By Mr. Thompson: I did not know M'Gee before he spoke to me; I know nothing of his character; he was sober when he spoke to me; he told me that he knew Breen in Orange, and went to Power's with Breen; he told me a girl there said she knew who took the money; he told me he paid Mr. Smith out of the cheque signed by Mr. John Lee; I made no inquiries about it; King is a miner living about Bathurst and was working at Kelso; from what I could see the house was kept very badly and have seen people going into the place on Sundays under the influence of drink; I have heard of people being robbed there; I have noticed people standing about the doors as if they were watching the police; I don't know where he is now; I heard the woman who was in the room make use of bad language about 1 o'clock; Power did not tell me I had no right to peer into persons' bedrooms; the people who were about Power's house were his servants; one of them was named Rickard. Sworn at Bathurst, this 15th \( \)

March, 1893, before-

J. GARNER.

J. B. GRAHAM, Chairman.

Michael Sheehy, on oath, states :- I am a constable, stationed at Bathurst; I have been on night duty near Power's hotel during the last twelve months; when I passed the house at night I could hear a number of persons talking pretty loud off the parlour of the bar, loud enough to attract people passing in the streets; I have also seen the bar lighted up between 12 and 1 o'clock at night; on 22nd January last, a man named King reported to me he was robbed of 5 shillings at the "Morning Star Hotel"; I told him to give me his address and where he was working, and I would do what I could; he said he had no fixed place of abode.

By Mr. Thompson: King was sober when he spoke to me; they are a rough people who go to the place; the house is resorted to by shearers, harvesters, and others, and has always been resorted to by these men; I believe the same class of people do not go to Stevens' hotel; the people who I saw going into Power's lived in the town; I don't think Power fit to conduct a hotel; as far as I know he is respectable.

Sworn at Bathurst, this 15th March, 1893, before—

M. SHEEHY.

J. B. GRAHAM, Chairman.

Patrick Power, on oath, states:—I was formerly the licensee of the "Morning Star Hotel," in George-street, Bathurst; the hotel was frequented by working men, and has always been so; on 20th July, 1891, a charge was brought against me by the police, and I pleaded guilty; the offence took place between 11 and 12 o'clock p.m.; I asked the boarders to go to bed, and a man came in and asked for a bed; I told him to go home, and some one hit him, and Constable Coyne came in; the reason I pleaded guilty was because the man was in the Government service, and he would have been dismissed; I never allowed any improper persons in my house, and never had people stationed on the look-out for the police; I never told a woman named Rickard to look out for police; my hoarders used to sit outside my house. allowed any improper persons in my house, and never had people stationed on the look-out for the police; I never told a woman named Rickard to look out for police; my boarders used to sit outside my house on Sunday evenings; I put stools outside for them; I don't know a man named M'Gee; no one ever made a complaint to me about being robbed; I know the man who was at Mr. Lees', and he had only one drink at my place; he never came inside my house; he had been drinking heavily; I don't know the man named King, and no other man ever complained about being robbed at my place; a man made a charge (referred to in the report) against Mrs. Power for picking his pocket; he could not pay for his drink, and I put him out of my house; he never stayed in my house at any time; he was in my house at 5 o'clock, and Mrs. Power was not home till 10 o'clock; I came back about an hour afterwards; when the man left the house he said nothing about having been robbed; I did my best to conduct my house properly; the other two charges, referred to in the report of Sergeant Morris, were dismissed; the house I make application for is in Piper-street, and is in a quiet place; it is very near the police station; I have made a contract about this house, and have leased it for nine years.

By Sergeant Morris: To the best of my belief I swore, in the case in which I pleaded guilty, it

By Sergeant Morris: To the best of my belief I swore, in the case in which I pleaded guilty, it was not after 12 o'clock; the man has now left the service who was in my house; I knew a man named Welsh, who was assaulted on my premises; I did see the assault, I was in my bedroom; it would be false if some one said the assault did not take place; I never saw two men fight on my premises on one Sunday morning; I told you they fought in another yard up George-street; I had a servant named

Carey; did not say to me she had lost a watch; I don't know a man Hickey in town here. Sworn before me, at Bathurst, this }

PATRICK POWER.

16th day of March, 1893,-J. B. GRAHAM, P.M.

Bridget Power, on oath, states:—I am the wife of Patrick Power, the late licensee of the "Morning Star Hotel," Bathurst, and now the applicant for the "Railway Hotel"; I have helped him to conduct the "Morning Star"; I have lived here in this district all my life; I was once postmistress at Peel; all the time I was in the "Morning Star" no complaint was made to me about robberies taking place in my house. I prove instructed anyway to look out for the males. house; I never instructed anyone to look out for the police; our house was full of a great many boarders, and especially at harvest time; I remember the time when the tug-of-war team came up from Tarana, and Fox assaulted Welsh; the case was dismissed, which was brought against Power; my husband is a very sober man and very careful man; the set of men who came to our place talk pretty loud in the bar; no bad characters ever were encouraged to stay in our house; we have no other means of livelihood. B. M. POWER.

Sworn before me, at Bathurst, this }
16th day of March, 1893,—

J. B. Graham, P.M.

William M'Kenzie, on oath, states: -I have been boarding with Power for a long time; it has been well kept, and is clean and respectable; I stayed there on Sundays; the boarders did sit outside on the footpath on Sundays; I never heard of any robberies taking place; Power and his wife always conducted themselves properly; harvesters came to the house, and they are hard to keep in order.

By Sergeant Morris: I stayed at the house three months at a time; I was not there when Welsh

was assaulted.

Was assaurced.

Sworn before me, at Bathurst, this \\
16th day of March, 1893,—\\
J. B. Graham, P.M.

WILLIAM M'KENZIE.

Henry James Barham, on oath, states:—I am a butcher, and reside in Piper-street, near the "Morning Star Hotel"; I know the "Morning Star Hotel" well, and it has generally been frequented by harvesters and men like that. I think Power has kept the house as well as can be expected.

By Sergeant Morris: People said it was a noisy house; I cannot say if people say it was badly or well conducted; I know other houses just as badly kept as Power's; I have heard neighbours say it was pretty rough; Power conducts himself decently; I don't think a man could conduct a house quietly with the same class of people. I leave my shop generally at 8 o'clock, and I don't see how the house is conducted.

By Police Magistrate: I think Power would keep a quiet house if he had different customers; he has always endeavoured to keep good order; the same people do not now frequent the house; I think it is because the man who now keeps the house is not known so well; Power kept his house well lately; no complaints have been made to me about any robberies except through the papers; the business seems to have gone from the "Morning Star Hotel"; comparing the men (Connelly and Power), I don't think Connelly is superior to Power; I don't pay the least attention to how the public-houses are conducted.

Sworn before me, at Bathurst, this?

H. J. BARHAM.

16th day of March, 1893,-J. В. GRAHAM, Р.М.

Application granted.

J. B. GRAHAM, P.M.

### LEGISLATIVE ASSEMBLY.

### NEW SOUTH WALES.

# LIQUOR TRAFFIC LOCAL OPTION BILL.

(MESSAGE No. 8.)

Ordered by the Legislative Assembly to be printed, 12 October, 1892.

JERSEY,

Governor.

Message No. 8.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to make provision in substitution for some, and in aid of other, provisions in the Sale of Liquors Licensing Acts, as to the voting in respect of licenses, and to enable electors in electorates to prevent the sale of intoxicating liquors, or otherwise to have effectual control over the drink traffic within such areas.

Government House,

Sydney, 11th October, 1892.

### LEGISLATIVE ASSEMBLY.

### NEW SOUTH WALES.

## LICENSING ACT AMENDMENT BILL.

(PETITION FROM CERTAIN WOMEN OF NEW SOUTH WALES IN FAVOUR OF THE.)

Received by the Legislative Assembly, 8 September, 1892.

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the undersigned Women of New South Wales,—RESPECTFULLY SHOWETH:—

That your Petitioners believe that the employment of women, as barmaids, is degrading to womanhood and the source of much evil, and therefore humbly pray your Honorable Assembly to take into consideration the Bill introduced by Mr. O. O. Dangar, M.L.A., for the non-employment of barmaids.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 4 signatures.]

'1892.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

### LICENSING ACT AMENDMENT BILL.

(PETITION FROM THE CHAIRMAN OF A PUBLIC MEETING HELD IN THE SYDNEY DOMAIN, IN FAVOUR OF.)

Received by the Legislative Assembly, 12 October, 1892.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, as Chairman of a large Public Meeting, whereat about seventeen hundred adult men were present, held in the Sydney Domain, on Sunday, the fourth day of September, one thousand eight hundred and ninety-two,—

### RESPECTFULLY SHOWETH:

That at the said Public Meeting, which was convened by advertisement, it was resolved to petition your Honorable House to pass into law as soon as possible the Bill introduced by Mr. Otho O. Dangar, M.L.A., to prohibit the employment of females in public-houses in bars, private or otherwise, and expressed a hope that Parliament would not only be pleased to pass the same into law but so amend the Licensing Act as to abolish private bars altogether.

Your Petitioner therefore humbly prayeth that your Honorable House will be pleased to pass the said Bill into law so as to grant the relief asked for as speedily as possible.

And your Petitioner, as in duty bound, will ever pray.

ALEXANDER GOW, Chairman. 

### LEGISLATIVE ASSEMBLY.

### NEW SOUTH WALES.

# LIQUOR LICENSES AMENDMENT BILL.

(PETITION FROM ALEXANDER GOW, J.P., CHAIRMAN OF A PUBLIC MEETING HELD IN THE SYDNEY DOMAIN, IN FAVOUR OF PASSING THE.)

Received by the Legislative Assembly, 6 September, 1892.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, the Chairman of a Public Meeting, convened by advertisement and held in the Sydney Domain, on Sunday, the 4th of September, one thousand eight hundred and ninety-two,—

RESPECTFULLY SHOWETH:-

That the said Public Meeting of Citizens is glad that Mr. Alfred Allen, M.P., has introduced a Bill, by giving notice thereof to Parliament, to secure the complete closing of public-houses on the Lord's Day, heartily approves of the same, and most respectfully prays that your Honorable House will be pleased to pass the same into law as speedily as possible.

And your Petitioner, as in duty bound, will ever pray.

ALEXANDER GOW, J.P., Chairman.

## LIQUOR TRAFFIC LOCAL OPTION.

(PETITION FROM MATTHEW MADDERN, PRESIDING OFFICER OF THE WESLEYAN METHODIST TEMPERANCE SOCIETY, WAGGA WAGGA, IN FAVOUR OF PASSING A BILL FOR.)

Received by the Legislative Assembly, 6 September, 1892.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, the Presiding Officer of the Wesleyan Methodist Temperance Society, Wagga Wagga, New South Wales,—

RESPECTFULLY SHOWETH:-

That your Petitioner believes that there are bitter and manifold evils in this Colony through intoxicating drink, and therefore humbly prays that electorates may have power conceded to them without delay to protect themselves by the passing of a Liquor Traffic Local Option Bill, which will enable each electorate to prevent the issue of new licenses, to reduce the number of licenses, and to enact prohibition, as each may please to decide.

And your Petitioner, as in duty bound, will ever pray.

MATTHEW MADDERN.

## LIQUOR TRAFFIC LOCAL OPTION.

(PETITION FROM THE PRESIDENT OF THE WOMEN'S CHRISTIAN. TEMPERANCE UNION OF NEW SOUTH WALES, PRESIDING AT A PUBLIC MEETING AT THE TEMPERANCE HALL, PITT-STREET, SYDNEY, IN FAVOUR OF).

Received by the Legislative Assembly, 11 October, 1892.

To the Honorable the Speaker and Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, President of the Women's Christian Temperance Union of New South Wales, presiding at a Public Meeting, held at the Temperance Hall, Pitt-street, Sydney, on the 27th September, 1892, at the Tenth Annual Meeting of the Union,

That your Petitioner believes that there are bitter and manifold evils in this Colony through intoxicating drink, and, therefore, prays your Honorable House that electorates may have the power conceded them without delay to protect themselves by the passing of a Liquor Traffic Local Option Bill, which will enable each electorate to prevent the issue of new licenses, to reduce the number of licenses, and to enact prohibition, as each may please.

That your Honorable House will be pleased to pass the Bill referred to and grant your Petitioner's prayer to afford the relief sought.

And your Petitioner, as in duty bound, will ever pray.

E. B. BOWES, President.

## LIQUOR TRAFFIC LOCAL OPTION.

(PETITION FROM THE INDEPENDENT ORDER OF GOOD TEMPLARS LODGE OF YOUNG.)

Received by the Legislative Assembly, 18 October, 1892.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

Your Petitioners, as undersigned, on behalf of the Independent Order of Good Templars Lodge of Young, beg to submit the following resolutions, which were passed by the above Lodge for presentation to Parliament,—

### HUMBLY SHOWETH:-

- 1. That we, the Members of this Lodge, are strongly opposed to compensation of the liquor traffic, there being no legal or equitable claim why blackmail should be levied on total abstainers in the community to compensate a traffic which they have strenuously opposed.
- 2. We regard every license as simply a privilege or permit granted to an individual to sell intoxicants for one year only, and that such privilege does not create a vested interest, and that the State should withhold the privilege when desired by public opinion or otherwise, without compensation.
- 3. We would urge your Honorable House to pass either a Local Option or Prohibition Act to deal with the drink traffic at an early date, without compensation, as any other Act would only endow the liquor traffic, and create a fictitious value, and we earnestly hope that any measure favouring compensation will be rejected.
- 4. That the above resolutions be signed by the Chief Templar, Lodge Deputy, and District Deputy, and forwarded to G. D. Clark, Esq., M.P., for presentation to Parliament.

And your Petitioners, as in duty bound, will ever pray that an Act without compensation may be speedily passed to remedy the enormous evils everywhere resulting from the drink traffic.

### LIQUOR TRAFFIC LOCAL OPTION.

(PETITION FROM EDWARD J. H. KNAPP, J.P., CHAIRMAN OF A PUBLIC MEETING, HELD IN THE DOMAIN, IN FAVOUR OF.)

Received by the Legislative Assembly, 20 October, 1892.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, Chairman of a meeting at which were over two thousand men present, in the Sydney Domain, on Sunday, the sixteenth of October, one thousand eight hundred and ninety-two, at which the following resolutions were passed unanimously:—

That this duly convened meeting views with indignation the proposal to compensate publicans, should the people veto the renewal of their licenses, and respectfully asks Parliament to reject any such addition to Mr. John Kidd's Bill which will impose extra burdens upon the people by extra taxation, and the attempt to create a vested interest in the liquor traffic.

That this meeting would respectfully urge upon the friends of reform in Parliament to push through the House the Bill as tabled by the Honorable John Kidd, without any amendment; and that the Chairman sign a petition to Parliament on behalf of this meeting.

Your Petitioner, therefore, humbly prays that your Honorable House will be pleased in its wisdom to take into consideration the foregoing resolutions, and grant such relief as to your Honorable House may seem fit to accede to the desire of the said meeting.

And your Petitioner, as in duty bound, will ever pray.

EDWARD J. H. KNAPP, J.P., Chairman. •

### LIQUOR TRAFFIC LOCAL OPTION.

(PETITION FROM JOSEPH MORRIS, CHAIRMAN OF A PUBLIC MEETING OF RESIDENTS OF MOLONG, IN FAVOUR OF.)

Received by the Legislative Assembly, 26 October, 1892.

To the Honorable the Speaker of the Legislative Assembly and Members, in Parliament assembled.

The Petition of the residents of Molong, in public meeting assembled,-

#### HUMBLY SHOWETH:-

- 1. That we regard the liquor traffic as inimical to the best interests of the community and productive of much crime, poverty, and misery, and that the time has now arrived when the privilege granted to men to traffic in strong drink for the sake of profit should be withheld, it having been proven on every hand that such privilege is against the prosperity of the nation.
- 2. We are also of opinion that no vested interest exists in the traffic, and that, therefore, there can be no claim for compensation, and as those who have opposed the granting of licenses, and have received no benefit therefrom, we strongly object to blackmail being levied on us to compensate the licensee; we therefore pray that no clause in favour of compensation be inserted into any Act of Parliament which may be passed, which would only levy a further tax on the greater part of the community, and endow to an enormous extent the licenses now in existence.
- 3. That the Chairman, on behalf of this meeting, sign this petition and present it to Parliament through G. D. Clark, Esq., M.P.

And your Petitioners, as in duty bound, will ever pray that a Bill to deal with this great evil, without compensation, will be speedily passed by your Honorable House.

JOSEPH MORRIS,

Chairman.

# LIQUOR TRAFFIC LOCAL OPTION.

(PETITION FROM THOMAS ROSEBY, M.A., LL.D., CHAIRMAN AT A PUBLIC MEETING OF THE RESIDENTS OF MARRICKVILLE, IN FAVOUR OF.)

Received by the Legislative Assembly, 25 October, 1892.

To the Honorable the Speaker and the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH:

That, at a Public Meeting of the residents of Marrickville, held on the seventeenth day of October, 1892, the following resolutions were unanimously passed:—

That this Meeting regards with satisfaction the fact that the Honorable the Postmaster-General, John Kidd, Esq., has introduced into the New South Wales Parliament a Local Option Bill, giving the people their undoubted right to either reduce or prohibit the traffic in intoxicating liquors within prescribed districts without compensation.

That this Meeting requests its Chairman to sign and forward this resolution as a Petition to the Parliament of New South Wales, respectfully praying that your Honorable House will be pleased to favourably consider the resolution, and grant the relief asked for.

And your Petitioner, as in duty bound, will ever pray.

### LIQUOR TRAFFIC LOCAL OPTION.

(PETITION FROM CERTAIN RESIDENTS OF ORANGE, IN PUBLIC MEETING ASSEMBLED, IN FAVOUR OF.)

Received by the Legislative Assembly, 3 November, 1892.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

We, the residents of the town of Orange, New South Wales, in public meeting assembled, having unanimously passed the following resolutions, viz:—

- (1.) That this meeting deplores the existing evils in this town caused by the drink traffic, and pledges itself to use all legitimate means for their removal.
- (2.) That in the opinion of this meeting it is desirable that power should be given to electors to decide whether there should be an increase in the number of public-houses or a reduction therein, or whether the trade in intoxicating liquors should be prohibited.
- (3.) That the foregoing resolutions be embodied in a Petition, to be signed by the ministers present on behalf of the meeting, for presentation to Parliament.

We therefore respectfully petition your Honorable House to support the Liquor Traffic Local Option Bill introduced by the Honorable Mr. Kidd.

And your Petitioners, as in duty bound, will ever pray.

(PETITION FROM THE LOYAL ALBERT DIVISION OF THE SONS AND DAUGHTERS OF TEMPERANCE, BATHURST, IN FAVOUR OF.)

Received by the Legislative Assembly, 1 November, 1892.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Loyal Albert Division of the Sons and Daughters of Temperance in Session met at Bathurst,—

HUMBLY SHOWETH:--

That your Petitioners are profoundly convinced of the many and frightful evils flowing from the legalised traffic in intoxicants. That as this traffic is declaredly kept up for the convenience of the people, and further, as they have to bear all the sorrow, suffering, and loss incident to and caused by the said traffic, your Petitioners claim for the people the right to determine whether this traffic shall cease or be continued.

Your Petitioners, therefore, pray your Honorable House to pass in the present Session the Bill introduced by the Hon. John Kidd.

And your Petitioners will ever pray.

(PETITION FROM THE MEMBERS OF No. 9 GRAND DIVISION OF THE SONS AND DAUGHTERS OF TEMPERANCE, OF SYDNEY, IN FAVOUR OF.)

Received by the Legislative Assembly, 10 November, 1892.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the Members of the No. 9 Grand Division of the Sons and Daughters of Temperance, of Sydney, New South Wales,—

RESPECTFULLY SHOWETH:

That the evils arising from the daily increasing use of intoxicants are so great that an alteration in the laws relating to the drink traffic is urgently required.

And further, that whereas the drink traffic is supposed to be for the convenience of the people, we earnestly affirm the desirability of full Local Option without compensation.

Your Petitioner, therefore, prays that your Honorable House will take the above into your favourable consideration.

And your Petitioner, as in duty bound, will ever pray.

W. F. STANTON, Chairman.

# LIQUOR TRAFFIC LOCAL OPTION BILL.

(PETITION FROM THE OFFICE-BEARERS OF THE PETERSHAM AND DISTRICT MINISTERIAL ASSOCIATION, IN FAVOUR OF.)

Received by the Legislative Assembly, 16 May, 1893.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, acting on behalf of and by authority of the Petersham and District Ministerial Association, comprising twenty-six members, who represent seven different denominations,—

#### RESPECTFULLY SHOWETH:

That your Petitioners believe that manifold and grave evils arise in this Colony through intoxicating drink, and, therefore, humbly pray that electorates may have power conceded to them, without delay, to protect themselves by the passing of a Liquor Traffic Local Option Bill, which will enable each electorate to prevent the issue of new licenses, to reduce the number of licenses, and to enact prohibition, as each may please to decide.

And your Petitioners, as in duty bound, will ever pray.

## LIQUOR TRAFFIC LOCAL OPTION BILL.

(PETITION FROM J. M. MAIN, CHAIRMAN OF A PUBLIC MEETING OF THE RESIDENTS OF THE BOROUGH OF ALEXANDRIA, 1N FAVOUR OF.)

Received by the Legislative Assembly, 23 May, 1893.

To the Honorable the Speaker and the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH:

That, at a public meeting of the residents in the Borough of Alexandria, held on the 17th of May, 1893, the following resolution was unanimously passed:—

- 1st. That this public meeting of the residents of Alexandria expresses its emphatic approval of the "Local Option Bill" introduced into the Legislative Assembly by the Hon. J. Kidd, as it asserts the right of the citizens of this Colony, in every locality, to decide for themselves whether intoxicating liquor shall or shall not be sold, without any restriction or compensation.
- 2nd. That this resolution be embodied in a Petition and signed by the Chairman on behalf of this meeting for presentation to Parliament.

We therefore pray your Honorable House to take the above resolution into favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

J. M. MAIN, Chairman.

A similar Petition was received on 25 May, 1893, from Rev. F. B. Boyce, Chairman of a Public Meeting of the Citizens of Sydney.

## LIQUOR LICENSING LAW AMENDMENT BILL.

(PETITION FROM THE UNITED LICENSED VICTUALLERS' ASSOCIATION, AGAINST.)

Received by the Legislative Assembly, 7 December, 1892.

To the Honorable the Speaker and the Honorable Meinbers of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the United Licensed Victuallers' Association, representing 3,441 licensed victuallers in the Colony of New South Wales,—

### SHOWETH:-

- 1. That your Petitioners are entirely opposed to any infraction of the Licensing Acts of 1882-83, in the direction of sub-letting bars to either male or female occupants.
- 2. That "threepenny" and "sixpenny" bars (otherwise called private bars) are a necessity for all licensed victuallers depending upon the patronage of the wealthier as well as the poorer sections of the community.
- 3. That the barmaids employed by licensed victuallers, as distinct from those alleged to occupy sub-let bars, are well conducted and deserving of the respect of the community.
- 4. That to prevent the employment of barmaids would not decrease the consumption of liquor, but would close an important avenue of female labour, the market for which is already overcrowded.

Your Petitioners therefore pray that your Honorable House will take the foregoing into earnest consideration, with a view to the rejection of the Bill to be introduced on this subject by Mr. O. O. Dangar, M.L.A.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 3 signatures.]

1892-3.

### NEW SOUTH WALES.

## POLICE DEPARTMENT.

(REPORT FOR 1892.)

Presented to Parliament by Command.

### The Inspector-General of Police to The Principal Under Secretary.

Police Department, Inspector-General's Office, Sydney, 9 January, 1893.

In accordance with instructions and the Police Regulations I have the honor to submit, for the Colonial Secretary's information, the following Report respecting the Department under my control

for the past year.

The strength and distribution of the Establishment will be found in Table A appended. The total force of police constables on the 31st December was fifty in excess of the number provided for on the Estimates, this being occasioned, as hereafter referred to, by a temporary augmentation in the Establishment in Sydney during the absence of a large force at Broken Hill. As, however, there were some unexpended balances during the early part of the year, the total vote was found adequate to cover the extra temporary charge.

During the year new stations were established at the following places:—

Cooloon (Tweed Heads)	•••	 Northern District.
Stockingbingal, Bethungra, and Bermagui		 Southern District.
Harris Park and Mulgoa		 Eastern District.
Newbridge, Gulargambone, and Leadville		 Western District.
A handson and Dallhasolt		 North-eastern District.
Garah		 North-western District.
Tarrawingee and Railway Town (Broken Hill)		 South-western District.

Additional constables have also been provided in Sydney and suburbs, and at the places hereunder named:

Bombala, Captain's Flat, Collarendabri, Cudgen, Denison Town, Murwillumbah, Narrabri, Narrandera, Parramatta, Stockton, Warren, and Wickham.

The following stations have been broken up:-Potts Hill ••• ... ••• Eastern District. • • • • Welbondongah North-western District. Gravel Pits (Nyngan-Cobar Railway Line) Bourke District. ... ... ... ... Murray District.

224 appointments were made during the year to provide for the above increase, and to fill vacancies, occasioned as under:-

Resignations		• • •								59
Discharges			•••				•••			26
Dismissals					•••	•••				18
Superannuation									•••	10
Deaths	71115	•••	•••	• • •	•••	•••	• • •	•••	•••	10
Deaths	• • •	• • •		• • •	• • •	• • •	• • •	• • •		8

Amongst the deaths appears the name of Mr. James Ryeland, Superintendent of Police, who for many years had been in charge of the Police Depôt and coast district, an officer with long and efficient service, by whose decease the public and the service have sustained a serious loss.

Ten police pensioners died in 1892, whose pensions amounted in the aggregate to £1,461 12s. 11d.

per annum.

Nineteen members of the force were superannuated during the year, fifteen receiving pensions varying from £85 8s. to £146 8s. per annum, amounting in all to £1,912 7s. per annum, and four were granted gratuities upon their discharge, which formed a charge of £768 upon the fund. £1,646 5s. has

been appropriated in gratuities to widows of members of the force, £225 to a sister, and £63 to a mother. One widow has been awarded a pension of £50 per annum.

The charges upon the Police Superannuation and Reward Funds continue to be considerably in excess of the revenue, and it has therefore been found necessary to realise a further portion of the invested funds. I trust that the Bill prepared for placing the Police Superannuation system on a satisfactory basis will shortly be considered by Parliament. There are many officers and other members of the service who have reached an age when their retirement cannot be much longer deferred.

Crime.

[1,203 copies—Approximate Cost of Printing (labour and material), £16 0s. 0d.]

### Crime.

The following figures have been taken from the Station Watch-house records in the Metropolitan District, and afford a general indication of the number of apprehensions for the year :-

> Total number of arrests for the year 1892 ... 22,317 1891 ... 22,499

There was a decrease of 699 apprehensions for drunkenness (simple, or accompanied by disorderly conduct), but this may be attributed to the diminution in the number of constables on duty, caused by the absence of a large force at Broken Hill for some months.

There was a small increase in the number of burglaries and house robberies, and in other offences of a less serious nature, but taking into consideration the increase of population, and the undoubted

listress from lack of employment, there is no indication of any general increase of crime.

The number of offences of the more serious class reported during the year is somewhat in excess of the total for 1891, but not to any marked extent, and in the country districts crime has not been at all prevalent, excepting perhaps incendiarism, the numbers of such cases being 59, compared with 49 in the previous year. 44 verdicts of "wilfully caused" having been returned at fire inquests, against 28 such verdicts in 1891.

Indecent assaults on females (especially on young girls) have been numerous, though not in excess of the usual average. 58 such cases having occurred in 1892.

Seventeen cases have been reported of placing obstructions on railway lines, a serious crime apparently on the increase, though it is proper to mention that in several cases in which the offenders have been traced, they proved to be young children who committed the act from simple mischief without

apparently realising how wicked and dangerous it was.

Complaints have been very numerous regarding offences committed by bands of disorderly youths, who assemble at various places in the city and suburbs, and who are a source of continual annoyance to citizens, even when not actively law-breaking. I anticipate, however, that should the measure introduced into Parliament by the Government (and passed by the Legislative Council) become law, a most marked in the character of disorder in the public thereughfores and elegations improvement may be anticipated, in the abatement of disorder in the public thoroughfares and elsewhere.

The following is a return of the prosecutions under the Licensing Act in the Metropolitan District

during the year 1892, with the figures for the previous year in comparison:-

Year.	Sunday selling.	Other offences by licensees.	Persons leaving licensed premises with liquor during prohibited hours.	Persons drinking liquor in licensed premises during prohibited hours.	Persons selling liquor without holding a license.	Total.
1892	148 216	153 151	5 <del>4</del> 71	115 126	25 25	495 589
Increase		2				•••••
Decrease	68	•	17	11		94

It is satisfactory to notice that the number of licensed houses in the Metropolitan District has been decreased by thirteen during the past year. This decrease was brought about by police objections to renewals, chiefly on the ground of dilapidated premises, and convictions for breaches of the Act.

1,241 inquests we sheld in the Colony during the year, and in 145 cases death was found to be the

result, direct or indirect, of intemperance, this being about the usual average.

The arrangements and distribution of the police, and the regular performance of duty, have been again seriously interfered with by the protracted strike at Broken Hill. It was necessary to detach from the Metropolitan District 221 officers and constables for special duty. Mounted police were also dispatched from the depôt, the Southern, and the Murray Districts, for the same service, whilst foot-police were withdrawn from the Western and North-eastern Divisions to perform duty in the metropolis.

Fortunately by these arrangements, and with a small augmentation in the establishment, the

officers in Sydney contrived to make reasonable provision for the Police protection required, and no marked increase of crime resulted.

The strike lasted from the 2nd July to the 7th November, and, as it was not deemed judicious to recall all the Police immediately upon its termination, it was not till the end of the year that the men resumed their ordinary duties, a few constables being left at Broken Hill till the present month.

The additional cost entailed was very considerable, not only in the maintenance of such a large force in an expensive locality, but also by the heavy cost of transmission to a district so remote from

Sydney.

I am happy to be able to add that testimony was borne by their officers, Magistrates, and others, to the good conduct and efficiency of this large body of Police whilst on duty at Broken Hill, under very trying circumstances, and when it was only practicable to provide them with very rough accommodation.

On several casesions constables were called off their heats in Sydney, and, at an hour's notice, were

On several occasions constables were called off their beats in Sydney, and, at an hour's notice, were dispatched on a long journey with opportunity only for the most hurried preparation. The same remarks apply to the Police who were withdrawn from country districts.

The conduct of the Police as a whole has been good during the year, the number of dismissals

for misconduct being below the average.

The undermentioned buildings have been erected for the Department during the year:

Tarrawingee Police station. Minmi Lock-up. . . . MacksvilleCourt and watch-house. Cassilis ... Police station. ٠.. Lock-up.  ${f Riverstone}$ West Kempsey Officers' quarters. Newcastle Additions to lock-up. Dο barracks. Port Macquarie Police station. ... Tocumwal Court and watch-house. Clarence-street, Sydney Lock-up Liverpool-street, Sydney Central Police Station. Corowa... Lock-up and Police quarters (nearly completed). Bowna ... Police quarters (nearly completed). Berrigan Police station. Jugiong Stables and fencing at Court and watch-house. ٠,٠ • • • ... Mudgee

Premises have also been purchased at Bourke for quarters for the Superintendent in charge of

that district, and at Penrith for sergeant's quarters.

The new Central Police Station recently completed provides accommodation for about fifty police, single men. Arrangements for placing that number of constables in barracks were in a forward state when they had to be held over until the men returned from Broken Hill, but I am now proceeding with the matter and have matured regulations. When the barracks are occupied there will always be a force available at a moment's notice in case of emergency.

The cells in the building are very complete and commodious, and when the lock-ups proposed to be erected in Regent-street and Surry Hills are completed no city in the world will be provided with cell

accommodation equal to that in Sydney.

In the early part of the year I visited and inspected the head-quarters of the South-western, Murray, Southern, and Western Districts, but other duties kept me in Sydney for the remainder of the year, and prevented me from inspecting the Northern Districts.

Demands are constantly made for increased Police protection, many of which are reasonable and should be complied with; but, notwithstanding the considerable addition made year by year to the number of constables, they are insufficient to meet growing requirements.

I have, &c.,

EDMUND FOSBERY, Inspector-General of Police.

### LEGISLATIVE ASSEMBLY.

#### $N \to W$ SOUTH WALES.

# POLICE REWARD AND SUPERANNUATION FUNDS.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 18 May, 1893.

[Laid upon the Table of this House in answer to Question No. 12, of 18 May, 1893.]

### Question.

- 12. Mr. McCourt asked The Colonial Secretary,—
  (1.) What was the total income of the Police Superannuation Fund for year 1892?
  (2.) What were the total disbursements during the same period?

### Answer.

As the Police Reward and Superannuation Funds are interchangeable, the income and expenditure of both funds are given. The balance required was made up by realising on invested funds.

*Police Superannuation Fund*, 1892:—Income, £7,646 5s.; expenditure, £17,923 8s. 1d.

*Police Reward Fund*, 1892:—Income, £9,838 0s. 6d.; expenditure, £2,863 16s. 6d.

*Combined Funds*, 1892:—Income, £17,484 5s. 6d.; expenditure, £20,787 4s. 7d.

#### · LECISLATIVE ASSEMBLY.

#### NEW SOUTH WALES.

# WILLIAM STAFFORD, EX-MOUNTED SERGEANT OF POLICE,

(PETITION FROM, PRAYING FOR APPOINTMENT OF SELECT COMMITTEE TO INQUIRE INTO HIS CASE.)

Received by the Legislative Assembly, 1 November, 1892.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—
MOST RESPECTFULLY SHOWETH, VIZ.:—

- (1.) That in the Session of 1890 a Select Committee was appointed to inquire into your Petitioner's claim upon the Police Superannuation Fund, to which he had been long contributing, and to which he is still contributing, with the interest and compound interest of the money which he should receive and enjoy, in accordance with the provisions of sections 19 and 21 of the Police Act of 1862.
- (2.) That in order to impede your Petitioner's claim upon the said fund, Mr. Fosbery submitted a specific charge of fraud against your Petitioner to the said Committee, and that charge is proved unfounded, as well as admitted, by Sub-Inspector Cornett, and even by Mr. Fosbery himself to be manifestly false, vide Cornett's evidence, and Mr. Fosbery's admissions to Parliament in Hansard of September, 1890, &c., &c.
- (3.) That, apart from that solid proof whether the alleged charge can be sustained or not, as it is a serious criminal charge, the Government should prosecute, or pay any just demand upon the Fund; but, forsooth, instead of doing so your Petitioner is suffered to pine under the brand of a criminal, while he has virtually disproved the charge and inuendoes with the weapons the accuser actually made himself; thus all that is required to acquit your Petitioner is admitted.
- (4.) That although the charge was proved unfounded before the Committee, &c., by incontrovertable testimony, the Committee had not brought up its report to Parliament when the House was prorogued in December of 1890, thus the matter has been since held in abeyance, owing, it is said, to some sessional rule keeping it back, &c., and thus, as this case stands on your business roll sub judice.

Your Petitioner therefore prays your Honorable House to take those facts into immediate consideration, and thus allow the motion (re this matter) on your business paper to pass as a formal motion, in order to relieve your Petitioner of suspense, and to bring this protracted case to a speedy and final issue

And your Petitioner, as in duty bound, will ever pray.

WILLIAM STAFFORD, Mounted Sergeant of Police until legally discharged or lawfully dismissed.

85 Norton-street, Leichhardt, October, 1892.

1892-3.

849---A

#### 1890.

#### EXTRACT FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

Votes No. 40. Tuesday, 29 July, 1890.

6. WILLIAM STAFFORD, EX-MOUNTED SERGEANT OF POLICE:-Mr. Hawthorne moved, pursuant to

(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the authenticity of the case already stated in the petition of ex-Mounted Sergeant William Stafford, presented to and received by Parliament on the 2nd day of May, 1988, concerning his claim for superannuation allowance from the "Police Superannuation Fund," to which he contributed 3 per cent. of his salary for eighteen years as a provision for accident, infirmity, and old age, and whether the ex-Sergeant received such a wound and other injuries in the execution of his public duty as to render him now unfit to follow his occupation.

(2) That such Committee consist of Sir Henry Parkes Mr. Ryrie, Mr. Frank Smith Mr.

(2.) That such Committee consist of Sir Henry Parkes, Mr. Ryrie, Mr. Frank Smith, Mr. Garrard, Mr. O'Sullivan, Dr. Ross, Mr. Barbour, Mr. Clubb, and the Mover.

Question put and passed.

#### EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

Votes No. 87. Wednesday, 12 April, 1893.

5. WILLIAM STAFFORD, EX-MOUNTED SERGEANT OF POLICE:-Mr. Darnley moved, pursuant to

(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon mounted police sergeant William Stafford's claim upon the Police Superannuation Fund.

(2.) That such Committee consist of Sir George Dibbs, Mr. O'Sullivan, Mr. Garrard, Mr. Danahey, Mr. Hogan, Mr. Rose, Mr. Johnston, Mr. Chapman, Mr. G. D. Clark, and the Mover.

(3.) That the Minutes of Proceedings of, and Evidence taken before, the Select Committee of 1890 be referred to such Committee.

Debate ensued. Question put.

The House divided.

Ayes, 42	2.
Mr. Young, Mr. Neild, Mr. Reid, Mr. Frank Farnell, Mr. Cann, Mr. Fegan, Mr. Carruthers, Mr. Hugh McKinnon, Mr. Lee, Mr. McCourt, Mr. Holborow, Mr. Hindle, Mr. Jeanneret, Mr. Cook, Mr. Danahey,	Mr. Jones, Mr. Dangar, Mr. G. D. Clark, Mr. Houghton, Mr. Garrard, Mr. Nicoll, Mr. Perry, Mr. Donald, Mr. Cruickshank, Mr. Langwell, Mr. O'Sullivan, Mr. Joseph Abbott, Mr. E. G. Brown, Mr. K. Schey, Mr. McGowen,
Mr. Scobie, Mr. Scobie, Mr. Barnes, Mr. Kirkpatrick, Mr. Hutchinson, Mr. Sharp,	Mr. McGowen, Mr. Bavister, Mr. Williams, Mr. Melville.  Tellers,
Mr. Hart, Mr. Edden,	Mr. Darnley, Mr. Chapman.

And so it was resolved in the affirmative.

Noes, 8.

Mr. Tonkin, Mr. Copeland, Mr. Kidd, Mr. Torpy,

Sir George Dibbs, Mr. Barton.

Mr. Hassall, Mr. Traill.

#### WILLIAM STAFFORD, EX-MOUNTED SERGEANT OF POLICE.

## REPORT.

The Select Committee of the Legislative Assembly, duly appointed on 12th April, 1893, "with power to send for persons and papers, to inquire into and report upon Mounted Police Sergeant William Stafford's claim upon the Police Superannuation Fund," and to whom was referred on the same date "the Minutes of Proceedings of and Evidence taken before the Select Committee of 1890," have agreed to the following Report:—

- 1. Your Committee having examined the witnesses named in the list and carefully considered the evidence referred, find,—
  - (1.) That the facts as disclosed in the evidence show that it had been the custom to refer any claims against the Department, and which did not appear to be correct, back to the claimant for correction or explanation, and that as this was not done in Stafford's case, it should entitle him to some consideration.
  - (2.) That William Stafford was dismissed from the service without formal inquiry, either before a Bench of Magistrates or his superior officers; and the defaulters'-sheet shows that such dismissal was for "attempting to defraud the Government," whereas the Inspector-General of Police states that he was dismissed for "misconduct."
  - (3.) That, while Stafford's superior officers appear to have regarded him in a very unfavourable light, the testimonials and other evidence from Magistrates and others with whom he came in daily contact go to show that he was highly esteemed by a large number of people in the district.
  - 2. Your Committee consider that William Stafford was, according to custom, entitled to the amount claimed; and, having paid into the Superannuation Fund 2 and 3 per cent. of his salary for a period of eighteen years, your Committee recommend his case to the favourable consideration of the Government.

E. DARNLEY,

No. 1 Committee Room, Sydney, 11th May, 1893. Chairman.

#### MINUTES OF EVIDENCE

TAKEN BEFORE

#### THE SELECT COMMITTEE

ON THE

# CASE OF WILLIAM STAFFORD, EX-SERGEANT OF POLICE:

TUESDAY, 16 SEPTEMBER, 1890.

Bresent:

Mr. GARRARD, Mr. CLUBB,

Mr. O'SULLIVAN, Mr. RYRIE.

J. S. HAWTHORNE, Esq., IN THE CHAIR.

Mr. Thomas Henry Goff sworn and examined:-

1. Chairman.] What are you? Secretary of the Police Department.
2. Do you desire to give evidence on behalf of the Inspector-General of Police? The Inspector-General asked me to come here, but I can give no information beyond that which has been put before Parliament. I have with me copies of the papers laid before Parliament, and Mr. Fosbery desired me to state that he 16 Sept., 1890 can give no additional information.

3. The papers have already been before Parliament? They have, with the exception of information in reference to an action which Mr. Stafford brought against Sir Henry Parkes, as nominal defendant, in the

reference to an action which Mr. Stafford brought against Sir Henry Parkes, as nominal defendant, in the Supreme Court, a verdict being given for the defendant.

4. State as briefly as possible the circumstances connected with Mr. Stafford's dismissal? He was dismissed from the Police Force in August, 1877, for sending in a fraudulent claim for travelling allowance, setting forth that he had been absent at certain places, performing certain duties, when he had not. He was dismissed on the recommendations of Sub-Inspector Medley, who has retired from the Service and is now in England, and Captain Zouch, since deceased, who was in charge of the Southern District. Since then he brought an action against the Inspector-General of Police, in the District Court, and was non-suited. In 1881 he brought an action against the Government—Sir Henry Parkes being the nominal defendant—for wrongful dismissal from the Police Force, and a verdict was given for the defendant. I think that was subsequent to the District Court action. think that was subsequent to the District Court action.

5. Do you know the reasons of the verdict being given for the defendant? [Witness extract from the case, as reported in the Sydney Morning Herald of July 30th, 1881]:-Witness read the following

His Honor, in the course of addressing the jury, said that the plaintiff asked for an allowance for the additional expense to which he had been put by the absence of accommodation at the police barracks. His family lived at an hotel, and the plaintiff took his meals at an hotel, only sleeping at the barracks in order to look after them at night; but he paid at the hotel the same as if he slept there. The claim is irregularly sent in, not to Mr. Medley, but to Captain Zouch, very probably as plaintiff says, because he was late in making his return. The case for the defendant is, that the Government, on the facts thus stated, was justified in dismissing the plaintiff. If the facts had been specially pleaded, His Honor would not have much hesitation in supporting it on demurrer. The facts are, that there was one inquiry before Mr. Medley, at which the plaintiff was verbally examined by Mr. Medley, and he put in a written explanation. In answer to this, the plaintiff says that this admission was extorted from him by his superior officer saying that he had better to sign it, and his wife and son corroborate him. As to the claim, the plaintiff has admitted that on two of the occasions for which he claimed he was not at the places there named. It would be very injurious to the Force if each man might take the law into his own hands, and because he thought himself hardly used, recoup himself by making false claims. The plaintiff puts forward in his explanation that he has been put to expense, and that only on that ground he has made his claim. The plaintiff says that this explanation or admission was extorted from him, but in this he is contradicted. It is for the jury to judge who is stating the truth. Afterwards, in July, he makes another explanation to the same effect. On 4th October he makes another explanation of what he calls a "nominal claim," which substantially is to the same effect. On 4th October he makes another statement, in which he also makes use of the words "nominal claim." The result of the evidence w

Mr.
T. H. Goff.

out of the station on three nights. To account for the other nine nights, he says that he was out late at night, and there was a practice to charge night money. In answer to that, a number of witnesses were called, who said that no such practice was countenanced. The question is, whether there is a false and fictitious report. If the jury think that it is false and fictitious, they will find for defendant; if not, for the plaintiff, and give him damages to compensate him for the loss which he has sustained. The jury retired, and returned a verdict for the defendant.

6. Mr. Garrard.] Then a verdict was given for the defendant, not because a case could not lie against the Government, but upon the facts of the case as submitted? Yes, upon the facts. The following is the report of Sub-Inspector Medley to Superintendent Zouch:-

Police Office, Moruya, 31 August, 1877.

I BEG to return to Captain Zouch Senior-constable Stafford's claim for night money, quarter ending 30 June, with extracts from the Moruya Duty-book of the duties performed by the senior-constable on the dates for which he has claimed night money, statements from Sergeant Cornett and Senior-constable Stafford, and report from Sergeant Cornett, showing the distances from Moruya of the places mentioned in the night allowance claim where the senior-constable states he halted.

In accordance with instructions from Captain Zouch, I have made careful inquiry into this matter, and can come to no other conclusion than that the night money claim submitted by Senior-constable Stafford for the quarter ending the 30th June, 1877, is a false one.

30th June, 1877, is a false one.

Not one of the places mentioned under head "Where claimant halted," &c., did the senior-constable stop at for the

night.

Under the head of "Nature of duty on which engaged," six entries are made of "summons serving." No such service was performed, as no summonses were issued for any persons residing at or near these places.

June 1st to 2nd, a claim is made for "summons serving" at Bodalla; by the senior-constable's admission to me, he was never at that place. Again, June 6th to 7th, "summons serving at Merricumbene"; he was not there. (Vide Dutybook copy). 6th June, "horse ridden 30 miles"; 7th June, "horse resting." How did he get back from Merricumbene? I will now call Captain Zouch's attention to three more entries:—31st May to 1st June, "Burro"; 26th to 27th June, "Burro." This place is only 7 miles from Moruya. 10th to 11th June, "Bergalia—inquest inquiry." This is true, but this place is only 5 miles from Moruya.

On reference to Senior-constable Stafford's statement (marked No. 1), it will be seen that the excuse he offers for submitting this claim is that he was under great expense whilst waiting at Moruya for the quarters, and having to remove his family from Braidwood to that place.

his family from Braidwood to that place.

I have suspended Senior-constable Stafford, as Captain Zouch is already aware (by telegram), pending the decision that may be arrived at in this case, and in the meantime I have placed Constable Williams in charge of the station.

I have, &c.,

J. R. MEDLEY,

Sub-Inspector.

7. What is Superintendent Zouch's minute upon that report? It is as follows:

Memo. from Superintendent Zouch to The Inspector-General of Police.

I TAKE it to be quite unnecessary, in submitting this report of Mr. Medley's and attached papers, to offer any comment on the glaring and deliberate design—evidenced as well as admitted—made by Senior-constable Stafford, to obtain money by false pretences, only equalled by the unparalleled effrontery of his attempted palliation by the plea set forth in defence.

H. ZOUCH,

Superintendent, Southern District, 5/9/77.

There is also a defaulter sheet against him.

8. Chairman.] Does the defaulter sheet contain anything serious against him? Only that he was reduced from the rank of sergeant to senior-constable in 1869.

9. What are the charges against him contained in this sheet?

Date.	Offence.	By whom reported.	Plea.	Evidence.	Decision.	By whom (Signature).	Remarks.

16 Sept., 1890.

- 10. What misconduct was Stafford guilty of in connection with Mounted-constable Lynch? He forced the constable into a cell, and I think they fought there, and Stafford's face was found to be injured.

  11. Was it not proved that Lynch subsequently set fire to the lock-up? Yes, I think so; he attempted to set fire to it. If you wish it I was a like the set of the provention with the case brought.
- to set fire to it. If you wish it, I will have the whole of the papers in connection with the case brought
- 12. Are you aware whether Stafford had contributed any pay towards the Superannuation Fund up to the time of dismissal? Yes, in the usual way as other members of the Force; 3 per cent. from 1868, and 2 per cent. before that year. 13. For how many years?

13. For how many years? About seventeen years; but a member of the Police Force is not entitled to compensation unless he is sixty years of age, or is certified by the Police Medical Board to be unfit for further service.

14. He had contributed regularly towards the Superannuation Fund up to the time of his dismissal? It

was deducted from his pay.

15. Mr. Garrard.] How much is deducted, and what are the benefits? Three per cent. Half-pay at

16. Do I understand that to a certain date 2 per cent. was deducted, and beyond that date 3 per cent.? Yes; because we found that the fund was not sufficient, and would not meet the demands upon it.

17. Then Stafford contributed 2 per cent. of his salary? Yes, for a certain period, and 3 per cent.

18. What are the benefits to which a member of the Police Force is entitled under the Superannuation Fund? Half-pay after fifteen years' service; that is, if he is over sixty years of age, or is certified by the Medical Board to be unfit for further duty, or is injured in the execution of his duty to such an extent that he cannot perform his duty; two-thirds' pay is allowed after twenty years' service, three-fourths' pay after twenty-five years' service, and full pay after thirty years' service, and gratuities in certain other cases.

19. Voluntary retirement or dismissal does not carry with it any refund under the Regulations? No; they forfeit if they are dismissed.

20. It is stated that Stafford received a wound in the discharge of his duty which unfitted him for service? I have heard nothing about that. As far as my knowledge goes, he has never been before the Police Surgeon or the Police Medical Board for examination.

21. Chairman.] At the time of Stafford's reduction, was any specific charge made against him, and was he called upon to answer any particular charge or allegation? Yes. In February, 1864, he was charged with bringing unfounded charges against Senior-canstable Graham of drunkenness, and he was reprimanded. Mr. J. W. Orridge, Superintendent, makes the following memorandum in reference to this charge:—

From circumstances that have since come to my knowledge, and subsequent experience of Senior-constable Graham's character (since dismissed), I am of opinion that the above reprimand was not deserved by Sergeant Stafford.—J. W. Orridge, Superintendent. 20/10/65.

In January, 1866, he was charged with neglect of duty in not having sold, as instructed, certain property of prisoners Willice and Ware. He was reported at that time by Prisoner G. Ware and others, and his plea was that his time was occupied with reports of bushrangers. The evidence consisted of his own reports, and those of Sergeants Cleary and Costello. He was severely reprimanded by the Superintendent and the Inspector-General of Police. [Police Rules produced for the information of the Committee.]

22. What course is usually pursued when police officers are found guilty of dishonesty;—do you dismiss them? Yes. According to the defaulters' sheet, the date of the charge upon which Mr. Stafford was dismissed was 25th August, 1877. The offence was that of attempting to defraud the Government by obtaining money by false pretences. He was reported by Sub-Inspector Medley, and pleaded guilty. Evidence was given from the Duty-book, by Sub-Inspector Medley, and by Sergeant Cornett, and the -"reduced and dismissed." decision was-

23. Mr. Garrard.] Do I understand that Mr. Stafford pleaded guilty to the charge? Yes.
24. Is there anything in writing to substantiate the statement that Mr. Stafford pleaded guilty to the charge? Subsequently, Superintendent Zouch made a further report upon the dismissal as follows:-

Memo. from Superintendent Zouch to the Inspector-General of Police.

Memo. from Superintendent Zouch to the Inspector-General of Police.

Police Department, Superintendent's Office, Southern District, Goulburn, 18 November, 1877.

On a retrospective view of this man's career, it is palpably manifest, whether the decision arrived at be just or unjust, the universally admitted odium entertained by the inhabitants, including magistrates, professional men, and people of all grades, has shown itself in the general satisfaction his removal has produced. This is the result of personal inquiries made within the last few days in the Braidwood District, the unhesitating reply being that his punishment was richly deserved, and it should have been meted out to him years ago, his conduct having earned for him a most unenviable reputation, not alone with the inhabitants, but with the Police generally.

Ex-constable Stafford's recriminations upon members of the Service, assertions, comments, &c., on the inquiries and decisions advanced by him in defence, cannot possibly affect his case; he obtained money by a false pretence—inquiry proved it, and allowed by his own admission; so rest the facts, for they are undeniable. He has now the hardihood to declare that this has arisen solely because his officer is actuated by feelings of animosity towards him.

25. How did this arise? Upon an appeal of Stafford against the decision of Superintendent Zouch.

26. When an officer is charged with dereliction of duty, as in the case of Stafford, what is the first thing to be done;—does the Superintendent of his district get some one to make inquiries? The officer charged with the offence is called upon to make a report.

with the offence is called upon to make a report.

27. Has there been any report? Yes.

28. Who first reports that Mr. Stafford has pocketed this money? Sub-Inspector Medley.

29. Performathing must have been brought under Medley's attention? Medley was in charge of the sub-district.

30. Are we to understand that Medley, in the fulfilment of his duty, found this out himself and reported it, or was it brought to his knowledge by some one else? Probably Sergeant Cornett found it out. I will read a report made by Senior-constable Stafford to Superintendent Zouch:-

Senior-constable Stafford to Superintendent Zouch.

Police Station, Moruya, 3 September, 1877.

Senior-constable Stafford having written hastily his report of the 30th ultimo, before he had any idea or knowledge of his suspension, as Mr. Medley was standing waiting for it, thus he begs to supplement that report with the following facts:

That out-station men halting at Braidwood station having slept in the barrack there, for which they tendered their claim and received night-allowance. Likewise, constables halting at Araluen and at other stations have also invariably tendered their claim and received night-allowance, notwithstanding that they have slept in those barracks, because they were

Mr. T. H. Goff.

16 Sept., 1890.

Were under extra expense; and if the senior-constable had not slept in the barracks here while he was waiting seven weeks for the quarters he was entitled to, he would be entitled to receive £4 18s. for night-allowance; thus, by the senior-constable having slept in the barracks, the Department has gained £3 2s., as the senior-constable only made a claim for £1 16s. to cover expenses, and which he considered he was entitled to on these grounds, viz., that he was under double expense on the days mentioned in his night-sheet, as he was on duty during the day and did not return till late at night, and as he had to pay by the week for his board in a public-house and keep a large family at Braidwood, and on the days he was out on duty he had to pay for meals, and there was no abatement in the public-house. The senior-constable has not even charged the Department for the conveyance of his regulation box, which would cost at least 20s., nor for whatever nights the senior-constable may have been absent from Braidwood in the early part of that quarter. The senior-constable has not even the police coach and horses to remove his family, &c. By these facts it will be seen that the senior-constable has not made any undue charge or claim upon the Department, and that all the senior-constable has done under these circumstances is that he returned for £1 16s. to cover some of these heavy extra expenses. Thus, under the circumstances, the senior-constable considers his claim just; and this being evidently so, he thinks it matters little as to what dates and duty he submitted, and his books are kept as Seargeant Cornett kept them.

In making out the senior-constable's night-sheet (he having been late with the returns), he did so hurriedly and from memory; hence the discrepancy in dates respecting the days he was absent, &c. When the senior-constable received Captain Zouch's cheque for his claim, it being disputed, the senior-constable handed it to Mr. Medley.

WILLIAM STAFFORD,

Senior-constable.

31. I want the beginning of the matter;—some one must have moved the Sub-Inspector to make this particular inquiry, or did it come about in the ordinary examination? Perhaps I had better again read Sub-Inspector Medley's communication to Superintendent Zouch.

#### Sub-Inspector Medley to Superintendent Zouch.

Police Office, Moruya, 31 August, 1877.

I BEG to return to Captain Zouch Senior-constable Stafford's claim for night-money, quarter ending 30 June, with extracts from the Moruya Duty-book of the duties performed by the senior-constable on the dates for which he has claimed night-money, statements from Sergeant Cornett and Senior-constable Stafford, and report from Sergeant Cornett, showing the distances from Moruya of the places mentioned in the night-allowance claim where the senior-constable states he halted

In accordance with instructions from Captain Zouch, I have made careful inquiry into this matter, and can come to no other conclusion than that the night-money claim submitted by Senior-constable Stafford for the quarter ending the 30th June, 1877, is a false one.

Not one of the places mentioned under head "Where claimant halted," &c., did the senior-constable stop at for

the night.

Under the head of "Nature of duty on which engaged," six entries are made of "summons serving." No such service was performed, as no summonses were issued for any persons residing at or near these places.

June 1st to 2nd, a claim is made for "summons serving" at Bodalla; by the senior-constable's admission to me, he was never at that place. Again, June 6th to 7th, "summons serving at Merricumbene"; he was not there. (Vide Dutybook copy). 6th June, "horse ridden 30 miles"; 7th June, "horse resting". How did he get back from Merricumbene.

I will now call Captain Zouch's attention to three more entries:—31st May to 1st June, "Burro"; 26 to 27th June, "Burro." This place is only 7 miles from Moruya. 10th to 11th June, "Bergalia—inquest inquiry." This is true, but this place is only 5 miles from Moruya.

On reference to Senior-constable Stafford's statement (marked No. 1), it will be seen that the excuse he offers for submitting this claim is that he was under great expense whilst waiting at Moruya for the quarters, and having to remove his family from Braidwood to that place.

I have suspended Senior-constable Stafford, as Captain Zouch is already aware (by telegram), pending the decision that may be arrived at in this case, and in the meantime I have placed Constable Williams in charge of the station.

I have, &c.,

J. R. MEDLEY,

Sub-Inspector.

32. Then it came to his knowledge through a claim made by Mr. Stafford for night-money, and upon that Medley makes a report? Yes; he first asked Sergeant Cornett to inquire as to the distances of the places mentioned in the report.

33. I understand that these charges for night-money, &c., come through the Sub-Inspector of the district?

Yes

34. Then Medley asked the sergeant to make inquiries, and to give information as to distances? Yes. . 35. Did Medley subsequently make a further inquiry personally? He explains everything in the report which I have read.

36. Is there any correspondence from Mr. Stafford to show that he pleaded guilty;—would Medley's report be sent to Mr. Stafford for any comments which he might make upon it? Yes. It was first sent on to Superintendent Zouch, together with the claim which Stafford put in.

37. But was no opportunity afforded Stafford of replying to the charges of Medley? I presume Sub-Inspector Medley asked Stafford for an explanation. Perhaps I had better read the report of Seniorconstable Stafford to Sub-Inspector Medley.

#### Senior-constable Stafford to Sub-Inspector Medley.

Moruya Police, 30 August, 1877.
Senior-constable Stafford begs to state, for the information of Captain Zouch and Mr. Sub-Inspector Medley, respecting the night-money claimed, submitted to, and scrutinised by Mr. Sub-Inspector Medley, and which Senior-constable Stafford was under the impression that he was fully justified in claiming,—should Captain Zouch and Mr. Sub-Inspector Medley consider the claim not a just one, Senior-constable Stafford can only impress upon these gentlemen the fact that at the time he was under very heavy expense, having to keep himself in a public-house here, and the removal of his family from Braidwood.

The senior-constable is quite willing to leave the matter in the hands of Captain Zouch and Mr. Sub-Inspector Medley. If the senior-constable had not slept in the barrack, which, as Mr. Medley knows, affords very disagreeable accommodation, the senior-constable would be allowed £4 18s. night allowance.

Under these circumstances, the senior-constable hopes that his explanation will meet the approval of his superiors, as because waiting for the quarters here and the removal of his family cost the senior-constable more than he could at that time well afford, and it was solely on these grounds that he submitted his claim for £1 16s.

WM STAFFORD

WM. STAFFORD, Senior-constable.

38. Then he did admit to submitting these claims and charging for work which he did not do, because of the extraordinary circumstances to which he refers? Yes.

39. Mr. O'Sullivan.] Is that the only record you have of Stafford pleading guilty of misappropriating 36s.? We have it on the defaulters' sheet, under Superintendent Zouch's signature.

40. How did it get there? I suppose Medley asked him how he pleaded—verbally, probably.

41.

s. **1**3

41. Is there only that record to show whether Stafford pleaded verbally or otherwise? Only the defaulters' sheet, and the report by Senior-constable Stafford, which I have just read. A report follows this, in which he explains something in his previous report of same date, the 30th August:-

Mr. T. H. Goff. 16 Sept., 1890.

Senior-constable Stafford to Sub-Inspector Medley.

Moruya Police, 30 August, 1877.

SENIOR-CONSTABLE Stafford begs to add to his statement of this date, that he forgot to add to his statement that any discrepancy which may appear in his claim for night-allowance and his duty return, arose through the senior-constable's mind at the time he made out his night-allowance sheet being upset through other reports which he had to answer to at the time, as also through his removing his family at the time, and the returns being late, as the senior-constable could not attend to them before the 10th Luit.

them before the 10th July.

The quarterly returns should be forwarded on the 4th of the ensuing month; hence it is that the senior-constable forwarded these returns direct to Captain Zouch so as to save time, and not through any discourtesy to Mr. Sub-Inspector WM. STAFFORD,

I should like to read another enclosure, and that is the report of Senior-sergeant Cornett, witnessed by Sub-Inspector Medley.

Police Station, Moruva, 31 August, 1877.

Police Station, Moruya, 31 August, 1877.

Sergeant Cornett makes the following statement in the presence of Senior-constable Stafford:—The document handed to me by Sub-Inspector Medley is Senior-constable Stafford's claim for night allowance for the quarter ending 30 June, 1877. The claim amounts to £1 16s. One night has been struck off for Araluen Station, making claim £1 13s.

The other document handed to me is a copy of the duty returned and performed by Senior-constable Stafford on the various dates named in the night allowance claim above referred to. It is in my handwriting. I copied it from the Moruya Duty-book. The various dates were called from the night allowance claim by Mr. Sub-Inspector Medley; and I entered the various duties performed by Senior-constable Stafford, in accordance with the records in the Duty-book. All this was done in the presence of Senior-constable Stafford, constable Williams, and Constable Harvison. Mr. Medley called Senior constable Stafford's attention to each date and item, as it was called out, and it was compared with the Duty-book. The entries for the various duties claimed for in the night sheet do not agree with the difference between the entries made in the Duty-book and the entries made by Senior-constable Stafford in the night sheet. Senior-constable Stafford could not account for the entries referred to in the night money claim. The only explanation Senior-constable Stafford could give when questioned by Mr. Medley was that he considered that he was entitled to the claim he submitted, as being under heavy expense, through his having to remove his family from Braidwood to Moruya on transfer.

Mr. Medley questioned Senior-constable Stafford as to whether he (Stafford) stopped at any of the places named in the night sheet under the heading "Places to be specified where claimant halted," &c. Senior-constable Stafford said he did not halt at any of the places named, but returned to his station during the night.

By Senior-constable Stafford: You were at least seven weeks

from Braidwood, as the quarters at the former place were not vacant. You slept in the Darracks, but Doubled as a publication for the time.

I am living in private quarters at Braidwood with my family at present. I have made no application for an allowance to cover the expense that I have been under for the removal of my family from Moruya to Braidwood; but I intend to do so for the time I am out of quarters at Braidwood.

You told me on one occasion that if you had slept out of quarters the Superintendent would have allowed you 2s. a night. This conversation was in reference to the time you were waiting for the quarters at Moruya.

JAMES CORNETT,

Witness-J. R. Medley, Sub-Inspector.

JAMES CORNETT Sergeant of Police.

42. Chairman.] Is Cornett still in the Service? Yes.

43. Where is he now stationed ;-will it be possible to produce him at the inquiry? He is stationed at

Gundagai; we could get him down in a day or two.

44. When a police officer, or any one in the Service is charged with dishonesty, is it usual first to dismiss him without bringing him before a Bench of Magistrates? No; they are brought before a Bench of

Magistrates usually.

45. Why was not Stafford charged before a Bench of Magistrates? I could not give you the reason, unless it was that it was thought that the punishment would meet the case.

46. Was there another police officer near Stafford, who was charged with drunkenness about the same time? I do not recollect; it is thirteen years ago.

47. Do I understand that in the Police Regulations there is a rule whereby a man can be deprived of the amount he has contributed towards the fund, if he is dismissed or resigns? The practice is to forfeit all the money paid in. I do not think there is any enactment making it compulsory.

48. Mr. Garrard.] Is the Police Superannuation Regulation Act printed? Yes; it is incorporated with the Police Regulation Act of 1862, 25 Vic. No. 16.

49. Can you furnish the Committee with a copy? Yes.

50. Mr. Clubb.] Have you anything to state beyond the fact that Stafford admitted the falsity of the claim he sent in? I cannot say anything beyond what is contained in the papers.

51. You understand that it was personally admitted to Medley? The last report I have read is tantamount

to an admission that he put in these claims in consequence of not being allowed some lodging allowance to recoup him for some expense at a hotel.

52. Where is Inspector Medley now? He is in England. I heard that he died not long ago, but I do not know whether it is true or not.

53. Chairman.] How did Sub-Inspector Medley come to leave the Force;—was he superannuated? He retired on a gratuity. That is another way of retiring—optional, in some cases.
54. Were any charges ever levelled against Medley;—did he leave the Force with a clean sheet; was he an

efficient officer? I think so. If there had been any grave charge made against him he would not have been allowed superannuation.

#### Mr. William Stafford sworn and examined:-

55. Chairman.] Where do you reside? 85, Norton-street, Leichhardt.
56. Did you serve in the New South Wales Police Force? Yes.
57. When were you dismissed? On 7th September, 1877.
58. What were you dismissed for? For attempting to defraud the Government.
59. To what amount? Thirty-six shillings: but the dismissed does not specify the

59. To what amount? Thirty-six shillings; but the dismissal does not specify the amount.
60. You have heard Mr. Goff read certain papers referring to these charges against you, will you state what reply, if any, you have to make;—make any statement you have to make in regard to pleading guilty? I was not asked to plead guilty.

61.

Mr. W. Stafford.

16 Sept., 1890.

Mr. W. Stafford.

Wife, and son, and Mr. Morris, a respectable storekeeper of Moruya, and pressure was brought to bear for me to copy it, upon the condition that the matter would drop; but after I copied the statement I was suspended, and Superintendent Zouch interpreted it into a confession of guilt. I was never called upon for any explanation in the matter. for any explanation in the matter.

62. Did you ever furnish any printed statement as to admitting your guilt? Not at all; I was never

asked whether I was guilty or not.

63. Were the statements that have been made about your admitting your guilt verbal statements? There

is no statement in the papers showing that I pleaded guilty or not guilty.

64. Can you throw any light on these charges of false entry, and show to the Committee that, in connection with the charges for night duty, you were at or near the places specified? Yes; I have all my statements together, and here are my replies in writing.

65. Mr. Ryrie.] Has a copy of that been handed in to the Inspector-General's Office? Yes; and he has seen all the originals.

66. Chairman.] Has the Inspector-General seen all these papers which you propose reading to us? has seen the originals, and most of my replies to them.

67. Did he see them previous to your dismissal? No; I never saw the paper which was written against

me until nine months after dismissal, when it was printed by Parliament.

68. So you were, practically speaking, dismissed without being called upon to reply? Certainly; there

is not a single paper which shows otherwise.

69. Were you not suspended in the first instance? No; I was suspended after I copied the statement for Cornett. He induced my wife and son and Morris to influence me to make the statement, upon the distinct understanding that the matter would drop on both sides. I strongly refused, and it was only the importunity of my wife and son and Morris which made me write that statement. That was proved at the Supreme Court by my wife and son and myself.
70. Mr. Clubb.] What inducement was offered to you? Simply to copy the statement, and that the

matter would drop if I would write no more.
71. What are we to understand by "the matter would drop on both sides";—you were under suspension

at this time? Certainly not.

72. Chairman.] Did you not receive a notification from Superintendent Zouch, suspending you from duty for obtaining money by false pretences? No; I never heard that expression until the Inspector-General's dismissal was read to me.

73. And you were dismissed without being called upon to make any reply to the charges against you? There were no charges made against me. During Sub-Inspector Medley's interrogations on 30th August, 1877, at Moruya, he formulated no charge, nor did he afford me an opportunity of explaining the particulars of my claim.

74. Mr. Clubb.] Do we not understand that a telegram was sent on your suspension being ordered? I

never saw it, and know nothing about it, and I have not seen it in the papers.

75. Mr. O'Sullivan.] You say you were induced to make that statement by your wife and son and Mr. Morris? It was brought to me in writing. The purport of it was that I was under great expense, &c. 76. Who brought it to you? Sergeta Cornett.

78. The statement was written for the purpose of getting you to sign it as an admission? No, I cannot call it an admission; there is no admission in it.

79. You say you were given to understand that if you signed it the matter would drop? distinctly understood; I had them in my hands. Yes, it was

80. What do you mean by that? I knew I was right, and I know I am right now.
81. Who made the agreement with you that the matter should drop? Cornett—not with me but with my wife and son and Mr. Morris. He came to me first, and I refused, and told him to tell Medley to call

upon me for a written explanation.

82. You say you never admitted you had been guilty of this charge? Never.

83. To any person, either in writing or by word of mouth? Never, nor do I now.
84. Mr. Clubb.] What was your position in regard to this charge up to this point;—had an investigation taken place? No; only the comparing of the claim with the Duty-book.
85. And you were not under suspension? Not at all; I was not suspended until after I copied the state-

ment, on the 31st of August, 1877.

86. Had any other charges been preferred against you prior to this? No.
87. Did any feeling exist between yourself and Cornett? No; but there was a personal ill-feeling between Medley and I; but it did not interfere with the performance of our duties. It was a very personal matter. The plea in the defaulters' sheet is all false.

88. Mr. O'Sullivan.] Judging from the petition you have lodged, you appear to have been put to considerable expense in the Braidwood district during the times of the bushrangers and the cattle stealers? Yes; and in the western district too.

89. The petition states that there are no less than forty-five arrests and convictions for felonies alone

recorded to your name? Yes, and more than that.

90. It was stated in one of the reports read by Mr. Goff that there was a feeling against you in the district;—was that on account of your many arrests? There was no feeling against me. No man could have been more thought of by the people in the Braidwood District. That was exemplified on two occasions when members of my family died—such funerals were never seen in that district; also testimonials from the Bench of Magistrates, Braidwood, &c.

91. Chairman ] So that the statement made by Superintendent Zouch that you were disliked in the Braidwood District, and that the people there were rejoiced or were delighted at your dismissal from the Service, is untrue? Perfectly untrue. I could bring gentlemen in Sydney to prove it to be untrue. There is Mr. Curtiss, who was a professional man in Braidwood, and who conducted his business in the Courts, and who saw me daily. There is only one person who could say an ill word, and that is Mr. Hassall. One of our rules states:—"When travelling on duty within their districts, and where they are compelled to stop the night at an inn, where there is no police-station—officers, 7s.; men, 3s." The general practice in regard to that scale is this: The officers, men, and myself have been paid for stopping at squatters' places. places, under no expense; for camping out, for travelling late under extra expense, for "days" under the heading of "nights," collecting an electoral roll, &c. Constable Nelson received it for years, for sleeping in barracks, travelling with the officers, &c. (See Sergeant Cornett's claim herewith.) It was general.

92. Mr. Clubb.] It was a general practice to make a charge of this kind? Yes; I can bring retired members of the Force to prove it.

Mr. W. Stafford. 16 Sept., 1890.

93. Mr. Garrard.] You admit it is against the literal rendering of the rule to charge it, but the custom

53. Mr. Garrara.] Tot admit it is against the literal rendering of the rule to charge it, but the custom to charge it had grown up? Yes.

94. Superseding the rule itself? Yes. The second rule is: "On branch gold escorts, for each night on the road, officers 7s., men 3s." The way that rule was used was this: 7s. and 3s. per day was paid on branch escorts under the heading of "nights." (See Sergeant Cornett's claim herewith for 30th September, 1877.) It was drawn under the heading of "nights," although I am paid under the heading of "days" when the scale said "nights"; and it is so to the present day. The third rule is: "Lodge allowances, when stationed temporarily, when no police quarters are available, officers 5s., men 2s." The way that rule was applied was this: men were always allowed 3s a night for stanning in horseles, when a compelled rule was applied was this: men were always allowed 3s. a night for stopping in barracks, when compelled to board at hotels. (See my own claim herewith for six nights consecutively, when I slept in Araluen barracks in March quarter, 1877; and this claim is certified to by Sub-Inspector Medley as correctly claimed.) The above allowance is not paid on water passages. Constable Williams, myself, and others, received the allowance on water passages. received the allowance on water passages. Constable Oliver received what was allowed, about £3, lodging allowance for sleeping in his police bed in the Court-house at Moruya.

95. Chairman.] You are trying to prove many things that were allowed, which were not in accordance with the Regulations? Yes.

96. And that your claims, although not strictly in accord with the Regulations, were in accord with the usage which had become general amongst the police officers in the district? Yes.

97. Can you give us any evidence in regard to this 36s. for which you put in a claim? Yes.

98. So as to show the Committee that you were substantially correct in the account that you furnished

to your superior officers? Yes.

99. Mr. Garrard.] Is that already contained in the papers in the petition? The petition contains the whole of my case, with the exception of explanations. "Quarter ending 30th June, 1877 (vide Dutybooks and returns in the Inspector-General's Office). Duty performed at Braidwood between 1st April and 15th May, 1877. I was absent from Braidwood station three nights at Reidsdale and Bombay, watching suspected cattle-stealers. The fourth night was May 15th to 16th, Araluen, transferred to May 15th to 15th to 15th bottlet at the hotel at Mayure a paper and thing. Moruya. At Moruya station, May 16th to 17th, slept at the hotel at Moruya; no barrack accommodation available. May 26th, Turos, summons serving (See Sergeant Cornett's claim herewith). The sixth night was June 1st to 2nd, Bodalla, summons served and inquiry. The seventh night was June 6th, Merricumbene, summons serving; returned June 7th, about 2 a.m. June 8th, Bergalia, Benja Benja, summons serving. Merricumbene, summons serving; returned June 7th, about 2 a.m. June 8th, Bergana, Benja, Benja, summons serving. The eighth night was June 10th to 11th, Bergalia, inquest inquiry. The ninth night was June 13th to 14th, Broulee Heads, patrolling and inquiry. June 17th, 18th, and 20th, absent these three days late, at Heads, Snap Hook, and Cooper's Island, patrolling and inquiry, &c. The tenth night was June 23rd, Mogo, patrol and inquiry; returned to station 24th June, about 3 a.m. The eleventh night was June 28th to 29th Araluen, returning to Braidwood. Total, eleven nights and five days absent from police quarters in June quarter, 1877. Three nights' absence in Braidwood were substituted in my claim, and they did not exactly agree with the Moruya book, owing to their being late with the returns. The nights 26th to 27th, at Araluen, was a mistake in copying, and should read 28th to 29th. That is the only error in my claim for 36s. It was the want of exact dates which made me substitute the three nights absent from Braidwood as absent from Moruya. However, according to the ruling scale, "days" are as justifiable as "nights," because I was under the expense at Braidwood of keeping my family and myself at an hotel at Moruya and travelling for seven weeks.

100. Mr. O'Sullivan.] You contend, then, that working under the regular system which had grown up in the Service, your charges were just and proper? Yes; I could not make a less claim.

101. Have you any objection to state what was the personal difference between yourself and Sub-Inspector Medley? Senior-constable Wells falsely reported me the report to be false. I knew that Wells and Sub-Inspector Medley intrigued in these reports against me to get me removed from Braidwood to make way for Senior-constable Wells there.

102. Have you any definite information to the effect that there was an intrigue to remove you? I know

for a certainty. I alluded to it in my report to the Superintendent.

103. But have you any absolute proof of it, or did you act upon suspicion? Upon what I was told by men at the station.

104. Then you only suspected it? I went upon what I was told by men on the Araluen station.

105. Are these men still living; could they give evidence? No, they are not here new; I do not know where they are. One man was named Armstrong, but I do not know where he is now. However, I am fully aware that Constable Wells would not dare to report me until he had Sub-Inspector Medley's concurrence.

106. Mr. Clubb.] You have heard Mr. Goff state that it was proved you were not in some of the places stated in your claim;—is that so? No, it is not. I have minutes here bearing upon my application for

107. Mr. Ryrie.] Is there any proof in the Inspector-General's Office that allowances have been made,—not according to the rules, but according to what you now state, that "night" pay has been allowed, although you did not make use of any hotel? Have I not proved it by one claim at Araluen, where 18s. was allowed?

108. But have you any proof in writing? There will be the abstracts of the claims, and the books on the station. I can bring three non-commissioned officers to prove my statement.

109. That these charges have been allowed, although not in exact accord with the rules? Yes.

110. Chairman.] Were you ever charged previously with misappropriating money? No.

111. No charge of dishonesty prior to this was ever levelled against you? No.

112. When you were dismissed it was proved that the Sub-Inspector had authority from Superintendent Zouch to grant a sum of £4 18s. for expenses which he withheld? Yes.

113. And you were not made aware of it until some time after your dismissal? Not until I saw the printed papers did I know a word about it.

Mr. W. Stafford. Whilst he was charging you with misappropriating 36s.? He had really withheld from me, under false pretences, the Superintendent's order for £4 18s., at the time he was trying to prove that I had defrauded the Government.

115. And you knew nothing about this £4 18s. being granted to you by the Superintendent until you saw the printed papers some time afterwards? Some time afterwards.

#### WEDNESDAY, 24 SEPTEMBER, 1890.

#### Present:-

MR. CLUBB,

Mr. GARRARD,

MR. FRANK SMITH.

#### J. S. HAWTHORNE, Esq., IN THE CHAIR.

Mr. James Cornett sworn and examined :-

Sub-Inspector 116. Chairman.] What are you? Sub-Inspector of Police, stationed at Gundagai.

J. Cornett. 117. Were you stationed at Braidwood in 1877? Yes.

118. What position did you then occupy? Sergeant.

24 Sept., 1890. 119. Were you in charge of the Braidwood District? No; Sub-Inspector Medley was in charge, and I was under him.

120. Was Stafford under you at that time? No; I was removed from Moruya, and Stafford took my

place.

121. Was Stafford in Braidwood at the time you were there? No. 122. You remember an account being rendered by Stafford for certain allowances in connection with night duty? Yes.

123. Did that go through you to Medley? No; it went direct to Medley.

124. Did you, subsequent to the claim being sent in, wait upon Stafford with a pencilled memorandum, with the object of getting him to write one similar to it? No.

with the object of getting him to write one similar to it? No.

125. Did you not wait upon Stafford's wife and son to get them to urge him to adopt a certain course in reference to this account, and the probable suspension? No. After Medley had made his inquiry, and looked over the Duty-sheet, and compared it with his night claims, Stafford spoke to me in the police-yard, and said, "What had I better say in reply to this inquiry?" I said, "You have simply to write a short report about it," or something to that effect.

126. Mr. Garrard.] Were you present when Stafford handed Medley a statement or report about the matter? I do not remember that I was.

127. If it has been said that, after handing in a statement to Medley, and Medley suggesting that the draft in pencil should be torn up, you gathered up the fragments and destroyed them, would that be true? Certainly not.

128. Did you do it? No.
129. You distinctly deny having submitted to Stafford, or his wife or son, any draft, in pencil, of what

Medley desired should be sent in? I never did such a thing in my life.

130. Chairman.] If the statement is made that you induced Stafford to make this statement, so as to settle the affair and bring about a reconciliation, it would be untrue? Yes; I would have no interest in doing such a thing. Stafford and I have always lived on the best of terms.

131. Mr. Clubb.] Was there no friction between you at any time? Never. We were always on the

best of terms, and parted on the best of terms.

132. You deny that you brought this statement to Stafford, and stated that Medley asked you to get him

to sign it, and that in the event of him signing it the matter would drop? Nothing of the sort.

133. If the statement has been made that you, in the presence of two or three other persons, did this,

would it be true? No. 134. Mr. Frank Smith.] There is a statement, dated August 31st, 1877, signed by you, in which it is declared that you copied the various dates of night duty from the Moruya Duty-book;—under whose instructions did you make that copy? Medley's.

135. In this statement you say-

The document handed to me by Sub-Inspector Medley is Senior-constable Stafford's claim for night-allowance for the quarter ending 30th June, 1877. The claim amounts to £1 16s. One night has been struck off for Araluen Station, making claim £1 13s.

The other document handed to me is a copy of the duty returned and performed by Senior-constable Stafford on the various dates named in the night-allowance claim above referred to. It is in my handwriting. I copied it from the Moruya Duty-book. The various dates were called from the night-allowance claim by Mr. Sub-Inspector Medley; and I entered the various duties performed by Senior-constable Stafford, in accordance with the records in the Duty-book.

Was there any dispute between Stafford and yourself at the time? No.

136. Were the dates admitted by Stafford to be correct? Yes; it was in the small office of the barracks at Moruva.

137. Have you a clear recollection of what took place at that time? I remember a good deal of what

took place, although it is thirteen years ago.

138. You say in this statement that Stafford could not account for the entries referred to in the nightmoney claim? Yes.

139. Then you further say that the only explanation Stafford could give, when questioned by Medley, was that he considered he was entitled to the claim he submitted in consequence of being under heavy expense through having to remove his family from Moruya to Braidwood? Yes. 140. Were you called as a witness in connection with the action which Stafford brought in the Supreme Court? Yes.

141. Did you give similar evidence in that case? I did, as far as I can remember. He brought an action against the Inspector-General for wrongful dismissal and back salary, which he thought he was entitled to. 142. Mr. Clubb.] Have you any knowledge of the local feeling at Moruya and Braidwood towards 143.

143. Chairman.] Was Medley a man who showed strong animus against those who displeased him? I Sub-Inspector could not say, but I understood there was some disagreement between Medley and Stafford before they were parted at Braidwood. I think Medley asked Superintendent Zouch for Stafford's removal, and he removed me from Mornus to Braidwood. removed me from Moruya to Braidwood.

144. Mr. Clubb.] Is it true that Medley was dismissed from the Force? No; he retired on compensation. 145. Chairman.] Did you consider that Medley had made up his mind to get rid of Stafford? No. 146. Was there anything in Medley's conduct which would justify you in believing that he had made up

his mind, if possible, to get rid of Stafford? No. 147. But still they were not on good terms? No.

148. When Stafford was dismissed, did you not expect that he would be placed on trial before a Bench of

Magistrates for the misappropriation of public money? No.

149. What is the usual course adopted when a charge is made against any one in the Police Force of misappropriation of funds? The first step would be to remove him from the Service.

150. Is it not usual for them to be suspended and asked to show cause? Yes, pending an inquiry.

151. Was Stafford suspended first, and then asked to show cause? I think he was suspended for some

time, by order of the late Superintendent Zouch, after Medley's report was forwarded. I did not look upon the matter at the time as a serious one.

152. Then, even as a Sergeant of Police, you looked upon the matter as of a trivial character? I did not look upon the matter as serious, because Stafford was a man of good station in the Service. He held the rank of sergeant, and did good service in the Jingaroo bush country. Of course I do not know anything

about Stafford's previous career from the defaulters' sheet.

153. Did you know that there had been some friction between Medley and Stafford in regard to certain action Stafford had taken to put down sly-grog selling in Moruya? I remember that there was a shanty action Stafford had taken to put down sly-grog selling in Moruya? at a place near Moruya, and the parties were rather hard to get at. Stafford, I believe made a representation to Medley that he could obtain a man who would inform and get the drink. This man was a Chinaman, and I believe the reply was that they looked upon the case as a degrading one, and that if the police could not get the case themselves they were not to solicit the aid of a Chinaman.

154. On July 26th, 1877, Sub-Inspector Medley writes to Superintendent Zouch as follows:—

For the information of Captain Zouch-Under the Amended Colonial Wine Act, when the police suspect "sly grog" selling is carried on, they may enter any place licensed under the Act and search for spirits, &c. I presume Captain Zouch will agree with me that the employment of police in disguise, to tempt persons to sell grog and thus break the law, hardly comes within the compass of their duties, and I think if the practice was carried out it would tend to degrade the

Was that in reference to the proposal of Stafford to employ a Chinaman? Yes; Constable Harvison

reported to Medley about the matter.

155. Where is Harvison? He retired from the Force. I believe he is now editor of the Moruya paper.

155. Where is Harvison? He retired from the Force is that Stafford was alleged to have been guilty of 156. Chairman.] Were you in trouble at all at the time that Stafford was alleged to have been guilty of these irregularities? No.

157. Mr. Clubb.] Has it been the practice amongst the Force to receive night-money in connection with circumstances which brought about Stafford's claim for 36s., and which brought about Stafford's dismissal? Yes, of course. If a claim is certified by the officer or Superintendent, it is paid.

158. Chairman.] Do you not think that the proper thing to have done with Stafford would have been to have brought him before a Bench of Magistrates? Yes; but I think the head of the Police Department and Superintendent Zouch looked upon the matter as exposing the Service to too great an extent.

159. Do you remember a case, in your experience as a policeman, in which a policeman has misappropriated public funds, and been brought before a Bench of Magistrates? I do not remember one. This matter was looked upon as a frivolous matter, and was not proceeded with further than removing Stafford.

