1890.

0	<b>X</b>	Average Attendance.			
Quarters.	Number enrolled.	Number.	Percentage.		
March quarter	167,319	106,740.7	63.7		
June quarter	169,318	117,331 5	69.2		
September quarter	172,672	119,9358	69.4		
December quarter	172,121	$122,\!651.3$	71.2		
Year's average	170,357	116,664-8	68:4		

<sup>\*</sup> Note.—It must be borne in mind that the basis of calculation is the school population of the last day of the year. In Victoria, calculation is made on the basis of the mean annual school population; and as the year's mean population is much smaller than that of the last day in the year, we suffer by any comparison made. No school data are at hand, however, for a proper calculation. When the 1891 census returns are published, the school statistics of the colonies will be made out with sufficient exactness to permit of a fair comparison.

# (b) Enrolment and Average Attendance for the last ten years.

				verage Attendance.

1881 to 1890.	44,851	2.44	13,715	•11	7,875	5.86	24,902	2.17	

The main facts relative to school attendance may be summed up thus:—Of the statutory school population, 194,877, or 85 per cent., were enrolled for school attendance—160,877, or 70.2 per cent., at State Schools, and 34,000, or 14.8 per cent., at private schools. Of the ordinary school population between 4 and 15 years, 237,594, or 75 per cent., were at school; 196,329, or 62 per cent., at State Schools; and 41,265, or 13 per cent., at private schools. 195,241 children attended schools under the Public Instruction Act-160,488 being of the statutory school age, 21,867 under that age, and 12,886 above it. quarterly enrolment was 170,357, or 86.77 per cent. of the year's enrolment; and the average attendance was 68:48 of the quarterly enrolment. 65.7 per cent. of the quarterly enrolment attended school 140 days or more in the year, 98,456 being of the statutory age, and 12,794 being under and over that age. Of the average enrolment, 72.3 per cent. attended school 70 days or more in the last half-year. Comparing last year's attendance with that for 1889, the following points may be noticed:—The year's enrolment was increased by 4,026 or 2 per cent., and the mean quarterly enrolment by 5,656, or 3.4 per Owing to exceptionally wet weather the percentage of the quarterly enrolment in average attendance was slightly lower than in

1889, and 111,250 pupils or 65.7 per cent. of the enrolment attended school 140 days or above in the year, as compared with 111,127 or 67.8 per cent. in 1889. The length of time pupils remain on the rolls continues to improve. The percentage of the population enrolled quarterly and the corresponding percentage in average attendance in 1890 were respectively 14.5 and 9.8, as compared with 14.7 and 10.2 per cent. in 1889.

Previous reports called attention to the defects in the compulsory clauses of the existing Act, and the experience of the past year emphasises the need for their amendment, especially as regards—

- 1. Provision to deal effectively with children found idling about the streets during school hours who are evading the law.
- 2. Authority to efficiently ascertain the total number of children in the Colony of statutory age.
- 3. The power to compel teachers of private schools to furnish accurate returns of enrolment and attendance.
- 4. Placing the onus of proof of age and of the fulfilment of minimum attendance on the parents or guardians.
- 5. Making the penalty for default more severe.
- 6. The inclusion of a clause making it penal to employ children of school age, unless educated up to standard requirements.

During the half-year ended 30th June, 1890, 21,051 children failed to attend school for seventy days as required by the Act. As satisfactory excuses were given, however, in 14,676 cases, the number of legal defaulters amounted to 6,375. The parents or guardians of 5,541 of these were cautioned, and in 834 cases legal measures taken.

For the half-year ended 31st December, 1890, there were 13,899 children who failed to make the prescribed minimum attendance. Satisfactory explanations were received in regard to 9,491, the parents or guardians of 3,452 were cautioned, and prosecutions were authorised in the remaining cases.

The defaulters, therefore, for the June half year, amounted to 3.7 per cent. of the average enrolment for that period, while for the December half-year the percentage fell to 3.5.

There are at present nincteen School Attendance Officers, who work under the supervision of the District Inspectors. Four are stationed in the Metropolis, and the rest in the following towns:— Armidale, Tamworth, Bathurst, Goulburn, Maitland, Tarce, Newcastle, Wallsend, Bowral, Wagga Wagga, Wellington, Parramatta, Hay, Liverpool.

Information as to deficient attendance on the part of pupils is readily obtained from the class roll, but in addition every teacher is required to ascertain as far as possible what children in the locality of his school are not receiving instruction up to the standard. Whilst little difficulty is experienced in gathering this information in thinly populated districts, it is well night impossible to obtain it in large towns. The Attendance Officers investigate the cases brought under notice, and are authorised to take legal proceedings whenever they can produce evidence of a character to warrant such a step.

The

The extreme course of prosecution is not adopted until parents have been cautioned for the first offence. Few cases in which legal action is authorised are dismissed, and the penalty imposed is almost always paid.

It sometimes happens that the services of children between the ages of twelve and fourteen years are absolutely required to assist their parents. Cases in which the father or mother is unable to work are frequent, and in these the Minister does not proscente on condition that the children regularly attend a Night School. Steps are taken to see that this stipulation is complied with.

Special action was taken towards the close of the year in relation to Broken Hill. In view of representations made to the Department to the effect that large numbers of children in the locality were not attending any school, an Attendance Officer was despatched to enforce the law. That officer has reported that very many of the parents of children are ignorant of their responsibilities under the Public Instruction Act. He adds, however, that the Managers of the local mines have discontinued the employment of all children under fourteen years and have agreed not to again engage any under that age. The parents interviewed have also promised to fulfil their obligations as regards their children, and it is confidently anticipated that the School Attendance Officer's visit will produce satisfactory results.

Collection of School Fees.—As a result of the course followed by the Department since 1887, fees are now paid with improved regularity, though it must be admitted that in a large number of cases their collection is still attended with trouble and friction. Teachers are required to furnish monthly returns of arrears of fees to the District Inspector, and the prompt and careful attention these documents receive at the hands of these officers, as well as in the Department, has largely prevented the accumulation of arrears.

All fees received are paid into the Consolidated Revenue. The total for 1890 was £71,826 15s. 7d.

#### II.—Inspection.

The large number of new schools yearly brought into operation for a considerable time past rendered the work of inspection with the existing staff a task of exceptional difficulty. The number assigned to each Inspector averaged 85. Each of these was expected to receive two inspections in the year, but, though the staff worked with commendable industry, it was found impossible to accomplish the amount of inspection set down, and at the same time perform other important duties incidental to an Inspector's office. It became necessary, therefore, to rearrange the districts, and strengthen the inspecting staff. A new district was formed at Bowral, and placed under the charge of District Inspector Johnson, whose place at Wellington was filled by the promotion of Inspector Long, of Hay, to the rank of District Inspector. Mr. Long was succeeded at Hay by Mr. Thomas

Pearson, a first-class teacher. To fill the vacancy in the Sub-Metropolitan District, caused by the promotion of Mr. District Inspector McIntyre to the position of Deputy Chief Inspector, Mr. District Inspector W. Dwyer was transferred from Goulburn to Sydney. Mr. David J. Cooper, M.A., of the clerical staff, succeeded him at Goulburn. Mr. Inspector Morris, stationed in Sydney, was promoted to the office of Examiner, his late duties being transferred to Mr. Inspector Dawson, of Campbelltown. Mr. Dawson was followed at Campbelltown by Mr. Bent, a first-class teacher, but on the 1st July a new Sub-District was formed, having Kogarah as its head-quarters. This was placed under the supervision of Inspector Skillman, of Bega. Mr. Bent returning to the work of teaching. Mr. Skillman was succeeded at Bega by Mr. Peter Durie, a first-class teacher. Early in the year Mr. District Inspector John McCredie was put on special duty in connection with the re-organization of the Public School Boards, and Mr. Inspector Pitt was brought from Nowra to assist in the work of inspection in Sydney. Subsequently, on Mr. McCredie's retirement in August, Mr. Pitt was stationed permanently in Sydney, being succeeded at Nowra by Mr. Inspector Lawford, of Young. Mr. C. W. Friend, a first-class teacher, was appointed to replace Mr. Lawford at the latter town. Other new sub-districts were formed, with Yass and Gunnedah as their centres, and were placed under the supervision of Messrs. Sheehy and Parkinson, first-class teachers.

The effect of these changes was to increase the number of Inspectors by three, and to render some of the larger districts more workable. The Inspectoral Staff now consists of a Chief Inspector, a Deputy Chief Inspector, 9 District Inspectors, and 24 Inspectors.

Frequent heavy rains during the year, with occasional floods, not only injuriously affected school attendance, but helped to make the work of inspection difficult and unsatisfactory. In several districts the roads became bad, travelling slow, and many of the schools empty, or nearly so, of scholars at the time of the Inspectors' visits. Notwithstanding these drawbacks, the Inspectors prosecuted their labours with energy and success. This will be at once apparent when it is stated that out of a total of 2,627 schools in operation 2,567 were fully inspected, while as many as 704 underwent inspection a second time. The uninspected schools, numbering 40, were, with few exceptions, not in operation when visited by the Inspectors.

The details of inspections made during the last three years are shown in the following table:—

Year.	No. of Schools.	No. of Schools inspected.	No. of Schools inspected twice.	Total No. of Inspections,	No. of Schools not inspected.	No, of pupils examined.	No. of Inspectors.
1888	2,461	2,445	1,071	3,516	16	118,710	32
1889	2,570	2,535	848	3,383	35	122,052	32
1890	2,627	2,587	704	3,291	40	127,515	35

The particulars for each district stand thus:-

District.	No of Inspectors,	No. of Schools.	No. of Schools inspected.	No. of Schools inspected twice.	Total No. of inspections.	No. of Schools not inspected.	No of pupils examined.
Armidale	4	285	282	9	291	3	9,439
Bathurst	3	256	255	89	344	1	8,767
Bowral	3	220	216	74	290	4	6,789
Goulburn	4	376	370	116	486	6	9,603
Grafton	3	256	255	51	306	1	8,960
Maitland	4	290	288	139	427	2	16,654
Metropolitan	4	182 -	' 181	98	279	1	37,000
Sub-Metropolitan	3	195	190	32	222	5	13,506

Totals	35	2,627	2,587	704	3,291	40	127,515

The inspected and the uninspected schools were :-

	Public.	Provisional.	Half-time.	House-to-House.	Evening,	Total.
Inspected	1,885	326	280	85	11	2,587
Uninspected	4	11	8	7	10	40
Totals	1,889	337	288	92	21	2,627

Course of Instruction and Standards of Proficiency .- The modifications made in the course of instruction referred to in last year's report appear to be justified by results. The inclusion of needlework and drawing in the infant school curriculum has not only imparted a pleasing variety to the matter of teaching, but has tended to foster in the minds of the young scholars an increased interest in their lessons. Sufficient time has not yet clapsed to enable a judgment to be formed as to the bearing of these changes on the proficiency attained in the same branches by the pupils in primary schools, but there is reason to believe that this result will prove of a satisfactory character. The omission of geography and grammar from the course laid down for the second class has had the effect of concentrating the attention of teachers and pupils on subjects of higher importance, as reading, writing, and arithmetic, and a substantial advance in the pupils' attainments in these branches may be looked for. Already the Inspectors' reports indicate a steady rise in the proficiency of the class thus affected.

There is one subject which, there are good grounds for believing, is not receiving that attention from our teachers and Inspectors which its unquestionably great importance merits. This is mental arithmetic, a most valuable aid in developing the thinking faculties of children and in training them to be quick and accurate in performing mental operations in numbers. A few years ago our schools showed to advantage in this branch of school instruction; now it might be safely affirmed that not one school in ten could pass a tolerably easy examination in the subject. For the subordinate position mental arithmetic thus occupies in our school curriculum, Inspectors are chiefly to blame, as few of these officers devote to it anything like adequate attention. Something must be done to improve the teaching and raise the proficiency of our scholars in this subject, and the necessary steps to this end will be taken without delay.

Character of Pupils Attainments and Progress in Learning.—127,515 pupils were present at inspection, being an increase of 5,463 scholars, or 4.4 per cent. over the number examined in 1889, and of 8,805 scholars, or 7.4 per cent. over the number in 1888. All were examined in reading, 99 per cent. in writing, 72.1 per cent. in dictation, 96.5 per cent. in arithmetic, 37.8 per cent. in grammar, 37.9 per cent. in geography, 46.1 per cent. in history, 94.4 per cent. in scripture and moral lessons, 90.2 per cent. in object lessons, 85.7 per cent. in drawing, 87 per cent. in music, 1.3 per cent. in French, 5.7 per cent. in Euclid, 1.9 per cent. in algebra, 4.7 per cent. in mensuration,  $1\frac{1}{2}$ 

per cent. in Latin, 0.02 per cent. in trigonometry, 80 per cent. (of girls) in needlework, 90.2 per cent. in drill, and 4.9 per cent. in natural science.

Of the 127,515 pupils examined in reading, 9 per cent. were in the alphabet, 21.7 per cent. in monosyllables, 31.5 per cent. in easy narrative, and 37.8 per cent. in ordinary prose. Of 126,169 pupils examined in writing, 38.8 per cent. wrote on slates, and 61.2 in copy books or on paper. Of 123,116 examined in arithmetic, 61 per cent. were tested in simple rules, 23 per cent. in compound rules, and 16 per cent. in the higher rules. Of 48,201 examined in grammar, 44 per cent. were learning the elementary part and 56 per cent. the advanced part of the subject. Of 48,322 examined in geography,  $42\frac{1}{2}$  per cent. were tried in the elementary branch of that subject, and  $57\frac{1}{2}$  per cent. in the advanced portion.

A comparison of some of the foregoing percentages with the results during the previous year in corresponding subjects is shown in the subjoined table:—

		1889.	1890.	Increase per cent.	Decrease per cent.
	Total number of pupils examined	122,052	127,515	4.4	*****
Percentages of pupils examined in	Reading, who were tested in ordinary prose Writing, who wrote on paper. Arithmetic, who were tested in the higher rules Grammar, who were tested in the advanced portions Geography, who were tested in the advanced portions History		37.8 61.2 16. 56. 57.5 46.1 94.4 90.2 85.7	2·  1·1  6·5 54·6 12·4	4·8 2·5 17· 9·8

From this table it will be observed that the percentages of pupils in 1890 who were examined in ordinary prose reading, in the higher rules of arithmetic, and in the advanced portions of grammar and geography show a falling off as compared with similar percentages for 1889, the decrease in the case of the two latter subjects being to the extent of 17 per cent. and 9.8 per cent. respectively. The proportion of scholars who wrote on paper has increased by 2 per cent., while those who were tested in history, and in scripture, and moral lessons remained at nearly the same percentages as in the previous year. The pupils who received instruction in drill showed a satisfactory advance of  $6\frac{1}{2}$  per cent., and a remarkable improvement took place in the number of children learning drawing. In that subject the total number of examinees in 1889 was 38,025, while in 1890 it was 109,347, being an increase of  $54\frac{1}{2}$  per cent. This increase is largely due to the fact that the teaching of drawing has now been extended to Infants' Schools, in pursuance of the policy announced in last year's report to direct wider attention to the subject.

Of other branches object lessons were given to 12 per cent. more pupils than in 1889, music was taught to  $2\frac{1}{2}$  per cent. more, and natural science to 1.7 per cent. more; but in mensuration 2.7 per cent.

less, and in trigonometry '08 per cent. less of the pupils present at inspections had received instruction. Needlework was taught to 80 per cent. of the girls.

With reference, in the next place, to the proficiency of the pupils examined in the abovementioned subjects, the Inspectors' reports show that in reading 80 per cent. of the examinces passed, in writing 79 per cent., in dictation 72 per cent., and in arithmetic 69 per cent., 73 per cent. passed in grammar, 76 per cent. in geography, and 70 and 75 per cent. in English and Australian History. Further, in scripture and moral lessons 75 per cent. passed, in object lessons 76 per cent., in drawing 65 per cent., and in music 77 per cent. In other subjects the percentages were-French, 66; Euclid, 73; algebra, 74; mensuration, 58; Latin, 68; trigonometry, 61; needlework, 85; drill, 72; and natural science, 79 per cent. Compared with the previous year there has been, in every subject, a decrease in the percentage of pupils who have satisfied standard requirements, a result due in part to the more rigorous tests applied by Inspectors during the year under the revised standards of proficiency, but due in a high degree to the irregular attendance caused by the exceptionally wet weather that prevailed.

Of 1,886 Public Schools examined, 1,655 or 88 per cent. were up to or above the standard, and 231 or 12 per cent. were below it; of 326 Provisional Schools, 56 per cent. were up to or above the standard, and 44 per cent. were below it; of 280 Half-time Schools, 69 per cent. satisfied the standard, while 31 per cent. did not; of 85 House-to-house teaching stations, 70 per cent. were equal to and 30 per cent. below the standard, and of ten Evening Schools all were up to or above the standard.

The following table shows the progress in efficiency made in the different classes of schools during the past five years:—

Class of Schools,			Percentage up to or above the Standard.						
			1886.	1887.	1888.	1889.	1890		
Public	•••		82	84.	85	86	88		
Provisional	•••		64	65	65	62	56		
Half-time	•••		65	74	72	74	69		
House-to-house	•••	•••	65	75	67	73	70		
Evening Schools			100	79	87	90	100		
All Schools	•••		78	80	;   80	82	81		

The Public Schools continue to show a larger percentage of those that are up to the requirements of the standard, but in the Provisional, Half-time, and House-to-house Schools there has been a decrease in such percentage, resulting from the causes to which allusion has already been made.

Vocal Music.—The new standard, which was brought into operation at the beginning of 1890, is very generally regarded by the teaching profession as a severe test of the pupils' knowledge of the theory and practice of vocal music. Its general scope is as follows:—Simple melodies by car are practised in the Infants' Departments, and the first class of Primary Schools; the second classes receive elementary lessons in "Tonic-sol-fa" notation; the third classes sing two part songs from "Tonic-sol-fa" notation, and receive introductory lessons in "Staff," notation; and the fourth and fifth classes are instructed in the "Staff" notation on the movable "Doh" principle, and are well practised in reading at sight.

During

During the year, the Superintendent of Singing has reported upon all the schools in the Metropolitan District. Having regard to the higher standard and to the increased severity of the examinations, the pupils' attainments are considered to be of a satisfactory character; and, as the junior classes become fully taught under the new standard, much higher results at each school may be looked for. The Superintendent remarks that "the teaching is both vigorous and painstaking, while the singing of the children cannot fail to give pleasure to themselves, and to the listeners."

A Report from the Superintendent is herewith published as an Appendix.

Drawing.—Early in the year measures to effect necessary reforms in the teaching of drawing were brought into operation. Mr. Frederick W. Woodhouse, the newly-appointed "Superintendent of Drawing," having arrived from England, entered on his duties, and the drawing work in schools was carried on in accordance with the revised course of instruction and standard of proficiency, which provide that the subject shall be systematically taught to all pupils from the infants' class upwards. As stated in last year's Report the system of drawing sanctioned by the Department had not always been adhered to in our schools. Defective methods were sometimes employed, and teaching from the flat rather than from the round was too much the practice.

The teaching of drawing in the Kindergarten, Infants' Schools, and junior classes, as now provided for, will form a good foundation to work upon in the higher classes; and drawing from the round and from objects or models can readily be introduced at the proper time, where care has been taken to familiarize the infants' and junior classes with the appearances of objects and of their constituent lines and surfaces in the round.

The object aimed at is to have the course of instruction made really gradual and progressive, and in every way effective in its results; and as one means to this end it has been deemed advisable that a further revision of the course should be made. Such revision has now been prepared by the Superintendent of Drawing, after the matter had been fully considered and discussed by responsible officers of the Department, assisted by M. Henri, the Teacher of Drawing in the When sufficient time has elapsed for Technical Education Branch. the full effect to result from the changes made already, and those now being introduced, it may be confidently expected that the character of the pupils' attainments in drawing will prove in all respects satisfactory. Since the Superintendent entered on his duties, he has visited 56 schools. In 92 departments included in these schools, 387 drawing classes were inspected, and 12,839 pupils fully examined. Of these pupils, 3,287 were in Infants' Departments, 5,096 in Boys' Departments, and 4,456 in Girls' Departments; and the results of the examinations showed that 7,005, or 54.5 per cent., were up to, or above, the standard in attainments, and 5,834, or 45.5 per cent., were below the standard.

To assist teachers in improving their qualifications as instructors in drawing the superintendent has given a large number, over 200, of model lessons in the schools he has visited; and this course he intends to continue so far as the time at his disposal will allow. The teaching of drawing in the Sydney High Schools and in the Training Colleges at Hurlstone and Fort-street is favourably reported on. In addition to the courses in Geometry and Perspective taken up at the Fort-street Training School, model lessons in Freehand and Model Drawing will be given by the Superintendent to the students at intervals in the current year.

Further details will be found in the Superintendent's report and the revised course of drawing instruction given as an Appendix.

Discipline.—Our teachers appear to devote due attention to the maintenance of good discipline. In general the government is mild and kind, but firm and effective. Corporal punishment is only resorted to in extreme cases when other means for preserving order have failed. Inspectors are almost unanimous in reporting school work to be carried on in a quiet orderly manner, the pupils to be respectful and attentive in demeanour, and to enter into the work of examination in a cheerful self-reliant spirit.

As aids to the maintenance of discipline, a methodic and well-arranged school routine, and a regular observance of military drill are of the highest value. And it is satisfactory to find that teachers are fully sensible of the importance of these essentials. The ordinary arrangements for teaching are such as provide for the constant and profitable occupation of all the pupils, while sufficient attention is devoted to drill to secure a becoming quietness and order in the school operations.

Drill.—In the new standard of proficiency issued at the beginning of the year "Drill" is recognised as an important school subject; and for progress made and proficiency shown at inspection, marks are now awarded for drill equal in value to those given for other important branches. Moreover, suitable text-books on military and other physical drill, &c., have been largely supplied, and, by this means, teachers have had improved opportunities of making themselves better acquainted with drill subjects. Under these arrangements increased attention has been given to the matter by both teachers and pupils, with results that may be regarded as very satisfactory.

For the better training of the girl pupils in this important subject, supplies of "wands" and "dumb-bells" are granted to schools; and during the year the Superintendent of Drill, Captain Mulholland, has delivered a series of lectures to the lady teachers in the metropolitan and suburban schools on the following subjects:—Calisthenics, dumb-bell, wand, ring, and gallery exercises, and musical drill. The lectures have been well attended and great interest has been taken in them by the teachers. It is also reported that a great improvement is already noticeable in the physique, bearing, and deportment of the girls attending the schools,

In his annual report Captain Mulholland states that all the schools in the Metropolitan District have been visited and examined by him in Military Drill, Calisthenics, Gallery Exercises, and Physical Drill; and that taking "Fair" as the standard, all were either up to or above the standard.

High Schools.—No increase has been made to the High Schools. Those in operation are established at Sydney, Maitland, and Bathursto comprising in all five departments, namely two for boys and three for girls. The aggregate enrolment at these for 1890 was 848 as compared with 774 for 1889, and the average attendance for the same years was 598 and 520 respectively. The enrolment has, therefore, increased 9 per cent., and the average attendance 15 per cent.

Both departments in Sydney are overcrowded and arrangements are in progress for removing the boys to buildings in course of erection in Harris-street, Ultimo, in proximity to the new Technical College. Here an excellent site of  $2\frac{1}{2}$  acres has been secured, and High School buildings of the most modern type as regards organisation and general equipment are expected to be completed early in 1891. Tenders for a new High School at Maitland are also about to be invited.

Admission to High Schools is gained by candidates passing a satisfactory examination in Reading, Dictation, Arithmetic, and Grammar, together with Euclid, Algebra, and Latin for boys, and French for girls. While the effect of this test is to restrict the attendance, it has the advantage of securing a certain evenness of attainments among the pupils, and of affording a tangible foundation for future work.

In common with other State Schools, High Schools are subjected to periodical Departmental examinations. These examinations are of a searching character. They embrace a minute inquiry into the organisation, discipline, and methods of teaching adopted in each school, the attainments of each scholar and class, the skill and usefulness of the several teachers, and, generally, whether the school is fulfilling its mission. Gauged by these tests, it is satisfactory to find that the results disclosed by the Inspectors' reports are of a favourable character. Viewed also in relation to the examinations instituted by the University, High Schools appear to stand well, as is shown by the following table:—

	No. of Passes. Junior Examinations.	No. of Passes. Senior Examinations.	No. of Passes. Matriculation Examinations.	Total number of Passes.	
Sydney (Boys)	40	9	26	75	
" (Girls)	3Ĝ	6	9	51	
Maitland (Boys)	7	1	1	9	
" (Girls)	6	1	•••••	7	
Bathurst (Girls)	4	3		7	
	93	20	36	149	

It is proper to remark, however, that the position taken by a school at these examinations forms no certain or reliable criterion of the general work done therein. At most but a very small proportion of the pupils are sent up to compete, and these are usually the brightest and most promising scholars, who have been more or less specially prepared for the ordeal. The discipline and tone of the school, the methods of teaching in use, the general character of the instruction imparted, the proficiency of each class, and the progress made by each individual pupil are in no way indicated by the results disclosed by the application of a test, at once partial and unsatisfactory, and eminently calculated to foster a system of "cram." Entertaining these opinions, I am at present considering the advisableness of instituting a scheme of Departmental examinations to supersede, so far as our schools and pupils are concerned, the examinations now held yearly by the University.

The Bursary System came into operation for the first time during the year, and the results attending it are of a hopeful character. Five boys and 3 girls from the High Schools succeeded in obtaining Bursaries at the University.

The total expenditure on High Schools for the year was £7,709 8s. 6d., while the amount received from fees was £4,706. The actual cost to the State, therefore, was £3,002 11s. 2d. or at the rate of £3 10s. for each pupil enrolled.

Superior Public Schools.—Fifty-seven schools of this class were in operation at the close of 1889. This number was increased by 7 during 1890, thereby making a total of 64. The schools thus newly promoted under the provisions of Regulation 5, are situated at Canterbury, Kiama, Picton, Queanbeyan, St. Leonards East, Windsor, and William-street. Superior Public Schools comprise 168 departments, with an enrolment for the closing quarter of the year of 47,213 pupils. These figures show an increase of 18 departments and 4,844 pupils on similar totals for 1889, and afford evidence that the instruction imparted in Public Schools, both as regards quality and range, is improving at a fairly reasonable rate. No school can be promoted to the rank of a Superior Public School unless the attendance thereat is sufficient to enable a class to be formed of not less than 20 children who have been educated up to the standard that completes the course prescribed for a Fourth Class. As, however, this class of schools is primarily intended to supply a more advanced education to families residing in localities where the means of obtaining such an education do not exist, it is a question whether greater facilities should not be afforded for their establishment. I am accordingly considering the expediency of so modifying the provisions of the regulation under which they are established as to lead to a more rapid extension of Superior Public Schools throughout the country districts.

The course of instruction embraces mathematics, natural science, French, and Latin, in addition to the subjects taught in ordinary Public

Public Schools. As far as practicable the teaching in English grammar, geography, and history is made to correspond with that prescribed for the Senior and Junior Examinations at the Sydney University.

The Inspectors' reports on the condition of Superior Public They show, among other Schools are of a favourable character. things, that the schools are of modern type, well organised and disciplined, affording sound instruction to the pupils attending them, and staffed by a band of home-trained, zealous, able, teachers. addition to successfully passing the examinations by the Department, 39 of these schools succeeded in passing 146 pupils at the University Junior and Senior Examinations, while no less than 60 pupils from ordinary Public Schools acquitted themselves in like manner. The Superior Public Schools that showed to the greatest advantage at these examinations were the following: -Fort-street, Crown-street, Young, Macdonaldtown, Wickham, Grafton, Mudgee, Parramatta South, It is but fair to mention that Emmaville Public School stands next to Wickham in the number of its successful competitors at these examinations.

Half-time Schools.—The schools taught by itinerant teachers Wherever 20 are of two kinds, Half-time and House-to-house. children, between the ages of 6 and 14 years are residing within an estimated radius of 10 miles from a central point, and can be collected in groups of not less than 10 children in each, an itinerating teacher is appointed to visit such places, and the schools so established are designated Half-time Schools. Suitable school houses are required to be provided by the applicants, but necessary furniture, apparatus, and books, are supplied by the Department. of such schools who are appointed and paid by the Department, are expected to divide their time between the schools under their charge so as to effect the largest amount of good. Half-time Schools are classified in the same manner as Public Schools according to the total average attendance of pupils at the stations at which the teacher gives instruction, and in all other respects they are required to be conducted The number in operation in 1890 was 288, and of as Public Schools. these 280 underwent inspection. From the reports furnished on their condition, it would appear that they are reasonably well organised, properly disciplined, and fairly well taught, the results in many instances proving quite equal to those obtained in Full-time Schools. As settlement advances these schools generally grow into Provisional or Public Schools.

House-to-house Schools.—In sparsely populated localities where it is not practicable to collect 20 children within an estimated radius of 10 miles from a central point, three or more teaching stations may be formed under the designation of House-to-house Schools. The teachers employed in these schools while not necessarily trained, must be persons of good moral character, and capable of imparting the rudiments of an English education. They are required

to supplement the school instruction, which is limited to reading, writing, dictation, and arithmetic, by a systematic course of home lessons, and to furnish at the end of each month a report upon the work done during that period to the Inspector. They are paid at the rate of £5 per annum for each pupil in average attendance up to a maximum salary of £100 per annum, in addition to which they are granted a yearly forage allowance of £10. As population increases, these schools frequently grow into Half-time or Provisional Schools. The number in operation during the year covered by this report was 92, 85 of which underwent full inspection, and, with few exceptions, the work done therein was found to be satisfactory.

Evening Public Schools.—Thirteen applications for the establishment of Evening Public Schools were received; 10 were granted, 2 declined, and the consideration of 1 was deferred. The total number of schools in actual operation in the year was 21, but 8 of these had but a brief existence. The number open at the close of the year was 13, attended by 338 pupils.

This class of schools hitherto has not met with much public support. Whether this be due to the comparatively small number of children cut off from other means of receiving an education, whether it be attributable to the conditions under which evening schools can only be brought into existence, or whether it be the result of the limited curriculum laid down for such schools, certain it is that they have proved the least satisfactory feature of our whole educational machinery.

The minimum age of children eligible to attend Evening Public Schools is fixed at 14 years; the course of instruction is confined to reading, writing, arithmetic, grammar, and geography; a weekly fee, not exceeding 1s. for each pupil, is charged; and an average quarterly attendance of not less than ten is required to warrant the payment of salary to the teacher, who must hold a certificate of classification.

Kindergarten. — The Kindergarten Schools at Fort-street, Riley-street, and Australia-street, Newtown, have been in operation throughout the year, and Kindergarten classes are organised in the Infants' Departments of Waverley, Paddington, Wickham, Goulburn, and other schools. These schools and classes have now nearly 2,000 children, from 4 to 8 years of age, under instruction, and their work is reported to be progressing very favourably.

At Fort-street the Kindergarten staff consists of a mistress (Miss E. L. Banks), two assistants, and one pupil-teacher; and the school has an enrolment of 193 pupils. These are taught and exercised in four classes, the following being an outline of the work carried on:—

The Babies' Class.—This class, which consists of the youngest children in the school, is exercised with "Gift I." The "Gift" consists of six rubber balls, crewelled over with wool, representing the three primary and secondary colours. By means of various exercises with this Gift, the children's perceptive

perceptive faculties are quickened, and the laws of similarity and discrimination are called into action. Musical games are introduced, and lines of poetry repeated, appropriate to the exercises and descriptive of them.

First Class.—This class is exercised with "Gift II," which consists of a sphere, cube, and cylinder, made of hardwood, enclosed in an oblong-shaped box of the same material. What was a ball in Gift I is now called a sphere. The bright colours and softness of the woollen balls are gone; the sphere feels cold and hard and heavy in comparison. The cylinder forms the connecting-link between the sphere and cube. It has one curved surface like the sphere, and can be made to roll, while on its two circular flat surfaces it can stand firm, or slide like the cube. The surfaces, edges, and angles of the cube are examined by the class. Exercises with the three forms of Gift II are worked, and poetry is repeated explaining the different motions.

Second Class.—This class is exercised with Gifts III, IV, V, and VI; and with planes of wood, &c. The Third Gift is contained in a small wooden box of cubical shape, and consists of eight small cubes. The form is the same as part of Gift II, the size only being different. The new experiences consist of notions as regards the whole in its relation to the parts, and of the parts in their relation to the whole. Thus the child acquires the notion, and the names, and both in connection with objects, of halves, quarters, eighths, and of how many of the small divisions make one of the larger. In connection with the Third Gift a new faculty is called forth-imagination, and with it the instinct of construction The cubes are mentally transformed into is awakened. bricks, and with them building commences. The construction faculty suggests imitation, but does not rest with that; it invents and creates. These eight cubes, placed in a certain relation to each other, make a long seat, or a seat with a back, or a cross, or a doorway, &c. The Fourth, Fifth, and Sixth Gifts consist of the cube variously divided into solid brick-shaped forms, and into smaller cubes and prisms. Observation is called on with increasing strictness, and the opportunity is afforded for endless manifestations of constructiveness; and all the while impressions are forming in the mind which in due time will bear geometrical fruits, and fruits, too, of æsthetic culture.

So far we have been dealing with solids; the next step brings us to plane surfaces. Planes of wood are now introduced. These are thin wooden tablets, painted white on one side and red on the other, of square, oblong, or triangular shape. The triangular tablets are divided into right-angled and isosceles triangles, equilateral, right-angled scalene, and obtuse-angled triangles.

triangles. This Gift teaches form and figure with greater force and effect than the first six Gifts. It also trains the sense of place by means of the different positions in which the tablets may be laid. The tablets are placed by the children upon the second surface of the desks to represent the plane surfaces of known objects, such as churches, houses, trees, &c., or geometrical forms, and forms of beauty or symmetry.

After the exercises with planes, or wooden tablets, "stick and ring-laying" are introduced; thus lines are represented—first the straight line, then the curved. The curved line is supplied by metal rings and half rings. In the circle the child recognizes the outline of the flat ends of the cylinder. Accuracy of work is gently and firmly insisted on, both for the sake of educating the hand and eye, and because accuracy of mind is thereby encouraged. According to Froebel's belief, accurate habits of mind in the child are among the best preventives of exaggeration and falsehood in the man.

Third Class.—This class is exercised in drawing, plaiting, or weaving, pricking and sewing, paper-folding, pea-work, and modelling. For drawing, slates and drawing-paper are used, scored in small squares, and the child's first effort with his pencil is to draw a straight line by following the scoring. Thence he progresses to the square, the triangle, the star, and hundreds of mathematical figures, learning the beauties of symmetry and combination, always aided by the simple network of squares. The teacher shows the child how he can combine lines into patterns, but invention in all these occupations is stimulated from the first.

Plaiting is just the ancient process of weaving, for the plaitingsheet takes the place of the warp, the plaiting-sticks do the work of the woof, and the plaiting-needle represents the Plaiting is one of the most favourite occupations of childhood. A child loves all that contributes to his intellectual and physical development, and there are, perhaps, few occupations more efficacious in this respect than plaiting. It exercises both hands, satisfies the taste for colour (for every pattern requires at least two colours), and it excites the sense of beauty, for it gives rise to beautiful—that is, symmetrical-forms. The child's sense of number and his comprehension of numerical relations are continually exercised; nor is there any better means of instilling into the child's young mind notions of number, at once thorough, based on personal experience and accentuated by differences of form and colour, than the present occupation of plaiting.

Pricking and Sewing.—We now arrive at points. A paper ruled in squares as before is laid upon a cork pad, and the outline of the pattern upon it is perforated at equal distances by

means of a pricking needle. Step by step Froebel returns to the solid, his occupations increase in difficulty, and more creative power is called for. The pricked pattern is embroidered with coloured silk or worsted on cardboard, the line is added to the points. Harmony and contrast of colour are the principal means of decoration.

Paper Folding.—A four-inch square of white or coloured paper is given to each child; and, proceeding from the simple to the difficult, a great variety of forms representing life objects is produced; and, while the work proceeds, the intelligent teacher, by developing the perceptive faculties of the children and calling upon them to describe in correct language, can make this occupation a most interesting one.

Pea Work.—Peas are soaked in water for six or eight hours and when thus softened are used as starting points for lines formed by pointed wires, or short sticks, stuck into them. An endless variety of skeleton forms can thus be constructed, outlines of geometrical figures, of houses, furniture, railing, &c., and these can be put together and remain in shape.

Modelling.—The lump of modelling clay is representative of the dearly-loved mud pies; but in the kindergarten it is handled by fingers that have been trained to work under the guidance of eyes and mind that have been trained to see and think, and the balls of clay become something very different from the little pie moulds that used to stand in a uniform row.

As pointed out in last Report, kindergarten training is included in the course prescribed for teacher students at Hurlstone College; and all female pupil-teachers under the Department are required to make themselves acquainted with the principles of such training.

Agriculture, Horticulture, &c., in connection with Public School instruction and training.—The revised standard of proficiency provides that, in the form of object lessons, instruction in Agriculture, &c., shall be given to pupils in Public Schools; and, early in 1890, the teachers were invited to give special attention to the matter. It was then pointed out to them that the lessons to be given might, with advantage, take up the work in three stages, namely:—

In first stage: The principles influencing the supply of plant food in the soil, the necessity for cultivation, and the circumstances making tillage more or less effective.

In second stage: The principles regulating the more or less perfect supply of plant food; and manures, as supplemental sources of plant food.

In third stage: The principles regulating the growth of crops, and the variations in their yield and quantity.

To assist teachers in the preparation of the necessary lessons, a text-book, specially written for the purpose, was supplied to them.

Oral school instruction in agriculture was thus provided for, but at the same time it was felt that such instruction would be of little value unless followed up by practical work outside. To meet this further requirement, it has been arranged that portions of school grounds may be set apart for the formation of flower and vegetable gardens, and, where practicable, for the keeping of bees. The planting of fruit or shade trees, the cultivation of grain, &c., or of live fences, and the management of bush houses, are also matters that may be taken up; but in all cases it is required that the work be done by the children under the direction and supervision of the teachers. To assist teachers in this practical work a special instructor has been appointed. This officer visits as many schools as he possibly can to advise and direct teachers. He also gives lectures on agricultural subjects, &c., and is ready, upon application being made to him, to furnish written advice in connection with such matters.

With the view of encouraging teachers to persevere in giving the instruction and practical training described, annual bonuses, ranging from £1 to £5, are granted to those who show satisfactory results. To obtain a bonus it is necessary for the teacher, at the regular or ordinary inspection of his school, to fill up a certain form supplied to him, and hand it to the Inspector. The Inspector certifies as to the correctness of the information furnished in the form, and also as to the efficiency of the school in its ordinary work. If such certificate be satisfactory, the teacher is then recommended for a bonus.

The form to be filled up by the teacher contains the following questions:—

What plants have you cultivated?

What instruction in cultivation have you given pupils?

What part did the pupils take in the work?

What kind of manure was used, and what quantity per rod?

What is the nature of the soil, i.e., is it sandy, clayey, or loamy?

How many workings had the soil before planting?

What kind of season was there during growth?

Was any artificial watering employed? If so, state particulars.

What insect or other blight was observed during growth?

What means were taken to eradicate blight? And with what success?

In what length of time did the crop mature?

What was the date of planting?

What would be the yield per acre of the plants specified?

Teachers

Teachers are requested to exercise great care in answering the questions given, and it is hoped that the information thus obtained from all parts of the Colony may become valuable to persons interested in the cultivation of the soil.

During the year the Special Instructor has visited 151 schools in different parts of the colony. At all the country schools and submetropolitan schools visited, and at many of the Sydney schools, lesson lectures were delivered. At a number of schools in different localities, practical out-door lessons were also given in grafting, budding, and pruning, and in the handling of bees, &c.

Supplies of the seed of golden wattle (Acacia pycnantha), with directions for culture, have been sent to nearly all the schools in the Colony. So far, the experiment with this seed is a success beyond expectation. Mr. Gale reports that some teachers divided the seed with their neighbours; others sowed it and distributed the seedlings. The playgrounds of many country schools are surrounded with these young wattles; others have them intermixed with the shade and ornamental trees previously obtained from the Botanic Gardens.

At a large number of schools the teachers and children are becoming greatly interested in agricultural and horticultural work. Most of the teachers now look upon such work as a healthy recreation to intermix with school life; and the children show their interest in it by competing for the neatest and best tended garden plots in the playgrounds. Where the soil is suitable for the cultivation of kitchen vegetables some good results have been produced. Generally, the boys devote themselves to the culture of vegetables, while the girls take up floral culture. Sets of garden tools suitable for the use of children have been supplied to the following schools:—Pitt Town, Lower Lawrence, Thornford, Tipperary Gully, Monteagle, Hoxton Park, Raymond Terrace, Mortdale, Goulburn North, St. Ives, Marrickville, Auburn, Coonabarabran, Coogee, Stanmore, Ryde, Neutral Bay, Granville, North Annandale, Kogarah, Gladesville, Rockdale, Leichhardt, Leichhardt West.

On the whole, good progress has been made among our schools in the year in the introduction and carrying on of operations connected with agriculture, &c., and it is confidently hoped that the teachers generally will engage in and continue this work with increased carnestness and enthusiasm. The time and trouble so spent will certainly be rewarded with good results. A pleasant, healthy, and profitable way of employing their leisure time will be provided for the pupils, the school-grounds will be made more comfortable and attractive, and, where the work is systematically carried out, the children will be taught to beautify the surroundings of their homes and to add to the natural products of the Colony.

As showing the interest already evinced by teachers in the work, and the results achieved by them during the time present arrangements with regard to school instruction and training in agriculture have been

in force, it may be stated that thirty-five qualified themselves for bonuses before the close of the year. These are arranged in the following list in order of merit as regards the results achieved:—

		Ç			~

In connection with the cultivation of school grounds, the planting of trees and shrubs for shade and ornamentation is a matter of importance. This has also been dealt with during the year, as the following circular, issued for the information and guidance of teachers and School Boards, will explain:—

Department of Public Instruction, Sydney, 1890.

The improving of school grounds by tree planting has long been recognised as a work of importance; and by free grants of suitable trees and shrubs, with monetary aid in special cases, it has been the practice to encourage both teachers and School Boards to undertake such work. Hitherto, however, but moderate progress has been made. The educational advantages to be derived from the planting of school grounds by the pupils should be at once apparent to all who are properly interested in the training and well-being of children. The schools will be beautified and made more attractive; and, by the changed character of the school surroundings, an interest in nature will be stimulated, and a love for the beautiful encouraged, among the pupils. In time, also, the summer shade, so necessary in our climate, will be provided for the children, and the general comfort and happiness of their school life will be materially advanced.

The study of trees and plants will likewise be promoted, and useful knowledge respecting them will be obtained by the pupils. They will, moreover, from the interest thus developed in connection with their schools, be led to plant and improve the grounds about their own homes, and in this way the information and advantages gained will be likely to have a permanent effect.

To bring this subject more prominently under the notice of pupils and their parents, and to give them encouragement to take up the desired work, several proposals have recently been made regarding the institution of an "Arbor Day" for Public Schools throughout the Colony. After careful consideration of the whole matter, the Minister cannot see his way, under existing circumstances, to establish the institution of one "Arbor Day" for all schools; but, with the view of creating a warmer interest in tree planting work, he has decided to give aid and encouragement to schools generally, under the following conditions and arrangements:—

- 1. Any Friday in the months of June, July, and August may be set apart as an "Arbor Day" for any particular school, upon a request being made by the School Board to the Minister of Public Instruction, with a statement showing the steps taken, or proposed to be taken, to properly celebrate the day.
- 2. The Department will provide all trees and shrubs necessary, and will deliver them upon the school grounds.

The setting apart of days for tree planting, and the assistance and encouragement offered towards the necessary work and its expense, have been greatly appreciated by those concerned. "Arbor Days" were inaugurated at the Ryde Public School in July, when the first tree was planted by Lady Carrington. During the remainder of the year, 140 schools throughout the metropolitan and country districts have held "Arbor Days"; and trees, shrubs, &c., in large numbers, have been planted. The amount of assistance granted by the Department towards the expenditure incurred for this work has reached £600.

Manual Training in Public Schools.—As stated in the report of 1889, steps had been taken by this Department for the organization of workshops in connection with Public Schools. In Great Britain and Ireland, in France, Germany, and other European countries, and also in America, the establishment of workshops for primary school pupils' instruction and practice in ordinary handicraft has long been advocated; and in connection with many of the primary schools in these countries such workshops have, in the last few years, been organized and brought into successful operation. These workshops are nowhere advocated for the purpose of teaching special trades. them, however, boys from the highest class in the school are trained to the proper use of the ordinary tools; they are made handy by doing things and by learning the elementry parts of many trades; and they are thus led to form habits of industry, perception, and judgment, and are materially helped in selecting the particular work they may afterwards take up as their special trade or occupation.

It was deemed advisable that workshops should be tried in connection with a few of the larger schools under the Department; and with the view of introducing the arrangement in the right way it was decided that one should be first established in the Fort-street School premises for the instruction and practice of the students in training as teachers, and that, subsequently, classes of boys from the Fortstreet Primary School should be instructed and exercised in the same workshop. In connection with large schools in other centres, similar workshops will be gradually established as those first started prove successful.

Early in 1890, a workshop, 30 ft. by 15 ft. was erected and fitted up on the Fort-street School ground. An instructor in carpentry and the use of tools was subsequently appointed, and, in April, workshop lessons for the Training School students was commenced. These lessons have been attended by 56 students, in sections of 9 and 10, for two hours in each week, with gratifying results. Classes for boys were also organised, and, in July, these were voluntarily attended by 55 pupils. The number of boys is limited to 100, in ten sections of 10 each, and each section receives two hours instruction per week.

The programmes adopted for workshop lessons and occupation are the following:—

Students' Programme.—In addition to elementary geometrical drawing, practical geometry and mensuration dealing with artificer's work, students will be required to obtain a general knowledge of practical handicraft, and of the tools in common use; such, for example, as acquaintance with:—

- (a) The construction, peculiarities, and uses of the principal tools used in carpentry and joinery, and in any other of the selected handicrafts.
- (b) The various kinds of nails and screws in common use; and to be expert in driving them.
- (c) The chief technical terms used in the handicrafts selected for study and practice; and to have an intelligent practical expertness in any five of the following, at the student's choice:—
  - 1. To prepare and use glue; to plane up the edges of two boards and glue them together; to make tenon and mortise joints; to make a simple dove-tail joint.
  - 2. To dove-tail two boards together and strengthen them with glue; to rabbet and bead-mould two boards and join them together, using ledger and either screws or nails.
  - 3. To plane up, rabbet, and mitre-point four pieces of wood, so as to form a frame for a tablet or picture.
  - 4. To be acquainted with the several kinds of tacks in common use, with their peculiarities; to put on a lock, using, if necessary, a board to represent a door, &c.; to take off an old lock; to take a lock asunder and put it together again.
  - 5. To be acquainted with the several kinds of hinges in common use; to put on a hinge of any ordinary shape, using, if necessary, boards to represent doors, &c.
  - 6. To be acquainted with the ways of scarfing and splicing; to splice any such thing as a broken broom-handle, rakehandle, pointer, &c., securing the joints with screws or copper wire, or waxed cord; to make a half-lap joint.

- 7. To cut out and make a rail for a clothes-rack, screwing on the hooks; to be acquainted with the different kinds of hooks; to know how to fasten up a rail to a wall by simple plaster railing, as well as by plugging; to understand the construction of several forms of paling.
- 8. To know the composition of hard and soft putty; to be able to cut glass, using either a diamond or an American glass-cutter; to hack out a broken pane and put in a new one.
- 9. To have some knowledge of the ingredients of the most important paints; to mix paint of any ordinary colour and to paint with it; to understand staining; to prepare a board for staining, and to stain, size, and varnish it.
- 10. To understand the nature of soldering; to tin a soldering iron; to do any plain piece of soldering, such as fixing in the wire handle of a tin vessel, soldering together two pieces of tin, brass, &c., to do plain riveting.
- 11. To mount a map with linen, roller, &c.; to mount a travelling map for the pocket; to know how to make paste.
- 12. To mend a break in any common article of furniture, a chair, a gate, a school-desk, &c.; to make any simple article, such as a stool, a box for pencils, a nail-box, a drawing-board, &c.

### Boys' Programme.

First Course.—To measure accurately with a rule to eighths or tenths of an inch; to be expert in the management and use of the following tools, and to describe them intelligently:—Hammer, bradawl, gimlet, spokeshave, plane, penknife, saw—including sawing along a line—turnscrew, pincers or pliers, marking gauge, rule, square, compass, nail-punch.

To sharpen the following tools, using whetstone or oil-stone, or both, as may be necessary:—Chisel, ordinary knife, penknife, scissors.

To have some knowledge of the different kinds of nails and screws; to drive nails and screws, having bored holes of the proper size with bradawl or gimlet.

To sink nail-heads with punch; to counter sink screw heads with chisel, gouge, or penknife.

To exhibit proficiency in any two of the following:

- 1. To make glue; to plane a board; to plane the edges of two short pieces of board straight and square, and to glue the edges together.
- 2. To know the different kinds of hinges in common use; to put on a butt or T hinge.
- 3. To know the usual kinds of locks in common use; to put on a box, cupboard, or door lock.

  Second

Second Course.—In addition to the programme for the first course, to exhibit proficiency in any five of the following:—

- 1. To grind a chisel or plane-iron on a grindstone, or on a whetstone, and to sharpen either on the oil-stone.
- 2. To splice or scarf a broken broom-handle or rake-handle or any stick of like shape; to secure the joint with screws in copper wire or waxed cord.
- 3. To plane up two boards and dowel them edge to edge for a broad shelf; to make a shelf-bracket; to know how to fix up the shelf with brackets.
- 4. To take accurate measures of a pane of glass in inches, &c.; to mark the measures of a pane on a rod as a guide to the glass-cutter; to know the nature and uses of putty; to hack out a broken pane and the old putty and to put in a new pane.
- 5. To understand the use of drying oil and turpentine in painting; to mix dry paint of any colour with oil or turpentine or both; to paint a piece of board; to understand the nature and use of staining; to know something of the different kinds of stain; to prepare and stain a piece of board including sizing and varnishing.
- 6. To mount a map or engraving on linen, and afterwards nail it on laths, or lath and roller; to know how to make paste; to understand the nature and use of varnishing; to know something of the several kinds of varnish; to varnish a map or diagram.
- 7. To know the use of a mitre-box or of the shooting-block; to rabbet and mitre-cut four pieces of wood, and joint them so as to form a frame for a picture.
- 8. To understand the nature of soldering; to solder two pieces of tin, or brass, or iron together; to tin the soldering iron.

For workshop instruction and practice no fees are charged, but each boy is required to provide his own tools. The manual instruction and practice arranged for the classes at Fort-street having already proved successful, it has been decided to extend the system gradually to other large schools. An instructor and supervisor of manual work for the Maitland Public Schools has been appointed, and classes of boys in attendance thereat have received five hours instruction per week during the last four months of 1890. The schools participating in these arrangements are West Maitland High School, West Maitland Superior School, and East Maitland Public School. A class, which teachers may attend, is also instructed at West Maitland every Saturday for two hours. Buildings have been provided and measures are in progress for the establishment of similar classes early in 1891 at the following Sydney schools, namely, Blackfriars Superior Public School, Crown-street Superior Public School, and Sussex-street Public School.

Instruction in Cookery in Public Schools.—The Cookery Class for girls held at Fort-street Public School in 1889, was continued throughout 1890. This class having proved successful, it was decided, in July last, to extend the instruction to other Public Schools. A scheme was at once formulated and adopted to provide for systematic instruction in cookery being given in Ordinary Public Schools, and also in a Central Cookery School at Fort-street, and three courses of work were arranged, namely:—

- 1. An Elementary Cookery Course.
- 2. A Plain Cookery Course.
- 3. A Teachers' Course.

The elementary course is to be one common to all schools in which instruction in cookery is imparted, and it is to be the only one recognized in these schools. While this course is complete in itself for ordinary home work, it lays a solid foundation upon which a professional superstructure may be built, should the skill and taste of the pupils lead them to study the higher branches of cookery as a means of livelihood. One day a week for three months in the cookery class-room should enable pupils to gain the Department's certificate for the course, and such certificate will entitle its holders to further instruction in the Central School of Cookery, should they desire to receive it.

A portable kitchen, on the model of those approved by the School Boards of Great Britain is necessary for the Public Schools giving cookery instruction, and one has already been supplied for use in the Blackfriars' Superior Public School. In the latter half of 1890 this school had a cookery class of 45 pupils, of whom 24 had practice in the kitchen. Of the latter, 22 were examined, and all were successful in gaining the certificate for the elementary course. In an Ordinary Public School having a cookery class, one hour a week is devoted to a lecture, with demonstrations upon cookery and domestic economy, to all the pupils of the fifth class; and this will count as the Science subject for girls in their school examinations.

The "Plain Cookery Course" is taught at the Central Cookery School at Fort-street. This course extends over one year, one day a week, and qualifies the pupils to do any work but that required of high-class professional cooks. All pupils holding the elementary certificate are eligible for this course. They will attend from surrounding Public Schools on fixed days, and such attendance will be marked as their ordinary school attendance.

The "Teachers' Course" is intended to qualify students holding "Elementary" and "Plain Cookery" certificates to conduct cookery classes in Public Schools. A certificate of proficiency will be granted for this course upon a successful examination in teaching.

At the Fort-street School a class of 145 pupils received instruction, two days a week, in the Elementary Cooking Course, of whom 39 attended in the practising kitchen. Of these, 37 were examined, and 34 were successful in gaining the elementary certificate. The

Fort-street Central Cookery School is also in operation for teaching the "Plain Cookery Course" to pupils holding the elementary certificate, and classes are also being arranged there for instruction in the "Teachers' Course." Thus the Cookery School at Fort-street is in full work daily, and supplies a dinner cooked, served, and cleared away by the pupils, for nearly 40 persons. At Blackfriar's School no regular dinner is prepared, but the cooked food is sold to teachers and to parents of pupils, and is often applied for for the sick in the neighbourhood. The receipts from the sale of food are expected to balance the expenditure for provisions, and the charges for the dinners and cooked food are made on a scale such as should produce this result.

A cookery class for the junior students is held at the Hurlstone Training School one day a week. This class has been but tolerably successful in the past year, but with improved arrangements, and the issue of teachers' certificates to successful students, better results may be looked for. Twenty-eight students attended the cookery class and practising kitchen, and all were examined at the close the year. The average percentage of marks gained was about 75.

For earrying out the programme thus outlined, Mrs. Fawcett Story was appointed "Instructress in Cookery," with the following duties, namely, to take charge of this branch of instruction, to organise and arrange suitable courses of lessons for the different classes, to regulate the expenditure for provisions, and to be generally responsible for the conduct and success of the scheme adopted by the Department. An assistant teacher was also appointed to take charge of the class at Blackfriars Public School. Both Mrs. Story and the assistant teacher have given every satisfaction in their work; and of the pupils attending the classes, it may be stated that, in studying and practising for the cookery certificates, they gain an amount of knowledge and skill the value of which, in their future lives, can hardly be over estimated.

In December, 1890, about 270 pupils were receiving instruction under the scheme. Of these, 88, who had completed the practice course, presented themselves for examination. All passed but 4.

In addition to her duties in connection with Public Schools, Mrs. Story gives cookery instruction to 50 girls at the Parramatta Industrial School. There she takes a class weekly, and the girls are reported to be improving very satisfactorily under the instruction they receive.

Needlework.—In any general scheme of elementary instruction the teaching of needlework to girls must always hold an important place. To render the teaching more efficient in the larger schools special work-mistresses are appointed; while in the smaller schools, the female teachers and pupil-teachers, and the wife of the master-incharge, are, jointly or separately, held responsible for the work. Also at the annual school inspections, specimens of sewing have been regularly examined and reported upon with other school subjects. But notwithstanding the attention thus given to needlework, and the apparently satisfactory results, a feeling has gradually arisen among

responsible officers and teachers that, in view of the acknowledged importance of the subject as forming, with the cookery instruction, the technical education to be obtained by school-girls, something more should be done to render its teaching thoroughly efficient throughout all our schools. Accordingly, to effect this desirable object, a complete reorganisation of the work has been planned and carried out. For the pupils of each class a carefully-considered course of sewing has been arranged in half-yearly portions, the combined work of all the classes forming a complete standard of practical school needlework. For female pupil-teachers a similar course and standard have been arranged, and in future no pupil-teacher will be allowed to pass her examination for promotion from class to class unless she also shows that she has reached the required standard in needlework. The new standard of proficiency was issued early in the year, and a "Directress of Needlework" was appointed to inspect and supervise the work carried on in connection with this branch of school-training.

The schools in the Metropolitan District have since received 240 visits from this officer, who has also fully examined and reported on 40 of them. The work done in the first and second class schools was found to be very satisfactory, and the sewing-mistresses employed are reported to be capable and efficient. In lower class schools, where the needlework is taught by the mistresses-in-charge, by assistant teachers, or by the teachers' wives, the general standard of proficiency has, with few exceptions, been well maintained, while in many of the schools excellence in the work has been reached. It is further reported that the female pupil-teachers in the different schools visited have been well taught in the cutting out and setting of work, and that the specimens of their own work exhibited were sufficient to show that the standard required for their individual grades at examination had been met.

In carrying on school teaching in needlework one difficulty is encountered which is common to a large number of schools. This is that suitable sewing material is not provided by mothers for pupils to receive their first instruction in the lower classes. To meet this difficulty it is suggested that a small grant should be made for the purchase of the material necessary. At present, either the pupils' progress is greatly hindered, or the teachers of needlework are compelled to purchase material out of their own limited means.

The new standard of school needlework issued is being faithfully and rigorously adhered to by the teachers. It is working satisfactorily in all respects, and is likely to produce excellent results.

Public School Savings Banks.—At the close of 1890 there were 554 school banks in operation, as compared with 547 at the close of 1889. Seven new banks have been opened, but the total amount deposited in 1890 was only £11,191 10s. 7d., as compared with £13,762 15s. 11d. deposited in 1889. The extremely wet weather which prevailed in the first half of the year, and the subsequent great strike, no doubt caused the falling off in the bank deposits. The same causes

also led to the withdrawal for current use of a still larger sum. The moneys so withdrawn totalled £8,282 19s. 2d., as compared with £7,651 14s. 1d. withdrawn in 1889, while the amount transferred to accounts in the Government Savings Bank was only £3,562 16s. 0d., or £300 14s. 6d. less than in 1889.

For the four years school banks have now been in operation the aggregate deposits have been £42,770 3s. 5d., while the number of banks has steadily increased from 255 in 1887 to 554 in 1890. Of the total sum deposited in the four years, £22,999 3s. 11d., or  $53\frac{3}{4}$  per cent., has been withdrawn by depositors for current use; £12,997 8s. 10d. has been transferred to children's own separate accounts in the Government Savings Bank, and the balance, £6,763 10s. 8d., still remains in the school banks to the credit of depositors.

Owing to the unfavourable events of the year already referred to the progress of school banks has been somewhat hindered; nevertheless, good work has been done, and the institutions are being gradually developed as important aids to public education. Further development and more satisfactory progress may be confidently expected to take place in the near future.

State Scholarships and Bursaries.—From the time Public High Schools were first established State Scholarships for such schools have been annually granted to a specified number of successful competitors; and, as pointed out in the report for 1889, an extended scheme, to include Scholarships and Bursaries for pupils of State Schools, and also Bursaries to enable deserving State School pupils to attend the Sydney University, had been arranged under the Department to come into operation from 1890. The proposed scheme has since been slightly modified, and the following are the exact terms and conditions upon which the Scholarships and Bursaries referred to are now granted:—

- 1. Examinations for Scholarships and Bursaries in State Schools shall be held half-yearly, in June and December; and at each of these examinations twenty Scholarships and twenty Bursaries—namely, ten of each for boys and ten for girls—may be awarded to those candidates who gain the most marks and show the requisite proficiency.
- 2. A Scholarship will be tenable for three years, subject to good reports from teachers, and will entitle a pupil to a free grant of text-books and to free education in any State High School or Superior Public School. A Bursary will be tenable for three years, subject to good reports from teachers, and will entitle a pupil to a free grant of text-books and to free education in any State High School, in any Superior Public School, or in the Sydney Grammar School; and when any pupil holding a Bursary must necessarily board away from home in order to attend one of these schools, an allowance not exceeding £30 a year, in addition to free education and text-books, will be made.

- 3. The examination for Scholarships will be open to all boys and girls under 14 years of age; but no pupil will be awarded a Bursary whose parents or guardians are in a position to pay for his education. Subject to this provision, the examination for Bursaries will be open to all boys and girls under 14 years of age who have attended a Public School with reasonable regularity for the two years preceding the date of examination.
- 4. Candidates who compete more than once will be only eligible for a Scholarship or a Bursary for the period remaining out of three years from the date of their first examination, and no candidate will be permitted to compete after having attended a High School.
- 5. Ten Bursaries, six for boys and four for girls, tenable for three years at the Sydney University, will be awarded annually on the position of candidates at the March Matriculation Examination.
- 6. Candidates for University Bursaries must be under 18 years of age, and must have attended a State High School, a Public School, or, as State Bursars, the Sydney Grammar School, for the two years preceding the examination; they must produce satisfactory testimonials of character from the head masters of the schools they have attended; and they must satisfy the Minister of Public Instruction that their own and their parents' means are unequal to the expense of the University education. To each successful competitor who resides at such distance from the University as to be unable to travel to and fro daily, a full bursary will be awarded, while to one who resides in the Metropolitan or sub-Metropolitan Inspectoral district within easy access of the University, part of a bursary only will be awarded. The candidates' status as to whether they be deemed eligible for a full bursary, or part of a bursary will be decided by the Minister before their admission to examination.
- 7. A University Bursary will entitle students to text-books and free education together with allowances not exceeding £20 per annum each to those who need not board away from home, or not exceeding £50 to those who must necessarily do so. Every Bursar must matriculate at the University and attend lectures; and he shall continue to hold the Bursary on condition that his conduct be good and that he pass creditably the examinations at the end of the first and second years after his matriculation.
- 8. The parents or guardians of candidates for State School and University Bursaries must fill in and forward to the Under Secretary the necessary forms of application at least six weeks before the date of examinations. Such forms may be obtained at the office.

The Bursary scheme came into operation in March, 1890, when 15 boys and 10 girls went as bursars from Public Schools to High Schools, Superior Schools, or to the Sydney Grammar School, and 5 boys and 3 girls from the High Schools were selected by competitive examination to hold bursaries at the Sydney University. In December, 1890, the first annual examinations under the revised conditions was held, and as the result of such examinations 20 State School Scholarships and 7 bursaries were awarded to successful competitors. Of the 25 who gained bursaries in March, 1890, 17 have since attended State High Schools, 4 have attended Superior Public Schools, and 4 have attended the Sydney Grammer School; while of the 7 who gained bursaries at the December examination, 4 will (in 1891) attend High Schools, 2 Superior Schools, and 1 the Sydney Grammar School. Two of the bursars who, in 1890, attended Superior Schools will, in 1891, attend the Sydney Grammar School.

The 32 competitors to whom State School Bursaries were awarded, in 1890, came up for examination from the following Public Schools, namely:—Crown-street and Young, three each; Blackfriars, Eskbank, Paddington, Port Macquarie, Singleton, and Woonona, two each; and Ballina, Berrima, Blayney, Darling Road, Forest Lodge, Guntawang, Marrickville, Nyngan, Plunkett-street, St. Leonards, Wagga Wagga, Wattle Flat, West Maitland, and Yarrunga, one each.

After the Matriculation examination, in March next, the University Bursaries for 1891 will be awarded to successful candidates.

The Board, appointed to conduct the examinations, is of opinion that the time for the preparation for the State School bursary examination was too short to enable the pupils to qualify themselves. At the December examination 194 candidates for bursaries presented Of these 163 passed the High School entrance examination, and 31 failed. The percentage of marks, 70 per cent., fixed for a bursary is very high, but the Board consider that it should not be lowered, as the good results expected to accrue from these bursaries can only be obtained by fixing a high standard and encouraging pupils to work up to it. In some cases teachers were not fully acquainted with the revised conditions, and, as a consequence, pupils were sent up to the examination who had not received adequate preparation for the ordeal they had to face. Taking all circumstances into consideration, however, the results may be regarded as satisfactory. With a longer time for preparation and a fuller knowledge of the bursary conditions, more satisfactory results may be confidently looked for.

School Books.—At present there are two series of Reading Books in use in our schools, namely, the Irish National School Series, and the Australian School Series, published by Messrs. Collins and Sons; but, in the opinion of our Inspectors and Teachers, these as well as other series now published are in several respects objectionable as School Reading Books for Australian pupils, and it is considered very desirable that a new series, specially suitable for Australian schools,

schools, should be obtained. The matter was discussed at the Conference of Inspectors and Teachers held in December, 1889, and it has since been referred, for special consideration and report, to each Inspector on the staff, and to a number of the best informed and most experienced teachers employed under the Department. The objections to the reading books in use may be summarized as follows:—The primer, or first book, instead of being written in a continuous narrative form, is to a large extent made up of detached words and sentences expressing no connected meaning; while the more advanced works are too difficult, and otherwise unsuitable, for the pupils for whose use they are intended, and their subject matter is not sufficiently Australian.

After careful consideration of the whole matter, and the reports furnished thereon, it is deemed advisable that a new series of books should be obtained, arranged in six "Readers," to suit pupils of different ages and progress. Touching the contents of the new Readers and their general characteristics, it is considered necessary that the subject matter of the lessons should be interesting and appropriate throughout all the books, and that the lessons should be carefully graduated with special reference to the difficulty of the words used. In the first two Readers the new and difficult words in each lesson should be printed at its head, with meanings, roots, prefixes, affixes, explanatory notes, &c. To a large extent, the subject matter of the lessons should be Australian, while other subject matter used should also be dealt with, as far as practicable, from points of view interesting to Australians. As a rule, rhymes and poems should not be invented or compiled for the Readers, but copious selections of these, of kinds suitable to pupils in the different stages of progress, should be carefully chosen from the writings of the best authors, and the whole of the Readers should be copiously illustrated in the most subjects, be suitable lessons on Agriculture, The Laws of Health, Natural Science, Art and Literature, Australian Birds, Mammals, Timbers, &c., on Education, and the Choice of Occupations in Life, on Sanitation, and on Political Economy and the Higher Duties of Citizenship, &c.

The production of the books required is the next matter to be considered, and here some difficulties will have to be overcome. As the books are to consist to a large extent of Australian matter, and are to be made suitable in all respects for Australian readers, it is not likely that any writer or compiler, personally unacquainted with Australia, will be able to produce what is required. Under these circumstances, the production of the proposed series should be entrusted to local people; or, if the series be produced by a writer residing in another part of the world, local revision will be necessary before the books are published.

In the adjoining colonies the want of a series of school reading books suitable to Australian requirements is also felt, and some steps have been taken towards obtaining such a series. If one series could be produced which would meet the requirements of all the Australian Colonies, the interests of Australian education would certainly be better promoted than by having a separate series for each colony; and with this important consideration in view it has been deemed advisable, before coming to a decision as regards the production of a series for New South Wales, to ascertain whether or not joint action could be taken by the Instruction Departments of the different colonies.

A School History of Australia.—The Public Instruction Act of 1880 provides that lessons in the History of Australia shall form part of the course of secular instruction in State Schools, and for the carrying out of this provision a suitable school text book of Australian History has always been deemed necessary. Sutherland's History of Australia is the text book now used; but in many respects it does not properly meet the wants of the case, and a more modern work, specially prepared as a school reading book, is greatly needed. From time to time the question of having such a book written has arisen, and during 1889-90 definite action in the matter has been taken by the Department. It has been decided that an endeavour be made to procure a suitable School History of Australia written primarily for the use of children about 12 years of age, the book to be octave size, of about 300 pages, divided into thirty-four chapters.

In addition to acquiring an ordinary knowledge of the history of their country, our State School pupils should also receive suitable instruction in matters relating to the Constitution under which they live, and as to the rights, duties, and privileges of citizenship generally. To this end it has been further decided that in chapters XIV to XX subjects such as the following shall be suitably and systematically dealt with: -Our Constitution and its laws, and the obligations they impose upon all who live under them; municipal government, with its privileges and obligations; our land and mining laws, and judicial systems generally; the laws specially relating to public health, public decency, obscene language, riotous behaviour, cruelty to animals, the rules of the road, walking or driving, and of general good behaviour in public, whether in the open air, in public buildings, or in rooms and offices; the respect due to all women from males; the deference due to seniors; and, generally, the duty of the strong to assist the aged and the weak.

With these preliminaries arranged, it was further determined to advertise in the public press, inviting qualified persons to undertake the work of writing the history required, and offering prizes for the best two productions furnished in accordance with specified conditions. It was also notified that chapters XIV to XX of the proposed history might be furnished separately before completing the whole book, and for this portion a separate prize was offered.

In response to the Department's advertisement there were numerous applications for particulars respecting the history required, and eventually competitors submitted productions of the work in manuscript, manuscript, chapters XIV to XX being furnished separately by ten competitors. A Board, consisting of the Under Secretary, the Chief Inspector, and the Superintendent of Technical Education, was then appointed to thoroughly examine the works submitted and report as to their merits. These officers reported that of the productions sent in those written by H. L. Lusk and Rev. J. Milne were the best. Accordingly Mr. Lusk was awarded the prize of £150 for chapters XIV to XX, separately submitted, and the first prize of £300 for the whole work, while to the Rev. J. Milne was awarded the second prize of £150.

A revision of the prize works is now being made with the view of obtaining a School History of Australia fully suitable to our requirements.

Teachers.—The number of persons offering themselves for the work of teaching is in excess of the requirements of the Department. Openings for additional teachers most commonly occur in connection with small schools, and appointments of this kind are tolerably numerous. The reason of this lies in the fact that applications for new schools are chiefly received from the more remote or less settled parts of the Colony. In these places the pioneer school is either a House-to-house, a Half-time, or a Provisional School, and as the number of pupils attending such schools is small, and the course of instruction limited in range, the teachers required to conduct them need not be possessed of great attainments, or of large scholastic experience or training. Usually they have received their education in the Public Schools of the Colony, although a few have been taught elsewhere. They must be not less than 18 years of age, of good moral character, and must satisfy the Department's officers that they possess the requisite attainments and aptitude for teaching. Candidates for small schools can be trained in any Public School of which the teacher holds a classification not lower than III A. They are required to defray the cost of their training, and to take their chance of obtaining employment in the School Service, as the Department undertakes no responsibility in connection with these matters. Such as are successful in obtaining employment may, at the end of two years, provided they conduct themselves well and afford evidence of becoming useful teachers, be permitted, under certain conditions, to undergo a more extended course of training in one of the existing Training Schools. There are, as pointed out in a former report, some features in this mode of procedure likely to command the approval of such as have had experience in the education and training of teachers. These may be briefly stated thus: a large proportion of the schools of the Colony become, practically, training schools; the teachers so trained, being for the most part used to a bush life, are content to labour in remote or isolated places where the prevailing modes of living are rough; the cost of training falls on the trainee; and the expense of the Department incurred on account of travelling by those appointed to small schools is much less than it would be if they received their appointments from

Sydney. During the year, 102 teachers trained in the manner described were placed in charge of the smaller Provisional schools or of House-to-house Schools.

Vacancies in the higher grades of the School Service are usually filled by the appointment of teachers whose training has been completed in one of the Training Schools established at Fort-street and Hurlstone. There are no openings for teachers trained elsewhere unless they are persons of exceptionally high attainments and skill in teaching.

The number of teachers on the list in the last quarter was 4,181, showing an increase of 179 on the number for the corresponding quarter of 1889. 2,086 were classified teachers, 834 unclassified, but certificated for small schools, 61 Training School students, 1,107 pupil-teachers, 61 work mistresses, and 32 High School teachers. Of the whole number 43.8 per cent. are males, and 51.2 per cent. females; and of the teachers in charge of schools or departments, 63 per cent. are males, and 37 per cent. females.

The following table will exhibit full information respecting the several classes into which teachers are divided:—

Note.—The High School teachers, numbering 32, are not included in the above table.

Exclusive of High School teachers, workmistresses, and pupil-teachers, the number is 2,981, or 110 more than in 1889. Of these 59.6 per cent. are males, and 40.4 per cent. females; while 72 per cent. are classified, and 28 per cent. unclassified. The unclassified teachers have passed the usual examination and been certified, and nearly all of them are in charge of small country schools. Of the total number of classified teachers, 6.5 per cent. are in Class I, 37.8 per cent. in Class II, and 55.7 per cent. in Class III. In 1889 the percentages in the three classes were respectively, 6.2, 38.7, and 55.2; and in 1888 they were 5.9, 39.6, and 54.5.

The

The next table shows the number of classified schools, the number of classified teachers required, and the number of such teachers actually in the Service at the close of 1890.

i,823	2,030	•••		1,891	491	2,382	1,309	777	28	33	2,147

The following points may be noticed in the information exhibited in the last table. At the close of 1890 the number of classified teachers in the service was 2,147, as compared with 2,140 in 1889. The total number of classified teachers required to fill positions in classed schools was 2,382, namely, 289 of Class I, 814 of Class II, and 1,279 of Class III; while the numbers of the different classes actually in the service were 139 of Class I, 811 of Class II, and 1,197 of Class III.

Pupil-teachers.—The number of pupil-teachers employed under the Department at the close of the year was 1,107, namely, 393 males and 714 females. Some difficulty was, for a time, experienced in obtaining an adequate supply of suitable male applicants for the office; but this difficulty has been removed by increasing the rates of remuneration paid to these young persons, and by offering greater inducements in other respects to eligible candidates to enter the service. The number of female applicants has, for years past, been in excess of the requirements of the Department, and full facilities have thus been afforded of making a selection of a superior class of candidates. Pupil-teachers are required to undergo a tolerably searching examination before appointment, and only those who give promise of becoming good useful teachers have any chance of passing at the close of the usual three months probationary period. They are engaged for four years, and, after completing this term of service and passing the prescribed yearly examinations, are permitted to enter one of the Training Schools for an extended course of training upon their proving successful in the yearly competition for scholarships. Classes for the special instruction of pupil-teachers in Music, Drawing, French, Latin, and Mathematics are held in Sydney, Newcastle, and Maitland. These classes are in a flourishing state, and are instrumental in doing a large amount of good. Those in Sydney alone are attended by 477 students, who are reported to be regular, punctual, and attentive to their work.

The Training of Teachers.—To carry on the work of National Education effectively a supply of thoroughly qualified teachers for State Schools is absolutely necessary; and, to cusure such supply, it is deemed expedient the State should itself provide an efficient system of educational training for teacher candidates. To be efficient, the system adopted must be such as will secure to candidates the best facilities for (a) acquiring full information in the subjects to be taught in schools, and (b) obtaining the highest professional skill in the art of teaching, or pedagogy. Under the Department the full course of training for teachers is made to extend over a period of seven years, commencing from the time when a boy or girl candidate has finished the ordinary school curriculum. The candidates pass four years of this course as pupil-teacher apprentices in State Schools under qualified Pupil-teachers, as the term implies, are both pupils and teachers. As pupils they receive from the principals of the schools, outside of school hours, instruction in school subjects and in school organisation and methods of teaching; and as teachers they teach and manage junior classes under the principal teacher's direction and supervision. Before admission as pupil-teacher a candidate has to pass a competitive examination in reading, writing, dictation, arithmetic, grammar, geography, and vocal music; and has also to teach a junior class in the presence of an inspector. At the end of each of the four years of apprenticeship, pupil-teachers also pass examinations in attainments and skill before being allowed to proceed to the next year's course.

At the close of the apprenticeship a pupil-teacher is partly equipped for future work, and may be usefully employed as the teacher of a small school; but he is not yet competent to undertake the full work of a teacher in the more important State Schools under the Department, of which there is a large and increasing number. A further and higher course of training is required to provide qualified teachers for such schools; and hence the most intelligent and best advanced among the ex-pupil-teachers are afforded an opportunity of entering the training institution which has been established for the purpose of providing this higher and completing course.

The ordinary Training College course is arranged to extend over two years, provision is made for students in training to attend University lectures, and, as pointed out in last year's report, a few of the most satisfactory second year's students may be permitted to remain for a third year's course, and proceed to examination for the B.A. degree. A further step has now been decided upon, and it is intended to erect suitable Training College buildings on a portion of the University ground, and to establish the institution as "A College within

the University." At present lectures and lessons are given in the theory and practice of pedagogy by professors of the highest qualifications for such work, and by making the Training School a College within the University, the students will have similar advantages in connection with the study of literary and scientific subjects. After leaving the Training College and University thus equipped for their work, the students will be employed for two or three years as assistants in large city and suburban schools before being themselves appointed to the sole charge of country schools. In view of the important character of the educational work required of our State School teachers, this comprehensive and complete course of education and training to qualify them for such work may be considered absolutely necessary. Moreover, by adopting the proposed arrangement, and establishing the Training Institution as "A College within the Sydney University," the following important advantages will probably be secured, namely:-The Training College will be conducted economically; the profession of teaching will be fostered by drawing to it young persons of the highest intelligence; public opinion will be moulded in favour of our Public School system; and the general education of the people will be made more thorough and complete.

The following are the arrangements made for the erection of buildings and the establishment of the Training Institution as a College within the University:—

A site approved by the Senate of the University and the Department has been selected and surveyed, and a Bill has been prepared under which the land selected may be resumed and the College established. Plans and specifications for the erection of College buildings have been prepared to provide for the residence and instruction of 51 students. The estimated cost of the buildings, exclusive of the value of the site, is £37,500; and the matter is now under the consideration of the Parliamentary Committee on Public Works.

The proposed College will be for male students only, and its operations will be so conducted as to gain for these students as full a benefit as is possible, under the circumstances of their position, from the University course of lectures and studies. The College will, by its Act of Incorporation, be declared to be a College within the University, having a Principal recognised as ex-officio a member of the University, and having the same rights and privileges as are conferred by the University Act of 1861 on Principals of the Affiliated Colleges. The management of the College, including the appointment of its staff, will be under the control of the Minister of Public Instruction, but the students will be amenable to the rules and regulations of the University so far as they may affect them as undergraduates or members of that body.

Fort-street Training School.—From time to time important alterations and improvements have been made in the pile of buildings at Fort-street, in which the work of training of male teachers is carried on. As a makeshift, these premises are now fairly suitable for the purpose, and consist of two large lecture-halls, lavatories and retiring-

rooms for the students, and a very complete laboratory. They are fitted with the most modern types of furniture and apparatus, and are otherwise well-found in educational appliances. In point of organisation, therefore, this training institution has been rendered as complete and effective as circumstances will permit. A workshop, wherein the students may receive instruction in manual training, has been recently erected, and a competent instructor in carpentry appointed. So far, the results of this experiment are encouraging.

Fifty-six students have attended the course of training during the year, divided into 28 seniors and 28 juniors. Of these, 37 hold full scholarships, and one is defraying the cost of his training. Twenty-one of the seniors matriculated in March last, and have since attended the University lectures. Two of those who failed to pass decided to attend the evening lectures with a view to making a second attempt to matriculate. In this, it is pleasing to note, they have been successful. The remainder of the seniors who failed to matriculate have confined their studies to the subjects prescribed for a II A certificate. Of the 28 juniors, 7 matriculated in March last, one holds the status of a second year student at the University, and the remainder, with one exception, are preparing for the Matriculation in March, 1891. At an examination attended by all the students towards the close of the year all passed in Pedagogy, Music, and Drawing. The following table shows the results achieved by the students at the several examinations held:-

Mr. John M. Taylor, formerly master of the Practising School, has succeeded Mr. P. J. Edmunds as Assistant Master and Lecturer in Science; Mr. J. Woodhouse has taken Mr. J. Plummer's place as Drawing Master; and the vacancy in the Practising School has been filled by the appointment of Mr. J. Finney. The Principal, Mr. Conway, discharges his very responsible duties with vigour, ability, and success. He is efficiently supported by his assistants, Messrs. Maclardy and Taylor.

The Practising School, under Mr. Finney, is ably conducted, and affords excellent opportunities for the students to improve their knowledge of practical School Management. A more suitable building however is a desideratum.

Hurlstone Training School for female students.—The buildings occupy a commanding position at a short distance from Ashfield. They are in very good repair, commodious, suitably furnished, and amply supplied with the working materials usually found in similar educational institutions. The grounds comprise 26 acres, and are fairly well kept.

Fifty-

Fifty-one students were in session arranged in two divisions, namely, 23 seniors, and 28 juniors. Seventeen of the seniors matriculated in March last, 3 taking honors in Latin and French. The 6 who failed to matriculate, owing solely to their deficiency in Latin, subsequently applied themselves to the study of the subjects prescribed for a second-class certificate, and their efforts in this direction were rewarded with success. The juniors not having been grounded in Latin and Mathemathics prior to their admission to training were unable to present themselves for Matriculation in March last, but will attend the next Matriculation Examination in March. 1891. In addition to the usual training course, special instruction is given to all the students in Physiology, and Elementary Ambulance Work.

Provision is made for the physical training of the students. They receive regular instruction in Drill and Calisthenics from Captain Mulholland, and have attained considerable proficiency in these important essentials. Lawn tennis and other means of healthful recreation are provided in various parts of the college grounds.

The Staff is that of last year, and consists of Miss Everett, Principal; Miss Nicol, Assistant; and Mr. Maclardy, Lecturer in Languages and Mathematics. Herr Alpen has charge of the Music, and Miss Douglas the Drawing. All appear to work with earnestness and zeal. Mr. Maclardy's labours in particular have been signally successful.

The Practising School, ably conducted by Miss Nicholls, is doing excellent work.

Teachers' Examinations.—The total number of Examinees reported on during the year was 2,122, showing an increase of 501 on the number for 1889. The percentage of passes of Pupil-teachers was 76.9 as compared with 74.9 in 1889, while the percentage of passes of applicant Pupil-teachers was 63.5 as against 58.8 for the preceding year. The examination work of Teachers and Assistants was inferior to that of 1889. This is due in a great measure, to the fact that new text-books had been prescribed, and Examinees had not sufficient time to make themselves thoroughly conversant with their contents. It is thought, however, that the number of failures will not be so great in future, and that it is better to insist on a thorough acquaintance with definitely fixed text-books than to be content with a general though vague knowledge, the result perhaps of wider but less careful study.

The average attainments of Pupil-teachers, especially those of the first class, are manifestly improving, a result, no doubt, largely attributable to the system of competition for scholarships in connection with the Training Schools, and also to the possibility now presented to students of securing a University degree as an incident in the course of preparation for the office of Teacher.

The work entrusted to the Board of Examiners has proceeded in a satisfactory manner throughout the year. The several members of the Board have examined with care the papers of Examinees in the respective respective subjects allotted to them, evincing a desire to treat the Teachers both fairly and liberally, and, at the same time, safeguard the interests of the Department. They appear to have secured the confidence of the teaching profession, inasmuch as no complaint has so far been made calling in question their action in any case.

In addition to the duties originally assigned to the Board, it has now undertaken the work connected with the examinations for admission to the High Schools, including those of candidates for State School Scholarships and Bursaries.

During the year two changes have taken place in the personnel of the Board by the resignation of Mr. H. C. L. Anderson, Vice-Chairman, and the retirement of District Inspector John McCredie. The offices thus vacated were filled by the promotion of Mr. R. N. Morris, M.A., LL.D., to the office of Permanent Examiner and Vice-Chairman of the Board, and the appointment of Mr. W. McIntyre, Deputy Chief Inspector of Schools, as Examiner in Geography. Mr. John McCredie's place on the Board, as Examiner in History, was filled by the appointment of Mr. W. F. Thompson, M.A.

The Board has now completed the first full year of its existence, and the results secured seem to justify the expectations entertained at the time of its appointment. It is satisfactory further to know that the new system effects a saving of fully one-third of the amount formerly expended, while the results of examinations are made known with at least as much promptness as heretofore.

The following table furnishes the results of the several examinations in detail:—

		Results.

Teachers' Mutual Assurance Association.—This Association which has now been twenty-two years in existence, continues to carry on its beneficial operations quietly and unobtrusively. There have been four deaths during the year; and in each case the claim, amounting to about £80, has been met with promptitude, the necessary payments being taken from the monthly salaries of the surviving members. Ordinary members continue to pay 5s. at each death; but at the close of 1889 an alteration in the rules was made whereby new members who join when under the ages of 30 and 25 years are required to pay only 4s. and 3s. respectively. As this change becomes known among the younger teachers, it is hoped it will have the effect of causing numbers of them to join the Association, and assist in extending its usefulness.

Since the formation of the Association in 1869, the annual death-rate of members has been 1.2 per cent., or twelve per thousand. This is a very low rate of mortality, and members reap the advantage of it. During the last ten years the amounts paid annually by way of premiums averaged £1 5s. 0d. or  $1\frac{1}{4}$  per cent. on the sum payable at death. This together with the smallness of each payment and the fact that such payment is made only after a death occurs, should especially recommend the Association to teachers in the smaller country schools.

Teachers' Emoluments.—Under the regulations, Primary Schools are divided into ten classes, and to each is allotted a fixed rate of salary. The emoluments of teachers of all ranks are given in the subjoined table:—

		King	l of Tc	achers	•			i			Males.				F	emales	9,

Evening School Teachers' Salaries: - In addition to school fees, a salary of £20, £26, £32, or £38, according to the number of pupils in average attendance, is paid to Evening School Teachers.

\* In schools ranking below Class IV the salaries of unmarried teachers and of married teachers not assisted by their wives, as required by regulation, are £12 per annum less than the rates stated above.

## III.—LOCAL SUPERVISION.

In last year's report it was regretted that the efforts made to arouse Public School Boards from their apathy and indifference had not met with the success anticipated, and that with a view to remedy the lack of interest shown, it had been decided to remodel the Public School sub-districts and to reconstitute the Boards throughout the Colony.

<sup>\*\*\*\* \* \*\*</sup> 

Colony. The hope was expressed that "next year it will be a pleasing duty to have to report that the unsatisfactory experience of past years has been completely altered, and that under the changes now being effected Public School Boards generally have evinced carnestness, activity, and judgment in the performance of the work entrusted to them, and have thus rendered signal service in the cause of education."

The work of reconstructing the Boards, especially in the Metropolitan and Sub-metropolitan Districts, has been steadily carried out, and in all instances where practicable ladies have been included among the members appointed. In the country, where large cumbrous Boards previously existed, sub-districts have been arranged with beneficial results. These, as a rule, embrace schools not more than about 6 miles from the central school, and may therefore be visited periodically by the members of the Board without great inconvenience or sacrifice of time.

It is very gratifying to be able to report that the anticipation of increased earnestness and activity on the part of the Boards has been, in a large measure, realised, and that members of Boards have during the year made their influences for good perceptibly felt. Where apathy formerly existed the Boards have, under the new arrangement, shown an intelligent and discriminative interest in school matters, which not only redounds to their own credit, but has been decidedly beneficial and of practical value to the schools placed under their supervision.

Apart from the appointment of additional members to Boards 64 new Boards have been appointed during the year, on 43 of which ladies hold scats, and show an increasing interest in all matters coming under the notice of members. Their presence in the schools will be highly and gratefully appreciated by the lady teachers, who will now be able more readily than hitherto to communicate with the Boards on school matters. There are many points appertaining to school work which require essentially a woman's mind and heart to understand, and such matters may most fittingly be allotted to the ladies section of the Boards, whilst they should, at their option, be relieved of many of the more irksome and less appropriate duties.

Reference has been made in a former portion of this report to the institution of "Arbor Days." It is felt that much of the success achieved in this direction is largely attributable to the Boards connected with the schools where the "Days" have been celebrated. By active co-operation with the teachers in raising funds for the necessary preparation of the grounds, in arrangements for the entertainment of the children, and in various other directions requisite for making the proceedings of a pleasant and instructive character, the members of Boards have deserved the thanks of all concerned.

It is hoped that during the present year Public School Boards will not allow their efforts to flag, but that the activity and interest shown by them in the performance of their duties during 1890 may increase and strengthen.

#### IV .-- SCIENTIFIC AND TECHNICAL EDUCATION.

In November, 1889, a Technical Education Branch of the Public Instruction Department was instituted under Mr. F. Bridges, This branch took over the management of all as Superintendent. matters relating to Technical Education, which up to that time had been in the hands of the Technical Board. At the same time the course of study and standard of proficiency for primary schools were carefully revised, and additional provision was made in them for systematic preliminary instruction in technical subjects, such as kindergarten, drawing, agriculture, manufactures, &c. also taken to improve the practical training of pupils in technical work, the boys in gardening, bec-keeping, the use of ordinary tools, &c., and the girls in sewing and cookery. During 1890 operations have been carried on vigorously under these new arrangements, and very satisfactory results have been achieved.