160. Then this charge against Stafford was looked upon by you and other police officers in the district as a frivolous one? I did not think that it would turn out so serious as it did.

161. You did not think the trumpery nature of the charge would have led to his dismissal? I did not. 162. Mr. Frank Smith. Stafford, in his evidence, says that a statement was submitted by you for him to sign, and that if he signed it, the matter would drop;—do you remember that? No. 163. Do you remember taking him the statement to sign? No; in fact I never did. I am satisfied about

that.

164. Chairman.] Do you remember whether anyone was present at this interview between you and

165. Was his wife or son present? No; the reason he spoke about it to me was because he wanted to know what sort of a report to make. He made out several. He was not satisfied with some of them, and made more.

166. Did you ever hear Medley say anything which would lead you to think that if he had the slightest opportunity, he would have Stafford removed from the Service? No; Medley was a strict and gentlemanly man in his way, and would not make free with anyone.

167. Did you, on or about the 31st August, 1877, after purchasing some goods in Mr. Michael Morris's store, at Moruya, have any conversation with Mr. Morris upon the subject of an official inquiry, touching the conduct of Stafford? Not that I remember. Mr. Morris may have mentioned Stafford's affair to me, and we might have had a conversation about it; but I would not be sure.

168. Did you say to Morris, "I have a statement in my pocket, and if Stafford will copy it and stop his writing and say no more about it, I am sure all will be right"? No.

169. You never made any statement which, in substance, would mean the same thing? No. 170. You know Mr. Morris? Yes.

171. And you do not remember ever having had a conversation with him upon the matter? No; it is against the rules to have any conversation with civilians in regard to police matters.

against the trues to have any conversation with regard to police matters.

172. You have stated just now that you never had a conversation with Morris about Stafford's case? I beg to correct myself. We may have had a conversation, but I have no recollection of it.

173. Mr. Frank Smith.] You made a written statement to Medley on 31st August, 1877. That is the same day as this conversation with Morris is alleged to have taken place. Is it not possible that the conversation may have been supposed to refer to the statement which you yourself wrote for Medley? It may be. Of course Mr. Morris may have mentioned something about Stafford's trouble to me. I simply went under orders to Moruya. I did not get up the case against Stafford.

849—C

Sub-Inspector 174. At any rate, it is not correct that you had a statement in your pocket waiting for Stafford's J. Cornett. signature? Certainly not

Certainly not.

175. Chairman.] You knew that Medley had no love for Stafford? I believe he did not care much about 24Sept., 1890. Stafford. I was told that they had had a little misunderstanding or quarrel at Braidwood. After this claim of Stafford's had been sent to Braidwood, Medley told me that he wanted me to go with him to Moruya, and he did not even tell me what it was about. He compared his night claim with the Dutybook, and saw that an error had been made. A charge had been made for a night halting at Araluen. According to the Regulations, if a member of the Force stops at the police barracks, and there is accommodation, he is not all the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state dation, he is not allowed monetary claim

176. Mr. Morris has made an affidavit (Affidavit read);— do you say that that affidavit is false? It is not correct, so far as the statement that I had a document in my pocket which would get him out of the

difficulty is concerned.

177. But it may be true that you had a conversation with Morris? I may have had.
178. And did you think that if he made this statement, which has been made so much of, the matter would be looked over? Well, I thought Stafford's statement and explanation would have been taken for granted as being correct, and that he would have got through the trouble. He put in a claim for one night, and it was found by Modley when charled to be incorrect. night, and it was found by Medley when checked to be incorrect.

179. A mistake like that might occur with regard to any person? Stafford, I believe, was under the

impression that he would be allowed the claim.

180. I suppose many irregularities come into operation by the carelessness of the superior officer? Yes; they may crop up in that way. No doubt Stafford thought he was justified in putting in his claim.

181. Had you been in Stafford's place, and had you been guilty of the irregularities complained of in regard to Stafford, would you consider that you had been hardly dealt with if you had been dismissed from the Force? Yes; that is, if my conduct had been good up to that time.

182. Have you had any experience as a police officer in which men have been forgiven and allowed to remain in the Force, when they have been guilty of actions far more glaring than Stafford's? No, I do not know of one. The Inspector-General of Police deals with everything that comes before him very

183. Mr. Frank Smith.] Of course you look upon this charge as a charge for something which was not done? Yes.

184. From your knowledge of the circumstances, did you gather that there was really no wilful attempt at misappropriation of public funds on the part of Stafford? I did, because if I put in a claim in the same way Stafford did I should expect it to be sent back with the words written across, "This cannot be allowed." That is the usual way If a man sends in a claim to my office I compare it with the Dutybook before I certify and forward it to the Superintendent for payment. It is my duty to examine it, and to certify at the back that the claim is correct. It is then forwarded to the Superintendent and is submitted for payment to the Inspector-General or the Department. The claim checks the Duty-sheet and the Duty-sheet checks the Duty book. the Duty-sheet checks the Duty-book. It is the same with the Forage-book. We could not draw a pound of forage unless it were checked.

185. Mr. Clubb.] How long have you known Stafford? Twenty-eight or twenty-nine years.

186. I believe he had a very good record in the Force? There is no doubt he was a good police officer, and rendered faithful service.

187. You say you do not remember the statement which Morris made? No.

188. You do not remember having any conversation with him? No.

189. But still you do not think it likely that a man occupying his position would invent a statement thirteen years afterwards? I do not think so.

190. You have always been good friends with Morris? Yes; in fact I have his signature to a testimonial which I received from the people when I was leaving.

191. So that Morris, in making this affidavit, has no doubt made what he considers to be a true statement? Yes.

192. Although you cannot call it to mind? No.

193. Mr. Frank Smith.] But you can remember that you never had such a statement in your pocket? Yes. 194. Chairman.] It might have been the printed statement made in the presence of Stafford on 31st August, 1877, which you had in your pocket? It might have been. 195. Mr. Frank Smith.] In any case, you say that Morris never saw that statement? No.

196. You would not be likely to have that statement in your pocket? No. 197. Where did you write it? In the office, I believe.

198. Did you sign it there and then? Yes.

199. Who did you hand it to? Medley. 200. And you had no other statement? No.

201. Do you remember when you signed that statement? We got to Moruya in the evening, and I think it was on the following day, between 10 and 11 o'clock, that Stafford and I were in the office.

202. And you signed that statement? I believe I signed it in the forepart of the day.

203. Do you remember whether you saw Mr. Morris in the morning or in the afternoon? It might have

been in the afternoon.

204. You had not the statement in your pocket then? No.

205. Chairman.] You did not bring the original statement into Constable Stafford's office at all? No. 206. I see that Constable Stafford, in writing to the Inspector-General of Police on the 14th September,

I beg to report that Sergeant Cornett (No. 10), received about £3 night allowance for quarter ending 31 March, 1877, and he told me himself, in the hearing of a second person, that during his time in the district he was only one night absent in the bush. The Duty-book here does not show where Sergeant Cornett was absent on any particular night in March quarter, and his horse drew his usual allowance of forage daily at the station; thus, the night allowance sheet when compared with the Duty-book, &c., will not correspond; therefore, let Sergeant Cornett be put to the test of proving where he has slept every night he has returned for in March quarter, &c.

Sergeant Cornett also told me that while Senior-constable M'Clelland was at Nerrigundah he did well by sending in claims for night allowance; therefore, let M'Clelland be put to the test of proving where he has slept for every night for which he received night allowance for March quarter, &c.; so that if Cornett is to be believed, M'Clelland and himself have done more than what I have been dismissed for. Cornett said, in the hearing of witnesses, that "all of us done what you (myself) did," but I was singled out.

Mr.

Mr. Medley put me to the test of proving where I slept every night I returned for. Thus, let Cornett and Sub-Inspector M'Clelland be put to the same test as I was put to.

As I have been dismissed for what has been invariably done by others in this district (who were under no extra expense), I beg to request that the Inspector-General will grant an inquiry, not to be conducted by Mr. Medley, and at 24Sept., 1890. which I will be permitted to be present, as he would certainly baffle justice being done to me. As proof of this, Mr. Medley told me "it did not matter what other men done—he was told I spoke indifferently of him."

Thave &c.

I have, &c., WILLIAM STAFFORD.

I can prove that while speaking of my troubles that Sergeant Cornett said—in the hearing of myself and others—"Why did you not do as I done when I was here—stop at home and take it easy, and draw your cheque. I was out only one night the whole time I was here."—WILLIAM STAFFORD.

207. You said a short time ago that many of the irregularities with which Stafford was charged were practised by other members of the Force? They may have been. Of course we were called upon to make a statutory declaration in regard to every claim which was put in.

208. Do you remember receiving £25s. as night allowance for the quarter ending March, 1877? course, if I put in a claim and it was passed, I should receive the money.

209. But still the Duty-book does not show that you were absent from quarters on any particular night in the March quarter, although you drew the money? If I were out, the Duty-book would certainly

210. I only wish to show that irregularities were allowed to be practised by other members of the Force, and that they were not brought to task in the same way as Stafford has been brought to task; you do not say that you were not absent from duty? No; if I put in a claim for travelling allowances, I was absent on duty. If they did not think I was justly entitled to the money, the item would be struck out. 211. I suppose, at different times, you have seen the claims which Stafford put in? knew anything about these claims, because I never was near Stafford at any time. Not often. I never

212. At the time the charge was levelled against him, you must have known what he was being charged with? Yes; he claimed that he halted at Araluen.

213. They found fault with a number of items of 2s. a night? I knew of one item, and that was the halting at Araluen.

214. Prior to this, was there any suspicion in regard to any of Stafford's actions? Not that I am aware of. I am satisfied there would not be, although I would never see the sheets. If Stafford had a claim to Not that I am aware send in, and I happened to be the officer in charge of the sub-district, that claim would come to me, and of course I would compare it with the Duty-books and sheets.

215. Did you at any time hand a statement to Stafford in regard to this matter? No.

216. If Stafford states that he handed you back the statement, saving, "I will do nothing of the kind"-I am referring to the statement that you asked him to sign—would it be true or not? I do not remember anything of the kind.

217. Is it a fact that you brought this statement to Stafford's wife and son on the morning of August 31,

1877, and asked them to get Stafford to copy it? It is not a fact.
218. You do not remember having seen Stafford's wife and son at all? I saw his wife when I went there with Medley, and I bowed to her. I might have spoken to her.

- 219. But had you any conversation with her concerning this case? Never. 220. You never discussed it with any of Stafford's family? No; his No; his children were only young at that time.
- 221. There was a boy of about 15 years of age—did you see him? I saw him, but I never spoke to him about the matter.

222. You never discussed the matter at all? No.

223. Any conversation you had with regard to the matter was with Stafford himself? Yes.

- 224. Do you remember whether any of his family were present listening whilst you were conversing? I do not remember.
- 225. Where did this conversation take place? It may have been in the yard after we left the little office, or it may have been at the stable.

226. You never got any document from Stafford's son or any of his family? No. 227. You deny that you brought any statement to Stafford's wife and son urging them to get him to sign it, and that all would be settled if he did so? Most decidedly not.

220. You again deny that you made a statement to the storekeeper, Mr. Morris? I do, because I would not do such a thing. We might have had a conversation about Stafford's misfortune, but that would be all.

229. So that the affidavit made by Morris is not correct? No.

230. Mr. Frank Smith.] You remember having had a conversation with Morris on the same day as your statement, which has been printed, was written? Yes.

231. Mr. Clubb.] You sent in a claim on the 31st March, 1877, for travelling allowances as follows:—

•	1							_
,, 8 ,, 17 ,, 22 Feb. 15	,, 13	5 3 1 1	Tomago Creek	do  do do Summons-serving	0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	15 9 3 3 3 3 3 3	. (	0 0 0 0 0 0

I suppose that Stafford's claim would be a similar one to this? Yes. At that time I was engaged in

collecting the Electoral Roll and in summons-serving.

232. Mr. Frank Smith.] In connection with that claim, can you say that you went to those places?

Yes; I did go. 233. The case against Stafford is that he did not go;—is not that the point of the whole dispute? The case against Stafford has reference to a claim in regard to Araluen.

Sub-Inspector 234. The case is, that Stafford made a charge for expenses, and did not stay there? That may be so, and J. Cornett. I believe it is.

235. Medley's report of the 31st August says:—"Not one of the places mentioned under head, Where claimant halted,' &c., did the senior-constable stop at for the night"? Stafford admitted that himself.

236. But you yourself stayed at the places in regard to which you made a charge? Certainly. 237. And the complaint against Stafford is that the duty for which he charged was not performed? Yes. 238. Mr. Clubb.] In the same report to which Mr. Frank Smith has referred as being sent by Medley to Superintendent Zouch on 31st August, 1877, it is stated:-

I will now call Captain Zouch's attention to three more entries:—31st May to 1st June, "Burro"; 26th to 27th June, "Burro" This place is only 7 miles from Moruya. 10th to 11th June, "Bergalia—inquest inquiry." This is true, but this place is only 5 miles from Moruya.

On reference to Senior-constable Stafford's statement (marked No. 1), it will be seen that the excuse he offers for submitting this claim is that he was under great expense whilst waiting at Moruya for the quarters, and having to remove his family from Braidwood to that place.

his family from Braidwood to that place.

I have suspended Senior-constable Stafford, as Captain Zouch is already aware (by telegram), pending the decision that may be arrived at in this case, and in the meantime I have placed Constable Williams in charge of the station.

-? Yes.

239. Chairman.] Would it not have been more in accordance with custom if this erroneous claim by Stafford had been returned to him for correction? I should think so. If the claim had been sent in to me I would have sent it back with the words written upon it: "This cannot be allowed."

240. You are occupying the same position in the Force which Medley occupied when Stafford was dismissed. Supposing one of your subordinates sent in a claim similar to Stafford's claim, and you believed he was making charges which were not strictly correct, what would you do under the circumstances? I would send it back, and I would write upon it that it could not be allowed.

241. You would not be likely to take the extreme course of holding an investigation without giving your subordinate an opportunity of replying? I would not.

242. But it may frequently occur that claims would be sent in which you do not think ought to be paid?

Yes, which I consider ought not to be paid.

243. It was nothing unusual for such accounts to be received and to be sent back? Since my appointment I have received one or two claims which I would consider were not just claims, or which would not be allowed.

244. But you would not think the men who sent in the claims, although they might by unjust, and might be refused payment, would be entitled to dismissal from the Force? Certainly not.

245. Mr. Frank Smith.] Supposing it was a claim for £1 for some particular duty which the sergeant or constable had to perform, and you discovered that he had never performed that duty at all, or attempted to perform it, what would you do under those circumstances? I would have reported the whole of the matter to headquarters.

246. Is not the gist of the cause of the dismissal of Stafford the fact that he made charges for duty which it was afterwards discovered he never performed? I think that Medley reported him upon one particular

claim for duty at Araluen

247. As a matter of fact, was that duty performed? I do not know anything about the matter. As I have already stated, Medley wanted to take me with him to Moruya, and I never saw the claim until then. I believe that is the claim upon which Stafford was dismissed. There are previous matters upon

which I do not wish to say anything.

248. Those are the cases referred to in the duty-sheet, including neglect of duty, being disguised in drink on duty, and the case in regard to Lynch who was locked up by Stafford and who afterwards set fire to the police station? Of course I saw Stafford's reduction to the rank of senior-constable notified in the Gazette, and members of the Force generally talked about it. It seems that Stafford placed Lynch, who was drunk, in the lock-up, and he set fire to it. The Government property was destroyed, and Stafford was blamed, and the result was that he was reduced.

249. Who was Lynch, the man who set fire to the lock-up? He was an ordinary constable, and Stafford

was in charge of the station.

250. I suppose Stafford was justified in locking up an ordinary constable for being drunk? Yes; but the authorities did not think he acted rightly. He should have brought him to Braidwood, to head-

quarters, before his superior officer.

251. Does not the fact that Lynch tried to burn down the lock-up prove that Stafford was justified in the action which he took? Yes; if the man were violent he should have been kept there until assistance was obtained to convey him to Braidwood.

252. If you met with a policeman who was misbehaving himself, or who was drunk, and a nuisance, would not you be justified in locking him up? Certainly. I would order his arrest at once, and suspend Certainly. I would order his arrest at once, and suspend him, and report him by wire to headquarters.

253. So that Stafford did nothing which was very wrong with regard to that matter? No; if the man misbehaved himself Stafford would be right in locking him up, but in the mean time his duty was to bring

the matter before his superior officer as speedily as possible.

254. Did the custom exist at this time in regard to inaccurate accounts furnished by members of the Force for the superior officer, if he thought there was anything wrong, to send back the accounts for correction? It is the general rule to write upon the accounts, "It will not be allowed," or "Struck out." They are attested in the office of the Superintendent.

255. You think, then, that Medley went out of the usual course in dealing with Stafford's claim for 26s.? Of course; if Medley had sent the account back, and had asked for an explanation, Stafford

might have been able to satisfy him.

256. Did not you think at the time that an unusual course was being adopted with regard to Staffordcourse which would not have been adopted with regard to any other person with whom Medley had not had an altercation? I fancy that Stafford ought to have had an opportunity of making an explanation as to how it was that he put in the claim.

257. You think, then, that Medley acted rather harshly, and in opposition to the usual custom which had sprung up in the Service? The usual course in my district was that the claims should first come to me, and if I saw any error in them, or anything wrong, that I should return them, along with a 258. memorandum.

ON THE CASE OF WILLIAM STAFFORD, EX-SERGEANT OF POLICE.

258. I presume that in this case Superintendent Zouch had very little to do with the matter, excepting Sub-Inspector from statements made to him by the Sub-Inspector? Of course he would believe the statements put forward by Medley or any other officer. He might pass his remarks upon the claim, and send them back, asking for the reason why he made certain charges. If a claim is put in which is not properly explained, a report is generally sent explaining why it is sent in.

259. And you think that Medley could have managed the whole of this business without referring it to the Superintendent of the district? I would not like to speak upon that matter, because it was one entirely between Medley and Superintendent Zouch.
260. Chairman.] You are aware that Stafford stayed at Araluen? He did, according to the claim.
261. You could not say authoritatively whether he did or not? No.

262. Was it usual to receive branch gold escort allowance under the head of "nights"? I can explain that. If I were ordered from here to Campbelltown in charge of a gold escort, I would not, of course, travel at night time. The manner in which branch gold escorts come in for night allowance is this: the heading for night allowance, gold escort, should be written at the top of the sheet, in red ink. It is paid out of a different vote altogether, and has nothing to do with travelling allowance.

262½. Is this not the scale: "On branch gold escorts, for each night on the road—officers, 7s.; men,

3s.";—has that pay been drawn for "days"? Most decidedly; it is correct.

#### WEDNESDAY, 8 OCTOBER, 1890.

Bresent:

M.R. CLUBB. MR. O'SULLIVAN. J. S. HAWTHORNE, Esq., IN THE CHAIR.

Mr. William H. Cooke sworn and examined :-

263. Chairman.] What are you? Clerk in the office of the Inspector-General of Police.

Mr. 264. What evidence do you wish to give? Evidence respecting the defaulters' sheet of ex-Constable W. H. Cooke. Stafford. I think the question is as to whether the defaulters' sheet was correct or not. From the printed 8 Oct., 1890.

papers I see that the first charge which was entered is in 1869.

265. You might read the defaulters' sheet? The first charge in the defaulters' sheet was on the 29th February, 1864. The offence was that of bringing unfounded charges of drunkenness against Senior-constable Graham. Evidence was given on oath by Inspector Battye, and the depositions were forwarded to the Inspector-General. He was reprimanded by the Inspector-General for that. In October, 1865, Superintendent Orridge, who was in charge of the Southern District, where Stafford was stationed, put this minute upon the papers following upon that charge: "From circumstances that have since come to my knowledge and subsequent experience of Senior constable Graham's character (since dismissed). I my knowledge, and subsequent experience of Senior-constable Graham's character (since dismissed), I am of opinion that the above reprimand was not deserved by Sergeant Stafford.—J. W. Orridge, Superintendent."

266. Chairman.] That absolves him entirely from that charge? Yes. The next charge is in January,

1866, for neglect of duty in not having sold, as instructed, certain property of Prisoners Willice and Ware. He was reported to his officers by Prisoner G. Ware and others. The sergeant's plea was that his time was occupied with reports of bushrangers, and the evidence given, or adduced, was his own report and those of Sergeants Cleary and Costello. The decision of the Inspector-General of Police was, that he be severely reprimanded. That was recommended by the Superintendent, and approved of by the Inspector-General of Police. The next charges are printed as follows:—

Date.	Offence.	By whom reported.	Plea.	Evidence.	Decision.	By whom (Signature.)			
1869. 28 July 1874.	tendent Orridge, int geant Stafford again papers were referred tor-General ordered reduction to the ra free from serious bla	ring the course of an investigation held at Mongarlowe, by Superintendent Orridge, into charges of gross misconduct preferred by Sergeant Stafford against Mounted-constable Lynch, and in which the papers were referred to the Inspector-General for decision, the Inspector-General ordered Lynch's dismissal, and directed Sergeant Stafford's rank of senior-constable, as he considered him not free from serious blame, and, from all the circumstances, unfit to hold the rank of sergeant. (IG. P's. minute, No. 60-135, 29 July, 1869.)							
Sept.	Drunkenness on duty	Inspector Sanderson.	Not guilty.	Letters from several persons produced.	Not proven, but Senrconst. Stafford re- moved to Braid- wood, to be under officer's immediate ob- servation.	Superintendent Zouch.			
1876. May 1876.	Neglect of duty	Constable Arm- strong and Sen const. Wells.	Not guilty.	Senconst. Wells, Cons. Armstrong, and others.	Not proven.				
27 June	Being disguised in drink on duty.	Senior-constable Wells and Constable Berry.	Not guilty.	Senconst. Wells, Const. Berry, Const. Smyth, and several letters	Case not proven.				
1877. 25 Aug.	Attempting to defraud the Government by obtaining money by false pretences.	Sub-Inspector Med- ley.	Guilty.	from civilians. Occurrence-book, Sub-Inspector Medley, and Sergeant Cornett.	Reduced and dismissed.	Inspector-General of Police.			

The defaulters' sheet is completed by Captain Zouch, Superintendent of the Southern District, and is dated 17th September, 1877.

W. H. Cooke. 267. Mr. Clubb.] That list contains the whole of the charges alleged against Stafford? Yes. 268. And, as a matter of fact, only the last one has been proven? The charge made in 1869 was proven,

8 Oct., 1890. when he was reduced to the rank of senior-constable.
269. Chairman.] You have given us the substance of that charge? Yes; I have read this document to show that the printed paper is a copy of it, with the exception of the first two charges.

270. Is it the custom in connection with the Inspector-General's Department to enter charges on the defaulters' sheet, even though they have been disproved, or simply to enter charges which have been proved? I can state how things have been done since I have been in the office, but I cannot speak in regard to 1869 and 1874.

271. What is the rule now? If a charge was brought against any constable for neglect of duty, or such a charge as that made against Stafford in 1876, I should say it would have been entered on the defaulters' sheet, and if not proven it would be in favour of the constable. An unfounded charge would be in the constables' favour, although it appeared in the defaulters' sheet.

272. According to your statement, the charges which were levelled against Stafford, through not being proven, really resulted in his favour? They were not proven.

273. Looking at the defaulter's sheet from which you have quoted, is there, after all, any charge against Stafford excepting the one for which he was dismissed? There is the case in 1869 in regard to which he was reduced to the rook of sonior constable. was reduced to the rank of senior-constable.

274. But was there any charge made in 1869?

28th July, 1869. Offence:—During the course of an investigation held at Mongarlowe by Superintendent Orridge into charges of gross misconduct preferred by Sergeant Stafford against Mounted-constable Lynch, and in which the papers were referred to the Inspector-General for decision, the Inspector-General ordered Lynch's dismissal, and directed Sergeant Stafford's reduction to the rank of senior-constable, as he considered him not free from serious blame, and from all the circumstances unfit to hold the rank of sergeant. (I.-G.P.'s minute No. 69-135, 28th July, 1869.) Decision:—Reduced to rank of senior-constable Reduced to rank of senior-constable.

275. What was the charge against Lynch? I could not say for certain.

276. It seems to me very unfair that a charge should be levelled against a man without stating the particulars attending the case? I think that the charge is in extense in the evidence. This is supposed simply to be a précis. If any question crops up as to details, they can be found.

277. Looking over the sheet amongst other documents in your office, would you come to the conclusion that there was more than the one charge against Stafford? If I saw a defaulters' sheet covered on two

pages I should look at the decisions in each case.

278. Would you consider he was free from all blame if the decisions in each were not proven? I do not know; I would not say that.

Mr. John M. Stafford sworn and examined:--

279. Chairman.] You are the son of William Stafford? Yes.

J.M. Stafford. 280. What age were you when your father was dismissed from the Force? Fifteen years. 8 Oct., 1890. 281. Had you gone out to work at that particular time? No. 282. Were you at school? I was not attending school at that time.

283. Do you remember a visit paid by Sergeant Cornett to your house at Moruya? Yes.
284. What was the object of his visit? This was on the morning after Mr. Medley had been interrogating my father in regard to the claim for night money. He called at the house and wanted to see my mother.
285. Was your mother at the interview? Afterwards, my mother came in; she was not up when he

285. Was your mother at the interview? Afterwards, my mother came in; she was not up when ne first called. We had some conversation whilst waiting for my mother.

286. Did he tell you the object of his visit? Yes.

287. What did he say? He said he had a statement which he wanted my father to copy.

288. Did he show you the statement? Yes.

289. Did he read it? Yes.

290. What appeared to be his object in reading it to you and speaking about it? He wanted us to persuade my father to copy the statement. He said he had been trying to get him to do it himself, but he had refused. Afterwards he had some talk with my mother, and she saw my father about it and perhad refused. Afterwards, he had some talk with my mother, and she saw my father about it and persuaded him to copy it.

291. You heard all the conversation? Yes.

292. You were there from the time Cornett arrived until he left? Yes.

293. And conversation was carried on in an ordinary tone of voice, loud enough for you to hear what was

going on? Yes.
294. What did Cornett advise your father to do? It was on the distinct understanding, that, if my would be settled.

would be settled.

295. Did he state that he had authority to say that? Yes.

296. That he was commissioned by Medley? Yes; so I understood.

297. We do not want what you understood, but did he say that? Well, he spoke as if he were.

298. What did he say? He said he had got the statement, and if my father would copy it, Medley would be quite satisfied—that was all that Medley wanted.

299. Did your father come in after this? Yes; he was called into the room.

300. What did your father say? He said he did not believe in copying the statement, because there had been no direct charge made against him. He did not believe in making a statement until he knew what been no direct charge made against him. He did not believe in making a statement until he knew what it was intended to reply to.

301. What was the result of the interview—did your father sign anything? No; he promised to copy the statement.

302. Did Cornett leave it with him? No; he left it with me.
303. Did you read it yourself? Yes; I then went into the office to my father, and read the statement

whilst he copied it.

whist he copied it.

304. That is the statement, I presume, which has been made out as a charge against him admitting the offence? Yes; that was the only statement he wrote previous to his suspension. Before he had finished copying the statement, Medley came up to the office. I was going out of the office, and he told me to stay until we had finished. He asked me where Cornett was, and I told him he would be back directly.

305. Where had he gone in the meantime? I think he went for his breakfast.

306. I presume Cornett had left this statement with you for the purpose of inducing your father, whilst he was away, to copy it, and to hand it to him subsequently? Yes, and to take it to Medley. 307.

Mrs. Ann Stafford.

8 Oct., 1890.

307. And while Cornett was away Medley came up? Yes.
308. Mr. Clubb.] What time had elapsed between Cornett going and Medley coming? A very short J. M. Stafford.

time—not much more than a quarter of an hour.

309. What transpired during Medley's conversation? Medley walked about the yard until Cornett arrived.

No. 1890. 310. No conversation took place between Medley and your father in the meantime? No, and when Cornett came Medley and he had some conversation. Then Cornett came to me and asked me for the original statement which he had given me.

311. Did your father sign it in the presence of Cornett and Medley? He had copied it and signed it whilst I was in the office.

312. Did he hand the paper to Cornett or to Medley? To Medley.
313. Did Medley make any remark when he received the paper? I was not in the office when my father handed him the statement. I had left.

314. Mr. Clubb.] Was this the Police Office at Moruya? Yes; it was a small place partitioned off our sitting-room.

315. Chairman.] Your father's private office? Yes.

316. Did your father seem to you to sign the document unwillingly? Yes; he was very unwilling.
317. Who induced your father to sign it? My mother principally.
318. What was your mother's object in inducing him to sign this paper, which was really admitting a crime? There was no charge made at that time, and it was upon Cornett's representation that she persuaded him to copy the statement.

319. Mr. Clubb.] Did Cornett or Medley give any reason why they wanted your father to sign the paper? Cornett's reason appeared to be that he wanted to settle the matter—acting as a friend, I should say—thinking that if my father were to commence to write he would kick up a row and they would be all in it. 320. Your father was under suspension at this time? No; he was still acting.

321. You had no idea, at this particular time, that your father was in danger of dismissal from the Force?

I was only aware of the interrogations of the previous day with Medley, and in speaking to Cornett, I asked him what the result would be, and he said it was all a storm in a tea-pot. He told me this when he came with the paper.

322. Mr. Clubb.] You are speaking from memory now? Yes.

323. Chairman.] You have not had any conversation with any one so as to bring the facts before your

memory? None, excepting with my father.

324. You remember the occurrence distinctly? Yes.

325. Had you not passed some examinations at this time? Yes; I had passed the Junior University

examination in the previous year.

326. What took place in reference to the interview with Medley? I heard Medley addressing my father in a very insulting manner, questioning him about his night claim. My father objected to the manner in which he was putting the question, and declined to answer any more, and told him that if he asked for an explanation, or made a charge in writing, he would give any necessary explanation. threatened to suspend him.

327. But he did not suspend him? No.

#### Mrs. Ann Stafford sworn and examined:—

328. Chairman.] You are the wife of William Stafford? Yes.

329. You remember your husband's dismissal from the Force?

330. Do you remember Sergeant Cornett visiting your place? Yes.

331. Do you remember Medley calling? Yes.

332. Do you remember Cornett calling with a paper which you wanted your husband to sign? Yes. 333. You were present at the interviews which took place? Yes.

334. What was your husband's attitude when Cornett called in reference to signing the paper? seemed to be unwilling to copy the statement which Cornett had with him. 335. Was any pressure brought upon him to sign it? He got me to indu He got me to induce him to sign it, and I asked

him to do so, and he refused at first.

him and Medley would be all right if he copied the statement.

337. Did you look at the statement? No, he read it to me.

338. Did you think, when Cornett asked you to get him to copy it, that it was contemplated to dismiss him? No. 336. What was your object in asking him to sign it? Because Cornett told me that the matter between

339. No intimation of any kind was given that it would either disrate him or get him dismissed? No. 340. Mr. Clubb.] You state that you were told that if he signed the paper there would be nothing further? I understood he was in some difficulty, but I did not know that there was any likelihood of his further? I understood he was in some difficulty, but I did not know that there was any likelihood of his dismissal, and that by his signing the statement the matter would be quashed.

341. Chairman.] Did Cornett have any private conversation with you? No; he simply sent my son to call me and said he wanted to speak to me, and then he held out this document and said, "If Stafford will call me and said he wanted to speak to me, and then he held out this document and said, "If Stafford will copy that the matter will be all right." I said, "Are you sure?" and he said, "Yes." I said, "Won't he do it?" He said, "No; he is stubborn, and won't do it." I went and asked him to do it and he refused, but after some time he said, "All right, I will do it." I did not know that he would be dismissed, but he was suspended afterwards.

342. Mr. Clubb.] How long after signing the statement was it before he was dismissed? 343. Mr. O'Sullivan.] What reason did your husband give for refusing to sign it? He did not give any reason. He said, "There is no charge made against me; I cannot understand what Cornett means."

344. Mr. Clubb.] But when he objected to sign it, he must have had some reason? I suppose he thought

it was not right to do so. 345. Chairman.] I suppose the impression on your mind was the same as on your husband's—that it would end in smoke, as Cornett had practically put it? That is what I thought; I had not the slightest doubt

346. It never entered your mind that the signing of the document would form the groundwork for a charge against him of being unfit for the Service? I had no idea of anything of the kind.

347. I suppose if a hint had been given that the signing of the paper meant admitting the crime, you would not have advised him? No.

Mrs. Ann 8 Oct., 1890.

348. Did you have any conversation with Medley? After the inquiry was over he told me he was sorry. 349. Mr. O'Sullivan.] Do you consider your husband was entrapped into copying and signing the document? I have no doubt about that, because I had almost to press him to do it.

350. Mr. Clubb.] You knew Medley and Cornett very well? Yes.

351. And they were on the best of terms with your husband? I cannot speak about Medley, because I did not know what passed between officers and men, but I thought Stafford and Cornett were on good terms. 352. Chairman. You remember distinctly that Cornett called for the purpose of inducing you to get your husband to sign this document? Yes.

353. But you did not think that the document was to be used afterwards as evidence against him admitting his own guilt? I had not the slightest notion of such a thing.

354. And your husband did not appear to imagine that he had committed any crime when he signed the document? No.

#### WEDNESDAY, 5 NOVEMBER, 1890.

#### Present:—

MR. GARRARD,

MR. O'SULLIVAN.

#### J. S. HAWTHORNE, Esq., IN THE CHAIR.

Mr. William Stafford further examined :-

Mr. W. Stafford.

355. Chairman.] I notice that Sub-Inspector Medley, in his report to Superintendent Zouch, says:—" Not one of the places mentioned under head 'Where claimant halted, &c.,' did the senior-constable stop at for the night";—are we to infer that whether you were put to any expenses or not, no matter where you slept or halted for the night, your claim would be correct? Yes; you cannot infer anything else, because in 99 cases out of a hundred the police, when travelling, do not stop at inns.

356. In other words, if you slept under a gum-tree for the night, you would have a claim against the Department? Certainly; that is what Medley means, and that was the usual course. I was allowed to claim it for watching a man 5 miles away from Braidwood, and I have received the allowance.

357. It is really not necessary for you to put up at an accommodation house before you can make your claim, so long as you are away for the night? No; so long as you are away from your regular quarters. 358. Mr. Garrard.] But is not that governed by another thing—that where there is local accommodation at the place you are supposed to be staying at, you do not make the charge? Yes, of course; but it has been allowed where there is accommodation. For instance, there is my claim at Araluen, for March 31, 1877, prior to my dismissal, in regard to which I was allowed 18s. for six nights in succession, sleeping in the barracks.

359. Medley says that he found, from examination of the records and books, you were not at the places you mentioned;—is that true or not? Of course it is not true.

360. But where is the evidence that you were there;—when you are out on duty, away from your station, and you arrive at a place where there is a station, you have to sign a book, or leave a report to the effect that you have been in a particular place? No; your name is entered in the Occurrence Book by the officer-in-charge, and your horse forage is entered also.

361. As a matter of fact, your visit is recorded either by yourself or the local officer at that particular

place? Certainly

362. Inspector Medley says that, having made careful inquiry, he finds you were not at the places mentioned on certain dates;—have you, or has anybody else, got any records to bear out your or Medley's statement? I have a report of the duty taken from the Duty-book sent with the papers at the time I was dismissed. 363. Have you a copy of the records to show that you were at Bodalla from the 1st to the 2nd June? Yes; I have it here, taken from the Duty-book by Medley himself. I will read the entry—"1st June, to Bodalla; inquiry, 4 p.m. 2nd June, returned 10 a.m."
364. Medley says: "Under the head of 'Nature of duty on which engaged,' six entries are made of 'summons serving.' No such service was performed, as no summonses were issued for any persons residing at or near these places";—can you controvert that? Yes; from a copy of the Duty-books. 365. That only proves that you were at a certain place ostensibly to deliver summonses? If you will allow me I can explain it. A constable going out on one duty might perform a dozen duties. For instance, I served a summons at Bodalla, at Coila Bridge, and I remained out that night.
366. Who issues the summonses? The Clerk of Petty Sessions.
367. And he gives them to you to serve? Yes.
368. The Sub-Inspector says: "No such service was performed, as no summonses were issued for any persons residing at or near these places"? I will explain that. He has taken that from the books, because I certainly served a summons. On the 1st June I went to Bodalla and served a summons upon 362. Inspector Medley says that, having made careful inquiry, he finds you were not at the places mentioned

because I certainly served a summons. On the 1st June I went to Bodalla and served a summons upon a person whose name I could mention.

369. How could you prove that? I am proving it now, if I am on my oath.

370. But he says that no summonses were issued; if they were not issued they could not come into your possession;—is there anything in the books or papers to show that he is wrong, and that the summonses were issued? The summonses were issued, but there is nothing in the papers to show it;

there is nothing in the papers beyond his assertion.

371. Chairman.] It is your assertion against his? Yes.

372. Mr. Garrard.] Presuming that Medley was wrong, mistaken, or that he wilfully told a lie, and that you were in possession of the summonses for the purpose of serving them, the question arises: "Did. you on those dates deliver the summonses"? On the 1st June I served a summons at Coila.

373. Medley says: "June 1st to 2nd, a claim is made for 'summons serving' at Bodalla; by the senior-constable's admission to me, he was never at that place?" I served a summons that evening at Coila Bridge.

374. You say you were serving summonses, and you prove it by the copy of the Duty-book? Yes.

374. You say you were serving summonses, and you prove it by the copy of the Duty-book? Yes.
375. This is your own Duty-book? Yes; it is taken from the Duty-book I kept. This is a copy which Medley took from the book alluded to in Sergeant Cornett's evidence.

376. But there is nothing here about serving summonses on the 1st and 2nd June? Summons serving is omitted. I remained out that night watching a suspected illicit distiller; hence it is that the duty is simply written in the usual way. We do not set out all the duty performed.

377. And whilst out watching the illicit distiller you also served the summons? Yes; in the afternoon, at Coila Bridge. That is on the road to Bodalla.

378. Then Medley is wrong in regard to that matter; there is no return concerning the summonses, and there is nothing to prove that you served it? No; there is only a bare synopsis of duty on the Duty-book. 379. I should have thought the service of a summons would have been a matter which ought to have No; the other matter is more important. I might arrest a man, serve a summons, go out on patrol, and make inquiries in one day, but all that is never entered in the book.

Mr. W. Stafford. 5 Nov., 1890.

380. Then what Medley says in this report, that you admitted to him that you never visited that place, is incorrect? It is false; I told him I served the summons.

381. Did you go to Bodalla on that occasion? I was in the Bodalla district. I told Medley that I was

not exactly in the township.

382. Medley also says: "Again, June 6th to 7th, 'summons serving at Merricumbene'; he was not there";—how do you prove you were there? I prove it on my oath that I was there. I returned about 2 o'clock in the morning; of course, it is not down.

383. Is there a lock-up or station at Merricumbene? No. 384. Then neither at Bodalla nor at Merricumbene is there any place where you could record your visit, and it was not recorded? No.

and it was not recorded? No.

385. The only record of it is your own entry in your own book when you got back? That is all.

386. Hedley says: "He was not there" [vide Duty-book copy]; "6th June, 'horse ridden 30 miles'; 7th June, 'horse resting'; how did he get back from Merricumbene?" How can you charge for a night when you went back at 2 o'clock in the morning? Because it was always allowed.

387. What is the definition of being out at night? Any time after 12 o'clock, or on extra expense being

incurred.

388. Chairman.] Tell me the different places you were at? This is a correct statement. [Producing written statement.]

389. The first place is Reidsdale, April 1st? Yes; three nights absent from Braidwood.
390. You can safely say these are the twelve places you charged for, and which your superior officer, Sub-Inspector Medley, said you had no right to charge for, as you had never done duty? Yes.
391. On April 1st you have got down, "Reidsdale, patrol duty, &c., one night, 3s."? Yes.
392. That is perfectly true? Yes; between the 1st April and the 14th May I was three nights absent

from Braidwood Station at Reidsdale and Bombay watching suspected cattle stealers.

393. Mr. Garrard.] Where is the proof of that in the books? It is in the Braidwood book. I was 60 miles from Braidwood when I made out the claim, and that is how the mistake came in. nights do not agree with the Moruya books.

394. Chairman.] You made the account out from memory on account of the books being 60 miles away? Yes, and I was ten days late with the account, and I substituted three nights due to me at Braidwood as due to me at Moruya.

395. You gave in your claim from memory, and you put down by mistake "Moruya" instead of "Reidsdale and Bombay, three nights at 3s."? Of course, it was a mistake, and I substituted what was due at Braidwood as being due to me at Moruya.

396. Then, to all intents and purprses, you worked for the Police Department for three nights at 3s.? Yes; but bear in mind that the duty was performed at Moruya by day and at Braidwood by night, so that double duty was performed for these three nights. I was absent during the days named in the claim at Moruya, but I was not absent at night. I returned to my station perhaps about 8 or 9 o'clock

397. Mr. Garrard.] Therefore, you had no right to charge? I had, because it was due to me at Braidwood. 398. You considered you had worked overtime at Braidwood, and not having the Duty-book, you put in three days as having been served at Moruya? Yes; it is simply a substitution, but the duty was performed at both places.

399. How could you do duty at both places? It was done by night at Braidwood, and by day at Moruya, 400. But you were not allowed to charge for day work? It has been allowed by precedents. I could have slept at the hotel the whole time and charged 3s.

401. Mr. O'Sullivan.] I desire to examine you in regard to the report of Sub-Inspector Medley. Sub-Inspector Medley says that he has made careful inquiry into the matter, and can come to no other

what have you to say to that? That is not true.

402. Medley further says: "Not one of the places mentioned under head 'Where claimant halted,' &c., did the senior-constable stop at for the night"? That is not true. I was at Araluen from the night of the 15th to the 16th May, and on the night of the 28th to the 29th June, and I slept at the hotel from the night of the 16th to the 17th May at Morning as there was no room at the harracks. Therefore, that night of the 16th to the 17th May, at Moruya, as there was no room at the barracks. Therefore, that

403. Medley then says: "Under the head of 'Nature of duty on which engaged,' six entries are made of 403. Medley then says: "Under the head of Nature of duty on which engaged, six entries are made of summons serving. No such service was performed, as no summonses were issued for any persons residing at or near these places"? In answer to that, I say that summonses are not always served on people where they reside, and that was so in the Merricumbene case. He was an itinerant labourer. The entries on the Duty-book are perfectly correct. This can be proved by the copies of the duties sent weekly to Mr. Fosbery. 404. Medley speaks here of six entries of summons serving? Yes; the only mistake I made in the summons serving was in regard to two entries as to pights substituted at Braidwood. mons serving was in regard to two entries as to nights substituted at Braidwood.

405. However, a mistake in the nature of duty performed would not invalidate your claim? No.

406. You contend that it matters not whether you were summons serving or not, you were there performing your duty? Yes; two entries in regard to summons serving are not correct, that is all. Four entries are correct, and two were substituted in filling up the three nights due at Braidwood.

407. Medley further says: "June 1 to 2, a claim is made for 'summons serving at Bodalla'; by the senior-constable's admission to me he was never at that place"? That is not true; I was in the district of

Bodalla, and I served a summons at Coila.

408. Can you put in the name of the man upon whom the summons was served? He is a German, and it would be hard to recollect his name. It was for him to appear at the Court, and giving him notice that

I would object to a wine license for which he was going to apply.

409. How do you account for the statement by Medley: "By the senior-constable's admission to me he was never at that place";—what did you admit to him to justify that remark? I said to him that I was 819-D

not exactly in the township of Bodalla, but that I was in the district, and I served a summons at Coila,

5 Nov., 1890. 410. Then, although Medley's remark may be correct as applied to Bodalla, it is, as a matter of fact, incorrect, because you went to Coila Bridge, near Bodalla? I was in the district of Bodalla—it is all the same. We do not run things so nicely as that. So long as I was in the district, I should say I was at Bodalla.
411. Medley further reports: "Again, June 6th to 7th, 'summons serving at Merricumbene'; he was not there";—were you at Merricumbene on that occasion? Yes; and I served the summons there.

412. Whom did you serve it upon? It was served upon an itinerant labourer. It was a case of assault, and the summons had to be served personally. I returned at 2 o'clock next morning.

413. Medley then reports, evidently with a desire to convict you of mis-statements:--"6th June, horse ridden 30 miles'; 7th June, 'horse resting'; how did he get back from Merricumbene''?—He was referring to some entry in the Duty-book? I told you that I was at Merricumbene and served a summons there.

414. If your horse was ridden 15 miles on the 6th June and was resting on the 7th, how did you get back from Merricumbene? I rode back. I came back that night—the night of the 7th June.
415. Then you contend that that fully accounts for the apparent discrepancy? Yes; there is not the

416. Medley goes on to state: "I will now call Captain Zouch's attention to three more entries:—31st May to 1st June, 'Burro'; 26th to 27th June, 'Burro'; this place is only 7 miles from Moruya";—what have you to say to that? June 1st, "Burro" is one of the nights due at Braidwood substituted as being due at Moruya.

417. You had better explain that matter, because it is one of the things which may have misled Sub-Inspector Medley? It could not have misled him, because I told him of it.

418. You say that you put in your claim for overtime or for night-work, which was really performed in Braidwood, but for convenience sake you put it down at Moruya? Yes, and that is one of the nights.
419. Then this money was honestly due to you? Undoubtedly, and it is due to me at the present day.
420. Was it the practice in the Force to do this kind of thing? I was at Braidwood during the earlier part of the June quarter, and I was transferred in the middle of the quarter to Moruya, and I could not make out my claim until the 10th July. Claims should be in the Superintendent's office not later than the 4th July, and in order to facilitate the despatch of the return I simply substituted the three nights due to me at Braidwood as being due to me at Moruya.

due to me at Braidwood as being due to me at Moruya.
421. Why did you not keep a record at Braidwood? I did, but I had not got the record at Moruya. 422. Then you put them in in a hurry, fearing that you might miss that month? I would have had to lose them altogether, or to have waited and delayed the returns longer, until I wrote to Braidwood.

423. Do I understand you to swear that Medley was aware that you had done this? Yes; I told him of it in the office.

424. And he made no objection to it? No; he did not speak at all about it. I asked him to allow me to write these places in.

425. But he knew that you had earned this money at Braidwood? He did.
426. The report states:—"26th to 27th June, 'Burro'; this place is only 7 miles from Moruya";—what is your reply to that? That was a mistake in copying. It should read, "28th and 29th, Araluen." Again, Mr. Medley has omitted that altogether from the return of the duty he sent in.
427. But whose mistake was it in putting in Burro instead of Araluen? In copying from the Duty-book I wrote "26th to 27th, Burro," when I should have written "28th to 29th June, Araluen." I made a mistake in copying. It is now corrected.

mistake in copying. It is now corrected.

428. Where is it corrected; -do you say you correct it now? Yes; it is corrected in my affidavit, and in the other printed papers.

429. Referring to this entry, "26th to 27th June, Burro," you say that it is a mistake that you made in copying from the Duty-book? Yes.

430. And you also swear that you were not allowed an opportunity of correcting that mistake? Yes. 431. Has it been the practice to allow officers to correct mistakes of this kind? Scores of claims have come back to me for correction.

432. Then it is not an unusual thing for mistakes of this kind to be made? No; not at all.

Yes; they are marked with red 433. And when they are made, opportunity is allowed for rectification? ink, and are sent back for report or correction.

434. Can you call to mind any case in which a correction of this kind has been made? Not particularly, but I can swear to several.

435. Do you know a case in which Sergeant Cornett was allowed to do this? Sergeant Cornett's claims were, of course, irregular, but they were passed without correction. Will you permit me to say there are three entries in Sergeant Cornett's claim written "Bush duty" instead of the names of places—and that is a greater mistake than I have made—and he was not called upon to correct it.

436. Medley further reports: "10th to 11th June, Bergalia—inquest inquiry"; this is true, but it is

only 5 miles from Moruya;—what have you to say in reply to that? I was absent on that night.

437. But Medley states that Bergalia is only 5 miles from Moruya? Yes, that is so.

438. Would that justify you in making a charge? Yes.
439. At what distance is this charge allowed? It is not specified.
440. Then I suppose it will be allowed (say) for a distance of 500 yards? No; of course, if you are

away from the township, and have to camp out all night watching a suspected person, it is granted.

441. Then why does Medley in one place put in this remark:—"This place is only 5 miles from Moruya," and in another place, "This place is only 7 miles from Moruya"? He speaks about 5 miles in his report, but I was a great deal further away than that.

442. I want to know why this remark is put in—is it to imply that the charge ought not to have been made? It would seem so.

443. Has it been the practice for a constable to make charges of this character, although only these short

distances away from their posts? Certainly; when they were absent all night from their posts.

444. Medley goes on to state: "On reference to Senior-constable Stafford's statement (marked No. 1.) it will been seen that the excuse he offers for submitting this claim is that he was under great expense whilst waiting at Moruya for the quarters, and having to remove his family from Braidwood to that place";
—what have you to say in regard to that paragraph? The statement referred to is not my statement at all; that is the statement which was brought to me.

445.

Mr.

ON THE CASE OF WILLIAM STAFFORD EX-SERGEANT OF POLICE.

445. You swear that that was not the statement made by you—it was a statement written out which you W. Stafford.

were asked to sign? Yes; upon the condition that the whole matter would drop.

W. Stafford.

446. And which statement you did sign? Which I copied and signed upon the understanding that the

5 Nov., 1890. whole matter would drop.

447. But why was that condition made if you felt you were right? I always felt that I was right, and I feel now that I am right.

448. Why did you submit to having that condition forced upon you? The statement was forced upon me by Cornett, and I refused to sign it; and then he went to my wife and son, and then to Mr. Morris.

449. And did you think you would rather submit to this little loss of money than have any friction over it? No; the fact of the matter is that I wanted to be called upon for a report. I did nothing but substitute three nights due at Braidwood as being due at Moruya.

#### WEDNESDAY, 19 NOVEMBER, 1890.

Bresent: MR. CLUBB. MR. RYRIE. Mr. GARRARD.

#### J. S. HAWTHORNE, Esq., IN THE CHAIR.

Mr. Wm. Stafford called, and further examined :-

450. Chairman.] Are there any inns or houses of accommodation at or near any of the places in respect of which you have sent in claims? Yes; there was one accommodation house at Bergalia, another at W. Stafford.

Moga, and another at Schnapper Hook, near Merricumbene.

451. Mr. Clubb asked you the question: "You have heard Mr. Goff state that it was proved you were 19Nov., 1890. not in some of the places stated in your claim;—is that so? No, it is not. I have minutes here bearing upon my application for allowance";—Is that so? I have the minutes, &c., here.

452. Mr. Garrard.] The point of the whole matter is this: That at one of the places which you mention as having stayed there—Burro—you did not stay at, but you charged on account of services at Braidwood. Then there are two other places. You were at these places but you were not cut all the night, and you

Then there are two other places. You were at these places, but you were not out all the night, and you charged in respect of these places because of some work previously performed at Braidwood? because it was frequently allowed, and due for services rendered at Braidwood.

453. Chairman.] Sergeant Cornett stated in his evidence that it frequently occurred that men under his control sent in claims which, after investigation, he either struck out or disallowed, or sent back for correction or report? Yes; that is the usual course.

454. And it was owing to this careless method of procedure that you got into the careless habit of making

charges which were not, strictly speaking, in accordance with fact, but for which you had given service somewhere? Yes; there is nothing whatever in the claim which does not correspond with my books,

with the exception of the night at Burro, to which Mr. Garrard has alluded.
455. Mr. Clubb asked Cornett (Question 231) as follows: "You sent in a claim on the 31st March, 1877, for travelling allowances, as follows:

Jan. 3 Ja ,, 8, ,, 17, ,, 22, Feb. 15 Fe ,, 22, Mar. 21 M	, 13	Tomago Creek Stony Creek Tuross River Moruya River Bush duty Do Do	Do Do Do Summons serving	0 0 0 0 0	15 9 3 3	0 0 0 0 0 0
			Totals	2	<b>`</b> 5	0

I suppose that Stafford's claim would be a similar one to this? Yes. At that time I was engaged in collecting the Electoral Roll and in summons serving? Yes; that is so. I wish to show the Committee that I applied for the allowance, but Sub-Inspector Medley impeded me in getting it, and yet he allowed it; that was the £4 18s.

456. Chairman.] Is it a fact that at the time you were charged with obtaining 36s. by fraud from the Government, Sub-Inspector Medley withheld a paper or a voucher for £4 18s. which had been signed by Superintendent Zouch as money to which you were entitled? Yes; and I think the best way to answer thas question is to read the minutes I have in my hand bearing upon it:—

Moruya Police, 21 June, 1877. As I have been put to very heavy expense keeping myself in a public-house here (and my rising family at Braidwood), waiting for the quarters occupied by Sergeant Cornett, under the circumstances, will the Superintendent be good enough to grant me permission to return for night allowance for the term I am kept waiting for the quarters occupied here by Sergeant Cornett, which, I was told, would be vacated immediately after I took charge of this station?

To Superintendent Zouch, Goulburn.

WILLIAM STAFFORD.

I was then six weeks at hotels and travelling on duty without any abatement from 20s. a week at the hotel when absent on duty. In forwarding the above application to Superintendent Zouch, Sub-Inspector Medley wrote on it thus :-

Braidwood, 21 June, 1877.

I presume, if the allowance asked for by Stafford is granted, it will also be allowed to M'Clelland, whose family is kept out of the Braidwood quarters by Stafford's family.

J. R. MEDLEY,
To Superintendent Zouch, Goulburn.

Sub-Inspector.

At that time there were five vacant rooms in the Braidwood barracks; therefore, M'Clelland's claim did not bear upon my case at all. Besides, apart from this, M'Clelland and his family were stopping at his father-in-law's place in town, under no expense, and Sub-Inspector Medley was aware of this when he introduced M Clelland's claim into my case. Thus, Sub-Inspector Medley's petty spite towards me is visible in all his statements in this matter. M'Clelland could not claim anything, therefore Medley should not allude to his claim; yet it seems that because M'Clelland's claim was refused, Medley was determined to stop my claim. Note this—on 22nd June, 1877, Superintendent Zouch wrote thus:—

If there is no barrack room at Moruya in which Stafford could have slept in common with men calling at the station, he might be allowed 2s. per night. As I am, however, aware that there was nothing to prevent M Clelland from stopping in the Braidwood barrack, his claim cannot be entertained.

HENRY ZOUCH,
Superintendent.

Mr. W. Stafford. 19 Nov., 1890.

On the 28th June, Cornett was ordered to vacate the Moruya barrack, and I was ordered to remove my Thus I saw Sub-Inspector Medley at Braidwood on the 30th June, and he told me there that "the Superintendent would not entertain my application for allowance." I said, "That is strange; I would like to see the Superintendent's minute"; he said he had returned it to the Superintendent again. I said, "That is unusual; I should see it first"—hence my submitting my claim on my return to Moruya on the 10th of July, 1877, for 36s. for the nights I was absent from the hotel and barracks under treble expense (vide duty). Now, leaving men calling at the station out of the question, there was not even "room for me to sleep in common" with a man "at the Moruya station." Yet, when at the station I slept in my office, so as to be handy to answer any call made upon me during the night, and so as to keep away from the hotel (see Police Rule 66). My bed was a makeshift one for the purpose, partly hotel bed-clothes, and I paid the same at the hotel as if I had slept there. Therefore, the Superindent virtually allowed me £4 18s., which the Sub-Inspector first tried to impede, and which he subsequently withheld from me by false statements as shown above, and thus caused my dismissal for 36s. of this money. Of course, I did not see the Superintendent's minute, &c., until the papers were printed by Parliament some ten months afterwards. My application was submitted in lieu of a report for wantonly putting me to such unnecessary expense, and it was submitted because I thought it would have more effect, which it had (as shown above), in bringing about Cornett's removal, than a direct report, else I would have submitted a full claim for £7 1s. allowance without an application or leave; and as proof of this, see claims and precedents herewith, notably my own claim for 31st March, 1877. For six nights I slept consecutively in the Araluen barrack 18s. was allowed. And as further proof of my statements I have already claimed £8 1s. in lieu of 36s., and which I still claim to be honestly due to me in accordance with custom and precedents herewith, which became a general rule in the Force. Here is the bill I submitted to Mr. Fosbery: To Edmund Foshery, I.-G.P., Sydney.

85, Norton-street, Leichhardt, 7 March, 1889.

Br. to William Stafford for travelling allowance on police service in quarter ending 30th June, 1877:—

£ s. d. 6 12 1 0

In reply to that bill, Mr. Fosbery wrote on the 7th March, 1889, namely:-

THE Inspector-General of Police informs Mr. William Stafford, in reply to his letter of even date, that he knows nothing of his claim, nor can it be certified to nor paid after such a lapse of time. If Mr. Stafford can give dates and particulars in detail the Inspector-General will see if there is any record.

E. FOSBERY.

In reply to that letter, on the 8th March, 1889, I furnished Mr. Fosbery with all the "dates," "particulars," and "details," with the precedents here quoted, which were then and are still in his possession. In reply to the particulars thus furnished, Mr. Fosbery, on the 27th March, again wrote thus:

THE Inspector-General of Police has no power to deal with Mr. Stafford's claim. After such a lapse of time it requires a Parliamentary Vote to pay it.

E. FOSBERY.

To that I replied on the 21st April:-

As the lapse of time is not due to any neglect on my part, your plea for not settling my case only serves to aggravate the grevious injustice under which I am suffering. Justice is justice at any time, all the world over. To Mr. E. Fosbery, Inspector-General of Police. WILLIAM STAFFORD.

These letters concluded my last appeal. Then there is another letter which I wrote to Sir Henry Parkes which may throw light upon the matter. Questions have also been answered in the House by Sir Henry Parkes and Mr. McMillan, showing that this allowance has been granted as a general thing. I will now read Mr. Fosbery's minute notifying the dismissal to me. On 7th September, 1877, Mr. Fosbery wrote

These reports and papers disclose such a deliberate attempt on the part of Senior-constable Stafford to defraud the Government, that (apart from previous ill-conduct) I have no alternative but to direct his reduction and dismissal from the Service.

E. FOSBERY,

Inspector-General of Police.

This is an extract from what I wrote to Sir Henry Parkes upon that matter:-

This is an extract from what I wrote to Sir Henry Parkes upon that matter:—

1 MAY, therefore, point out that Mr. Fosbery, by way of parenthesis, took care to make it quite clear in his minute of dismissal that he dismissed me, "apart" from side issues, for "attempting to defraud the Government." That being so, why did he afterwards belie himself by falling back upon false assertions to bolster up his charge of fraud. I may also point out that he said that the "attempt was so deliberate" that he had "no alternative but to direct my dismissal." This is also false, because if Mr. Fosbery (by his own showing) was inclined to do his duty impartially, according to law, he had "no alternative" but to submit the alleged charge to a "Bench of Magistrates" to hear and determine before he took upon himself the responsibility of adjudging me guilty of a criminal offence by dismissal from the Public Service, which of course entailed the confiscation of my pension. What is the use of police rules and statute law if Mr. Fosbery is allowed to ignore them and usurp the functional powers invested in magistrates, judges, and juries? Here is one police rule by which he should be guided in my case, namely, 74:—"Offences against the public, or where magistrates have clear jurisdiction, will be always submitted to a local magistrate or Bench of Magistrates unconnected with the Force." Yet, in the face of this rule and precedents, I, who was dismissed for fraud upon the bare report of the accuser, was refused the right of a fair trial before a Bench of Magistrates, when two Police Magistrates were sent at the same time hundreds of miles to investigate charges of drunkenness, &c., preferred against Sergeant Cornett, whose alleged misconduct was the real cause of sending me to Moruya. Hence the trouble and expense I have been put to arose because there was no complaint against me at Braidwood.

1892-3.

LEGISLATIVE ASSEMBLY.

SOUTH WALES.

# MINUTES OF EVIDENCE

TAKEN BEFORE

#### THE SELECT COMMITTEE

ON THE

# CASE OF WILLIAM STAFFORD, EX-SERGEANT OF POLICE.

#### TUESDAY, 18 APRIL, 1893.

Present:-

Mr. G. D. CLARK, Mr. GARRARD,

Mr. JOHNSTON, Mr. O'SULLIVAN.

E. DARNLEY, Esq., IN THE CHAIR.

Mr. James Smith called in, sworn, and examined:-

Mr. James Smith called in, sworn, and examined:—

1. Chairman.] What are you? I am an hotel-keeper at present.

2. Were you living at Mongarlowe at the time Sergeant Stafford arrested Constable Lynch? I was.

3. Were you present on the occasion? Yes.

4. Will you tell the Committee what took place between Sergeant Stafford and Constable Lynch? 18April,1893. Constable Lynch came to the door and called Sergeant Stafford out. Sergeant Stafford went out. I could hear what passed at the door. Constable Lynch wanted Sergeant Stafford to let his brother stop in the barracks all night. His brother was drunk, and Sergeant Stafford refused. He said, "Let him get sober first, and it will be a different case. If he came here sober the case might be different." He said, "You are both drunk; you had better go into your room and stop there," and Lynch struck Stafford and cut his cheek. I think he had a ring on his finger, and he cut him. Constable Lynch's brother went to close on Sergeant Stafford who sang out for me to come out. He said, "Smith come here; come here quick"; so I went out, and I pulled the brother away.

5. Were you a constable at the time? No, I was a gold-miner at the time. Sergeant Stafford said to me, "See if you can get him down the yard a bit and let him get quiet." He walked two or three steps down the yard, and wanted to fight with me, and he jostled me against the window and broke it, so Sergeant Stafford locked him up. He asked me to open the lock-up door, and I opened it and he locked

Sergeant Stafford locked him up. He asked me to open the lock-up door, and I opened it and he locked

6. Did Stafford bear the name of a dissolute and intemperate man in the Braidwood District? No; he was a man who was highly respected. I remember that on one occasion a daughter of his—a little child—

died, and the funeral was the largest that was ever in the Braidwood District.

7. Mr. O'Sullivan.] How long ago is it since this quarrel took place between Lynch and Stafford? I think it occurred in 1869. It was on the occasion of the opening of a quartz-crushing machine there; I think it was about the middle of July.

8. Have you been living at the Little River or Mongarlowe since? No; I left Mongarlowe seventeen years ago last October.

9. You consider, from what you saw in that matter, that Lynch and not Stafford was at fault? Lynch was at fault. He was the aggressor. He struck Stafford after Stafford asked him to go into his room until he would get sober.

10. Did you ever hear any rumours about Stafford's dishonesty or any weakness on his part? No; he was a man always spoken well of, and there are business men in Sydney who can bear out what I say—people who were in business in the district.

11. He was a long time stationed at Braidwood, was he not? I believe he was. He was a good while on the Mongarlowe. I think he held the appointment of Mining Registrar for a time. I remember taking out some miners' rights when he was Registrar on the gold-field. I believe he was. He was a good while

#### MINUTES OF EVIDENCE TAKEN BEFORE THE SELECT COMMITTEE

Mr. J. Smith.

12. Did you ever hear any complaints made about his being short of cash, or interfering in any way with

the moneys confided to his care? Never; never a word of anything of the sort.

13. Mr. Garrard.] Were you called as a witness in the inquiry that took place in reference to the row between Stafford and Lynch? Yes; Superintendent Orridge called me.

14. Did you make the same statement then that you did now? As near as I can recollect, pretty much the

15. You must have a very retentive memory to recollect the exact words spoken in a drunken row twenty-four years ago? Well, it is as near as possible; it might not be the exact words, but it is the sum and substance.

16. Who else was called besides you as a witness in the inquiry held by Superintendent Orridge? Mrs. Smith, my wife, and I think W. J. Doyle a storekeeper.

17. And was the evidence all towards confirming your view that Stafford was not to blame? I could not

say. While the other witnesses were being examined I was away at my work.

18. Are you aware that Sergeant Stafford was reduced because of the result of that inquiry?

that he was reduced, but I did not take much interest in the matter. I did not know what it was for.

19. Does not that go to show that the weight of evidence must have been against your view of the matter? I heart that was the cause of it, and I thought to myself that it was very unjust.

20. You do not confirm the opinion expressed by the Inspector-General in reducing Stafford? No. 21. In answer to Mr. O'Sullivan you said that Stafford was held in very high esteem by the people of the Braidwood district? So he was; I never heard anything to the contrary.

22. Superitendent Zouch on the 18th November, 1877, wrote concerning Stafford, these words:—

On a retrospective view of the man's career, it is palpably manifest, whether the decision arrived at be just or unjust, the universally admitted odium entertained by the inhabitants, including, magistrates, professional men, and people of all grades, has shown itself in the general satisfaction his removal has produced. This is the result of personal inquiries made within the last few days in the Braidwood District, the unhesitating reply being that his punishment was richly deserved, and it should have been meted out to him years ago, his conduct having earned for him a most unenviable reputation, not alone with the inhabitants, but with the police generally.

Do you agree with that opinion expressed by Superintendent Zouch? I certainly do not agree with it, and I do not believe there is a living man in the Braidwood District who would agree with it.

23. Your whole experience concerning Stafford goes in a very opposite direction to the opinion expressed by Superintendent Zouch? Yes.

 $\mathbf{Yes}$ .

24. How long did you know Stafford in the Braidwood District? Between five and six years. I knew him when he was in Araluen, before he came to Mongarlowe. I was a gold-digger there and knew him by sight, and sometimes spoke to him.

25. He was not one to shirk his duty in any way? I never heard tell of it.
26. He did his duty without being officious? Yes, as far as my knowledge goes. He was a man highly respected by everybody in the district.

27. Mr. O'Sullivan.] In what year did you say it was that Stafford and Lynch quarrelled at Mongarlowe?

I think it was in 1869.

28. This report of Superintendent Zouch is dated 18th November, 1877; therefore there would be a lapse of eight years between those two dates;—do you think it possible that during those eight years Stafford had got himself into bad odour, not only with the inhabitants but also with the police? I could not say; but being so much about the Braidwood District, and meeting and talking with so many people, if it had been the case I would have heard something about it from the inhabitants.

29. Were you in the Braidwood District long after 1869? I left Braidwood and came to Sydney in

November, 1876.

30. Then you were there seven years after the quarrel between Lynch and Stafford? Yes; somewhere about that.

31. And you say you had opportunities of learning the opinions of the district during those seven years, and yet you heard nothing to justify this report made by Superintendent Zouch? No; I never heard a

word to Stafford's dispraise in any way.

32. Do you think that this strong feeling against Stafford on the part of the inhabitants and the police could have existed without your being made aware of it? I must have heard it, because in a country place a report flies like wildine, and one neighbour will tell another. I never heard a word of such a

rumour before.

33. Mr. G. D. Clark.] Were you on intimate terms with Stafford when in the district? with him meeting him. I was on intimate terms, and I will tell you how it came about. Stafford was away on duty, and his child took ill—she afterwards died—and Mrs. Stafford asked me as a favour if I would go to Braidwood for medicine, and I got a horse and rode into Braidwood, and got the medicine. After that I was more intimate with Stafford than formerly. When he was away from home I went to Braidwood to bring medicine for the child on several occasions in order to oblige Mrs. Stafford.

34. You claim to have been in a fair position to judge of Stafford's general character? Well, I fancy could judge a man—whether he was a harsh man or otherwise. I have travelled about the world a bit. Well, I fancy I

#### Mr. William Stafford called in, sworn, and examined:-

Mr

35. Chairman.] I believe you desire to make a statement in reference to certain evidence given before the W. Stafford. last Committee? Yes; I believe the case was concluded at the last meeting of the Committee with the exception of my statement and rebutting evidence.

18 April, 1893. 36. Will the statement you will now make include the rebutting evidence? It will consist of my statement, and explanation, and rebutting evidence. I will read my statement as follows:—"Messrs. Fosbery and Zouch's reports to the Colonial Secretary disclose that they entirely abandoned the charge of fraud upon which I was dismissed, and urged misconduct as a reason for dismissing me, without showing any specific charge of misconduct proved. Sub-Inspector Medely did not dare to report me for misconduct, and the sub-Inspector and I have the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Inspector of the sub-Ins and I was too far away from them for Messrs. Zouch and Fosbery to see me misconduct myself. Defaulters-sheet, and the magistracy have proved my conduct good, and that even the influence of drink was never proved against me. Therefore, I cannot see where Messrs. Zouch and Fosbery found the misconduct they alluded to in their reports to the Colonial Secretary, when I asked to be reinstated or to submit the charge of fraud to a Bench of Magistrates to hear and determine, as provided for by Police Rule 74, and statute law. Hence, I beg to submit that, as in my case, where there is no offence there

should be no punishment; and therefore, gentlemen, when you have impartially heard me in reply to the extraordinary indictment upon which I am arraigned before you, I think that your verdict will be "Not guilty of fraud," and that the innuendoes regarding Stafford's conduct are malicious and unfounded. When the Force was remodelled in 1862, I was a trooper under Superintendent Zouch, at Goulburn; Mr. Zouch was very irregular in paying me my salary. This, with his promoting undeserving men, caused me to make up my mind to leave his district, and I applied for a transfer to Braidwood. Mr. Zouch sent for me, and told me he could not think of allowing me to leave his district, and my time for promotion would come in due time. I said if my application for a transfer be refused, I shall submit my resignation to the Inspector-General, with my reasons. Hence, I was transferred to Braidwood. Soon after I arrived in Braidwood I told Sergeant Duffy (now Sub-Inspector at Maitland) that Mr. Zouch owed me all the escort and night allowance due to me since I joined, and that I had signed for the money—about the escort and night allowance due to me since I joined, and that I had signed for the money—about £19. Duffy recommended me to report the matter to Mr. Inspector Walker (now Principal Under Secretary). I did so, and I got my money. In 1874, the Braidwood District came under Mr. Zouch's superintendence, and thus I came to serve under him again. Between 1862 and 1877, I only met Mr. Zouch four or five times, when he showed a sort of a stand-off disposition towards me, and, therefore, mark the coincidence: I reported that he had withheld £19 of my money in 1862; and he recommended my dismissal in 1877, for an attempt to defraud the Government of 36s. - the subject of this inquiry.

Dear Sir,

Allow me to request your kind consideration of the unfortunate case which recently dismissed from the Service Senior-constable Stafford, of Moruya, an effective officer of, I believe, eighteen years' service. The summary manner of his dismissal without a hearing, on a charge, too, which might be explained satisfactorily before the highest tribunal of the people, is my honest apology for intruding thus on your valuable time, well knowing, as I do, your love of fair play and high sense of justice. I have no acquaintance with the sufferer personally, having met him but once, and that casually. But public rumour led me to inquire concerning his case, and I have heard enough to convince me of the fact that he has been victimised. It is said that the grievance if not redressed will be mooted in Parliament. An officer so useful and of so long standing is entitled, I think, to be permitted to show cause why he should not be sacked in his old age.

I have, &c.,

CAPTAIN CAMPBELL,

Formerly of Dragoon Guards.

Formerly of Dragoon Guards.

Mr. Goff,—Reply. Acknowledge, and inform in reply that he is mistaken in supposing that the case was dealt with without full investigation, but that some further statements made by Stafford are now being inquired into.—E.F. Done.—T.H.G., 29. Forwarded for Captain Zouch's information.—Edm. Fosbery, Inspector-General of Police, 29/9/77. There is red tapeism. It is now manifest that Captain Campbell was not mistaken, and that my statements were not investigated before nor since. Mr. Fosbery ordered Mr. Goff to write that misleading minute to Captain Campbell. This is substantial proof of the grave injustice done me, which is confirmed, every word of it, by Sub-Inspector Cornett's sworn testimony, who has boldly acquitted me of any suspicion of fraudulent intent—who has virtually admitted that his own claims and my claims are similar; suspicion of fraudulent intent—who has virtually admitted that his own claims and my claims are similar; thus, the substance of Captain Campbell's letter to Mr. Fosbery is proved by Cornett, vide replies to questions 157, 161, 184, 231, and 255, &c. Hence the only difference between Cornett's sworn testimony and my evidence is, that Cornett, I regret to say, has denied bringing me the penciled memoranda, &c., to copy for Medley; and in justice to myself and others, I must point out that Cornett's mere denial is proved wrong by four witnesses, whose testimony can be corroborated by two more witnesses if necessary; therefore, the alleged confession is proved a collusion in which Medley evidently made Cornett his cat's paw, and hence the whole mischief (vide Mr. Morris' affidavit, &c.), because Medley did not dare to write his report against me until I was induced to copy the pencilled memoranda, when he obtained a statement from Cornett indicating an investigation; and thus it was upon these statements Medley based his false report to Mr. Zouch upon which I was dismissed without even an explanation—without calling upon me to refute Medley's report (vide Cornett's dismissed without even an explanation—without calling upon me to refute Medley's report (vide Cornett's evidence, &c.) And when Mr. Fosbery, on 29th September, 1877, ordered Mr. Goff to inform Captain Campbell "that he was mistaken in supposing that the case was dealt with without full investigation, &c.," he (Mr. Fosbery), was in full possession of the trick of the so-called confession, and of Medley's and Cornett's conduct, from my reports of 14th September, 1877, and 15th September, 1877, upon which he (Mr. Fosbery), wrote on 18th September, 1877, thus: "These statements are very serious, and should be promptly and closely investigated by Superintendent Zouch himself.—E. Fosbery, I. G. P." Thus, we have that admission from Mr. Fosbery himself that his dismissal was wrong, and that Captain Campbell was not "mistaken." &c. Yet. mark, in the face of Mr. Fosbery's own imperative order, he Campbell was not "mistaken," &c. Yet, mark, in the face of Mr. Fosbery's own imperative order, he allowed Mr. Zouch to disobey it (while I was under suspense waiting at Moruya, without knowing what was going on). Mr. Zouch did not investigate my statements, and thus my case has been held in abeyance since. Mr. Zouch called upon Cornett to make a statutory declaration, and attacked my previous conduct, and thus inquiry was burked. My protest against the inadmissible innuendoes imported into the case, &c. Gentlemen,—At this juncture of the case, I may first of all point out that the extract from the Sydney Morning Herald is proved incorrect, even that Judge Windeyer uttered every word it contains, and that in any case a newspaper report is not admissible evidence against the accused, and therefore, I object to its retention in evidence, as I was not charged with fraud in the Supreme Court; and as Judge Windeyer refused to admit evidence of bona fide exceptional extra expenses incurred, viz., £27 5s., the very gist of my case—vide papers. Of course, if Mr. Fosbery thinks that the evidence £27 5s., the very gist of my case—vide papers. Of course, if Mr. Fosbery thinks that the evidence adduced in the Supreme Court (on the subject of my action for £10,000 damages for breaches of agreement) can assist him in proving his charge of fraud againt me, I have no objection to his citing Judge Windeyer before his masters, the Commons of his country, to read the notes of the evidence taken by windeyer before his masters, the Commons of his country, to read the notes of the evidence taken by him in the Supreme Court; but I most decidedly protest against the *Herald's* highly coloured report in evidence. If Mr. Fosbery believed me guilty of fraud, he had no alternative but to submit the charge to a bench of magistrates to determine (vide Police Rule 74, &c.); thus his dismissal is proved unlawful, and upon my reporting these facts to the Colonial Secretary it was the duty of the Government to insist upon Mr. Fosbery to prove his charge of fraud before "a bench of magistrates unconnected with Force," and if he could not do so to reinstate me, because the law holds every man to be imposent until he is found quilty by a compostout tribunal of his country. In pating the arrivance of be innocent until he is found guilty by a competent tribunal of his country. In noting the evidence, if be innocent until he is found guilty by a competent tribunal of his country. In houng the Children Judge Windeyer had discovered a fraudulent intent, it was his duty to indict me, or to recommend the Attorney-General to do so, and the judge's notes should show that Superintendent Zouch virtually admitted that his reports re my conduct are unfounded assertions. Therefore, from these facts alone, admitted that his reports re my conduct are unfounded assertions. Therefore, from these facts alone, you may infer that the charge and innuendoes are false. Again, as the charge upon which I am now

Mr. W. Stafford.

arraigned (for the first time) before this august tribunal is, if proved, an indictable offence, I therefore protest against the defaulter's sheet and other extraneous innuendoes being allowed to remain hashed up with the evidence bearing upon the alleged charge of fraud, which is the point at issue in this case; because you cannot try a man for fraud to find him guilty of rape or misconduct which he is not charged with; yet, so far, that is the way my case has been treated. Mark, I am upon my trial for fraud, yet every unfounded squib or fizzle that crossed my whole public career have been raked up from the regions of oblivion and thus urged against me for to confuse the real issue. Why so? Because Mr. Fosbery discovered when it was too late that the charge of fraud could not be sustained, and that he had no power vested in him to adjudge me guilty of fraud by dismissal, &c. These facts alone fully account for the unscrupulous attack that was so ruthlessly made upon my stainless and previous conduct, which has defied criticism for over sixty years. This will be proved in due time, with the facts that, while the bush-ranger, the thief, the liar, and the office spider lived in fear of me, every honest man respected me and assisted me in my duty, and supplied me with information, and that is the secret of my success in suppressing crime. Again, mark, that it was most cruel to put Mr. Goff in the witness-box to prove, as he himself admitted, what he knew nothing about; thus, his evidence is worse than worthless. I object to it, and to every assertion unconnected with the charge of fraud which I came here to disprove with the fact that I was away grant and the public that I am with the fact that I was wrongfully disrated in 1869, and thus show Parliament and the public that I am still a Mounted Police Sergeant until I am superannuated, and legally discharged. I must, therefore, put this statement in evidence, and ask you to expunge from the evidence all the extraneous innuendoes imported into the case for to bolster up an unfounded charge that cannot stand the light of day. And as Sub-Inspector Cornett's evidence on oath has contradicted the statement he made for Medley on the 31st of August, 1877, that statement must be also ignored or expunged; thus, when the cloak which has so long covered the charge of fraud is stripped off it, all that is really in the case may be seen at a glance, which really amounts to nil, barring pure malice, and sticking to a brother officer proved to be unworthy of credence against the rights of a subordinate. I will now submit a brief statement, and then prove it by of credence against the rights of a subordinate. I will now submit a brief statement, and then prove it by incontrovertible precedents, explained consecutively as plain as A B C, to wit.:—Sub-Inspector Medley's claims are identically the same as my claim; he boarded at an hotel, slept in his quarters at Braidwood, and claimed and received 5s. per night (vide claims). My affidavit, which I now hand to the Committee, with Cornett's statutory declaration, &c., fully explains my claim for 36s. travelling allowance; and Superintendent Zouch's minute upon my application for allowance to recoup exceptional extra hotel expenses is incontrovertible proof of his having allowed me 2s. per night (£4 18s.), which is still due to me, because Sub-Inspector Medley maliciously and wrongfully withheld that allowance from me, and thus caused my dismissal (vide minutes); and, therefore, the charge of "attempting to defraud the Government" of 36s. of that money, which was thus withheld from me, is a false charge, as where money is reasonably proved to be due, as in my case, there cannot be frauducharge, as where money is reasonably proved to be due, as in my case, there cannot be fraudulent intent; hence the charge is nothing short of a complete farce. Again, as 3s. per night was, and is still the regular allowance paid to recoup such expenses, I will now prove my claim for £8 4s. on the 3s. per night scale, and thus prove the charge trebly false—that is to say, that my claim for £8 4s. is virtually proved when it is compared with Sub-Inspectors Medley's, Cornett's, and Constable Nelson's claims herewith; and with Mr. Fosbery's admissions to Parliament, vide Hansard, 10th September, 1890, because those claims and admissions are virtually identical with my claim for £8 4s. These facts were pointed out by me to Mr. Fosbery immediately after I was dismissed &c. (vide printed papers): facts were pointed out by me to Mr. Fosbery immediately after I was dismissed, &c. (vide printed papers); and Mr. Fosbery's admissions to Parliament have therefore proved my case for me, and thus confirmed my contentions from start to finish, less, that since I was dismissed the scales of allowances have been raised from 3s. per night to 4s. for mea, from 7s. to 12s. for inspectors, and from 12s. to 20s. for superintendents. Thus the allowances were intended to recoup more than the cost of a bed for the night, and hence day allowances were claimed on the general form under the heading of nights absent, (vide Cornett's and Nelson's claims herewith); thus, if my claim be wrong for day and night allowance paid to all other men in the Service, why not dismiss Sub-Inspectors Medley, Cornett and Constable Nelson, &c., for claiming and receiving day allowance when they slept in barracks at night—the proof will be found herewith attached; therefore my claim for \$22.45 is proved with the group Mr. Forberg and his truster. with attached; therefore, my claim for £8 4s. is proved with the weapons Mr. Fosbery and his trusty officers made for me themselves—who acted the part of accusers and judges of their own false allegations against me behind my back, and then blocked every attempt on my part to prove their handiwork and star chamber proceedings unlawful. I will now prove the equity of my claim for £8 4s. beyond doubt and thus disclose the palpable injustice and cruel persecution to which I was subjected to, without fault on my part, by withholding inquiry and justice from me so long, simply because Mr. Fosbery blundered in his duty.

Extract from printed papers. Sergeant William Stafford's corrected claim for quarter ending 30th June, 1877.

Errata.—"Forty-four" should read "forty-five," making the total £8 4s.

WILLIAM STAFFORD.

I hereby certify the above claim to be correct. To the Inspector-General of Police, Sydney.

N.B.—This claim and the following claims are on the 3s. per night scale.

Note, my claims for 36s., and my corrected claim for £8 4s., can be checked this very day in Mr. Fosbery's office with the duty returns, and they can be likewise checked with Sub-Inspectors W. Stafford. Cornett's, Medley's, and Constable Nelson's claims, &c., and with the pay abstracts, which cannot be done 18April, 1893. Then it will be seen that my claims, Sub-Inspectors Medley's, Cornett's, and Constable Nelson's claims are exactly similar, and therefore my claim for £8 4s. must be held to be correct; and, if any doubt upon this point should arise, these claims can be checked this very day in Mr. Fosbery's office, or in fifty years hence, just as ready as the day I was dismissed; but for the purpose of this inquiry, as we have the claims printed before us, the claims check themselves by dates and particulars. Here they are defined for inspection, namely :-

Extract from printed papers submitted to Parliament by Mr. Fosbery himself. Sergeant Cornett's claim for quarter ending 31st March, 1877.

From.	То.	Month.	No. of nights.	Places halted at for the night.	Nature of duty.		Remarks.
1887. Jan. 3 , 8 , 17 22 Feb. 13 , 22 Mar. 21	Feb. 6 , 23	;, ;, Feb	5 3 1 1	Tomaga Creek Stony Creek Tuross Moruya River Bush duty " "	,, ,, Summons serving ,,	£ s. d. 0 9 0 0 15 0 0 9 0 0 3 0 0 3 0 0 3 0 2 5 0	The contents of this claim for day-work only is defined thus:—Tomaga and Stony Creek are only 10 miles from Moruya Police Station, and there was no place to put up at there; yet Cornett was paid 24s. for eight nights in succession, when his duty and forage returns in Mr. Fosbery's office proves that he slept every one of those nights at the Police Station in Moruya. Tuross is about 8 miles from Moruya, and Cornet's books proves that he was not absent on the three nights claimed for there. And, lastly, "bush duty" is not the name of any place. Thus Cornett was paid for day-work under the heading of nights absent, even for summons serving, when he did not serve summonses at any place.

I hereby certify the above claim to be correct,-

JAMES CORNETT,

In charge of Station.

This claim is on 3s. per night scale.

And he thus received £2 5s. for fifteen nights' absent when he was really under no extra expense—when he really slept in his own bed in barracks at Moruya. And in the face of these facts Cornett's claim for £25s. was passed, and paid by my accusers, Messrs. Medley, Zouch, and Fosbery, who wantonly put me to £27 5s. exceptional extra expenses at hotels, and in the removal of my family (vide printed papers), when there was no complaint against me at Braidwood; nor even at Moruya, until Medley maliciously trumped up his bogus charge of fraud—when there was no reason for putting me to such expense beyond that there were several charges of drunkenness, &c., pending against Cornett at Moruya, and, therefore, I was ordered to take a large of Markenness. to take charge of Moruya station seven weeks before Cornett was ordered to leave the Moruya barrack; hence, I am entitled to hotel allowance upon the highest scale (vide Cornett's claim for day allowance).

Extract from printed papers. Sergeant Cornett's claim for quarter ending 30th September, 1877.