As regards the whole work done in the year, Mr. Bridges reports that the total number of Technical Classes under his supervision in Sydney, Suburban, and Country districts, has been 225, as com--pared with 119 in operation in 1889. The old established central branch schools at Goulburn, Bathurst, and Newcastle have been continued, and new central branch schools brought into operation, under resident masters, at Broken Hill, and Maitland. The Sydney classes have been carried on in the same buildings as formerly; and the suburban and country classes generally meet in Public School buildings, or in rooms belonging to local Schools of Arts. crection of new Technical College buildings for Sydney is being pushed on, and the Engineering workshops will be ready for the commencement of the lessons for 1891. There is every probability that in the course of a few months the classes of the Sydney Technical College will be accommodated in class and lecture rooms equal to the best provided elsewhere for similar purposes. It has also been decided to erect College buildings at Broken Hill, to include Hall, Museum, Class-rooms, Laboratory, Carpenter's workshop, Machine-shop, &c., at an estimated cost of £10,500. The preparation of plans for the whole building is in an advanced stage; and for the ercetion of the Laboratory and Workshop, tenders have already been invited.

In 1890, the number of enrolments for the several classes was 6,580, as compared with 3,497 in 1889; the number of individual students, 5,207, as compared with 2,586; and the average attendance, 1,885, as compared with 1,184. The students examined at the close of the year numbered 1,538, of whom 864 passed successfully; while in 1889 there were 1,219 examined, of whom 823 passed. At the technological examinations of "The City and Guilds of London Institute," held in this Colony in April last, 32 candidates presented themselves, and 20 obtained certificates; and at the annual national competition, held at South Kensington in May, 1890, under the auspices of the

Science and Art Department of Great Britain, the works of 13 students of the Sydney Technical College obtained classification from the Imperial examiners.

The subjects taken up in the different classes are the following:--Agriculture (elementary and advanced), Engineering, Architecture, Art, Chemistry, Commercial Economy, Domestic Economy, Geology, Mineralogy, Mining, Pharmacy, and Physics. 178 popular science lectures, 44 in Sydney and 134 in the suburban and country districts, were delivered during 1890, as compared with 61 given 1889, and in most cases the lectures were very well attended. The total number of teachers and lecturers employed under the branch was 113, being an increase of 44 to the staff of the previous year. At the close of 1889, Mr. Edward Dowling, who had been promoted to the position of Some months assistant-superintendent, retired from the service. later, Mr. D. Codrington Selman, a gentleman lately from England, was appointed to the vacant position. Mr. Selman, who has a good record as a student and worker in connection with technical education in England, was selected for employment in the Colony, by the Agent-General and Sir Philip Magnus, from over 100 applicants. appointment of a gentleman of Mr. Selman's training and experience should be a decided gain to the Colony, and it is but reasonable to expect that he will render valuable assistance in superintending the work of technical education carried on under the Department.

The Technological Museum, under Mr. Maiden as curator, was transferred to Mr. Bridges' superintendence in January, 1890. The number of visits made to the museum in the year was nearly 100,000, the Sunday visits numbering 36,000. The museum is also a very important aid to technical education in acting as a bureau for supplying information on all kinds of subjects, but especially those connected with the resources and industries of the Colony, and the work is carried on by the Curator with enthusiasm, ability, and success. Branch museums have since been established at Bathurst, Goulburn, West Maitland, and Newcastle.

The system of technical education thus inaugurated by the State is complete and homogeneous, extending as it does step by step, from the preliminary technical work done in the kindergarten, or infants' division of the primary school, up to the advanced work proper to a fully organised technical college or polytechnic institution. The work of each advancing stage is based upon the stage preceding it, and, perhaps, in no other country has a system so well graded and comprehensive in its character been yet organised.

The total expenditure on technical education during the year, including £3,389 12s. 7d. expended on the technological museum, has been £28,341 6s. Of this amount £25,439 9s. 8d. was obtained from the Parliamentary grant, and £2,901 16s. 4d. from fees paid by students.

Details of the technical education work carried on in 1890 will be found in the Superintendent's report, with its annexes.

# V.—PUBLIC SCHOOL CADET FORCE.

Under the scheme of reorganisation, set forth in last year's report, the Public School Cadet Force has made very satisfactory pro-In the latter part of that year, before the arrangements of the reorganisation scheme had been brought into operation, the number of enrolled cadets had fallen to 1,084; but it was confidently expected that as a result of the reorganisation decided upon the numbers enrolled in 1890 would reach over 4,000. This expectation has been more than realised, as the actual enrolment at the close of 1890 was 5,842, including 3,208 from Sydney and suburbs, and 2,634 from country places. This growth of the force has been steady throughout the year, each quarter showing an increased enrolment. The teachers in the schools manifest a warm interest in the expansion and efficiency of the cadet force, and it is to their well directed efforts that so marked a development is largely due. The commanding officer of the force bears testimony in his report to the "unselfish and loyal manner in which the teachers generally have assisted the Cadet staff in furthering the interests of the cadet movement.

Major-General Richardson held an inspection of the corps in June. The display then made was very creditable, and called forth the commendation of that officer. In August, Lord Carrington reviewed the force in Moore Park. The review was a pronounced success, and the field state showed an attendance of 4,525 of all ranks. The whole of the Sydney and Suburban Corps, and many of the Country Corps took part in the review. Cadets were in attendance from the following country places: Bathurst, Blayney, Bombala, Bungendore, Blackheath, Cathcart, Cooerwull, Cooma, Camden, Cudal, Campbelltown, Canowindra, Dubbo, Emmaville, East Maitland, Eskbank, Frogmore, Grafton, Grenfell, Goulburn, Glen Innes, Gundagai, Junee Junction, Kiama, Mount Keira, Murrurundi, Mudgee, Morpeth, Muswellbrook, Nowra, Nyngan, Newcastle, Orange, Penrith, Picton, Tamworth, Tenterfield, Wagga Wagga, Wollongong, Wickham, West Maitland, Yass, and Young.

Besides the Public School Cadet Corps there are in existence six other school corps, which have been formed under the Volunteer Force Regulation Act of 1867. Five of these corps were also well represented at the review, namely, the Sydney Grammar School, the King's School Corps, Newington College Corps, St. Ignatius College Corps, and Cooerwull Academy Corps. The corps not represented was that connected with the Windsor Grammar School. The year's total enrolment in the six school corps referred to was 673, and when this number is added to the enrolment in the Public School Cadet Corps a total cadet force enrolment is shown of 6,523.

A healthy interest in the cadet movement has now been created throughout the country, and this interest is being well maintained in our Public Schools. It is confidently expected, therefore, that the results

results of the past year will be fully equalled, if not surpassed, by those of 1891, and that the cadet force will become firmly established as a permanent National Institution.

#### VI.—FINANCE.

The sum available in 1890 for expenditure under the Public Instruction Act was £705,060 16s. 7d. made up as follows:—

Balance from 1889	£ 171	8. 1 <i>7</i>	
Amount received from Treasury on account of Vote		•	Ū
for 1890	615,733	17	2

The amount of school fees collected and paid into the Consolidated Revenue was £71,826 15s. 7d., namely £67,119 18s. 3d. from ordinary day schools, and £4,706 17s. 4d. from High Schools. Deducting this sum from the total expenditure there will remain £632,433 1s. as the net school expenditure derived from State funds, showing an increase for the year of £69,241 16s. 2d. as compared with a similar outlay in 1889.

\* Included under Inspector's Branch.

The foregoing statement shows that of the total year's expenditure of £704,259 16s. 7d. about  $21\frac{1}{4}$  per cent. was spent on school premises, nearly  $69\frac{3}{4}$  per cent. on the maintenance of ordinary schools, 8 per cent. on administration, including training and examination of teachers and the enforcement of school attendance, and about 1 per cent. on High Schools. In 1889, the corresponding per centages were:—Premises,  $17\frac{1}{2}$  per cent, maintenance of ordinary schools  $73\frac{1}{2}$  per cent., administration  $8\frac{1}{2}$  per cent., and High Schools about 1 per cent.

The following table exhibits the number of schools, the number of pupils, and the State expenditure for each of the ten years elapsed since the passing of the Public Instruction Act of 1880:—

		i		T	ne State Expenditi	are.	
Years,	Number of Schools.	Number of Pupils.	On School Premises.	On maintenance of Schools, including administration, &c.	Total.	Less School Fees.	Net State Expenditure.
1831	1,067	148,106	£ s. d. 102,903 11 2	£ s. d. 371,253 14 5	£ 8, d, 474,157 5 7	£ s. d. 46,847 5 4	£ s. d. 427,810 0 3
1882	1,795	166,611	223,401 11 2	390,398 17 7	618,800 8 9	51,312 5 11	567,488 2 10
1883	1,706	155,918	391,000 2 7	430,852 13 8	821,852 16 3	51,427 7 10	770,425 8 5
1994.:	1,912	167,134	304,383 9 7	469,973 16 5	774,357 G <b>0</b>	56,766 13 1	717,590 12 11
1885	2,016	173,440	173,601 15 7	485,694 16 2	663,696 11 9	58,925 17 11	604,770 18 10
1886	2,170	179,990	155,072 0 7	499,338 18 4	654,410 18 11	68,164 10 7	591,246 8 4
1887	2,236	184,060	119,957 3 10	505,025 12 11	624,982 16 9	63,895 17 5	501,086 19 4
1888	2,271	186,692	84,575 0 9	512,627 1 6	597,102 2 3	69,553 14 4	527,548 7 11
1889	2,373	191,215	109,725 18 10	525,932 19 6	635,508 18 4	72,317 17 6	563,191 0 10
1890	2,423	195,241	150,441 0 2	553,818 16 5	704,259 16 7	71,826 15 7	632,433 1 0
Total 10	years' exp	enditure	1,824,911 14 3	4,744,817 6 11	6,569,129 1 2	605,538 5 6	5,963,590 15

It thus appears that the net State expenditure under the Public Instruction Act, for the ten years ending December, 1890, was £5,963,590 15s. 8d., or an average of £596,359 1s. 7d. per year; and that, in 1890, the expenditure was £69,242 more than in the previous year, but considerably less than it was in 1884, or in 1883. Of the total expenditure for the ten years, £1,824,911 14s. 3d., or 30.6 per cent., was spent in providing school premises.

The next table will show the expenditure more in detail.

Heads of Expenditure.	1881			1885			1889	'.		1890

IV. RETIRING ALLOWANCES:	_								_			
To Public School Teachers			.	866	19	0	••••••••				•••	
Total expenditure $\pounds$	474,157	5	7	663,696	11	9	635,508	18	4	704,259	16	7

The last table shows that the total expenditure has increased in the year by £68,750 18s. 3d. Of this increase, £40,865 1s. 4d. was for school premises (repairs, sites, and new buildings), £6,736 3s. for fuel and cleaning allowances, which had been discontinued in 1888 and for part of 1889, and £15,661 18s. for salaries of the increased number of teachers necessary for the 56 new schools, &c. These three items total £63,263 2s. 4d. of the whole increase, and the balance of £5,487 15s. 11d. represents the total increase in the whole of the remainder of the services under the Public Instruction Act. The extension of Technical Education in connection with Public Schools has also added to the outlay. The cost for administration, &c., is larger in amount than it was last year, but is less as a percentage of the total expenditure. It is also less in an amount than it was in any year from 1883 to 1887 inclusive.

The total cost per child, and the average cost respectively for "School Premises," the "Maintenance of Schools," and "Administration" including inspection, the training and examining of teachers, and the enforcing of school attendance, are shown in the next tables.

(a) Average cost per child of the Year's enrolment.

In the last three tables the total year's expenditure is dealt with in calculating the average cost per child; but in the succeeding tables the amount of school fees paid into the Treasury has been deducted, and the average cost per child has been calculated on the reduced amount as being the actual cost to the State.

(a) Average cost (to the State) of a child's education.

		, .			
	In 1881.	In 1885.	i In 1839.	In 1890. <b>1</b>	Average cost per child for 10 years.

The total cost per child for the State Schools in the principal Australian Colonies, is given below:—

	Number of Schools.	Mean quarterly enrolment.	Average attendance.	Average number of pupils per School.	Cost per head of mean enrolment.	Cost per head of average attendance.
New South Wales	2,062 584	170,357 190,497 55,860 38,602	116,665 130,829 40,472 28,314	70 92 95 68	# e. d. 4 2 8 4 6 8 3 19 2 3 7 7	# 8. d. 6 0 8% 6 6 2% 5 9 31 4 11 64

The net State expenditure in the principal colonies, in the last year for which reports are available, was:—

-			£	s.	d.
New South Wale	s	 	 632,433	1	0
Victoria		 ,	 826,020	14	11
Queensland		 	 217,359	18	10
South Australia		 	 101,634	17	4

I cannot close this portion of my Report without pointing out clearly that the expenditure upon school sites and new school buildings, and for additions to and repairs of existing schools, by no means has met the fair requirements of the Colony. During the last seven years works of necessity have been delayed, and in many cases postponed from year to year, owing to the annual votes from Parliament becoming exhausted. Complaints are made frequently of inadequate accommodation for scholars in many places, and the resources of the Department have been taxed to the uttermost to meet even the more urgent of these cases. The rapid extension of the railways, the increased population extending along these railways, together with the new settlements created by new mining-fields, by free selections, and by pastoral occupations, have all been creating great demands for expenditure for new schools. The policy, too, of recent years in erecting temporary wooden

wooden buildings in well-established school neighbourhoods is coming home to this Department as a disappointment. Most of these buildings, owing to the materials used in their construction, viz., wood and iron, are warm and stuffy in the summer; and, from the number of ventilators necessary, they are cold and draughty in the winter. They are, moreover, eyesores from their rough appearance, and altogether are out of keeping with the private buildings in many of the localities where they have been placed. The ravages of white ants, too, in these buildings have shown that the structures have been but a poor economy to the State where a brick building with some architectural design could have been erected at a moderately-increased outlay. During the year 1890 I have rarely sanctioned the erection of these temporary structures, but have caused the larger proportion of the new buildings to be erected for permanency, and upon designs calculated to admit of future extensions upon a complete plan. In all the chief towns of the Colony, and in the suburbs of the city, wherever new buildings have been erected they have been of such a character as to be worthy of the State, whilst not too ornate or too expensive in their style. The temporary buildings which have become overcrowded, and which are admittedly unsuitable, are being rapidly replaced by the permanent structures; but there remain still many which are a constant source of complaint, on the grounds above mentioned, and which must in the near future be dealt with.

In the matter of repairs, I have found that schools of an inferior character are constantly draining the vote for this purpose, to the detriment of the fair claims of other schools needing only the "stitch in time." Some schools erected at a cost of thousands of pounds have gone for seven to eight years without a coat of paint or other repairs and renovations necessary every three or four years; and this has occurred simply because of the constant strain upon the votes to meet cases of extreme urgency. The value of the school buildings the property of the Department is estimated at £2,000,000, exclusive of sites, and at least a sum of £30,000 per annum should be set apart to keep such a valuable State asset in fair repair. The accumulations of previous years, unsatisfied demands for new buildings and repairs, will necessitate ere long a large outlay.

The Church and Schools lands bring in now an income of £17,586 19s. 6d. per annum, and there is an accumulation of £193,342 12s. 5d. in a trust account in the Government Treasury. As the law now stands, none of this money is available for the purposes of our schools, and some amendment of that law is necessary in order that the Department may reap the benefit of a revenue clearly intended to aid in the maintenance of the State schools.

But whether that source of revenue is made available or not, it must be clear to all that as the State has undertaken the education of the children there will of necessity be an ever-increasing and large expenditure, and the experience of the past few years of the inception of the system has only revealed the larger demand which the future must bring forth if the work is to be done as a State should do it—in a spirit of progress and thoroughness.

The following table of statistics gives a general summary of our school work done in 1890, and also shows the progress made under the Department since the passing of the Public Instruction Act of 1880:—

Statistics of 1890 compared with those of 1881, the first year of the last decade, and also the first complete year of work under the Public Instruction Act of 1880:—

Information respecting educational institutions connected with the Department, but not carried on under the provisions of the Public Instruction Act, is furnished in the following summaries:—

#### THE SYDNEY UNIVERSITY.

In 1890, the matriculated students attending lectures in the University numbered 376; 33 non-matriculated students also attended day or evening lectures. In 1889 the students numbered 293. Of 245 candidates who presented themselves for the Matriculation Examination, 171 passed successfully. In addition to these, 64 passed the Senior or Junior Examination in the matriculation subjects, while 66 passed the Matriculation Examination for Articled Clerks. Beginning from 1891, 10 State Bursaries for the University, 6 for males, and 4 for females, will be annually offered for competition among State School pupils. Arrangements for Training School students matriculating at the University came into operation at the commencement of the rear, and 46 such students have since attended lectures.

The University Staff has been considerably increased, and appointments have now been made to the Challis Chairs of Law, Anatomy, Logic and Mental Philosophy, and History.

The Senate has consented to given up a portion of the University land as a site for a residential college for male students in training for the office of Public School Teacher, and measures are in progress for the erection of the necessary buildings. The college will be under the direct control of the Minister of Public Instruction, but it is intended that it shall be affiliated to the University, and that the Principal, like the Principals of the other affiliated colleges, shall be ex-officio a member of the University.

As

As pointed out in last year's report, an Act of Parliament has been passed granting the sum of £5,000 towards the erection of an affiliated college for women, and providing £500 towards the salary of a Principal, contingent upon £5,000 being first raised by the promoters of such college. The required £5,000 has now been subscribed, and the further steps necessary towards the establishment of the college will shortly be taken.

The year's expenditure, exclusive of the sums disbursed for private scholarships, bursaries, &c., was £26,075 4s. 1d. Of this sum £18,633 18s. 11d., or about  $71\frac{1}{2}$  per cent., was received from the Government, and £5,426 10s. 7d., or about 21 per cent., from fees. Including the payments already received from the Challis bequest, the amount of the private foundation account of the University now stands at nearly £300,000.

#### THE SYDNEY GRAMMAR SCHOOL.

The total enrolment of pupils in 1890 was 526, of whom 117 with 1889, these figures show that the number of pupils over 14 years of age has increased by 109, that the number under the age mentioned has decreased by 95, that the increase in the total enrolment was 14. 178 new pupils were admitted, being 14 more than in 1889. Of these 97 were under the age of 14, while 81 were above it. The mean quarterly enrolment for 1890 was 429, and the average daily attendance 405. The University Examinations were attended by 55 pupils from this school, as against 65 in 1889. All but two were successful, as shown thus: -Junior Examination, 21 attended, all passed; Senior Examination, 5 attended, all passed; Matriculation, 29 attended, and 27 passed. In addition to these, 6 boys presented themselves at the Law Matriculation and passed. The per centage of new pupils under 14 years of age was higher than in 1889, being  $54\frac{1}{2}$ . In 1889, the per centage was 45; in 1888, 52; in 1887, 54; and in 1886, 60. income of the school for the year amounted to £9,905 12s. 10d. being comprised of State Grants, £3,649 18s. 10d.; School Fees, &c., £6,105; and from other sources, £150 14s. The year's expenditure reached £9,225 11s. 3d. The cost per pupil in average attendance was £22 15s. 7d. in 1890; £21 10s. 6d. in 1889; £24 3s. 7d. in 1888; and £26 3s. 4d. in 1887. The expense to the State, per head of the average attendance, was £9 0s. 3d. in 1890; as compared with £5 17s. 9d. in 1889; £7 19s. 8d., and £5 19s. 8d. in 1887.

### FREE PUBLIC LIBRARY.

At the end of 1890, the Library contained a total number of 86,284 volumes, being an increase of 298 over the number for 1889, 3,941 over that for 1888, and 10,322 over that for 1887. The number of new works added during the year was 4,653, being an increase of 658 on the number added in 1889. The reading-room was visited by 102,279 persons, showing the large increase of 23,567 over the visits

paid in 1889. The number of visits made to the Lending Branch by borrowers of books was 53,543, making the total number of visits to the Library to be 155,822. The number of persons employed in the Institution was 27, being an increase of five on the staff for 1889.

The expenditure for 1890 is shown hereunder:--

#### THE AUSTRALIAN MUSEUM.

The number of visitors to the Museum during the year was, on week-days, 87,900; on Sundays, 36,824; total 124,724. As compared with 1889, the attendance has fallen off, inasmuch as there were 4,958 fewer visits paid on week-days, and 8,728 less on Sundays, the total decrease being 13,686. Twenty-five persons were employed in connection with the Institution. The Trustees report the expenditure to have been as under:

#### NATIONAL ART GALLERY.

This Institution was visited in 1890 by a total number of 211,544 persons, namely: 128,513 on week days, and 83,031 on Sundays. A decrease on the attendances in 1889 has here also to be recorded to the extent of 20,583 on week-days, and 17,572 on Sundays, or a total decrease of 38,155. The staff of employees consisted of five persons.

The following is a statement of the year's expenditure:-

NEW

# NEW SOUTH WALES INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

The number of immates of this institution in 1890 was 99, being 1 more than in the previous year. Of these 56 were under 14 years of age and 43 were above it. The new admissions numbered 19—15 under 14 years and 4 over that age. 25 inmates were discharged, of whom 24 were 14 years or age or upwards. The income of the Institution was,—from State grants, £450; from other sources (including legacies to the amount of £6,198 18s. 5d.), £11,016 10s. 2d., making a total of £11,466 10s. 2d. This income exceeded that of the previous year by the sum of £5,557 2s. 9d—a result mainly due to the legacies mentioned. The expenditure was as under:—

# INDUSTRIAL SCHOOL FOR GIRLS, PARRAMATTA.

The number of girls enrolled during the year was 123, of whom 39 were under 14 years of age and 84 over that age. The new admissions were 36, 11 being under, and 25 over, 14 years. 1 inmate died of consumption, and 58 were discharged in the following ways, namely,—for apprenticeship, 32; on attaining the age of 18 years, 10; transferred to Boarding-out-Officer, 13; to the Benevolent Asylum, 1; and on the order of the Governor in Council, 2. At the close of the year 1890, 74 girls remained in the Institution. On a comparison of the above with the returns for the preceding year, the enrolment in 1890 shows a decrease of 46; the new admissions were fewer by 40; and the number discharged was 24 less; 9 persons were employed in the Institution. The expenditure for the year amounted to, for maintenance, £1,491 11s.; and for salaries, £883 1s. 4d.; total, £2,374 12s. 4d. Calculated upon the number enrolled, this represents an expenditure of £19 6s. 1d. per head, exclusive of amounts spent on buildings.

Very important changes have been made in the management and character of this Institution since my last report. On several occasions, grave defects in the system that obtained were brought prominently into notice, and the escape of five girls from the Institution at the same time and their disorderly and defiant conduct, together with other abscondings of a less serious nature, at length made it necessary to hold a searching inquiry into the entire working and condition of the establishment. This inquiry was conducted by officers of the Department, with the result that, in regard to the discipline and the character of the management in general, the methods employed, although carried out by the existing staff to the best of their ability, were not calculated to effect any permanent good

in the conduct or the future life of the inmates. As, therefore, it was evident that the Institution did not successfully carry out its mission as a Reformatory for the young females committed to it, a thorough reorganisation and remodelling were eventually resolved upon. For this purpose a new staff of officers were appointed in May 1890, comprising a Male Superintendent, an Assistant Superintendent or Matron (the wife of the first-named officer), a teacher, an assistant teacher, and a sewing mistress. A suitable person to fill the position of Superintendent was found in Mr. C. H. Spier, late head master of the Parramatta Public School, a gentleman who had served under the Department for twenty-six years, and was deemed to possess high qualifications for the discharge of the duties pertaining to his new office.

In connection with the system of management, also, various reforms have been inaugurated, which there is every reason to believe will materially increase the efficiency and usefulness of the Institution. The beneficial effects of some of these have already been manifested. One very important reform related to the classification of the inmates, with a view to prevent the younger and more innocent girls from being contaminated by association with those who, on their entrance to the Institution, are found to possess some of the vicious traits which the unfortunate surroundings of their earlier lives render them peculiarly liable to. The latter class are disposed, notwithstanding the utmost watchfulness, to narrate their experiences to the comparatively innocent ones, and with a view therefore to avoid too close a contact between the two classes, it has been arranged to allow the younger In order, further, to children the use of a separate playground. encourage good conduct, it has been decided to provide small rooms, or "cubicles," in one of the dormitories for the separate use of the best behaved girls. These rooms will be furnished in a home-like manner, and the girls will be stimulated to take a pride in their neatness and arrangement, and to acquire a love for domestic habits that will probably be retained in after life. For the health and well-being of inmates of an institution like this, plenty of active work is a necessity, and it was therefore decided that the laundry work of the Hurlstone Training College for female teachers should be done by these girls. This has not only resulted in a great saving of expense to the Department, but the Superintendent has noted with satisfaction the pride and interest taken by the girls in this branch of domestic work.

A Cookery Class has been formed under the charge of Mrs-Story, Instructress in this subject at Public Schools, and lessons, both practical and theoretical, are now given with encouraging results. Needlework is regularly taught under the Sewing Mistress, and the girls will be helped to make, as well as sew, their own dresses. Ordinary School instruction is imparted under two trained teachers. The behaviour and demeanour of the girls are equal to those of pupils in a well-managed Public School; and the discipline and progress in learning are reported to be creditable. The health of the inmates has been very good and their general conduct has much improved.

The object of the reforms herein referred to is twofold. The girls in the first place, will be taught to regard the institution as a home, in which each girl will have her set duties to perform and will be encouraged to habits of industry and allowed to develop her individual tastes as far as practicable. Secondly, the girls will be trained to become thoroughly conversant with household duties and thus be enabled to earn honest livelihoods as competent domestic servants. A feeling of self-respect will, it is hoped, be so acquired, which, aided by the education received and the moral influence exerted, will make this institution the means of accomplishing all that it is possible perhaps for the State to do in the way of preventing the girls from relapsing into vicious habits and of helping them to become respectable members of society.

# NAUTICAL SCHOOL-SHIP "VERNON."

The total enrolment of boys was 340; 177 of these being under the age of 14 years and 163 over. 113 new admissions were made, of whom 85 were under and 28 over 14 years. The number discharged for apprenticeship or otherwise was 132, 48 under and 84 over 14 years old. In comparison with 1889, the enrolment was 73 less, the new admissions were 91 less, and the discharges 54 less. The expenditure has increased by £865 9s. 9d.; and amounted to the following:—For maintenance, £4,468 7s. 2d.; for salaries, £2,277 2s. 7d.; total, £6,745 9s. 9d. The cost per head of the enrolment was £19 16s. 9d.

The Superintendent Captain Neitenstein, reports as follows:—
"The Institution has worked smoothly during the year, and the boys have behaved satisfactorily. The new building on Cockatoo accommodates 60 boys, and the overcrowded state of the ship has been relieved. The apprentices, of whom there are over 400, have received more than 90 per cent. of good reports, and the demand for these boys greatly exceeds the available supply."

### J. H. CARRUTHERS,

Minister of Public Instruction.

Department of Public Instruction, Sydney, 9th April, 1891.

### APPENDIX XII.

### THE CHIEF INSPECTOR'S REPORT. WITH ITS ANNEXES.

Or the 2,368 schools open in 1889, 69 were closed during the year, leaving 2,299 in existence at the beginning of 1890. In 1890, new schools to the number of 119 were established, making a total for the year of 2,418. The returns for the last three years give the following statistics:—

Year.	Public.	Provisional.	Half-time.	House-to-House.	Evening.	Total.
1888	1,635	316	224	79	12	2,266
1889	1,671	325	258	92	22	2,368
1890	1,680	333	289	95	21	2,418

Arranged in classes, according to the attendance at the close of the year, they stand thus:

	Class I.	Tſ.	III.	IV.	v.	VI.	VII.	VIII,	IX.	х.	Small. Unclassified,	Total.
1888	26	33	20	47	101	190	183	281 -	694	222	469	2,266
1889	30	31	22	45	110	188	181	306	657	263	535	2,368
1890	31	33	20	46	119	179	191	290	632	296	581	2,418

The "class" of a school is determined by its average attendance. For instance, a sixth class school has an average between 50 and 100; a fifth between 100 and 200; a fourth between 200 and 300; a third between 300 and 400; a second between 400 and 600; a first above 600. The schools that grow from second to first class during the year were Ashfield, Annandale, Stanmore, and Waverley; those that increased from third to second, were Broken Hill, Broken Hill North, Marrick-ville West, Redfern West, and Penrith.

Most of the newly established schools are in outlying thinly peopled districts, and are, therefore, small. Every year a few schools are opened in new mining camps, and last or disappear according as the mines succeed or fail. Of these new schools, the Inspectors superintended the building and furnishing of 63 where none previously existed. Permanent buildings in all but the smallest class of schools are put up under the superintendence of the Architect. To meet increase of attendance and to preserve existing buildings, 131 new schools or departments, 18 residences, and 35 weather-shels, were put up; 48 schools were enlarged or had class rooms added to them, and 916 buildings were repaired. In remote places the Inspectors did much of this work, and thus saved both time and money. They planned and supervised the following:—

£ s. d.

95 new schools 15 additions to schools  15 total cost	7,767	5	0
5 new residences; total cost			
22 weather-sheds	563	17	6
458 buildings repaired	5.865	0	1

At the close of 1889, there was sitting accommodation in all schools for 185,434 pupils; at the end of 1890, the sittings had increased to 198,071, being a gain of 12,637. Three new inspectoral districts were formed in 1890, necessitating a general redistribution of schools. This makes it meaningless to compare the number of sittings in any district in 1890 with the number in what was nominally the same district in 1889. The following table, however, gives the accommodation in each district on the 31st December, 1800:—

District.	Number of places at end of 1890, reckoned at 8 square feet for each child.	Number of places at end of 1890, reckened at 100 cubic feet of air space for each child.
Armidale	16,217	14,769
Bathurst	15,233	15,061
Bowral	13,626	11,659
Goulburn	18 109	15,298
Brafton	15,276	15,134
Maitland	24,865	25,580
detropolitum	43,336	55,786
Sub-Metrorolitan	20,109	19,534
Sub-Metropolitan	20,030	19,115
Wellington	12,097	12,330
Total	198,898	204,285

There is practically little difference between the results, calculated on the basis of floor space, without reference to height, and those obtained by taking the cubic space. The Act says that 100 cubic feet of space must be allowed for each child. In practice, buildings for some years have been constructed not only to meet this condition, but to meet it by giving also at least 8 square feet of floor space per child. Without keeping both measurements in view, ceilings might be too low for the number of children that a floor would accommodate, or a floor too small to give requisite space and comfort in a building with a disproportionately high roof.

The Inspectors report that the schools as a whole are well supplied with furniture, apparatus, and working materials. The materials, which include books, slates, pencils, pens, ink, chalk, maps, diagrams, drawing copies, records, &c., cost the Department about £11,000 a year. In different schools the Department has experimented on almost every kind of desk and form recommended or used by educational authorities in Europe, America, and Australia. The outcome of a general comparison as to the suitability and usefulness of the various types is an almost unanimous preference for the ordinary long dasks and forms commonly used in our schools. The forms need strong backs; but, otherwise, teachers and inspectors would rather have the present plain, open seats and desks, to accommodate rows of from 9 to 12 children than any other furniture they have seen.

Considering the attendance, the playgrounds of the majority of Sydney schools are too limited in area. In most cases, however, the sites are so built in as to make it impossible to add to their size. In the suburbs and in country places, where it is practicable to enlarge the existing sites at not too great an expense, steps have been taken in many instances to doso. Hitherto, in the country, a block of two acres has been the standard site; but efforts are now being made to increase these areas to at least four acres. At

places, and, owing to the wet season, an unusually large number have thriven. An annual holiday, under the name of Arbor Day, will be granted to all schools in order that tree-planting and kindred work may be made a prominent incident of school life. If managed solely by the children, the teachers, and the local people interested in the school, these days may be made the occasion of very pleasant gatherings.

The gross enrolment of pupils in 1890 was 221,864. Deducting 12 per cent. for multiple enrolments, the number of individual pupils entered on the books of the schools was 195,241. The following table gives the enrolment and the average attendance for each quarter of 1889 and 1890, together with

the rates of increase or decrease :-

Quarter	Enrolment in for a		Average daily attendance for 1889.	daily daily attendance attendance a				
March	163,313	167,319	4,006	115,746.3	106,740.7	Decrease 9.005-6	2.4	Decrease 7.7
June	164,075	169,318	5,243	110,952 2	117,331.5	Increase 6,379-3	3·1	Increase 5 7
September	165,644	172,672	6,023	115,462.7	119 935 8	4,473-1	3.6	3.8
December	161,773	172,121	7,348	116,1143	122,651.3	6,537 0	4.4	5.6
Average	164,701	170,357	5,656	114,568.8	J16,664·8	4,347:3*	3.3	3.7*

\* In taking these averages, March quarter has been omitted, the weather during that quarter having been exceptionally

The percentage for each quarter was :-

0.4	Procedure 1	Average attendance.					
Quarter.	Enrolment.	Number.	Percentage				
March	167,319	106,740-7	63.7				
une ,	169.318	117,331.5	69-2				
September	172,672	119,935-8	69.4				
December	172,121	122,651.3	71.2				
Year's average	170,357	116,664-8	68.3				

Compared with 1889, the increase on the gross enrolment was 5,349, on the average quarterly enrolment, 5,636, and on the average daily attendance, 2,096. Excluding the March quarter, the increase in average attendance was 4,347.

In the last quarter the average daily attendance was 71.2 per cent, of the enrolment, the highest percentage yet recorded in the Colony; but the percentage for the whole year was but 68.3. In 1889 it was 69.5. These figures show how greatly the attendance in certain months was affected by heavy rains and floods, and how suddenly the attendance recovered itself during the fine-weather months.

The average enrolment for the first half of the year was 168,318. Of this number 21,051 failed to attend 70 days. The explanations given in regard to 14,676 were considered satisfactory. Of the remainder—about 4 per cent, on the enrolment—the parents of 834 were prosecuted, and the parents of 554 received cautions. The average enrolment in the second half-year was 172,396. Of these 13,899 failed to attend 70 days; the explanations respecting 9,491 of them were accepted; the parents of 956 were prosecuted, and of 3,452 cautioned. As has been frequently pointed out in the Minister's annual reports, the absence of official registration of children who are not enrolled in Public Schools puts obstacles in the way of Attendance Officers which make it a hard matter for them to deal with children who attend no school, or who only nominally attend private schools.

Notwithstanding the increase of schools and scholars during the last five years, the number of Inspectors remained unchanged during that period. It was recognised, however, that their work was becoming too heavy for them. In the beginning of 1890, therefore, new sections were formed at Young and Taralga, and, in the middle of the year, a third was formed at Gunnedah. These changes, which made a re-arrangement of all the districts necessary, increased the inspectoral staff by three, and brought each officer's district to a more manageable size.

and brought each officer's district to a more manageable size.

In schools of more than one department, each department is examined separately, and, for purposes of inspection, is treated as a distinct school. There were altogether 2,627 schools or departments open during some portion of 1890, this being an increase of 57 on 1889. All received a regular inspection except 40 small schools that either closed early in the year before the Inspectors visited their neighbourhood, or were established late in the year after the visits of the Inspectors. In most of the country districts the work of inspection was at times both difficult and unsatisfactory. During the first eight months wet weather and floods made travelling unpleasant and, sometimes, impossible; and the small attendance of children and the closing of schools—in some cases for weeks together—made Inspectors feel that examinations under such conditions could do justice to neither teachers nor pupils. It was fortunate that the increase in the number of Inspectors came at such an opportune time. The details of inspections made during the last three years are shown in the following table:—

Year.	No, of schools.	No. of schools inspected.	No of schools inspected twice.	Total number of inspections.	No. of schools not inspected.	No. of pupils evamined.	No. of Inspectors.
1888	2,461	2,445	1,071	3,516	16	118,710	32
1889	2,570	2,535	848	3,383	35	122,052	32
1890	2,627	2,587	704	3,291	40	127,515	35

The particulars for each district stand thus :-

District.	No. of Inspectors.	No. of schools.	No. of schools inspected.	No. of schools inspected twice.	Total No. of inspections.	No. of schools not inspected,	No. of pupils examined.
Armidale	4	285	282	} 0	291	3	9,439

Total	35	2,627	2,587	704	3,291	40	127,515

The inspected and uninspected schools were :-

	Public.	Provisional.	Half-time.	House to-house	Evening.	Total.
Inspected	1,885 4	326 11	280 8	85 7	11 10	2,587 40
Totals	1,889	337	288	92	21	2,627

As might be expected, the irregularity of attendance caused by the continuous wet weather during the greater portion of the year told on the results of inspection. From all parts of the colony Inspectors reported that, in spite of the best efforts of teachers, large numbers of pupils had not attended with sufficient regularity to enable them to pass their examinations satisfactorily. The introduction of the new standard of proficiency by which extra subjects were added to some of the classes, also helped to pull down the average results, especially in schools badly attended during the first half-year. On the whole, however, notwithstanding these drawbacks, the schools did good work. Of the 2,537 schools inspected, 81 per cent. reached or exceeded the standard; and of the 2,449 that were open the whole year, 83 per cent. did the same. Last year the numbers were \$1.6 and 83, respectively.

The following table shows the proficiency of all schools inspected:-

Speaking generally, there is an average decline of about 5 per cent in the passes in most subjects as compared with the passes in 1889. This is explained by the Inspectors, and correctly so, as due to the exceptional irregularity of pupils on account of wet weather, to the introduction of a new standard which pressed heavily on irregular attendants, and, in some cases, to changed and more severe methods of marking. In writing, for instance, a subject not affected to a large extent by irregularity, the passes in 1800 were 79, as against 88 per cent in 1889; and yet in no year was so great an advance made in this subject. In order to stimulate teachers to give increased attention to writing, the following circular was sent to them in March last:—

"To induce teachers to improve the writing in public schools, the mark value of this subject has been raised in the second, third, fourth, and fifth classes. I am directed by the Minister to state that in future crery pupil in your school must regularly write in ruled copy-books. You are at liberty to adopt any approved series of copy-books, and need not confine yourself to one series; but each individual pupil should be kept to the one series selected for him. At present it is not uncommon to find the same pupil using the round upright copies of the 'Federal Series' at one time, the sloping head-lines of Forster at another, something different, set by the teacher, at another, and all the while writing a hand of his own, wholly unlike any of the copies. In future each pupil must be kept to one style of writing, and the Inspectors will mark each book a failure where no attempt is made to imitate the copies given."

The effect of this was an immediate improvement in most of the schools; but those teachers who neglected to insist on fair imitation of headlines had their copy-books rejected wholesale as failures by the Inspectors, and, instead of obtaining a tolerable number of marks for them as hitherto, received none. The result was the reduction of the number of passes from 88 to 79 per cent., and that in a year which showed the best work in writing done within our experience. This is but an illustration of the impossibility of accurately comparing the passes of this year with those of previous years.

All the Inspectors concur in thinking that the revised standard is working well, that it will lead to considerable improvement in schools, that its demands can be met by ordinary industry, and that it is generally acceptable to teachers.

In 1890, for the first time, the Department enforced definite rules with regard to home lessons. Here, as in other countries, children of tender years, in addition to spending the day in school, were in many cases weighted with home lessons so numerous and heavy as to be a source of annoyance.

and concern to parents, and of misery to themselves. As far as can be ascertained at present, the rules have in no way interfered with the children's progress, and they have certainly added to their comfort. The rules are:—

### HOME LESSONS.

(a.) No home lessons or written exercises of any kind shall be given to children attending Infant

ENO nome lessons or written exercises of any kind shall be given to children attending Infant Schools or first classes in other schools. Children in the second class shall have no written exercises of any kind; but they may be required to prepare lessons on reading, spelling, or tables, provided such work take up not more than half-an-hour each evening. Children in the third class may be given home lessons four evenings in the week, the subjects being left to the discretion of the teacher; but such lessons must not take more than one hour to complete. to complete.

In the case of fourth or fifth classes it is left to the discretion of the teacher to give such home lessons as he may consider necessary.

(it.) In the case of fourth or fifth classes it is left to the discretion of the teacher to give such home lessons as he may consider necessary.

Iustruction in cooking, started at Fort-street about a year ago, has been extended to Blackfriars, and the first examination in the subject was held in December. The results of the examination were satisfactory. As at present managed, there is no reason, beyond that of the expense of fitting up a kitchen, why cooking should not be tanght in most of the large schools. The present arrangement is that all girls in the fifth class—say, about sixty—take cooking as a class subject. Once a week they receive a demonstration lesson, and on the other days sections of twelve, spend the whole morning in cooking an actual dinner for about thirty-five people. The dinner is served by the girls, they afterwards wash up, and by 3 o'clock leave the kitchen and all utensils serupulously clean, and ready for the next day's section. The dinner consists of two or three courses, varied day by day, and such teachers and pupils as desire to dine notify the fact each morning. The charge for dinner is simply the cost price of the provisions. If the kitchen could meet the demands, three or four times the number who now dine would do so. There are two features in these arrangements that I consider essential to success. One is that from the outset the thing should be real, and yield practical results. To show girls on one day how to make some peculiar cake or jelly, on another day how to make a pudding, and so on, is not the kind of instruction needed. The girls require to learn to use with confidence and dexterity all ordinary kitchen utensils, to clean and prepare vegetables, to distinguish good meat, fish, or poultry from bad, to make paste for boiling or baking, to so arrange their work that the cooking of every dish may be carefully supervised, to so regulate time that nothing will be overdone or underdone, and, lastly, to have plates and dishes properly heated, and the dinner examination, wo

movements.

The teaching staff at the close of the year numbered 4,149, an increase of 77 on 1889. The Inspectors speak in high terms of the respectability, good conduct and faithful industry of the teachers as a whole. Stationed as many of them are where the ordinary comforts of life cannot be obtained, and where they can have no congenial society, these teachers yet work on honestly and patiently, getting out of their teaching and its visible results their only real pleasure. Occasionally a teacher misconducts himself, or has to be punished for indolence or neglect; but instances of this kind are so few relatively, that the Inspectors' reports as to the general trustworthiness of teachers may be accepted as correct. Of the whole staff, the pupil-teachers number 1.107. These young people work hard, in and out of school. Their professional training is severe, and the course of study prescribed for them, high and extremely varied. At the recent examination of pupil-teachers, the Examiners noticed a general advance in the character of the work done in all classes.

The following table shows the number of teachers and pupil-teachers in the several classes :-

Note. -- The High School teachers, numbering 32, are not included in the above table.

Both Training Schools have been in operation throughout the year. At Fort-street, 28 seniors and 28 juniors, and at Hurlstone, 23 seniors and 28 juniors were in training. The seniors in each school who have matriculated, and such of the juniors as have also done so, attend the University, and those not attending, both senior and junior, receive regular instruction from their own teachers. During the year, 28 seniors and 7 juniors from Fort-street, and 17 seniors from Hurlstone attended the University. The course of study is nearly the same in both Training Schools, and covers not only literary work, but professional practice in teaching. Except in one or two cases the students have been very attentive to their duties, and are most favourably reported on by the officers responsible for their training. Appended will be found the reports of the Principals of the Training Schools, giving in detail particulars connected with their management.

In a separate report, I have given information connected with the High Schools.

I also append the report of each Inspector on his own district.

Sydney, 31 January, 1891.

J. C. MAYNARD, Chief Inspector.

## ANNEX A.

# INSPECTORS ALLPASS AND DAWSON'S REPORT.

As the result of the rearrangement of the schools in the Metropolitan District on the 1st July last, 86 Public Schools and 3 Evening Public Schools were placed under our joint superintendence. Since that date a girls' department has been created at the West Marrickville School and an infants' school has been opened at Mitchel Road Alexandria. The whole of the schools on our list have received the annual regular inspection. Ordinary inspections were made of 51 schools, and many were incidentally visited. The school buildings are, as a whole, in excellent condition. New buildings have been erected during the year as follows:—Croydon Park, school-room for girls. Darlington, echool and class rooms for infants. Marrickville West, school and class rooms for girls. Waverley, school-room for infants.

Improvements in some cases of extensive character, have been effected at the following schools:—Australia-street, Bondi, Blackfriars, Croydon, Croydon Park, Coogee, Crown-street, Darlinghurst, Darlington, Fort-street, Glenmore Road, Hurlstone, Leichhardt, Leichhardt West, Macdonaldtown, Neutral Bay, Naremburn, Redfern West, Surry Hills South, Sussex-street, Waverley, William-street, and Waterloo.

Departmental steps have been taken for the erection of permanent buildings (three departments) to displace the temporary school structures at Albion-street; for the erection of a girls' school-room at Glenmore Road, and one at Woollahra. At Leichhardt and at Mill Hill Waverley, infants' schools will be creeted forthwith, and at the commencement of the year an infants' department in connection with the Croydon Park Public School will be opened.

The schools, excepting departments as such, are classified as follows:— As the result of the rearrangement of the schools in the Metropolitan District on the 1st July last, 86

The schools, excepting departments as such, are classified as follows :-

Class 1.	Class 2.	Class 3.	Class 4.	Class 5,	Class 6.	Class 7.	Class 8.	Class 9.	Class 10.	Evening.	Total.
35	15	14	12	9	2			1		3	<b>9</b> 1

As regards attendance, the enrolment and average attendance are :-

Period.	Enrolment,	Average,	Percentage.
September quarter	23,956	16,886	70
December quarter	23,612	17,021	73

At the close of 1889, the school accommodation was 22,600 seats, allowing 8 square feet for each pupils and allowing 100 cubic feet per child, there was cubic space for 30,832. By the transfer of three schools to the sub-metropolitan district at the commencement of the year, a deduction of 1,072 seats with 1,500 cubic feet accommodation must be made, but the additional accommodation secured by the new school and class rooms gives 1,173 seats and cubic space for 1,391 pupils. The accommodation therefore now is seats for 22,701 and cubic space for 30,723 pupils.

The following table shows the prefisioner of the schools under report 50 per cent of possible

The following table shows the proficiency of the schools under report, 50 per cent. of possible marks being taken as a pass :-

Schools.	Below Standard.	Up to Standard.	Above Standard,	Total,
Public Schools, or departments thereof	2	2	84	88
Evening Public Schools	•••	1	2	3
	2	3	86	91

The number of pupils examined in the prescribed subjects, and the percentages of passes, appear in the following table:

Subjects.	Pupils Examined.	Per- centage.	Subjects.	Pupils Examined.	Per- centage.
Reading Writing Dictation Arithmetic Grammar Geography History, English , Australian Scripture Object Lessons Drawing	17,339 12,864 17,103 6,752 6,752 6,456 1,592 16,976	71 62 66 56 64 71 65 61 64 60 53	Music French Euclid Algebra Mensuration Latin Science Trigonometry Needlework Drill	16,714, 402 1,264, 450 1,572, 447 1,804	73 59 65 63 47 62 72 75 73

The passes shown in the preceding table are, with some exceptions, creditable to teachers and scholars, but in the more important subjects of reading, writing, and arithmetic, there is marked room for improvement.

Reading. 22-P

Reading.—In a very fair number of schools this subject is taught in an intelligent manner, but in many schools the reading of the pupils is either very monotonous, or too rapid in delivery. We attribute much of what is defective to the perfunctory manner in which the prescribed lessons in poetry have been reated. In schools where the subject matter of the poetry committed to memory was understood, and the children had been trained in the art of recitation, the prose reading was of satisfactory worth.

Writing.—As the result of a circular issued by the Chief Inspector, referring to the unsatisfactory character of the copy-book writing in the schools generally, the subject has been examined in an exacting manner. The prominent defects are undoubtedly attributable to one, or both, of two causes—

- (a) The subject has not been taught, and the supervision by the teachers has been of a perfunctory character. The pupils have been allowed to write in all sorts of styles, and with but little attempt to imitate the characteristics of the head-lines in their copy-books.
- (b) The acceptance by the teachers of discreditable scribble in the pupils' home exercises.

The teachers have been distinctly told that the prevailing style of writing in their schools is unsatisfactory, and they are now fully aware of the necessity for vigilant supervision and careful teaching during the writing lessons.

Arithmetic.—The proficiency in this subject is shown as 55 per cent. of possible marks.

This mark applies to slate work; the value of the mental arithmetic is very much lower. The answering in this subject indicates defective teaching, and the absence, to a large extent, of practical tests.

The discipline maintained in our schools is of a very satisfactory character. The order is good,

and the pupils are fully and judiciously employed.

The teachers as a body work in a loyal and effective manner. The character and worth of the work done by the pupil-teachers is a valuable reflex of the efficiency of the teachers who are entrusted with their training.

TABLE showing the staff and classification of Teachers and Pupil-teachers.

	1	A.	1	в.	II	Α.	16	В.	111	Α.	ш	B.	111	C.	Spe	cinl.	To	tals.	15 15

Superintendents for drawing, music, needlework, and drill are employed in the schools under our

superintendence. Their visits are of marked advantage to the echools.

Two School Attendance Officers have worked under our supervision. We have pleasure in stating that they have performed their duties in a kindly and judicious manner. During the year 3,478 cautions have been issued to parents or guardians of defaulting children. The prosecutions were 143, resulting We have pleasure in stating

in 135 convictions.

To sum up, the schools are in good condition, effectively organised, and well-disciplined. The results of the instruction imparted have, in most respects, been of a satisfactory character.

J. W. ALLPASS, J. DAWSON, Inspectors.

Sydney, 30 December, 1890.

## ANNEX B.

# INSPECTORS THOMPSON AND PITT'S REPORT.

WE beg to submit our report on the schools in the Metropolitan District, which have been jointly and severally inspected by us during the year.

Under our supervision during the year there were 39 Primary Schools, comprising 88 Departments, and 3 Evening Public Schools, making a total of 91 Departments in all. Of these 1 Primary School-Botany Heads-was closed on account of the very sparse attendance, and was, in consequence, not inspected. One Evening Public School also—viz.: Smith-street, Balmain—collapsed for a similar reason. reason.

# Accommodation.

At the beginning of the year there was provision for 20,823 places, reckoning upon the basis of 8 square feet per child; owing to certain transfers, however, these were reduced to 20,635 places. Thus a slight decrease appears. At the same time more ample provision has been, or is being, made at Redfern and Marrickville, by the erection of infant school buildings, also at Petersham a new and commodous building has been erected. The accommodation, therefore, may be considered as ample and commodious building has been erected. for all requirements.

Allendance.

Hereunder are shown the enrolment, average attendance, and percentage of attendance for each quarter year :-

Quarter.	Enrolment.	Average Attendance.	Percentage.
March	22,464	14,788	66.0
Tune	22,554	16,003	71.0
September	23,077	16,382	71:0
December	22,591	16,350	<b>72</b> ·0

## Inspection.

All schools—with the exception of One (Botany Heads) which closed before opportunity for inspection was given—received regular inspection, and 47 departments underwent ordinary inspection. The majority of the departments were incidentally inspected, and 2 received special inspection, in addition to the usual annual inspections. Of the schools examined it is satisfactory to report that all, with one exception, meet or exceed the requirements of the standards. The following table shows the proficiency of the pupils, as estimated upon a standard of 50 per cent., in the several subjects enumerated:—

Subject.	No. examined	Percentage,	Subject.	No. examined	Percentage
Reading Writing Writing Dictation Arithmetic Grammar Geography History—English , Australian Scripture and Moral Lessons Object Lessons Drawing	18,619 12,704 18,508 7,368 7,468 7,129 2,997 18,586 17,612	69:0 62:0 59:0 61:0 66:0 69:0 68:0 69:0 60:0	Music French Euclid Algebra Mensuration Latin Trigonometry Needlework Drill Science	680 1,609 908 1,735 714 24 6,173 18,583	79.0 68.0 60.0 70.0 48.0 65.0 69.0 76.0 62.0 70.0

The general proficiency is well up to standard in all subjects except Mensuration.

Staff and Classification of Teachers.

The Schedule herounder shows the staff and classification of teachers and pupil teachers: -

## Classification of Teachers.

	1	۸.	1	В.	11	A,	11	B.	111	A.	ш	В.	111	c.	ካpe- Teac Ex-mpt	li-ra	Tot	als.	_

## Pupil-teachers.

Cla	ass I	1:	ı. 	111.		1	v.	Probat	ioners.	То	   Grand	
Male.	Female.	Male.	Femule.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Total,
14	28	10	23	19	40	20	33	8	17	71	141	212

The teachers, as a body, are attentive to their duties, assiduous, painstaking, and earnest in the

discharge of their several offices.

To sum up: the organisation is very satisfactory; the schools, as a whole, are well disciplined; and teaching, generally speaking, is effective.

W. F. THOMPSON, CHAS. JNO. PITT, Inspectors.

Inspectors' Office, 3/1/91.

## ANNEX C.

# DISTRICT INSPECTOR W. DWYER'S REPORT.

The number of schools in operation at the close of 1889 was 300. Of these, 126 were transferred to the newly-formed district of Bowral; the remainder, including new and transferred schools, makes a total of 190, exclusive, however, of 4 Evening Schools and 1 House School, which collapsed after a brief existence, and are now permanently closed.

The schools in operation are classified as follows:-

Public ..... 148 Containing 175 departments. Provisional...... Half-time House .....

making a total of 163, containing 190 departments.

These afford convenient sitting room for 20,109 pupils, allowing 8 square feet of floor space for each; or for 19,534, allowing 100 cubic feet for each; and the entire enrolment for the year was 18,332

each; or for 19,534, allowing 100 came received and, and in the children.

These figures show that the accommodation available exceeds present requirements; while the new buildings now in progress, or authorised by the Minister, will keep the supply and demand in satisfactory relation for the year now commencing. The distribution of schools among the various centres of population is judicious and appropriate. The enlargement of the playgrounds, where less than 4 acres, and the planting of same with shade trees, are new features of administration applied during the past year, and calculated to effect wholesome and agreeable changes in the comfort and surroundings of pupils, and in the general material character of the schools.

Excepting

Excepting the 5 small and temporary schools above mentioned, all were duly examined; 2 re-examined; and 32 received an ordinary inspection. Their character for efficiency may be understood from the following statement:—

	Below Standard.	Up to Standard.	Above Standard.	Total.
Public Schools open a full year	1 2	19	131	170 5
Provisional Schools open a full year	1 2	*****	6	7 2 3
Half-time Schools open a full year  not open a full year  House Schools open a full year			2	2
", not open a full year	······	19	140	180
Totals open a full year, not open a full year	4.	2	4	10
Totals	25	21	144	190

The subjects taught, the number of pupils examined in each, and the percentages of proficiency are shown in the following table :-

Subjects.	No. of Pupils Examined.	Percentage up to and above Standard.
Reading	13,506	84,
Writing	13,412	85
Dictation	10,906	73
Arithmetic	12,409	68
Grammar	5,184	76
Geography.		77
History, English	<b>z</b> '	68
Australian	- '	77
Scripture and Moral Lessons		76
		78
Object Lessons	T	66
Drawing		80
Music (Voca)	149	45

Ruelid	141	6 <b>5</b>
Algebra	515	68
Mensuration	141	73
Latin		
Needlework	5,223	84
Drill	13,550	79
Natural Science	301	78

The foregoing figures show that in almost every subject the pupils' knowledge is considerably above the standard, and that the schools in general have been successful in meeting its requirements. Defects similar to those noticed in my report for last year on the Goulburn district are also common in that now under review; but judging from the apparently candid and willing dispositions evinced by most teachers, and the earnestness with which they promised to give practical effect to my suggestions, I feel some confidence that s'eady progress based upon judicious foundations will be both attempted and realised during the year now entered upon. during the year now entered upon.

The number and rank of the teachers and pupil-teachers are as follows :---

Teachers-Class 1 A	1
1 B	14
" 2 A	66

For the most part they are persons of respectable social position, devoted to their work, and qualified in terms of the Regulations for the due and proper performance of the same; and under such circumstances the results of their labours may be expected to sustain the high character for efficiency and usefulness which the majority of them have deservedly won.

The reports of the Inspectors acting with me are forwarded herewith.

WM. DWYER, District Inspector.

Sydney, 10th January, 1891.

# ANNEX D.

# INSPECTOR HOORINS' REPORT.

I HAVE the honor to submit this my general report on the condition of the schools placed under my immediate supervision during the year 1890.

At the beginning of the year I was placed in charge of 64 Public Schools or departments, 3 Provisional, 6 Half-time, and 1 House-to-house School, in all 74 schools; to this number was added the Industrial School for Girls at Parramatta.

During the year 4 Public Schools were transferred to me from another inspectoral district, and at the same time 3 Public Schools were taken from me and placed under the charge of another inspector.

New

New Public Schools at The Meadows, Laughtondalc, and Llaudilo; Provisional Schools at Bossley Park and Lower Hawkesbury were opened; and new Public Schools at Rydalmere and Wentworthville, and Provisional Schools at Bull Ridge, Mill's Creek, and Webb's Creek, are ready for opening in the new year.

One Provisional School was converted into a Public School, and one was closed during the year.

An Evening School was opened at Pitt Row, Public, in July last, but was closed in November from paucity of pupils. Two Half-time Schools were also closed.

The year ended with the following Schools in operation :-

Public	
Provisional 4	
Half-time 4	
Itinerant 1	.,

In all 6 8schools, with 72 departments.

The following new buildings were created :-

V	U		
Under Inspector's care-		Under Architect's care-	
Bossley Park,	Provisional	Wentworthville, P	ublic
Bull Ridge	,,	Toongabbie	<b>†</b> 1
Hawkesbury, Lower	r ,,	Rydalmere	13
Webb's Creek	**	Laughtondale	*7
		Mill Creek, Provisi	onal.

The school-rooms at Upper Dural, Colyton, and Parramatta North, Infants, were enlarged by

class-rooms.

New weather-sheds have been erected, under inspectoral supervision, at Comleroy Road, Wood-

stock, Wiseman's Ferry, and Central M'Donald, and one, at Crancbrook, is in course of erection.

Important additions and repairs have been made to the residences at Galston and Penrith, and a new and handsome residence is being erected (under Architect), at North Parramatta Superior Public School.

Repairs of a minor character have been effected at the following schools:-

```
Castlercagh, Upper New oven.
North Rocks Fencing.
Hawkesbury Lower 400 gal. tank.
Pitt Row General repairs.
Australian Farm Ant eradicating.
Llandilo. Repairs and fencing.
Riverstone Fencing and hat pegs.
Galston General, and emptying closets.
Dural, Upper Fencing.
Blacktown General repairs.
Parramatta Superior General repairs and gravelling.
Bossley Park New tank and fixing.
Cranebrook General renovation.
 Bossiey Fark Row tank and hings.

Cranebrook Ceneral renovation.

Co yton General repairs.

Dural Painting or colouring.

Woodstock Filling in watering hole, and levelling ground.
```

## Accommodation for Pupils, &c.

Sitting room for 5,650 pupils was provided at the end of last year, but, by the transference of schools to other inspectors, there is now accommodation for 5,242 pupils only, a loss of 408 scats.

By a wise and liberal expenditure on necessary additions and repairs, the school-buildings generally are in a well-ordered condition. Those creeted during the year are excellently arranged for the comfort and convenience of teachers and scholars. The white ant still causes considerable expense, trouble, and annoyance in the schools built of wood.

## Enrolment and Attendance,

The following table exhibits the state of enrolment and attendance, as compared with 1889 :--

Quarter.	Enrolment. Average Attendance.	* Per centages.		
Quarter.	Enforment.	Attendance.	1899.	1890.
March June September December	4,647 4,710 4,766 4,844	2,889·2 3,381·9 3,409·3 3,495·3	71·9 68·7 70·2 72·8	62·2 71·8 71·5 72·2
Average for year	4,712	8,233.9	70.9	69.4

The first half of the year was a stormy and tempestuous one, and the regular attendance of the pupils was seriously interfered with; but, by the increased efforts made by the teachers during the fine weather the results in attendances are nearly as favourable (for the whole year) as are those for the last year. It is also to be noted that some of the schools taken away were suburban, where the attendance was not affected by the cause just mentioned.

During the year 5,888 pupils were carolled :-
In Public Schools 5,618 pupils.
" Provisional Schools 85 "
" Half-time Schools 126 "
" House-to-house Schools 30 "
" Evening Schools 29 "
And the average attendance was:—
In Public Schools 2,993.9 pupils.
" Provisional Schools 61.6 "
"Half-time Schools
"House-to-house Schools … 22·2 "
" Evening Schools 8.5 "
·
Total average attendance 3,168 9 pupils.

Inspection.

## Inspection.

All schools but one were fully inspected during the year. Ordinary inspections were held of 16 schools. 8,718 pupils were fully examined, and also some 70 of the inmates of the Girls' Industrial School at Parramette.

The following table shows the efficiency of the schools and the attainments of the pupils in relation to the Standard:—

Subsolu	**************************************	Passed.	Percentages.	
Schools.	Examined.		1889.	1890.
Public	63	59	87:5	93.7
Provisional	4	3	100.0	75.0
Talf-time	5	5	100.0	100.0
House-to-house	None ex	amined.		
Evening		*******		•••••
	72	67	85.3	94.4

Of the schools in operation, 61 Public, 2 Provisional, and 3 Half-time Schools had been at work a whole year at the day of inspection.

The higher results obtained this year are, I think, attributable to the more simple and workable Standard of Attainments and Course of Instruction introduced in 1890, to the encouragement given to studious pupils by the establishment of bursacies or scholarships, and to the improvement in the teaching staff, effected by the retirement of many veteran officers, and their replacement by young, vigorous, and well-trained men and women.

The proficiency of pupils in the various subjects of instruction is shown in the following table :-

Estimated proficiency of all Schools.				Percentages.	
Subjects.	Examined,	Passed,	1890.	1889.	
Reading	3,713	3,553	95	97	
Writing	3,694	3,566	97	96	
Dictation	2,743	2,191	80		
Brithmet'e	3,203	2,681	83	79	
Frammar	1,401	1,330	94	91	
Leography	1,406	· 1,314	93	97	
listory (English)	1,375	1,195	87	87	
listory (Australian)	500	424	85	80	
eripture	3,681	3,481	94	91	
Dbject Lessons	3,509	3,111	Í 88	97	
Drawing	3,120	2,743	88	93	
Ausic	3,024	2,769	91	94	
Veedlework	1,319	1,166	88	99	
Orill	3,734	3,421	92	93	
French	17	17	100	100	
utin	22	22	100	100	
fensuration	185	157	85	34	
dgebra	22	22	100	100	
aiclid	160	160	100	100	
atural science rigonometry	41	41	100	100	

Taking the subjects as a whole, there has been an improvement in results of about 2 per cent. on the work of last year. There has been an advance in seven subjects, in six subjects a retrogression, and in six subjects no improvement.

The instructional arrangements are satisfactory in most schools; the classification is fairly judicious, and the various subjects are effectively taught.

# Organisation.

On this point I have to report a general improvement. Many school grounds have been enlarged, to the extent of 4 acres in some cases, and the teachers, where practicable, have given effect to the Minister's desire to see the grounds beautified by shade trees, and the pupils instructed in horticulture. Their efforts have been, in many cases, generously supported by the parents. Thanks to the propitious moisture of the seas in, nine tenths of the trees planted have well rooted themselves.

Few schools are now without weather-sheds attached, and in places where there is no natural water supply, sufficient water is eaught from roofs and stored in tanks or wells.

This part, in the successful management of a school, is very fairly satisfactory; the pupils are well ordered, and neat and clean in their apparel and persons.

The following is a tabulated statement of the teachers and their several ranks in the service :-

Teachers.	Class I.		Class II			Class III.		Not	Total.
Teachers.	Α,	В.	A.	В.	Α.	В	¢.	Classified.	1044.
Mule	*** •	1	13	10	20	4	3	5	56
Semale	*****	1	4	3	3	5	2	6	24
Total		2	17	13	23	9	5	11	80

One sewing mistress is employed at the North Parramatta Girls School. In other schools, where sewing is taught, it is taken by the teacher's wife, or some female relative.

Pupil-teachers.	Class I.	Class II.	Class III.	Class IV.	Total.
Male	*	••••	2	9	11
Fomale	4	4	2	8	18
Total	4	4	4	17	29

Examinations of teachers and pupil-teachers were held as usual at Midwinter and Christmas, and in February and September applicant pupil teachers were also examined, with results of a satisfactory character.

I am happy to report very favourably of the industry and good conduct of the members of the teaching staff. During the first half of the year the attendance at the schools was very irregular and discouraging, owing to severe weather; but it is creditable to the public spirit of the teachers that their schools in consequence have lost little in efficiency.

The pupils are reported to be studious, attentive, and well-conducted.

C. HOOKINS, Inspector,

## ANNEX E.

#### INSPECTOR SKILLMAN'S REPORT.

I RAVE the honor to submit my report for the year 1890.

At the end of 1889 there were in this section of the Sub-Metropolitan District 71 Public, 4 Provisional, and 8 Half-time Schools, making a total of 83.

At the beginning of this year 40 Schools (named below) were transferred to another District, while 17 others were placed under the supervision of the Inspector then in charge of this section.

## Schools transferred from this District in 1890.

Appin Public	Minto Public	Bargo West Provisional
Avoca Vale Public	Mount Hunter Public	Bimlow ,,

Ingleburn "	Werombi "	Williamswood ,,
Luddenham "	Werriberri "	·
Menangle "	Wilton ,,	

## Schools placed in this District in 1890.

	•	
Auburn Infants'	Granville South Public	Prospect Reservoir
Auburn Primary	Hurstville Boys	Rookwood
Fairfield Public	Hurstville Girls	St. Marys Infants'
Goughtown Public	Mortdale	St. Marys Primary
Granville North Infants'	Peakhurst	Sutherland
Granville North Primary	Prospect	

New Schools have been opened at Corrimal, Port Kembla, and Darke's Forest, and an Infants' Department at Woonona.

Evening Public Schools at Balgounic and Hoxton Park were started, but, after a brief existence, they lapsed, on account of the lack of interest and the non-attendance of the pupils.

At the close of 1890 there are, therefore, in this district :-

64 Schools, comprising 47 Public, in 63 Departments. 1 House School.

At the beginning of next year new schools will be opened at Auburn (North) and St. John's Park; and applications have been received for the establishment of others at Carlton and Dalmorton.

Hereunder is a list of the new school buildings completed during the year ;-

Schools.	Under whose supervision.	Object.	Places provided.
Corrimal	do	New school  To replace old building  New department	216

A new class-room has been provided at Bulli.

A small building at Port Kembla has been rented, and one at Darke's Forest given free for school purposes.

A house at St. John's Park has been purchased by the Department, and alterations costing £28 10s. made under my supervision to fit it for a school-room to accommodate 25 pupils.

The following table shows the accommodation for pupils provided in this district:-

	Seats reckoned at 8 sq. ft. per child.	Seats reckoned at 100 cubic ft. per child
Seats provided at end of 1889	8,212	8,089
Lost by giving up old buildings, and by schools transferred	. 2,625	2,217
Gained by schools transferred to this district, by buildings (new, leased, &c.), and by class-room	2,743	2,928
Increase of places	118	711
Total places at present	8,300	8,880

The enrolment of pupils at the end of December quarter was 8,006.

Taking the schools as a whole a sufficient number of places is provided.

This district is being well supplied with schools, and scarcely any children can be said to be out of reach of one.

A new and commodious building is almost completed at Helensburgh to replace the existing structure, and a new school is to be erected at Kelraville which will relieve the present over-crowded state of Mt. Keira.

The material condition of the buildings at a number of schools has been improved during the year. At twelve the works were executed under the supervision of the Inspector at a total cost of £75 6s. 7d.

Considerable expenditure has been authorised for further repairs and improvements at Auburn, Granville, Hurstville, Liverpool, Peakhurst, Prospect, and Woonona.

The teacher's residence at Parramatta South is being enlarged.

### Attendance.

In all, 66 schools have been in operation during 1890—60 being in existence for the whole year and 6 for only a portion thereof.

The total enrolment of pupils has been 10,495, and the average attendance for the year 5,4595.

The average attendance for the four quarters was :-

Quarter.	Boys.	Girls.	Total.	Total Enrolment.	Percentage.
March	2,583 9	2,242-9	4,826:8	7,805	G1·8
Juno	2,959.1	2,598.4	5,557.5	7,919	70.1
September,	2,966.6	2,602.3	5,568-9	8,048	69·1
December	3,045.0	2,758.3	5,803.3	8,006	70.2

Very wet weather prevailed during the March quarter.

## Inspection.

All the schools in the district (with the exception of the two Evening Public Schools, which were open for a short time only) were regularly inspected: 2 by Mr. Inspector Dawson, 21 by Mr. Inspector Bent, and 41 by myself. Mr. Bent also made 11 ordinary inspections, and I two.

I took charge of the district on 1st July, and have not had an opportunity of visiting all the schools under my supervision.

So far as I have been able to observe, the internal organisation of the schools is satisfactory. The premises are clean and tidy, the playgrounds are being improved by the planting of trees and the cultivation of flowers, and the records, as a rule are well kept.

The discipline, in nearly all cases, is very creditable; but, in a few instances, the government lacks uniform firmness, and here the good order and thorough subordination of the pupils, which are so necessary for the proper conduct of a school, do not exist.

The following table shows the condition of the schools in relation to the standard:-

Below Standard.	Up to Standard.	Above Standard.	Total.
11	10	43	64

Owing to the great alteration in the schools forming this district, it is useless to compare this year's results with those of 1889.

The

The number of pupils examined, and the percentage of those who satisfied the standard, are given hereunder :-

Subjects,	Pupils examined.	Pupils passed.	Percentage
Reading	5,793	4.826	83.3
Writing	5 896	4,855	82.3
Dictation	5,102	3,654	71.6
Arithmetic	5,834	4,226	72.4
Grammar	2,278	1,767	77:5
Geography		1,836	80.7
History, English	2,242	1,476	66.3
" Australian	500	344	68 S
Scripture	4,859	3,526	$72 \cdot 1$
Object Lessons	5,786	4 585	79.2
Drawing	5,654	3.362	59.4
Music		4,190	72.6
French	75	28	37:3
Euclid	343	192	56
Algebra	51	28	54.9
Mensuration	205	118	67·5
Lutin	51	37	72.3
Needlework	2,618	2,138	81.6
Drill	5,816	4,059	69 7
Natural Science	132	93	70.4

Two subjects in which pupils displayed small proficiency, and which, therefore, need special attention in future, are mental arithmetic and English composition.

Arithmetic 1 find especially weak in the girls' departments of the larger schools. The subject is taught mechanically rather than intelligently, and there is a tendency to set girls to work the higher rules before they thoroughly comprehend the simple ones.

The number and the classification of the teachers and the pupil-teachers employed in this district

Class	TR.	*** ****					6
<b>7</b> 3	11 A.						29

**	3						14
22	4						25
							71

The teachers as a body are carnest and conscientious in their work, and correct in their conduct and habits.

So far as I am able to report, the schools are in a satisfactory condition, and there is every reason to believe that good work will be done in 1891.

H. SKILLMAN,

Kogarah, 29th December, 1890.

Inspector.

## ANNEX F.

## DISTRICT INSPECTOR BRADLEY'S REPORT.

## I .- Schools and School Establishment.

DURING the year 1890, 285 schools were in operation in this district for the whole or portion of the year. Of this number, 196 were Public Schools, 57 were Provisional, 12 Half-time, 19 House-to-house, and 1 Evening Public School.

and 1 Evening Public School.

Few opportunities for the establishment of new schools have occurred in the southern portions of the district, but a fair increase has taken place within its northern area, Altogether, 15 schools have been opened in localities previously without the means of education, and a large Infant School has been creeted at Armidale West. With the new year, small schools will also be brought into operation at Blair Hill, Darby's Branch, Furracabad, Glenarm, Tiara, and Upper Bingara; and at Argenton (Webb's Silver Mine), a building is in course of creetion, and should be finished by the end of January.

Applications for the establishment of schools at the undermentioned places are still pending.— Millie West, Old Edgeroi, Spring Vale, Ross Hill, Stonehenge South, Moredun, and Dundee Ruilway Station.

The following schools have been closed on account of insufficient attendance: Gainsborough (P.), Puddlebrook (P.), Glenarm (Prov.), Border Saw-mills (P), Keepit (P.), Boonaldoon (Prov.), Emu Creck (Prov.), Grabham's Vineyard (Prov.), Bulterawa (House), and Boggabri (Evening School).

While there are doubtless many isolated families in the outlying parts of the district beyond the reach of State education, I know of no locality with a sufficient number of children for even the smallest class of school in which either the means of education has not been provided, or is in course of provision. provision.

22-Q.

## II.—School Buildings, Organisation, &c.

A more liberal expenditure in the case of the smaller class of school-houses has been made during A more liberal expenditure in the case of the smaller class of school-houses has been made during the year, and by degrees their appearance is improving, and the comfort and accommodation afforded are being increased. In all, 9 new school-rooms have been built through the agency of the Inspectors at a cost of £1,061 0× 6d.; two have been enlarged at a cost of £52 19s.; and £515 11s. 3d. has been spent in general repairs. Under the same officers works are in progress and approaching completion to cost £382 10s., so that altogether a sum exceeding £2,000 has been expended on works initiated and supervised by the inspectoral staff.

Under the Architect, the most important work completed is the new Infant School building at Armidole West. An additional school worm is being erected to meet increased requirements at Hillarors.

Armidale West. An additional school-room is being erected to meet increased requirements at Hillgrove; and at Blair Hill a new building will be ready for opening early in January. Under the same officer numerous additions and repairs of a more or less extensive character have been carried out; and, on the whole, it may be said that the material condition of the school premises leaves little room for

complaint.

As regards the equipment of the school-rooms, I can but repeat what was said in my report for 1889. With but few exceptions the schools have sufficient and suitable furniture, and so far as essential working appliances are concerned, the stock is usually adequate to requirements. It is to be regretted, however, that a more liberal supply of maps, diagrams, and picture cards is not available, especially in the case of schools ranking in the muddle classes.

The total sitting accommodation provided in all schools of the district at the close of last year reached 15,429 places, estimated at 8 square feet per child, and 14,057 places with an allowance per pupil of 100 cubic feet. An increase of 788 places at 8 square feet, and of 711 places at 100 cubic feet, has taken place within the year, so that at the close of 1890 the sitting accommodation reached:—

16,217 places at 8 square feet per child, or 14,768 places at 100 cubic feet per child,

As the gross enrolment of pupils for the December quarter reached only 12,668, it is evident that the accommodation supplied is adequate to existing requirements.

the accommodation supplied is adequate to existing requirements.

In a very fair number of cases the improvement of play-grounds by means of planting trees, shrubs, and flowers, has been effected. Comparatively few of the school-sites, however, are close paled; and until this necessary work has been done, the labour of the teachers and pupils will be wasted, owing to the injury and destruction wrought by treespassing stock. "Arbor Day" was celebrated at several schools, and bids fair to prove a successful and popular institution. I am not in possession of information respecting the proceedings in the other sections of the district, but, in the portion under my immediate supervision, the teacher of Hillgrove Public School deserves special commendation for his untiring and very successful efforts. Good work has also been done at Armidale, Black Mountain, Rocky River, Dumaresq, Salisbury, Saumarez, and Uralla. Mr. Inspector Blumer makes favorable mention of the teachers at Nemingha and Warialda; and Inspector Beavis says the best school-garden in his section is at Gilgai. at Gilgai.

## III .- Inspection.

The extent of the district, and the large number of schools to be visited has necessitated the appointment of an additional Inspector, and a rearrangement of the several sections. Such change, however, did not take place till July, previous to which some 20 schools about Quirindi had been transferred to the Maitland District. With the appointment of Mr. Henry Parkinson, as fourth Inspector, these schools were restored to the Armidale District, 3 of the number having, in the meantime, been inspected by Mr. C. O. Flashman.

The District now comprises the following sections :-

Armidale Section, under the supervision of District Inspector.

Tamworth Section, "Inspector L. Blumer.
Glen Innes Section, "Inspector W. Beavis.
Gunnedah Section, "Inspector H. Parkinson.

Gunnedah Section, " " Inspector H Parkinson.

With this distribution it is confidently expected that, in addition to the regular inspection of every school, a second inspection of all but the more remote ones will be practicable. But for the timely appointment of a fourth Inspector, it is certain that very many schools must have been left unvisited during the past year, the first half of which was so phenomenal as regards the rainfall as to render most of the schools inaccessible through floods and impassable roads.

It affords me much pleasure here to testify to the willingness, zeal, and efficiency displayed by Mr. Parkinson in his new sphere of duty, and to the diligence and aptitude shown by him in mastering the routine work involved.

Of the 255 schools open during 1890, 282 were fully inspected. Nine ordinary inspections were also made, and the Public School at Inverell, for special reasons, received a second full inspection. The 3 schools uninspected are—Boonaldoon Provisional, from which the teacher was withdrawn immediately after it was transferred to the Tamworth section; Bullerawa House School, closed on account of floods; Boggabri Evening School, which lapsed during the first quarter of the year on account of insufficient attendance. The aggregate enrolment at these three schools would not exceed 35 pupils.

## IV.-Efficiency of Schools.

The modifications made in the Standards of Proficiency for the several classes, and the more definite instructions issued to teachers as to calculating the periods of the pupils' onrolment to which such standards refer have acted beneficially in several ways, and more especially as a help to judicious classification. Within my own experience, the defects and anomalies referred to in my last report have much diminished; and, from the reports of the other Inspectors, it is to be inferred that this important feature of school organisation is more generally satisfactory. Time-tables are usually of very fair merit; but, in the case of I esson Programmes it frequently happens that entries are too indefinite to serve any practical purposes. As a rule, the various school records are kept with care and accuracy though in not a few instances, with a want of neatness.

The discipline of the schools, both in relation to the means applied and results accruing, continues to be a creditable feature; and, with the increased attention to drill that has been imposed, further improvement may be expected.

to be a creditable feature; and, with the increased attention to drill that has been imposed, further improvement may be expected.

The general efficiency of the schools is evolved from the marks awarded for the organisation, the discipline, and the attainments of the pupils. Of the 282 schools examined, 223 (79 per cent.) either satisfied or exceeded standard requirements, and 59 (21 per cent.) fell below. The corresponding percentages for the previous year were 83 and 17 respectively, and a falling off of 4 per cent is thus recorded. The retrogression is, however, more apparent than real, and results from the operation of a rule but recently introduced to the effect that "no school having only two classes can be regarded as up to standard." Had the general efficiency of such small tehools been rated as in previous years, the percentage of passes for 1890 would have been fully as high as that for 1889.

The total number of pupils examined was 9,439, or 511 more than in the previous year, a good record considering the excessively bad weather which prevailed. The following table shows the attainments in all subjects of instruction and their relation to the results of 1889. Fairly substantial improvement has taken place in Reading, Arithmetic, Grammar, and Geography, while a slight falling off in Writing is recorded. The new standards have proved generally acceptable, and on the whole have worked very well.

	Estimated Proficiency.

# VI.—Teachers.

With very few exceptions, the teachers are well qualified for their positions, exemplary in their conduct, and zealous in the discharge of duty. The staff of pupil-teachers is increasing, and complaints of misconduct on their part are of rare occurrence. Not a few of their number become teachers of the smaller schools, and the influence of the training received by them is apparent in the general character of their work.

J. D. BRADLEY. District Inspector.

# ANNEX G.

# INSPECTOR BLUMER'S REPORT.

I.—The adequacy of the means of education, as regards distribution and amount.

At the close of last year 99 schools were under my supervision. Since then 66 have been transferred to the Gunnedah section, and 41 others from the Armidale and Glen Innes portions of the district have been placed upon my list.

Two Provisional Schools—Colonna and Ukolan—were converted into Public, and the House-to-house School at Rockmore and Woods' Reef was formed into two Half-time Schools. Big Plain Public and the Provisional Schools at Boonaldoon, Emu Creek, and Grabham's Vineyard were closed on account of small attendance. of small attendance.

There are at present in operation in this section 71 Schools, comprising 47 Public, 17 Provisional, 4 Half-time, and 3 House-to-house.

Applications for the establishment of schools were dealt with as follows:—

## 2.- The Actual Condition of the Schools, as elicited by Inspection.

During the first six months of the year it was impossible, on account of the flooded state of a great portion of the country, to reach many of the schools then under my supervision; but that period was fully occupied with the inspection of those that were accessible.

Of the 74 schools allotted me by the redistribution, 73 were fully inspected. The only one omitted was Boonaldoon Provisional, the teacher of which was withdrawn immediately the school was placed upon my list.

Six ordinary inspections were held.

The appointment of an additional Inspector, who relieves me of a large number of remote schools, supplies a much felt want, and renders it practicable to visit in future by far the greater number, if not the whole of my schools, twice every year. There is no doubt that the second or ordinary inspections will greatly tend to promote the efficiency of the schools.

## (a) Organisation.

In nearly all cases, the school sites are conveniently situated, and generally suitable. Treeplanting has been carried out at a few places, and the teachers at Warialda and Nemingha deserve special mention for their praiseworthy efforts in this respect. It is expected that similar improvements will be attempted during the coming year, at nearly all schools with enclosed grounds.

Sometimes in the bush, where the population is by no means settled, the buildings can only be regarded as makeshifts; but as a rule, the schoolrooms are suitable, comfortable, and well provided with furniture, books, and apparatus.

The records are correctly, and in most instances carefully, kept, and the time-tables intelligently constructed and carefully followed.

Entries on programmes of lessons, however, are too often indefinite, and not sufficiently detailed.

#### (b) Discipline.

Seldem has any fault to be found with the appearance and behaviour of the pupils; and even then the shortcomings in these particulars are usually the result of bad home influences.

The value of drill as an aid to discipline is being recognised more and more by teachers. It is attempted in nearly every school, but the want of practical knowledge on the part of many teachers prevents general success. In the larger schools, however, it is systematically and skilfully taught.

Corporal punishment is restricted as much as possible to extreme cases. During the year only one complaint was made of undue severity on the part of a teacher; and in this instance it was satisfactorily shown that a lad had received a well merited thrashing.

The disciplinary condition of the schools is, as hitherto, highly satisfactory.

#### (c) Instruction.

All schools, except a few inspected early in the year, were tested by the provisions of the revised standard of proficiency. Honest efforts are made by the teachers to meet these new requirements.

The actual condition of the schools now under my supervision, as compared with that of the schools inspected by me last year, is as follows:----

Year.	Number of schools inspected.	Up to or above Standard.	(Percentage up to or above Standard,
1889 1890 Decrease during 1890	74	78 54	83·8 73· 10·8

Of the 20 schools below standard during 1890, 11 were very small country schools not placed in my section until 1st July last, so that the above comparison is really between two different sets of schools. The teachers also were in nearly every instance young and mexperienced, and the attendance of the pupils was much affected by exceptionally wet weather during a large portion of the year. Practical advice was given; and this, combined with honest efforts on the part of the teachers, will no doubt produce satisfactory results in the future.

Proficiency of Pupils in the respective subjects compared with that of last year (1889).

Subjects.	Percentage of Pup Stand	Increase (+) or Decrease (—)	
	1339.	1800.	during 1890.
Reading	87·1	87:7	+ ·6
Writing	940	90.4	— 3·6
Arithmetic	<b>7</b> 3·9	85 5	+ 116
Frammar	79.1	86·1	十 7:0
deography	82.8	89.9	+ 7·1
listory—English	78.4	82.1	+ 3.7
listory—Australian	95 9	87:2	— 8·7
cripture and Moral Lessons	91.6	95:5	j + 3·9
bject Lessons	90-2	88.7	-15
Orawing	84.2	73.5	<b>— 10 7</b>
Iusic	81.2	57.4	<b>— 23·8</b>
rench	100.	50	-500
atin	100	92.9	— 7·1
Cuclid	71.6	92.8	+ 21.2
lgebra	100	100	l <u>≐</u>
Icnsuration	52.1	100.	+ 47.9
Vatural Science	100.	100	=
Veedlework	99.8	95.1	- 4.7
Orill	69.6	57.9	-11.7

Writing results, although not equal to those of the previous year, are still very high.

Of the other more important subjects, reading is about the same as in 1889; and substantial improvement is noticeable in arithmetic, mensuration, grammar, and geography.

The falling off in connection with drawing, music, needlework, and drill may be accounted for by the extended requirements of the raised standards. The retrogression is more apparent than real.

### 3. Adequacy of School Accommodation.

	Allowing each pupil-		
	8 square feet.	100 cubic feet	
Accommodation existing at end of 1889 for	6,153	<b>5</b> ,665	
Number of seats lost by closing of schools		73	
Number of scats lost by giving up buildings	23	17	
Number of seats lost by schools transferred	3,702	3,242	
Number of new seats provided by additions	· 9	G	
Yumber of new scats provided by schools transferred	1,840	1,574	
Decrease in number of scats during 1890	1,979	1,752	
Accommodation existing at end of 1890	4,174	3,913	

The total number of pupils enrolled during the whole or any portion of the year, was 4,076. It is evident, therefore, that more than sufficient accommodation is provided. This exc

caused by diminished attendance in country places where there are no younger children to take the places of those who left school when old enough to work for their living.

Under the supervision of the Inspector, the school-room at Ukolan was removed to another site and enlarged, so as to afford additional accommodation for 9 pupils, allowing each 8 square feet, and for 6 pupils, allowing each 100 cubic feet of space. The cost of this work was £29 9s. The buildings at Varrowyck (Public), and Tia (Provisional), are also to be shifted, but tenders have not yet been accepted in these cases. in these cases.

No new buildings have been completed during the year, but school-rooms to take the place of old ones are being creeted by the Architect at Colonna, Woolomin, and Yallaroi. A new residence is in course of erection at Burraba, and a tender was accepted for one at Lower Dungowan, but the contractor

has not yet commenced operations.

Minor repairs and improvements have been effected by the Inspector at several places; and similar works of greater magnitude have been carried out by the Architect at Attunga, Attunga Springs, Tamworth, Tamworth West, and Upper Manilla.

#### 4. Teachers.

One school needs a pupil teacher. No local candidate is forthcoming, and the attendance does not at the employment of an assistant. This is the only case in which the staff of any of the larger warrant the employment of an assistant, schools is incomplete.

Difficulty still arises at times in providing suitable teachers for the smallest and most remote

Cases of misconduct are very rare, and there is good reason to regard the teachers as a highly respectable, intelligent, and carnest body.

## 5. Summary,

The educational requirements of this section of the district are fully met by existing means of education.

The past year's work may be considered as fairly satisfactory, and the results of 1891 will, no doubt, be higher than those for the year just ended.

Tamworth, 27 December, 1890.

L. BLUMER. Inspector.

## ANNEX H.

## INSPECTOR REAVIS' REPORT.

THE portion of the Armidale District under my supervision has undergone great modification during the The portion of the Armidale District under my supervision has undergone great modification during the year. Of the 105 schools which were in operation at the end of 1889, all but one, Lyston, resumed work after the Christmas vacation, but 11 of the number had in the meantime been transferred to Armidale section, leaving 93 still on my list. Six months later 9 of the 11 were re-transferred, together with two schools which had been newly established. As all of these were inspected by me, they may, for the purposes of this report, be regarded as having formed part of my section for the whole year. The second transference above mentioned was simply part of a more extensive re-distribution consequent on the appointment of a fourth Inspector to the district, and the formation of a new section. In effecting this re-adjustment, 25 schools in the western and southern portions of the Inverell section were added to the Tamworth section, and as it then became evident that Glen Innes was geographically and practically a better working centre for the diminished section than Inverell, my head-quarters were changed to the former town.

Within the area now designated the Glen Ianes section, 85 schools have been in operation for the whole or a portion of the year, viz., 66 Public, 14 Provisional, 5 House-to-House. 78 of these were in operation during 1889; 7 are new schools, viz., 4 Public—Bear Hill, Castle Rag, Jennings, and Kookarabooka; 2 Provisional—Bald Nob and The Scrub; 1 House-to-House—Swan Peak. Bear Hill was opened as Provisional, but was afterwards converted to Public; the Provisional Schools at Ashford and Round Mount were similarly raised in rank. The Airlie Brake School was successfully re-established on a new vite of the having been closed for nearly traders results.

Mount were similarly raised in rank. The Airlie Brake School was successfully re-established on a new site after having been closed for nearly twelve months.

Two schools—Beardy Bridge and Wandera, were closed for short periods, but re-opened. The Border Saw-mill School was closed early in the year, when the adjacent school at Jennings (Wallangarra) was brought into operation; three schools—Brookside, Sapphire, and the Gulf—have been discontinued on account of small attendance, but may be resuscitated. The Redbank House School will not be re-opened in January next, provision for the wants of the locality having been made by the establishment of a school at Tintot, 2 miles distant.

New buildings for Provisional Schools have the schools have the schools have the schools have the schools have the schools have buildings for Provisional Schools have the schools has

New buildings for Provisional Schools have also been provided at Blair Hill, Darby's Branch, and Furracabad, and work will be commenced at these places immediately after the vacation. At Argenton (Webb's Silver Mine) a building is in course of crection, and should be completed before the end of January.

Applications

Applications for schools at Ross Hill (Inversell), Stonehenge South, Moredun, and Dundee Railway

Applications for schools at Ross Hill (Inverell), Stonehenge South, Moredun, and Dundee Railway Station, are under consideration.

Speaking generally, the material condition of the schools is satisfactory, and is gradually being bettered. The more liberal allowance now granted for the erection of the smaller buildings admits of the provision of increased comfort and convenience, and must result in the ultimate extinction of confined, rough, unsightly structures. The supply of maps and other teaching appliances, except books and slates, is in many cases very meagre, but is regulated by a consideration of the proportionate expense.

Inspection work during the early part of the year was carried on with difficulty, and for a time was virtually suspended owing to the phenomenally wet weather; a large number of the schools must have remained unvisited but for the re-adjustment of the district already referred to.

All the schools (85) received regular inspection, but no ordinary inspections were practicable. One school (Inverell Public) was twice examined, Mr. Inspector Parkinson assisting on the second occasion. Fifty-six of the schools were above the standard, 5 up to, and 24 below it, the first two numbers combined representing 72 per cent. of the whole These figures show an apparent falling off of 11 per cent. since last year, when 83 per cent. of the schools satisfied the standard; the actual difference, however, is only 3 per cent, the other 8 per cent. being made up of new schools without third classes, which have done satisfactory work, but which, in conformity with a new rule, are now reckoned below the standard. The small actual reduction of 3 per cent. may be attributed to the wet weather, which for six months The small actual reduction of 3 per cent. may be attributed to the wet weather, which for six months made school-attendance extremely irregular.

The schools most prominent in point of general efficiency at inspection were Deepwater, Emmaville, Glen Innes, and Inverell. Pupil-teachers (4) and pupils (10) from the three schools last-named were successful at the University Junior Examination.

The alterations recently made in the standards of proficiency, and in the method of computing the periods in class to which those standards relate, have served to rectify anomalous classification, and have given the schools generally a healthier organization. The discipline continues to be effective without being harsh.

2,806 pupils were examined. Their proficiency in the several subjects of the school course, and relative progress or retrogression, may be gauged from the following figures:—

	Percentage up to or	Percentage up to or above the Standard.		
Subjects.	1889.	1890.	Increase or Decrease, per cent.	
Reading	79	81	+ 2	
Writing	92	85	- 7

Nutural Science	100	100	=	

The divergences from last year's figures may be traced largely to the altered or modified demands of the new standards, or to the more exacting nature of the tests employed. Allowing for all disturbing causes, the schools are not less efficient this year than last; and the recognition by the teachers of the fact that the school course now prescribed is well within what is practicable, and leaves a margin for the exhibition of special skill, has inspired them with a new incentive to exertion.

The teachers, as a body, are honest, carnest, painstaking, and of high moral rectitude. An occasional example to the contrary serves only by its rarity to confirm the rule as affecting the rest.

The following summary gives particulars as to accommodation in the schools:-

	Number of Places allowing each Child-		
	8 square feet of floor space.	100 cubic feet of air space	
Accommodation in the schools of the Inverell section at the end of 1889	6,008	5,5 <b>5</b> 2	
Places lost during the year by transference and closing of schools, and discontinuance of buildings	1,697	1,443	
Places gained	729	572	
Decrease	968	87	
Accommodation available in the Glen Iunes section at the end of 1890	5,040	4,681	

New accommodation provided during the year is shown in the subjoined table :-

Schools.	Accommodation allowed to each child.			Under supervision
	8 square feet of floor space.	100 cubic feet of air space.	Provision,	of.

Totals	729	572		

Under the supervision of the Architect, new teachers' residences have been provided at Dundee, Glen Innes, and Tenterfield; and additions made to those at Little Plain and Tingha; the school buildings at Emmaville, Glen, Goonoowigall, Leech's Gully, Little Plain, Oakwood, Rob Boy, Stannifer, Tenterfield, and Tingha have been renovated or altered.

Lesser improvements to 26 schools have been carried out by the Inspector at a total cost of

£162 18s. 8d.

Fig. 183. 86.

Fencing improvements have been effected at a few schools. The demand for this kind of work is certain to increase as gardening and tree-planting under the special encouragement now given, become more extensively practised. Where opportunity has offered, the teachers have shown much interest in enhancing the appearance of the grounds. The best school-garden this section is at Gilgai.

"Arbor Day" was celebrated at several schools with marked success, and promises to become an appearance of the interest slike of presute and of pupils.

annual festival, commanding the interest alike of parents and of pupils.

Within the reduced area now known as the Glen Innes Section, 7 new schools have been established and 5 have been closed; 1 which was closed during 1889 has been revived, 4 are ready for opening, and 1 is almost ready; applications for 4 others are in hand. Though apparently the efficiency of the schools shows retrogression, their actual condition is not worse, but is full of promise. The curtailment of the section secures the possibility of more frequent and effective inspection, and as the confidence of the public in the schools and in their management is not only unabated but growing, there is every reason to regard hopefully the prospect for 1891.

W. BEAVIS, Inspector.

## ANNEX J.

## INSPECTOR PARKINSON'S REPORT.

About the middle of the year it was found necessary to divide the Armidale District, which had previously consisted of three sections, into four. The new subdivision, roughly speaking, comprises the valley of the Namoi River, and the schools in this area were placed under my supervision at the beginning

of July.

The number of schools in operation for the whole year, or some portion of it, was 69. They were

41 Public.

14 Provisional.
2 Half-Time.

11 House-to-House.

1 Evening.

69 Total.

The Public School at Keepit was closed during 1839, and has not been re-opened this year.

Boggabri Evening School and Bullerawa House-to-House School were closed before I took charge of the district. The Provisional Schools at Rotherfield and Mullally, and the House Schools at Milchomi and Pian Creek were opened during the year. The information here given may be thus summarised:—

Schools open at the end of 1889	66
Schools opened during the present year	4
Schools closed during the present year.	- 3
Schools in operation at the end of 1890	67

Applications respectively for a Provisional School at Curragundi and a House School at Spring Vale have been declined, and there are now under consideration the following applications for schools:—

Millie West—Provisional, Old Edgeroi—House-to-House. Spring Vale—House-to-House (second application).

The residents of Molley are desirous of having their school, which has hitherto been worked as one of the stations of a House School, converted into a Full-time School; and if this application be granted, it will be necessary to discontinue teaching at the other stations, unless new provision can be made.

The year 1891 will commence with about 70 schools, and it is anticipated that the number will be increased during the year. The people of this extensive district are chiefly engaged in pastoral pursuits, and as some of the runs are very large, the population is scattered. There are, therefore, isolated families, which cannot be reached even by the liberal regulation that establishes House-to-House S. hools. But it may be safely asse ted that the majority of the children living in the district are enrolled, and that this part of the country is well provided with the means of education.

All the schools of the section received regular inspections, excepting Boggabri Evening School, which collapsed for want of attendance during the first quarter of the year, and Bullerawa House School, which was closed on account of floods when the locality was visited. Only two schools which had to be visited in connection with the work of pupil-teachers employed in them, received ordinary inspections. It is hoped, however, that all schools will receive two visits each during 1891. The number of regular inspections held in the section was 67, of which 3 were conducted by Mr. Inspector Flashman, 22 by Mr. Inspector Blumer, and the remaining 42 by myself. Of the 67 schools inspected, 54 were found to be above the required standard, 3 up to standard, and 10 below; that is, 85 per cent. of the schools in the section were either up to or above standard requirements. Of the 10 schools below standard, 2 were small Public Schools, 1 a House-to-House School, and the other 7 Provisional. One of the latter, when visited, had only been a few weeks in operation. In 1889, the percentage of schools in the Tamworth section (from which all the schools in the Gunnedah section have been transferred) up to or above standard was 83. The increase for this section is, therefore, 2 per cent. In the majority of schools the organisation, as evidenced by the classification of the pupils, the lesson guides, and the school records is satisfactory, while the discipline seldom fails to produce regular and punctual attendance, a respectful demeanour, and steady application to work. The work of instruction may be judged from the following table, which gives the total number of children examined, and a comparison between the percentage of passes in each subject for the years 1889 and 1890:—

Subjects.	Number of	Per cent	Per cent.	Increase
	Children Examined	up to Standard	up to Standard	or Decrease for
	1890.	in 1890.	in 1889.	1890.
Reading Writing Arithmetic Grammar Geography English History Australian History Scripture Lessons Object Lessons Drawing Music Euchd Needlework Drill Natural Science	2,106 2,138 766 766 715 198 1,886 1,903 1,481 1,725 58 799	86 94 87 93 92 83 89 83 89 67 72 75 92 64	87 94 74 79 82 78 96 91 90 84 81 71 99 69 100	- 1 + 13 + 14 + 10 + 5 - 7 - 8 - 17 - 9 + 4 - 7 - 5

Referring to the three most important subjects of school instruction, it will be seen that reading and writing are about equal for both years, while arithmetic shows an advance for this year of 13 per cent. Differences will be observed in the proficiency attained in individual subjects for the two years under consideration; yet, on the whole, the standard of the previous year has been more than maintained. This result cannot but be gratifying, when it is remembered that the weather for many months of the year was unusually wet, and the attendance in consequence very irregular; but there is no doubt that the modifications made in the standard at the beginning of the year, and the plan of estimating the enrolment by the actual attendance of each child, have proved favourable to the teachers.

The following table will give required information concerning the adequacy of the accommodation in relation to the attendance:—

	for each.	for each.
Number of scats provided at the end of 1889	3,702	3,242
Number of sents lost during 1890	164	118
Number of seats gained during 1890	476	339
Increase of seats during 1890	312	221

Seats were lost during the year by the closing of the House School at Bullerawa, and by giving up old school buildings at Breeza, Tippereenah, and Galathara Road. At the three places last named the loss was more than made up by the erection of larger buildings, while the opening of Provisional Schools at Rotherfield and Mullaly, and an increase in the number of House Schools also added to the school accommodation. The gross enrolment of pupils for the December quarter was 3,052, and the average attendance, 2,137. It is, therefore, plain that the accommodation provided is more than sufficient for present requirements.

The following new buildings were opened in 1890:-		
2	8 square feet.	100 cubic feet.
Breeza (built under the Architect's supervision)	64	61
Tippercenah (built under the Inspector's supervision)	40	32
Galathara Road " " "	29	21
Rotherfield (finished in 1889)	21	15
Sents provided	154	129
The undermentioned works have been authorised :		
8 square feet.	100 cubic feet.	Probable cost.
Baan Baa (new building to replace old one) 45	<b>3</b> 6	£154

Werris Creek (new class-room) .....

 $\mathbf{T}$ he

90 £244 The Public School at Gunnedali was repaired during the year, under the supervision of the Architect; the people at Bando are having the building there enlarged at their own expense. Repairs of a more or less important nature have been effected at 17 schools by the Inspectur; and repairs are still in progress at 3 schools. In towns and places where the population may be considered settled, the school buildings are, as a rule, substantial, in good repair, and large enough for present requirements. Many of the schools in the district are in places where the population is scattered and uncertain; the buildings in these cases are necessarily of a temporary and inexpensive character. Viewed as a whole, this section may be considered to be well provided with buildings of a character suited to the requirements of the several localities, and the furniture and apparatus are generally suitable, sufficient in quantity, and well cared for by the teachers.

The number of teachers employed under my direction is \$3,—namely, 66 teachers, 6 assistants, and 11 pupil teachers. Complaints against them are rare, and the work of the majority is acceptable to the people amongst whom they labour. Many of the small schools are under the charge of expupil-teachers, who bring to their work the experience gained in large schools under trained teachers.

In brief: the accommodation provided for children in this section is more than sufficient for present requirements; the buildings are suitable, and kept in fair repair; the teachers as a body are hard-working and successful; the schools have improved in efficiency; and the general outlook for 1891 is promising.

Tamworth, 31 December, 1890.

H. PARKINSON,

Inspector.

## ANNEX J.

# DISTRICT-INSPECTOR 'CREDIE'S REPORT.

At the beginning of the year, 36 schools in the neighbourhood of Cowra were transferred from this District to the Young section of Wagga Wagga District, and two newly established schools in the Wellington District were added to my list. These changes reduced the number of schools in the Bathurst District to 242. This number was further affected during the year by the opening of 14 new schools, and the clasing of 8 others. and the closing of 8 others.

The new schools (including the two transferred from the Wellington District) which came into operation during the year were :

Public: -East Orange, Alectown, Peak Hill, and Cullen Bullen.

Provisional:—Molong Creek, Rulimore Creek, Gum Springs, Garland, Thompson's Creek, Antonio Creek, Jenolan Caves, and Swan Ponds.

Half-time :- Reedy Creek,

House-to-house :- Warge Rock.

Evening Public :- Mitchell and Hartley Vale.

The Evening Public Schools at Milltown, Mitchell, and Hariley Vale, lapsed through lack of support, and the schools at Cadogan, Cumbijows, Gosper's Downs, Murga, and Nangar were closed on account of the attendance in each instance being insufficient to warrant the continuance of the school.

The total number of existing schools at the close of 1890 was 249, classified as under :-

Public	. 178
Provisional	. 25
Half-time	. 34
House-to-house	11

No less than 23 applications for new schools were received, 12 of them being from the western section of the district. At Mount Wilson, Pine Rocks (Oakey Creek), Eulimore Creek, and Bulbodney, Provisional Schools were granted; at Hillington, Rock Lynne, and Murrin Bridge, Half-time Schools: at Nanima, Long Angle, and Trigalans, House-to-house Schools; and at Hartley Vale and Mitchell, Evening Public Schools.

Provisional Schools at Stanley, Sodwalls, Rodd's Creek, Mingelo, and Yarragong, and an Evening Public School at Canowindra were refused. Applications for schools at Blackman's Flat, Townsville, Glenbrook, Clarence Siding, and East March have not yet been finally dealt with.

Several changes in the classification and names of schools occurred during the year. The Provisional Schools at Bundaburra Gap, Trundle, Bindogundra and Hanover were raised to the rank of Public, and Tanner's Mount Public, Mount Stromboli Provisional, and Flagstone House-to-house Schools were converted into Half-time. The schools at Slippery Creek and Kendale are now known by the names of Hazelgrove and Crown Ridge respectively.

Under the supervision of the Inspectoral staff, 8 small school buildings (3 to replace old ones) were creeted, one building was enlarged, 53 schools, and 13 teachers' residences were repaired, and one new weather-shed was provided. The total cost of these works was £1,434 10s. Other repairs under Inspectors, in progress, but not completed at the end of the year, will cost an additional sum of £307 12s. 6d. Tenders have been accepted for the erection of school buildings at Lewis' Ponds and Pine Rocks under my personal supervision under my personal supervision.

Besides the works enumerated, substantial repairs and improvements to a considerable number of the larger schools were effected by the Architect, who also supervised the erection of new school buildings at East Orange.

Excepting a few buildings, which will receive attention when funds are available, the schools are in good repair, and are well furnished and appointed.

The schoolroom floors are, as a rule, kept clean, but there are one or two teachers who, with little extra time and trouble, might render the appearance of their rooms more attractive by keeping the walls free from dust, the school presses tidy, and the maps and diagrams evenly hung on the walls.

Much was done throughout the year to improve the school grounds by forming small flower-beds and planting ornamental trees and shrubs. If the praiseworthy interest now evinced by teachers in this matter does not flag, many of the school grounds should, in a few years, with favourable seasons, become the most attractive spots in their respective neighbourhoods. For practical illustration, on a small scale, of improved methods of working and manuring the soil for the growth of wheat and vegetables, the teacher of Eglinton Public is deserving of special mention. Several other school grounds in the central section of the district, notably those of Orange Superior Public and Canoblas Public, have been much improved by the formation of neatly-kept flower-beds and borders by the pupils under the supervision of their teachers.

The discipline is as satisfactory as in past years. In the larger schools it is sound, healthy, and vigorous, and in very few of the smaller ones was it found to be deserving of a mark lower than fair.

Statistics are given in the following tables, showing, in a concise form, particulars of the school accommodation, attendance, and fees :-

IV.—Results of Prosecutions for Breach of the Compulsory Clause of the Public Instruction Act of 1880.

Number of cases.	Convictions.	Dianissals.	Withdrawals.
184	151	17	16

Twenty-three persons were sued for the recovery of arrears of school fees, and a verdict for the full amount claimed was obtained in each case.

There were 256 schools in operation during the year, and all, except one, received a regular inspection. The school not inspected was Mitchell Evening Public, which when opened was attended by only one or two pupils, and was at once closed by the teacher without authority, before the Inspector was able to visit it.

Eighty-nine schools received a second regular or an ordinary inspection, and the total number of inspections, regular and ordinary, was 344. Mr. Inspector Lawford and myself also inspected the Girls' High School at Bathurst.

The percentage of schools regularly inspected, which were up to or above the standard, is 87½, being a slight increase on the percentage for 1889.

The subjects taught, the number of pupils examined in each, and the percentages of passes, are shown in the annexed table.

. Subjects.	Number of Pupils Examined.	Percentage up to or above Standard.	Percentage for 1889

	7,184	71	80
Drill	202	92	94

The new system of estimating the half year of enrolment of the pupils in the several classes by reckoning 110 days' attendance in class as half a year, has given general satisfaction to the teachers, who by this fair and just method of determining the half year of enrolment, should now be able to keep their classes well abreast of standard requirements. There was considerable irregularity in the attendance for several months of the year, caused by almost continuous wet weather, for weeks at a time, floods, had roads, and siekness. From these causes chiefly, the total number of children present at the regular inspections was 832 less than in the previous year. The results of examinations of a few pupils representing the several classes in a school cannot fairly be taken as a gauge of the teacher's work, even when, as it sometimes happens, the pupils acquit themselves reasonably well.

The introduction of the revised standards, and of new text-books for one or two of the higher subjects, tended to lower the percentage of passes. Drawing, the subject which shows the greatest falling off, is now taught to every pupil, instead of, as in past years, to those in the third and higher classes only. Many teachers have little or no knowledge of this subject or of drill, and hence, in the schools under such teachers' supervision, poor results in these branches are almost invariably obtained.

As a body, the teachers, assistants, and pupil-teachers sustain their character for respectability, devotion to their work, and skill in the performance of their duties.

Considerable progress was made during the year in establishing new schools, and in effecting necessary repairs to existing school buildings. All schools provide ample sitting accommodation in each instance for the number of children attending them, and in the aggregate there are 1,940 seats more than are required for the total actual errolment of pupils in the schools of the district. The organisation and discipline are of as high a standard as in previous years, and

Bathurst, 10th January, 1890.

District Inspector.

#### ANNEX K.

## INSPECTOR KEVIN'S REPORT.

I have the honor to submit my report for the year 1890.

The end of 1889 showed under my supervision 101 schools, classified as follows:—

Public Schools Provisional Schools Half-time Schools	. 8
House Schools	. 4
	101

This number was reduced early in the year by eight schools, viz., Cowra Public, Coota Public, Porter's Mount Public, Mount M'Donald Public, Milburn Creek Public, Kangaroo Flat Provisional, Darby's Falls Public, and Pine Mount Provisional, being transferred to the Young section. To counterbalance this, however, eight new schools were opened during the year, and the numbers now stand nominally the same as before :-

Public Schools	00
45) CHIBY FIRMS SCHOOLS	
TO DECOMAL SUMOMS	
**###*** DEHODIS	- C
House Schools	10
7 T T T T T T T T T T T T T T T T T T T	T
	101

In addition to these, the following schools are expected to be in operation early in the ensuing year:—Mount Wilson Provisional and Hillington Half-time, the latter to be worked in conjunction with Kssington Public, reduced by small attendance, and probably a small place on the Isabella River, with Wallbrook, as Half-time.

Wallbrook, as Half-time.

Schools were refused at Stanley (near Mount Macquarie), and at Sodwalls (near Rydal), as the existing means of education are considered adequate; while the establishment of Provisional Schools at Blackman's Flat and Glenbrook, and of a House arrangement at Clarence Siding, are under consideration. The two Evening Public Schools at Mitchell and Hartley Vale closed after a brief existence. A few unimportant changes in the classification of the schools took place, but as a whole matters have remained much as they were last year. The Department has promptly dealt with all cases calling for the establishment of schools, and it can be safely said that this section of the Bathurst District is liberally supplied with the means of education, and if any child is found to be growing up in ignorance it is certainly not the fault of the State. There are, of course, isolated families of painful experience here and there, but there is really no help for them.

## Buildings.

New buildings have been erected during the year at Swan Ponds, Burnt Yards, Antonio Creek, and Cheetham's Flat, under my own supervision, and at a total cost of £263 10s., while thirty-three schools have been repaired, at a cost of £330 8s. 3d. Four teachers' residences have been repaired, at a cost of £73. The Architect has carried out a number of important works during the year, and such as properly came within the scope of his functions. They have materially added to the accommodation, general comfort, and appearance of many of the more important centres in the district. Altogether, it is safe to say that the buildings, as a whole, are in good condition, centres in the district. Altogether, it is all reasonable conveniences. Each year shows a steady and well-timed improvement in the condition of the structures, and it is both amusing and instructive to compare the present condition of things with that of twenty-five or thirty years ago, when the bark "humpy" or slab hut represented our school architecture in many places. architecture in many places.

## Organisation.

This I have found to be generally satisfactory throughout the year, and if teachers as a body will only utilize to the fullest the means placed at their disposal by the Department there will be little ground for complaint. The schools are well found in materials, and with but few exceptions these are carefully kept, and used with economy. The lesson guides are drawn up with skill, and the classification is

kept, and used with economy. The lesson guides are drawn up with skill, and the classification is generally correct.

In some instances I found the school records behind, and exhibiting a want of taste and care, but this was only where one might expect nothing else from persons who clearly had no taste themselves. How distinctly the character of a teacher is seen in his school! I could now name schools the pleasure of entering which is, in a measure, a privilege—everything so neat and tidy and methodical, while I know of others that to visit them is almost painful—disorder, dust, and untidiness everywhere.

In my report for last year I referred to the subject of ventilation, and I am glad to say that I have noticed a great improvement in this direction during the year just closed. Most teachers now see how important is a constant supply of fresh and pure air, and the futility of expecting mental activity in a vitiated atmosphere. I will here mention one circumstance, and it may be taken as one, perhaps, that is not

not uncommon. I went into a school unexpectedly during the year in the afternoon of a rather warm day. Things were going on regularly, and all apparently were working hard. One of the first things that struck me on opening the door was the close atmosphere. Only a portion of two windows was up, and the air seemed heavy and stuffy. At the upper end of the school there were some 20 young children, ages from 5 to 8 years, working addition. They seemed languid and heavy-cycd. I drew the teacher's attention to the matter, and he "thought it might be heat." I opened the windows top and bottom, and also the door, and let matters go on. In half an hour the change was marvellous. Activity and spright-liness took the place of lassitude and a tendency to sleep, and there was little trouble during the rest of the afternoon in getting the children to attend, and to work with energy and sustained effort. I could also see the change in the face of the teacher (as good a man as is to be found in the Service), though I am sure he could not for the moment account for it. This little incident speaks for itself I think.

I am glad to see that the Department has allowed a water supply, generally in the shape of a 400-gallon ship's tank, to Provisional Schools. It always seemed to me hard that children in Public Schools should have clean and wholesome water to drink, while those of Provisional Schools were obliged to quench their thirst at, perhaps, typhoid-infected waterholes, or carry a little for miles in bottles.

The come 25 schools have had trees planted and flower beds formed, and at several of these the "Arbor Day" went off with great celat. The interest manifested by the children is, as a whole, enthusaatic, intelligent, and sustained, though, of course, there are some churls among the parents, who decline to allow their children to take part in this pleasant and educative work. Such people can only be reasoned with, and the teacher of address and tact generally makes converts of them. During next year I hope to be able to

### Discipline.

Discipline.

The discipline has sustained the good character it gained for itself last year. The pupils are regular, punctual, well behaved, and clean and tidy. They are obedient and respectful while in and about school, but I regret to say the varnish in many cases disappears when they leave the teacher's presence. This, to me, and I know to others, has been a painful experience, but I suppose it is only the "Old crah and the young and the swimming lessons" over again. I can only repeat here what I said last year, "Those (the children) I meet are civil enough, but we need more than this;" and if we need one thing above another we need proper respect for authority, a purging of our language of low and disgusting words, and a high-minded and honorable regard for the feelings and character and the property of others. Much of the remedy for this state of things lies in the hands of the teachers themselves, and I hope they will at all times use the power fearlessly and firmly, yet with gentle discretion. Drill has been taught in nearly all the schools, but except in a few of the very best the results are poor. Many of the teachers have not been taught the subject themselves, and cannot therefore be expected to include it in the school course with any great success. The little work on "Manual Exercises," recently issued, will to some extent assist these.

### Inspection.

Of the 101 schools on my roll for the year, or any portion thereof, all went through a regular inspection except Michell Evening Public, closed before I had an opportunity to visit. One went through a second inspection, while 31 received an ordinary inspection. The work of inspection was much retarded in the first six months of the year by a rainfull of unprecedented length and volume, and travelling was in consequence frequently attended with inconvenience, loss of time, and danger. The month of March for instance—an important one in the year's work—showed twenty-three wet days out of thirty-one, and some of the other months up to July were little better. The work done under this head is seen from the following table:—

Schools.	Below Standard.	Up to Standard.	Above Standard.	Totals.
Public Schools		10 1 1 2	55  3 11	68 1 9 18 4
Totals	17	14	69	100

The proficiency up to or above the standard—83 per cent.—must be regarded as very satisfactory in view of the unfavourable condition of the weather in the first six months of the year, and of the small attendance on several occasions at examination.

## Instruction.

This has gone on steadily and industriously on the whole during the year, though it took a considerable time to get into work under the revised standards. These standards give more satisfaction than the late ones; for though the number of subjects has been increased, the quantity in the more important ones has been reduced. The amount of reading, arithmetic, &c., set down in the late standards was always thought to be most difficult, if not impossible, to cover. The reduction is a decided relief. The actual work of teaching has been carried out during the year on much the same lines as those of the last couple of years, but with a decided benefit to the system where unsuccessful pupil-teachers for training are sent. I spoke of this in my report for last year, and the year's experience confirms what I then said. I am pleased to see a great improvement in the writing since the issue of the circular compelling all pupils to write from head-lines, and insisting on uniformity, exactness, and a faithful reproduction of the head-line. I anticipate that the results in the future will be marked and beneficial.

The introduction of drawing in the I and II classes has so far produced but little fruit, and the cause is that hardly six out of every ten teachers know how, or if they do know how, they do not teach their scholars to draw a straight line. The plan is to "set a copy" on the blackboard, and then turn to something else, leaving the little ones to do the best they can. One can easily imagine what that best will be. It is equivalent to tossing a child who cannot swim into a pond of water beyond his depth and leaving him to do the best he can, and without even the poor and of the bladders of boyhood's memory. I hope, however, to see an improvement in this direction during the coming year; for in every instance where I have met so-called teaching of this kind I have condemned it, and explained fully the proper course to follow.

In the unsjority of the schools—in quite 85 per cent.—all the subjects are taught with var

In the majority of the schools—in quite 85 per cent.—all the subjects are taught with varied skill and intelligence, and with but few exceptions, I must say, general conscientiousness. The

The teachers of this section of the district are, as a whole, a respectable, steady, and well-conducted body of public servants. The lives of many are extremely monotonous and tame while out of school; but I observe that the more thoughtful take a right view of life by study and carnest work, and thus in time reap the reward of their patience and attention to duty by removal to better positions. Someone must teach in the bush and be a "brave soldier in the war of liberation and humanity," and he or she is wise who views life in this light; and, sinking all mean, petty, and selfish motives, faces the situation manfully, and considers for a time at least that salary, and home, and friends, and discomforts, are as nothing beside the noble work before them.

The pupil-teachers under my supervision have been steady and fairly industrious during the year, and have as a whole given satisfaction.

The half-yearly examinations were held at my head-quarters in June, and the yearly examinations during the week ended 20th instant.

## Summary.

(i). The means of education are ample, and fully meet all present needs.

(II). Organisation and discipline are satisfactory—the former being as complete as the circumstances demand, while the latter is generally sensible and healthy.

(III). The instruction, though considerably interfered with by floods and unfavourable weather, has been carried on carnestly, and on the whole successfully; and has, under very discouraging circumstances at times, produced satisfactory results. With the organisation and discipline in a healthy condition, and the revised standards now in good working order, I look forward to a year of great hope for 1891. The usual statistics have already been sent on.

JOHN KEVIN. Inspector.

Inspector's Office, Mount Victoria, 31st December, 1890.

# ANNEX L.

## INSPECTOR THOMAS' REPORT.

I HAVE the honor to submit my report upon that portion of the Bathurst District under my supervision during 1890.

I. The adequacy of the means of education as regards amount and distribution.

The year 1880 closed with 112 schools in operation, but 28 of them were, during the vacation, transferred to the newly-formed Young section of the Wagga Wagga District, so that I commenced this year with 84 schools, viz. :

Public	46
Provisional	-15
Half-time	16
House-to-house	7

During the year the Peak Hill Public and Warge Rock House-to-house were transferred from the Wellington District to my section of the Bathurst District, and new schools opened at Alcetown, Enlimore Creek, and Gum Springs; while the conversion of Flagstone House-to-house into two Halftime Schools has added another to my list. On the other hand, the following schools have been closed through distributed attentions. through diminished attendance: -

Cadogan, I Cumbijowa, Gosper's Downs, Murga, Half-time Provisional ,, Nangar,

These changes, with the conversion of Trundle and Bindogundra Provisional to Public School rank, give me 85 schools in active operation at the close of 1890, viz.:

Public	
Provisional	
3 10 (Stonat, , , , , , , , , , , , , , , , , ,	
liali-time	***************
Monge-to-house	
240440 00-104630	

The following schools have been opened during the year in places hitherto without means of education:--

Alectown, Public Gum Springs, Provisional Eulimore Oreek, Provisional.

Applications for new schools have been more numerous than in previous years. They are detailed below :-

Place.	Class of School sought.	Result of Application.
Murrin Bridge Rock Lynne Tinpot and Binda Nanima and Long Angle Eulimore Creek Canowindra Bulbodaey Mingelo	Half-time  Provisional Evening Provisional	Granted. Transferred to Wellington District.

The eastern portion of my district is well supplied with schools, but settlement is still going on The eastern portion of my district is well supplied with schools, but settlement is suit going on rapidly in the central, western, and north-western portions. I expect, in consequence, several applications for small schools during the coming year. In establishing schools to suit new settlers in the central division of the Colony, it is always a matter of difficulty to bring sufficient families within a fair distance of a central site, the Land Act allowing a maximum of 2,560 acres (2 miles square) to be taken up by one person.

II. The actual condition of the Schools as elicited by Inspection.

Nincty schools in all were in operation during some part of 1890, and all without exception were fully inspected. Three received a second regular inspection, and 30 of the larger ones underwent an ordinary inspection, while incidental visits were paid to a great many. Circumstances beyond my control prevented my making as many ordinary inspections as I had intended.

Four of my schools near Orange were inspected by the District Inspector, and I assisted him in the inspection of Orange Superior.

The following table will show at a glance the condition of the schools in relation to the standard :-

Class of School.	Below Standard,	Up to Standard.	Above Standard,	Total.	Percentage satisfying Standard.
Public	4 3 5 2	4 3 3	42 9 13 2	50 15 18 7	92 80 72·2 71·4
Total	14	10	66	90	84-4
Results in 1889	13	14	85	112	88.3

A comparison between the percentages of schools satisfying the requirements of the standard in 1889 and 1890 will show a slight decline. This is to be attributed almost solely to the following causes:—

1. The long continued wet weather, and consequent broken and irregular attendance.

2. The application of the newly revised standards to the work done under those in previous use. The new standards, though by no means more severe, pressed unfavourably in the subjects drawing, music, needlework, drill, and object lessons during the first bulf of the year, by which time, however, most schools had adapted themselves to the new requirements.

### Organisation.

Special attention has been directed during the year to the size, condition, and capabilities of the school sites. Wherever practicable the school grounds have been enlarged, until there are now few schools without vested sites ranging in area from 2 acres in the small bush schools to 4 acres in the more important ones. In several instances teachers have been stimulated, by recent regulations, into vigorous action with regard to planting and cultivating any available ground, and the coming year will bring forth several applications for bonuses. The Cudal Public School held an "arbor day" in August, when the grounds were suitably planted. grounds were suitably planted.

grounds were suitably planted.

The school premises are with few exceptions in good condition. The school-rooms are well provided with furniture and material. All the Public, and many of the Provisional Schools, are now provided with tanks, and generally the material condition of the schools is very satisfactory.

Turning to those points falling more especially within the teacher's province, I find that the school routine conforms in almost every case, to the Regulations; that the instruction is regulated by well constructed time-tables and programmes; and that the records are neatly and accurately kept, while the Inspector's labours are lightened by the prompt despatch of the necessary returns.

School Savings Banks are in operation in all schools where there are two or more teachers employed, but popular interest in these institutions seems on the wane, though it is to be noted that many pupils now so direct to the Post Office Savings Banks.

now go direct to the Post Office Savings Banks.

### Discipline.

The Cadet System under the new regime is the most prominent feature in the discipline of the larger schools. Cadet corps have been formed in Forbes, Cudal, Condobolin, and Canowindra, and attempts are being made in other centres to obtain the requisite enrolment. In the schools where corps have been formed it is needless to say that the general discipline has materially improved, and that the movement has the warm approval and hearty co-operation of the community. Under the new standards of proficiency elementary drill and physical training exercises are expected in every school, and the teachers though, in many cases, only self-taught in this respect are achieving very promising results.

# Instruction.

The following table will show the number of pupils examined in each subject, the percentage of passes both for this year and for 1889, and the result of such comparison:—

Subject.	No. examined.	Percentage for 1890.	Percentage for 1889.	Increase or Decrease per cent.
Reading Writing Arithmetic Grammar Geography English History Australian Bistory Scripture Object Lessons Drawing Music Drill Neodlework French Latin Euclid Algebra	2,417 2,253 868 868 838 313 2,174 2,231 2,084 2,072 2,088 818 85 5	864 848 750 788 792 764 702 805 808 645 703 597 766 500 811	85·3 85·4 74·4 77·9 78·0 72·8 74·5 78·7 81·4 81·6 80·5 76·9 84·9 76·4 62·5 60·0 65·9	+ 1·1 - 6 + 6 + 6 + 1·2 + 3·6 - 4·3 + 1·8 - 3·6 - 17·1 - 10·2 - 17·2 - 8·3 - 26·4 - 21·1 + 21·6
Meneuration		71.6 90.0	55 <b>·7</b> 91·6	+ 15·9 1·6

The decline in the percentages in object lessons, drawing, music, drill, and needlework is the result, as already mentioned, of the application of the revised standards as soon as they were issued, as it is in these subjects that material alterations have been made. The excessive rainfull of the year had also

The methods employed are, on the whole, sound, and based on those found most successful in our best schools. The employment in the small schools of ex-pupil-teachers tends, of course, to raise the general tone of the instruction. The subjects I find weakest in the small schools are mental arithmetic, notation, and word meanings, while the oral or memory subjects fail to impress through lack of effective revision.

## Teaching Staff.

Eight Public Schools and 10 Half-time Schools are in charge of unclassified teachers, but 6 of them, representing 7 schools, attended the recent examination in order to qualify for the positions they hold, while several other of the schools in question are in charge of ex-pupil-teachers, not yet classified.

The teachers are, almost without exception, well-conducted and respectable, and fully merit the confidence placed in them. No complaints whatever came under my notice during the year. All the pupil-teachers due for examination during the year succeeded in gaining promotion, but it is to be regretted that out of 3 first-class pupil-teachers who completed their course at the end of the year 1 was debarred by illness from competing for admission to the Training College, and the other 2 elected to take small schools.

Suitable male candidates for small schools and pupil-teachers have been accounted to the confidence of the pupil teachers in the confidence of the pupil teachers are marketicable in this purit to

#### III .- Accommodation.

During the year school-buildings were erected under my supervision at Gum Springs, Eulimore Creek, and Trajere. The first two were established in localities hitherto without schools, though the opening of Eulimore Creek Provisional entailed the closing of Murga and Nangar Half-time. Trajere school-building was erected to supply the place of an old building badly situated. Leased premises at Alectown were also secured, but have since been vacated, as, under the Architect's supervision, a school-building has been erected upon a vested site.

A weather-shed was creeted under my supervision at Cudal, and repairs and improvements to 12 school-rooms and 6 residences were effected under my control at a total cost of £377 14s. 6d.

Under the Architect's supervision a class-room has been added to Peak Hill school-room, and the erection of a teacher's residence, and the effecting of extensive improvements to the promises there are in progress. The same officer has in hand very considerable additions and improvements to the Forbes school-buildings, and the painting and repairing of the Parkes school-rooms and residence. It has also been decided to add a brick class-room to the Canowindra school-room, and to effect other improvements there under the Architect's direction.

The removal of the Boree-Cabonne Half-time School to a more central site, and the repair and

The removal of the Boree-Cabonne Half-time School to a more central site, and the repair and improvement of 4 other school-buildings are works under my control, still uncompleted, and entailing an expenditure of £257 15s.

The interchange of the school buildings at Fair Hill and Green Grove, at a cost of £147 14s., has just been approved, but too late to admit of its inclusion in the usual statistics. As the contract will not be signed this year, the matter may properly be allowed to fall within the work of 1891.

The following figures will show that the accommodation provided at existing schools fully meets the requirements of the district:—

Number of pupils enrolled in December quarter	3.476
, in average attendance	2,3586
in Ordinary attendance	2,700 0
Highest quarterly average during 1890	2,358.6
No. of seats provided at close of 1889	5,354
, lost during the year by transfer of schools, &c.	1,334
, gained during the year by opening new schools, &c  Nett loss	345
Nett loss	989
Sitting accommodation at end of 1890	4,365

# IV .- Summary.

Eighty-five schools, with an enrolment of 3,476 pupils, and an average attendance of 2,358.6, and employing 93 teachers and pupil-teachers, are in operation at the close of the year.

Every school was fully inspected during the year, with results only slightly below those of 1889. The schools are in a satisfactory condition as regards organisation, discipline, and instruction. The distribution of existing schools fairly meets the present requirements of the district. The usual lists and statistics have already been furnished.

W. GEO. THOMAS. Inspector.

Forbes, 27 December, 1890.

## ANNEX M.

## DISTRICT INSPECTOR JOHNSON'S REPORT.

This part of the Colony was formed into a separate district at the beginning of the year. It extends along the coast from Milton on the south to Lake Illawarra on the north, and from the coast westward to Tuena. It consists of three sections—the Eastern, or Nowra Section, under the supervision of Mr. Inspector Lawford; the Western, or Taralga Section, under Mr. Inspector Murray; and the Central Section, under my own direct supervision. Mr. Lawford is stationed at Nowra, and Mr. Murray's head-quarters are, as a temporary arrangement, at Mittagong, instead of at Taralga, which has been fixed on as the place of residence of the inspector in charge of that section, and which is certainly the most convenient from which to visit his schools.

There are at present 212 schools in the district, of which 161 are Public, 16 Provisional, 26 Halftime, and 9 House-to-house Schools; 64 are in the Central Section, 85 in the Nowra Section, and 63 in the Taralga Section.

the Taralga Section.

There are 3 Superior Public Schools—Kiama, Nowra, and Picton, the first and last named having been raised to that rank during the year.

New schools were established at Bombo, Meglo, and Fullorton; and it has been decided to open schools at Exeter and Wollondilly as soon as the necessary buildings have been erected. Kangaroo River school was closed on account of small attendance.

New

New school-rooms were erected at Greendale, Gullen, Meglo, Fullerton, Clydesdale, and Hadley, a class-room at Berrima, a teacher's residence at Crookwell, and a weather-shed at Wilton. The crection of new buildings at Wollondilly, Bargo West, Exeter, Mulgoa Forest Mount, Glenquarry, Berrima Colliery, and Peelwood has been sanctioned; those at Wollondilly and Exeter being required for newly-established schools, and the others to replace old ones. It is probable that additional accommodation will shortly be required at Bowral, Minto, and Ingleburn.

Thirty-nine school buildings were repaired and otherwise improved, and 2 others are now undergoing requires.

undergoing repairs.

The school-rooms of the district provide accommodation for 13,094 pupils. This is considerably in excess of that required, as the highest quarterly enrolment for the year was 9,522. They are also well distributed.

All the schools of the district, except 1 Provisional and 1 Half-time, in the Taralga section, and 1 small Public and 1 Evening school in the Nowra section, were inspected during the year. Seventy-seven were inspected a second time.

With few except ons, the schools were found to be in a satisfactory condition—173 exceeded the standard, 18 reached it, and 25 were below it. Some of the least efficient have since been placed in charge of other teachers, and in consequence marked improvement has taken place in the attendance, and it may be hoped in the efficiency also.

The following table gives the number of pupils examined in each subject, and the percentage of

	No. examined.	Percentages.		No. examined.	Percentages.
Reading	6,789	88:4	Drawing	5,525	84.5
Writing	6,848	90-5	Music	5,704	82.8
Dictation	5,569	78 <sup>.</sup>	French		100.
Arithmetic	6,596	76.9	Euclid	373	89.8
Grammar		84.3	Algebra		91.1
Geography	2,605	80.8	Mensuration	82	68.2
English History	2,505	74.7	Latin	18	100-
Australian History	722	<b>78</b> ·9	Needlework	<b>2,5</b> 86	91.8
Scripture	6,325	87.	Science	938	91·1
Object Lesson	5,110	6.3			

In only a few schools is the discipline unsatisfactory, and it is not often that the government is found to be learsh, the fault generally lying in the opposite direction.

The quarterly enrolment and average attendance for the year are given below:—

		Enroment,		Average.
March	quarter	9,338		5,737.3
June	,,	9,429		6,542.1
September		9,446		6,393.6
December	77	9,525	•••	6,678.5

The attendance for Murch quarter was 61.4 per cent. of the enrolment, for the June quarter 69.1, for September quarter 66.6, and for December quarter 70.1. There has, therefore, been a satisfactory increase in both curolment and average attendance during the year,

The teachers and pupil-teachers employed in the district are classified as follows:-

Clas	Class 1.		s II.	Class III.			Unclassified.
A	В	A	В	A	В	С	
*****	1	21	18	50	36	25	57

## PUPIL-TEACHERS.

Class I,	Class II.	Class III.	Class IV.
12	G	7	19

Summary.—The district is well supplied with schools, and the work being done therein is satisfactory. Increased efficiency may be looked for during the year now entered upon.

Bowral, 10 January, 1891,

W. H. JOHNSON, District Inspector.

## ANNEX N.

## INSPECTOR MURRAY'S REPORT.

At the close of last year I had under my supervision 54 Public Schools, 11 Provisional, 20 Half-time, and 6 House-to-House Schools. Departmental changes at the beginning of the year left to me 41 Public Schools, 6 Provisional, 16 Half-time, and 7 House-to-house Schools. During the year Provisional Schools were established at Meglo and Fullerton. Now, at the close of the year, I have 38 Public Schools, 9 Provisional, 8 Half-time, and 8 House-to-house Schools.

## Buildings.

During the year Provisional School buildings have been erected at Meglo, Fullerton, and Hartley, where previously no schools existed. Two school-rooms were enlarged; 9 others underwent repairs, including, in some cases, water supply, fencing, and furniture; 3 teachers' residences were repaired. All this work was supervised by myself. The Architect supervised the crection of new buildings at Gullen, extensive repairs at Kialla, the crection of a teacher's residence at Crookwell, and is now superintending the building of another residence at Peelwood.

At the beginning of the year there was accommodation for 4,171 pupils. The changes previously mentioned took away 1,269 places; 84 now places were provided, leaving now 2,986 places. This is sufficient accommodation for all the children in the district, and it is properly distributed.

Inspection

## Inspection.

Every school in the district received one full or regular inspection, except 1 Provisional School, which was opened in a remote part of the district as late as the 28th October last, and 1 Half-time School at which no pupils were present when I visited it. Eight schools received a second or ordinary inspection, and many others received from one to four incidental inspections.

#### Estimated Proficiency,

Twelve schools were found to be below the standard, 10 schools were up to the standard, and 48 schools were above the standard.

Of all the pupils examined:

87 per cent, passed the standard in Reading. 83 , in Writing. 86.7 ,, in Dictation. 86.9 per cent. in Scripture and Moral Lessons. in Object Lessons. in Drawing. 80.8 in Arithmetic. in Grammar. in Euclid.
in Algebra.
in Mensuration. 79.4 88 " 77 87 in Geography.
in English History.
in Australian History. 91.6 in Sewing, and 86 ,, 80 66.3 in Drill.

Owing to the changes already named, there are not sufficient data to make a correct comparison between the progress made last year and that made this year.

Except in two or three instances the teachers are assiduous, honest, and persevering in the faithful discharge of their important duties, and are deserving of the esteem of the people among whom they

1. The means of education are sufficient and properly distributed.

 The supply of teachers is equal to the demand.
 The inspection was thorough, and the supervision as complete as the great extent of the district allowed.

4. The educational outlook is hopeful.

J. H. MURRAY,

Mittagong, 23 December, 1890.

Inspector.

## ANNEX O.

#### INSPECTOR LAWFORD'S REPORT.

I HAVE the honor to submit my general report for the year 1890.

I was transferred from the Young district to this on the 11th July, and have therefore only been in charge of the Nowra district during the latter half of the year.

When I took charge there were 85 schools in operation. These 85 remain still open. They

consist of .-

Public Schools	1
Total	 85

All these have been regularly inspected during the year, and 39 have received an ordinary inspection as well, want of time and other circumstances preventing any more of these latter being made. One school, Jamberoo, received two ordinary inspections.

At the beginning of the year there were 86 schools in operation; 1 new school was opened during the year at Bombo, making a total of 87 open during the year or any part of it. Of these, 84 were in operation during the whole year, 3 being open during a portion only.

Two schools were not inspected.

Kangaroo Valley, Public. Broughton Village, Evening Public.

They were, I believe, both of them visited for the purpose of inspection, but owing to wet weather no children were present. They collapsed from want of attendance before I took charge.

As to the adequacy of school accommodation in the district, there were places for 6,068 children at the end of last year. By the closing of Kangaroo River and the giving up of the old building at Clydesdale, 117 places have been lost. By the opening of Bombo and a new school-room at Clydesdale 97 places have been gained.

There is, therefore, accommodation for 6,048 children at the end of 1890.

Repairs and improvements of a more or less extensive nature have been under the inspectors

Repairs and improvements of a more or less extensive nature have been made under the inspectors at 18 schools and residences, at a total cost of £305 16s. 6d.

at 18 schools and residences, at a total cost of £305 16s. 6d.

As far as I have seen the district it is exceedingly well supplied with the means of education. There are schools every two or three miles in the northern end of it, but, owing to the mountainous nature of the country, means of communication are very bad, so that probably schools are really wanted at shorter intervals than in other parts of the colony. The southern end of the district is a desert with a few cases. On these settlement has taken place, and there are quite sufficient schools to meet all wants. The one industry of the whole district is dairy farming, and the unfortunate children have in most cases to toil very hard before and after school. This is naturally not conducive to brilliant scholarship.

Under such circumstances it is very gratifying to find that the condition of the schools is as good as it is. Last year 93 per cent. of the schools reached or exceeded the standard. This year no less than 83 out of 85 schools reached or went beyond the standard, or 97 per cent. as against 93 per cent. last year. This is no doubt what it should be, for, after all, for a school to gain an average of half-marks in all subjects is nothing much to boast of, and to be below that position shows that there must be something very wrong.

all subjects is nothing much to boast of, and to be below that position shows that there must be something very wrong.

There is another reason why the percentage of passes should be high this year, and that is the adoption of revised standards of proficiency, rather loss exacting in many respects than preceding ones, and which give good marks to needlework and drill. Neither of these subjects is very hard to teach, and needlework generally receives very liberal treatment in the way of marks.

With such a result as this report shows it would be very rash to express an opinion that next year's report will be any better or as good. Let us hope it will not be much worse; though, with the present standards, and the present really efficient body of teachers taken as a whole, there is not much reason to suppose it will be.

The required statistics have been duly forwarded.

Nowra, 30th December, 1890.

L. E LAWFORD, Inspector.

#### ANNEX P.

#### DISTRICT INSPECTOR COOPER'S REPORT.

The number of schools and departments in operation in the Goulburn district for the whole, or a part of 1889 was 387. They were supervised by the District Inspector, at Goulburn, and 3 Inspectors stationed at Mittagong, Braidwood, and Bega, respectively. On the enlargement of the general inspectoral staff, and consequent readjustment of schools at the beginning of this year, the Mittagong Section was taken from the Goulburn district, and a group of schools, with Yass as their centre was, in lieu thereof, attached to this district. The effect of these changes is represented hereunder:—

Section of District.		1889.	;	£890.
Poctron or pasture.	Schools.	Pupils enrolled.	Schools.	Pupils enrolled.
Goulburn Braidwood Bega Mittagong Yass	60 107 126 94	4,159 3,908 5,473 4,317	84 97 103  92	4,628 9,495 4,647 3,504
Totals	887	17,857	376	16,274

The Braidwood section has remained under the charge of Mr. Inspector Willis. Early in January, Mr. P. F. Sheehy was appointed inspector of the Yass section, and, in July, Mr. P. Durie assumed charge of the Bega section, which had been under Mr. Inspector Skillman's supervision up to 30th June.

Of the 376 schools and departments open during the year, or a part of it, 13 were new, and 3 had been closed, but were revived. On account of diminished attendance, 7 of these 376 schools were closed. The total number of schools now in operation is, therefore, 369. In the course of the year, 153 places were lost by the closing of schools, while 571 places were gained by the crection of new schools, or the enlargement of existing buildings. The places now provided and the highest quarterly enrolment during the year are shown below:—

Charles of The Ch	Number of places, a	llowing for each child.	Highest quarterly

Totals	14	1,255 0	0	4	239 2 5	459	366

The schools built in the Goulburn section are Thornford, to replace a leased building; Brooks' Greek, to replace an old school; and Little Gundary, erected where no school formerly existed. A new school was built under the Architect's supervision to supersede a rented building at Tirranus. Details of schools erected or enlarged under the Inspectors' directions are given in those officers' separate reports.

In addition to the erection and enlargement of schools, the following works have been carried out under the Inspectors' supervision:—

Section of District.		Repairs	to	, w	/caf.her-sheds.
Second of District	Schools.	Residences.	Cost.	Number.	Cost.
Goulburn Braidwood Begu Yuss	9 19 15 `	10 3 5	460 5 6 112 12 6 270 16	5   1	£ s. d. 91 14 6 5 0 0 included with repairs 49 10 0
Totals	76	18	1,102 14 13	L   9	146 4 6

In many cases also provision by means of overground tanks has been made for supplying wholesome water for the use of teachers and pupils. Among the additional works approved or in course of execution, are a new Boys' Department in connection with the Superior Public School at Goulburn, a small school at Milbang, and a teacher's residence at Eastgrove.

The accommodation for pupils now provided is, in the aggregate, ample, and very fairly distributed. Several of the smaller schools are not as comfortable as might be desired, and some buildings of all classes have been erected without due regard to the necessity for so placing the windows as to save the pupils from the discomfort and probable injury arising from continued exposure, while in their seats, to the direct rays of the sun.

## Play-grounds.

Play-grounds.

Since July last, when the Minister's decision was communicated to Inspectors as to the desirableness of securing enlarged areas for play-grounds, this matter has received due attention, and substantial additions have already been made to the smaller grounds, or steps in that direction have been taken, throughout the district. In the Goulburn Section an extra 1 acre has been added to the site of the Superior Public School, Goulburn, making it 2 acres; and the sites at North Goulburn, South Goulburn, and Eastgrove have also been extended. At Queanbeyan the site has been doubled in area, and now measures somewhat more than 4 acres; and action has been commenced which will result, it is hoped, in increasing the Bungendore site from 2 to 4 acres. In the case of the smaller schools, also, necessary steps have been taken to extend the sites where necessary. Tho advantages that may be expected from enlarged recreation areas, especially in towns, are so important that the inauguration of a liberal policy in respect to the acquisition of reasonably large play-grounds is a marked feature of the year's administration.

Although few of the teachers formally arranged for holding "Arbor Days," yet many of them took a praiseworthy interest in planting the school-grounds with trees and flowers. In some cases where, from the nature of the soil and the surroundings, all but those blessed with much zeal and perseverance would have been disheartened, neat little flower-plote have been formed; and I am glad to be able to report that in many of these instances the teachers are young women, by whose taste and good example their pupils must be greatly benefited. The teacher of one school (South Goulburn) obtained a bonus in terms of the rules relating to rewards for the successful cultivation of plants. Mr. Lumsden, the teacher of that school, with the aid of his pupils, who appear to take a lively interest in the work, has tastefully embellished the school-grounds, and richly merited the official recognition he gained f

Attendance of Pupils. Information as to the attendance of pupils, payment of school-fees, and free pupils, is contained in the subjoined table :-

	Totals	12,956	8,925	68	1,322 8 0	212 7 6	840

The foregoing figures indicate serious irregularity in the attendance of pupils. The unusually wet weather experienced throughout the year, and epidemic sicknesses, will account to some extent for the unusualistactory attendance; but the chief cause is to be found, I fear, in the indifference of many parents to the welfare of their offspring in respect to education. For the half-year ending 30th June last it was reported by the teachers that 1,333 children had failed to complete the statutory attendance. The short attendance of 536 of these was deemed to be excusable, the parents of 630 others were cautioned, and in the cases of the remaining 167 prosecution was authorised. It was found practicable, however, to prosecute in only 128 cases, of which 111 resulted in convictions. Those who were prosecuted had already been cautioned at the end of March. For the last half of the year, 722 children have been reported as defaulters. Of that number 450 may be excused, the parents of 213 have been cautioned, and in the cases of 59 I have recommended legal action.

I am persuaded that the fear of the punishment that may be entailed by a violation of the com-

cautioned, and in the cases of 59 I have recommended legal action.

I am persuaded that the fear of the punishment that may be entailed by a violation of the compulsory clauses of the Public Instruction Act has now but little deterrent effect upon parents whose indifference or expidity predispose them to break that law. In many of the cases that have come under my notice the chief cause of short attendance has been "work at home." It is pitiful to read at times in the teachers' reports, that not only children from 12 to 14 years of age are compelled to work, but that little ones from 7 to 12 years are also required to take a share of the labour incidental to their parents' occupations. It cannot be admitted that there is any excuse for the heartlessness which leads parents to expect to be allowed, as a matter of course, to rely on the aid of their young children in earning a subsistence for their families or in increasing their wealth; yet it is true that the continued and widespread existence of the ovil has a tendency to blur the natural sense of surprise and indignation which its appearance should excite. It augurs badly for the future moral and physical welfare of the rising

rising generation that so many of its members of tender age should be subjected to the suffering and cruel deprivation of educational benefits, which are the inevitable attendants of a system of "juvenile labour."

The collection of school-fees is a duty which most teachers find irksome and unpleasant, and although the total arrears have been reduced somewhat within the year, the sum due is disproportionately large. It is to the credit of many teachers that, by firmness and tact in dealing with this matter, they are able to report from month to month that they have no arrears of fees; and it is to be hoped that the number of such teachers will rapidly increase. There were 840 free pupils at the end of the year; of that number 159 are State children, who are boarded in the district, under the provisions of the "State Children's Relief Act."

#### Inspection.

The several classes of schools and departments which were open during the whole, or part of the year, together with their mean quarterly enrolment of pupils, are shown in the following table:—

Section of District.	Public	Pro- visional,	Half- time,	House-to- house.	Evening.	Totals.	Mean Quarterly enrolment
Goulburn Braidwood Bega Yass	51 37 72 60	10 17 10 25	22 37 20 6	1 5 1	1	84 97 103 92	3,691 2,788 8,561 2.870
Totals	220	62	85	8	1	376	12,910

Of these 376 schools, 370 were subjected to regular inspection, and 127 were inspected a second time-that is, underwent a second regular, or an ordinary inspection.

Schools inspected and Pupils examined.

	Total		hat under- arinspect'n.		ls twice ected.	Pupils e	examined,
Section of District	number of Schools.	<u>-</u>	Percentage	<del></del>	<del></del>	Number.	Percentage of enrolment

Totals	376	370	98	127	34	9,603	74

In the Bega Section, 75 schools were regularly inspected by Mr. Skillman. The remaining inspections were conducted by Mr. Durie. Of the 6 schools not inspected, 2 (Half-time) in the Goulburn section were closed early in the year, on account of diminished attendance. In the Yass Section, one small school was closed before the Inspector visited its neighbourhood. One school in the same section, and two in the Bega Section, were established after the usual visits of the inspectors to the localities.

The efficiency of the inspected schools, in relation to the standard, may be seen from the following statement :-

In consequence of the changes effected by the redistribution of the schools at the beginning of the year, it would not be possible to make a comparison between these results and those reported for last year. The revised standards of proficiency which came into force this year have been received by the teachers with favour, and their operation has, I think, already had a beneficial effect on the schools of the district. In respect to object lessons especially, much improvement may be anticipated, as teachers will find themselves compelled to resort less to text books for stereotyped subjects; and will be induced to depend more on their own resources in preparing interesting lessons on concrete objects within the possible observation of children. What are often difficult and useless memory exercises will thus become pleasing aids in inciting the pupils to note, compare, and form intelligent notions concerning the natural phenomena which surround them.

In writing, 84 per cent, passed; but, as the standard implies merely half the possible marks, or mediocrity, the result is not one to excite feelings of gratification. There can be little doubt that writing is a weak subject in our schools, and that there must be some serious defect in the system, or its application, which, after so long a trial, yields no better results. In the classes above the second, improvement is especially needed. In these, too much writing is done on slates, an exercise which cramps the fingers, and induces carelessness; and the pupils are not afforded sufficient opportunities for writing small-hand in books. The best writing is to be found in schools where the children, under proper supervision and direction, write much, not only in copy books, but also in dictation and exercise books.

\*\*Kindergarten.\*\*—During the year, several of the Kindergarten occupations have been introduced into the Infants' Departments of the Public Schools at Goulburn, North Goulburn, and South Goulburn, and so have been made a part of the instruction of the first

and on her return to Braidwood introduced the methods into her teaching, with results which have won the commendation of Mr. Inspector Willie. In the Queanbeyan School, Miss F. Cavanough, an exstudent in the Hurlstone Training School, has also been very successful in embodying appropriate gifts in the instruction of the first class. The effect of these occupations on the general tone, and the intellectual development of the little ones to be found in the Infants' classes, is very beneficial. It is, I think, worthy of note, that the incorporation of the leading features of the Kindergurten method with the Public School System of the Colony is, like the recent establishment of School Banks, and formation of Cadet Corps, evidence of that wise "celecticism" which, as pointed out fully twenty-five years ago by one of the ablest and most sagacious of those to whose zeal and sound judgment Australians are greatly indebted for their present educational privileges, has from the outset been a characteristic of an administration which, whether under a Board, a Council, or a Minister, has striven to establish and perpetuate a truly National system.

a truly National system.\*

Superior Schools.—There are 3 Superior Schools in the district, namely, at Goulburn, Braidwood, and Queanbeyan. Three pupils of the Queanbeyan School passed the last University Public Examinations.

#### School Banks.

School Banks are in operation in the schools in which it is practicable to work them. They have been, on the whole, fairly successful, but I do not think that the teachers, generally, fully appreciate the means for good which these institutions place within their reach, and that, therefore, the interest taken in them is not sufficiently hearty and earnest.

## Discipline.

The discipline throughout the district is, as a rule, satisfactory. In some cases, an indulgence approaching weakness, leads to disorder and its attendant evils, and, in many instance, the cane is still too frequently used for trivial offences that tact and vigilance would prevent. It is to be regretted that the very explicit cautions against, not only undue, but also too frequent, corporal punishment are so little heeded; and on this point even teachers who have had the advantage of regular training are not altogether free from blame. Some have failed to realize, as yet, that the cane is not a proper instrument of instruction, and are too ready to turn to that very useful "last resort" in cases of failure, or inability to learn, where its use is always injudicious and sometimes cruel. Play-ground supervision is fairly satisfactory, but, in some schools, the out-offices do not receive proper attention. It has been laid down that it is "essential to the well-being of children that their moral sense should not be depraved by the sight of filth, or by contact with it?" It is a serious blemish in the management of a school when there is evidence of a lack of the supervision necessary to lead to the formation of habits of personal cleanliness on the part of the pupils, and the teacher who neglects this important duty exposes himself to condemnation.

Teachers.

The teachers employed in the district at the end of the year were classified as follows:-

Section of District.	Ter	ochers.	Mistresses.	Ass	istants.	All	ranks.	P	upil Teache	ers.
District.	Males.	Females.	Mistr	Males.	Females.	Classified.	Unclassified.	Males.	Females.	Totals
Goulburn	52	29 24 17 38	5 1 1 0	2 0 0 0	5 3 3 2	56 39 62 45	23 41 29 44	5 2 6 3	14 8 5 4	19 10 11 7
Totals	209	108	7	2	13	202	137	16	31	47

As a body, they are well-conducted, and desirous of giving satisfaction. In many cases their work As a body, they are well-conducted, and desirous of giving satisfaction. In many cases their work is not only fully up to the general standard of efficiency—fifty per cent. of possible marks—but also satisfy the higher standards of their respective classifications. In some cases, however, teachers who have won high certificates have subsequently relaxed in their efforts, and the results of their management are, therefore, not now commensurate with their classifications. This is a matter for regret, as greater efficiency than the mere mediocrity indicated by the standard "Tolerable" should be aimed at by all teachers, but especially by those who hold high certificates and fill responsible positions.

## Summary.

It may be stated, briefly, that due provision exists, or is in contemplation, for the accommodation of the children of the district; that the work of education is proceeding with very fair success; and that the prospects of the future are encouraging. Goulburn, 5th January, 1891. D. J. COOPER.

# ANNEX Q.

# INSPECTOR SHREHY'S REPORT.

I HAVE the honor to submit my general report upon the condition of the schools in the Yass Section of Goulburn District for the year 1890.

At the beginning of the year this section was transferred from the Wagga Wagga to the Goulburn District, and its boundaries were considerably altered. On the north they were extended by the annexation of the schools in the vicinity of the Fish River, and on the south by that of those round Tumut and Exponeilly. Eurongilly.

At the end of 1889 there were 198 schools on the register; 45 of these were transferred to the Inspector of Young, and 25 schools from the central sections of the Wagga Wagga and Goulburn Districts were added to my list. There were, therefore, at the commencement of the year 88 schools under my supervision, viz. :-

Public Provisional Half-time	22
Total	<del></del>

During the year new Provisional Schools were opened at Mountjoy (Jugiong Creek) and Galong; a House-to-house School was established at Phil's Creek, and the former House School at Clonalton,

<sup>\* &</sup>quot;Wherever, therefore, an improved method, a wiser practice, or a useful discipline could be found, it was incorporated with the National system of the Colony, although it might be that no example of the kind existed in the parent system. By reason of this celecticism, it happens that, in matters of school organization, modes of discipline, and nethods of teaching, the system of the Colony differs from the system of Ireland, although identical in all the leading principles." An exposition of the National system of New South Wales; by W. Wilkins (1865).

which had been closed for some time, was reopened as a Provisional School. There were, therefore, 92 schools in operation during the whole or some portion of the year. Owing to small attendance, the Provisional Schools at Nimby, Bongongo, and Billabong have been discontinued. The existing schools

Applications for the establishment of Provisional Schools at the following places have been received and dealt with :-

Place. Reid's Flat (Numby) Granted.
Homewood Declined. Granted.

It is expected that the new school at Reid's Flat will be ready for occupation after the holidays.

## Inspection.

Except Nimby Provisional, which had been closed before it could have been visited, and Phil's Creek House-to-House, which was opened in the latter part of the year, all the schools in this section received a regular inspection, 2 an ordinary inspection, and 1 a second regular inspection.

The following table shows their general efficiency in relation to the standard (50 per cent. of

possible marks) :-

Schools.	Below Standard.	Up to Standard.	Above Standard.	Total.
Public	Y	2 4 	42 13 6	60 24 6
Total	23	6	61	90

# Organization.

As regards organization, for which teachers are responsible, 7 schools are good, 27 very fair, 23 tolerable, 4 moderate, and 4 indifferent. In the majority of them the programmes are satisfactorily constructed, and the records neatly and correctly kept; but in several provision was not made in the time-table for all the subjects in each class required by the new standard of proficiency.

## Discipline.

The condition of the schools in regard to discipline is on the whole satisfactory. Only 3 schools are below fair, 38 are fair, 39 very fair, and 10 good. The government is, in most cases, characterised by kindness and firmness, and is reasonably effective.

The subjects of examined, the number of pupils examined, and the percentage of passes in each subject are characteristics.

subject are shown hereunder :-

Subjects.	Number of Pupils examined.	Percentage up to or abov Standard.

Class I.	. Class II.	Class III.	Class IV.	Probationers.	Total.				
2		2 ,	1	2	7				

Of the unclassified teachers, 18 were trained as pupil-teachers, and, except a few, these have no served in their respective schools the period prescribed to render them eligible for examination. They are very desirable teachers, and are doing satisfactory work. During the year four complaints which required investigation were made against teachers. Two were for alleged neglect of duty. On investigation, one proved to be groundless, and the other exaggerated. The remaining two were for the infliction of excessive corporal punishment. The teachers, as a body, are exemplary in their conduct, conscientious in the discharge of duty, and respected by the parents of their pupils.

#### Accommodation.

At the beginning of the year, places for 3,320 scholars were provided; 63 of these were lost by the closing of schools, and 63 more by giving up old buildings. As 124 places were gained by the erection of new buildings, and 13 by an addition to a school-room, the existing accommodation affords places for 3,331 children. This is adequate, as the highest enrolment for any quarter was under 2,900. In three schools the accommodation was found to be insufficient, one has been enlarged, and new buildings are in course of crection to replace the other two.

Five new buildings have been erected. Information respecting them is furnished in the following table:—

School,	Cost.	Places provided.	Supervised by,	Object.
Mountjoy Provisional Galong Provisional Wagnagobilly Public Mitta Mitta Public Phil's Creek House-to-House Total	98 10 0	19 23 28 36 28	Mr. J. Osborne Inspector Local committee	To replace old building.

Under the supervision of the Inspector, weathersheds which cost £29 10s. and £20 respectively have been built at Jugiong and Nangus; repairs and improvements have been effected to 33 schools at a cost of £328 3s. 10d., and to 5 teachers' residences at a cost of £19 7s. 6d.

New buildings to replace old ones are in course of erection at Gobarralong and Mooney Mooney, and will accommodate 58 pupils at a total cost of £272 17s.; at Reid's Flat, where no school previously existed, a purchased building which is to be repaired will afford places for 28 pupils at an estimated cost of £55 6s.; a teacher's residence is being built at Felled Timber Creek at a cost of £199 15s., and substantial repairs, to cost £111 10s. are in progress at 8 schools.

Under the supervision of the Architect, a brick building is nearly completed at Binalong, and a teacher's residence at Pudman Creek. Additions are being made to the residences at Frogmoor and Rdwardstown, and improvements to the residence at Lacmaist.

#### School Grounds.

In the case of every school visited since the beginning of July the question of enlarging the area of its playground, if less than 4 acres, received special attention. Wherever it was considered desirable, steps were taken to obtain the additional area required, and where the land was available 8 or 10 acres were secured. Not the least advantage of a spacious playground is the attraction which it offers to children to play where their sports are under supervision, and their actions influenced by the surroundings of their school.

Tree planting has been carried out in connection with several schools, and at a few an "Arbor Day" was celebrated for this purpose. Some teachers have taken a commendable interest in improving the school grounds, and the planting of shrubs and shade trees where required will, I have no doubt, receive next year the measure of attention due to it.

Three new schools have been opened, and five new schoolrooms erected; three new buildings are in progress, and the erection of two others has been sanctioned. The means of education are well distributed, the accommodation is adequate, and 74 per cent. of the schools have satisfied or exceeded the requirements of the standard. The educational prospects of this section for the ensuing year are

Yass, 27th December, 1890.

P. F. SHERHY, Inspector.

# ANNEX R.

## INSPECTOR DURIE'S REPORT.

I HAVE the honor to submit a general report upon the schools in the Bega section of the Goulburn District for the year 1890. These schools were, for the former half of the year, under the supervision of Mr. Inspector Skillman; for the latter half, under mine.

At the close of 1889 there were in the District 125 schools, viz.:—84 Public, 14 Provisional, 24 Half-time, and 3 House-to-House Schools. By the redistribution of schools among Inspectors at the beginning of 1890, 34 schools were transferred from Bega to Braidwood District, and 10 from Braidwood to Bega District; the former comprised 19 Public, 6 Provisional, 6 Half-time, and 3 House-to-House Schools; the latter, 9 Public and 1 House-to-House School.

The following new schools have been opened this year:—Willow Glen and Tanto, both Half-time; while Holt's Flat and Mount Cooper Half-time Schools have been closed.

Two Half-time Schools, Glenroy and Dignam's Creek, have been converted into Provisional Schools. The name of the former has been changed to Glenryan, to distinguish it from another Glenroy under the Department. Seven applications have been received and reported upon for the establishment of new schools. The localities and results of the applications are:—

Place.	Result of Application.
Puen Bûen, Provisional	Granted.
Boco " Thoko, Half-time	Granted.
Thoko, Hall-time	Granted.
Yourie, Provisional Colombo, Public	Declined.
Dangelong, Provisional	
Long Bridge	Under consideration

The number of existing schools at the close of 1890 in the District is as follows:-

Public Provisional Half-time	10
House	
Total	101

#### School Buildings.

Five new schools were erected under the supervision of the Inspector during the year, viz., Greig's Flat, Brogo, and Avoca, Public; Wellesley and Bozo, Provisional. The first replaced the school burnt down in 1889, and the others were built where no vested schools formerly existed. Boco school has not yet been in operation; it will be opened in January. The schools at Dalgetty, Tilba Tilba, and Wallagoot were enlarged during the year.

The following works are now in progress under the Architect:—The crection of an Infants' Department, Bega Public School; of Public Schools at Wyndham and Kameruka; of residences at Bega, Wyndham and Tanja; and of a kitchen at Delegate. A new residence has been completed at Quaama, under the same supervision

Quaama, under the same supervision.

Repairs under the Architect's supervision have been effected at Bodalla, Panbula, and Beresford; under local supervision at Bermagui and Cobargo; and under the supervision of the Inspector at 18 schools.

Weathersheds have been creeted at Millingandi, Dalgetty, and Mumbulla.

Places for 1,174 children have been lost by the transfer of 34 schools to the Braidwood District; for 57 by the closing of schools, and for 75 by giving up old buildings. On the other hand, 334 places have been gained by the transfer of 10 schools to the District, 134 by the creetion of new schools, 36 by new Half-time Schools, and 52 by additions to school rooms.

The number of places in all schools in the District at the close of 1890 is 5,183.

The number of schools in operation during the year was 103: of these, 2 were closed on account of the low attendance, and 4 existed for only a portion of the year.

The total enrolment of pupils for the year has been 4,647, and the average daily attendance 2,5143. The following table will show the enrolment and attendance for the four quarters of the years 1890 and 1890. 1889 and 1890 :--

	Enrolment.		Atter	odance.	Percentage.	
Quarter.	1889.	1890,	1889.	1890.	1839.	1890.
March	4,286 4,279 4,281 4,225	3,562 3,584 3,563 3,535	2,960·2 2,886·3 2,895·6 2,814·1	2,186·9 2,476·2 2,406·9 2·426·1	69. 67.4 67.6 66.6	61·4 69·1 67·5 68·6

The attendance during the first quarter was much affected by the heavy rainfall during that portion of the year. Throughout the latter half of the year, both the enrolment and the attendance at many schools have been scriously reduced by the prevalence of scarlet fever. This has been particularly the case on Monaro, where several schools were closed for a considerable time on account of an outbreak of the epidemic. The schools which suffered most were Bombala, Bibbenluke, Paupong, Brown's Camp Rock Flat. Jimenbuch, and Nimitybelle. Rock Flat, Jimenbuen, and Nimitybelle.

# Inspection.

Of the 103 schools in operation during the year, 101 received a regular, 37 an ordinary inspection, and one school was fully re-inspected. Two Half-time Schools were not inspected regularly, as they were not opened until the second half of the year, and after the usual visit of the Inspector for the regular inspection.

## Organization.

The schools on the whole are well organised. The buildings afford abundant accommodation for The schools on the whole are well organised. The buildings afford abundant accommodation for the children in attendance, and they are, with few exceptions, well supplied with the requisites for their efficient working. The chief defects occur in Half-time Schools, which are built and kept in repair by the residents. Some of these are very cheerless and uncomfortable. In most cases, where serious defects exist, I have obtained a promise from the parents to have them remedied.

A number of schools held an Arbor Day during the year; several, however, had trees planted without such a ceremony. In many schools the play-grounds and teachers' residences have been much improved by the cultivation of flower gardens. The best of these is at Jellat Jellat Public School, where the garden is quite a model of hosticulture.

the garden is quite a model of horticulture.

. The school records are as a rule kept with care, and the lesson guides, such as programmes and time-tables, save in a few schools, are prepared very satisfactorily.

# Discipline.

The discipline is generally satisfactory. Very little corporal punishment is used. The chief defect is the want of regularity and punctuality of some of the pupils. This is very noticeable in schools in the dairy farming centres, where children at a very early age become useful. Their services being required for several hours every morning and afternoon, and frequently for whole days throughout the year, the attendance at such schools is seriously affected.

The subjoined table will show the conditions of the various classes of schools in 1889 and 1890:-

Schools.	Below Standard.		Up to Standard.		Above Standard.	
Schools.	1889.	1890.	1839.	1890,	1889.	1390.
Public Provisional Half-time All Schools	60 62	per cent. 24 40 47 31	per cent. 37 40 25 34	per cent. 40 50 29 40	per cent. 34 13 26	per cent. 36 10 24 29

It will thus be seen that there is a substantial improvement in all classes of schools during the year. In 1889, 40 per cent. of the pupils examined failed to reach the standard; in 1890, only 31 per cent. did so. To a considerable extent, the higher percentage in 1890 is due to the different standard of proficiency followed in this year. The requirements of the new standard which came into use early in 1890 are more reasonable and attainable than those of the standard previously in use. There was only one House School in operation this year, and for a portion of it only; it was below standard when

Teachers.

The number of teachers and pupil-teachers employed in the schools of this district at the close of the year is as follows :-

Teachers :	
Class II A	4
, II B	7
, 1II A	19
" TIT D	21
" III O	11
Unclassified	29
O nettesment	
Total	91
Pupil-teachers :	
Class I	. 1
, II	
" III	
717	_
33 AV	
Total	11
Grand total	102

The number of teachers promoted on account of good service under clause 86 of the Regulations, was 3; 2 from Class III B to class IIIA; and 1 from Class II B to Class II A. Taken as a body, the teachers are zealons in their work, and are held in high esteem by both pupils and parents. I have had no occasion to find fault with the conduct or habits of any of them since taking charge of the District.

### Summary.

1. The school accommodation is ample for the requirements of the District.

2. Five new buildings have been erected, three are in course of erection, and the establishment of three has either been sanctioned or is under consideration.

The organization and discipline are satisfactory.
 The attainments are in advance of those shown last year.

5. The future prospects of the schools, so far as they can be seen with any certainty, are good, and I anticipate increased prosperity for 1891.

P. DURIE. Inspector.

Bega, 27th December, 1890.

## ANNEX S.

## INSPECTOR WILLIS' REPORT.

Inspector Willis' Report.

When last year closed, there were under my supervision 97 schools, classified thus:—Public, 40; Provisional, 13; Half-time, 38; and House to-House, 6. Before the work of the current year was commenced, a redistribution of the schools in Goulburn District was effected. From Braidwood Section to Goulburn 33 schools, and from Braidwood Section to Bega 10 schools were transferred, and at the same time 34 of the schools in the Monaro Circuit of Bega Section were placed in the Braidwood Section. Those 33 attached to the Goulburn Section were:—Brooks' Creek, P.; Bungendore, P.; Canberra, P.; Googong, P.; Gungahleen, P.; Kowen, P.; Hoskingtown, P.; Michelago, P.; Rossi, P.; Queanbeyan, P.; Tuggranong, P.; Yarralumla, P.; Inglewood Forest, Prov.; Majure, Prov.; Woodfield, Prov.; Weetangara, Prov.; Rob Roy, H.-T.; Williamsdale, H.-T.; Gidleigh, H.-T.; Molonglo, H.-T.; Urila, H.-T.; Burra, H.-T.; Keewong, H.T.; Waterholes, H.-T.; New Line East, H.-T.; Werriwa, H.-T.; Foxlow, H.-T.; Carwoola, H.-T.; Ryric Creek, H.-T.; Hilldyke, H.T.; Thornhurst, H.-T.; Black Creek, H.-T.; and the House-to-House school at Barnes' Creek and Naus.

The 10 schools removed from Braidwood to Bega Section were:—Bergalia, Kiora, Bodalla, Eurobodalla, Moruya, Nerrigundah, Newstead, Turlinjah, Nootooma, and Wagonga, all of which ranked at the time as Public Schools.

bodalle, Moruya, Nerrigundah, Newstead, Turlinjah, Nootooma, and Wagonga, all of which ranked at the time as Public Schools.

The following are the 34 schools transferred to Braidwood from Bega Section:—Adaminaby, P.; Arable, P.; Berridale, P.; Bredbo, P.; Caddigat, P.; Collinton, P.; Cooma, Primary; Cooma, Indunts; Cootralantra, P.; Dairyman's Plains, P.; Jindabyne, P.; Kiandra, P.; Middlingbank, P.; Murroo, P.; Rocky Plain, P.; Rock Villa, P.; Tollbar Creek, P.; Thurbergal Lake, P.; Umaralla Siding, P.; Umaralla, P.; Countagany, Prov.; Ingebyra, Prov.; Moonbah, Prov.; Mowenbah Lower, Prov.; Townsend, Prov.; White's Point, Prov.; Alum Creek, H.-T.; Bolairo, H.-T.; Coolringdon, H.-T.; Jellamatong, H.-T.; Eaglehawk, H.-T.; Hemsby, H.-T.; Boggy Plain House School, and Bredbo (North and South) House School.

Thus 43 were taken from, and 34 others added to, this section of schools, which left a tetal of 88 schools to begin the work of the year with. To these have since been added the following 9 new schools:—

Thus 43 were taken from, and 34 others added to, this section of schools, which left a tetal of 88 schools to begin the work of the year with. To these have since been added the following 9 new schools:—
Uridux, Prov.; Barlang, H.-T.; Nithsdale, H.-T.; Kalkite, H.-T.; Dena River Lower, H.-T.; Anembo, H.-T.; Buckenbour, House-to-House; Forest View, House-to-House; and the Evening Public at Arabien West. No schools have been closed this year, but teaching has been temporarily stopped at Back Creek, H.-T., and at Jellamatong, H.-T., pending the provision of more suitable buildings than the existing ones. There are now, therefore, 97 schools under my supervision, and they are classified thus:—Public, 37; Provisional, 17; Half-time, 37; House-to-House, 6; and Evening Public, 1.

For the establishment of new schools 2 numbications were received and dealt with. They were:—

For the establishment of new schools, 9 applications were received and dealt with. They were:-

For Half-time: At Kalkite, Cooma Creek, and Bunyan. For Provisional: At Uridux, Bendorsh, and Woodend. For House-to-House: At Forest View and Bullenbolong. For Evening Public: At Araluen West.

Only one of these applications, that, namely, from Woodend, was refused. At Uridux, Kulkite, Forest View, and Araluen West the schools asked for are now in operation, and at Bendorah and Bullenbolong the necessary buildings are being erected, and will soon be finished. At Cooma Creek and Bunyan the parents have not yet taken steps to put up school-rooms for their

with very few exceptions the material condition of the schools in this section is good, and a conwith very few exceptions the material condition of the schools in this section is good, and a conwith the bear danc, and expense incurred in making it so. At Major's Creek the siderable amount of work has been done, and expense incurred in making it so. At Major's Creek the old wooden structure is now replaced by a large brick building, and at Bombay, Alum Creek, and Anembo.

Anembo, the parents, partly at their own expense, have put up commodious little school-rooms to super-sede the unsuitable ones hitherto made use of in those localities. Besides this work, one residence and nineteen schools were repaired, a weathershed was provided at Colinton and Captain's Flat, and the last-mentioned school was enlarged by the erection of a class-room for it, and while I write this the school and residence at Araluen West, and the residences at Braidwood, Araluen, and Adaminaby are being repaired, and new buildings to replace old ones are being creeked at Adaminaby and Murroo.

At Kiandra and Adaminaby the accommodation afforded by existing buildings is insufficient, and arrangements are now in progress to remedy this state of things. All the other buildings are at present large enough, and the aggregate number of seats provided by the whole of the schools now in operation is 4,498, being an increase of seventy-one seats upon the total of last year.

Since very few more than a third of my schools rank as Public, it follows that many of the sites are pointed war fewered.

are neither measured nor fenced.

Since very few more than a third of my schools rank as Public, it follows that many of the sites are neither measured nor fenced.

The majority of the vested school-grounds have an area of at least 2 acres, but at Cooma and at Araluen only one acre is provided, and at Nelligen the play-ground measures barely half an acre. At Araluen the school area is to be at once enlarged to 4 acres by the purchase of adjacent land, and the advisableness of extending the grounds of Cooma and Nelligen schools is under consideration.

At Araluen, Araluen West, Berridale, Braidwood, Jindabyne, Kiandra, Major's Creek, and Bell's Creek, much has been done by the teachers to improve the play-grounds. Trees have been planted this year round all these schools, and additional flower-beds laid out at Major's Creek, Bell's Creek, and Braidwood. Arbor days were successfully held at Araluen, Kiandra, and Jindabyne, and the prizes offered at Braidwood Public for the best kept gardens were keenly competed for, and descreedly won.

The gross cerolment of pupils during the year was 3,495, the multiple enrolment 388, and the net enrolment 3,107. The average attendance for the year was only 1,533-4, and the ordinary attendance 2,200 pupils. The irregularity evidenced by this comparatively small annual average is mainly attributable to exceptionably inclement weather prevailing in this part of the Colony during the months of February, March, May, and June.

The whole of the schools under my supervision received a regular, and thirty-three of them an ordinary inspection, while six were fully inspected a second time. This year the efficiency of the schools was tested by the revised standard, with the result that fifty were found above, thirteen up to, and thirty-four schools below standard, with the result that fifty were found above, thirteen up to, and thirty-four schools failed to reach the standard prescribed, it must be pointed out here that eight of that number were new, and but recently opened at the time they were inspected, and eight othe standard. Not a few of the time-tables had to be amended, and some were declared altogether unsuitable. The omission of a synopsis, insufficient oral teaching for junior pupils, and the inconvenient arrangement of sitent and oral lessons, were the most serious of the defects noted in the time-tables with which fault was found. The lesson register in every well organised school will contain entries exactly in keeping with the work set forth for each class in the time-table, and the lesson programme. In too many instances this agreement has been sought for in vain. The attendance records were generally found complete and correct, and in those schools to which savings banks have been attached, the account books are punctually posted, and accurately kept. There has been very little need to find fault with the classification of the pupils. Several teachers have been cautioned against forming unnecessary sub-divisions of classes one and three, while here and there pupils have been found to be enrolled in one class and taught in another. and taught in another.

In nearly every one of the schools the discipline has been favourably reported upon, and in some full marks have been awarded for it. The supervision of the pupils during play time is an important duty that has been neglected in one or two schools, and some of the junior teachers have not yet learnt the art of gaining and sustaining the active attention of their pupils. Every effort has been made to secure the punctual and regular attendance of the pupi s, and in most cases where this end has not been gained, the cause has been due to circumstances over which the teachers have had no control.

The pupils examined in the schools this year numbered 2,120. The following table shows how

many of these were examined in each subject, and the percentage of passes in each for the years 1889

and 1890 :--

Subject.	Pupils.	Percentages, 1890.	Percentages, 1889.
Reading	2,120	86	88
Writing	2,120	80	79
Dictation	1,695	78	
Arithmetic	1,764	69	69
Grammar	815	73	72
Geography	85 L	70	60
History, Knglish	722	60	67
Australian	170	91	69
Scripture	2,004	1 74 1	71
Object Lessons	1,820	75	79
Drawing	1,557	4.4	68
Music	1,328	75	86
French	22	86	100
Enclid ,,,,,,	114	80	72
Algebra	16	100	87
Mensuration	135	98	41
Latin	23	69	100
Needlework	638	97	91
Drill	1,695	77	91
Science	16	100	100

In consequence of the transfer of so many schools to and from this section, the results of the inspection this year cannot reasonably be compared with those recorded for last year. A few brief comments on the above statistics are necessary. Many pupils read hurriedly, and a large number failed to give the meaning of words, and to understand the subject matter of the lessons read.

A higher percentage of passes in writing is to be obtained if every teacher will insist upon daily progress—upon the last line written being invariably better than the first; and if more care be exercised in the provision of the best procurable writing materials. In arithmetic, 69 per cent, of the examinees successfully worked the tests put before them.

successfully worked the tests put before them.

The majority of those who failed, did so because not intelligently exercised in mental arithmetic. When a new rule is being taught, mental problems therein should be invariably given to the pupils before state work is attempted, after the plan indicated in Longman's "Junior Arithmetic," published last year. English history is mechanically handled by a considerable number of the teachers, and some fail to pass their pupils in this subject, because they have not yet become themselvos sufficiently familiar with it. Australian history is taught only to the senior pupils sitting in fourth and fifth classes, hence the higher percentage of passes than in English history. The object lessons given would be of much more educational value if pictorial representations, and specimens of the objects under notice were invariably set before the pupils during the progress of such lessons. Last year, drawing, under the old standard, was studied by the upper classes of the schools only, now, upper and lower classes alike are taught to draw, hence the chief cause of the low results recorded for the subject this year.

The higher branches have been successfully taught in Braidwood Superior Public, and in the Public Schools at Araluen, Major's Creek, and Cooma.

The higher branches have been successfully taught in Braidwood Superior Public, and in the Public Schools at Araluen, Major's Creek, and Cooma.

A Kindergarten class was established in Braidwood Superior School last April, and placed in charge of the assistant teacher, Miss T. Daly, who, before taking charge, received special training for the work. Under her competent management the class passed a very successful examination last September.

Viewed generally, the teaching throughout the year may be described as having been earnest, fairly correct in method and in the main effective.

In the schools to which this report relates there are 77 teachers, 3 assistants, and 10 pupil-teachers. They are classifed thus.—

They are classified thus:-

Office.	Class I.	Class III.						
	-	A.	В.	A.	В.	C.	- Probationer.	. Total.
Feachors		7	4	13	6	7	40	77
Assistants			1	1			1	3
Office.	Class I.	Class	II.	Class III.	Class I	IV. 1	Probationer.	Total.
Pupil-teachers	4	1		2	2		1	10

All the 40 unclassified teachers received, before being employed, the training necessary to fit them for their work, and 10 of them are ex-pupil-teachers, who served four years before being raised to their present positions. All the teachers employed in the schools of this section are persons of exemplary character, and all but two are conducting their schools to the satisfaction of the parents

amongst whom they are labouring.

All the pupil-teachers have been favourably reported on by their teachers. They are young persons of good repute and of studious habits, and are one and all making commendable progress in their school work.

To sum up :-

Six schools have been opened where none formerly exis'ed, and three others reopened.
 One large brick building and eight small wooden ones erected.
 Nineteen schools and a residence repaired, and one school-room enlarged.
 Two schools provided with weather-sheds.
 One play-ground enlarged, and ten planted with trees.
 A Kindergarten class established and conducted by a competent and successful teacher.
 The school work generally carried on with diligence and a fair measure of success.

Thus some progress has been made during the year that closes to-day, and I feel certain that at least as much will be effected during the year 1891.

Braidwood, 31 December, 1890.

M. WILLIS, Inspector.

## ANNEX T.

## DISTRICT INSPECTOR LOBBAN'S REPORT.

The quarterly returns for December, 1889, gave 240 schools in operation in the Grafton district at the close of the year. Of these, the Evening Public School at Ballina was not opened in 1890, but during the year 15 new schools were established, and 4, that had been closed for some time, were resuscitated. Four schools lapsed on account of diminished attendance. Of the new schools established 3 are in the Port Macquarie section, 5 in the Grafton section, and 7 in the Lismore section. Thus, at the close of of 1890, there were 252 schools in operation, affording accommodation for 15,276 pupils, being an increase of 789 seats. As the highest enrolment at any given date did not reach 13,000, it would seem that more than adequate accommodation is available; and, in point of fact, nearly every school building in the district is large enough for existing requirements. Whenever a case occurs in which there is not sufficient room, prompt steps are taken to remedy the defect. The decision of the Minister to establish separate schools for the aboriginal children on the Macleay, Hastings, and Wallamba Rivers is a wise one. It is very undesirable that the white children should have to sit in school side by-side with children from aboriginal camps.