From	То	No. of nights.	Names of places halted at for the night.	Nature of duty.				• Remarks.
18 23rd and 24tl 18th August 20th and 21st 17th and 18th	August	$\frac{1}{2}$	Goulburn and return Black Range Goulburn, &c Goulburn, &c	٠,,	0	s. 6 3 6 6	0	This claim is allowance for work contrary to the allowance scale. The scale is this:—"On branch gold escorts for each night on the roads, officers, 7s.; men, 3s."; yet in the face of that rule Cornett certified to his claim for day allowance, and Sub-Inspector Medley endorsed it twenty days after he had caused my dismissal; hence Sub-Inspector Cornett had to swear that his own claims and my claim were similar, and usual, &c.

This claim is also on the 3s. per night scale.

I hereby certify the above claim to be correct-

JAMES CORNETT, Sergeant. J. R. MEDLEY, in charge of Station.

Hence my claim for £8 4s. is proved to be no exception to the general custom and practice; and it is therefore authenticated by unquestionable precedents, namely, Sub-inspector Cornett's claims and admissions, vide evidence, and Constable Nelson's claims, &c. And all that proof is capped by Mr. Fosbery's admissions to Parliament, and that the travelling allowance scale in every branch of the public departments were not adhered to (vide report of the Board appointed to revise the scales of travelling allowance is the public and the public departments were not adhered to (vide report of the Board appointed to revise the scales of travelling allowance in the public departments.) allowances in the public service herewith). In prosecuting my civil action for breaches of agreement (vide writ), Judge Windeyer would not admit this evidence; but now that I am arraigned upon an indictable charge before the highest tribunal of the people—the commons of my adopted country—evidence of general custom and precedents cannot be ignored. These facts are my full reply to Mr. Ryrie's questions, Nos. 107, 108, and 109, &c. 849—E

34

Mr. W. Stafford. 18 April, 1893.

#### Extract from printed Papers, &c.

Constable Nelson's claims for night allowance while travelling with Inspectors Medley and Sanderson.

From	To	Name of Police Stations halted at for the night.	. Remarks.

*N.B.—The sauce for the goose is sauce for the gander, and thus my claim for £8 4s. is proved.

EXTRACT (vide Hansard of 10th September, 1890):—Mr. McMillan (for Mr. Fosbery), in reply to Mr. Perry, stated before Parliament thus:—"The present scale of travelling allowance in the Police Department was as follows:—Sergeants and constables, 4s. per night when absent from their quarters on duty; Inspectors, ditto, 12s.; and Superintendents, ditto, 20s. The rule is, that where members of the Force are provided with accommodation at police stations they are not entitled to the above allowance, but under exceptional circumstances, where they have been put to extra expense, it has been granted." Now, there cannot be more exceptional circumstances on record than my case, viz.:—"Seven weeks at hotels, and travelling," &c., through no fault of mine. Thus, my claim for £84s. is proved, and my contentions from start to finish are thus admitted by Mr. Fosbery himself. Why, then, keep me in suspense, when the charge is false? Mr. Fosbery's admissions and Sub-inspector Cornett's evidence are identically the same as the evidence given in the Supreme Court by Senior-constable Gilder, Mr. Superintendent Ryland, and myself. For instance, I will read Mr. Gilder's evidence, and thus close my rebutting evidence by pointing out that, if only for the sake of decency, the *Herald's* extract, containing Judge Windeyer's alleged remarks, must be expunged from the evidence as being inadmissible and utterly false (vide Mr. Fosbery's admissions and Messrs. Cornett's and Gilder's evidence, &c.), has completely refuted the Herald's extract, Medley's and Zouch's reports; and thus Mr. Fosbery's minute of dismissal is proved a nullity, even by his own admissions to Parliament, &c.; and Cornett, in his evidence before the Committee, has proved his own statement of 31st of August, 1877, absolutely untrue, and, therefore, I was dismissed upon false reports, now proved and admitted. Mr. Gilder's evidence (vide Herald, of 29th July, 1881), "said he had been a senior-constable and Clerk of Petty Sessions; he had served in various parts of the Colony. The practice was that when a constable returned off duty, late even a few minutes, after 12 o'clock to charge night allowance. It was a practice well known to the Superintendents. A police constable has to spend a good deal of money if he works hard. Allowances were paid whether he stopped at private places or camped out; days and nights are the same so long as the expense has been incurred. Stafford was entitled to allowance for the time he was under extra expense at the hotel and travelling; the practice had been well known to witnesses' superiors for years. Witness had received 3s. a night travelling when he slept in barracks in his district and on transfer." Mr. Gilder gave that evidence before Judge Windeyer, and I swear it is perfectly correct, and that I proved every count contained in my writ in the Supreme Court, and when I saw Judge Windeyer taking his seat on the Bench, I told Mr. E. Barton to throw up his brief. In Evening News, of 13th September, 1878, on the papers being printed by Parliament, the editor summed up the case in a very able leading article, thus:—"There was no fraudulent intent. Stafford would be entitled to more money than he claimed if he had put his claim under the proper heading. The question to be considered is whether justice and the maintenance of the proper discipline of the Force required that, for making this claim, an elderly constable should be dismissed, and so deprived not only of the pay on which he and his family were dependent, but of all that he would have been entitled to on retiring from the service out of the Superannuation Fund to which he had been long contributing." Now mark that the Evening News interpretation is confirmed by no less an authority than Sir James Martin, in the celebrated case Regina v. Baker, M.L.A. That eminent Judge said: "I shall tell the jury that where money is proved to be due, as in this case, it does not matter under what heading it is received; there could not be a fraudulent intent." And that ruling was on the subject of travelling allowance received by Baker under a wrong heading—and in this case it is worth noting that in Baker's civil action in the Supreme Court a verdict was given against Baker, and a Select Committee was afterwards appointed, and found upon the facts that the verdict in the Supreme Court was wrong (vide Parliamentary proceeding); thus, that precedent holds good in my case, &c., and Sir James Martin's ruling meets the facts in my case re the 36s. claim. Mr. Oliver, of the Lands Office (now Railway Commissioner), went on duty to Albury, and from there he went to Melbourne on French leave. He charged and received travelling allowance for the time he was enjoying himself at Melbourne, and on his being reported he was simply ordered to refund the money which was thus obtained under the pretence of discharging his duty at Albury, when he was actually in Melbourne without the knowledge of his superiors. Mr. Thompson, the Member for Queanbeyan, then brought Oliver's case up in the House, and contrasted it with the unjust treatment I had received. Again mark, not long ago other officers attached to the Lands Department had to refund large sums of travelling allowances improperly received by them. Thus, put Oliver's and Cornett's claims, &c., side by side with my claim, and the fact that Medley withheld £4 18s. allowed by Mr. Zouch to recoup some of my exceptional extra expenses, that Mr. Fosbery admits my claim now for £8 4s., less that after the lapse of time it requires a Parliamentary vote to pay it. That Mr. McMillan, for Mr. Fosbery, says the "allowance has been granted," &c., where police "accommodation was provided, when under extra expense." That in lieu of 36s., I have, therefore, justified £8 4s., which I now claim to recoup some of my extra expenses; therefore, I would like to see Mr. Fosbery or his detectives point out to the Committee where the fraud is in my case because until that is done there is no case whatever out to the Committee where the fraud is in my case, because, until that is done, there is no case whatever against me. New

New South Wales Police Defaulters' Sheet.

Mr. W. Stafford.

Note.—Compiled strictly in accordance with Police Rule 75, for to meet the requirement of Police Rule 54, &c., re Wm. Stafford's conduct in the Police Force. The defaulter sheet is the only admissible 18 April, 1893. evidence of good or bad conduct in the Force-vide Police Rule 54, &c.

Affidavit.—William Stafford, duly sworn, saith:—To enter any assertions on a constable's defaulters' sheet that was "not proven," or "proved unfounded," are malicious and false entries of the meanest description. The above defaulters' sheet is compiled strictly in accordance with the rules of the Force; and my "remarks" in the margin are true. There was Taken and sworn to. before me, at Leichhardt, this 14th day of April, 1893,—

WILLIAM B. WRAGGE, J.P.

WILLIAM STAFFORD.

Now, that the dirt is cleared from my sheet; now, in the face of that proof—let Mr. Fosbery be asked to show that I am not entitled to a clean sheet, nor to a first-class discharge, which is my right.

Again, my affidavit is confirmed by Mr. Fosbery's expert, Mr. Cook, who has proved four of the squibs entered on my sheet unfounded (vide his evidence); and I have proved every entry on the sheet false. Many of the officers would have very dirty sheets if all the reports made against them had been entered on their sheets. Now, gentlemen, you have in these facts the defaulters' sheet submitted to Parliament, and put in evidence against me, proved false, and the fact of thus submitting a false defaulters' sheet to injure my character, and to prejudice Parliament against my just claim, is a serious matter for you to reflect upon, because it has virtually broken down the whole charge and innuendoes urged against me for eighteen years. However, as the charge of fraud is proved unfounded, there is only one matter on my defaulters' sheet worth noticing, namely:—"Constable Lynch's gross misconduct." Thus, in order to leave no doubt as to the total falsity of my sheet, I shall now prove the particulars relating to Constable Lynch's dismissal, and to my reduction in 1869.

My affidavit, taken from the printed papers, is thus:-

William Stafford to E. Fosbery, Inspector-General of Police.

William Stafford maketh oath, and saith :- Constable Lynch and his brother, a civilian, came to the police station at Mongarlowe, both drunk. Constable Lynch asked deponent to allow his brother to sleep in the barrack. Deponent refused, and told Constable Lynch to go to his room, and remain there till he got sober. Thus, Constable Lynch violently assaulted deponent, and he also assaulted deponent's wife, who tried to pacify him; and he smashed the barrack window. For those offences, and for to stop his violence and threatening attitude, deponent locked up Constable Lynch, who set fire to the lock-up, a wooden building, endangered his own life, and destroyed property of the value of £5, and while deponent was extinguishing the fire Lynch made his escape from the station. At an investigation, these facts were confirmed by deponent and four witnesses (who are now in Sydney), and without Lynch being prosecuted for these criminal offences, the result was, that Constable Lynch was dismissed, and deponent reduced from the rank of sergeant to senior-constable. Deponent cannot understand since how two could be aggressors.

aggressors. Sworn to before me, at Leichhardt, this

WM. STAFFORD.

2nd day of March, 1888, WILLIAM B. WRAGGE, J.P.

Note.—If I had allowed Constable Lynch's brother to sleep that night in the barracks it would be a breach of Police Rule 158, for which I might be dismissed. That under section 15 of the Police Act, Lynch was liable to six months' imprisonment for assaulting his superior officer; and it goes without saying that his attempt to destroy the public building, &c., is a felony. I was, therefore, absolutely disrated for doing my duty, which was forced upon me by the gross misconduct of a drunken constable, who had more than once committed like offences; hence, the alleged reason given on the original sheet for disrating me is absolutely false. The papers in connection with this matter may be seen in Mr. Fosbery's office, and all the witnesses who gave evidence in the case are now in Sydney, and will, if required, corroborate my affidavits; therefore, as I filled the stations, and discharged the duties of sergeants and senior-sergeants until I was suspended, I shall insist upon the money thus wrongfully deducted from my salary being refunded to me now. Mr. Fosbery was not then Inspector-General of Police, but he acted so in this job for Lynch and his influential friends (vide papers).

Mr. and Mrs. Smith, who witnessed Lynch's conduct, and who saw me lock him up, tendered their evidence to the late Committee, but the Committee said it was not required; and three non-commissioned officers also tendered their evidence re my conduct in the Force, and to prove my claim for 36s., &c., in accordance with the custom and practice of the whole Force, but their evidence was not taken either With your permission I will now stop my own evidence for a few minutes in order that Mr. and Mrs. Smith's evidence may be taken to corroborate my affidavit, &c., and thus prove that I would be justified in locking up the Inspector-General of Police if he had misbehaved himself as Lynch did; and that in

looking over Lynch's offences a felony was compromised.

36

The following is a copy of an affidavit by Michael Morris, which should have been printed with

Michael Morris, of Moruya, in the Colony of New South Wales, saith as follows:—I am a storekeeper residing at Moruya; I know Police-sergeant James Cornett, formerly in charge of Moruya Police Station; he came into my store at Moruya at about 6 o'clock in the morning of the 31st of August, 1877, and made a purchase from me; our conversation turned upon the topic of an inquiry held the previous day at the police barrack, when Sergeant Cornett said, "I have a written document in my pocket, and if Stafford would copy it and say no more about it, I know from Mr. Medley that the matter will drop at that." I went immediately and told Stafford exactly what Cornett had just told me; I have good reason to believe that Stafford copied the document alluded to by Cornett, and that on his doing so, he was suspended by Sub-Inspector Medley, and soon afterwards dismissed. Taken and sworn to before me, at Moruya, MICHAEL MORRIS.

this 6th day of September, 1890. T. GANNON, J.P.

Mr. Morris' affidavit is substantially the same as his statement of the matter, dated 9th August, 1878 (vide printed papers); therefore, the family evidence of Mr. J. M. Stafford, &c., is fully corroborated by Mr. Morris, whose respectability (as admitted by Cornett himself) cannot be doubted. Again, in Mr. Morris' letter accompanying his affidavit, he said, "I know that you was wronged and persecuted; I hope you will get a full measure of justice meted out to you now. Let me know the names of the members on the Committee.—Yours truly, MICHAEL MORRIS."

#### Confessions and undue influence.

Now, if the Committee will compare the evidence of Mr. Morris, Mr. J. M. Stafford, and Mrs. Stafford with Police Rule 225, and with section 357 of the Criminal Law Amendment Act, you will see that undue influence was brought to bear upon me by Cornett to copy the pencilled memoranda, and therefore that document is inadmissible; and as it was upon the evidence of that document that I was dismissed the dismissal is null and void, because that document is not evidence against me, and it must be therefore wiped out or ignored. To say that I pleaded guilty to a charge of fraud, when there was no foundation for the charge—when there was no charge made against me—brands itself a palpable untruth.

#### THURSDAY, 20 APRIL, 1893.

#### Present:

Mr. G. D. CLARK, | Mr. GARRARD. MR. JOHNSTON,

#### E. DARNLEY, Esq., IN THE CHAIR.

Mr. William Stafford recalled and further examined:—

37. Chairman.] I understand that you wish to hand in some testimonials as to your character? I hand W. Stafford. in some testimonials [vide Appendix].

38. Did you complete your statement at the last meeting of the Committee? I wish to state my claim on the Superannuation Fund. It is set out in the following statement which I will read:—Having filled the stations, and discharged the duties of sergeants, and senior sergeants, I claim a refund of the money deducted from my salary by wrongful reduction in rank from 1st August, 1869, to 31st August, 1877. I claim a first-class discharge upon my sergeant's rank from the date of my suspension, with my pension rated on my sergeant's pay and service from said date of suspension, as provided for by sections 19 and 21 of the Police Act of 1862, and by my voluntary contribution of 1 per cent. of my salary to the Superannuation Fund from 1868 to keep the fund solvent. I claim £8 4s. to recoup exceptional expenses incurred at hotels and travelling in quarter ending 30th June, 1877 (vide claim). The following facts re the dispensing of the Police Superannuation Fund may assist the Committee in adjusting my claim upon that fund. Sub Inspector Modley: in the face of his conduction my said range allowed to my claim upon that fund. Sub-Inspector Medley, in the face of his conduct in my case, was allowed to retire, and he was paid a gratuity of about £500. Police Sergeant Foley was tried for murder at the gratuity of about £400. Police Sergeant Foley was tried from the Force on a gratuity of about £400 for about ten years service. Constable McHale, on the grounds of a slight flesh wound, after about two years' service, was pensioned off on half pay; he could be seen all right in Sydney for years, and he is now at home working his farm in Ireland. Senior-constable Barrett was pensioned off on half-pay at fifteen years' service, and he may be seen all right in Sydney. Sub-Inspector Keegan (a married man) was reported for intemperance, and for the seduction of a poor grippled girl at Braidwood, and married man) was reported for intemperance, and for the seduction of a poor crippled girl at Braidwood, and the result was that he was pensioned off on two-thirds of his salary, £165 5s. per annum. Sergeant Frewin was pensioned off at less than fifteen years' service, and he is now governor of Grafton Gaol, due for another pension. Mr. Superintendent Zouch died of old age in the Force, and his widow was paid about £1,200 out of the fund; and the widow of the late Superintendent Ryland will, no doubt, receive a similar allowance from the fund. These are only a few cases out of many similar I might name. Again, apart from my claim upon the Police Fund, when Mr. Bayless, P.M. of Wagga Wagga, was awarded about £1,500 by the late Parliament for some trivial service rendered in the bushranging times some thirty-five years ago, I think a glance at my record will show that my services in the bushranging times are more deserving of recognition than Mr. Bayless' service, or than any other member of the Force in the Colony. Partiality in the Force:—
Sergeant Cornett's. Constables Berry's and M'Clelland's families and effects were conveyed scores of miles at the expense of the Government, contrary to Police Rule 111, when I was refused a similar concession, and thus compelled to pay £18 for the removal of my effects from Braidwood to Moruya. Again, there is Scnior Constable Wells and his wife, who were the sole cause of the friction between Medley and myself. Wells was reported for allowing his wife to cohabit with another man in the lock up, at Araluen, in the presence of Wells himself. Constable Armstrong, and two others, and that matter was hushed up too, and Wells was retained in the service (vide papers). Armstrong is now a warder in Berrima Gaol.

37

39. Is there anything else that you desire to bring under our notice? Only my agreement, which is a most material point in my case. The oath which I took was:—

I, William Stafford, do swear that I will well and truly serve Our Sovereign Lady the Queen in the office of constable, without favour, or affection, malice or ill will, for the period of from this date and until I am legally discharged, that I will see and cause Her Majesty's peace to be kept and preserved, and that I will prevent to the best of my power all offences against the same, and that while I shall continue to hold the said office I will to the best of my skill and knowledge discharge all the duties thereof faithfully according to law.

That oath is equivalent to an agreement according to section 11 of the Police Regulation Act of 1862, which reads as follows:

Every person taking and subscribing such oath shall be deemed to have thereby entered into a written agreement with and shall be thereby bound to serve Her Majesty as a member of the said Force, and in the capacity in which he shall have taken such oath at the current rate of pay for such member, and from the day on which such oath shall have been taken and subscribed until legally discharged. Provided that no such agreement shall be set aside, cancelled, or annulled for want of reciprocity. Provided also that such agreement may be cancelled at any time by the lawful discharge, dismissal, want of reciprocity. Provided also that such agreement may be cancelled at any time by the lawful discharge, dismissal, or other removal from office of any such person, or by the resignation of any such person accepted by the Inspector-General or other person accepted by the Inspector-General or other person accing in his stead.

A man after taking that oath, unless he resigns, must be legally discharged or lawfully dismissed, and

unless that is done he is still a constable or sergeant as the case may be.

40. Mr. Johnston.] In your evidence last year you state "there was a personal illfeeling between Medley and me"; was it in anyway connected with your police duties? Not at all; it was in regard to a private matter to which I alluded this afternoon.

41. It was outside your police duties altogether? Yes.

42. In the first letter which you read last Tuesday you stated that there was no man in the Braidwood district who could make any complaint against you except Mr. Hassall;—was he in the Police Force? think I said, "who would say anything against me."

43. Had he anything to do with the Police Force? No; he was a private citizen. He had been a magistrate. He was disrated in the bushranging times. As a matter of fact, there was some difference between

us over some cattle that I took possession of.
44. At page 7 of your evidence last year, question 107, you state that you made a claim for some 18s.,

money which you reckoned you ought to have at Araluen, and that 18s. was allowed to you;—did you receive the money? Yes. I slept in the barracks six nights in succession.

45. Chairman.] Was it a rule to pay for extra duty? It was always the custom. I boarded in the hotel. 46. Mr. Johnston.] In the first letter which you read last Tuesday, you state distinctly that the Inspector-General of Police abandoned the charge of fraud? Yes.

47. Yet, at the close of your evidence last year, you put in this minute, by Mr. Fosbery:—"These reports and papers disclose such a deliberate attempt, on the part of Senior-constable Stafford, to defraud the Government, that (apart from previous ill-conduct) I have no alternative but to direct his reduction and dismissal from the service"? That is right.

48. What induced you to state, in your letter, that Mr. Fosbery had abandoned the charge of fraud? Because in the minute to the Colonial Secretary it was misconduct principally that was alleged against me.

49. You also stated in your letter that Mr. Medley dare not report you for misconduct;—do you mean to imply that you had any charge against Mr. Medley? No; only that he had no misconduct to report against me.

50. You go on to state in your letter that you were too far away from Mr. Zouch or Mr. Fosbery for them to see you carrying on anything? Yes; I saw Mr. Zouch only four or five times between 1862 and

We were scores of miles away.

51. We are not to infer by your statement that because you were a long way from head-quarters or from Mr. Zouch, you would "carry on" if you were disposed? I meant to imply nothing of the sort. I meant to say that they could not see me. I was under the supervision of Mr. Medley, and he could not see me if such were the case.

52. You were out a couple of times after the bushrangers? More than a couple of times—I was out for

53. Can you remember the names of the bushrangers you went out after in 1864? There was bushranging from 1862 to 1867. The Clarkes were arrested, I think, in February, 1867.

54. Do you remember that while Ben. Hall was out some serious charges were made, in Sydney, against some Inspector or Sub-Inspector of Police in connection with his taking to the roads? No; I have no recollection of it.

55. Mr. G. D. Clark.] It was a regular thing apparently when you were out of barracks to make an extra charge on the Department? Yes.
56. And it was allowed legally? It was allowed according to custom and practice. The scale was never

adhered to since it came into force in 1862; it would not work at all.

57. These charges were made according to custom by policemen, sergeants and inspectors whether they paid the extra amount for lodging or not. Suppose, for instance, you were away from your barracks, and you did not stay at an hotel, and it did not cost you anything for lodging, it was a customary thing to make a charge as if you had had to pay for your lodging at an hotel? Certainly it was, and so it is at the present day. I have stopped for nights and nights as an officer, and the officers themselves have stopped at squatter places. Every one knows that a squatter would not charge them. We always received our allowance. When I had to put up at hotels it was allowed by Suppositiondent or side. stopped at squatters places. Every one knows that a squatter would not charge them. received our allowance. When I had to put up at hotels it was allowed by Superintendent Orridge by

58. In the event of a mistake being made in the charges it was not an unusual thing for the person concerned to have his statement referred back to him for correction? No; I had one referred back to me. never knew an instance where, if an error was discovered, it was not sent back for explanation or correction. All these claims could be corrected in the Inspector-General's office as readily as at the station, because a copy of the books was forwarded by the Superintendent of Police to the Inspector-General. I believe the custom was to keep them in the Superintendent's office until the end of the quarter and then to despatch them to the Inspector-General, so that virtually the latter had the same books in his office as were kept at every police station in the Colony.

59. You stated just now that you have had papers referred back to you for correction;—do you remember any particulars of a reference? Mr. Markham sent me back a claim of the sort for correction when he was Superintendent at Cooma. I explained it, and, without any correction being made, the money was allowed.

W. Stafford. 20 April, 1893.

60. Chairman.] In this case your claim was not referred back to you? I never knew a word about it

until the officer popped in and pulled it out of his pocket.
61. Mr. Johnston.] Were you reckoned as an officer under the regulations? As a non-commissioned officer.

62. Were you entitled to 7s. or to 3s.? To 3s.

63. Chairman.] Is there anything else which you would like to add? I wish to explain my reference to Mr. Hassall. I meant that I know of no person in the district who would speak ill of me, but Mr. Hassall. He was superseded from the Commission of the Peace at the time of the bushrangers. In the absence of the Inspector the whole duties of the district devolved upon me. I was next in rank to him, according to my station at Braidwood.

#### THURSDAY, 4 MAY, 1893.

#### Present:-

Mr. G. D. CLARK, MR. CHAPMAN, Mr. JOHNSTON.

#### E. DARNLEY, Esq., IN THE CHAIR.

Mr. Edmund Walcott Fosbery called in, sworn, and examined :-

Fosbery. 4 May, 1893.

64. Chairman. You are Inspector-General of Police? Yes

65. Do you remember this case being before you? I do not think I know as much about it now as I did

fifteen years ago; but I recollect it pretty well.

66. You are aware that Stafford states that a false charge of attempting to defraud the Government has been made against him, according to his defaulters' sheet—a charge which, he alleges, was never proved? I notice that he so alleges.

67. You have received the copy of the defaulters' sheet as it should be, according to Stafford's opinion?

Yes; I saw a copy.

68. Is it usual, in making out a defaulter's sheet, to place upon it charges which have been brought against constables which have not been proved? Yes, they are reported in the defaulters' sheet, but they certainly do not tell against a man, but rather in his favour.
69. They do not tell against him? Certainly not.

70. You are aware there are several charges on the defaulters' sheet which are not proven? Yes.

71. The first charge is in reference to a disturbance which occurred in the barracks between Sergeant I was not Inspector-Stafford and Mounted Constable Lynch—do you remember the facts of the case? General of Police at that time.

72. But you were acting, were you not? No; I looked up the matter yesterday, thinking you might ask me a question on that point. By the record I find that the minute giving the reasons for reducing Sergeant Stafford from a position for which he was considered entirely unfitted, was signed by Captain M'Lerie, my predecessor. I have not the slightest doubt, although I cannot charge my memory with the facts, that it was his action, and not mine. I, of course, was a subordinate.

73. Have you read the facts of the case in connection with the discharge of Constable Lynch? Not

74. Have you read the evidence submitted to the Committee by Sergeant Stafford? I have not read it carefully; I have not had time to consider it carefully, and I did not think it was necessar

75. Taking that case alone, do you think it was one which would warrant the Inspector of Police reducing him? I have not the slightest doubt about it. I am satisfied that my predecessor's decision was a wise one.

76. With reference to the charge of attempting to defraud the Government, was it not usual, when a constable or sergeant sent in a claim, and the authorities considered that it was not in accordance with That would facts or usage, to refer it back to the person sending it for correction or otherwise? constantly be done; but in this instance it was noticed by his superiors that it was a fraudulent claim. Therefore, he was at once placed upon his defence.

77. Was he asked to explain the claim in any way—was he asked for any explanation? That I cannot say; but I think not. I think a report was made upon his claim by his immediate superior officer.
78. Is it a fact that other claims, of a similar character, have been submitted, which have been paid by the Department? Certainly not, to my knowledge.

79. I should like to call your attention to Sergeant Cornett's claim for the quarter ending 31st March, 1877, given in the statement made by Stafford before the Committee at the last meeting? I know nothing about the facts of that case.

80. Do not the facts of the case show themselves in the statement? It shows his claim

81. It shows his claim to be one for extra duty in the shape of collecting the electoral roll and serving summonses at different places? Of course an ex parte statement like that would have to be tested by examination and reference to the officer himself, who is now a Sub-Inspector. I could not, of course, from this extract, give any opinion as to its being correct or incorrect.

82. This is a return or extract from printed papers submitted to Parliament by yourself? Yes; but what you wish me to do is to give an opinion as to whether the claim is a correct one or not, and that I

83. Mr. Stafford says in connection with Sergeant Cornett's claim:-

The contents of this claim for day-work only is defined thus:—Tomago and Stony Croek are only 10 miles from Moruya Police Station, and there was no place to put up at there; yet Cornett was paid 24s. for eight nights in succession, when his duty and forage returns in Mr. Fosbery's office proves that he slept every one of those nights at the Police Station in Moruya. Tuross is about 8 miles from Moruya, and Cornett's books prove that he was not absent on the three nights claimed for there. And lastly, "bush duty" is not the name of any place. Thus, Cornett was paid for day-work under the heading of nights absent, even for summons serving, when he did not serve summonses at any place.

Can you explain the meaning of "bush duty" for several nights? Certainly. If a man is sent into the bush, in pursuit of an offender, or on any other duty, he may have to camp for the night, and it will cost him nothing, but during the day he may have to call for food, and pay a good deal more than 3s. for getting it.

84. But is it not usual to put down the district in which he is on duty—not merely to state "bush duty"? No; that, to me, would be quite sufficient an entry, because the man may be required not to go near any civilisation, but to keep to the bush.

Mr. E. W.

85. Mr. Johnston.] Although that might have been sufficient for you, it might not have been sufficient 4 May, 1893. for your predecessor? This was in my time. I wish you to bear in mind that these reports are made out every quarter by some 1,500 men. They are examined by the officer in each district, who is responsible for their accuracy, and they do not come to me to be checked in detail.

86. Chairman.] Sergeant Stafford's corrected claim for quarter ending 30th June, 1877, includes three nights halting at Reidsdale making inquiries, 9s.; forty-four days and nights at hotels, and travelling at Araluen and at Moruya, and in waiting for the Moruya quarters occupied by Sergeant Cornett and his family, £6 12s.; to conveyance of regulation box, £1, making a total of £8 1s.;—do you not think that on the face of these claims one is on a par with the other, as far as the rate of pay, 3s. per day, is concerned; one is for bush duty at no particular place, the other includes forty-four days and nights at hotels doing transfer and general duty;—how does the officer who submitted the report to you make that out to be a fraudulent claim? This is not the claim which was sent in.

87. Was not this corrected claim for the quarter ending 30th June, 1877, sent to you? No. 88. The original claim was for 36s.? The original claim for which he was dismissed was, as far as I remember it for heir set a place that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent that the sent the sent the sent the sent that the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent the sent remember it; for being at a place where he never was and for doing a duty which he never performed.

89. Are you aware as to how he explains that? Of course I was at the time. I do not know what I do not know what he has said since, but at the time the matter was investigated it could, of course, have been easily proved

from the duty report.

90. He explains it in some portion of his report? He did not explain it at the time.

91. He explained it in this way: that he was out in the bush-in the Bodalla district, I believe-and he placed on his claim the name of Bodalla, although he was never in Bodalla itself, and it never occurred to him to put down "bush duty." That is the sum and substance of which he stated to the Committee? That is altogether new to me.

92. He also states in his claim that he was summons serving on the way to these paticular places where he was staying all night? money in another way. He admits he made a false claim, because he considered he was entitled to

93. That is for forty-four nights during which he was waiting for Sergeant Cornett and his family to move? Yes; to which, of course, he was not entitled.

94. You consider he was not entitled to any allowance, because he slept in the barracks, although he paid expenses at the hotel for his family? In those days there was no allowance for families at all.

95. But independent of his family, the man had his food at the hotel, and was allowed to sleep in the barracks—is that a fact? It may have been a fact—I cannot say. He was not entitled to any allowance because he slept in the barracks.

96. Is it not a fact that Sergeant Cornett received travelling pay when he was sleeping in his own bed?

I should think not. If it were a fact it was never made known to me.

97. I desire to call your attention to the extract to which I have previously referred, submitted to Parliament by yourself, and the comments upon it? Whose comments are they?

98. That is the evidence of Stafford himself in reference to the extract from printed papers submitted to Parliament by you? Is it his comment which you read a short time ago?

99. It is his comment on the payment to Cornett of £2 5s. for fifteen nights absence? If it is as true as

his other assertions it is altogether unworthy of credence.

100. He says that all these claims can be proved by reference to the duty returns—that they can be checked by the returns of the different Inspectors? I should think he knows very well that all the duty reports have been destroyed before this.

101. Is it usual to destroy duty reports? Certainly; after a certain number of years they are perfectly

102. For any purpose whatever? I have destroyed tons of them myself.

103. Your memory will not serve you, then, in connection with these reports; and you say that all the papers are destroyed, so that it is a matter of impossibility to get at the facts of the case? I will not positively assert that the duty report in reference to that occasion has been destroyed, but I think it is extremely probable. The copy of it in my office has been destroyed. The practice used to be to send in duty reports in duplicate. One went to the Superintendent of the district, and the other to the Inspector-General. The practice has been discontinued, and the Superintendent is now held responsible for the duty

performed in his own district.

104. Do you know that it has been stated that Stafford was dissipated, and that he was a man who was not very well liked in the district of Moruya? It was alleged that he was not temperate, and Captain Zouch seemed to say that he was not acceptable in the district as a police officer; but it was subsequent to dismissal that that was stated.

105. Are you aware that he has handed in copies of recommendations and characters from different persons residing in and around Braidwood and Moruya? I saw something of it, but I attach no importance to this kind of recommendation.

106. You attach no importance to the recommendations to which men of some influence in the district attach their signatures? I know that these things are done more as an act of consideration and grace. 107. I think you had better read them before you make such a statement as that? But I have experience of these matters.

108. Possibly; nevertheless there are recommendations and recommendations? What on earth would a

private citizen know of a sergeant of police, compared with his own officer.?

private citizen know of a sergeant of police, compared with his own omeer. r 109. We are not speaking with reference to the man's conduct towards his own officer, but in regard to the opinions of the district? It has been stated in evidence that this man was not liked as a police constable in the district by the private citizens. In the Appendix to the report I sent you, along with the summons to attend, is an address from the residents of Araluen, in the Braidwood district, to Sergeant W. Stafford. It is not dated, but is signed by William M'Donnell (now J.P.), Dr. G. M. Alley, James Maher, T. W. Faulkner (now J.P.), W. H. Johnston, and 112 others of all callings and sects. That was before he was dismissed—apparently on his discharge from Araluen.

40

Mr. E. W. 110. There is also a testimonial as follows:— Fosbery.

St. Omer, Braidwood, 23 March, 1878.

During the time S.-C. Stafford was stationed in this district (about fifteen years) he always seemed to me both a zealous and efficient officer. He was instrumental in bringing several offenders to justice. In many of the cases the investigation and tracing of evidence must have acquired great acuteness as well as time.

J. W. HUNN, J.P., J. W. HUNN, J.P., Coroner.

> Do you know Mr. Bunn? Yes; very well.

111. Do you think he would give a recommendation of character of this description unless the recipient were worthy of it? I do not think he would, if he thought the person were unworthy of it.

112. Do you not think he would have a very good opportunity, from the position he held, of judging of the character of Stafford? Not like the officers of the Force.

113. Is it not a fact that Stafford would come very much in contact with important citizens in connection with his duty? He would at times. Of course, these recommendations are granted as a matter of grace all over the country. I should not place them in importance against the opinions of his superior officers.

114. You attach no importance to them? I did not say that I attach no importance to them, but I do not attach as much importance to them as I would to the opinions of a man's own superior officer.

115. Mr. Chapman.] With regard to what is termed "bush duty," what is the regular custom when an officer is sent out on which is termed "bush duty"; I suppose he is, to a certain extent, to use his own discounting as to whom he comes in the bush duty. discretion as to when he comes in; is he allowed to charge extra expenses when he is in a backward place? Not extra expenses, but if he were absent for the night he would be entitled to draw the allowance. The matter is different now, but in those days he was strictly required to be absent a night from his quarters in order to obtain his night's allowance.

116. If he were out after 12 o'clock, I suppose, it would be termed a night? Not necessarily. A man might be sent out at 9 o'clock at night, and come back at 12 o'clock, and get nothing at all; that would

be part of his day's duty.

117. Stafford has stated—question 46—

Mr. Johnston.] In the first letter which you read last Tuesday, you state distinctly that the InspectorGeneral of Police abandoned the charge of fraud? Yes.

Is that a fact? No, certainly not. Misconduct covers the fraud. That is the term used in the Act.

You may perhaps ask me why he was not sent before a Bench of Magistrates.

118. You might tell us that? It does not necessarily follow, in every case, that I refer a matter to a
Bench of Magistrates. That clause in the regulations was put in in order to prevent officers of police
interfering by punishing men who ought to have been made amonable before the magistrates; but it has interfering by punishing men who ought to have been made amenable before the magistrates; but it has no controlling power over me as regards dismissing a man for misconduct. The regulation which Stafford has not referred to says :-

Members of the Force will be liable to dismissal for disobedience, neglect, or omission of duty, incompetency, disrespect to any person in authority, insolent or indecorous behaviour, or any misconduct punishable by law or contrary

Upon that regulation of course I have the power to dismiss a man; but it does not say that I must necessarily send him before the Bench. It would be impracticable. For instance, a case occurred very necessarily send him before the Bench. It would be impracticable. For instance, a case occurred very recently in which a constable became intoxicated and assaulted a citizen. There was some difficulty in identifying him, and he ultimately, when identified, went to the citizen and apologised, and said he was intoxicated. The gentleman said he would not think of going to court to appear against him. Consequently it was necessary for me, not to send the man to the magistrate, but to protect the public by dismissing him from his position, which I did. It does not follow that a man must always be taken before

119. I suppose that, in very many cases, if an officer does something which may make him amenable to the law, it is considered quite sufficient to dismiss him? Certainly. In this case I should consider it was the man's wrong-headedness which contributed to his making this claim, as he now explains it; but a man who would state that he was at a place where he was not, and that he was serving summonses when there were no summonses to serve, is not a man I could ever trust in the witness-box, and upon the recommendation of the Superintendent I acted.

120. Chairman.] Do you mean by that, that you did not discharge him in consequence of the charge of fraud, but for misconduct in connection with submitting the claim; you put it down as misconduct?

121. And you call a case of fraud, which is a criminal act, a case of misconduct in the Force? Certainly; every offence is misconduct.

122. Mr. Chapman.] Stafford has stated:

Messrs. Fosbery and Zouch's reports to the Colonial Secretary disclose that they entirely abandoned the charge of fraud upon which I was dismissed, and urged misconduct as a reason for dismissing me, without showing any specific charge of misconduct proved.

That is not true? It is a misapprehension on his part. The misconduct referred to was in sending in a fraudulent claim.

123. Mr. Johnston.] Is it considered misconduct on the part of a policeman to serve summonses on people who were not actually at the place at which the offence for which they were summoned was supposed to have been committed? I do not exactly understand you.

124. Not very long ago a policeman summoned twelve or fourteen young persons for gambling on a Sunday; five or six of them were not at the place at all, and, of course, they had to be discharged;—is that misconduct on the part of the policeman? Most certainly, if it were wilfully done, or unless it was a case of mistaken identity, to which we are all liable. I do not know the facts of the case to which you

125. Mr. Chapman.] From your general knowledge as Inspector-General of Police, and from the reports you have from time to time received from the Superintendent and others, your opinion of Stafford is not a very favourable one? I never had a very favourable opinion of Stafford, although, of course, he was not under my immediate direction.

126. Apart from any belief that he was not a temperate man, generally speaking, you did not look upon him as a good policeman? I could not judge of his capacity as a policeman, as he was not sufficiently under my control. I do not think he was fit to be a non-commissioned officer, and my predecessor entertained that opinion very strongly.

127. I wish to make myself clear with regard to Stafford's testimonials. The Chairman has read a testimonial from Mr. Bunn, stating that he seemed to be a very zealous and efficient officer, and that he was instrumental in bringing several offenders to justice, and that in many cases the investigation and tracing 4 May, 1893. of evidence must have required great acuteness as well as time. I take it that your answer to that is that any testimonial which may be given by a magistrate or a private citizen weighs very little when placed alongside a contrary representation from a superior officer? That is my opinion. Of course, if he could not do the things which Mr. Bunn says he did, he would not have earned his pay.

Mr. E. W. Fosbery.

128. Mr. Johnston.] You have stated just now that neither yourself nor your predecessor entertained a very high opinion of Stafford;—do you know how he came to attain his position? I think he was promoted upon the recommendation of his officer, but not by me.

129. Mr. Chapman.] What is the scale at present allowed to policemen for expenses? Four shillings a night, and it has been more liberally administered under present arrangements than previously.

130. Mr. Johnston.] Stafford must have entered the Force as an ordinary policeman? 131. When he was discharged he was Sub-Inspector? Senior-constable. Certainly

132. A man must be of good conduct to attain to that position? He must have shown his fitness in the estimation of his officer, or he would not have been recommended.

133. Do you know who the officer was who recommended him for that position? I cannot tell at present;

it was before my time.

134. Chairman.] With reference to the character given by Mr. Bunn, and your answer to the effect that you would accept a superior officer's opinion before that of a civilian or magistrate, I should like to refer you to the following appendix to the evidence of Stafford :-

HEREBY certify that I have known William Stafford, late sergeant of police, Braidwood District, and up to the time of my leaving the force in 1865 he bore a good character for efficiency and sobriety, and I always considered him a trustworthy officer, and always attentive to his duties.

J. R. WILSHIRE, P.M., Berrima, 25th March, 1878.

Late Inspector of Police, Braidwood. Late Inspector of Police, Braidwood.

?—Mr. Wilshire had very little police experience; he remained with us but a very short time.

135. But do you not think he would be a good judge of the character of Stafford? For the time he might.

136. Mr. Chapman.] I take it that you consider that, as a rule, testimonials are given to men on application, if they bear anything at all approaching a fair character? I think we are all induced to say a good word for a man, if it may be of any use to him, rather than say a bad one.

137. Chairman.] But you do not think anyone would do that in regard to Stafford, if they considered he was not a good officer—that he should be discharged some time before he was;—you do not think anyone holding that opinion would give him a character? No; but they do not know the facts. They do not take the trouble to inquire.

138. Do you think that anyone, holding that opinion, would give a character of that description? I do not think that either of these gentlemen would do a dishonorable thing.

139. Most of the gentlemen who have given him characters are J's.P. or magistrates of some standing or other;—do you think that the opinions of these leading men are a criterion of the feeling in the district with respect to Stafford? I do not think so.

140. Mr. Chapman.] As a matter of fact, I suppose you know that, very often, a policeman may be a favourite in a district, and yet be a bad officer? Very frequently.

141. And a policeman may be disliked in a district and yet be a good officer? Very much so. I do not wish to lean heavily on this man, but he has made most reckless statements, which I will not go into in detail, reflecting upon myself and others. I will take one instance. He refers to his superior officer, Capt. Zouch, who was Deputy Inspector-General of Police, who held the good opinion of everyone who came in contact with him, and served originally in the police in 1834. He says that when he died his widow received £1,200 from the fund. She did not receive anything of the kind. She received £800, and Capt. Zouch had contributed more than that to it. It shows that there is a recklessness about this man's statements.

142. Police rule 38 states:-

"The Officer in charge of Police in any district, will" &c., "act in accordance with the wishes of the Bench, for which purpose he will frequently communicate personally with the magistrates to ascertain whether their lawful orders are carried out by the members of the Force, and whether they are active, diligent, and efficient in the prevention of crime or the pursuit of criminals, and orderly, respectful, and steady in their conduct."

Stafford states, "Mr. Zouch did not communicate with the magistrate on the question of my competence, and the magistrate proved him false seven months after I was dismissed";—I suppose you knew Mr. Zouch very well? Yes, very well indeed; he was my deputy.

143. And Mr. Zouch, of course, owing to the position he held, would be well known by most of the people of the district? He lived there for forty years.

144. What character did Mr. Zouch bear? He was a man of the very highest rectitude and moral character, and a most efficient public officer.

145. And besides that, is it not a fact that Mr. Zouch was looked upon as a very humane man, and one likely to lean to the side of mercy in regard to his officers on all occasions? The only difference between Mr. Zouch and myself was because of his undue leniency towards his subordinates. He was too goodhearted for a police officer, and he was accused by this man of sticking to £16, or something of that kind, of his night money. It was before my time, but I do not hesitate to say, judging from the thirty-one years I have been here, that it was absolutely impossible for an officer to stick to money; but it is possible

that he may not have been able to obtain it from the Treasury.

146. Are you sure that it is Zouch whom he charges or Medley? It is Zouch. He says that the reason that Zouch had "a down" upon him was because he went to Mr. Critchett Walker, and Mr. Walker got him his money.

147. Chairman.] With reference to your answer to a question put a few minutes ago regarding Mr. Zouch's widow, in what year was the £800 paid? When he died his widow got it. He died, I think, in

148. Would the claim be paid in the same year? Yes; we always pay widows as soon as possible.

149. Mr. G. D. Clark.] The reason of this man's dismissal appears to be that he made a charge for allowances to which the authorities consider he was not entitled? No; much more that. If he had made a claim for allowances to which he was not entitled, and the claim was bond fide on his part, he 849—F would

42

Fosbery. 4 May, 1893.

would have been allowed to withdraw it, substitute, or reduce it, but he made a false claim. He represented that he was doing things that he was not doing, and that he was at places where he never halted. 150. Mr. Chapman.] As a matter of opinion, you do not think that Stafford has been harshly treated, and you think he might have been prosecuted, besides being dismissed? Certainly I do. I may mention that I have never had a single decision of mine, during the forty years I have been in the police, upset. Of course, I am obliged to be what would be considered in other Departments extremely severe, because I have something like 2,000 men who have to be kept in a state of strict discipline, and this will not allow me to depart from a principle; more especially as these men may have the lives and the liberties of their fellow creatures in their keeping when they appear in the witness-box. Therefore I have to be more exacting, probably, than I might be in any other service.

151. Chairman.] Will you give us any reason why this man was not prosecuted in the first instance? I

did not think it was necessary. I might give a reason which, perhaps, might be disbelieved. I would not risk a man, guilty of wrong-headedness, going to gaol. I would not desire to see a man like that

utterly ruined.

152. But he applied to be removed, and was allowed to be removed from Goulburn to this place, because he could not agree with the Inspector for the district? He says so, but the Superintendent is dead, and it was before I came to the Colony; therefore I have no knowledge about it. A constable does not

disagree with his Superintendent as a rule.

153. The point he makes is, that there was a strong personal feeling against him on the part of his superior officer, and because he committed what he believes to have been only an error of judgment in making a claim for allowance in regard to one particular place, when it ought to have been made in regard to some other place, he was dismissed. He also says that other officers have had their reports sent back for correction, and money has been paid to them? I do not admit that it could be so. However, if it were, two wrongs could not make a right. I frequently reduce claims myself. I have considered that they have been made here fide although I have disconveyed of them. two wrongs could not make a right. I frequently reduce clair have been made bona fide, although I have disapproved of them.

154. For a mere error of judgment or calculation, then, a man would not be dismissed; a man may hurriedly make up his report; a man makes a charge in regard to a given place, and it is discovered that he was not at the place on the particular nights in regard to which the charge was made; the matter is referred back to him for report, and he corrects it by saying that he has made a mistake, and that he was at some other place; you would not consider that a man who did that, committed a very serious breach? But the circumstances were different. In this case, Stafford himself states that he was endeavouring to make up what he considered he ought to have been allowed, because his family were

not provided with quarters.

155. Chairman.] Is that in connection with the statement he copied, which was submitted to him, as he

alleges, by Medley, through Cornett? He admitted it himself.

156. Mr. G. D. Clark.] Was it a custom in those days, when a police officer was away on duty, and when he was entitled to allowance, for him to stay with a friend and be entitled to charge the allowance? He was entitled to claim it so long as he could not have gone to a barracks to his bed. If he had slept under a gum-tree he would have been entitled to it.

157. Mr. Chapman.] Stafford appears to lay considerable stress on the fact that he was not prosecuted; I suppose that, in many instances, as a matter of mercy, men, when they make trifling mistakes, or do for this way consist tolerate them in the Force, are punished by dismissial? Constantly. suppose that, in many instances, as a matter of mercy, men, when they make trifling mistakes, or do something for which you cannot tolerate them in the Force, are punished by dismissial? Constantly. 158. Mr. Johnston.] Captain Zouch bears a high character amongst private people in the district of which he had command? There never was a worthier man who broke the bread of life. 159. Was Stafford first appointed to the staff in Sydney?. No; I think he was originally a southern patrol-man, appointed by Captain Zouch. They appointed them in all sorts of ways before the Police Act, which was passed in 1862, when I came here as Deputy Inspector-General.

160. At that time extra men were wanted on account of the bushrangers and the cattle-stealers?

#### CASE OF WILLIAM STAFFORD, EX-SERGEANT OF POLICE

#### APPENDIX.

[To Evidence of William Stafford, 18 April, 1893.]

My dear Stafford,

My dear Stafford,

I have been for some time endeavouring to find your address, but was unable to do so before this day, when I found it in Truth. I was surprised to learn that your matter with the Government is still unsettled. I may mention without further preface that I have had it in contemplation for some years to write a history of bushranging in the colonies, and with that object in view have collected important materials. I purpose to write the history and not compile it, as most persons are in the habit of doing with so-called histories, and to do justice to the police, and to many who have risked, and, in many cases sacrificed, their lives in the performance of their duties.

I am well aware that you have done good service in your capture of offenders, bushrangers, &c., in the Jingeras and Braidwood district, and I shall esteem it a favour if you will furnish me with the particulars relating to any of your encounters both at Araluen and the Jingeras for the book. You might also give me some particulars relating to the commission in Braidwood after the murder of the Jindera special constables. I am receiving a great deal of information from members and ex-members of the police, and I would feel delighted in getting some extracts, &c., from you.

Hoping Mrs: Stafford and family, as well as self, are well, Newcastle, 6 November, 1892.

I remain, &c., MARTIN BRENNAN, Inspector.

Dear Mr. Stafford, 28 December, 1892.

Dear Mr. Stafford,

I duly received your kind and welcome letter of the 21st instant, enclosing your experiences of the bushrangers in the Braidwood district and elsewhere, for which accept my best thanks. The reminiscences cover many important events, and will be of vast service to me in the contemplated work. Your epitome of the events is the more valuable because it develops itself in consecutive order, and is an able and graphic recital of those cases in which you took a prominent part. I shall have probably to refer to you more than once for further information later on. With regard to disarming the police at Morris' public-house, you make no mention of what I understood was the case—that Johnny Clarke had been arrested by two of the police—if I mistake not, Curran and Richardson—but subsequently rescued by the bushranger's brother Tommy and the Connells. Stapylton's conduct throughout the whole period of bushranging was simply disgraceful.

I hope Mrs. Stafford, family, and self enjoy good health; and wishing them and you a very happy Xmas and prosperous new year,

new year,

William Stafford, Esq.

I remain, &c.,
MARTIN BRENNAN, Inspector.

While my petition to Parliament, and the Town and Country Journal, gives a sketch of my services, I desire to show in connection with the arrest of the notorious Tommy Clark, who escaped from Braidwood Gaol, and thus became an outlaw, that I am entitled to credit for the shooting of the outlaw, Pat. Connell, as it was my forethought and prompt action that brought his desperate career to a sudden end, and that was brought about this wise:—I was then at Araluen. I wired thus to Superintendent Orridge, Braidwood:—"Bushrangers sticking up Mr. Mires' store; send Ballalaba police forthwith to intercept on Back Creek mountain track. I shall run them hotly." Mr. Orridge done so, and thus the outlaw, Pat. Connell, was shot at the place indicated by Constable Kelly.

Again, I claim that it was myself that routed the aider and bushranger, Doran, and thus brought about his death, and that was brought about this wise:—Doran was a spy and aider, and when the boys wanted an extra hand Doran was their man. The bushrangers fired upon me and my men at Major's Creek, and Doran was with them. I charged the bushrangers, and in the encounter I was told that I wounded Doran in the fleshy part of the thigh, and that the bushrangers had him in Krawarrie Range. Thus, when Doran got well, in making his escape across the border into Gippsland, his horse ran him against a tree and killed him, and thus another dangerous man was disposed of by me. As these distinguished services are not generally known, and that Sergeants Creagh and Byrne got the credit and promotion for their share in these cases, which, by right, myself and Constable Kelly were entitled to, thus I beg to put the facts in evidence for future reference in support of Mr. Brennan's letters, &c.

WM. STAFFORD.

WM. STAFFORD.

Sub-inspector Cornett's sworn testimony is thus:—"There is no doubt Stafford was a good police officer, and rendered good and faithful services. He was a man of good standing in the Force, and held the rank of sergeant. I am not aware of any local ill-feeling existing against him at Braidwood or at Moruya. The matter of his dismissal was frivolous," &c., &c., (vide Cornett's replies to Questions 152 and 186, &c.)

Police-Superintendent Brennan's opinion on my competence and services, and magistracy's and Mr. Dalley's certificates, are attached.

The applicant has been most highly recommended to me as an industrious, intelligent, and highly-qualified man, of large experience in municipal matters, and deserving the fullest confidence. I venture to endorse his application.

Armory, Darling Point, 7 May, 1888.

WILLIAM B. DALLEY.

Mr. Dalley wrote the above endorsement to an application made by me for the office of Council Clerk at Bourke.

WM. STAFFORD.

Address from the residents of Araluen, in the Braidwood District, to Sergeant W. Stafford.

Dear Sergeant,

We have heard of your sudden departure with very great surprise. Our regret is deep and sincere, as our surprise is great. We wish to express both in this simple address, as well as the high admiration in which we have always regarded your private and public life. Your official life for the last six or eight years is so universally known that it requires no comment. Each one can easily call to mind your energy, your vigilance, and your wonderful success in the suppression of crime and vice of every description. Araluen, and the district in general, therefore, may well mourn your loss, for where affairs are so confused justice and peace can ill afford to lose one of their best supporters, one of their most constant and steady friends.

In conclusion, we beg to tender you our best wishes for your future welfare. We wish you success and happiness, and hope earnestly that your services may be highly appreciated wherever you go, that your virtue and integrity may meet their full reward.

WM. McDONNELL (now J.P.), DR. G. M. ALLEY, JAS. MAHER, T. W. FAULKNER (now J.P.), W. H. JOHNSTON,—Committee. And 112 others of all callings and sects.

APPENDIX.

See Police Rule 48, Magistracy, &c.—Extracts from printed Papers.

I HEBEBY certify that I have known William Stafford, late sergeant of police, Braidwood district, and up to the time of my leaving the Force in 1865 he bore a good character for efficiency and sobriety, and I always considered him a trustworthy officer, and always attentive to his duties.

J. B. WILSHIRE, P.M.,
Berrima, 25th March, 1878.

Late Inspector of Police, Braidwood.

St. Omer, Braidwood, 23 March. 1878. During the time S.-C. Stafford was stationed in this district (about fifteen years) he always seemed to me both a zealous and efficient officer. He was instrumental in bringing several offenders to justice. In many of the cases the investigation and tracing of evidence must have acquired great acuteness as well as time.

J. W. BUNN, J.P., Coroner.

Braidwood, 23 March, 1878. I HEREBY certify that I have known Sergeant William Stafford for many years in the Braidwood district. He always appeared to me to be a very competent officer, active and zealous in his attention to his police duties.

Manar, 26 March, 1878. I HEREBY certify that I have known Sergeant William Stafford for many years in the Braidwood district, and I never found him otherwise than thoroughly efficient in his duties, a good police officer, and at the same time his conduct was always WILLIAM F. GORDON, J.P.

This is what the senior magistrate of the district, Mr. James Larmer, said :-

Braidwood, 25 March, 1878.

I have known S. C. Stafford for about sixteen years, and during that time he has been very energetic in the performance of his duty. My opinion is that we never had a more efficient officer in this district.

JAS. LARMER, J.P.

The Moruya Bench says:

Sir,—Your stay at Moruya was too short to speak definitely of your general character; but while you were in charge of the police here you were active and efficient, and evinced a warm desire to carry out all duties connected with the Police Court.

W. S. CASWELL, P.M.

W. FLANNAGAN, J.P.

In view of the magistrates' testimony of my efficiency I will now quote Police Rule 48, viz.:—"The Officer in charge of Police in any district will," &c., "act in accordance with the wishes of the Bench, for which purpose he will frequently communicate personally with the magistrates to ascertain whether their lawful orders are carried out by the members of the Force, and whether they are active, diligent, and efficient in the prevention of crime or the pursuit of criminals, and orderly, respectful, and steady in their conduct." Mr. Zouch, &c., did not communicate with the magistrates on the question of my competence, and the magistrates proved him false seven months after I was dismissed.

Sydney: Charles Potter, Government Printer.-1893.

#### LEGISLATIVE ASSEMBLY.

#### NEW SOUTH WALES.

#### ADMINISTRATION OF JUSTICE.

(RETURN RESPECTING WARDERS IN DARLINGHURST GAOL)

Ordered by the Legislative Assembly to be printed, 16 November, 1892.

[Laid upon the Table of the House in answer to Question No. 14, of 15 November, 1892.]

#### Question.

14. Mr. Kelly asked The Colonial Secretary,—Is it a fact that the warders in Darlinghurst Gaol are detailed to keep watch upon prisoners sentenced to death from 4.30 p.m. to 6.30 a.m.; if so, will be cause alteration to be made, with a view to curtail these long hours?

#### Answer.

When a warder is employed he is on duty for three nights consecutively, from 4.45 p.m. to 6.15 a.m. during the summer months, and from 4.30 p.m. to 6.30 a.m. during winter, inclusive of meal hours. Death sentences are not of frequent occurrence, but were there constantly a prisoner under a death sentence such duty would fall to the lot of each warder at Darlinghurst Gaol once in sixteen weeks. The duty is very light when compared with that of men who have to be constantly on their feet or at work of some kind. It is not deemed necessary to incur the expense of more than one special warder in such cases. Owing to the uncertain and varying requirements of the Prison Service, it is not practicable to adhere to a fixed period of duty in all the gaols. In some gaols a warder may never be required during the whole period of his service to watch a condemned prisoner.

1892 - 3.

#### NEW SOUTH WALES.

#### DMINISTRATION OF JUSTICE.

(ADDITIONAL REGULATIONS FOR REFORMATORY PRISON TREATMENT OF CERTAIN MALE OFFENDERS.)

Presented to Parliament, pursuant to Act 37 Dic. Ao. 14, sec. 9.

Department of Justice, Sydney, 17th April, 1893.

#### ADDITIONAL REGULATIONS FOR REFORMATORY PRISON TREATMENT OF CERTAIN MALE OFFENDERS.

His Excellency the Lieutenant-Governor, with the advice of the Executive Council, has been pleased, under section 5 of 4 Victoria No. 29, to make the following additional Regulations for Reformatory Prison Treatment of certain Male Offenders, in substitution for those of 15th November, 1888.

R. E. O'CONNOR.

THERE shall be a seventh class of prisoners, comprising persons of not more than 25 years of age under sentences of imprison-ment, with or without hard labour, not exceeding twelve months, who shall be treated during such sentences under the following conditions of separate treatment:-

- 1. Each prisoner shall occupy a separate cell, and shall be employed upon such suitable work as may be furnished to him.
- 2. He may be allowed exercise for one hour each day, and a longer period if thought necessary by the Surgeon.
- 3. He may, if coming under the Regulations as to eligibility for school, be allowed one hour daily for performing tasks to be set for him by the Schoolmaster, and one hour for reading such instructive and reforming books as may be selected for him by the Chaplain. He shall at all times be provided with a Bible
- 4. He shall not, under any pretence, attempt to communicate with another prisoner. He must neither read aloud, sing,
- whistle, dance, nor make any noise in his cell, exercise ground, in the corridor, or chapel.

  5. He shall rise immediately upon the first bell being rung, wash his hands and face, and make up his bedding neatly in such form as may be directed.
- 6. He shall keep his person, cell, and the furniture therein in the highest state of cleanliness.
- 7. He shall wash his feet twice in summer, and once in winter, weekly, and shall bathe once a week.

  8. He shall not be allowed to alter his clothing, and shall keep it clean and in proper repair.

  9. He shall, on hearing his cell door open, at once, if not in
- bed, stand up in the centre of his cell, facing the door, with his hands by his side and his heels close together.
- 10. In marching to or returning from the exercise grounds or chapel, he shall keep five yards distant from any other

- 11. Any prisoner requiring assistance or instruction, or having anything to communicate, may ring his gong for the officer on duty; but all conversation not strictly necessary is to be avoided, and on no account is the gong to be rung with out sufficient reason.
- 12. At the order "Prepare for exercise," the prisoner shall, as soon as the door is opened, move out of his cell to the as soon as the door is opened, move out of his cell to the exercise circle, and take up the position assigned to him by the officer; at the word "One," he shall stoop down and take hold of the rope handle attached to the marching chain; at the word "Two," he shall at once assume an erect position, retaining hold of the marching chain, and so remain at attention until the officer calls "Walk round." During wet or very hot days he may (by permission of the officer) remain in his cell, or take such exercise as may be practicable and directed, in the corridor. in the corridor.
- 13. He shall be very respectful to all officers of the Government, and shall nevery respectful to an omeers of the Government, and shall never pass a superior officer of the prison without touching his hat.

  14. The scale of Dietary will be—16 oz. bread; 8 oz. meal; 8 oz. meat; 8 oz. pctatoes; 1 oz. sugar; ½ oz. soap; ½ oz. salt
- 15. The Surgeon shall visit daily each prisoner of the seventh class in his prison.
- 16. Each prisoner shall be weighed monthly, and reports of weight shall be laid before the Surgeon at the commencement
- of each month.

  17. The prisoners shall be allowed the usual monthly visits, but in each case the Gaoler must be satisfied that the visitor is a person to whom it is desirable to permit the privilege.

  18. Correspondence will be permitted in terms of Regulations
- 10. Correspondence with se permitted as 1.

  19. Each prisoner of the seventh class shall be provided with a plank bed, which shall be used without a mattress or substitute therefor for a period of six months. A coir pillow of 4½ inches in diameter will be allowed.

20. After a period of six months a coir mattress will be allowed; but, in case of misconduct, the Visiting Justice may direct the prisoner, apart from any cell or other punishment, to be deprived of his mattress for a period not to exceed fourteen days.

21. In cases of short sentences not exceeding fourteen days the dietary scale shall be limited to bread and water (Prison ration No. 5). Each prisoner so treated shall not be subject to the conditions prescribed in Regulations 2, 10, 12, and 14. He shall, however, be required to conform to Regulations 1, 3 (except as regards school), 4, 5, 6, 7, 8, 9, 11, and 13. He shall not be allowed to receive visits, nor to write letters.

22. In cases where the sentence is for more than fourteen days but not exceeding six months, and for the first six months of sentences exceeding that period, each prisoner shall be placed on bread and water diet (Prison ration No. 5) during the first week of his sentence; during the second week he shall

receive the ration prescribed in Regulation 14 (Prison ration No. 9), and so on throughout the period of six months No. 5 ration shall alternate weekly with No. 9. In other respects he shall be subject to the conditions of all the above Regulations, excepting 21, while in receipt of No. 9 ration, and to the conditions prescribed in Regulation 21 only while in receipt of No. 5 ration; but the Gaoler may allow such exercise as he may deem necessary, on the advice of the Visiting Surgeon, for any prisoner on the reduced ration No. 5.

23. In cases where the sentence exceeds six months each prisoner shall, during the last fourteen days of his sentence, be treated in the manner prescribed in Regulation 21.

24. These Regulations shall not apply to any seventh class prisoner who may have been sentenced prior to their publication in the Government Gezette, but all such prisoners shall be treated in accordance with, and shall conform to, the Regulations of the 15th November, 1888, hereinbefore mentioned.

#### NEW SOUTH WALES.

#### PRISONS.

(REPORT FOR 1891.)

Presented to Parliament by Command.

#### The Comptroller-General of Prisons to The Minister of Justice.

Department of Prisons, N.S.W., Comptroller-General's Office,

Sir,

Sydney, 25 April, 1892.

I have the honor to furnish you with my Departmental Report for the year ended 31st

December, 1891, with the usual tabulated statistics attached.

The total number of prisoners confined on the 31st December, 1891, was 2,616, as compared with 2,423 at the end of 1890, and it is estimated that the population had increased from 1,121,860 to 1,165,300. These prisoners were distributed throughout sixty gaols. This number includes police gaols, which, as mentioned in former reports, it has been found necessary to keep in operation to meet local wants arising from the wide extension of Circuit and Quarter Sessions Courts.

For the year 1891 the entries and discharges give respectively 18,047 and 17,854, as against 16,497 and 16,446 for 1890. I may here repeat that many persons included in these numbers belong to the incorrigible class, and were convicted several times during the year, and sentenced to short terms of

imprisonment.

The distinct persons received into the various gaols numbered 11,265, as compared with 10,938 for 1890

On reference to table B it will be seen that the net value of all work done by prisoners was £51,067 3s. 6d. as against £42,406 1s. 1d. in 1890. This table includes for the first time the estimated value of labour performed at Trial Bay, i.e., for the working of the prison as distinguished from the breakwater which is shown in table F, and in small country gaols where it has been found practicable to

usefully employ the prisoners.

The number of deaths was 39, as compared with 29 in 1890. During 1891 the epidemic of influenza caused a great deal of sickness in the gaols, both among officers and prisoners. In some of the larger gaols much inconvenience was experienced, owing to the number of officers who were absent at the same time suffering from influenza. The serious nature of the epidemic also interfered considerably with the trades and other kinds of work performed by the prisoners in the labour gaols during the latter portion of the year, and thus reduced the labour returns. At Goulburn Gaol the workshops and all other branches of employment were almost at a stand-still during the quarter ended December last.

other branches of employment were almost at a stand-still during the quarter ended December last.

The reconvictions show:—For the 1st class or graver offences (five years and upwards) second, third, fourth or more, 16, 11, 24, as against 17, 10, 50, for 1890. For 2nd class (less than five years), 208, 87, 138, as compared with 217, 94, 120; and for 3rd class (imprisonment only), 87, 45, 35, as compared with 156, 72, 81. Drunkards and petty offenders, 1,069, 454, 391, as against 916, 412, 350, for 1890.

with 156, 72, 81. Drunkards and petty offenders, 1,069, 454, 391, as against 916, 412, 350, for 1890.

From these returns it will be perceived that the reconvictions for the serious offences have been on the whole less than they were during the previous year, but that there has been an increase in the number of drunkards and petty offenders. This increase has probably arisen from the general depression that existed during the greater portion of the year, which reduced the avenues of employment, and, as a consequence, led to idleness and disorder.

From the following table will be seen the estimated population of the Colony for the ten years 1882 to 1891 inclusive, and the total number of prisoners confined in the gaols at the end of each of

those years:-

Year.	Estimated Population on 31st December.*	Prisoners confined on 31st December.	Year.	Estimated Population on 31st December.*	Prisoners confined on 31st December.
1882	815,000	1,943	1887	1,020,330	2,382
1883	861,310	2,130	1888	1,051,080	2,353
1884	904 980	2,466	1889	1,081,820	2,372
1885	949,570	2,562	1890	1,121,860	2,423
1886	989,340	2,500	1891	1,165,300	2,616

^{*} The figures for population from 1882 to 1890 are taken from "Coghlan's Wealth and Progress of New South Wales, 1890-91."

17.—.

In

In connection with this return reference may be made to the fact that the Criminal Law Amendment Act came into operation in 1883, under which the duration of sentences was increased and new offences were created.

Considerable delay having occurred in the work of erecting the new gaol at Broken Hill it was found necessary, in view of pressing local requirements, to proclaim the police lock-up a gaol. This was done on the 12th May, 1891. It is probable that the new gool will be completed before the end of the present year.

The additions and improvements to the Wilcannia Gaol were completed in December last, and the

gaol was then occupied by the necessary staff.

Competitive designs for the proposed new gaol at Grafton having been obtained by advertisement, a board of selection and advice was appointed to examine the plans, consisting of the Government Architect, Mr. John Sulman, and myself. The result was the approval by the Minister of Works of a design submitted by Mr. Henry A. Wilshire, Architect of Sydney. Working plans have since been prepared, and it is expected that, when erected, the new gaol, which will be on a much improved modern design, will meet the wants of the district for many years to come.

It is much to be regretted that, owing to paucity of funds at disposal of the Government Architect, the yards for keeping prisoners awaiting trial and under remand separate from convicted prisoners at the gaols at Tamworth, Young, and Armidale could not be proceeded with. The absence of such yards is a

very serious defect.

At Maitland Gaol new and convenient workshops were completed by prison labor and opened during the year, and several useful trades are now being carried on in them. The new wing for females was commenced, and this work is also being performed by prisoners, as well as the formation of six classification yards. When finished, these yards will very greatly improve the organization of the gaol.

At Darlinghurst Gaol a complete system of sewerage has been carried out under the supervision of the Water and Sewerage Board, and the mess yards have been supplied with patent latrine flush-closets, which are a great improvement on the old system. These improvements were carried out by contract.

As regards the total cellular accommodation afforded by the gaols now in operation it will be perceived, on reference to table A, that there is separate cell-room for only 1,774 prisoners, whereas the number of prisoners confined on the 31st December last was 2,616. Upwards of 850 more cells are,

therefore, required to enable the department to carry out a proper system of separation by providing a cell for each man at night, which is contemplated by the regulations now in force.

The new wing, which is being erected by prison labour at Parramatta Gaol, will contain 78 cells, and the wing which is about to be built at Goulburn 127 cells, but some considerable time must elapse

before this much-needed extra accommodation will be available.

It is impossible to secure effective administration unless adequate accommodation be provided. From a disciplinary and reformatory point of view the importance of placing each prisoner in a separate cell at night cannot be overstated. Unfortunately, under existing conditions, association of prisoners in cells is unavoidable.

Presumably from a misunderstanding as to the amount of accommodation at its disposal, this department has been blamed for the cellular association of prisoners. Even if the required cell accommodation could be found by distributing the prisoners throughout the small country gaols, the absence of proper means of repression and of classification yards, as well as of the necessary workshops, from such small gaols would render it most unadvisable to detain long-sentenced prisoners in them. Prisoners should never be kept in idleness, and wherever it is practicable to find employment for them every effort is made to keep them regularly at work. But this is one of the greatest difficulties which this department has to contend with, and I regret to say that in most of the smaller gaols it is impossible to overcome it. Therefore only short-sentenced men are confined in them.

It has also been stated that our gaols hopelessly fail in reforming criminals, and it has therefore been assumed that the system is a bad one. Our prison system under the Régulations in force is based upon what is acknowledged to be the best model that is known, viz., Sir Walter Crofton's Irish system, but owing to the want of adequate accommodation and other difficulties to which I have referred, it has been hitherto found impossible to fully carry it out. So far as the means at disposal will admit, every stimulus to reformation is offered to prisoners, without dispensing with the necessary deterrent portion of their treatment. It is obvious that nothing should be done to destroy the deterrent effect of imprisonment by making the gaol attractive to its inmates. A strict and close discipline of a humane kind must always be maintained over them. In a great number of cases the benefits that a prisoner may have derived from his disciplinary and industrial training in a well organised gaol are soon destroyed by the many evil influences and temptations which beste him on his discharge. These are too well known to require enumeration have The difficulty of finding employment is also a great cause of relapse into crime. meration here.

In connection with the subject of the reformation of prisoners in gaols I may here give an extract from a report of the "State Board of Prison Directors" of California. After summing up the many causes of crime, the Directors write as follows:-

Nevertheless, in the face of this, not a few persons stand up to denounce the State Prisons of California as "Nurseries of crime" for which the prison officers are solely responsible, because they have not accomplished what all the moral and Christianizing forces of civilized society, and the denunciations and penalties of the criminal law have failed to accomplish, viz., the prevention of crime and the complete reformation of criminals.

When any State prison can be found, or any system of prison discipline devised, by which to effect a general reformation, or regeneration of the convict—when all the moral forces of society and the terrors of the penal law cannot prevent crime—we may reasonably expect the millennium to be near at hand.

These remarks apply also to what has been said of the prisons of this colony.

A large number of cases, either of forgery, embezzlement, or conspiracy to defraud, in connection with various monetary institutions, have been dealt with by the Courts of this Colony during the last two years, and, in the great majority of these cases, the persons who were found guilty had not been previously convicted. They were not "Gaol-manufactured criminals." It is almost unnecessary to repeat that there is also a large class of persons upon whom no system of disciplinary and reformatory treatment can produce permanently good results, owing to their naturally weak and dishonest natures.

In

In my report for last year, and in a memo. to the Minister of Justice, written in September last, which has since been published, I gave an outline of the method pursued in our gaols for the treatment of youthful offenders of the "larrikin" class, who were sentenced to gaol by the various Courts, in order to show that, by that method, they could not be contaminated by evil association, inasmuch as no association with other prisoners was allowed. Statements had been publicly made that boys who were sentenced to imprisonment were herded together with old and degraded criminals, and thus ruined. I find that what I want has been purposed to extend to prove that I want to be a characteristic or the statement of the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been published to the court had been p that what I wrote has been wrongly construed to mean that I am opposed to the establishment of a Reformatory for boys, and I have recently been publicly misrepresented in this matter. I therefore felt

it my duty to address a letter to you, a portion of which I now repeat as follows:—

"My memo. was simply intended as a defence of the system of treating boys who were committed to gaols in the absence of a Reformatory, which was described in the State Children's Relief Department's Report as 'inhuman,' and its effects were stated as likely 'either to seriously affect a boy mentally, or to confirm him in criminal tendencies.' This is not borne out by the reports which have been sent to me by officers of large experience. If any source proposed the stated are related to the surgeon. by officers of long experience. If any young prisoner were affected mentally or physically the surgeon would at once interfere and order a modification of the conditions. Of course there are, and always will

be, incorrigibles upon whom no kind of reformatory treatment has any permanent effect.

"I have never at any time questioned the necessity which exists for the establishment of a Reformatory for boys; but I am of opinion that there is a class of boys who do not need the full treatment of a Reformatory, and who should be dealt with in a stern and sharp manner, either in the form of a week or ten days' imprisonment, under separate treatment on a bread and water diet, or by corporal punishment, to be inflicted within the gaol walls, the boy to be discharged on the same day as the punishment is administered. Such treatment as this would have a strong deterrent effect upon young "larrikins," who amuse themselves by forming gangs or "pushes" for the purpose of assaulting the police with "blue metal," and making themselves a nuisance and a danger to the public peace; also, for boys who wilfully destroy valuable trees in public reserves, and commit other serious offences. A large number of these boys are not naturally criminal, being led on to mischief by the evil example of others older than themselves; but still they should be sternly checked in their lawlessness. I firmly believe that many of them could be effectually checked by such sharp treatment as I have indicated. It would bring home to them in a very unpleasant manner that they had broken the laws, and would teach them such a wholesome lesson as would deter them from again offending. Many of such boys are under 16 years of age.

"It surely cannot reasonably be contended that every boy who is, for the first time, detected in breaking the law should be committed to undergo a lengthened detention in a Reformatory, and his parents thus be relieved of all their responsibility for his training and support. "Larrikinism" does not always spring from the lowest ranks of society, and the parents of many larrikins would be only too glad to have their boys, whom they grossly neglect, trained almost entirely at the cost of the State, no matter in what class of institution such training is carried out. Only boys whose cases are deemed to be serious ones, and unfortunates who break the laws and who have no parents or homes to go to, should, I submit, be committed to Reformatories, vagrants and destitute children being sent, as now, to Industrial Schools, or boarded out. Of course the discretion in such cases must rest with the courts which deal with the I repeat that a boy is disgraced by his conviction of a crime, not by the fact of his having

boys. I repeat that a boy is disgraced by his conviction of the discrete been in gaol. Disgrace cannot be separated from crime.

"A Reformatory for boys is a very valuable and most necessary institution, but its successful results must depend largely not only upon the personal administration of the officer who may be placed in the state of the personal administration. Unless a careful, kindly, and firm the state of the personal administration of the officer who may be placed in the state of the personal administration. The personal place is the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration of the officer who may be placed in the personal administration in immediate charge of it but also upon the fitness of his assistants. Unless a careful, kindly, and firm supervision is constantly maintained, much evil is engendered among the boys by association, and gaols in all countries contain prisoners who, as boys, have graduated in Reformatories.'

The alterations in the regulations for the Public Works Prison at Trial Bay, referred to in my last report, were adopted by the Government and brought into operation on the 26th February, 1891. Under these amended regulations the term license-holder has been dropped, and the men undergoing the modified servitude at the prison are designated prisoners. A copy of these regulations is attached as Appendix G. The advantages and privileges derived by prisoners from this modified servitude at Trial They are allowed much freedom from restraint, are not dressed like prisoners, and Bay are very great. have also opportunities by regular and instructive labour to earn, by gradually increasing remuneration, a substantial sum to aid them on their discharge.

The construction of the breakwater is carried on by mechanical means, and the labour to be performed is of a skilled kind which commands high wages in the colony. A drunkard or thief who has led prior to his conviction of a crime an idle and worthless life, is taught habits of sobriety and industry. He learns how to use a pick, shovel, and other tools in blacksmithing, road-making, skilled quarrying, and other useful labour. His health and constitution are also greatly improved and strengthened by the regular and steady life he leads in the open air of a fine climate like Trial Bay, under a system which comprises healthy discipling, industrial training and humane treatment, and one which should undoubt comprises healthy discipline, industrial training, and humane treatment, and one which should undoubtedly educate him to habits of self-restraint, and tend to reform him, if any elements of reformation exist

The Superintendent reports that during the past year "the conduct of the prisoners was very good, and they have worked remarkably weil," as will be seen by the attached table marked F.

In order to ensure uniformity in the keeping of the books of the different gaols and also to maintain a proper check over the stock-books relating to the work of the different branches of the larger maintain a proper check over the stock-books relating to the work of the different branches of the larger labour establishments, an officer was appointed, on my recommendation, in April, 1891, to fill a new position as accountant to the head office and examiner of gaol offices. I found it very necessary that an officer should be available to periodically examine the books at the large gaols, and whom I could despatch at any moment to investigate the accounts at any gaol at which I might deem such a course desirable or necessary. The appointment was conferred upon Mr. Samuel McCauley who, at the time, held the post of chief clerk at Darlinghurst Gaol, and had previously served as accountant in the head office. By his training he has gained a thorough insight into the work which he is now required to perform as examiner of gaol offices.

I have nothing special to report in connection with the Shaftesbury Reformatory for Girls, excepting that the hospital and additional rooms which were so much needed for the proper treatment and classification of the girls were commenced during the year, and are now almost ready for occupation. The number of girls in the institution on the 31st December last was 32, and their general conduct during

the year was very fair.

In conclusion, I am pleased to be able to speak generally in high terms of the efficiency of the numerous officers serving under the department. Considering the necessarily strict and exact disciplinary requirements of the service, the few cases of serious default which have occurred may be viewed as evidence of the very satisfactory conduct and bearing of the main body of the officers comprising the staffs

of the prison establishments under my control,

I have, &c.,
GEORGE MILLER,
Comptroller-General.

(A.)

(G.)

Department of Justice, S. dney, 26 February, 1891.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Additional Regulations for giving effect to the provisions of 4 Victoria No. 29, 37 Victoria No. 14, and the "Criminal Law Amendment Act of 1883," 46 Vic., No. 17.

ALBERT J. GOULD.

Additional Regulations for giving effect to provisions of 4 Victoria No. 29, 37 Victoria No. 14, and the "Criminal Law Amendment Act of 1883," 46 Vic. No. 17.

Amendment Act of 1883," 46 Vic. No. 17.

1. Prisoners under sentences to penal servitude, or to hard labour on the roads and public works, or to imprisonment with hard labour, will become eligible for employment upon the public works at Trial Bay Prison under the following conditions, viz.:—Prisoners under sentences from three to five years, who have not been punished for misconduct within the previous six months, and who are favorably recommended by the Gaolers, at a period twelve months before they would become eligible for discharge under the ordinary remission regulations, and in anticipation of such discharge; in sentences of five to ten years similarly at a period of eighteen months anterior to discharge; in sentences of ten years and upwards at a period of two years anter or to discharge.

2. The Governor may, under exceptional circumstances, direct the employment at the Prison of any offender at any period of his sentence, and for such period as the Governor may fix.

3. The authority for the granting of the privilege of the nodified servitude at the Prison will be issued by the Governor, and the privilege may be withdrawn by the Governor at discretion. Any prisoner who through misconduct may have rendered it desirable that he be returned to an ordinary Gaol shall have the cost of his transfer deducted from the monetary reward which he may have earned during his servitude at the Prison.

4. The prisoners shall occupy such quarters as may be assigned to them, and shall be liable to ordinary prison punishment for any offences or disorder in like manner as in other prisons, and shall be subject to all the rules laid down for their treatment by the Comptroller-General of Prisons, authorised by the Minister of Justice.

5. The prisoners shall be supplied with rations according to the scale subjoined, and with clothing other than the Prison pattern.

Prison pattern.

6. They will further be allowed reward in money on accomplishment of specified tasks, or on the recommendation of officers directing their work, according to the authorised scale. The money so allowed will be credited to them from time to time until their discharge: but they will be allowed, at the discretion of the Superintendent, a certain proportion, not to exceed one-third, for the purchase of extra articles of consumption. Those who may wish to do so may also remit money, subject to the approval of the Superintendent, to any immediate relatives who are in destitute circumstances; but such remittances must not exceed one-third of the total amount earned. Those who may avail themselves of this concession will still be permitted to expend the proportion allowed for extra articles of consumption.

7. All prisoners to be eligible for the Prison will have to be passed as physically fit for quarrying, or other such labour, by the Surgeons of the Prisons, and the favourable recommendation of the Gaolers must express a belief that the prisoner will conduct himself properly, and not abuse the privilege.

8. In case of prisoners who may not be eligible, either from physical or other causes, and therefore have to serve their sentences in ordinary prisons, the consideration will be allowed of an additional remis ion period beyond that specified in the Prison Regulations, on the following scale:—

In sentences of from 3 to 5 years—2 months.

In sentences of from 3 to 5 years—2 months.

"" " 5 to 10 years—4 months.

"" " 10 years and upwards—6 months.

9. Prisoners serving sentences under convictions for unnatural offences shall not be eligible for the privileges of the Prison, unless under very exceptional circumstances; but they shall be entitled to receive the additional remission provided for under condition 8.

Daily scale of Rations for Prisoners at Trial Bay, referred to in condition No. 5:-

1 lb. bread, of fine wheaten and maize flour, in the proportion of \( \frac{1}{3} \) of the latter.

1\( \frac{1}{3} \) lb. fresh meat.

1 lb. vegetables.

½ oz. salt,

 $\frac{3}{4}$  Oz. suap.

1 oz. sugar.

2 oz. tobacco, weekly.

 $\mathcal{C}$ 

#### 1892-3.

#### NEW SOUTH WALES.

#### PRISONS.

(REPORT FOR 1892.)

Printed in accordance with Acsolutions of both Houses of Parliament.

The Comptroller-General of Prisons to The Under Secretary of Justice.

Department of Prisons, N.S.W., Comptroller-General's Office,

Sydney, 9 May, 1893. Sir, I have the honor to forward herewith my Departmental Report to the Minister of Justice for the year ended 31st December, 1892, together with the usual tabulated statistics.

I have, &c.

GEORGE MILLER, Comptroller-General.

#### The Comptroller-General of Prisons to The Minister of Justice.

Department of Prisons, N.S.W., Comptroller-General's Office,

Sydney, 5 May, 1893.

I have the honor to furnish you with my Report upon the working of this Department during 92, to which is attached the usual statistical information in tabulated for Sir,

the year 1892, to which is attached the usual statistical information in tabulated form.

These statistics show that the number of gaols in operation during the year was 62. In this number are included the small establishments which have been proclaimed gaols and are occupied partly by this Department and partly by the Police, for purposes of economy.

The total number of prisoners confined on the 31st December, 1892, was 2,622, as against 2,616, at

the close of 1891, while it is estimated that the population has increased from 1,165,300 to 1,197,050.

11,806 distinct persons were received in the gaols during 1892, as compared with 11,265 for the previous year.

The entries and discharges for 1892 were, respectively, 18,910 and 18,904, as compared with 18,047 and 17,854 for 1891. These numbers include prisoners of the incorrigible class, who were convicted more than once during the year and sentenced to short terms of imprisonment.

The net value of all varieties of work done by prisoners in the different gaols was £52,615 0s. 7d.,

as compared with £54,067 3s. 6d. in 1891.

The number of deaths during the year was the same as in 1891, viz., 40. There were 1,437 prisoners treated in hospital, as against 1,513 for 1891; and 15,062 were treated out of hospital, as compared with 14,571 for the previous year.

The reconvictions at the Circuit Courts and Courts of Quarter Sessions were—for the 1st class (five years and upwards), 10 second convictions, 16 third, and 29 fourth or more; for the 2nd class (less than five years), 107 second convictions, 38 third, and 83 fourth or more; and for the 3rd class (imprisonment only), 3 second convictions only. Among the drunkards and petty offenders who were convicted more than once during 1892 at the Police Courts, there were 1,100 second convictions, 393 third, and 384 fourth or more.

The regulations governing the remission of sentences have been so amended as to provide that any sentence for escape or attempted escape from lawful custody on the part of a convicted prisoner shall not be included in the period upon which the remission is calculated, but shall be added in full to the term to

be served under such regulations. This amendment was published in the Gazette of 4th May, 1892, and a copy will be found attached to this report as Appendix G.

In view of the necessity for making provision for the detention of prisoners at Bombala, consequent upon the opening of a Court of Quarter Sessions, the lock-up at that place was proclaimed a gaol in January 1892.

January, 1892.