Works in connection with the crection of small school buildings, and the execution of minor re-

works in connection with the crection of small school buildings, and the execution of minor repairs, were carried out under the supervision of the inspectors in 46 cases, at a cost of £1,160 7s. 0d.; and about £50 were expended under the supervision of school boards. Works estimated at £289 are still in progress under inspectoral supervision. All the more important works, however, were supervised by an officer from the Architect's Department, under whom upwards of £8,900 were expended in new buildings, repairs, and improvements. Works valued at £8,000 are still in progress, and will be completed shortly. New buildings were crected at Cudgen, Smithtown, Kramback, and the buildings at Coraki, Lawrence, and Wingham were enlarged. Extensive additions and improvements are in progress at Grafton, Lismore, and other centres. The more recently crected wooden buildings have been constructed in such a way as to prevent the encroschment of white ants, and the plan adopted appears to be successful.

successful. I cannot speak too favourably of the valuable assistance rendered to me by the Architect's clerk of works in this district, and of the very satisfactory way in which his duties are performed. His work was greatly increased this year by the destructive floods in the nothern rivers. Through his zeal in carrying out the works authorised upon the recommendations of the inspectors, the material condition of the schools generally is in a very satisfactory state. New settlements are constantly being formed, and applications for schools are more numerous than formerly. It is anticipated that the number of schools in this district will be largely increased by the end of the current year.

Arbor Day in 1890 was kept by only a few schools; but it is expected that it will be widely made use of in 1891. Flower gardens are attached to most of the residences of teachers, and many of them are nicely laid out; but, with few exceptions, the play-grounds are shadeless and flowerless. Two schools in the Grafton section deserve special mention on account of the care bestowed upon the school-grounds, viz., Leelands Public and Coramba Provisional. Wherever it was found practicable an effort was made to carry out the Minister's instructions in reference to the enlargement of the school sites. Eeveral cases have already been dealt with, and others are under consideration.

Several cases have already been dealt with, and others are under consideration.

Notwithstanding the almost constant rain and frequent floods in the first half of the year, all the Notwithstanding the almost constant rain and frequent floods in the first half of the year, all the the schools in the district—except a small Provisional School which lapsed in the March quarter—received a regular inspection, and 51 of them had an ordinary inspection also. In the 255 schools inspected 8,960 pupils were examined. It was found that 203 schools, or 80 per cent., were up to or above the standard, and 52 were below it. In the previous year 85 per cent. reached or exceeded the standard. There is ample excuse for the apparent declension. Less than 40 per cent. of the pupils attended 70 days in the first half-year, while in the latter half whooping cough, measles, and scarlatina prevailed. Moreover the 52 schools below the standard include a number of small provisional schools, some Half-time Schools, and the 2 House-to-house Schools recently established. In all subjects except grammar, history, drawing, music, French, needlework, and drill, in which there is a slight falling-off, the results of the examination, taken as a whole, were equal to or better than those of the previous year.

Cadet Corps have been formed in connection with the Superior Public Schools at Grafton and Lismore. The Grafton Corps is in a flourishing condition, and numbers upwards of 60 members. A contingent of the Grafton cadets attended the encampment in Sydney during the year.

Pupils from 12 schools were present at the University examinations, and 27 of them passed. This

Pupils from 12 schools were present at the University examinations, and 27 of them passed. This is not up to the record of 1889, when 9 schools passed 20 pupils. It is not less so isfactory, however, inasmuch as a greater number of schools sent up successful candidates. All the Superior Public Schools, except West Kempsey, were represented at this examination. The Public School at Frederickton, not only passed 6 pupils at the University examination, but its general efficiency at the regular inspection

was such as to merit special commendation.

From reports obtained from all the teachers in the district, it is found that in very few schools,

From reports obtained from all the teachers in the district, it is found that in very few schools, is special religious instruction given with any degree of regularity. The dergymen connected with the Church of England Cathedral, however, give regular religious instruction in the Grafton Schools. The teachers throughout the district will welcome accredited instructors from any religious denomination, and afford them opportunities of conducting classes without interruption.

Savings banks are in operation in 41 schools. There were at the end of the year, 1,340 depositors, with £425 9s. 5d at their credit. Considering the unfavourable year, this result is not unsatisfactory, although lower than the record of 1889.

Sixty-eight parents or guardians, representing 105 children were prosecuted under the compulsory clause of the Act. There were 81 convictions, 10 dismissals, and 14 withdrawals. The fines and costs amounted to £28 16s. The number of free pupils in 1890 is nearly three times as great as it was in 1889; but the increase is only temporary. Scores of families on these rivers had their whole crops swept away by floods, and were, for the time, left destitute. The list of free scholars has thus been greatly increased. The amount of school fees in arrear (£118 10s.) is also larger than that of 1889. It is, however, made up chiefly of sums under 5s., which will be collected by the teachers. At the close of September Quarter, all persons owing 5s. and upwards were written to, and their replies were so satisfactory that it was not dremed necessary to recommend legal action in any case.

The supply of applicants for small schools and for the position of pupil-teacher has been greatly in excess of the number actually required. It has been found more satisfactory to employ young men in the small bush schools, and, hence the offers of many female applicants, otherwise eligible, had to be declined.

declined

declined.

There are 242 teachers, 14 assistants, 1 workmistress, and 71 pupil-teachers employed in this district. Of at least 95 per cent, of the teachers, I can speak in the highest terms of praise. They are competent, zealous, and industrious; their influence in their respective spheres is always good, and they are deservedly esteemed by the public. The small minority are indolent and inefficient, and always in trouble, either with the parents or the Inspector. The work of the pupil-teachers is heavy, and they sometimes do not get the sympathy and assistance which they have a right to expect from their teachers. Their behaviour throughout the year has been excellent, and the failures at examination were few.

Viewed in all its aspects the condition of the schools in the district is very satisfactory, and there is good promise for the future.

The reports of Messrs. Nolan and M'Lelland and statistics for the whole district are attached.

A. LOBBAN, District Inspector.

Grafton, 6th January, 1891.

## ANNEX U.

## INSPECTOR NOLAN'S REPORT.

Inspector Nolan's Report.

At the close of 1889 my list comprised 73 Public, 8 Provisional, and 12 Half-time Schools; in all, 93 schools. Early in the present year a new Public School was opened at Greenhills; in February the Half-time School at Bellbrook lapsed on account of small attendance, and at the same time a similar school at Pee Dee was converted into a Provisional School; Provisional Schools were established at Belbouric and Tigrah in the carly part of the year; during the December quarter Kinchella Creek Half-time was closed, and Clybucca Half-time was raised to the rank of a Provisional School. In the course of the year one (1) public and four (4) Provisional Schools were brought into operation, whilst four (4) Half-time Schools ceased to exist. The year ends with 74 Public, 12 Provisional, and 8 Half-time Schools; in all 94 schools.

With the exception of a few isolated spots where small schools will probably be established during the coming year, this section is adequately provided with educational advantages, and the schools are well distributed. In connection with riparian settlements, difficulties frequently arise on account of the position of the schools, the intervening rivers proving obstacles to regular attendance; hence claims are often advanced for the establishment of schools on the opposite sides of the same river, and within short distance of each other; in regard to this matter parents might reasonably be expected to assist the State by providing ferrying accommodation for their children, and, by so doing, they would obviate the expense and the disadvantage arising from the multiplication of small competing schools.

The Minister has authorised the provision of separate schools for aberiginal children; such schools will be resdy for occupation early in the coming year at Pelican Island, Rolland's Plains, Wauchope, and Forster; it is anticipated that, whilst the aberiginal children will gain by separate treatment, an objectionable feature will be removed from some of the public schools

The material condition of the schools is gradually improving. Commodious and well-designed buildings are superseding the old and unsuitable structures crected many years ago. All of the more important schools are now provided with residences, and, with but few exceptions, the premises receive due care. Speaking generally the buildings are in good repair, and they are amply furnished with modern

appliances.

During the year the sum of £6,773 3s. 7d. was expended by the Architect either in affecting substantial repairs, or in the erection of new buildings; contracts to the extent of £927 18s. are also in progress, and initial steps are being taken for extensive works for next year; minor repairs, costing £92 5s. were effected under inspectoral supervision. Greater attention and, consequently, more encessful results are observed in connection with horticulture; next flower-gardens are becoming more common, and the majority of the teachers display a commendable desire to comply with the recently issued instructions concerning agriculture. During the year the question of increased area of school sites was kept in view. Hitherto an area of two (2) acres has been deemed adequate, but on account of the contemplated extension of agricultural instruction, and also in order to provide more space for recreation purposes, an additional area of two acres is secured where practicable.

## Inspection.

All schools (96) in operation during the year received regular inspection, and 12 of them ordinary inspection; incidental visits were paid when opportunities arose. On account of long continued wet weather the first half of the year was very unfavourable to the work of inspection; in consequence of delays thereby occasioned the number of ordinary inspections specified on my programme was not reached; the 12 ordinary inspections referred to and one regular inspection (Wingham Public) were held by Mr. District-Inspector Lobban. The inspections were conducted in accordance with the revised standards of proficiency, which appear to be suitable, and to meet with the approval of teachers. 3,262 children were examined; in the previous year 3,280 pupils were present at inspection. Of the 96 schools inspected 87 (or 91 per cent.) satisfied the required standard; the corresponding numbers for last year were 87 passes (or 93 per cent.) out of 93 schools. It would thus appear that the results for 1890 are slightly below those shown last year; it must, however, be borne in mind that during the present year the instruction was strictly tested under new standards, and that the attainments were seriously affected by irregularity of attendance caused by wet weather. All things being considered, the work done during the year has been of a reasonably satisfactory character. The under mentioned schools deserve special mention for successful work during the year; they are placed in order of merit:—Wingham Public, Frederickton Public, Seven Oaks Public, Rawdon Island Public, West Kempsey Public, and Pelican Island Public.

Island Public.

The following schools were represented at the recent University Junior Examinations:—
Frederickton Public, secured six (6) passes; Port Macquarie Public, four (4) passes; Tarec Public, three
(3) passes; East Kempsey Public, two (2) passes; and Wingham Public, one (1) pass.

The teachers serving under my supervision are classified thus :-

		1	,

Classification of pupil-teachers:

The following information is derived from the quarterly returns:-

Quarters.	Enrolment.	Average attendance.	School fees collected.	School fees in arrear.	Free pupils.
March	4,311 4,305 4,394 4,341	2303·5 3009·6 2932·3 3200·0	£ s. d. 313 10 6 451 18 3 459 13 3 432 12 6	£ 6. d. 39 7 3 27 18 3 34 10 9 42 8 0	139 157 178 150

Savings Banks are in operation in 17 schools; on the 31st December there were 339 depositors, and the total credit amount was £174 19s. 10d.

At the close of 1839 accommodation was provided for 5,728 pupils; by the closing of two schools and by the giving up of old buildings 357 seats were lost; on the other hand, the erection of new buildings gave 670 additional seats, so that during the year there was an increase of 313 seats. The enrolment at the end of the year was 4,341, and existing buildings afford accommodation for 6,041 pupils

pupils.

The work done during the year now past has been satisfactory, and the prospects of the coming

Port Macquarie, 31st December, 1890.

W. NOLAN. Inspector of Schools.

## ANNEX V.

# INSPECTOR M'LELLAND'S REPORT.

Inspector Mcelland's Report.

At the beginning of the year there were 73 schools in operation in the Lismore section. During the year Public Schools were opened at Lindendale and Newrybar, and Provisional Schools at Booeric, Granuaile, Tregengle, Uralla, and Wooram. Dangarubba Creek Provisional (closed in 1887), and Warwick Half-time (closed in 1889), were reopened, while the schools at Goolmangar and Brook P ark lapsed on account of failing attendance. Thus there are now, at the end of the year, 80 schools in operation, classified as follows:—

Public, 59; Provisional, 17; Half-time, 4; Total, 80. Other new schools will be opened early next year at Tuckurimba, Coorabell, and Rosebank. Altogether 11 applications for the establishment of small schools have been dealt with, but only in 6 cases has the Minister decided to grant monetary assistance towards the erection of school buildings.

At the end of 1839 accommodation was available for 4,253 pupils. By the erection of severalnew buildings during the year, and the enlargement of some others, this number has been raised to 4,518,

4,518, or 4,594, reckoning respectively 100 cubic feet of air space, or 8 square feet of floor space to each pupil. Since there were never, in any quarter, quite 4,000 pupils enrolled, it is manifest that the accommodation as a whole is ample. Where, in one or two individual cases, it has been found inade-

accommodation as a whole is ample. Where, in one or two individual cases, it has been found inadequate, steps have been taken to remove the defect.

Briefly, it may be stated that both in respect to amount and distribution, the residents of this district are well supplied with the means of education, and have every reason to be satisfied with the liberal treatment dealt out to them by the Department of Public Instruction.

New residences have been erected at Woodburn, Bexhill, Clunes, New Italy, and North Pimlico, under the supervision of the Architect, and at M'Lean's Ridges under my own direction. Others are in progress at Wyrallah and Pimlico South, to replace old premises. New school buildings, intended to supplant old ones, are in course of erection at Cadgen, Pimlico South, M'Lean's Ridges, and Wyrallah. Wyrallah premises are of wood, the rest of brick.

progress at Wyrallah and Pinico South, to replace old premises. New school buildings, intended to supplant old ones, are in course of erection at Cudgen, Pimico South, M'Lean's Ridges, and Wyrallah. Wyrallah premises are of wood, the rest of brick.

From the returns in my office I find that the sum of £3,621 16s. 5d. has already been expended in the execution of various works, while the contracts not yet completed involve a further outlay of £3,229 1s. 7d. The amount spent in miscellaneous minor repairs and improvements under the Inspector's supervision was £251 13s. 10d.

The general material condition of the Department's property in this section is little short of good. Most of the teachers are good tenants. Some, however, cannot be accused of wasting any superfluous energy in repairing little defects in the premises committed to their care. They prefer to allow the little defects to become big enough to give countenance to their ready applications for improvements. Little or nothing has been done this year towards beautifying the school-grounds. A few teachers attempted to inaugurate an "Arbor Day," but through no fault on their part their well-meant efforts proved abortive. Just as arrangements had been made for sending trees from Sydney, the "strike" intervened, and delayed their arrival until it was too late to plant them with any prospect of success. Only a limited number of the teachers, I regret to state, seem to take any practical interest in gardening, and of this minority many have been prevented, by the excessive wetness of the season, from doing as much as they could have wished. I hope that the matter will be taken up much more heartify during the coming year, and that the number of those teachers who appreciate the educative effect upon their pupils' minds of neat and ornamental school-grounds will be considerably increased. It is a fact, however, that many teachers who might reasonably be expected to hold wider views upon the subject, are narrow-minded enough to define education as the acquisit their pupils.

Though the majority of teachers still continue to gain creditable marks for organization and discipline, the proportion of those who have failed, comparatively or absolutely, in these departments of school management, is not materially lessened. Many of the unbrained, and even some of the trained, teachers are unmethodical in their liabits, and do not readily submit to the routine required for effective organization. Others are deficient in the art of governing, and are too prone to adopt the quickest, not the best, means of securing obedience from their pupils.

All schools except Brookpark, closed in January before I could visit it, received a regular inspection, but only eleven an ordinary inspection. The first half of the year was exceedingly wet, and floods were as common as they were disagreeable. It is not surprising, therefore, that so few second inspections were made. It was a frequent experience to find the schools either occupied by the teacher alone or by so few numbles that their examination gave a by no means trustworthy indication of the value of the so few pupils that their examination gave a by no means trustworthy indication of the value of the

teacher's work during the year.

The condition of the schools, as clicited by inspection, reveals that 52 exceeded, 4 were up to, and 25 failed to reach, standard requirements. Last year 20 out of 75 were below the mark. That a still larger percentage of comparative failures should have occurred this year is doubtless attributable, in a measure, to the unfavourable conditions under which some of the schools were inspected. It is significant, however, that only 3 out of 14 Provisional, and 2 out of 4 Half-time Schools passed a satisfactory example. measure, to the unfavourable conditions under which some of the schools were inspected. It is significant, however, that only 3 out of 14 Provisional, and 2 out of 4 Half-time Schools passed a satisfactory examination, though all except 2 of these schools were tested during the second half of the year, when a fair amount of time had passed in which the teachers might, to some extent, have recovered lost ground. Under the new standards, too, the disadvantages under which teachers labour on account of irregular attendance are reduced as nearly as possible to a minimum. In view of these facts, it seems just to conclude that the teachers are chiefly responsible for the low state of efficiency of such schools as are ranked below standard in the accompanying lists. The following table contains information as to the subjects of examination, and the number of pupils tested, with the percentage of passes in each case for 1839 and 1890:—

Subject.	Number of pupils examined.	Percentage of passes for 1890.	Percentage of passes for 1889.	Increase or decrease for 1890.
Reading Writing Arithmetic Grammar Geography English History Australian History Object Lessens Drawing Music French Euclid Algebra Mensuration Latin Needlework Drill Natural Science	2,645 2,645 858 858 817 277 2,524 2,517 2,475 2,105 10 72 18 57 18 889 2,481	86 81 76 69 68 56 63 68 58 54 70 81 72 50 84 53	91 86 80 77 73 60 60 70 77 72 76 88 79 85 85	Decrease 5 per cent.  5

In every subject almost the results are inferior to those of last year. This deterioration is accounted for by the irregularity in the attendance, caused by rain and floods during first half-year, and hy an epidemic of mearles in the second. For the half-year ending June, only 37 per cent. of the pupils enrolled attended the minimum number of days required by the Act. I do not suppose so low an average has been reached in any other district in the Colony, and it is pulpable that such a degree of enforced irregularity must have injuriously affected the pupils' proficioncy in most, if not all, of the subjects of instruction. Though not equal to last year's results, the percentages indicate, on the whole, a very fair amount of thoroughness in the teaching. The unskilful and mechanical teaching is confined chiefly, but not entirely, to the Provisional and Small Public Schools. Teachers whose educational qualifications are, at best, only tolerable, who only imperfectly appreciate the responsible nature of their dutics, and who rarely indulge in preparatory study of their lessons, cannot hope to achieve much.

The marks for general proficiency obtained by the following schools entitle them to honorable mention:—Acada Creek, 7.1; Ballina, 8.3; Lismore Superior Primary, 7.5; Lismore Infants', 7.2; and

Merdell, 8.0.

Only two schools were represented at the University Examinations. A junior candidate passed from Lismore, and another from Broadwater Public. Last year there were seventeen passes. The falling off is not attributable to any lack of interest in these examinations, but is simply due to the fact that in country schools a goodly number of candidates cannot be obtained every year. It is very likely that a good record will be shown next year. The high fees charged are certainly prohibitive in the case of many a promising pupil, and this fact has been so frequently dwelt upon that it is a matter for wonder that no reduction has yet been made by the University authorities.

No new Savings' Banks have been opened. There are now six in operation. At the close of the year they had, in all, 262 depositors, with a credit balance of £83 0s. 1d.

The teaching staff under my supervision consists of seventy-eight teachers, four assistants, and eighteen pupil-teachers. Of most of the teachers I can report in favourable terms. They are steady and industrious, many of them possess excellent qualifications for their office, and they rarely fail to secure the esteem of the people among whom they are placed. There is still a small section who have deservedly fallen under the Minister's censure for the unsatisfactory performance of their duties, and whose services are likely to be dispensed with unless they display greater efficiency and zeal during the coming year. The pupil-teachers continue to do useful work, and, with very few exceptions, are very favourably reported upon by the head-teachers under whom they are placed.

In conclusion, I may state that primary education is, generally speaking, making satisfactory progress in the Lismore section, and I look upon the prospects of the coming year as distinctly favourable.

H. D. M'LELLAND,

H. D. M'LELLAND,

Inspector.

Lismore, 29th September, 1890.

#### ANNEX W.

## DISTRICT-INSPECTOR T. DWYRR'S REPORT.

At the beginning of the year twenty-one schools, lying beyond Liverpool Range, were transferred to this district. In July they were again placed in the Armidale district. No further reference to these schools will be made in this report. When the schools under the Department opened, in January, 1890, there were in operation in each section of this district, the following schools, viz.:—

Public Schools.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
62	1	2	P11. P12. C11. C	************	65
61	1				62
36	8	20	. 4	***********	68
56	10	10	4	1.1	80
215	-20	32	8		275
	62 61 36 56	Schools. Provisional.  62 1 61 1 36 8 56 10	Schools.         Provisional.         Half-time.           62         1         2           61         1            36         8         20           56         10         10	Schools.         Provisional.         Half-time.         House-to-house.           62         1         2	Schools.         Provisional.         Half-time.         House-to-house.         Evening.           62         1         2

In the Maitland section during the year, Dairy Arm and Mount Finch were reduced from Provisional to Half-time rank. Two non-vested Public Schools were opened in leased buildings, viz., Homeville West and Leconfield. Extensive improvements were effected to a considerable number of schools and residences, at a cost of £626 9s. A new school-room (weatherboard), capable of accommodating forty-four pupils, was creeted at Murray's Run, under the supervision of the Local Public School Board, at a cost of £99. Weathersheds were erected at Allandale and Wallalong. Three class-rooms were creeted by the Architect in connection with the following schools, viz., Aberglasslyn, Greta Infants', and Singleton Infants'. New brick residences were also creeted by that officer at Dunolly and Ellalong. A new school-room and a teacher's residence (brick) are in course of creetion at Bolwarra. At Richmond Vale a new residence (brick) approaches completion. The teachers' residences at East Maitland, Branxton, and Singleton were considerably enlarged and improved by the Architect during the year.

In the Newcastle section new schools were opened at Catherine Hill Bay, Toronto, Carrington, and Wyce Provisional. New residences were erected in connection with the Public Schools at Hamilton, Toronto, and West Wallsend. New buildings to replace old ones were creeted at Lambton and Morquito Island, and classrooms were provided for at Adamstown Infants', Charlestown Primary, Minmi Girls', and Minmi Infants'. A number of schools received important improvements during the year. It has been decided to establish schools at Awaba Platform, Burwood South, Cardiff, Hue-Hue, Morrissett, Young Wallsend, Killingworth, and to open additional departments at Islington and Stockton.

In the Muswellbrook section, during 1890, a Provisional School was opened at Owendale. The House School at Muscle Creek, the Provisional at Howick, and the Half-time Schools at Bunnan and Ginghi were closed through the smallness of attendance at each. Timor Public was reduced to Half-time rank. The House Schools at Springfield and Putty were advanced to Half-time rank. The Bylong Provisional suffered reduction to Half-time rank. The teacher's residence was enlarged. A new and commodious teacher's residence is in course of erection at Muswellbrook.

commodious teacher's residence is in course of erection at Muswellbrook.

In the Dungog section, Hannah Bay was advanced to Public rank from Half-time, and Nelson's Bay from Half-time to Provisional. Tabule Creek was closed, and Binglebrah and Sugarloaf Creek were worked as Half-time Schools. Swan Bay Half-time was closed last June, in consequence of smallness of attendance, and Limeburners' Creek Provisional was reduced to Half-time for the same reason. At Woerden a Provisional School building (wood), creeted by the Inspector, was opened in July. Wangat, which had been closed for a number of years, was reopened in July as a Provisional School. The Barrington Aborigines' Camp Provisional School, also erected by the Inspector, was opened in October. In it 19 coloured children were enrolled, who appear to be good pupils. Cross Creek was reopened in July, but had to be closed again in October for want of pupils. Early in the year a new brick schoolroom, erected by the Architect, was occupied at Williamtown. At Brushy Hill a new wooden building was erected (to replace the old one) by the Inspector and a local Committee. Brick buildings were orected at Telegherry and Euwylong by the Inspector. Extensive repairs and improvements to schools and residences were effected by that gentleman during the year.

The number of schools in the Maitland district at the close of 1890 is shown in the following table,

Section of District.	Public.	Provisional.	Half-time.	House-to-house.	Evening Public	Total.
Maitland	64	1	2		1	67
Newcastle	63	3				66
Muswellbrook	36	8	20	4		68
Dungog	57	13	10	2		82
Totals	220	25	32	6		283

There were 290 schools in operation during some portion of the year.

The schools are well placed, with few exceptions, and afford more accommodation than is required for the average attendance of pupils, floor space for an attendance of upwards of 24,000 pupils having been provided by the close of the year.

The material condition of the vested buildings shows progressive improvement. The lighting and ventilation of new schools and teachers' residences are better attended to than formerly. Tree-planting and the formation of flower and vegetable gardens have been more general this year than in any previous one in all the sections of this district. There is no doubt that, from the increased activity of members of Boards, of teachers, and pupils, the school-grounds of the Department will, in a number of localities, be beautified and enhanced in value. There is one teacher under my supervision who has improved the school-grounds to such an extent that it is quite a treat to visit the place. I refer to Mr. John Lawton, of Pokolbin, who richly deserves public mention for his marked industry in forming beautiful and useful of Pokolbin, who richly deserves public mention for his marked industry in forming beautiful and useful gardens, in tree-planting, &c.

On the whole, the organisation of the inspected schools is satisfactory and improved.

The number of pupils enrolled during each quarter of the year, and the average attendance, are shown in the following table:—

Enrolpont Appropriate Property:

	Enrolment.	Average attendance.	Per centage.
March quarter	22,345	14,340.8	64 +
June ,,	22,297	15,437.1	69 +
September ,	22,009	15,634 <sup>.</sup> 7	71 ÷
December ,	21,349	15,606.6	73 +

During the first half of the year, wet weather prevailed over the Colony, and in the Maitland district floods and high freshes were important factors in reducing the average attendance at the Public

Schools.

The number of pupils enrolled for the whole year was 27,337, the multiple enrolment amounting to 3,844. The net enrolment, therefore, was 23,493, and the average attendance for the same period was 15,227-7, or 65 per cent., which is the same as for 1889 and 1888. When it is considered that it was almost constantly raining from 13th January to the end of July, the average attendance for the year cannot be regarded as unsatisfactory.

With reference to irregularity of attendance of pupils attending Primary Schools, it may be stated that there are three obstacles to an increase in the regularity of attendance of such pupils, viz.:—

(a) The parents are often to blame, as they do not know the value of what their children lose by irregularity of attendance.

irregularity of attendance.

(b) The pupils are sometimes to blame, for, to a number of them, school means irksome confinement in a room often totally unfit for school purposes. Out of school they receive no assistance or sympathy, and inside they are stirred by no emulation.

(c) Some of the teachers, too, are more or less at fault, inasmuch as they let the pupils come and go, stop away and return again, without inquiry, strict and scarching, as to the cause of absence.

The Inspectors report favourably in regard to the character of the discipline which is maintained in the schools of this district. A few cases of undue corporal punishment were investigated; but, on inquiry, it was found that they were of a trivial character.

The work of inspection for the year is shown in the following table: inquiry, it was found that they were of a trivial character.

The work of inspection for the year is shown in the following table:—

Section of district.	Regular Inspections.	Second Regular Inspection.	Ordinary Inspections.	Total No. of Inspections.	Total Number of Pupils Examined.
Martland	67		56	123	8,524
Newcastle	66		31	97	8,876
Muswellbrook	72		~ 4	76	2,144
Dungog	83	2	48	133	2,110
Total	288	2	139	429	16,654

The following schools in the Maitland section did not receive ordinary inspection for want of time, viz., Belford, Glendon Brook, Kirkton, Mitchell's Flat, Merannie, Mundawa, Roughit, Sedgefield, Singleton (Girls), Singleton (Infants), Whittingham.

It is to be regretted that the number of ordinary inspections is on the decline. The value of these inspections is considerable in regard to check of records, to improvement of methods of teaching, and to the work of general supervision.

Except two small schools in the Dungog section, which were not long enough in operation to admit of inspection, every school in the Maitland district had a regular inspection, two had second regular inspections, and 139 had ordinary inspections.

The work of inspection for the year in each section of the district is shown hereunder:-

Section of District.	Schools.	Above Standard,	Up to Standard.	Below Standard.	Total.
	( Public	50	8	6	61

	Total	48	13	22	83
Grand Total	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	192	40	56	289

It appears from this table that of the inspected schools 89 per cent, were up to and above the standard in the Maitland section; 87 per cent, in the Newcastle section; and 73 per cent, in Muswellbrook and Dungog sections. Last year the percentage for each section of the district was: Maitland, 76; Newcastle, 89; Muswellbrook, 81; Dungog, 73. Maitland section, all the schools of which except six were examined in the second half of the year, is better this year by 13 per cent., Newcastle is not so good by 2 per cent., Muswellbrook has fallen 8 per cent., and Dungog holds the same position as last year.

The proficiency of the pupils examined in each subject of instruction, and the percentage of those who satisfied or exceeded the standard, are shown in the following table:—

Subjects.	Number Examined.	Percentage up to c above Standard.

Compared with last year, reading is not so good by 2 per cent.; writing has fallen 5 per cent.; rithmetic, 4 per cent.; Australian History, 4 per cent.; object lessons, 5 per cent.; drawing, 2 per cent.; music, 5 per cent.; French, 25 per cent.; algebra, 1 per cent.; mensuration, 3 per cent.; needlework, 6 per cent.

In the following subjects the results are the same as for last year, viz.: Scripture and moral

In the following subjects the results are the same as for last year, viz.: Scripture and moral lessons, and drill.

In grammar, there is an increase of 2 per cent., in geography of 3 per cent., in English History of 2 per cent. in Euclid of 7 per cent., in Latin of 8 per cent., and in natural science of 21 per cent.

The falling of in reading, writing, arithmetic, and the other subjects specified above, is mainly due to the introduction of the new standard, and to the fact that a considerable number of schools were examined under unfavourable circumstances, owing to the protracted season of rain and floods experienced in every part of this district during the first half of the year. I must, however, repeat what I stated in my last report, that in the great majority of schools in which the attainments of the pupils are below the standard, the fault lies with the teachers themselves, who will not regularly and systematically prepare their school work, and thus save themselves from haphazard and unproductive teaching.

In the Maitland Section, 66 teachers, 12 assistants, and 78 pupil-teachers were employed during the year. They are classified as follows:—

Teachers and Assistants:—

*11	1 1		8
		Total	6

The teachers on the whole have worked zealously during the year, and have striven satisfactorily to master the details of the new standard. Few cases of omissions or errors are now met with in the Records—thanks to the ordinary inspections. The pupil-teachers are the backbone of the system. With one or two exceptions, they have maintained their former reputation for hard work and habits of regular study. The Saturday classes at Wickham and East Maitland are largely and regularly attended, and are conferring solid advantages on the diligent students.

#### Summary.

Fourteen new schools were opened during the year; accommodation for nearly 25,000 pupils exists. Every school in the district, except 2—the existence of each of which was not long enough to admit of an Inspector's visit—had a regular inspection; 2 had second regular inspections, and 139 had ordinary inspections. The character of the organization and discipline of the inspected schools indicates progress. Tree-planting and the formation of school gardens have been pretty general throughout the district. The school banks still prosper. The teachers, assistants, and pupil-teachers give indications of an increase in the time they devote to study, and the prospects of primary education in the Maitland District continue to be highly satisfactory.

East Maitland, 10 January, 1891.

T. DWYER,
District Inspector.

#### ANNEX X.

#### INSPECTOR McCormack's Report.

1. The Newcastle section of the Maitland District had 62 schools in operation at the beginning of 1890. New schools have since been opened at Catherine Hill Bay, Toronto, Wyee, and Carrington. Of the 66 schools now existing, 63 are Public and 3 are Provisional. Buildings to replace old ones have been erected at Lambton and at Mosquito Island. Vested residences have been given to the Public Schools at Hamilton, Toronto, and West Wallsend; and class-rooms have been provided for Adamstown Infants', Charlestown Primary, Minni Girls', and Minmi Infants'. Important improvements and repairs have been sanctioned, and in most cases effected, in connection with the following schools:—

Adamstown. Minmi. Charlestown. Dora Creek. Mosquito Island. Newcastie. Glen Mitchell. Newcastle East. Newcastle South. Raymond Terrace. Hanbury. Hexhani Tomago. Wallsend. Islington. Jesmond. Lambton. Wickham.

It has also been decided to establish schools at-

Awaba, Burwood South. Cardiff, Hue Hue.

Morrissett, Young Wallsend, Killingworth,

and to open additional departments at Islington and at Stockton. All works have been carried out

and to open additional departments at I-lington and at Stockton. All works have been carried out out under the supervision of the Architect.

2. The highest enrolment of pupils in all schools during the year was 11,921. This secured an ordinary attendance of 9,550. Allowing 8 square feet for each child, school accommodation exists for 10,197, and this number is increased to 11,964 by reckoning 100 cubic feet of air space for each pupil. The new schools sanctioned will give about 1,050 additional places. Adequate room is therefore provided for the school population of this section of the district. The schools are well distributed, and are in a very fair state of repair. Close attention is given to secure the cleanliness and the careful ventilation of the buildings, to maintain a neat and pleasing arrangement of the furniture and 'the apparatus, and to conserve the purity of the water supply. The question of playground improvements is receiving special consideration. In twenty-eight instances action has been taken to increase the areas of the grounds, and con lands belonging to 35 schools teachers are devoting a part of their leisure time to plant cultivation. on lands belonging to 35 schools, teachers are devoting a part of their leisure time to plant cultivation.

3. The schools and the departments under my supervision are ranked thus .-

Classes.	Schools and Department

Provisional	3

4. In the following table the enrolment and the average attendance for each quarter of the year are given :-

Quarters.	Pupils Enrolled.	Average Attendance.	Percentage of Attend ance to Enrolment.
March	11,615	7,782·0	67·0
	11,606	7,979·6	68·7
September	11,921	8,550·1	71·9
	11,623	8,567·4	73·6

The average attendance for the year is 70°3 per cent. of the enrolment. Frequent wet weather affected the attendance during the first half of the year. A marked improvement is recorded for the second half.

5. All schools received during the year a regular inspection, and 31 received an ordinary inspection. The general condition of the schools is here given :—

Schools.	Below Standard.	Up to Standard.	Above Standard.
Public Provisional		9	48
Totals	8	10	48

The results show that 87 per cent. of the schools satisfied the standard.

6. The subjects, the number of pupils examined in each subject, the number who passed, and the percentage up to or above the standard are given in the following table:—

Subjects.	Pupils Examined.	Pupils Passed	Percentage up to or above Standards.
Reading	8.876	7,024	79
Writing		7,400	83
Dictation		5,296	77
Arithmetic	8,875	5,347	60
Grammar		2,695	72
Geography		3,072	80
History .		3,492	77
Scripture	8,655	6,786	378
Object Lessons	P,508	7,059	83
Drawing	7,883	4,915	62
Music	8,762	6.774	77
French	93	49	52
Prefici	653	478	73
Euclid		122	1 79
Algebra	608	276	45
Mensuration	114	S0	70
Latin			
Needlework	2 95 t	2,373	80
Drill	8,764	7,106	, 8t
Natural Science	176	169	j 96

The results are higher this year than last in geography, cuelid, algebra, mensuration, and Latin about equal in grammar, Scripture, and drill; and lower in the remaining cleven subjects. This falling off is mainly due to the unfavourable weather experienced during the early part of the year.

7. The entire teaching staff consists of -

66 Teachers.
45 Assistants.
103 Pupil teachers.
10 Work-mistresses.

# Pupil-teachers.

Class I.	Class II.	Class III.	Class IV.
33	   12 	17	41

The pupil-teachers are attentive to their duties, studious, and well conducted. Among them are several who possess large mental capacity, and display aptitude for their work far above the average. Their special classes held on Saturday mornings at the Wickham Superior Public School are popular and productive of much good. The subjects taught are Latin, French, music, and drawing. No change in the original staff has taken place. The teachers as a body display intelligence and judgment in the discharge of their duties, and by their general conduct command respect. With few exceptions, school work has been successfully carried on during the year, and the prospects for 1891 are very favourable.

J McCORMACK,

Newcastle, 7th January, 1891.

Inspector of Schools.

#### ANNEX Y.

#### INSPECTOR FLASHMAN'S REPORT.

Ar the commencement of the year the northern boundary of this section was removed further north, so as to include about 20 schools situated on the Liverpool Plains, and hitherto under the supervision of the Inspector residing at Tamworth.

For six months I had charge of these additional schools. In July, on the appointment of an Inspector to reside at Gunnedah they were included in the new section then formed. The Muswellbrook section then resumed the dimensions it had at the close of last year.

During the year a Provisional School was opened at Owendale, near Broke. The House School at Muscle Creek, the Provisional School at Howick, and the Half-time Schools at Bunnan and Ginghi have been closed in consequence of diminished attendance.

The Public School at Timor was reduced to the rank of a Half-time School, and is now worked in conjunction with the school at Waverley. The House Schools at Springfield and Putty have been converted into Half-time Schools and the Provisional School at Bylong has been reduced to the rank of a Half-time School.

The year closed with the following schools in operation:-

Pablic	36
Provisional	8
Half-time	
House	
-	
Total	68

Seat accommodation has been provided for 3,597 pupils which is more than sufficient for present and prospective attendance.

All the schools in this section are fairly well situated and within easy distance of the school population. Several of the Provisional and Half-time Schools will, in the near future, be closed in consequence of the smallness of the attendance, arising from the fact that most of the children in the neighbourhood of the schools have grown beyond school age, and their places have not been filled with younger children.

The closing of some small schools, and the reduction of others to lower rank, have not, in every case, given full satisfaction to the parents concerned. Whenever it has become necessary to close a school, it is always found to be a hardship to some few children, and many indignant protests are received against the decision of the Department. Frequently, vain attempts are made to show that past attendances have been exceptionally low in consequence of unfavourable weather, sickness, &c., and that the future will produce a more satisfactory average. It is not unfrequently the case that those who took little or no interest in the school when it was open are among the loudest and most active in protesting against the withdrawal of the teacher. Such conduct is not altogether unpleasing, for it indicates in a strong manner the high value placed by the people of the country upon the advantages of the Public Instruction Act, although, in some cases, the blessing is not fully appreciated till there is a chance of losing it.

The material condition of all the schools in this section is satisfactory. Very few have needed any repairs or improvements during the past year. The teacher's residence at Denman has been enlarged, and a residence of a superior character is being built at Muswellbrook.

Tree planting has been carried out with a good deal of enthusiasm in connection with some few schools, but it has not been nearly as general as I expected.

The school-grounds at Murrurundi, Warkworth, and Falbrook, will soon present in each case a very attractive appearance. If the state of some of the pluy-grounds is an indication of the interest taken in this matter by the teachers in charge, I am forced to the conclusion that many teachers are either deficient in onergy or wanting in interest. Under proper management, it is a very simple matter for the judicious teacher to create and maintain a healthy interest on the part of his pupils in all matters pertaining to the general appearance and material condition of his school and school grounds. I am more than ever convinced that the teacher who fails in this particular is weak in one of the essential points that go to make up an efficient teacher.

During the year all the schools in this section received a regular inspection, but only four received an ordinary inspection. I also inspected four schools in the Dungog section, four in the Maitland section, and twenty in the Newcastle section.

This year, new standards of attainments have been introduced. This has produced a certain amount of uncertainty and indecision on the part of some teachers, and in some cases a lowering of the general attainments of the schools. When the new standards are fully understood, and their provisions interpreted in a liberal and intelligent manner, it is confidently expected that a considerable advance will be made in the general attainments of the schools, and that more thorough, effective, individual teaching will be the result.

Very few teachers appear to me to have carefully studied the new standards. Most teachers have taken for granted that there are but few differences between the old and the new, and that if in a general way they follow the course prescribed no objection will be raised.

In very few schools have I found any attempt to follow the standard in drawing, vocal music, mental arithmetic, composition, or poetry.

The following table shows the relation of the schools to the standard of proficiency :-

Schools.	Below Standard.	Up to Standard.	Above Standard,	Total
Public Provisional Half-time House.	ნ 7	6 0 3 0	23 3 13 5	36 8 23 5
Total	19	9 •	44	72

Last year 14 schools failed to satisfly the requirements of the standard; this year 19 were found to be in a similar condition. In each case suitable action has been taken by the Department. Most of the schools below standard are very small and in charge of young, untrained, and inexperienced teachers. The time is not far distant when it will be found necessary to replace these unsatisfactory teachers with others more effective.

The subjects, the number of pupils examined in each, and the percentage that satisfied the standard are given below :-

Subjects.	Number examined,	Percentage up to Standard
Reading	2,144	94
Writing	2,093	89
Dictation	1,783	81
Arithmetic—Simple Rules	1,242	87
" Compound Rules	489	60
" Higher Rules	393	61
Frammar	830	84
deography	829	87
History—English	797	86
, Australian	395	100
eripture	1,859	79
bject Lessons	1,695	89
rawing	1,629	80
Ausio	1,608	81
Luclid	89	88
Algebra	7	100
Mensuration	19	68
atin	16	100
Veedlework	706	97
Orill	1,5մ8	88
Natural Science	90	89

The percentage up to the standard is not quite as high in most subjects as it was last year. This may be accounted for by the fact that during the first six months of the year the attendance at all schools was much interfered with 1 y the almost constant wet weather which then prevailed.

The organization of the schools is in most cases, "Good," and in a few, "Excellent." Some teachers spare no pains in trying to make their schools attractive to the eye. The tables are supplied with covers, and frequently adorned with vases of fresh and beautiful flowers regularly supplied by the pupils; pot plants of various kinds are to be found in different parts of the rooms; mats and hearth-rugs help to give the schools a comfortable appearance; while the walls of many rooms are covered with attractive and useful diagrams, the private property of the teachers. These silent yet powerful educators do much to mould the characters of the pupils.

The discipline is, on the whole, mild, kind, firm, and effective. Very few cases have come under my notice during the year where corporal punishment has been improperly or excessively administered.

No classified teacher has during the year been examined with the view of improving his classification. This appears to me to be unsatisfactory, as it shows an evident want of ambition on the part of those concerned, and must ultimately tend to make their positions very insecure.

All the pupil-teachers, but one, gained promotion during the year.

I am of the opinion that the educational requirements of the Muswellbrook section are fully satisfied by the existing schools, and that as regards material condition and efficiency the schools are in a fairly satisfactory condition.

Muswellbrook, 24th December, 1890.

C. O. FLASHMAN, Inspector.

Early

## ANNEX Z.

## INSPECTOR WATERHOUSE'S REPORT.

I HAVE the honor to submit my report for the present year upon the schools in the Dungog section of the Maitland district.

In consequence of unsatisfactory attendance, the Stewart's Brook evening school was closed at the end of last year. The follo

e following schools were re-opened after the Christmas vacation	:
Public Schools	56
Provisional Schools	10
Half-time Schools	10
House-to-house Stations	4
-	

Total ..... 80

During the year the average attendance at Hannah Bay and Nelson's Bay Half-time Schools became sufficient to justify their conversion into Full-time Schools, the former being treated as a Public and the latter as a Provisional School.

In March, the attendance at Tabule Creek, worked in conjunction with Binglebrah and Sugarloaf Creek under the House-to-house system, fell so low that it was closed; the remaining stations have since been treated as Half-time Schools.

Swan Bay (Half-time) was closed last June in consequence of unsatisfactory attendance, whilst Limeburner's Creek (Provisional) was reduced to Half-time for a similar reason.

A Provisional School was built at Woerden by the residents on the usual conditions, and opened in July: it supplied an existing want.

operation at the close of the year aro—		
Public	57	
Provisional	13	
Half-time	10	
House-to-house Stations	2	
<del>.</del>		
Total	82	•

Early in the year the Architect handed over the new brick school building at Williamtown, which was erected to replace the old one. This latter has been so altered as to add two rooms to the teacher's residence.

A local committee superintended the crection of a schoolroom (wood) at Brushy Hill, to take the place of the old wooden structure there.

During the year the Inspector has supervised the building of 4 schools, viz.:-

Name.	Material.	Object.
Telegherry	Brick	To replace old building. New locality. ,,

A teacher has been selected for the Euwylong School, near Raymond Terrace, which will be

formally opened in January.

These buildings provide accommodation for 251 pupils, but 208 scats have been lost by the closing, &c., of schools. Provision now exists in this section for senting 4,457 pupils, which is quite sufficient for the children in attendance.

Some rather extensive repairs have been effected by the Architect's Branch. The Department is indebted to a local committee for taking charge of repairs to the Page's River School. The Inspector has looked after repairs in connection with 21 schools.

The new schoolroom and residence at Glen William will be ready for occupation within a month,

I regret to record that these old buildings were recently totally destroyed by fire, whereby the teacher lost a considerable portion of his personal effects.

At Dungog, a weathershed, and at Stroud, a wash-house, are now being built under the Architect's directive.

The unfavourable weather which prevailed during the earlier months of the year rendered it impracticable to have the painting of certain schools and residences attended to, whilst the low state of public funds available for repairs, &c., later on, made it necessary to defer the consideration of these matters until next year. Except as regards painting, the school buildings generally are in a fair state of

I am of opinion that the educational wants of this section have been fully met. In all instances where the minimum regulation attendance can be maintained, provision has been made for the instruction

of the children.

The number of schools open during any part of the year was 85. Of these, all but two received a regular inspection, and two underwent a second regular inspection. The schools which it was impossible to inspect were Swan Bay (Half-time), closed in June, and Cross Creek (Provisional), open only from

July to October.

The District Inspector relieved me of one regular inspection, and Mr. Inspector Flashman of four.
Raymond Terrace (in Newcastle section) received a regular inspection, and Nelson's Plains (in Maitland section) both regular and ordinary inspection, at my hands.

The inspectoral work indicated above, together with the time occupied in assisting at the inspection of the Sydney High Schools, prevented me from holding more than 48 ordinary inspections in my

The relation of the schools to the standard of proficiency may be exhibited thus:-

Schools.	Below Standard.	Up to Standard.	Above Standard,	Total.
Public	16	7	34	57
Provisional	2	3	8	13
Half-time	3	3	1 4	10
House-to-house	1	0	2	3
Total	22	13	48	83

Last year 22 schools were below standard, 13 satisfied standard requirements, and 47 were above standard.

The attainments of the pupils in the different subjects of examination is shown in the following table :

Subjects,	Number of Pupils examined.	Percentage up to of above Standard.
Reading	2,110	82
Writing	2,110	83
Arithmetic	2,110	70
Grammar	814	80
Geography	814	75
History (English)	810	65
History (Australian)	231	74
Scripture and Moral Lessons	1,963	80
Object Lessons	2,075	85
Drawing	2,075	84
Music ,	1,552	82
French	-,6	83
Euclid	119	82
Algebra	41	78
Mensuration	111	64
Latin	7	86
Needlework	837	87
Orill	2,031	59
Natural Science	13	92

Comparing these results with those obtained last year there is an apparent retrogression.

The following facts are, in my opinion, quite sufficient to explain why the percentage of passes in many of the subjects is lower:—

(a) The unusually heavy rainfall, extending over several months, caused numerous freshes and floods in the rivers, which prevented the regular attendance of the children at many of the schools.
 (b) The modification of the standard of proficiency by which the teachers work.

The one subject requiring special comment is drill. Last year, of 2,159 pupils present at examination, only 802 were tested in drill. Marks are now awarded for this subject, which has very properly been made compulsory. In consequence of this change, this year 2,031 pupils were drilled, out of a possible 2,110, the balance being pupils of the House-to-house Schools, and these who were prevented by physical infirmity from taking part in this exercise.

With very few exceptions, the teachers are painstaking and faithful in the discharge of their duties, and a credit to the profession.

and a credit to the profession.

The pupil-teachers are doing satisfactory work.

The teachers of all ranks are classified thus:—

	1 A.	I B.	И А.	II B.	III A.	III B,	III C.	Unclassed.	Total.
Teachers	•••	1	1	5	17	10	13	30	77
Assistants	•••			1	1	ļ	***	1 1	3

	Class I.	Class 11.	Class III.	Class IV.	Total.
Pupil-teachers	1	1	1	3	6
<u></u>			<u>                                     </u>	:	

A start at tree-planting or otherwise improving the school grounds has been made in several places. I find, however, that some of the country people look upon Arbor Day as a cheap way of improving the property of the Department, and refuse to countenance the movement in any way.

The work during the past year has, when all circumstances are taken into consideration, been

satisfactory, and there is every reason for anticipating greater progress during the coming year.

Dungog, 27 December, 1890.

J. WATERHOUSE, Inspector.

#### ANNEX ZL

# DISTRICT INSPECTOR O'BYRNE'S REPORT.

I have the honor to submit, for the information of the Minister, my report on the condition and working of the Primary Schools in the Wagga Wagga District for the year 1890.

On the 1st January, 1890, the district was reconstructed and somewhat reduced in area. The Yass section was placed in the Goulburn District, and a new inspectorate was formed at Young. This section was formed mainly from schools in the original Wagga Wagga District, and by the transference of 35 schools from the various sections of the Bathurst District.

These changes resulted in leaving this district to start, in January, with 303 schools. During the year 22 new schools were opened, so that the total in operation during the whole or part of the year was 325. These are designated:—

These are designated :-

Public	995
Provisional	62
Hair-Time	- 99
nouse-to-nouse	12
Evening Public	3

### Accommodation.

The buildings in which the above schools are conducted afford floor accommodation, according to the recognised standard, for 19,557 pupils. The total number of children entered on our books throughout the year was 19,900. In this number is included many pupils who have moved from school to school, and whose names have been counted twice or oftener. It will give a better idea of the adequacy of the accommodation to place, side by side, the enrolment and average for December quarter, with the actual number of school scats provided at that date:—

Enrolment for quarter ending 31st December, 1890  Average attendance for quarter ending 31st December, 1890  Number of places provided on 31st December, 1890	3 A OF B
25 amount of places provided on 31st December, 1890	19.557
** WILDER OF DRUCES III PYCESS OF ONNATMANE	
Number of places in excess of average	4,067
2 timoer of fraces in excess of average	8,900
	-,

It will thus be seen that in the matter of school accommodation we are well ahead of all reasonable requirements. Excepting at Broken Hill, where the influx of population has been very rapid, we have no

requirements. Excepting at Broken Hill, where the many of population has soon to, April, cases of overcrowding.

The new schools brought into operation are as follows:—Alma, Infants; Broken Hill North, two departments; The Pianacles, Day Dream, Toogimbie, Whealbah, Overton, West Blowering, Jubilee Downs, Mundarlow, Walla Walla West, Piney Range, Lesterfield, Pikedale, Maytong, Milbrulong, Brungle (aborigines), Billimari, and three Evening Schools.

Increased accommodation was secured, by lengthening buildings or adding rooms, at Broken Hill, Broken Hill North, Moama, Burrumbuttock East, Culcairn, and Tumut. The new room at Tumut is designed to answer as an Infant School.

Broken Hill North, Moama, Burrumbuttock East, Culcairn, and Tunut. The new room at Tunut is designed to answer as an Infant School.

A large amount of work was done throughout the district in keeping the Department's property in repair. These repairs were done principally under the supervision of the Inspectors. The names of the schools repaired, and the nature and cost of the work will be found in the Annexes attached to each Inspector's report. The expenditure was principally on general repairs—painting, fencing, and water supply. In all, 68 schools were put in repair.

A weathershed was creeted at Toeumwal.

New

New residences were built at Morongh Creek. The Rock, Cangegong, and Brungle Aborigines' School. The cost of the latter was generously borne by the Aborigines Protection Society.

Organisation.—The organisation in nearly all the schools is of a satisfactory character. The material condition continues to be improved year after year. The supply of furniture and working material is, in nearly every case, up to requirements. The teachers are reasonably careful of the Department's property. The cost of books, stationery, &c., is about 11d. per head on the quarterly enrolment.

#### Inspection.

This District is divided into four inspectorates, as under :-

Digital, in contrast in and			•	
Wagga Wagga	69 Sc	hool	s	District Inspector G. O'Byrne.
Albury				
Young				
Har	7-3			Inspector Thos. Pearson.

The following table shows the number and various kinds of schools forming the Wagga Wagga District. It also shows the number of inspections held :-

		ublic. Departments.	Provisional.	Half-time.	House.	Evening.	Total
Open during year 1890, or part thereof	210	225	62	! 22 ! 1	13	. <b>3</b> ,	325
Number that received regular inspection	200	223	57	20	11	. 1	312
Number that did not receive regular inspection Number that received an ordi-	1	f   2	5	1 2	2	2	13
nary inspection		56 	2		1	******	59

This table shows the condition of the schools examined in relation to the Standard of Proficiency, Tolerable, or 50 per cent., being regarded as up to Standard :-

Kind of Schools.	Bolow Standard.	Equal to.	Above.	Total.	Percentage equal to or above Standard.
Public		24 3 3 4	162 33 8 2 1	223 57 20 11 1	73 63 55 55 100

Of the 13 schools not inspected, 11 are in the Hay section; 2 of these were Evening Schools that had only a short existence. It is only fair for me to report that the work of the Hay section is extremely difficult and heavy. The schools are great distances apart, and some of them far away from coach routes. Besides, the population in the Barrier District is now so great that I think that there is sufficient work for an Inspector in connection with the schools lying beyond the Darling River.

The number of pupils examined in 1890 was 10,508. The following numbers exhibit the percentages of passes in each subject. Any child who received 50 marks out of a possible 100 is regarded as having passed the Standard:—

Reading	83 per	cent.
Writing	83	11
Dictation	65	37
Arithmetic	69	31
Grammar	71	,,
Geography	74	22
History, English	66	11
Scripture	69	11
Object Lessons	77	11

Total	***	- 6	46	21	63	42	29	136	313

#### Pupil-leachers.

Sections,	Class I.	Class 11.	Class III.	Class IV.	Total.
Albury Hay Wagga Young	3 2	5 2 6 5	6 2 5 6	6 10 2 4	20 17 15 16
Total	Ð	18	19	22	68

Very few complaints were made against teachers or pupil-teachers during the year,—and none of a serious nature. That between 400 and 500 persons carried on their work for a whole year under the eyes of a watchful and critical public without any serious complaint, furnishes ample proof of the good character, industry, and efficiency of our staff of teachers.

#### School Fees.

The amount of fees received during the year was £5,953 19s. 7d. This sum, divided by the average attendance for the year, gives 11s. 5d. fees paid by each pupil. Putting it in another way, this shows that every child in average attendance paid the prescribed fee for 46 weeks of the year. Parents are becoming more regular in the payment of fees, and, as a consequence, the total amount of arrears is attendity degreesing. atendily decreasing.

## Attendance Branch.

The following is a statement in connection with the Attendance Branch, completed as far as returns up to date will allow:---

Number of defaulters reported for 1890	3.5	54
Number of prosecutions authorised for 1890		38
Number of convictions for 1890	2	36
Number of diemissals		41
Number of withdrawals		27
Number incomplete		34
Prosecutions for recovery of fees authorised		20
Convictions		14
Withdrawals in consequence of absence of teachers		6
$\epsilon$	8.	d.
Amount of fees sued for 17		
Amount recovered	9	9

Before closing this report I desire to place on record my grateful appreciation of the zeal for duty, and the personal courfesy and cordiality displayed by the gentlemen associated with me in the management of this district.

Wagga Wagga, 16 January, 1890.

G. O'BYRNE, District Inspector.

# ANNEX Z 2.

# INSPECTOR WRIGHT'S REPORT.

AT the end of 1889 there were 90 schools in operation in this district, 3 of which were transferred at the beginning of 1890 to the Wagga Wagga District, so that the year was commenced with 87 schools. Four new schools have been opened, viz., Major's Plains Public, Blowering West Provisional, Mundarlo Provisional, and Walla West Provisional, and 1 school, South Mahonga, which was closed in 1889 was reopened, but had to be again closed later in the year. Two other schools, Moorwaths Public and Redlands Public, were closed as they were unable to maintain the required minimum attendance. There were therefore 92 schools open during some portion of the year, and there are now 89 in operation. A few of these must, however, soon be closed, as, owing principally to the selling out of selectors, the school population round them has very considerably diminished.

One new school is to be established early in 1891, viz., at Berrigan township, the centre of a very flourishing farming district; but as selection is now very limited in this portion of the Colony, it is not probable that many new schools will be needed next year to meet the requirements of the district.

#### Adequacy of School Accommodation

At the end of last year, accommodation was provided for 4,533 papils, but places for 370 were lost through the closing of schools &c. Places for 181 pupils were gained, as follows:—

By the erection of new school-rooms By additions to school-rooms	128 53
Total	181

Thus there is a loss for the year of 189 places, there being accommodation now for 4,344 pupils. It must, however, be borne in mind that of the 370 places mentioned as lost during the year, 93 were in schools which were transferred to another district, and which are still in operation.

# Inspection.

Of the 92 schools open during the year, 91 were fully inspected, and 9 ordinary inspections were made. The one school which did not receive a regular inspection was Greenwood Public, which was closed for alterations and repairs when the locality was visited, and remained closed from that time until the end of the year. Of the 91 schools inspected, 64 were above, 4 up to, and 23 below the standard in efficiency; that is 747 per cent. satisfied the requirements. This is 24 per cent. above the results obtained last year, a fact attributable, in my opinion to two causes:—(1) the introduction of the new Standards of Proficiency, and (2) the appointment of ex-pupil-teachers to small schools, which were formerly taught by untrained teachers.

The attainments of the pupils in the principal subjects of examination are shown in the following

Reading	2,328 2,563	82· 83·8
Arithmetic	1,916 2,205 985 984 920 283 2,250 2,150 2,023 1,007	68-5 67- 71-6 78-3 57-7 63-6 71-8 72-3 76- 85-

#### School Buildings.

During the year 6 new buildings have been erceted, viz. :-

		New, or		If Vested.	Places for.	none for Cost to		
Schools.		Erected by.	to replace old.	II Vestexi.	Traces for.	Department.		t. 
Major's Plains, Public Blowering West, Provis Jubilee Downs, " Mundarlo, " Overton, " Walla Walla, West "	ional .  	Architect Local Committe do do do do	New To replace old New To repla e old To repla e old	Vested do do do do do do do	16 21	£ 806 35 45 60 45	8. 1 0 0 0 0	_
			Totals	,	159	1,051	1	Ð

Repairs and additions have been affected, under the supervision of the Inspector, to 24 schools, at a total cost of £295 16s., and, under the supervision of the Architect, to 11 schools, at a cost of £1,341. In addition to these, new buildings are being erected and repairs executed which will cost about £2,000.

#### Summary.

To sum up, the educational requirements of the district are properly met, the teachers as a body are capable and persevering, and the prospects for the future are good. STEWART WRIGHT.

Albury, 30th December, 1890.

#### ANNEX Z3.

## INSPECTOR FRIEND'S REPORT.

I HAVE the honor to submit my general report for 1890.

This section of the Wagga Wagga District came into operation in January last, and was placed under the supervision of Mr. Inspector Lawford, who has since taken charge of the Nowra District, where, during the first half of this year, I was engaged in inspectoral work.

My duties here commenced in July.

At the hegipping of the year the Young section comprised, 60 schools.

At the beginning of the year the Young section comprised 90 schools. A Provisional School has since been established at Billimari.

The number in operation during the year or some part thereof may be classified as follows:—

Public	70 17 4
Total	91

In consequence of the limited attendance, the undermentioned schools were closed during this quarter: - Boginderra Provisional, Uley Provisional, Eualdric and Torwood Half-time. Thus there are now 87 schools in existence here.

A Provisional School at Bute, a Public at Benmore, and a House-to-house at Holy Camp have

been sanctioned, and will shortly be opened.

In addition to these, it is proposed to transfer some schools from the Yass to this district.

During the year 4 new buildings have been erected, viz.:—

Schools.	Supervision.	New, or to replace old,	Accommodation for.	Cost.
Billimari, Provisional Benmore, Public Bute, Provisional Piney Range, Provisional	do	do	48 ,,	2089 DR.

Twenty schools have been improved. A residence has been built, under Mr. Inspector Lawford, for the teacher at Morongla Creck, at a

cost of £202 5s. An Infants' Department is in process of erection at Cootamundra. The Architect has the matter in hand. Petitions

Petitions for new schools at the following places have been received, with the results specified

Wallundry... Declined.
Crowther Creek... Declined.
Holy Camp House-to-house School sanctioned.
Billimari Provisional School sanctioned. \*\*\*\*\* The Battery ........ Declined.

Provisional School sanctioned. Public School sanctioned. Bute ..... Benmore ...... 

The Quarterly enrolment and average attendance for 1890 appear in the following table:-

	Enrolment.	Average Attendance.
March Quarter June Quarter	4,051 4,033	. 2,718·7 2,730·
September Quarter	4,066 4.050	2,768· 2,817·9

The total places provided at the beginning of the year=5,664; the total places provided at the cud of the year=5,695.

As the highest enrolment does not reach 4,100, the accommodation afforded may be considered much in excess of requirements.

The material condition of almost all the schools is good. They are pleasantly situated, and well distributed.

#### Inspection.

Of the 91 schools in operation during the year, 90 received a regular and 22 an ordinary inspection. Uley Provisional was closed before an opportunity to test the work offered.

One was fully inspected twice, and one received a second ordinary inspection.

Several schools were incidentally visited, and the records, &c., looked into.

The District Inspector aided me in the Infants' Department of the Young Superior Public School, and examined Beaconsfield Provisional. I inspectod Kildary Provisional for that gentleman, and assisted him with the Wagga Wagga Superior Public Boys' and Girls' Departments.

As a rule, the instruction is intelligent, careful, well directed and profitable; the discipline effective, and the word two of the schools building.

and the moral tone of the schools healthy.

In the case of some teachers (mostly those who have not had the advantages of the Training School or pupil-teachership) an absence of system is visible.

The classification of their pupils is badly regulated. The instruction lacks impressiveness, and the school movements are executed with small precision.

Advantage has been taken to show how these faults may be amended, and an improvement is expected.

expected.

Many of the untrained teachers, however, do most creditable work.

English History, Dictation, Arithmetic, and French, require close attention.

Military drill in many schools is of a very elementary nature, and in some cases is most imperfectly

taught.

Some of the school-rooms are models of neatness and order, the records correctly and tastefully

In cases where these matters have not received a reasonable amount of attention, the teachers have been either censured or fined.

The grounds of many of the schools have been improved by tree-planting or the cultivation of flower or vegetable gardens.

The efficiency of the schools is shown hereunder:—

	Below Standard.	Up to Standard.	Above Standard.
Public Schools Provisional Schools	3	6 1	60 12 2
Total	9	7	74

Hence 90 per cent. have satisfied standard requirements.

Nine Candidates from the Young Superior Public School succeeded in passing the last Junior Examination of the University.

The following table shows the proficiency of the pupils in the various subjects taught :-

Subjects.	Number Examined.	Percentage up to or above Standard.
Reading	2,822	76
Writing	2,868	( 86

		;	Class I.	Cla	se 11.	Class III.	Cta	ss IV.	Total.
Papil-teachers	***********		3		5	6	,	6 ,	20

The majority of them are carnest, reliable, and dutiful, while some are men of superior parts, and eminently fitted for the positions they occupy.

To conclude:—With the exception of one school, all were fully inspected.
The instruction, organisation, and discipline are, in general, satisfactory.
The schools are liberally distributed throughout the district. Their material condition is good, and the accompandation in cross of previous mentals are in the instruction.

and the accommodation in excess of requirements.

The educational prospects are favourable.

CHAS. J. W. FRIEND,

Young, 30th December, 1890.

Inspector.

#### ANNEX Z 4.

#### INSPRCTOR PEARSON'S REPORT.

I MAYE the honor to submit my general report upon the schools in the Hay section of the Wagga Wagga District for 1890.

1. The adequacy of the means of education as regards amount and distribution.

At the close of 1889 there were 84 schools in this section, classified as under :-

Public	59
Provisional	19
House-to-house	G
Total	81

Before the commencement of this year 5 of these were closed, and 19 were transferred to another I commenced this year, therefore, with 62 schools, including Broken Hill North Primary and Infants' opened in January.

These schools comprised 48 Public, 9 Provisional, and 5 House-to-house.

The following new schools and departments were established during the year:-

Three schools, Booroorban, Tongul, and Wandook North, were reopened.

Hence the total number of schools in operation during the year was 73, consisting of 51 Public, 10 Provisional, 4 Half-time, 6 House, and 2 Evening.

Nine of these have been closed, on account of failing to maintain the regulation minimum, viz., Arcadia, Gol Gol, Hatfield, Maude, Stony Crossing, Wandook North, Wandook South, and the 2 Rvening Schools at Broken Hill North and Round Hill, thus leaving 64 in operation at the end of the year.

Applications for the establishment of schools at Broken Hill West, Yalpungs, and Corrowong

have been granted.

Three Provisional Schools, Cuthero, Ivanhoe, and Mossgiel, have been raised to the rank of Public.

Wandook South was reopened as Half-time, in conjunction with Wandook North, which previously ranked as Provisional.

Wanganella Public and Booroorban Provisional were converted into Half-time. Booroorban was subsequently changed to Provisional, and Pretty Pine Provisional is now worked as Half-time with Wanganella.

Wanganella.

These changes in the number of schools may be summarised thus:—

Schools in operation at end of 1889	84
Schools in operation at beginning of 1890	62
Schools closed during the year	9
Schools opened as new	10
Schools reopened	:1
Schools in operation during some part of the year	79
Schools in operation during the whole of the year	58
Schools in operation at end of the year.	64

Generally speaking, the means of education are adequate, and the schools are well distributed. In all localities where the regulation minimum could be found, State education was granted.

2. The actual condition of the schools as elicited by inspection.

Of the 73 schools in operation during the year or some part of it, 62 were fully inspected, 2 received a second inspection, and the 2 stations at Tori and Maremby were treated separately. In addition, 6 schools received an ordinary inspection, making a total of 71 inspections for the year.

Of the 11 schools not inspected, 5 were closed before my visit to their respective localities, 1 was opened too late to permit of inspection, and the remaining 5 were established in Broken Hill, after my visit to that portion of this very extensive area. For obvious reasons a second visit to Broken Hill was impossible. impossible.

The following table shows the efficiency of the schools :--

Schools.	Below Standard.	Up to Standard.	Above Standard.	Totals.
Public	16	6	28	50
Provisional	5		1	G
Half-time	]	į , <u>.</u> ,	1	2
House-to-house	2	į .	1 ;	4
artung			···· ······· '	
Totals	24	7	31	

Comparing these results with those of 1889, we have :-

Year.	Schools Inspected.	Up to or above Standard.	Percentages.	Results of Comparison.
1889 1890	77 62	47 38	61·0 61·2	Incease of '2 per cent.

The majority of the schools which failed to reach the standard are small schools under the management of unclassified teachers.

The schools of highest general efficiency are Broken Hill Primary and Infants', Deniliquin Primary and Infants', Hay Primary and Infants', Mathoura, Moama, Silverton, Tattaila, Wentworth, and Wilcannia.

Wentworth was the only school represented at the recent University junior examination. The proficiency of the pupils examined is shown in the subjoined summary:—

Subjects,	Pupils examined.	Percentages up to or above Standard, 1890.	Percentages up to or above Standard, 1889
Reading	2,683	90.1	78.5
Writing	2,697	84-8	91.2
Dietation	1,610	62.7	
Arithmetic	2,660	69.7	58·0
Grammar	713		79·6
Geography	710	76:1	77.2
English History	713	60-7	68.3
Apetrolism History	017	75.7	57.6
Austrulian History	32	100 0	50.4
Scripture		66.0	73·5
Object Lessons	2,080	808	83.4
Drawing	1, <b>5</b> 05	70.1	77:0
Music	2,255	80•5 j	94.7
French	9	100.0	100 0
Euclid	77	83.1	98:0
Algebra	τ4.	100· <b>0</b>	100 0
Mensuration	12	41.6	40.8
Latin	14	50.0	72.7
Necdlework	775	67:5	91.7
Drill	1,519	83 6	76.2
Natural Science	1.1	100 0	.02
			*** * ***

By reference to the above, it will be seen that mensuration is still below the standard, Latin just reaches it, but all the other subjects are more or less beyond.

In reading, dictation, history, mensuration, and drill an improvement is noted; while eleven subjects show a retrogression as regards proficiency.

Generally speaking, the organization is creditable, though in a few schools due regard for neatness, good order, and cleanliness of premises is wanting, and in others the lesson registers are not the definite daily records they should be.

The attendance at the Broken Hill schools has considerably mereased during the year, causing the schools to be somewhat crowded. The proposed new Public School at Broken Hill West will relieve these crowded schools.

In a few schools the teachers exhibit praiseworthy energy in beautifying the premises with flower-gardens and shade trees. Hay and Balranald deserve special mention.

With few exceptions the schools are well disciplined, and the pupils are well clad, orderly, attentive, and industrious.

In many of the smaller schools drill has been neglected.

## Teaching Staff.

The Teaching Stuff of this section consists of 103 teachers, and pupil-teachers whose classifications are exhibited in the subjoined tables:--

Staff.	Class I. i		Class 11		Class III.		·h . Certificates	20.4		
Stati.	Α.	B.	Α.	В.	Λ.	B. ,	C.	not awarded	Not classified.	Total
Teachers	!	1	14 2	4 2	4 3	7 1	3	. 1	29 10	63 23
Totals		1	16	6	7	13	3	1	39	86

Pupil-teachers.

Class I.	Class II.	Class III.	Class IV.	Probationers.	Totals.
3	2	2	7	3	17

As a whole, the teachers are respectable, intelligent, competent, and popular.

A few cases have occurred of failure to furnish the various returns correctly and punctually, and

much inconvenience and delay have been occasioned thereby.

Much difficulty has been experienced in obtaining pupil-teachers, necessitating the employment of unclassified teachers as substitutes.

Attendance.

The following table shows the enrolment and average attendance for each quarter of the year :-

Quarter.	Pupils enrolled.	Average Attendance.	Percentage of Attendance to Enrolment.
March June September December	4,426 4,814	2,642·2 2,874·8 3,166·6 3,140·9	65·2 64·9 65·3 65·8

Hence, an almost uniform percentage has been maintained throughout.

#### III .- Adequacy of School Accommodation.

Accommodation existing at beginning of 1890	4,822
Additional accommodation provided during 1890	619
Accommodation lost by closing of schools, &c	262
Accommodation existing at end of 1890	5,209
December quarterly enrolment	4,769
December quarterly average	3,140 9

Hence, it will be observed that the accommodation provided is ample.

## Insufficient Accommodation

exists at one or two schools on the Barrier, but steps are being taken to remedy this by the crection of class-rooms and the building of a new school at Broken Hill West.

The following is a list of new schools and departments opened during the year:—

Schools.	Schools. Accommodation.		Supervision	
Alma Primary ,, Infants' Broken Hill North Primary ,, Infants' Day Dream Pinnacles Foogimbie Whealbah	83	To replace old building		

There are no buildings or additions in progress under the Inspector's supervision.

Repairs and improvements, at a total cost of £519 1s. 11d., have been effected to twenty schools during the year. All of these works, with three exceptions, have been carried out under the Inspector's

## Summary.

- The means of education are adequate, and the schools are well distributed.
   The efficiency of the schools has but slightly improved.
   The supply of pupil-teachers is insufficient.

4. Educationally regarded, the prospects are fairly encouraging.

T. PEARSON. Inspector.

Hay, 31st December, 1890.

### ANNEX Z5.

# DISTRICT-INSPECTOR LONG'S REPORT.

District-Inspector Long's Report.

I have the honor to submit the following report for the year 1890 on the Wellington District, to the charge of which I was appointed at the beginning of the year.

For the purpose of inspectoral supervision the district is divided into three sections, the eastern or Mudgee section, under Mr. Inspector Rooney; the western or Dubbo section, under Mr. Inspector Smith; and the central or Wellington section, under myself. The position of School Attendance Officer for the district is filled by Mr. G. M. Fitzpatrick.

The number of schools in the district at the beginning of the year was 236. Owing to the removal of population, fourteen of these were closed during the year, and others reduced in status from Public or Provisional to Half-time or House-to-house. Twelve new schools were established and brought into operation. The whole number of schools in operation during the year was 242, but owing to the changes indicated above, the number remaining in existence at the end of the year was reduced to 229.

The buildings in use at the end of the year contained 12,097 places, at 8 square feet per pupil. The average enrolment for the year was 9,340, and the average daily attendance, 6,312.3. The highest enrolment and average daily attendance for any quarter of the year were 9,389 and 6,550 G. The aggregate accommodation is thus considerably in excess of present requirements, and in no individual case, with the exception of one House-to-house School, whose continued existence is uncertain, does the building contain less than is required by the regulations for the attendance. Five buildings have been erected during the year, and thirty schools repaired under inspectoral supervision, and various improvements have been effected under the Department's architect. All expenditure, for which fair reason could be advanced, has been sanctioned in the the liberal spirit which characterises the Department's action where the comfort of those under its supervision is concerned, and, speaking generally

reports, should it appear advisable. It is, however, satisfactory to be able to state that, as a rule, commendable care for the preservation of the property, and the maintenance of a neat and well ordered aspect are observed, and, in many instances, pleasing evidence of that good taste which finds its expression aspect are observed, and, in many instances, pleasing evidence of that good taste which finds its expression in an endeavour to render the school surroundings as sightly and attractive as possible. To this end much attention has been given during the year to tree-culture and gardening, and generally in such a way as to generate and stimulate in the pupils a beneficial interest in such pursuits. The Minister's desire that increased attention should be given to the improvement and beautifying of our school-grounds has evoked a most satisfactory response from the teachers of this district, and I feel assured that the number who will during the next planting season avail themselves of the opportunities offered for "Arbor Days" will show a marked increase.

Of the 242 schools in operation during the year, all, excepting four of minor importance, which were closed prior to the inspector's visit to their neighbourhood, were fully inspected; two received a second regular inspection, and thirty-seven ordinary inspections were made. Of the whole number of inspections effected during the year, viz., 277, 145 were by Mr. Inspector Rooney, 73 by Mr. Inspector Smith, and 59 by myself. The relation to standard of each of the schools inspected in regard to efficiency is shown in the following statement—

#### Wellington Section.

Above Standard:—Buckhobble, Cobar, Cobbora, Cunnock, Eschol, Eulomogo, Galwadgerie, Maryvale, Molong, Munbil, Murrumbidgerie, Nyngan, Nymagec, Rocky Ponds, Spicer's Creek, Beri,

Maryvale, Motong, Runnon, Murrumonagere, Pangan, Panager, Robert, Robert, Sundon, Medway.

Up to Standard:—Baker's Swamp, Ballarah, Cundumbul, Curra Creek, Eurimbla, Geuric, Kerr's Creek, Mullion Creek, Mulyan, Nora Creek, Ponto, Sandy Creek, Stuart Town, Terra Bella, Warne, Wellington, Yeoval, Yullundry, Coolabah, Goodrich, Newrea, Obley, Store Creek, Somer Croft, Boomey, Nubrygyn, Loombal, Catombal, Comobella, Wendora.

Below Standard:—Bulbudgerie, Farnham, Lower Mookerawa, Morungulan, Killeigh, Penbody, Burrendong, Mookerawa, Lincoln, Lower Spicer's Creek, Arthurville.

#### Mudgee Section.

Above Standard:—Avisford, Para Creek, Bayly, Beryl, Botobolar, Burrandulla, Camboon, Canadian Lead, Coolah, Cooyal, Crudine, Cudgegong, Cullenbone, Dapper, Dungaree, Eurunderee, Frome's Creek, Grattan, Gulgong, Guntawang, Gulgamree, Hill End, Hford, Lawson's Creek, Linburn, M'Donald's Creek, Meanh, Mobellah, Mullamuddy, Munghorn, Mudgee Boys', Mudgee Girls', Mudgee Infants', Mudgee South, Narrengo, Pipeclay Creek, Pyangle, Pyramul Upper, Round Swamp, Rylstone, Springfield, Stubbo, Spring Flat, Tallawang Upper, Tallawang Lower, Tambaroora, Wilbertree, Windeyer, Black Spring, Bocoble, Narrangerie, Tong Bong, Brogan's Creek, Clandulla, Crudine Creek, Sally's Flat, Dabee, Glen Lee, Havilah, Molarban, Murragamba, East Tabrabucca, Lower Pyramul, Dun Dun, Glen Alice, Oak Creek, Pandora's Pass, World's End.

Up to Standard:—Coomber, Cudgebegong, Hargraves, Honeysuckle Springs, Lambing Hill, Millsville, M'Donald's Hole, Tara, Tunnabutta, Warrungunyah, Cainbill Creek, Denison Town, Leaning Oak, Wyaldra, Flatlands, Carwell, Piambong Lower, Warburton, Collingwood, Upper Campbell's Creek, Below Standard:—Goolma, Merrendee, Birriwa, Combo, Coolah Bridge, Oakborough, Piambong, Ben Buckley, Bimbijong, Campbell's Creek, Upper Meroo, Pinnacle Swamp, Rawdon, Mount Morris.

#### Dubbo Section.

Dubbo Section.

Above Standard:—Baradine, Beni, Bourke Boys', Bourke Girls', Brewarrina, Coonamble, Coonabarabran, Dubbo Boys', Dubbo Girls', Dubbo Infants', Narramine, Timbriebungee, Trangie, Ulamambri, Wanaring, Warren, Willandra, Plain Creek, Coonabarabran Evening.

Up to Standard:—Barringun, Binnaway, Bourke North, Bunglegumbie, Buninvong, Curban, Bringonia, Gilgandra, Goodooga, Gulargambone, Mundooran, Nevertire, Nullabong, Orandelbinma, Rocky Glen, Tomingley, Gumbalie, Manoa, Ballimore, Elong Elong, Billeroy, Purlewaugh, Wilga.

Below Standard:—Angledool, Belar Creek, Boogaldie, Brocklehurst, Byerock, Girilambone, Gongolgon, Louth, Minore, Riverside, Tooraweenah, Warkton, Armatree, Belaringah, Bone Bone, Brewarrina Mission, Bundemar, Cannonbar, Dandaloo, Ford's Bridge, Noonbar Creek, Yalcogrin, Belarbigill, Coalbaggie, Brightling Park, Ironbarks, Appletree Flat, Biamble, Collie, Dappo Springs, Kerbin, Kienbri, Tenandra. Kienbri, Tenandra.

Kienbri, Tenandra.

Summary:—Above Standard, 106: Up to Standard, 74; Below Standard, 58.

It thus appears that 76 per cent. of the schools in the district were found to be in a satisfactory or creditable condition in regard to general efficiency, and this, in view of the large number of teachers who have not had the advantage of regular training, may be regarded as fairly satisfactory. In some cases further, in which results would appear to indicate that the teacher has been deficient in diligence or ability, the explanation is to be found in some special circumstance, such as recent establishment, or interruption of school work by epidemic complaints, or bad weather. As the necessity for employing other than properly trained teachers disappears, the number of schools returned under the least favourable of the above headings, will doubtless exhibit a satisfactory dimination.

The number of pupils examined in the several subjects of instruction, and the percentage whose proficiency reached or exceeded standard, are shown in the following table. I also give, for purposes of comparison, the percentages of passes for the preceding year:—

comparison, the percentages of passes for the preceding year

Subjects.	Number examined.	Percentage of passes.	Percentage of pass in 1889.	
Reading	6,515	87:7	92-1	
Writing	6,347	83.4	96.0	
Dietation	5,001	78.8		
Arithmetic	6,305	783	73 i	
Grammar	2,341	75.5	76.1	
Geography	2,353	84.0	81.0	
History—English	2,112	70.57	1	
Australian	606	90.9	79.4	
Scripture	5,995	: 80.6	87.5	
Object Lessons	5,523	80.2	92 9	
Drawing	4,902	68 3	81.8	
Music	4,614	77.0	88.3	
French	38	100 0	100 0	
Euclid	237	97.0	91.8	
Algebra	55	96.3	71.9	
Mensuration	172	83.1	82.0	
Latin	45	100.0	100.0	
Needlework	2,247	88 4	j	
Drill	4,470	69.8		
Natural Science	114	90.3	97 0	

It appears from the above that though in several instances the results are higher for this year than for last, they are lower in the majority of subjects. Taking into account, however, the recent alterations in the standard, the scrious interruption caused by bad weather and illness, and the fact that the estimates are, to a certain extent, by different officers, there does not appear to be any reason to regard this as indicating any deterioration in the teaching. The fact that the number of passes approaches 70 per cent. In the subject in which the profesency is lowest, being one of the most affected by standard alterations, would appear to indicate that the teaching generally is of more than fair efficiency.

The discipline of the schools is a pleasing feature in all but a few exceptional cases. As regards the schools visited by myself, I am able to say that regularity, good order, docility, and neatness are, as a rule, inculcated by appropriate methods, and with good result. The pupils display an animated, cheerful appearance, a respectful demenatur, and an interest in their work, which are suggestive of genial and intelligent government. The old theory that corporal punishment is the sole and appropriate means for securing proper discipline and rendering teaching effective is now retained only by a few teachers who are deficient in the intelligence, self-control, and culture, which form necessary qualifications for the office they fill. The reports of the officers who share the supervision of the district are to a similar effect in regard to this detail.

The average daily attendance for the year was 6,312.3, or 67.7 per cent. of the average enrolment, which was 9,340. For the preceding year it was 70.7. This decrease is fully accounted for by the exceptionally great rainfall which, for lengthened periods, rendered roads impassable and attendance impossible. During the year 741 persons were cautioned for failure to comply with the law in regard to the attendance of children at school, and 79 were presecuted, conviction being secured in 72 cases.

The teachers employed in the district and their classifications are as follow:-

#### Teachers and Assistants.

Clas	ss I.	Clas	s II.	Class HI.			Not classified.	Total,
Α.	В.	A.	В.	Λ.	В.	c.	classified.	Total,
1	2	25	13	37	28	26	96	228

#### Pupil-teachers.

 Class 1.	Class II.	Class Hf.	Class IV.	Total.
 G	11	7	9	33

It is, of course, impossible to frame a comprehensive statement which shall accurately indicate the aptitude, general conduct, and efficiency of each individual of so large a number. It may, however, be said that the teachers of this district generally display a due sense of the responsibilities of their important and honourable office, that they are carnest and successful in their work, well-conducted, and respected by the community in which they respectively reside. The pupil-teachers, as might be expected from the care exercised in their selection, have shown creditable aptitude, diligence, and efficiency; the reports on their general conduct have in every instance been satisfactory. All, so far as is at present known, have been successful in their examinations for promotion.

## Summary.

The schools in this district satisfy its present educational requirements; their material condition is good, and the number displaying creditable efficiency is, under existing circumstances, satisfactory, and likely to increase in the future.

Wellington, 20th January, 1891.

GEORGE ED. LONG, District Inspector.

## ANNEX Z6.

## INSPECTOR ROONEY'S REPORT.

I mays the honor to submit the following report for the year 1890, on the Mudgoe section of the Wellington District.

This section included 100 schools in full operation at the end of 1899, classified thus:-

62 Public.

10 Provisional.22 Half-time.

6 House-to-house.

Total ..... 100

Owing to the school population having left their respective neighbourhoods, the two schools, Capertee Public and Mount Morris Half-time were closed, the former in the beginning of the year and the latter at midwinter. In June, the Girls' department of the Hill End Public School was closed, and since then the school has been carried on in one department, whilst the Public School at Dabee has been reduced to the rank of Half-time, and the Half-time Schools at Dun Dun and Lower Pyramul to House-to-house Schools. The refusal of the laudlord to repair Tabrabucca Public School caused its abandonment at the close of 1839; nine months later the East Tabrabucca Provisional was also closed, the new school erected at Warrangunyah taking the place of both.

New schools were opened as under:--

Warrangunyah Public, Birriwa Provisional, Oakborough Provisional, Glen Lee Half-time, Pinnacle Swamp Half-time,

and Combo Provisional was reopened in October.

These changes being considered, the tabulated result will show the following schools at the close of 1890:

60 Public. 13 Provisional. 20 Half-time. 7 House-to-house. Total..... 100

During the year three new schools have been creeted in places hitherto unprovided with school buildings; in two cases additions have been creeted, whilst repairs of a substantial character have been effected in 16 schools. Teachers' residences have been creeted at Gulgamree and Wurrangunyah; a tender has been accepted for the creetion of a suitable structure at Gulgang, and 17 residences have been effectually repaired. With the exception of two, all the Public and Provisional Schools are vested in the Department. The buildings in which the Half-time and House-to-house Schools are carried on, and of which 10 are vested in the Department are suitable, and, omitting two, are in fair repair.

At the beginning of the year the accommodation was sufficient for 3,620 pupils, now it is sufficient for 3,668. The annual returns show an average daily attendance of 2,654.

Playgrounds:—Increased attention has been given by teachers and pupils to the care and ornamentation of the playgrounds. In eighteen instances the value of the playgrounds has been augmented by the planting of trees which will in the near future afford both shade and beauty.

The following schools deserve special mention for their efforts in this direction:-

Burrandulla. Dungarec. Cooyal. Linbura. Crudine. Mobella. Cullenbone. Pyramul. Mudgee. Wilbertree.

Enrolment and Attendance:—The total enrolment for the year was 4,691 of whom 476 were entered as pupils of more than one school. The following table shows the enrolment and average attendance for each quarter :-

		Ei	irolment.	Attendance.
1st Q	uart	er	8,706	$2,492^{\circ}$
2nd	,,	***************************************	3,671	2,604.0
3rd	11	************	<b>3</b> ,649	2,638.3
4th	,,	**************************************	3,677	2.691.2

In comparison with the previous year the enrolment and attendance show a decrease of 13 and 112 respectively, whilst the attendance represents 73 per cent. of the enrolment for the present year as against 74 per cent. for last year. The decrease is accounted for by the fact that from January to August, continued wet weather absolutely prevented many from attending school.

Inspection:—Of the 103 schools in operation during the whole or part of the year all received a regular inspection, and two, Hargraves Public and Cudgebegong Public, received a second such inspection. In addition, I examined eight schools in a part of the district not under my supervision. My work of inspection may be thus summarised :-

111 schools received a regular inspection. second " 33 ordinary ,, ,, Total .....145

In all 2,664 pupils of schools under my supervision were examined. The results as also those of last year are here appended :-

· Subjects.	Number of pupils	Percentage satisfying Standard.		
out you to	examined.	1890.	1891.	
Reading	2.664	91.7	93	
Writing	2,496	93.5	95	
Dictation	2.101	50.0	90	
Arithmetic	2,454	90-9	79	
Grammar	1.117	85.4	74	
Geography	1.135	91.0	81	
History, English	970	81.5	74.8	
" Australian	527	92 7	84	
Scripture	2,438	82.7	83.4	
Object Lossons	2,203	86.0	93.6	
Drawing	1.834	74.4	68.9	
Music	1,825	68:8	82.2	
French	23	100	100	
Euclid	122	100	84	
Algebra	31	100.	100	
Mensuration	99	97:9	92	
Latin	31	100.	100	
Natural Science	74	100	90	
Trigonometry	None e	xamined	l	
Ncedlework	832	90∙	95.7	
Drill	2,176	67:	92	

From the comparison herewith shown it may be seen that a general improvement has taken place in arithmetic, grammar, geography, and history, whilst the percentages obtained in reading writing, needlework, drill, and object lessons are lower than those of the previous year. Except in the case of object lessons, alterations in the standard of proficiency will account in a great measure for the apparent falling off in these subjects. Since the revision of the standard, increased attention has been paid to mental arithmetic, and a corresponding measure of success has followed. Similar results may be anticivated in a reasonable period in the case of writing, needlework, and drill.

The

The efficiency of the schools in relation to the standard may be seen from the following table:-

Schools.	Below Standard.	Up to Standard.	Abov Standard.
Public Provisional Half-time House-to-house	2 5 7	10 4 4 2	49 4 11 5
Total	14	20	69

Thus, 86 per cent, of the schools either satisfied or exceeded the requirements of the standard.

#### The Teachers.

Those under my supervision are ranked as follows:-

No		Classification.
1	**************************************	I A
10	Indianistration reserves the state of the st

8	***************************************	4 ))	III
3		14 17	ΤV

Total ...14

Collectively, the teachers may be said to be respectable and intelligent, and the pupil-teachers painst king and deserving. Generally, teachers may be commended for the state of the school buildings since to them alone is entrusted all the Department's property.

#### Savinas Banks.

These institutions have been established in 10 schools, and now appear to meet with a greater measure of success than hitherto.

In conclusion, it may be stated that: -

- (a) This section of the district is amply provided with schools.
- (b) The material condition of the unjority of the schools is good.
- (c) Generally speaking, the accommodation afforded by each building exceeds the requirements of the individual place.
- (d) The curolment and average attendance for the year show a slight falling off, but a marked improvement is noted in the last quarter.
  - (e) The inspection of all schools was complete.
  - (f) The organisation of the schools is satisfactory.
  - (g) The general discipline is satisfactory.

The present condition of the schools warrants the anticipation of an increased degree of efficiency in the future.

JOHN P. ROONEY,

Mulgee, 27 December, 1890.

Inspector.

## ANNEX Z7.

## INSPECTOR SMITH'S REPORT.

INSPECTOR SMITH'S REPORT.