The small gaol at Milparinka was disestablished in September last.

The

The new gaol at Broken Hill was completed and brought into operation in November last, when the prisoners confined at Silverton were removed to this new establishment which more than meets the requirements of both places. Subsequently a proclamation was issued disestablishing the Police Gaols which had been in operation at Broken Hill and Silverton.

A tender for the erection of the new gaol at Grafton was accepted in the month of June, the work to be completed in two years. The contractor is proceeding rapidly with his work, and it is expected that the gaol will be ready for occupation before the end of this year. The present gaol is old, exposed to injury from floods, and of a very inferior design, which renders it quite unsuitable for the detention of long-sentenced or refractory prisoners, the means of repression being very defective.

At Young, proper provision has now been made for the separation of prisoners awaiting trial or under remand from those who are serving sentences. This gaol now presents a greatly improved appearance, and its condition reflects much credit upon the officer-in-charge (Mr. Adamson), who has

been very energetic in keeping his prisoners constantly employed on useful work.

I must again express regret that, owing to want of funds at his disposal, the Government Architect was unable to have the work necessary for the formation of separate yards for committed prisoners at Armidale and Tamworth Gaols commenced during the year. Both these gaols and those at Hay and Dubbo require considerable improvements for the more effective management of the prisoners.

As I pointed out in my last report, the separate cell accommodation afforded by the existing gaols falls far short of what is required to enable the Department to break up the cellular association of prisoners, by providing each man with a separate cell at night, as is contemplated by the regulations in force. This most objectionable association cannot be too strongly condemned. It was properly described by the late Mr. Harold Maclean as the "hot-bed of crime extension." I have strongly impressed upon the officers in charge of the gaols the necessity for separating the prisoners at night as much as they possibly can with the accommodation at their disposal.

The additions to the gaols at Goulburn, Parramatta, and Maitland will be of very great service when completed. The new wing at Goulburn, which was commenced in July last, is being erected by contract, and the work is rapidly approaching completion. The additions to the gaols at Parramatta and Maitland are being erected by prison labour, and will, therefore, not be finished for a considerable period. The progress of the work at both gaols has been much retarded in consequence of the delay in obtaining the necessary material, which was caused by the inadequacy of the funds at disposal to meet the requisitions.

If these much-needed works are to be carried out with reasonable expedition, the requisite material must be on hand so that the prisoners may be kept fully employed. In the interests of discipline and order, and for the prisoners' own good, it is most necessary that constant and instructive work should be found for them. The building of wings and other gaol extensions affords employment of the best description for prisoners under labour sentences, and is, moreover, of great advantage from an economical point of view. There is a great deal of work yet to be done to bring our gaols up to the standard of modern requirements, and thus to make effective administration practicable. This cannot be attained until adequate prison accommodation is available, so that a judicious classification and separation of prisoners may be secured.

Those who complain that prisoners are not reformed in gaols should remember that a gaol is not, strictly speaking, a reformatory, nor is it an asylum. It is a place to which offenders against the laws are sent to serve certain periods under a stern and exact discipline as a punishment for their crimes and a warning to others, as well as for the protection of society. It cannot reasonably be expected that a prisoner who reaches the hands of the gaol authorities a dishonest man, with criminal tendencies, can be transformed into an upright and respectable citizen by prison treatment, however excellent the system may be. Any good effects which that treatment may have had on him are apt soon to be destroyed, inasmuch as he finds, when discharged to freedom, that the causes which led him to commit crime still exist, and, in many cases, he falls again into his old ways of living. If of a naturally weak and dishonest nature, as is very frequently the case, he is almost sure to again commit crime.

In my reports for 1890 and 1891 I dealt with the treatment of youthful offenders of the "larrikin" class, who are sent to good by the Courts, and advocated an alteration of their treatment in the direction of making it more severe, either by the infliction of sentences to corporal punishment of a humane kind, or to shorter terms of imprisonment upon low diet and stringent conditions of separation, so that the punishment might be made a genuine one, and thus exercise a greater effect as a deterrent. Acting upon your instruction, in October last, I submitted draft amendments in the then existing regulations which were framed by my predecessor. The effect of these amendments was to provide for low diet (for certain periods, confined to bread and water) and more uncomfortable conditions of servitude. Before submitting these amendments to you I duly placed them before Dr. Maurice O'Connor, the Visiting Surgeon of Darlinghurst Gaol, for his perusal and approval from a medical point of view, and obtained his written concurrence. At the close of the year they were still under your consideration.

I venture here to again express the opinion that mild corporal punishment should form part of the treatment of the "larrikin" class of offenders, and, in this opinion, I am strongly supported by Mr. Herbert, the Governor of Darlinghurst Gaol, who has had long and close experience of youthful offenders. In many cases we feel convinced that youths and boys would be effectually checked in their lawless careers if subjected to corporal punishment inflicted under the usual formalities of gaol discipline. This form of punishment would frequently be more merciful and effectual than a fine, or a sentence to a term of imprisonment. Many people are under the erroneous belief that the punishment would be inflicted upon boys with what is known as a "cat o' nine-tails." This is not the case. The instrument prescribed for the punishment of youths under 18 years of age is a leather tawse, and two descriptions of that instrument are in use, according to the age of the delinquent.

I have been told that a flogging would only have the effect of making a youthful offender a hero among his "mates" on discharge. I cannot believe this. It would be a sort of hero-worship which would very soon come to an end when these youths had learnt by experience what was in store for them as a penalty for their crimes or outrages. It seems to me that a "larrikin" youth who had been fined, or imprisoned for a term, would consider himself a much more important person than one who had been compelled to submit to a flogging inflicted in the usual solemn and formal manner within a gaol.

 $\mathbf{W}$ here

Where it is found that the short and sharp punishment which I have indicated fails in its purpose, and that an offender who has been so punished still continues to misconduct himself when set at liberty, he should be treated as a fit subject for a Reformatory, if within the prescribed age for such an institution. In connection with this subject, I may here refer to a recent work on "Penological and Preventive Principles," by Mr. William Tallack (Secretary of the Howard Association, London), who, in a chapter npon the treatment of Juvenile Delinquents, writes as follows:

"The Town Clerk of an English borough of more than 12,000 inhabitants lately wrote to a public journal: 'It has been our rule for five and thirty years that no boy and no girl under fifteen years shall go from our Town Hall to prison.' The substitute, at least for boys, was a birching. In case of repetition or obstinacy, another birching has been given; in one instance three whippings were inflicted with a couple of days' interval between each. It is added: 'The result is that we have not a known juvenile thief in the place. Thieving is unpopular and contemptible in the eyes of the boys who do not want to be birched, but who probably might not object to become heroes of 'penny dreadful' depredatory adventures.'"

The Shaftesbury Reformatory for Girls now presents a much improved appearance by the completion of the new buildings, which were handed over for occupation on the 17th May, 1892. prise two hospital wards, separated by a nurse's bed-room which communicates with each ward, and with kitchen, bath-room, &c., attached. There is also a large separate building containing fourteen small bed-rooms (two of which hold three bedsin each), one large bath-room (with three baths and seven land-basins), two stores (one for bedding, &c., and the other for inmates' clothing), while at the end of the building are situated three punishment cells, for the repression of disorderly and refractory girls. Matron Superintendent reports that she has already found the small bed-rooms of great service, as they enable her to keep apart from the others any troublesome inmates whose conduct renders it desirable that they should be isolated. The general conduct of the girls has been fair. Three absconded from the Institution together, and were subsequently brought before Mr. Smithers, D.S.M., and sentenced to a short term of imprisonment in Darlinghurst Gaol, under section 12 of the Reformatories Act (30 Vic. No. 4). The number of girls in the Reformatory at the end of the year was 25, of whom 6 were under the age of 14, and 19 were over that age. Seven girls were received during the year, and 13 were discharged.

Speaking generally, order and discipline have been satisfactorily maintained in the gaols during the Some trouble was experienced at Trial Bay and at Parramatta, owing to the refusal in combination of certain prisoners to go to work; but these exhibitions of insubordination were promptly dealt with by the officers. In each case the offenders were induced to commit these breaches of discipline through listening to the evil counsels of agitators, by whom they permitted themselves to be guided. There were also several individual cases of serious misconduct at Goulburn Gaol, where some of the worst criminals of the Colony are confined. In two cases of violent assaults upon officers corporal punishment was inflicted. At Berrima a prisoner made an attempt upon the life of the senior warder by stabbing him with a shoemaker's knife. He was afterwards tried at the Central Criminal Court at Darlinghurst, and was sentenced to imprisonment for life with hard labour. He is a man of a very bad type, and very

During the year the question of the uniform worn by the warders was brought under my notice, and, after consideration of the reports submitted to me, I decided that the tunics or dress coats should be abolished when those in use were worn out, and that, in future, the "jumper" or "sac" should be

worn, which is a more suitable style of dress for prison work.

The effect of the Superannuation Act is very beneficial to the Department, inasmuch as under it old and worn-out officers can be called upon to retire without subjecting them to great hardship as would be the case if no provision were made for them in the torm of a pension. The efficiency of the service is much improved, and opportunities of promoting deserving officers more frequently present themselves than would be the case were there no measure of provision for the retirement of officers who have passed their periods of usefulness.

With the conduct and efficiency of the officers of the Department as a body, I have again to express my satisfaction. Generally speaking, they perform their troublesome and trying duties with superior tact and intelligence.

I have, &c.,

GEORGE MILLER, Comptroller-General of Prisons. (A.)

Department of Justice, Sydney, 4th May, 1892.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulation being substituted for No. 79 of the Gaol Regulations, made under the Prisons Regulations Act, 4 Victoria No. 29, viz.:—

#### REMISSION OF SENTENCES.

79. Prisoners will, by continuous good conduct and industry, become eligible to a remission of sentence in proportion to the term served by them in accordance with the subjoined scale. In cases of cumulative sentences, the united period shall be deemed the term of sentence, but any sentence that may be imposed upon a prisoner for escaping or attempting to escape from lawful custody, or from any prison or place of detention, shall not be included in the period upon which the remission is to be calculated, but shall be added to the term a prisoner is required to serve under this regulation.

#### REPORT OF THE MINISTER OF PUBLIC INSTRUCTION.

To His Excellency the Right Honorable VICTOR ALBERT GEORGE, EARL OF JERSEY, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

#### My Lord,

I have the honor to submit to your Excellency the report of the Department of Public Instruction for the year 1891. The report deals fully with the educational work carried on under the provisions of the "Public Instruction Act of 1880," and embraces summaries of similar work done in State-aided Institutions of an educational character.

The number of schools on the list in the year was 2,457, embracing 2,670 separate departments, with accommodation for 208,118 pupils. The gross enrolment of pupils was 205,673, the mean quarterly enrolment 178,278, and the average attendance 122,528. The staff of teachers, all grades included, numbered 4,427. In pursuance of the measures adopted with a view to improve school organisation, as explained in last year's report, a large number of school grounds were enlarged; and by additions to 26 existing buildings and the erection of 138 new buildings, accommodation was provided for 11,168 more children than in 1890.

2,628 schools, comprising 2,840 departments, were inspected during the year. In Primary Schools 132,044 pupils were examined, 83,062 in the course of instruction for Classes I and II, and 48,982 in higher class courses. 582 High School pupils were also examined. In the different classes of the Primary Schools 81 per cent. passed in reading, 78 per cent. in writing, 71 per cent. in arithmetic, 74 per cent. in object and science lessons, and 74 per cent. in drawing. In Superior and High School subjects from 66 to 100 per cent. satisfied the standard; while in all the schools inspected the discipline was reported as satisfactory. During the year 80 candidates were successful in obtaining Scholarships and Bursaries for secondary or higher education.

Cookery

Cookery and needlework instruction for girls and manual training for boys were considerably extended; the number of School Savings Banks increased by 48, and the Cadet Force reached an enrolment of 6,888. The Technical Education Branch of the Department also made satisfactory progress.

The total expenditure of the year under the Public Instruction Act was £769,565 6s. 8d., and towards this sum school fees amounting to £75,912 17s. 11d. were collected and paid into the Treasury. The cost of maintaining the Technical Branch was £37,601 6s. 3d., including £5,185 17s. 11d. spent on the Technological Museum. The sum of £3,721 5s. 6d. was paid as fees by students.

The whole work carried on and the results achieved are shown in detail under the divisions which follow:—

### I .- Schools, Accommodation Provided, Attendance.

The total school population between the ages of 4 and 14 years, estimated on the basis of the last census returns, was 284,682; and, of this number, 65,140 were from 4 to 6 years, and 219,542 from 6 to 14. years, the statutory school age. 2,457 schools, containing 2,670 departments, were in operation; as compared with 2,423 schools and 2,630 departments open in 1890. During the year 137 schools, or 144 departments, were established, comprising 37 Public, 63 Provisional, 23 Half-time, 14 House-to-house, and 7 Evening Schools. Twentyseven Provisional and 3 Half-time Schools were raised to the rank of Public Schools, and 13 Half-time and 10 House-to-house Schools to the rank of Provisional Schools; while 19 Public and 16 Provisional Schools were reduced to Half-time or House-to-house Schools. 103 of the schools in operation during the whole or some portion of 1890 do not appear on the list of schools open in 1891, and of those actually in operation in that year 70 were closed before the last quarter. number of schools open at the close of 1891 was 2,387, containing 2,600 departments. The net increase for the last quarter of 1891, as compared with the last quarter of 1890, was 21 schools or 27 departments. The whole school accommodation available was equal to 208,118 places.

The schools in operation in 1891 were organised and classified as follows:—

#### Schools:-

- 5 High Schools, 2 for boys and 3 for girls.
- 1,567 Public Mixed Schools for boys and girls, including 4 Kindergartens.
  - 52 Public Schools of 2 departments each.
  - 77 Public Schools of 3 departments each.
    - 1 Model Public School of 5 departments, including Practising School and Kindergarten.
  - 349 Provisional Mixed Schools for boys and girls.
  - 300 Half-time Mixed Schools for boys and girls.
  - 92 House-to-house Mixed Schools for boys and girls.
  - 14 Evening Public Schools for males only.

#### Departments:-

- 5 High Schools, 2 for boys and 3 for girls.
- 1,567 Public Mixed Schools for boys and girls, including 4
  Kindergartens.
  - 41 Separate Primary Departments for boys and girls.
  - 121 Separate Infants' Departments and Kindergartens.
    - 91 Separate Departments for boys, including a Practising School.

Schools.

Two hundred and fifty-four applications for the establishment of new schools were received, namely, 54 for Public Schools, 137 for Provisional Schools, 28 for Half-time Schools, 23 for House-to-house Schools, and 12 for Evening Schools. Of these 148 were granted and 74 were declined, while 32 remained under consideration at the close of the year. The total number of children to be accommodated in the new schools granted is 4,407. The department has erected, or is taking steps to supply, buildings for 3,210 children, while for the remaining 1,197 children the local promoters are to provide school-rooms. The school-rooms to be erected by promoters are generally for small settlements whose permanency is very doubtful.

The

The number of applications received, and the action taken with regard to them, are shown in the following table:—

Applications for the establishment of Schools.

Schools.			Number received.	Number granted.	Number declined.	Number still under consideration.

Accommodation	98,721	156,127	208,118	109,397			

^{*} Decrease.

From the foregoing table it will be seen that, Evening Schools excepted, all kinds of schools received very considerable increases in numbers for the period under notice. Primary Public Schools increased 676 in the ten years and Superior Schools 134. Provisional and Half-time Schools show increases respectively of 103 and 207, while of House-to-house Schools, first started in 1883, there are now 92. During the ten years referred to the Evening Schools have decreased from 57 to 14.

In addition to the schools established and maintained under the Public Instruction Act, the following State-supported or aided schools are still in operation, namely, the Sydney Grammar School, the two Industrial Schools, and the School for the Deaf and Dumb and the Blind.

School Premises, Sites.—The number of school sites acquired during the year was 138. Of these 42 were government grants; 61 were resumed, some under the "Lands for Public Purposes Acquisition

Act" (44 Victoria No. 16), and the rest under that Act as embodied in the "Public Works Act of 1888;" 34 were purchased; and 1 was a gift from a private individual. The cost of the purchased sites amounted to £18,642 19s. 4d., and the sum of £5,738 18s. 9d. was paid on account of those resumed. The balance to be paid for the latter, when the claims have been settled, is approximately £16,284. Full particulars as to these sites will be found in Appendix XIX.

A large proportion of the lands purchased and resumed was obtained for the purpose of increasing the areas of existing school sites, the necessity for which was pointed out in last year's report. Among others, the following important schools had their play-grounds enlarged:—Albury, Bingera, Camdenville, Cleveland-street, Canterbury, Forest Lodge, Goulburn North, Goulburn South, Hamilton, Hinton, Homebush, Hurstville, Kempsey West, Kogarah, Leichhardt, Maitland West, Marrickville, Newcastle East, Queanbeyan, Leonards, St. Peters, Sandringham, Smith-street (Balmain), Surry Hills South, Taree, Tempe, Walcha, Warialda, Wickham, and Wool-At Marrickville, Hurstville West, and Singleton South also separate additional sites were purchased with the object of erecting new premises to accommodate numbers of children for whose education the schools already established in those localities could not satisfactorily provide. The schools above mentioned are, it will be easily seen, situated chiefly in thickly-settled centres of population; consequently the enlargement of these sites proved to be by far the most costly of the land acquisitions made by the department during the But, on the other hand, they are among the places which suffered the most inconvenience from small crowded play-grounds, and in which an alternative between the school limits and the street as a place of recreation for the young rarely presented itself. It is in such cases, therefore, that the beneficial results of the outlay will be In purchasing or resuming these lands care was most appreciable. taken to have them valued by reliable valuators, and they have in most cases been acquired at, or approximate to, the prices thus put upon them. Compensation for the resumed lands has, so far, been assessed without a recourse to law on the part of claimants. It may be stated with confidence that there has been a judicious expenditure of the special funds voted for school sites, and the results stand as a permanent and valuable State asset in the shape of improved land devoted to a high public purpose.

With regard to sites on Crown land, it was sought, as mentioned last year, to have the minimum area increased from two to four acres, but the steps taken to that end have not been successful. The applications made to the Department of Lands have had but slight effect, either in granting larger areas for new schools, or in having additional areas set apart in cases where Crown land adjoins the existing sites. Although, doubtless, other public wants have to be considered, such as court-houses and gaols, post and telegraph offices, &c., it is evident that the requirements for those services can be met with much smaller

smaller areas than are necessary for school sites. It must be borne in mind that a large portion of the daily life of children of all ages is passed in school or on the school premises, and that, on the provision of sufficient space for healthy exercises of all kinds, depends in a large measure the physical well being of those who will form our future citizens. A commodious play-ground is a want that has to be satisfied, therefore it is a saving to the public purse to grant an ample area in the first instance, inasmuch as if this be not done the department is compelled, sometimes at great expense, to purchase or resume land after it has passed away from the Crown to private persons.

The return of sites for the year does not include a considerable number that the department is pledged to purchase or has decided to resume, but in regard to which the preliminary action requisite for legally vesting the lands in the department had not been completed at the close of the year. These comprise some 48 cases, costing about £13,300. The greater number are in the hands of the Crown Solicitor for preparation of the deeds of conveyance, the others await survey by the Lands Department's surveyors previous to deeds being prepared for them also. Full particulars of these will be found in Appendix XIX.

Buildings.—138 new school-houses were completed in the year, as well as additions to provide increased accommodation in 26 existing buildings. Twenty-one teachers' residences and 25 weather-sheds were also erected, and repairs and improvements were effected in connection with 988 schools. Places for 11,168 children were provided in the new buildings and additions. The erection of 75 of the new school-houses, 7 of the additions, 2 of the residences, and 11 of the weather-sheds, and also the repairs to 536 buildings were carried out under the supervision of Inspectors of Schools. The other works specified were executed under the Architect for Public Schools. Of the total number of new places, 8,448 were provided by the Architect's buildings, and 2,720 by the buildings erected under the Inspectors' supervision. 1,601 additional places were provided in 42 leased buildings.

At the close of 1891, existing school premises afforded room for 208,118 pupils, about 95 per cent. of this accommodation being in vested premises. Of the school places counted in 1890 about 3,550 were lost in 1891 by the closing of schools and by the giving up of old buildings. The net increase for 1891 was 9,220. Taking the building work done in the last two years, it may be observed that, in 1891, 82 new schools and residences were erected under the Architect's supervision as compared with 49 built in 1890; while the additions numbered 19 as compared with 33; the premises repaired, 452 as compared with 458; and the places provided, 8,448 as compared with 7,834 for the same period. It may also be noticed that the number of small school buildings and residences erected under the Inspectors' supervision was 75 as compared with 100 put up in 1890, and that the number of places provided in 1891 was 2,720 as compared with 3,733 in the previous year,

At the close of 1891 the following additional works were in progress:—34 new buildings, 4 additions, and 20 buildings for small country schools, the whole to provide for about 5,500 children. One new weather-shed was also in course of construction, and repairs and improvements were being carried out in 92 existing buildings.

Full particulars respecting the building work completed in the year and that in progress at its close are given in the following tables:—

#### Works completed.

School Attendance.—School returns for the year show a gross aggregate enrolment of 233,719, as compared with 221,864 under instruction in 1890. Deducting the usual 12 per cent. for multiple enrolments,

enrolments, it will be seen that the number of individual pupils at State schools was 205,673. This number equals 17.65 per cent. of the total population of the Colony.

The gross and corrected enrolments for the last ten years, taking 12 per cent. as representing the multiple enrolments in each year, are given in the following table:—

77		Gross Aggregate		Corrected Aggregate	Increase or Decrease.

In addition to the 205,673 pupils enrolled in schools under the Public Instruction Act, there were 1,077 in attendance at other Stateaided schools, namely:—

The Sydney Gr	ammar School		•••	•••	•••		511

•	Total			•••			1,077

By the census returns of April, 1891, the population of the statutory school age, not including the children of the aborigines, was 211,839; and on the 31st December such population, with the aborigines' children included, was estimated to be 219,542. Of this number 169,949, or 77.4 per cent., attended State schools, and 49,593, or 22.6 per cent., received instruction in private schools and at home, or else remained altogether untaught. From the latest published returns of private schools' attendance it appears that the total enrolment was 42,612, namely, at 375 undenominational private schools, 9,789; at 64 Church of England private schools, 3,607; at 244 Roman Catholic private schools, 28,552; and at Presbyterian, Wesleyan, and Lutheran private schools, 664. Estimating that 35,027 pupils in the private schools' enrolment were between the ages of 6 and 14 years, it will be found that of the total statutory school population of 219,542, about 204,976, or 93.37 per cent, were enrolled at State and private schools while 14,566, or 6.63 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 27,879 under 6 years of age, and 16,507 over 14 years, were also enrolled for school attendance, 36,801 at State schools, and 7,585 at private schools. Thus of 308,804 children in the Colony between the ages of 4 and 15 years, 206,750 attended State schools, and 42,612 attended private schools; while the remainder, 59,442, received instruction at home, had completed their education, or were untaught. 205,673 children were enrolled in schools under the Public Instruction Act,—878 in High Schools, 970 in Evening Schools, and 203,825 in ordinary day schools; and of these, 22,623 were from 4 to 6 years, 169,470 from 6 to 14 years, and 13,580 over 14 years of age.

The average quarterly enrolment was 178,278, and the average attendance 122,528, showing increases, respectively, of 7,921 and 5,863. The regularity of attendance, as tested by comparing the average attendance with the enrolment, was slightly higher than in 1890. In 1890 one quarter's average was greatly reduced through exceptionally wet weather, and in 1891 the last quarter's average fell much below the ordinary standard through the prevalence of influenza among the younger pupils. Had the regularity of attendance in the last quarter of 1891 been equal to that of the last quarter in the previous year, the average for 1891 would have been over 70 per cent. of the enrolment.

In the first half of the year 115,048 pupils, and in the second half 122,701 pupils, attended the ordinary day schools 70 days or more; while the number who attended 140 days or more in the year was 116,424.

The percentages of the enrolment attending 70 days or more in each half-year and 140 days or more in the year, since 1886, are as follow:—

	70 days or more in first half-year.	70 days or more in second half-year.	140 days or more in the year.
1886	64.2 per cent. 56.9 ,, 65.5 ,, 68.8 ,, 58.4 ,, 57.9 ,,	69 0 per cent. 71 7 ,, 76 1 ,, 71 5 ,, 72 3 ,, 68 7 ,,	59.8 per cent. 60.6 ,, 64.8 ,, 67.8 ,, 65.7 ,,

The enrolment, average attendance, and attendance for the number of days required by statute, are shown, and compared for the last eleven years, in the following tables:—

* Returns for 1891 not available.

The main facts relative to school attendance may be summed up thus: -204,976, or 93.37 per cent. of the statutory school population, were enrolled for school attendance; 169,949, or 77.4 per cent. at State schools; and 35,027, or 15.97 per cent. at private schools. Of the ordinary school population between 4 and 15 years—249,362, or 80.7 per cent. were at school; 206,750, or 66.9 per cent. at State schools; and 42,612, or 13.8 per cent. at private schools. 205,673 children attended schools under the Public Instruction Act; 169,470 being of the statutory school age, and 13,580 above it. The mean quarterly enrolment was 178,278, or 86.6 per cent. of the year's enrolment; and the average attendance was 68.72 of the quarterly enrolment. 65.7 per cent. of the quarterly enrolment attended school 140 days or more in the year; 102,930 being of the statutory school age, and 13,494 being under, or over, that age. Of the average enrolment 68.7 per cent. attended school 70 days or more in the last half-year. Comparing the year's attendance with that for 1890, the following points may be noticed:—The year's enrolment was increased by 10,432, or 5.3 per Owing to the prevalence of influenza the attendance fell off in the last quarter of the year, but still the year's average showed a slight increase on that for 1890. The mean quarterly enrolment was increased by 7,921, or 4.6 per cent. The percentage of the population enrolled quarterly, and the corresponding percentage in average attendance in 1891, were respectively 15.3 and 10.5, as compared with 15.1 and 10.4 in 1890.

The estimated total population used in compiling the report of 1890, was 1,170,000; but, since the census was taken in April, 1891, the previous years' estimated populations have been recast, and greatly reduced. In lieu of 1,170,000 for 1890, the population for that year is reckoned at 1,121,860, and this number is now taken in comparing the percentages of population in school attendance for the year, with the corresponding percentages of 1891.

If, as was suggested in last report, the mean annual population were to be taken as the basis of calculation in reckoning percentages in school attendance, the following would be the returns for 1891:—

Compulsory Clauses of the Act.—The defects in the compulsory clauses of the Public Instruction Act have been brought under notice in previous reports, and the experience of the past year has emphasised the necessity for their amendment.

In May, 1891, a deputation from the Trades and Labour Council urged the more effective administration of the compulsory clauses, particularly as regards the violation of the law by the employment of children under statutory age. Information regarding the action already taken by the department in this direction was furnished to the deputation, and it was also pointed out that the non-attendance of children at school, and their employment in factories and other industries could not be properly dealt with until the compulsory clauses had been made more stringent in the following directions:—

- 1. Provision to deal effectively with children found idling about the streets during school hours, who are evading the law.
- II. Authority to ascertain conclusively the total number of children in the Colony of statutory age.
- III. Placing the onus of proof of age and of the fulfilment of minimum attendance on the parents or guardians.
- IV. The power to compel teachers of private schools to furnish accurate returns of enrolment and attendance.
- v. The inclusion of a clause making it penal to employ children of school age, unless educated up to standard requirements.

During the half-year ended 30 June, 1891, 22,554 children failed to attend school for seventy days, as required by the Act. As satisfactory excuses, however, were given in 15,413 cases, the number of legal defaulters only amounted to 7,141. The parents or guardians of 5,560 of these were cautioned, and prosecutions were authorised in the remaining 1,581 cases.

For the half-year ended 31 December, 1891, there were 20,700 children who failed to make the prescribed minimum attendance.

Satisfactory

Satisfactory explanations were received in regard to 14,723, the parents or guardians of 3,925 were cautioned, and in 2,049 cases legal measures were taken.

The default for the June half-year amounted to 3.3 per cent. of the average enrolment for that period, while for the December halfyear the percentage was 4.0.

There are at present nineteen School Attendance Officers, who work under the supervision of the District Inspectors of Schools. Four are stationed in the metropolis and the rest in the following towns:—Armidale, Tamworth, Bathurst, Goulburn, Grafton, Taree, Maitland, Newcastle, Wallsend, Bowral, Wagga Wagga, Wellington, Parramatta, Hay, Liverpool.

It has been decided to abandon the practice of dealing with all first offence cases by the issue of a caution, and to prosecute or caution according to the circumstances of each case.

In the early part of the year steps were taken with a view to the inspection of the factories and other industries in Sydney. The department had no power to make these inspections without the permission of the proprietors concerned, but the School Attendance Officer reports that he was offered every facility in the pursuit of his inquiries. Sixteen factories were visited, and 96 cases were investigated, 33 of which proved to be clear breaches of the Act. Legal proceedings were instituted in 20 instances, and suitable action taken in regard to the remaining cases.

• Similar inquiries were made in the Newcastle and Maitland districts, with the result that 2S children under the age of 14 years were found to be at work. Action appropriate to the circumstances was taken in each of these cases.

Collection of School Fees.—Although the grounds for dissatisfaction with regard to the collection of school fees for the year 1891 were not greater than in former years, much trouble and friction were experienced in connection with cases in which people were either unable or unwilling to pay for their children's schooling. A large number of debts were cancelled during the year; in many instances the department accepted payment of arrears in instalments; and in 196 cases legal action was resorted to for the recovery of school fees.

The total amount of fees collected during 1891, and paid into the Consolidated Revenue, was £75,912 17s. 11d.

#### II.—INSPECTION.

Notwithstanding a substantial increase in the number of schools, the Inspecting Staff remained the same in point of strength as in the preceding year. Including the Chief Inspector and his deputy, the staff numbers thirty-seven officers. These are not sufficient to ensure more than one thorough yearly inspection of each school even when the conditions for carrying on the work are favourable; when however these conditions are unfavourable, the task becomes one

of great difficulty. The question, therefore, of adding to the staff will soon have to be considered. A sound efficient system of inspection is the best safeguard to the maintenance of a healthy, vigorous, and enlightened educational policy, as without it, school-teaching and schools are bound to deteriorate in efficiency and usefulness. Hence money spent in this direction will be well spent.

Several causes combined during the year to render the work of inspection more difficult, the chief of these being a prolonged period of wet weather, and a general and severe visitation of influenza. Notwithstanding these untoward circumstances all the Inspectors, with one or two exceptions, performed their duties with vigour and effect. Of 2,662 schools in operation, no less than 2,623 received a full or regular inspection, while as regards the few not examined, the majority were established after the Inspector had visited the district. It is satisfactory to find that incidental visits are becoming more frequent in the metropolitan district. Nothing is better calculated to keep schools in a healthy condition than inspections of this kind.

The details of inspections made during the last three years are shown in the following table:—

Year.	No. of Schools.	No. of Schools inspected.	No. of Schools inspected twice.	Total No. of Inspections,	No. of Schools not inspected.	No. of pupils examined.	No. of Inspectors.
1989	2,627	2,535	848	3,383	35	122,052	32
1890		2,587	704	3,291	40	127,515	35
1891		2,623	986	3,609	39	132,044	35

### The particulars for each district stand thus:-

District.	No. of Inspectors.	No. of Schools.	No. of Schools inspected.	No. of Schools inspected twice.	Total No. of inspections.	No. of Schools not inspected.	No. of pupils examined

The Course of Secular Instruction and Standards of Proficiency.—Constant attention has been directed to the branches constituting the prescribed school course, to the time devoted to the teaching of the different subjects, and to the standards laid down for determining

determining the degrees of proficiency required of the several classes in schools. Modifications, usually unimportant in character, have from time to time been made in these matters, and the general tendency of these modifications has been to give greater satisfaction to the teaching body and to add to the efficiency of school instruction.

The working of the Standards of Proficiency will necessarily depend on the Inspectors applying them. It cannot be expected that these officers will in all cases agree in their estimates of the pupils' work, but it is expected that they will endeavour so to conduct their examinations as to ascertain as far as practicable the true value of the teachers' labours.

Character of Pupils' Attainments and Progress in Learning.—132,044 pupils were present at inspection, being an increase of 4,529 scholars, or 3.6 per cent. over the number examined in 1890, and of 9,992 scholars, or 8.2 per cent., over the number in 1889. All were examined in reading, 99.3 per cent. in writing, 78.7 per cent. in dictation, 97.4 per cent. in arithmetic, 37 per cent. in grammar, 36.8 per cent. in geography, 46.8 per cent. in history, 96.1 in Scripture and moral lessons, 95.6 per cent. in object lessons, 96.9 per cent. in drawing, 90.4 per cent. in music, 1.9 per cent. in French,  $6\frac{1}{2}$  per cent. in Euclid, 2.3 per cent. in algebra,  $5\frac{1}{2}$  per cent. in mensuration, 2.2 per cent. in Latin, 0.08 per cent. in trigonometry, 80 per cent. (of girls) in needlework,  $95\frac{1}{2}$  per cent. in drill, and 5.1 per cent. in natural science.

Of the 132,044 pupils examined in reading, 10.6 per cent. were in the alphabet, 23.8 per cent. were in monosyllables,  $28\frac{1}{2}$  per cent. were in easy narrative, and 37.1 per cent. in ordinary prose. Of 131,167 pupils examined in writing, 42.2 per cent. wrote on slates and 57.8 per cent. in copy-books or on paper. Of 128,630 pupils examined in arithmetic, 61.6 per cent. were tested in simple rules, 24.4 per cent. in compound rules, and 14 per cent. in the higher rules. Of 48,857 examined in grammar, 51 per cent. were learning the elementary part and 49 per cent. the advanced part of the subject. In geography, of 48,627 examined, 47.7 per cent. were tried in the elementary portions of the subject, and 52.3 per cent. in the advanced part.

A comparison of some of the foregoing percentages with the results in corresponding subjects during the previous year is shown in the subjoined table:—

		1890.	1891.	Increase per cent.	Decrease per cent.
	Total number of pupils examined	127,515	132,044	3.6	
Percentages of pupils examined in	Reading, who were tested in ordinary prose		37·1 57·8 14·0 49·0 52·3 46·8 96·1 95·5 96·9 95·6	0·7 1·7 5·3 11·2 5·4	0 7 3 4 2 0 7 0 5 2

This table shows a decrease in the percentages of pupils examined in reading, writing, arithmetic, grammar, and geography,

An increase of over 5 per cent. in each of the subjects of drill and object lessons is observable, with slightly higher percentages in history and in Scripture and moral lessons. A noteworthy feature is the great advance in the number of examinees in drawing, as, under the revised course of instruction and its extension to Infants' Schools,  $11\frac{1}{5}$  per cent. more pupils received systematic teaching in that subject than was the case in 1890. Viewing the attainments generally, it will be seen from the information here given that, in addition to reading, which is taught to all scholars, more than 95 per cent. of the children in our schools are instructed in the following subjects:—Writing, arithmetic, Scripture, and moral lessons, object lessons, drawing, and drill.

drill. Music is taught to 90 per cent.; dictation, to 78 per cent. From 36 to 46 per cent. learn geography, grammar, and history; 80 per cent. of the girls learn needlework; while other subjects, such as can be taught to the elder pupils only, range from 1 to  $6\frac{1}{2}$  per cent.

With regard to the proficiency of the pupils examined, the results of inspection show that in reading 81 per cent. of the examinees passed, in writing 78 per cent., in dictation 73 per cent., and in arithmetic 71 per cent. 71 per cent. satisfied the standard in grammar, 75 per cent. in geography, and 69 and 72 per cent. in English and Australian History. Further, 74 per cent. passed in Scripture and moral lessons, 74 per cent. in object lessons, 69 per cent. in drawing, and 75 per cent. in music. In other subjects the percentages were:—French, 69; Euclid, 71; algebra, 71; mensuration, 60; Latin, 69; trigonometry, 76; needlework, 83; drill, 74; and natural science, 77. Compared with last year, the above percentages show, on the whole, little alteration. The proportion of "passes" was slightly higher in reading, dictation, and arithmetic; 4 per cent. higher in drawing; and 3 per cent. higher in French. It was also higher in mensuration, Latin, and drill; while decidedly better results were obtained in trigonometry. In that subject, the number of examinees increased from 28 in 1890 to 111 in 1891, and the "passes" rose from 61 to 76 per cent. On the other hand, the percentages were lower in several subjects, but only to the extent of 1 or 2 per cent., except for Australian History and algebra in which a falling off of 3 per cent. of "passes" was noticeable.

Of 1,902 Public Schools examined 1,757 or 92 per cent. were up to or above the standard, and 145 or 8 per cent. were below it. Of 334 Provisional Schools 236, or 71 per cent., were up to or above the standard; while 98, or 29 per cent., were below it. Of 283 Half-time Schools 229, or 81 per cent., satisfied the standard, and 54, or 19 per cent., did not. Of 91 House-to-house teaching stations, the standard was reached in 74, or 81 per cent., and 17 or 19 per cent. were below; while out of 13 Evening Public Schools 12 were up to or above the standard, and 1 failed to reach it. Taking all the schools, out of 2,623 examined, 2,308, representing 88 per cent., either reached or were above the standard, and 315, or 12 per cent., were below it.

The following table summarises the progress in efficiency made in the different classes of schools during the past five years:—

Class of Sals	1.		Percentage up to or above the Standard.							
Class of Schools.			1887.	1888.	1889.	1890.	1891.			
Public	•••		84	85	86	88	92			
Provisional	•		65	65	62	56	71			
Half-time	•••	•••	74 .	72	74	69	81			
House-to-house	•••	•••	75	67	73 .	70	81			
Evening Schools			<b>7</b> 9	87	90	100	92			
All Schools	•••		80	80	82	81	88			

It will be seen that the results are considerably better than in 1890. There has been a marked increase in efficiency of the Provisional, Half-time, and House-to-house Schools, and 4 per cent. more of the Public Schools have satisfied standard requirements. The general efficiency of schools was greater in 1891 than for any period in the last five years, while the tests applied were if anything more vigorous. Very satisfactory progress has been made, and a high standard set for maintaining in future years.

Vocal Music.—Of 119,354 pupils present at inspection 75 per cent. reached the prescribed standard in music. In each year an improvement is apparent in this branch of our school curriculum, noticeable

noticeable especially in the greater freedom with which the upper classes sing music at sight. This, with voice culture, is the great object of musical education. In the lower classes of the large schools music is chiefly taught by pupil-teachers, and the results are not always satisfactory; but, at the same time, many pupil-teachers are fully competent for this work, and a fair number of them teach music to even the upper classes with success. As evidence that reading at sight is carefully practised throughout the schools, it may be mentioned that the Arbor Day Cantata was produced with success in hundreds of schools, notwithstanding that, through delay in printing, the music was not supplied to many of them till within a week of the Arbor Day celebration. With a limited time at their disposal, it cannot be expected that our teachers can give that refinement, style, and voice culture, which can alone be obtained by arduous private study, but, at the same time, satisfactory work is done in the schools, and music is a favourite study with the pupils. In the Infants' Departments especially, much trouble and pains have been bestowed upon the pupils by their teachers.

All the Metropolitan Schools were examined by the Superintendent of Music. That officer reports that throughout the schools visited the attainments of the pupils range from "fair to very fair," while in a considerable number of them the mark awarded is "good to very good."

Discipline.—The schools appear to great advantage in this Inspectors are all agreed that the discipline ordinarily met with is of a high order. In thus aiming to secure good discipline teachers do well, as without it the best teaching must prove abortive. It is rare that low or unsatisfactory educational results are found associated with good discipline, sound effective teaching being the ordinary characteristic of a well-governed orderly school. To place the discipline on a healthy basis, a teacher needs not merely to display high personal qualities, but to provide for the constant and profitable occupation of the pupils and to see that all the school movements are regulated by an efficient system of drill. A weak uncertain government begets a disorderly school, while a harsh unsympathetic rule rarely leads to success. The best schools are usually found in charge of earnest, zealous, energetic teachers.

Drill.—The progress made and the proficiency shown in this important school subject are reported as satisfactory. Of 126,121 pupils examined in drill, 74 per cent. were found to be up to or above the standard.

The Superintendent of Drill, Captain Mulholland, has during the year regularly instructed the students at Hurlstone Training College, and the third and fourth class female pupil-teachers assembling on Saturdays at Fort-street. A special course of lessons has also been given to a class of female teachers. The instruction thus given in the different classes includes general school drill, school drill for infants, marching and gallery exercises, play-ground orders, calisthenics, and dumb-bell

dumb-bell and wand exercises. The Superintendent has also visited all schools in the metropolitan district, and examined the pupils in military drill, calisthenics, gallery exercises, and physical drill. As to results, he reports that all the schools visited are up to or above "fair" in the standard of proficiency. He further states that the pupils like drill, and that the teachers are fully alive to its importance as an aid to good discipline.

High Schools.—The High Schools in operation during the year were the same as in 1890, namely, the boys' and girls' schools, Sydney; the Maitland boys' and girls' schools, and the school for girls at Bathurst. The total enrolment for the year was 878, and the average daily attendance 624.3. For 1890 the numbers were 848 and 598 respectively. There was an increase, therefore, of 30 in enrolment and of 26 in average attendance. The figures for each school are shown in the following table:—

Scho	School.		School. Total enrolment.		Average quarterly enrolment.	Average daily attendance.	
Sydney (Boys) ,, (Girls) Maitland (Boys) ,, (Girls) Bathurst (Girls)				354 354 63 44 63	282 281 42 41 49	263·5 250·1 35·9 35 39·8	
Total	s	•••	-	878	695	624:3	
Total	s for 1	890	•	848	669	598	

As mentioned in the report for 1890, the overcrowding of the Sydney High Schools rendered it necessary that extra accommodation should be provided. With that view it was decided to erect new school buildings in Harris-street, Ultimo, in proximity to the new Technical College. These were completed before the close of the year, and will be occupied as a Boys' High School from the beginning of 1892. They afford excellent accommodation, and are furnished with all the requirements of a first-class school. The premises in Castlereaghstreet vacated by the boys will be appropriated for the use of the girls' school. Hitherto the girls have been taught in the up-stairs portion of the building, but now they will occupy the whole of it.

In March last a contract was entered into for the erection of a new Boys' High School at East Maitland, to take the place of that now conducted at West Maitland; and it is anticipated that the buildings will be ready for occupation in April, 1892. New premises will also be provided for the Maitland Girls' School as soon as the question of a suitable site has been definitely settled.

It is satisfactory to be able to report that there has been a general advance in the proficiency of the High Schools. Each school has been subjected to an exhaustive examination by officers of the department, who report that excellent work is being done, and that,

in respect to both attainments and discipline, the results of inspection are very satisfactory. The percentages gained at examination range from 75 per cent. for trigonometry to 100 per cent. for botany, the average for all subjects being 83.4 per cent. As regards the examinations instituted by the University, the following table shows the results achieved by High Schools:—

School.		No. of Passes Junior Examination.	No. of Passes Senior Examination.	No. of Passes Matriculation Examination.	Total Number of Passes.
Sydney (Boys)		37	- 3	19	59
" (Girls)	•••	48	8	8	61
Maitland (Boys)	•••	12	1	2	15
" (Girls)		10	3		13
Bathurst (Girls)	•••	6	.1	1	8.
Totals	•••	113	16	. 30	159

As compared with previous years, there is an increase in the number of passes in the case of every school but one. For all schools the total number of passes in 1891 was 159, as against 149 in 1890.

But, apart from the high educational advantages received by the pupils actually in attendance at High Schools, it may be claimed that these institutions have rendered very important service by means of the influence exerted by them on private schools. The standard of secondary education maintained in them has made it imperative on the conductors of private establishments to keep their own schools in a satisfactory state of efficiency, especially as regards the attainments of the pupils, as only by so doing can they expect to retain the confidence of parents, and prevent the removal of pupils. In this way, therefore, High Schools have conferred considerable benefit on the Colony at large.

Under the Bursary System, 4 candidates—1 boy and 3 girls—were successful in obtaining bursaries at the University Matriculation examination in March last.

The total expenditure on High Schools for the year was £7,913 18s. 5d., while the amount received from fees was £4,735 17s. 8d. The actual cost to the State was, therefore, £3,178 0s. 9d., or at the rate of £3 10s. 9d. for each pupil enrolled.

State Scholarships and Bursaries.—Under the Scholarship and Bursary Scheme, explained in last Report, examinations were held during the year, 80 candidates being successful. Of these, 24 males and 24 females obtained scholarships for High Schools and Superior Schools; 17 males and 11 females bursaries for High and Superior Schools; and 1 male and 3 females University bursaries.

The following are the Public Schools from which successful competitors for High School Scholarships and Bursaries were sent up, namely:—

For Scholarships:—Blackfriars, Bathurst, Burwood, Crown-street, Darlinghurst, Dubbo, Fort-street, Forest Lodge, Maitland West, Maitland East, Macdonaldtown, Moruya, Marrick-ville West, Parramatta South, Penrith, Pyrmont, Stanmore, Surry Hills South, St. Peters, Warialda, Wagga Wagga, Waverley, and Wingham.

For Bursaries:—Blackfriars, Bowling Alley Point, Bungowannah, Colyton, Cleveland-street, Galwadgerie, Gosford, Grafton, Helensburgh, Kempsey, Maitland West, Nundle, Port Macquarie, Redfern, Wallerawang, Wickham, Woonona, Wallsend, Warkworth, and Young.

Of the 48 successful competitors for High School Scholarships, 13 boys and 13 girls have since attended the Sydney High Schools; 9 boys and 6 girls the Maitland High Schools; 1 girl has attended the Bathurst High School; and 2 boys and 4 girls have enrolled themselves at Superior Schools. Of the 28 successful competitors for High School Bursaries, 6 boys and 4 girls have attended the Sydney High Schools; 5 boys and 4 girls the Maitland High Schools; 2 girls the Bathurst High School; 3 boys and 1 girl Superior Schools; and 3 boys the Sydney Grammar School.

Ten University Bursaries are available annually. In 1891, however, only 7 candidates presented themselves for examination, and of these, 4 (one boy and three girls) were awarded bursaries. All the successful competitors were pupils of the Sydney High Schools.

In addition to the 76 competitors who obtained High School Scholarships and Bursaries, 1,006 candidates passed the examination for admission to High Schools. The total number of examinees was 1,287, and of these 82.9 per cent. were successful.

Superior Schools. - At the close of 1890, Superior Public Schools totalled 64. This number increased by 14 during 1891. schools newly created are situated at East Maitland, Tumut, Maclean, Narrabri, Quirindi, Camdenville, Cowra, Goulburn North, Goulburn South, Forest Lodge, Cooma, Gunnedah, and Kogarah. Public Schools comprise 192 departments, with an enrolment for the closing quarter of the year of 57,206 pupils. These figures show an increase of 9,993 pupils on similar totals for 1890, and afford evidence that the instruction imparted in Public Schools, both as regards quality and range, is improving at a satisfactory rate. No Public School can be promoted to the rank of a Superior Public School unless the attendance thereat is sufficient to enable a class to be formed of not less than twenty children, who have been educated up to the standard that completes the course prescribed for a fourth class. Although primarily intended to meet the educational wants of places unprovided with anything higher than elementary instruction, this

class of schools has, owing to the liberal provisions under which they are established, greatly multiplied in the neighbourhood of Sydney and other large towns.

The course of instruction prescribed for Superior Public Schools embraces Mathematics, Natural Science, French and Latin, in addition to the subjects taught in ordinary Public Schools. As far as practicable, the instruction in English Grammar, Geography, and History, is made to correspond with that presented for the Senior and Junior Examinations at the University.

Evening Public Schools.—Twelve applications for the establishment of Evening Public Schools were received. Seven were granted, and 5 declined. The total number of schools in operation was 14, but one collapsed before the close of the year.

Evening Schools do not meet with public favour. Even when started under the most encouraging auspices, they do not last long. This phase of their history is not peculiar to this Colony. The pupils attending them are required to be over 14 years of age. The course of instruction is confined to reading, writing, and arithmetic.

House-to-house Schools.—Including 15 established during the year, the number of House-to-house Schools in operation was 92. Nine of these closed after a brief existence, leaving 83 at the end of the year. Schools of this class can only exist in the remote and isolated parts of the Colony where families reside at long distances from each other, and it is not practicable to form Provisional or Half-time Schools.

The authorised course of instruction is necessarily limited in range, the teacher's attention being confined to reading, writing, and arithmetic. He is required to work in accordance with an approved programme on which, in addition to the ordinary school instruction, provision is made for a systematic course of home lessons. Teachers not fully trained may be employed in House-to-house Schools, but they must be of good moral character, and must satisfy the Inspector that they are capable of imparting the rudiments of an English education. The remuneration of teachers engaged in the work is at the rate of £5 per annum for each pupil in average attendance up to a maximum of £100 per annum. As population extends, these schools usually grow into Half-time or Provisional Schools. Of the 92 in operation, 91 underwent inspection, the examination disclosing results of a satisfactory kind.

Technical Education in connection with Public Schools.— Technical education in its preparatory stages continues to be carried on in connection with Public Schools, under the provisions explained in previous reports. These include kindergarten schools and classes, drawing, oral lessons on common objects and in elementary science, planting and cultivating school gardens and play-grounds, manual training in workshops for boys, and needlework and cookery for girls. Kindergarten.—The Kindergarten Schools at Fort-street, Riley-street, and Australia-street (Newtown) continued in operation during 1991, and similar schools were opened at Alexandria and Armidale West. In addition to these fully organised institutions, kindergarten classes have been started at the following schools:—Burwood, Braidwood, Goulburn, Goulburn North, Goulburn South, Kegworth, Newcastle, Paddington, Queanbeyan, Rockdale, Smithstreet (Balmain), Waverley, and Wickham. The five complete kindergarten schools have an attendance of 1,413 pupils; while, in the Infants' departments and junior divisions of the 13 schools where kindergarten classes have been formed, there is an enrolment of about 3,000.

Froebel's kindergarten is a system specially designed for children of tender years. At the same time the main principles of kindergarten training are those upon which all correct teaching of children is based; and they have always been carefully observed by the trained and fully qualified teachers engaged throughout our school service. These principles may be shortly summarised as follows:—

The activities, energies, and natural instincts and habits of children, as shown in their attention to play, are aided and developed by placing suitable common objects within their reach. means the children are made acquainted with the world around them, and are trained to observe, to compare, and to reason, so that when they reach an age to enter upon abstract study they are already disciplined to exercise their faculties upon all that comes within their range. In all things, the concrete before the abstract is the method of cultivating the faculties; and the children, if trained to accuracy in visible things, will have little difficulty in dealing with the abstract when that is brought under their notice at a later period of their school career,—self-development and action on the part of the pupils being the strong point of the kindergarten system. A love of knowledge is thus kindled in the child's mind which is deemed more important than the extent of acquirements, and hence care is taken to stimulate and gratify the children's natural curiosity by as far as possible answering the what, the how, and the why, with accuracy and interest. In moral training associations are created that lead to kind feelings and right actions, and make the child to discover for himself their beauty and happy consequences.

The manner of using Froebel's "gifts" in the Kindergarten Schools and classes established under the department has been fully described in previous reports. The progress made in extending and carrying out the system during the past year is of a satisfactory character.

Drawing.—This important subject is now taught throughout our schools to all classes of pupils. In the Kindergarten and Infants' Departments suitable drawing work is practised with care and thoroughness, gradual progress being the object aimed at, so that the pupils may be properly prepared to enter upon the work of the upper departments.

departments. At the regular inspections of the schools held during the year the Inspectors examined 127,903 pupils in drawing; and, of this number, 88,619, or 69 per cent., were found to have reached, or exceeded, the prescribed standard of proficiency. The work of the year is also favourably reported on by the Superintendent of Drawing, Mr. F. W. Woodhouse. This officer himself visited 181 school departments in the Metropolitan District, and examined 31,456 pupils, namely, 10,510 boys, 9,870 girls, and 11,076 infants. Of the number thus examined, 20,263, or 64.4 per cent., were up to or above the standard.

In the pupil-teachers' classes, in the Sydney High Schools, and in the Training Schools at Fort-street and Hurlstone satisfactory progress in drawing has been made during the year. Details will be found in the Superintendent's report, Appendix XIII.

Object and Science Lessons.—Object lessons and lessons in agriculture, horticulture, and elementary science generally, are regularly given in the schools in accordance with the provisions of the standard of proficiency; and the instruction thus imparted is followed up by different kinds of practical work. Under the direction and supervision of their teachers, the pupils in a large number of schools receive practical instruction in cultivating flowers and vegetables in the school grounds, and in the planting and tending of useful trees The special instructor, whose business it is to assist teachers in this work, reports favourably of the progress made. schools in the Central, Northern, Western, and Southern Divisions of the Colony were visited by this officer, who remarks, with regard to results, that "it is not too much to say that in another three or four years, if play-ground cultivation goes on as it has during the last two years, unadorned school premises will be the exception, and not the rule as they used to be." During the year 33 sets of gardening tools, for the use of pupils, were supplied to 21 schools.

Annual bonuses of from £1 to £5 are still granted to teachers for their encouragement, in accordance with the system detailed in last report. In 1891, 88 teachers succeeded in qualifying themselves for these bonuses, as compared with 35 in the previous year. Arranged in order of merit as regards the results achieved, the following are the first six on the list:—

Teacher.				School.
John Halstead	•••		• • •	Eglinton.
John Lumsden		•••	•••	Goulburn South.
Henry Tonkin		***	•••	Hillgrove.
J. F. Lane		•••	•••	Euroka.
R. A. Smith				Young Wallsend.
J. W. Clark				Tarago.

Arbor Day and the Planting of School Grounds.—Under any circumstances the proper planting of Public School grounds is an important work that should not be neglected; and when such work is systematised and the school pupils are trained to take their part in it,

great benefits will undoubtedly accrue, not only to the pupils themselves, but also, through them, to the public at large. The school grounds become beautified, summer shade, so necessary in a climate like ours, is provided for the pupils in their play-ground exercises, and through the instruction and training received in connection with the work, their minds are stored with useful knowledge, and they are imbued with a love for nature by being brought into touch and sympathy with nature's work. A right feeling for nature, moreover, comprises more than this planting and cultivation of trees as by a necessary law of association it embraces important conditions regulating our every day life. As expressed by an American gentleman (Professor G. F. Null), "It means a greater exhibition of tenderness, thoughtfulness, and gentleness in our social intercourse; it means a greater regard for orderliness, neatness, and beauty in our surroundings. tree planted needs attention and care, which cannot be bestowed upon it without entering into the general habit of the planter; the plant may need a box to protect it; the shrub, or bed of flowers, suggests the well-kept lawn, or the more modest grass plot; and these in turn point to a neat fence, a clean yard with trim walks, a painted house, and within, tidy rooms, decorated walls, pictures and books, good It will be readily admitted that these things cheer and comfort. cannot be without affecting wholesomely, and only for good, the moral tone of family life, and through it, that of the community."

Other practical results may also be expected from the work. In view of the great destruction and waste which have, in past years, been so widely practised in connection with our natural forests, there is urgent need that public attention should now be directed to tree-planting, and the public schools certainly form the best medium through which this can be effectively accomplished.

For years past, supplies of trees for planting public school grounds have been granted, free of cost, to teachers applying for them, upon their undertaking to bestow upon them the needful care and attention. Under this arrangement many school grounds throughout the Colony have already been planted, and through the forethought and industry of those teachers who voluntarily engaged in the work, are now stocked with well-grown trees.

The inauguration of "Arbor Day" in 1890 not only gave impetus to the tree-planting movement, but provided for the participation of school pupils in the work, and afforded opportunities for their practical instruction in arboriculture. During the planting season of 1890, as pointed out in the last annual report, 140 schools throughout the Colony held "Arbor Days." These were granted free supplies of trees and shrubs, with aid to the amount of £600 towards the expenditure incurred in connection with the planting.

Early last year it was decided that in lieu of each school having its own separate Arbor Day, one general day should be appointed annually for all schools in the Colony; and Friday, 21st August, was fixed upon for 1891. His Excellency the Governor and Lady Jersey have

have manifested a warm interest in the matter, similar to that shown by Lord and Lady Carrington at the inauguration of Arbor Day in 1890. It may be stated, as an evidence of her goodwill, that Lady Jersey kindly contributed the words of the Cantata or Floral March, composed by Herr Alpen, to be sung by the school children on Arbor Day. The following amended circular, issued for the information and guidance of teachers and School Boards, will explain the action taken by the department since the report for 1890 was issued:—

Department of Public Instruction, Sydney, 6 June, 1891.

School Arbor Day.

In the month of June last School Arbor Days were inaugurated in the Colony, at the Ryde Public School, under the patronage of His Excellency the late Governor and Lady Carrington, and, during the planting season of 1890, over 140 schools were granted free supplies of trees and shrubs, and aid towards planting expenses, in accordance with provisions notified in a circular previously issued.

As pointed out in the circular referred to, the improving of school grounds by tree-planting is recognised as a work of educational importance. By such means the school will be made attractive, and an interest in nature and a love for the beautiful will be stimulated and encouraged among the pupils. In time, also, the summer shade, so necessary in our climate, will be provided for the children, and thus the general comfort and happiness of their school life will be promoted. Much useful knowledge respecting the nature and growth of plants will, moreover, be obtained by the pupils, and from working to improve their school grounds they will be led to plant and beautify the grounds about their homes. In this way the information and advantages gained will be likely to have a permanent effect.

It has now been decided that in lieu of each school having its own separate Arbor Day, one general day shall be appointed annually for all schools in the Colony; but any school may, if more convenient, celebrate the festival on a Saturday immediately before or after the general day. Friday, 21st August next, is fixed as general Arbor Day for the current year. To facilitate the necessary work a catalogue of trees, shrubs, &c., suitable for school grounds has been arranged by Mr. Ednie Brown, Director-General of Forests, and is now being printed for circulation. Mr. Brown is also preparing an appropriate lesson-lecture on arboriculture for the information of school pupils. In connection with the movement, Lady Jersey has very kindly promised to write the words of a short cantata and floral march. These will be set to appropriate music by Herr Alpen, and will be taught to the school children, to be sung by them on Arbor Day. The catalogue, lesson-lecture, and cantata will be forwarded to all schools as quickly as possible.

The position of the proposed plantations in the school grounds must be approved by the Teachers and their Inspectors, and in every case the ground for planting should first be well trenched and, if necessary, properly drained and manured. A neat guard-fence or railing, in keeping with the school surroundings, should also be provided.

The Department will provide and deliver on the school grounds all trees and shrubs necessary; and, towards the expense of preparing and planting the grounds, grants not exceeding the following scale will be made to the schools in the different classes upon the basis of £1 for every £1 subscribed by residents, parents, or pupils, namely:—

To 1st, 2nd, or 3rd class schools	s	 	£12
To 4th or 5th class schools	•	 •••	10
To 6th or 7th class schools		 •••	. 8
To schools below 7th class		 	5

The Minister wishes the following arrangements to be observed on Arbor Day:—
In the morning.—Instruction to be given suitable to the occasion, and the lessonlecture herein referred to to be read and explained to the pupils.

In the afternoon.—A few trees to be planted in the school ground by leading residents and the better pupils of the school.

In

In the evening.—A concert, arranged by Teachers and residents, may, perhaps, be given, the cantata and floral march already mentioned being included in the programme. The proceeds of the concert should be devoted to the Prize Fund, Arbor Day objects, Piano Fund, Library, or other school purposes.

The planting in the school grounds, properly carried out under the Teacher's supervision, may be done at any time, suitable weather being chosen; but a few good trees should be reserved for the general Arbor Day purposes. Trees, &c., will be supplied whenever they are required. Application for the supply should be made at once, and should be accompanied by a certificate from the Teacher that the ground either has been prepared or will be ready on the arrival of the trees.

EDWIN JOHNSON, Under Secretary.

In 1891 planting operations were carried out at no less than 601 schools, at which the routine prescribed for "Arbor Day" celebration was generally observed. The trees and shrubs planted were principally furnished by the Director-General of Forests (Mr. J. Ednie Brown, F.L.S., &c.) from the Gosford State Nursery. The stock of the Botanic Gardens was also placed at the department's disposal by Mr. Moore, and from this source many schools were supplied. Mr. Brown, moreover, prepared a catalogue of the trees in the Gosford Nursery, and an "Arboricultural Lecture for Public Schools," which were issued to schools for the information of teachers and the instruction of their pupils.

The principal "Arbor Day" celebration of the year took place at the Liverpool Public School, in the presence of His Excellency the Governor and Lady Jersey, the Minister of Public Instruction, and other visitors. For this celebration special arrangements were made by the Department and the local Public School Board, and the day's proceedings may be regarded as a creditable representation of a complete "Arbor Day" celebration. In some cases it was found that school grounds were either fully stocked with trees or were not adapted for tree-planting. In order, therefore, that the pupils of such schools should not be deprived of the pleasure and instruction accruing from planting operations, it was decided that streets and public parks should be availed of for the purpose wherever the co-operation of the authorities concerned could be secured.

Money grants towards the expenditure incurred were made to the amount of £1,462 15s. 4d. to 260 of the 601 schools at which planting operations were carried out, and in connection with 330 schools freight payments were made amounting to £104 16s. 11d. Thus the total amount granted by the Department towards school ground planting was £1,567 12s. 3d., as compared with £600 granted in 1890, while the number of schools at which planting operations were carried on was 601 as compared with 140.

The results of the year's work may be regarded as evidence of the fact that "Arbor Day" has now developed into a permanent and popular institution. There is little doubt that tree-planting and the improvement of school grounds will shortly become general throughout the Colony. Manual Training.—The classes organised at Fort-street in 1890 for the students of the Training School and for boys attending the Superior Public School have been continued throughout 1891. Owing to the popularity of these classes the accommodation provided was found to be too limited, and the workshop has therefore been considerably enlarged. Similar workshops have been opened during the year in connection with the Public Schools at Crown-street, Blackfriars, and Sussex-street. In the Maitland workshop, established in 1890, manual training is provided for pupils from the Maitland High School, and for boys from the Public Schools at West Maitland, East Maitland, and St. Ethel's. At Goulburn also a class has been formed which provides for pupils from the Public Schools at Goulburn, North Goulburn, South Goulburn, and Eastgrove.

It will thus be seen that, in different localities, six workshops have now been established, and these provide manual training for students from thirteen separate schools.

The manual training carried on and the progress made by the students in the different workshops are very favourably reported on by the instructors and examiners employed in connection with the work. The total number of students attending the classes was:—

Cookery Instruction.—The Cookery classes in operation in 1890, at Hurlstone Training College and at the Fort-street and Blackfriars Superior Public Schools, were continued through 1891. No new classes were organised during the first half of the year. In July, however, an extension of cookery instruction was decided upon; and, subsequently, classes were brought into operation for the Bathurst High School, and for the Superior Public Schools at Crown-street (Surry Hills), Darling Road (Balmain), and Bathurst. These classes were carried on with success, and were subjected to a searching examination before the close of the year. Classes were also started at the Glebe and Newtown Superior Public Schools, but through a scarcity of qualified teachers, they had to be temporarily closed.

To meet this difficulty a Teachers' Training Class has been established in the Central School of Cookery at Fort-street. To obtain students for this class, applications were invited from Hurlstone students and from first-class pupil-teachers. Many were received, and, from among the applicants, twelve were selected to form the first class. These are now pursuing their course of instruction and training with pleasing aptitude and earnestness, and at its conclusion will, no doubt, be qualified to undertake teaching work.

In September, Mrs. Story, the Instructress in cookery, was appointed "Directress of Cookery," and made responsible for the initiation and control of all cookery classes in connection with technical education, those carried on in the Sydney Technical College excepted. At the close of the year, the cookery teaching staff consisted of the directress, one senior and two probationary teachers, and one junior assistant; and the plant provided included one permanent kitchen, four portable kitchens, and two sets of utensils for large classes in temporary kitchens.

The total number of pupils who received cookery instruction during the year in the High and Public Schools was 757, and the practice classes from which students attended examinations had an enrolment of 390. The number actually examined was 310, of which 6 failed and 304 passed, namely, in honors, 101; in first grade, 89; and in second grade, 114. Of those who passed, 25 were students from Hurlstone College, 35 from Bathurst High School, 32 from Bathurst Superior Public School, 39 from Crown-street Superior Public School, 36 from Darling Road Superior Public School, and the remainder, 137, from the Superior Public Schools at Fort-street and Blackfriars.

On the whole, the progress made in cookery instruction in 1891 may be considered fairly satisfactory, and, under the arrangements now in operation for the special training of teachers for such work, greater progress will, no doubt, be accomplished. It is expected that not fewer than eighteen separate classes will be found in operation before the end of 1892.

In addition to the work done in connection with Public Schools, Mrs. Story continues to take a cookery class in the Girls' Industrial School, Parramatta.

Detailed information respecting the whole work done under Mrs. Story will be found in her annual report, Appendix XV.

Needlework.—The girls throughout all the classes are taught this subject. In the first and second classes simple plain sewing of different kinds is taught; in the third class more difficult needlework is practised and aprons, pinafores, and garments of underclothing are made up; while in the fourth and fifth classes the pupils have to set their own sewing, and those over 14 years of age are instructed in dressmaking, and are required to cut out and fit any garment to be made in the school.

The Inspectors have reported upon 46,381 girls examined in needlework; and, of this number, 38,606 or 83 per cent. are up to or above the prescribed standard of proficiency. Seventy-eight schools in the Metropolitan and sub-Metropolitan districts have been visited by the Directress of Needlework, and 12,000 pupils have been examined. The Directress reports that "the system of instruction in needlework throughout the classes is effective, universal, and well maintained according to the standard."

The female pupil-teachers throughout the schools are also favourably reported on as regards attention to needlework. The Directress states that the aptitude and eager industry displayed by them generally in connection with this subject cannot be too highly commended.

Public School Savings Banks.—602 banks were in operation at the close of 1891, being an increase of 48 on the number open at the end of 1890. The amount deposited in the year was £12,452 6s. 6d., or an increase of £1,260 15s. 11d. on the sum deposited in 1890; and this increase would, no doubt, have been still larger had not the influenza epidemic which prevailed in the last quarter of the year greatly interfered with school attendance.

The moneys withdrawn during the year for current use totalled £8,183 8s. 8d., or £99 10s. 6d. less than was withdrawn in 1890, while the sums transferred to accounts in the Government Savings Bank reached £3,574 11s. 10d., which is a slight increase on the amount transferred in the previous year.

For the five years school banks have now been in operation the aggregate deposits are £55,222 9s. 11d.; and the number of banks has steadily increased from 255 in 1887 to 602 in 1891. Of the total sum deposited in the five years £31,182 12s. 7d., or  $56\frac{1}{2}$  per cent., has been withdrawn by depositors for current use; £16,572 0s. 8d. has been transferred to children's own separate accounts in the Government Savings Bank; and the balance, £7,467 16s. 8d. still remains in the school banks to the credit of depositors.

The opening of 48 additional school banks in 1891, while only 7 were opened in the previous year, indicates that substantial progress is being made in developing these important aids to public education; and, should no special hindrance arise to retard this progress, it may be expected that, before long, school banks will be found attached to all Public Schools having the required classification.

Teachers.—An ample supply of teachers is obtained from three sources, namely—(1) the two Training Colleges; (2) ex-pupil-teachers who do not enter a Training College; (3) young persons, not less than 18 years of age, who, with few exceptions, have been educated in the Public Schools of the Colony, and who undergo a short course of training in schools taught by teachers holding classifications of not lower than III A. Few teachers trained outside the Colony find employment under the department; those only who are possessed of exceptionally high qualifications have any chance of joining the school service.

The number of teachers on the roll in the last quarter of 1891 was 4,427, being an increase of 246 on the enrolment for the corresponding quarter of 1890. They were composed as follows:—2,175 classified teachers, 101 students in the Training Schools, 856 unclassified teachers of small schools, 1,196 pupil-teachers, 68 work-mistresses, and 31 High School teachers. Of the whole number 50·2 per cent. were males, and 49·8 per cent. females; and of the teachers

teachers in charge of schools or departments 64 per cent. were males and 36 per cent. females. The following table will exhibit full information respecting the several classes into which teachers are divided:—

Exclusive of High School teachers, workmistresses, and pupil-teachers, the number was 3,132, or 151 more than in 1890. Of these 56.6 per cent. were males and 43.4 per cent. females; while 72.7 per cent. were classified teachers and Training Schools students, and 27.3 per cent. were unclassified teachers. The latter have passed, the usual examinations and been certified, and nearly all are in charge of small country schools. Of the total number of classified teachers, 7 per cent. were in Class I, 38.1 per cent. in Class II, and 54.9 per cent. in Class III. In 1890 the percentages in the three classes were, respectively, 6.5, 37.8, and 55.7; and in 1889 they were 6.2, 38.7, and 55.2.

The next table shows the number of classified schools, the number of classified teachers required, and the number of such teachers actually in the service at the close of 1891.

2,276	45	56	808	1,367	2,568	586	1,982		••	2,132	1,919

The following points may be noticed in the information given in the last table. At the close of 1891 the number of classified teachers in the service was 2,276, as compared with 2,147 in 1890. The actual number, however, required to fill positions in classed schools was 2,568, namely, 319 of Class I, 906 of Class II, and 1,343 of Class III.

Pupil-teachers.—The number of pupil-teachers in the service was 1,196, consisting of 432 males and 764 females. They were classed as follows:—1st class, 246; 2nd class, 244; 3rd class, 293; 4th class, 329; probationers, 84.

As many as 852 applications for appointment to the office were received, and 586 of the applicants passed the entrance examination. It would appear, therefore, that the position of pupil-teacher has some attractions for parents and pupils.

The examination to which applicants are subjected is regarded as somewhat searching, taking cognizance as it does not merely of the literary attainments of the examinees but of their aptitude for teaching, and of their personal qualifications. Before receiving permanent appointment pupil-teachers are employed on probation for three months, and their appointments are not confirmed unless they give promise of becoming useful and efficient teachers. They are engaged for four years, and after completing this term of service and passing the prescribed yearly examinations, they are permitted to enter one of the Training Schools for an extended course of training upon their proving successful in the yearly competition for scholarships.

The reports upon the work of the pupil-teachers are very gratifying. They are, with few exceptions, diligent in the performance of their duties, studious in their habits, and anxious to do well.

Fort-street Training School.—The training of male teachers continues to be carried on at Fort-street. Every endeavour has been made to render the premises as suitable as possible for carrying out the object in view, but, at the best, they can only be looked upon as a make-shift pending the erection of a residential College within the University. I am glad to be able to say that arrangements towards that end have been completed, and that plans for the necessary buildings have been prepared and approved of. A sketch plan of the proposed premises appeared in the report for last year. The College is designed to accommodate fifty students, and comprises lecture and class rooms, a dining hall, dormitories, &c., and a residence for the Principal. The estimated cost is £37,500. The erection of the buildings will be proceeded with when the necessary funds are available.

Fifty-six students have attended the course of training during the year, four being seniors admitted to a third year's course, twenty-six seniors in second year, and twenty-six juniors. Thirty-six of the number hold full scholarships, nineteen half scholarships, and one is attending at his own cost. Of the seniors, one, already a Bachelor of Arts, is studying for the degree of Bachelor of Science, seven

matriculated in March, 1890, sixteen in March, 1891, and two failed to matriculate, of whom one has since recovered his lost ground by attendance at evening lectures. Among the juniors, eleven matriculated in March last, and the remainder, with one exception, received instruction with a view to passing the departmental examination at the end of the year and the Matriculation examination in March, 1892.

At the close of the session all the students were examined in School Management, Music, and Drawing. The various examinations attended by them are shown in the subjoined table:—

	Number of Students.

Special Training School Examinations				14	
Total		•••	30	26	

The Practising School has been of very great benefit to the students in the development of their knowledge of practical school management. Test, criticism, and specimen lessons have been regularly given, and the students, both senior and junior have been employed, in rotation, for a week at a time, as assistant teachers. They have also been afforded frequent opportunities of observing the working of the kindergarten system under Miss Banks, from whom they have received valuable instruction on the application of that system to the teaching of junior classes in Primary schools.

During the year the workshop erected for the manual training of the students has been considerably enlarged, thus affording increased facilities for instruction. The result of the examinations held at the end of the year is as follows:—

		Nature	of Pass.	Failure.	Total.
		1st Grade.	2nd Grade.	fanure.	Total.
First year students		. 9	28	3	40
Second year students		. 0	14	1.	15
Totals	•••	. 9	42	4	55*

A new feature in connection with the Training School is the establishment of a Rifle Corps at the beginning of the year. Later on it was decided that the corps should be incorporated with the pupil-teachers' corps, the whole to be designated the "Training College Battalion." The battalion now consists of 220 members, exclusive of officers.

No alteration has taken place in the staff during the year. Mr. Conway continues to discharge the onerous duties of Principal with fidelity and zeal, and receives hearty and effective support from his Assistants. Mr. J. D. St. Clair Maclardy, M.A., is Classical Master; Mr. J. M. Taylor, M.A., Assistant Training Master and Science Lecturer; Mr. F. W. Woodhouse, Drawing Master; and Mr. Hugo Alpen, Instructor in Music.

Hurlstone Training School for female students.—The students attending Hurlstone Training School reside upon the school premises, which are situated upon a high and healthy site in the neighbourhood of Ashfield. In connection with the institution there are 26 acres of ground which afford ample space for recreation and gardening by the students, as well as for the pasturage of cows and the rearing of poultry for the purposes of the household.

The buildings are in good repair, and are well equipped with modern educational appliances. During the year a new fence was erected around the grounds, which has improved greatly the appearance of the premises.

The number of students undergoing training last year was 45, two being seniors in their third year, 15 seniors in second year, and 28 juniors. Of these, 33 held full scholarships, 11 half scholarships, and 2 attended at their own cost. Seventeen of the seniors and 1 junior attended the Matriculation Examination in March last. All passed with the exception of 3 seniors, who failed in Latin only. These took up the ordinary work of the Training School for the remainder of the year, and will make a second attempt to matriculate in March, 1892. Twenty-seven of the juniors are also preparing for the Matriculation Examination at that time. The respective examinations attended by the students are shown in the subjoined table:—

Nature of Examination.		Number of Students.

Special Training School Examination		•••	0	27	
Total	•••		17	28	

The practical training of the students was carefully attended to throughout the year. Each student had the advantage of one month's attendance at the Practising School under the supervision of the Mistress, Miss Nicholls, and was required also to give, periodically, special criticism lessons in the presence of her fellow-students. Lectures were also given every Saturday by Miss Banks, Mistress of the Kindergarten, Fort-street, on the kindergarten method, and visits were paid by the junior students to Fort-street to observe the system in actual operation.

In addition, systematic instruction has been given in music, drawing, cookery, needlework, drill, and calisthenics. In music, of 42 students examined 39 passed; in cookery, certificates of proficiency were awarded to 25 out of 26 examined; and all (27) examined in needlework and drill satisfied the Examiners.

It may be mentioned that 43 of the students were examined under the auspices of the St. John's Ambulance Association for "First Aid to the Wounded" certificates, all of whom were successful in obtaining certificates.

The staff of teachers remained the same as for the year 1890.

Teachers' Examinations.—The total number of examinees reported on during the year was 3,533, showing an increase of 1,411 on the number for 1890. The percentage of passes of teachers was 51·1, as against 32·1 in 1890; of pupil-teachers 85·5 as against 76·9; and of applicant pupil-teachers 68·7 as against 63·5. As was anticipated in last year's report, a marked improvement was noticeable in the quality of the work sent in by teachers under examination, a result no doubt attributable to the greater familiarity of examinees with the prescribed text-books.

The average attainments of pupil-teachers continue to show advancement, the percentage of passes being 8.6 higher than in 1890, and 10.6 higher than in 1889. Greater care in preparation was evidenced also by applicant pupil-teachers of whom a larger number than in the preceding year succeeded in satisfying the Examiners.

Of the first-class pupil-teachers examined in December last, it has been ascertained that the male examinee who succeeded in obtaining the highest number of marks was Mr. Richard A. Wearne, of the Model Public School, Fort-street; while Miss Mary J. Bruce, of Kiama Public School, headed the list of female pupil-teachers. Mr. Wearne obtained 696 marks out of a total of 850, nearly 82 per cent., and Miss Bruce 556 out of 700, slightly over 79 per cent. To these pupil-teachers, therefore, it has been decided to present the Jones' Memorial Medals which are awarded annually to the best first-class male and female pupil-teachers of the year. Mention should be made of the fact that Mr. Septimus Thornton, of Balmain Public School, came within four marks of Mr. Wearne, and Miss Catherine M. Anglim, of Mudgee Public School, within one mark of Miss Bruce.

The duties entrusted to the Board of Examiners were carried out with zeal and efficiency. As before stated there were 1,411 more examinees in 1891 than in 1890, an increase of 66 4 per cent.; but notwithstanding the extra labour occasioned by the large increase in the number of papers, the work of revision was effected with promptitude and despatch.

In this connection it is with pleasure that I record my appreciation of the assistance rendered to the Board by the local committees who kindly undertook the work of supervising the examinations of pupil-teachers and High School candidates in centres of population where there are no resident inspectors. This arrangement obviated the necessity for preparing many extra sets of questions, and tended to secure greater uniformity in valuing the papers, inasmuch as all pupil-teachers of the same class were thus examined in identical papers which were all valued at the same time.

The following table furnishes the results of the several examinations in detail:—

•		Results.	
Persons examined.	Passed.	Failed.	Total.

Teachers' Mutual Assurance Association.—During the year five members of this Association died, and, in each case, the claim, amounting to about £80, was promptly met. Since the formation of the Association in 1869, the average annual death rate has been 1.2 per cent., a very low rate of mortality. Taking the years 1880 to 1891 inclusive, the amount paid annually by way of premium has averaged £1 5s. 3d., being slightly over  $1\frac{1}{2}$  per cent. on the sum payable at death.

Ordinary members continue to pay a call of 5s. on the death of any of their number, but in accordance with a rule adopted in 1889, teachers joining the Association under 25 years of age are required to pay 3s., and between the ages of 25 and 30 years 4s. only per call. The smallness of these payments should have the effect of popularising the Association among the younger members of the teaching profession.

Teachers' Emoluments.—Under the regulations Primary Schools are divided into ten classes, and to each class is allotted a fixed rate of salary. The emoluments of teachers of all ranks are given in the subjoined table:—

Kind of Teachers		Males		Γemales.			
	Salary	Value of Residence	Income.	Salary	Value of Residence Income

#### LOCAL SUPERVISION.

During the year the work of reorganising the Public School Districts has steadily progressed. Twenty-seven additional sub-districts have been formed and Boards appointed thereto. In addition to the appointment of these Boards, 113 members have been added to 57 already existing Boards. At the end of the year the number of Boards in operation was 268. On 52 of these ladies have been appointed to the number of 109.

Gratification was expressed last year that the anticipations formed of increased activity and earnestness on the part of Boards had been in a great measure realised, and that members of Boards had made their influence for good perceptibly felt. It is with pleasure that

^{*} In schools ranking below Class IV the salaries of unmarried teachers and of married teachers not assisted by their wives, as required by regulation, are £12 per annum less than the rates stated above.

that testimony can be again borne to the usefulness of a large number of the existing Boards. In many cases the members, with inconvenience to themselves, and at the sacrifice of their own time, have interested themselves, in conjunction with the teachers, in providing entertainments for the children and in raising funds for the purchase of prizes, and have exerted themselves in other ways to promote the welfare of the children and the comfort and well-being of the teachers.

But notwithstanding the intelligent interest taken by the Boards above referred to, it must be admitted that local supervision still remains the least satisfactory feature of the Public School system. While many Boards have earned the thanks of the department by their zeal and efficiency, it is to be regretted that in a large number of cases a different spirit is manifested, and that the duty undertaken, when discharged at all, is performed perfunctorily, without interest and with little care.

#### · IV.—Scientific and Technical Education.

The Technical Education branch is responsible for carrying out this portion of the department's work.

The new Technical College at Ultimo, which it was expected would be fit for occupation in 1891, had not been completed at the close of the year. The buildings will, however, be ready for the reception of students early in 1892.

Commodious workshops were erected and occupied at Ultimo during the year, and those in Kent-street, previously used, were given up. Beyond this no change was made in the buildings devoted to technical work in Sydney. Branch schools were successfully carried on at Petersham, Newcastle, West Maitland, Goulburn, Bathurst, and Broken Hill. The suburban and country classes generally met in the Public School buildings, or in rooms attached to the local Schools of Arts, and, as a whole, were satisfactorily provided for.

Owing to unavoidable delay in securing the selected site, and to the failure of local contractors to tender for the required work, the erection of the buildings planned for a Technical College and School of Mines at Broken Hill could not be proceeded with. A beginning, however, will be made at an early date, and no unnecessary delay will be permitted in the completion of the work. The workshop and class-room in the proposed building are urgently needed.

Six of the classes for technical instruction, existing in 1890, were discontinued in 1891, but, during the year, 76 new classes were formed. These consist of 4 in the Sydney Technical College, 22 in the suburbs, 36 in the country, and 14 in connection with Public Schools. The total class enrolment in 1891 was 8,466, as compared with 6,580 in 1890, and the number of individual students 6,688, as compared with 5,207. The average attendance for the year was 4,642.

The teaching staff employed for actual technical work numbered 134 persons, or an increase of 21 on the previous year. It comprised 12 lecturers, 5 resident masters in charge of branch schools, 100 teachers, and 17 assistants. Of these 63 were employed in Sydney and 71 in the suburbs and country districts.

In addition to the class work in the Sydney Technical College and the suburban and country schools, popular science lectures were given by the permanent officers employed under the Technical Education Branch, which were well attended, and will, it is hoped, be productive of good results.

The results of the examinations held during the year are satisfactory. 2;178 students were examined, as compared with 1,538 in 1890, of whom 1,491 passed, as compared with 864. In 1890, 56 per cent. of those examined under the Technical Branch passed, and, in 1891, the per centage rose to 68. Students from the Sydney College also gained a good position at the Science and Art Examinations held at South Kensington in May last, while, in connection with the technological examinations of the City and Guilds of London Institute, 49 candidates from the Sydney College were examined and 31 passed. The numbers in 1890 were 33 and 20 respectively.

The Technological Museum in Sydney, under Mr. Maiden as Curator, continues to render good service to the cause of technical education. During the year the Museum was visited by 112,632 persons, and numerous inquirers received much useful information and instruction from the Curator. The branch Museums, established in country towns towards the close of 1890, report 25,842 visits. A contract was entered into, in July last, for the erection, in Sydney, of a suitable new building to accommodate the collections now lodged in a temporary structure, and the work is well advanced. This new building is estimated to cost £19,365, and will afford ample space and improved facilities for the Curator's important work.

The total expenditure on Technical Education during the year, including £5,185 17s. 11d. spent on the Technological Museum, amounted to £37,601 6s. 3d. Of this sum £33,880 0s. 9d. was a Parliamentary grant, and £3,721 5s. 6d. was paid as fees by students.

Details of the Technical Education work carried on in 1891 will be found in the report of the Superintendent, Appendix XVIII.

#### V.—Public School Cadet Force.

During 1891 the Cadet movement has continued to progress under the scheme of reorganisation adopted in 1889, and its stability has now been assured. New School and Senior Infantry Corps have been established, and further interest has been added to the movement by the formation in Sydney of Corps for the Training School Students, and for Pupil-teachers, and also of an Ambulance Corps. Cadet Cavalry Troops have been organised at Casino, Picton,

and Parramatta. At the close of the year the strength of the Force was as follows:—

Training School Battal	ion—							
Students	• • •	•••	•••				58 ·	,
Pupil-teachers	•••	•••	•••	•••	•••	•••	$\frac{58}{158}$	<b>2</b> 16
Seniors—

School Bands	• • •	•••	•••	•••	• • •	•••	5,684 358 .	6,042
Ambulance Corps	•••		•••	•••	•••		•••	45
Staff	•	•••	•••	•••		•••		9
		Total	l		•••	•••	•••	6,888

This enrolment shows the satisfactory increase of 5,840 in the last two years, and of 1,204 in 1891; and by the formation of the Training School and Pupil-teachers' Corps the necessary training will be given to teachers to qualify them for imparting instruction in Cadet work to their pupils.

Camps of Cadets were held as follows:—At Easter 560 Senior Cadets went into camp with the Military Forces at Campbelltown; from the 2nd to the 5th October the Artillery Cadets camped at Long Bay for shot and shell practice; from the 11th to the 18th October the Country Corps were in camp for special instruction and training at the Royal Agricultural Society's Grounds, Moore Park, and from the 6th to the 9th November the Casino Cadet Cavalry was in camp locally in conjunction with the Richmond River Cavalry.

The camp held at Moore Park during the week ending October 18th comprised 75 School Cadet Corps from different parts of the country, Troops of Cadet Cavalry from Picton and Parramatta, Senior Cadet Infantry from Bathurst, Goulburn, Newcastle, and West Maitland, and the Sydney Ambulance Corps, numbering in all 2,262. Every facility for instruction and training was afforded, and the week was one of hard work for officers, teachers, and cadets. The value of the work done was, moreover, enhanced by the services of the leading Metropolitan and Country Military Instructors, whose attendance for the week in camp was kindly allowed by Major-General Richardson, C.B., and the officers commanding the Volunteer Force.

The City and Suburban Cadets went into camp on the Friday and Saturday for instruction, and on the Saturday afternoon the whole body was reviewed on Moore Park by His Excellency the Governor. The force present at review numbered 5,223 of all ranks, representing Cadet Cavalry, Artillery, Senior and School Infantry, the Training School Battalion, and the Ambulance Corps. The review passed off very satisfactorily, and the Cadets obtained the strong approval of His Excellency for their appearance, discipline, drill, and general conduct.

During the year all City and Suburban Corps were officially inspected, and most of the Country Corps were seen in camp. The Commanding Officer, Lieutenant-Colonel Paul, reports that "the results of inspection show that attention has been paid to drill, and that greater steadiness in the ranks and improvement in discipline are everywhere noticeable."

Further information respecting the progress and management of the Cadet Force will be found in the Commanding Officer's Annual Report, Appendix XVII.

#### FINANCE.

The sum available in 1891 for expenditure under the Public Instruction Act was £775,014 3s. 8d. make up as follows:—

	•				-			
						£	s.	d.

^{*} Included under Chief Inspector's Branch.

The foregoing statement shows that of the total year's expenditure of £769,565 6s. 8d., nearly 25 per cent., was spent on school premises,  $66\frac{3}{4}$  per cent. on the maintenance of Primary Schools,  $7\frac{1}{4}$  per cent. on administration and inspection (including the training of teachers and the enforcement of school attendance), and 1 per cent. on High Schools. In 1890 the corresponding percentages were:—Premises,  $21\frac{1}{4}$  per cent.; maintenance of Primary Schools,  $69\frac{3}{4}$  per cent.; administration, 8 per cent.; and High Schools, 1 per cent.

The following table exhibits the number of schools, the number of pupils, and the State expenditure for each of the eleven years elapsed since the passing of the Public Instruction Act of 1580:—

									The	e State Ex	pen	dıtı	ıre					
Ye				On School Premises			On Maintenance of Schools, including Administration, &c		Total		Less School Fees		Net State Expenditure					
				£	s (	a	£	5	đ	£	s	d	£	s	d	£	s	d.

1891	2,	457	205,673	191,373	17	6	578,191	9	2	769,565	16	8	75,912	17	11	693,652	8	9
To	otal 11 years' e	- expend	ituie £	2,015,683	11	9	5,323,008	16	1	7,338,694	7	10	681,451	3	5	6,657,243	4	5

It thus appears that the net State expenditure under the Public Instruction Act for the eleven years ending December, 1891, was £6,657,243 4s. 5d., or an average of £605,203 18s. 7d. per year, and that

that in 1891 the expenditure was £61,219 7s. 9d. more than in the previous year, but considerably less than it was in 1834 or in 1883. Of the expenditure for the eleven years £2,015,685 11s. 9d., or 30.2 per cent., was spent in providing school premises.

The subjoined table will show the expenditure more in detail:—

Heads of Expenditure.	1881			1885.			1890.			1891.

IV. RETIRING ALLOWANCES: To Public School Teachers	••••		_	866	19	0					••••	
Total expenditure£	474,157	5	7	663,693	11	9	701,259	16	7	769,565	6	8

The last table shows that the total expenditure has increased in the year by £65,305 10s. 1d. Of this increase £40,932 17s. 4d. was for school premises, repairs, sites, and new buildings, and £22,766 16s. 9d. for salaries of the increased number of teachers necessary for enlarged schools, and for the 40 new schools. These two items account for £63,699 14s. 1d. of the gross increase, and the balance of £1,605 16s. represents the increase for the whole of the remainder of the services under the Public Instruction Act. The cost for administration is larger in amount than it was last year, but is less as a percentage of the total expenditure. It also remains less in amount than it was in any year from 1883 to 1887 inclusive.

The total cost per child, and the average cost respectively for "School Premises," the "Maintenance of Schools," and "Administration" including inspection, the training and examining of teachers, and the enforcing of school attendance, are shown in the next tables.

(a) Average cost per child of the Year's enrolment.

Year.	For School premises.	For the maintenance of Schools.	For administration, including the amount paid for training and examining teachers, &c.	Total.

In the last three tables the total year's expenditure is dealt with in calculating the average cost per child; but in the succeeding tables the amount of school fees paid into the Treasury has been deducted, and the average cost per child has been calculated on the reduced amount as being the actual cost to the State.

### (a) Average cost (to the State) of a child's education.

	In 1881.	In 1885.	In 1890.	In 1891.	Average cost per child for 11 years.
Cost per child, calculated upon the— Year's enrolment of distinct children Mean quarterly enrolment	£ s. d. 2 18 $6\frac{1}{2}$ 3 8 2 5 3 $2\frac{1}{2}$	£ s. d. 3 9 8½ 4 2 6¼ 6 0 4¾	£ s. d. $3   4   9\frac{1}{4}$ 3 14 $2\frac{3}{4}$ 5 8 5	£ s. d. 3 7 $5\frac{1}{4}$ 3 17 $9\frac{3}{4}$ 5 13 $2\frac{3}{4}$	4 0 114

# (b) Average cost (to the State) of a child's education—exclusive of the cost of School premises.

	In 1881.	· In 1885.	In 1890.	In 1891.	Average cost per child for 11 years.
Cost per child, calculated upon the— Year's enrolment of district children Mean quarterly enrolment Average attendance	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	£ s. d. 2 9 2½ 2 18 3 4 4 11¾	$\begin{bmatrix} 2 & 9 & 4\frac{1}{4} \\ 2 & 16 & 7 \end{bmatrix}$	£ s. d. 2 8 10 2 16 4 4 1 $11\frac{3}{4}$	$\begin{bmatrix} 2 & 7 & 4\frac{3}{4} \\ 2 & 15 & 9 \end{bmatrix}$

The total cost per child for the State Schools in the principal Australian Coloniës, is given below:—

	Number of Schools,	Mean quarterly enrolment.	Average attendance.	Average number of pupils per School.	Cost per head of mean enrolment.	Cost per head of average attendance.
New South Wales Victoria Queensland South Australia	2,457 2,170 621 563	178,278 191,175 57,640 38,450	122,528 133,768 40,836 27,552	72 88 93 69	£ s. d. 4 6 $3\frac{3}{4}$ 4 8 $5\frac{1}{4}$ 4 0 7 3 11 $0\frac{1}{2}$	£ s. d. 6 5 $7\frac{1}{4}$ 6 6 5 5 13 9 4 19 $1\frac{3}{4}$

The net State expenditure in the principal colonies, in the last year for which reports are available, was:—

				æ	s.	α.
New South Wales		•••	 	693,652	8	9
Victoria			 	845,566		
Queensland	•••		 	232,262	17	7
South Australia			 	108,294	4	<b>2</b>

The following table of statistics gives a general summary of our school work done in 1891, and also shows the progress made under the department since the passing of the Public Instruction Act of 1880:—

Statistics of 1891, compared with those of 1881, the first complete year of work under the Public Instruction Act of 1880:—

Total expenditure under the Public Instruction Act		ļ	<del></del>	

Information respecting educational institutions connected with the department, but not carried on under the provisions of the Public Instruction Act, is furnished in the following summaries:—

#### THE SYDNEY UNIVERSITY.

The number of students attending lectures in 1891 was 532, being an increase of 123 on the attendance of the previous year.

Of 264 who presented themselves at the ordinary Matriculation Examination, 182 were successful. In addition to these, 7 passed the entrance examination for Medicine and Science, 37 the Articled Clerks Examination, 17 the Senior Public, and 62 the Junior Public Thus the total number of matriculants for the year Examination. was 305, which it may be stated includes 26 students from the Training Schools, and 4 pupils of the Sydney High Schools who were awarded Bursaries. The number of Professors and Lecturers on the University staff during 1891 were as follows:—14 Professors and 30 Lecturers. Of these, 7 Professors and 4 Lecturers were paid out of the Challis Fund, while two Lecturers who delivered courses of University Extension Lectures gave their services gratuitously. Suitable temporary premises have been rented, in which it is intended to carry on the Women's Affiliated College pending the erection of the proposed buildings within the University grounds.

Out of a large number of applicants for the position, Miss L. Macdonald, M.A., has been chosen as the first Lady Principal. It is anticipated that Miss Macdonald will reach Sydney shortly, and that the College will be opened in the first term of 1892.

The year's expenditure was £34,933 9s. 6d., of which sum £18,300, or about  $52\frac{1}{3}$  per cent., was granted by the Government. The year's total income, including students' fees, and £8,000 from the Challis bequest, was £34,821 2s. 11d.

# THE SYDNEY GRAMMAR SCHOOL.

The total enrolment of pupils in 1891 was 511, of whom 184 were under and 327 over 14 years of age. Compared with the previous year, there has been a decrease of 82 in the number of pupils 14 years of age, an increase of 67 below that age, and a decrease of 15 in the total enrolment. 166 new pupils were admitted, 12 less than the number for 1890. Of these, 87 were under 14 years and 79 above. The mean quarterly enrolment was  $404\frac{1}{2}$ , and the average daily attendance  $381\frac{1}{2}$ , showing a decrease from last year of  $24\frac{1}{2}$  and  $23\frac{1}{2}$  respectively. The latter, it is explained, was greatly affected during the year by sickness, principally influenza. The University examinations were attended by 72 pupils as against 55 in 1890. The results were as follows:—Junior Examination, 29 attended, 28 passed; Senior Examination, 8 attended, all passed; Matriculation, 35 attended,

32 passed; Law Matriculation, 2 attended, both passed. The income of the school for the year amounted to £9,958 7s. 9d., being comprised of:—

			£	s.	d.
Balance from last	year		 1,354	15	7
State grants	•••	•••	 2,841	19	<b>2</b>
School fees			 5,630	0	0
Other sources	•••		 131	13	0
			£9,958	7	.9

The year's expenditure reached £10,255 2s. 5d. The cost per pupil in average attendance was £26 18s. 4d., of which £22 13s. 9d. represented tuition, and £4 4s. 7d. the cost for additions to the school buildings and improvements to play-ground. In 1890, the cost per pupil was £22 15s. 7d. The expense to the State was £7 9s. 2d. per head of the average attendance, as against £9 0s. 3d. in 1890.

From the Head Master's report it is gathered that there has been distinct improvement in the teaching of Modern Languages, and an extension of Natural Science teaching to a large proportion of the scholars. Such extension was facilitated by the completion of the Laboratory and Theatre, and by the appointment of a teacher from England, who is a specialist in that subject. The teaching of Latin has been kept up to a high standard, but the numbers who studied Greek were comparatively small. The Commercial Side is being gradually and consistently developed; the teaching in the Lower School is reported to be sound, and the discipline and organisation thorough.

At the University Examinations, pupils of this school gained the Classical Scholarship at Matriculation, the Senior and Junior University prizes, and several silver medals, the standard of passes being the highest yet reached.

#### FREE PUBLIC LIBRARY.

The total number of volumes in the Library at the end of 1891 was 91,945; an increase of 5,661 over the number for 1890. The number of new works added was 5,806, being 1,153 more than were received during 1890. 114,947 persons visited the reading-room, as against 102,279 in 1890, while 58,258 visits were made to the Lending Branch: the total number of visits, therefore, paid to the institution during the year was 173,205. Twenty-seven persons were employed on the staff.

The year's expenditure is shown hereunder:—

					£9,937	7	3

#### THE AUSTRALIAN MUSEUM.

The number of visitors to the Museum was, on week-days, 91,910; on Sundays, 40,935; total, 132,845. As compared with 1890, this shows an increase of 8,121 visitors, being 4,010 more on week-days and 4,111 on Sundays. Twenty-two persons were employed in the institution. The Trustees report that the year's expenditure was as given below:—

						£	s.	$^{\mathrm{d}}$ .

				-	-	£7,637	19	3

#### NATIONAL ART GALLERY.

During the year 238,131 visits to the Gallery were registered, showing an increase of 26,587 on the attendance for 1890. On weekdays the visits numbered 139,863, and on Sundays 98,268, as against 128,513 and 83,031 respectively for the previous year. Five persons were permanently employed, and three extra assistants for Sundays and holidays. The following is a statement of the year's expenditure:—

For works of art purchased	•••	$\stackrel{\pounds}{5,170}$	s. 16		
For maintenance	•••	936		4	
For Salaries	•••	962	<b>2</b>	<b>2</b>

# NEW SOUTH WALES INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

The number of inmates during the year was 88, as compared with 99 for 1890. Of these, 59 were under and 29 above 14 years of age. The new admissions were 16—15 under the age stated and 1 above it. Twelve inmates were discharged—5 under 14 years and 7 over that age. The income was—

	•		æ	s.	α.
From State grants			849	0	0
From other sources	•••	•••	5,184	$15_{-}$	4
Total			£6,033	15	4

showing a decrease of £5,432 14s. 10d. on the previous year's receipts. This decrease is accounted for by the fact that, during 1890, the Institution benefited by legacies to the amount of £6,198 18s. 5d. The expenditure for the year was as follows:—

			æ	s.	a.
For buildings, &c	•••		5,753	4	2
For maintenance		• • •	1,814	0	4.
For salaries and wages		•••	$2,\!426$	12	9

INDUSTRIAL

#### INDUSTRIAL SCHOOL FOR GIRLS, PARRAMATTA.

The number of girls enrolled during 1891 was 117, of whom 37 were under and 80 above the age of 14 years. There were 44 new admissions, 16 under and 28 over 14 years old. Thirty-seven inmates, of whom 35 were more than 14 years of age, were discharged during the year as follows:—

For apprenticeship		16
On attaining the age of 18 years	•••	5
Transferred to the Boarding-out Officer		14
By order of the Governor-in-Council		<b>2</b>
		37

The number remaining in the school at the end of the year was 80. Compared with 1890, the enrolment was 6 less. The new admissions showed an increase of 8, and the discharges were fewer by 21. The expenditure for the year was—

				£	s.	d.
For maintenance.		•••	••••	1,713	0	<b>2</b>
For salaries	•••	•••	•••	1,038	18	8
Total				£2.751	18	10

Calculated on the number enrolled, the expenditure was equal to £23 10s. 5d. per head.

The Superintendent, Mr. Spier, reports that the behaviour of the girls has steadily improved. They are obedient and respectful to the officers, and, with few exceptions, courteous and kindly to one another. Their health was remarkably good, except that nearly every inmate suffered from influenza. As many as 25 were laid up at the same time, and received careful attention from the Visiting Surgeon and nursing at the hands of the Matron. The ordinary work of the Institution was carried on with vigour and success; the school work and sewing were satisfactory, and the cookery class was successful. The girls appear to take great pride in the laundry work, started during They washed 42,777 pieces for Hurlstone College students, representing a saving to the Government of about £350, and 112,825 articles for their own institution, at a work-value of about £330. The influence of this industrial work upon the inmates has proved highly beneficial. Much attention was given to the garden plots, and the introduction of pets, such as doves and canaries, and the keeping of poultry, added to the home-like life of the Institution. Considerable alterations and additions to the buildings are approaching completion, which will assist greatly in the proper classification of the inmates. The Superintendent states that, of 67 inmates discharged in the last twenty-one months, 55 have turned out well, 7 have reverted to their former immoral lives, and 5 have been lost sight of.

# NAUTICAL SCHOOL-SHIP "VERNON."

In this Institution 361 boys were enrolled, 199 of these being under, and 162 over 14 years of age; 153 new inmates were admitted, 109 less and 44 more than 14 years old. The number discharged was 131—under 14 years 36, and above 95. The discharges were made as follows:—

For apprenticeship	101
On attaining the age of 18	5
Transferred to Boarding-out Officer	6
Sent to Hospitals	3
Released by the order of the Governor-in-	
Council	16
	131

220 boys remained on the ship at the close of the year. These figures, as compared with those of 1890, show an increase of 21 in the enrolment, and of 40 in the new admissions, while 1 boy less was discharged. The total expenditure was £7,195 2s. 10d., made up as follows:—

For Maintenance For Salaries	 	 4,613 2,581		
		£7,195	2	10

The cost per head of the enrolment was £19 18s. 7d.

The Superintendent, Captain Neitenstein, reports as follows:—
"Included in the above expenditure is the cost of certain repairs to the ship, rendered necessary by the decayed condition of the hull. The expense incurred in the supervision of the ship's apprentices is also included. The daily average number of apprentices has been about 430, and more than 90 per cent. of these lads received favourable reports during the year. On the ship, the inmates behaved satisfactorily, and the institution worked quietly and smoothly. Three new-comers arrived in a diseased condition and were sent to hospital, otherwise no sickness occurred, and during the influenza epidemic the boys enjoyed a clean bill of health. Various improvements have taken place in the routine, notably in the school department, and the efficiency of the establishment has been materially increased.

"The new Training Ship is approaching completion, and will shortly take the place of the 'Vernon,' which has been engaged in reformatory work for twenty-five years. During that time, 2,581 boys have been committed to the ship. Eleven of these died on board or in hospital, 230 remain on board, and 2,340 have been apprenticed or otherwise discharged. Comparatively few of these latter have gone astray after leaving the ship, and the reformations effected by the ship's operations amount to fully 90 per cent. of the boys sent here."

F. B. SUTTOR, Minister of Public Instruction.

Department of Public Instruction, Sydney, 31st March, 1892.

# APPENDIX XII.

# THE CHIEF INSPECTOR'S REPORT, WITH ITS ANNEXES.

Or the 2,418 schools open in 1890, 103 were closed during that year, leaving 2,315 in existence at the beginning of 1891. New schools to the number of 137 were established in 1891, making a total for the year of 2,452. The numbers for the last three years stood thus:—

Year.	Public.	Provisional.	Half-time.	House-to-House.	Evening.	Total.
1889	1,671	325	258	92	22	2,368
1890	1,680	333	289	95	21	2,418
1891	1,697	349	300	92	14	2,452

Arranged in classes, according to the average attendance at the end of the year, they are :-

	Class I.	II.	III.	IV.	v.	VI.	VII.	VIII.	IX.	X.	Small. Unclassified.	Total.
1889	30	31	20	45	110	188	181	306	657	263	535	2,368
1890	31	33	20	46	119	179	191	290	632	296	581	2,418
1891	35	35	20	47	118	197	200	309	668	290	533	2,452

#### Accommodation.

As in previous years, the majority of new Provisional Schools were put up cheaply and expeditiously, under the supervision of the Inspectors. These officers also attended to minor repairs, and to the erection of small weathersheds. Their work in this direction comprised:—

				ъ.	
75 new schools	total	cost	5,793	6	2
2 new residences	,,		391	14	6
11 weathersheds	,,				
536 buildings repaired	,,		6,944	6	2

The more important new buildings were, as usual, erected under the supervision of the Departmental Architect, and particulars respecting them will be found in his report.

At the close of 1890 there was sitting accommodation for 204,285 pupils. By the end of 1891 the sittings had increased to 218,940. The following table shows the accommodation in each district:—

District.	Number of places at end of 1891, reckoned at 8 square feet for each child.	Number of places at end of 1891, reckoned at 100 cubic feet of air space for each child.
Armidale	17,150	15,641
Bathurst	15,365	15,311
Bowral	13,583	16,692
Joulburn	18,315	15,193
Frafton	16,520	16,498
Maitland	25,782	26,790
Metropolitan	44.978	57,933
Sub-Metropolitan	22,028	21,829
Wagga Wagga	21,367	20,498
Wellington	12,388	12,555
Total	206,476	218,940

The Inspectors report that the schools are well supplied with furniture, apparatus, and working materials and that the teachers, as a body, take reasonable care of the property entrusted to them. From every district, too, satisfactory reports are received of increased attention being given by teachers and pupils to the planting of school grounds. In the Inspectors' reports appended, special mention is made of several schools distinguished for improvements in this direction.

## Attendance.

THE gross enrolment of pupils in 1891 was 233,719. Deducting 12 per cent. for multiple enrolments the number of individual pupils on the books of the schools was 205,673. The following table gives the enrolment and average attendancefor each quarter of 1890 and of 1891, together with the rates of increase

Quarter.	Enrolment in 1890.	Enrolment in 1891.	Increase of enrolment for 1891.	Average daily attendance for 1890.	Average daily attendance for 1891.	daily	Percentage of increase of enrolment.	
March	167,319	178,751	11,432	106,740.7	123,556.7	16,816.0	6.8	15.7
June	169,318	175,205	5,887	117,331.5	122,246.7	4,915.2	3.4	4.1
September	172,672	181,176	8,504	119,935.8	125,238.0	5,302.2	4.9	4.4
December	172,121	177,980	5,859	122,651·3	119,070.7	Decrease. 3,580.6		Decrease. 2.9
$oldsymbol{\Lambda}$ verages	170,357	178,278	7,920	116,664.8	122,528 0	*9,011.1	4.6	*8:0

^{*} In taking these averages, December quarter has been omitted, the attendance during that period having been seriously interfered with, owing to the outbreak of the influenza epidemic throughout the Colony.

The percentage for each quarter was :-

		Average attendance.				
Quarter.	Enrolment.	Number.	Percentage.			
March	178,751	123,556.7	69.1			
Tune	175,205	122,246.7	69.7			
eptember	181,176	125,238.0	69·1			
December	177,980	119,070.7	66.9			
Year's average	178,278	122,528.0	68.7			

Compared with 1890, the increase on the gross enrolment was 11,855, on the average quarterly enrolment, 7,921, and on the average daily attendance, 5,863.

**Inspection.**

#### Inspection.

No change was made in the staff of Inspectors. As in the previous year, their work was unusually heavy in consequence of wet weather, bad roads, swollen rivers, and the wide-spread epidemic of influenza. When visited for inspection, many small schools were found temporarily closed, or the attendance was insufficient to make an examination a fair test of attainments. In such cases Inspectors had frequently to make their journeys a second or third time.

In schools of more than one department, each department was examined separately, and, for all purposes of inspection, was treated as a distinct school. Altogether, there were 2,662 schools or departments open during the whole or a portion of the year, an increase of 35 on the number in 1890. All received full inspection except 39 small schools that either closed before the time fixed for the Inspectors' visits, or were opened so late in the year as to give the Inspectors no opportunity of inspecting them. The details of inspections made during the last three years are shown in the following table:—

Year.	No. of schools.	No. of schools inspected.	No. of schools inspected twice.	Total number of inspections.	No. of schools not inspected.	No. of pupils examined.	No. of Inspectors
1889	2,570	2,535	848	3,383	35	122,052	32
1890	2,627	2,587	704	3,291	40	127,515	35
1891	2,662	. 2,623	986	3,609	39	132,044	35

#### The particulars for each district stand thus :--

District.	No. of Inspectors.	No. of schools.	No. of schools inspected.	No. of schools inspected twice.	Total No. of inspections.	No. of schools not inspected.	No. of pupils examined.

Totals	1,914	344	294	96	14	2,662

## Attainments of Pupils.

Influenza and wet weather greatly interfered with attendance, and naturally affected the results of examination. All the Inspectors, however, consider that, in spite of these hindrances, both teachers and pupils did good work, and made as much progress as could fairly be expected. Of the 2,623 schools examined, 88 per cent. reached the standard or exceeded it. In 1890 the percentage was 81. As 298, or 11 per cent. of these schools were new, or only open for a portion of the year, the fact that all the schools, with the exception of 315, reached the standard may be accepted as proof of steady progress. The following table shows the proficiency of all schools inspected:—

	Below Standard.	Up to Standard.	Above Standard.	Totals.
Public				
1. In operation a full year at time of inspection	137	220	1,503	1,860

This is a long list of subjects to be studied in Primary Schools, and it is satisfactory to notice that, though disease and bad weather interfered largely with the children's chances of obtaining full instruction in the whole course, the teachers so arranged their work as to bring out more than ordinarily good results in the important subjects of reading, spelling, writing, and arithmetic.

# Discipline.

The Inspectors report that the discipline of schools is almost invariably good. Where this is not the case, the fault is always the teacher's. In all schools pupils are trained to be punctual, industrious, obedient, orderly, tidy, and respectful to their teachers and companions. Even children whose conduct at home or in the streets is rude and unbecoming, adapt themselves naturally and easily to the strict requirements of school discipline.

Drill continues to be used extensively as an aid to discipline. All the male pupil-teachers in Sydney and students at Fort-street are members of the Cadet Corps, and systematic training is given to all pupil-teachers and students, both male and female, in school-drill, calisthenics, infant-drill, dumb-bell and wand exercises, and marching. In the schools these exercises are regularly taught, and are of and wand exercises, and marching. undoubted advantage to the pupils.

# Compulsory Clause of the Act.

The average enrolment for the half-year ending 30th June, 1891, was 176,978. Of this number 22,554 failed to attend school seventy days. The explanations given in regard to 15,413 were considered satisfactory. Of the remainder, amounting to 4 per cent. of the average enrolment, the parents of 1,581 were prosecuted, and cautions were sent in 5,560 cases.

For the half-year ending the 31st December, the average enrolment was 179,578. Of these, 20,700 failed to attend seventy days. The explanations respecting 14,723 were accepted, the parents of 3,928 were cautioned, and legal action was taken in 2,049 cases. The prosecutions, therefore, for the December half-year amounted to 3.3 per cent. of the average enrolment for that period.

It has been pointed out in previous reports that the compulsory clauses of the Act do not invest Attendance Officers with sufficient powers to effectively deal with defaulting children.

#### Staff of Teachers.

At the end of the year there were 4,396 teachers employed, an increase of 247 on 1890. Of these, 3,031 are principal teachers or assistants, 1,297 are students or pupil-teachers, and 68 are work-mistresses. In schools below the second-class, needlework is taught by the female assistants or by the wives of teachers.

The Inspectors' reports on the conduct and habits of teachers and pupil-teachers are, with very few exceptions, favourable. Most of the teachers are respectable citizens, who take a warm interest in their pupils, and do honest, useful work.

The following table shows the number of teachers, together with their classifications:—

	1	A.	ı	B.	п	A.	11	в.	111	Α.	m	В.	III	C.	N	īil.	То	tal.	Total.

# The Training Schools.

Both training schools were in full opera-	tion througho	out the	year. Thes	e were	e in attenda	ınce at :—
Fort-street (male students)	30 seniors		26 juniors		Total, 56	3
Hurlstone (female students)	17 ,,		28 ,,		,, 4	5
Totals	47 seniors		54 juniors		Total, 101	Ĺ

All who matriculate in March of their first year attend the University, and study the University first-year course in Latin, French, English, Algebra, Geometry. Trigonometry, Physics, Chemistry, and Physiography. Those who do not matriculate in March of their first year take up the literary subjects at the training schools, and prepare for matriculation during their second year. All students, whether in attendance at the University or not, have, in addition to other work, to study practical teaching, school management, music, drawing, and drill, and to pass an examination in these subjects. The male students have also to practise carpentry, and to be efficient members of the Training School Military Battalion, which is at present 220 strong. The female students have to pass an examination in needlework and cooking. The following table shows the distribution of students for study:—

		Senior.	Junior.	Total.
Attending Uni	versity—1st year course (males)	18	12	30
,,	1st (females)	12	1	13
,, ·	1st ,, (females)	12	O	12
,,	" (females)	2	0	2
Non-Universit	y students—1st year (males)	0	14	$\frac{14}{27}$
,,	,, 1st ,, (females)	0	27	27
,,	,, 2nd ,, (females)	3	0	3
,,	,, , , ,			
	Totals	47	54	101

With the exception of three first-year members from Hurlstone, and one from Fort-street, the students at the University passed in their respective years. All passed their professional examination in practical teaching, school management, music, drawing, and drill. All the female students passed in needlework, and with one exception, in cooking. In carpentry fifty-one of the male students passed, four failed, and one was unavoidably absent from examination.

The students at Hurlstone live on the premises, but those at Fort-street are non-resident. The Principals and other teachers speak in high terms of the students' attention to duty and study, and their conduct was such that no difficulty was experienced in the government of the colleges. High

High Schools.

No increase or decrease has taken place in the number of High Schools. The following table shows the attendance at each :-

School.	Total enrolment, in 1891.	Average quarterly enrolment.	Average daily attendance.	Amount of fees paid.
Sydney (Boys) ,, (Girls) West Maitland (Boys) ,, (Girls) ,, (Girls)	354 354 63 44 63	282 281 42 41 49	Per cent. 263.5 250.1 35.9 35.0 39.8	£ s. d. 1,953 0 0 1,980 6 0 244 3 10 210 15 3 347 12 7
Total	878	695	624:3	4,735 17 8
The figures in 1890 were	818	669	598:0	4,706 17 4

The enrolment and the attendance show a slight increase on the numbers for 1890.

Under amended regulations some slight modification has been made in the subjects of examination for entrance to High Schools. The changes are in the direction of securing from those who present themselves moderate proficiency in spelling, arithmetic, and elementary grammar. A pupil who has been educated up to the standard of a 3rd Class in a Public, Provisional, or Half-time School, and who has prepared the additional quantity of history or geography set for 4th classes should have no difficulty in passing. This enables parents who desire their children to enter a High School at from 10 to 12 years of age to make arrangements for them to do so. The number, in Sydney especially, who present themselves for examination and pass is yearly increasing. In 1891, out of 943 who attended, 809 passed the examination. Those who pass do not all enter the High Schools, as the parents of most of them are not in a position to pay £2 2s. a quarter for their education. They compete in the hope of gaining a scholarship, and a great number who fail to do this continue at Public Schools or go to work.

All the High Schools were fully examined by the Department's officers. The results as reported.

All the High Schools were fully examined by the Department's officers. The results as reported, are, on the whole, satisfactory, and the Inspectors speak well of the devotion to duty shown by the teachers, and of their warm interest in the work and in the pupils. The following table gives the number of pupils examined in each subject, and the percentage of passes:—

Subject.	·No. examined.			No. examined.	Percentage of passes.
Arithmetic	567	85	Latin	511	82
Mensuration	350	66	French	488	79
Algebra	<b>5</b> 59	82	German	35	80
Trigonometry	115	75	Drawing	454	86
Geometry	417	85	Dictation	429	81
English	582 ⁻	89	Botany	31	100
History	563	92	Greek	11.	82
Geography	424	88	Physics	113	83

All the schools were represented at the annual junior and senior examinations of the University. The passes are shown in the following table:—

	Junior.	Senior.	Matriculation.
Sydney, Boys , Girls West Maitland, Boys , Girls Bathurst, Girls	48 12	3 8 1 3 1	19* 8 2  1 30

^{*} Of these 7 qualified for matriculation at the junior examination.

The new year (1892) opens with increased accommodation for the pupils of the Sydney High Schools. The boys have gone into their new building at Ultimo, and the girls have added the vacated boys' rooms to their own.

The total expenditure on High Schools for the year was £7,913 18s. 5d. Deducting from this sum the amount paid in fees, there is a balance of expenditure of £3,178 0s. 9d., or £4 11s. 5d. per head on the average enrolment.

J. C. MAYNARD. Chief Inspector.

18 February, 1892.

# ANNEX A.

INSPECTORS ALLPASS AND DAWSON'S REPORT FOR 1891.

At the close of 1890, the schools under our supervision were 88 Public Schools and 33 Evening Public

Schools.

Infants' departments have since been opened at Neutral Bay and Croydon Park, while the Infants' School and Kinderg arten School at Fort-street have been combined—the total number of schools being

As a whole the school buildings are in excellent condition. At Leichhardt and Woollahra new school-rooms have been erected, the former for infants and the latter for girls. Both are handsome and commodious structures. The erection of permanent school buildings at Albion-street, Lower Paddington, although much needed, stands deferred.

At Camdenville, Crown-street, Forest Lodge, and Fort-street, commodious class-rooms have been erected, and additions and improvements of varying extent have been effected at Australia-street, Alexandria, Blackfriars, Bondi, Crown-street, Camdenville, Croydon, Croydon Park, Fort-street, Forest Lodge, Hurlstone, Leichhardt, Leichhardt West, Macdonaldtown, Neutral Bay, Naremburn, Willoughby, Pyrmont, Riley-street, St. Leonards East, Sussex-street, William-street, Waterloo, and Woollahra.

The schools are, generally speaking, well situated as regards the population, and provide adequate

Pyrmont, Riley-street, St. Leonards East, Sussex-street, William-street, Waterloo, and Woolfahra.

The schools are, generally speaking, well situated as regards the population, and provide adequate accommodation. Applications for new schools at Edgecliffe, Summerhill North, and Waverley South, have been reported upon during the year, and additional accommodation is contemplated for Macdonald-town and Leichhardt. The schools, allowing 8 square feet per child, afford seats for 23,786, and, allowing 100 cubic feet, for 31,937 pupils. The exterior appearance of many of our schools has been made very attractive by the cultivation of ornamental trees and flower borders. In this respect the following schools are most noteworthy, the names being placed in the order of merit:—Waverley, Bondi, Croydon Park, and Croydon. and Croydon.

Attendance, &c., as shown by the school records:-

•	Enrolment.	Average attendance.	Percentage of attendance.	Free pupils.
March quarter	24,780	17,511	70·5	776
	24,726	17,369	76·0	881
	25,467	17,756	70·0	917
	24,900	17,105	67·5	948

The decrease in enrolment and average attendance in the December quarter is due to the effects The decrease in enrolment and average attendance in the December quarter is due to the effects of influenza. It should be stated that the foregoing percentages are calculated on the total enrolments, but quite 10 per cent. of such enrolments is made up of casual attendances—children who attend for a few days only, but whose names have, by regulation, to be retained on the rolls until the termination of the quarter. Thus taking the March quarter's enrolment, less 10 per cent., the percentage of average attendance is nearly 80. The 89 Public Schools have each received a regular inspection for the examination of the pupils, and also an ordinary inspection for the criticism of the prevailing modes of conduct and instruction. The three Evening Public Schools have each received a regular inspection. As regards general efficiency, the estimates of which are based upon the organisation and discipline of the school and the attainments of the pupils, accepting 50 per cent. as a pass, the following table shows how our schools stand: stand :-

	Below Standard.	Pass.	Above Standard.	Total.
Public Schools	1	3	85	89
Evening Public Schools	•••••		3	3
				92

Number of pupils examined and the percentage of passes in the several subjects of test: --

•			l l	•	Į

The subjects, marked, * show a satisfactory increase in passes as compared with the examination results of 1890. In reading and recitation the improvement in "passes" is calculated to be 5 per cent, in writing 11 per cent, and in arithmetic 5 per cent. Respecting this latter subject, whilst it has been well taught, we have to repeat our emphatic protest against the use of large numbers in the problems the pupils are required to solve.

School Management.—With one or two exceptions the schools are well managed and effectively disciplined. Corporal punishment is, as a rule, judiciously exercised, and few complaints of severity are made. Insufficient attention is however given to the record required to be made in the punishment book. In this respect teachers not only ignore the regulation thereon, but they deprive themselves of a reliable medium of defence when inquiries have to be held respecting the complaints of parents.

We cannot speak too highly of the loyalty and worth of the teachers under our superintendence.

The pupil-teachers, with scarcely an exception, are young people of marked intelligence and promising usefulness.

TABLE showing the classifications of the Teachers and Pupil-teachers.

The Superintendents of Drawing, Music, Drill, and Needlework have been assiduous in their duties, and their visits and instructions have effected satisfactory results.

The work of the Attendance Officers (2) under our superintendence has been effected in a smooth

and unoppressive manner.

During the year 2,737 cautions have been issued respecting defaulting children. The prosecutions were 169, resulting in 156 convictions.

J. W. ALLPASS, Inspectors.

Sydney, 2 January, 1892.

#### ANNEX B.

# INSPECTORS THOMPSON AND PITT'S REPORT.

UNDER our superintendence during the year, there were 39 Public Schools, 1 Provisional, and 3 Evening Schools, comprising 93 departments. Of these, one Evening School was reopened at Smith-street, Balmain; one Public School was established at Rose Bay East, and one Provisional School was opened at Biloela.

# Accommodation.

The places at the beginning of the year were 20,496, and at the end of the year, 21,192; showing (after deducting places lost on certain old buildings) a net increase of 696 places. This increase is due to the opening of new Infants' departments at Redfern and Marrickville, and to the erection of certain additions at Summer Hill and St. Peters.

The accommodation provided may, therefore, be regarded as sufficient for present requirements.

#### Attendance.

The schedule hereunder shows the total enrolment, the average attendance, and percentage of attendance for each quarter during the year:

Quarter.	Enrolment.	Average Attendance.	Percentage.
March	23,609	16,896.0	71.5
June	23,692	16,792.0	70.6
September	24,557	16,969.9	69.0
December	24,005	16,422.4	68.4

This computation does not include the enrolment and attendance at Evening Schools.

# Inspection.

All schools and departments have undergone regular inspection, 49 departments have received ordinary inspection, and every school has been visited at least once, incidentally. Of the schools and departments examined, 4 were below the required standard of proficiency, 37 were up to the standard, and 52 exceeded it.

The following table shows the number of pupils examined, and their proficiency in the prescribed subjects:

Subject	Number examined.	Percentage (on standard of 50 per cent.)
Reading	18,503	76.0
Writing	18,503	70.0
Dictation	16,090	70.0
Arithmetic	18,503	73.0
Grammar	5.719	73.0
Geography	5,719	76.0

To sum up:—The organisation is satisfactory, the discipline well sustained, and the teaching, as a whole, effective. The teachers as a body are attentive to their duties, earnest and assiduous in their work generally.

W. F. THOMPSON, CHAS. JNO. PITT, } Inspectors.

Sydney, January, 1892.

## IANNEX C.

# DISTRICT-INSPECTOR W. DWYER'S REPORT.

During the whole or part of the year 1890 the number of schools in operation was 163, comprehending 190 departments. Twelve new schools have since been established, and the number open during all or any portion of 1891 was 200, distributed in the following classes:—

Public	182	Department
Provisional	10	- ,,
Half-time	6	**
House-to-house	2	,,

At the end of 1890 the total number of places available was 20,097 (floor space) for an enrolment of 18,382 pupils. After calculating the additions and deductions since made, the accommodation now provided shows an increase of 1,949 places and a total of 22,028 places for an entire enrolment (during December quarter) of 19,309 pupils. It thus appears that the means of instruction, as represented by school-rooms, furniture, and appliances are sufficient and suitable, and their distribution through the various centres of population is in fair accordance with the wants and requirements of each.

With the exception of one, all the schools of the district were fully examined; 5 were reexamined; and 36 received an ordinary inspection. Their condition as regards efficiency, ascertained by such inspections, may be stated as follows:—

	Below Standard.	Up to Standard.	Above Standard.	Total
Public Schools open a full year, not open a full year Provisional Schools open a full year , not open a full year Half-time Schools open a full year , not open a full year House-to-house Schools open a full year not open a full year	1 1 	17 3 2 1 	144 1 5  6  2	176 5 8 2 6  2
Totals open a full year	16 2	19 4	157 1	192 7
Totals	18	23	, 158	199

The subjects of instruction, the number of pupils examined in each, and the number of passes per 100, are shown in the subjoined table:-

Subject.	No. of Pupils examined.	No. of passes pe
Reading	14,776	76
Writing	14,482	70
Dictation	10,825	70
Arithmetic	13,692	63
Grammar	5,311	64
Geography	5,309	68
Listory (English)	5,2 <b>45</b>	61
distory (Australian)	1,218	64
Scripture and Moral Lessons	14,507	65
Object Lessons	14,352	66

densuration	377	59
Latin	155	67
Needlework	4,655	71
Orill	14,467	63
Natural Science	270	75

These results may be regarded as satisfactory, though lower than those of last year, a fact which may be explained, in part at least, by the prevalence of influenza and wet weather preventing regular attendance, and often reducing the number of pupils most capable of maintaining the credit of their classes. At the same time it is satisfactory to be able to state that the number of schools which have reached or surpassed the standard shows a considerable increase—the proportion being 91 per cent. For 1890 it was 86 per cent. was 86 per cent.

was 86 per cent.

In the matter of organisation the schools generally are free from serious defect. For the most part teachers are familiar with the essential points and conditions of efficiency, and hence are able to fit their schools for work with fairly satisfactory care, judgment, and success. There is, however, in this connection, one important point sometimes overlooked or not sufficiently attended to, and that is classification. Although imbued with the laudable desire for their pupils' progress and their own, teachers often omit to ascertain with any measure of exactness what the children know. These are placed in, or promoted to, a class for which their attainments and capacities do not fit them; and, such being the case, they spend the remainder of their time learning little or nothing of the prescribed subjects, and, as a natural consequence, fail ignominiously on the day of examination. Another cause of failure is insufficient teaching arising from too minute a subdivision of classes; but the most general and fruitful cause is that of over-teaching. Some teachers appear to be of opinion that the best and most effective method is that of constant effort and worry, incessant questioning, impatience of delay on the part of the pupils, and the suggestion of a word or syllable when the answer is not promptly forthcoming. But this is attended with several serious disadvantages, especially that of leaving the dull pupils hopelessly behind from lack of effort, and of stimulating only the attentive and intelligent, who are always ready and willing to work. Some appear to be satisfied with answers from a few pupils, the majority of the class evincing little or no evidence that the subject treated of is received and understood. This last undesirable result can be obviated only by skilful, impartial, frequent, and searching examination by the teacher; and the practice, I am glad to say, prevails in all the efficient schools of the district, none being more convinced than the teachers themselves of its value and

Discipline, including drill, is generally good, as far, at least, as regards its external manifestations. The pupils for the most part march well and go through the various exercises with commendable ease, precision, and alacrity. It is to be observed, however, that, in some cases, modesty of demeanour and respectful manner and address are not conspicuous features of character.

The teachers employed in the district are classified as follows:-

Class I A	4
" I B	14
" II A	69
" II B	41
" III A	75
" III B	22
" III C.	7
Unclassified	30
Onclassined	90

,, 2	23
, 3	39
,, 4	68
On probation	3
L	
Total	163
_LU1244	10.3

They are all persons of respectable character, and maintain a becoming position in society, for the most part are devoted to their work, earnest and zealous in performing it, and prompt in adopting and applying improvements. The pupil-teachers are well reported of, manifest satisfactory attention to their studies and school duties, render steady obedience to their superiors, and give promise of attaining a high degree of efficiency and usefulness both in their present and future positions.

The schools of this district, judged by their condition and circumstances as herein set forth, may be fairly accredited with having attained, on the whole, a satisfactory degree of success, and it is only reasonable to expect that they will sustain their high reputation during the year now entered upon.

WM. DWYER,

Sydney 14th January, 1892.

Sydney, 14th January, 1892.

District Inspector.

#### ANNEX D.

# INSPECTOR HOOKINS' REPORT.

At the expiration of the year 1890, there were in operation 63 Public, 4 Provisional, 4 Half-time, and 1 House School. To these must be added the Girls' Industrial School, at Parramatta.

During the past year, 1891, the following schools have been in operation: Provisional..... ,, Half-time ..... House..... school

In all, 56 schools, or 72 departments.

One House School was converted into a Provisional; 2 House-to-house Schools were converted into Half-time Schools; and 1 Public School was temporarily closed, waiting the appointment of a

New buildings, of a modest character, have been erected at Middle Dural, and Olive Mount, under inspectoral supervision, and of a more important character at Galston and Nelson, by the architect.

Repairs of a more or less important character have been done at the following schools:—

Cranebrook Dural Maroola Llandilo Blacktown Lower Portland Mangrove Creek.

Toongabbie Woodstock Pitt Town

Parramatta, Superior

Nelson Vineyard Dundas Galston Penrith, Superior Freeman's Reach Australian Farm

Industrial School at Parramatta (Girls).

#### Accommodation.

At the commencement of the year there was sitting room for 5,242 pupils.

## Inspection.

Seventy-one schools were fully or regularly inspected; one was not; it being temporarily closed at the time of the Inspector's visit to the neighbourhood. Ordinary inspections were held of 6 schools. The following table shows the work of inspection done:—

•	Public.		Due

Totals	4,903	3443.8	69 4	70.2	

Average enrolment, 1890 = 4,742 pupils; average attendance = 3293.9.

# Organisation.

ABBOB DAY ceremonies, inaugurated in 1890, were continued in 1891, and tree planting was pursued vigorously. Those planted last year, shade trees mostly, are in sound health. Every school ground, that is securely enclosed, has now been planted with trees suitable to the soil and the aspect.

The interval condition of nearly all the schools is satisfactory. They are well provided with needful school material, and the Minister's property is well guarded by the teachers generally.

On the whole, the pupils are classified with very fair judgment; they are quiet and courteous in demeanour, and everywhere prepossessing in appearance.

Teaching

#### Teaching Staff.

Seventy-nine teachers and thirty pupil-teachers are now employed in this sub-district, classified as shown in the following table :--

	Class I.		Class III. Class III.		Class II.		Class III.			
	А.	В.	А.	В.	A.	В.	c.	Not classed.	Total.	
Male	1	1	10	11	25	4	2	2	56	
Female	1		4.	2	4	4		8	23	
Total	2	1	14	13	29	8	2	10	79	

Work-mistresses are employed at the Parramatta and Penrith Superior Schools; in other schools sewing is taught by the wife, or other female relative of the teacher.

The following table shows the classification of the pupil-teachers:-

	Class I.	Class II.	Class III.	Class IV.	Probationers.	Total.
Male	1	2	3	6		12
Female	2	4	4	7	1	18
Totals	3	6	7	13	1	30

Examinations of teachers and pupil-teachers were held as usual in the months of June and December, and of applicant pupil-teachers in September.

Candidates for bursaries, scholarships, and for entrance to High Schools were examined in

December.

The results of the examination of pupil-teacher applicants are of a fairly satisfactory character.

Those of the others are not yet determined.

I have with pleasure to record that both teachers and pupil-teachers have worked industriously and intelligently during the past year, although, on account of sickness, their efforts have not met with

## Discipline.

Very fair order is preserved on the whole. Military drill is taught in the larger schools with good results, while in the smaller schools drill is limited to the ordinary school exercises.

# Summary.

 Seventy-five seats were lost this year by removal of schools to another district.
 The enrolment has increased by 161 pupils, and the average attendance by 8 per cent.
 Results of inspection show an increase of schools passed of 42 per cent, but results in the subjects of instruction a decrease averaging 20 per cent., through sickness prolonged through many months. 11th January, 1892. CHARLES HOOKINS.

## ANNEX E.

## INSPECTOR SKILLMAN'S REPORT.

AT the end of 1890 there were in this section of the Sub-Metropolitan district 64 schools, comprising

47 Public Schools in 63 departments, and 1 House School.

At the beginning of this year 9 schools (12 departments) were placed in this district, while 3 schools (7 departments) were transferred from my supervision to that of other inspectors.

Schools placed in this district in 1891:-

Arneliffe Public Bexley Blakehurst Blakehurst "
Bossley Park Public
Kemp's Creek Provisional Kogarah Public (2 departments) Rockdale ,, (3 ,, ) Sandringham Public Sylvania Public

Schools transferred from this district in 1891:-

Richmond Public (2 departments) ,, (2 ,, (3 ,, (3 St. Mary's Windsor

New schools have been opened at Auburn North, Keiraville, and St. John's Park.

The attendance at Sylvania has become so small that it has been decided to close the school.

At the end of 1891 there exist, therefore, in this district, 54 Public Schools, in 69 departments;

1 Provisional School; 1 House School. Total, 71 schools.

In January next a girls' department will be opened in connection with Kogarah Public School, and new schools are to be established at Austral (Hoxton Park) and Hurstville West.

Hereunder

103

Hercunder is a list of the new school buildings completed during the year :-

Schools.	Under whose supervision.	Object.	Places provided.
Auburn North Helensburgh Keiraville Kogarah	do	New school	255 135

An addition to accommodate 125 pupils has been made to the school-room at Hurstville.

The following table shows the accommodation for pupils provided in this district:—

	Seats reckoned at 8 square feet for each child.	Seats reckoned at 100 cubic feet for each child.
Seats provided at end of 1890	1,055	8,880 1,022
by addition	3,057 2,002	3,363 2,341
Total places at present	10,302	11,221

The enrolment of pupils at the end of December quarter was 9,167, so that the accommodation as a whole is more than sufficient for the number of children attending our schools in this section.

There are one or two cases of overcrowding, but as soon as the necessary funds are available increased accommodation will be provided at these schools.

New buildings are being, or are to be, erected at Austral, Fairy Meadow, Hurstville, and Hurst-

ville West.

The school-rooms and teachers' residences in several places have been repaired and improved during the year by the architect, but in many instances needed works have had to be postponed, in consequence of the straitened condition of the building fund. Minor repairs, costing £99 17s. 3d., have been executed at 22 schools under the inspectors, or local supervision.

Petitions for the establishment of new schools at the following places have been received during 1891, with the results specified hereunder:-

Place, Austral	Result of inquiry. Public—granted.
Kingsgrove	Not finally dealt with.
Moorbank Mount Kembla (The Flat)	Declined.

Land for new school sites has been obtained at Austral, Carlton, and Hurstville West, and the grounds at Bulli North, Fairy Meadow, and Guildford have been enlarged by the acquisition of additional areas.

## · Attendance.

In all, 72 schools have been in operation during 189!—70 being in existence for the whole year, and 2 for only a portion thereof.

The total enrolment of pupils has been 12,213, and the average attendance for the year, 6,278.9.

The average attendance for the four quarters was:—

Quarter.	Boys.	Girls.	Total.	Enrolment.	Percentage.
March June September December	3,294.4	2,966 2 2,885·4 3,019·0 2,812·8	6,312·4 6,179·8 6,456 7 6,029·0	9,165 9,055 9,394 9,167	68·8 68·2 68·7 65·7

The prevalence of influenza militated against the regular attendance of pupils, especially during the December quarter.

## Inspection.

All the schools in the district were regularly inspected, 4 were fully inspected a second time, and 25 received an ordinary inspection.

I did a fortnight's work in the Wellington district, or more ordinary inspections in this section would have been made.

Taken as a whole, the schools in this district are correctly organised; due care is taken of

Taken as a whole, the schools in this district are correctly organised; due care is taken of departmental property; and the records are wellkept.

In most of the grounds some trees and flowers have been planted, and in several instances with very creditable results. The teachers and pupils at Granville North deserve praise for having the best school gardens in my district.

Arbor Day was celebrated at many schools. Liverpool Public School was honored by the presence of Lord and Lady Jersey at the ceremony of tree-planting.

The discipline is a satisfactory feature in the schools. In nearly all cases the order maintained is good, and a healthy tone exists.

In some schools there is a lack of punctuality, and in others children have a habit of leaving school before the proper closing hour, on what seem to me frivolous pretexts. These defects need to be remedied by firmness on the part of teachers.

Twelve

Twelve schools in my section have Cadet Corps, or detachments, and, in nearly all, increased attention is given to drill.

The following table shows the condition of the schools in relation to the standard. For the purpose of comparison the figures for 1890 are also given:—

Below S	tandard.	Up to St	andard.	Above S	tandard.	Tot	al.
1890.	1891.	1890.	1891.	1890.	1891.	1890.	891
11	12	10	17	43	43.	64	72

Seven more schools reached the standard in 1891 than in 1890.

The number of pupils examined, and the percentage of those who satisfied the standard, are given

Subject.	Number of Pupils examined.	Percentage up to or above Standard.
Reading Writing Dictation Arithmetic Grammar Geography History—English Australian Scripture Object Lessons Drawing Music	7,122 7,122 5,129 7,122 2,593 2,593 2,593 716 7,122 7,106	80·1 74·3 71·4 66·6 71·1 71·3 64·7 62·1 68·8 70·9 62·0 65·4

At the competitive examination held in December, 1890, Scholarships and Half-scholarships were won by First-class Pupil-teachers from the undermentioned schools:

Schools.	Scholarships won.	Half-scholarships won.	Total.
Parramatta South Liverpool Bexley	3 1 	 1 1	3 · 2 1
Totals	4	2	6

The teachers of this district are exemplary in their conduct, and endeavour to the best of their ability to perform their duty to the department and to the public.

To sum up

The Kogarah section of the Sub-metropolitan District is well supplied with schools, which are, on the whole, satisfactorily conducted. More schools have reached the standard than in 1890, and steady progress is expected during 1892.

H. SKILLMAN,

Kogarah, 31st December, 1891.

Inspector.

# ' ANNEX F.

## DISTRICT INSPECTOR BRADLEY'S REPORT.

## I .- Schools and School Establishment.

During the year 1891 new schools were brought into operation in this district in the following localities:—Argenton, Blair Hill, Boonaldoon, Darby's Branch, Dundee Railway Station, Glenarm, Hermitage, Keepit, Loanga, Millie West, Narrabri (Girls' Department), New Gunyerwarrldi, Niangala, Oakleigh, Piallaway, Pinewood, Puddledock, Spring Vale, Strathbogie, Terrible Vale, Tiara, Tintot, and Upper

As, however, about a dozen small schools lapsed through paucity of attendance, the net increase for the year is 12, giving a total for 1891 of 297 schools, which are classified as follows:—196 Public, 60 Provisional, 24 Half-time, and 17 House-to-house.

Applications for the establishment of schools at Crinoline, Currigundi, Kangaroo Camp, King's Plains, Mungindi, Rock Vale, Sunnyside (near Elsmore), Tamworth (West end), and Tareela are still under consideration, and a fair increase in the school roll may be anticipated for the coming year. At present, so far as I am aware, the educational requirements of the district are well met, and any new wants will be promptly supplied.

#### II.-School Buildings, &c.

In all, 13 new school buildings have been erected and furnished under the supervision of the inspectoral staff of the district, at a total cost of £968 17s. 9d. Enlargements and general repairs, costing £818 6s. 4d., have also been effected, and works (eight new buildings and repairs to four old ones) are still in progress, involving an expenditure of £446 13s. The total outlay on works arranged for and supervised by the inspectors will thus somewhat exceed £2,200: Paucity of funds available for building purposes necessitated curtailment of outlay on repairs and improvements at a comparatively early date in the year; and much in this direction that has been recommended for execution has had to stand over for accomplishment during the coming year. On the whole, however, the condition of the school buildings in essential points is reasonably good, and the equipment, as regards furniture and working appliances, is adequate to requirements.

Calculated (1) at 8 square feet of floor space and (2) at 100 cubic feet of air space per child, the sitting accommodation for 1890 represented 16,217 and 14.768 "places," respectively. The net increase of places during 1891 (933 at 8 square feet, and 873 at 100 cubic feet) brings the present totals up to 17,150 and 15,641. As the maximum enrolment of pupils does not exceed 13,000, it is obvious that the school-rooms of the district provide amply for the accommodation of the children. There are a few cases in which slight overcrowding occurs, and others in which, from decadence of population, some school-rooms are but half filled. As a rule, however, the excess of accommodation over actual requirements is fairly distributed.

ments is fairly distributed.

# III .- Inspection.

No change has taken place in the inspectoral staff of the district during the year. Quirindi has recently been made head-quarters for the Southern Section, in lieu of Gunnedah, and the change is likely to prove advantageous in all respects—much more convenient for the inspector in charge, and more economical to the department as a centre of operations. Notwithstanding hindrances occasioned by the exceptionally large number of school applications to be dealt with, and the adverse weather which prevailed for several months of the year, the record of inspection work stands higher than that for any previous period. Of the 297 schools that were in operation during the whole or part of 1891, all but 3 received full inspection. The 3 schools that were not inspected had a total ordinary attendance of but 15 pupils, and died out before they could be visited in the regular course. Besides the 294 regular inspections, 88 ordinary inspections have been made, the greater number of which (60 per cent.) go to the credit of Mr. Inspector Parkinson.

In point of general efficiency which takes into account not only the attainments of the pupils, but

In point of general efficiency which takes into account not only the attainments of the pupils, but also the condition of a school as regards its discipline and the organisation so far as the teacher is accountable, 50, or 17 per cent. of the number examined, failed to satisfy standard requirements; while 234, or 83 per cent., reached or exceeded the standard. In 1890, 21 per cent. fell below the standard, and 79 per cent. met or passed its requirements; so that, for 1891, increased efficiency to the extent of 4 per cent. is apparent. This improvement is the more creditable in view of the fact that the influenza epidemic disturbed school attendance very considerably, and for weeks at a time prostrated most of the children and not a few of the teachers.

Taking the attainments of the pupils alone into account the profesence of disclosed at increasion.

Taking the attainments of the pupils alone into account, the proficiency as disclosed at inspection shows improvement in drawing, history, music, and drill. Reading, writing, dictation, Scripture, and needlework rate about the same as for 1890; while in the case of the remaining subjects of instruction some degree of retrogression has to be recorded. Taken as a whole, the results are very fairly satisfactory, specially when it is remembered that sickness was most prevalent among the children during the portion of the year when the work of inspection was most active. of the year when the work of inspection was most active.

The following table shows the proficiency of the pupils in all subjects of instruction, and indicates the degree of progress or retrogression relatively to the corresponding record for 1890:—

	Estimated Proficiency.

# IV.—Teachers.

Within the year, three teachers have been dismissed for offences more or less grave; but, as a body, the teachers deserve credit for their exemplary conduct, and for the earnest and efficient discharge of duty, in many cases under circumstances of the most adverse character, and with surroundings uncongenial and depressing. The yearly attendance at examination has been satisfactory, and the number of unclassified teachers is steadily diminishing. Except in one or two instances, the staff of pupil-teachers is adequate, and almost invariably their character for obedience, diligence, and usefulness is favourably reported upon by the principal teachers of the schools in which they serve.

J. D. BRADLEY,

District Inspector.

#### ANNEX G.

#### INSPECTOR BLUMER'S REPORT

-Adequacy of the Means of Education as regards Distribution and Amount.

The returns for the last quarter of 1890, showed that 71 schools were then under my supervision.

The Provisional School at Bobby Whitlow Creek, and the Half-time School at Wood's Reef did not reopen; and 5 others—Reedy Creek, Public; Oakey Creek, Provisional; Woolshed, Provisional; Rockmore, Half-time; and Cobbadah, House-to house, have since been closed on account of small

During the year the following new schools were opened:

Niangala (Public), Boonaldon, Loanga, Tiara, Upper Bingara (Provisional), and New Gunyerwarildi (House-to-house). • There are therefore in operation at present 47 Public, 17 Provisional, 2 Halftime, 4 House-to-house. Total, 70 schools.

Twenty-six applications for the establishment of new schools were received and dealt with as

stated hereunder ..

Place.	Kind of school.	Result of application.
Mungundi Niangala Nywung Tamworth (west end) Bereen Bogamildi Boolooroo Central Manil'a Crinoline Currigundi Duncan's Creek Emu Creek Gineroi Goldsworth Haning Hoskinson Creek Loanga Lochiel Lipson Moor Creek, Upper North Cuerindi Tareela Fairview and Hall's Creek Abington New Gunyerwarildi	Public	Under consideration. Granted. Granted. Under consideration. Granted. Under consideration. Granted. House-to-house granted conditionally. Under consideration. Under consideration. Refused. Granted.

Three of these are now in operation, 7 will open soon after the vacation, and 3 probably a little later in the year. Two that were granted conditionally are not likely to be established. In the case of those "under consideration" the applications were received too late in the year to admit of inquiry and report.

. It is impossible to say from where the next request for a school will come. At present I know of no locality where due provision has not been made for educational requirements.

# II .- The Actual Condition of the Schools, as elicited by Inspector.

The unusually large number of applications for schools, which arrived at irregular intervals from the most remote portions of the district, necessitated inquiries that materially retarded the actual work of

Reedy Creek (Public), and Rockmore (Half-time), were closed before visits could be paid, but all other schools in operation during any portion of the year were fully inspected. For the inspection of Mount Russell (Public), I am indebted to Mr. Inspector Beavis.

In all, 73 regular, and 17 ordinary inspections were held. Numerous incidental visits were also made as opportunities offered.

During the year much has been done to improve the school grounds by tree-planting, and in most cases the efforts made have been fairly successful.

At Bingara and Warialda, additional land has been secured by resumption; and wherever practi-

The school buildings are in a fair state of repair, and are in general well looked after by the teachers. As regards equipment, the furniture is suitable and adequate, and the stock of books and apparatus sufficient, and in good order. Improvement in connection with records and lesson-guides still continues, but even now the entries in the latter are often not sufficiently detailed and precise.

As in previous years, the discipline is very satisfactory. Except in rare instances, fair, kindly government, and careful supervision, have resulted in punctuality, neatness, orderly conduct, and prompt obedience. Efficient cadet corps exist at Tamworth (Superior), and West Tamworth, and military drill is taught in most of the schools with degrees of success proportionate to the practical knowledge of the

# Actual Condition of the Schools as shown by Inspection.

Year.	Number of schools inspected.	Up to or above standard.	Percentage up to or above standard.
1890 1891	mo.	54 63	73· 86·3 13·3

The work of 1890 was much impaired by irregular attendance during a long period of wet weather. The advance made during the present year may be largely attributed to the more favourable conditions under which the teachers wrought.

The schools below standard are nearly all small ones under the charge of untrained and inexperienced teachers. Of those above standard, the most noteworthy are Tamworth (Superior), and Manilla (Public)

Manilla (Public),

Proficiency of Pupils in the respective subjects compared with that of last year, 1890.

Subjects.	Percentage of Pupils up to or above Standard.		Increase (+) or Decrease (-)
	1890.	1891.	during 1891.
Reading	87· <b>7</b>	89.1	+ 1.4
Writing	90.4	<b>91</b> ·8	+ 1.4

Grammar	<b>86·1</b>	88.3	+ 2.2
Geography	89.9	90.7	+ 2·2 + ·8 - 1·3
History—English	82.1	80.8	
HistoryAustralian	87.2	91.4	+ 4.2
Scripture and Moral Lessons	95·5	93.9	— 1·6
Object Lessons	88.7	88.2	'5
Drawing	73·5	82.9	+ 9.4
Music	57.4	70.2	+ 12.8
French	50.	52.2	+ 2.2
Latin	92.9	71.4	<b>—</b> 21·5
Euclid	92.8	69:4	23·4
Algebra	100	100	=
Mensuration	100	46	54
Natural Science	100	· 100	=
Needlework	95.1	97.5	+ 2.4
Drill	57.9	66.9	+ 9.0

Increased proficiency is apparent in all the most important subjects except arithmetic. Although the results in this subject are lower than those of the preceding year, yet they are higher than those of 1889. Special attention was directed to arithmetic at each inspection, and there is reason to believe that substantial improvement will be made during the coming year.

III.—Adequacy of School Accommodation.

	Allowing each Pupil.	
	8 square feet.	100 cubic feet.
Accommodation existing at end of 1890	4,147 287 531 244 4,418	3,913 203 416 213 4,126

The largest enrolment for any quarter of 1891 was 3,345.

In the aggregate the accommodation provided is in excess of the enrolment, and I know of no school-room, that is too small for the number of pupils in attendance.

Under the supervision of the architect, new school-rooms, to replace old ones, were completed at Colonna, Woolomin, and Yallaroi, and extensive additions have been made at Walcha and Pallamallawa. A new residence has also been erected at Barraba.

New school-rooms were provided under the superintendence of the Inspector at Niangala, Rywung, Goldsworth, Hoskisson's Creek, North Cuerindi, Tiara, and Loanga, and the buildings at Tia and Yarrowyck were removed to more central sites. At Bereen and Boolooroo small school-rooms are in course of erection.

Numerous necessary repairs and improvements have been effected by architect and inspector as

Numerous necessary repairs and improvements have been effected by architect and inspector as occasion arose.

## IV .- Teachers.

Pupil-teachers are required at Bendemeer and Moree, and as no local candidates are forthcoming

the staff at each place is incomplete.

The want of suitable male teachers for small bush schools has been felt during the past year, but it is expected that this difficulty will be overcome before the end of the present vacation.

One teacher was dismissed for misconduct, but, as a body the teachers are intelligent, earnest,

V.—Summary.

The increased educational requirements of this section of the district have been fully met by rearrangement of existing schools and the establishment of new ones.

Satisfactory progress has been made by the pupils, and the prospects for 1892 are quite as encouraging as were those for any former year.

Tamworth, 30th December, 1891.

## ANNEX H.

# INSPECTOR BEAVIS' REPORT.

OF the 82 schools which remained in operation in the Glen Innes Section up to the end of 1890, only 78 resumed work after the Christmas vacation; the schools at Redbank and Oban were permanently discontinued, and those at New Valley and Ollera remained closed for several weeks in the new year.

During 1891, 7 new schools have been established, viz., Argenton, Blair Hill, Darby's Branch, Dundee Railway Station, Furracabad, Strathbogie, and Tintot; the Sapphire school which had been closed for about six months was reopened in March; and the number of schools in the section has been further increased by two, Glencoe and Stonehenge, retransferred from the Armidale Section.

Several schools have undergone change of rank. Glen Inues has been made Superior; the schools at The Scrub, Bluff River, and Wandsworth have been converted from Provisional to Public; and Swan Peak opened as a House School has, since its location has been slightly altered, been ranked as Provisional. On the other hand the Public Schools at New Valley and Ollera have been reduced to Provisional status.

The complete list of schools in operation for the whole or any portion of the year 1891 includes,—

67 Public. 20 Provisional.

2 House-to-house.

Four Provisional Schools—Beardy Bridge, Clive, Kulki, and Wandera—have failed through paucity of attendance; and the Public Schools at Clearbank and Stanborough are, from the same cause, likely to be discontinued after the vacation. The effective schools with which the work of 1892 will be commenced are.—

65 Public.
16 Provisional.
2 House-to-house.

These will be added to at an early date, by the establishment of Provisional Schools at Severn (near Dundee), and Rivertree, and Half-time Schools at Wandsworth Creek and Moredun.

Applications for the establishment or resuscitation of schools have been particularly numerous during the year, and have involved much travelling and clerical work. Applications for schools at Sunnyside (near Elsmore), Kangaroo Camp, and King's Plains are still under consideration.

No new school-buildings of any importance have been erected during the year, and in very few cases have additions or repairs been effected. The material condition of the schools cannot, therefore, be said to have improved; indeed several of the better buildings have already suffered from the want of timely renovation, and they must become materially depreciated in value if not soon attended to. The schools have been very fairly supplied with books and the more indispensable working appliances.

Inspection work has been more extensive and complete than it was in the previous year, but has fallen below anticipations formed at the end of 1890. Every school has been fully inspected once, and 14 have received ordinary inspection; incidental visits have been made as occasion offered. Sixty-three of the schools were above the standard, 8 up to, and 18 below it; the percentage satisfying the standard being 80—an increase of 8 on the percentage of last year.

3,012 pupils were examined. The results of inspection in relation to the subjects taught are shown hereunder in comparison with the figures for 1890.

Reading         81           Writing         85           Dictation         66           Arithmetic         82           Grammar         79           Geography         88           History—English         77           History—Australian         96           Scripture         85           Object Lessons         86           Drawing         72           Music         82           French         82           Euclid         100           Algebra         100           Mensuration         100           Latin         Trigonometry	standard. At the Emmaville, Glen Innes, and Inverell Schools the course of instruction included 5th class work, and pupils were successfully prepared for the University Public Examinations. The passes were 3 seniors, and 14 juniors. Of this number, 3 seniors and 7 juniors were from the Emmaville School, which has also the merit of being this year the school on my list of highest general efficiency.

which has also the merit of being this year the school on my list of highest general efficiency.

The few ordinary inspections held have further proved what has been so often urged, how desirable it is that every school should at least once a year be observed in its customary working. These have revealed that in many instances the organisation fails to provide for the constant and profitable occupation of all the pupils, that the discipline, while generally effective in securing order in the school arrangements, is not applied with equal success to the mental efforts of the pupils, and that the instruction frequently wants definiteness, and is not measured in its results by a sufficiently high standard of excellence. Yet, throughout the schools generally there are not wanting indications that the teachers give more than perfunctory attention to their duties. The holding of school picnics, the enthusiastic celebration of "Arbor Day," the adornment of the grounds in settled places with flower gardens, and the clearing of the sites at the more remote schools, may fairly be taken as evidences of unselfish zeal, when it is remembered that the promoters of these movements are in constant expectation of removal. The annual inspections, too, often reveal minor circumstances which show that the teachers are interested in their pupils individually. Under such conditions the schools become increasingly popular.

Particulars of the accommodation afforded in the schools may be gathered from the subicined

Particulars of the accommodation afforded in the schools may be gathered from the subjoined summary:—

	Number of Places allowing each Child.		Highest Quarterly
	8 square feet of Floor Space.	100 cubic feet of Air Space.	Enrolment (March quarter) during the year.
Accommodation at the end of 1890 Places lost by closing of schools, &c Places gained Increase Accommodation at the end of 1891	169 244 75	4,681 118 195 77 4,758	3,979

New accommodation is shown hereunder .-

Argenton Dundee Railway Station Strathbogie	30	21 21 17	New School	*		

#### Summary.

Seven new schools have been brought into operation during the year, and 1 closed last year has been revived; 5 have been closed, and 2 are likely to be discontinued; 3 are in progress towards establishment. The schools are generally more efficient than they were last year, and the teachers continue to be zealous in their work. A satisfactory record for 1891 gives favourable promise for 1892.

W. BEAVIS,

4th January, 1892.

Ínspector.

### ANNEX I.

### INSPECTOR PARKINSON'S REPORT.

At the close of 1890 the schools under my supervision were classified thus:-

41 Public.

14 Provisional. 2 Half-time.

10 House-to-house.

Nowley Provisional was not re-opened in 1891, and the following charge have been made in existing schools:--

Quirindi			
Narrabri (two departments)	.,,		
Narrabri (two departments) Somerton	Converted from Prov	visional to Public.	
Galathara Road	**	11	
Rotherfield	;;	**	
Gunnenbene	Converted from Publ	lic to Half-time (now worked in conne	ction
	with Keepit).		
Molley	Converted from House	se-to-house to Provisional.	
Sugarloaf	••	,,	
Sugarloaf	Converted from House	se-to-house to Half-time.	
Milchomi and Cashel	29	,,	
Apple-tree Clump	Separated from Molle	ey, and forming with a new station a H	ouse-
	to-house School.		

The following new schools have been brought into operation during the year:-

Timilio.	TATION.
Terrible Vals	Provisional.
Piallaway and Oakleigh	
Keepit	" (worked with Gunnenbene).
Spring Vale	House-to-house.
Pînewood	23
Millie West	••

The last-named school has again been closed owing to the small attendance.

The following new schools have been granted and will no doubt commence work early in 1892:-

Name.	Kind.
Walhallow	. Provisional.
Bullowa Creek	., ,,
Rective	TT-1C Aims

The foregoing information may be thus summarised:-

Schools in operation at the close of 1890	7 1 8
School not re-opened in 1891	1
	2
Increase in number of schools caused by changes in existing schools	•
New schools brough into operation during 1891	7
School closed during 1891	1
New schools granted but not opened in 1891	4
Schools in operation during any part of 1891 76	
Schools in operation at the close of 1891	

This section of the Armidale district is large and sparsely populated. It is, however, well provided with the means of education. Selectors settle their families sufficiently near each other to obtain the establishment of schools; while squatters appear anxious for the education of their employees' children, and arrange for the residence of married men within easy access of a school. Of course there are some families too remote from any centre to enjoy the educational advantages provided by the Government, but it is gratifying to note that in most of these cases private tuition is provided.

The number of inspections made during the year was 129. Each of the 76 schools in operation received a regular inspection, 6 of them received a second regular inspection, and 47 received an ordinary inspection. Of the 23 schools not visited a second time, many were very remote from head-quarters, and some of the others were at work for a part of the year only. Most of these schools would, however, have been reinspected but for the very wet weather which prevailed from June to October. Of the 76 schools examined, 11 were below standard and 65 above. That is, about 85 per cent. of the schools were found to be above standard requirgments. The same percentage was obtained in 1890, so that, notwithstanding the opening of a number of small schools, the efficiency of last year has been maintained.

The following table shows the efficiency of the schools more in detail:-

Below standard (less than 50 per cent. of marks)	11
Between standard and fair (from 50 to 6) per cent.)	42
Between fair and very fair (from 60 to 70 per cent.)	17
Above very fair (more than 70 per cent.)	6

The 6 schools receiving the mark last named are (in order of merit) Nundle, Quirindi, Pillaga'

Gunnedah, Boggabri, and Narrabri West.

At the ordinary inspections the pupils were tested in the four principal subjects, while the teachers' methods of giving oral lessons were carefully criticised. Organisation received special consideration.

Lesson guides were strictly examined, and the absurdity of subdivision of classes was pointed out. As many of the ordinary inspections were paid at schools under the charge of inexperienced teachers, and as

many of the ordinary inspections were paid at schools under the charge of inexperienced teachers, and as the utmost pains were taken to correct errors and improve methods, it is hoped that considerably better results will be obtained next year.

In some of the larger schools the range of instruction has been raised by the formation of fifth classes. Such classes were examined at Quirindi, Narrabri (both departments), and Gunnedah, and the range of instruction at Nundle was also that prescribed for Superior Schools. The school last named was the only one in the district represented at the University examinations. Four candidates were presented and all were successful. In all the centres of population, successful candidates for the office of pupil-teacher were obtained; 2 senior pupils from Quirindi passed the examination required for admission to High Schools (one boy gaining a scholarship), and 2 girls from Bowling Alley Point secured bursaries, and are now continuing their studies at High Schools. These remarks show that the leading teachers of the district are alive to the necessity of maintaining a high standard in their schools.

The following table shows a comparison for the years 1890 and 1891 in the percentage of passes in the various subjects of school instruction :-

Subjects.	No. of children examined in 1891.	Percentage of Passes in 1891.	Percentage of Passes in 1890.	Increase or decrease per cent.
Reading	2,539	85	86	1
Writing	2,539	89	94	_ 5
Arithmetic	2,539	77	87	- 10
Dictation		69	75	- 6
Gran mar		- 77	93	- 16
Geography		86	92	- 6
English History	323	78	83	5
Australian History	59	100	89	+ 11
Scripture Lessons	2,224	83	83	=
Object Lessons	2,254	87	89	2
Drawing	2,394	80	67	+ 13
Music	1,979	66	72	- 6
Mensuration	97	62		
Euclid	81	76	75	+ 1
Algebra	• 37	89		
Litin	33	81		
French	24	75		
Necdle-work	917	94	92	+ 2
Drill		92	64	+ 28
Natural Science		100	100	=

In most of the subjects the percentages of passes are somewhat below those for last year. The schools are not in my opinion less efficient than formerly, but a number of new schools were opened during the year, some schools below standard were reinspected, and 401 more pupils were examined in 1891 than in 1890.

The accommodation provided for the children in this district is considerably more than what is actually required, and it is so well distributed that there is scarcely a school that does not provide the necessary room for the pupils in attendance. The following table will show the accommodation in

	Allowing fo	or each child
	8 square feet.	100 cubic feet.
Seats provided at the close of 1890. Seats lost during 1891 Seats gained during 1891 Increase for 1891 Seats provided at the close of 1891.	4,014 247 752 505 4,519	3,463 181 662 481 3,944

The highest enrolment during the year was 3,185, and the highest quarterly average 2,209.2; so that some hundreds of places over requirements are provided.

The seats lost during the year were .-

Walhallow (new school)	60 60	29 29 29 29 29	21 21 21 21 21
İ	240	116	84

Repairs were effected at 17 schools and 3 residences during the year. The work at 5 of these schools and 1 residence was carried out under the direction of the architect; at the other places I supervised the work. It will thus be seen that existing buildings have been kept in good repair, and new ones provided where necessary. The material condition of the largest schools, too, has been improved by tree-planting and flower gardening. The celebration of Arbor Day last August was entered into with spirit and enthusiasm by many teachers, and the co-operation of the residents at most places shows that the movement is a popular one, and is likely to prove of lasting benefit. Most of the trees sent to the district appear to be fairly suitable to requirements, and the majority have taken root, and promise well. The number of teachers employed in this district is 89. Seventy are in charge of schools, 10 are assistants, and 9 are pupil-teachers. A few complaints have been laid against teachers during the year, but in every case investigation has shown that the charges have been exaggerated, and no teacher has incurred the Minister's censure for misconduct. In fact, the teachers, as a body, perform their duties to the best of their ability, and are deservedly respected by the people amongst whem they labour. Many of them devote the whole of their time and energy to their work, appearing to think of little else than the improvement of their schools. The appointment of ex-pupil-teachers to the charge of small schools is proving of inestimable benefit to the country, and too much cannot be said in praise of these young people's services. people'

The foregoing report may be summarised as follows:—

- The accommodation provided is more than sufficient for requirements.
   All the schools open during the year received a regular inspection, and 70 per centwere re-inspected.

- Righty-five per cent. of the schools were above standard requirements.
   Four hundred and one more children were present at regular inspections in 1891 than in 1890.
- 5. Seven new schools were established during the year.
  6. Repairs were effected at 17 schools and 3 residences; 4 new schools were built; and
- 4 others are in course of erection.
  7. The teachers maintain their previous good characters, and continue to work with diligence and success.

I look forward to the work of the new year with hope and confidence. Quirindi, 31st December, 1891.

H. PARKINSON, Inspector.

### 113

#### ANNEX J.

### DISTRICT INSPECTOR McCREDIE'S REPORT.

THE year 1890 closed with 248 schools on my general list, classified as under:--

Public Schools  Provisional  Traff time	25
Half-time	34 11
Total	248

Prior to the re-opening of the schools in January last, some changes were made in the number Prior to the re-opening of the schools in January last, some changes were made in the number and classification of schools, and in their distribution in the several sections of the district. Bundaburra Gap Public, Carrawobbity. Public, and Mandagery Provisional were permanently closed, and Walli Public was transferred from the Wagga Wagga District to the Western Section of Bathurst District. Five schools in the Western and four in the Eastern Sections of the District were placed under my direct supervision, and three schools in the Central Section were transferred to the Eastern Section.

The Half-time school at Galwary Creek was opened as a Provisional school, and Bangaroo North House-to-house was also opened as Provisional, under the new name of Townsville.

These changes reduced the total number of schools in operation at the beginning of the year to

These changes reduced the total number of schools in operation at the beginning of the year to 246, apportioned in the three sections of the district as follows:—

Central Se	ection	***************************************	70	Schools
$\mathbf{E}$ astern	,,	· · · · · · · · · · · · · · · · · · ·	98	,,
$\mathbf{W}$ estern	,,	***************************************	78	,,

Eight new schools were established during the year, and four, in addition to those already mentioned, were closed; the total number in operation throughout the whole or a portion of the year being 254. The schools which lapsed through small attendance were:—Swallow's Nest Public, Caloola Public, Townsville Provisional, and Burrawang Station Half-time. The places where new schools were brought into operation were:—Pine Rocks, New Vale, Mount Wilson, Blackman's Flat, Hillington, Ungarie, Carraboblin, and Erasa. A few changes were made in the classification of the schools during the year, and at the close of 1891 the numbers in the several classes were as under:—

Public Schools	176
Provisional Schools	25
Half-time Schools	38
House-to-House Schools	11
	21
fr 1	
Total	250

In last year's report five applications for schools were referred to as not having been finally dealt Two of these—Glenbrook and East March—were declined, and the remaining three—Blackman's Flat, New Vale, and Townsville -- were granted.

Applications for new schools at the following places were inquired into and reported upon :-

Locality.	Decision upon Application.
Winburndale Provisional Back Swamp Provisional The Village (King's Plains) Provisional Ungarie Provisional Gilgie's Provisional Mingelo Provisional Gorman's Hill West Provisional Bogan Gates H. to H. Garra Evening	Declined—H. to H. offered. Declined. Granted. Declined—H. to H. offered. Granted. Declined—H. to H. offered

Two other applications for schools, at Hiawatha (Western Section of District) and Glenbrook (Eastern Section, second application), were received at the end of the year, and will receive early attention.

The works carried out under the supervision of the inspectoral staff comprised the following:—

1. The erection of new school-rooms at Lewis Ponds, Coffey Hill, Pine Rocks, Bradshaw's Flat, Garland, and Blackman's Flat, at a total cost of £621 ls.

At Mount Wilson a neat, substantial, and commodious school building was erected by the promoters of the school, free of cost to the department.

2. The erection of a weather-shed at Mount Tamar Public, at a cost of £19 5s.

3. The repairing of 63 school-rooms and 9 teachers' residences, at a total cost of £796 9s. 5d.

New school buildings at Ungarie and Mingelo, and trifling repairs to one school-room and one teacher's residence, are in progress, and will cost a further sum of £178 12s. 6d.

Important additions, repairs, and improvements to a number of schools were effected by the architect, under the supervision of Mr. E. Gostelow, the local clerk of works.

Except that many of the wooden buildings are badly in need of painting, the material condition of existing school-rooms is very fair.

of existing school-rooms is very fair.

In regard to the cleanliness and orderly appearance of the school-rooms, and the adequacy and condition of the furniture, apparatus, and books, the teachers, as a body, have evinced as much interest

as in past years.

A large number of teachers made praiseworthy efforts to improve the appearance of the school-grounds, and comparatively few in charge of schools in securely enclosed areas failed to celebrate Arbor Day by planting trees, shrubs, &c. It is to be regretted, however, that many of the trees and shrubs forwarded to schools from the State nursery at Gosford were too young and too small for transplanting, and that few of them where planted are likely to thrive, in spite of the greatest care and attention on the

part of the teachers.

In some instances trees of a maturer age and larger growth were purchased from local nurseries by teachers and their friends for planting on Arbor Day, rather than run the risk of losing a year by planting those supplied from the Gosford nursery.

The discipline is of as high a standard as in past years, and in only a small number of schools can it be described as weak. The pupils are, with very few exceptions, clean and respectable in appearance, and well conducted. In some of the smaller schools, and in one or two of the larger ones, more attention might with advantage be paid to the teaching of drill and physical exercises. Fourteen schools have cadet corps, the aggregate number of cadets on the roll at the close of the year being 392. The Bathurst corps has an excellent fife and drum band of about 20 performers.

Tables are appended, giving information in a concise form, respecting the school accommodation, the attendance of pupils, the school fees, and the results of prosecutions conducted by the School Attendance officer:—

#### A .- SCHOOL ACCOMMODATION.

		Number of Seats.	
	Number of Schools.	Reckoned at 8 square feet for each pupil.	Reckoned at 100 cubic feet of air space for each pupil.

7	Total fees	receive	1	******	£5,134 10	5
ė.	Total fees	in arres	r at the clo	ose of the year	£87 12	8

### C.—RESULTS OF PROSECUTIONS.

# I.—For breach of the compulsory clause of the Public Instruction Act of 1880.

Number of cases.	Convictions.	Dismissals.	Withdrawals.
237	204	11	22

Prosecution was authorised in 10 other cases of default, but, as it was found impossible to serve summonses upon the defaulters concerned, no legal proceedings were taken in the cases.

# II .- For the recovery of School fees in arrear.

	1. Number of persons sued for arrears of fees	17
	<del></del>	15
•	obtained	
	4. Total amount of arrears recovered	£9 13 0

The number of schools in operation for the whole or a portion of the year was 254. All schools in the Central and Western Sections of the district, and all except three in the Eastern Section, received a regular inspection.

The 3 schools uninspected were Swallow's Nest Public and Palmer's Oakey and Upper Turon

The first-mentioned of these schools was closed in February last, before the inspector had an opportunity to visit it, and the two Half-time schools were not in operation when visited, through an outbreak of diphtheria in their respective neighbourhoods.

Ordinary and second regular inspections were made in 80 schools, and the Bathurst Public High School for Girls was also inspected by Mr. Inspector Lawford and myself. Exclusive of the inspection of the High School, the total number of regular and ordinary inspections was 331.

Only 20 of the 251 schools regularly inspected were below the standard in general efficiency, the percentage up to or above it being 92. This is an increase of 4½ per cent. upon the results for 1890.