I HAVE the honor to submit my general report for the year 1890, on all the schools which have been placed under my charge in the Dubbo section of the Wellington District.

The year 1890 commenced with—18 Public, 12 Provisional, 4 Half-time, 11 House, and 1 Evening Public School—total 76 schools. Of these, 6 schools were closed at different times—Boogaldic and Riverside (Public), Cannonbur and Gumbalic (Provisional), Goorianawa and Inglegar House Schools. Collie and Coradgeric (Public), were formed into a House School, while Brightling Park (Public) was worked as a Half-time with a new school opened at Ironbarks. Two new schools were opened during the year—Ford's Budge (Provisional), near Bourke, and Purlewaugh (House), near Coonabarabran. Bramble House School having been closed for a few months was reopened in October, in conjunction with Bundulla in lieu of Caigan Station. After these changes there are at the end of 1890, 43 Public, 11 Provisional, 6 Half-time, 10 House, and 1 Evening Public School—total, 71 schools. Three or four more small schools will most probably be est-blished in a few mouths, in entirely new localities, as a large portion of fresh country has recently been selected.

portion of fresh country has recently been selected.

Every school in this section has received at least one regular inspection. The number of inspections made during 1890 was 75, against 98 during 1889. The reason of this great difference is that no ordinary inspections were made in 1800, in consequence of the continuous rains and bad condition of roads which made travelling an impossibility, whereas in 1889 there were 22 ordinary inspections, and more than one school received two regular inspections.

The following table will show the estimated proficiency of all schools with regard to standard:—

	Below Standard.	Up to Standard.	Ahove Standard.	Totals.
(a) Schools in operation full year	31 2	0 1	40 1	71 4
Totals	33	1	41	75

Of the 33 schools below the required standard, 20 were evidently carried on in an unsatisfactory manner. The pupils of these schools made little or no progress, and the teachers, from ignorance of their work, or wilful negligence, or both, failed to obtain the lowest mark required for classification.

The following table will show the estimated proficiency of all pupils examined during the year :-

2,140 2,140 1,534 2,140 652 652	1,864 1,870 995 1,408 393	Per cent. 87 87 64 66
2,140 1,534 2,140 652	1,870 995 1,408	87 87 64 66
1,534 2,140 652	1,870 995 1,408	64 66
$2,140 \\ 652$	995 1,408	66
652		
		CO
652		60
	532	81
635	449	70
1 997	1 810	90
1.837	1,429	78
1.77L	1,030	57
1,517	1,483	95
679	585	86
1,441	1,118	75
•	,	
15	. 15	100
72	72	100
14	14	100
29	29	100
14	14	100
	1,444 15 72 14 29	1,517

The percentages are a little lower this year than they were in 1889 for several of the most important of the ordinary subjects. The percentages for special subjects are the same.

Below is a tabulated statement of the enrolment and average attendance for each quarter of the year 1890 :-

	Number of Schools.	Enrolment.	Average Attendance.
March quarter June quarter Soptember quarter December quarter	76	3,255	2,022·6
	74	3,306	2,076·5
	74	3,270	2,117·0
	71	3,291	2,255 7

The total accommodation for pupils at the end of 1890, taking into account the decrease and increase of sittings by reason of the closing of schools, new schools, and enlargement of schools, comes to 4,968 sittings at 8 square feet for each child, and 4,675 sittings at 109 cubic feet for each child. As the enrolment of scholars does not reach 3,500 there is ample accommodation provided in all the schools,

the enrolment of scholars does not reach 3,500 there is sample accommodation provided in all the schools, with, perhaps one or two exceptions.

The naterial condition of the schools has greatly improved during 1890. A handsome and commodious school of wood and a teacher's residence have been built at Baringun on a new and more elevated site above flood mark. Baradine and Bourke Public Schools have been enlargel. New weathersheds have been creeted at Gilgandra and Warren. Repairs and improvements have been effected at Brin, Brewarrina, Brocklehurst, Bunglegumtic, Coonamble, Dubbo, Louth, Timbrichunge, Tomingley, and Warren. It is proposed to build new schools at Anglediol, Narromine, and Wanaaring, and to enlarge Coonamble and Trangic Public Schools by the addition of class-rooms. When these works have been completed a very small expenditure will be required during 1891.

In conclusion, the material condition of most of the schools scattered over this great and important portion of the Colony has during the past twelve months wonderfully improved. It may reasonably be expected that a decided change for the better will be noticed in the next future in the management of the small schools, when a greater number of ex-pupil-teachers are appointed thereto instead of the usual inexperienced, half-qualified class of candidates. A good many pupil-teachers, who have failed to obtain admission to the Training School, it is to be hoped will be found willing to accept the position of teachers of small country schools.

JOHN LESLIE SMITH,

Inspector.

Dubbo, 6th January, 1891.

## ANNEX Z8.

# REPORT OF PRINCIPAL OF TRAINING SCHOOL, FORT STREET.

Refort of Principal of Training School, Fort Street.

The connection between the Training Schools and the University has now undergone a practical test of twelve months, and the result may be regarded, on the whole, as very satisfactory. The only weak feature in the arrangement is the loss of time incurred by students in travelling to and from the University, but it will be impossible to obviate this until the proposed Training College within the University grounds is ready for occupation.

On the 21st January, 1889, 28 students were admitted who now form the senior division. Of these, 6 failed to matriculate in March, 1890. The remainder, with one exception, have since attended lectures at the Sydney University, and the Registrar speaks in favourable terms of their diligence and conduct. Of the 6 who failed to matriculate 2 decided to try to regain the lost ground by attendance at the evening lectures, and it is pleasing to note that both have succeeded in doing so. The other 4 determined to confine their attention to the subjects required for a II A certificate. One matriculated student was compelled to apply for six months' leave of absence owing to illness, and on his return to dufy he also took up the II A subjects.

Twenty-eight (28) juniors were admitted on the 20th January, 1890, seven of whom matriculated at the examination held during the following March, and one held the status of a second year student at the University at the time of his admission to the Training School. The remainder, with one exception, have, in addition to their training in the theory and practice of teaching, been engaged in preparing for the matriculation examination to commence on the 9th March, 1891.

Towards the close of the year all the students submitted to an examination in the Training School in school management, music, and drawing, their examination in other subjects being dependent upon their year in training and their connection or otherwise with the University. The various examinations for which the students presented themselves, together with the number in each case are as follows:—

N. Ive at Part I I	No. of Students.		
Nature of Examination.	Seniors.	Juniors	
University, 1st year	21	7	
" 2nd year	2	l ó	
9 wd ++ a a = 1	0	1	
Second-class certificate	5	0	
third-class ,	0	i	
Special Training School examination	0	19	
Total	28	28	

None of the students who sat for the University examinations have absolutely failed to pass, but seven failed in one subject only (either Latin or French) and will have the opportunity afforded them of again sitting for this particular subject in March next. The remainder all passed with credit. The diligence, attention, and conduct of the students throughout the year have been, with but few examples satisfactors. exceptions, satisfactory.

The distribution of scholarships and half-scholarships is as follows:—

	Seniors.	Juniors.
Scholarships	2 l	 16
Half-scholarships	7	 11
Without scholarships	0	 1
Totals	28	 28

Drill.

Singlestick practice.

Dumb-bell and Indian Club Exercises.

#### 3. STAFF.

Mr. John M. Taylor, B.A., formerly master of the Practising School, has been appointed successor to Mr. Percy J. Edmunds, Assistant Training Master and Lecturer in Science, and has proved himself an carned and capable teacher. Mr. Woodhouse has succeeded Mr. John Plummer as Drawing Master, and Mr. Joseph Finney has been appointed Master of the Practising School. In other respects the staff is

#### 4. Prictising School.

This school, under Mr. Finney's management, continues to do good work. The organisation is the same as in former years, i.e, the students act in turn as assistants for a week at a time; and test, criticism, and specimen lessons are continued with satisfactory results. In addition to the work in the Practising School, students receive regular instruction under Miss Banks on the application of Kindergarten principles to the instruction of the junior classes in Public Schools.

#### 5. MANUAL TRAINING.

During the year a workshop was erected on the premises, under the auspices of the Technical Education Branch, for the purpose of giving instruction in manual work—more especially carpentry. The Instructor, Mr. Powric, has proved himself well adapted for the work, and, considering the short time the workshop has been opened, has produced satisfactory results.

#### 6. TRAINING SCHOOL RIFLE CORPS.

It is proposed to establish a Rifle Corps, during the year 1891, in connection with the Training Institution, under the control of the Public School Ondet authorities. This is undoubtedly a step in the right direction, and will have the effect of keeping up a constant and efficient supply of instructors for the purpose of extending the Cadet movement throughout the Colony.

#### 7. ALTERATION IN VACATIONS.

In order to avoid clashing with the vacations of the Sydney University, it has been decided for the future to continue work during the Midwinter Vacation, and close during the Michaelmas Holidays in September in each year.

## 8. PUPIL-TRACHERS' CLASSES.

The enrolment and attendance at the Pupil Teachers' Saturday Classes during the year has been

CT		Ordinary		
Class.	Males.	Females.	Total.	Ordinary Attendance.
I	35	G8	103	98
01	26	67	93	87
II	3 F	88	122	115
V	60	99	159	145
otals	155	322	477	415

The fourth and third class Pupil-teachers received instructions in blackboard, freehand, and model drawing from Messrs. Woodhouse and Thornton, and Mesdames Douglas and O'Byrne; in the theory of music from Messrs. Alpen and Turner; and in drill and calisthenies from Captain Mulholland. The first and second class Pupil-teachers confined their attention to Latin and French, with a view to assist them to matriculate either before entering the Training Schools, or as soon as possible afterwards. The Instructors at the close of the year were:—Dr. Thibault, and Messrs. Maclardy, Taylor, Smith, and Stevenson. The following is the time-table of work:—

Classes.	9·15 to 10·15 a.m.	10-15 to 11·10.	11-2	11 ·20 to 12·15.	
ıv	Drawing. Music.	Music. Drawing.	Drill {	Males and Females alternately.	
	9·15_to 10·45 am.		11 to 12·15		
II	Latin. Latin,		French.		

Instruction is also given to the male Papil-teachers at the Castlereagh-street Public School on Wednesday afternoon, from 4:30 to 5:30 p.m. Geometry and algebra are taken on alternate Wednesdays. During the coming year, it has been decided to substitute Latin and French for the mathemetical subjects. The pupit-teachers attending these classes are, with but few exceptions, regular, punctual, and attentive to their work, and the results achieved are very satisfactory, considering the limited time at the disposal of the Instructors.

J. CONWAY, Principal.

#### ANNEX L9.

## REPORT OF PRINCIPAL OF TRAINING SCHOOL, HURLSTONE.

#### 1.-THE STUDENTS.

In 1890, there were 51 students in the Training School-23 seniors who had already been in the

In 1890, there were 51 students in the Training School—23 seniors who had already been in the Institution one year, and 28 juniors.

Two additional scholarships were granted by the Minister to those half-scholarship or non-scholarship students of the senior division who gained highest marks at the December examination.

Of the seniors, 17 matriculated in March, 1890, three taking honours in classics. As Latin, algebra, and geometry were new to all the students on entering the Training School in 1899, and as they had much other work to attend to, apart from matriculation subjects, these results are considered very satisfactory. The successful students have attended the University lectures, their first year in Arts being their second and final year in the Training School.

Upon their success at the University, added to the results of their examination in practical skill, school management, music, and drawing, at the Training School, will depend their obtaining a second-class classification.

The students appear to appreciate the benefits ensuing from the University course of study, and their work as teachers must gain in effectiveness by the advanced mental culture they have received. When instructions for the preparation of the test lessons were given, it was noticeable that none among the fifty-one students were more carnest and enthusiastic in this particular work than the University undergraduates.

undergraduates.

The great drawbacks in connection with attendance at the University are:—

- 1. The considerable distance between the University and the Training School, and the time lost
- 2. The want—on the part of the students—of early groundwork in science and classics previous to entering the Training School.

Those senior students—six in number—who failed to matriculate, studied for the ordinary second-class examination, and were examined at Hurlstone, December, 1890. They worked diligently to achieve success at the matriculation examination, and failed only in Latin, which was a new subject to them. They deserve credit for the courage with which they turned again to the old subjects, and for the earnest-

ness and industry with which they studied them.

Of the juniors, none were considered sufficiently advanced in the required subjects to warrant their presenting themselves for matriculation in March. The majority had no knowledge of Latin or

mathémutics

It will be seen that there were thus three distinct classes during the greater part of the year.

The conduct of the students, with very few exceptions, was excellent, and their health fairly good.

#### 2.—Course of Study.

1. The course of study for the seniors who matriculated was :-

(a.) - At the University :-

Latin.

Cicero in Catilinam I-IV; Virgil, Æneid I-VI; Livy, Book V.

#### French.

Macmillan's Course, Third Year; Corneille's "Horace"; Thierry's "Récits des Temps M'rovingiens; Molière's "L'Avare"; Roche's "Les Poètes Français"; Scribe: "Le Verre d'eau."

English.

More's History of King Richard III; Shakespeare's [Richard III; Morris' Historical English Accidence.

Mathematics.

Euclid: Books I to XI; Geometrical Conic Sections; Plane Trigonometry; Analytical Geometry.

Physics.

Chemist y.

I hysio raphy.

(b.) At the Training School:-

Art of Teaching and School Management.

Music: Theory and practice. Drawing: Geometrical.

2. For the senior students studying at Hurlstone for second class :--

English.

Shakespeare's "Macbeth"; Composition, Parsing, Analysis, and Prosody.

French.

Havet's Grammar; part of Macmillan's Third Year's Course; Saintine's "Picciola.

Mathematics. Arithmetic; Hamblin Smith's and Barnard Smith's Text-books; Euclid, Books I and II; Algebra; Quadratics without Surds.

Geography. Descriptive: Europe, Australasia, and North America; Geikie's Physical Geography; Mapping.

English Literature.

From Elizabeth to Cromwell, inclusive; Special Study-Macbeth.

History.

Ransome's English History; Sutherland's Australian History.

Natural Science.

Physiology.

School Management.

Organisation, Method, Discipline; Compilation of School Records, Time-tables and Lesson Programmes; History of Education; Public Schools Act and Regulations; Kindergarten.

Domestic Economy.

Wilson's " Healthy Life, and Healthy Dwellings."

Tecal

Vocal Music.

Sutton's Class Bo. k ; Practice; Stuff Notation, and Tonic Sol-fa.

Drawing.

Blackboard, frechand, model, and geometrical.

DrIII.

Calisthenics and school drill.

3. For the junior students :-

English.

Mciklejohn's Book of English; Composition, Parsing, Analysis, Prosody; Special Study-Henry V.

French.

Macmillan's Second French Course; Corncille's "Horace."

Latin.

Smith's Latin Grammar; Arnold's Composition; Sallust's Catiline War.

Mathematics.

Arithmetic: Theory and practice; Euclid Book I, with deductions; Todhunter's Algebra.

Natural Science.

Physiology.

School Management.

Organisation, method, and discipline; Compilation of School Records, Time-tables, and Lesson Programmes; History of Education; Public Schools Act and Regulations; Kindergarten.

Domestic Economy.

Cookery: Theory and practice; needlework.

Vocal Music.

Theory and Practice : Staff Notation ; Tonic Sol-fa.

Drawina.

Blackboard, freehand, model, and elementary perspective; geometrical.

Drill.

Calisthenics and school drill.

## III.-PRACTICAL TRAINING.

The juniors—those in their first year at the Training School—have each taught in the Practising School for four weeks, and have given weekly criticism lessons to children in the presence of their fellow-students, the Principal of the Training School, and the Mistress of the Practising School. The seniors have always been exempt from Practising School duty, but criticism lessons are expected from them as from the juniors. Specimen lessons are given by the Principal and the Mistress of the Practising School. Lessons in the theory of music are given to classes in the Practising School, under the supervision of Herr Alpen.

# IV .- PHYSICAL TRAINING.

As there is no gymnasium, the physical training is confined to military drill and calisthenic exercises. The Drill Instructor attends twice a week, and under his supervision the students are required to give drill and gallery lessons to classes of fellow-students and also to children from the Practising School. In the way of exercise, the students have their daily walk and lawn tennis.

## V .- KINDERGARTEN.

Each Saturday morning an hour's instruction in this subject is given to the students, and they in their turn are expected to give occasional Kindergarten lessons to children. The more thoroughly the students understand the principles of Kindergarten, and the greater practice they have in teaching it, the more they appear to appreciate its uses.

# VI.-NATURAL SCIENCE.

The students have received instruction in Physiology and Elementary Ambulance work, and their progress has been tested by monthly examinations.

# VII.-THE PREMISES.

The premises are in very good condition, the exterior of the building having been freshly painted and the juniors' dormitories thoroughly renovated.

MARY M. EVERITT,

Principal.

# APPENDIX XIII.

## REPORT ON HIGH SCHOOLS.

THERE are five State High Schools in operation in the Colony. The following table shows where they are, how they are attended, and what fees are paid by them:—

	Total enrolment during 1890.	Average quarterly enrolment.	Average daily attendance.	Amount of fees, paid.
Sydney—Boys' , Girls' Maitland—Boys' , Girls' Bathurst—Girls'	327 361 56 38 66	250 276 44 36 63	235 243 40 30 50	£ s. d 1,780 16 ( 2,011 16 ( 269 1 ( 185 16 3 459 7 (
	<b>£</b> 48	669	598	4,706 17
The figures in 1889 were	774	578	520	4,225 4

There has been therefore an increase of about 15 per cent, in both the average quarterly enrolment and the average daily attendance. Admission to High Schools can only be obtained by passing the entrance examination prescribed by law. This restriction limits the attendance, but has the advantage of securing, even in the lowest classes definite and pretty even attainments as a starting point. The ages of the pupils are some indication of their fitness to receive the higher education that these schools are intended to give. In the Sydney High School, for instance, the average age of both boys and girls in the lowest class is 13½ years; in the highest class the boys average 16 and the girls 17 years of age. As the great majority of the pupils come from Public Schools, these figures show that the High Schools receive them at an age when children usually leave Public Schools. It was always intended that this should be so, and that the High School work should supplement that of the Public School, and not merely run perullal with it.

so, and that the High School work should supplement that of the Public School, and not merely run parallel with it.

The public usually gauges the success of High Schools by the number of scholars who pass the junior, senior, or matriculation examinations at the University. The Department, while appreciating these passes at their full value, tests the High Schools exactly as it does the Public Schools, by a regular annual examination of all the classes. In all schools, promising and industrious pupils are nearly certain to receive justice and attention; but there is always a danger that they may receive this at the expense of less promising children, who are entitled to an equal share of time and care. The check on this tendency is that which has been in force in the High Schools since their establishment—the annual examination of each class by independent responsible officers. In giving their estimates of proficiency, they take into consideration the condition of the whole school. If their report is favourable, the fact that a large number of pupils have passed the University Examinations gives additional satisfaction; but if, in conjunction with these passes, it is found that the children in the lower classes, and many of those in the upper, are badly taught, the school throughout should be condemned.

It should be mentioned that, at the request of some of the teachers, the Departmental Examination in 1890 was held during the week that the clder pupils were absent at the University Examinations. To save the time and anxiety of two examinations, the teachers were willing that the results of the University Examination should be accepted as

attended them, and that the results obtained from the remainder of the pupils should be accepted as the test of the general efficiency. This method was clearly to the disadvantage of the schools, and will not be repeated, as the work of the best pupils was not counted in the general mark for proficiency. Notwithstanding this drawback, however, the results on the whole were satisfactory, and compared favourably with those of former years. The following tables show the details:—

RETURN of High School pupils who passed examinations at the University in 1890.

	Junior.	Senior.	Matriculation.
Sydney Boys' , Girls' Maitland Boys' , Gurls' Bathurst Girls'	40 36 7 6	9 6 1 1 3	26* 9 1
<u></u>	93	20	36

\* Of these, fourteen matriculated at the Junior or Senior Examination.

RETURN of pupils examined, and percentage of passes in each subject.

Drawing	411	90
Chemistry	31	84
cology	31	93
rigonometry	! 31	90
Bolany	38	100

All the pupils—boys and girls alike—study English, Latin, French, Arithmetic, Euclid, Algebra, English History, Geography, and Drawing; the older boys and girls receive regular instruction in physics, the senior boys in Trigonometry and Come Sections; and special classes study Greek and German. No one can say that too little is done. The feeling of the examiners is, and always has been that too much is attempted in the time available. This high pressure carries with it heavy night work, and is not conducive to thoroughness or health. It is right to say that the High Schools give shorter home lessons than they did two or three years ago, and that, even at their worst, they were not harder on their pupils in this restantiant of the pupils.

in this matter than other schools.

The teachers take a great interest in their work and in their scholars, and the pupils as a body are docile, respectful, industrious, fond of their school, and easily controlled and influenced. The discipline

docile, respectful, industrious, fond of their school, and easily controlled and influenced. The discipline in all cases is reported as satisfactory.

During the year the bursary system came into operation for the first time. Fifteen boys and 10 girls went as bursars from Public Schools to High Schools or Superior Public Schools, and 5 boys and 3 girls from the High Schools were selected by competitive examination to hold bursaries at the University.

No changes were made during the year in regard to existing buildings, but in a few months the new Sydney High School for boys will be finished, and before the close of 1891, a new boys' school will be ready for occupation at Maitland. The Girls' School in Sydney is overcrowded, but when the boys remove from their half of the building, the whole of the present premises can be given up to the girls.

As a Technical College, with necessary workshops and laboratories, will be on the same site as the Boys' High School, advantage will be taken of this circumstance to modify the course of study in the school. As I before mentioned, all pupils at present study Latin and French, and as most of them know little or nothing of these languages when they enter, it is necessary for them to spend an

an undue proportion of time over them, if they desire to matriculate. As the majority of the boys and girls do not go to the University, parents in many cases look upon the time spent on Latin and French as wasted, and would much prefer to see their children studying something that would tell more directly on their future occupations. To meet such cases, and to make the curriculum as comprehensive as possible, it has been decided to make the study of the subjects numbered below 1 to 6 in section I compulsory for all pupils, to allow those who do not intend to matriculate to omit either 7 or 8, or both, and to encourage all to take up one or more of the subjects classed as technical or commercial.

```

It is not intended that a pupil shall take up more subjects in Section II that he can profitably Annual examinations will be held and certificates of proficiency given for each technical or com-

mercial subject in which the candidate passes.

The total expenditure by the State on the High Schools for the year was £7,709 8s. Cd. Deducting from this sum the amount received as fees, the balance is £3,002 11s. 2d., or £4 9s. 9d. per head on the average enrolment.

28th January, 1891.

J. C. MAYNARD,

Chief Inspector.

# APPENDIX XIV.

REPORT ON DRAWING.

I HAVE the honor to submit the following report on the teaching of drawing in the public schools in the Metropolitan District, and, as shown by the result of examinations, in the Colony at large.

The general statements herein made are based upon inspections held in 41 schools, and visits to 5 others, 10 of the former being revisited.

### Manner of Examining.

After examining 9 on the old lines, by inspection of books (the new regulations requiring the instruction of all classes not having come into force) I instituted the practice of examining viad voce and by work done in my presence, thus securing a real test, not only of the pupils' powers, but often of the

by work done in my presence, thus securing a real test, not only of the pupils' powers, but often of the methods of instruction used.

As was to be expected, I find many teachers in doubt as to the intention of the new standard, and as to the method of teaching in several of the branches demanded. My attention has been largely given, therefore, to showing how the course of instruction may be made a really gradual and progressive one, not only in each class, but in the classes as a whole. With the very brief time that can be given to any one subject, this is an absolute necessity, and my efforts will be especially given to the promotion of this most desirable end. In order to make the best use of the time, it is also necessary to bring the intelligence of the children to bear upon their work, by cliciting from them at the beginning of each lesson the mode of procedure they will adopt in attacking the subject. This sharpens the faculty of observation, and obliges them to see the object as a whole rather than in detail, as is almost certain otherwise to be done to the detriment of any real grasp of the work as to proportion or construction. detriment of any real grasp of the work as to proportion or construction.

## Model Lessons givenby Superintendent.

With a view to assisting the teachers as far as possible in these matters, I have given nearly 200 model lessons in the upper departments, and a considerable number in the infants' departments of the 32 schools thus examined. So far as it is possible in the time at my disposal, I shall continue to give such lessons as a help to the teachers, regarding this as the nearest approach I can make to the ideal system of employing peripatetic teachers of drawing.

#### Time given to Subject.

The higher marking for the subject is effecting a change in the time given, and I have hopes of seeing a minimum weekly allowance of one hour become general. In schools where the head-teachers perceive the practical importance of the work this is already the case, but, by too many, the "accomplishment" view of the subject is held, and it is not easy to persuade some that when rightly taught it is a valuable mental exercise as well as a training in observation.

#### Class-leaching.

The necessity and method of collective class-teaching has not been sufficiently perceived or understood, and the possibility of imparting considerable skill to the general run of children is to many a new idea, the notion that drawing is the gift of the few rather than the instinct of the many being a firmly rooted one. Still, with few exceptions, I find all classes of teachers ready to receive suggestions as to improved methods of teaching, and to further my aims as far as they are able.

#### Infants' Schools.

The teaching in the infants' school is, on the whole, very fair, and forms a good foundation to work upon in the higher departments. A few teachers make an effort to teach the subject after the Kindergarten method, the result being in such cases markedly satisfactory. The use of squared slates or paper is very desirable.

The want hitherto of instruction in the earlier classes is strikingly shown in the work of the third-classes which is generally poor and feeble.

#### Examinations of Applicant Pupil-teachers, &c.

The examinations of applicant pupil-teachers and of candidates for bursaries, &c., from Sydney and the country districts show the general standard of work reached in freehand drawing. In these is observable the result of not having begun the subject sufficiently early, and of a want of real teaching, shown either by the absence of any system of construction or the use of some purely arbitrary or worthless one. In such examinations one should not, of course, require any particular degree of skill so much as the evidence of intelligence in method.

#### Examinations of Pupil-teachers.

Examinations of Pupil-teachers.

The examinations of pupil-teachers are naturally of the greatest importance, and it appears to me very necessary that the standard of attainment should be slowly raised above that at which it has lately stood. In this connection the rapid spread of technical education is doing a good work in bringing the means of improvement in drawing near to so many who had hitherto few chances within their reach. It is encouraging to see that, in the towns where there are Technical Schools, a considerable number of teachers avail themselves of the advantages offered by them. In some places the result of this in improved work is most noticeable. An effort has been made this year to arrive at a similar standard in the examinations of the Technical Department and for the D certificate, the same models being used in all the more important centres, the papers in geometry and perspective being made as far as possible of similar value, while the revision of papers has been in the hands of the same Examiner. The freehand copies set have been designed with the idea of prompting, through the use of free large curves and simple proportions, a sensible mode of construction or analysis, rather than presenting an unintelligible mass of small detail to the eye and mind of the candidate.

In the revision of the black-board for the Metropolitan District and of the freehand and model drawing generally, credit has been given more especially to any signs that knowledge has been made use of, rather than to the exercise of mere manipulative skill. It is the former which can alone give the power of teaching, while not unfrequently the latter, when it is the result only of quickness of eye, is misleading rather than not, tending to a disregard of systematic method, and conferring a power merely of correcting, not of teaching.

Model Drawing.

## Model Drawing.

On the other hand, there is a tendency in teaching model drawing to place a mistaken reliance on the rules of mechanical perspective, forgetful of the fact that while data can be supplied in the one case, they are practically unattainable in the other. Here they are as much out of place as in freehand would be the geometrical construction of a pentagon to obtain the form of a five petalled flower. This subject is indeed one of the most difficult to teach, and one where I foresee the least likelihood of obtaining fair results for some time to come, owing to the want of proper grounding in the mind of the teacher, and to the dependence hitherto place 1 on drawing from flat copies of models rather than the real object.

## Results of Pupil-teachers' Examinations.

A comparison of the results in the different subjects of examination of pupil-teachers shows this clearly. The percentage of passes is given:—

Blackboard (Sydney candidates)	55.7
Freehand	50·5
Model drawing	24.2

In the revision of papers attention is primarily given (as with the other subjects), to evidence of knowledge; this being essential in a teacher. Roughness of execution, even a considerable degree of error in proportion, is not allowed to condemn a drawing, provided only that a knowledge of principles is shown. At the same time high marks cannot be obtained on work, where execution and proportion are disregarded,

disregarded.

Hitherto, few children have been properly equal to taking up model drawing, owing to drawing having begun in the 3rd class only; but under the new arrangement this need not be the case, especially if they are familiarised with the appearances of objects and of their constituent lines and surfaces in the round, almost from the commencement of their studies. More ingenuity might be shown in obtaining models where geometrical solids or wire models are not to hand. In fact, so long as the forms are not too complicated, simple familiar objects are preferable at times, as being more interesting than abstract forms. Nevertheless, it is undesirable to sacrifice thoroughness in any way to a mistaken notion of furthering interest—in drawing as in other studies.

# Appliances, &c.

Many schools need models of larger size than those now in use, and it will be most advantageous to the teaching when all schools are supplied with a few wire models. The Superintendent of technical Instruction has promised to supply from the technical workshops sets of simple casts for freehand drawing, and these will be found very useful in many schools, though it requires more than the ordinary knowledge to enable a teacher to make a proper use of these.

## Practical Geometry.

In the examination in practical geometry, the branch of solid geometry has hitherto received little attention. Its immense practical utility in so many handicrafts and professions makes it of the utmost moment that this subject should not be neglected, while the work of many teachers in perspective shows the want of any grasp of it. Some knowledge is now made obligatory, and the question of

scale drawing, and of the construction of simple geometrical patterns, received recognition in the examinations, as it is of importance that candidates should be led to give attention to these branches. In the schools, geometry is often not given where it should be, on the plea that the children cannot, or will not, supply themselves with compasses. Where this is really the case, it is no excuse for the total omission of the subject, as much can be done without instruments, supplemented by direct blackboard work.

# ${\it Training \ Colleges.}$

The Training Colleges are, generally speaking, well supplied with apparatus and appliances, though the rooms are not well adapted for the teaching of drawing, owing to the arrangement of desks, &c., and the position of the windows. At Hurlstone, classes are given in model drawing and geometry, the teaching being thorough, conscientious, and intelligent. At Fort-street, courses in geometry and perspective are attended by the training students. Model lessons in freehand and model drawing will be given at intervals during the ensuing year, the year's work being more than sufficient to allow of proper courses in geometry and perspective being given. By this means, much useful knowledge on the subject of the teaching of drawing will be disseminated.

\*\*Pupil-teachers' Saturday Classes.\*\*

Pupil-teachers' Saturday Classes.

The arrangement of the rooms in which the classes for pupil-teachers are held on Saturdays militates considerably against their success. The position of the desks, and the large number of students under each instructor, forbid the class being taken as a whole, and it is therefore a matter of great difficulty to keep the class well in hand, and preserve the continuity of the lessons. Individual instruction, which is so necessary in drawing, is hardly possible in the brief time—often curtailed—which can be allowed.

#### High School, Sydney.

The standard of work reached in this school is satisfactory, when we take into account the size of the classes. The teaching is energetic and intelligent, and illustrates the advantages derived from the teaching of a specialist. Syllabus.

The remedy for some of the shortcomings I have here dwelt upon, especially with regard to the arrangement of the course of instruction, lies in the dissemination of a carefully-considered syllabus. For the benefit of such teachers as have no special knowledge of the subject this should be arranged in sufficient detail for every half-year to leave little to their mitiative. A syllabus has been prepared on these lines, embodying many hints on the method of teaching, outline lessons, suggestions as to models, text-books, and the like, and showing how the work may from the commencement, lead directly up to the chief end of drawing—the power of expressing with precision the real or apparent form of any object seen or remembered—answering, in fact, to the power of description in writing. The real form may be shown either by frechand or geometry; the apparent, by model drawing or perspective.

#### Results of Inspections. I append the results of my inspection in tabulated form :-

	Schools.	Departments.	Classes.	Boys.	Girls.	Infants.	Total.
Inspected before May, 1890 After May, 1830 Visited	9 32 15	15 77	37 350	5,096	4,456	4,017	13,569
Totals	56	92	387	5,096	4,456	4,017	13,569

The following statement gives the result of the oral and individual examinations conducted after May 1st, 1890, and the percentages of passes in each Department:—

	Above	Up to	Below Standard.	Percentage of passes.
Boys	413 303 503	2,235 2,000 1.545	2,448 2,147 1,239	51.9 51.8 62.3
Totals	1,225	5,780	5,831	545

The percentages of those above, up to, and below standard, is shown in the following statement, and the average of marks given to classes:—

	Above	Up to	Below Standard.	Average marks given to classes,
Boys	8 1 6 9 15 3	43·8 44·9 47·0	48·1 48·2 37·7	5·4 5·6 6·5
Totals	9.5	45.0	45.5	5.8

One general result of the examinations of pupil-teachers this year has been to leave on my mind an impression of the necessity of a progressive series of examinations in drawing for each class of pupil-teachers as in other subjects, and I hope ere long to be able to draw up and submit a scheme for the

The full effects of the changes which have taken place cannot, of course, begin to be visible until those children who are now beginning their school life have worked through into the upper classes.

Although it would, therefore, be a mistake to look for results too soon, I can safely say that I see every sign of distinct progress having been initiated, and I look hopefully to next year for evidence of improvement improvement.

FREDERIC W. WOODHOUSE,

Sydney, January 9, 1891.

Superintendent of Drawing.

#### APPENDIX XV.

#### REPORT ON SINGING.

I have the honour to report, for the information of the Minister, that I have, during the past year, examined and reported upon all the schools in the Metropolitan District both in the theory and practice of vocal music. The average Mark (Fair = 6) is not so high as last year, but the attainments of the children are, nevertheless, higher, the examinations having been more severe and searching.

The new standard, which came into operation at the beginning of the year, demands a much more extended knowledge of the theory of music than the one which it superseded, and is certainly higher than that of any other country. Reading at sight forms a prominent feature in all examinations, and in the fourth and fifth classes passages in two and three-part harmony (in any key or time) are frequently placed upon the black board, and generally very creditably sung by the pupils.

To attain the result indicated in the new standard, the teaching in the lower classes must, in many instances, be improved. It too often happens that these classes are entrusted entirely to junior pupil-teachers of but little experience, and it is scarcely a matter of surprise that very often they do not reach the standard, and thereby throw additional work upon the teachers of the more advanced classes. As a matter of fact, it often happens that while the senior classes of a school deserve the mark "Good," the junior classes receive but "Moderate." It is this which affects the average mark. The scope of the new standard is as follows:—

- (1.) Infant Schools.—Simple includies by car.
- (2.) Second Class (Primary Schools).—Elementary lessons in Tonic Sol-Fa Notation.
- (3.) Third Class.—Two part-songs from Tonic Sol-Fa and introductory lessons in Staff Notation.
- (4) Fourth and Fifth Classes.—In these classes attention is confined to the Staff Notation on the movable (Doh) principle, and reading at sight forms a prominent part of the training.

The best theoretical and practical examinations were passed by the schools at Paddington, Fortstreet, Crown-street, Cleveland-street, Waverley, and Glebe; but the Paddington Girls' Department was the best, as each class was properly prepared, and above the standard—Miss Doyle, the head-mistress, being a very able teacher.

In addition to the examination and occasional teaching of Schools in the Metropolitan District, I have also entire charge of the musical training of the students at the Hullstone and Fort-street Training Schools. At both these institutions the students have, as a whole, endeavoured to profit by my instructions, and will in future form a very important factor in the dissemination of musical knowledge in our schools. Excellent results of teaching are frequently shown by former students of these institutions by the very charming concerts which are sometimes given by the children in country towns.

In conclusion, I beg to say that, as far as the Metropolitan District is concerned, the teaching is both vigorous and painstaking, while the singing of the children cannot fail to give pleasure to themselves and the listeners.

HUGO ALPEN, Superintendent of Singing.

## APPENDIX XIV.

## REPORT ON COOKERY.

In July of this year the success of the cookery class held at Fort-street determined the Minister to extend the system to other schools. I was appointed "Instructress in Cookery," my duties being to take charge of this branch of education, organise and arrange suitable courses of lessons for the different classes, regulate the expenditure for provisions, and be generally responsible for the conduct and success of the scheme, adopted by the Department, for cookery instruction.

This scheme provides a plain cookery course common to all schools in which cookery is faught. Complete in itself for ordinary home-work, it also lays a solid foundation upon which a professional superstructure may be built, should the skill and taste of the pupils lead them to study the higher branches of cookery as a means of livelihood.

It is expected that one day a week in the cookery class-room for three months will enable pupils to gain the certificate granted for this course. This is the only course which it is proposed to teach in the Public Schools, and every girl in the fifth class of a school which possesses a "portable kitchen," will, during the year, pass through it. In these schools one hour a week is devoted to a lecture, with demonstrations, upon cookery and domestic economy, which the whole of the fifth class attends, and which will count as the "science" subject for girls in examinations.

For the efficient and economical carrying out of this scheme a portable kitchen was sent to Blackfriars Superior Public School, and an assistant teacher of cookery appointed and placed in charge of the class. The examination has shown that with an earnest capable teacher, who adheres strictly to the course laid down, the time allotted is sufficient to enable the pupils to gain the certificate, and with it an amount of knowledge and skill, the value of which, in their future lives, can hardly be over-estimated.

The receipts from the sale of food are expected to balance the expenditure for provisions; and this expectation is grounded on the report, made in June, of the experimental class at Fort-street, which showed receipts, £75 14s. 10d., as against expenditure, £52. 10s.

In December, 1890, about 270 pupils were receiving instruction under this scheme. Of these, 88 had completed the practise course and presented themselves for examination; all passed but 4. The pupils were distributed as follows:---

Fort-street: -Number of pupils, 145; pupils in practising kitchen, 39; examined, 37; passed, 34.

Average of	marks in	practice	***************************************	583	max.	70
	27	method	***************************************	8	,,	
	"	theory	• ············	1ธ	11	20
				<del></del> -		
		Totalar	reinde	91 a	max 1	nn.

The cookery school is in full work daily, and supplies a dinner for nearly 40 persons, cooked, served, and cleared away by the pupils. On the occasion of the Vice-Regal visit, a luncheon was cooked and served by them very satisfactorily.

Blackfriars :-- Number of pupils, 45; pupils in practising kitchen, 24; examined, 22; passed 22.

Average of marks in	practice	66ŀ,	max.	70
11	method	7	1)	10
17	theory	161	9.9	20
	Total average	90, 1	nax. I	.00

These returns show that the instruction given has been fully utilised by the pupils. By the teachers and parents it is so highly valued that they have begged to be allowed to retain the "portable kitchen." Instruction is given two days a week. No regular dianer is prepared, but the cooked food is sold to teachers, parents of pupils, and is often applied for for the sick in the neighbourhood.

Hurlstone Training School:—A class is held one day a week, and attended by the junior students. With improved arrangements, the issue of certificates, and the prospect of some of the students teaching the subject, good results may be looked for.

Number of pupils, 28; pupils in practising kitchen, 23; examined, 28; passed, 28.

Average of marks in	practice	52 <del>1</del>	, max	, 70
"	method			
27	theory	. 164	"	20
	-			
	Total average	743	, max	. 100

Parramatta Industrial School:—Number of pupils, 50. No examination has yet been held. There is one class a week, the pupils are decile, eager to learn, and thoroughly appreciate the instruction given. The superintendent and matrons state that the girls have greatly improved since the establishment of the class.

I desire to acknowledge my obligations to the teachers at Fort-street and Blackfriars, without whose cordial co-operation no such results as those indicated could have been obtained in their schools; and who have had by extra work and self-denial to make up for the inroads made upon the time available for other subjects.

20th January, 1891.

A. FAWCETT-STORY.

Instructress in Cookery.

#### APPENDIX XVII.

## REPORT ON NEEDLEWORK.

I HAVE the honor to report that since my appointment to the above position in February last I have in all paid 240 visits to Public Schools in the Metropolitan district. Of this number, I have examined and reported upon 40 schools.

From these reports it will be seen that the efficiency of schools in sewing has been maintained. This is most gratifying, as circumstances, in my opinion, have been adverse to uniformity and progress, inasmuelt as the new standard rules for the guidance of work-mistresses and others only came into force this year.

The majority of work-mistresses in 1st class and 2nd class schools, have in past years come under my notice, and my estimate of their ability then has since been confirmed.

As regards the efficiency of the needlework in III, IV, V, and VI class schools taught by mistresses-in-charge, assistants, and teachers' wives, the general standard of proficiency (with few exceptions) has been maintained, while many of these schools have attained to excellence.

As regards the general knowledge and efficiency of pupil-teachers, I found invariably that they had been well taught in cutting and setting, and, judging from specimens of needlework in hand, had reached the standard required for their individual grades.

At the present time the accommodation existing in many first and second class schools for the use of the needlework classes is extremely inadequate. From my personal experience in Fort-street school, this class of instruction has always been attended with great inconvenience and discomfort, as cleanliness, order, and a calm rest of mind and body, should be the natural accompaniments to this species of employment, and these conditions could only be secured by the provision of spacious workrooms, with lavatory attached.

During my visits to schools (especially in poor localities) the want of suitable sewing material provided by mothers for first instruction, in lower classes, was very noticeable.

Referring to the new standard of needlework issued by the Minister, I may state that it is being faithfully and rigorously adhered to, and is working satisfactorily and well.

ANNIE DADLEY,
Directress of Needlework.

13th January, 1891.

## APPENDIX XVIII.

## REPORT ON THE PUBLIC SCHOOLS CADET FORCE.

I HAVE the honor to submit for the information of the Minister the following report on the Public Schools Cadet Force for 1890 :-

The cadet work of the year has been conducted under the new regulations, which came into force

on the 21st of January.

In the report for last year the estimated enrolment of eadets for 1890 was stated at not less than

5.000.

This estimate has been more than realised, the actual enrolment at the close of the year being 5,850.

If to this be added the enrolment of cadets in schools in which corps have been formed under the Volunteer Force Regulation Act of 1857, namely, in the King's School (92), Sydney Grammar School (223), Newington College (112), St. Ignatius College (113), Coocrwull Academy (53), and Windsor Grammar School (80), it will be seen that the enrolment of cadets in the Colony reaches 6,523.

The year has been one of organisation, and one in which many difficulties have had to be overgone and many dispensing themselves experienced.

come, and many disappointments experienced.

In many cases corps have had to wait for months before receiving their equipment, notwithstanding which the teachers have patiently carried on the cadet work in their schools and kept up the

interest of the pupils.

I take this opportunity of bearing witness to the unselfish and loyal manner in which the teachers generally have assisted the Cadet Staff in furthering the interests of the cadet movement. I am fully convinced that in this matter the hearty co-operation of the teachers is essential to success. The best corps in the force are undoubtedly to be found in schools in which the teachers take an active interest in each teachers. cadet work.

The growth of the Cadet Force has been steady throughout the year, each quarter showing an increase on the preceding one.

The quarterly enrolments were: For March quarter, 2,951; for June quarter, 3,921; for September quarter, 5,524; and for December quarter, 5,850. This development has been mainly due to the efforts of the teachers themselves to establish corps in their schools and to increase the number of their

Had it been possible to equip the corps at anything like a reasonable rate, the expansion of the

Had it been possible to equip the corps at anything like a reasonable rate, the expansion of the Cadet Force would have been far more rapid, inasmuch as the cadet movement has the sympathy of the public and the hearty goodwill of teachers and boys generally.

The kindly interest taken in the movement by Major-General Richardson and his staff, by members of the permanent staff, and by many volunteer officers throughout the Colony, has been very encouraging, and the thankful acknowledgments of all those benefited is due to these officers for their valuable assistance, given on various occasions and in many ways.

The chief events of the year were the following:—(1) The inspection by Major-General Richardson. This inspection was held on Moore Park, on the 20th June, and was attended by 886 cadets, principally from the city and suburban schools

from the city and suburban schools.

Unfavourable weather prevented the attendance of at least twice this number

The display was very creditable, and called forth the commendation of the Major-General.

(2) The review of the Cadet Force on the 23rd August by Lord Carrington, on which occasion Lady Carrington presented the force with colours thoughtfully provided by lady teachers of the Public

Schools.

This review was held on Moore Park, and was a pronounced success.

The whole of the City and Suburban Sen The field state showed an attendance of 4,525 of all ranks. The whole of the City and Suburban Senior and School Cadet Corps and many of the country corps took part in this review. In addition to these, the following corps from other schools and colleges were well represented, namely, King's School, Sydney Grammar School, New-

ington College, St. Ignatius College, and Conerwill Academy.

After the review His Excellency directed the following to be published in General Orders:

"The Governor has reviewed with pleasure the first parade of the Public School Cadet Corps, and congratulates the Minister for Public Instruction on the pronounced success of the inauguration of

this valuable movement.

"He also congratulates Colonel Paul and his staff on the manner in which they have carried out the details of the scheme.

"The steadiness in the ranks, and the march past of the cadets were exceedingly good; and His Excellency is especially pleased to hear of the good conduct of the cadets in camp, and of their obedience to discipline and good order.

"It only remains for the Governor to wish all members of the various cadet corps every happiness and success in years to come."

"It only remains for the Governor to wish all members of the various cadet corps every happiness and success in years to come."

To emble the country crops to be present at the review, an instruction camp for these corps was formed at the Agricultural Society's Grounds. Moore Park, during the week of the review, the Society having generously offered the Minist r the use of the large pavilions and other buildings for housing the cadets. Without this timely offer it was doubtful whether the country corps could have participated in the review, as owing to the very wet winter just closed and the probability of more rain falling the risk attending camping out was thought to be too great to be incurred by the buys.

The cadet camp was attended by nearly 1,490 eadets from the following places:—Bathurst, Blayney, Bombals, Bungendore, Blackheath, Catheart, Coperwall, Cooma, Camden, Cudal, Campbelltown, Canonindra, Dubbo, Emmaville, East Maitland, Eskbank, Frogmore, Grafton, Grenfell, Goulburn, Glea Innes, Gundagai, Junee Junction, Kiama, Mount Keira, Mudgee, Murrurundi, Morpeth, Muswellbrook, Nowra, Nyngan, Newcastle, Orange, Penrith, Picton, Singleton, Tantworth, Tenterfield, Wagga Wagga, Wollongong, Wickham, West Maitland, Yass, and Young.

The Railway Commissioners allowed the cadets from all these places, together with their officers or teachers, to travel to and from the camp free of cost to this Department—a very generous concession. During the camp week the Public Schools Athletic Association held its annual sports meeting on the Association Ground, Moore Park. This was done to give the eadets in camp an opportunity of witnessing or taking part in the yearly sports gathering of the Public Schools.

At this meeting the Drill Challenge Shield was won by the Crown-street Superior Public School.

Owing to the compulsory closing of the Paddington Rifle Range (which had the effect of compelling the New South Wales Rifle Association to abandon its rifle meeting for the year), the competition for the Public Schools Carle

winners.

The heavy special work of this, the first year of the existence of the re-organized Cadet Force, did not permit of visits being paid to country corps. Many of these corps were, however, seen in camp.

All the city and suburban corps were fully inspected and reported on during the December quarter.

A.

A parade held at Newcastle on the 18th of December, enabled me to inspect the following School Corps: Cook's Hill, Morpeth, Newcastle, Newcastle East, Raymond Terrace, Stockton, West Maitland, and Wickham. The Newcastle Seniors, a fine corps of 57 lads, were inspected on the following day.

Taken as a whole, the results for the year may be regarded as very satisfactory. The interest in the cadet movement has been well maintained, notwithstanding many drawbacks, and there is every reason for concluding that the results for the coming year will be equally satisfactory.

A. PAUL,

Lieut.-Col. Commanding the Public Schools Cadet Force.

#### APPENDIX XIX.

REPORT ON TECHNICAL EDUCATION, WITH ANNEXES.

Report on Technical Education, with Annexes.

The report now submitted will show that during the year 1890 the work of this Branch has been prosecuted with vigour and success, and that much has been done to extend the benefits of technical education, especially in the country districts.

The record for 1889 gave 119 classes, thus distributed:—56 in Sydney, 8 in the suburbs, and 55 in the country. Although 8 of these classes lapsed during 1889, or at its close, the record for 1890 shows 205 classes in operation, viz.: 70 in Sydney, 26 in the suburbs, and 109 in the country districts. In addition to this increase of 86 classes, there have been formed, in connection with Public Schools, 6 classes for manual training, and 14 for phonography, so that the total number of classes under my supervision during the year was 225, an increase of 106 upon the number for 1889.

At the beginning of the year a Branch Technical School and School of Mines was established at Broken Hill, under the charge of Mr. James Harris, C.E. Classes in chemistry, geology, mineralogy, mechanical drawing, applied mechanics, mining, metollorgy, physics, mathematics, and drawing, were formed, but, from a variety of causes, the attendance of students has not come up to expectations. No suitable buildings being available, the rooms of the Public School have been temporarily made use of. Their situation, some considerable distance from the business part of the town, and the difficulty of approach at night, and the impossibility of conducting experiments so as to make the instruction practical, have, with the interruption caused by the strike, tended to damp the enthusiasm of some students, and to cause the withdrawal of others. As most of the probable students are employed in the mines and work in successive shifts of eight hours each, it is absolutely necessary that classes be held during the day-time, otherwise students can attend only at irregular intervals. To this circumstance the during the day-time, otherwise students can attend only at irregular intervals. To this circumstance the low average attendance of the various classes is to be attributed. Efforts have been made to rent suitable buildings in a central position to serve till the new college buildings are completed, but hitherto without success. Plans and specifications for the new building are ready, and tenders will be called for in the server of a few days. in the course of a few days

The importance of West Maitland as a centre of influence was recognised early in the year by the establishment of a distinct Branch Technical School in that town. Mr. J. A. Hollings, teacher of the art classes, was appointed the resident master, and has proved himself worthy of the confidence reposed in him. He has worked with great energy and success, and has now 14 classes under him with 539 students, instead of 3 classes and 126 students reported for 1889.

The old-established Branch Schools at Goulburn and Bathurst continue to advance steadily in efficiency and usefulness, but the one at Newcastle does not keep pace with the progress of that great centre of industry.

Applications for the formation of classes have been numerous.

The subjects most in demand are

Applications for the formation of classes have been numerous. The subjects most in demand are phonography, book-keeping, mathematics, agriculture, drawing, mining, and cookery. It has not been found practicable to accede to all the requests for classes in phonography, and it is not desirable to extend much more in this direction. Little encouragement has been given to the formation of classes in mathematics, and applications for classes in French and Latin have been refused. With the view of introducing instruction in cookery into the country towns, a Leeds cookery apparatus and portable kitchen was imported and sent to Goulburn. Miss M. A. Nisbet, a highly qualified teacher, trained in the Glasgow School of Cookery, was appointed teacher, and classes were formed. These classes have been a decided success, and have been greatly appreciated. Efforts will be made during 1891 to establish a thoroughly organised school of cookery in connection with the Sydney Technical College, where teachers will be trained, examinations held, and diplomas issued. Classes at the branch schools will also be established as early as practicable.

where teachers will be trained, examinations held, and diplomas issued. Classes at the branch schools will also be established as early as practicable.

No change has been made in the buildings occupied for the work of the classes in Sydney, so that all the difficulties detailed in former reports have been experienced throughout the year. The work of creeting the new Technical College buildings is being pushed on vigorously; the engineering workshops will be ready for the commencement of the lessons for 1891, and there is every probability that in the course of a very few months the classes of the Sydney Technical College will be accommodated in class and lecture rooms not surpassed in any part of the world.

The suburban and country classes generally meet in the Public School buildings or in rooms belonging to the local School of Arts. At Newcastle and Goulburn, the School of Arts authorities have creeted rooms specially for the technical classes, and have leased them to the Department at a nominal rent. Additional and improved appliances have been provided for all the classes, and the equipment has been made as complete as the occupation of temporary buildings will admit.

The following are the places where new classes have been started during the year:—Ashfield, Burwood, Newtown, St. Leonards, Orange, Lithgow, Bega, Candelo, Wellongong, Broken Hill, Silverton, East Maitland, Buttai, Muswellbrook, Denman, Tamworth, Grafton, Merewether, Hamilton, Wickham, Waratah, Wallsend, Stockton, Pennant Hills, Ryde. Classes have also been formed in connection with the following Public School, Fernant Hills, Ryde. Classes have also been formed in connection with the following Public School, Neweastle Superior Public School, Girls' High School, Boys' High School, Cook's Hill Public School, Hamilton Public School, Wickham Public School, Tighe's Hill Public School, West Maitland Boys' High School, West Maitland Superior Public School, East Maitland Public School, West Maitland Boys' High School, West Maitland Superior Public School, East Maitland Public School, Muswellbrook Public School.

The number of enrolments during the year amounted to 6,580; 2,822 of these were in the classes of the Sydney Technical College, 3,020 in the classes of the Branch Schools, and 733 in the Manual Training and Phonography classes connected with the Public Schools. These enrolments represent 5,207 individual standents. In the returns for this year no notice is taken of the private classes held in the Technical College buildings. The attendance was rather irregular during the year, in consequence of the heavy rains that prevailed for more than half the year, and the interruption to industry caused by the great strike that began in August. For several weeks the classes at Nowenstle, Broken Hill, and Silverton, had no attendance, and those in Sydney were greatly affected. Notwithstanding these drawbacks, the average attendance reached 1,885, an increase of 700, or 58 per cent., on that of 1899.

The course of instruction for each class, and the text-books to be studied are laid down in the calendar for the year. This calendar was compiled after consulting all the lecturers and teachers, and, with a few unimportant alt

#### (1.) AGRICULTURE.

This important subject has received constant and careful attention, and the results, whether judged by the number of students or the effectiveness of the teaching imparted, or by the practical good that has account from the operations of the classes, have been eminently satisfactory. As an illustration of the good effected by these classes, I give the following extract from the Daily Telegraph of the 29th Eeptomber, 1890:—

#### " Utilising Skim Milk.

"A meeting of dairymen was feld in the Kiman Council Chambers on Friday afteroon, for the purpose of hearing from Mr. C. F. Jeanucrett an exposition on the subject of profitably utilising the skim milk of butter factories by transforming it into wholosome food for both man and beast. There were five factories represented. Mr. Jeannerett soid that the surplus skim milk of butter factories since the utilisation of the cream separator had in many instances become a muisance in New South Wates, and as summer was again approaching it recented a pity that something was not done to minimise this cvil. A direct and very simple method of treating the material had been brought under the notice of the Minister for Public Instruction, of which the following would give a general idea:—The skim milk immediately after leaving the separator is run into a vat, and there tested with litmus paper. If it has an acid resction, limewater or a solution of caustic-potash is added until the whole is quite neutral or elightly alkaline. The mass is then run into an oraporniang pan of the boar or hollow-dix pattern, a description of which will be found in sugar-refining and old engineering books. Here it is evaporated to about one-fifth of its original bulk, the exhaust steam from the factory engine only being required. The milk having been reduced to the consistency of molasses, dry maize meal, bran, pollard, or flour is added, as a medium of drying, according to the purpose for which the material is to be used. This damp meal is at once transferred to a drying-room, where all moisture is evaporated by spreading on shelves, &c., and it is afterwards bagged for sale, thus being made available for human beings, cattle, horses, dogs, poultry, sheep, &c., and will keep in this state for years. A manufactory could be started on a small scale, Mr. Jeannerett announced, for about £150 or £200, and to give an illustration of the commercial aspects of the affair, he stated that from 1,000 gallons of milk, 1,850 lb. of this food could be produced.

#### The Classes and Subjects taught.

- 1. Elementary Agriculture.—For the study of the rudiments and practice of Australian agriculture. The subjects taught are :-
  - 1. Australian agriculture—character and prospects.
  - 2. Soils of New South Wales-composition and qualities of. Organic (vegetable) and inorganic (mineral) value of soils.
     Climate and rainfall—their effects on grass and crops.
     Selecting land for sheep, stock, farm, or garden.
     Water supply.
     Tools and machines of agriculture—their use and cost.

```
8. Australian forestry: ringbarking, clearing, stumping.

9. Fencing, for grass and cultivation.

10. Stock and crop farming.

11. Tree pruning, planting, &c.

12. Ploughing, harrowing, rolling, &c.

13. Sheep and wheat farming, combined.

14. Dairying stock and soils for.

15. Native v. cultivated pasture—respective values of.

16. Poultry-farming: requirements for success.

17. Grafting, budding, &c.: theory and practice.

18. The farm garden—seasonable work, vegetables and fruits.

19. Pig-keeping, bacon-curing, &c.

20. Common crops of New South Wales—how to work them.

21. Irrigation: storing, pumping, and using water for crops of grass.

22. Where draining pays; injurious matters in our soils.

23. Making and using manures: preventing waste of manures.

24. Seed farming: hybridising, selecting, and testing seeds.

25. Requirements for tobacco, arrowroot, &c.

26. Sugar, as an Australian crop: manufacture of sugar.

    Sugar, as an Australian crop: manufacture of sugar.
    Keeping a cow.

28. Fruit preserving, canning, drying, curing, &c.
29. Poultry-farming: breeds, diseases, &c.
30. Seasonable work in farm and garden.

30. Seasonable work in farm and garden.
31. Effects of lime on soils and plants.
32. Root crops in rotation for this climate.
33. The soils, ensilage, hay-making, storing, &c.
34. Seed, oil, and fibre crops.
35. Working maize, wheat, potatoes, as crops.
36. Summer treatment of fruits, budding, &c.
37. Bee-keeping as a business.
38. Principles of dairying for milk, butter, cheese.
39. Comparative values of native and cultivated pasture.
40. River and well waters.
41. Insect and funcoid posts, and means for cheeking the

                                                             41. Insect and fungoid posts, and means for checking them.
42. Review of the work done.
2. Advanced Agriculture.—For the study of agricultural science and practice, and the chemistry of agriculture. The subjects taught are:—

    Seasonable work in farm and garden.

                                                                             Science of agriculture (practical, with use of apparatus). Sources of soils of New South Wates.

    Mechanical and chemical character of soils.
    Tests for water (practical).
    Irrigation for grass and crops.

    Effects of burning grass land (practical tests).
    Sheep and cattle in Australian agriculture.

                                                             9. Relations of soil to quality of wool.
10. Dairying as a business: various breeds of cattle for dairying.
11. Mechanical analysis of soils.
12. Chemical analysis of soils.
13. Seasonable work in farm and garden.
                                                           13. Seasonable work in furm and garden.
14. Chemical combinations—use of re-agents, &c.
15. Tree pruning and planting.
16. Vegetable and fruit gardening: what the Chinese teach us.
17. Budding, grafting, &c.: the theory and practice.
18. The grape vine in Australia.
19. Wine making and distilling—chemistry of the operations.
20. Fruit canning, drying, and curring.
21. Manures, natural and artificial (practical tests for).
22. Wheat-farming: diseases of wheat, rust, &c.
23. Barley, oats, rye, vetches—Australian practice.
24. Root crops for rotation and feed.
25. Seed, oil, and fibre crops.
26. The horse in Australia: stock-keeping; value of feeds.
27. Semi-tropical products: sugar, tobacco, arrowroot, &c.
28. Siloing for dairy and other purposes; hay-making, &c.
29. Lucerne, clover, and the grasses.

    Siloing for dairy and other purposes; hay-making, &c
    Lucerne, clover, and the grasses.
    Poultry-farming: anatomy, feeding, breeding, &c
    Defects in New South Wales soils (practical tests).
    Nature (chemical and botanical) of native vegetation.
    Lime, potash, phosphates, &c., in our soils.
    Tests for limestone, gypsum, &c. (practical).
    What grass and crops take from the land.
    Reducing bones to manure (practical).
    Analysis of plant ash (practical).
    Dry earth, the base for Australian manures.
    Starration of plants, diseases of animals.

39. Starvation of plants, diseases of animals.
40. Use of the microscope.
41. Injurious and beneficial insects (anatomy).
42. Mechanics of agriculture: steam on the farm.