The number of pupils examined in each subject of instruction and the percentages of passes in the several subjects are given in the following table:-

Subjects.	Number of pupils examined.	Percentage up to or above standard.	Percentage for 1890.	Increase or decrease per cent
Reading	9.142	84	85	-1
Writing	8,894	83	84	_ ī
Dictation	7,007	73	77	- 4
Arithmetic	8.674	74	72	$+\hat{2}$
Grammar	3,345	70	73	
Geography		78	76	$+\tilde{2}$
History		69	74	- 5
Scripture	8,313	75	80	<b>—</b> 5
Object Lessons	8,733	75	78	_ 3
Drawing	8,778	72	67	+ 5
Music	7,885	80	82	- 2
French	72	69	$7\frac{1}{4}$	-5
Euclid		77	83	6
Algebra	89	76	83	_ 7
Mensuration	250	72	71	+ 1
Latin	83	84	82	+2
Frigonometry	3	100		T 2
Trigonometry	3,421	-82	82	
Drill	8,491	71	71	_
Natural Science	195	86	92	

On glancing at this table, it will be seen that in thirteen subjects the percentages for the past year are slightly below those of 1890. The reductions are, I believe, solely attributable to the frequent irregularity in the attendance during the greater part of the year through wet weather and sickness. This irregularity seriously interfered with the systematic teaching of the oral subjects, and retarded the progress of the

pupils.

The teachers as a body have discharged their duties faithfully and conscientiously, and few of them during the year gave cause for serious complaint.

The pupil-teachers are studious, obedient, hard-working, and well conducted.

# Summary Remarks.

In establishing new schools, erecting new buildings, and repairing old ones good progress was made during the year. The percentage of schools up to or above the standard for general efficiency is higher than in 1890, although in some subjects of instruction the percentages of passes of the pupils examined are slightly lower. Under more favourable circumstances than existed in 1891, marked improvement in the attendance and progress of the pupils may be confidently expected during the year now entered upon.

J. M'CREDIE, District Inspector.

### ANNEX K.

### INSPECTOR KEVIN'S REPORT.

The year closed with 101 schools on my list, classified as follows:-

Public Schools	63
Provisional	12
Half-time	22
House-to-house	4
-	
Total	101

Of this number four represent new schools, viz., Mount Wilson Provisional, New Vale Provisional, Blackman's Flat Provisional, and Hillington Half-time; otherwise, things remain as they were last year.

At the beginning of the year the District Inspector took over from me Mitchell Public (two departments) Meadow Flat Public and Dark Corner Public; while in exchange Carcoar Public, Mount Tarana Public, and Reinville Provisional were added to my list. Beyond these changes nothing of moment has taken place in the arrangement of the schools. The present year will probably see added to the district roll three small centres, viz., Glenbrook as a Provisional School, Gingkin Half-time, and Isabella in the same rank Isabella in the same rank.

# Inspection.

Of the 102 schools on my list for the year, all were regularly inspected excepting three, Swallow's Nest Public, closing early in the year on account of small attendance, and Palmer's Oakey and Upper Turon Half-time, closed at the time for inspection owing to an outbreak of virulent diphtheria in the locality. One school was regularly inspected a second time, while 26 went through an ordinary inspection. In addition a large number of incidental visits were made with the usual object in view—the inspection of programmes, records, &c. The year was not a favourable one for the work of inspection, the first six months being wet, while the influenza epidemic seriously interfered with the work in a large number of schools, many being closed for some time either through the illness of the teacher or the number. pupils.

## Organisation.

As in former years, I am pleased to be able to report favourably under this head. The accommodation is adequate, and on the whole comfortable. The schools are well found in materials, while the classification is generally judicious, and the lesson-guides fairly skilful. I find a decided improvement in record-keeping this year, where it was in some instances of an unsatisfactory character last.

Arbor Day was celebrated with considerable enthusiasm in many places in the district during the year, and tree planting, &c., was successfully carried on. According to a promise made in my report for last year, I now make special mention of some of the schools that have shown marked success in this work. They are:—Carcoar, Eskbank, Hartley Vale, Katoomba, Kierson, Lyndhurst, Mandurama, Marrangaroo, Mount Macquarie, Oberon, Rydal, Sofala, Trunkey, Wallerawang, and Wattle Flat. The work done in beautifying the premises at these schools is of a highly creditable character. There may be others that deserve special mention, but as these schools held their Arbor Day after my visit of inspection I am unable to report anything reliable this year.

Buildings.

Buildings.

# Buildings.

The erection of buildings has kept pace with the needs of the district. Structures of a superior kind have been erected during the year at Katoomba and Lawson under the supervision of the architect, while smaller buildings have been put up under my own control to meet the wants of Blackman's Flat, Garland, and Bradshaw's Flat, at a total cost of £187 10s. In addition, a large number of buildings were repaired, at a cost of £191 17s. 4d. A larger number would have received necessary attention, but for the limited funds at the disposal of the Department. On the whole, however, there can be little or no grounds for complaint as to the adequacy or otherwise of the character of the school accommodation.

### Discipline.

This continues to give satisfaction. The pupils are, as a body, regular and punctual, fairly neat and clean, and, on the whole, well-behaved; while the teachers are considerate and generally kind. No case of undue severity was reported to me during the year. Drill and physical exercise do not receive the attention they deserve. A large number of teachers in the district look upon the time given to the subject as little better than wasted, and the so-called drill consists mainly in a few simple turnings, &c. This is to be regretted, as the importance of physical training cannot be over-rated. Of course there are still a number who know almost nothing of the subject themselves. The most successful are the pupil-teachers who failed to gain admission to the training-schools.

#### Instruction.

This has gone on steadily during the year, notwithstanding the unfavourable weather in the early part and the influenza epidemic towards the end. It is intelligently regulated and the standards are generally fully met. It is not to be expected that all the subjects are taught with the same skill and success; but where one is weak another is strong, and thus matters are usually balanced. The following table shows the results for the year, taking the total number of schools inspected:—

Below Standard.	Up to Standard.	Above Standard.	Totals.
8	. 6	85	99

A comparison of these figures gives for all schools 92 per cent. of passes which must be regarded as very satisfactory. The percentage for last year was 83, so that there is an improvement all round.

The teachers of this section continue to conduct themselves in a very creditable manner, and give full satisfaction, as a whole, to those among whom they labour. The pupil-teachers are fairly studious, and work honestly, both in the schools and at their studies. The usual examinations were held at my headquarters in June and December.

#### Summary.

(1.) The means of education are adequate, well distributed, and meet all existing wants.
(2.) The organisation, discipline, and instruction are satisfactory.
(3.) I see no reason why the work of next year should not be even better than that of the one which has just closed. JOHN KEVIN,

Mount Victoria 4 January, 1892.

Inspector.

### ANNEX L.

# INSPECTOR THOMAS' REPORT.

I .- The adequacy of the means of Education as regards amount and distribution.

At the close of	1890, I had 85 schools under my supervision, viz.:-	
•	Public	<b>5</b> 0
	Provisional	12
•	Half-time	16
	House-to-house	

Of these, Bundaburra Gap and Carrawobbity Public Schools were closed during the Christmas vacation; Belgravia, Byng, German's Hill, Lewis Ponds, and Ophir Public Schools were transferred to the central section of the district; Mandagery Half-time was closed, and its associate school, Galwary Creek Half-time opened in 1891 as Provisional; and Bangaroo House-to-house re-opened as Townsville Provisional. On the other hand, Walli Public was transferred from the Wagga Wagga District to my supervision.

Thus I opened the year with 78 Schools, viz.:-

Public	44
Provisional	
Half-time	
House-to-house	- 6

During the year Provisional Schools were opened at Pine Rocks and Ungarie (the former now ranking as Public), and a House to-house School was established at Erasa Creek; Townsville Provisional was closed, and several changes were made in the classification of existing Schools, the year closing with 80 schools in active operation, viz.:—

Public	45
Provisional	12
Half-time	16
House-to-house	7

The following applications for new Schools were received during the year:-

Name.	Class of School sought.	Result of Application.
Gilgies	Evening Provisional	Granted: School now in operation. Declined; House-to-house offered, but declined. Granted; will open after vacation. Granted; but establisment rescinded, as no pupils attended. Declined. House-to-house offered; will open early in 1892. Under consideration.

I have just received an application for the establishment of a Provisional School at Hiawatha (between Marsden and Barmedman), but have not yet been able to report upon it.

There are several localities in the north-western portion of my district from which applications for new schools may be expected during the coming year; but, on the whole, the educational requirements of the district are year fairly satisfied. of the district are very fairly satisfied.

### II .- The actual condition of the Schools as elicited by Inspection.

Eighty-two Schools were in operation during some part of 1891, and all received a full inspection. Thirty-five underwent an ordinary inspection, and one of the latter received, in addition, a second regular inspection.

Pine Rocks Public and Cave Creek Half-time were visited by the District Inspector, and I relieved him of Lewis Ponds and Ophir Public Schools, and assisted him in inspecting Orange Superior, East

him of Lewis Fonus and Opini Tubic Schools, and Newbridge.

Orange, and Newbridge.

The work of inspection was much retarded by the very wet weather, travelling being rendered slow, laborious, and, at times, dangerous, while the wear and tear on horses and vehicles were excessive.

The following table will show how the Schools stand in point of efficiency in relation to the

Class of School.	Below Standard.	Up to Standard.	Above Standard.	Total.	Percentage satisfying Standard.
Public	3 1 1 3	2 0 1 0	40 12 15 4	45 13 17 7	93·3 92·3 94·1 57·1
Total	8 .	3	71	82	90:2
Results in 1890	14	10	66	90	84:4

It will thus be seen that 90 per cent. of the schools have fully satisfied the standard—an increase on the previous year's results of 6 per cent.

# (a.) Organisation.

(a.) Organisation.

The schools are, as a rule, well placed, centrally situated, and fully equipped. All, with the exception of Forbes Superior, are provided with spacious play-grounds. The buildings, with a few exceptions, are suitable and in good repair. Several, however, are much in need of painting and minor improvements. It is poor economy to allow good wooden buildings to go unpainted through the summer months, but the number in need of attention in this respect would entail a large expenditure. I hope to be in a position to deal with the most urgent cases early in the new year.

With the facilities placed at teachers' hands for planting and improving their grounds, it is needless to say that Arbor Day was celebrated in many of the schools in a manner that will bear good fruit in a few years time. In many play-grounds rapidly-growing shade trees and neat flower beds are now to be seen. In this respect the work done at Parkes Public School deserves special mention.

Coming to matters within the school walls,—I have to report that neat and well-drawn lesson guides are the rule and not the exception; that the records in most schools are accurately compiled, and returns furnished with commendable despatch. All schools ranking above seventh class have School Savings Banks in operation; but, except in a few cases, the pupils' interest in them would appear to be declining. Perhaps this is due to the fact that the thrifty ones have passed the £1 limit, and now take their savings direct to the Post Office Bank.

### (b.) Discipline.

With very few exceptions, the discipline of the schools is very satisfactory. Corporal punishment is kept within due bounds; the pupils are neat in person, respectful in demeanour, and well under control; while good order and uniformity of movement, with the minimum of noise and bustle, are points aimed at by the majority of teachers.

During the last two quarters of the year the irregularity of the pupils has been a constant source of worry to the teachers. In the September quarter almost incessant rain, with its concomitants of impassable roads and swollen creeks, rendered any approach to regularity of attendance out of the question. During the December quarter influenza has been the disturbing factor, many of the schools being closed in consequence.

Cadet Corps have been formed in Cudal, Canowindra, Forbes, Condobolin, and Parkes, and detachments from the first three schools took part in this year's encampment. Heavy weather and bad roads kept the Condobolin boys away, and the Parkes Corps has been enrolled since.

A very marked improvement in the teaching of drill and in the proficiency of the pupils in this tranch will be noticed upon glancing at the statistics below.

### (c.) Instruction.

Two thousand three hundred and fourteen children were examined at the regular inspections made during the year. The following table shows how many of these were examined in each subject, and a comparison is made between this year's percentages of passes and those of last year:—

Subject.	Number examined.	Percentage of passes for 1891.	Percentage of passes for 1890.	Increase or Decrease per cent.	
Reading	2,314	85.0	86.4	- 1-4	
Writing		84.8	<b>84</b> ·8	_	
Dictation		66.7	69·5	<b>— 2·8</b>	
Arithmetic		740	75.0	<b> 1</b> ·0	
Grammar		75.5	78.8	<b>—</b> 3.3	
Geography		<b>7</b> 5·0	79.2	4·2	
English History		• 60·5	<b>76</b> ·4	<b>15</b> ∙9	
Australian History		57·3	70.2	<b>—12</b> ·9	
Scripture		70.5	80.5	10.0	
Object Lessons		72.8	80.8	8.0	
Drawing		$72 \cdot 2$	64·5	+ 7.7	
Music		69.7	70.3	<b></b> 0·6	
Drill		70.5	59·7	+10.8	
Needlework		74.3	76.6	— 2·3	
French		80.0	50.0	+30.0	
Latin		50.0	60.0	<b>—10</b> ·0	
Euclid		75.0	81· <b>1</b>	<b>—</b> 6·1	
Algebra		100.0	87.5	`+12·5	
Mensuration		91.5	71.6	+19.9	
Trigonometry		100.0		**********	
Natural Science	21	90.5	90.0	+ 0.2	

It will be noticed that it is in subjects which call most upon the powers of memory that the decrease on last year's results is greatest. This is to be attributed to the very irregular attendance at all schools during the latter half of the year as already referred to.

I have paid particular attention during the year to mental arithmetic, a subject that is greatly neglected by many teachers; where it is intelligently and methodically taught, the slate work is invariably good. Grammatical accidence is another subject much overlooked, particularly by untrained teachers. Parsing, instead of being looked upon as simply a test of the pupil's knowledge of accidence and syntax, is made to usurp their place, and formal lessons on these branches of grammar are rarely given.

As the ranks of our small school teachers are recruited from the ex-pupil-teachers, who do not go into training, the work done in these schools continues to improve. In general, the approved methods of our service are employed, and are used with zeal, patience, and intelligence.

### (d.) Teaching Staff.

Eleven unclassified teachers hold positions that should be filled by classified teachers. Six of these however presented themselves this month for examination. All pupil-teachers due for examination succeeded in gaining promotion.

Considerable difficulty is still experienced in obtaining male candidates for small schools and pupil-

During the year one teacher was dismissed for misconduct. With this exception, no charges or complaints against teachers came under my notice.

The teachers employed under my supervision are classified as follows :-

	I. A.	I. B.	II. A.	н. в.	III. A.	ш. в.	ш. с	Ex- PT.	Un- classi- fied.	Total.
Teachers in charge		1	5 1	5 	13	13 1	5	3 3	27	72 5
Total		1	6	5	13	14	5	6	27	77
		r.	II.		III.	IV	r.	Probation	ers.	Total.
Pupil Teachers		.2	4		3		3	2		17

### III.—Accommodation.

During the year, extensive additions have been made, under the Architect's supervision, to the school buildings at Forbes, Peak Hill, and Canowindra.

The principal works effected under my own superintendence during the year were:—

1. The interchange of the Fair Hill and Green Grove buildings.

2. The erection of new buildings at Coffey Hill to replace old buildings.

3. The painting and repairing of the buildings at Cudal, Cranbury, Avenel, Trundle, and

Manildra.

Minor repairs were also effected under my direction to eighteen other school premises, full details of which are given under the usual statistical returns.

Schools were established during the year at Pine Rocks, Ungarie, and Erasa Creek, places previously unprovided for; a Provisional School at Mingelo will open after the vacation; and the establishment of a House School at Gorman's Hill West, has just been approved.

At the close of 1890, there was accommodation provided (on the basis of 100 cubic feet of air per child) for 4,365 pupils. Making due allowance for changes effected during the year, there is at the close of 1891, accommodation for 4,410—a gain of 45 seats. As the December enrolment was 3,246, it will be seen that ample room is provided for the school population of the district.

## Summary.

Eighty schools with an enrolment of 3,246, and an average attendance of 2,127, were in active operation up to the Christmas vacation.

Every school was fully inspected, 90 per cent. satisfying the standard.

The schools are generally in good repair, and well equipped and organised.

Their distribution fairly meets the present conditions and requirements of this part of the Colony

W. GEO. THOMAS,

Forbes, 30 December, 1891.

Inspector.

### ANNEX M.

### DISTRICT INSPECTOR JOHNSON'S REPORT.

At the beginning of 1891 there were 212 schools at work in the Bowral District. Four new schools were opened during the year, five were permanently closed in consequence of the attendance having fallen below the required minimum, and one was transferred to the Goulburn District. There were therefore 210 schools in operation at the end of the year. These are classified as follows:—

5	
Public	163
Provisional	14
Half-time	24
House-to-house	. 9
Total	210

Eighty-four of these are under Mr. Inspector Lawford's supervision, 62 under Mr. Inspector

Murray, and 64 under my own direct supervision.

Nine new schoolrooms were erected during the year, 4 of which were required for newly established schools, and 5 replaced old and unsuitable buildings. Weather-sheds were erected at Thirlmere, Glenmore, and Werriberri. Repairs were effected to 22 school buildings, and 3 others are being repaired.

The various works above mentioned have been carried out under the supervision of the Inspectors. The following have been done by the Architect :

A new school-room erected at Berrima Colliery, a class-room at Berrima, and teachers' residences at Nowra, Cambewarra, Numba, Peelwood, and Berrima Colliery.

New buildings, including teachers' residences, are urgently required at Ingleburn and Glenquarry. Their erection has been sanctioned and probably will be proceeded with at once.

The school-rooms of the district provide accommodation for 13,583 pupils, allowing 8 square feet of floor space for each child, and for 11,692 allowing 100 cubic feet of air space for each. This is more than sufficient for the pupils enrolled.

All the schools of the district, with the exception of 1 House School which was closed at the time of the Inspector's visit to the locality, were inspected once during the year, and 87 were inspected a second time. Had it not been for the illness of Mr. Inspector Murray and of myself a much greater number would have been inspected twice.

The proficiency of 185 schools exceeded the standard, in 11 others the standard was reached, and I short of it. The numbers last year were 173, 18, and 25 respectively, so that fair improvement has been made in this respect during the year.

The number of pupils examined in each subject, and the percentages up to or above the standard in each, are given hereunder :

	No. Examined.	Percentage.		No. Examined.	Percentage.
Reading	6,800	89.	Drawing	6,585	82.1
Writing	6,850	89.8	Music	5,909	76·
Dictation	5,749	<b>74</b> ·	French	22	909
Arithmetic	6,583	81.7	Euclid	265	78·1
Grammar		84:3	Algebra		89.1
Geography	2,515	87.7	Mensuration		79.6
English History	2,484	68.2	Latin	39	66.6
Scripture	6,434	85.2	Needlework	2,466	92.2
Object Lesson		85.3	Natural Science	426	92.7

A marked improvement has been effected in arithmetic. This subject, which used to be a weak one in most schools, is, as a rule, now taught with very fair skill and intelligence.

Discipline is one of the strong points of the Public Schools of this Colony, and the Schools of this district maintain a high standard in this respect. There are, however, a few exceptions. Corporal punishment, except in extreme cases, has become almost a thing of the past, and complaints from parents as to the too severe or unjust punishment of their children are now seldom received.

The teachers generally are giving much attention to school gardens, and have also induced their pupils to take an interest in them. There are, however, a few schools whose grounds have still the bare and uncared for appearance so characteristic of Public Schools a few years ago. The grounds of several schools in the Bowral section of the district have been much improved by the planting of trees, flowers, and vegetables. These gardens are neatly kept by the pupils, under the supervision of their teachers. The following schools are deserving of mention, viz., Picton, Campbelltown, Camden, Bowral, Appin, Mittagong, Mt. Hunter, Menangle, Werriberri, Minto, Berrima, Theresa Park, and Narrellan.

The parents of 74 pupils were prosecuted for breaches of the compulsory clauses of the Act. Convictions were obtained in 64 cases, the remaining ten having been withdrawn or dismissed. 1,120 cautions were sent to parents whose children had failed to attend school for the minimum number of days during each half-year.

Only three persons were proceeded against for recovery of arrears of school fees, and in each of these cases the amount due was paid into Court. Little trouble is now experienced in the schools of this district in collecting the fees, and the greater number of those who fall into arrears do so through poverty. In every such case the debt has been cancelled by the Minister.

Every part of this district is well supplied with schools, and the various buildings provide ample accommodation for the pupils enrolled, and are in very fair repair.

The schools are in a satisfactory state of efficiency and give promise of a continuance of good work during the year now entered upon.

W. H. JOHNSON, District Inspector.

Bowral, 9 January, 1892.

# ANNEX N.

# INSPECTOR MURRAY'S REPORT.

This year's work commenced with 38 Public Schools, 9 Provisional, 8 Half-time, and 8 House-to-

This year's work commenced with 38 Fuolic Schools, 9 Frovisional, 6 Hart-vine, and 6 Local house Schools.

The Public School at Caoura was reopened. The failure of the Cordillera silver-mine caused the closing of the Public School at that place. Owing partly to small attendance, but chiefly to the establishment of a school at Exeter, the Provisional School at Ringwood was closed. The Rhyanna Provisional School was transferred to the Goulburn district. A Provisional School was established at Kareela. The schools in operation at the close of the year were:—Public Schools, 38; Provisional Schools, 8; Half-time Schools, 8; and House-to-house Schools, 8.

### Buildings.

New schools were built at Kareela and Yarranoo, where none previously existed, and the old building at Wowagin was replaced by a new structure. The school buildings at Streamville and Leighwood are undergoing repair, and a tender has been accepted for providing a water supply at the Kareela

At the beginning of the year the schools in the Mittagong district afforded accommodation for 2,980 pupils. The changes mentioned above have reduced this accommodation by 98 seats, making a total of 2,882 places. This accommodation is sufficient, and it is properly distributed.

### Inspection.

Every school in the district, save one very remote House-to-house School, which was closed at the time of my visit, and not reopened till a fortnight before the close of the school year, received one full or regular inspection. Nine Public Schools and one Provisional School received a second or ordinary inspection, and several others received from one to three incidental inspections, as opportunities offered. Proficiency.

### Proficiency.

Of a	all the	pupils examined:—			
90.9 pe	er cen	t. passed the standard in Reading.	81.1 pe	r cent.	in Scripture and Moral Lessons.
85·1 ¯	••	in Writing.	80.2	,,	in Object Lessons.
87.8	,,	in Dictation.	10.8	,,	in Drawing.
81.	,,	in Arithmetic.	67·6	"	in Music.
<b>86</b> ·9	,,	in Grammar.	$66 \cdot$	,,	in Euclid.
88· <b>5</b>	32	in Geography.	84.7	,,	in Needlework.
81.6	,,	in English History.	 73.	,,	in Drill.
72.8		in Australian History.			

These percentages show a considerable advance in the attainments of the pupils over those of 1890.

#### Teachers.

Except in two or three instances, the teachers are assiduous, trustworthy, and deserving of the confidence of the people.

Summary.

The means of education are sufficient.

The supply of teachers is equal to the demand.

The inspection was thorough and searching, and there is reason to believe that the present standard will be maintained.

J. H. MURRAY,

Mittagong, 5th January, 1892.

Inspector.

### ANNEX O.

### INSPECTOR LAWFORD'S REPORT.

The boundaries of the district are the same as they were last year. At the end of that were 85 schools in operation. Two new schools have been established and opened since, viz.:

Tanner's Creek, Public, At the end of that year there

Yarrunga, Evening Public,

making a total of 87 schools open during the year or any part of it, viz. :-

Public Provisional Half-time Evening Public

L. E. LAWFORD, Inspector.

Nowra, 10th December, 1891.

### ANNEX P.

### GOULBURN DISTRICT.—DISTRICT-INSPECTOR COOPER'S REPORT.

During the year 1890 there were 376 schools in operation in this district; 7 of these were closed before the end of that year. The evening school at Araluen, and small schools at Burragundra, Sam's Corner, Wallendibby, and Murrumbego, were not reopened. The number of schools taken over from 1890 was, therefore, 364. By readjustment with contiguous districts that number was reduced to 363, but, during 1891, new schools to the number of 13 were opened. Consequently, the total number of schools or departments

departments in operation during the past year, or a portion of it, was 376. These schools are distributed, as shown hereunder, among the District Inspector and the Inspectors stationed at Baidwood, Bega, and Yass respectively:-

Section of District.	:	1890.	. 1891.		
330007 01 2130100	Schools.	Pupils enrolled.	Schools.	Pupils enrolled.	
Goulburn Braidwood Bega Yass	84 97 103 92	4,628 3,495 4,647 3,504	82 100 103 91	4,892 3,454 4,533 3,708	
Totals	376	16,274	376	16,587	

Of these 376 schools 10 were closed before the end of the year, causing, with the buildings given up and transferred, a loss of 1,027 places. The new schools, together with those removed to the district, and additions to existing buildings, however, afford accommodation for 1,233 pupils, resulting in a net increase of 206 places for the year. The highest quarterly enrolment, and the provision for pupils in the existing 366 schools are given below for each section of the district:—

Section of District.	Schools or	Number of places, a	Highest quarterly	
Section of District.	Departments.	8 square feet	100 cubic feet.	enrolment.
Goulburn Braidwood Bega Yass	81 94 102 · 99	4,443 4,601 5,140 4,158	4,104 3,220 4,268 3,586	3,892 2,863 3,600 3,045
Totals	366	18,342	15,178	13,400

Twelve new schools were erected under the supervision of the inspectoral staff, 2 under that of the Architect, and 3 Half-time Schools by parents of pupils. These, together with additions to 3 existing schools, provide accommodation as indicated hereunder:—

Schools built or enlarged.

Orabian at Diabatah	New schools.	Cabacia anismad	· Number of places, allowing			
Section of District.	ivew schools.	Schools enlarged.	8 square feet.	100 cubic feet.		
Goulburn	3 2 7 6	1 2 0 0	115 155 227 228	84 150 179 197		
Totals	18	3	725	910		

The 3 new buildings in the Goulburn section are at Milbang and Lomolong, where no schools formerly were open, and Niel's Creek, where a private building had previously been used. The several Inspectors show in detail in their separate reports the work done in their sections.

The subjoined table contains information as to schools and residences repaired under the Inspectors direction :-

. Section o District.		Repairs t	Wes	Weather-sheds.		
. Bython o District.	Schools.	Residences.	Cost.	Number.	Cost.	
foulburn Braidwood lega Yass	4 23 8 34	3 8 3 6	£ s. d. 159 19 0 135 9 2 242 16 6 286 10 9	1	£ s. d.	
Totals	69	20	824 15 5	1	27 10 0	

Under the Architect's supervisior, a teacher's residence has been built at Eastgrove, Goulburn. Plans and specifications for the new boys' department, to be erected in Bourke-street, Goulburn, were prepared, but the exhausted state of the general building fund arrested further progress. It is hoped that this much-needed work will be undertaken early in 1892. It may be said that, on the whole, the accommodation provided for the available children is sufficient and very fairly distributed. In some cases more space is needed to meet increased attendance, and in some the school-rooms are row too large for the diminished numbers of pupils.

Play-grounds.

Many teachers have during the year entered heartily into the work of ornamenting their play-grounds by planting trees and flowers. The recognition of a particular day in the year to be observed throughout the Colony as "Arbor Day" has had a beneficial effect, and it may be confidently expected that the excellent example of the teachers, who by zeal and judgment have already greatly improved their school premises, will kindle a general enthusiasm which will result in permanent good, not only in respect to the material surroundings of the schools, but also in the way of developing a taste for the beauties of nature and tidy hab ts in the pupils. In the Goulburn section many teachers have done praiseworthy work in this direction, but Mr. J. Lumsden, of South Goulburn Superior Public School, and Mr. Jethro Clark, of Tarago, deserve special notice. I have had pleasure in recommending the granting of bonuses to those gentlemen. Mr. Lumsden also earned a bonus for 1890.

Attendance

1-Q Attendance

Attendance of Pupils.

Details of the attendance of pupils, payment of school fees, and free pupils, are given in the table following:—

Quarter.	Section of District,	Enrolled.	. Average Attendance.	Per cent.	Fees paid.		Fo	es d	ue.	Free Pupils.

	10tals { 1890	12,956	8,925 -	68	1,322 8	)	212	7	6	840

In respect to both the total enrolment and the regularity of attendance, the first quarter of the year compares favourably with that of 1890. In the following quarters, however, continuous wet weather and epidemic sickness had a marked effect on the attendance. The total enrolment for the last quarter shows an actual decrease of 397 pupils, and the average attendance a fall of 6 per cent.

For the half-year ending 30th June, 1,118 children were returned as defaulters. In the cases of 115 of these, prosecutions were authorised, the parents of 312 were cautioned, and 691 were held to have given satisfactory explanations. For the second half-year, it has been reported by the teachers that 1,312 failed to attend for the prescribed period. In most of these cases, it would appear that short attendance is attributable to the prevalence of wet weather and sickness. The parents of 118 will be recommended for prosecution, those of 252 will be cautioned, and in the case of the others no action will be taken.

### Inspection.

The following table shows the distribution of the schools which were open during the year, of a part of it, together with the mean quarterly enrolment, for each section of the district:—

Section of District.	Public.	Pro- visional.	Half-time.	House-to- house.	Totals.	Mean Quarterly Enrolment.
Goulburn	50 34	11 19	21 41	, 6	82 100	3,775 2,755
Bega Yass	72 59	11 23	20 9	 1	103 91	3,586 2,99 <b>5</b>
Totals	214	64	91	7	376	13,111

Of these 376 schools, 366 were subjected to regular inspection, 13 were regularly inspected a second time, and 142 underwent ordinary inspection. Details of inspection are given below :—

Schools inspected and Pupils examined.

Section of District.	W.4.1	Schools that underwent Regular inspection.				Schools inspecte	ed.	Pupils examined.			
	Total number of Schools.	Number.	Percentage.		Number.	Percentage.		Number.		Per cent. of Enrolment.	
	I	Mu	1891.	1890.	MM	1891.	1890.	1891.	1890.	1891.	1890.
Goulburn Braidwood Bega Yass	82 100 103 91	82 98 96 90	100 98 93 90	98 100 98 98	48 49 57	58 49 55	56 40 37 3	2,194 2,724	2,799 2,120 2,719 1,965	79 76	76 76 76 68
Totals	376	366	97	98	155	. 41	34	9,765	9,603	74	74

In addit on to the inspections in the Braidwood Section indicated in this table, Mr. Willis aided me by the full inspection of 3, and the partial inspection of 1, of the schools in Goulburn, as well as by the inspection of 3 country schools in the Goulburn Section. One school in the Yass Section was inspected specially by me.

The unusually wet weather experienced throughout the year, and the severity of the epidemic of influenza which prevailed in October and November in many parts of this district, interfered seriously with the work of inspection. Nevertheless, the percentage of schools regularly inspected was about the same as that for 1890, while the schools inspected twice show an increase of 8 per cent. In every section, excepting Yass, more than half the schools were inspected a second time within the year.

Information as to the efficiency of the schools inspected, in respect to the standard, is afforded hereunder:—

hereunder :-

Efficiency of Schools Inspected.

Section of District.	Class of School.	Above	Up to	Below Standard.	Totals.	Percentage up to or above Standard.		
		Standard.	Standard.	Standard.		1891.	1890.	
	( Public	41		3	£0	94	76

	Totals	65	5	20	90	77	75	
Whole District	Grand Totals	208	98	60	366	84	72	

A comparison of the tabulated results with those obtained in 1890, exhibits a general increase of 12 per cent. in school up to or above the standard. In the Bega Section, the increase appears as high as 18 per cent. The improvement may be regarded as satisfactory.

Proficiency

124

### Proficiency of Pupils Examined.

The results of the examination of 9,765 pupils, or 74 per cent. of the mean quarterly enrolment, are shown hereunder:—

The results are, in general, lower than those reported for 1890. The stricter application of the new standard of proficiency will account for the smaller percentages of passes in some subjects, but the chief causes of the decline are those to which reference has already been made as affecting the attendance, namely, rain for long periods and epidemic influenza of an alarming type. In the Bega section, however, these hindrances to progress seem not to have operated, inasmuch as the attainments reported are noticeable as being considerably in advance of those exhibited in the former year.

### Superior Public Schools.

The Public Schools at North Goulburn, South Goulburn, and Cooma were promoted to the status of Superior Schools during the year. These, added to the Superior Schools already existing at Goulburn, Braidwood, and Queanbeyan have raised the number of schools of that grade in the district to six. In these schools instruction in the advanced subjects is given in addition to the ordinary Public School curriculum, and in the lower classes of all of them, excepting Cooma, the kindergarten occupations introduced in 1890 have been continued with good results.

### Organisation.

The material organisation of the schools is, in most cases, open to but little objection, and the buildings are in a very fair state of preservation. The woodwork, however, of many of the schools which have come under my own observation requires painting. This is a work which, it is hoped, it will be possible to undertake shortly, even as a matter of mere economy, to say nothing of appearance.

The internal organisation, for which teachers are held responsible, is on the whole satisfactory. In some instances, however, the value of properly constructed lesson guides is not fully appreciated, and a want of systematic arrangement of lessons in accordance with the standard of proficiency is a fault too often met with

often met with.

Discipline.

### · Discipline.

In most of the schools the work is conducted in a quiet orderly manner, and the general discipline is healthy. In the schools in which the happy combination of gentleness of manner, soundness of judgment, and firmness in exacting obedience are found, the discipline is excellent, and the moral tone of the pupils eminently pleasing. Although such schools are not, at present, numerous, there are many in which excellence is approximated, and in which there are hopeful signs of improvement.

### Teachers.

At the end of the year there were 319 teachers, 7 mistresses of departments, 16 assistants, and 52 pupil-teachers, making a total of 394 of all ranks employed in the district. They were classed as follows:—

	Тез	Teachers.		Assistants.		All	ranks.	Pupil Teachers.	
Section of District.	Males.	Females.	Mistresses	Males.	Females.	Classified.	Unclassified.	Males.	Females
Goulburn		33	5	2	6	62	22	7 2	12
Braidwood Bega Yass	73	25 17 32	1	•••	3 3 2	40 67 42	40 27 42	5 3	8 7 8
Totals	<u> </u>	107	7	2	14	211	131	17	35

With very few exceptions the teachers are zealous and faithful in the discharge of their important duties. The personal conduct of those who have come under my own observation has been, in nearly all cases, exemplary, and the Inspectors associated with me speak in high terms of the character of those under their supervision.

#### Summary.

The present educational wants of the district are well provided for, and steps are in contemplation to meet the needs of further settlement; the work of the year—due allowance being made for the serious difficulties already mentioned—has been fairly satisfactory, and the outlook for 1892 is hopeful.

D. J. COOPER.

Goulburn, 6th January, 1892

District Inspector. -

### ANNEX Q.

### INSPÉCTOR SHEEHY'S REPORT.

AT the commencement of the year the schools round Tumut and Clarendon were transferred to the Wagga Wagga District, and those at Gundagai, Gundagai South, Tarrabandra, Brungle, Coolac, Gininderru, Weetangerra, and Brooklands were added to my list. By these changes travelling in the south-western portion of the section has been minimised, whilst the number of schools under my supervision has not been reduced. In January the following schools were in operation:—

Public	24 6
	_
m + 1	$\alpha$

A new Provisional School was opened at Reid's Flat in April; but after a period of about four months it was closed on account of small attendance. The House-to-house School at Phil's Creek was also discontinued towards the end of the year, owing to the removal of most of the residents from the locality. On account of diminished attendance Graham Public, Merrill Creek Public, Clonalton Provisional, and Ferneliffe Provisional have been reduced to Half-time rank. The following are the existing

Public	22
Total	<del></del>

Five applications for the establishment of new schools were received during the year. One is under consideration, and the others have been dealt with as follows:-

Place.	Result.
Little Narrawa	Provisional School granted.
B,ker's Creek	Half-time School granted.
Elizabethfields (Yass River)	Half-time School granted.
Ellington Gates, Rocky Hill	Declined.
Goondah	Under consideration.

# Inspection.

Of the 91 schools open during the whole or part of the year, 90 received a regular inspection, and one (Yass-Public) received also a special regular inspection. Beggan Beggan Public was not inspected, as it was not in operation on the date of my visit, nor for some time afterwards, on account of the illness of the pupils with influenza. Owing to wet weather, the number of works carried out under my supervision, and the time devoted to inquiries in regard to applications for the establishment of new schools, &c., it taxed my energies to complete the regular inspections. I was unable, therefore, to make any ordinary inspection during the year. The efficiency of the schools in this section in relation to the standard (50 per cent of possible marks) is shown hereunder:—

Schools.	Below Standard.	Up to Standard.	Above Standard.	Total.
Public Provisional Half-time House-to-house	9 3	3 2	46 12 6 1	57 23 9 1
Total	20	5	65	90

Last year 80 of the abovementioned schools were on my list. In 37 of them there was increased efficiency, in 7 the results were about the same as at the previous inspection, and in the remaining 36 the average proficiency had deteriorated, though 21 of the number were up to or above the standard.

## Organisation.

In the majority of schools the organisation is of a satisfactory character. The records are carefully kept, and the instruction is fairly well regulated. In several schools, however, the time-tables required to be recast, as adequate provision had not been made for all subjects.

### Discipline.

The government is on the whole kind, vigilant, and very fairly effective. Satisfactory order and attention are maintained, and the pupils are as a rule obedient and well-behaved. The "Instruction to Teachers" that puni-hment should not be inflicted for failure or inability to learn is not observed in all schools. The breaches of it, however, are so slight that in one school only has any complaint been made in regard to the matter.

Proficiency. The proficiency of the pupils examined is given in the subjoined table:-

	Number	Number	Percentages.		
Subjects.	examined.	passed.	1891.	1890.	
Reading	2,020	1,621	80.3	80.1	
Writing	1,786	1,549	86.7	87.9	
Dictation	1,604	984	613	61.6	
Arithmetic	1,849	1,221	6 <b>6</b> 0	81.1	
Frammar	754	331	43.9	62.9	
deography	766	465	60 7	60 8	
History (English)	769	217	28.2	50 5	
Jistory (Australian)	80	70	87.5		
Scripture	1,935	1,018	51.8	65 0	
Object Lessons	1,981	1,848	93 2	91.1	
Drawing	1,793	1.008	56.2	54.5	
Ausic	1.923	869	45.1	65.3	
Buclid	40	9	22.5	47.8	
Veedlework	815	736	90 3	992	
Orill	2,020	1,024	50.6	45 5	

In reading, writing, dictation, and geography the percentages of passes are about the same as those for last year, there is an improvement in object lessons, drawing, and drill and a retrogression in the other subjects. In several schools meanings, mental arithmetic, and history are weak, and require special attention to work them up to standard requirements.

Only one school, Murrumburrah Public, was represented at the Junior Public Examination in September, and five pupils f.om it were successful.

# Teachers.

The teaching staff employed in this section at the end of the year consisted of 82 teachers, 2 assistants, and 11 pupil-teachers classified as follows:—

Teachers and Assistants.

						20000								
	11	A. `	111	В.	111	Α.	11	I B	11	I C.	Unc	lassi- ed.	Tot	als.
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Malee.	Females.	Males.	Females.
Teachers	4  4		4  4		12	$\begin{bmatrix} 2 \\ 1 \\ \hline 3 \end{bmatrix}$	11	5  5	2 2	1 	17  17	24 1 25	50  50	32 2 .34

### Puvil-teachers.

Cl	ass I.	Cla	ss II.	Clas	ss III.	Cla	uss IV.	Piob	ationers.	r	otals.
Males.	Females.	Males.	Females	Males.	Females.	Males.	Females.	Males.	Females.	Males.	remales.
	1	1	2	2			3	•••	2	3	8

Five complaints against teachers were made during the year. Only two, however, required investigation; a dispute which took place out of school formed the subject of one, and the inflection of corporal punishment that of the other. The teachers as a body are respectable and industrious. The pupil-teachers are well-conducted, and are working satisfactorily; with one exception all who were examined gained promotion during the year.

### Accommodation.

At the end of last year the number of seats provided for scholars in this section was 3,331. Of these 5J were lost by the closing of 2 schools, 113 by giving up 5 old buildings, and 276 by the transfer of 7 schools to another Inspector. As, however, 197 places were provided by the erection of new school-rooms, and 497 more by schools which were added to my list, there has been an increase of 255 places during the year. The total sitting accommodation, therefore, consists of 3,596 places, and this fully satisfies existing requirements. satisfies existing requirements.

The schools erected during the year, their cost, the places provided, &c., are given in the following

School.	Cost.		Places provided.	Supervised by.	Object.
Binalong Public  Gobarralong Public  Mooney Mooney Provisional  Clonalton Half-time  Gorham Half-time  Rei i's Flat Provisional  Total	75 10 70 0 70 0	0 0 0 0	63 36 22 23 23 27 197	Architect Inspector Inspector, ,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	building.

The following works have also been carried out under the supervision of the Inspector:

Erection of a new teacher's residence at Felled Timber Creek £199 15s., repairs and improvements to 6 residences £50 14s. 6d, and to 34 schools £235 16s. 3d.; total £486 5s. 9d.

The works in progress comprise repairs to 10 schools at a cost of £155 8s. 61., and improvements to 2 residences to cost £50 10s. 6d. A new building to replace the old one is in course of crection at Brungle; it is to cost £203 5s., and will accommodate 25 scholars.

#### Attendance.

The attendance, especially in the case of schools situated in the neighbourhood of creeks, was very much interrupted during a portion of the year by wet weather. In the December quarter the operation of 19 schools was suspended for periods varying from one to several weeks, on account of the provalence of influenza among the pupils. Some of the teachers also were seized with the epidemic.

#### School Grounds.

The playgrounds of schools provided with residences have with a few exceptions been very much improved during the year by the planting of trees, shrubs, and flowers. The teachers have taken a praiseworthy interest in the work which was prominently brought under their notice by the celebration of "Arbor Day." The improvements which have been carried out at the following schools are of an encouraging abgrates.

Murrumburrah Public, Frogmoor Public, Gunning Public, Dalton Public, Bendenine Public, Yass Public, Demondrille Junction Public, and Gininderra Public. The teachers' gardens are as a rule well kept, and those at Gundagai South, Frogmoor, Bowning, and Demondrille Junction are very neat, and attractive.

### Summary.

During the year 5 new schoolrooms have been built, a new one is in course of erection, and the provision of another has been sanctioned. Every school in the section (except one) received a regular inspection, 5 per cent. were up to the standard, and 72 per cent. above its requirements. Adequate accommodation is provided, and the educational wants of the section are satisfactorily met. P. F. SHEEHY,

Yass, 31st December, 1891.

Inspector.

# ANNEX R.

# INSPECTOR DURIE'S REPORT.

At the close of 1890 there were in existence in this section of the Goulburn District 101 schools, made up as follows :-

72 Public Schools.

10 Provisional Schools.
11 Half-time Schools.
1 House School.

Of those, 4 were not re-opened in 1891, owing to the small attendance. They were Burragundra and Sam's Corner Provisional, and Wallendibby and Murrambego Half-time. Later on Rock Flat Public was converted into Half-time on account of reduced attendance, and was transferred to Braidwood section; Tarraganda Provisional was raised to the rank of Public, Jettiba Public was made Half-time, and Wagonga House School was made Provisional.

The new schools opened in 1891 number 7, viz., Warratta Public, Boco, Dangelong, and Puen Buen Provisional; and Thoko, Murrah, and Cuttagee Half-time. Of these, Boco school was closed during the last quarter of the year on account of low attendance. There remain, therefore, at the close of 1891, the following schools in Bega section:—

72 Public Schools.

10 Provisional Schools. 20 Half-time Schools.

102 Total.

During the year 3 new school buildings were erected under my supervision. They are Warratta and Newstead Public, and Boco Provisional. The old building at Dangelong was removed to a more central position, and the buildings at Lochiel, Merimbula, Paupong, Quaama, Stony Creek, Tantawanglo and Nethercote underwent repairs. Repairs were also made to the residences at Angledale, Candelo, and Tanja. A new weather-shed was erected at Bombala Public.

The following works under the supervision of the architect have been completed this year; an Infant School at Bega, Public Schools at Wyndham and Kameruka, residences at Bega and Wyndham, a new kitchen at Delegate, and repairs at Bodalla, Bergalia and Moruya Public Schools.

The sittings provided for pupils in all schools in this section at the close of 1890 were 5,183. By the closing of schools 270 of these were lost, and by the opening of new schools there was a gain of 227 seats. The sitting accommodation at the close of 1891 is thus reduced to 5,140.

Attendance.

Attendance.

### Attendance.

There were 103 schools in operation during the year. The total enrolment of pupils in all schools is 4,533, and the average daily attendance, 2,398. The following table will show the enrolment and the attendance for the four quarters of the years 1890 and 1891:—

	Enro	lment.	Attend	lance.	Perce	ntage.
Quarter.	1890.	1891.	1890.	1891.	1890.	1891.
March	3,562	3,563	2,186.9	2,491·1	6l·4	€9.9
une	3,584	3,591	2,476.2	2,460.9	69.1	68.5
September	3,563	3,600	2,406 9	2,346.3	67.5	65·1
December	3,535	3,590	2,426.1	2,294.8	68.6	63.9

Both the June and September quarters were most seriously affected by continuous heavy rain and floods, while the univeral spread of influenza has influenced the attendance during the last quarter of the year in even a more marked manner.

### Inspection.

Of the 103 schools in operation during the year, 96 received a full or regular inspection, and 56 an ordinary inspection. One school, Lord's Hill, was inspected twice. Of the 7 schools not fully inspected, 4 were newly opened during the last quarter of the year, I was opened in July, a few weeks prior to my visit of inspection, I was closed before I visited the locality, and at the remaining I there was no attendance on the day of my visit.

Taking the schools all round, there is a very satisfactory improvement in the attainments of the pupils. As the new standard of proficiency has now been in use for two years, the results obtained this year should be upheld in 1892. The following table shows the condition of the various schools in 1890 and 1891:—

Schools.	Below S	tandard.	Up to St	andard.	Above St	tandard.
Schools.	1890.	1891.	1890.	1891.	1890.	1891.
Public	per cent. 24 40 47 31	per cent. 7 12 6 8	per cent. 40 50 29 40	per cent. 64 75 53 59	per cent. 36 10 24 29	per cent. 29 13 41 33

### Organization and discipline.

I have still to report that the organisation is, as a rule, satisfactory. In the great majority of the schools ample accommodation for the pupils is provided. The schools vested in the Minister are mostly in good repair, and an improvement has been made in many of the non-vested ones, the residents,

acting upon my suggestions, having made necessary repairs.

Arbor day was celebrated in a large number of schools. Where the climate is favourable good results already are seen. On Monaro, the severity of the late winter killed a large proportion of the trees planted. The teachers are, however, not disheartened, and, profiting from experience, intend to apply for more hardy trees next season.

The discipline in most of the schools is good, and the tone healthy. Corporal punishment is not severe, and in a number of schools it is not inflicted. The teaching of drill is general in all schools, and has a very hopeficial effect, upon the discipline.

has a very beneficial effect upon the discipline.

### Teachers.

During the year the following promotions under clause 103 of the Regulations have been made. From Class II B to Class II A, 3 teachers; from Class III B to Class III A, 2 teachers; and from Class III C to Class III B, 1 teacher. With few exceptions the teachers are devoted to their work, and are in good repute with the residents. The following are lists of the teachers employed under me at the close of the year:—

Summary.

The condition of the schools in this section shows an improvement upon that of last year; the accommodation is ample, and the schools we'll distributed; and the prospects for the coming year are encouraging.

P. DURIE,

Bega, 1st January, 1892.

Inspector.

#### ANNEX S.

### INSPECTOR WILLIS' REPORT.

AT the close of 1890 there were 97 schools in operation. One of these, the Evening Public at Araluen West, was closed before the work of this year was begun, so that 96 schools were opened under my supervision last January. Since then new schools have been established and opened at Bendorah, Pleasant View, and Bullenbolong; and one school, that at Rock Flat, transferred from Bega to Braidwood section. These 4, added to those above-mentioned, make a total of 100 schools that have been open during the year. Six of these, owing to the average attendance thereat falling below the prescribed limit, were closed, viz.:—Currawan, House-to-House; Jinden, Half-time; Gundilbin, Half-time; East Lynne, Half-time; Cootralantra, Half-time; and Moonbah, Half-time: so that 94 schools at present exist in this section, and they are classified thus:—Public, 34; Provisional, 19; Half-time, 36; and House-to-House, 5.

For the establishment of new schools five applications have been received and dealt with. They were

For Provisional Schools—At Rhine Falls, Lobb's Hole, and Miller's Point. For Half-time Schools—At Eucumbene and Providence.

That from Miller's Point was declined, but the other applications were granted, and now buildings are ready for occupation at each of those four places.

Most of the school sites are elevated, easy of access, and fairly central; but as nearly two-thirds of them are, for economic reasons, neither cleared nor fenced, it follows that only a small percentage of the existing grounds are under cultivation. The programme of work arranged for Arbor Day, last August, was fully carried out in 15 schools, and practically so in 40 others. The results of this movement, so far as observed among the schools, have been a considerable improvement in the condition of many of the grounds, and on the part of the pupils an increase of interest in the study and cultivation of flowers and useful trees. Many of the plants set last August have, in spite of all that careful nursing could do to save them, since died, because they were neither healthy enough nor sufficiently matured to bear the removal from Sydney. To afford more room for the growth of trees and flowers, the sites at Araluen, Araluen West, and Jembaicumbene have been enlarged, and arrangements are now in progress for increasing the area of the grounds at Berndale and Major's Creek, and for selecting at Bateman's Bay a larger and in every way more suitable site than the present one. All but 6 of the school-rooms are built of wood, and no less than 30 of the wooden ones have been roughly put up by the parents themselves. Notwithstanding this, the buildings, regarded as a whole, are in satisfactory condition. Eleven school-rooms and 6 residences have been repaired this year, and at Adaminaby a large brick building, and at Bindorah a small wooden one, have been erected. The Kiandra school is now 10 feet longer than it was last year, and the rooms at Farringdon, Trownsend, and Berlang have been pulled down and re-erected on sites much more central and convenient than those formerly occupied. The sitting accommodation afforded by the existing school-rooms is at present sufficient for local requirements in all the educational centres except Nelligen. The aggregate number of seats provided last year was 4,498, when the pupils enro

As a rule, the school premises are kept clean and tidy. In this part of the school work many teachers are faultless; but a few it has been found necessary to rebuke for such evidences of neglect as dusty walls, windows, and maps, stained desks and dirty ink-wells, unwashed floors, and littered play grounds.

Of the 100 schools open under my supervision this year, 1 was inspected by Mr. Inspector Durie, 97 by me, and 2 were not inspected, because they were closed, owing to paucity of attendance, before I could get round to them. Nine of these schools received a second regular inspection 40 of them an ordinary inspection, and 25 incidental visits were made to various schools. Putting with these items the 6 schools fully inspected by me in the Goulburn section, the undermentioned numbers represent my inspectoral work for the year:—

Regular inspections	112
Ordinary	40
Incidental visits	25

The efficiency of the schools this year compares very favourably with that recorded for last year. The results now are:—Above standard, 48; up to standard, 27; below standard, 23. Last December the corresponding numbers were:—Above standard, 50; up to standard, 13; below standard, 34. Thus, of the schools inspected, there have been this year, 11 more passes than in 1890, and this is mainly due to the improved efficiency of so many of the schools in the Monaro circuit of this district. Some of the teachers conducting the unsatisfactory schools have been exonerated from all blame, but 5 received censure, and 4 were cautioned. The following schools have this year been awarded the best marks for general efficiency:—Braidwood, Superior; Cooma, Infants'; Araluen, P.; Cooma, Primary; Bell's Creek, P.; Adaminaby, P.; Captain's Flat, P.; Kiandra, P.; Bredbo, P.; Nelligen, P.; Bombay, Prov.; Monkittie, H.-T.; Bolairo, H.-T.; and Bullenbolong, House-to-house School. A few days ago Cooma Primary was raised to the rank of Superior Public, under which new title it will begin the advanced work next January.

Several of the teachers under my supervision organise their schools excellently, and all but one or two have shown praiseworthy diligence and considerable aptitude in their efforts to perfect this important branch of their school work. A few of the lesson programmes were condemned because no systematic subdivision of the branches taught was represented thereon, and four time-tables were similarly treated in consequence of the defective arrangement of the class-work indicated upon them. It is not often that teachers are found neglecting to record daily the lessons they give, but the entries in the lesson registers are sometimes not in accord with the course of work set on the quarterly programmes. The attendance records are in most schools neatly kept and punctually posted, but the returns compiled from those books are, in too many instances, found to be incorrect. For carelessness in furnishing returns, 3 teachers have lately been find, and a number of others cautioned. have lately been find, and a number of others cautioned.

Correct classification of the pupils is the rule throughout the schools, and, with few exceptions, class-promotions have been effected judiciously, and in strict accordance with statutory provisions.

It is necessary to point out in this connection that some teachers, when enrolling new pupils, do not insist upon obtaining from the former teachers of such pupils, a full statement of the time spent in the classes they have left. As an indication of a pupil's correct position in a school such a statement is indispensable. Five of the schools in this section have savings banks attached to them; but only a small fraction of the pupils in each school employs these institutions as a means of saving money, notwithstanding that the teachers frequently point out to the children the advisableness of doing so.

Two teachers have this year been awarded the mark "excellent" for their skill as disciplinarians, and several others, for proficiency in the same direction, have obtained estimates ranging from good to very good.

very good.

Some teachers are not sufficiently vigilant during the progress of school work, and talking and idling amongst the pupils then result. One or two do not cultivate a genial way of exercising control over the pupils, and in such schools prompt and cheerful obedience is not secured. Again, there are several teachers who both govern and instruct without the requisite vigour and crispness of manner, and the consequences are mental sluggishness on the part of the pupils, and unsatisfactory results in every branch of the work. Viewed generally, the order and discipline of the schools are of a very satisfactory character, creditable alike to both teachers and pupils. character, creditable alike to both teachers and pupils.

There were 2,194 pupils examined this year, and the results obtained are, for the purpose of comparing them, placed in the following table beside the corresponding estimates of 1890:—

Subjects.	Percentages, 1891.	Percentages, 1890.
Reading	84	. 86
Writing	74	80
Dictation	74	73
rithmetic	68	69
rammar	68	73
eography	67	70
listory—English	. 61	60
Australian	79	91
eripture	67	74
bject lessons	70	75
rawing	56 ,	44
fusic	71	75
rench	64	86
uclid	7 L	80
lgebra	64	100
Iensuration	89	96 -
atin	59	69 .
Ceedlework	86	97
rill	68	77
cience	83	100

Excepting in dictation, English history, and drawing, the passes for this year in the various branches do not reach the percentages of the year 1890. This is mainly attributable to the fact that in all the schools inspected during the last half of the year the attendance of the pupils was exceptionally irregular, owing to an unusually wet winter and the prevalence of the influenza epidemic.

Drill is now taught with satisfactory results in all but one or two of the smallest schools, and an additional cadet corps has lately been established at Adaminaby with an enrolment of 19.

At Braidwood Superior and Cooma Superior Public, candidates were prepared for the Junior University Examination, of whom 5 passed, and 1 (W. Mawson), gained a silver medal for geography. From Cooma school 2 pupils were sent up for Civil Service Examination, and both passed very creditably.

In the schools under my supervision are employed 76 teachers, 3 assistants, and 10 pupil-teachers, who are classified thus:—

Office.	Clas	s I.	Clas	s II.		Class III.		Probationers	Total
omce.	Α.	B.	Α.	В.	Α.	В.	C.	Probationers.  39 1  Class IV.	
Teachers		1	5	2	14	7	8	39	76
Assistants	•	•••			2			1	3
			Class I.	Class	iII.	Class III		Class IV.	Total.
Pupil-teachers			2		3	3	İ	2	10

With one or two exceptions the teachers are dutiful in their calling, exemplary in their conduct, and thoroughly deserving of the respect and good-will which most of them enjoy.

To sum up :-

Four new schools have been established.
 One large brick building, and a small wooden one erected.
 Three school-rooms removed to more central sites.
 Eleven schools and 6 residences repaired.
 Four new schools established that will be ready to be opened next January.

(6.) Cooma Public converted to the rank of Superior.(7.) A large proportion of the schools successful in reaching the prescribed standard.

These are the evidences of progress during the year, and I believe that, in the cause of education, at least as much good work as this will be effected in 1892.

M. WILLIS. Inspector.

Braidwood, 31st December, 1891.

## ANNEX T.

### DISTRICT INSPECTOR LOBBAN'S REPORT.

THERE were 248 schools, or 252 departments, in the Grafton district at the close of 1890. Owing to diminished attendance, 5 of these schools were closed at the end of that year; 1 other had but a short existence in 1891; and 2 Half-time schools had to be reduced to the status of a House-to-house school during

during the year. On the other hand, 20 new schools were established—8 in the Port Macquarie section, 7 in the Grafton section, and 5 in the Lismore section. There were, therefore, 261 schools, or 265 departments in operation at the close of 1891, viz., Public, 199 schools, or 203 departments; Provisional 39; Half-time 16; and House-to-house 7.

At the end of 1890 there was accommodation for 15,276 pupils, allowing 8 square feet of floor space for each. Now there is room for 16,520 scholars. Yet there are still a few schools not quite large enough for existing requirements; but these will have attention as soon as funds for the purpose are available.

During the year 27 new school-buildings were erected—15 under the supervision of the architect, and the rest under inspectoral oversight. Besides these vested premises, 11 non-vested buildings were temporarily obtained for school purposes in localities where no schools previously existed. Of the 27 new schoolrooms erected, 17 replaced old structures, and 10 were for newly-established schools. New buildings are now needed at Brunswick Heads, Calliope, Glenreagh, and Ulmarra West.

Residences were erected in connection with 6 Public Schools; 2 weather-sheds were built; 6 schools were enlarged or provided with class-rooms; and extensive repairs and improvements to existing buildings were effected. The greater part of the supervision in connection with new buildings and repairs was carried out by the architect's clerk of works, under whom nearly £10,000 were expended. Only minor works were undertaken by the inspectors. In Port Macquarie section, the amount spent in this way was about £294; in Grafton section, about £542; and in Lismore section, about £870. The grounds of several schools were fenced in, and water-tanks were supplied wherever they were absolutely needed.

needed.

In 1890 a circular was issued, directing that, in all cases where school sites were selected on Government land, an area of at least 4 acres should be recommended for dedication. This was accordingly done; but the Department of Lands did not, in any instance that came under my notice, grant the request—2 acres being measured and dedicated as formerly. School sites considered too small have, however, in several cases been enlarged by the purchase of adjacent land. Much in the way of improving the grounds has been effected during the year. Arbor Day was enthusiastically celebrated in all parts of the district, and extensive shade-tree planting has been accomplished. Plots of flowers and regetables are found in many school enclosures, and several teachers were awarded bourses for their regetables are found in many school enclosures, and several teachers were awarded bonuses for their school-gardens. In the Grafton section, the Public School at Chatsworth Island stands first in point of merit in this direction. The play-ground of the Grafton Superior Public School has been levelled and planted with trees, and the fascine work along the creek bank is not only a permanent barrier to further erosion, but is also an object of interest, as showing the value of this kind of work for preventing landslips along the banks of rivers.

A considerable amount of time was taken up in each section, dealing with applications for new schools. The railway-works in the north have drawn along the line a shifting population whose educational wants are being promptly attended to by Mr. M Lelland. Settlement is rapidly increasing on the Upper Orara, and a large area of the Don Dorrigo is about to be thrown open for selection. An increase of population in these parts will lead to a corresponding increase of work in connection with the Grafton section. In Mr. Nolan's already extensive domain new settlements are being formed, which will settlements with high large ways to be a section. materially augment his labors.

The early part of the year was very unfavourable; but with the exception of one small school which was closed in January, and another which was opened in the end of November, all the schools in the district received a regular, and 59 of them an ordinary or second inspection. One school in the Grafton section was inspected by Mr. Nolan, and another one by Mr. M'Lelland, while 8 schools in the Lismore section received an ordinary inspection by me. During the year, Mr. Nolan made 100 regular inspections, Mr. M'Lelland made 84 regular and 17 ordinary inspections; and 81 regular and 42 ordinary inspections were made by myself.

There were 9,464 pupils present at the regular inspections, as against 8,960 in the previous year. Of the 264 schools inspected, 26 were below, 11 up to, and 237 above the standard. In 1890 only 80 per cent. of the schools inspected reached or exceeded the standard; in 1891 the percentage is 90. The attainments in reading, writing, arithmetic, grammar, object lessons, French, Latin, music, and needlework were better than formerly, as an inspection of the subjoined table will show:—

	1890	) ·	1891.		
- Subjects.	Number Examined.	Passed.	Number - Examined.	Passed.	
Reading Writing Arithmetic Grammar Geography History Scripture Object Lessons Drawing Music French Euclid Algebra Latin Needlework Drill Dictation	8,960 8,960 8,960 3,308 3,308 3,234 8,774 8,579 8,128 7,836 68 390 106 98 3,406 8,047 7,302	91 89 80 76 82 79 80 80 74 73 76 92 95 82 88 87	9,464 9,464 9,464 3,604 3,604 3,604 9,045 9,366 8,862 83 389 204 100 3,499 9,204 7,369	92 91 84 79 80 73 79 81 66 76 84 78 81 83 92 77	

In the larger schools a high standard is aimed at, and an excellent working tone pervades most of them. The pupils, as a rule, are cheerful and animated; and, in the upper classes, the answering is generally thoughtful and accurate. In all the schools the behaviour of the pupils under examination is highly satisfactory, and, as a rule, a good moral tone prevails. In most subjects the proficiency of the pupils is fairly creditable. In no school visited by me, however, did the writing in dictation books and exercise books satisfy me, although in most cases the copy books are fairly satisfactory. At the ordinary inspections special attention was paid to the character of the organisation of the schools visited, and the methods of instruction adopted. In several cases the programmes were not deemed sufficiently explicit; but the teaching, on the whole, was painstaking and interesting. Thirteen schools were represented at the annual examination in connection with the Sydney University. Owing to a general change in the school staff of the Grafton Superior Public School, after the midwinter vacation, the usual

contingent from that school was missing. In two cases the name of the teacher instead of the school appeared in the published lists. The results, so far as this district is concerned, are shown in the following Table:—

School.	Teacher.	Junior.	Senior.	Total.
Ballina Public Broadwater Public. Casino Public Cowper Public Cundletown Public Grafton South Public Greenhill Public Kempsey East Public Kempsey West Superior Maclean Superior Smithtown Public Taree Superior Wyrallah Public	, J. C. Law , Wm. Archibald , C. Gregson , St. Clair Nelson , G. Henderson , D. J. Lobban , L. M'Donald E. Henry , F. Lewis , T. Bennett	1 1 3 1 1 2 1 3 1 3 8 1 2	0. 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	1 1 3 1 1 2 1 4 1 3 8 1 2 2 2 2 2 9

The cadet movement cannot be considered more than moderately successful, inasmuch as only two full corps have been formed in the district, one at Grafton and the other at Lismore. Physical drill is, however, receiving more careful treatment than formerly, and the ordinary school drill is fairly performed.

• The School Savings Banks continue to attract a fair number of depositors. Wherever the principal teacher takes a lively interest in the matter the Bank is a success. The one in connection with the Public School at Murwillumbah affords a pleasing illustration of this fact. When teachers look upon this branch of their work as an infliction, the Banks languish.

Irregularity of attendance continues to be the great obstacle to rapid progress. During the first half of the year many schools were practically closed for weeks at a time on account of wet weather, while in the latter half measles and influenza were widespread and malignant; but apart from causes of this kind, it is well known that much irregularity is due to the apathy of parents. Sometimes children, who have to stay at home on the first day or two in the week, are not allowed to attend the remaining days because the weekly school fee would be charged! Cases frequently come under notice where a strict count of the attendances is kept by the parents, and as soon as the provisions of the law are satisfied, the children are withdrawn from school for the rest of the half-year to assist in work at home.

Comments are frequently made upon the number of children of school age seen upon the streets during school hours. It does not seem to be generally known that there are at least 110 school-days in each half year, and consequently each child on a school roll may be absent 40 days and yet meet the requirements of the Public Instruction Act. It rarely happens that more than 80 per cent. of pupils enrolled are in attendance at school on any day of the week, the remaining 20 per cent. being absent on various pretexts. The Attendance Officers are absolutely powerless in cases of this kind. Sometimes when parents are cautioned as to the irregularity of their children's attendance, they threaten to remove them from the Public Schools and send them to other schools, where they run no risk of being reported. During 1891, parents (77) representing 116 children, were proceeded against as defaulters. There were During 1891, parents (77) representing 116 children, were proceeded against as defaulters. There were 91 convictions, 6 dismissals, and 19 withdrawals. Fines and costs in these cases amounted to £38 1s. 2d.

The school fees are paid with fair regularity. Upwards of £5,212 were collected during the year, but there were arrears amounting to £128, due on 31st December, 1891, and there were 376 free pupils

on the rolls.

In most of the sub-districts the Public School Boards perform their duties with commendable zeal and ability, and in several instances have afforded valuable assistance in connection with the supervision of local works, and in obtaining information respecting applications for the establishment of new

Special religious instruction is regularly given in several schools by clergymen of the Church of England, and ministers of other denominations occasionally avail themselves of the opportunities offered in the Public Schools for work of this kind.

The supply of applicants for the office of pupil-teacher continues to be fully equal to the demand for their services, and no difficulty has been experienced in obtaining suitable persons for vacancies in small Provisional Schools.

There are 259 teachers, 15 assistants, 1 workmistress, and 74 pupil-teachers in the department's service in this district. A clerk of works and 2 Attendance Officers are also employed. Saturday forenoon clases have been established in Grafton for the benefit of pupil-teachers in and around the town. The

causes have been established in Granton for the benefit of pupil-teachers in and around the town. The subjects studied are Latin, French, music, and drawing.

Having visited schools in all parts of the district, an opportunity has been afforded me of seeing most of the teachers at their work. A more sober, steady, and trustworthy body of workers it would indeed be difficult to find. They are competent, industrious, and loyal to the department. The pupil-teachers, too, are deserving of commendation.

Viewed from every point it appears to me that the promosts of the schools in this district were

Viewed from every point, it appears to me that the prospects of the schools in this district were never so promising as at present. Well-equipped school-buildings and comfortable houses are provided for the married teachers, and the small schools are liberally supplied with necessary books and apparatus.

The reports of Messrs. Nolan and M'Lelland are forwarded herewith.

A. LOBBAN, District Inspector.

Grafton, 2nd January, 1892.

# ANNEX U.

# INSPECTOR NOLAN'S REPORT.

At the close of 1890 my list contained 94 schools. During the present year Public Schools (3) were established at Smithtown, Failford, and Huntingdon; Provisional Schools (3) at Warbro, Forster, and Urulgurra; and House Schools (2) at Macleay Heads and Nowendoc River. The Provisional Schools at Telegraph Point and Harrington (2), and the Half-time Schools at Ellenborough and Lonely Point (2), were not reopened, on account of insufficient attendance. My list at the end of 1891 comprises 79 Public, 10 Provisional, 6 Half-time, and 3 House-to house Schools; in all 98 schools, an increase of 4 over

Owing to the cancellation of several large reserves there has been an extension of settlement during the year, and, in consequence, a few additional small schools will be required at an early date. Initial steps have already been taken in regard thereto.

A separate school for Aborigines was established at Forster, and buildings are now being provided for similar schools at Wauchope, Rolland Plains, and Pelican Islands.

The establishment of schools is keeping pace with the extension of settlement. The educational facilities in regard both to amount and distribution are equal to the requirements of the district.

The material condition of the schools continues to improve. During the year substantial buildings to replace old and unsuitable structures were erected, under the supervision of the architect, at Cogo, Darawank, Glenthorne, Rainbow Reach, and Turner's Flat, and new buildings are in course of erection at Cundletown. The provision of a weather-shed, and repairs in connection with 24 schools, were carried out under my discretion to good of \$154.00 and repairs in connection with 24 schools, were carried out under my direction at a cost of £164 9s. 9d.

out under my direction at a cost of £164 9s. 9d.

During the year marked improvement has been effected in the appearance of the school grounds. Agriculture and horticulture have received increased attention; neat and flourishing vegetable and flower gardens are now the rule, and not as formerly the exception. The introduction of Arbor Day has resulted in the ornamentation of several sites which had previously presented cheerless aspects.

All the schools on my list received regular inspection. Owing, however, to long continued wet weather, no ordinary inspections were held. 3,260 pupils were examined in 1890, and of the 96 schools then inspected 87 (or 91 per cent.) satisfied the required standard; during the present year 3,312 pupils, representing 98 schools, were present at inspection, and 90 schools (or 92 per cent.) passed. Considering the irregularity in attendance, arising from continued wet weather and from the prevalence of influenza, the results of instruction are reasonably satisfactory.

The several schools are fairly well equipped, the property entrusted to the teachers is carefully preserved; the classification is sound, the general organisation may be regarded as satisfactory; the disciplinary condition is pleasing, the government, though gentle, is firm and effective, securing good order and a high moral tone; the demeanour of the pupils is pleasing, and their general conduct is praise-worthy.

worthy.

The following schools, given in order of merit, deserve mention for successful school work done during the year:—Frederickton, Wingham, and Summer Island.

The undermentioned schools were represented at the recent University examinations:—Cundletown Public (1 pass), East Kempsey Public (3 passes), West Kempsey Public (1 pass), Smithtown Public (8 passes), and Taree Public (1 pass).

The following information is obtained from the quarterly returns:—

Quarters.	Enrolment.	Average Attendance.	School Fees Collected.	School Fees in Arrear.	Free Pupils.
March June September December	4,124 4,52 <b>5</b>	3,040·9 2,869·2 3,158·9 3,069·1	£ s. d. 450 14 3 427 4 5 499 11 9 499 7 3	£ s. d. 36 0 6 30 7 1 30 10 0 36 11 6	133 114 94 110

The teaching staff under my supervision consists of 98 teachers, 6 assistant teachers, and 25 pupilteachers. Collectively the teachers may be described as an industrious respectable body, exercising a salutary influence in their respective localities. The large percentage of failures at examination is, however, indicative of insufficient private study. The pupil-teachers continue to do satisfactory work.

With few exceptions school operations have been successfully prosecuted during the past year, and the prospects for 1892 are favourable.

W. NOLAN, Inspector.

Port Macquarie, 24th December, 1892.

# ANNEX V.

# INSPECTOR McLelland's Report.

Inspector McLelland's Report.

At the close of 1890 the schools in operation in the Lismore section numbered 80. During the present year new schools were opened at Coorabell Creek, Tuckurimba, Rosebank, Dalwood, and Numulgi. Bimgabee Provisional and Byangum Public were temporarily closed and afterwards reopened, the former as a House-to-house School in conjunction with a similar station at Nimbin. Goolmangar Public, closed last year, was also reopened, while the Provisional School at Condong was permanently closed. Murragong and Warwick Half-time Schools were, on account of failing attendance, reduced to House-to-house rates. As the result of these changes the classification of the schools at the end of the year stands thus:—Public, 64; Provisional, 16; Half-time, 2; House-to-house, 2; total, 84.

In addition to the new schools referred to above as already opened, it has been decided to establish others at Byron Bay, Lower Booerie Creek, Duranbah, Gay's Hill, Graham Town, and Terranora. The building at Gay's Hill is now ready for occupation, and tenders are being invited for the erection of the necessary premises at each of the other places. Applications for the establishment of schools at Burringbar, Rous Mill, Maxwell's Hill, Ellengowan, and Naughton's Gap, having been made on insufficient grounds, were declined. It is very probable, however, that most of these localities will, during the coming year, be able to make good their claims upon this department.

The highest enrolment for any quarter of the year was 4,313, and the existing schools provide accommodation for 4,858 pupils. Though the accommodation as a whole is more than sufficient, it is not so in two or three individual cases. Had funds been forthcoming, however, these cases would have received attention ere now, and I should have been able to report that every school in the district fully met the requirements of the locality to which it belonged. The general expenditure upon buildings, under the supervision of the Architect and the Inspector, has b

residence early next year.

In addition io the large amount expended by the Architect's branch in effecting repairs and improvements, the sum of £300 has been spent under my own supervision in minor improvements to thirty-seven schools.

Few schools have failed to obtain satisfactory marks for organisation and discipline, and several teachers have merited special commendation for their success in this direction. It is needless to add that in such instances the general efficiency of the schools has been equally good. As a rule the school premises are neatly kept, and the teachers fully recognise the double responsibility of their positions as tenants in charge of valuable property committed to their care, and as teachers bound to set their pupils an example of orderliness and cleanliness.

I regret that it is not possible to include all in these terms of praise, but unfortunately there are some whose schools and residences are anything but an agreeable spectacle. Last year I complained that few of the teachers seemed to take any practical interest in gardening, but I am able to modify that statement to some extent this year. The institution of Arbor Day has had an excellent effect, and in some centres, notably Lismore, Casino, Ballina, and Drake, the residents, entering heartily into the matter, have rendered the teachers invaluable assistance in making the celebration a success. The work done at the above-named schools, and also at Dunoon, Lindendale, Gundurimba, and Whian Whian, affords

affords capital proof of the richness of the Richmond River soil. All the teachers with whom I have had an opportunity of discussing the question, speak highly of the sustained interest shown by the pupils in tending their garden plots. The cumulative effect of a number of "Arbor Days" in this district will undoubtedly be such that the schools as a body may vie in the beauty of their grounds with those in any portion of the Colony. Everything depends upon the teachers. The soil and climate are for this purpose readly reprect.

portion of the Colony. Everything depends upon the teachers. The soil and climate are for this purpose nearly perfect.

Of 85 schools open during the whole or any portion of the year, 83 received a regular and 25 an ordinary inspection. Of the latter inspections 8 were made by the District Inspector. Of the two schools not inspected, Condong was closed in January before I could visit it, and Byangum, closed in June last, was not reopened till the end of November. It was then impossible in the remaining time to inspect this school and also Dalwood and Numulgi opened in December. Altogether I have made 101 inspections, including the regular inspection, Cormick's Creek, in the Grafton section. Under more favourable circumstances this number might have been increased by at least 30. But, as usual, the first half of the year was abominably wet, and greatly retarded the work of inspection. Moreover, a very considerable portion of my time was taken up in attending to new school movements and the erection of new buildings. I have dealt with no less than 17 applications for the establishment of schools this year, and have had to prepare plans and specifications for 12 school-rooms—7 of which have been completed and the rest are still in hand. While the conditions remain the same, I see no prospect of materially increasing the number of ordinary inspections. Of course many incidental visits have been made, generally with satisfactory results.

The schools, in their relation to the standard, occupy a better position than they did last year. Of

The schools, in their relation to the standard, occupy a better position than they did last year. Of 83 schools inspected, 68 were above standard, 6 up to, and 9 below. Last year 25 out of 81 were below the mark. The improvement thus observable is to be found in the advance made by most of the smaller schools. The table given hereunder shows that the per centages of passes for the current year are higher in the majority of subjects than those recorded for 1890:—

Subject.	Number of Pupils Examined.	Percentage of Passes for 1891.	Percentage of Passes for 1890.	Increase or Decrease for 1891.
Reading Writing Dictation Arithmetic Grammar Geography English History Australian History Scripture Object Lessons Drawing Music French Euclid Algebra Mensuration Latin Needlework Drill	2,955 1,948 2,955 1,002 1,002 1,002 1,709 2,923 2,923 2,923 2,924 25 63 14 43 14 1,035	90 88 72 78 77 71 50 74 61 67 60 55 76 71 71 51 35 91	86 81  76 69 68 56 62 63 68 58 64 70 81 72 50 50 84	Increase 4 %
Natural Science	34	79	69	" 10 "

The results in those subjects which reach or exceed 70 per cent. of the number of passes may be looked upon as creditable, in view of the difficulties with which all teachers must contend in a greater or less degree. On the whole I think the teaching has been rather more thorough than formerly. The teachers are more fully alive to the necessity of training the thinking powers of their pupils, of creating in them a desire for true knowledge, and impressing upon them the fact that their education has only begun when they have left school begun when they have left school.

The following schools are worthy of special mention for general efficiency:

Acacia Creek (Mr. James Sullivan). Ballina (Mr. Patrick Connelly, removed).

Cowlong (Mr. Patrick Connerty Cowlong (Mr. Owen Gilbert). Cudgen (Mr. Richard Spiers). Casino (Mr. John Law). Drake (Mr. James Paterson).

Lismore, Primary (Mr. Fred. Nicholls).
Lismore, Infants (Mrs. Catherine M'Lennon).
New Italy (Mr. Thos. Morgan).
Newrybar (Mr. William Boorman).
Wardell (Mr. Donald Fraser, removed).
Wyrallah (Mr. John Horton).

Ten candidates from the local schools passed the Junior University examination, viz.:—Ballina and Broadwater one each, Wyrallah two, and Casino and Lismore three each.

The staff now employed in this section consists of 83 teachers, 5 assistants, and 19 pupil-teachers. The great majority of the teachers reflect credit upon the service to which they belong. They are consistently industrious in the discharge of their duties, and are well worthy of the confidence of the department and the esteem of parents and pupils.

In reviewing the work of the past year I may conclude by stating that the schools are for the most part in a satisfactory condition. Those that are now efficient can be relied upon to maintain their good record, and it is to be hoped that the rest will, through increased effort on the part of the teachers, meet with more favourable comment during the coming year.

meet with more favourable comment during the coming year.

H. D. M'LELLAND, Inspector.

Lismore, 29th December, 1891.

### ANNEX W.

DISTRICT-INSPECTOR T. DWYER'S REPORT. THE number of schools in the Maitland District at the close of 1890 was as follows:-

Section of District.	Public.	Provisional.	Half-time.	House-to-house	Evening Public.	Total.
Maitland	64 63 36 57	1 3 8 13	2 23 10	4 2		67 66 68 82
Total	220	25	32	6		283

The four sections of the district were remodelled at the beginning of the year. Maitland Section received 19 schools and departments from Newčastle. To the Muswellbrook Section were transferred 7 schools from Maitland and 13 from Dungog. Eight schools from Maitland and 1 from Newcastle were transferred to Dungog.

In the Maitland District for the year 1891, the following is a brief summary of the school work

In the Maitland District for the year 1891, the following is a brief summary of the school work and extension carried out by the department:—

**Maitland Section.**—During the year the infant department at East Maitland was reopened. New (vested) brick buildings were creeted and opened at Awaba, Bolwarra, Morrissett, and Young Wallsend. A leased building was opened at Killingworth last July. Provisional Schools, wooden structures, were creeted and opened at Hue Hue and Noraville. One Provisional School, Mandalong, was closed for want of attendance. The sum of £258 14s. 9d. was expended under the District Inspector in this section in effecting necessary improvements to 26 schools and teachers' residences.

**Considerable activity was displayed by the people, teachers and pupils, in celebrating "Arbor Day," by tree planting and the formation of flower beds and borders. Mr. Lawton, of Pokolbin, still holds the field in this section for his successful gardening operations.

**Newcastle Section.**—A non-vested Public School has been opened at Cardiff, and an Infant Department at Islington. Evening Public Schools have been started at Adamstown and New Lambton. New buildings await official opening at Dudley and Stockton.—Girls Department. At Ash Island, a brick building, to replace an old wooden edifice which was destroyed by fire in 1890, was erected. The school at Teralba (late Glen Mitchell) has been enlarged and improved, and a class-room has been added to the Waratah Public School. Improvements and repairs have been effected to 18 other schools, and important works are to be carried out at Adamstown, Carrington, Hamilton, Lambton, New Lambton, Merewether, Newcastle South, Stockton and Tremarton. New school buildings are to be erected at Cardiff and Catherine Hill Bay, and additional departments will be opened at Hanbury, New Lambton Cardiff and Catherine Hill Bay, and additional departments will be opened at Hanbury, New Lambton

Cardiff and Catherine Hill Bay, and additional departments will be opened at Hanbury, New Lambton and Tighe's Hill.

Muswellbrook Section.—The Inspector of this section reports "that with a few exceptions the property of the Department is in good condition. More than 20 school-rooms and teachers' residences have been repaired. Tree planting and the formation of flower gardens have been, on the whole, fairly general; but some teachers take only a perfunctory interest in the matter, and have left the tending of the trees and gardens to the pupils, who have not been slow to interpret the indifferent conduct of their teachers, and have soon fallen off in their zeal and attention."

Dungog Section.—Inspector Waterhouse states:—"A new Public School was opened at Euwylong, a Provisional at Lamb's Valley, a Half-time at Glommartin. and an Evening Public School at Miller's Forest. The Barrington Aborigines' Camp Provisional, and Tea Gardens Provisional, were raised to the rank of Public Schools. Aliceton Half-time was raised to Provisional rank. Dusodic Public and Bungarce Provisional were reduced to Half-time Schools owing to a falling off in their attendance, while Nerong and Sugarloaf Creek had to be closed for want of pupils. Nerong and Sugarloaf Creek had to be closed for want of pupils.

The number of schools in each section of the Maitland District at the close of 1891 is given in the following table :-

Section of District.	Public.	Provisional.	Half-time.	House-to-house.	Evening Public.	Total.
Maitland	71	5	2	0	1	79
Newcastle	50	0	0	0	2	52
Muswellbrook	51	11	18	1	0	81
Dungog	60	9	· 10	0	1	80
Total	232	25	30	1	4	292

There were 304 schools in operation during some portion of 1891 in this district.

The schools, with few exceptions, are centrally situated, and afford more than adequate floor-space for the average attendance for the whole of the Maitland District. The existing floor-space amounts to 25,782 places, while the number of cubical spaces is 26,790, an increase over last year of 917 and 1810 remarking.

to 25,782 places, while the number of cubical spaces is 20,790, an increase over last year of 517 and 1,210 respectively.

The number of pupils on roll for the whole district is 29,536; the multiple enrolments amount to 4,863; the net enrolment is therefore 24,673. The average attendance is 16,228.2 or 65.8 per cent., a very satisfactory result when the causes that operated against regularity of attendance during a considerable part of the year are taken into account. Some of these causes were wet weather in July, August, September, and November, bad roads, and the epidemic of influenza. Last year the percentage of attendance to the net number of pupils enrolled was 65, which was also that for the received 1888 and 1889. years 1888 and 1889.

The organisation of nearly all schools in this district shows marked improvement. Formerly teachers' tables and tops of presses were, to a large extent, covered with dust, books, slates, &c.; now a visitor will see these articles of furniture tastefully ornamented with flowers. Discipline, also, has advanced, especially in schools in which drill is well taught. Few cases of undue corporal punishment came under our observation during the year.

The work of inspection for the year is shown in the following table:-

Section of District.	Regular Inspections.	Ordinary and Second Reg. Inspections.	Total number of Inspections.	Total number of Pupils examined.
Maitland	79	67	146	5,333
Newcastle	52	50	102	7,546
Muswellbrook	89	42	131	2,490
Dungog	83	43	126	2,341
Total	303	202	505	17,710

But for wet weather and the influenza, more ordinary inspections would have been made in Maitland, Muswellbrook, and Dungog sections.

The work of inspection for the year in each section of the district is exhibited in the following

Section of District.	Schools.	* Above Standard.	Up to Standard.	Below Standard.	Total.
Maitland	Public	60 3 2	6 0 0	5 2 0	71 5 2
	Total	66	6	7	79
Newcastle	Public Evening Public	41 1	8	1 0	50 2
	Total	42	9	1	52
Muswellbrook	Public	40 6 12 3	7 4 4 1	4 3 5 0	51 13 21 4
	Total	61	16	12	89
Dungog	Public	44 6 7 0	2 0 1 0	14 4 4 1	60 10 12 1
	Total	57	. 3	23	83
Grand Total		226	34	43	303

From this table it is seen that of the inspected schools 86 per cent. were up to or above the standard for the whole district, the percentage for each section of the district being: Maitland, 91; Newcastle, 98; Muswellbrook, 86; Dungog, 72. Last year the percentage for each section of the district was: Maitland, 89; Newcastle, 87; Muswellbrook, 73; Dungog, 73. Maitland section is better this year by 2 per cent.; Newcastle by 11 per cent.; Muswellbrook by 13 per cent.; while Dungog is not so good by 1 per cent.