                                 3. Afternoon class.—For ladies and other students who cannot attend evening classes. The
 subjects taught include:-
                                                             Seasonable fruit and flower-gardening, structural botany, budding, grafting, layering, &c., keeping a cow, butter-making, fruit-preserving, poultry-farming bee-keeping, good bread and how to make it, curing meat, bacon, hams, skins, &c., insect and fungoid pests, use of the microscope, making essences, tests for water, milk, &c. (This class is arranged for those who cannot attend evening classes, or who may not be desirous of following the full course of agricultural instruction.
```

Several ladies have attended this class during each term, and make studious and most apt pupils. The attendance in all the classes has been uniformly good throughout the entire session.

Ĉ

Practical Instruction in Garden and Field.—It is a defect in the system of the Technical College that we have no established place for direct instruction in the garden and field. In order to overcome that defect as far as practicable, fifteen "outings" to gardens, orchards, bee farms, the Sewerage Irrigation Farm, and the State Forest Nursery at Gosford, have been organised. That to Gosford extended over three days, and on every occasion the attendances have been most satisfactory, the average of the whole being over thirty. The instruction on these occasions include observations and tests concerning the nature of our soils, indigenous vegetation, water for home use and irrigation, grasses, timbers, and weeds; the use and cost of tools and implements; tree planting, budding, grafting, and other methods of propagation; the effect of manures, draining, and various methods of cultivation. Useful though these excursions and lessons in the garden and field are, were a portion of land available for carrying out, with the aid of students, the operations taught in the class-room and field, the results would be still more satisfactory; and there would be, in connection with the Technical Education system of New South Wales, what is proving to be a most comprehensive and effective system for training adults in Australian agricultural practice, in both its desirable and defective aspects.

Students becoming Cultivators.—At the end of each term several students have left the classes to

Students becoming Cultivators.—At the end of each term several students have left the classes to become orchardists, and enter upon various other branches of agriculture. Numbers of them were business men and mechanics, who prefer country to town life. The classes are formed largely from men of that type—gardeners, farmers, and others—the very stamp of men who have aided so materially to make California the great orcharding and agricultural country it has become; that is, men with to make Canorina the great organization and agreturinal country it has become; that is, men with sufficient skill, enterprise, and capital, to estimate fairly their prospects as cultivators of the soil as they would any other business. This feature of the Technical College work is worthy of all the consideration that can be given it, so as to spread such instruction as enables town and suburban residents to take to country pursuits, with a fair knowledge of what has to be done to ensure success. That there is an carnest desire for such a change the growing numbers who study in these classes bear ample evidence.

Lesson Lectures in Country Districts.—During the year since last annual report thirty-four locatures have been given in country districts, at the request and at the cost of Agricultural Societies, Progress Committees, Schools of Art, Literary Societies, and other public bodies. The subjects chosen are of a decidedly practical order, and discussions have followed on many occasions, during which most valuable information has been made available—information which could not be easily got by any other means than the opportunities afforded by meetings in the districts and amidst the industries immediately concerned. Requests have been made frequently for the publication of these practical lesson lectures and discussions, and which, as a rule, are well reported in the local papers; but, so far, there has been no opportunity to carry out the suggestions.

has been no opportunity to carry out the suggestions.

Agricultural Classes in Country Districts.—As results of students from the Technical College settling in country districts, and of the lecturing system, which teaches the close connection existing between the science and practice of agriculture, there is a fast-growing desire for classes in many of the principal centres of orcharding and forming. A class has been in operation at Granville since July; another has been organized at Hornsby Junction, to commence with the 1891 session. Efforts for the establishment of classes are being made at Goulburn, Maitland, Mudgee, and other centres. A class under the local Science Master is in operation at Bathurst, and were Public School teachers available, classes might be commenced in many other places, to the great benefit of the community. Teachers might also be got from the students of the Technical College, many of whom have the experience of practical work in the field, as the very best foundation for scientific training in agriculture.

Investigations. Analyses. Answers to Inguivies.—Correspondence continues to increase concerning

enases might be commenced in many other places, to the great benefit of the comminity. Teachers might also be got from the students of the Technical College, many of whom have the experience of practical work in the field, as the very best foundation for scientific training in agriculture.

Investigations, Analyses, Answers to Inquiries.—Correspondence continues to increase concerning investigations into soits, diseases of plants, and the many other subjects of interest to agriculturists. The investigations this year include analyses of various indigenous and cultivated grasses; the guns of the eucatypti; investigation and reports on enemies of fruit trees and crops, both insect and fungoid; the making and composting of manures, &c. Several of the advanced students are becoming experts at work of this kind, and have in preparation exhibits for the approaching exhibition in Victoria.

Treatment of "Machine" or Skimmed Milk.—What I have every confidence will prove a suitable and reliable process for the treatment of the waste milk of Australian butter factories has be n worked out in this department. The main objects of the process are to use the materials and appliances in common use in the factories, and produce articles of food in a form with which the public are familiar. This is accomplished by evaporating the bulk of the water in natural combination in milk. The solids of the milk are compounded with med, bran, pollard, or other food substances, and are then available for either human or stock food. For bone and muscle forming, when the natural defects of skimmed milk are thus made good, this food-material is of very great value. The factories having enough to do with their own immediate work of butter-making, there is now a movement on foot to perfect and register the process, and then carry it out on a scale that ought to be beneficial to all concerned.

The Teacher of Botany reports as follows:—"The total number of enrolments during the year mounted to 18 individuals, and about 10 would constitute an ave

to be inconvenient to a majority of students who may be engaged in business during the day, and in some instances will not leave work until 6 o'clock.

Appliances.—For the most part I have used plates, illustrations on black board, and in text-books, also the dissecting microscope, purchased for the use of this class, has been very useful. There is, however, required a herbarium to better illustrate lessons, and some arrangements should be made with one of the florists for a supply of typical specimen flowers for dissection and examination. At the Technological Museum there are excellent models of flowers and fruits available for teaching purposes.

Students.—The conduct of the students has been all that any teacher could desire. As regards

Students.—The conduct of the students has been all that any treather could desire. As regards progress of the students, with one exception none of them had any previous knowledge of the subject, and from what I saw of their work I should judge the progress of several to be very satisfactory; many fell behind from irregular attendance, or were unable to master the nomenclature, and soon abandoned the study. At the close of the term the attendance was small, owing to the fear many students have of any form of examination. I am of the opinion, however, that there will be a considerable influx of new tradents with the new term.

study. At the close of the term the attendance was small, owing to the fear many students have of any form of examination. I am of the opinion, however, that there will be a considerable influx of new students with the new term.

The Teacher of Wool-sorting in his report states that, "The number of students enrolled for the year was 29. The progress of the students has been fairly good, and the present condition and future prospects of the class highly satisfactory." The examiner's report shows better results than in any previous year.

(2.)—

#### (2.)-Engineering.

The importance of this department will be at once seen from the list of classes it includes, viz., mechanical drawing, machine construction, applied mechanics, blacksmithing, pattern-making, boiler

making, fitting and turning, carriage building (railway and ordinary).

The students are chiefly young men engaged in the various trades. Notwithstanding the disadvantages under which the lessons have been given they have stuck well to their work, and have achieved remarkably good results—both in the acquisition of knowledge and in gaining good positions. In future, these classes will meet in the new buildings at Uitimo. The engineering workshops just completed there are, in the opinion of Professor Selman, not inferior to the best attached to any Technical College in

The following are synopses of the reports upon the various classes,—The lecturer in charge of this department reports as follows:—

Applied Mechanics' Class.—The accommodation for the class is sufficient, and the conduct and progress of the pupils good. The class is not nearly so well attended as I should wish, but I find that for free lectures I always get a very good attendance. I believe that with the improved prospects of trade this class will get a great deal larger.

free lectures I always get a very good attendance. I believe that with the improved prospects of trade this class will get a great deal larger.

Mechanical Drawing Class.—The accommodation for this class is sufficient, and the conduct and progress of students good. The long bad times, the strike, and wet weather, have kept this class back a great deal, but the future prospects are very good. The lighting and ventilation of the class-room are very defective—I trust that in new class-rooms this will be well considered, as the rooms are very trying to both teachers and students.

Blacksmithing.—The teacher reports as to accommodation, "that the room is hot and stuffy, and the fires are too close together, but this of course will be remedied in the near future. The appliances are insufficient, but this will also have every attention when the removal takes place. As to the conduct of the students, I cannot speak in too high terms of praise, and must say that it has been most exemplary. The course of studies has chiefly aimed at teaching them how to make tools for their own use, a most necessary matter in the trade of a blacksmith; they have also been taught how to get the length of all description of hoops (round, conical, and elliptical), and have been given an insight how all kinds of general forgings should be made, including engine work. Their progress has been highly satisfactory. As to the present condition of class, we have had more pupils than we could properly accommodate, and if more publicity were given in the workshops, the attendance would test the accommodation of the new shops at Ultimo."

Pattern-making.—The teacher of this subject reports that the class accommodation has been

Pattern-making.—The teacher of this subject reports that the class accommodation has been sufficient, but the appliances have been inadequate, the want of wood-turning lattices being most felt. The students have shown an amount of interest and attention to their lessons that augurs well for their

students have shown an amount of interest and attention to their lessons that augurs well for their future, and have made considerable progress as far as present appliances would allow, and with increased facilities would give satisfactory results for the time and trouble taken in their behalf.

Boiler-making.—The teacher reports: "There is not any accommodation at present for students changing their apparel, and no pegs for hanging up same. This is the only complaint I have heard. The conduct of students has been good; there has not been one case of misconduct during the year.

"The course of study included the method of laying out the templates for the construction of all classes of boilers, demonstrating by formula the bursting, collapsing, shearing, and crushing strains of cylindrical boilers; the proportion of riveted joints; the staying and strengthening of flat surfaces; the proper proportion of grate area to heating surface; the relative volume of steam to water; temperature of steam at different pressures; capacity of boiler tanks and eisterns, and all practical work in relation to boiler-making. I have every reason to believe that the future prospects of the class will be very good, and I anticipate a very large increase in the number of students next term, and have no doubt that we will have a good result from the class with the increased appliances and accommodation at the new workshops."

Fitting and Turning.—The teacher reports: "That the number enrolled for the year was eighty-four. The class-rooms are deficient in dressing-room accommodation for pupils. More lathes and machine tools are greatly wanted. The conduct and progress of the pupils are very good, the course of the studies for the year was that contained in the syllabus. The present condition of the class is very fair, with every prospect of largely increasing next year." In his report on the class the Examiner states: "I have great pleasure in testifying to the care and attention the teacher has shown with the pupils in the fitting and turning class, and hope that the next year may be still better."

Carriage Building (Railway and Ordinary.)—The teacher reports that: "This year there has been an improvement in the number of students, and a better average attendance, I think, over any other year. The accommodation is yet insufficient for the limited number of students, and the benches for practical work are not suitable for our requirements; in the new College I hope this want will be met. The conduct of students has been good; also the general proficiency will be considered very favourable. The course of studies embodied in the calendar I have carried out, with practice and theory combined with lectures on the various heads in the trade."

#### (3.) -ARCHITECTURE.

In this department the classes included are architecture, building construction, carpentry and joinery, bricklaying, masonry, stone and marble carving, house painting, cabinet making, plumbing, and use of the slide rule. Some of these, notably the plumbing and house painting classes, have increased, but the depression in the building and furnishing trades that prevailed all through the year has injuriously affected most of the others. There has been no falling off in the efficiency of the teaching or in the quality of the work executed. The following extract from the Australian Builder and Contractor's News of the 13th September, 1890, will show that the students of our classes can hold their own in competition with those in other parts of the Reitigh Empire ... with those in other parts of the British Empire :-

## "National British Competition of Schools of Art.

"English Honors to Students of Architecture in the Sydney Technical College.

"The works submitted for the annual competition for prizes are now open to the public in the gallery of the South Kensington Museum, England. Out of the 233 Schools of Art and Branch School 54,780 works were sent up for examination; over 43,000 from 317 science schools, and 37,761 works from 265 art schools. Of this large number, 2,084 works were selected for competition, and only those awarded medals and Queen's prizes have been exhibited. The designs for architectural subjects which take silver medals, the highest award given this year, are from Chester, Manchester (England), and Sydney. A silver medal has been awarded to Mr. J. A. Kethel, for a design for a colonial mansion in the Italian style. The designs for architectural subjects, which take bronze medals, are from Birmingham, Leeds, Nottingham, Leiester, Barrow in Furness (England), and Sydney. A bronze medal has been awarded to Mr. P. E. Malumby, for a design for a bachelor's residence, classic in style.

In the above we have the most gratifying evidence, first of the aptitude which young Australians possess for the cultivation and practice of fine arts; then of the success which has attended the transfer of the Sydney Technical College to the Department of Public Instruction; and last, not least, of the efficiency of the architectural instruction given by Mr. Wright Campbell, M.S.A., Lecturer on Architecture, in charge of the Architectural Department of the Sydney Technical College. It is the first time, we believe, that prizes of this character have been awarded at South Kensington to Australian students."

The

The lecturer in charge of the Department reports that: "During the first term the weather was unfavourable, and in the second term very wet weather was experienced, which doubtless affected the numbers of enrolments and the average attendance. The average attendances have been further affected in their ratio to the numbers enrolled, by the fact that very few students entered the class for three nights weekly; the majority of curolments being for two nights weekly, and a number for only one night.

in their ratio to the numbers enrolled, by the fact that very few students entered the class for three nights weekly; the majority of eurolments being for two nights weekly, and a number for only one night.

"It may be further pointed out that the class, consisting, as it does to a large extent, of the young artisan class, some of whom enter the class at the beginning of the session for the whole three terms, and shortly thereafter have to leave Sydney in search of employment, leaving their names on the roll right through the year, affects the average attendance as the session progresses.

"From this same cause, viz., the migratory nature of some of the members of the class, the average attendance, even in the enrolments of individual terms, is affected.

"The accommodation has proved suitable in extent of area, but is unfit for use as a class-room, on account of its lack of accommodation, and ritiated air, which passes into it through open joints in the flooring from class-rooms beneath. The conduct of students has been good. The course of studies has included copying of diagrams, including variations of sume to different scales; planning and designing; inking, colouring, and finishing drawings, including perspectives. My aim has been to teach the students individually, conversing with them and explaining the subject on hand. To those who were capable of designing, their work was initiated and guided in every stage. The time at my disposal in the class has been all along insufficient to do justice to this important section of my students. I have therefore placed my services at their call during any part of my office hours, which voluntary concession has been taken advantage of to a considerable extent, thereby raising the efficiency of this part of my work to a better position than if only the class hours were devoted to it. Concurrent with the tution in drawing, the listory of architecture and building construction lave been regularly taught.

"The progress of students during the session has been in advance o

the greater honors at South Kensington.

"I do not say that architecture is not sufficiently attractive in itself to cause some students to study it laboriously, but there is the example of all the great art centres of the old world, who have found it desirable to specially honour with medal, scholarship, or travelling studentship, and in some instances all these honors combined, those students who have proved in being thus signally honored, the eminently good results of such well-timed consideration."

The Examiner in Architecture, in his report, states: "I have examined the plans exhibited to me as the year's work of the students of this class, and, taking the work as a whole, was favourably impressed by it."

Carpentry and Joinery (Evening Class).—The teacher reports that: "The accommodation at present is sufficient, but as I expect, with the revival of trade at the beginning of the year, an increase of students, our class-room will be found rather small. The tools and other appliances are in good condition with the exception of the benches, which are not fit to work on; the wood-working machinery in connection with this class is practically useless, being too large and heavy for the work required.

"The behaviour of the students during the last term is all that can be desired. The new course for the following year must have a beneficial effect on the classes.

"The progress made by many of the students is your satisfactory as far as the practical work is con-

"The behaviour of the students during the last term is all that can be desired. The new course for the following year must have a beneficial effect on the classes.

"The progress made by many of the students is very satisfactory as far as the practical work is concerned, more especially those in the trade, and some have had an increase of wages from their masters; one who has just completed his apprenticeship has obtained work at the standard rate of journeyman carpenter's wages, which I attribute to the knowledge gained at this class."

Carpentry and Joinery (Afternoon Class).—Of this class the teacher reports: "The accommodation is sufficient. Tools are provided for fourteen boys, two lots in each basket; should more attend they are supplied from the evening class tools. All are in good working order. The same complaint is also made in this class with regard to the condition of the benches.

"The behaviour and attention of students is all that can be desired. The progress made has been fairly good, many of the boys making useful articles of furniture, and have turned them out in a tradesman-like manner. No definite course has been followed by this class. I cannot see how we could follow one, that is, to be anything like the evening class, so that to teach the use and how to handle the tools and in making simple parts in joinery is about as far as we can go."

Carpentry and Joinery (Deaf and Dumb Institution, Newtown Road).—Of this class, Mr. Dunlop, the teacher, reports: "Ample accommodation is provided for the students. Tools and cannot be said in praise of the behaviour and attention of the students. This class does all practical work, with the exception of the working drawings, which are drawn out on the blackboard and explained to students, accompanied with a small sheet of reference, which I find of great use, it being impossible for me to look ofter so many and keep them all going at once. This gives me a lot of extra work, but it gives better satisfaction to the students. At the unmual examination for

seek work in the country, but there is a good prospect of a considerable increase of students in the forthcoming session of 1891."

Masonry.—The teacher reports that: "The accommodation for the number of students that are in the class is unple for the present time. As you are aware I took chare of this class on the 20th May with three students; one of the students was under Mr. Howie in the first term, the other two joined the class at the beginning of the second term, and continued till the end of the third term. They have told me that they will rejoin the class after the vacation."

Stone and Markle Corping—The teacher reports that (17th course of the class).

Stone and Marble Carving.—The teacher reports that: "The accommodation for the class is not what it should be; the room is far too close. We want plenty of ventilation, as the dust from the stone is most dangerous to the health. I have been using as little of the Sydney stone as I could help on this account.

account, and have been principally using Oamaru and marble, as the dust from these stones—although bad enough—is not so dangerous to the lungs as the Sydney stone, but now that a new college is being built, this room will suit me for all the time we require it. I have got everything I want for the present. The conduct of the students has given me every satisfaction. The greater part of the students worked on ornament in the first year's course, but some of them have shown marked ability, and I gave them models to copy according to the ability they have shown. The students attending the class are principally from the monumental yards in and around Sydney, but next year if the building trade gets busier I expect that the 'building mason' will be well represented in the class."

The examiner's report shows that 9 students presented themselves for examination, and that 4 obtained honours, and the remainder the first grade. The year's work is also satisfactory.

House Painting.—The teacher reports that: "The numbers have steadily increased during the year, and the attendances have been good. The accommodation for the class at Sussex-street is good. The conduct of the students has also been good. The course of studies as laid down in the calendar has been carried out during the three terms, and I see no advantage in making any alternation at present. The progress of the students has been satisfactory, and in one or two instances very good indeed. The present condition of the classes is good, and they seem to be appreciated by the class of people they are intended for, the greater part of the students being apprentices, improvers, and workmen in the painting trade."

Cabinet-making.—The teacher reports that: "The accommodation for the pupils, while not all that could be withed in without the students are the students being apprentices, improvers, and workmen in the painting trade."

present condition of the classes is good, and they seem to be appreciated by the class of people they are intended for, the greater part of the students being apprentices, improvers, and workmen in the painting trade."

Cabinet-making.—The teacher reports that: "The accommodation for the pupils, while not all that could be wished, is very fair. The appliances and tools for the use of students have been sufficient for past needs, though some additions are now being made which will improve the class in this respect. The conduct of the students has been all that could be desired—chedient in class, and eager for instruction and information. The course of students has been very fair. The present condition of the class is quite satisfactory, and the prospects are encouraging."

Plumbing.—The teacher reports that: "The accommodation is very limited indeed, especially when working on long lengths of piping or soldering. The conduct of students has been satisfactory, all seeming to apply themselves with a will to master the course of instruction contained in the syllabus, which is fairly comprehensive as a sample of the subjects. These are, among others, the theory and practice of internal sanitary plumbing—drains, their connection to sewers, and means of ventilation, testing of drains and internal sanitary fittings to prove their soundness, or to find out their faults, smoke, and other tests, humps, hydraulic rains, syphons, sizes of cisterns and cylinders and their capacities, weight and pressure of water, hot water arrangements for the supply of baths, lavatories, sinks, &c. The progress made by most of the students is highly to be commended, because there are very few of them who ever have a chance of practising upon any lead work for sanitary or other internal plumbing, except in the limited time they are in the class, and while at work they generally are very attentive. The attendance for a chance of practising upon any lead work for sanitary or other internal plumbing, except a good attendance. For the sake of th

This department continues to attract large numbers of students of both sexes. The following classes are placed under this group:—Freehand Drawing, Model and Object Drawing, Perspective, Practical Plane Geometry, Solid and Perspective Geometry, Modelling, Dosign, Art Decoration, and Sign-writing. In consequence of the growth of this department, it was found necessary to relieve Mr. Henry of the supervision of some of the classes, and to do this, Mr. J. R. Wright, one of the most experienced and successful teachers connected with the college, was appointed Associate Lecturer, and placed in charge of the evening freehand classes, in addition to those under his immediate charge. The arrangement has worked well, and the systematic teaching of every class has been secured. The course of instruction in all sections has been definitely laid down, so that pupils of art classes in Sydney and in the branch schools will all work on the same lines. Details of the state of the various classes will be found in the following reports:—

Mr. Wright reports of the Evening Freehand, Model, Perspective, and Geometry classes in the

Mr. Wright reports of the Evening Freehand, Model, Perspective, and Geometry classes in the

Mr. Wright reports of the Evening Freehand, Model, Perspective, and Geometry Classes in the following terms:

"The alterations provided at the beginning of the year have made my work a real pleasure, and have been thoroughly appreciated by my students, it being a common remark upon entering, 'What a nice class-room you have got.'

"The appliances with which I have been provided since your superintendence, together with the others ordered for my classes, are all sufficient. The conduct of students has been all that could be desired. The course of studies is as set forth in the calendar; this I find a great improvement upon the past. In the coming year I hope to have a class for drawing the human figure, animal forms, and anatomical drawing as a third year's course of freehand. This class has long been asked for by the advanced student, but, for some reason or other, it has never been carried out only in a desultory and most unsystematic manner.

tematic manner.

"The progress of students has in most instances been excellent. I have obtained better class and home work than ever before, and can say the same for the freehand section; since taking charge of this section there has been now life, and I am sure the teachers have taken more pains to get good work from their students. I have determined upon a uniform system of teaching in this branch which will be carried out by all teachers alike, and hope with your assistance to have the same carried out at every school of technical education. The present condition of the classes is healthy, taking into consideration the wet beginning of the year, together with the strike.

"While the class in Practical Plane Geometry has remained much the same as last year in numbers, the class for Model Drawing has increased by one-third, and I am confident will keep growing as the usefulness of the subject becomes better known. The Perspective class also has had more enrolment than on any previous year; this I attribute to the better arrangement of calender, and a more advanced instruction. The Descriptive Geometry class is not large, but I think its one of the most evenly attended of any. I expect this class to receive an impetus it has not lad before, by the appointment of a good examiner, the papers produced this year being highly satisfactory."

Of the Modelling, Design, and Saturday Freehand classes, Mr. Henry speakings in the following term: "The actual accommodation and appliances are as satisfactory as they can be made under present circumstances;

circumstances; the only desiderate being more space and better ventilation, which cannot be obtained in the temporary premises in which the classes are located. The conduct of the students is, I think, very creditable to them. In design and modelling they show much application, and put into their work much enthusiasm, which is in many cases substantiated by their home-work—which has to be performed in the little spare time left to them by their daily occupations and their attendance at the classes. Except in a few instances the above remarks cannot apply to the students of the Saturday morning class, owing probably to the fact that the majority of them provery young, and only beginners and that the class is only held once a week. As for their progress, it is easy to understand that is slower than in the design and modelling, which classes are held respectively twice and three times a week, and are attended by students already prepared by anterior courses to receive instruction.

Modelling.—This class has already proved itself of great usefulness, but I think, that it has very much more yet to perform, and that it will become in time an Industrial school proper, through which will have to pass all the youth of the colonies intending to devote their life to the Plastic Arts.

I do not think it would be possible to obtain in a few months a great numerical success in evolving from this class a Terra cotta section, but I feel certain that important results would follow, results of great consequence in a colony where so much building is going on, and where natural resources are almost inexhaustible, and in some instances of such a nature as to be astounding (one specimen of clay tested in the college having proved harder than flint-stone, and having been only crushed by the testing machine at a pressure of 20,000 lb, to the squwe inch). The working of such a section would necessitate an outlar (kilus, pits, coffers, tables, and utensils included), should not exceed the sum of £120; such installation being susceptible

obtained at least one pass in the annual examination in modelling, I have no doubt that the results would be above the most sanguine expectations.

Design.—The work required from students in this class is of such a nature and requires such a long period of study that many give up before the completion of the course. Those who can stand the test, and remain, will in my opinion be the men of the fature in this country. Already some of them have shown not only great application, steadiness, and determination, but remarkable ability and originality which would be a credit to any one.

I hope most sincerely, more than that, I feel that this class will turn out men who will be a credit to themselves, to the Institution, and to their country.

Saturday Freehand Drawing.—Owing to this class being held only once a week, and to its being attended chiefly by beginners, it seems to me to have for chief aim to develop the taste for drawing, and to be, as it were, a nursery to prepure students for the night classes, to make the best among them feel the necessity of following the regular course of the Institution.

At the recent examinations in design 3, students obtained the honors A certificate and one the Honors B. Certificate. These students have for five years attended the course in design, and have passed in 8 of the different styles of ornamentation as required by the calendar.

For the year's work in the Design Class, two obtained honors, one the first grade, and one the second grade.

In modelling the result of the examination is also satisfactory.

#### (5).—Chemistry.

While this is one of the most important sections of Technical Instruction, it is also one that has been productive of a vast amount of good. The length of time required to master the subject, and the incidental expense of going through the prescribed course of study will always make the number of students comparatively small, but the classes are steadily increasing. The newly established class for the study of lithography has been attached to this department. The following are the reports on the

The lecturer in chemistry reports:—"The number of students enrolled for chemistry last year was 99. The accommodation for pupils and appliances for teaching purposes are sufficient for present requirements. The conduct of pupils has been good in all cases except one, which was reported at the time. The course of studies pursued has been that contained in the calendar. The progress of students throughout the year has been good."

The examiner in chemistry reports on the work of the year in the following terms,—"The students of these classes have done very well."

Lithography.—The teacher reports,—"The accommodation for the pupils is very good in every respect. As to appliances we have a very good press, a good supply of lithographic stones, and other materials that will do for a long time. The conduct of pupils has been very good. The course of studies is as follows,—Lithographic stones; presses; rollers; transferring to stone; etching; chalk work; making offsets; printing with various colors; transferring and printing from zine; various acids used in lithography; drawing on stone.

The lithography class is rather small, but I hope next year with the addition of photography, that it will enlarge very much. In the new college I hope the department will purchase a copper plate press, and a steam lithographic machine."

#### (6).—Commercial Economy.

This group includes the following classes,-

This group includes the following classes,—

Book-keeping, ealigraphy and correspondence, phonography, type-writing, French, Latin, and mathematics. A German class was in operation at the beginning of the year, but lapsed from pancity of students. The reports from the various teachers are as follows,—

Book-keeping.—The teacher says "The number of students enrolled during the year was 131. The accommodation for pupils is satisfactory, as are the appliances. The conduct of the students has been very satisfactory. During the year I composed with the classes 13 different sets of books in grocery, drapery, general store, auctioneer, commission agency, brokerage, and manufacturing businesses, and over 50 per cent. of the pupils had correct bulance sheets. The progress of the students in some instances was remarkably good, and on the whole satisfactory. During the third term circumstances were very unfavourable owing to commercial depression, some lost their situations and accepted places in the country again, owing to the continued strike others had at their employers' instigation, enrolled themselves as special constables, &c., hence were absent through drill, &c.

I am pleased to state the pupils personally acknowledged they were well satisfied with their progress, and hoped to make it convenient next year to join again for finishing lessons."

Caligraphy and Correspondence.—The teacher reports that "Owing to the recent strike and consequent depression of trade the attendance during the last term was adversely affected. The accommodation as to space is ample, but the furniture is not quite suitable for the subjects under notice. This no doubt will be looked after when the new college is being furnished. The conduct of the students was excellent. The course of studies was as heretofore, that laid down in the calendar. A large proportion of the students being junior clerks, business pennanship was specially dealt with. The progress made by the students, speaking generally, was very satisfactory. With a view of exhib

present condition of the classes is very good, and their utility is increasingly appreciated, promising well for their future success. As explained in my report of last year the progress of the students is materially hindered by the insufficiency of teaching time, as, with the large number of students attending each class and with two subjects, it is impossible for me to give to each individual that personal attention and supervision which is indispensable to success."

\*\*Phonography\*\*—The teacher in charge of the elementary section states "The accommodation for pupils is fairly good. The conduct of pupils has been good. The course of studies has comprised the following points,—Form, alphabet, pronunciation, the placing of vowels, position of consonants, correct vocalisation, illustrations on blackboard, writing lessons, reading, and class lectures. The text books are Pitman's 'Teacher' and 'Manual'. The progress of the students has been good. The present condition and future prospects of the class are very good, and in consequence of the great increase in the demand for shorthand clerks the classes are likely to increase largely in number of students.

The teacher of the Corresponding section reports that the conduct of the pupils ander his charge has been excellent. The class has been through the whole of the 'Manual', and has also had easy reporting practice. The progress of the students has been satisfactory."

The teacher of the Reporting section states that "The accommodation in the future should provide for about 30 pupils. The conduct of the pupils has been very satisfactory."

An evening Typewriting class is also held in conjunction with the Reporting class, and the taucher reports in this connection: "I expect about 30 pupils will enter for typewriting next term. Hitherto, on account of the scarcity of typewriting machines in the Department, the pupils of the evening typewriting class have not been able to practice more than 30 to 35 minutes each at a time, and as the class meets only once a week this

The teacher reports:—"The accommodation for pupils is good, and the conduct of students exemplary. The course of studies has been taken from the undermentioned text-books:—'Cassell's Lessons,' 'Macmillan's Progressive Course (2nd year for 1st year pupils),' 'Macmillan's Progressive Course (2nd year),' 'Chardenal's Exercises for Advanced Pupils, for second year students.' The progress of students has been very satisfactory. The present condition of the French class, considering the late industrial disturbance, and the exceedingly unfavourable weather during a large portion of the year, is quite up to my expectations, though much under the condition of former years. The future prospects are very promising, because of the improved accommodation afforded to the class, of the increased commercial value placed on the college certificates, and of the growing importance and necessity of a knowledge of the French language, not only among commercial, scholastic, and literary people, but among the more intelligent of the artisan and other industrial classes."

The teacher reports:—"The accommodation is all that could be desired. I keep, as far as possible, the class in two divisions, an upper and a lower. The lower division gets through in one year the prescribed amount of translation from Latin into English, and from English into Latin, together with grammar and vocabularies, on which I insist particularly. The upper division, whose curriculum contains two years' work, I proceed with more freedom, and while requiring the same standard in grammar (extending to the whole of the Latin grammar), and translation from English into Latin—embracing a course of 'Hine's Latin Syntax,' and 'Bradley's Arnold's Latin Prose'—I take each through the Latin author which is of most practical utility in the individual case. The students, as might be expected in a class of this nature, which none attend who are not anxious to get on, make as much progress as is possible under the circumstances, in my judgment. My class is fairly numerous at present, and will, I think, compare favourably in attendance with any others; and, considering the great utility of the class for those who intend to matriculate and qualify as public teachers under the new system imagurated by the Minister of Public Instruction, will continually increase. It is those who are qualifying thus for public teachers who form the great majority of my class, and I think it would be hard for them to get the same advantages elsewhere at a cost they could afford."

#### Mathematics.

The teacher reports:—"Until October the classes were held at the Technical College, Pitt-street, where there was ample accommodation; but at the Institute the scating-room is very limited, and there is also the disadvantage of having to work in the same room with another class. The conduct of studies always been exemplary. The course of studies includes arithmetic applied to mensuration, &c. In this subject there are three divisions, viz: the class for beginners, a second for those more advanced and a third for the best students who have aftended the class to some time. advanced, and a third for the best students who have attended the class for some time.

#### Geometry.

The lower division has done during the year Euclid Book 1, part of Book 2, and Easy Deductions on Book 1. The upper division has read Books 2, 3, and 4, with Deductions on Books 1 and 3.

#### Algebra.

Here there are also two divisions the lower having gone to simple equations, the upper to simultaneous quadraties. Other students, who have joined at different times during the year, and are not fit for these divisions, are worked with individually.

Trigonometry—This is a very small class and the students are at all stages of advancement—from angular measurement to the solution of triangles—so that I have to work individually with them. The progress of students has been very fair, excellent in some cases, but generally interfered with by irregular attendance. The pre-ent condition of the classes with reference to numbers, is not yet satisfactory; but if the returns for last term be compared with the corresponding term of last year, a distinct improvement will be seen."

### (7).-Domestic Economy.

In this group are placed the classes for household management, cookery, scientific dress-cutting and tailor's cutting. The class for household management takes up such subjects as fool, clothing, health, the house and its furniture, house-keeping and thrift, but it does not attract many students. Probably when the arrangements are re-modelled as they will be, when the new buildings are occupied, this class will be a success. The cookery classes have improved in all respects during the year, but I regret to say that the arrangements for the examination of the students have not proved satisfactory. As indicated elsewhere it is proposed to establish a properly organised school of cookery during 1591. The classes for scientific dress-cutting are well attended and in spite of limited accommodation have gained good results. The number of students for the tailor's cutting class was during the winter months more than

than the room could properly accommodate, but towards the end of the year the attendance fell off; the teacher was seriously iil for several weeks, but he provided a competent substitute and the efficiency of this class was thus well main ained.

The lecturer in domestic economy reports as follows:-"I do not consider the accommodation The lecturer in domestic economy reports as follows:—"I do not consider the accommodation at all satisfactory, but will not suggest any alteration as the new buildings will be ready shortly. Many of the appliances are not in first rate condition, but I am endeavouring to make them do till the new college is ready. The conduct of the students is on the whole satisfactory. I have already suggested a few rales which I hope to put into practice next term. The course of studies followed are stated in the calendar, and are based on the one laid down by the National Training School of Cookery, London; the recipes used are chiefly from the Kingswood Cookery Book, which has been carefully adapted to meet the needs of the Australian housekeeper from the official book of South Kensington. The progress of the students on the whole has been good and I hear that many of the pupils do most satisfactory work at their homes. The present condition is I think as good as it can be under present circumstances. With class are encouraging." class are encouraging.'

Scientific dress-cutting.—No less than 105 students have been enrolled during the year, and their progress is attested by their success at the annual examinations, as shown by the Examiner's report, which states that "The draftings on the whole are very satisfactory." Twenty-three candidates presented thouselves for examination and 20 passed; of these 3 obtained honors, 14 the 1st g ade, and 3

the 2nd grade.

Tailor's Cutting.—At the examination 8 candidates entered and 6 passed, of whom 2 obtained honors, 2 the first grade, and 2 the second grade.

#### -Geology, Mineralogy and Mining.

(8).—Geology, Mineralogy and Mining.

The lecturer in charge of this department, Mr. S. H. Cox, F.C.S., was compelled to visit England early in the year. For this purpose he was grant d six months leave of absence on condition that he made satisfactory provision for the performance of his duties during his absence. Mr. J. H. Campbell, a former student, who had for some time acted as assistant to Mr. Cox, was engaged to take up the work and has discharged the duty efficiently. As Mr. Cox found that he could not return to the colony at the termination of the period of his leave, he resigned his position and Mr. Campbell was appointed to act till the end of the year. He reports as follows:—

"Mr. Cox, the lecturer in charge of the department, left for England in the beginning of March on six months' leave of absence, appointing me as his substitute. Mr. Cox subsequently applied for an extension of his leave and afterwards sent in his resignation; when I was appointed acting-lecturer in charge from the 15th August till the end of the year.

"Work done.—No lectures were given in mining, as a sufficient number of students possessing the necessary knowledge of geology and mineralogy did not apply, but 42 lessons were given in each of the subjects of geology and mineralogy, those in the latter subject being of two hours each, and almost entirely given to practical work.

"The conduct of the students throughout has been excellent, and several of them have shown an enthusiasm in their work which promises well for their future career in their special subjects.

"The conduct of the students throughout has been excellent, and several of them have shown an enthusiasm in their work which promises well for their future career in their special subjects.

"Appliances.—The appliances at present in the college are all in good order, but much difficulty has been experienced during the year from the want of a collection of Australian specimens of rocks and fossils, and also of a collection of minerals suitable for blowpipe experiments. The college should also possess a good collection of typical Australian ores. The fossil rocks and minerals at present in use are English or German, and although very good for teaching the elements of the sciences, are of very little value for giving that practical instruction in Australian geology and mineralogy which it should be the aim of these classes to impart."

Fresh arrangements will be made for 1891 and it is hould that before long land will be secured so

Fresh arrangements will be made for 1891 and it is hoped that before long land will be secured so that practical instruction in mining, such as is given in Schools of Mines, can be given to students.

#### (9.)—PHARMACY.

In this group are placed classes for pharmaceutical chemistry, materia medica, dispensing, &c, anatomy and physiology, ambulance surgery, and mechanical dentistry.

Mr F. Wright, the lecturer in charge of the department, reports as follows:—The enrolments for

the year for my classes were

Pharmaccutical Chemistry	29
Materia Medica	15
Pharmacy	23
Dispensing	17

of Pharmacy adopts a similar course, and it meets all the requirements of the trade.

With reference to the progress of students. A number of students from the classes have secured good positions as the outcome of their study, and if the test of progress is to be quality of work, I can state that having engaged six of the students for various employers, they all are skilfully and profitably employing their knowledge. I have one as my chief assistant (Mr. Harold Tinley) and another as pharmacist in charge of Messes. Elhott Bros.' bonded laboratory (Mr. N. A. Foldi). Both of these gentlemen, at an early age, and without the and of any natural ability, particularly have shown great skill in their work and secured good positions over the heads of men from abroad. I attribute this to their superior technical education. In conclusion, I beg to state that I am of the opinion that the Technical College supplies in its various classes all that is requisite for fitting a lad for his business as a chemist and druggist."

Anatomy

#### Anatomy and Physiology and Elementary Ambulance Surgery,

Dr. Roth, the teacher of this class, reports that the accommodation for the class is satisfactory The course of studies has been on the lines laid down in the calendar for 1800.

During the ambulance lectures one evening was set apart specially for women and another specially for men. The progress has been very satisfactory, the students have paid every attention to their studies, and have shown great interest in the same. I see no reason why the prospects of the future should not be good, when the class is better known.

#### Mechanical Dentistry.

The teacher reports:—"The benches are not suitable for the work required to be done in mechanical dentistry, and I beg to submit a plan of room adapted to correctly teach this work, subject to approval. The students throughout the last three terms have behaved themselves as gentlemen, and

to approval. The students throughout the last three terms have behaved themselves as gentlemen, and gave the greatest attention to all lessons and instruction, the proof of which is that each pupil who came to the examination has passed, some with honors, the rest in grades."

The Examiner reports as follows:—

"The result of the examination has been somewhat disappointing, as the students have had no practical work in continuous gum process, owing, I am informed by the teacher, to the want of materials. I think it would be far better if more time could be given to the examination in practical work, and would respectfully suggest that in future the Examiner should have an opportunity afforded him to visit the class at least a month previous to the clase of the year, to give him an opportunity of studying more closely the manipulative ability of the students, as a very great difficulty presents itself in the fact that some of the best writers, who are thoroughly well up in theory, &e., possess little, if any, manipulative ability. In other respects there could be no doubt that the students have made considerable advancement under their instructor, and for the time allowed."

#### (10).-Pursics.

The subjects taught in this group are:—
Sound, and the physical theory of music.
Light and optical apparatus generally.
Heat, and its relations to work. Magnetism. Electricity.

Mr. Hewett has charge of all the classes. He reports:—"The accommodation and appliances are ample for present purposes. The conduct of the students has been exceptionally good. The course of studies in each class has been in strict accordance with the syllabus as published in the calendar. The progress of students, in the case of those who have attended the whole course with fair regularity, has been highly satisfactory. The present condition of these classes is healthy, and the future prospects are encouraging."

#### PETERSHAM.

This, the oldest, is one of the most successful of the suburban branches, and has made very good progress during the year. The following classes are in operation:—Freehand drawing, model and object drawing, mechanical drawing, practical plane geometry, solid and descriptive geometry, perspective, mathematics, and phonography. All the classes are well attended, but the building used, though conveniently situated, is badly lighted, and is cumbered with a quantity of useless infants' school furniture. The teachers have worked well in spite of the difficulties encountered, and the results of the year's work are in all respects encouraging.

This is one of the new branches started during the year, and has met with satisfactory success. The buildings of the Newtown Superior Public School are made use of, and suit well. The classes in operation are freehand drawing, model and object drawing, practical plane geometry, solid and descriptive geometry, perspective, phonography, mathematics, and book-keeping.

#### ASHFIELD AND BURWOOD.

Five classes are in operation at Ashfield, and 3 at Burwood. These have made good progress, and the teachers report hopefully of the future prospects.

#### PADDINGTON.

The classes in operation at this school are architectural drawing, freehand, practical plane geometry, and perspective. The condition and prospects are fairly stated in the teacher's report as follows:—

"The individual number of students enrolled for the year was 46. The accommodation for the pupils is ample, and the lighting, although not satisfactory, has been much improved by the re arrangement of the gas. The appliances are sufficient. The progress of the students is on the whole satisfactory. The present condition and future progress of the school I consider satisfactory. There are a larger number taking an interest in their work."

#### KOGARAH.

The classes, mechanical drawing and shorthand, meet at the School of Arts. The teacher of the mechanical drawing class reports as follows:—

"Accommodation.—The accommodation is ample for 16 students at the drawing tables.

"Appliances.—Of appliances, there are sufficient for present needs.

"Conduct.—Conduct of students has been exceptionally good. The course adopted in the studies has been that suggested by individual experience. At first, the student is given one of the copies provided for use in the class, which he is instructed to accurately copy by careful measurement with the instruments; or, if he be young and quite inexperienced, the simplest four live objects are given, and the method of projection explained. As he becomes proficient in the use of the instruments dimensioned sketches are then given, but not to scale. This stage of the work excites his interest, and enables him thereby to become proficient in the art of correct measuring and drawing to scale; and, moreover, removes him from mere copyism which becomes monotonous to an intelligent youth. He usually inks in drawings thus made, and may colour or leave them finished and sectioned in ink. The ability of the student would be further brought out, and more progress would be made by him if wooden models of parts of machinery or buildings were available for him to make his own sketches. The actual object is much more instructive than the flat paper sketches; as much more, in fact, as the paper sketches are over the mere copies.

much more instructive than the flat paper sketches, as much more, in fact, as the paper sketches are over the more copies.

"Progress.—It is with satisfaction that I report under this head, for notwithstanding the number of students has not been as large as might be desired, owing parily, no doubt, to the very wet weather that prevailed during a portion of the year, but more, I think, to the absence of a wider knowledge of the existence of the class, the progress of the students has been very good."

The following gentlemen have offered to give prizes to the successful local students:—

The Hon. J. H. Carruthers, and Messrs. C. Bown, E. English, J. English, W. A. Balcombe, P. Hermann, J. B. Carroll, and P. J. Lacey.

The

The teacher of the phonography class reports as follows:—"The total number of individual students was 25. The bad weather militated against the attendance during the second term. The accommodation at present is satisfactory. As the class increases more room will be required. Some inconvenience is caused by the room being changed occasionally. The appliances, with one exception, are adequate to the requirements of the class.

"With regard to the progress of students, a good proportion has been carnest and enthusiastic in work, and consequently has made rapid progress. In two or three instances the desire to learn has not been sufficiently strong to overcome natural laziness, and consequently their progress has not been rapid.

"The class at the present time is in a good healthy condition, and bids fair to produce good results in future. Next year the enrolment promises to be much greater. More interest is being taken in the class, and its value is being better understood. Its future prospects are good.

"The introduction of type-writing in connection with the short-hand class would certainly make the class more popular, and increase its usefulness. I do not think that a type-writing class by itself would succeed."

#### ST. LEONARDS.

Five classes, covering all sections of art and phonography have been established; they meet in the Public School buildings, and have attracted a good number of students. This branch bids fair to become one of great importance.

#### GRANVILLE AND PARAMATTA.

For several years drawing classes have been in operation in these townships, but they met with only moderate success. During last year important changes were made, and several new classes established, particularly at Granville, so that this branch school has now assumed proportions somewhat commensurate with the population of the locality and the importance of the district as a centre of industry.

itslied, particularly at Granville, so that this branch school has now assumed proportions somewhat commensurate with the population of the locality and the importance of the district as a centre of industry. It seems not at all improbable that in the near future Granville will be one of our leading technical schools. The following classes have been in operation during the year:—Applied mechanics, with 9 students enrolled; mechanical drawing, 12; carriage building, 9; geometrical drawing, 16; mathematics, 10; freehand drawing, 19; model drawing, 13; agriculture, 16; phonography (two classes), 41.

The following extracts will show what work is being accomplished:—Mr. J. B. Brown, who teaches the subjects of applied mechanics, mechanical drawing, carriage building, geometrical and model drawing, and mathematics, reports:—"The accommodation since the 14th July has been very good. In the applied mechanics class the want of a set of models illustrative of the lessons has been very much felt; whenever possible I have substituted some home-made contrivance, and have, on different occasions taken the students to a private workshop in Sydney on Saturday afternoons, to enable them to see some of the contrivances which they had no other opportunity of studying. The models obtained from the Technological Museum have been a great assistance in teaching mechanical drawing. As I shall probably have several students in solid and descriptive geometry next year, a set of models, showing the intersections of planes, &c., would be very useful. The regulation drawing-boards would be useful for the drawing classes at Granville. The conduct of the students has been very good. In applied mechanics and mathematics, instruments only having been given for twenty weeks, it was impossible to overtake the whole work; in the former subject the class lectures dealt with the first part of the syllabus—that relating to mechanical powers. There was also some time given to the graphical method of determining stresses.

graphical method of determining stresses.

"In the majority of cases the students have made very good progress, one or two of the more diligent having done very well indeed. Though the attendance has not been so large as I expected the longest established classes have been gradually increasing both in the enrolment and attendance of students, and from conversations I have had with several of them I believe there will be a considerable interests in the classes next zero."

students, and from conversations I have had with several of them I believe there will be a considerable increase in the classes next year."

The teacher of the agricultural class at Granville reports as follows:—"This class was started on the 18th July, mainly through the efforts of a gentleman who had attended for a short time one of the agriculture classes under the Lecturer on Agriculture in Sydney. The number of individual students enrolled was 16, and their average age over 32 years. Ample accommodation was provided for both teachers and pupils. I have had all the appliances necessary this year, having a black-board in the classroom; and Mr. A. Mackay kindly placing his diagrams and specimens at my disposal to illustrate the lessons. The conduct and attention of the students could not have been better. The course of studies was kept as near as possible to the subjects taught in the elementary class in Sydney. I am highly pleased at the interest taken and progress made by the students, considering the short time this class has been in operation. The students are of a very desirable class—only 2 of them being under 21 years of age, and these are apprentices in one of the leading nurseries in New South Wales; the majority of the others cultivate small pieces of ground near their homes. Thanks to Mr. Mackay's kind invitation and arrangements made by him, I, with the students who wished to avail themselves of the opportunity, accompanied Mr. Mackay and his classes on five different Saturday afternoons, for the purpose of outside teaching, to the following places:—

the following places:—
9th August.—The garden, orchard, vineyard, &c., at Rookwood for practical lessons in pruning,

grafting.

27th September.—The orchard, garden, vineyard, &c., of Mr. Low at Merrylands.

11th October.—The orchard of Mr. Alderman Taylor, near Eastwood.

18th October.—Mr. Mackay's private residence at Balmain, for a practical lesson in bee keeping.

29th November.—Mr. Abram's bee-farm at Beecroft."

(The teacher of freehand drawing at Parramatta reports:—"The class was held every Wednesdan and the standard being appointed to the standard being appointed to 29th November.—Mr. Abrum's bee-farm at Beecroft."

The teacher of freehand drawing at Parramatta reports:—"The class was held every Wednesday night since its formation at the commencement of the third term, 17 students being enrolled at that time, and 2 at the half-term, making a total of 19. There is accommodation for 16 students, and sufficiency of appliances for that number. In the event of a greater number being enrolled, provision could be made for them by the addition of two more desks and the drawing-boards; the room would then be taxed to the utmost; whether the extra desks will be required I cannot at present say, but if all those who have signified their intention of enrolling do so, they will certainly be wanted. The conduct of the pupils has been on the whole remarkably good. None of the students having drawn from the cast before, I took them as a class on the first night, and drew one of the ornaments on the black-board, and explained to them how to commence the drawing. I commenced this way so as to gain an idea of their capabilities; since then they have been drawing from the casts. Speaking of them generally they have made considerable progress. The present condition of the class I consider satisfactory, and I think that the fact of my having had a number of inquiries from intending students, and also that the majority of those who have been attending have expressed their intention of continuing, promises well for the future success of the class."

The teacher of shorthand at Parramatta reports:—"The accommodation for the students is, with one exception, excellent; we have in the class-room two rows of desks; the front row is of the ordinary height, and allow the students to sit down to their work, but the rear desks being higher require the

ordinary height, and allow the students to sit down to their work, but the rear desks being higher require the student to stand while writing. This is very uncomfortable, and does not conduce to neat work, but this defect would be overcome by having a higher seat for the back row of desks; with this exception the accommodation is all that can be desired. Most of the students who joined this class, having no previous knowledge of phonography, the cause of study in the elementary class commenced with the "Teacher" as a text-book, and on the night of the last lesson we had studied about two-thirds of the book.

The advanced class was started with the resumé of the "Teacher," and then took up the study of the "Manual," of which book we had studied nearly one-half when the classes ended for the year. The progress of the students will scarcely justify criticism if we consider that most of them have spent so shout a time at the study of phonography; but even in the number of lessons received by them, they might have made more progress if they had given, say one half-hour each day to the practice of the art. The conduct of the students has been good, a word or two being sufficient to check anyone who evinced a desire to become frivolous. The employment of phonography in a countless variety of branches of business, renders it one of the most important studies of the age, not only in England, but even in America, where phonography is used more extensively than all the other systems of shorthand put together. In all the English-speaking Colonies the use of phonography is extending inpidly, and even Italy, India, and China are gaining a knowledge of this art. I mention these facts mere'y to support my humble communicate its business with another nation of an entirely different language; and it is certainly clear that commercial houses and law offices. Acc. are becoming familiar with the advantages of this time-saving art, and adopting the use of it. It is also stated by authorities that to a young man or a young woman entering on the battle of life a knowledge of phonography is of far more value to them that the knowledge of a modern language. Therefore, I can only argue from this universal adoption of phonography that the success of a properly conducted technical class phonography has its future success assured."

Batherst. The advanced class was started with the resumé of the "Teacher," and then took up the study of

#### BATHURST.

The Resident Science Master reports:—"During the year the total enrolment in the various classes has been:—

Physics	23	Mathematics	53
Chemistry		Bookeeping	$^{34}$
Grology		French	41
Mineralogy		Phonography	48
Botany		Art	
Agmoultung			

that subject.

"The accommodation provided has hitherto proved sufficient for the classes which have met at the Technical School. There are three rooms available as class-rooms, in addition to a fourth, which serves as a store-room and laboratory. The class-rooms are all occupied on several nights in the week, and only one or two more evening classes could be accommodated. Should it be decided to commence classes in carpentry or other mechanical arts, it would be practically impossible to arrange for such in the present building, and additional accommodation will be required.

"For the physics class an air-pump and a few other pieces of apparatus are required. A good microscope would also be very useful for the botany, agriculture, geology, and other classes. A collection of New South Wales rocks and fessils is much wanted for the geology class. There are very few diagrams at the School, and none provided by the Department, all those in use having been drawn or purchased by myself. A set of physical, and another of botanical diagrams, together with a good physical chart of the world would be very useful. The stock of chemicals also needs replenishing. The few books of reference at the Technical School have been largely used by the students, and a few more might be added with advantage.

at the Technical School have been largely used by the students, and a few more might be added with advantage.

"The general behaviour of the students has been very good. A few of the younger students are at times inclined to playfulness, but the attention shown by the majority is all that can be desired.

"As far as possible the courses outlined in the syllabus have been followed. In my report for last year I entered with some detail into the method of teaching, and it is hardly necessary to treat this in detail now. In physics and chem strs the lectures are fully demonstrated by experiments. For geology and mineralogy we have collections of rocks, fossils, and minerals which are largely used, and there is also practical work with the blow-pips. At the botany class fresh plants are used for demonstration. The agriculture class was only begin in April. The physical and chomecal properties of soil were experimentally demonstrated. Collections of seeds, &c., were shown, and the diseases of plants, such as rust, demonstrated under the microscope. In book-keeping and mathematics the work is mainly practical, the students mostly working individually under my supervision.

"The progress of most of the students has been satisfactory. I always strongly recommend the use of text-books, but regret to say that in some cases very little private study is done. This especially applies to the younger students. Many students also display a reluctance to present themselves for examination. This has been more marked in the present year than previously.

"During the session now closing the number of subjects taught has been larger than in any previous year, and the number of individual students has also increased.

"The drawing classes, I regret to say, have not been well supported during the year. Many of our best students associated by a character larger than any applicated by a character larger than any previous year, and the number of individual students has also increased.

The drawing classes, I regret to say, have not been well supported during the year. Many of our best students completed their courses of study last year, and have left us; others have been comployed away from Bathurst, and could only attend occasionally. Next year I hope we may enrol a good many new students in these classes.

"The special class for building construction, which was commenced this year, has been especially went, and I cannot recommend its continuance unless more interest is shown at the commencement of

weak, and I cannot recommend its continuance unless more interest is shown at the commencement of next session.

"The future prospects of the school are good. Most of the present students have intimated their intention of continuing their studies, and several will take up new subjects. Quite at the close of the session, also, new students presented themselves, and promised to attend next year. The scope of the school may be extended by the formation of new classes. Such, I think, may be formed in applied mechanics, and possibly applied electricity. A principal difficulty in the formation of these classes is the finding of a suitable time of meeting. I am prepared to conduct the results that the week, and very few students can attend during the day. A Latin class would, I think, be well attended, but this was not sunctioned when applied for. A large number of names was also recoved for a carpentry class.

think, be well attended, but this was not subcloned when appared to. I may mention the formation of a football club, and subsequently of cricket club among the students. This has, I think, a tendency to unite them more closely with the school, and develop esprit de corps.

"A local Scientific Society has also been started lately: the meetings are held by permission at the Technical School. There will be, I believe, a considerable increase in the interest felt locally in science arising from this, and I have hopes that day classes may be formed in some branches of science. The establisment of the Technological Museum will also probably have a beneficial effect on the classes."

#### GOULBURN.

The Resident Science and Art Master reports: - "The number of students enrolled in each class has been-

Theoretical chemistry	20	Practical chemistry	10
Physics		Mineralogy	6
Geology		Arithmetic & mensuration (Tech.)	56
Book-keeping		Freehand drawing	60
Model drawing		Practical gounetry	19
Perspective		Mechanical drawing	$^{6}$
Architectural subjects	12	Phonography	24
Cookery		5	

The accommodation provided for the classes is good. Students at architectural and mechanical drawing would find it more convenient to work at high tables instead of those of ordinary height which we now have, and a system of concentrating light on the freehend and model drawing copies is wanted.

Appliances.—The chemistry classes are fairly well supplied; many stocks now need replenishing and a small quantity of apparatus is wanted. It would be an advantage if the school were supplied with a set of milk testing apparatus, certain appliances used in water analyses, and a good microscope. The physics class is fairly well supplied, for the first year of its existence, but additional apparatus would be very desirable. The appliances for teaching ordinary practical mineralogy are satisfactory, but constant additions of New South Wales minerals are needed. In geology we require specimens of rocks and fossils drawn from our own country, also photographic views (preferably stereoscopic) of prominent geological features illustrating Australian geology. A geological map of Australia has been published in Victoria, and this, with a geological map of New Zealand, would be desirable. A first-class line light lantern, with exchange of slides, would be a decided acquisition for all the science classes. The casts provided for examination in model drawing are of a more interesting character than the wooden geometrical solids we now possess, and a further supply of such models would be appreciated.

Conduct.—The conduct of the students has been uniformly good. I have never known an instance of bad conduct since I have been in Goulburn.

now possess, and a further supply of such models would be appreciated.

Conduct.—The conduct of the students has been uniformly good. I have never known an instance of bad conduct since I have been in Goulburn.

Progress.—The general progress has been good; a large amount of interest has been excited in physics and geology; chemistry is less popular, but a few young students have worked well. A large amount of information is given every year to prospectors and others concerning minerals, but few students are inclined to study the subject systematically. Although the students work fairly well; yet, bad weather, overtime-work for their own employers, and attractions of social gatherings are constantly breaking in upon continuous and steady application.

The present condition of the school is, I think, fairly satisfactory. The small population of Goulburn necessarily limits the number of students, and a large increase is scarcely to be expected. A number of young men attend on Monday and Thursday evenings, the majority of whom are very backward in general education; they work at arithmetic, drawing, and book-keeping. A fair proportion of the young men and women are good students, and show a praiseworthy application and a determination to avail themselves of the advantages offered. The Public School teachers and pupil-teachers, resident in Goulburn, do not join the classes so freely as they did a few years ago. It might be supposed that a scientific training would be of the highest value to them. Next year I propose to modify my time-table so as to give several science lessons during afternoons, as I have reason to believe that they will be attended by students who do not find it convonient to come out during evenings. The Scientific Fociety inaugurated a few months ago, has greatly assisted the science classes.

The proposed manual training classes will confer a practical character to the Technical School which is needed. I think they should be successful, especially if some means are devised for admitting selecte

The mineral section of the museum attracts more visitors than any other, and it is very desirable that representative specimens of ores from Broken Hill and other mining centres, be supplied; also that increased facilities be given for having ores tested and valued. I have, at present, applications to find the commercial value of asbestos, meerschaum, and cobalt. An assay balance, capable of accurately weighing the minute beads of gold and silver would be a great acquisition. I think it is desirable to endeavour to make the Technical School the scientific centre for the district, where reliable information may be obtained concerning value and uses of colonial products.

The teacher of the Phonography Class reports:—"The number of students enrolled during the year was 24. The accommodation is good, and the appliances are sufficient. The conduct of the students has been excellent.

year was 24. The accommodation is good, and the appliances are sufficient. The conduct of the statuents has been excellent.

"This class is principally composed of young boys attending school, and great difficulty is found in getting the pupils to undertake home-work. The progress made is thus very slow, but though not rapid, I believe the pupils will acquire a sound knowledge of the system, if they attend another session or so. The attendances, except in wet weather, have been very fair throughout, and on the whole I regard the future prospects of the class as most encouraging."

The teacher of the cookery class reports:—"The classes were carried on for one term of fourteen weeks, during which time 69 pupils were enrolled. There was accommodation for the number of pupils. "The appliances were neither sufficient nor of the right kind for the classes held; they might do very well for classes in connection with the Public Schools, but certainly not for adult classes in connection with the Technical College.

with the Technical College.

"Both household and advanced cookery were taught. The conduct of the students was good, and

"Both household and advanced cookery were taught. The conduct of the students was good, and I was well satisfied with their progress.

"There may be a good attendance at the classes next term, but I think after this time one term will be quite long enough for a country class, and they should be held more like country classes in the old country, and if anyone wishes to go up for examination, let them go to the capital for nine months, and go through a regular course of training, as this is the only way in which we can get competent teachers to take up this branch of education in the Public Schools, which branch I hope will be established in all throughout the Colony."

NEWCASTLE.

The Science Master in charge of the District reports—" During the year, the following enrolments were made for the various classes":—

Newcastle		Chemistry
73	*******	Mineralogy
12		Metallurgy
3)		Coal-mining
13		Mechanical drawing
2)	*************	Building const uction
>>	*************	Phonography Seniors
,,	***********	Phonography Juniors
1)	*************	Mathematics
22	***************************************	Art drawing
37		Modelling
_ 21.		Bollermaking
Lambton		Art drawing
Wallsend		Coal mining
Hamilton		Mechanical drawing
**	*******	Phonography
Wickham	141 *************	Mechanical drawing
Waratah		Mechanical drawing
Stockton	* * * * * * * * * * * * * * * * * * * *	Phonography
Merewethe	r	Coal-mining

"The accommodation for students has not been sufficient, so that instead of a boilermaking class being held twice a week, it could only meet once a week. A good carpentry class could have been at work, but there is no accommodation for it. The appliances have been suitable. The conduct of the students has been highly satisfactory, but it would be well if more regularity of attendance could be enforced. The course of studies has been as far as possible thoroughly practical, but the time devoted to some subjects is hardly commensurate with the results expected; thus in mineralogy, 40 lessons

lessons a year, of which number only 30 attendances may be put in is hardly sufficient time to prepare a candidate for a thorough examination in the science at the end of the year, unless there be study at home, which in the majority of cases there is not. The progress of the students generally has been satisfactory. In Newcastle it would, I think, be well if there were classes for mechanical and electrical engineering, carpentry, and on steam and the steam-engine. Science classes will not, I believe, be largely attended. Such subjects as mineralogy, geology, &c., would be more acceptable in a metalliferous mining district, where the miners would consider them an essential portion of their practical education.

The art teacher reports that the accommodation for the Newcastle classes has been very much improved during the past year by removing the classes from the School of Arts to the Bolton-street

The art teacher reports that the accommodation for the Newcastle classes has been very much improved during the past year by removing the classes from the School of Arts to the Bolton-street Public School, where gas brackets with reflectors are arranged, the only drawback being that the school-room is at the extreme cast end of the city, and students living in the west end and suburbs complain of the distance. The appliances in the shape of freehand drawing casts have been increased, a full set having been supplied at the early part of the year; but models of common objects, such as those used in the recent examination, are urgently needed. The conduct of the students has been quiet, orderly, and studious. The following were the courses of study:-
Freehand.—Copying progressive casts according to year.

Model.—Various groups, showing different degrees of light and shade.

Geometrical.—Problems and exercises from Rawle (new edition) and Burchett.

Perspective.—Studies from Toidge and Dennis.

The progress on the whole was satisfactory, though several of the students were young, and could

The progress on the whole was satisfactory, though several of the students were young, and could could not succeed as well as older ones.

The accommodation at Lambton is the same as last year, the room attached to the Mechanic's Institute being rather small, but the Committee have decided to renovate the Institute almost immediately,

answedge being rather shall, but the committee have decided to renovate the institute almost infinediately, and to enlarge the room occupied by the class.

The classes are at present well attended, and many of the students evidently are very anxious to succeed, and I have every reason to believe that the members will still keep up next year.

Coal-mining classes have been formed at Newcastle, Merewether, and Wallsend, and have received

very fair support.

The teacher reports that, "There was 16 candidates for examination, of these 10 had only attended the last session, so that I searcely expect high results. At the same time the strike has in every way been against the classes, as, although they had much more leisure, there seemed to be less inclination

way been against the classes, as, although they had much more leasure, there seemed to be less inclination to study than when work was going on regularly.

If a geological chart, and maps of the Cornish pump, ordinary horizontal engine, plan of a coulmine, and anything of a similar nature were obtainable by the School of Arts, or Mechanics Institute where a class is held they would be valuable auxiliaries.

In the advanced I propose to take the elementary principles of mine surveying and levelling, in the advanced a portion of the theory of mine ventilation, and fuller details in geology, sinking, bauling, winding, for."

There is nothing in the conditions of the other classes in this district calling for special report.

#### MAITLAND.

The encolments for the various classes in this district are as follows :-

			14
Buttai		PhonographyArt drawing	23

The Resident Master reports:—"The accommodation afforded by the art class-room in which the scoior art students, together with those learning building construction and mechanical drawing are taught, is a fairly suitable room, length, 30 feet; width, 20 feet. A shelf runs along the southern side of the room and supports the wooden models for model drawing and the easts of human figures, &c., for advanced frechand. The room is fitted with a central light, and the freehand drawing students are forced to work in the shadows east by their hands, otherwise it answers very well for these subjects; it is, however, very badly ventilated, and is unbearably hot in summer. The room on the opposite side of the archway is also used as an art-room for junior students; they have a good light, and the accommodation is good in all respects. The modelling class meets in the art-room; this is not very satisfactory as far as cleanliness is concerned, but I cannot make other arrangements at present. The carpentry, joinery, carving, &c., classes are located in a detached brick building, containing two rooms on the ground floor and two upstairs rooms at the rear of the main building. The rooms are small, and the students are inconvenienced by the cramped space. As an afternoon fret-work class for ladies has been proposed by some of the residents, I have arranged for Mr. Coles to use the room set apart for science classes, and to use it also for theory lessons in carpentry and joinery at night time. The mathematics class meets in an upstairs room in the main building; the room is not well lighted, and I would much prefer to have it in the northern class-room of the Girls' High School; this room is fitted with Andrew's patent school desks, but the gas is not laid on. The science classes, when forned, can be accommodated at the Technological Museum. The phonography class meets in the southern class-room of the Girls' High School; they have a good light and convenient desks, and the accommodation is suitable.

The calendar has been adhere The Resident Master reports:-" The accommodation afforded by the art class-room in which

The calcular has been adhered to as closely as possible throughout all the classes.

Progress of students.—Through the large amount of elementary work which has fallen to my share this year, I have been unable to give the special attention that I have hitherto done to the art classes. In this year, I have been unable to give the special attention that I have hitherto done to the art classes. In the case of perspective, the standard required by the calendar is, I think, to high for both first and second year. In the second year only one student worked courageously to get through the course. I may say here that one of the juniors was fortunate enough to gain the medal for drawing at the Junior University Examination in September last. On the whole, the progress of all the art classes has been good.

Shorthand classes.—At the ceremony in connection with the opening of the Technological Museum I was very pleased to see several of the shorthand students taking down the speeches of the different speakers. Considering that they have learnt the art within the year, it speaks well for the progress of the shorthand class.

Carpentry and Joinery.—The progress of these classes has been particularly good since their establishment, and the model door, gates, &c., the work of young men who have never handled a saw before, surprises the townspeople.

Mathematical Classes.—These students have always distinguished themselves at examination time, and although the class of pupils has clanged, young tradesimen being predominent this year, still I feel sure that the results will be as good as formerly.

Notwithstanding the fact that the technical classes have had to compete with gaslight handicaps, skating rinks, and numerous other classes of night entertainment which were not in vogue in the early days of the school, the numbers have rapidly increased every year.

Singleton

days of the school, the numbers have rapidly increased every year. SINGLETON

#### SINGLETON CLASSES.

"Accommodation is provided for the classes at the infantschool-room of the Public School, Hunterstreet, and it answers very well for the purpose. We have a good supply of casts and models, but a rack for hanging the models on is required, also an extra shelf. The conduct of the students has been very fair, and the course of studies was in accordance with the calendar as far as possible. I have some first-class young draftsmen in the Singleton School in frechand and model drawing, but the practical plane geometry and perspective class is not a good one, although a few of the students are proficient. I have, however, lately been giving a lesson in the afternoon in these subjects. With regard to the phonography class, the teacher has been attentive, and although the class did not start till April, he nearly succeeded in lawing three men ready for the speed test at the recent examinations. The classes are very popular, and I feel sure that a carpontry class would be successful. I feel sure that a carpentry class would be successful.

#### EAST MAITLAND TECHNICAL SCHOOL.

"Accommodation.—This class meets in one of the class-rooms of the Public School. I managed during the term to use some old desks which were stowed away in one of the out-houses attached to the school, but had to refuse admittance to intending male students for want of accommodation.

"The progress was very marked, considering the short time the class has been in operation, and I hope to have some successful passes from this school at the next annual examination."

#### Broken Hill, &c.

BROKEN HILL, &c.

The Resident Master reports:—"The accommodation for pupils is very inferior and inconvenient. The premises are not central enough. As to the progress of pupils, I think that, considering the difficulties under which we are labouring, the few students who have continued to the last have progressed fairly. The closing numbers were not such as I could wish, but that was chiefly owing to the position of the class-room being so far out of town, which is not lit at night, and students generally will not walk for 1½ or 2 miles in the dark to study, but now they see an attempt made to obtain central premises, although temporary, promise to attend in large numbers in the coming year."

In June last classes in physics, mining, mineralogy, and metallurgy were started in the adjoining mining centre, Silverton, under the charge of Mr. Uriah Dudley, formerly a student of the Technical College. The classes were prospering when the great strike occurred, and many of the students had to leave the district. There are good grounds for hoping that the work for 1891 will be taken up by a goodly number of students.

College. The classes were pleave the district. There a goodly number of students.

In addition to the branch schools already mentioned, one or two technical classes have been established in the following towns:—Morpeth, Muswellbrook, Denman, Tamworth, Grafton, Orange, Lithgow, Bega, Candelo, and Wollongong. In the larger of these towns other classes will in course of time be added, and thus branch Technical Schools will be established.

#### GENERAL RESULTS OF EXAMINATIONS.

The standard to obtain a pass has been raised, and a student has now to get 50 per cent. of marks to pass in the second or lowest grade; in 1889 and former years it was necessary to get only 34 per cent. of marks to secure a pass. The standard now adopted is 50 marks must be obtained to pass in the 2nd grade, 75 to pass in the 1st grade, and 85 to secure honors. The number of candidates who presented themselves for examination in December last was 1,538, of whom 864 or 56 per cent. passed.

At the Technological Examinations of the City and Guilds of London Institute held in this Colony in April last, 32 candidates presented themselves, and 20 obtained certificates. At the annual national competition held at South Kensington in May, 1890, under the auspices of the Science and Art Department of Great Britain, the works of 13 students of the Sydney Technical College obtained classification from the Imperial examiners.

from the Imperial examiners.

MANUAL TRAINING IN PUBLIC SCHOOLS.

Manual Training in Public Schools.

Early in the year the Minister decided to introduce manual training into the Public Schools, and for that purpose a workshop was erected on the grounds of the Model School at Fort-street.

The number of applicants for the position of Instructor was so great that it was determined to make the selection from the result of a competitive examination in theory and practice.

Mr. William Powrie who gained the highest marks in both subjects was the successful competitor and the results of his work have fully justified the appointment. All the students of the Fort-street College are required to pass through the course of instruction in the workshop, but with the boys of the Model School attendance is optional. Hitherto the instruction has been confined to carpentry, but working in metal will shortly be added and the requisite additional appliances will be provided. A definite course of instruction will be prescribed; planned on the lines of the St. Louis Manual Training School, one of the most successful of the many such schools in the United States.

Although the attendance of the students in training is compulsory they have entered on the work

Although the attendance of the students in training is compulsory they have entered on the work with diligence and some with enthusiasm, and even those who not like it at first change their opinion before the session closed and admitted that the workshop instruction had done them much good in

every way.

before the session closed and admitted that the workshop instruction had done them much good in every way.

Sixty boys have joined the classes; I expected a greater number, but this is a good beginning. Parents, however, are apt to be impatient as to results, and want to see finished articles, made before the boys have learned to handle the tools properly. This is to be regretted, for while results are not overlooked systematic and thorough training is the main object in view. One motto of the St. Louis Manual Training School, "The Cultured Mind—The Skilful Hand" might well be adopted by us.

Manual training classes have been started in connection with the High School at West Maitland, and the Public Schools in East and West Maitland and have been very well received. The teacher is well pleased with the industry and application of the pupils. Workshops have been erected on the grounds of the Crown-street and Blackfriars Superior Public Schools. The Public School at Sussex-street is to be specially fitted up to serve the same purpose, and I trust that before long each of our principal towns will have a Manual Training School.

I venture to hope that at no distant date it will be my privilege to report in terms similar to those in the following by Superintendent M'Alister of the Public Schools of Philadelphia, March, 1890.

"The success which has attended the Manual Training School from the first is the best guarantee of the soundness of the principle upon which it is organised and conducted. Beginning a little more than four years ago, in a very humble way, it has steadily grown in public confidence and approval. It has more than justified every claim that was made in its behalf. Every available foot of space is now eccupied and it has now become impossible to admit all the pupils who apply for admission."

The experience of the educational authorities and teachers in France and the United States, the countries where most attention has been given to manual training is that its introduction has not in any contrac

countries where most attention has been given to manual training is that its introduction has not in any way interfered with the ordinary school work, but on the contrary has proved the needed complement

way interfered with the ordinary school work, but on the contrary has proved the medical contrary of such work.

The Superintendent of the State Schools of Washington asked the candid opinions of his teachers as to the effect of the introduction of manual training and reports "All concede that no academic loss has been sustained; the majority agree that a positive appreciable gain has been made in the academic studies. The majority report increased love of school, increased interest in all studies, better appreciation of what is taught and why it is taught, better understanding of the relation between what is taught and the affairs of life, and resulting therefrom, broader and more intelligent grasp, and constantly greater cheerfulness, and less disposition to consider the school as a place for tasks, and the teacher as a task-master. We have found that manual training has given the pupil at every stop in his work an intelligent and tangible purpose for such work."

The teacher of manual training, Fort-street, reports as follows:—
"During the year 56 students in training and 67 boys have joined classes on this subject. As far as practicable both students and boys are divided into groups of ten, each group constituting a class.
"I find the workshop by far too small, and would suggest that there be added at least 300 feet

extra floor space.
"I would suggest that there be two lathes, a foot-power fret-saw, and a set of carving tools added to present appliances in workshop.

"As a rule, I find both students and boys take a great interest in their work, and their conduct is

good in every way.

good in every way.

"The course of studies includes—Nature and properties of the different kinds of wood, principally those grown in New South Wales, their peculiarities, and how to treat them before they are fit for use; elementary, geometrical, and mechanical drawing; tools—their names, shape, uses and how to sharpen them; the names and construction of the principal kinds of joints used in woodwork; the names and peculiarities of the different kinds of locks and hinges in common use, and how to fix them; nails and screws, and how to drive them; how to prepare and use glue; making small box picture-frame, &c.

"As a rule, both students and boys have made very good progress. I consider the class is, at present, in a very good condition, and have every reason to think that it will improve as it becomes older, and that it has a bright future before it, for as we proceed with our work it will become far more interesting. Their fellow-scholars will see what boys are doing, and will in many cases have a desire to do the same.

do the same.

"I find by the examination that the students appear to be backward in drawing, and especially "I find by the examination that the students appear to be backward in drawing, and especially "I find this arbitration absolutely necessary for manual training students."

solid geometry. I think this subject is absolutely necessary for manual training students."

While the manual training has been provided for the boys, the interests of the girls have not been overlooked. The instruction in needlowerk has been made more regular and systematic, and cookery classes have been established, but none of this work comes under the cognizance of this Branch.

#### PRACTICAL INSTRUCTION IN AGRICULTURE AND HORTICULTURE IN PUBLIC SCHOOLS.

PRACTICAL INSTRUCTION IN AGRICULTURE AND HORTICULTURE IN PUBLIC SCHOOLS.

In order to carry out the plans indicated in my report for 1889, to give solid instruction to pupils of Public Schools in matters pertaining to the cultivation of the soil, all teachers were supplied with a copy of the text-book prepared for their use by Mr. Angus Mackay. To assist, encourage, and direct teachers in this work, a special visiting teacher was appointed—Mr. Albert Gale—who for many years had been successful in improving school grounds by cultivating trees and flowers, and was known to be an expert in all points connected with horticulture and the management of bees, was chosen for the work. This officer entered upon his duties in January, and has paid more than 200 visits to 150 different schools. The nature of Mr. Gale's work will be seen from his report appended hereto. In most cases Mr. Gale has been welcomed by both teachers and pupils, and the good likely to result from attention to the subject he had charge of freely admitted. One teacher, a solitary exception, plainly not in favour of the new line taken up by the department, indignantly asserted "it is no part of my duty to drive nails or plant cabbages." It is perhaps needless to state that the school in charge of that teacher did not occupy a prominent place in connection with the University examinations. To encourage teachers in giving practical instruction to their pupils in agriculture and horticulture, bonuses were offered in accordance with the following circular:—

#### CIRCULAR TO PUBLIC SCHOOL TEACHERS.

Department of Public Instruction, Sydney, 21st April, 1890.
The Minister of Public Instruction is anxious that the lessons given in Public Schools should be of as practical a character as possible. He has therefore decided that, in future, teachers be invited to give special attention to Agriculture and Horticulture.

Instruction in these subjects can be best given in the form of object lessons, and you will find that it is so provided for in the revised Standards of Proficiency.

The lessons might take up the work in three stages, thus:—

1st Stage: The principles influencing the supply of plant food in the soil, the necessity for cultivation, and the circumstances making tilinge more or less effective.

2nd stage: The principles regulating the more or less perfect supply of plant food; manures as supplemental sources of plant food.

3rd stage: The principles regulating the growth of crops, and the variations in their yield and quantity.

To assist you in giving these lessons a text-book, specially prepared by Mr. Angus Mackay, F.C.S., Lecturer in Agriculture, Sydney Technical College, for use in Public Schools, will be supplied.

It is felt, however, that more oral instruction in school will be of little value, unless followed up

by practical work outside.

It is therefore proposed to set apart a portion of the play-ground for the formation of flower and vegetable gardens, and, where practicable, for the keeping of bees. The planting of fruit or shade trees, the cultivation of grain, &c., or of live fences, and the erection of bush-houses, are matters that could be well taken up. The work should be done by the children, under the direction and supervision of the

A special teacher has been appointed to give lectures in the subjects now brought under notice, but, as he cannot visit every school in the Colony, he will be prepared to furnish you with such advice

and information as you may require.

Applications for information, &c., should be addressed to the Superintendent of Technical Education, Sydney.

With a rior of encouraging teachers in giving the practical instruction indicated, the Minister has

Education, Sydney.

With a view of encouraging teachers in giving the practical instruction indicated, the Minister has decided to give annually a bonus to each teacher who has results to show. The bonus will vary from £1 to £5 according to the quantity and quality of the work done. Teachers desirous of gaining a bonus, should, at the regular or ordinary inspection of their school, fill up the paper attached and hand it to the Inspector.

Great care should be taken in furnishing the information asked for in the form as, being collected from all parts of the Colony, it will become valuable to all persons interested in the cultivation of the soil.

of the soil,

The names of the teachers gaining bonuses will be published in the annual report of the depart-

It is perhaps hardly necessary to point out that, notwithstanding the great importance of the work to which your attention is now invited, it is not to be allowed to push aside the duty of teaching reading, writing, anothmetic, &c. Hence it has been decided that no teacher will be considered eligible for a bonus, unless the School under his charge is in a satisfactory condition as regards efficiency.

The Minister confidently expects that the out-door practical lessons will be taken up by the teachers generally with carnestness and enthusiasm. The time and trouble they devote to the work will be rewarded with good results. A pleasant, healthy, and profitable way of employing their leisure time will be provided for the pupils, the school grounds will be made comfortable and attractive, and where the work is systematically carried out the children will be taught to beautify the surroundings of their homes, and to add to the natural products of the Colony.

EDWIN JOHNSON, Under Secretary. The names of those who were awarded a bonus are furnished in Mr. Gale's report. In addition to the teachers mentioned, Mr. John Dobbie, of the Hunter's Hill School, was specially commended by the Minister for the excellent condition of the school grounds, adorned with trees and flowers—the results of his out of school labours.

Besides visiting schools, giving lessons to school pupils, delivering public lectures, and conducting classes, Mr. Gale has distributed an immense number of packets of seeds and flowers. He has also had to reply to hundreds of queries from all parts of the Colony. The work has increased considerably, and is now more than one man can manage. If the work is to be done properly and made to reach all the schools of the Colony additional instructors must be appointed. The institution of Arbor Day has led the members of School Boards and the parents of the children to take an interest in the planting of trees and cultivation of flowers in school grounds; and though the matter has been in hand for only a few months, a very marked improvement in the appearance of many school grounds has already evoked complimentary comment. From the work of Public School Teachers on a small scale, but in many places, and the labours of the Director-General of Forests on a large scale, we may soon hope that trees, ornamental and useful, will be found in all parts of the Colony, and that the prevalent notion among our people that "a tree is something to be cut down" will be for ever swept away.

The Technical Education Branch has been brought into direct contact with the primary schools

The Technical Education Branch has been brought into direct contact with the primary schools in two other ways. Sets of plaster casts, to serve as copies for drawing, of the value of £1212s., have been supplied to the schools that have applied for them. Loans of lantern slides, too, are granted to teachers, on condition that they pay the cost of carriage, and undertake to return the slides in good order. An excellent collection of views, some with readings, have been purchased, but the requests for loans have been so many that it is only with very great difficulty that all applicants could be supplied. It will probably be found necessary to add largely to the collection and to engage a youth to look specially after this business, but the good accomplished will amply repay any expenditure incurred. Many of the children in the country have never been out of the district in which they live, and the views of places of historic or commercial interest, of the various natural phenomena, of the wonders of art and architecture displayed by the aid of a magic lantern cannot fail to instruct as well as interest. Not a few teachers have manifested a praiseworthy interest in their pupils by providing themselves with a lantern so as to qualify themselves for a loan of slides.

Our teaching of phenography to pupils of Eublic Schools have not at 11 fine and 12 few teachers.

Our teaching of phonography to pupils of Public Schools has met with fair success. Classes have been formed in the leading schools of the Metropolitan, Newcastle, and Mairland districts. Pupils have joined, and attend with satisfactory regularity, but the progress is necessarily slow; most of the lessons are given only once a week, and the home study and practice so necessary for the acquisition of a knowledge of phonography cannot be secured. The pupils state their time is fully occupied by the home lessons and exercises connected with the ordinary school subjects. The general demand for shorthand writers in Government and mercantile offices, and the good positions that a few pupils who diligent'y studied the subject have gained will most likely make these classes very popular.

#### TEACHING STAFF.

In 1889, there were 50 lecturers and teachers employed in conducting technical classes in Sydney, and 19 science and art masters, and teachers employed in country districts; or a total of 69 on the teaching staff for the year. During the past year this number was increased to 55 lecturers and teachers in the Sydney district, and 58 in the country districts; or a total for 1890 of 113 on the teaching staff,—being an increase for the year of 44 persons. With very few exceptions, all the teachers have worked with industry, zeal, and efficiency, and are entitled to much of the credit of the year's success.

#### LECTURES.

During 1880, 15 lectures were given in Sydney, and 46 in the suburban and country districts; or a total of 61 popular lectures. In 1890, 44 lectures were given in Sydney, and 134 in the suburban and country districts; or a total of 178 popular lectures for the year, being an increase for 1890 of 117 lectures. These lectures were, in most cases, very well attended—the average attendances being 83 persons. As some of the results of these popular science lectures it may be stated that as the outcome of lectures on geology and mineralogy given by the Rev. Joseph Campbell at Moruya, an application, signed by a large number of intending students, has been received, asking for the establishment of a class in these subjects in that township. As the result of lectures on the "Silver-bearing Ores of Australia," delivered by Mr. T. Wallis Barnes, at dingleton, smelting works have been started in the neighbourhood to treat ores from the Northern mines.

#### LIBRARY.

The library contains 1,430 books, and about 600 pamphlets, treating on all subjects of a technical character. Considerable additions have been made during the year, particularly in securing a regular supply of periodicals.

The library is open to the teachers and students of technical classes and to Public School teachers.

The periodicals are kept in the library for one month, and are then removed to the various class-rooms for the benefit of teachers and students.

The Technological Museum also has a valuable collection of works bearing on technical subjects. Not the least of the advantages to be derived from the new buildings at Ultimo will be the opportunity for combining these two collections.

#### TECHNOLOGICAL MUSEUM.

In January last, the direction of this institution was handed over to the Technical Education Branch. The report furnished by the Curator is appended. During the year nearly 100,000 persons visited the museum, a very great number, considering its unattractive appearance and crowded condition. The Sunday visitors amounted to 36,000, and from personal observation, as well as from the reports of the officers, I can state that these Sunday visitors are a very respectable and intelligent class.

The transfer of the museum to my superintendence has been a direct gain to the Technical College while the museum will receive types of good work from the college students. Mr. Edward Combes, C.M.G., one of the best authorities on technical education, observes, "All technical schools and art schools should be an immediate connection with a museum. The eye sees in a moment what the mind could not understand from a written description."

The museum, too, is a very important aid to technical education in acting as a bureau for supplying information on all kinds of subjects, but especially those connected with the resources and industries of the Colony.

industries of the Colony.

In the Curator, Mr. Maiden, I have found a loyal and enthusiastic colleague, while the Colony at large is in a great measure indebted to him for the great interest now taken in wattle culture, and in the development of the wealth it has in our indigenous vegetable products.

The great usefulness of museums as educational agencies led to early attention being given to the formation of branch museums, the establishment of those at Goulburn, Bathurst, West Maitland, and Neweastle was approved by the Minister. That at Goulburn was opened on the 17th November, and the

others shortly afterwards.

The local museums have been much appreciated by the residents, and the Department of Public Instruction has been commended on all sides for its action.

Decentralisation of this nature meets with a ready recognition.

Scientific societies at West Maitland, Goulburn, and Bathurst, are working in conjunction with the technical branch to advance the interests of the local museums.

There are two classes of people to be considered in regard to the formation of these local

museums.

First, the local students and residents, who should not be compelled to go to Sydney to study a collection of specimens informing them as to the nature and properties of the things which go to make the clothes they wear, the food they eat, the appliances they daily see and use, and so forth. For their benefit, also, a collection of the local products should be got together, in order that a man may be conversant with the resources of his own district, and have his interest excited both in the development of resources known to him, and in the searching out of fresh ones.

Second, the visitor to the district on the look-out for utilisable products or passively taking note of the resources of the district, which he may afterwards make use of, will have full information placed before him in the most striking and convenient form.

In all the local museums, therefore, a strong point will be made of the collection of the local pro-

of the resources of the district, which he may afterwards make use of, will have full information placed before him in the most striking and convenient form.

In all the local museums, therefore, a strong point will be made of the collection of the local products, as such specimens are of the highest value to the resident and to visitors. In order to present the local resident with useful information, and at the same time throw out suggestions to him for the collection (if they exist), of analogous products in his own district, a general collection of non-Australian products will also be formed. To be specific, at Goulburn, for example, acts of the types of wool grown in the district will be shown, and special measures will be taken to ensure the adequate representation of the wools of all wool-producing districts. These will be uniformly classed and described at the central museum in Sydney. Then we shall have samples of the ores of the district, and a point sadly neglected, samples of the "country rock," illustrating the getting of such ore. Then we follow with the clays, building stones, native grasses, fodder plants, noxious weeds, and so forth. In addition we shall have samples of the crops grown in the district, with particulars as to yield, soil, and any other items required by the practical farmer. Other exhibits will comprise samples of the local tan-barks, and a few sides of leather to show the capabilities of the local tanners—and so on for other local industries. Survey, postal and other maps of the district and diagrams illustrating processes of manufacture will be hung round the walls. Local herbaria will also be formed; this is a matter of great importance, especially in view of the fact that our vegetable productions are so little utilised or even known.

Then we shall have sample logs and slabs of the local timbers, and railway-sleepers, naves, felloes, &c., worked out of them, together with samples to illustrate the capabilities of the ornamental woods. Besides these, there are other vegetable

The local museums will in fact become the headquarters for the dissemination of local information abroad, as well as a bureau of information for local residents.

We believe that the local products can be procured with very little expense, and frequently with none at all. We must look to donations for keeping such specimens up to the mark and generous as people have been to the central museum in Sydney we confidently expect that they will be far more generous to the museums in their own midst.

A pamphlet, prepared by Mr. Maiden, Curator of the Technological Museum, gives full particulars as to the desirable contents, preparation and preservation of specimens, and the scope and objects of the museums. Copies of this pamphlet or of the calendar of the Technological Education Branch, in which the pamphlet, is embodied may be obtained on application to any of the resident science masters.

Technological Museums are not new institutions, but we believe this is the first instance in which a central museum has extended its operations and usefulness by formation of branches. On one point, however, there can be no doubt—this is the first instance of a museum being established as an integral part, not only of a system of technical education, but of the general plan of public education for the whole country. whole country.

The additional and improved accommodation afforded by the new buildings at Ultimo will enable the Technical Education Branch not only to increase the usefulness and efficiency of existing classes, and to extend their operations, but also to take up important lines of work hitherto quite out of reach. A new department in electrical engineering will be established, organised with a view to meet the growing needs in this great development of science, now offering the very largest field for future employment, enterprise, and industry. The instruction will be based on the most approved systems, and will supply a very complete theoretical and practical training. Experimental lectures of a thoroughly technical nature, will be given on the principles of the science, supplemented by organised practical instruction in the electrical, physical, and mechanical laboratories, and the mechanical workshops.

Mining and mining engineering will receive particular attention during this year. The importance of the mining industry cannot be over-rated. Classes for instruction in conl-mining have been started, and others will be formed where necessary. A special syllabus of instruction has been prepared to regulate the teaching. It is also proposed to have in connection with the Technical College a School of Mines, where practical lessons in every branch of mining industry will be given. To do this it will be necessary to secure within convenient distance of Sydney a suitable area of land, so that actual mining operations may be carried on. A similar course will be pursued, at Broken Hill, and gradually extended to other localities. Work in this direction will be facilitated by the appointment of a lecturer in mineralogy now under consideration. The additional and improved accommodation afforded by the new buildings at Ultimo will enable

under consideration.

Among other points demanding attention in the near future may be mentioned foundry work, terra-cetta work, and the establishment of a School of Music, but no definite arrangements can be specified till the new buildings are occupied.

Mr. Edward Dowling, who had been appointed to the position of Assistant Superintendent, retired from the Service at the end of 1889. The post was not filled up for some months, when Mr. D. Codrington Selman was appointed. Mr. Selman was selected by the Agent-General and Sir Philip Magnus from over 100 applicants for the position. Previous to his appointment Mr. Selman was Professor of Pure and Applied Mathematics at University College, Bristol, and Lecturer on Civil, Mechanical, and Electrical Engineering. He served an apprenticeship of five years in the shops of the Avonside Engine Company's Locomotive Works, Bristol, and subsequently held a leading position in the drawing office of the Belling Stock Department of the Bristol Waggon Works. During the last six years he had charge of the surveying and civil engineering field-work in Bristol. He is an exhibitioner of the Royal School of Mines, London, a Whitworth scholar, and a medallist of the Science and Art Department, a member of the Institution of Mechanical Engineers, and an Associate Member of the Institution of Civil Engineers, London. He was Examiner in Mathematics in the University of Durham for degrees, and has acted as Extension Lecturer in Engineering. He has taken part in original research for the Institution of Civil Engineers and the Royal Society of London.

The appointment of a gentleman of Mr. Selman's training and experience ought to be a decided gain to the Colony, and I confidently expect that I shall receive from him much valuable assistance.

To sum up, the results for 1890, when compared with those of 1889, show a more extended sphere of operations, a greater number of subjects taught, improved and additional appliances, and a very large increase in the number of students.

It is very gratifying that the first year's work under the direct administration of the Minister of Public Instruction has been attended with such all-round success.

ψ,

#### THE TECHNOLOGICAL MUSEUM.

I have the honor to submit my first Annual Report on this Museum since it was taken over by the Department of Public Instruction, on the 1st January, 1890.

You will observe that the public has shown its generous appreciation of the usefulness of the Museum by numerous donations, many of them of great value.

The phenomenally wet weather of the past year has given me much anxiety for the safety of a portion of the collections in the wretched shed which will have to continue to do duty for a museum building for a short time longer; but I have lost only a very few specimens (vegetable products—from mould) from this cause. mould) from this cause.

It will be convenient for me to briefly touch upon various points in connection with the work of

the Museum under headings.

I have reported on a large number of useful raw products, or substances supposed to be so; but the mere enumeration of subjects would form a long list. Most of the reports themselves would scarcely bear abstracting, and to give them in extense in this place—is out of the question.

#### Technical College and its Branches.

The Museum has been found useful in supplying public lectures in connection with the Technical Education Branch, and also Hurlstone College students, with specimens, diagrams, and apparatus, for illustrative purposes, while members on the staff of the Branch have also been supplied with the loan of apparatus, &c., for teaching purposes. Aid of this kind has been cheerfully given to lecturers; but, on account of the lack of accommodation at my disposal, and the distance of the class-rooms from the Museum, the collections have not been so capable of utilisation as will be the case later on.

I have taken stock of the apparatus, specimens, and diagrams belonging to the Department in the Technical College.

Technical College.

#### Public School Teachers.

The incorporation of the Museum as an integral portion of the Department of Public Instruction has had one result in inducing a number of public school teachers (chiefly in country districts) to apply for information.

The aid given has been chiefly in the direction of naming minerals and plants; and I trust that, as time rolls on, the number of teachers who look upon this Museum as a bureau of useful information will become increasingly large.

#### $Country\ {\it Muxeums}.$

The Minister has been pleased to sanction the formation of Technological Museums in those towns which already poscess Technical Colleges, viz.:—Goulburn, Bathurst, West Maitland, Newcastle, and Broken Hill. Museums are now open to the public in suitable buildings in all these towns, except at Broken Hill, operations being suspended there pending the erection of proper accommodation. Each museum contains about 2,000 specimens, and already many additions have been obtained by donation locally.

museum contains about 2,000 specimens, and already many additions many hern obtained by domination of local collections fills up an important gap in the arrangements for imparting technical education in this Colony. Not only are local specimens exhibited, but general ones as well, in order that all persons, whether residents of a district in which a museum is situated, or visitors to it, may have an opportunity of acquiring useful information.

The collections are also useful for supplementary instruction in the Branch Technical Colleges and Public Schools of a district; while by means of duplicates, locally supplied the products of one district may be made known in all others in which a nuseum is situated.

#### COUNTRY SCIENTIFIC SOCIETIES.

In the case of West Maitland, a flourishing scientific society has existed for some years, and the society offered its valuable collection of natural history specimens to the department, conditionally on suitable accommodation being found for them, and facilities to the members for access to them. The specimens having been accepted by the Minister, on these terms, they form a valuable addition to the West Maitland Technological Museum, constituting a natural history "side" to it. It being felt that the formation of local scientific societies would do much good in the way of securing specimens to the local museums, and in concentrating the scientific activity of a district to the advantage also of the local Technical College, and of the district in general, Messrs. Such and Ross, the Resident Science Masters at Goulburn and Bathuret respectively, have been instrumental in forming scientific societies in their respective cities, which already have a good number of members, who meet regularly for the discussion of scientific questions, and the societies give promise of much usefulness.

Mr. Alfred Hawkesworth, the wool classer to this museum, reports as under in regard to the progress of the wool-section during the past year. The collection is now, I may say, so well known, that it is not necessary for me to amplify Mr. Hawkesworth's statement.

"In connection with the wool-section of the museum, I have much pleasure in reporting ratisfactorily in every respect. The number of samples has been largely augmented since last report, and at present contains the most comprehensive collection in these colonies, and, many travellers state, in any other country. The samples are coming in freely, and many of our most influential stud and flock masters show their appreciation by sending specimens of their produce.

"There are 3,000 specimens in the raw state, and 370 manufactured and curios.

"The branch museums have been supplied with 1,306 specimens, viz.: Goulburn, 297; Bathurst, 237; West Maitland, 252; Newcastle, 244; and Broken Hill, 236.

"The first descriptive wool catalogue (No. 1) was issued early in the year, and it is very satisfactory to mention that it was most favourably received by the trade (brokers, &c.), squatters, selectors, and has been largely used by the Technical College students.

been largely used by the Technical College students.

"No. 2 descriptive wood catalogue is printed, and will be issued very shortly. No. 3 is now being

prepared."

#### Wattle and Wattle-backs.

Waltle and Waltle-backs.

In May I gave two lectures an the above subject at which you were present and at which the Hon. the Minister for Public Instruction presided, the attendance of the public being very large on each occasion. By direction of the Minister I amplified these two lectures into an illustrated 8vo. pamphlet of 40 pages, in which I drew on the few authorities on the subject, and embodied my own original researches which extend over six years. Two thousand copies were issued in July and the edition is now exhausted, but an enlarged and greatly improved edition is in preparation and will be ready in ample time for next planting season. The subject of wattles being so important to Australia, and there being so little reliable information on the subject, we have been inundated with letters, samples of bark, seed, flowering and fruiting specimens from every Colony except Western Australia, but including New Zealand. I have written several hundreds of replies, often covering analyses of bark and botanical determination of wattles. With the view to introduce the Golden Wattle of South Australia in the localities suitable for it, the Minister purchased a quantity of that species of seed which has been distributed a small quantities to the teachers of public schools and also to numerous applicants. applicants.

applicants. What the actual value of this inexpensive experiment will prove to be time will determine, but large numbers of healthy seedlings have been raised, and a number of favourable reports have been received from all parts of the Colony. The "boom" in wattles has also given a great impetus to the cultivation of the better known green and black wattles, and I have direct information that through the influence of this Department many thousands of acres have been put under wattle during the past soason.

Also many questions have been replied to in regard to various prints which crop up in connection with the wattle industry.

Colonial Timbers.

I have continued to give marked attention to this subject during the past year. Affiliation of the Museum with the Technical Education Branch has opened out possibilities for the practical testing of our native timbers which did not before exist, and tests are now being applied to little-known timbers of promise in the classes for carpentry, coach-building, cabinet-making, and turnery at the Sydney Technical College, and at the classes for manual training at Fort-street and West Maitland, under Mr. Powrie and Mr. Coles respectively. In the Museum itself the carpenters have practically tested about 189 native timbers during the year, and I have spent much time supervising these tests and scheduling the results in forms kept for the purpose. During the last six years pearly 600 native timbers have passed therough in forms kept for the purpose. During the last six years nearly 600 native timbers have passed through iny hande.

I gave a public lecture on native timbers in June, which was largely attended, and was a means of drawing attention to our splendid collection.

#### Original Research.

The increased work which has necessarily been thrown on me during the past year, has left me very little time for original investigations as compared with previous years. In addition to the pamphlot on wattle barks already alluded to, I have published the following during the past year:

1. The Chemistry and Commercial possibilities of Wattle Gum (Pharmaceutical Society of Great Baits in)

Britain).

- Britain).
  2. On Leopard-tree Gum (Flindersia maculosa); and
  3. Observations on gums yielded by species of Ceratopetalum (Australian Association for Advancement of Science, Melbourne meeting).
  4. Notes on Australian Economic Plants. (Linnean Society of N.S.W.)
  5. On Grass-tree Gum. (Linnean Society of N.S.W.)

#### Model of Strasburg Clock.

Model of Strasburg Clock.

Rarly in the year the Minister for Public Instruction purchased a large model of the Strasburg clock for the Museum, of which it constitutes one of the chief attractions. It was made in Sydney by Mr. R. B. Smith, a young Australian, and speaks cloquently of his industry and skill.

I sak to be allowed to state my obligations to the members of my stuff, who zealously and with kindly feeling work for the advancement of the Museum, and particularly to the assistant curator (Mr. R. T. Baker) and to my laboratory assistant (Mr. H. G. Smith).

I beg to add to my report the following Appendices, viz.:—

I Attendage of visitors

I. Attendance of visitors.

- I. Attendance of visitors.
  II. List of specimens purchased.
  III. List of specimens presented.
  IV. List of specimens from country museums, Technical College, &c.
  V. List of specimens lent to the Museum.
  VI. List of books, periodicals, &c., purchased,
  VII. List of books, periodicals, &c., presented.
  VIII. List of diagrams, maps, &c., purchased.
  IX. List of diagrams, maps, &c., presented.
  X. List of specimens sent away in exchange.
  XI. List of specimens received in exchange.

  I have, &c.,
  J. 11, 12

I have, &c., J. H. MAIDEN. Curator.

Technological Museum, January, 1891.

#### ANNEX C.

#### EXAMINATIONS, 1890.

#### PASS LIST.

## SYDNEY TECHNICAL COLLEGE,

Agriculture.—Second year 'Honors, Harry Fisher, Charles Jeanneret; first grade, Frederick Brooks; second grade, Archibald Ward. First year: Honors, Edward Sampson James Brunton, Ernest Harris; first grade, Florence Jenkins, Keary Spark, Daniel Buddle, Edmund Hollings, William Burns, Thomas Vine, Jane Hambly, Wilham Franklin, James Somerville; second grade, John Menzies, Susan Beaumont, Athol Wilson, Sobey Vivian, Lindsay Barker.

Botany.—First year: First grade, George Valder; second grade, George Pitt, John Menzies.

Wool Sorting.—Honors, George Valder, Henry Lord; first grade, Hugh Bucknell, James Sture, William Sampson; second grade, Bartholomew Molony, Alexander Paterson, Charles Broughton.

Mochanical Drawing.—Honors, Invid Little; first grade, Fdward Nobbs, Robert M'Cubben.

Applied Mechanics.—First grade, Patrick Conolly; second grade, George Poole.

Blacksmithing.—First grade, Patrick Conolly; second grade, David Mathers.

Pattern-making.—Second grade, Edward Pratt.

Entting and Turning.—Honors, Charles Phillips; first grade, Walter Anderson, Horman Simon, James Ferguson; second grade, Leopold Wheeler, Herbert Whetton, John Pelletier.

Carriage-building.—First grade, Alfred Morgan, Hugh Dorahy, Robert Liggett; second grade, Joseph Martin, Henry Kellerman, Wytham Roberts.

Architecture (Historical).—Second year: Second grade, Ernest Tebbutt, Alexander M'Rae. First year: Second grade, Charles Owen, Edward Nancarrow.

Architecture (Building Construction).—Second year: Second grade, Byera Hadley, Ernest Tebbutt, Holland Andrews, George Poole. First year: Second grade, Thomas Stophens.

Architecture (Planning and Designing).—Second year: First grade, Alexander M'Rae, George Poole, Byera Hadley; Second grade, Ernest Tebbutt, Holland Andrews. First year: Honors, Edward Nancarrow; first grade, Thomas Stephens, Fred. Winn, Henry Broderick; second grade, John Swan, Charles Owen.

Architecture (Year's work).—Honors, Holland Andrews and Alexander Kethel (eq.), Byera Hadley, Alfred Spain; first grade, Ernest Tebbutt, Frank Lee, Edward Nancarrow, A. E. Grant; second grade, A. Neele, George Poole, J. Little, Charles Owen, David Swan, Fred. Winn, P. Wood, W. Wright, T. A. Walker, G. A. Moulder, J. Saunders, Henry Broderick, C. Byrne, Arthur Eutroppe, Alexander M'Rae, John Swan, F. Maccabe, Arthur Smith, K. Curran, J. Drury.

Carpentry and Joinery.—Second grade, Frederick Marshall, Lionel Geering, James Hodge.

Bricklaying.—Honors, Edward Broadhurst, Maurice Dayle, Robert Donaldson; second grade, John Jackson, Krnest Johnstone.

Cabinet-making.—First-grade, Edwin Burton; second grade, James Elphinston.
Plumbing.—Honors, William Collis, James Stevens, Francis Fliteroft; first grade, Arthur Copp, Charles Booth, Frederick Tuck, Joseph Beckhaus, George Spragg, John Mathers; second grade, Alfred Varley, James Kennedy, Frederick Trollope, Alfred Barker.
Stone and Marble-carving.—First year: Honors, Arthur Rice, William Jeffries, Thomas Spencer, George Harvey; first grade, Robert Fazackerley, Frederick Parkhill, William Walker, David Walker,

George Cooper.

Stone and Marble-carving (Year's work, 1890).—Honors, William Jeffries, George Harvey, Arthur Rice, Gregory Macintosh, Thomas Spencer; first grade, George Cooper, Frederick Parkhill, Ernest Duggan, Duncan Campbell, Robert Fazackerley, Joha Harris, William Walker, Hermann Harder, Fred Sharpe, Edward Paton.

House Painting.—Second year: Honors, John Bennett. First year: Honors, Frederick Prior, Harry Gulieford; second grade, Edward Robinson, William Lyons, Albert Haynes, Henry Miller, Alfred

Geometry (Practical Plane).—Second year: First grade, Archibald Livingstone, Fritz Scholer. First year: Honors, Philip Kean, George Broughton, Herman Simon; first grade, William Taylor, Eliza Chambers; second grade, Charles Paterson, Alfred Robbins, Emily Pickering, Percy Nall, Elizabeth Coghill.

Eliza Chambers; second grade, Charles Paterson, Alfred Robbins, Emily Pickering, Percy Nall, Elizabeth Cogbill.

Geometry (Solid and Descriptive)—Third year: First grade, James Nangle; second grade, Alexander Donald. Second year: Second grade, Fr.deric Maccabe. First year: Honors, Henry Rapp, Stewart Blair; second grade, Herman Simon.

Model Drawing.—Second year: First grade, Philip Kean, Emily Paul, Robert Smith; second grade, Frank M'Comas, Lilly Button. First year: Honors, William Taylor; first grade, Emmie Hammon, Isabella Ditlon, Rthel Buckland, Florence Cowles, Kutherine Basss, Arthur Debelle, Eliza Harpur, May Dillon, Maud Chambers; second grade, Emil Strom, Alice Pippett, Louisa Cole, Julia Thompson, Elsic Basss, Emily Fickering, Mabel Thorne, Kate Fraser, James Smith, Maud Burkitt, Adu M'Coy, Alison Noad, Walter Jamieson.

Perspective.—Second year: Honors, George Aurousscau; first grade, Philip Kean, James Nangle. First year: Honors, William Pole; first grade, Robert Smith, Thomas Walker, George Broughton, Eliza Chamber; second grade, Agnes M'Call, William Taylor, John Leeman.

Architectural Perspective.—Honors, George Poole; first grade, Frederick Green.

Freehand Drawing.—Second year: Honors, Philip Kean, Marian Drewe, Thomas Tidswell; first grade, Henry Harrison, Cissic Puterson; second grade, Joseph Babilinski, William Taylor, Maud Penteeost, Ernest Henderson, Geraldine Davis, Samuel Herbert, William Johnson, Florence Cowles, Edward Muller. First year: Honors, F. W. Leist, Theodore Williams, Hurry Hibble, Arthur Debelle; first grade, Arthur Tiley, Fritz Scholer, Charles Holmes, Harold Wyatt, Millient Green, Elizabeth Gillies, Winifred Mole, William Bedhober; second grade, Maud Chambers, Florence Williams, Alice-Galvin, Robert Geary, Herman Simon, Mary Foskett, Rhoda Dobbin, Eliza Harpur, Lucy Gullet, Frederick Cremen, George Broughton, A. M. Black.

Design Certificate.—Honors A: Lucien Dechaineux, Gregory Macintosh, Arthur Rice; Honors B: Lily Dowling.

Lily Dowling.

Design, Year's Work, 1890.—Honors, Thomas Tidswell, Lily Dowling; first grade, F. Booker; second grade, C. Mort.

Design, Year's Work, 1890.—Honors, Thomas Tudswell, Lily Dowling; first grade, F. Booker; second grade, C. Mort.

Modelling.—Third year: Honors, George Harvey; first grade, Edward Mueller, Joseph Buckley; second grade, Henri Bastings; Second year: Honors, Edward Paton; first grade, Lucien Dechaineux; second grade, George Everitt. First year: Honors, John Hankinson; first grade, William Palmer, Robert Larcomb, Mary Gent; second grade, Alice Pippett, Samuel Robbins.

Art Decoration.—Second year: Honors, Edward Taylor, Harry Gulieford, Frederick Prior, James Bennett; Second grade, Edward Robinson. First year: Second grade, Walter Andrews, William Lyons.

Sign Writing.—Second year: First grade, Walter Andrews; second grade, Adam Melville. First year: First grade, Frank Leggatt, John Salvana; second grade, Sydney Bateman, Walter Allen, Frederick Prior, Ernest Peatfield, Alfred Taylor.

Chemistry (Theoretical).—Second year: Honors, Francis Watt, Nathaniel Basnett; second grade, Arthur Eutroppe. First year: Second grade, Marie Rush, Arthur Rush, George Pitt, Egbert Haage:, Alfred Merrington.

Chemistry (Practical).—Second year: Honors, Francis Watt, Vincent Nevell, Arthur Eutroppe; frst grade, Harrie Elphinston, George Pitt, Roland Vale; second grade, Henry Smith, Ernest Whitten, Francis Mottershead, Nicholas Lockyer, Arthur Fairfax. First year: Honors, Nathaniel B:snett, Vincent Nevell, George Levitt, Roland Vale; first grade, Thomas Fawns, Harry Riphinston, Archibald Harpur, Horace Bohrsmann; second grade, Elliott Gurney, Charles Murton, Henry Rozea.

Lithography.—Honors, Archibald Andrews, Alfrel Dickmson; second grade, Ernest Csborne, George Smythe, Blanchard Garnett.

Bookkeeping.—Second grade: Thomas Davidson, Francis Curcton, Frederick Inman, Walter Musernya Richard Richards (George Hattersley, Hugh Repus

Bookkeeping.—Second grade: Thomas Davidson, Francis Curcton, Frederick Inman, Walter Musgrove, Richard Richards, George Hattersley, Hugh Byrne.

Caligraphy.—First grade, George Hattersley; second grade, Frederick George, Walter Hunt, James Mitchell, Charles Atkinson, Arthur Bourke, William Coulson, Edith Ashton, John Robertson,

Hubert Burns.

Correspondence.—First grade, George Hattersley; second grade, James Mitchell, Arthur Rourke, William Coulson, Charles Atkinson, George Smith, William Melville, Walter Hunt.

Latin.—First year: Honors, Caroline Scotland, Hugh Hunt; first grade, Jane Paris, Elsie Watson, Robert Wardrop; second grade, Samuel Davidson, E. W. Culbert, Nellie Fear.

French.—Second year: First grade, Francis Hickman; second grade, Arthur Eutroppe, William Rodick. First Year: First grade, Sarah Lloyd; second grade, Rdith Brown.

Phonography.—Reporting section, from dictation, at the rate of 100 words per minute.—Honors, Joseph Price, David Cumming; first grade, James Potter, Allen Dowling, Robert Slater, Reporting section, from dictation, at the rate of 80 words per minute.—Second grade, John Wallace, George Field, Arthur Wicken, Winter Sturrock, James Rush, Martin Donohoe, David Gilbert, Robert Miller, Michael Lyons, Robert Beardsmore, Arthur Moore, Percy Helmore, J. C. Lodge, John Challinor, William Little. Corresponding Section: Second grade, Arthur Ironside, John Houston, Hugh Griffith, W. H. Goodier, H. A. Wilson, J. C. Skellon, E. H. Betts.

Phonography (Elementary section).—First grade, Eliza Spencer; second grade, Harold Tyler, David Hersfield, Lewis Solomon, Alfred Greenwood, Alfred Bignell, Arthur Marshall, John Smith, James Aitken.

Mathematics (Arithmetic).—Honors: Herman Simon; first grade, James Aitken; second grade, Robert Hamilton, William Speading.

Mathematics

Mathematics (Algebra).—Honors, Samuel Davison; second grade, William Penny.

Mathematics (Algebra).—Honors, Samuel Davison; second grade, William Penny.
Mathematics (Trigonometry).—Second grade, Walter Geikie.
Cookery.—First grade: Sarah Bartlett; second grade, Edith Plomley, Ina Campbell, Martha Henry, Ethel Rossiter, Jennie Small, Clare Button, Amy Blyth, May M'Knight, Annie Role.
Scientific Dress-cutting.—Honors, Annie Fox, Emily Farran, Florence Crabbe; first grade, Edith Banks, Jennie Small, Catherine Mundy, Annie Rofe, Annie Cochran, Lily Ambrose, Alice Fraser, Elizabeth E. English, Madoline O'Hea, Maria Lewis, Ethel English, Elizabeth Bedhober, Lillian Downing, Esther Davis; second grade, Rubio Carter, Florence Friend, Alice Light.

Tailor's Cutting.—Honors: Brice Thomas, Robert Shears; first grade, Thomas Rolston; second grade, George Ayre, Henry Rowlands.

Household Management.—Second grade, Jane Hambly.
Geology.—First grade, Nicholas Lockyer; second grade, George Pitt, E. C. Whittell.
Mineralogy.—First grade, H. G. Smith, Charles Murton.
Materia Medica.—Second grade, Robert Donald.
Pharmacy.—Second grade, Alexander Foldi. Thomas Mason.
Pharmaceutical Chemistry.—First grade, Thomas Mason; second grade, William Perrie, Alexander Foldi.

ander Foldi.

Prescriptions,—Honors, Thomas Mason; second grade, William Wearne, William Judge, Harold Tinley, William George.

Anatomy and Physiology.-Honors, Marie Rush; second grade, Constance Taylor, Thomas

Neville.

Mechanical Dentistry.—Third year: Honors, Percy Cohen, Thomas Neville; first grade, James Rainford; second grade, Michel Albert. Second year: Honors, William Clifton. First year: Honors, John M'Donnell, Austin Cleary; first grade, John Wintle, Charles Wintle, Arthur Henry; second grade, Jesse Robinson, Rosamond Wintle, David Carmichael, Henry Alexander.

Physics (Heat, Magnetism, &c.)—Second year: Honors, Herman Simon, Arthur Jenter; first grade, Charles Owen, William Young, Charles Taylor.

Physics (Sound and Light).—Birst year: Honors, Herman Simon, Charles Taylor, Arthur Jeater; first grade, William Young, Charles Owen; second grade, Arthur Entroppe.

Electricity.—Honors: Nathaniel Basnett; first grade, Oswald Jones; second grade, William Young, Henry Hales, John Carr, Walter Younger.

Telegraphy.—Second grade, John Carr, Etienne Pickbarn, William Dayton.

#### SUBURBAN TECHNICAL SCHOOLS.

#### ASHFIELD AND BURWOOD.

Model Drawing.—Second year: Second grade, Alice Jordan; first grade, Lucy Chapman, Annie

Freehand Drawing.—First year: First grade, Alice Foy, Lydia Dowling, Frank Foy, Beatrice Pilcher, Emma Foy; second grade, Mary M'Nicoll.

Caligraphy.—Honors, David Rutherford; second grade, J. J. Howell, Jessie Rutherford, A. O. Burton, Henry Vanhee.

Correspondence.—Honors, David Rutherford; second grade, J. J. Howell, Henry Vanhee, Jessie Rutherford Rutherford.

Phonography (Corresponding Section)—First grade, R. S. Flood.
Phonography (Elementary Section)—Second grade, Oliver Kimberly, Henry Pyne.

#### GRANVILLE AND PARRAMATTA.

Agriculture (Elementary)—First grade, George Baxter, John Ford, James Dickinson; second grade, Elwood White, James Sheppard, Ernest Ende.

Phonography (Elementary Section)—Second grade, George Roche, James Ryan.

Mechanical Drawing.—Second grade, Louis Mathews, John Bond.

Mathematics (Arithmetic)—Second grade, Arthur Bishop, Herbert Longbottom, Harry Davey.

Geometry (Practical Plane)—First year: Second grade, H. Davey, Clarence Hasmer.

Model Drawing.—Second grade, John Bond, Marion Newcombe.

## Kogaran.

Phonography (Elementary)—First grade, Charles Anderson; second grade, Henry Herrmann, W. A. Smithson, John Allen, Franz Vogel.

#### Petersham.

Mechanical Drawing.—Honors, Frank Shenstone; first grade, William Johnston. Geometry (Practical Plane)—Second year: Honors, Frank Shenstone; first grade, William

Johnston.

Model Drawing.—Second year: Honors, Walter Rayment, Frank Shenstone; second grade, William Johnston, John Hodgson. First year: First grade, James Gosnell; second grade, Marie Rainsford, Ada Cooper, Harold Cooper, Franky Rainsford.

Freehand Drawing.—Second year: Honors, Frank Shenstone; first grade, William Johnston, John Hodgson; second grade, Walter Rayment, William Beer. First year: Honors, Ada Cooper, James Gosnell; first grade, Alice Pippett, William Wiesener; second grade, George Clark, William Rowley, Violet Salter, Edith Henderson, Alfred Burton, Frank Corcoran, Harold Cooper, John Donald, Oswald Goddes. Geddes

Geddes.
Perspective.—First year: Second grade, John Hodgson.
Mathemetics (Arithmetic)—Honors, Jessie Wilson, Sarah Taylor; first grade, Nathan Payne,
Thomas Hall; second grade, Raginald Wallace.
Mathematics (Geometry)—First grade, Thomas Hall.
Mathematics (Algebra)—Second grade, Sarah Taylor, Jessie Wilson.
Phonography (Corresponding Section)—Second grade, F. J. Howard.
Phonography (Elementary Section)—Second grade: Albert Gale, William Boyd, Caroline Johnson,
A. R. Wallace.

#### NEWTOWN,

Model Drawing.—First year: Honors, Robert Grant; second grace, Ellen Richardson.

Erechand Drawing.—First year: First grade, Robert Grant, William Jefferies; second grade,
Florrie Lane, Theophilus Drinkwater, Ada Kingsbury, William Forrest, Adeline Dole.

Mathematics (Arithmetic).—Honors, Stephen Pierce, John Newell, John Smith; first grade,
Ada Kingsbury, Lottic Baldwin; second grade, Ethel Kingsbury, Stella Bohrsmann.

Phonography (Flementary).—Honors, George Denison, Joseph Berrer; second grade, Albert
Gilbert, Percy Mack, Francis Phegan.

#### ST. LEONARDS.

Freehand Drawing.—First year: First grade, Norman Clough, William Hodge; second grade, Alberta Layton, Walter Heins, H. M. Amphlett.
Phonography.—Reporting Section, from dictation, at the rate of 80 words per minute: Second grade, William Rodick.

Phonography (Elementary.-Second grade, Charles Radford, William Stack, William Stuart.

#### PADDINGTON.

Model Drawing.—First year: Honors, May Bernauer. Freehand Drawing.—First year: First grade, J. S. Bowmaker, Eva Hogan, May Bernauer, Eliza Etherington; second grade, Albert Mark

#### BATHURST.

Advanced Agriculture.—First grade, John Halsted. Elementary Agriculture.—Honors, Albert Page; first grade, Samuel M'Nibben; second grade, William Hawke.

Botany.—Second grade, Hannah Ross, John Halsted.
Architecture (Planning and Designing).—Second year: First grade, Frederic Jones. First year: Second grade, George Butcher.
Model Drawing.—Second year: Second grade, John Halsted. First year: Second grade, Harriett

Weekes.

Perspective.—First year: Second grade, George Butcher, Archibald Robens, Harriett Weekes.
Freehand Drawing.—First year: Second grade, Lavinia Mugridge, Archibald Robens.
Phonography (Elementary).—Honors, William Moulton, Walter Smith, Peter Clines; first grade,

French.—Second year: Second grade, Constance Mullins, Ethel Slack. First year: Second grade, Katic Atkins, Mary Falvey, Jessic Kelk, Blanche Cripps.

Mathematics (Arithmetic).—First year: Honors, Mary Plowman, Albert Kelly, James Tinsley; second grade, Joseph. Chivers, Percy Neal, Douglass Dickie, Arthur Atkins, William Kelly, Francis Howell.

Mathematics (Algebra) .- Honors, William Mugridge, Mary Plowman; second grade, James

Tinsley, Albert Kelly.

Mathematics (Geometry).—Second grade, William Mugridge, Mary Plewman.

Ohemistry (Practical).—Second year: Second grade, Charles Mills. First year: Second grade,

William Mugridge, Albert Page.
Geology.—Second grade, Peter Clines.
Physics.—Second grade, Magnetism, &c.): Second grade, Albert Page, William Mugridge, Charles Toovey. First year (Sound and Light): First grade, Albert Page, William Mugridge; second grade, Adelina Toovey, Mary Plowman.

Record Hart.

Record grade, Charles Malls.

Record grade, Albert Page, William Mugridge; second grade, Adelina Toovey, Mary Plowman.

BROKEN HILL.

Mechanical Drawing.—Honors, Arthur Martin; second grade, Alexander M'Lean. Geology.—Second grade, Farquhar Wallace.

#### SILVERTON.

Physics.—First year (Sound and Light); second grade, W. F. Roberts, Edward Moule.

Architecture (Planning and Designing).—Second year: Second grade, Henry Laker.
Model Drawing.—First year: Second grade, Louisa Whitlow, Ada Barber.
Freehand Drawing.—Second year: First grade, William Everett; second grade, Louisa Whitlow. First year: First grade, Ada Barber, Winifred Tait, Annie Fuller; second grade, Emily Benson, Arthur Quartly, Frank Flint, Edward Hunt, Alfred Rowe, Ada Stevenson, Essic Gaskell.

Essic Gaskell.
Chemistry (Practical).—First year: Honors, Ewan Corlette; first grade, William Kingsell; second grade, William Longmore.
Chemistry (Theoretical).—First year: Second grade, William Kingsell, William Longmore, Phonography (Elementary).—First grade, Harry Conder; second grade, Thomas Kinnerly.
Mathematics (Arithmetic).—Second grade, John Jones, Annie Fuller, Samuel Weaver.
Cookery.—Honors, Annie Sach; first grade, Ellen Chisnall, Marie Ross, Mabel Simons.
Geology.—Second grade, Louie Hunt, Amy Harris, Ewan Corlette.
Physics.—First year (Sound and Light): First grade, Phomas Weaver, Amy Harris, Louie Hunt,

James Nevill.

#### MAITLAND DISTRICT.

Architecture (Building Construction).—First year: Second grade, Robert Pender, George Brown.
Freehand Drawing.—Second year: First grade, Jane Tipper; second grade, George Yeates,
Edward Norman. First year: Honors, Joseph Pryor, Harry Tuck; first grade, G. Howitt: second
grade, Louisa Smith, Arthur Tuck, Thomas Norman, Howard Tracey, Beatrice Kessey, John Rourke,
Thomas Cross, Joseph Chapman, Annie Elliott, William Hole.
Model Drawing.—Second year: First grade, George Yeates; second grade, Edward Norman,
James Hollingsworth, Ruth Slater. First year: First grade, Joseph Pryor, Arthur Tuck; second grade,
Ellen Ling, Maria Tracy, William Hole, Henry Tuck, George Brown, Henry Ling, William Quinton,
Frederic Deakins.

Frederic Deakins.

Perspective.—First year: First grade, William Hole; second grade, Arthur Taylor.

Modelling.—Third year: Second grade, Edward Norman. Second year: Second grade, Felix Coles, William Yeates, William Quinton, Augustus Moss. First year: Second grade, George Broomfield, James Hendry, Christopher Harris.

Mathematics (Arithmetic).—Second year: Honors, Thomas Lipscombe, First year: Honors, Maude Forrest, George Lockey, Thomas Birrell, James Peek, May Edmunds, Florence Fry, Daniel Carter, Haunah Bertles, Robert Ryan. First year: First grade, Eleanor Bertles, Albert Lackey; second grade, Mary Lackey, Minnie Cruise.

Mathematics (Algebra).—Honors, Thomas Lipscombe; first grade, John Stonham; second grade May Edmunds, James Peek.

Mathematics (Geometry).—Honors, Thomas Lipscombe: second grade, James Peek, John Mathematics (Geometry).—Honors, Thomas Lipscombe: second grade, James Peek, John

Mathematics (Geometry).—Honors, Thomas Lipscombe; second grade, James Peck, John Stonhrm.

Phonography (Reporting Section, from Dictation, at the rate of eighty words per minute.)—
Second grade, John Kennedy.
Phonography (Elementary).—Honors, Henry Skelton; first grade, John Kennedy; second grade,
John Chessel, George Pender, Norman Cooper, Henry Gorman.
Mineralogy.—Second grade, William Pender.
Electricity.—Second grade, William Pender.

#### SINGLETON.

Model Drawing.—Second year: First grade, Margaret Molster; second grade, James Coady. First year: First grade, Frederick Parsons; second grade, Herbert Mathews, William Read.

Freehand Drawing.—Second year: Second grade, Herbert Mathews, Frederick Parsons, Robert Wright. First year: First grade, George Broomfield, Ernest Rootes; second grade, William Read, William Burke.

Phonography (Elementary.)—Honors, Thomas Waring, Percy Fullick; first grade, William Coughlan; second grade, Maggie Laverty, Henry Geary, William Bailey William M'Callum, Arthur Coughlan, Frederick Parsons. NEWCASTLE.

#### NEWCASTLE.

Mcchanical Drawing.—Second grade, Benjamin Rourke.

Geometry (Practical Plans).—Second year: Second grade, Percy Onkes, Rosina Rothwell. First year: Second grade, Robert Thorpe.

Model Drawing .- First year : First grade, James Cradick ; second grade, Mary Garaty.

Perspective.-First year : Second grade, Annie Rothwell.

Freehand Drawing. -First year: First grade, William Fetherston, John Watson.

Modelling .- First year: Second grade, Martin Doherty, Charles Geites, David Mckdrum, Arthur Middleton.

Chemistry (Theoretical).—Second year: Second grade, Walter Combes. First year: Second grade, Henry Williams.

Phonography (Elementary). —First grade, Robert Hewitt, George Bolley, Andrew Stamp; eccond grade, Florence Rothwell, Stephen Colman, Robert Durie, John Wood, Charles Hodges, John Richter, John Vallauce, John Collins, William Collins, William Thomas, Howard Tracy.

Mathematics (Arithmetic). -First Year: Honors, Evan Jones, James Byrne, Louis Smith, Charlotto Finney, Ada Cresswick, Adın Parsons, Sarah Genge, Florence Rothwell.

Mathematics (Algebra) .- Honors, Louis Smith; first grade, James Byrne, Evan Jones.

Coal-mining (Elementary).—Honors, George Leitch, William Williams, George Jones; first grades William Sneddon, William Chogwidden, Jona'han Dixon, Benjamin Doble; second grade, John Banks, Herbert Cr. p., Thomas Rigby, John Thomson, Thomas Ridley, John Forshaw, James Wilson, Robert Graham

## ANNEX H.

# HORTICULTURE AND BEE CULTURE.

HORTICULTURE AND BEE CULTURE.

I no myself the honor to submit the following report:—

I commenced my duties at the close of the Christmas vacation of 1889-90. My first work was to visit all the metropolitan and sub-metropolitan schools, and report on the suitableness or otherwise of the play-grounds for arboriculture and horticulture.

During the early part of the year, I visited nearly the whole of the schools in the above districts, and suggested to the teachers where improvements could be made. In many of the schools I found the grounds of a rocky nature that would not admut of any kind of open air horticulture. But even in these grounds there are corners where pot culture, hush houses, and rockenes can be made the means of interesting instruction. The only valid objection is, that these schools being left unguarded during holidays and vacations, the pot plants, &c., are liable to be stolen, or despoiled. In other schools the area available for drill and other purposes is too circumscribed to admit of any space being taken for tree planting or gardening. In these the heat reflected from the walls or other fences is extremely disagreeable, and the glare from the sun at noonday when the children are at play is injurious to the sight. The fences of such play-grounds should be covered with climbing plants, i.e., virginian creepers, climbing fig, ivy, &c. In addition to the advantage named, the unsightly fences would be made ornamental. In play-grounds where both area and soil are at command, I laid out the grounds for Arbor days.

The setting apart of a day for such purposes was greatly appreciated alike by teachers and children. In and around Sydney, Arbor days were celebrated at a large number of the schools, and in many of the country ones it was held as a day of rejoicing. On these days the interest taken was very great, many thousands of visitors gathered to see the ceremonies. The maugural tree was planted by Lady Carrington in the grounds of Ryde Public School.

During October, I visited 29 schools of th

questions were asked and instructive answers given.

I also gave practical out-door lessons in grafting, budding, pruning, the handling of bees, &c. Since the commencement of these lessons, and the introduction of Arbor Day, marked improvement has been made in the play-grounds, but the most praiseworthy feature is the instruction in agriculture and horticulture given by the teachers to the school children, who show their interest in the work by competing for the neatest and best tended garden plot in the play-grounds.

The majority of the teachers are much interested in agriculture and horticulture, and look upon it as a healthy recreation to intermix with school life. In three cases only have I met with anything like indifference or opposition.

The wholesale destruction of indigenous shade trees on all school-grounds is to be regretted. Nature's arrangement of her trees may not be pleasing to all, but foreign specimens of shade and ornamental trees can be introduced with our native umbrageous ones with good effect.

Where the soil is suitable for the cultivation of kitchen vegetables some good results have been produced. In most cases the girls devote themselves to floral culture, and the boys to the culture of vegetables.

regetables.

The teachers' gardens are very creditable, some being laid out in attractive designs, and the harmony in the arranging of flowers displays good taste. The bush house and fernery are receiving more attention from the teachers than formerly, but as yet they have not been introduced into the play-grounds. One or both of these should be in the play-grounds of all schools. Few things tend more to interest children than land cultivation. Floral culture and other gardening have great influence on their dispositions. No play-ground should be without the means of clucating the children in some one or other of the many branches of gardening.

School teachers have been the means of introducing many rare flowers and profitable vegetables into their districts.

into their districts.

During the year packages of the seeds of the golden wattle (acacia pycnantha), with directions for culture were sent to nearly all the schools in the Colony. This has been a success beyond expectation. Some teachers divided the seeds with their neighbours, others sowed it, and distributed the seedlings. The play-grounds of many country schools are surrounded with these young wattles, others have them intermixed with the shade and ornamental trees that were obtained from the Botanical Gardens. In the Orange and Bathurst districts during early Spring I saw the acacia pycnantha several inches high. inches high.

Packages of the seeds were also sent to the various newspapers of the Colony for distribution among farmers and others; 73 applications were received from private persons for seeds for experimental purposes. In this way nearly 3 cwt. of it was distributed. It is intended to forward interrogative circulars to the recipients at the close of the season, for the purpose of obtaining statistical

By the kindness of Mr. Sanderson, who has charge of the gardens of Rookwood Reformatory, many thousands of strawberry plants, dahlias (tubers and seeds), and chrysanthemums have been distributed to the schools.

distributed to the schools.

In the early part of the year circulars were sent to all teachers informing them that bonusos would be paid to those who showed aptitude in imparting practical and theoretical agricultural and horticultural instruction, and that the lessons given had been productive of good. Only thirty-five availed themselves of this advantage. This is accounted for by the fact that these bonuses were supposed not to be retrospective, and, as the harvesting for the season 1889-90 is not yet completed, many teachers are nuprepared to make application. The following is a list of teachers who have obtained bonuses. They are arranged in order of merit:—

led bonuses. They are arranged in or John Warren, Cullenbone John Halsted, Eglinton Walter Jurd, Nyngan George Streatfeild, Shadforth Charles Showe, Pennant Hills G. H. Shaw, Grenfell Louis H. Witts, Pyree William Peacock, Wagga Wagga Walter Stevens, Canobias Robert Patten, Wallaroo Charles de la Molte, Bulli Mountain H. E. Page, Dural Richard Todd, Mount Hunter John Lumsden, South Goulburn J. Drummond, Appin Arthur R. Buckland, Meodow Flat P. Cavan, Cudgegong Elbenezer Campling, Brewarrina

Felix Knight, Duramana
J O. Miller, Colyton
Maurice J. Hennessy, Coonabarabran
C. H. Milgate, Batadine
Samuel Bidwell, Dunkeld
W. J. Liggins, Moorilda
John Cuzack, Annandale
Henry, Engins, Merimbula Henry Eggins, Merimbula E. E. Buttsworth, Cessnock E. E. Buttsworth, Cessnock
S. Morrison, Pittwater
James Pearson, Balgownie
J. P. Buggy, Corowa
Sydney Ciane, Dungarce
Martin Burke, Pelican Island
D. J. Lobban, Forest Hill
John Morrison, Verona
Walter Knight, Marrangaroo

The information supplied by teachers in making application for these bonuses were answers, on forms supplied, to the following questions: —

What plants have you cultivated?
What instruction in cultivation have you given pupils?
What part did the pupils take in the work?
Kind of manure used, and quantity per rod?
Nature of soil, i.e., sandy, clayey, or loamy?
Number of workings of soil before planting?
Kind of season during growth?
Was any artificial watering employed? If so, state particulars
What insect or other blight was observed during growth?
Means taken to eradicate blight, if any. If successful?
Length of time crop was maturing?
Date of planting?
What would be yield per acre of the plants specified?

To those very practical questions instructive and interesting answers have been received, and coming from the various climatic districts of the Colony, cannot fail to be beneficial.

The following are selected:—Wagga Wagga.—13 varieties of shade trees, 9 of flowering shrubs, 18 of standard fruits, 4 of grapes, 4 of other fruits, 8 of kitchen vegetables, 5 of grasses, and a large number of flowering and other plants. Cullenhone.—19 varieties of shade trees, 20 of roses and ornamental vines, 10 of fruit-trees, and 10 of vegetable. Pennant Hills.—All the ordinary garden vegetables, 24 varieties of grapes, and successfully grafted 112 fruit-trees. Eginton.—Experimented with corn, wheat, oats, potatoes, mangol wurtzel, swedes, &c. (quantities not given). Shadforth.—Wheat, 27 bushels to the acre; potatoes, 8 tons; cabbage, 8 tons; parsnips, weighed from 6 lb. to 7 lb. each; sweeds, 10 lb. to 12 lb. each. Wallaroo.—Wheat, 22 bushels to the acre; buck-wheat, 40; pumpkins, 4 tons; potatoes, 5 tons; cabbage, 30 tons; carrots, 12 tons; pursnips, 10 tons. Illawaria District.—About 70 varieties of wheat, giving 20 bushels to the acre; 4 of barley, 28 bushels to the acre; oats, 35 bushels to the acre. Cambhas.—For the season September, 1889, to September, 1890, by rotation cropping and judicious manuring with stable litter, ashes, and lime, the following results were charvested from 1 rod 7 perches:—Potatoes, 7 cwt.; cabbages, 1,638 lb.; cambiflower, 2,178 lb.; turnips (quantity not stated); carrots, 3 cwt.; parsnips, 4 cwt.; onions, 1½ cwt.; leeks, 1 cwt.; lettuces and radishes during the whole season; peas (green), 20 bushels; beans throughout the season; tomatoes, 10 bushels; vegetable marrow, 4 dozon, some weighing 30 lb.; cucumbers, 200; pumpkins, 3 cwt.; rhubarb in use from November to June; 4 cases of gooseberries and 2 of cherries.

The practical instruction given to the pupils embraces such subjects as "preparation of soil," "tillage," "composting," "spade husbandry," "budding," "grafting," "puning," &c. These lesso

under the supervision of the teachers.

are some of the subjects:—"Insect pests and their destruction," "plant life," "parts of a plant," thoughants are nourished," &c. In all schools named the children did the greater part of the work under the supervision of the teachers.

As may be expected, the soils treated are very diversified in character, and much labour and expense have to be borne by the teachers to bring them under cultivation. The following is from Mr. John Warren's report:—"The school-ground is composed of slaty rock and sandstone, with some tran and red clay. A great amount of labour was required to prepare even a small portion for planting. In several cases blasting-powder had to be resorted to in breaking up very hard rocks." Only a love of horticulture could induce anyone to undertake gardening in such a ground as this.

Insect and other plant pests were chiefly met with in the Wagga Wagga District—mealy bug, black and green aphides, American blight, cocus, and scale. Vine-middew was observable on the grape-vines. The remedies applied were soft soap and sulphur or kerosene, dry slake line and wood ashes. A decoction of native pine and gum bark with sulphur was found to be very saccessful. At Pennant Hills the potatoes were attacked by a small green caterpiller, that would have destroyed the whole crop but for a colony of sparrows that exterminated the caterpillars. In the Pyrce District scale and lemon smut (capnodium Australe) and aphides on peaches were destroyed by syringing with Gishurst's Compound. Sulphur saved the grapes from vine-middew.

The manness employed were common salt (from 7 lb. to one bushel to the acre); bone dust, 30 lb.; stable litter, 6 cwt.; wood ashes, lime, &c. Only in one or two cases were artificial manures used. Very few teachers have been able to give answers to the last question (yield per acre), not having kept records. The results obtained by those who have will to be found very satisfactory—they are incorporated with the auswers to the first question.

During the winter months I delivered courses of l

of the best seasons for hency that has been experienced for years.

Many teachers have been very successful in the management of bees, and are now engaged in educating the children under their charge in the industry. As a means of supplementing incomes, I would strongly recommend teachers and others to embark in bee-culture.

Classes

Classes in bee-culture were conducted by me at Ryde and Pennaut Hills during the session. The average attendance at the former place was 32, and at the latter 40. At one place it resulted in many of the school children commencing bee-culture for amusement and profit.

On my return from the Western district, I reported that the difficulty in the way of carrying on practical out-door horticultural and agricultural teaching in connection with the schools is the absence of close fences around the school-grounds. Most of the sites are enclosed with two or three-rail fences, which, while keeping out cattle do not prevent the admission of goats, pigs, fowls, &c. As it would entail a very large expenditure to erect paling fences around all the schools, I would suggest that live fences of whitethorn should be cultivated; these would be economical, permanent, and attractive in appearance, and very effective in excluding the smaller animals. In the cold climate of the Western district, hawthorn is very luxuriant; there would be very little difficulty in having a supply of haws forwarded to a suitable depôt where, in a few acres of land sufficient quicks could be grown to enclose the whole of the school-grounds in the Colony with live fences. These could be easily planted, and their training and after management would be excellent practice for the scholars.

Live Fences

#### Live Fences.

residences are not included in the above estimates.

Some of the play-grounds are only enclosed with two or three-rail fences, and most likely never will be paled. If live fences be substituted, the teachers will not be under that disadvantage.

Presuming that these 1,000 play-grounds are already enclosed with two-rail, three-rail, or paling fences, they will continuously require renewal. In a few years hence the posts, &c., will have entirely rotted away. If, while these fences are sound, quicks are planted to take their places, by the time the posts, &c., have become useless the live fences will have grown vigorous and sightly. By the time these play-grounds would require new fencing a saving of £75,000 would be the result.

Good fencing materials near to hand are rapidly disappearing, and sooner or later it will become imperative to erect those that I have here suggested.

## School Farms.

School Farms.

In my opinion, the most important auxiliary in aiding this country to open up all its resources of farming, gardening, vine and other fruit culture, is the establishment of school farms in various centres of agricultural districts. This can be done by training all our male teachers and students in the theory and practice of the work. The former can be carried on by book and class teaching. The latter can only be acquired by taking practical lessons in the open garden, field, vineyard, or orchard. I would strongly suggest that a practising school farm be established within easy access of Sydney, where teachers and students could obtain all necessary training. Drafted, as the teachers arc, to all districts many of them will have to instruct the children of parents whose livelihood will entirely depend on the culture of the soil. No class of men have the future of the Colony so much in their hands as our teachers, not only intellectually and morally, but they can also inculcate industrial and thrifty habits in the children under their charge.

There are still many industries that, properly attended to, would not only be a source of profit, but would promote the health and comfort of our farmer and artisan population. Many of these can be undertaken by the wives and children. These are poultry rearing; management of incubators and brooders; preparing cut flowers for sale; growing such flowers and plants as lavender, pennyroyal, rosemary, corinder, saffron, dill, caraways, &c, for medicinal purposes, perfumes, and essences. Caraway seeds are worth 50s. per cwt. in the English markets, and 12 cwt. per acre is a fair average crop. Nuts of all kinds are always in demand, and will do well in our colder climates. They can be easily stored, packed, and transported. An acre of cob filherts is said to be worth £100 per annum. Small patches of these and many others can be grown by the school children under the guidance of trained teachers on school farm for experimental purposes.

By such means as those just d

sources of the Colony developed.

Many letters have been received on various subjects of interest in connection with my work.

Although I do not endorse all that is stated, the letters evidence the attention that has been given and the co-oparation it has enlisted. The following are extracts from some of the correspondence.

"Thinking of the plague of grass hoppers in the South, I wonder whether some knowledge of insect life would not be useful. Hornets live in communities and people think they are doing good by destroying them. I have watched a hornet sting a locust (cicada) which instantly dropped in a state of torpor, near to death. Our hornets deposit their eggs in the bodies of the locust or grass hoppers, after stinging them into inactivity. The helpless cicada is drugged down a shaft previously prepared by the hornet. The shaft is never less than 18 meles deep, and that is beyond drainage from any ordinary rain. The late heavy rains went deeper than this and would drown the embryo hornets and hence the present plague of grass hoppers."

School (irounds.

"I have lately seen several suburban school-grounds and their barrenness vexed me. True many of them are new, but old enough to be green. I saw trees and flowers planted and carefully hedged in with unsightly bushes. It would be easier to drop a seed of maize beside the young trees. Corn grows quickly and beautiful and would adorn the grounds while shading the slower growing plants."

## Plans and Prizes.

"It strikes me there could be supplied to every school, a plan of the grounds as it is desired they should be, showing paths, grass, flower beds, shubberies, arbors, large trees, seats, &c., and then leave the school to work out the plan. Working to plan would itself be a great educator, and by sowing and planting the right thing at the proper time, a garden would be in perpetual bloom."

"I would suggest prizes not only for what was done in the school-grounds, but I would insist on homework and reproduction in gardening. A little enthusiasm would work wonders in our school-grounds."

### Bee Culture.

Bee Culture.

"Your Mr. Gale treated us to two highly interesting lectures on bee-culture last evening, and the evening before resulting in a number of inquries as to getting the necessary hives, bees, &c. I perhaps might venture your displeasure by suggesting that it would be a wise thing of the Department if they could authorise their lecturers in this branch, and perhaps other branches, to supply hives, &c., as by doing so the industry would be more quickly taken up. Last night was an instance; had Mr. Gale been able to supply some dozens would have given orders right away. The industry and others now being lectured upon would receive a greater impetus than if the public were left, as now, to write and find out cost, &c."

"Early in the month of October, I received a visit from Mr. Gale, of the Technical Department, who gave a lecture on "Bees and their culture." During the visit a swarm of black bees was transferred from a common box to a bar frame one, in the presence of the pupils. This stock has worked well, filled up the frames, but not swarmed up to date. I then had eleven stocks, I have now thirty-five all large and vigorous, save one, twenty-four of them are in Langstroth frames. The whole of the twenty-four have been made by myself and boys. The season has been very favorable for bees. There has been an abundance of white clover from which the bees have worked. All the hives, excepting the last swarm, have a large supply of honey of splended quality. I have noticed bee month in two old stocks only, which died through their ravages. From these I took out every particle of honey, and comb threw into the fire. The moth does not appear to attack the strong hives."

"I mentioned to Mr. Cooper, that I proposed keeping bees here and he recommended me to write to you on the subject, I am quite a novice at bee keeping in the improved style, I have had some practice with them in the old fashioned way."

Bluestone for Smut in Wheat.

## Bluestone for Smut in Wheat.

"Having noticed that farmers use a large quantity of bluestone in dressing seed wheat, and know ing its corrosive nature, I became convinced that sound grain became injured thereby; so determined to try a less quantity per bag. I pursued the following plan; 9 bushels of wheat I put into two casks with a hole close to the bottom and straw to act as a filter, then water about blood-heat, and poured it through and through the wheat till it was well moistened. I then drained the water off through the hole in the bottom of the cask. It was then allowed to stand in a room where there was a fire fer about fourteen hours. In the morning I made a solution of 6 oz. of blue stone to 4 gallons of water, and I poured it through and through the damp wheat, then drew the solution off. I did not let the seed lie in the solution at all. Sowed the seed next day, I bushel to the acre. I sowed in the middle of April, and harvested in the first week in January; ground ploughed three times. The seed came up quickly, grew well, and produced 25 bushels to the acre; not a sign of smut or rust."

### Rust in Wheat,

Rust in Wheat.

"I have read with a good deal of interest the ideas expressed at the recent Conference on Agriculture, especially those relative to rust in wheat, its cause and its remedies. Several causes were spoken of—over-cropping, had ploughing, late sowing, and sowing of bad seed. To my school are attached 4 acres of land; 12½ are of a good red loam, and 1½ lighter coloured. The land (1½ acres) was ploughed three times about 6 inches deep, and the seed was good sound plump grain; I covered it with a heavy harrow. I had previously grown potatoes in the ground, which I had manured with stable sweepings. I sowed I bushel to the acre. The seed was sown in the last week in April. Results: A heavy crop of straw with good heads of wheat; but developed rust the first week in December, especially so where wind and rain had knocked it down."

"Another portion of the land (2 acres) the previous year was sown with prairie grass; but being a dry season it failed. On this portion, one day earlier than that mentioned in the previous paragraph, I sowed the same kind of wheat, after ploughing up the prairie grass and giving the land two other ploughings. The land was not worked so fine as the potatoe ground. Results: The crop stood well up, but not so gross in growth as the 1½ acres mentioned above. It had a good head almost entirely free from rust. None of the wheat was dressed with bluestone. No smut was to be seen in the crop. I cut on the 23rd December, 27 bushels to the acre."

"My experience is that neither of the causes named produced the rust in my crop. The cause must be looked for in climatic or atmospheric influence—a large amount of moisture in the air and the absence of drying winds. Where the crop was thickest and could not dry, there the rust was worst; but where the crop was thinner and could dry quickly, the crop was least affected by it."

"At the Conference this theory was also advanced:—'Wheat that would mature in 200 days, or before the heat of November came, would be the best to withstand the attacks

Disolution of Bones by means of Sulphuric Acid.

"1. Where can I obtain sulphuric acid and what cost? 2. What kind of vessel would be required for holding it? 3. Would the above process be sufficiently remunerative so as to be likely to ensure its adoption by the farmers of the neighbourhood?"

To one school on the coastal district artificial manures were supplied, and portions of the land connected with it trenched for experimenting with wheat and other grain, but up to date no results of practical value have been communicated.

From the correspondence that has been received it can be seen that the teachers are taking a lively interest and are enthusiastic in the various cultures referred to in the forgoing extracts.

# Wattle Culture.

"Having 12 acres of land I should like to try the experiment of planting wattles. Will you kindly send me all the information. The piece of ground that I am going to try is of a sandy stony nature, and barren. It faces the north, and a small portion, about 2 acres of good mountain land, faces cast. I am trying one portion cleared and trenched, and the other simply ringbarking and under-scrubbing."

"In acknowledging receipt of your letter and parcel of wattle-seeds, I have to thank you for the seeds and your quick reply. I intend to get in 20 or 25 acres at once, and shall try to make the quantity spread out, but am afraid it will be hardly sufficient."

ALBERT GALE.

Lecturer in Horticulture and Bec-culture.

## APPENDIX XXI.

## REPORT OF THE WORK OF THE ARCHITECT'S OFFICE.

### BUILDINGS.

During the year there have been delivered to the Department, ready for eccupation, the following buildings, viz.:-

Ňo.	Description of work.	Accommodation.	Cost.
. 36 13 13 33 458	Public School buildings	5,308 48  2,478	£ s. d. 30,856 9 10 6,775 17 6 1,133 1 0 12,306 4 6 25,666 7 7

The school accommodation has thus been increased this year by 7,834, at a cost of £43,162 14s.4d. or about £5 10s 2d. per head, against 7,561 last year, at a cost of £42,036 6s 8d., or about £5 11s. 2d per head, and 3,614 at a cost of £17,586 2s. 5d., or about £4 17s. per head during 1888.

In a large number of cases where new buildings are creeted, both residences and weathersheds are included, and I have only kept these items separate where a distinct contract has been entered into for those works only. Where a residence is included in the contract for new buildings the cost per head of the accommodation is of course largely increased.

In addition to these works, contracts have been entered into and are now in progress for the undermentioned buildings, viz.:--

No.	Description of work,	Accommodation.	Cost.
47 16 6 10 121	Public School buildings  Residences  Wenthersheds  Additions providing accommodation  Additions, repairs, and improvements not providing accommodation.	27  571	£ s. d. 40,373 19 0 10,534 16 11 346 17 0 2,977 9 7 11,759 0 10

It will therefore be seen that in the works now in progress, all of which will probably be completed by the end of 1891, additional accommodation is provided for 5,129, at a cost of £43,351 8s. 7d., or about £3 9s. per head, and there is every indication of this number being largely increased during the year 1891. The following works are also in progress at Ultimo, viz.:—

Workshops providing accommodation for practical instruction for	£	8.	d.
engineering students of the Technical College	4.267	0	0
Technical College	19,535	0	0
night conools	16,220	Ó	Ó
Oarvings	289	12	Ō
busined of	158	2	0
Laboratory	2,660	0	Ó

All these works will, I expect, be completed during the ensuing year. The contracts in progress at the end of 1890 amount, in the aggregate, to £109,121 17s. 4d.

## Outlay.

The total outlay for works certified for by me during the year is £110,187 14s. 3d., in 1,600 certificates, averaging about £69, against an outlay of £67,908 16s. 9d., in 1,291 certificates, averaging about £52 for last year.

## Correspondence.

The number of papers received, registered, and dealt with during the year is over 9,200, against about 8,000 last year, and the number of letters, reports, &c. written and despatched is 5,884, against 4,425 last year, besides 238 orders for school furmture, against 155.

The number of contracts entered into is 600, for which sets of contract documents had to be prepared in each case, against 428 last year, an increase of over 50 per cent., and a number of small works were carried out under the Minister's authority, but for which no contracts were signed.

Plans

### Plans and Specifications.

During the year 1,272 plans, and 1,051 specifications have been prepared, against 662 plans and 671 specifications last year, an increase of over 70 per cent. in this work.

The following statement of the whole of the work of the office during this and the two previous years will show to what extent the work has increased—over 50 per cent. since the 31st December, 1888:—

	1888.	1889.	1890.
Letters received and registeredLetters, reports, &c., written and despatched	7,000	8,000	9,200
Letters, reports, &c., written and despatched	3,526	4,425 155	5,884 238
Orders for school furniture	112 346	428	230 660
Dertificates issued	1,038	1,291	1,600
Plans prepared	527	682	1,272
Specifications prepared	577	671	1,051
Totals	13,126	15,652	19,905

#### Cost.

The cost of the office for salaries was £5,506 6s. 1d., and for travelling expenses, £1,574 4s. 10d.—making a total of £7,080 10s. 11d.

## Staff.

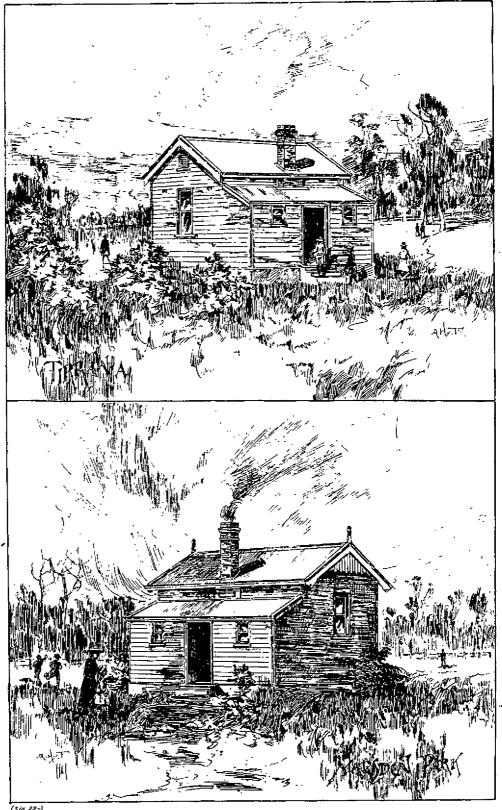

At the close of the year the staff consisted of 4 draftsmen, 3 junior draftsmen, 1 cadet, 2 temporary draftsmen, 3 clerks, and 8 clerks of works. The cadet was only appointed in December, and the services of one of the temporary draftsmen terminated on the 31st December.

I am glad to be able to report that the officers working under me continue to do their work in a satisfactory manner, and nothwithstanding the large increase of work, without any corresponding increase of men to do it, and the consequent continuous strain put on every one to keep pace with the work, I receive cheerful obedience from them all.

If there is no slacking of work in 1891—and there is no indication of it at present—I shall have to ask the Minister before long for a substantial increase in the staff, both clerical and professional.

WM. E. KEMP, Architect for Public Schools. THE following illustrations are typical of various classes of Public School buildings that have been erected by the Department of Public Instruction:—

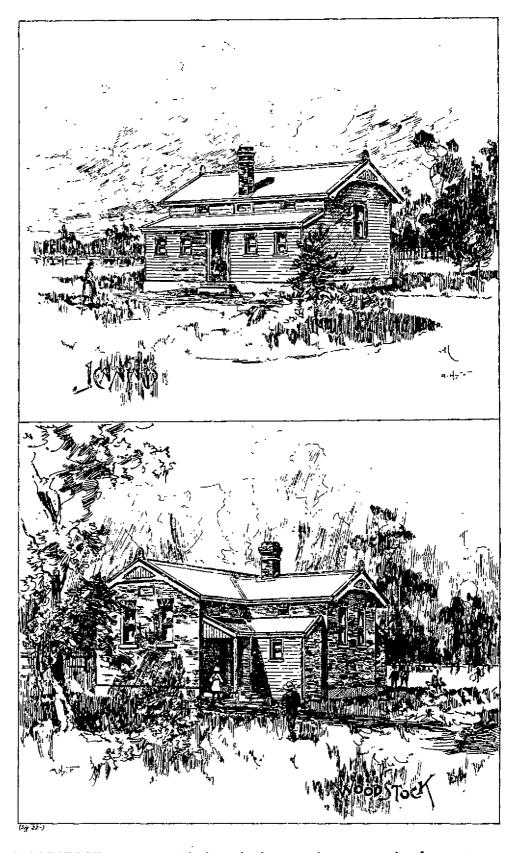

TIRRANNA.—Designed for a 9th or 10th class school, constructed of wood, and giving accommodation for 20 or 30 pupils Cost, £215 12s.

(349.22-)
MARSDEN PARK.—Designed for an 8th class school, constructed of wood, and giving accommodation for 40 pupils. Cost, £ 228 5s. 3d.

JENNINGS.—Designed for a 7th class school, constructed of wood, and giving accommodation for 40 or 50 pupils. Cost, £ 347 10s.

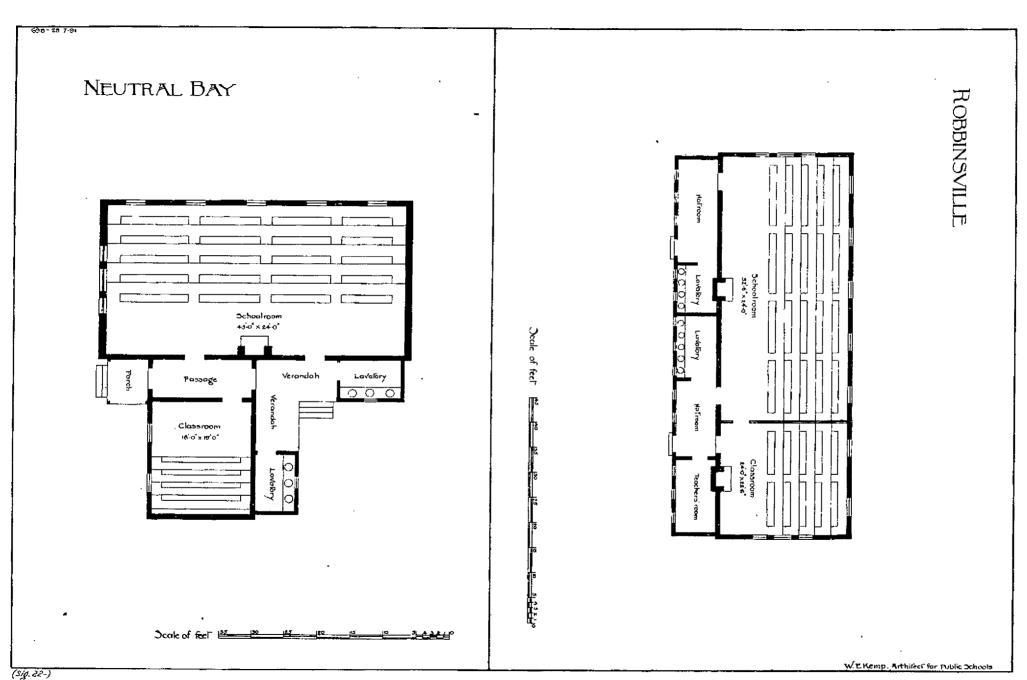

WOODSTOCK represents a 6th class school, arranged to accommodate from 50 to 100 pupils, with class-room for 30. This building is constructed of brick. Cost, £560.

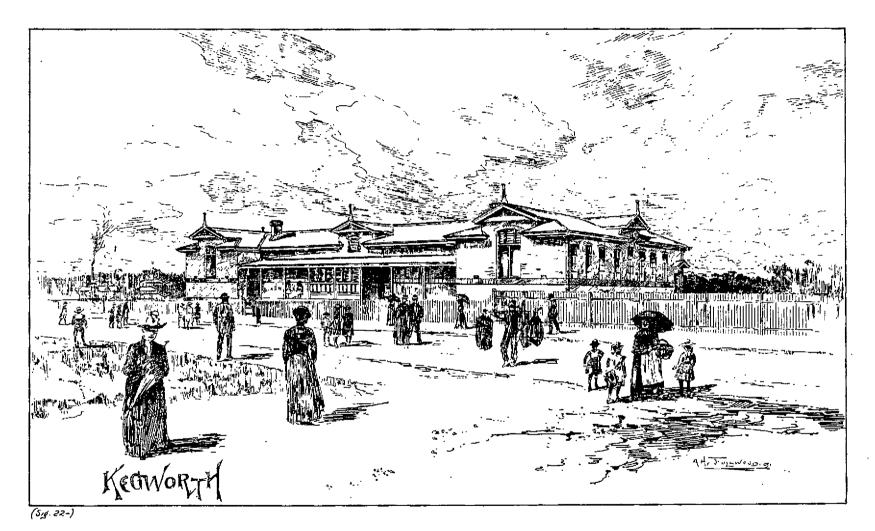

694 -28.7 91 5chool room 52'0" x 15'0" Halroom - 32'0'x5 6" JENNINGS Scale of feet Schoolroom 40'-6" x 20'-0" Class room 16<sup>1</sup>0"× 13<sup>1</sup>0" Woodstock Scale of feet W.E. Kemp Architect for Public Ochools (Sig 22-)

ROBBINSVILLE represents a 4th class school, accommodating between 200 and 300 pupils. The building is constructed of brick, and the class-room is divided from the main room by a glass partition. Cost, £ 1,450.

NEUTRAL BAY is a sample of a 5th class school, constructed of brick, and giving accommodation in the school-room for from 100 to 200 pupils, with a class-room for 50. Cost, £845.

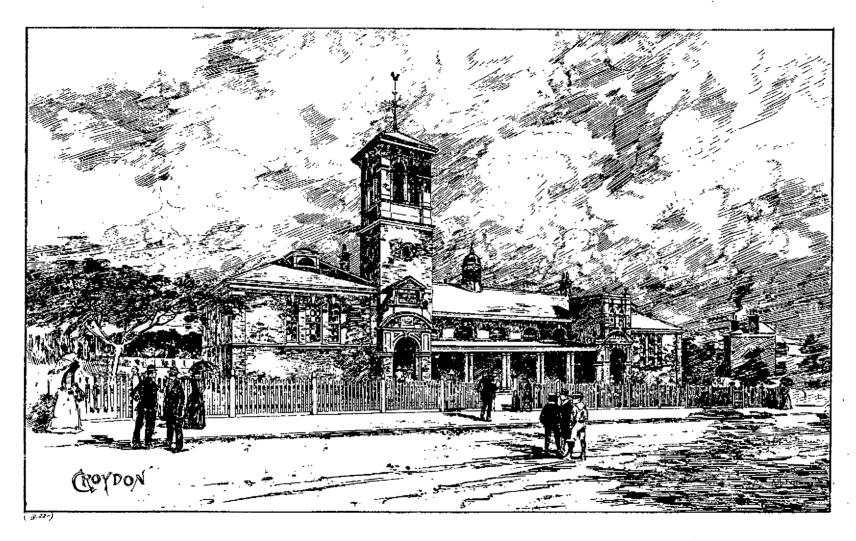

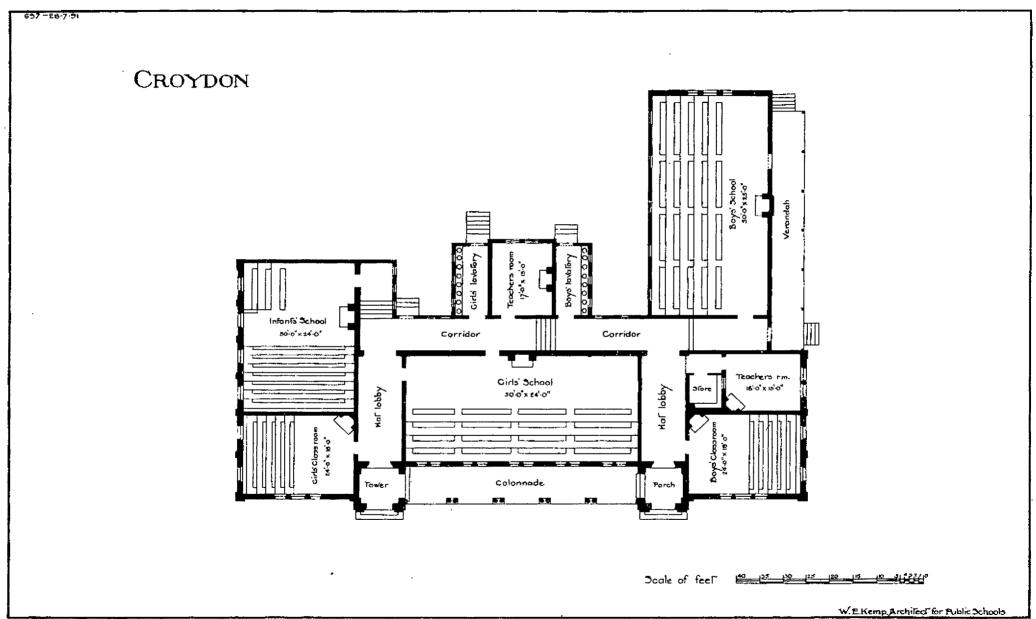

KEGWORTH represents a 3rd class school of three departments, constructed of brick, and accommodating from 300 to 400 pupils.

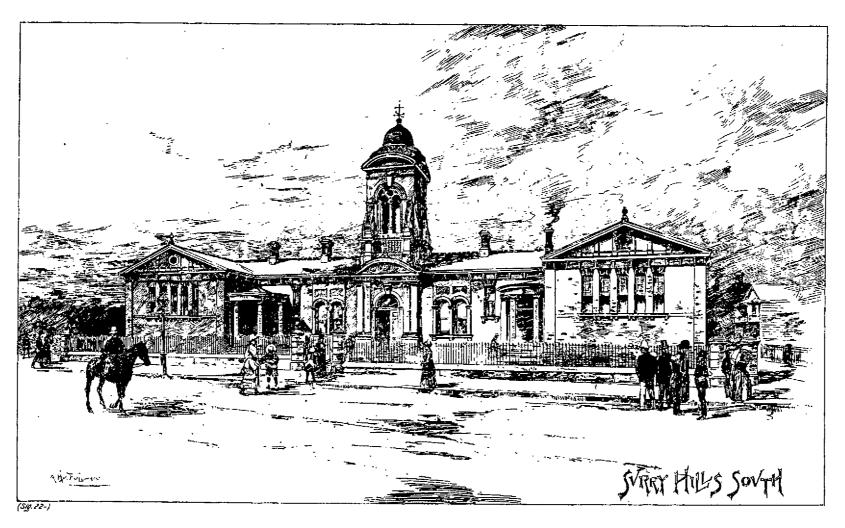

Cost, £2,528.

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY, NEW SOUTH WALES.

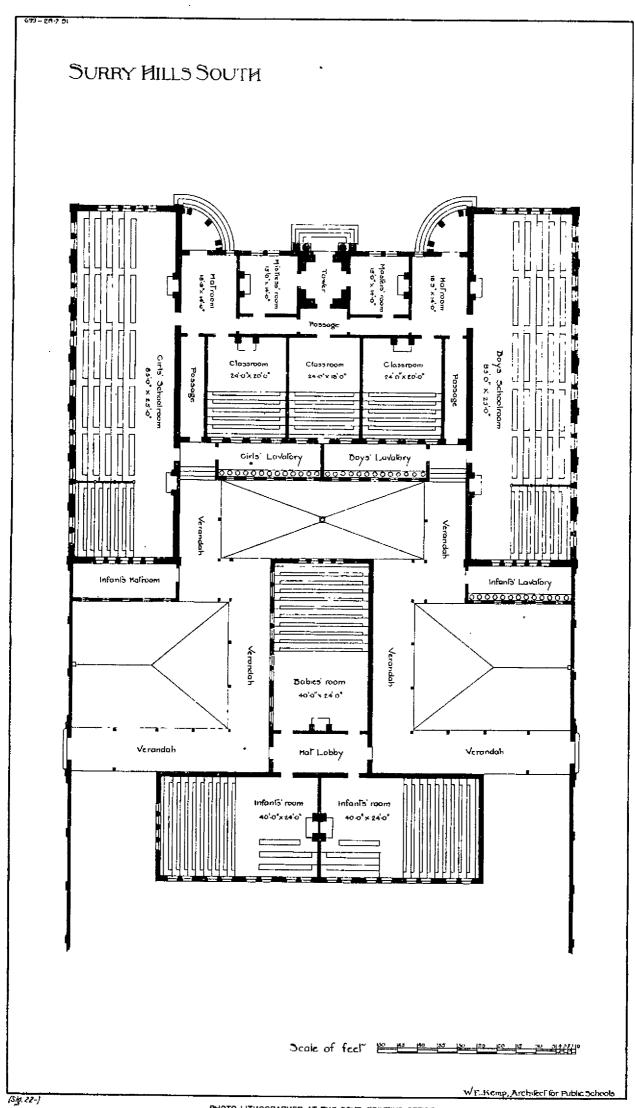

CROYDON represents a 2nd class school of three departments, accommodating between 400 and 600 pupils. This building is constructed of brick with stone dressings. Cost, £ 5,463.

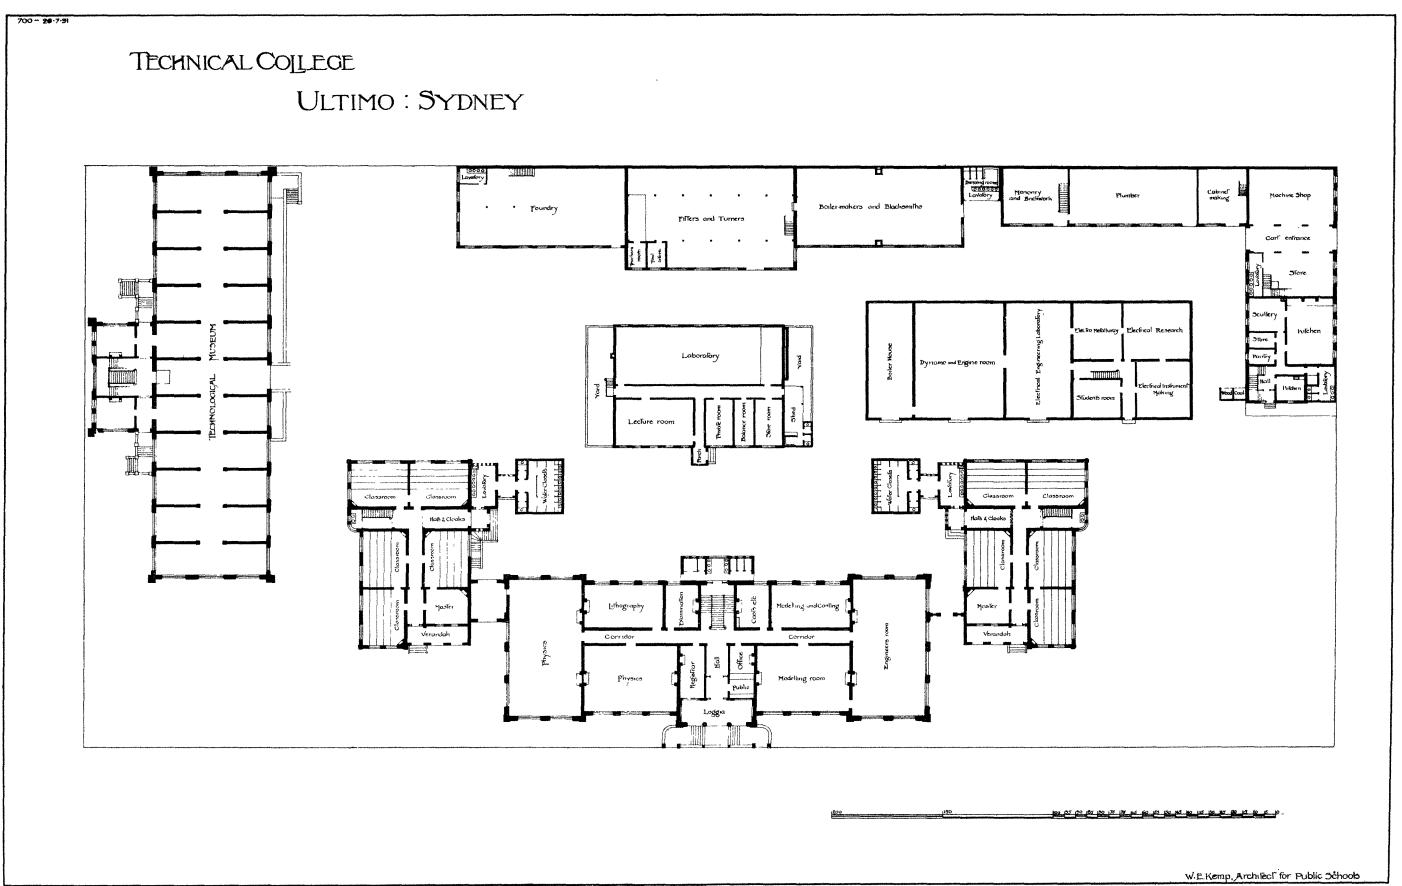

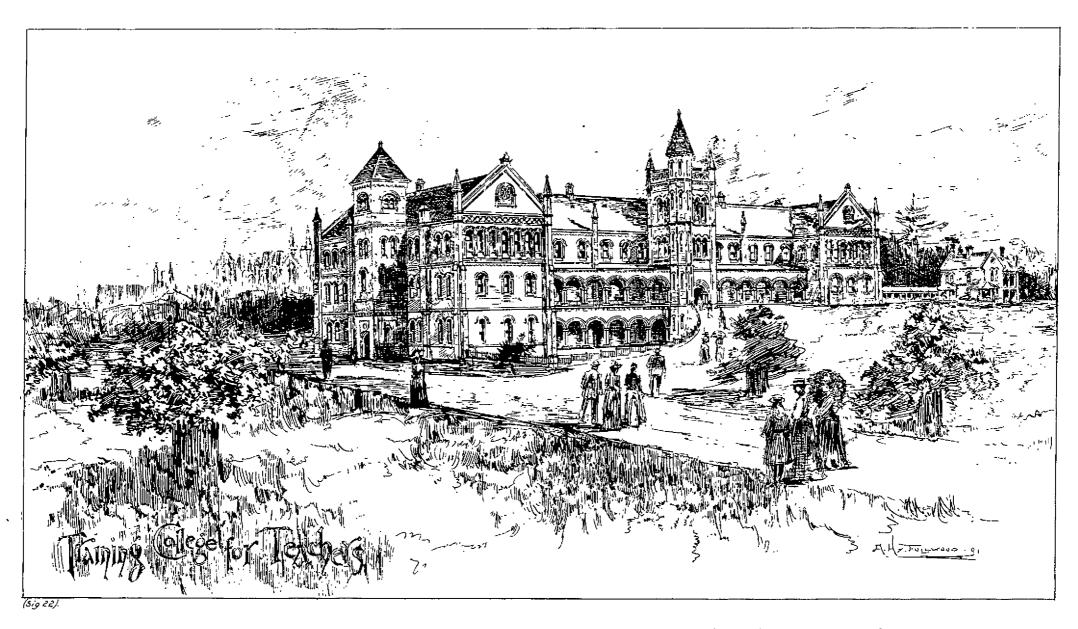

SURRY HILLS SOUTH represents a 1st class school of three departments, affording accommodation for from 600 to 1,000 pupils, with all necessary class-rooms, lavatories, &c. These buildings are constructed of stone. Cost, £ 15,615 158. 6d.

TECHNICAL COLLEGE.—Technical College buildings are being erected at Ultimo, and comprise College, High Schools, and workshops. The buildings are of brick with stone dressings.

TRAINING COLLEGE.—The Training College is designed to accommodate 50 male students, and comprises lecture-rooms, class-rooms, dining-hall, dormitories, &c., and a residence for the Principal. The buildings are to be of stone. Estimated cost, £37,500.

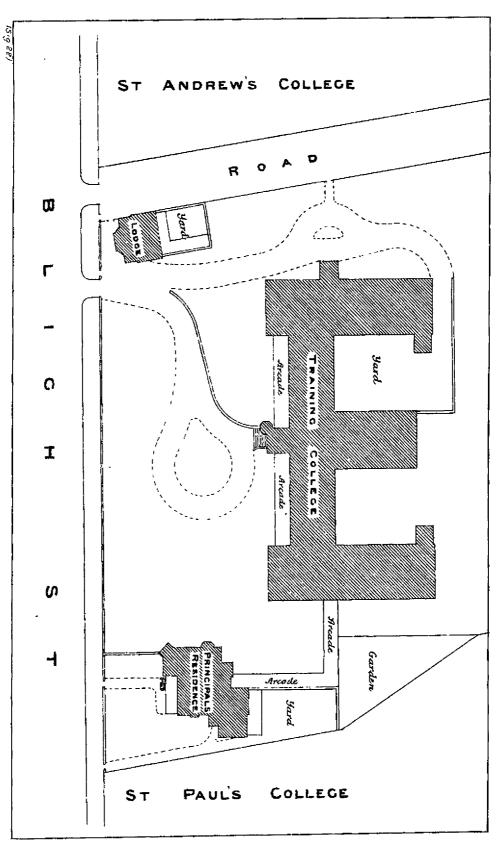

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY, NEW SOUTH WALES.

## APPENDIX XXII.

## THE BOARD OF EXAMINERS' REPORT.

I HAVE the honor to furnish a report of the work performed in connection with the Examining Branch during the year 1890.

The total number of examinees reported upon was 2,122, as against 1,621 in 1889. This number is made up in the following way:—

1. Candidates for Bursaries. 2. Applicant Pupil-teachers. 3. Pupil-teachers, including 124 candidates for training. 4. Training Students completing their first year. 5. Unclassified Teachers and Assistants. 6. Classified Teachers and Assistants. 7. Examinces taking supplementary subjects	108 666 850 67 109 241 81

## 8. Supplementary.

Examined in Drawing only or not otherwise reckoned ...... 81

The average attainments of Pupil-teachers, especially those of the first class are evidently improving; a result, no doubt, largely due to the system of competition for scholarships in connection with the Training Schools, and also to the possibility now set before students of securing a University degree as an incident in the course of preparation for the office of teacher. Indeed Pupil-teachers can see that by the present generous and judicious system of training they may got such a grounding in liberal studies as to become in reality as well as in name members of one of the learned professions.

22—2 G

The percentage of passes of teachers and assistants is much lower this year than last. This is probably due to the circumstance that new text bools have been prescribed, and examinees had not made themselves fully conversant with their contents. It is thought, however, that the number of failures will not be so large in future, and that it is better to insist on a thorough acquaintance with definitely fixed text books than to be content with a general but vague knowledge, the result of perhaps wider but less careful study.

During the year two changes have taken place in the personel of the Board. Mr. H. C. L. Anderson, M.A., after having rendered valuable services, first as one of the examiners in conjunction with Messrs. Gardiner and Forbes, and afterwards, in connection with the Board, as Examiner and Vice-Chairman, resigned, in February last, his position in this department to undertake the duty of Director of Agriculture. The vacancy has been filled by the appointment of Dr. Morris to the offices of Examiner and Vice-Chairman of the Board, and Mr. W. Muntyre to that of Examiner in Geography. Mr. John M'Credie, after a career of very zealous and arduous service, retired in August last under the provisions of the Superannuation Act, and his place as Examiner in History has been taken by Mr. W. F. Thompson, M.A.

The work of the branch has proceeded in a satisfactory manner throughout the year. The various members of the Board have examined with care and despatch the papers in the respective subjects entrusted to them, and have also devoted much time and close attention to the numerous and varied matters submitted for their deliberation at the meetings of the Board, evincing a strong wish to treat the teachers both fairly and liberally, and, at the same time, to safeguard the interests of the department and the public. They appear to have secured the confidence of the teachers, inasmuch as no complaint has, so far, been made calling in question their action in any case.

In addition to the work originally undertaken, the Board is now charged with the conduct of the examinations for admission to the High Schools, including those of candidates for scholarships and bursaries. This change became necessary in consequence of the new regulations regarding scholarships and bursaries. On general grounds, however, it is thought better that the Board should take the control of these examinations, and so relieve the High School teachers of the risk which they formerly ran of being suspected of favouritism, or of too readily admitting pupils in order to swell the numbers attending their schools. By holding the examinations in December and June, it will be possible in future to publish the list of successful candidates sufficiently early to allow prevaions to be made so that pupils may be ready to enter immediately the schools reopen after the holidays.

A change of policy has been made in the distribution of scholarships. Formerly a certain number was given for each High School, but now all children of the colony compete against one another, and scholarships are given to the ten best boys and ten best girls, who are at liberty to attend whichever High School they choose. As these are prizes given by the State, it is deemed more equitable to throw them open to all the colony rather than to confine them to particular localities.

The Board has now completed the first full year of its existence, and the results secured, both as to efficiency and despatch, seem to fully justify the expectations entertained at the time of its appointment. It is satisfactory, further, to know that the new system effects a saving of fully one-third of the amount formerly expended, while the results are made known with at least as much promptness as heretofore.

R. N. MORRIS,

18th February, 1891.

231

### APPENDIX XXIX.

# REGULATIONS UNDER THE PUBLIC INSTRUCTION ACT OF 1880.

Department of Public Instruction,

Sydney, 1st July, 1891.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulations, for carrying out the provisions of the Public Instruction Act of 1880, being made in accordance with the 37th section of that Act. These Regulations are intended to supersede those of 12th February, 1886, and of subsequent dates.

J. H. CARRUTHERS.

PUBLIC SCHOOLS.	
1. Application for the establishment of a Public School me	ust be made in the following form:-
Application for the establishment of a Public School at	
Post Town, Date, The undersigned, on behalf of the residents at may be established at that place, under the provisions of the Publ	hereby request that a Public Schoolic Instruction Act.
On behalf of the residents.	
Information to be supplied by app	licants.
(1.) Describe the position of the proposed School, namely:—  County,— Parish —	

- Distance from Post Town,—

  (2.) What other Schools, maintained or aided by the State, are within two miles of the proposed School?
- (3.) If none are within two miles, give the name of and the distance to the nearest State School.
- (4.) Are there any Primary Schools, not aided by the State, within two miles of the proposed School? If so, of what character, and how many children attend?
- (5.) State the number of children, from four to fourteen years of age, living within a radius of two miles of the site of the proposed School:—

	Boys Girls	**************************************	•
		Total	
:	Church Roman Presbyt Wesley	ations— of England	, ,
			·

(6.) Is there a building available in which the school could be opened at once? If so, describe it.
(7.) What land is available for a site on which school buildings may be creeted by the State, if necessary? Give a description, and, if possible, a plan of the ground.

Annex to Application for establishment of a Public School at

Post Town,-

WE, the undersigned Parents (or Guardians) of Children residing within the undermentioned distances from the site of the proposed Public School at hereby undertake that our Children, whose names are inserted below, shall attend the said School regularly and punctually.

Name of Parent or Guardian, (To be written by himself.*)	Distance from proposed School	Distance from nearest existing State School.	Full Name of Child.	Age.	Religious Denomination.
	- <del></del>				
<u> </u>				j j	

If the Parent or Guardian be unable to write, his mark must be witnessed by one of the Promoters of the School.

2. A Public School may be established in any locality where a regular attendance of twenty children between the ages of 6 and 14 years is guaranteed.

3. In the case of every Public School, whether the property be vested in the Minister or not, the words "Public School," shall be put up on the outside of the building in a conspicuous position.

#### Uses of Public School Buildings.

4. No use shall be made of any Public School building tending to cause contention—such as the holding of political meetings, or bringing into it political documents or petitions for signature—or for private purposes. And no such building shall be used as a place of public worship, unless built and kept in repair without aid from the Minister; nor in such case, if objected to in writing by one-fourth of the parents of the children attending the school.

5. The Fee payable for each pupil shall be 3d. per week up to four children of one family, and for four, or any larger number from the same family, the total amount of fees shall be 1s. weekly. Such Fees shall be paid to the Teachers in charge on or before school closing on Friday in each week.

6. The Teacher shall demand and receive such Fees and shall record the receipt thereof, at the

time, in the Roll Book of the School.

Š.

7. All sums received by Teachers as School Fees must be remitted weekly, or monthly, to the Cashier of the Department of Public Instruction, for payment into the Consolidated Revenue Fund, together with statement in the following form, marked B or B1. At the same time the statement in one of the following forms, marked A or A1, shall be forwarded to the Accountant of the Department:—

This Voucher should be forwarded, addressed to the ACCOUNTANT, on the last Friday in each Month.

Note.—This form is NOT required in duplicate.

#### SUPERIOR PUBLIC SCHOOLS.

9. Any Public School may be declared a Superior Public School, if, after due inquiry, it shall be found that the attendance thereat is sufficient to enable a class to be formed of not less than twenty pupils, who have been educated up to the standard that completes the course prescribed for a Fourth Class.

10. In addition to more advanced work in the ordinary subjects, lessons in other branches shall be

given to the highest class, as under:—

To Boys.—In Mathematics, Latin, Science, and Drawing.

To Girls.—In French, Drawing, and Sanitary Science.

Instruction may also be given in such other branches as the Minister may from time to time

Instruction may also be given in such other branches as the minister may from time to time consider expedient.

11. No special fee shall be charged.

12. Necessary text-books shall be supplied by the Minister.

13. In cases where the regular staff is unable to teach any prescribed subject efficiently, the Minister may employ a special teacher for such subject, and pay him such salary as he may deem expedient, provided that the special class so taught shall be drafted from the highest class, and contain not less than twenty punils

expedient, provided that the special class so taught shall be directed from the highest class, and contain not less than twenty pupils.

14. The course of instruction to be carried out in the highest class of a Superior Public School shall be that prescribed for a fifth class in the Standard of Proficiency; and such portions of the course shall be studied each year as will coincide with the subjects prescribed annually for the Junior or School Examinations of the Sydney University.

### EVENING PUBLIC SCHOOLS.

15. Application for the establishment of Evening Public Schools must be made by petition to the Minister of Public Instruction in the form quoted after Regulation 30.

#### Signatures to Petition.

16. Every such petition must be signed, on behalf of not fewer than ten persons, by the parents, guardians, or other residents of the locality in which it is desired to establish an Evening Public School.

#### Persons not eligible to be Pupils.

17. No person below the age of fourteen years shall be received as a pupil in any Evening Public School, until such person has received a certificate under section 35 of the Public Instruction Act; and no teacher or pupil-teacher employed in any school established or maintained under this Act shall be eligible for admission into such Evening Public School unless authorised by the District Inspector.

#### Appointments of Teachers.

18. Teachers of Evening Public Schools will be appointed by the Minister, but no teacher can be appointed unless he has been trained and classified.

Place of holding Evening Public Schools.

19. An Evening Public School may be conducted in any Public School-room, in any class-room attached thereto, or elsewhere in a suitable place.

## Furniture and Apparalus.

20. The ordinary school furniture and apparatus of any such Public School may be used in the management of an Evening Public School.

Books. 21. Necessary supplies of reading books will be granted to Evening Public Schools.

### Time of Meeting.

22. The pupils of an Evening Public School shall meet for instruction three times weekly at least, and every such meeting shall be of not less than two hours' duration.

#### Course of Instruction.

23. The course of instruction shall comprise Reading, Writing, Dictation, Arithmetic, Grammar, and Geography, and such other subjects as the Minister may from time to time determine.

#### Instruction to be Secular.

24. The instruction imparted must be secular, in accordance with section 7 of the Public Instruction Act.

25. Every pupil in an Evoning Public School shall pay to the teacher weekly, in advance, a fee not exceeding one shilling; but the Minister may relieve any pupils from the payment of school fees where inability to pay is satisfactorily shown, and shall make good the payment to the teacher.

#### Salaries.

26. The salaries of teachers of Evening Public Schools shall be at the following rates:

For an average attendance of 10 to 15, £20 per annum.

15 to 20, £26

20 to 30, £32

30, £32

30, £32

30, £32

30 to 40, £38

#### Fuel and Light.

27. The expense of providing fuel and light must be borne by the Teacher.

## Registers.

28. A class roll for recording the attendance of pupils, and a lesson register, shall be kept in every Evening Public School. Returns

29. Quarterly and annual returns shall be furnished in the same form as in Public chools.

### Inspection and control.

30. Evening Public Schools shall be subject to the same inspection and control as Public Schools.

### FORM OF PETITION.

To the Honorable the Minister of Public Instruction.

The petition of the undersigned parents, guardians, and other residents, humbly showeth:—
That your Petitioners desire that an Evening Public School may be established at in accordance with the provisions of section 10 of the Public Instruction Act of 1880.

That your Petitioners guarantee the regular attendance for a period of months at such school, when established, of the persons named in the annexed Schedule.

That your Petitioners undertake, on behalf of the said persons, that they shall conform to the Regulations for the conduct of Evening Public Schools now in force or that may hereafter be framed by authority. authority.

And your Petitioners will ever pray.

SCHEDULE showing the names of persons who will attend an Evening Public School at

Full Name.	Age next birthday.	Occupation (if any).	Signature of parent, guardian, or employer.

#### PUBLIC HIGH SCHOOLS.

31. Examinations for admission to Public High Schools as well as for Scholarships and Bursaries shall be held half-yearly, in Juno and December, and at these examinations Scholarships and Bursaries may be awarded to those who gain the most marks and show the requisite proficiency, as follows:-

#### SCHOLARSHIPS.

15 (7 to boys and 8 to girls in June; 8 to boys and 7 to girls in December), Sydney High School.
5 Bathurst Girls' High School.
10 (5 to boys and 5 to girls), Maitland High School.

#### BURSARIES.

BURSARIES.

10 half bursaries for Metropolitan and Sub-metropolitan children tenable at the Sydney High, Grammar, or Superior Schools.

5 full bursaries (2 to boys and 3 to girls in June; 3 to boys and 2 to girls in December) for country children tenable at the same schools.

2 full bursaries in June and 3 in December, Maitland Girls' High School.

2 full bursaries in June and 3 in December, Bathurst Girls' High School.

5 full bursaries, Maitland Boys' High School.

In the case of children whose parents reside within convenient access of the country schools only half bursaries will be awarded, and no child so residing will be permitted to compete for a Sydney bursary. Vice versa, no Sydney child may compete for a country bursary.

Every applicant for either a scholarship or a bursary must state in his application what school he intends to enter.

Country children are expected to attend the High School nearest by a practicable route to their

Country children are expected to attend the High School nearest by a practicable route to their places of residence. In exceptional circumstances, however, the Minister may, on application being made, sanction a departure from this rule. The application should accompany the form notifying intention to compete.

32. There shall be two groups of subjects for examinations, one for Scholarships and one for they are—

Bursaries. They are-

FOR SCHOLARSHIPS.

- Grammar.—To parse the more difficult words in a passage of about six lines. To distinguish the true subjects and the true predicates in sentences. To correct inelegant or ungrammatical expressions. To exemplify the correct usage of picked words.
   Dictation.—To write a passage of about fourteen lines, dictated from some standard author or from an ordinary newspaper, with correct spelling and punctuation.
   Arithmetic.—To solve questions in Proportion, Vulgar and Decimal Fractions, Interest and Discount.\*
- and Discount.\*
- (4) French (for girls) As prescribed for Fifth Classes in Public Schools, First Half-year. Latin (for boys)
  (5.) Euclid (for boys only).—Book I, Definitions, &c.; Propositions 1 to 20 inclusive.
  (6.) Algebra (for boys only).—First Four Rules.

- For Bursaries.

  (1.) Grammar.—As for Scholarships.
  (2.) Dictation.—As for Scholarships.
  (3.) Arithmetic.—As for Scholarships.
  (4.) History.—Henry VII to Victoria inclusive, as prescribed for fourth classes in Public Schools; History of Australia as taught in Public Schools.
  (5.) Geography.—Europe, Asia, America, and Australia, as prescribed for third and fourth classes in Public Schools.
  (6.) Drawing and Music.—As prescribed for third and fourth classes.
- (6.) Drawing and Music.—As prescribed for third and fourth classes in Public Schools. Candidates shall be eligible for admission to a High School who pass satisfactorily in the subjects numbered (1), (2), and (3), and in one other subject selected from Nos. (4), (5), and (6) in either group.
- in either group.

  33. A Scholarship will be tenable for three years, subject to good reports from teachers, and will entitle a pupil to a free grant of text-books and to free education in a State High School. A bursary will be tenable for three years, subject to good reports from teachers, and will entitle a pupil to a free grant of text-books and to free education in Sydney High School, in a Sydney Superior Public School, or in the Sydney Grammar School, or in one of the Country High Schools. When a pupil holding a Bursary must necessarily board away from home in order to attend one of these schools, an allowance not exceeding £30 a year, in addition to free education and text-books, will be made.

  34. No pupil will be awarded a Bursary whose parents or guardians are in a position to pay for his education; but, subject to this proviso, the examination for Bursaries will be open to all boys and girls under fourteen years of age who have attended a Public School with reasonable regularity for the two years preceding the date of examination.

  35. The examination for scholarships will be open to all boys and girls under fourteen years of age.

  36. Candidates who compete for a Bursary or Scholarship more than once will be eligible for a Bursary or Scholarship only for the period remaining out of three years from the date of their first competition, and no candidate will be permitted to compete after having attended a High School.

  37. The fee to be charged at a High School shall be £2 2s. per quarter payable in advance.

  38. The fees shall in no case be the property of the teachers but shall be forwarded to the Cashier for payment into the Consolidated Revenue Fund.

  39. The parents or guardians of candidates for Bursaries or Scholarships must fill in and forward to the Under Secretary the necessary forms of application at least six weeks before the date of examination. Such forms may be obtained at this office.

#### STATE BURSARIES FOR UNIVERSITY EDUCATION.

40. Ten Bursaries, six to boys and four to girls, tenable for three years at the Sydney University, will be awarded annually on the position of candidates at the March Matriculation Examination.

41. Candidates must be under eighteen years of age, and must have attended a State High School, a Public School, or, as State Bursars, the Sydney Grammar School, for the year previous to the examination; and they must produce satisfactory testimonials of character from the headmasters of the schools they have attended.

42.

- 42. They must satisfy the Minister of Public Instruction that their own and their parents' means are unequal to the expense of the University education. To a successful competitor who resides at such distance from the University as to be unable to travel to and fro daily a full bursary will be awarded, while to one who resides in the metropolitan or sub-metropolitan inspectoral district, within easy access of the University, part of a Bursary only will be awarded. The candidate's status as to whether he can be deemed eligible for a full Bursary or part of a Bursary will be decided by the Minister before his
- admission to examination.

  43. A Bursary shall entitle pupils to text-books and free education, together with an allowance not exceeding £20 per annum to those who need not board away from home, and not exceeding £50 to those who must necessarily do so.

44. Every Bursar must matriculate at the University and attend lectures; and he shall continue to hold the Bursary only on condition that his conduct be good, and that he pass creditably the examination at the end of the first and second years after his matriculation.

45. The parents or guardians of candidates must fill in and forward to the Under Secretary the necessary forms of application for University Bursaries at least six weeks before the date of the Matriculation examination. Such forms may be obtained at this office.

#### PROVISIONAL SCHOOLS.

46. Application for the establishment of a Provisional School must be made in the form shown

after Regulation 55.

47. A Provisional School may be established in any locality where not fewer than twelve, but not more than nincteen, children between the ages of six and fourteen years can regularly attend such school: provided that no Provisional School shall be established within four miles, by the nearest route practicable for children, of any existing Public, Provisional, or Half-time School.

48. The necessary school buildings and furniture for a Provisional School, as well as the requisite books and apparatus, will be provided at the cost of the Department, subject to the following conditions:—

- (a) That the grant in aid of the building and furniture shall be limited to £45, when, in the opinion of the Inspector, the average attendance will be from 12 to 15, and to £60 when the average attendance is likely to be 18; that payment shall not be made until the building has been erected, and reported by an Inspector or other officer of the Department of Public Instruction to be ready for occupation.
- (b) That the building shall be placed on Crown lands, if a site thereon central to the school population and otherwise suitable can be obtained, and that, if built on private land, the right-of-way shall be secured, and the property leased to the Minister of Public Instruction for a term of years, as may be agreed upon, at a peppercorn rent, the Minister having the right to remove the building before or at the expiration of that term.
- (c) That where the average attendance is expected to range from 12 to 15, the schoolroom shall measure 14 feet in length, 12 feet in width, and 9 feet in height to the wall-plates, and shall have a pitched roof, two windows, a boarded floor, and a fireplace; two out-offices must also be provided, and the following articles of furniture supplied, viz. :- 2 desks, each 10 feet 6 inches long.

2 forms, each 10 feet 6 inches long.

1 book-press or box.
1 table, 3 feet by 2 feet.

1 chair.

(d) That when the average attendance is expected to be 18, the schoolroom shall measure 17 feet in length, 14 feet in width, and 9 feet in height to the wall-plates, and shall have a pitched roof, two windows, a boarded floor, and a fireplace; two out-offices must also be provided, together with the following articles of furniture, viz.:—

4 desks, each 7 feet 6 inches long. 4 forms, each 7 feet 6 inches long.

1 book-press or box.
1 table, 3 feet by 2 feet.

- (e) That the applicants for a Provisional School state, on the usual form of application, the arrangements which they deem best for having the building erected, and the furniture supplied, with the least possible delay.
- 49. Teachers of Provisional Schools will be appointed by the Minister, after their competency for the office has been ascertained.
- 50. To ensure the continuance of a Provisional School, the provisions of the Public Instruction Act must be duly observed, and an average attendance of not less than 12 pupils maintained.

51. Provisional Schools shall be classified in the following manner:

Schools with an average attendance below 20, but not } First-class Provisional Schools. below 18.

Schools with an average attendance below 18, but not Second-class Provisional Schools. below 15. Schools with an average attendance below 15, but not { Third-class Provisional Schools.

below 12.

below 12.

52. The Salaries of Teachers of Provisional Schools shall be at the following rates:

In First-class Provisional Schools, £96 per annum.

In Second-class Provisional Schools, £96 per annum.

In Third-class Provisional Schools, £72 per annum.

53. School fees shall be paid at the same rate as prescribed for Public Schools, and the sums received shall be paid to the Consolidated Revenue.

54. Provisional Schools must be conducted in every respect as Public Schools, and be subject to all the provisions of the Public Instruction Act with respect to religious instruction.

55. The course of secular education shall embrace Reading, Writing, Arithmetic, Grammar, Geography, and History, with needlework for girls, whenever practicable; and the instruction must be imparted in accordance with the prescribed standards of proficiency.

#### SCHEDULE.

Form of application for the establishment of a Provisional School at Post Town, Date,

THE undersigned, on behalf of the residents at school may be established at that place, in accordance with the 22nd section of the Public Instruction Act of 1880.

		Ì		ļ	J

\*If the Parent or Guardian be unable to write, his mark must be witnessed by one of the local promoters.

#### SCHOOLS TAUGHT BY ITINERANT TEACHERS.

#### (A.) Half-time Schools.

- 56. Wherever twenty children, between the ages of six and fourteen years are residing within an estimated radius of 10 miles from a central point, and can be collected in groups of not less than ten children in each, the Itinemant Teacher shall visit two such places only, and the schools so established shall be designated Half-time Schools.
- 57. Applications for the establishment of Half-time Schools must be made in the form appended; but aid will not be granted towards the maintenance of such schools unless suitable school-houses be provided by the applicants.
- 58. No schoolroom shall be approved unless it be at least 10 feet in width, be floored, be provided with a fireplace, and be properly lighted and ventilated.
- 59. A full supply of furniture and school books shall be granted as a first stock to all schools newly established, and further grants will be made from time to time, as may be deemed expedient.
  - 60. The same Registers are to be kept, and the same Returns furnished as in Public Schools.
- 61. Every teacher must divide his time between the schools under his charge, in such a way as to effect the largest amount of good. Where practicable, he is to devote the mornings to the teaching of one school, and the afternoons to the teaching of the other; but, if found more suitable, other arrangements may be adopted, under the authority of the Inspector charged with the supervision of the schools. The parent or guardian of each child is to be supplied by the Teacher with a time-table showing the hours at which school opens and closes.
- 62. Half-time Schools shall be classified in the same manner as Public Schools, according to the total average attendance of pupils at the stations at which teacher gives instruction.
  - 63. Teachers shall be paid the full rates of salary attached to the classification of their schools.

64. The scale of fees for Half-time Schools shall be, for five days teaching—
For one child in a family, three pence.
For two children in a family, six pence.
For three children in a family, nine pence.
For four or more children in a family, one shilling.
The sums received shall be forwarded by the Teacher to the Cashier for payment into the Consolidated Revenue.

- 65. Teachers shall be paid an annual allowance of £10, where necessary, for forage, in addition to the salary attached to their schools.
  - 66. As regards instruction, every Half-time School is to be conducted in all respects as a Public School.
  - 67. Teachers are required to insist on the carrying out of a systematic course of Home Lessons.
- 68. Teachers shall be held directly responsible to the Inspectors under whose supervision they are placed.

69. At the end of each month a report upon the work done during that period must be furnished by Teachers to the Inspector.

#### (B.) House-to-house Schools.

70. Teachers not necessarily trained may be employed in house-to-house teaching; they must be persons of good moral character, and must satisfy the Inspector that they are capable of imparting the rudiments of an English education.

71. The mode in which their time shall be apportioned between the several families visited by them will be determined by the Minister, on information furnished by the Inspector.

72. The subjects of Instruction shall be limited to Reading, Writing, Dictation, and Arithmetic.

73. It is required that the teacher shall supplement his oral instruction by a systematic course of Home Lessons. Home Lessons.

Home Lessons.

74. At the end of each month a report upon the work done during that period must be furnished by the Teacher to the Inspector.

75. The remuneration of teachers engaged in the work shall be at the rate of £5 per annum for each pupil in average attendance, up to a maximum salary of £100 per annum.

76. In addition to such remuneration, they shall be allowed, where necessary, a sum of £10 per annum as forage allowance. Application for payment should be made at the end of each quarter.

77. As a condition to payment of salary, they must keep a record of the pupils' attendance in a satisfactory manner, and furnish punctually and accurately such returns as may be required by the Department. Department

78. Necessary text-books and materials will be supplied on requisition, as in the case of other schools.

79. The school fees payable shall be at the same rate as prescribed for half-time schools, and the sums received shall be forwarded to the Cashier for payment into the Consolidated Revenue.

Application for the appointment of an Itinerant Teacher for the District of

Place,

Post Town,

Sir,

Date We hereby request that the Minister of Public Instruction, in accordance with the provisions of section 23 of the Public Instruction Act, will be pleased to appoint an Itinerant Teacher to instruct the children residing in the vicinity of that place.

The information necessary for the Minister's decision is appended hereto.

We remain, Sir, Your obedient Servants.

١

Information to be supplied by Applicants for the appointment of an Itinerant Teacher.

					<u> </u>