The proficiency of the pupils examined in each subject of instruction, and the percentage of those who satisfied or exceeded the standard, are shown in the following table:—

Subjects.	Number Examined.	Percentage up to or above Standard.
Reading—Alphabet	1,886	73
,, Monosyllables	3,294	77
" Easy Narrative	5,021	77
" Ordinary Prose	7,509	82
· Total	17,710	78
Writing—On slates	6,592	83
" On paper	11,103	82
Total	17,695	. 82
Dietation	14,226	73
Arithmetic—Simple Rules	10,367	70
,, Compound Rules	4,743	60
"Higher "	2,598	57
Total	17,708	66
Grammar—Elementary	4,226	68
, Advanced	3,342	70
Total	7,568	69
Geography—Elementary	3,722	71
" -Advanced	3,671	78
Total	7,393	74
History—English	7,287	71
,, Australian	1,921	71
Scripture and Moral Lessons	17,068	73
Object Lessons	17,068	78
Drawing	17,517	68
Music	16,254	76
French	203	76
Euclid	1,173	66
Algebra	263	69
Mensuration	1,272	46
Latin	234	72
Needlework	6,359	82
Drill Natural Science	16,734	80
IVADUTAL SCIENCE	<b>4</b> 75	77

Compared with last year the percentages are not so good, except in case of the higher rules of Arithmetic, the percentage of which is the same as for last year. French is better by 10 per cent., and drill by 1 per cent. Reading, Writing on slates, Elementary Grammar, Advanced Geography, and Music, are not so good by 5 per cent.

Dictation, Object Lessons, and Needlework have fallen 6 per cent. Writing on paper, and the Compound Rules are less satisfactory by 2 per cent. The Simple Rules of Arithmetic and Latin are worse by 4 per cent. Scripture and Euclid have fallen 10 per cent. Elementary Geography is worse by 8 per cent. English History by 7 per cent. Australian History and Algebra are not so good by 12 per cent. Natural Science has fallen 15 per cent. Mensuration shows an improvement of 2 per cent.

The falling off in the percentages of the subjects of instruction are mainly due to two causes, viz., wet weather and the influenza.

During 1891, 100 teachers and assistants and 57 pupil-teachers were employed in the Maitland section; 91 teachers and assistants, 90 pupil-teachers, and 6 work-mistresses in Newcastle section; 78 teachers and assistants and 11 pupil-teachers in Musclebrook section; 77 teachers and assistants and 7 pupil-teachers in Dungog section. They are classified as follows:—

165 Pupil-teachers.

The teachers and the assistants, with few exceptions, have worked regularly and zealously, and have not shirked that very important duty—the full, regular, and careful teaching of their pupil-teachers, who should always be regarded as the back-bone of the system. Their training and instruction form a most important item of a teacher's duties, and one which an honorable man or woman never should evade. The classes at Wickham and East Maitland continue to be largely and regularly attended, and to be the means of rendering important services with regard to the study of Latir, French, Singing, and Drawing, to the diligent pupil-teachers.

#### Summary.

Eighteen new schools were opened during the year. Accommodation for 25,782 pupils exists. 303 out of 304 schools were fully inspected according to the regular form, and 202 schools received second regular and ordinary inspections. Organisation, discipline, and method continue to improve. Tree-planting and the formation of school gardens have been more general during 1891 than heretoforc. School banks continue to be extensively patronised. Teachers, assistants, and pupil-teachers are more studious than in the past. In the Maitland district the prospects of primary education are of a most relief or the prospector. satisfactory character.

T. DWYER,

East Maitland, 11th January, 1892.

District Inspector.

## ANNEX X.

### INSPECIOR M'CORMACK'S REPORT.

THE Newcastle section of the Maitland District had 48 schools in operation at the beginning of 1891. A Primary School has since been opered at Cardiff, and an Infants' School at Islington. Evening Public Schools have been established at Adamstown, and at New Lambton. The 52 existing schools rank as Public Schools. New buildings are ready for occupation at Dudley and at Stockton (Girls'). A brick structure, to replace the wooden one destroyed by fire, has been erected at Ash Island. The school at Teralba has been considerably enlarged, and a class-room has been added to the Waratah Public School. Improvements and repairs have been effected in connection with the schools at:—

Ash Island. Carrington. Charlestown. Cook's Hill. Hamilton. Hexham. Islington. Lambton, New.

Mosquito Island. Newcastle, East. Newcastle, South. Stockton. Teralba. Tomago. Waratah. Wickham.

Works of an important character are to be carried out at Adamstown, Carrington, Hamilton, Lambton, New Lambton, Newcastle, Newcastle South, Stockton, and Tremation. It has also been decided to erect new school buildings at Cardiff and Catherine Hill Bay, and to open additional departments at Hanbury, New Lambton, and Tighe's Hill. All important works have been supervised by the Architect

At the beginning of the year existing schools had accommodation for 7,309 children, and the buildings erected since supply 1,079 additional places. The ordinary attendance of pupils is about 7,700. Adequate room is, therefore, provided for the school population of this section of the district. The schools are well distributed, and are in a very fair state of repair. Most stand on good and conspicuous sites. This year the teachers have, by tree-planting and garden cultivation, much improved the appearance of the grounds. In these works the pupils have assisted. Satisfactory results have been achieved. The schoolrooms, with two or three other exceptions, are kept clean, carefully ventilated, and neat. Due care is taken of the furniture, apparatus, and materials. The water supply is good. As a rule the classification is judicious, and the registration correct. The punctuality secured in most schools is very satisfactory. The time devoted by some teachers to the inspection of the pupils in the lines, as to cleanliness and neatness, is too limited, and this work, so full of results, is consequently performed by them in a lax and superficial manner. School movements are generally performed with ease, quietness, and precision, and the government exercised is both vigilant and regular.

The schools and the departments under my supervision are ranked thus:—

The schools and the departments under my supervision are ranked thus:-

Classes	s. Scho	ols or	Departn	nents.
I	***********		9	
II	***************************************	]	.2	
$\mathbf{III}$	********************************		4	
IV		1	<b>2</b>

IIIV	· · · · · · · · · · · · · · · · · · ·	•••	1	
· IX			2	
$\mathbf{X}$	•••••••••••••••		0	
Evening	Public		2	

In the following table the enrolment and the average attendance of pupils for each quarter of the year are given :-

Quarter.	Pupils Enrolled.	Average Attendance.	Percentage.
March	9,546	6,607.4	69.2
June	9,356	6,724.5	71.8
September	9,694	7,013.9	<b>72</b> ·3
December	9,411	6,535.6	69.4

The average attendance for the year is 70.6 per cent. of the enrolment. Remarkably wet weather during the greater part of the year, and the recent general sickness have lowered the attendance.

C

All schools received during the year a regular inspection, and all but the two Evening Public Schools received an ordinary inspection. The general condition of the schools is here given:—

Schools,	Below Standard.	Up to Standard.	Above Standard.
Public		. 8	41
Totals	1	9	42

These results show that all the schools but one either reached or exceeded the standard.

The subjects, the number of pupils examined in each subject, the number who passed, and the percentage up to or above the standard are given in the following table:—

Subjects	Pupils Examined.	Pupils Passed.	Percentage up to or above Standard.
Reading	7,546	5,590	74
Writing	7,546	5,939	79
Dictation	5,928	4,035	67
Arithmetic	7.546	4.278	57
Grammar		2,063	62

Pupil Teachers.

Class I.	Class II.	Class III.	Class IV.
14	12	25	39

As a body the teachers are respectable, intelligent, zealous, and efficient. The pupil teachers are

studious, attentive to their duties, and well-conducted.

School work in the Newcastle section of the Maitland district has been successfully carried on during the year, and the prospects for 1892 are favourable.

J. McCORMACK. Inspector.

Newcastle, 30th December, 1891.

# ANNEX Y.

### INSPECTOR FLASHMAN'S REPORT.

The year 1890 closed with 68 schools in operation in this section.

Early this year 7 schools taken from the Maitland, and 13 from the Dungog sections, were placed under my supervision. I commenced the year, therefore, with a total of 88 schools.

Two Provisional Schools, one at Gungal and the other at Muscle Creek, have been opened.

The Provisional Schools at Isis and Worrowalong, the Half-time Schools at Kellick, Nandowra, Rosedale, and Turanville; the House Schools at Donald's Creek, Ellerston, Glen Dhu, and Willey, have been closed in consequence of diminished attendance.

Some changes have been made in the working of a few of the smaller schools.

The year closed with the following schools in operation:  Public  Provisional  Half-Time  House	11 18
Total	81

There are still a few schools where the average attendance is unsatisfactory; these will, I expect,

be closed during the ensuing year.

It is much to be regretted that so many of the small country schools have been closed because of

It is much to be regretted that so many of the small country schools have been closed because of the falling off in the attendance. The tendency in this district is certainly for persons with families to seek employment in or near towns. In many cases, the removal of one family is sufficient to reduce a school to such an extent as to render its closing imperative.

With one or two exceptions, the property of the Department is in good condition. More than twenty schoolrooms and teachers' residences have been repaired during the past year. The expenditure necessary for improvements next year will be very limited.

The planting of trees and the formation of flower gardens have been on the whole fairly general throughout the district. Several of the play-grounds are fast assuming quite an altered appearance; the trees planted two and three years ago have now grown, and are adding much to the comfort of the pupils. In some cases the results have not been satisfactory; many of the trees sent to the schools were dead when they arrived, or so small that they were unable to bear transplanting and soon died. In other cases the teachers have taken only a very perfunctory interest in the matter, and have left the tending of the trees and gardens to the pupils, who have not been slow to interpret the indifferent conduct of their teachers, and have soon fallen off in their zeal and attention.

It is pleasing to note with what readiness the parents of the pupils responded to appeals for funds to meet the necessary expenses connected with Arbor Day celebrations. In some cases nearly twice as much money as was required was subscribed. In a few instances, where the teachers have been unsympathetic in the matter, they have been fairly driven by the force of public opinion to fall in with the movement.

the movement.

While every effort to beautify the grounds in an intelligent manner should be highly commended and encouraged, it must be borne in mind that the grounds attached to the schools are ploy-grounds, and that any action which tends materially to change their character in that respect is a positive injury. I have come across cases where the flower-beds have been so placed as to prevent the lads from indulging in such games as cricket, rounders, football, &c. The average school boy would much prefer the spacious unalorated area, where games so dear to his heart might be practised without fear of damaging flower-beds or sprouting young trees, to the beautiful but limited grounds which some teachers seem to think quite sufficient. quite sufficient.

The school grounds at Warkworth, Murrarundi, Falbrook, Singleton, Roughit, Parkville, and Wingen are very attractive in appearance, and are the best in the district.

All the schools in this section, except one, received a regular inspection, and forty-two received an ordinary inspection. The only school not inspected was the Provisional School at Worrowolong, which was closed early in January last.

The total number of inspections conducted by me was 133.

My work kas been very much interfered with by wet weather, flooded creeks, and almost impassable roads.

I visited several schools, and found them closed in consequence of the state of the weather. An unusual number of special inquiries has taken up much of my time and necessitated considerable extra

The subjects reported last year as weak have received special attention from the teachers, with satisfactory results. Mental and slate arithmetic, dictation, grammar, drawing, and writing have in

I was particularly pleased with the writing I inspected at the Public Schools Roughit, Rouchel, Broke, and Singleton Boys' Department. In each case the work exhibited was much above the average.

The subject, the number of pupils examined in each, and the percentage that satisfied the standard, are given below:—

Subject.	Number examined.	Percentage up to Standard.
Reading	<b>2.49</b> 0	78
Writing	2,475	33
Dictation	2,093	72
Arithmetic—Simple Rules	1,443	72
" Compound Rules	711	63
" Higher Pulsa	334	63
Grammar—Elementary	561	74
Higher	389	71
Geography—Elementary	593	74
Higher	353	73
History—English	938	75
Australian	189	74
Scripture	2.134	76
Object Lessons	2,397	80
Drawing	2.389	70
Music	1,805	69
French	20	100
Euclid	100	70
Algebra	17	82
Mensuration	25	52
Latin	25 25	100
	853	75
Needlework	1,930	69
Drill	1,000	

It appears to me that one of the most difficult subjects an untrained teacher has to deal with is Although the instruction contained in the little manual on "Physical exercises," which is supplied drill. Aithough the instruction contained in the little manual on "Physical exercises," which is supplied to all teachers, is simple, plain, and pointed, it is to the uninitiated difficult, perplexing, and bewildering. On several occasions I have seen the exercises gone through in such a manner as would provoke unbounded merriment to the majority of boys attending any of our town schools. Drawing is another subject of great difficulty to those who have not received special instructions in the method of teaching it. Few trained teachers appear to consider that the elementary course they themselves have gone through should be followed in treating the subject before their classes. Frequently have I found fourth-class pupils simply amusing themselves during the lesson—some copying animals' heads, others trees, others parts

parts of the human body, &c., but not one following any set plan or studying the subject in a systematic intelligent manner. The teacher who has yet to learn the real importance of the subject will fail in his methods of teaching it.

The following table shows the relation of the schools to the standard of proficiency:-

Schools.	Below Standard.	Up to Standard.	Above Standard.	Total.
Public	4 .	7	40	51
Provisional	3	4	6	13
Half-time	5	4	12	21
House	•••	. 1	3	4
Total	12	. 16	. 61	89

Last year there were nineteen schools below standard; this year there are only twelve. In every case where low results were obtained suitable action was taken by the Department.

The organisation of the schools is on the whole satisfactory. All the principal schools are now provided with weather sheds, and many of the smaller ones with verandahs. The schools are fairly well found in furniture, materials, maps, and diagrams. There is seat accommodation provided for 4,677 pupils, which is quite sufficient for present requirements. The highest enrolment during any quarter this year was 3,310:

In a few instances I have been surprised and disappointed when I have unexpectedly visited schools which I have always previously found in a good condition, to find much to object to. Untidy schoolrooms, presses, and playgrounds, dirty lavatories, and outhouses are faults which generally do n t appear alone. A teacher who is careless in such matters is certain to be equally slovenly in matters of greater importance.

The discipline maintained in the schools is effective and satisfactory, but few teachers appear to excreise much control over, or take any interest in their pupils when once they leave the vicinity of the schoolroom. Really effective discipline seeks to influence every action of the child, not only in the schoolroom and playground, but beyond them.

One classified teacher only has been examined with a view of improving his classification. One teacher applied for permission to be examined, but as his practical skill was not sufficiently good his request was declined.

Two teachers who had done very satisfactory work, and whose official records were in every way satisfactory, were promoted under Regulation 103.

There are 11 pupil-teachers in this section. One only failed to gain promotion. These young persons are all of unblemished characters, intelligent, hardworking, conscientious, and enthusiastic; they have done good work during the year, and promise to become in the future valued members of the profession of their choice.

The teachers and pupil-teachers are classified thus:-

	111.			II.		I.		Un-	Total.
	Α.	В.	C.	А.	В.	A.	В.	classified.	1000
Peachers	18	10	6	4.	5		2	27	72
Assistants	2	***		1	1			2	6
		Class I.		Cass II.		Class III.		Class IV.	Total.
Pupil-teachers		1		2		4		4	11

The number of unclassified teachers is still very large; many of them are females in charge of very small schools, and have been in the service of the Department a considerable time. Under such circumstances it will, I think, be a long time before the number is materially reduced.

I am of opinion that the educational requirements of this section are well met and that the

prospects are encouraging.
Muswellbrook, 29th December, 1891. C. O. FLASHMAN, Inspector.

# ANNEX Z.

# INSPECTOR WATERHOUSE'S REPORT.

At the close of the year 1890, 82 schools were in operation, of which 57 ranked as Public, 13 as Provisional, 10 Half-time, and 2 House-to-House Schools. At the beginning of this year there were transferred to this section 10 schools, viz.:—Clairwood, Dunolly, Glendon Brook, Merannie, Miller's Forest, Mitchell's Flat, Mundawa, Nelson's Plains, Raymond Terrace, and Sedgefield; at the same time I was relieved of the supervision of Belltrees, Brushy Hill, Davis' Creek, Gundy, Moonan Brook, Moonan Flat, Ravensworth North, Rouchel, Rouchel Vale, Page's River, Stewart's Brook, Donald's Creek, &c., and Ellerston, &c. In consequence of these changes I had charge of 79 schools in January, 1891.

During

During the year a Public School was opened at Euwylong, a Provisional School at Lamb's Valley, a Half-time School at Glen Martin, and an Evening Public School at Miller's Forrest. The Barrington Aborigines' Camp and Tea Gardens Provisional Schools were raised to the rank of Public Schools, and Aliceton Half-time to that of Provisional. The unsatisfactory attendance at Dusodie Public, and Myall Upper (now called Bungsree) Provisional, necessitated their reduction to Half-time Schools, whilst the small attendance at Nerong Half-time, and Sugarloaf Creek Half-time, led to the closing of these schools. The schools in operation at the close of the year are classified thus:—

Public	60
Provisional	Ğ
Half-time	10
Evening Public	10
12 tolling I dollo	T

Total .....

Two other schools will come into operation after the Christmas vacation, viz., Martin's Creek Provisional, and Gloucester River House-to-house; at the former place the residents have completed a suitable building, the Department making the grant which is usual for schools of this class, while at the latter suitable rooms will be provided by the settlers. In the few instances in which applications for schools were declined, either a school was already in operation within a reasonable distance of the place at which the residents wished for a school to be erected, or else the conditions laid down in the Regulations with regard to the establishment of schools of even the lowest class could not be complied with.

Serious damage has been caused to several of the schools and residences by white ants; minor repairs and improvements have been effected in numerous instances under the Inspector's supervision, and steps have been taken to give the buildings most requiring it a thorough overhaul during the coming year. The Architect for Schools will be responsible for this work.

Allowing 8 square feet of floor space for each child there is sufficient accommodation in the schools in this section for 4,622 pupils; reckoning 100 cubic feet of air for each child, 4,281 pupils could be accommodated; this is an increase of 165 places if the calculation be made on the former basis, and of 290 if on the latter.

290 if on the latter.

The school accommodation is ample, as may be seen by a glance at the following table:—

Quarter.	Enrolment.	Average Attendance.
March June September December	3,177 3,140 3,134 3,125	2,191·3 2,271·5 2,152·6 2,120·8

All the schools in operation during the whole year or any part of it were fully inspected, two of the least satisfactory receiving a second regular inspection. Special work prevented me from holding more than forty-one ordinary inspections.

The efficiency of the Schools may be exhibited thus:-

	Below Standard.	Up to Standard.	Above Standard.	Total.
Schools in operation a full year at the time of inspection	20	3	56	79
Schools not in operation a full year at the time of inspection	3	•••••	1	4
Total	23	3	57	83

from which it appears that 72 per cent. reached or exceeded standard requirements, last year the percentage was 73. In some instances, doubtless, the failure of teachers to satisfy the standard is due to neglect to prepare thoroughly the subjects they teach, and inability to impart in a pleasing and instructive manner the knowledge they possess; other failures may readily be accounted for by one or more of the following circumstances:—

(a) Irregularity in the attendance of pupils on account of the wet weather which prevailed for several months.

(b) Irregularity in attendance, due to the prevailing epidemics, influenza and whooping-cough.
(c) The examination of schools which had been in operation only a short time when inspected.
(d) The fact that there was no Third Class in the school.

The schools of highest general efficiency were Booral, Dungog, Gresford, Stroud, and Telegherry. Three of the pupils from the Dungog Superior Public School passed the recent University Junior Examination.

The proficiency of the pupils examined during the year is given in the subjoined summary:

Subjects.	Number of Pupils examined.	Per centage up to or above Standard.
Reading	2,341	82
writing	2,341	84
Dictation	1,929	73
Arithmetic	2,341	70
Grammar	916	69
deography	916	74
English History	907	69
Australian History	303	68
scripture and Morai Lessons	2.205	79
Julect Lessons	. 2,332	83
Drawing	2,332	80
Music	1,884	74
Euchd	135	76
Algebra	55	65
Mensuration	254	54
Latin	18	83
Needlework	974	82
Jrill	2,330	67
Natural Science	18	83

There have been serious interruptions to continuous work caused by bad weather and epidemic complaints. About half the schools are so situated that it is necessary for many of the children to cross a river or creek in order that they may attend. In ordinary seasons this presents no difficulty, but during the present year the ground has been so saturated with moisture that a comparatively insignificant rainfall has been sufficient to cause a "fresh" which has covered or carried away the logs by which the children usually cross, and thus the children have been prevented from attending. In one part of my section I was credibly informed that no less than thirteen logs were carried away by freshes within six weeks. For many months these freshes were of frequent occurrence, and the attendance was merely nominal. All parts of this section have been visited by the prevailing epidemic, influenza, which prostrated teachers and scholars alike, and seriously interfered with school work for periods varying from two to six weeks. Whooping cough, too, has been of common occurrence, and has rendered the examination of certain schools distressing to Inspector, teacher, and pupils. After making due allowance for the interruptions to which I have alluded, I am satisfied the teachers are not responsible for any apparent retrogression, indeed I deem them worthy of commendation for the judgment they have displayed in taking care that such important subjects as reading, writing, dictation, and arithmetic, in which the percentage of passes is practically the same as last year, should not suffer.

The teachers and pupil-teachers under my supervision are ranked thus:—

The teachers and pupil-teachers under my supervision are ranked thus :-

	I A.	IB.	II A.	II B.	III A.	III B.	III C.	Un- classed.	Total.
Teachers	•••	1	2	5	18	15	9	24	74
Assistants				1				2	3
		1	2	6	18	15	9	26	77
		Class 1.	Class 2.	Class	3. Cla	ass 4.	On Proba	tion.	Total.
Pupil-teachers	• • • •		2	3		1	1		7

Four of the teachers have been promoted for good service in accordance with section 103 of the revised Regulations. One teacher has secured a classification by examination. The teachers, as a whole, have worked zealously under unusual difficulties; a few have been deservedly censured for the unsatisfactory performance of their duties. The pupil-teachers are, with one exception, continuing to give satisfaction factory performance of their duties. satisfaction.

Several of the teachers celebrated "Arbor Day" in an appropriate manner, and I am pleased with the care the children take of their own particular tree or flower-bed. The teachers deserving of special mention for the interest they have taken in this work are Mr. E. E. Mitchell, of Stroud, under whose supervision the children have formed some very pretty flower-beds, which are well kept, and Mr. G. W. Browne, of Chichester, who has converted ground previously covered with fallen timber and tussocky grass into a well-arranged flower and vegetable garden.

Mr. John P. Green, of Raymond Terrace, has a Cadet Corps of about thirty members, which executes military movements with considerable precision, and handles the carbine with a freedom which shows not only that the instruction has been imparted in a skilful manner, but that the lads take an interest in learning how to handle firearms properly.

The Kindergarten exercises, which are incorporated with the regular work of the First Class at the Clarence Town Public School, continue to interest the children, and to develop their faculties.

The educational requirements of this section are fully met by existing means of education The year's work has been fairly satisfactory, and there is every reason to anticipate that the results for the year 1892 will be higher.

J. WATERHOUSE.

Inspector.

### ANNEX Z1.

# DISTRICT INSPECTOR O'BYRNE'S REPORT.

The number of schools in operation for the whole or any portion of the year was 327. These are classed in accordance with the attendance, and the circumstances under which they are worked, as follows:—

Public Schools Provisional Schools Half-time Schools House-to-house Schools Evening Schools	61 20 16
m	

For the information of the general public, who are not supposed to be acquainted with the precise signification of the technical terms used by the department in designating the different kinds of schools, I think that the following will be of use.

A Public School is one at which the ordinary average attendance is not less than twenty pupils. These schools are divided into ten classes, the divisions being made on the basis of average attendance. In each class of school it is required that the head teacher shall have obtained by examination a prescribed and a school with an average between 50 and professional diploma or classification. Thus for a Sixth-class school—one with an average between 50 and 100—the master must have a Second-class certificate, and so on. Anyone can readily ascertain what amount of scholarship is indicated by each grade of classification. This information is usually published in the Minister's Report, under the heading "Course of Studies prescribed for Teachers."

A Provisional School is one in which the average attendance ranges between 12 and 20. These are the pioneers and usually form the nucleus of permanent Public Schools. For the most part, their teachers are untrained and unclassified. As a rule, these teachers are recruited from young men and women

women who have been brought up in our Public Schools, and who exhibit an aptitude for the work of teaching. As soon as this class of school shows an average of 20 or more for a reasonable time, it is placed on the Public School list. In all permanent centres the cost of providing and maintaining Provisional Schools is borne by the State. At saw-mills and places of doubtful permanence the residents are required to provide the school-buildings. The same prudent rule is followed in the establishment of Half-time and House-to-house Schools. The migration of a single family would cause a school of this kind to collapse at any time. Therefore the aid given is properly limited to the payment of the teacher's salary, and to a small grant of books, slates, and a few other necessary requisites. The attendance at Half-time and House-to-house Schools generally averages from 9 to 12 pupils. In many parts of this district good work is being done by these schools, and they bring the means of education, as it were, to the doors of more than 500 children. There are very few, if any, places in the extensive tract of country to which this report refers, and where 10 or 12 children can be grouped together, that have not their school of one kind or another. I venture to say that there is no country in the world where greater efforts are made to extend the blessings of primary education to all. Yet there are many large families in the Central and Western Land Divisions which cannot be reached under our Public School system. Of late years I think that this number is increasing, and I attribute this to the increased area of land that can now be selected. Where a man can acquire 4 square miles of country, it is almost impossible for a sufficient number of families to settle to form a school centre. I am merely stating a fact, not offering an opinion on the land policy.

### New Schools, Accommodation, and Repairs.

Between 1st January and 31st December, 1891, 18 new schools were brought into operation These are:—Ballast Quarries, Berrigan, Derlow's Creek, Benmore, Bute, Canimbla Creek, Holy Camp Broken Hill Girls, Bourton Terrace, Alma, Broken Hill Evening, Tumut Infants, Ramsay, Urangeline, Munyabla, Edge Hill, Emu Reefs, and Lalla Rookh. The following Schools, which had been closed for some time, were reopened during this period, viz.:—Moorwatha, Eualdrie, Forwood, Maude, and Jones' Creek

In consequence of small attendance, 17 schools either did not reopen or were closed in the year, ramely, Moira, Paika, South Marowie, Pretty Pine, Wanganella, Mia Mia, Yellow Waterhole, Jellingrove, Bago, Morebringer, Upper Tumbsrumba, South Humula, Mount Blanc, Matong, Wilson, Methul, and Rawsonville.

Rawsonville.

The Infant Schools at Adelong and Grenfell ceased to be worked as separate departments, whilst the Primary Schools at Cootamundra and Tumut had infant departments added to them. These results were, of course, brought about by decrease or increase of the av-rage attendance.

This accommodation provided by all schools in this district at the end of last year was 19,557 places. The number of new scats provided this year by new buildings, by renting, &c., was 3,602; the loss by closing schools, &c., was 1,792. These changes leave, on 31st December, 1891, sitting accommodation for 21,367 pupils. The enrolment and average attendance for the last quarter of the year were, respectively, 16,084 and 10,566. It will thus be seen that in the matter of school accommodation we are well abreast of all reasonable requirements. I know of no place where there is overcrowding in the schools.

Lake Albert is the only place at which a weather-shed was erected.

Nearly all the classified schools have residences. The few that are without them are recently converted Provisional Schools, the permanency of which is doubtful. Twenty-two residences were repaired at a cost of £359, and 70 schoolhouses at a cost of £1,033 9s. 3d.

New schools have been sanctioned at Tyagong, Boginderra, and Tumbleton. Applications from Lisgo, Collinroobie, Ganmain (Deepwater), Broken Dam, Tarrawange, Bynyar, and The Rise are still under consideration.

About the middle of the year a grant of £30 was made to the residents of Mangoplah to enable them to build a schoolhouse, but this grant has not been taken up.

# Inspection.

No change worth mentioning has been made in the boundaries of the district or in the number of schools contained therein. The staff of Inspectors also remains unchanged, and is as follows:

Wagga Wagga	73	school	S	District Inspector G. O'Byrne.
Albury	92	••		Inspector S. Wright.
Young	92	11		Inspector C. W. Friend.
Hay	70	2)		Inspector Thos. Pearson.
•				
Total	327	school	s.	

Three hundred and sixteen of these received regular and 104 a second or ordinary inspection. Several incidental inspections were paid to many of the schools in the course of the Inspectors' travels. It is a rule with us never to pass a school without calling, and briefly noting how the work is proceeding. These basty visits are very useful as tending to preserve uniformity of work in the schools.

Of the 11 schools not regularly examined, two were night schools, which had only a very brief existence. Most of the other schools were very small ones, and had closed for want of local support before the Inspectors could reach them on their usual rounds. I missed the regular inspection of the Windowie school in consequence of the sickness and absence of the teacher. This school, however, received an ordinary inspection.

an ordinary inspection. The following table shows the condition of the schools in relation to the Standard of Proficiency, 50 per cent. being regarded as up to Standard :-

Kind of School.	Below Standard.	Equal to.	Above.	Total.
Public Provisional Half-time House-to house Evening	23 15 2 3	23 8 4 . 4 	179 34 12 8 1	225 57 18 15
Total	43	39	234	316

The number of pupils examined in each section is as follows:-

Hav		3,598 in	67 schools.	
			92 "	
	***************************************	<b>2,5</b> 08 in		
Wagga		2,421 in	72 ,,	
	Total	11 232 in	316 schools	•

The percentage of passes in each subject for the years 1890 and 1891 are given hereunder:-

Subjects.	1890.	1891.

Albury	5 1 4 4	3 1 6 3	3 5 1 6	1 8 5 6	12 15 16 19
Total	14	13	15	20	. 62

School Fees.

The amount of school fees paid was £5,972 4s. 6½d. This is a slight increase on last year's payments. This sum divided by the average attendance gives 10s. 4d. as the annual fee paid by each child.

In this year a considerable amount of tree-planting and improvement to the grounds was done. At nearly every school, where the site is securely enclosed, Arbor Day was celebrated with varying degrees of enthusiasm and success. In some places the teachers, pupils, parents, and School Boards united in making the day a thoroughly effective one in the direction aimed at by the Minister. Future generations of children will owe a debt of gratitude to the forethought manifested by the Department in the active and enlightened efforts made to improve and beautify the school grounds. The ultimate success of this movement will largely depend on the amount of recognition given by Inspectors to teachers who display taste, skill, and industry in the management of the few acres allotted to them. Many of the teachers have done good work in horticulture and tree-planting. The following, however, deserve special mention:—Mr. Heath, of Narrandera; Mr. Peacock, Brucedale; Mr. Kchoe, Cungegong, and Mr. Balmain, of Old Junee. I have, for many years, recognised the great importance of encouraging the planting of our school sites, and I would fain hope that here and there in the various parts of the Colony entrusted to my supervision, that some little good remains as the result of my feeble advocacy. At the risk of what, may have the appearance of an unpleasing egotism, I will venture to quote my opinions of twenty years ago. In the Council's Report of 1872 I wrote as follows:—
"Generally speaking, the playgrounds and whole surroundings of the schools present a bare and uninviting appearance, and little has been done to render them attractive by planting trees and flowers . . . I shall not prolong this report by any lengthened speculations on the advantages to be derived from exhibiting to our children examples of successful horticulture; but I am strongly of opinion that our schools can be made largely instrumental in cultivating those tastes which will induce our future settlers to surround their homesteads with something more attra

Attendance Branch.

There are two Attendance Officers employed in the Wagga district—one located at Hay, and the other at Wagga. Besides these, Mr. Cork was sent to Broken Hill for a couple of months as temporary Attendance Officer. I have no return of the work done by him, but I understand that he was employed in visiting and cautioning defaulting parents, and that a good many children were brought into the schools through his intervention.

The number of prosecutions authorised by the Minister was 257. There were 193 convictions under the compulsory clause; 38 cases were either dismissed or withdrawn; 26 of the prosecutions authorised have not yet been brought into Court.

authorised have not yet been brought into Court.

Wagga, 6th January, 1892.

G. O'BYRNE District Inspector. ANNEX

#### ANNEX Z2.

#### INSPECTOR WRIGHT'S REPORT.

At the end of 1890 there were 89 schools in operation in this district, one of which was transferred to the Yass district at the beginning of 1891, so that the year was commenced with 88 schools. Three new schools, viz., Ballast Quarries Public, Berrigan Provisional, and Darlov's Creek Half-time, have been opened, and one school, Moorwatha Public, which was closed in 1890, has been reopened. There were, therefore, 92 schools in operation during some portion of the year, but of these 6, viz., Jellingroe Public, Bago Provisional, Morebringer Provisional, Upper Tumberumba Provisional, South Humula Half-time, and Mount Blanc Half-time, have been closed owing to the limited attendance, so that there are now 86 in operation. It is very probable that 2 of the schools closed this year, viz., Upper Tumberumba and South Humula, will be reopened in 1892.

The schools now in operation meet the requirements of the district very satisfactorily, and I anticipate that few applications for new schools will be made during 1892.

pate that few applications for new schools will be made during 1892.

#### Inspection.

Of the 92 schools open during the year, 85 received a regular inspection, 1 was twice fully inspected, and 13 ordinary inspections were made. The 7 schools which did not receive a regular Inspection were —

Ballast Quarries Public, which was open during the last two weeks of the year only.

Morebunger Provisional, which was open for 1½ day only (in January).

Bago Provisional

Upper Tumberumba Provisional South Humula Half-time

Which were closed when the localities in which they are situated were visited.

Mount Blanc Half time

The total average attendance at the last five of these schools for the year was only 36 4, so that very few scholars were missed by the omission of the regular inspections.

Of the 85 schools inspected, 66 were above, 6 up to, and 13 below the standard in efficiency; that is, 84 7 per cent. satisfied the requirements. This is 10 per cent. above the results obtained last year, and speaks well for the industry and intelligence of the teachers generally.

The attainments of the pupils in the principal subjects of examination are shown in the following table—

Subject	Number of Pupils examined	Percentage up to o above Standard
Reading	2,444	729
writing	2,508	64 3
Dictation	1,982	71 4
Arithmetic	2,320	64.9
Frammar	1,066	705
Beography	1,049	72 5
English History	1,038	61.1
ustralian History	152	73 6
Scripture	2,232	67.2
Object Lessons	2,316	683
Jrawing	2,352	63 6
veedlework	1,033	71.9
Orall	2,379	63.0

# Accommodation.

Accommodation was provided at the end of 1890 for 4,344 pupils During 1891, places for 201 were lost by closing schools, &c., while new places for 407 were provided by the erection of new buildings. There is thus a total gain for the year of 206 places, there being accommodation now for 4,550 scholars. As the largest enrolment for any quarter of the year was 3,485, in the quarter ending March, it will be seen that ample provision has been made for properly accommodating the children.

# Buildings, Grounds, &c.

The following work has been done under the supervision of the Inspector:-

trouble.

# Teachers.

The classifications of the teachers and pupil-teachers are shown in the following table -

								O	
Position.	1 A.	1 B	II A.	ИВ	II A.	шв	111 C	Un- classified	Total

Pupil-teachers		5		3		3		1	12

Work-mistress ....

### Summary.

The educational requirements of the district are well met by the schools provided; the buildings as a whole are in good condition; and the teachers generally are painstaking, earnest, and capable. The prospects for the coming year are good.

Albury, 2nd January, 1892.

STEWARF WRIGHF

#### ANNEX Z3.

#### INSPECTOR FRIEND'S REPORT.

At the end of 1890 there were 87 schools or departments under my supervisior. Of these Coolac, Gundagai, Gundagai South, and Walli were transferred to other inspectors in January last; and Mitta Mitta, Cooba Creek, Clarendon, and Burr Hut Schools, situated between the Great Southern and Gundagai railway lines, were added to my list. Grenfell Infants' ceased to exist as a separate department, but an Infants' School was opened at Cootamundra. Schools were established at Benmore, Bute, Canimbla Creek, Holy Camp; and Eualdrie and Torwood Half-time which closed last year reopened as a House-to-house school.

Hence, there are 92 schools now in operation in the Young section, and they are thus classified :-

Public Provisional Half-time House-to-house	16 2
Total	<del></del>

It has been decided to sanction schools at Tyagong, Boginderra, and Tumbleton, and others will probably be established at Winderahdeen, and at a place near Balabla. Within the last few days two additional petitions has been received. By March next, my list will probably comprise 98 or 100. Applications for schools have been numerous; and, although some have been declined, the department's principle of expansion has been borne in mind, and schools have been allowed in all cases where it was considered judicious to open them.

At Cootamundra new buildings for infants were erected under the architect's supervision. Among the works done by the inspector may be mentioned:—

#### (a) The erection of new school-rooms.

Place.	Object.	Cost.	Seats.
Canimbla Creek	New To replace old building	£ s. d. 59 10 0 105 0 0	35 48

- (b) Repairs to 31 school buildings, the cost being £329 10s. 3d.
- (c) ,, 11 school residences, ,, £114 0s. 6d.

# Material Condition, Accommodation, &c.

The buildings in which the children are collected are, in most cases, well adapted for the purposes they are intended to answer. They are centrally situated, properly ventilated and furnished, in satisfactory repair, and commodious. They contain 5,768 places, as against an enrolment which does not exceed 4,989. In general, they indicate due attention on the teachers' part, and present a neat and well-kept appearance—circumstances which cannot fail to exert a healthy influence over the pupils. Arbor Day was successfully celebrated in a large number of schools, and flower and vegetable gardens are meeting with increased favour.

## Inspection, &c.

Every school in this district received a regular and 44 an ordinary inspection, 6 were subjected to a second ordinary (1 from the District Inspector). I assisted for a week in the Wellington District, where I examined Cobar and Nyngan (5th class schools), and Coolabah Provisional. My inspections may be thus summarised:—

Regular, in Young Section	93
" Wellington District Ordinary, in Young Section	3
Ordinary, in Young Section	49
Total	 45

The results in reading, writing, slate arithmetic, French, algebra, mensuration, trigonometry, and Science compare satisfactorily with those of last year; but grammar, geography, history, drill, mental arithmetic, and words and meanings have not been so successfully treated. Some teachers miss or fail to recognise the importance of mental arithmetic as leading to correct operations upon the slate; and where word meanings or dictation are weak, it is found that they have erred in pushing the pupils beyond the reading lessons required by the Standard. Where these latter conditions exist, the children can, in many instances, manage fairly well the mechanical part of reading, but they can neither understand what they are attempting, nor write correctly from dictation the lessons which they should have mastered. Low results in history and geography can invariably be traced to the fact that teachers have left the children to learn the subject from books, instead of imparting the instruction themselves. The mark for elementary drill would certainly be higher if a less elaborate work than "Infantry Drill" were supplied. A small hand-book, compiled by some one who understands our schools, would meet an existing want in this respect.

I can, with satisfaction, record an improvement in the organisation and general discipline of the schools in my district.

The following deserve special mention for the creditable results attained at the regular inspections of this year:—

Cowra Superior.
Cullingar,
Dudauman.
Grenfell Superior.
Koorawatha.
M'Henry's Creek.
Milong.
Quondong.

Tubbul.
Wambanumba.
Wattamadara.
Weddin.
Wombat.
Yeo Yeo.
Young Superior.

Billimari is the best Provisional School.

The undermentioned schools were successful at the recent University Junior Examination:-

Young Superior	14 p 3 1	asses.
Total	18	12

I am pleased to report that the schools are, in most cases, duly appreciated, and that a local interest in them has been excited and sustained. Prizes have been liberally subscribed in many of them, and school picnics, sports, &c., freely indulged in. The Tenora Public School has been especially fortunate in regard to the means of physical education, provided by some of the residents, who, have had a tennis court and cricket ground formed, and horizontal and swing bars erected.

As a rule, the pupils are punctual and regular in their attendance, and the home disabilities and hindrances are comparatively limited. In a few farming localities, however, the teachers complain of the indifference with which the parents regard the educational advantages offered by the department. These persons either send their children to school simply when they can find nothing for them to do about the house or farm, or allow them to attend for the bare seventy days in the half-year. If a substantial fine were inflicted in lieu of the very nominal one now in force, persons of this stamp would probably be induced to realise the necessity for permitting their children to embrace their privileges, instead of depriving them of the benefits provided by the State; and teachers labouring in such undesir able places would have a fair chance of better satisfying the department.

A synopsis of the efficiency of schools is shown hereunder:-

Class of School.	Below Standard.	Up to Standard.	Above Standard.
Public	7 3	1	65 13 2 2 2

The following table shows the proficiency of pupils in subjects taught:-

Subjects.	Total number Examined.	Number Passed.	Percentage up to o above Standard.		
Reading—Alphabet	157	107	68

#### Teachers.

The Teachers, Assistants, and Pupil-teachers now employed in the Young section are classified as follows :-

	1 A.	1 B	2 A.	2 B.	3 A.	3 В.	3 C.	Not classified
Teachers and Mistresses Assistants	*****	2	8 1	2 1	21 3	13	9	36 2
			Class	1.	Class 2.	Class	3.	Class 4.
Pupil-teachers	••••••		4		3	6		6

In the majority of cases the teachers have laboured assiduously and intelligently in the performance of their work, and by their commendable conduct and efficiency have secured the respect and confidence of the persons they live amongst.

It is satisfactory to know that the number of untrained teachers is not likely to increase to any material extent, as all novices who receive their first appointments in the capacity of teachers in full charge of schools, although many of them ultimately do well, must gain their experience at the expense

of the children over whom they are placed. When, however, a novice commences his career as a pupil teacher, the results of his inefficiency are not so serious, for instead of being thrown wholly upon his own resources, he is placed under a head-master who is capable of training and aiding him in the management of his class.

This evil is now being gradually remedied by the appointment of ex-pupil teachers to the charge of small schools.

To sum up :-

1. All schools were fully inspected.

An schools were thiny inspected.
 The district is well supplied with schools, which are mostly in good repair.
 The buildings afford ample accommodation, and the sites are well chosen.
 Viewed generally, a satisfactory year's work has been achieved.
 The outlook is promising.

Young, 27th December, 1891.

CHAS. W. FRIEND. Inspector.

## ANNEX Z4.

#### INSPECTOR PEARSON'S REPORT.

1. The adequacy of the means of education as regards amount and distribution. At the close of 1890 there were 64 schools in this section classified as under: Public .....

Provisional ..... Half-time ..... House-to-house ..... Total.....

The year 1891 was commenced with the same number.

During the year 7 schools were closed, owing to diminished attendance, chiefly through removal of tion. These schools are as follows: population.

Public......Moira, Paika, South Marowie Half-time ...Pretty Pine, Wanganella. House-to-house...Mia Mia, Yellow Water-holes.

During the year Maude Provisional was re-opened, Broken Hill Girls, Bourton Terrace House-to-house, and the 2 Evening Schools at Alma and Broken Hill were established.

Pinnacles Provisional has been classified as Public.

The total number of schools open during the year, therefore, was 69, and the 62 in operation at the end of the year were classified as Public 48, Provisional 8, House-to-house 4, Evening 2.

These changes are summarised thus :-

Schools in operation at end of 1890	64
School in operation at beginning of 1891	
Schools closed during the year	7
Schools opened as new	4
Schools reopened	1
Schools in operation during some portion of the year	69
Schools in operation the whole of the year	57
Schools in operation at the end of the year	62

This section is adequately provided with the means of education, in fact in every locality where the regulation minimum could be maintained state education has been granted.

2. The actual condition of the schools as elicited by inspection.

Of the 69 schools in operation during the year, all except 3 were fully inspected. In addition 18 schools received an ordinary inspection, making a total of 84 inspections as against 71 last year

I also assisted the district Inspector with the inspection of Wagga Wagga Superior Public Boys'

and Girls Departments.

The 3 schools uninspected were Broken Hill Girls, Broken Hill Evening, and Mia Mia House-to-

The first two were established after my visit to the Barrier, and owing to their extreme remoteness and the pressure of other important duties it was absolutely impossible to make a second visit. The other school, Mia Mia, was closed before my visit to that portion of this enormous area.

The following table shows the efficiency of the schools:-

Schools.	Below standard.	Up to standard.	Above standard.	Total.
Public Provisional Half-time House to-house Evening	1 1	2	42 7 2 4	50 8 2 5 1
	8	2	56	66

Hence 88 per cent. have satisfied standard requirements.

Comparing these results with those of 1890 we have :-

	Year.	Schools inspected.	Up to or above standard.	Percentages
1890		62	38	61·2
1891		66	58	88·0

It will thus be seen a most marked improvement in the efficiency of the schools has been made The schools of highest efficiency are in order of merit:—Deniliquin Primary and Infants, Hay Primary, Broken Hill North Infants, Wentworth, Gunbar, Silverton, and Wilcannia. The

The proficiency of the pupils examined is shown in the subjoined summary.

Subjects.	Pupils examined.	Percentages up to or above standard, 1891.	Percentages up to or above standard, 1890.
Reading Writing Dictation Arithmetic Grammar Geography	3,598 2,404 3,558 854 839	90 86·8 84·4 89·2 89·1 82·9	90·1 84·8 62·7 69·7 76·1 60·7
English History Australian History Scripture Object Lessons Drawing	847 129 3,542 3,476 3,5 9	82·7 95·3 83·4 91·1 81·6	75·7 100·0 66·0 80·8 70·1
Music French Euclid Algebra Mensuration	$egin{array}{c} 3,226 \\ 14 \\ 75 \\ 16 \\ 42 \\ \end{array}$	89·4 100·0 97·3 93·7 90·4	80·5 100·0 83·1 100·0 41·6
Latin Needlework Drill Natural Science	16 961 <b>3</b> ,525 50	81·2 86·7 91·0 94·0	50·0 67·5 83 6 100·0

It will thus be seen a decided improvement has been made in writing, dictation, arithmetic grammar, geography, English history, scripture, object lessons, drawing, music, cuclid, mensuration, Latin, needlework, and drill; in the other subjects a slight retrogression is shown.

Satisfactory improvement in the general organisation and discipline of almost all the schools was

With but few exceptions the government is more vigilant, uniform, and effective.

Tree planting and horticulture have been carried on in many schools, but I regret to say with only moderate success, chiefly owing to the excessive heat and dryness experienced in this part of the country.

The following table shows the enrolment and average attendance for each quarter of the year:-

Quarter.	Pupils enrolled.	Average attendance.	Percentage of attendance to enrolment.
March June Scptember December	5,109	3,395·1	66·4
	5,256	3,530·4	67·1
	5,602	3,719·3	66·3
	5,424	3,517·3	64·8

The lowest attendance occurred in December quarter, owing to the prevalence of influenza.

3. The adequacy of school accommodation:—

equacy of school accommodation :	
Accommodation existing at beginning of 1891	5,202
Additional accommodation provided	1,565
Accommodation lost by closing of schools, &c	786
Accommodation existing at end of 1891	5.981
December quarterly enrolment	5,424
STAPAGA	9 517.9

. Schools.	Accommodation.	Object.	Supervision.
Alma Broken Hill Broken Hill North Round Hill Thackaringa Whittan	132 180 252 71 58 94	Additional	)) ))

Under the Inspector's supervision repairs and improvements have been effected to 18 schools during the year, at a total cost of £176 15s. 8d. There are no buildings or additions in progress under my supervision.

Teaching Staff.

The teaching staff of this section consists of 110 teachers and pupil teachers classified as under :-

	<del></del>	1					-	,	,
	I A.	I B.,	II A.	II B.	III A.	III B.	III C.	Unclassified.	Total
Teachers		2	14	4 ₆	5 5	8 6	3 <b>2</b>	23 16	59 <b>3</b> 6
ļ		2	`15	10 ·	10	14	5	39	95
	Class I.	Class II.	Class III.	Class IV.					
Pupil Teachers Work Mistresses.	1	1	5	8					15 2
		Total Te	eachers of	all ranks .	••••••••	•••••			112

Generally speaking, the teachers are well conducted, diligent, and zealous, and appear to command the respect of the parents.

Summary.

#### Summary.

All schools but 3 received a regular inspection.
 The efficiency of the schools shows a marked improvement.

3. The accommodation provided is adequate.

4. The educational prospects for 1892 are favourable.

Hay, 31st December, 1891.

T. PEARSON, Inspector.

#### ANNEX Z5.

# DISTRICT INSPECTOR LONG'S REPORT.

DISTRICT INSPECTOR LONG'S REPORT.

I HAVE the honor to submit the following report on the Wellington District for the year 1891.

The divisions for inspectoral supervision have remained unchanged, and consist of the Eastern or Mudgee Section, under Mr. Inspector J. P. Rooney, the Western or Dubbo, under Mr. Inspector J. L. Smith, and the Wellington or Central Section, under the District Inspector.

The number of schools at the end of 1890 was 229, all of which were still in operation at the commencement of last year. During the year 8 schools were closed, 7 were established, and 3, which had not been in operation during any portion of 1890, were reopened. There were thus 231 schools in existence at the end of the year, consisting of 135 Public Schools or Departments, 36 Provisional, 38 Half-time, 21 House-to-House, and one Evening School. Of these schools 99 are in the Mudgee, 69 in the Dubbo, and 63 in the Wellington Section. That they satisfy the educational requirements of the district is indicated by the fact that all residents, excepting a few isolated families in the more remote portions of it, are within accessible distance of a school. The buildings and premises generally are in good condition, and have a full supply of furniture, material, and apparatus. It has, in some cases, been necessary to postpone desirable repairs and improvements, owing to the state of the funds available for such purposes, but all of an absolutely necessary or urgent nature have been effected. Under inspectors' supervision 3 new school-rooms have been erected. I has been enlarged, and 38 schools and 8 residences have been repaired, the total cost of these works being £790 13s. 4d. Twenty-nine of the above cases in which expenditure has been necessary were in the portion of the district under my own immediate supervision.

The buildings in use at the end of 1890 contained accommodation for 12,097 pupils at 8 square feet per head. During the year 225 places were lost by the closing of schools, and 516 were gained by the crection of new school-rooms, &c. The total number of places provided by the buildings in use at the end of the year was thus 12,388. The average enrolment for the year was 9,550-7, and the average attendance 6,503-9. The largest enrolment for any quarter of the year was 9,617, and the highest average daily attendance 6,677-0. It thus appears that the accommodation provided by the cristing school-buildings is, in the aggregate, in excess of requirements, and, it may be stated, that in no individual case is it less than is required by regulation for the average attendance.

Of the 238 schools in operation during the year, or some portion of it, 231 were fully inspected and 46 received a second or ordinary inspection. The 7 not inspected are small schools opened late in the year, or closed before they could be visited. They do not include any school which was in operation throughout the year. Of the 231 regular inspections effected, 100 were by Mr. Inspector Rooney, 68 by Mr. Inspector Smith, 52 by myself, and 11 in my own section by officers from other districts. All the ordinary or second inspections were made by Mr. Inspector Rooney.

In the following Schedules is shown the relation to standard of each school inspected in regard to general efficiency, based on the aggregate of the estimates awarded for organisation, discipline, and results of teaching.

# $Wellington\ Section.$

Above Standard:—Amaroo, Baker's Swamp, Buckhobble, Cobar, Cobbora, Cumnock, Curra Creek, Eschol, Eurimbla, Galwadgerie, Geurie, Kerr's Creek, Maryvale, Molong, Mullion Creek, Murrumbidgerie, Nyngan, Nymagee, Rocky Ponds, Spicer's Creek, Stuart Town, Terra Bella, Warne, Wellington, Yeoval, Coolabah, Obley, Suntop, Boomey, Nubrygyn.

Up to Standard:—Bulbudgerie, Cundumbul, Eulomogo, Morungulan, Mulyan, Mumbil, Nora Creek, Ponto, Sandy Creek, Yullundry, Apsley, Arthurville, Bridgewater, Beri, Liucoln, Newrea, Station Point, Store Creek, Burrendong, Mockerawa, Loombah, Catumbul, Lower Spicer's Creek, Comobella, Windora, Medway, Gowengreen.

Below Standard:—Ballarah, Farnbam, Gulgullendah, Killeigh, Peabody, Somercroft.

# Mudgee Section.

Mudgee Section.

Above Standard:—Beryl, Botobolar, Burrundulla, Black Springs, Canadian Lead, Coolah, Coomber, Cooyal, Crudine, Cudgegong, Cudgebegong, Cullenbone, Dapper, Dungaree, Eurunderee, Frome's Creek, Grattai, Gulgong, Guntawang, Gulgamree, Hargraves, Hill End, Ilford, Lambing Hill, Linburn, M'Donald's Creek, Menah, Merrendee, Millsville, Mobella, Mullamuddy, Munghorn, Mudgee Boys', Mudgee Girls', Mudgee Infants', Mudgee South, Narrango, Pipeelay Creek, Pyramul Upper, Pyangle, Rylstone, Stubbo, Spring Flat, Tallawang Lower, Tunnabutta, Tambaroora, Warrangunyah, Wilbertree. Bocoble, Cainbill Creek, Leaning Oak, Narrarangeric, Oakborough, Avisford, Brogan's Creek, Carwell, Crudine Creek, Sally's Flat, Dabee, Glen Lee, Gulgoura, Havilah, Molarban, Murragamba, Lower Piambong, Dun Dun, Glen Alice, Oak Creek, Pandoria's Pass, Warburton.

Up to Standard:—Bara Creek, Bayly, Camboon, Goolma, Lawson's Creek, Round Swamp, Springfield, Tallawang Upper, Tara, Windeyer, Combo, Coolah Bridge, Collingwood, Denison Town, Tong Bong, Campbell's Creek, Ben Buckley, Bimbijong, Flatlands, Nile, World's End.

Below Standard:—Birriwa, McDonald's Hole, Wyaldra, Clandulla, Pinnacle Swamp, Rawdon, Piambong, Rats' Castle, Upper Campbell's Creek.

#### Dubbo Section.

Above Standard:—Barradine, Barringun, Beni, Bourke Boys' Bourke Girls', Brewarrina, Bunglegumbie, Coonamble, Coonabarabran, Coonabarabran Evening, Curban Dubbo Boys', Dubbo Girls', Dubbo Infants', Mundooran, Narrowmine. Rocky Glen, Timbricbungie, Trangie, Ulamambri, Wanaaring, Warren, Willandra, Ballimore, Elong Elong, Apple Tree Flat, Dappo Springs, Belar Creek, Purlewaugh, Wilga.

Purlewaugh, Wilga.

Up to Standard:—Angledool, Binnaway, Bourke North, Byerock, Eringonia, Gilgandra, Goodooga, Nevertire, Orandelbinnia, Tomingley, Warkton, Armatree, Brewarrina Mission, Bundemar, Noonbar Creek, Plain Creek, Belarbigill, Coalbaggie, Brightling Park, Ford's Bridge, Gumbalic, Biamble, Billeroy, Collie, Tenandra.

Below Standard:—Brocklehurst, Buninyong, Girilambone, Gulargambone, Louth, Minore, Nullabong, Belairingah, Manoa, Killara, Yalcogrin, Ironbarks, Kienbri.

Summary:—Above Standard, 130; Up to. 73; Below, 28. The number of schools whose efficiency reached or exceeded standard is thus more than 86 per cent. of the number inspected, and exceeds the number for last year by 23 schools, or 10 per cent.

The following tabular statement shows the number of pupils examined in the different subjects of instruction, with the percentage whose proficiency reached or exceeded standard. The percentages for the former year are placed with them:—

Subjects.	Number examined.	Percentage of passes.	Percentage of passes in 1890.
Reading	6,935	83.8	87.7
Writing		86.7	88.4
Dictation		77.7	78.8
Arithmetic	a'=	78.4	78.3
Grammar	0,000	73.3	75.5
. 1	0,000	82.9	84.0
Geography		72.3	76.5
History—English	′ l	80.1	90.9
, Australian	_ 171	77.2	80.6
Scripture and Moral Lessons	0,000	75.8	80.2
Object Lessons	a . a	67·8	68.3
Drawing		. 71.1	77.0
Music			100.0
French		100.0	97
Euclid	306	83.6	96.3
Algebra	63	82.5	~ ~ ~
Mensuration	289	75.4	83.1
Latin		92.5	100 0
Trigonometry	16	<b>7</b> 5·0	
Needlework		83.2	88.4
Drill	= 0.10	62.8	69.8
Natural Science		91.1	80.3

In nearly every subject, the percentage of passes is less than for the preceding year. The decrease is, however, but slight, and is accounted for by the extent to which school work has been interrupted by epidemic complaints, and bad weather, and by the fact that statistics are from a smaller number of Public Schools, and a larger number of schools of lower grade. That it does not indicate any diminution in the ability, or diligence of those to whom the practical work of the department is entrusted, is shown by the increase in the number of schools, whose efficiency was found to reach, or exceed standard.

The organisation and discipline of the schools are almost invariably found to show care, diligence, and at least a satisfactory degree of skill. It may reasonably be expected that the few exceptions, of which in my own section, there are this year but four, will become fewer still, as the number of teachers, who have not had the advantage of thorough training, diminishes. During the year, there has been displayed creditable attention to the improvement, and beautifying of school-grounds by tree-planting, and flower-culture, while the announcement of the Minister's wishes, and directions, in regard to the Arbor Day of the year, evoked a general and ready response, in every locality in which its observance was possible.

The teachers employed in my District number 202

The teachers employed in my District number 268, and are classified as indicated in the following

Teachers and Assistants.

Cla	ss 1.	Cla	ss 2.	Class 3.		Not .	Total.	
A	В	Α .	В	A	В	· c	Not classified.	
•••	4	27	13	43	32	20	95	234

Pupil-teachers.

Class I.	Class 2.	Class 3.	Class 4.	Total.
11	3	9	11	24

As a body, the teachers are well fitted for their respective positions, and are diligent, and successful in the discharge of their duties. The number of complaints has been rather larger than usual, and their investigation has involved a most vexatious demand on time urgently required for other duties. In every case, however, in which the inquiry was made by myself, the complaint was clearly proved to be frivolous, and inspired by motives quite apart from any consideration of the teacher's trustworthiness, or efficiency.

The pupil-teachers, without exception, display creditable aptitude, and diligence. In one case only has it been necessary to report any impropriety in general demeanour, and in this the rebuke administered has, so far, been productive of the necessary amendment. I have, however, recently learned with regret, on testimony which appears fully reliable, that indulgence in the cigarette, both in private, and in public, is very common among the male pupil-teachers throughout the service. I take this opportunity of suggesting the expediency of adding to the obligations required from male candidates for the office, one involving abstinence from a practice so unbecoming and so pernicious in example and effect effect.

The average number of children present each day in the schools of the District during the year, was 68 per cent. of the mean quarterly enrolment, which indicates a more than fairly regular attendance, so far as relates to children of statutory school age. In 179 cases, legal proceedings were authorised for failure to send children to school the prescribed number of days during the former half of the year. In 124 of these, convictions were obtained, 15 were dismissed, 7 were withdrawn, and the remainder have not yet been finally dealt with, owing to the recent illness of the Attendance Officer for the District.

#### Summary.

The existing means of education are sufficient for the present educational requirements of the District. The material condition of the schools is good in all necessary details, and, in general efficiency, there is substantial improvement. The result of the year's work is satisfactory, and affords reason for anticipating due progress in the future.

I forward with this the reports on their respective sections of the Officers associated with me in

the supervision of the District.

Wellington, 14th January, 1892.

GEORGE ED. LONG, - District Inspector.

#### ANNEX Z6.

#### INSPECTOR ROONEY'S REPORT.

THE year 1890 closed with 100 schools in active operation in this section of the Wellington District, classified thus :-

Public	60
Provisional	13
Half-time	20
House-to-house	7

The Half-time School at Upper Meroo and the House-to-house School at Upper Campbell's Creek were closed in June and November, respectively, owing to the departure of the school population from these places.

The following schools were reduced in rank during the year:—Avisford Public to Half-time; McDonald Hole Public to Provisional, after being closed for nine months; and Warburton and Lower Piambong Half-time Schools to House to-house Schools.

In November the Provisional School at Black Springs was converted into a Public School.

The year has added two new schools—the Half-time School at Rats' Castle and the House-to-house School at Tarrabran.

The subjoined statement shows the classification of the schools in active operation at the close of 1891:-

Public	13
House-to-house	8
Total	00

Nineteen schools and 3 residences have been substantially repaired during the past year. A capacious residence has been erected at Gulgong, and at the new township of Leadsville, near Denisontown, a school to accommodate 70 pupils is approaching completion.

With the exception of 3 Half-time and two House-to-house Schools, all buildings are in fair repair and suitable for educational purposes. Of the wooden structures, many will require painting during the coming year, whilst fully 20 of them are suffering from the ravages of the white ant.

All the Public and Provisional Schools, with the exception of two, are vested in the department; as well as 9 of the Half-time schools.

as well as 9 of the Half-time schools.

The school accommodation has increased during the year from 3,668 to 3,705 seats, and since the average daily attendance, as shown by the Annual Returns, has been 2,701, it may be seen that the accommodation is ample for present requirements.

## Playgrounds.

Since the institution of Albor Day, increased interest in the beautifying of playgrounds by trees and flowers has been displayed by pupils, parents, and teachers alike, resulting in a healthy development of last year's trees and flowers, and a large addition to their numbers. The following schools are examples of the good results following on tree-planting and flower cultivation:—

Botobolar,	Coolah,
Crudine,	Cullenbone,
Eurunderee,	Linburn,
Munghorn,	Pyangle,
Tambaroora,	Campbell's Creek,
Burrundulla,	Cooyal,
Cudgegong,	Dungaree,
Gulgamree,	Mobella,
Pyramul,	Rylstone,
Wilbetree,	Coomber.
Mudgee,	

Special commendation must be bestowed upon the teachers of the undermentioned schools on account of the attention displayed by them upon their gardens and playgrounds:—

Burrundulla P	ublic	Munghorn H	ublic
Cudgegong	**	Pyramul	,,
Cullenbone	**	Rylstone	"
Dungaree	22	$\mathbf{W}$ ilbetree	,,

Enrolment and Attendance. —The total enrolment for the year was 4,467 of which number 455 were entered as pupils of more than one school. In comparison with last year's returns, although the enrolment shows a diminution of 134, the average shows an increase of 47, and the increase in the average would have been greater had not the prevalence of influenza largely diminished the attendance during that quarter of the year which usually gives the highest results—December.

The appended table summarises the enrolment and average attendance for each quarter:—

			Enrolment.	Attendance.
1st Q	uart	er	3,827	2,830.9
2nd	,,	*******************************	3,742	2,708.9
3rd	,,	***************************************	3.694	2.650.2
4th	"		3 650	2.529.8

Inspection.—Of the 102 schools in operation during the whole or part of the year, all, with the exception of Upper Meroo Half-time, which was closed early in the year for want of attendance, and Tarrabran House-to-house School, which was not opened till late in the year, when indisposition prevented me from visiting it, were fully examined. In addition to the regular inspection of 100 schools, 46 were given an ordinary inspection.

1--U

In these Schools, a total of 2,871 pupils were examined. The results, as also those of last year, are subjoined :-

	Number of Pupils	Percentage s	satisfying Standard.	
Subjects.	Examined.	1891.	1890.	
Reading	2,871	82.2	91.7	
Writing	2,820	86	93.5	
Dictation		79.8	90	
Arithmetic		82.8	90.9	
Grammar		<b>78·3</b>	85.4	
Geography	1,065	80.7	91.0	
History—English	1,083	$77 \cdot 2$	84.5	
" Australian		86.7	92.7	
Scripture		74.3	82.7	
Object Lessons	2,552	70.6	86.0	
Drawing		<b>74·5</b>	74.4	
Music	1,886	61.7	68.8	
French	27	100	100	
Euclid	119	84 ·	100	
Algebra	24	83.3	100	
Mensuration	132	72.7	97.9	
Latin	24	91.6	100	
Natural Science	122	91	90	
Trigonometry		75	None examined.	
Needlework	1,041	78.5	90	
Drill	2,606	65.4	67	

In comparing the results of the two years, it will be seen that the general average for the present year falls short of that for previous years. This is to be accounted for by the fact that there has been a decrease in the number of Public Schools and a corresponding increase in that of the lower grades of schools, there now being no less than 42 classified as Provisional, Half-time, and House-to-house Schools.

The results from the Public Schools alone are quite equal to those of previous years.

The annexed table shows the efficiency of the schools in relation to the standard:—

, Schools.	Below Standard.	Up to Standard.	Above Standard.
Public Provisional	3 4	27 8 10 2	30 2 7 4
Totals	10	47	43

Thus, 90 per cent. of the schools either satisfied or exceeded the requirements of the standard.

The teachers under my supervision are ranked as follows :-

	No.	Class.
	1	I B
	11	
	5	II B
	23	
	14	
	8	III C
	34	Unclassified.
Total	96	

Pupil-teachers :--

No. 7	lass I
1	,, 11
2	" IV

Total ... 15

Collectively, the teachers may be described as respectable and intelligent, the pupil-teachers as painstaking and deserving.

Four complaints were made against teachers during the year, and in two of these the charges were trivial.

In conclusion, it may be said that:-

- (a) There is ample provision of schools for this section of the Wellington District.
  (b) The material condition of the majority of schools is very fair.
  (c) As a rule, the accommodation afforded by each building exceeds the requirements of the individual place.
  (d) Although the enrolment shows a slight decrease, the average attendance shows an increase upon last year's numbers.
- upon last year's numbers.

  (e) The organisation of the schools is generally satisfactory.

  (f) The general discipline is good.

Notwithstanding the disastrous effects resulting from floods and the influenza epidemic, a satisfactory state of proficiency has been maintained during the past year. is promising. The outlook for the coming year

JOHN P. ROONEY, Inspector.

Mudgee, 3'st December, 1891.

ANNEX

#### ANNEX Z7.

#### INSPECTOR SMITH'S REPORT.

At the commencement of 1891 there were in the Dubbo section of the Wellington District 43 Public, 11 Provisional, 6 Half-time, 10 House, and 1 Evening Public School; total, 71. Of these, 2 Public and 1 Provisional were closed for want of sufficient attendance, namely, Gongolgon and Tooraweena Public and Dandaloo Provisional Schools. Belar Public was converted into a House School in conjunction with Kerbin Station, and Bone Bone and Ford's Bridge Provisional Schools were converted, the former into a House School in conjunction with Yarragrin Station, and the latter into a Half-time School in conjunction with Gumbalic. A new Provisional School was opened at Killara, on the Darling River below Louth. At the close of 1891 there were in this section 40 Public, 9 Provisional, 8 Half-time, 11 House, and

At the close of 1891 there were in this section 40 Public, 9 Provisional, 8 Haif-time, 11 House, and
1 Evening Public School; total 69.

Sixty-eight schools received a regular inspection last year. Two Public, 1 Provisional and
1 House School were not inspected—Gongolgon Public, Tooraweenah Public, and Dandaloo Provisional
Schools. These schools were closed at the beginning of the year, and Bone Bone and Yarragrin House
Schools were closed, in consequence of the serious illness of the teacher, when Yarragrin Station was visited.
The regular inspections could not be completed before the end of November, and there was no time to
make any ordinary inspections. The continuous rains, floods, and bad roads were the cause of the paucity
of inventions in 1801

The following table shows the estimated proficiency of the schools with regard to standard, inclusive of attainments, organisation, and discipline:—

,	Below.	Up to.	Above.	Totals.
(a) Schools in operation whole year	13	2	52	67
(b) Schools in operation part of year	1		,	1
Totals	14	2	52	68

If House Schools were reckoned as below standard, as the instruction in them is limited to a few subjects, the number of schools below standard during 1891 would be 24. In 1890, 75 schools were inspected, and 33, or 42 per cent., were below standard; in 1891, 68 schools were inspected, and 24, or 35 per cent., were below standard. In 1890, 2,140 pupils were examined, and in 1891, 2,385, an increase of 245 pupils with a decrease of 7 schools.

The following table shows the estimated proficiency of the pupils examined in all subjects:—

Subjects,	No. of Pupils examined.	No of Pupils passed.	Percentages.
(a) Ordinary Subjects—			
Reading	2,385	2,066	86
Writing	2,385	2,190	91
Dictation	1,696	1,316	77
Arithmetic	2,385	1,912	80
Grammar	728	476	65
Geography	728	673	92
History	673	448	66
Scripture	2,258	2,022	89
Object Lesson	2,270	1,899	83
Drawing	2,254	1,267	56
Music	1,788	1,557	87
Needlework	784	727	92
Drill	1,816	1,060	<b>5</b> 8
b) Special Subjects—	ĺ	•	
French	20	20	100
Latin	23	23 [.]	100
Euclid	112	112	100
Algebra	23	23	100
Mensuration	43	43	100

Under the Architect's supervision, a more commodious schoolroom, in lieu of an old and dilapidated building, was completed at Narromine; an addition, was also made to the residence of the teacher. Bourke and Bourke North and Coonamble Public Schools were extensively enlarged and improved.

Under the Inspector's supervision the following schools were repaired:—Curban, Dubbo, Gulargambone, Louth, Nevertire, and Bundemar. Two new provisional schoolrooms were erected, one at the Mission Station, Brewarrina, and the other at Killara, on the Darling River.

The appearance of the playgrounds of several schools has been improved by the planting of ornamental trees and shrubs, particularly Baradine, Bourke, Brewarrina, Coonabarabran, and Dubbo.

During the past twelve months no formal complaints of any serious character have been lodged against either teachers or pupil-teachers.

against either teachers or pupil-teachers.

The enrolment and the average attendance for each quarter of the year were:—

	No. of Schools.	Enrolment.	Average Attendance.
March June -September December	72. 69 69 69	3,351 3,326 3,351 3,297	2,200·3 · 2,153·1 2,254·9 2,145·7

Total seats provided for scholars at the end of 1890, reckoning 8 square feet for each child, 4,968; or reckoning 100 cubic feet for each child, 4,675.

8 square feet. 100 cubic feet. 

Better results than last year were obtained in the attainments of the pupils, and the material condition of the schools generally has considerably improved.

JOHN LESLIE SMITH,

Dubbo, 5th January, 1892.

Inspector.

#### ANNEX Z8.

#### REPORT OF PRINCIPAL OF TRAINING SCHOOL, FORT-STREET.

THE experience of the past year has emphasised the opinion expressed in my report for 1890, that the sooner the Training College within the University is ready for occupation, the better it will be for the students. It rarely happens that students at the University are receiving lectures during a whole morning, and when this is not the case they are practically under no supervision. Further, during nine months of the year more than half the students are in attendance at the University in the morning, and are not prepared to resume duties at the Training School till 2:30 p.m. It thus follows that the staff is brought into contact with (say) one half of the students for six hours a day, and the other half for two. The principle of residential colleges for the purpose of training teachers has long passed the experimental stage in Great Britain and the Continent of Europe, and we may, therefore, look forward with full confidence to the result of a similar movement in our own Colony. The success of the Training College for female students at Hurlstone is another strong argument in favour of a similar privilege being accorded to the males.

On the 20th January, 1890, 28 students were admitted, 2 of whom retired at the end of the year with III A certificates. The remaining 26 now form the senior division. Of these, I already a Bachelor of Arts, is studying for the degree of B. Sc., 7 matriculated in March, 1890, 16 in March, 1891, and 2 failed to matriculate (1 of whom has since recovered his lost ground by attendance at the evening lectures). Four students were admitted to a third year's course of training in accordance with the provisions of clause 192 of the Bacyletions.

Four students were admitted to a third year's course of training in accordance with the provisions of clause 122 of the Regulations.

On the 19th January, 1891, 26 students were admitted, who now form the junior division. Eleven of these matriculated iu March, 1891, and the remainder, with one exception, received instruction for the purpose of preparing them for the Departmental examination in December, 1891, and the Matriculation Examination in March, 1892. (The exception referred to was a junior, who was granted permission to study for the University first year's course by attendance at evening lectures).

The numbers at present in attendance, therefore, are 26 in their first year (at the Training School), 26 in their second year, and 4 in their third year.

At the close of the session the whole of the students were examined at the Training School in School Management, Music, and Drawing, their examination in other subjects depending upon their year in training and their connection or otherwise with the University. The various examinations for which the students presen'ed themselves, together with the numbers in each case, are as follows:—

	Number of Students.		
Nature of Examination.	Seniors.	Juniors.	
University, 1st year University, 2nd year University, 3rd year Bachelor of Science, 2nd Year Special Training School Examination	18 9 2 1	12	
Totals	30	26	

Although it will be observed that 42 students sat for examination at the University, none actually failed to pass, but 9 were below the required percentage in one subject only (either Latin or French), and will be admitted to a deferred examination in March next.

I have again to report favourably on the general diligence, attention, and conduct of the students. The scholarships and half-scholarships were distributed as follows:—

	Seniors.	Juniors.
Scholarships'	21	15
Half-scholarships	9	10
Without Scholarship	•••	1
m		
Totals	30	26

## 2. Course of Study.

French.

Macmillan's First Year's Course. Part of Macmillan's Second Year's Course.

Gautier's Scenes of Travel.

Music, omitting Harmony, Drawing, and Drill as for University Students.

#### 3. STAFF.

No alteration has taken place in the staff this year. Mr. J. D. St. C. Maclardy, M.A., is Classical Master; Mr. J. M. Taylor, M.A., Assistant Training Master and Science Lecturer; Mr. Woodhouse, Drawing Master; and Mr. Alpen, Instructor in Music. All have proved themselves earnest, capable, and enthusiastic in their several departments, and it affords me much pleasure to bear testimony to the success attending their efforts.

#### 4. PRACTICAL TRAINING.

The practical training of the students has been superintended by the Master of Method (Mr. J. W. Turner), the Master of the Practising School (Mr. J. Finney), and myself. Test, criticism, and specimen lessons have been regularly given as in former years, and the senior and junior students are employed in rotation as assistants in the Primary and Practising Schools, respectively, for a week at a time. The result has been eminently satisfactory, all the second year students, with two exceptions, having succeeded in obtaining a skill mark sufficiently high for a II A certificate. The students have had frequent opportunities of observing the working of the Kindergarten system under Miss Banks, who has also given them instruction on the application of that system to the teaching of junior classes in primary schools.

#### 5. MANUAL TRAINING.

The enlargement of the workshop has given increased facilities for instruction in this useful and practical subject, and, considering the limited time at the disposal of the students, the result cannot be regarded as other than gratifying. The result of the examination held at the close of the year, under the auspices of the Technical Education Branch, is as follows:—

	Nature	of Pass.	72. 13	m 4.3
	1st Grade.	2nd Grade.	Failure.	Total.
First Year Students	9	28 14	3 1	40 15
Totals	9	42	4	. 55

One student was absent from examination.

#### 6. TRAINING COLLEGE BATTALION.

At the beginning of the year the students of the Training School were formed into a rifle corps' Mr. Maclardy being gazetted captain, and Messrs. Edmunds and Williams (senior students) lieutenants. On the 1st June it was decided that this corps should be incorporated with the pupil-teachers' corps, the whole to be designated the Training College Battalion, which now consists of 220 members, exclusive of captains, viz., 55 students and 165 pupil-teachers. One student suffering from a chronic strain in his side was exempted by the Minister, as was also one pupil-teacher on religious grounds. The battalion is divided into four companies, the first, or A company, consisting of students in training, the B, C, and D companies of pupil-teachers. Each company is governed by an efficient staff, and the whole has been placed under my control, assisted by Captain Maclardy as adjutant.

#### 7. MATERIAL CONDITION.

The material condition of the Training School is highly satisfactory. The art room is now furnished with a liberal and carefully-selected supply of casts and models chosen by Mr. Woodhouse from the stock of the well-known London firm, D. Brucciani & Co. The Training School is also indebted to the Superintendent of Technical Education for a number of artistically designed plaster casts. A piano has been added, which is of much assistance in the musical instruction of the students. The library has also been enriched by several valuable books.

#### 8. PUPIL-TEACHERS' CLASSES.

Good work has been done in these classes during the past year. The course of study was the same as formerly, viz., Music, Drawing, and Drill (calisthenics for females) in the third and fourth classes; and Latin and French in the first and second classes. The staff consisted of the following:—Mr. Maclardy, M.A., Latin and French, class I, males; Mr. Smith, M.A., Latin, class I, females, French, class II, males; Mr. Taylor, M.A., Latin and French, class II, females; Mr. Taylor, M.A., Latin and French, class II, females; Mr. Stephenson, M.A., Latin, class II, males; Mr. Alpen, Singing, class III; Mr. Woodhouse and Miss Douglas (assisted by two students), Drawing, class III; Mr. J. W. Turner, Singing, class IV; Mr. Thornton and Mrs. O'Byrne, Drawing, class IV; Captain Mulholland, calisthenics, females, classes III and IV; Warrant-officer Murphy (assisted by three instructors), Drill, all classes, males. The following is the time-table:—

Classes.	9·15 to 10·15 a.m.	10·15 to 11·10 a.m.	11·20 to 12·15 p.m.
IV III	Music. Music.	Drawing. Drawing.	Driil.
	9 15 to 10 45 a.n	n.	11 0 to 12 15 p.m.
II	Latin.	· French.	
I	Latin.	,	French.

The formation of the Pupil-teachers' Rifle Corps has, to a slight, but not material extent, curtailed the time of the first and second class male pupil-teachers.

At the Wednesday classes for male pupil-teachers Latin and French have been substituted for Geometry and Algebra, with satisfactory results. The pupil-teachers attending the Wednesday and Saturday classes are, as a rule, painstaking and attentive, and appear to honestly wish to avail themselves of the advantages offered. The total enrolment of the pupil-teachers' classes, together with the ordinary attendance, is as follows: attendance, is as follows :-

Classes.		Ordinary			
Olasses.	Males.	Females.	_ Total.	attendance	
I	38	85	<b>12</b> 3	115	
II	32	80	112	108	
II	47	82	129	120	
rv	49	100 .	149	140	
Totals	166	347	513	483	

J. CONWAY, Principal.

#### ANNEX Z9.

#### REPORT OF PRINCIPAL OF HURLSTONE TRAINING SCHOOL,

## I.—THE STUDENTS.

The number of students at present in the Training School is 45—17 being seniors, and 28 juniors. Of the seniors, 15 are in their second year's course of training; the other 2 being highest in the list of Professional and University subjects for 1890, were admitted to a third year's course of training.

With the exception of 3, all the students who presented themselves for examination in March, were successful. Those who failed did so in Latin only, and during the remaining part of the year they took up the Matriculation subjects for 1892, in addition to the Professional subjects.

Of the juniors, only 1 matriculated last March, the others not being sufficiently advanced in Latin and Mathematics to undergo examination. The conduct of the students has been excellent.

The respective examinations which the students are at present undergoing are as follows:—

Senior. Junior. University—First Year .....  $\frac{12}{2}$ 1 University—Second Year
Special Second-class Certificate
Special Training School Examination ... 3 27 17 28

# II.—COURSE OF STUDY.

Vocal Music.

Sutton's Class Book; Stainer's "Harmony"; Staff Notation; Tonic Sol-fa.

Drawing.

Blackboard, freehand, model, geometrical, and elementary perspective.

Drill.

Calisthenics and School-drill.

#### III.—PRACTICAL TRAINING.

As in former years, the practical training has consisted of special criticism lessons given by students in the presence of their fellow-students, and of a month's attendance in the Practising School.

## IV.—KINDERGARTEN,

The Mistress of the Kindergarten Department of Fort-street Model Public School visits the Training School each Saturday for the purpose of giving lectures—including practical demonstration—on Kindergarten method to the students, who take great interest in the subject. The junior students had this year the advantage of visiting the Kindergarten School at Fort-street, and of watching the application of Kindergarten principles to the art of teaching.

V.—Formation of Hurlstone Branch of St. John Ambulance Association.

Forty-three students applied to be examined for "First Aid to the Wounded" certificates, under the auspices of the St. John Ambulance Association. All the students were successful in gaining certificates.

## VI.—THE PREMISES.

The premises have been improved by a new fence around the grounds, and are generally in good condition. No repairs to the building have been necessary.

MARY M. EVERITT,

16 December, 1891.

Principal.

#### APPENDIX XIII.

#### REPORT ON DRAWING.

I HAVE the honor to present the following report on the teaching of drawing in the Public Schools and Training Schools of the Metropolitan district, and the results of the examinations of teachers, pupil-teachers, &c., throughout the Colony.

Annual inspections have been held in 81 schools, including 181 separate departments and 979 classes. Every class has been examined vivât voce and by work done before me, and the work of the Third, Fourth, and Fifth Classes done during the year has been separately inspected.

#### Model Lessons.

In view of the difficulty of finding an opportunity of paying a second visit to more than a few schools, I have striven to make each inspection as useful as possible to the teachers by giving numerous model lessons—between 400 and 500 in all. I have reason to believe that these are appreciated by the teachers as suggestions for a better method of teaching, and as showing the necessity of more oral

#### Methods.

Methods.

The use of the black-board for freehand drawing has almost entirely taken the place of the small flat copies previously largely used. This is a great step in advance, and, when a freer use of oral instruction becomes generally used is needed, for the lower classes especially, and, wherever possible, I have pointed out to teachers the possibility of devising simple and suitable copies. The fact that no series already published is quite satisfactory throughout makes it desirable to make a judicious selection from the best. These are, in my opinion, Longmans' Drawing Books and Poynter's South Kensington Drawing Book.

I may here incidentally mention that I have been glad to avail myself of the opportunity afforded by the publication of the New South Wales Educational Gazette, of contributing a series of articles containing suggestions for methods and courses of work which can be carried out by all, and will doubtless reach a large number of teachers.

Model drawing makes slow progress, few being really qualified to give instruction in it, many, even of the best, having very erroneous ideas on essential points. Under these circumstances it must be long before the results in this subject will improve as a whole. Inasmuch, however, as Freehand and Practical Geometry are by far the more important subjects in point of utility, and from a technical point of view, this is the less to be deplored.

The teaching of Practical Geometry is sound as a rule, and in the Boys' Departments is generally aided by intelligent reference to the theoretical knowledge of the pupils. Sufficient attention is, however, not usually given to neatness and accuracy. In some schools a difficulty is experienced in getting the requisite instruments, and where this is the case I have advocated and given model lessons in the teaching of scale-drawing, which can be carried on without compasses, and is an extremely useful branch of the subject.

# Infants' and Kindergarten Departments.

The work done in the Infant Departments is careful and thorough for the most part, and the average mark gained shows a slight increase over that of last year, while the percentage of passes is fully as high as one should expect. Where there are Kindergarten Classes in operation the drawing is very good, but to obviate the too sudden transition from entire reliance on aids to freedom from them, I have proposed a system of gradual progress from slates ruled in squares to slates ruled in one direction only for the upper classes and so to entire self-reliance in preparation for the upper departments.

## High Schools.

There has been a change of teachers here, and more time is now given by the teacher, Mr. Fotheringham, than had been the case. The classes have thus been brought into more manageable size, and each pupil can now receive a fair amount of individual attention. Mr. Fotheringham, together with a thorough artistic training, has had long experience of class-teaching, and is an excellent and systematic teacher. I am informed by the heads of the two departments that the discipline maintained by him is exemplary.

## Training Schools.

At Fort-street the students now receive special instruction in solid geometry in connection with their course of manual training from Mr. Powrie, who has a thorough knowledge of his subject, and is a careful teacher. This is of advantage to them in their work for the D certificate, and will of course be very useful to them in their work as teachers; a knowledge of even the simplest solid geometry being very rarely found, owing to its not having been made a sine quá non in examinations until lately. A portion of the time available being now given to this subject has unfortunately interfered with my design of giving model lessons in freehand and model drawing. At Hurlstone the results in model drawing show a very decided improvement, owing partly to the use now made of an excellent apparatus for demonstrating its principles.

## Applicant Pupil-teachers.

The number of papers examined has been 652, of which about 65 per cent. have passed. In setting these papers, the idea has been, by means of simplicity of form and construction, to suggest to pupils as far as may be the method of attacking the example, and to the teachers into whose hands they often come a more useful type of freehand copy.

## Pupil-teachers' Saturday Classes.

Pupil-teachers' Saturday Classes.

While it is to this branch of the work that I look with most anxiety, and should be most pleased to see marks of progress, I am glad to be able to report a decided improvement in the results obtained from these classes. The result of the examinations in December, 1890, showed an advantage in favour of country candidates over metropolitan ones in most classes, the results of the latter in model drawing especially being extremely unsatisfactory. In June, 1891, this still held to some slight extent in the freehand drawing, but in model drawing the positions were reversed, a great improvement having taken place in the work of the metropolitan students. The careful teaching of Mr. Edmunds and Mr. Williams, who were at the beginning of the year put in charge of a part of the class (male pupil-teachers), has chiefly contributed to bring about this change. In black-board drawing it would be unfair to compare the country and metropolitan students, the revision of both not being in the hands of the same Examiner, but it is gratifying to observe an increase of nearly 15 per cent. in the passes of the latter, owing almost entirely to the more general use of an intelligent system. Mrs. O'Byrne, Miss Douglas, and Mr. Thornton continue to give me earnest support by efficient teaching and cheerful and untiring efforts. Their efforts are not, however, always seconded by those of the pupil-teachers, who too often wholly fail to realize the advantage to be derived from the classes.