#### GENERAL REGULATIONS.

#### Grants of School Books, &c.

80. Grants of school books and apparatus shall be made from time to time, as may be deemed expedient, to all schools under supervision of the Minister, in proportion to the average number of children in attendance. A full supply will be granted to schools newly established.

#### Requisitions for School Materials.

81. Requisitions for supplies should be forwarded at the end of a quarter only.

#### Character of School Books.

- 82. Such books only as are supplied or sanctioned by the Minister shall be used in any school for ordinary instruction. Apparalus.
- 83. The term Apparatus shall be held to include maps, diagrams, pictures, black-boards, easels, ball-frames, and Kindergarten appliances.

#### Registers, &c., to be kept.

84. The undermentioned Registers and Forms shall be kept, according to directions supplied with them, by every teacher: (a) Admission Register, (b) Class Roll, (c) Daily Report Book, (d) Punishment Book, (e) Lesson Register, (f) Time-table, and (g) Programme of Lessons for each Class.

#### Returns.

85. Quarterly and Annual Returns shall be furnished from every school. Each Quarterly Return must be neatly made out in duplicate, one copy to be retained by the teacher as a record, and the other to be furnished to the Inspector on the last Saturday preceding the Midwinter and Christmas vacations, and in other cases on the last Saturday in the months of March and September. The Annual Return must be forwarded, with the Quarterly Return, immediately after the close of the December quarter.

#### Default as to Returns or Registers.

86. Negligence in compiling or sending Returns, or in keeping School Registers, shall render a teacher liable to a fine, or, if repeated, to a loss of classification. Any teacher guilty of fraudulently making false entries in any Register or Return will be dismissed.

### Appointment and Training of Teachers.

87. Every applicant for employment as a teacher, unless he be a University graduate, or a person holding a certificate from a recognized training institution, must show that he has gained in the Colony, either as a pupil in a State School, or otherwise, a sufficient experience of the established Public School system to warrant his employment. Every untrained applicant must undergo a course of training before being permanently appointed, and he must sign an undertaking to accept such employment in any locality indicated by the Minister.

### Position of Teachers.

88. Teachers employed under the Department of Public Instruction are Civil Servants of the Crown, and are entitled to the advantages and subject to the restrictions of that position.

#### Teachers not to seek Outside Influence.

89. Teachors are appointed, promoted, and removed on a due consideration of their claims and merits. They are, therefore, prohibited from seeking the interest of influential persons outside the Department to obtain promotion, removal, or other advantage. Any infringement of this Regulation will be severely dealt with.

#### General Qualifications.

90. As a general rule, no person will be appointed as a teacher unless he has been examined and classified. In some cases a teacher may be appointed provisionally who has not undergone examination; but his appointment will not be ratified until his competency has been tested in that manner.

#### Examination and Classification.

91. The attainments of Teachers, Students of the Training Schools, and Candidates for employment as Teachers, shall be tested by written and oral examinations, and their skill in teaching determined by their ability to manage a school or class; and, according to such attainments and skill, they will be classified in the following grades:—The first, or highest, class, will have three grades, distinguished as IA with Honors, IA (without Honors), and IB; the Second Class will have three grades, distinguished as IIA with Honors, IIA (without Honors), and IIB; and the Third Class will have three grades, distinguished as 3A, 3B, and 3C. A classification awarded to a Teacher, a Student of the Training School.

School, or a Candidate for employment, after his first successful examination, shall be provisional only, and be confirmed at the end of three years from the date of examination if the Inspectors' reports upon his school work be fully satisfactory: provided that the classification of any Teacher in the School Service shall be liable to reduction or cancellation for inefficiency, gross neglect of duty, or serious misconduct on the part of the person holding such classification.

#### Commencement of duty.

92. When a teacher is appointed to a school, he must report to the Inspector of the District the fact of arrival at his post, and the date of commencing duty.

#### Resignation of a Teacher.

93. A teacher is required to give not less than one month's notice of his intended resignation, which shall take effect on the last day of the month indicated. Before receiving salary for the last month, he must hand over to a person duly authorized all school property belonging to the Minister, and make out, in duplicate, an inventory of the same: one copy, to be forwarded to the Inspector, the other to be left with the School Records.

#### Teachers not to engage in other Occupations.

94. Teachers in the service of the Minister are prohibited from engaging in any occupation not having a distinctly educational character, unless the sanction of the Minister has been previously obtained.

#### Duties of Teachers.

Duties of Teachers.

Duties of Teachers.

Duties of Teachers.

To observe faithfully those Regulations.

To carry out the suggestions of Inspectors.

To teach according to the Course of Secular Instruction.

To maintain the discipline prescribed in the Regulations.

To keep the School Records nearly, and to furnish Returns punctually.

To see that the undermentioned documents are kept posted in a conspicuous place in the schoolroom, namely:— (a) The Regulations; (b) Notice to Visitors; (c) Course of Secular
Instruction; (d) Time-table; (e) Programme of Lessons; (f) Scale of Fees; (g) Proclamation as to obligatory attendance; List of Public School Board.

To take charge of the school buildings and all property belonging to the Minister, and to be
responsible for keeping the school premises in good order and tenantable repair—reasonable wear and tear excepted—and to see that they are not used for any private purposes
without the Minister's permission.

without the Minister's permission.

#### Teachers' Wives.

96. In a school containing female children but no female teacher, it will be the duty of the teacher's wife to teach needle-wook to the girls during at least four hours in each week. In forming an estimate of the efficiency of a school, the competency and usefulness of the teacher's wife, and the time she devotes to school duties, will be taken into account.

#### Assistant Teachers.

97. Assistant teachers may be appointed to schools in which the average daily attendance exceeds seventy. They may be (a) persons who have served for four years as pupil-teachers, or, (b) persons who have been examined and classified.

### Pupil-teachers.

98. Pupil-teachers may be employed to serve for not less than four years in any school in which the average attendance has not been less than fifty for the preceding quarter, provided that the teacher holds a classification not lower than Class II.

### Conditions of Appointment.

99. Candidates for the office of pupil-teacher must be not less than thirteen nor more than seventeen years of age, and free from any bodily infirmity likely to impair their usefulness. They must also pass an examination in the subjects specified in Regulation 101.

100. The remuneration of a pupil-teacher will consist partly of instruction to be given by the teacher, for at least one hour on every school day, and partly in a yearly salary.

### SUBJECTS OF EXAMINATION FOR TEACHERS AND PUPIL-TEACHERS.

101. The subjects in which teachers and pupil-teachers shall be examined for classification are those stated herounder.

#### For a Third-class Certificate.

A young child's dress, showing gathering and stroking, ornamented with various stitches as shown in former samplers; tucks to be run, frill—whipped and hem-stitched to be used as a trimming. Also cut out any garment required as in former classes. 2. A six-inch sampler done in coloured silk with threads drawn showing all the various stitches used in needlework.
 Nors 1.—The course herein prescribed is for all pupil-teachers alike. It is recommended, however, that the Sydner

Various butches used in needlework.

Note 1.—The course herein prescribed is for all pupil-teachers alike. It is recommended, however, that the Sydney University Matriculation subjects (as set forth in the by-laws and annually published in the Calendar) be also studied by those pupil-teachers who may desire or intend, after admission to the Training School, to present themselves at the Matriculation examination and to compete, in subsequent University examinations, for the privilege of remaining three years in training and proceeding to the final examination for the Bachelor of Arts degree.

Nore 2.—Any pupil-teacher who may have passed the Junior or the Senior University examination in Euclid, Algebra, Latin, or French may be exempted from further examination in such subject or subjects in Classes IV, III, and II.

Note 3.—Drawing must be taken by all candidates for scholarships, even though the standard has been previously satisfied.

satisfied

ed.
NOTE 4.—See also Note 4, at end of Subjects of Study for Teachers.

#### Examinations.

102. An examination of teachers shall be held yearly in each Inspector's district. Teachers who desire to be examined, with a view to promotion, must apprise the Inspector of their wish at least one month before the date of examination, and furnish him with a list of the alternative subjects, if any, upon which they are prepared for examination.

### Promotion for Good Service.

103. Teachers can be promoted from one class to another by examination only. But in each class a teacher may, without examination, be advanced to a higher grade for good service, counting from I885; that is to say, if in the last five years during which he has held his classification, his school has increased in efficiency, if the Inspectors' Reports throughout that period have been satisfactory, and the Report for the fifth year indicates that the applicant's practical skill is equal to that required for the grade sought, and if his general conduct has merited the Minister's approval.

#### Promotion by Removal.

104. Teachers desirous of being promoted to more important schools must intimate their wishes to the Inspector of the district, in writing. A list of such teachers will be kept in the Department of Public Instruction; and, except in special cases, promotions will be made in accordance with the principle of classification and seniority.

### Efficiency of Teachers.

105. In judging of the efficiency and usefulness of Teachers and of their claims to promotion, the successful work carried on by them in connection with (a) the initiation and management of School Savings' Banks. (b) the planting and beautifying of school grounds. (c) the instructing and drilling of Public School Cadet Corps, and (d) the passing of pupils at the Junior or Senior Examinations, will have full value awarded to it.

#### Classification of Schools.

106. Primary schools established or maintained under this Act shall be classed as follows:-

#### First Class Schools.

All schools in which the average daily attendance is not less than six hundred in three departments, boys', girls', and infants', and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Second Class Schools.

All schools in which the average daily attendance is not less than four hundred children nor more than six hundred in three departments, boys', girls', and infants', and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Third Class Schools.

All schools in which the average daily attendance is not less than three hundred nor more than four hundred in three departments, boys', girls', and infants', and in which the standard of proficiency prescribed for that class of school is fully reached.

### Fourth Class Schools.

All schools in which the average daily attendance is not less than two hundred nor more than three hundred in two departments, and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Fifth Class Schools.

All schools in which the average daily attendance is not less than one hundred nor more than two hundred children, and in which the standard of proficiency prescribed for that class of school is fully reached.

<sup>\*</sup>From female pupil-teachers in country districts the following will be accepted in lieu of French, where it can be shown that the examinee has had no means of acquiring a knowledge of the language in question:

Latin, or
Euclid and
Algebra,

#### Sixth Class Schools.

All schools in which the average daily attendance is not less than fifty nor more than a hundred children, and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Seventh Class Schools.

All schools in which the average daily attendance is not less than forty nor more than fifty, and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Eighth Class Schools.

All schools in which the average daily attendance is not less than thirty nor more than forty children, and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Ninth Class Schools.

All schools in which the average daily attendance is not less than twenty nor more than thirty children, and in which the standard of proficiency prescribed for that class of school is fully reached.

Tenth Class Schools.

All Public Schools in which the average daily attendance does not reach twenty.

#### Condition of Retention in Class.

107. Where a school fails to meet the conditions above specified, the Minister may remove such school to a lower class.

### Eligibility of Teachers for appointment to certain Schools.

108. Teachers who have gained their classifications by examination, or by promotion under Regulation 103, shall be eligible for appointment to any school or department, in accordance with the following Schedule :-

Class of School or Department.	Teacher's Classification.
I	
II.	I.D II. A. with Honors.
1V	
V	
<u>VI</u>	
VIIVIII.	
1X	
X	

109. A teacher may be removed from the school in which he is employed to another of a lower class, should he fail, through any default on his part, to maintain the requisite number of pupils in average attendance, or to satisfy the conditions of the standard of proficiency.

#### Teachers' Emoluments.

110. The salaries of male teachers shall be according to the following scale:—

For a teacher	in charge o	of a school of	the First Class	£400
$\mathbf{p}_{o}$	do	do	Second Class	336
$\mathbf{D}_{0}$	do	do	Third Class	252
D٥	do	do	Fourth Class	240
Do	ďο	ф	Fifth Class	228
Do	do	фo	Sixth Class	216
Do	do	do	Seventh Class	
Do	do	do	Highth Class	156
Do	do	do	Ninth Class	132
Do	do	do	Tenth Class	

In schools ranking below the fourth class, the salaries of unmarried male teachers, of married teachers

who are not assisted by their wives, as required by regulation 96, and of female teachers in charge, shall be £12 per annum less than the foregoing rates.

111. In addition to these salaries, residences, vested or rented, shall be provided for classified male teachers in charge of classified Public Schools; but a residence rented for a teacher shall be as near as practicable to his school.

#### Mistresses.

112. The salaries of mistresses shall be according to the following scale:-

For a mistress in cha:	rge of a girls' or infants' department of a	
School of th	e First Class	£300
Do	Second Class	252
Do	Third Class	
Do	Fourth Class	
D-	Figh. Olar-	190

#### Assistant Teachers.

113. Salaries shall be paid to assistant teachers as follow:-

To a First Assistant, holding a First Class Certificate, in a school of the First Class	Male. £250	Female. £168
To a Second Assistant, holding a Second Class Certificate, in a school of the		
First Class To a Third Assistant, holding a Third Class Certificate, in a school of the	150	120

### Pupil-teachers.

114. Salaries shall be paid to Pupil-toachers at the following rates ..

Dataries shall be baid to raph-toachers at the following rates:			
First Class	Male.	Female. £48	
Second Class		36	
Third Class		30	
Fourth Class		24	

Work-mistress.

#### Work-mistresses.

115. Work-mistresses may be appointed to schools of the first and second classes; and their salaries shall be at the following rates:-

Per annum.
s £120
£100
20100
£90
Days a week.
5
.,,,
4
4

117. Each Work-mistress shall be required to keep a record showing the names of the pupils, as well as the dates of commencing and completing each piece of work. The record is to be preserved for the information of the Inspector, and of the Directorss of Needlework.

118. The regular Teachers of such classes as may be receiving instruction in Needlework will be expected to assist the Work-mistress in the performance of her duties.

#### TRAINING SCHOOLS.

#### Classes of Candidates.

119. The Minister may authorize to be received into the Training Schools, annually, three classes of candidates, namely, First Class, or Scholarship Candidates—Thirty pupil-teachers whose term of service has expired, and who have obtained the highest marks among those passing the entrance examination successfully; Second Class, or Half-Scholarship Candidates—Twenty pupil-teachers whose term of service has expired, and who have obtained, after the first thirty, the next highest marks among those passing the entrance examination successfully, and are prepared to pay half the cost of their maintenance while in training; Third Class, or non-Scholarship Candidates—Other Pupil-teachers whose terms of service have expired, untrained teachers who have had charge of schools, and persons entering the teaching profession for the first time, who have passed the entrance examination successfully, and are prepared to pay the whole cost of their maintenance while in training.

#### Qualifications.

120. Candidates must apply for admission in a form prescribed by the Minister. They must, except in the case of pupil-teachers, be not less than twenty years of age, and, as a general rule, not more than thirty; they must be free from any bodily infirmity likely to impair their usefulness as teachers, and be persons of active habits and unblemished reputation. They must also satisfy the Minister as to their previous history and their qualifications.

#### Conditions of Admission.

121. Before admission, every candidate must make a declaration that he intends, in good faith, to follow the profession of a teacher in schools under the Minister, and that he will accept a situation in any district, as the Minister may see fit. He must also procure a guarantee from two responsible persons that the whole expense of his training defrayed by the State will be refunded, if, from any cause whatever, he shall not enter the service of the Minister, or shall leave it in less than three years from the date of his first appointment.

#### Terms of Training.

123. Entrance examinations shall be held yearly in December; and the periods of training will be one year, two years, or three years, as may be found expedient.

### Allowances during Training.

123. The following allowances may be made to students who satisfy the aforementioned conditions and pass successfully the prescribed examinations:—To scholarship students, £6 per month; to half-scholarship students, £3 per month. When the school is prepared to receive students into residence, these allowances are not paid, board and lodgings being provided instead.

#### Practical Training.

124. The students shall be trained in the practical management of schools by attendance at the Practising School.

#### Examinations.

125. Oral examinations of the students shall be held periodically to test their attention and progress; and written examinations shall take place yearly, in December, when classifications will be awarded according to attainments and teaching skill to students who have completed their course. No certificate shall be given until the Inspector's Report shows that the student is successful in the management of a school.

#### GOVERNMENT OF SCHOOLS.

#### Public School Boards.

126. The Minister reserves to himself the power of controlling, through his officers, the internal management of schools; but, for other purposes, he will avail himself of the assistance of Public School Boards, wherever suitable persons are found to fill the office.

127. Every Public School Board, at the first meeting thereof, shall elect from the members a Chairman, whose duty it will be to correspond with the Minister on behalf of the Board; and the Board may in like manner appoint such other honorary officers, being members of the Board, as the Board may deep expedient may deem expedient.

may deem expedient.

128. A Public School Board may, by resolution passed at a duly constituted meeting thereof, appoint any member or members to perform the duty, prescribed by the 19th section of the Public Instruction Act, of visiting any of the schools placed under the supervision of the Board; and it shall be the duty of the member or members so appointed to report the results of any such visitation to the Board, who will, if necessary, report to the Minister.

129. The grounds upon which any Public School Board shall exercise the power conferred on it by the section beforementioned to suspend a teacher for misconduct, shall be the following:—Unfitness or the vert of such teacher to professive the latter form internates in uneverlated to suspend a factor of the conduct as a profession of the vert of such teacher to profess the power profession.

on the part of such teacher to perform his duties from intemperance, immoral conduct, gross neglect of duty, or continued absence from duty without leave.

130. Public School Boards shall, before leaving the school under visitation, report to the Minister any case in which a teacher is suspended by them, and apprise the Inspector having charge of such

131. Public School Boards are expected to use every endeavour to induce parents to send their children regularly to school, and to report the names of any parents or guardians who refuse or fail to educate their children, for which purpose necessary forms will be provided.

132.

132. When the course laid down in Regulations under the 13th section of the Public Instruction Act for relieving parents and guardians from payment of school fees by the Minister is not convenient, application may be made by parents or guardians to the Public School Board of the district; and, if satisfied as to the inability of the applicants to pay school fees, such Public School Board may issue a certificate of exemption from payment thereof for a period not exceeding three months, and shall thereupon report the case to the Minister.

133. In fixing the hour for special religious instruction, in accordance with section 17 of the Public Instruction Act, the Public School Board should take care that the daily routine of the school, as laid down in the Regulations, is not unduly interfered with.

134. In addition to the powers conferred on such Boards by the Public Instruction Act, the Minister entrusts to them the following duties:—(a) To take care that the school buildings are not used for any improper purpose. (b) To see that a sufficient quantity of suitable furniture and apparatus is provided. (c) To take precautions for excluding from the school, during its ordinary business, all books not sanctioned by the Minister. (d) To inspect periodically the School Registers and Records. (e) To see that the school is open on all the usual school days, and that the teacher is present at his work. (f) To observe whether the teacher discharges his duties, to report his conduct to the Minister when he is in fault, and to protect him from vexatious complaints.

\*\*Inspectors of Schools\*\*

#### Inspectors of Schools.

135. Inspectors and other persons deputed by the Minister to visit any school shall be furnished with propor credentials. Every teacher is required to treat such persons with deference; to carry out their suggestions for the improvement of the school; and to obey their instructions in all matters relating to the Public Instruction Act and these Regulations.

#### Duties of Inspectors.

136. Inspectors are to enforce observance of the provisions of the Public Instruction Act and of the Regulations; but their decisions shall be subject to appeal to the Minister. They are to examine into condition of the schools, and to inquire into all matters which it may be expedient to report to the Minister. They are authorized to determine all questions of school management, and to take the teaching of a class or of a school into their own hands for a time, to show the teacher how defective methods may be improved.

#### Annual Inspections.

137. Once at least in the year, every school in each Inspector's district shall be visited by him and the pupils be examined as to their proficiency in the several branches of instruction as authoritatively prescribed. He shall, within six days of such inspection, send a report thereupon to the Minister, together with such observations on the state of the school generally as shall appear to him to be called

### Conduct of Inspectors.

138. In their intercourse with teachers, Inspectors should be guided by feelings of respect for the teacher's office, and of sympathy with his labours. They should exhibit towards teachers every possible courtesy, treating them at all times with the consideration and kindness which the difficulties of their position demand.

#### Observation Book.

139. The Inspector's remarks upon the state of a school visited by him, shall, at the close of the examination, be entered in the Observation Book of the school, which, as a record, is to be carefully preserved. Entries therein must not be erased or altered.

#### SCHOOL ROUTINE AND DISCIPLINE.

### Punctuality.

140. With a view to the proper training of their pupils, teachers must conduct the operations of their schools with punctuality and regularity.

#### Cleanliness.

141. Habits of personal neatness and cleanliness are to be encouraged among the pupils, not only by precept, but by the personal example of the teachers, and, if necessary, may be enforced. Teachers are also responsible for keeping the schoolrooms and furniture clean and arranged in an orderly manner.

#### Order and Conduct.

142. Teachers are to instil into the minds of their pupils the necessity for orderly and modest behaviour, as well as for obedience to teachers and to the rules of the school. Pupils should also be trained to exhibit respect for the property of others, whether public or private; to regard the feelings of their follows; to be honest and truthful, attentive under instruction, and conscientious in the discharge of every duty.

### Government of Pupils.

143. In the government of pupils a teacher must avoid all degrading punishments. His discipline should be mild but firm, his manner kindly, his demeanour cheerful, and his language marked on all occasions by strict propriety. While overlooking no offence, his aim should be to prevent the necessity for punishment by effecting the improvement of the offender.

#### Corporal Punishment.

144. Corporal punishment may be inflicted, but by the principal teacher only, or by an assistant with his approval. It should be restricted as much as possible to extreme cases; and the teacher must keep a record of the time and place of punishment, its amount, and the nature of the offence.

#### Expulsion of Pupils.

145. No pupil shall be expelled from any school except by the authority of the Minister.

#### Suspension.

146. A pupil may, nevertheless, for gross insolence, persistent disobedience, profanity, or immoral conduct, be, by the teacher, forthwith removed from the school: provided that, in every such case, the matter shall be reported without delay to the Minister; and, until its settlement by him, the pupil shall not be re-admitted.

### Playground Supervision.

147. The conduct of pupils in the playground must be carefully supervised by the teacher; and he must see that, in proceeding to school and returning from it, their behaviour is orderly.

### Religious Views of Pupils or of Parents.

148. Nothing must ever be said or done by any teacher, in a pupil's hearing or presence, calculated to offend the religious views of that pupil, or of any other in the school, or of the parents of any such pupil.

Daily

#### Daily Routine.

149. In all schools maintained or aided by the Minister, the daily routine shall be that specified hereunder: Provided that, by permission of the Minister, the time of assembling may be half an hour later than so specified; in which case, the several times stated will be later in the same proportion.

#### Morning.

At 8.45. Pupils to assemble in the playground. All school materials to be prepared for lessons. At 8.55. Pupils to be arranged in ranks, inspected as to cleanliness, and marched into school.

At 9. Lessons (or Special Religious Instruction) to commence; as noted in the Time-table preserbed by Rule 150.

At 1030. Recess for ten minutes, to be spent in the playground by pupils and teachers. At 1045. Lessons to be resumed according to the Time-table. At 1155. Class-roll to be called and marked.

At 12. The school to be dismissed for mid-day recess.

#### Afternoon.

From 12 to 1.20. Recess for dinner and recreation, under the superintendence of the teachers At 1.20. Pupils to re-assemble in the playground. School materials to be prepared for lessons. At 1.30. Lessons to re-commence as noted in the Time-table. At 3.25. The Roll to be called and marked. At 3.30. The school to be dismissed.

#### Time-table.

160. The Time-table to be observed in the schools is the following, except that, in cases within the provise to the preceding Regulation, the time in each instance will be half an hour later than specified :--

Special Religious Instruction; or, in Public and Provisional Schools, where no Religious Teacher is in attendance, Ordinary Instruction.
From 10 to 12. Ordinary Instruction.
From 12 to 1'30. Recess for dinner and re-assembling.
From 1'30 to 3'30. Ordinary Instruction.

#### $Special\ Religious\ Instruction.$

151. Where the time specified for special religious instruction is inconvenient, some other hour may be fixed by mutual agreement between the Public School Board, the teacher, and the person giving such instruction.

#### Vacations and Holidays.

152. The vacations canctioned by the Minister are—three weeks at Christmas, one week at Easter, and a fortnight at Midwinter. The holidays allowed, other than those occurring in vacation, are—the Anniversary of the Colony, of the Queen's Birthday, and of the Prince of Wales' Birthday; and Good Friday.

Teachers are to enter on their Time tables these Vacations and Holidays.

#### Closing Schools.

153. No school is to be closed upon any school-day without the written direction of the Minister or other person duly authorized by him on that behalf.

#### Infectious Discases.

154. The attendance of any pupil suffering from any contagious, offensive, or infectious disease, may be temporarily suspended by the teacher under rules approved by the Minister.

### INSTRUCTION IN SCHOOLS.

### Course of Instruction.

155. The Course of Secular Instruction, as the term is defined in the Public Instruction Act, shall be as follows for each class :-

#### INFANTS' DEPARTMENT.

### (Course, 2 years.)

Reading-Primer and Reader I-" Australian School Series."

Writing—On slates, from copies and dictation.

Arithmetic—Notation to four places, and Simple Addition on slates; easy mental operations in Addition and Subtraction, and the Multiplication Tables to "7 times."

Object Lessons—Familiar Objects, Domestic Animals, Common Vegetables, Common Materials.

Form—Lines and Angles, Three and Four-sided Figures, Curved-line and other Plain Figures.

Colour—Primary, Secondary, and Tertiary Colours; Combination, Shades and Tints.

Singing—Simple Melodies by Ear.

Scripture—Narratives and Moral Lessons.

Drill—Inspection Drill, Free Exercises, Gallery Exercises, Marking Time.

Drawing—On States, Lines, Angles, Parallels.

#### FOR PRIMARY SCHOOLS AND FOR BOYS' AND GIRLS' DEPARTMENTS.

#### First Class.

(Course, 11 year.)

Reading—Primer, Reader I—A. S. Series; or, I.N.B. Series as far as Book II, Section III, Lesson 8. Writing—On slates from copy.

Dictation-From Lessons read.

Arithmetic— As in Infants' Department. Singing—

Scripture-Narratives and Moral Lessons; Old Testament, No. 1.

Object Lessons— As in Infants' Department.

Needlework-Hem, top-sew, make holland or calico work-apron or sachet. Name to be marked.

#### Second Class.

(Course, 1 year.)

Reading-Reader II, A.S. Series, or I.N.B. Series, Book II, with Sequel I.

Writing—On slates from copy; in copy-books. Dictation—From Lessons read.

Arithmetic-Notation; Simple Rules; Mental Arithmetic-Simple Rules, Tables, Money.

Arithmetic—Notation; Simple Rules; Mental Arithmetic—Simple Rules, Tables, Money.

Object Lessons—Domestic Animals, Common Objects, and Materials, Common Animals, and Vegetables.

Singing—Simple Melodies by Ear; Scale Exercises, Two and Three Pulse Measures.

Scripture—I.N.B., Old Testament No. I; Moral Lessons.

Drawing—Freehand, on Slates; Simple Right-lined and Curved Figures.

Drill (for Boys)—"Infantry Drill for 1889"; Squad Drill with Intervals; Sections 1, 2, 3, 4, 5, 6, 25, 26; Marching, 12, 13, 15, 16, 17, 18, 19, 31, 32, and 50; Exercises, 1, 2, 3, 4.

Drill (for Girls)—Dressing with Intervals; Turnings by Numbers; Free Exercises and Body Flexions (six exercises); Marching in Single Rank.

Needlework—Hemming, Top Sewing, Feather Stitch, Satin Stitch; a Pinafore, Pillow-slip, &c.; Scams top-sewed and felled-finished with tapes.

#### (Course, 2 years.)

Course, 2 years.)

Reading—Readers III and IV, A. S. Series; or, I.N.B. Series, Books III and IV; Synonyms, Meanings, Derivations; Repetition of Poetry, 130 lines.

Writing—In copy-books.

Dictation—From the Reading Lessons, with correct spelling and punctuation.

Arithmetic—Compound Rules and Reduction; Simple and Compound Proportion. Mental Arithmetic—Prices of Dozens and Scores, Exercises in Buying and Selling Transactions, and in Proportion.

Grammar—All the Parts of Speech; Accidence, Parsing and Analysis of Simple Sentences; the Rules of Syntax; Composition—Letter-writing, description of places and events.

Geography—School Locality, Cardinal Points, Definitions, Map of World; Outlines of the Geography of Australasia and Polynesia; Physical Geography, and Towns of New South Wales and Europe; Mapping. Mapping.

Mapping.

Object Lessons—Animal and Plant Life, with Special Reference to Agriculture; the Human Frame and Laws of Health; Elementary Physiology; Important Manufactures.

History—Nelson's Brief History of England; History of Australia; Outlines of English History.

Singing—Part-singing; Notation, Pitch, Accent, Length of Sound; Double, Triple, and Quadruple Measures; Time Signatures; Scale, &c.

Drawing—On Paper; Freehand Exercises from Models and Common Schoolroom Objects; Geometrical Figures, with Rulers and in Freehand.

Figures, with Rulers and in Freehand.

Scripture—I.N.B. Old Testament No. 1; New Testament No. 1.

Needlework—Plain Under-garments, Stitching, Herring-boning, Eyclet and Button Holes, Felling, Running, Darning, &c.; Sampler showing various stitches used in needlework.

Drill (for boys)—"Infantry Drill for 1889"; Physical Training, section V, Exercises 5, 6, 7; Marching—Sections 7, 8, 10, 11, 20, 21, and 22; and Squad Drill, sections, 37 to 50.

Drill (for girls)—File Marching; Wheeling in File; Marking Time; Changing Step; Free Exercises while Marching and Marking Time.

#### Fourth Class.

#### (Course, 1 year.)

Reading-Reader V to Lesson 56, AS. Series; or I.N.B. Fourth Supplement, to page 155. Repetition of Poetry-100 lines.

Writing-In copy-books.

Writing—In copy-books.
Dictation—From any portion of books read, with punctuation.
Arithmetic—Practice; Vulgar and Decimal Fractions; Interest; Discount, Profit and Loss; Mensuration of Surfaces; Mental Arithmetic.
Grammar—Accidence; Parsing and Analysis generally; framing Sentences; simple Essays.
Geography—Physical features and Chief Towns of Asia and America; Mapping.
Object Lessons—As in Third Class (advanced), with the Chemical and Physical principles involved in Agriculture; Health; Elementary Physical Science.
History—Nelson's History of England for Junior Classes, Henry VII to Victoria; History of Australia.
Also Work of Class III.
Sinaino—As in Third Class: Shaves. Flats. Transition, Staff Notation, Key and Time; Signatures and

Also Work of Class 111.

Singing—As in Third Class; Sharps, Flats, Transition, Staff Notation, Key and Time; Signatures and Intervals fully; Three Part Songs; Easy Passages at Sight.

Drawing—Freeland Drawing, from copies of common objects, which should be enlarged or reduced from the example; Drawing Plans and Elevations of Plane Figures and Rectangular Solids, in simple positions; Drawing Geometrical Figures with Instruments; Drawing to Scale in a limited

Scripture—I.N.B. Whole Series.

Scripture—I.N.B. Whole Series.
Euclid—Book I, to Proposition XII.
Drill (for boys)—"Infantry Drill for 1889"; Company Drill; Formation and Movements—Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 20, 22.
Drill (for girls)—Marching in line; Balance Step, with and without advancing; Body and Limb Flexions; Pole Exercises; Dumb Bells († 18.).
Needlework—The Work of the Previous Standards, with advanced skill; Patching in Calico, Flannel, and Print; Cutting out Garments, and Setting Work. Ornamental Work and Knitting to be introduced when standard of plain needlework prescribed for the Third Class has been completed.

### Fifth Class.

#### (Course, 1 year.)

Reading—As prescribed for University Junior Examination.

Writing—As in Fourth Class.

Dictation—On unruled paper, ordinary prose—15 consecutive lines.

Arithmetic—Full Course, from Hamblin Smith's Manual, or any equivalent. Mensuration—Regular Surfaces and Solids.

Grammar— Geography— History— As prescribed for Junior and Senior Public Examinations at the Sydney University. History-

Natural Science-Physics or Physiology, or one of the Science Subjects prescribed for University Examinations or

Cooking: For girls.

Geometry—Buelid, Books I and II, with easy exercises.

Algebra—Hamblin Smith's Algebra to Chapter 13.

Latin (for boys)—Abbott's "Via Latina," to page 53, with the first conjugation and the verb sum.

French (for girls)—Macmillan's Progressive French Course to the end, with Macmillan's "First Reader," to page 28, or an equivalent.

Needlework—

Needlework—As for Fourth Class; Child's Frock in Washing Material; Cutting out and Fixing Work
Fancy Work and Knitting at discretion of Work Mistress.

Drill (for boys)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Drawing—Similar to Class IV, but of greater difficulty; Drawing from Common Objects and from Casts
of Ornaments in Light and Shade; Plans and Elevations of Circular Solids, with sections. Music -- As in Third and Fourth Classes; Major and Minor Modes; Inversions, &c. Scripture -- As in Fourth Class.

NOTE 1 .- Where there are pupils in a Fifth Class in third half-year, it is expected that Trigonometry will be introduced; also Euclid Book III; Algebra to Quadratics.

Note 2.—Where there are not as many as ten pupils to form a Fourth Class or a Fifth Class, as required, the Fourth Class and Fifth Class courses are to be taken as additions to the courses of the Third and Fourth Classes respectively.

# THE STANDARDS OF PROFICIENCY FOR THE SEVERAL CLASSES IN SCHOOLS SHALL BE AS FOLLOW:—

#### First Half-year of Enrolment.

Reading—To read Primer, Part I (Australian School Series), to Lesson 20.

Writing—To write on Slates—i, u, n, m, v, r, w.

Arithmetic—To count and read up to 10; to know ball-frame exercises in Addition, and Addition of other Concrete Quantities as far as 10.

Object Lessons—Familiar Objects.

Form—The different kinds of Lines and Angles.

Colour—First (Primary) Colours.

Singing—Simple Melodies by Ear.

Scripture—Narratives and Moral Lessons.

Drill—Inspection Drill for Cleanliness; Free Exercises; Gallery Exercises.

Drawing—On Slates—Lines, Angles, and Parallels.

### Second Half-year of Enrolment.

Reading—To read Primer, Part I, to the end.

Writing—To Write on States all the Letters of the Alphabet, with easy combinations.

Arithmetic—To Count and Read as far as 20; Addition, in single column, to 20; to add and subtract mentally numbers not involving results higher than 20.

Object Lessons—Domestic Animals, Form—Three and Four Sided Figures.

Colour—Three and Four Sided Figures.
Colour—Secondary Colours.
Singing—Simple Melodies by Ear.
Scripture—Narratives and Moral Lessons.
Drill—As for last half-year.
Drawing—As for last half-year.

#### Third Half-year of Enrolment.

Third Half-year of Enrolment.

Reading—Primer, Part II, to the end.

Writing—To Write on Slates from Copies.

Dictation—Words from Lessons Read.

Arithmetic—To Read and Notate as far as 100; Addition to three places—three addends; Mental Arithmetic up to 30; tables to "4 times."

Object Lessons—Common Vegetables.

Form—Curved Line Figures.

Colour—Tertiary Colours.

Singing—Simple Melodics by Ear.

Scripture—Narratives and Moral Lessons.

Drill—As for last half-year.

Drawing—As for last half-year.

Drawing-As for last half-year.

#### Fourth Half-year of Enrolment.

Reading—Australian School Serics—Reader I, to the end.

Writing—On slates from copies.

Dictation—From lessons read, 8 lines.

Arithmetic—To read and notate up to 1,000; Addition, 4 places, 4 lines; mental operations in Arithmetic and Subtraction; Multiplication Tables to "7 times."

Object Lessons—Common materials.

Form—Other plain figures.

Colour—Combination; shades and tints.

Singing—Simple melodies by cor

Singing—Simple melodies by ear.

Drawing—Freehand Drawing on slates—lines, angles, and parallels.

Scripture—Narratives and Moral Lessons.

Drill—As for previous half-years, with marking time—(1) with left foot; (2) with right foot; (3) with left foot and right foot alternately.

Drawing—As for previous half-year.

FOR

#### FOR PRIMARY SCHOOLS AND FOR BOYS' AND GIRLS' DEPARTMENTS.

#### FIRST CLASS.

#### First Half-year of Enrolment.

Reading-One of the following books, or an authorized equivalent :-

1. Australian School Series: Primer I, to Lesson 40.

2. I. N. B.: Book I, to Sec. II, Lesson 12.

Writing-To write on slates, from the blackboard, the following letters, with their combinations, in

words of four letters—i, u, n, m, o, a, c, e, v, w, r, t, d, l, b, h, j, f, y, g, p, q.

Arithmetic—To count and read any number as far as 20; to add in single columns numbers not involving a higher result than 20; to notate as far as 20; to add and subtract, mentally, numbers not involving results higher than 20.

Drawing—Freehand Drawing, on slates—lines, angles, and parallels.

Object Lessons—As for Infants' Schools; oral lessons on form and colour, on the properties of common objects and materials, and on common animals and vegetables.

Needlework—Hem 2-inch Strips with coloured cotton.

Singing—Simple melodies by ear.

Scripture—Narratives (Old Testament No. 1)—Moral Lessons. (First and Second Classes may be taken together.)

Drill-As for Infants' Schools, first half-year.

#### Second Half-year of Enrolment.

Reading—1. Australian School Series: Primer II, to the end.
2. I. N. B.: Book I, to the end.
Writing—To write on slates from copies.
Dictation—Words from lessons read.
Arithmetic—To read and notate easy numbers as far as 100; to work sums in Addition—three addends; to add, mentally, numbers involving results not higher than 30; Multiplication Tables to "4 times."
Deaning—As for first half-year to add, mentally, numbers involving results not nighter than oo; interpretation and Drawing—As for first half-year.

Object Lessons—As for first half-year.

Needlework—Hem and top-sew together strips with coloured cotton, and plain hems.

Singing—Simple melodies by ear.

Scripture—Narratives and Moral Lessons; Old Testament, No. 1.

Drill—As for Infants' Schools, first half-year.

#### Third Half-year of Enrolment.

Reading—1. Australian School Series: Reader I, to the end.
2. I. N. B.: Book II, to Section III, Lesson S.

Writing-On slates from copies.

Writing—On slates from copies,
Dictation—From lessons read.
Arithmetic—To read and notate numbers as far as 1,000; to work sums in Addition to 4 places, 4 lines;
to perform easy mental operations in Addition and Subtraction; Multiplication Tables to "7 times,"
Drawing—As for first half-year.
\*Object Lessons—As for first half-year.
Singing—Simple melodics by ear.
\*Scripture—Narratives and Moral Lessons: Old Testament, No. 1.
Drill—As for Infants' Schools, fourth half-year.

Needlework—Make Work-apron or Sachet with holland or calico. Name to be worked.

## SECOND CLASS.

## First Half-year of Enrolment.

Reading—One of the following books, or an authorized equivalent:—

1. Australian School Series: Reader II, to Lesson 50.

2. I.N.B.: Book II, to the end.

Writing—In copy books.

Dictation—Eight lines from lessons read.

Arithmetic—Notation as far as six places, three lines; Subtraction; Multiplication by two digits; Mental Arithmetic; More difficult operations in Addition and Subtraction; Multiplication Tables to "12 times."

Simple meladice by one. Fact Exercises on the Modulator

"12 times."

Singing—Simple melodics by car; Easy Exercises on the Modulator.

\*Scripture—Old Testament, No. 1.

Drawing—Freehand Drawing on slates, of simple right-lined and curved figures.

\*Object Lessons—Properties of common objects and materials, common animals, and vegetables.

Drill (for boys)—"Infantry Drill for 1889"; Squad Drill with intervals; Sections 1, 2, 3, 4,6, 25, 26; Marching, 12, 13, 15, 16, 17, 18, 19, 31, 32, and 50.

Drill (for girls)—Dressing with intervals; turnings by numbers; free exercises and body flexions (six exercises); marching in single rank.

Needlework—Hem and top-sew a 9-inch sampler of jaconet with coloured cotton, and feather-stitch all round. Initial or name in satin-stitch.

#### Second Half-year of Enrolment.

Reading—1. A. S. S.: Reader II, to the end.

2. I. N. B.: Sequel I, to the end.

Writing—In copy-books.
Dictation—Eight lines from lessons read.

Arithmetic—Notation to 9 places, 3 lines; Multiplication in full; Short Division; Mental Arithmetic;

Exercises in simple Rules; Tables—Money.

<sup>\*</sup> In small schools, the First and Second Classes should be combined for Object Lessons and Scripture, and should receive in each subject not less than one half-hour lesson per week; the inspection to be conducted on the lessons actually

Singing—Tonic Sol-fa Notation—Scale Exercises (without accidentals); two and three pulse measures (without subdivision of pulse); simple melodies.

\*Scripture—Old Testament, No. 1; Moral Lessons. (Moral Lessons to be given orally.)

\*Drawing—Frechand Drawing on slates, of simple right-lined and curved figures.

\*Object Lessons—As for previous half-year.

\*Needlemark—Make a plain willow-slip winefers handkershief on similar useful articles access to be

Needlework—Make a plain pillow-slip, pinafore, handkerchief, or similar useful article; seams to be top-sewed and felled-finished with tapes.

Drill—As for previous half-year; and Physical Training, section 5; Exercises 1, 2, 3, and 4.

#### THIRD CLASS.

#### First Half-year of Enrolment.

Reading—One of the following books, or an authorized equivalent:

1. Australian School Series: Roader III, to Lesson 20.

2. I.N.B.: Book III, to Lesson 30.

Repetition from memory of twenty lines of poetry.

Writing—In copy books.

Dictation—Eight lines from lessons read.

Dictation—Right lines from lessons read.

Arithmetic—Notation, Long Division, Addition, Subtraction, and Multiplication of Money; Mental Arithmetic—Easy Exercises; Tubles—Weights and Measures.

Geography—To know the school locality and the cardinal points; and the names and positions of the Continents, Oceans, and chief divisions of land and water marked on a Map of the World.

Grammar—To define the noun, pronoun, adjective, and verb, and to distinguish each in easy sentences.

†Singing—Tonic Sol-fa Notation: scale exercises; only time exercises; two, three, and four-pulse measures (pulse, half-pulse, hold marks, and rests); simple two part songs and rounds.

History—Coltic Period to Henry II; to page 21, Nelson's Brief History of England.

Drawing—On paper, from simple rectangular and circular models, and from common objects about the school-room; also simple geometrical figures, to be drawn with rulers and in free-hand.

Scripture—Old Testament, No. 1; New Testament, No. 1; Moral Lessons.

Object Lessons—Lessons on animals and plants, with special reference to agriculture; on the human frame, and laws of health; on elementary physiology; and on important manufactures.

†Drill (for boys)—"Infantry Drill for 1889"; Physical Training as for Second Class; Marching—Sections 7, 8, 10, 11, 20, 21 and 22.

Drill (for girls)—File marching; wheeling in file; marking time; changing step; free exercises while

Drill (for girls)—File marching; wheeling in file; marking time; changing stop; free exercises while

marching and marking time.

Needlework.—A plain chemise, gathered at neck into a stitched band, ornamented with feather stitching; or similar useful article which can be completed by stitches already taught.

#### Second Half-year of Enrolment.

Reading—1. Australian School Series: Reader III, to the end.
2. I.N.B.: Book III, to the end.

Repetition from memory of thirty lines of poetry.

Writing—In copy-books.

Dictation—Twelve lines from the reading lessons.

Arithmetic—All the Compound Rules; Mental Arithmetic.

Grammar—To distinguish readily all the parts of speech.

Composition—To write a letter of not less

than twelve lines.

Geography—To know the outlines of the Geography of Australia, Tasmania, and New Zealand.

Object Lessons—As for previous half-year.

History—To death of Richard III; to page 44 of Nelson's Brief History of England.

Singing—Staff Notation (movable dob system); Treble Clef; Pitch and Time; Names; Relative Value of Notes; Two-part Songs and Rounds from Tonic Sol-fa Notation.

Drawing—As for previous half-year.

Scripture Lessons—Old Testament, No. 1; New Testament, No. 1.

Drill (for boys)—"Infantry Drill for 1889;" Physical Training, section 5; Exercises, 5, 6, and 7; Squad Drill, sections 37, 38, 39, 40, 42, 43, 44, 45, 46, 47, 48, 49, 50.

Drill (for girls)—As for first half-year.

Needlework—A linen sampler, with threads drawn, showing the various stitches used in Needlework, namely: top-sewing, stitching, herring-boning, various feather-stitching, eyelet and button-holes, small square of darning, loops; name done in satin-stitch.

## Thira Half-Year of Enrolment.

Thira Half-Year of Enrolment.

Reading—1. Australian School Series: Reader IV, to the end of Lesson 30.

2. I. N. B., Book IV, to end of Section II.
Repetition from memory of forty lines of poetry.

Writing—In copy.books.

Dictation—Twelve lines from the Reading Lessons.

Arithmetic—Reduction; Miscellaneous Exercises in Simple and Compound Rules; Mental Arithmetic;
Easy Questions in Buying and Selling.

Grammar—Pursing of Simple Sentences; Accidence, and Analysis of Simple Sentences. Composition—
To write on paper a letter of not less than twelve lines.

Geography—New South Wales—Physical Features and Chief Towns; Mapping.

Object Lessons—As for first half-year.

History—Nelson's Brief History of England, to page 70; Outlines of English History, to the Abdication

History-Nelson's Brief History of England, to page 70; Outlines of English History, to the Abdication of James II.

rests); Scale Exercises on the Staff; Two-part Songs and Rounds from Tonic Sol-fa Notation.

. f Nort.—In Schools below the Sixth Class, the standard in singing for Second Class shall also be that for Third Class, t Nort.—In schools below the Sixth Class, the standard for drill will be that for the Second Class.

#### Second Half-year of Enrolment.

Reading—1. Australian School Scries: Reader V, to end of Lesson 56.
2. I. N. B., 4th Supplement, to page 155.
Repetition from memory of fifty lines of poetry.
Writing—As for last half-year.

Dictation—Selected passages of twelve consecutive lines from books read.

Arithmetic-Interest; Discount; Profit and Loss; Mensuration of Surfaces.

Grammar—Accidence; Parsing and Analysis generally; Simple Essays.

Geography—America; Physical Features, and Chief Towns of each Country.

Object Lessons—As for first half-year.

History—English History (Nelson's "History for Junior Classes")—William III to present time;

History—English History (Nelson's "History for Junior Classes")—Whitain 111 to present time;
History of Australia.

Singing—Staff Notation only; Key Signatures, Bb, D, Eb, A; Time Signatures fully; Time Exercises as in last half-year, with Dotted Notes, Ledger Lines, Accidentals, Definitions of most common Musical Terms; Three-part Songs and Rounds; Easy Passages at Sight.

Drawing—As for first half-year.

Scripture Lessons—The whole series.

Euclid—Book I, to Proposition 12.

Drill (for boys)—As for first half-year.

Drill (for boys)—As for first half-year.

Drill (for girls)—As for first half-year.

Needlework—1. A plain night shirt, showing top sewing, stitching, button-holes, and gathers, and finished with gussets; or a night-dress tucked and trimmed, or any similar article.

2. Patching in calico and flannel.

3. This class will be expected to set their own sowing, with the advice of the Work-mistress; and pupils over 14 years of age should be able to cut out and fit garments specified in Third Class.

Note.—When there are not ten pupils to form a Fifth Class, the standard prescribed for the first half-year in Fifth Class shall be that for the third half-year of the Fourth Class.

#### FIFTH CLASS.

#### First Half-year of Enrolment.

Reading-The Text-book prescribed for the University Junior Examination.

Writing—In copy-books.

Dictation—Passages of ordinary prose, fifteen consecutive lines.

Arithmetic—Compound Interest, Profit and Loss, as treated in Hamblin Smith's Manual, or any equivalent; Mensuration; Area of Regular Surfaces.

Grammar—)

Geography— As prescribed for the Senior or Junior Public Examinations at the Sydney University.

History—

History— )
Natural Science—Physics or Physiology, or one of the Science Subjects prescribed for the University Examinations or

Cooking: For girls. Euclid—Book I.

Euclid—Book I.

Algebra—As shown in Hamblin Smith's Algebra, up to Chapter 6, omitting Exercises 15 to 32.

Latin (for boys)—Abbott's "Via Latina" to Exercise 21, page 29.

French (for girls)—Macmillan's Progressive French Course, to Lesson 25.

Drawing—Similar to Class IV, but of greater difficulty; Drawing from any Common Objects and Casts of Ornaments, in Light and Shade; Drawing Plans and Elevations of Circular Solids with Sections.

Music—Key and Time Signatures fully; Time Exercises on all the ordinary notes and Rests, with Dots,

Triplets, Simple Passages at sight, Syncopation, Modulation, Double Dotted Notes, Double Sharps and Flats, Three-part Songs.

Scripture Lessons—The whole series. (The Class may be taken with Fourth Class in this subject.)

Drill (for boys)—

Drill (for boys)—

As for Fourth Class.

Needlework—1. Patching in print, flannel, and cloth.

2. A linen sampler as in Third and Fourth Classes; also a child's dress made of washing material.

The pupils will be required to cut out and fix their own sewing; also any garment named in former classes.

## Second Half-year of Enrolment.

Reading—
Writing—
Dictation—
As for last half-year. Reading

Arithmetic - The full course, as treated in ordinary Text-books, such as Hamblin Smith's Arithmetic; Mensuration-Regular Surfaces and Solids.

GrammarGeography-History Natural Science -As for last half-year. Music-Scripture Lessons-

Dealing —

Euclid — Books I and II, with easy Exercises.

Algebra—Hamblin Smith's Algebra, to chapter 13.

Latin (for boys) — Abbott's "Via Latina," to page 53, with the first conjugation and the verb sum.

French (for girls) — Macmillan's Progressive French Course to the end, with Macmillan's "First Reader,"

to page 28, or an equivalent.

Needlework—As for last half-year.

Drill (for boys)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Note 1.—Where there are pupils in a Fifth Class in third half-year, it is expected that Trigonometry will be introduced; and provided the pupils are able to work as far as page 104 of Todhunter's "Trigonometry for Beginners," full marks (100) will be awarded. (Euclid in the third half-year, Book III; Algebra to Quadratics.)

Note 2.—Music—Inseparate boys and girls departments the sexes may be combined for singing lessons at the discretion of the teachers; but the teachers of the respective departments will be held responsible for instruction in the theory of music.

Note 3.—Drill—In all schools under one teacher, the standard for the second-class shall be the highest required for any class. Subject to this provision, rifle drill should be taught to third and higher classes whenever not fewer than ten pupils can be assembled.

Note 4.—Writing—All writing will be rejected as a failure if there is no attempt made to imitate the copies set.

Note 5.—Arithmetic—Pupils of girls' schools will not be expected to work Discount, Stocks, or Cube Root.

#### Provisional Schools.

156. The last preceding Regulation, with all others respecting routine, discipline, and inspection, shall apply equally to Provisional as to other schools.

#### Special Religious Instruction.

157. No pupil is to be required to receive Special Religious Instruction if the parents or guardians of such pupil object to such religious instruction being given.

## General Religious Instruction.

158. Where any parent or guardian objects to a pupil receiving the General Religious Instruction prescribed in the Course of Instruction, notification to this effect shall be made to the teacher in writing.

#### Denominational Books.

159. The Teacher, in all schools under the superintendence of the Minister, shall see that the religious books employed in the Classes for Special Religious Instruction are confined to the time and place of such instruction, and not left in the way of children whose parents may object to them.

#### Methods of Teaching.

160. Every Teacher shall make himself acquainted with improved methods of teaching, and practise them in his school; and, as the efficiency of Teachers will be judged of by the attainments, as well as the moral improvement of their pupils, results, as well as the mode of instruction, should be kept in view.

## Teaching power to be justly distributed.

161. Teachers shall provide for the equitable distribution of their time through all the classes, so that the instruction of no pupil be neglected.

#### Persons visiting Schools.

162. Visitors shall have access to every school maintained or aided by the Minister, during the hours of Secular Instruction—not to take part in the business or to interrupt it, but simply to observe how it is conducted.

#### Duty of Teachers to Visitors.

163. Every Teacher shall receive courteously visitors seeking to inspect his school, and afford them access to the schoolroom, and liberty to observe what books are in the hands of the children or on the desks, what tablets are on the walls, and what is the method of teaching; but teachers shall not permit any person to interrupt the business of the school by asking questions of the children, examining classes, calling for papers, or in any way diverting attention from the usual business.

#### Official Visits.

164. The restriction expressed in the preceding Rule will, of course, not interfere with the provision in Section 17 of the Public Instruction Act, whereby access is afforded to Religious Teachers for the purpose of communicating Special Religious Instruction.

#### Visitors' Book.

165. Every Teacher shall have the "Visitors' Book" lying upon his desk, in which the visitors may enter their names, and, if they think proper, any remarks. Teachers are by no means to crase or alter any remark so made.

#### INSTRUCTIONS TO TEACHERS.

The following Instructions, issued for the information and guidance of Principal Teachers of Schools and of Mistresses of Girls' and Infants' Departments, are also to be acted upon as far as practicable by Teachers generally.

#### I. Instructions relating to Principal Teachers only.

The Principal Teacher will keep a Teachers' Time Book, and will see that all Teachers enter therein the time of their arrival at and departure from school.

2. He will report to the Inspector all Teachers absent from duty without leave, and any who are

habitually unpunctual.

3. He will visit the other School Departments once a day at least, to ascertain that the Teachers are at their posts and are observing the Time-tables. He will see that all documents required by the Regulations are exhibited in their proper places. It is not intended that he shall interfere with the teaching, the discipline, or the internal management of the other Departments; nor is he at liberty to remove children therefrom to his own Department without the sanction of the Inspector; but he is empowered to decide questions relating to the general order and routine of the entire school, subject to appeal to higher authority.

4.

4. He will, with the concurrence and aid of the Heads of Departments, arrange for the regular cleaning of the schoolrooms, will see that the water-closets and all external premises are kept clean, and that the fences and gates are uninjured by the pupils. He will report promptly any damage done to the school buildings, as also any necessity for emptying the water-closets. If the water for the use of the pupils should become bad, the Inspector should be informed to that effect; and, in dry seasons, care is to be taken to prevent any persons, other than the pupils or the Teacher's family, from obtaining water from the school tanks or wells.

5. He will require all letters addressed to Teachers at the School and deliver them to the approximately appro

5. He will receive all letters addressed to Teachers at the School, and deliver them to the owners as soon as convenient. At the same time he will impress upon Teachers that having private letters addressed to them at the school is an inconvenient arrangement, justified only by urgent circumstances. Letters intended for pupils, and non-official letters addressed to Pupil-teachers, should be forwarded to

the parents of the persons concerned.

6. Persons visiting the School, or calling upon Teachers, should in the first instance be brought to

6. Persons visiting the School, or carriag upon Teacher,
the Principal Teacher.
7. He will receive and investigate complaints from parents and others. It is expected that he will attentively consider such complaints, that he will endeavour to ascertain whether they are well founded, and that he will afford the redress which their nature may require or suggest.

8. The Principal Teacher will register all children applying for admission to the School, and will determine the Department for which they are fit.

9. Under the heading in the Annual Return, "Number of Scholars on the Records," pupils who

9. Under the heading in the Annual Return, "Number of Scholars on the Records," pupils who have left, but who have subsequently been re-enrolled in the same school during the year, should only be counted once. A School with two or more Departments is to furnish but one Annual Return, in which children transferred from one Department to another a property of the senting department. which children transferred from one Department to another during the year are only to be counted once.

## II. INSTRUCTIONS RELATING ALIKE TO PRINCIPAL TEACHERS AND MISTRESSES OF DEPARTMENTS.

10. He will give vigilant attention to the ventilation and temperature of the rooms, and will especially avoid an excessive degree of heat. At each recess the doors and windows should be opened so as to secure an effectual change of air. Windows should be opened, where practicable, by lowering them from the top; and children must not be allowed to sit in a strong current of air.

11. He will note the methods employed and the discipline maintained by the several Teachers under his immediate supervision, and will have power to interfere whenever he may consider either to be defective.

to be defective.

12. He will arrange his classes, if four or more, in sections, each section to contain two or three classes; and will place in charge of each section an Assistant Teacher, who, when the staff admits, will be aided by a Pupil-teacher.

13. For all purposes of classification and examination, the actual attendance of a pupil in days shall determine his half-year in class, such half-year to consist of 110 days.

14. When a subordinate Teacher relinquishes the charge of a class or section, it should be examined by the Head of the Department in the presence of the outgoing Teacher and his successor. A record of the condition of the class or section, as elicited by such examination, should be entered in the Lesson Register, and be attested by the signatures of all the persons concerned.

15. A similar course should be followed with respect to the materials used by the class or section in charge of the outgoing Teacher.

16. He will carefully preserve in the School all completed records and duplicate returns, for the use of future Teachers.

17. Corporal punishment must not be inflicted except by the Head of the school, or Department,

17. Corporal punishment must not be inflicted except by the Head of the school, or Department, or—under his direction and responsibility—by an Assistant Teacher. Pupil-teachers are, under no circumstances, to be allowed to inflict corporal punishment. Careful attention must be paid to the Regulation which provides that corporal punishment "should be restricted as much as possible to extreme case." Failure or inability to learn is not to be regarded as an extreme case; and corporal punishment is not to be recognized as a proper aid to teaching. The boxing of pupils' ears is strictly forbidden, as is also the corporal punishment of female pupits twelve years of age and over; and no corporal punishment may be inflicted for neglect to prepare home lessons. All cases of corporal punishment are to be recorded, at the time the punishment is inflicted, in the Punishment Book supplied to all schools by the Department. Department.

18. Home Lessons :-

(a.) No home lessons or written exercises of any kind shall be given to children attending Infants' Schools or First Classes in other schools.

Schools or Eirst Classes in other schools.
(b.) Children in the Second Class shall have no written exercises of any kind; but they may be required to prepare lessons on Reading, Spelling, or Tables, provided such work take up not more than half-an-hour each evening.
(c.) Children in the Third Class may be given home lessons four evenings in the week, the subjects being left to the discretion of the Teacher; but each night's lessons must not take more than one hour to complete.
(d) In the case of Equation of Eight Classes it is left to the discretion of the Teacher to give such

(d.) In the case of Fourth and Fifth Classes it is left to the discretion of the Teacher to give such home lessons as he may consider necessary.

19. Pupils shall not be detained in School for study or for punishment during any part of the forenoon recess

forenoon recess.

20. The Teacher shall make the necessary arrangements for the proper oversight of the playground during recesses. It is competent for the head of a School or of a Department, the staff of which contains more than one Teacher, to so arrange that each half of the staff shall be relieved of playground supervision during an equal portion of the recess for dinner. Principal Teachers and Mistresses of Departments must undertake playground duty equally with the other Teachers and Mistresses of Departments must undertake playground duty equally with the other Teachers.

21. He will construct Programmes of Lessons for classes in his Department taught by Pupilteachers, and will decide upon the suitableness of those framed by Assistant Teachers. His signature is to be attached to these documents, in evidence that they have been examined by him and have received his approval.

is to be attached to these documents, in evidence that they have been grainfied by him due have received his approval.

22. He will devote a portion of his time weekly to the instruction of each class in his Department.

23. He will examine each class in his Department at least once a month, and will record the results, note the defects, and enter suggestions for their remedy in a book kept for the purpose. Such entries should be signed by himself and the Teacher of the class.

24. He will be responsible for the progress of all children in his Department, and for the condition of the Department in all other matters, excepting those points of organization for which he cannot recording the held geographicable.

reasonably be held accountable.

reasonably be held accountable.

25. He will devote at least one hour daily to the instruction of Pupil-teachers, and will see that all the prescribed subjects are duly studied by them. Suitable programmes are to be prepared, and a Register is to be kept showing (a) the time of commencing the daily lesson and the time at which it was concluded, (b) the exercise or home-lesson appointed for the day. It must be clearly understood that Mistresses of Departments are to perform a fair share of the work of instructing Pupil-teachers.

26. He will be responsible for posting Quarterly Returns on the last Saturday preceding the Midwinter and Christmas vacations; and, in other cases, on the last Saturday of the months of March and September. In country places, where no post leaves on Saturday or the preceding Friday evening, the Returns must be sent, without fail, by the first subsequent opportunity.

27. In making application for increased assistance, he will give attention to the following Rules, by which the numerical strength of Teaching Staffs is regulated.

In a mixed school, or in a separate Boys' or Girls' Department, having an average attendance ofwinxed school, or in a separate Boys' or Girls' Department, having an average attendance of 50 pupils, the staff may consist of Teacher and Pupil-teacher.

70 pupils, the staff may consist of Teacher and Assistant.

80 to 110 pupils, the staff may consist of Teacher and 2 Pupil-teachers.

110 to 140 pupils, the staff may consist of Teacher, Assistant, and Pupil-teachers.

140 to 180 pupils, the staff may consist of Teacher, Assistant, and 2 Pupil-teachers.

180 to 220 pupils, the staff may consist of Teacher, Assistant, and 3 Pupil-teachers.

220 to 270 pupils, the staff may consist of Teacher, 2 Assistants, and 2 Pupil-teachers.

270 to 310 pupils, the staff may consist of Teacher, 2 Assistants, and 3 Pupil-teachers.

350 to 400 pupils, the staff may consist of Teacher, 3 Assistants, and 4 Pupil-teachers.

400 to 450 pupils, the staff may consist of Teacher, 3 Assistants, and 5 Pupil-teachers.

In every separate Infants' Department having an average attendance of-

60 pupils, the staff may consist of Teacher and a Pupil-teacher.

100 to 120 pupils, the staff may consist of Teacher and 2 Pupil-teachers.

120 to 160 pupils, the staff may consist of Teacher, Assistant, and Pupil-teachers.

120 to 200 pupils, the staff may consist of Teacher, Assistant, and 2 Pupil-teachers.

200 to 240 pupils, the staff may consist of Teacher, Assistant, and 3 Pupil-teachers.

240 to 300 pupils, the staff may consist of Teacher, 2 Assistants, and 3 Pupil-teachers.

300 to 340 pupils, the staff may consist of Teacher, 2 Assistants, and 4 Pupil-teachers.

340 to 380 pupils, the staff may consist of Teacher, 3 Assistants, and 5 Pupil-teachers.

480 to 480 pupils, the staff may consist of Teacher, 3 Assistants, and 6 Pupil-teachers.

480 to 550 pupils, the staff may consist of Teacher, 3 Assistants, and 7 Pupil-teachers. 480 to 550 pupils, the staff may consist of Teacher, 3 Assistants, and 7 Pupil-teachers.

450 to 500 pupils, the staff may consist of Teacher, 3 Assistants, and 6 Pupil-teachers.

28. Principal Teachers and Mistresses of Departments, respectively, are empowered to grant leave of absence to Assistants and Pupil-teachers employed under their supervision for a period not exceeding one day, subject to the conditions stated in paragraph 3 of the Rules regulating leave of absence. It must, however, be distinctly understood that such leave of absence can only be granted in cases where the necessity for it is clearly shown. In forwarding applications for leave of absence for more than one day, the Principal Teacher or Mistress of a Department, will state thereon the arrangements proposed for the performance of the duties of those applying; will express an opinion as to whether such arrangements are satisfactory; and will state what previous leave has been granted, and on what terms, during the past twelve months. Applications for sick leave for three or more days should be accompanied by medical certificates. medical cortificates.

29. All correspondence and returns (except those relating to fees) should be sent to the Inspector under whose immediate supervision the school is placed. Salary abstracts should be sent direct to the Accountant.

Accountant.

30. Teachers of all ranks are required to abstain from participation in any public meetings or other gatherings on party, political, or sectarian topics, and generally to refrain from all action in such matters calculated to give offence to any section of the community or to impair their own usefulness as teachers; they must also abstain from public controversy upon the merits of the system of education now in force, and from acting as local preachers, lay readers, or local correspondents of newspapers.

31. It is incumbent on teachers to attend to directions given them by Inspectors, and all departmental orders issued to them must be strictly observed. Should a Teacher at any time feel aggrieved, he may appeal to the Minister for redress, but such appeal must be made in a proper and respectful manner. Pending an appeal, no Teacher will be justified in disobeying orders, nor in the course of an appeal shall he knowingly make unfounded charges or improperly introduce subjects foreign to the matter of appeal.

32. No sectarian or denominational publications of any kind whatsoever shall be used in school, nor shall any denominational or sectarian doctrines be inculcated.

33. It shall be the duty of all Teachers to impress on the minds of their pupils the principles of morality, truth, justice, and patriotism; to teach them to avoid idleness, profanity, and falsehood; to instruct them in the principles of a free Government; and to train them up to a true comprehension of the rights, duties, and dignity of citizenship.

#### LEGISLATIVE ASSEMBLY.

#### NEW SOUTH WALES.

# EDUCATION.

(CORRESPONDENCE RESPECTING CONDITION OF SCHOOL PREMISES AT BYROCK.)

Ordered by the Legislative Assembly to be printed, 15 February, 1892.

Laid upon the Table of the Legislative Assembly in accordance with promise of the Minister of Public Instruction.

Telegram from W. N. Willis, Esq., M.P., to The Under Secretary of Public Instruction.

Byrock, 29 January, 1892. I INSPECTED the Public School here to-day, with the Progress Committee, and find it is in most wretched state of dilapidation. About fifty children are like sardines in a low, flat, iron-roofed building, 34 ft. x 16 ft. The place is like an oven; the stench of the surroundings is simply sickening and pestilence-breeding. Dead dogs, decaying fowls, and fever-germed rubbish heaps are at the door. The tanks for water supply are empty; have 4 inches of silt, dead frogs, and a stray kitten or two. The water-closets are filthy, and not fit for dogs to go near, much less children. The youngsters are compelled to bring bottles of water, which, after standing for hours in this oven, act as an emetic at luncheon-time. I have advised the parents to discontinue sending their children to such a death-trap until the Department takes some prompt action. Please ask the Minister to see this is done at once. The schoolmaster seems listless and helpless listless and helpless.

W. N. WILLIS, M.P. for Bourke.

Ask teacher to explain at once so much of these complaints as refer to him.—J.C.M., 1/2/92. Teacher asked.—G.K.S. 5/2/92. Submitted. Tenders for the proposed works might perhaps be invited. Plans, &c., have already been prepared, but work has been postponed for want of funds.—E. Johnson, 1/2/92. Approved.—F.B.S., 2/2/92. Mr. Willis, M.P., informed, 5/2/92. Tenders invited to be in by 3rd March. Plan to teacher, 9/2/92.

## Mr. J. T. Burrell to The Chief Inspector, Department of Public Instruction.

Condition of Schools and Premises.

Public School, Byrock, 8 February, 1892. Sir,

I have the honor to state, in reply to the statements by Mr. Willis, M.P., as mentioned in your letter of 5th February instant, that such a condition of the school and premises under my charge does not exist. There is no dead or decaying organic matter on the premises, neither is there any silt or animal matter in the school tanks. In the latter case, I may mention that two gentlemen kindly visited the school for the purpose of cleaning the tanks, but found no silt or other matter except the usual handful of rust; while, with regard to the former, a visit of inspection was made by the police and others on reading Mr. Willis's strictures in the newspaper, and they failed to find the school and premises in other than a proper condition. I also beg to refer to Mr. Inspector Smith's report.

With regard to the water supply, I beg to state that at present there is water in one of the tanks, which I permitted to be lifted from the stand and partly filled with water. That there was no water in tanks is a matter inevitable in a climate like this, where every person has to buy water, myself included.

Trusting that you will therefore consider my explanation satisfactory,—

I have, &c.,

I have, &c., J. T. BURRELL, Teacher.

Submitted.—E.J., 11/2/92.

732 - A

Presented

## Presented by Mr. Langwell, M.P.

RE wire sent by Mr. Willis to the Central Australian and Sydney newpapers, concerning the Byrock Public School, and reflecting on teacher at same place.

An indignation meeting of the Byrock Progress Committee was held at "Nurrell's Royal Hotel," on Saturday, 30th January, to deal with the wire sent by Mr. Willis to Department and newspapers of

the Colony.

After considerable discussion, at which it was admitted by all that the matter was exaggerated, the following resolution was carried:—"That this meeting disclaim all knowledge of the wire sent by Mr. Willis to the Department and various newspapers of the Colony, not having authorised him to do so, and at the same time expresses its opinion that this matter has been grossly exaggerated."

Mr. Burrell, the teacher, thanked the gentlemen who were present for their kindness in assembling and passing this resolution on his behalf.

The meeting then closed.

F. O'GRADY. Hon. Secretary.

# Telegram from Mr. F. O'Grady to The Minister of Public Instruction.

Byrock Station, 11 February, 1892. WILLIS complains I sent you letter re his statements on Public School. I sent no letter, nevertheless Committee meeting denied all knowledge of Willis's wire, which was grossly exaggerated.

FRANK O'GRADY,
Hon. Secretary, Progress Committee.

Mr. M. O'Grady to W. N. Willis, Esq., M.P.

Sir. 39, Goulburn-street, 11 February, 1892. In reference to the statement made in the Legislative Assembly last night re the Byrock Public School, I, as a resident of Byrock, can honestly say that in no town in New South Wales will there be found another school in such a disgraceful state, nor is it to be expected, as it is built on a rubbish heap, behind public-houses, and is a hot-bed of evil odours exuding from the accumulated rubbish. Hoping your efforts may give the residents of Byrock a building creditable to a town like Byrock.

I beg, &c., Μ. Ο'GRADY.

Mr. R. H. Howes to W. N. Willis, Esq., M.P.

Byrock.

PROGRESS Committee did not authorise Secretary to contradict your statements re Public School. R. H. HOWES,

President, Progress Committee.

Copy of wire received by me.-W. WILLIS.

# Telegram from W. N. Willis, Esq., M.P., to Mr. R. H. Howes.

12 February, 1892. PLEASE convey to your Committee my thanks for their supporting me in my efforts to do my duty against the opposition of the ignorant and envious.

W. N. WILLIS.

#### LEGISLATIVE ASSEMBLY.

#### SOUTH WALES.

## EDUCATION.

(FURTHER CORRESPONDENCE RESPECTING CONDITION OF SCHOOL PREMISES AT BYROCK.)

Ordered by the Legislative Assembly to be printed, 17 March, 1892.

## Mr. F. O'Grady to The Under Secretary for Public Instruction.

Byrock, 14 February, 1892. Sir. Yours of 12th duly to hand, enclosing copy of my memorandum handed by myself to Mr. H.

Langwell for presentation to Mr. Suttor. I have endorsed the copy on the margin.

When I gave same to Mr. Langwell I requested him to show same to Minister, so that he would see that the teacher, Mr. T. Burrell, was exonerated from all blame in connection with Mr. Willis' statements.

Mr. Willis publishes a wire he got from the chairman stating "that the committee did not authorize the accretary to contradict his (Willis') statements re Public School."

Well, there was no necessity for me to do what the committee had done by passing the resolution which is attached heroto.

Trusting, Sir, I am not trespassing on your valuable time,

I have, &c., FRANK O'GRADY.

P.S.—The only thing in shape of dead animals seen by Willis on our tour of inspection in the vicinity of the schoolhouse was the remains of a defunct nanny-goat.—Frank O'Grady.

Submitted.—E.J., 16/2/92. Place with the papers.—F.B.S., 18/2/92.

## Mr. Inspector Carter to The Inspector-General of Police.

Byrock Police Station, 20 February, 1892. Sir. I have the honor to report for your information that, on my return from Cobar this morning, I visited the Public school and grounds at this place, as requested in the attached letter from the Education Department, B. 92/1,132, and your minute thereon of the 12th instant. The school, an ordinary portable one with fixed brick chimney, is built on grounds of about 2 acres, and enclosed with a two-rail fence. The building is about 36 by 16, internal measurement, boarded floor, walls lined up to three-fourths the height of the ceiling, which is also of boards and 11 feet high. The room has one large window at each end and five small windows on one side, all made to open for ventilation. In front there is a verandah 6 feet wide, which contains a layatory, 9 by 6 feet (I saw no basins or utensils for washing). is a verandah 6 feet wide, which contains a lavatory, 9 by 6 feet (I saw no basins or utensils for washing), and an entrance porch of the same size. The boards of the latter and a small portion of the wall of building near the door has been eaten with white ants, which, no doubt, will in time destroy the building, which is built of deal and softwood, as it has been erected close to the ground, instead of being supported which is built of deal and softwood, as it has been erected close to the ground, instead of being supported on blocks at least a foot therefrom. The building is coated with circular iron in the manner usual to schools of this description, which are to be seen all over the Colony. There are two water tanks, 400 gallons each; one had, when I visited the place, been taken down from the stand, and had a little water in it, but the other had not been interfered with, was dry, and had in the bottom half-an-inch of sediment, iron rust, and fine red sand. The latter had, probably, been blown into the spouting from the surrounding ground, which is all red, and so found its way into the tank with the rain-water. There are eleven desks in the schoolroom, which have sitting room for five each; and there were, I am informed, thirty-seven children in the school on the day of Mr. Willis' visit, which, with the master, would make thirty-eight, giving about 166 feet of cubic air space to each, or 6,336 feet in all. The roll is about fifty, and the average attendance forty. The water-closets—two in number, two seats each—have been cleaned, and, no doubt, must have been in a very offensive state when seen by Mr. Willis, as the pits are very small and shallow, and, if there had been any quantity of nightsoil therein, must in this climate have small and shallow, and, if there had been any quantity of nightsoil therein, must in this climate have caused a great stench. I may here say I notice there are no weather-sheds in the grounds for the children, which is usually the case. 839-With

With reference to the accumulation of filth and rubbish, I am informed that, at the time of Mr.

Willis' visit, there was a part of a dead goat lying outside the grounds, but in close proximity thereto.

I am informed by Senior-constable Nies that he visited the grounds on the 1st February, three days after Mr. Willis, and saw nothing offensive except the remains of the dead goat already referred to, which he had removed.

I notice there are a few pieces of waste (in and iron lying about the grounds, which may have been brought by the children to play with, but pieces of iron lying about seem common to Byrock as a whole.

I may say, in conclusion, that I have no doubt the school was very hot for the children at the -time Mr. Willis made his visit, but, of course, no one could expect it to be cool at that time of the year 1 have, &c., in Byrock.

C. CARTER,

Inspector.

Forwarded for the information of the Minister of Public Instruction.—EDMUND FORBERY, I.-G.P., Submitted.—E.J., 23/2/92. Read.-F.B.S., 23/2/92. B.C., 22/2/92.

## Telegram from Mr. M. O'Grady to The Minister of Public Instruction.

LETTER re Byrock School, laid on Table of House, purporting to be signed by me is Willis' dictation written by a third party who signed my name. Willis requested me to sign it, that some person in Byrock was trying to do him injury.

M. O'GRADY.

Submitted.—E.J., 10/3/92.

Place with other papers.—F.B.S., 11/3/92.

## W. N. Willis, Esq., M.P., to The Minister of Public Instruction.

Dear Sir,

In reference to a telegram you have received from Mr. M. O'Grady, of Byrock, saying he did not write me such a letter as appears under his name in the papers, in re the Byrock School, I merely say he did write it without any word from me, and he knew full well the statements contained therein are However, I do not blame the man nor care to further bother myself about the wretched affair, I Yours, &c., W. N. WILLIS. have too much else to do.

Parliament House, Sydney, 16 August, 1890. We enclose application\* for Public School at Huntingdon. The petitioners have put forth their case so clearly that we need add nothing to it, but trust you will be able to grant the application.

Yours, &c.,

J. H. YOUNG.

W. H. VIVIAN.

Mr. Inspector Nolan. For inquiry and report.—J.M.G. (for Chief Inspector), 19/8/90.

#### [Enclosures.]

The Under Secretary, Department of Public Instruction, Sydney,

The Under Secretary, Department of Public Instruction, Sydney,—
Sir,

We beg to lay before you the following reasons why a Public School should be granted in the site which we propose. The nearest Public School on the same side of the river is at Wauchope, 7 miles distant. Brombin Public School, though only 1 mile distant, is on the opposite side of the river, and is unavailable to the children on our side, whenever there is a rise in the river, as no boats can be kept, being liable to be swept away with the rapid running stream. The slightest rise also keeps the children from crossing on horseback, this method being dangerous at the best of times. For example, from February till May of the present year, the river was crossable only by a boat, having a man or two on board, with difficulty. In the best of dry seasons, the attendance from our side at Brombin was irregular, and some of our children have had to be sent away to other places to be certain of being able to get a regular education. The majority of the children on the roll of Brombin School, are from this side of the river, and this is likely to be the case for many years, as there are more families settled on this side of the river than on the other. The education of our children in the past, being so irregular and dangerous, we have had for some time a private teacher at the proposed Public School, and now ask the help of the Department, to send a qualified teacher such as our numbers warrant. We believe that the Brombin School was granted by the Department because of the opinion of Inspector Bradley that it was dangerous to cross the river. The schools on both sides were continued for some time, when the attendance on our side grew small and the school was closed. But now, as we have already stated, the great majority of children are on our side, because the land has been opened out greatly. greatly.

Trusting to your favourable consideration of the above facts, and your petitioners will ever pray.

Yours, &c.,

Yours, &c., RICHARD RICHARDSON. WILLIAM S. LINDSAY.

The Honorables J. H. Young and W. H. Vivian,-

Gentlemen,

Herewith find enclosed\* an application to the Minister of Instruction for a public school at Huntingdon. We have over thirty children attending a private school now. We have got the school-house, and all we want from the Depart-

have over thirty children attending a private school now. We have got the school-house, and all we want from the Department is a teacher.

Our children have been attending the Brombin school, but through the difficulty of getting them put across the river, we cannot get them educated anything like what they should be; therefore we, and some of the other parents, have to send our children away to our friends to get them finished at other schools. The difficulty of the river is that at times it will be uncrossable for days, at times for weeks and months, and we cannot keep a boat with safety. We have lost two already, and several times the children have fallen out of the boat, and had to be dragged out of the river half-drowned.

We know there will be a great deal of opposition to the granting of this school, but as it is not favour but justice that we want from the Minister, we hope that you will use your influence with him that he may grant us the school. And you will be doing us a lasting favour that will not soon be forgotton.

Yours, &c..

Yours, &c.,
D. S. LINDSAY.
WILLIAM S. LINDSAY.

men, Department of Public Instruction, Sydney, 24 December, 1890. I am directed to acknowledge the receipt of your letter of the 19th instant, forwarding a list Gentlemen, of children who would attend a public school at Huntingdon if one were established at that place, and to state that the matter will receive early attention.

I have, &c., J. GIBSON (For Under Secretary).

#### No. 5.

## Mr. Inspector Nolan to The District Inspector of Schools.

Huntingdon: -- As to establishment of school thereat.

HUNTINGDON is situated on the right bank of the Hastings River. Immediately on the opposite side of the river is the village of Brombin, where there is at present a public school. The residents of Huntingdon ask for a school on the grounds that though their children are within a short distance of Brombin Public School, yet access thereto is difficult on account of the intervening Hastings River. The accompanying rough sketch shows the relative positions of the site of the proposed school and of that of the existing school at Brombin and the positions of the largest of the several families interested. school at Brombin, and the positions of the homes of the several families interested.

The site proposed is I mile distant from Brombin Public School. In time of flood the river is dangerous, but in ordinary seasons the river is fordable at several places, and very little difficulty exists in journeying between the two villages. Moreover, in time of freshes in the river the children at untingdon can reach Brombin by means of boats. Nearly all the settlers possess boats, and I am of expiring that this is a case where the parents might reasonably be expected to assist the State in forrying of opinion that this is a case where the parents might reasonably be expected to assist the State in ferrying their children across the river. By so doing the necessity of establishing two small competing schools

Substantial buildings, including a residence, have been erected at Brombin. The opening of a school at Huntingdon will mean the continuance of two provisional schools in lieu of the existing public school.

As may be seen by reference to the accompanying sketch, the site selected is by no means central even for those living on the Huntingdon side of the river. To reach such site the families of Messrs. Johns, T. Carney, Way, Daly, and M'Lennan would have to travel 2 miles over a by no means level country, whilst they can more readily, by crossing the river, reach Brombin Public School. It is true that the majority of the school children live on the right bank of the river; but a school placed at Mr. D. Lindsay's residence would be more inaccessible even to the majority of the petitioners than is the existing

The residents of Brombin oppose a school at Huntingdon, because, by the withdrawal of children, their school would fall to a provisional school. Having made local inquiry, I am led to believe that the

their school would tall to a provisional school. Having made local inquiry, I am led to believe that the present application is the outcome of a family quarrel—the contending families being the brothers Lindsay, of Huntingdon, and their brother-in-law, Mr. J. Summerville, of Brombin.

For some time past a private school has been in existence at Huntingdon, with an attendance of about fifteen pupils. For the December quarter the enrolment at Brombin was thirty-one, several of the former attendants of the private school having returned thereto. The late teacher, Mr. Fox, was not popular. His recent removal will, I believe, cause the withdrawal of most of the children now attending the private school. On the usual printed form I have given full information concerning the petitioners.

A school at Huntingdon would open with an enrolment of about twenty-six, and the prospective average is seventeen. There is no certainty that even that small average will be maintained.

average is seventeen. There is no certainty that even that small average will be maintained.

I am of of opinion that the existing school at Brombin affords reasonable facilities for the education of all children living on Huntingdon side of the river.

I recommend:-

- 1. That a public school be not established at Huntingdon.
- 2. That the petitioners be informed, per Mr. W. Lindsay, that the existing public school at Brombin is considered to afford reasonable facilities for the education of the children residing at Huntingdon.

W. NOLAN, Inspector.

Port Macquarie, 2 June, 1891.

Chief Inspector,—I concur.—A.L., 9/1/91. Unteted.—E. J., 14/1/91. Approved.—J.H.C., 15/1/91. Under Secretary,-I concur.-W.M., 14/1/91. Submitted.—E. J., 14/1/91.

#### Department of Public Instruction.

Queries to be answered by Inspectors when reporting upon applications for the establishment of Public Schools.

Proposed Public School at Huntingdon.

Describe position of the proposed school in regard to—

 (a) Nearest town: Wauchope, 7 miles distant.
 (b) Nearest State school: Brombin Public School, I mile away

(b) Nearest State school: Brombin Public School, I mile away

2. What is the population of the school District? About 100.

3. Is the locality likely to be permanently inhabited? Yes.

4. State any information you have obtained relative to the circumstances of the people for whose children the school is intended, especially whether they have a permanent interest in the locality? Four families—D. Lindsay, J. Lindsay, G. Lindsay, and W. Lindsay—are permanently settled, being well-to-do farmers. The remaining signators are not permanent. Mr. J. Daly, with six children, is a road-maintenance man—he may be removed at any time; Mr. P. Carney, six children, has removed from the district; Mr. R. Richardson holds a rented farm; Mr. James Richardson is, I believe, a permanent resident.

5. What schools already exist in the neighbourhood, and at what distances from the proposed school are they situated; do they provide sufficient accommodation for the whole number of children in the district? Brombin Public School is 1 mile distant from the proposed site. That school affords sufficient accommodation for all the children in the district. Beechwood Public School is 5 miles from Huntingdon.

Becchwood Public School is 5 miles from Huntingdon.

6. State the number of pupils expected to attend this school:

Number likely to be enrolled, 11 boys, 15 girls; total, 26.

Probable average attendance, 7 boys, 10 girls; total, 17.

How many of these live within 2 miles of some existing school? 11 boys, 15 girls; total, 26.

7. Have you inspected the proposed site;—what are its dimensions;—is it suitable? (1) yes; (2) 4 acres; (3) yes.

8. Furnish, on a separate paper, a rough sketch, showing the site of the proposed school, and the relative distances of the homes of children expected to attend, as well as any local physical features, such as mountains or rivers, which would be likely to interfere with the regular attendance of children. [Vide plan].

9. If this be a case in which you recommend the erection of schoolrooms, &c., state that fact, and furnish the required information on the proper form, as to the size and material of the necessary buildings. If a temporary slab or weatherboard building could be put up by local persons rapidly and reasonably, you should state the cost, make such recommendations as you think might be acted on, and name one or more trustworthy persons who would be willing to act for the Department m seeing that the buildings are properly creeted.—I do not recommend the creetion of school buildings.

10. If you advise the purchase of existing buildings by the Department, give a description of them, and specify the materials of which they are constructed, their condition, and estimated value. How do you propose that furniture should be provided?

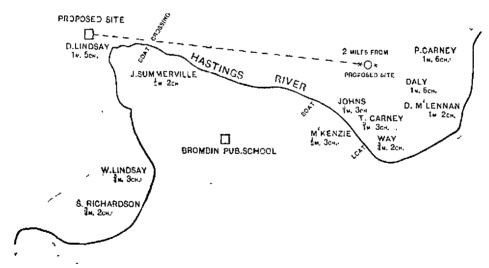

provided?

11. If buildings are offered on lease to the Department, furnish the same information as in the previous question (10), and forward a properly executed lease. If not, state if there is a building available in which the school could be opened temporarily, pending the provision of vested premises.—An old building, 22 ft. x 13 ft. x 9 ft., the property of Mr D. Lindsay, can be secured at a nominal rental as a temporary school-house. It is in fair order; two desks, two forms, and a

blackboard have been provided.

12. Who are the promoters of the proposel school;—state their respective professions or occupations, and religious denominations;—who is the present correspondent? Mr. H. Clark, farmer, Church of England; Mr. J. Paterson, farmer, Presbyterian; Mr. J. Polley, farmer, Church of England; correspondent is Mr. W. Lindsay.

Rough sketch showing residences at Huntingdon and Brombin. The distances given are measured from Brombin Public School.

#### No. 6.

The Under Secretary, Department of Public Instruction, to J. H. Young and W. H. Vivian, Esqs., Ms.P.

Department of Public Instruction, Sydney, 21 January, 1891.

I am directed to acquaint you that the Minister of Public Instruction has had under notice Gentlemen, the formal application, dated 1st August last, presented by you, for the establishment of a public school at Huntingdon, together with communications from you on the subject, and a report upon the merits of the case by an officer of this Department.

2. Having read the facts adduced in support of the application, and carefully considered the whole of the circumstances, the Minister has arrived at the conclusion that the public school at Brombin affords reasonable facilities for the education of all children living on the Huntingdon side of the river, and that the establishment of a school to compete with the existing one, and thus reduce the status of the latter, would not be justifiable. Mr. Carruthers is, therefore, unable to see his way to grant the application of I have, &c., E. JOHNSON, the residents of Huntingdon.

Under Secretary.

#### No. 7.

# The Under Secretary, Public Instruction, to Mr. W. Lindsay.

Department of Public Instruction, Sydney, 21 January, 1891. Sir, I am directed to acquaint you that the Minister of Public Instruction has had under notice the tormal application, dated 1st August last, for the establishment of a Public School at Huntingdon, together with a report on the matter.

2. Having giving the case full and careful consideration, the Minister is of opinion that the existing Public School at Brombin, affords reasonable facilities for the education of all children living on the Huntingdon side of the river, and is therefore not prepared to grant the application. Moreover, the establishment of a school at Huntingdon, which would tend to reduce the status of the school at Brombin would not be warranted. I have, &c., J. GIBSON

(For Under Secretary).

#### No. 8.

# J. H. Young, Esq., M.P., to The Minister of Public Instruction.

Sir,

I have lately been visiting my electorate, and when in the neighbourhood of Huntingdon the question of establishing a Public School there was again brought under my notice by those residing on that wide of the piper Hastings. The property that will be stated as the first property of the piper Hastings. Sir, that side of the river Hastings. I am aware that your Inspector has reported against the new school, principally on the grounds that it would be detrimental to the status of the school at Brombin, and that

there is no difficulty, in his opinion, for the children crossing the river near Mr. David Lindsay's.

Now in regard to the first—the children who would attend the new school, do not, and will not attend the Brombin School, so that the status of that school cannot be affected, and with regard to the second I have no hesitation in saying that were I living at Huntingdon, I would not allow my children to run the risk of crossing the river daily for any consideration. I lived in the neighbourhood myself for many years, and have an intimate knowledge of the locality, and know that the crossing is one of large stones or boulders, where the stream runs fast with the least freshet, and so far as I know there is no deep hole there which would be comparatively still water.

I should be glad if you will cause a report to be made by your District Inspector, after his personally visiting this crossing, and that you will take such action as may be found necessary.

I enclose a list of thirty-six children who are stated are likely to attend a school at Huntingdon. Yours, &c., J. H. YOUNG.

I quite concur in Mr. Young's reasons herein.—W. H. VIVIAN. [Very urgent.] District-Inspector Lobban. For report. In view of the new grounds advanced by Mr. Young, your careful attention is invited to this case.—J.M.G. (for Chief Inspector), 10/3/91.

#### [Enclosure.]

Children likely to attend a school at Huntingdon, 5th March, 1891.

Sarah Lindsay, George Lindsay, Annie Lindsay, May Lindsay, Isabella M. Lindsay, Jessie Lindsay, Jane Lindsay, James Lindsay, Alexander Lindsay, Islet Lindsay, Emily Richardson, Samuel Richardson, Frederick Richardson, George Trotter, Douglas Trotter, Mary Richardson, Marcella Richardson, Gertrude Richardson, Albert Richardson, James Richardson, James Carney, William Carney, Robert Carney, Ann Carney, Herbert Carney, Kate Carney, William Murray, Ada Murray, James Johnson, George Johnson, Matthew Johnson, Albert Johnson, Allan Johnson, Samuel Wisely, Harriet Polly, Isabella C. Lindsay.

# The Under Secretary, Department of Public Instruction, to J. H. Young, Esq., M.P.

Sir, Department of Public Instruction, Sydney, 10 March, 1891. I am directed to acknowledge the receipt of your letter, dated 5th instant, and endorsed by Mr. W. H. Vivian, M.L.A., requesting that the application for the establishment of a Public School at Huntingdon may be reconsidered.

2. In view of your representations, the District Inspector has been instructed to furnish a further report, and it is expected he will do so at an early date to enable the Minister to arrive at a final decision in the case. As soon as possible, a communication conveying the Minister's decision will be I have, &c., J. GIBSON addressed to you.

(For Under Secretary).

## No. 10.

# The Under Secretary, Department of Public Instruction, to W. H. Vivian, Esq., M.P.

Sir,

Department of Public Instruction, Sydney, 10 March, 1891.

With reference to the letter of 5th instant from Mr. J. H. Young, M.L.A., endorsed by you, and to your personal interview of this date, I am directed to state that, in view of the further representations and the state of the further representations and the state of the further representations and the state of the further representations are stated as a state of the further representations and the state of the further representations are stated as a state of the further representations are stated as a state of the further representations are stated as a state of the further representations are stated as a state of the further representations are stated as a state of the further representations are stated as a state of the further representations are stated as a state of the further representation and the stated as a state of the further representation and the stated as a stated tations as to the necessity of a public school at Huntingdon, all the papers have now been forwarded to the District Inspector, and that it is expected he will furnish a report at an early date, in order that the Minister may be in a position to deal finally with the case.

I have, &c., J. GIBSON

(For Under Secretary).

#### No. 11.

## Mr. District-Inspector Lobban to The Chief Inspector.

I HAVE never visited this part of the Hastings River, and, therefore, cannot advise from a personal knowledge of the facts of the case. But my experience on these rivers, which are so frequently flooded, has impressed me with the opinion that rapid streams like the Upper Hastings, upon which no punt or ferryboat plies, should be regarded as a sufficient obstacle to prevent the operation of the compulsory clauses of the Act, and when sufficient people reside upon the opposite side of one of these streams from an existing school, to warrant the establishment of either a public or a provisional school there, I think the claims of the applicants should receive special consideration, in view of the danger and difficulty of crossing the rivers.

If the statements made by Mr. Young can be accepted--and I am aware that he knows the Hastings thoroughly--I think a school should be opened at Huntingdon. Mr. Nolan states in his report, "In times of flood the river is dangerous, but in ordinary seasons the river is fordable at several places. Moreover, in times of freshets in the river, the children at Huntingdon can reach Brombin by means of boats." Mr. Nolan says the establishment of a school at Huntingdon would lead to the reduction of the Mr. Nolan says the establishment of a school at Huntingdon would lead to the reduction of the present school at Brombin to provisional rank, and that two provisional schools would take the place of one public school. Mr. Young says, "the children who would attend at Huntingdon do not and never will attend the Brombin Public School." The testimony is somewhat conflicting, but in view of the fact that a suitable building in fair order is offered by Mr. D. Lindsay at a nominal rental, I would suggest that a public school be re-established at Huntingdon. I feel sure that the agitation will not cease until account the complicants evidently believe that their slain is a just one and this opinion is something is done, as the applicants evidently believe that their claim is a just one, and this opinion is supported by Mr. Young.

A.L., 13/3/91.

Under Secretary,-I concur.-W.M., 20/2/91.

Submitted.—E.J., 21/3/91.

Approved .-

telegram from Mr. Nolan.—A.L., 13/4/91.

#### No. 12.

## K. Mackenzie, Esq., to The Under Secretary, Department of Public Instruction.

Brombin, 30 March, 1891.

Having noticed in the local paper that you are about to reconsider your decision in connection with the establishment of a public school at Huntingdon, and that the same was endorsed by Mr. Vivian, I beg to submit to you a few particulars in connection with the locality, and to enter my protest against the establishment of the proposed school.

First.-Mr. Vivian endorsed the application without making inquiries, simply being asked to do so

by the agitators when attending a banquet at Wauchope.

Secondly.—The establishment of a school at Huntingdon would considerably reduce the status of the present Brombin school, inasmuch as the Brombin school is so situated that it is within sight of all the residents of Huntingdon, and also of easy access to them, not one of them living more than 1½ mile from it, and that during my residence at Brombin, upwards of thirty years, all the children from Huntingdon attended Brombin school, even when it was farther away than it is at present, and the present enrolment

is only twenty-three.

Thirdly.—The application for a school at Huntington is simply caused by a bit of family jealousy. Fourthly.—That fourteen of the present attendance at Brombin school cross the river, and live at a much greater distance than the children at Huntingdon, and if these can attend then those at Huntingdon

Huntingdon could do so too, also that a number of the children whose names are included in the application for the school at Huntingtan live at a much greater distance than 2 miles, some of them even 4 miles from that school.

Fifthly.—That the Department having gone to a deal of expense in establishing a school, with residence, at Brombin, I consider it would be an injustice and extravagance to spend a further sum at Huntingdon, only about 1 mile distant, more especially as the residents at Huntingdon made no protest at the time the Department were spending this money, and as they refused to accept a Government boat which was offered them by the Inspector, and which would have met all their requirements.

I have, &c. KENNETH MACKENZIE.

District-Inspector Lobban for report.—G.K.S. (for Chief Inspector), 10/4/91.

#### No. 13.

Mr. J. Summerville to The Under Secretary, Department of Public Instruction.

Re the erection of a school at Huntingdon, I beg to state that if a school is built at Huntingdon, it will be the means of closing the Public school at Brombin. There are fourteen children crossing the same river, and attending Brombin Public School; at the present time there is nothing to prevent the Huntingdon children from crossing the said river as they have done for many years, as the records of the school will show; and I am sorry to say that it is a relative grievance over the said school for many years.

I have, &c. JAS. SUMMERVILLE,

Member of School Board, Wauchope.

District Inspector, Lobban, -For report in connection with former papers referred to you on 6th instant.—G.K.S. (for Chief Inspector), 10/4/91.

#### No. 14.

The Under Secretary, Department of Public Instruction, to J. H. Young, Esq., M.P.

Department of Public Instruction, Sydney, 4 April, 1891. Referring to the renewed application, dated 5th March ultimo, for the establishment of a public school, at Huntingdon, and to a further report into the circumstances of the case, I am directed to state that notice of the application has been sent for publication in the Government Gazette, in accordance with the requirements of the 34th section of the Public Instruction Act of 1880.

2. A further communication will be made to you when the necessary notice has been published.

3. The usual form of lease of the building, offered by Mr. D. Lindsay, has been sent for signature I have, &c., J. GIBSON by him in the meantime.

(For Under Secretary).