In

In

In this table the results of Pupil-teacher examinations are given in percentages of passes:-

Subject	Decem	ber, 1890.	June	e, 1891.	Total Passes.					
Subject.	Country.	Metropolitan.	Country.	Metropolitan.	December, 1890.	June, 1891.				
Black-board	94·8 60·6 47·5	55.7 42.2 18.1	92·4 67·5 61·1	70·5 53·4 66·6	76·8 50·4 30·5	82·9 60·0 64·0				

The number of papers on which these results are based was 458 in the first period and 393 in the second, 147 being black-board tests not revised by me. I should note that in judging examination-papers in either of these subjects it is undesirable to be too lenient. It is to be remembered that the mistakes are generally not such as can readily be amended by the student by simple reference to a text-book when the information is required, as is the case with the generality of written subjects. It is, therefore, of importance that the principles involved should not be seriously transgressed in the work done in examination, as it is unlikely that amendment will take place afterwards if these are not fairly mastered and applied at the time.

# Teachers and Students-in-Training Examinations.

In December, 1890, the papers of 280 teachers were revised, and in June, 1891, 18; of Students in Training, 70 and 29 respectively.

Results of Public School Inspections.

I append the results of my inspections in tabulated form.

Schools.	Departments.	Classes.	Boys.	Girls.	Infants.	Total.
81	181	979	10,510	9,870-	11,076	31,456

## The average marks obtained in the several departments is as follows:-

Boys.	· Girls.	Infants.	Infants—1st Class.
6.23	6.18	6.63	5.99

The following statement gives the result of the oral and individual examinations in each department, and the percentage of passes (50 per cent. and over).

l	ł	Up to	Below Standard.	Percentage of Passes.
Boys	836 726 1,960	5,456 5,050 6,235	4,218 4,094 2,881	59·7 58·5 73·1
Total	3,522	16,741	11,193	64.4

In these and the other results given I feel confident in saying that signs of distinct progress are to be observed. The interest taken by a large proportion of the teachers is encouraging, and must bear fruit in the further advance of their pupils.

January 8, 1892.

FREDERIC W. WOODHOUSE Superintendent of Drawing.

# APPENDIX XIV.

# REPORT ON SINGING.

REPORT ON SINGING.

I have the honor to report to you, for the information of the Hon. the Minister, that I have examined and reported on all the Public Schools in the Metropolitan District in Music and Singing. I am glad to be able to say that with each successive year there is an improvement in this branch of the school curriculum, especially noticeable in the greater freedom with which the upper classes sing music at sight, which really is (besides voice-culture) the great object of musical education. In my last report I drew attention to the somewhat unsatisfactory teaching of the lower classes by the pupil-teachers; although there has been a change for the better, it still is the weak point in our system, and the teachers of the upper classes have very often hard work to reach the standard in schools where the singing has not been well taught in the lower classes. If the heads of the schools were occasionally to take the lower classes themselves it would have a beneficial effect.

In writing this I by no means undervalue the good work shown by many pupil-teachers; a fair number teach the upper classes, conduct successful concerts, and are amply competent for their work. To show that reading at sight is well practised in the schools throughout the Colony, I venture to refer to the production of the Arbor Day Cantata (of which Lady Jersey so kindly wrote the words). Through delay in the printing the cantata was not supplied to many schools till within a week of Arbor Day, yet was rendered, according to the reports of the Press, in hundreds of schools, with great satisfaction to the listeners. It cannot be expected that teachers in our schools, with a limited time at their disposal, can give the refinement, style, and voice-cultivation, which can be obtained alone by arduous private study; but I can safely say that our teachers do good work, and that singing and music is a favourite study of the pupils.

The attainments of the children range from fair to very fair, but there have also been a fair number of sc

HUGO ALPEN,

Superintendent of Music.

#### APPENDIX XV.

#### REPORT ON COOKERY.

During the early part of this year, cookery instruction remained stationary at the point reached in December, 1890. Classes were held at Hurlstone Training School, Parramatta Training School, Fortstreet Model School, and Blackfriars Superior Public School, but no new ones were formed. In July the extension of the scheme of cookery to other schools was definitely decided upon, and two teachers who had received their training under me at the Technical College were appointed provisionally, after examination. They commenced work in August, at Darling Road, Balmain, and Fitzroy-street, Surry Hills. The results obtained, as shown by the December examination, will be found under the headings "Balmain" and "Crown-street."

In August the Senior Teacher was sent to Bathurst to organise a school for the instruction of High and Public School children and Technical College adults. The success which attended her efforts has determined the Department to establish a permanent school there, and will be found recorded under the heading "Bathurst."

In September I was appointed "Directress of Cookery." My position remained practically unaltered, excepting that the initiation and control of all cookery classes in connection with Technical education (excepting those held in the Technical College) were entrusted to me, in addition to those which I already controlled in High and Primary Schools.

The assistant teacher connected with the latter institution commenced teaching the primary cookery course under my supervision, to a class of children from Newtown Superior Public School, in the room hired by the Technical College for its own work. She resigned her position and returned to England before the completion of the course, and it was not found practicable to make new arrangements

in the room hired by the Technical College for its own work. She resigned her position and returned to England before the completion of the course, and it was not found practicable to make new arrangements in time for the December examination. An attempt to trach the children at the Glebe Superior Public School was made, but also proved abortive, from the same cause—the want of duly qualified teachers. In October, at the request of the Department, I furnished a report upon the creation of a supply of capable teachers for this work. It was adopted, and arrangements were made for bringing it into operation. Its provisions will be found under the heading "Teachers."

During the year the question was raised as to the employment of portable kitchens, and, after some discussion, a decision in favour of their general adoption was arrived at. Tests were also made of the gas-stoves of all the most approved makers, which left us no reason to be dissatisfied with our choice.

The total number of pupils who have received cookery instruction during the year in the High and Public Schools, including Glebe and Newtown, is 775. Total number examined in practice classes (not including Glebe and Newtown), 390. Of these, 73 were examined in time at Blackfriars and Fortstreet. Examined, 310; passed, 304; honors, 101; first grade, 89; second grade, 114; failed to pass, 6. The influenza epidemic, which raged through October and November, seriously affected the results of the examination, with regard both to the numbers sent up and the average of marks. With regard to the former I have improved upon teacher; that subject the property intervence after the serious intervence are the serious intervence are true. The influenza epidemic, which raged through October and November, seriously affected the results of the examination, with regard both to the numbers sent up and the average of marks. With regard to the former, I have impressed upon teachers that unless some very special circumstance intervence every practice pupil should be presented for examination. It must be remembered that the results of cookery instruction are not to be calculated only on the number of pupils obtaining certificates, because these are based on the practical work, which only 60 pupils from one school can be taught in a term. They should be combined with the Inspector's report of the science subject in girls' schools in which cookery is taught, e.g., Fort-street will send as many as 170 to demonstration in a week, but only 60 can practise the work. They all, however, gain an amount of useful, practical information, which must be most beneficial and helpful to them in their home-work.

At the end of the year the staff consisted of the Directress, one senior and two probationary teachers, and one junior assistant. The plant consisted of one permanent kitchen, four portable kitchens, and two sets of utensils for large classes in temporary kitchens.

#### Bathurst Cookery Classes.

In August the Senior Teacher was sent to organise a school in this town, which, if successful, it was intended to permanently establish. Premises were kindly placed at her disposal by the mistress of the High School, which enabled her to conduct the Cookery School, while in its experimental stage, at a minimum expense. Classes were formed from High and Public School pupils for the study of elementary cookery, and from the general public for that of plain and high-class cookery. 123 individual students were enrolled, and 11 lessons a week given for 13 weeks, 4 of them being demonstrations or lectures of 2 hours duration, and 7 practice lessons of 3 hours duration.

The examination of the school children was especially interesting, as this school was the first in which the scheme approved by the Minister was rigidly adhered to, and was regarded by me as a test of its "workability." The result must be regarded as very satisfactory. Out of an enrolment of 81 in the practice classes, 69 were examined, and 67 gained certificates. The highest method marks of the year were gained by one of these schools.

# Results of Examination.

 High School.—No. in class, 52; No. in practice class, 42; No. examined, 36; No. passed, 32; honors, 12; first grade, 18; second grade, 5; failed to pass, 1.

,, ,, theory.....

Total average..... 82 max. 100 No examination was held of the 42 pupils forming the Technical College classes. They, not unnaturally, objected to be subjected to the same tests as pupils who had been learning for one, two, and in some cases three years at the classes in Sydney; and there was so much force in the objection from the points of view of both teacher and pupils that I did not think well to urge the matter. Reference to these

examinations will be found in the General Report. It is pleasing to note that there was a magnanimous consensus of opinion among the pupils as to the pleasure and profit they derived from the instruction

State of Appliances.—Very fair.

Accounts.—Well kept.

Records.—Well kept, but lack neatness.

Provision Account.—Expenditure, £30 7s. 4½d.; receipts, £30 7s. 4½d.

N.B.—By a convenient arrangement with the mistress of the High School, the actual cost of provisions was paid for the cooked food.

Premises—The building attached to the High School is eminently unsuited for the purpose of a Cookery School, and I recommend that one of the large class-rooms of the Cathedral Sunday School be engaged for the purpose, at a rental of £50 per annum.

#### Fort-street.

Owing to the absence of the senior teacher in Bathurst, and our inability to supply her place with a properly qualified teacher, Fort-street has not kept up the standard of excellence previously attained. The pupils have passed, but in an unsatisfactory manner, as is shown by the average of marks. No doubt, under more favourable circumstances, the premier Cookery School of the Colony will regain its position.

Results of Examination.—No. in class, 127; No. in practice class, 60; No. examined, 37; No. passed, 35; honors, 0; first grade, 2; second grade, 33; failed to pass, 2.

State of Appliances.—Fair, many missing. Accounts.—Tolerable.

Records.—Tolerable.

Cleanliness.—Not maintained. Housekeeping.—Moderate.

Provision Account.—Expenditure, £47 12s. 4d.; receipts, £47 9s. 9d.; loss, 2s. 7d.

Premises.—The Cookery School occupies part of the ground-floor of the Training School, the dining-room being made by the enclosure of the arches on one side. They are fairly well suited for the purpose of an ordinary school; but very inadequate for a Central Training School, such as Fort-street has now become.

#### Balmain.

This school was opened in August with a probationary teacher in charge. The Directress visited the school once a week, and gave the demonstration lessons. Sixty-nine pupils were enrolled.

The school has been well managed throughout, the course faithfully adhered to, and the interest of the pupils well maintained. The examination gave satisfactory results all round.

Results of Examination.—No. in class, 69; No. in practice class, 60; No. examined, 37; No. passed, 36; honors, 8; first grade, 11; second grade, 17; failed to pass, 1.

"	"	theory	$14\frac{1}{2}$	,,	20
		Total average	$77\frac{3}{4}$	max.	100

State of Appliances.—Very good.
Accounts.—Well kept.
Records.—Regularly, but not neatly kept.
Cleanliness.—Very good.
Housekeeping.—Excellent.
Cost of Provisions.—Expenditure, £30 4s. 11½d.; receipts, £32 2s. 3d.; profit, £1 17s. 3½d.
Premises.—This class is held in part of the arches under the Darling-road School, used for play-shed and lavatory, which was boarded and partitioned for the purpose. It has not been an altogether satisfactory arrangement. The unavoidable fumes from the cookery pervade the upper floor to an extent inconvenient to the teachers, and the noise of the children during recess, and impossibility of keeping them away from the Cookery School, seriously interfere with its work and discipline. Should it be decided to continue the classes upon these premises, it is absolutely necessary that water be carried to, and drainage provided from the kitchen, as the present arrangements in this regard are uncleanly, untidy, and inconvenient. Taking into consideration the number and nature of the Balmain population, I recommend that there be a school built or rented in a central spot, which children from all the schools can attend in turn, and at which occasional courses of lectures can be given to adults. There should be attached to it a dining-room, in which a dinner can be served every day, as at Fort-street.

#### Crown-street.

This school was opened in August with a probationary teacher in charge, the Directress giving the demonstrations. It has been fairly well managed. The teacher, who is very earnest and painstaking, has had some anxiety respecting the sale of provisions. No encouragement was given by the school which derived benefit from the instruction, and the existence of the Cookery School was but little known in the immediate neighbourhood. The failure on this account to cook and serve a dinner at a given time greatly militated against the "method" at the examination, so far as punctuality was concerned.

*Results of Examination.*—No. in class, 89; No. in practice class, 60; No. examined, 39; passed, 39; honors, 2; first grade, 17; second grade, 20.

Cost of provisions.—Expenditure, £22 14s. 8½d.; receipts, £21 15s. 3d.; loss, 19s. 5½d. State of Appliances.—Excellent.

Accounts.—Well kept.

Records.—Regular, but not neat.

Cleanliness.—Excellent.

House bearing.—Very feir.

Housekeeping .- Very fair.

Premises.—This class is held at the Church of England Sunday School in Fitzroy-street, rented for the purpose. The rooms are spacious, airy, and convenient. Bourke-street School will attend these classes next year, as well as Crown-street.

#### Parramatta Industrial School.

The same cause which militated against the success of Fort-street during the last term in the year, viz., scarcity of teachers, greatly interfered with the regularity of the instruction given in this school; nevertheless, some good work was accomplished, and every encouragement given to the teacher, both by the officers and girls. The primary course is not rigidly adhered to, the ages, ability, and circumstances of the girls rendering this undesirable, but the object in view being that they may earn their living by practising it, they are taught as much general cookery as they have time and talent to learn, and this with excellent results.

**Results of Examination.**—No. in class, 80; No. in practice classes, 36; examined, 29; passed, 29; honors, 8; first grade, 9; second grade, 12. Two pupils who held the elementary took this year the full plain cookery certificate.

**State of Appliances.**—Very good.

**Courses of Instruction.**

Courses of Instruction.

Of these, there are three: I. Elementary, for High and Primary Schools; II. Plain cookery, for pupils holding first certificate; III. Teachers' course, for teachers already trained by the Department

Of these, there are three: I. Elementary, for High and Frimary Schools; II. Plan cookery, for pupils holding first certificate; III. Teachers' course, for teachers already trained by the Department who desire to qualify for this work.

Course I. This admits of no deviation. It is set forth in twelve lessons, printed in good type upon large cards, to be hung in full view of teacher and pupils during the class. It embraces all the first principles of cookery, and has been most carefully arranged to form a course which, complete in itself, also affords a reliable foundation for the most advanced teaching. The examples for practice are selected from the ordinary dishes in use among the Australian people, together with some which would benefit their health and income if adopted. The course is as follows:—

Lesson 1. Introductory, on lighting fires, cleaning stoves and flue, washing cooking utensils, scouring tables, buying and keeping stores.

Lesson 2. On roasting and baking meat and making the puddings usually served with it.

Lesson 3. On cooking vegetables.

Lesson 4. On boiling and stewing meat.

Lesson 5. On frying and broiling.

Lesson 7. On cooking fish.

Lesson 8. On pastry-making.

Lesson 9. On puddings.

Lesson 10. On bread and cakes.

Lesson 11. On invalid cookery.

Lesson 12. Cookery for breakfast and tea.

In order to show that this course does not exist only upon paper, and also to give some idea of its comprehensiveness, a list is given below of the dishes selected from it for the December examination at the various schools. The "theory" paper is also appended:—

Soups.

Fried and Grilled Meats.

Puddiags

Fried and Grilled Meats. Soups. Fruit pudding Plum dumpling Soup maigre
Pea soup
Cottage broth
Household stock. Liver and bacon Steak and onions Urney pudding Mutton chops Meat pudding Yorkshire pudding Tripe. Fish. Sausage pudding Rice pudding Tapioca pudding Cold Meat Cookery. Filletted mullet Stewed flathead. Rissoles Fritters. Joints. Pancakes Roast beef Fritters. Pastry. Roast mutton Boiled mutton. Steak and kidney pie Stews. Cornish pasties Napoleons Irish stew Scotch collop Jam turnovers Fruit tarts. Stewed tripe. Breakfust and Invalid. Cakes and Bread. Vegetables. Small loaves (soda) Potatoes (boiled) (mashed) Buttered egg3 Sponge sandwich Swiss roll (baked) (croquetees) Caramel ,, Beef tea. Beans White cake Cabbage Sultana cake Currant cake Marrow London huns. Peas.

> Christmas Examination, 1891. Cookery.

Two hours are allowed for this paper.

Six questions only are to be attempted. Questions are of equal value.

1. For what is clarified fat used, and how is it made?

- 2. At what heat does albumen coagulate, and how does this knowledge guide you in making beef tea for the sick?

- for the sick?

  3. Of what is baking powder composed, and how does each substance act upon the other?

  4. Give the laws for stewing, with one example.

  5. Write an account of the lesson on sick-room cookery?

  6. By what methods is water removed from boiled vegetables?

  7. What do you know about frying?

  8. What rules are to be observed, and what errors avoided in pastry-making?

  9. Why is meat for the table plunged into boiling water, and for soup-making into cold?

  10. How ought you to cook and serve a grilled mutton chop?

Course II.—This is an extension and enlargement of Course I, and is based entirely upon the instruction therein given. It includes many dishes which are ordinarily but improperly classed under the heading of high-class cookery, and also yeast or batch bread-making and the preservation of fruit and vegetables. This course (excepting in so far as it is taken concurrently with the teachers' course) is, I regret to say, in abeyance in Sydney, owing to the want of accommodation at the Central School. No matter how great the ability and industry displayed by Sydney pupils after gaining the Elementary Certificate they are excluded from the Cookery School. Some have deliberately absented themselves from the examination in the hope that their failure to take certificates would enable them to continue learning. In the large country towns in which permanent schools are to be established, this difficulty, of course, will not

not occur, as the instruction given will be homogeneous, proceeding step by step, from Elementary Cookery, in Primary Schools, to the Plain Cookery course for pupils who gain honors, on to high-class cookery, taught to those only who hold the two previous certificates, the instruction being given by teachers trained under one system, guided by one directing head, and taking both the School and Technical College work. In Sydney, as I have said, we teach a course which we call Elementary, but which at present is practically final. Before the next Cookery report is written I trust that such accommodation will be provided as will enable us to carry out the scheme in its entirety in Sydney as well as in the country.

modation will be provided as will enable us to carry out the scheme in its entirety in Sydney as well as in the country.

Course III. for teachers, commences with Course I, the principles and practice of which have to be mastered before another step is taken, proceeds to Course II which is taken concurrently with it. The students are taught, practically, housekeeping, i.e., the choice and purchase of food for a number of people on a fixed sum of money. Household and Cookery School accounts, dining-room management, carving, keeping of Cookery School records, and cleaning; also how to give lessons upon cookery and domestic economy to girls in the 5th class, and lectures to adults. Theoretically, they are taught domestic economy by a course of lectures illustrated by experiments, those in chemistry being kindly given by the chemistry lecturer at Fort-street. Of these it is proposed to arrange a few, needing only simple, easily-managed apparatus, by means of which teachers can emphasise their lessons on the "Nature of gases," "the Nutritive value of different foods," the "Aiding and retarding of the process of digestion," and "Ventilation."

The object I have had in view in arranging this course has been to fit the student to be a teacher

The object I have had in view in arranging this course has been to fit the student to be a teacher not only of cookery, but of practical domestic economy.

The examination will be as follows:—

Practice and theory of elementary cookery. plain cookery. ,, ,,

Method-

One week's housekeeping for Cookery School.

"" responsibility for cleanliness.

kitchen.

,,

account-keeping.
record-keeping.
dining-room management.

One test lesson on primary cookery (given to children).

" on plain cookery (adults).

One demestic economy paper.

One arithmetic paper.

This examination will gain a second-class certificate only. If the student so desires at the end of

This examination will gain a second-class certificate only. If the student so desires at the end of a year's teaching, she can be examined for a first-class certificate, which will be given for Cookery School management, public lecture, practice in high class cookery, provision being made for her attendance at a course of lessons in the latter subject during her term of teaching in Sydney.

Teachers.—In consequence of the adoption of the report already mentioned, applications were invited from first-class pupil-teachers and Hurlstone students who desired to be trained for this work, and from the many received twelve were approved, and four Hurlstone students and eight pupil-teachers have entered upon their work at the Central School, are pursuing it with enthusiasm, and some already display considerable ability. The great advantage of employing trained teachers is that they are both amenable to and able to enforce discipline, are accustomed to handle large classes of pupils, and are familiar with the methods of the department. They will also enable us to introduce cookery into some of the smaller country towns by teaching it in conjunction with other subjects.

amenable to and able to entorce discipline, are accustomed to handle large classes of pupils, and are familiar with the methods of the department. They will also enable us to introduce cookery into some of the smaller country towns by teaching it in conjunction with other subjects.

Methods of Instruction.—The teaching is given by means (1) of demonstrations or illustrated lectures, (2) by practice by the pupil of the instruction there received. At the former, principles are enunciated and recipes worked out by the teacher, she being careful to give the reason for every process, and to explain the consequence of neglect to observe it. Each recipe, so far as time will allow, is commenced and completed before the pupils. At these lessons opportunity is afforded of which a capable teacher will make good use, conveying much useful knowledge to children on every-day domestic science. The number of children attending these lessons need only be limited by the size of the room. Practice classes consist of groups of twelve, who commence by learning how to handle ordinary cooking implements, and to measure with ordinary household appliances, and proceed until they have learnt to cook every dish upon the instruction cards. A dinner is served at each lesson, and bought either by the teachers and children of the school or the outside public. Pastry, cakes, and soup are also sold to children. The receipts for cooked food are expected, and in most cases do, cover the cost of provisions. The improvement in the dinners as the course proceeds is a very good criterion of the value of the teaching. After the recess the pupils wash all kitchen utensils, clean the stove, sweep the room, and leave all in order for the next lesson. They then form a class for note-book examination and criticism, which is done with the aid of a black-board. They are free to leave about half-past 3, and are not expected to return to school after cookery instruction. The nature and quality of each pupil's work is recorded at the time in a book provided fo

Sufficient amount of work.

Examinations.—At these 100 marks are given; 70 are for the actual results of the work, 20 for a knowledge of the laws by which it is done, and 10 for the cleanliness, order, punctuality, and economy which are observed in its execution. At the last examination I suggested that the cost of the necessary provisions should fall upon the parents of the children, the latter carrying home the results of their work. It met with a very fair response, and I think that teachers should be authorised to charge the fee of one shilling, which would about cover the extra cost, and save the Department many pounds.

Interest in the Work.—With a good teacher this never flags. The children go about their work in a bright, capable way, which speaks volumes for its popularity. Their regret at not being able to continue the work beyond the elementary course is constantly expressed, and many entreaties are made by both parents and girls that the latter may continue in the Cookery School for another term.

Technical College Classes other than those at Ultimo.—I have in preparation courses of instruction suitable for these, upon which the students will be invited to present themselves for examination. Instruction in cookery being now fairly started on a sound basis as part of the education of our girls, I am firmly of opinion that it will continue to increase in favour among teachers, parents, and children, and that its benefits will become more apparent every year.

A. FAWCETT STORY,

A. FAWCETT STORY, Directress of Cookery.

# APPENDIX XVI. REPORT ON NEEDLEWORK.

During the year ending December 1891, I examined and reported upon 78 schools in the Metropolitan District; this number includes the Hurlstone Training College, High School, Castlereagh-street, and the Randwick Asylum. In all 12,000 pupils were present at examination. The influenza was very prevalent among the pupils last quarter; but notwithstanding this drawback the various teachers of needlework in charge gave evidence of the industry and skill of the absentees, which is a gratifying proof that the system of instruction in needlework throughout the classes is effective, universal, and well maintained according to the standard. according to the standard.

Head-mistresses in charge of schools (with some few exceptions) have this year taken much interest in the progress of needlework. As a result of this incentive, there has been greater emulation and rivalry to excel among the pupils.

## Dressmaking, &c.

Most work-mistresses have the ability to teach this subject in addition to the other numerous branches of needlework. The absence of work-rooms in Metropolitan schools is a hindrance, as fitting on attracts attention, and disturbs the quict and order expected at sewing-lesson.

Dressmaking is carried out in the upper classes of most schools on a small scale, viz., small dresses for girls' wear; the elder girls display great facility and interest in this industry.

In many of the schools work-mistresses have introduced neatly made and ornamented work aprons. This plan gives an orderly, artistic, and refining effect. Making these articles cultivates form, and gives a desire to cut out, set, and apply those useful ornamental stitches that have been acquired in former lessons. in former lessons.

#### Discipline.

I am pleased to notify the improvement and economy of time in the method of giving out and

receiving needle-work.

The head teachers have greatly assisted the work-mistresses in this arrangement. Each pupil has an assigned place and number, the work aprons being also numbered to correspond, the result being that time is economised, and order and discipline insured.

I may add that until this method was adopted, I have had to wait in many cases twenty minutes

before a classs of 40 pupils was in form or readiness for examination.

#### Mixed Schools.

During the year a special feature of instruction is the introduction of needle-work to 1st class in the above schools.

The simple employment of plain sewing in coloured cotton attracts and amuses the active young

brain, and it is amazing to note how practical these young children become in form and colour.

Suitable sewing material has been absolutely necessary to insure uniformity and success in the past; at present the expense of this material is defrayed solely by the teachers.

#### Pupil-teachers.

Many excel in their individual grades; the specimens shown by those of the 1st class come more under the heading of dress-making, with the finish of fine varied stitches. In my incidental visits to schools, I observed that the pupil-teachers were attentive to the instructions of work-mistresses, and

anxious to adopt suggestions given.

The aptitude and eager industry generally displayed cannot be too highly commended.

In concluding this report, I am pleased and gratified to testify to the high proficiency in needle-work attained by many of the schools in the Metropolitan District during the year—several of them being far above the standard in this subject; also, to the combined efforts of the teachers who, in conjunction with the work-mistresses, have materially assisted in bringing about these successful results.

ANNIE DADLEY, Directress of Needle-work.

Balmain, 16th January, 1892.

# APPENDIX XVII.

# REPORT ON PUBLIC SCHOOLS CADET FORCE.

I HAVE the honor to submit for the Minister's information my report on the Public Schools Cadet Force for 1891

I HAVE the honor to submit for the Minister's information my report on the Public Schools Cadet Force for 1891.

The year has been an interesting one, and much has been done to give stability to the cadet movement. Not only have new schools and senior infantry corps been added, but additional variety has been given by the formation of the Training College and the Pupil-teacher Rifle Corps in Sydney, an Ambulance Corps at Fort-street, and Cadet Cavalry Troops at Casino, Picton, and Parramatta. The new records—muster roll, and arms, attendance and requisition books, &c.—were issued to all corps, and with very few exceptions the necessary equipment provided.

The strength of the force at the close of the year was as follows:—Training College Battalion (Students, 58; Pupil-teachers, 158), 216; Seniors (Cavalry, 99; Artillery, 45; Infantry 432), 576; School Cadets, 5,684; School Bands, 358; Ambulance Corps, 45; Staff, 9. Total, 6,888.

The enrolment at the end of 1839 and 1890 was respectively 1,548 and 5,850.

The formation of the Fort-street Training College Rifle Corps and of the Pupil-teacher Corps will give an impetus to the spread of the cadet movement throughout the Colony, inasmuch as it will considerably increase the number of teachers qualified to take up cadet work.

If the cadet movement is to become general it must be mainly through the agency of the teachers. Material for Cadet Corps exists wherever a sufficient number of lads of the required age is to be found, which practically means in nearly every township in the Colony, but the absence of teachers capable and willing to manage corps is frequently the only obstacle to their formation.

In places where volunteer corps exist, military instructors are available, who assist the teachers to drill the Cadet Corps at a small remuneration for such extra services. Where no such assistance is to be found, the teachers have to depend entirely on themselves, and in some instances succeed admirably.

Many teachers, both in Sydney and in the country, have become

Many teachers, both in Sydney and in the country, have become omeers in the Cauet Force, and are taking great interest in the work.

From their knowledge of boys, their continual practice in directing and commanding, and their educational and other qualifications, I feel satisfied that teachers ought to make excellent officers. The way in which the companies and battalions were handled during the Cadet encampment, and at the subsequent review of over 5,000 cadets on Moore Park, confirms me in this opinion.

Ambulance Corps.—Surgeon Roth, of the Cadet Staff, was desirous of trying the experiment of forming a school ambulance corps in connection with one of the large city schools. The Fort-street Model Public School was selected for the purpose, as being the most convenient, and 50 strong lads, over 14 vears of age, were enrolled.

years of age, were enrolled.

years of age, were enrolled.

The experiment proved to be most successful, and the corps under the personal training of Surgeon Roth was complimented for smartness and efficiency at the cadet encampment by the Principal Medical Officer of the Military Forces.

Cavalry Troops.—The question of establishing Cavalry Cadet Corps has been under notice ever since the re-organisation of the Cadet Force, several teachers having drawn attention to the fact that many country lads ride to school, and would prefer to join such corps.

As one of the objects of the cadet movement is to prepare lads for service in the different branches of the military forces of the Colony, it was decided to recommend the formation of only a limited number of senior Cadet Cavalry troops in centres where mounted volunteer corps already existed, so that these latter corps might be in a measure recruited from the cadets.

Cavalry

Cavalry

Cavalry Cadet troops were subsequently established at Casino, Picton, and Parramatta. For the training of these I have had to depend largely upon the advice and assistance of the N.S.W. Cavalry authorities, who look upon this movement with much favour.

Cadet Encampments.—All country corps, school and senior, and all Sydney senior cadets had opportunities afforded them of going into camp.

Matropolitan and suburban school cadets were not so favoured which was a source of much dis

Metropolitan and suburban school cadets were not so favoured, which was a source of much disappointment to them.

Several camps were held:—
(1.) Of Senior Cadets, at Campbelltown, with the military forces at Easter.
(2.) Of the Artillery Cadets, at Long Bay, from the 2nd to the 5th October, for shot and shell practice.
(3.) Of the country corps, at the Royal Agricultural Society's Grounds, Moore Park, from the 11th

to the 18th October.

(4.) Of the Casino Cadet Cavalry, locally in conjunction with the Richmond River Cavalry, from

the 6th to the 9th November.

The bundred and sixty-one cadets were in camp at Easter. At the close of the continuous training the following appeared in the General Orders issued from the Military Headquarters:—"It was a source of pleasure to the Major-General to have under his temporary command the Cadet Artillery and Infantry, and he is confident that their association with the more highly-trained troops will result in benefit. Considering their recent organisation, the commanding officer is to be congratulated on the manner in which the work was generally performed. It is further to be hoped that the Senior Cadets will take part in future trainings."

part in future trainings."

The encampment of country cadets in Sydney in October was rendered possible by the liberality of the Railway Commissioners in agreeing to convey the cadets to and from Sydney free, and to the generosity of the N.S.W. Royal Agricultural Society in placing their fine grounds and buildings at the disposal of the Minister for the accommodation of the cadets.

To this camp all country cadets were invited, with the object of enabling every cadet corps to be represented at the review of the Cadet Force by His Excellency the Governor, on the 17th October.

Seventy-five School Cadet Corps, drawn from every part of the Colony, two troops of Cadet Cavalry (Picton and Parramatta), Senior Cadet Infantry from Bathurst, Goulburn, Newcastle, and West Maitland, and the Fort street Ambulance Corps were in camp, making a total of 2,262 under canvas for a week's training.

a week's training.

The week was one of hard work for officers, teachers, and cadets, and every facility for instruction

The week was one of hard work for officers, teachers, and cadets, and every facility for instruction

was afforded, of which the officers and teachers took full advantage.

The value of the instruction given was enhanced by the services of the leading Metropolitan and country military instructors, whose attendance for the week in camp was kindly allowed by Major-General Richardson, C.B., and the officers commanding the volunteer regiments.

Many of the teachers took their boys, when off duty, to places of interest in and around the city, the tramway authorities allowing all cadets in uniform to travel at the ordinary schoolboy rates on all tram rentee.

The thanks of all were due to Mr. Cyril Haviland (Secretary, Sydney Mechanics' School of Arts), the members of the Sydney High School Literary and Dramatic Society, and the band of the Scottish Rifles for entertainments given in camp at night to relieve the monotony of camp duties.

On Tuesday most of the cadets attended the annual gathering of the Public Schools Athletic Association, when the drill competition for the Public Schools Challenge Shield was won by the Crownstreet Superior Public School boys—last year's winners.

On Wednesday the Orange Superior Public School Cadet Corps won the Cadet Challenge Shield at the Randwick rifle range, being the second consecutive win by this corps.

On Thursday afternoon a Cadet Tournament was held, and on Friday all the corps in camp, joined by most of the city and suburban corps, marched through the city.

The following special inspections of the camp were made:—On Thursday morning by the Minister of Public Instruction, accompanied by the Minister for Justice and Colonel M'Kenzie, A.A.G.; and in the afternoon by His Excellency the Governor, accompanied by Captain Leigh, A.D.C. Colonel M'Donald, Commanding the N.S.W. Cavalry, and Captain M'Neill, 4th Hussars, Adjutant, inspected the Cadet Cavalry; and Brigade-Surgeon Williams, P.M.O., the Ambulance Corps and the camp hospital.

On Friday morning Major-General Richardson, C.B., inspected the camp, and expressed warm approval of the arrangements.

On Friday morang Major-General Richardson, C.B., inspected the camp, and organization approval of the arrangements.

The City and Suburban Cadets came into camp on Friday and Saturday mornings for instruction, and on Saturday afternoon the whole of the force was reviewed on Moore Park by His Excellency Lord Jersey, G.C.M.G. The field state showed a presence of 5,223 of all ranks, representing Cadet Cavalry, Artillery, Senior and School Infantry, the Training College battalion, and the Ambulance Corps. The review passed off most satisfactorily, and formed a fitting conclusion to the week's continuous training.

The following reference to the camp and review was subsequently received from his Excellency:—

"Government House 19 October 1891.

"Government House, 19 October, 1891. "Government House, 19 October, 1891.

"His Excellency the Governor and Commander-in-Chief desires me to express to Colonel Paul, and the officers and cadets lately encamped in Sydney, his great satisfaction with the appearance, discipline, and drill of the cadets during the past week. The parade and marching on Saturday proved most satisfactory. His Excellency is glad to state that Major-General Richardson, C.B., and the Hon. the Minister of Public Instruction, Mr. J. H. Carruthers, agreed with him as to the usefulness of the week's encampment. His Excellency is particularly pleased to receive an excellent report of the conduct of the cadets in camp He also desires to thank the Cadet Cavalry escort for their services on Saturday."

Several other large gatherings of cadets took place during the year, notably on the landing of Lord Jersey, on the 15th January, when over 1,800 cadets lined the roadway from Government House gates to Government House, and a church parade in Sydney on the 16th August of 1,500 cadets.

During the year all city and suburban corps were fully inspected, and most of the country corps

Burning the year and city and saturate sorps and seed in camp.

I took whatever opportunities offered to make visists to important country centres, and held battalion parades at Bathurst, Goulburn, Maitland, and Newcastle.

I visited the corps along the western railway line between Dubbo and Penrith, and also those in and around Goulburn, Maitland, and Newcastle.

The results of inspection show that attention has been paid to drill, and greater steadiness in the content of the content in discipline are everywhere noticeable.

The results of inspection show that attention has been paid to drill, and greater steadiness in the ranks and improvement in discipline are everywhere noticeable.

One of the principal incentives to the bigger boys to become cadets is that they will be afforded opportunities for shooting, and there is no doubt that the taste for rifle shooting should be cultivated. Unfortunately few facilities in this respect have been given to city and suburban corps during the last two years. Many corps have never even visited the range.

The compulsory closing of the Paddington range in 1890, and the non-completion of the new Randwick range till October, 1891, were the principal causes of this. After being in use for two months the Randwick range is again closed, on account of its being found to be unsafe.

The results of the year's work are, on the whole, very satisfactory.

The returns for the last quarter of the year are appended.

A. PAUL, Lieut.-Col.,

A. PAUL, Lieut, Col. Commanding the Public Schools Cadet Force.

A. PAUL, Lieut.-Col., Commanding the Public Schools Cadet Force

#### APPENDIX XVIII.

#### REPORT ON TECHNICAL EDUCATION, WITH ANNEXES A TO J.

The year 1891 has not been marked by any striking everts, but good steady progress has been made in every department of the work under my supervision. Not only are the students attending the various classes much more numerous than in any previous year, but all former records of success at examinations have been surpassed.

Buildings.

The expectation that the new college buildings at Ultimo, would be available for classes early in the year has not been realised, and even now, January, 1892, the contractor still holds possession. Strenuous efforts are being put forth to have everything in readiness to commence on 8th February, and as the tenancy of the rented buildings, except the Chemical Laboratory, will be given up at the end of this month, it is hoped that no delay on the part of the contractor will render those efforts fruitless. Some weeks must elapse before the class-rooms will be properly equipped and arranged, but our teachers and students will cheerfully submit to any inconvenience that may be thus caused. No change has been made in the buildings occupied for the work in Sydrey, except that the workshops in Kent-street were given up, and the fitting and turning, pattern-making, boiler-making, blacksmithing, and plumbing classes were transferred to the new engineering workshops at Ultimo. This transfer has increased the difficulty of supervision, but has been a decided gain to the classes concerned. It was feared that Ultimo would be regarded by many of the students as out of the way, but so far the classes named have either maintained their former numbers, or show an increase.

The fitting and turning shop is 75 feet long by 45 feet wide, with a large gallery 12 feet wide, surrounding it, and is capable of providing accommodation for about 140 students working simultaneously.

feared that Ultimo would be regarded by many of the students as out of the way, put, we has the water hammed have either maintained their former numbers, or show an increase.

The fitting and turning shop is 75 feet long by 45 feet wide, with a large gallery 12 feet wide, surrounding it, and is capable of providing accommodation for about 140 students working simultaneously.

The gallery is fitted with benches and vices, and is used for imparting instruction in the use of the hammer, and chisel, and file.

The floor contains the heavy machine tools, numbering about thirty. These include planing, drilling, shaping, slotting, and boring machines, ordinary and screw-cutting lathes, and a variety of small tools. The machines are driven by an 8-horse power gas engine placed in the corner of the shop. In this portion of the establishment instruction at group in the use and machine the corner of the shop. #### Equipment.

During the year the equipment of the various classes has received careful attention, and has been considerably increased and improved, so that the more advanced and extended work that must necessarily be taken up in the new college is fairly provided for. The new appliances have been obtained locally or from England. Those obtained locally were purchased under the supervision of the officers and teachers, or were made under their direction; those obtained from England were ordered by the Agent-General. In this case, the late Minister, Mr. Carruthers, caused instructions to be sent to Sir Saul Samuel that he should consult with Sir Phillip Magnus and other experts in Technical Education and then order what was deemed necessary. The result is, that about £5,000 worth of appliances, consisting chiefly of machinery for the engineering and the woodworking classes and apparatus for the electrical engineering, chemistry, and physic classes has been received. Much of this is of the most modern type, made by the best makers, and could hardly be improved upon. The new Sydney Technical College will thus start on its career with an equipment that would be difficult to surpass or even equal.

Classes

#### Classes and Students.

The record for 1890 gave 225 classes in operation, but 6 of these were discontinued during that year or lapsed at its close. During 1891, 76 classes were formed, giving an increase on the previous year of 70 classes, bringing up the total to 295. The new classes consisted of 4 in the Sydney Technical College, 22 in the suburbs, 36 in the country, and 14 in connection with Public Schools. Equally satisfactory is the increase in the number of students enrolled, from 6,580 in 1890 to 8,466 in 1891. Deducting from this gross enrolment all cases where students have joined two or more classes, the number of individual students on our books for the year was 6,688, an increase of 1,481 on the previous year. In the following table the advance made during the last two years is succinctly shown: previous year. shown:—

	1889.	1890.	1891.	Increase in 1891 over previous year.
(a.) Classes in operation— Sydney Technical College Suburban classes Classes in country towns Classes in connection with Public Schools	56 8 55	70 26 109 20	73 48 140 34	3 22 31 14
Totals	119	225	295	70
(b.) Students— Sydney Technical College Classes in Branch Schools	1,841 745	2,822 3,020 738	2,912 4,178 1,376	90 1,158 638
Totals	2,586	6,580	8,466	1,886

The average attendance for the year was—in Sydney Technical College, 1,485.6; in Suburban and Country classes, 2,503.9; and in Public School classes, 652.3; total, 4,641.8. The increase in the Sydney Technical College is greater than appears in the above table, as the number of individual students was 221 more than in 1890. Most of our students now attend only one class, but do so for two or three evenings per week. This practice is to be commended, as more real progress is made when the attention is concentrated on one subject than when several subjects are taken up. No private classes are reckoned in this return, nor are the cookery classes established in connection with Public Schools. The returns from the latter show that 550 pupils have been under instruction.

#### Teaching Staff.

For the actual work of technical instruction, 134 persons were employed during the year; this is an increase of 21 on the staff for 1890. The staff consists of 12 lecturers, 5 resident masters in charge of Branch Schools, 100 teachers, and 17 assistants; of these, 63 were employed in Sydney and 71 in the suburbs and country districts. I cannot speak too highly of the intelligent zeal and marked efficiency of almost every member of this teaching body. With the exception of 3, who are not now in the Service, every member has striven earnestly to make the operations of the Technical Education Branch a success, and I am greatly indebted to one and all for loyal support and enthusiastic co-operation. co-operation.

# Courses of Instruction.

Advantage was taken in preparing for work in the new College buildings to revise the syllabus of instruction of each class so as to include the latest developments of technical education. The chief part of this revision fell upon my colleague, Professor Selman, to whose loyal and able assistance I am deeply indebted. Provision, too, has been made for new and important subjects, as electrical, civil, and sanitary engineering. The following summary will show what is proposed in connection with these subjects:—

# Electrical Engineering.

A design for suitable laboratories, a list of carefully selected standard instruments, engines and dynamos, and a syllabus of instruction, have been prepared for the establishment of an efficient School of Electrical Engineering, at an estimated cost of £7,000. When completed, this School will afford the means for giving a very complete theoretical and practical training in electrical engineering, electrical instrument industries, and in the modern applications of electricity in mining and Metallurgy. Provision has also been made for enabling students to carry on original researches in the industrial applications of electricity. The instruction will include the designing, practical construction, and management of electrical machinery generally, now forming such extensive industries elsewhere, and the establishment of such a school should result in the successful manufacture of electrical machinery in the Colony. A considerable amount of apparatus has already been purchased, and, pending the carrying out of the above scheme, a course of lectures has been arranged for to be delivered during the coming session.

#### Mechanical Engineering.

Mechanical Engineering.

An important addition to this department is the new Iron Foundry in which teaching operations will be commenced at the beginning of the present session. The kuilding is 75 feet long by 35 feet wide, and, as a part of the equipment, will contain a modern cupola with receiver, having an hourly melting capacity of two tons of metal, with an improved blower and engine for supplying the blast; a large stove for drying and annealing, and the usual foundry tools and adjuncts. A competent teacher has been appointed, and the course of instruction will include a complete training in the principles and art of iron moulding on a commercial scale. Brass and steel melting furnaces will be added as soon as practicable. During the past year extensive additions in the shape of lathes, drilling, shaping, milling, and screwing machines, have been made to the fitting and turning shop, and plate-bending rolls, forges, gas hammers, shearing, punching, drilling, and riveting machines to the black-smithing and boiler shops. The engineering workshops are now very complete, including, as they do, foundry, pattern shop, smith's shop, boiler shop, fitting and turning shop, and with the recent extensive additions, the equipment is such as will enable students to manufacture, in the College workshops, machines and engines direct from the raw material.

An engineering laboratory is in course of organisation, in which students will be taught practically the principles of mechanics and machine design. A 100-tons testing machine, of the most modern construction, has been ordered, by which the behaviour and strength of materials under stress will be demonstrated, and in the electrical engineering equipment an "educational engine," capable of illustrating about sixteen different types of engines has been included, by means of which the complete theory and working of all type of steam-engines will be taught:

The syllabus of the department has also been revised.

#### Sanitary Engineering.

A syllabus has been prepared, and a lecturer appointed in this important branch of engineering. During the first two years the instruction deals with architectural sanitation, and in the third year descriptive sanitary engineering; there are also practical classes in plumbing and gas-fitting in connection with this department. An extensive laboratory is in course of organisation, in which the principles of drainage, ventilation, water purification, sewage disposal, and other important branches of sanitary science will be demonstrated practically. A considerable amount of apparatus in glass, showing the proper and defective arrangements of sanitary appliances in houses, has been constructed, with which students will make practical experiments. The city engineer for sewerage is taking a good deal of interest in this work, and he is very sanguine that a great deal of good will accrue from the instruction given at the Technical College.

#### Civil Engineering.

A syllabus for a systematic course of instruction in civil engineering has been prepared, and recommendations will be submitted at a subsequent date for carrying the work of this important branch of engineering into effect. The proposed scheme is of a thoroughly technical character, and suited to the requirements of those engaged in public works who desire to qualify themselves for responsible positions. Courses of about twenty lectures on separate branches of civil engineering, such as water conservation, irrigation, boring, sewage disposal, road, railway and tramway construction, roof and bridge designs, are proposed to be delivered in each term by lecturers who are specialists in the various subjects enumerated above. Work of the proposed nature has been recommended by the Institute of Civil Engineers of England, and forms an important portion of the instruction given in the various Technical Colleges. Instruction in the principles of surveying will also be arranged for.

#### Mining Engineering.

A syllabus for a course of instruction in mining engineering, including mine surveying and metallurgy, has been prepared on the system adopted at the Royal School of Mines, London. This system has worked most admirably, and produced excellent results; lectures on mining engineering and metallurgy are proposed, with practical work in assaying and furnace working.

#### Wool Department.

Mool Department.

A department will be started in February next, to be called "The Department for Instruction in Sheep and Wool." The instruction, to be given by a lecturer aided by one or more assistants as may be found convenient, will be imparted by the following methods:—(1) class teaching; (2) practical demonstrations; (3) visits to the sale-yards, shows, &c.; (4) popular lectures. The course of instruction will embrace the following subjects, in each of which a certificate will be given on passing the required examinations:—a, the sheep; b, wool sorting and classing; c, valuation of wool; d, uses of wool; e, fellmongering; f, wool-scouring; g, sheep-judging. The diploma as a wool expert will be given to those students who have secured honors or first-grade certificates in all the subjects specified. Practical examinations will be held at the end of each term, and certificates will be awarded to those students who pass a satisfactory examination. The wool collection at the Technological Museum, consisting of over 5,000 specimens, dating from the year 1800, will be utilised for purposes of instruction, and this will be supplemented by purchases and donations from time to time. To meet the convenience of those students who cannot attend during the day-time, the wool-sorting class now in operation of an evening at the Technical College will be continued, and, if necessary, similar classes will be established at the principal towns in wool-growing districts. Special facilities will be offered to such of the evening students who have advanced to a certain stage under these arrangements to have access at all times to the wool collection of the Technological Museum in Sydney, and its various branches in the country districts. branches in the country districts.

# L'ctures.

At the end of 1890 the Minister decided that all popular science lectures should be given by the permanent officers of the Technical Education Branch, and not by lecturers specially employed. Advantage was taken of the resignation of Mr. S. H. Cox, lecturer in geology, mineralogy and mining, to separate the work of lecturing from that of teaching the classes at the Sydney Technical College. It was arranged that the principal duties of the lecturer should be to visit the various mining districts, make himself acquainted with their geological formation and mineral deposits, and furnish information thereon by means of reports and lectures, and at the same time give practical lessons or lectures to the miners. Applications for the position of lecturer were invited by advertisement, and the seven applicants, who from their training and experience appeared to be best qualified, were selected to give test lectures. These test lectures were reported upon by a special Committee, who unanimously recommended the Rev. J. Milne Curran, F.G.S., for the appointment. Mr. Curran has for many years been an assiduous worker in the fields of Australian geology and mineralogy. He is an accomplished microscopist, particularly in rock section work, and is one of the most skilful producers of micro-photographs in the Colony. The appointment of so distinguished a scientist as Mr. Curran has been of very great benefit to the Technical Education Branch, as, in addition to his lecturing work, he examines and names the specimens of minerals, rocks, and fossils in the Technological Museum, furnishes information to Public School teachers and other inquirers after information on such subjects, and advises the geological collector as to good collecting-grounds. Mr. Curran has also presented a large and valuable collection to the Museum. These specimens, for exchange purposes merely, would well nigh recoup the department for the salary paid. As a lecturer, Mr. Curran has been everywhere welcome. The twenty-eight lectures he has delivered have b in our footsteps.

Applications for Mr. Curran's services pour in from all parts of the Colony, and it will be a long time before those already received can be satisfied. Further details of Mr. Curran's work will be found in his report, appended.

An April last a department of Sanitary Engineering was formed. One of the duties of the lecturer in charge, Mr. J. L. Bruce, is to deliver popular lectures on health and sanitation. Mr. Bruce has lectured in Sydney and suburbs on such subjects as "What Sanitation is," "Air and Health," "Water and Health," "Gas and Light," "Ventilation and Cooling," "The House and its Site," "Home Comforts." The lectures have been reported at great length in the daily and weekly papers, and have been much appreciated.

Mr. Angus Mackay, Lecturer in Agriculture, has unfortunately been able to do very little during the year. From the effects of an injury he received when returning from a lecture at Ryde he became so lame that in August last he was rendered unable to attend to duty. Mr. Mackay delivered only seven lectures during 1891, as usual, to large audiences.

Mr. Albert Gale, while visiting public schools in his capacity of Visiting Teacher on Horticulture and Bee Culture, gave forty-seven public lectures in the country districts on matters connected with bees.

with bees.

As soon as matters are settled in the new college buildings arrangements will be made for the regular delivery of popular science lectures, probably on Saturday evenings. A similar course will be pursued in the branch schools, and the resident science masters have already been supplied with lanterns, so that the lectures will be made both interesting and instructive. At Bathurst and Goulburn arranged seed the search lead to be additioned to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to be added to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the search seed to the se several good lectures have already been delivered.

#### Examinations.

As already stated, the results of 'the examinations have been very gratifying. The number of students submitting to examination was 2,178, against 1,538 in 1890; and the number that passed reached 1,493, as against 864 in 1890. Out of the total entries of 2,178, 226 obtained Honors, 394 the first grade, and 873 the second grade. There was, therefore, an increase of 640 in the number examined and of 627 in the number that passed. These numbers are exclusive of the pupils of Public Schools that were examined in manual training, shorthand, and cookery. The standards of examinations were the same as in 1890, viz.,-

50 per cent. of marks to gain a pass. 75 per cent. to gain a first grade. 85 per cent. to pass with honors.

Compared with those of the previous year the results for 1891 stand thus :-

	1890.	1891.	Increase.	Increase per cent.
Number examined	1,538	2,178	640	41
	864	1,491	627	72

In 1890, 56 per cent. of those examined passed, in 1891 the percentage rose to 68, a result that speaks well for the industry and ability of the teachers.

The tests applied were, on the whole, more difficult than in 1890, as the standard in theory was fully maintained, but the practical part of the examinations was made more severe.

It, perhaps, is necessary to point out that attendance at these examinations is purely voluntary and that, except in very few instances, no direct gain results from the possession of a certificate. Students join classes to obtain particular information of which they stand in need, and do not come to the examinations. Many teachers advocate that attendance at examinations should be compulsory upon all students, as they are assured that the efficacy of their teaching would thus be made more evident. While admitting that strong arguments may be adduced in favour of such a course, I am not inclined to give it my support at present. If the various public departments fixed a standard of qualification for admission to all branches of the civil service—professional, electrical, mechanical—and would accept the Technical College certificates that gave clear proof that their holders possessed the qualifications required, the college and the public service would both be benefited. The Water and Sewerage Board has already agreed to accept the Technical College certificates in plumbing as evidence of fitness for a plumber's license.

The following remarks by some of the examiners may be found interesting:—

Mechanical Drawing.—The work all round has improved as compared with former years.

Fitting and Turning.—I have very great pleasure in testifying to the very able manner in which the students of this branch of the college have accomplished their various tasks. The work done is extremely satisfactory. It proves to me that they have in their instructor one who is thoroughly conversant with his duties, and also that the students must have paid keen attention to his instructions, otherwise they

otherwise they would not have turned out the class of work which they have done.

Carriage-building.—The practical work is of a high class.

Freehand Drawing.—There is a decided improvement in the general average over the work of last year

Model Drawing.—There is improvement in the average of both classes.

Descriptive Geometry.—The results are most satisfactory.

Lithography.—Excellent work has been done.

Caligraphy and Correspondence.—The answers given by the students have, taken as a whole, proved very satisfactory, some being even of merit of a high order, and the greater portion of the papers show results to attain which, study on the part of the students must have been close and attentive.

Cookery.—Very good work has been accomplished under great disadvantages.

Scientific Dress-cutting.—I must congratulate the teachers on the marked progress made by the students in their respective classes.

Cookinging.—The papers as a whole show fairly good work

students in their respective classes.

Coal-mining.—The papers as a whole show fairly good work.

Modelling.—It may not be considered out of place to allude to the excellent results of the instruction as manifested by the year's work. Some forty casts, representing the work of the best students during the year, reflect the highest credit upon their instructor.

Blacksmithing.—In practical work and using tools the class put in good all-round work.

Architecture.—The work of the students during the past twelve months is an improvement on that of previous years. The papers on Building Construction are very good.

Carpentry and Joinery.—At this year's examination nearly all the questions were fully answered, in addition to the illustrations required by diagrams, showing the subjects were fully understood.

The creditable results obtained at the recent examinations are endorsed by the exceptional number of passes gained by students of the college at the Science and Art Examinations held at South Kensington in May last. The prizes are more numerous than in any previous year. Amongst the prize-takers may be mentioned Mr. Alfred Spain, who was awarded a bronze medal for a design for a town hall. a town hall.

a town hall.

Annual grants are made by the Science and Art Department to the teachers of pupils in Great Britain who are successful at the National Competitions at South Kensington, but no funds are available to pay teachers of Colonial students. The amount that would otherwise come to teachers of the Sydney Technical College for successes gained by pupils in these examinations is £51 2s. The importance attached to these examinations in Great Britain may be gathered from the fact that the number of works sent up for classification last year was as follows:—48,636 from 241 Schools of Art and Branch Schools, 43,246 from 338 Science Schools, and 40,335 from 272 Art Classes.

The Technological Examinations of the City and Guilds of London Institute were held, as usual, in April last. These examinations are open to all comers, but by far the larger number of candidates are or were students of the Technical College. The number of candidates examined this year was 49, being an increase of 16 over the number for 1890; while the number of passes this year was 31, against 20 for 1890. It will thus be seen that not only has the number of candidates increased, but also that the percentage of passes is higher for this year.

also that the percentage of passes is higher for this year.

#### Details of Work.

The classes connected with the Sydney Technical College are arranged under 12 departments, viz.:—Agriculture, Architecture, Art, Chemistry, Commerce, Domestic Science, Geology and Mineralogy, Mathematics, Mechanical Engineering, Pharmacy, Physics, and Sanitary Engineering, Arrangements for the addition of new departments, as Electrical Engineering, Civil Engineering, Wool, and Printing, during 1892, have been made. One pleasing feature in the work of the period under

under review has been the growing desire for classes during the day. I hope that in the new College buildings, in the country as well as in Sydney, we shall be able to carry out a systematic course of technical instruction during the day as well as the evening, and thus have a staff of permanent instructors, who will give the whole time to the work. I shall not look upon the Technical College as properly organised until that is the case, and I am convinced that the increased expenditure entailed will prove a good investment.

Particulars as to the work performed, and the results achieved in the various classes, are given

in the following reports:-

Agriculture.

The Acting Lecturer reports as follows:—

"Mr. Angus Mackay, F.C.S., the lecturer in charge of this department, being unwell, obtained leave of absence in July, and I, his assistant, have been acting-lecturer in charge from the 27th of July till the end of the year. In the teaching of the advanced class, where the work of analysing soils, plants, manures, &c., was carried on in the two class-rooms, I have been ably assisted by Mr. G. J. Pitt, who also took the subject lesson on that evening.

The accommodation for pupils has been very defective, but this will be remedied, as we hope, in the new buildings at Ultimo next year, where more space will be available. With some slight additions our present appliances will suffice.

The conduct of the students has been excellent, and several in the advanced class have shown an enthusiasm in their work, which promises well for the future.

The course of studies in the afternoon elementary and advanced classes was, with some slight

enthusiasm in their work, which promises well for the future.

The course of studies in the afternoon elementary and advanced classes was, with some slight alterations, the same as last year. In order to give practical instruction as far as possible, fifteen "outings" were made to orchards, gardens, bee-farms, agricultural implement manufacturers, the State Forest Nursery at Gosford, the Botany Sewage Irrigation Farm, &c. Students from the Hornsby and Granville branch classes attended most of these outings. That to Gosford extended over three days, and on every occasion the attendances have been most satisfactory, the average of the whole being about 27. Two outings were made to the residence, at Goughtown, of one of the students in the Granville class, who, having provided the horse, the students were shown by me, in a practical way, how to break in a horse for the saddle, harness, or plough.

The general progress of the students has been good.

Last year there were 71 students in the three classes; this year there are 73, and as the work done becomes better known I have no doubt that the classes will increase.

The advantages accruing to the student from the knowledge gained in these classes will be apparent when it is known that at each term a number of students leave the classes to enter upon one or another of the various branches of agriculture.

It is not generally known that a large number of men and women attend these classes, as the following figures will show:—

Class. Students. Average Arc.

	Class.	Students.	Ave	erage	Age.
			Over	34	years.
Elementary		35	,,	23	- ,,
Advanced		28	,,	28	,,
	•				
	Total	73		27	

The above includes 5 ladies in the afternoon, 2 ladies in the elementary, and 1 lady in the

Most of the students who attend these classes do not come for any certificate; this explains the small number who present themselves for examination. They come for practical information, which they may apply daily in the home garden or the poultry yard, &c., which most of them possess."

#### Woolsorting.

The Teacher reports:—

"The accommodation has been barely sufficient for the present number—24. The appliances are fairly good, and the students have paid every attention to their duties. The course of studies has been the ten heads comprised in the syllabus. The progress of the class was highly satisfactory. There were double the usual number on the roll-book, and fair prospects of further increase. A larger quantity and variety of wools would be of great benefit to the class. Several instances of students classing clips to the satisfaction of their employers have come to my knowledge, and of others having advanced their position through the information gained in the class."

## Applied Mechanics.

The lecturer in Engineering reports as follows:—

"The work in this class during the year has been very satisfactory, the standard of students being much above the usual;—the average age stands at about 23 years, so that the students have been old enough to thoroughly appreciate the subjects taught, and have kept up a very good average attendance, considering the weather, and that many of them suffered from influenza.

In our new quarters we will have ample accommodation, but we will require many more new appliances in lecture models, diagrams, &c., no new material having been received for several years. Making the course a two-year instead of one year gives more time to go further with different branches of the subjects and helps the students. The progress has been good, and I have great hopes for the future with improved appliances.

## Mechanical Drawing.

This class has increased in numbers this year, so much so that we will require the accommodation of the new College if the class has any further increase, and an assistant teacher. The students require a great many more drawing models, as the few we have are not up to our present requirements, and I propose to make use of the machinery in workshop to a certain extent, and with a little addition make matters easier for the teachers and students. The conduct has been good and also the progress. One great advantage I look forward to in the new building is the lighting arrangements;—as matters are at present they could not be worse, and the temperature of the room is far too high for drawing; but with the roposed new lamps and tables these difficulties will be overcome.

# Patternmaking.

This class, though like all the others that were moved to the new College, made a late start in the year, and students had to be drawn to the new building, but the last half of the year shows a decided increase, but still there is a small number of students, which is due more to the fact that their trade being so very slack few students saw any future before them as patternmakers. As we will have the new shop ready for next term, the foundry at work, and a probable revival in trade I think the class will then push ahead. The teacher of the class reports that "The students commenced their studies for this year in new class-room, Harris-street, which room I find unsuitable on account of heat and proximity to intended foundry. The appliances have been sufficient, with the exception of lathes, as there is but one at present; and as wood-turning is an important branch of pattern making the students have not been able to obtain the amount of instruction in that direction that I could wish. The starting of the moulding class will be of great advantage to students of patternmaking, and will supply a long felt want. The students have been diligent in their studies, and have made considerable progress.

progress. The patternmaking business is the most important (outside of the drawing office) in the iron trade, as it requires a certain amount of knowledge of the various other branches, particularly moulding, so that it requires a large amount of time and attention to become competent; and as large firms require a premium for apprentices to patternmaking there are not so many in the various workshops apprenticed to patternmaking as to the other branches. From practical knowledge I find in the various factories in the Sydney district the average is about 1 apprentice to patternmaking to 6 to fitting and turning, 6 to boilermaking, 4 to moulding, and 3 to blacksmithing; so that it follows that the patternmaking class, though almost the most important, will necessarily be the smallest."

# Fitting and Turning.

This class, though making a late start in the year, has been extremely satisfactory, the number of students is greatly increasing, and with the addition of space and appliances, and the assistance of an additional teacher very good work has been done. I look forward to this being a very big class next year, when all the new machinery is in place. The fact, too, that the Government has determined to do a great deal more of the machinery work in the Colony will induce students to take up the study of a trade by which they can earn a living. The course of study seems perfectly satisfactory. The progress has been very good. The advantages of the class are enormous. The day of apprenticeship is dying out, and an employer will now only take boys out of whom he can make a return, so that it is almost necessary for a boy to join the College classes to get some insight into his work before he applies for a situation in a factory. The teaching he gets in this shop is far better than ever was given to any apprentice in any of the colonial workshops." The report from the teacher of the class is as follows:—

to any apprentice in any of the colonial workshops. Increport from the executed of the follows:—

"The accommodation for pupils is satisfactory. The appliances will be greatly increased on the arrival of the new machinery, which I am sure will meet the requirements of the class for some time to come. The conduct and progress of the students have been very good, and the course of studies for the year was that contained in the syllabus. With an increased number of machines I shall be able to accommodate a much larger number of pupils, particularly those who are somewhat advanced, and I am led to believe that the future will increase the number of pupils 25 per cent. I have received assurances from several pupils holding good positions of the benefit they have derived from attending the class, the knowledge gained therefrom being much to their advancement."

# Blacksmithing.

The Teachers report:—

"The advantages of the new workshop has been thoroughly proved by this class, the number of students having increased, and the work they have done been far better. So much has the class increased that as the two classes using the same shop require so much space I think before long it will be necessary to build a new blacksmith shop, and give the present one entirely to boiler-making. The conduct of students has been good, also the progress. The teacher of the class reports that, "accommodation for the pupils is sufficient. The students have conducted themselves in a very becoming and respectful manner. The course of studies has been as nearly as practicable in accordance with the syllabus. The progress of the students may, I think, be considered fairly satisfactory, though the trade of a blacksmith is one in which progress is not very noticeable in a few months practice, but the future prospects of the class seem to me very encouraging."

#### Boilermaking.

This class has not made as much increase as some of the others, mostly due to the depression of the trade, so few youths taking up the work. But what increase there has been is very satisfactory, especially as lately there has been very little work. In consequence of this scarcity of work for boilermakers, we have only just got our machinery in full work. All things combined have reduced the encouragement required, but with a revival in trade a large increase ought to accrue as there is a wide field for intelligent boilermakers, the bulk of the tradesmen not having had the advantages in youth, that is, now to be got in this class. The teacher of the class reports as follows:—

that is, now to be got in this class. The teacher of the class reports as follows:—

**Accommodation.**—Under this head I would like to bring under notice the insufficiency of light. The gas-pipes will require to be rearranged to suit the altered positions of the machinery. This alteration is due to the additional machinery late supplied. In every other respect I consider the accommodation satisfactory.

**Appliances.**—I am pleased to report that in respect to the machinery there has been a great improvement, the last three machines added to the class being a great acquisition. They are of good quality, and very suitable for our work.

**Conduct.**—The behaviour of the students throughout the year has been very satisfactory.

**Course of Studies.**—This included the undermentioned subjects. The tensile and crushing strength of iron and steel; the bursting, and collapsing, and working pressure of steam boilers and flue tubes; strength of riveted joints, both longitudinal and transverse; staying and strengthening flat surfaces; evaporation; combustion; heating surfaces; temperature of steam at different pressures; relative volume of steam to water.

**Progress.**—The progress of the students throughout the year on the whole has, I consider, been fairly good in both theoretical and practical studies.

**Condition of Class.**—The enrolment of the class has not been so large as I would like to report, but the average attendance has been fairly good compared with the enrolment. In all other respects the class is in a healthy condition. The future prospects, I venture to predict, will be very good.**

**Carriage Ruilling**

Carriage Building.

The teacher's report is as follows:—"The conduct of students could not have been much better. The amount of work both theoretical and practical, that many of the students have done and the high class of it, is worthy of a little recognition apart from the annual examination. I submitted the year's work to our examiner, and probably he may make a recommendation. In reference to appliances, &c., I am now collecting and assorting a number of different diagrams that I should like to have copied on cards, &c., for which, when complete, I will make the usual application accompanied with material for your consideration."

for your consideration."

The course of instruction that has been imparted during the current year embraces the following subjects:—A knowledge of scale rules, how to construct them; the use of drawing instruments, set and T square; the construction of the regular polygons; construction of scrolls; sweep and curves used in coach building; the drawing and setting out of plane joints of carriage parts; the drawing of seats and plane body, side elevations; drawings of buggy, side elevation, front and back view; dog carts, showing all sides including ground plane; the drawing and laying out of Victorian phaeton, also the construction of buggy tops with proper dimensions; the draughting of cabriolet, also piane box buggy.

the construction of buggy tops with proper americans, and buggy.

Lectures have been given on special subjects, such as features to be considered in designing plane bodies; "Formation of hoods, and how to fix them"; "Two-wheel vehicles, how to suspend them for different sized horses"; "Original system for building carriages for different sized horses"; "American and English style of carriages"; "The position of wheel horse, and how to obtain exact shape for various lengths of axles and wheels"; "The construction of bodies, and how to make the cant beard, also the proper mode of pricking of patterns for their construction and proper materials to be used, both colonial and foreign"; "The subject of draught, and position of springs and wheels to obtain the best results."

The work of the practical class embraces the making of plane carriage doors, under carriage wood work; Abbot style frame seats; Abbot style solid side seats; the framing of a Victoria boot in native timber; a cutunder wagonette frame; mail phaeton pillars framed to brackets, &c. These, with useful plane jointings, &c., form the main work in this section. Nine students presented themselves for examination, and I have no doubt but that they gave a good account of themselves."

#### General Remarks.

General Remarks.

The Lecturer further states:—
"Taking the whole Department of Engineering into consideration with the understanding that we had moved some classes, that others have had to put up with things as they stood, a dreadfully depressed year for engineering work, the progress made in this department has been very good; we have been deficient of appliances but I think that is now remedied. The conduct on the whole has been good. The course of study I consider meets the requirements—progress good, and the future prospects extremely good.

The advantages afforded are very great as a student may though wealthing at a dark the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the description of the

The advantages afforded are very great, as a student may though working at a trade so improve himself at the College at a very low cost to double his rate of wages and so raise himself from an inferior to a high-class workman.

In conclusion I may state the teachers as a whole seem to have their hearts in their work, and the principle of having working men who have been, and are employed at the branches they teach, is a great advantage to the class as they keep ahead of the improvements of the day."

#### Architecture.

The Lecturer reports:—

"The accommodation has served in a barely passable manner the purposes of the classes. The building having evidently been erected for other uses than as class-rooms, renders further comment of course unnecessary. The necessary appliances have been valuably increased during the session, a course which it will be advisable to be continued for an indefinite period. The students have conducted themselves satisfactorily. The course of studies has been—as contained in the first year of the new cyllabus.

The Historical studies have embraced the styles of architecture practised in India, China, Japan, Mexico, Peru, Babylon, Assyria, Persia, Egypt, Phœnicia and Greece.

In building construction the following have been overtaken,—excavation, shoring and strutting, scaffolding, drainage, foundations, brickwork, different bonds, compound walls, prevention of damp in walls, junction of walls at right angles, joints, gauged work, arches, centres, window and door

in walls, junction of walls at right angles, joints, gauged work, arches, centres, window and door openings, chimneys.

All of the foregoing, both the historical and building construction studies, have been well illustrated by both lantern and blackboard examples and explanations. The architectural drawing has started with the use of drawing instruments, followed by drawing to scale, copying drawings, enlarging and altering sizes, orders and styles of architecture, also several original designs by individual students, commenced and carried out in the class, with general assistance, and under supervision. The progress of the students has been gradual and satisfactory. The present condition of the classes compares favorably with preceding sessions notwithstanding the very great commercial depression and influenza epidemic from both of which causes the classes doubtless suffered to some extent. The future prospects of the classes are good. The new premises will probably prove more attractive than the past have been, and consequently with increased and suitable accommodation, together with gradual accumulation of appliances, continued success may confidently be expected."

#### Carpentry and Joinery.

Carpentry and Joinery.

The Teachers report:—

"During the present year the gradual increase of students has made the class-room too small. This has had a tendency to drive students away.

The conduct and general behaviour of pupils are all that can be desired. The year's work has been in accordance with the syllabus, giving examples of practical work in detail, and in full and half-size drawings on the blackboard, explaining tools required and their adaptation to the various kinds of work. The progress made by students has been in advance of previous years, the pupils being older with more journeymen amongst them. The attendance has been very steady, considering the distance many of the students had to come.

This class is at present in a prosperous state, and seems to meet the requirements of the trade; but with our new room and appliances the future prospects will be greatly increased. During the past year it has been found out that more practical work is required, and that an additional practical night would prove of great benefit to the students, and that students should not be allowed to join for practical work without the theory."

#### Bricklaying.

"The accommodation for this class is all that can be desired, and leaves nothing to be recommended. As regards the sufficiency of appliances, they are quite satisfactory. The conduct of the pupils has been very good; they have always been well-behaved, industrious, attentive, and anxious to improve themselves, as far as lay in their power. The course of studies has been very comprehensive and has comprised all the lines as laid down in the syllabus for the year's working, as far as practicable. Amongst other items may be mentioned the description of all tools and their uses; the different kinds of bonds and their merits; arches of all descriptions, and practical method of setting same. The setting of steam boilers and bakers' ovens has also received a fair amount of attention.

Those students who have been able to attend regularly have made good progress, and have gone through the whole course for the year. I may state here that the class would have been better attended but for a number of the pupils leaving town for the country owing to the scarcity of work in Sydney.

Sydney.

I regret to state that the present condition of the class is not all that could be desired, owing to the reasons already stated, but I am looking forward to a better state of affairs on the resumption of the class after the vacation."

## Stone and Marble Carving.

"The appliances for this class are sufficient for its requirements. The conduct of the students has been excellent. The course of study has been on the first and second year's models, and the students have made good progress and are getting on well. The dull times have had an effect on the class this year, but the teacher expects a large class next year. Most of the old students are coming back, and several others have promised to join."

# Masonry.

"This class did not come up to the expectation of the teacher this year. Several young men who had promised to join did not do so, but a larger enrolment is expected this year.

The attendance has been good, and the students are all anxious to learn all they can and improve themselves."

## House Painting.

"In reference to accommodation for students, ample provision will be made in the new College for the present number and any reasonable increase for some time to come. Numerous diagrams and other teaching apparatus have been obtained for the use of the classes during the present year, and

others are necessary to finish illustration of course of studies, several of which are already in preparation. The conduct of students has been very good. The course of studies has been same as laid down in the syllabus, but a scheme for dividing the present classes and adding new ones has been adopted, and the new syllabus will be put into operation during the coming terms. The progress of students has been satisfactory, and in a few cases very marked indeed. The present condition of the classes is good, equalling in numbers and attendances any period since their establishment. With the better accommodation provided in the new College, and new teaching apparatus and fittings, there should be a gradual increase on the roll, and work will be carried to a higher standard."

#### Slide Rule.

"The accommodation has been adequate. The enlarged rule and stands have been supplied, and a few diagrams illustrative of the mechanical principles are necessary, but with this exception everything has been most satisfactory. The conduct of students has been most exemplary. The course of studies has been comprehensive and thorough, embracing the application of the rule to the solution of problems in mechanics and mensuration, superficial and solid measure, and the technical arithmetic of the blacksmith, engineer, millwright, builder, &c.; also a thorough explanation of the principle of construction and its analogy to decimal arithmetic.

Owing to the students, in nearly every case, having previously taken up the study of other subjects the progress has not been as rapid as was anticipated; this also accounts for the large falling off in the second term.

While the present condition of the class is far from all that could be desired, when the

off in the second term.

While the present condition of the class is far from all that could be desired, when the practical utility of the rule becomes known, in fact as soon as it is generally known that such a useful instrument exists, the instruction at the college will be largely availed of. Increased interest in it is being manifested; it is being talked of and inquired after.

Each student has found it available for some special purpose—a turner for screw-cutting problems, a blacksmith for weighing metals by measure and solving the many problems relating to the working up of metal and wood, a clerk for checking and compiling timber and other accounts, an engineer for the power of an engine, pulley and power problems, and many others. Some of the students have signified their intention of repeating the course of studies next year for the sake of practice.

Instrumental calculation is becoming a feature of the mechanical education in England and on the Continent, and there seems a grand future for it in the Colonies."

The Associate Lecturer in Art reports as to the classes under his charge :-

In general terms I think I am right in stating that this year has been more satisfactory than any previous year.

At the commencement I made some slight changes in the duties of the teaching staff, which have in most cases worked well. I now possess a better knowledge of their several qualifications.

My special care this year has been to get the teachers into a more systematic mode of teaching, and also to assimilate as far as possible my ideas with those of the examiner, the result being a substantial progress, one teacher remarking that he felt we were making a real move onward. No doubt there is new life awakening in our midst, where it comes from or how it comes matters not so much as the fact that it exists. It is with pleasure that I have to report the success of the day classes in general, more especially the freehand drawing, your sanction to the forming of which has met with full reward; although it was commenced in the middle of the year it soon became popular, there being 30 enrolments, with an average attendance of 25. The model drawing class too has been equally well appreciated, there being as many as 29 attending in an afternoon.

It is satisfactory also to embody in my report the fact of several of my students distinguishing themselves by carrying off awards for works of art forwarded to South Kensington for classification. This of itself is encouraging to both teacher and student alike, and I feel sure that still better results will follow.

will follow.

will follow.

As we are upon the eve of vacating the old premises, viz., the School of Arts, Pitt-street, it is little use commenting upon the accommodation, it is enough to know there has been much good work done while there, and as it is from difficulties we gain the most valuable experiences, we must look upon all the past inconveniences as the preparation for still higher work in the commodious college which is now being provided for us.

The appliances for existing classes for present purposes are all that can be desired.

The conduct of the students throughout has been excellent.

The course of studies is freehand drawing, model and object drawing, perspective, plane as solid geometry, and sciography.

solid geometry, and sciography.

The course for freehand in the first and second years has been carried out as near as possible to the following table:

1st term.—Drawing in outline from flat copies; studies in proportion, construction, &c.; drawing in outline from the cast.

2nd term.—Construction; diagonal line shading, back ground, for even tone work and drawing from memory for home work. 1st year. Medium pencil ... 3rd term.—Shading in full from the cast and time-work; recapitulation of outline. outline.

Ist term.—Drawing in outline from the cast, when the cast is in parallel and oblique positions; composition of lines, construction, &c., and line shading.

2nd term.—Drawing and shading in full simple casts, introducing the use of the stump; time work and drawing from memory.

3rd term.—Drawing from the most advanced casts, as capitals, rosettes, fruit, &c.; finished drawing for exhibition work; recapitulation of outline and time-work for examination purposes. 2nd year. Medium, 1st term. Crayon and pencil... 2nd and 3rd term. Chalk and stump ...

outline and time-work for examination purposes.

The third year students are allowed a greater freedom of action so that they may bring forth their individuality, using any medium as set forth in the calendar.

The course for model drawing, as set forth in the calendar, is becoming more and more appreciated, and is bringing forth a class of student who never attended our college before. It is not merely the placing of a model before a student to copy, but much more; every lesson is made as far as possible of a practical use, showing how each of the geometrical solids may be the embodiment of a substructure for common objects; for instance, a cylinder (a) standing vertically is taken to illustrate one block of stone in a column, showing from this the constant varying curves of the ellipse of the many joints when drawing such an object; (b) lying horizontally, a garden roller, or its ends as the wheels of a waggon, and others according to the student's occupation. Again, a square pyramid, vertically over a square prism, illustrates a tower with its pyramidal roof, and so indefinitely. It will thus be seen that our endeavour is not only to teach drawing thoroughly, but also to make it instructive and technically useful. In the first year's course the student is kept almost entirely to outline. In the second year the time is given more fully to shading. The student is also encouraged to devote time at home in selecting any common object for practice. These are collected, and will be exhibited at our annual exhibition under that head.

The progress of the students has, generally speaking, been satisfactory, and would have been much more so had it not been for the late influenza epidenic, which, coming during the latter term, threw many of the students back in their work, especially in the collective subjects; this, of course, cannot be helped.

cannot be helped. Chemistry.

#### Chemistry.

The Lecturer reports:—

"The accommodation for pupils has been ample so far as the practical chemistry classes are concerned. The appliances have been ample for the students attending. The conduct of students has been uniformly good during the past session, though greater regularity in attendance is much to be desired, as it would contribute to their progress, which, with the above drawback, has been from fair to good. The future prospects require serious consideration as fas as the theoretical classes are concerned. That the matter may be understood it is necessary to give a short statement of the history of these classes.

Whilst the Technical College was under the management of the Committee of the School of Arts the present large art room was used as a lecture room, and the chemistry classes steadily improved in number of students and in regularity of attendance during some four years when there were proper appliances and accommodation for teaching. The Committee then arranged that lectures should be delivered twice a week for six months in the large hall, handling the subject in a so-called popular manner. (The classes were always twice a week for the six winter months before that.) This experiment was not at all successful, as only a small number came up for examination, and their papers were all very weak. At that time the lecture room was coverted into an art room, and from that onwards to coming to the present building the theory classes had to be conducted in the laboratory with practically no proper accommodation. The result was that the classes did not grow, whilst the irregularity of attendance was distressing. Since coming to this building the classes have improved in both respects, although the room being used for other classes left much to be desired. In the new college there will be a lecture room solely for chemistry, and the result should be beneficial."

#### Lithography

Lithography.

The Teacher reports:—

"The accommodation at Sussex-street was good, but the extreme heat was very trying. In the way of appliances there are a lithographic press, a good supply of lithographic stones, and everything necessary to demonstrate practical and theoretical lithography. The conduct of the students has been very good; there has never been any trouble with them. They were always willing to do anything required. The course of studies has been the practical making of transfer papers, and transfer inks; the manufacture of various colours; the theory of acids and chemicals used in lithography and zincography, and printing work up to ten colours. There has also been some progress made in photography, samples of which have been submitted.

The progress of the students has been very good. They have gained knowledge and information that they would never have received in a printing office, and which must be of great service to them as they progress in life."

Sanitary Engineering.

#### Sanitary Engineering.

The Lecturer reports:—

"The classes in the Department of Sanitary Engineering, conducted during a portion of last session, were of two kinds:—1st, The sanitary engineering of building, intended for architects and for sanitary engineers; and 2nd, sanitary plumbing, for the instruction of practical plumbers. These classes having been started only during the second term of the session of 1891, have been necessarily to some extent preliminary to the full course which will be begun under the new syllabus, next session; and the accommodation and apparatus for teaching and demonstration purposes which, it is to be hoped, will then be available in the new buildings at Ultimo, will very greatly facilitate the work of the course in both classes.

Notwithstanding the difficulties inseparable from the makeshift accommodation and appliances.

Notwithstanding the difficulties inseparable from the makeshift accommodation and appliances

work of the course in both classes.

Notwithstanding the difficulties inseparable from the makeshift accommodation and appliances rendered necessary on account of the noncompletion of the new college buildings, and which have compelled me considerably to curtail the completeness of the instruction, I have every reason to be pleased with the close attendance and intelligent attention of my students.

In the class for the sanitary engineering of building there has been no formal examination held at the close of the session, but from class examinations made during the two terms of its existence or I found that the subjects which I was able to overtake in the time available seem to have been creditably understood. In the sanitary plumbing class similar examinations gave equally satisfactory results, so much so, that although they had only a two-term in place of a three-term session I considered my students quite capable of being examined in theoretical plumbing along with the workshop students, and I do not doubt that those who were so examined have not disgraced their teaching.

The new syllabus which will be acted upon next session for this, the branch of "Practical General and Sanitary Plumbing," as you are aware, aims at associating more closely than hitherto the theory with the handicraft. With this object, lectures and demonstrations on the proper proportions of parts and descriptions and explanations of the leading appliances necessary in the practice of modern plumbing (the entire field of which is embraced in the term "Sanitary Plumbing") will be given in conjunction with instruction in the preparation of working detail-drawings. In this way students will be taught to use the information given in the lectures in making working drawings of properly proportioned parts, and these working drawings they will then take to the workshop where they will be taught how to shape, make and put together (according to the drawing) the part or apparatus they have delineated. And further, with a view to give a purpose to t

## Plumbing.

The Teachers report:—

"The new workshops will be comfortable and commodious; the temporary workshop the class has occupied during the year has answered all requirements very well indeed.

The class has been very well served during the year with appliances, but there will be some new requirements at the begining of next term owing to the new class of work intended to be done.

The conduct of students during the year has been good.

The course of studies comprises the general principles of plumbing as laid down in the syllabus, including sanitary and hot water work, pumps, hydraulic rams, lead casting on work, &c.

The progress of the students has been satisfactory and in some cases excellent.

The practical working and some of the work done is very good indeed, and the future prospects of the class are good.

of the class are good.

The majority of pupils who have attended the plumbing class have reaped great benefits from their attendance; very many of them learned here and not in their workshops how to manipulate sheet-lead or piping into material for plumbers' use; some are reaping a benefit now." Geology.

## Geology.'

"The accommodation for pupils has not been satisfactory, but pending the removal from the present rooms no alterations have been recommended. With regard to the conduct of students everything has been satisfactory.

The course of studies has been the subject of previous communication, and thing has been satisfactory. The course of studies has been the subject of previous communication, and the alterations then recommended will put this Department on a more technical basis than ever it has been. The progress of students has been satisfactory, notwithstanding the insufficiency of appliances, but the progress has been greater in the geology class, due to the fact that students attending this class happened to be a better class of workers. The present condition of the classes is not all that could be desired, but it is to be hoped the alterations recommended will be the means of making the future prospects of the classes much brighter.

The formation of a class on mineral prospecting will be the means of making the classes more popular and of supplying students to the high classes of geology and mineralogy."

#### Domestic Science.

"Sufficient accommodation has been provided in the new college. The conduct of students has a the whole satisfactory. The course of studies has comprised plain and advanced cookery and been on the whole satisfactory. household management.

Considering that there has been no opportunity for the students to make such dishes as require long prepartion and are difficult to carry away, the progress has been satisfactory, and the difficulty of teaching them practically soups, gravies, stews, &c., will be overcome when a daily luncheon is

served.

The number of students has been large, and there is every reason to expect an increase in

Scientific Dress-cutting.

"The conduct of students has been generally good; they are regular in attendance, orderly, and well behaved, but lately many have been absent on account of sickness. The course of studies has been according to the syllabus. There has also been a class for dressmaking in the third term. The progress of the students has been very satisfactory.

The present condition of the classes is favourable. The future prospects will be greatly enhanced by extra accommodation, which is to be provided in the new college."

by extra accommodation, which is to be provided in the new college.

#### Home Nursing.

"Classes in this subject have been held at Burwood, Hunter's Hill, and Sydney. The enrolment at each place was 143, 51, and 50 respectively, and the average attendance about 60 in each of two classes at Burwood; about 45 at Hunter's Hill; and 21 in each of two classes at Sydney. As a large proportion of the persons attending the classes are mothers of families, the continuous rains during the winter and early spring, and the prevalence of the influenza epidemic in almost every household during the last term, it is but reasonable to suppose, have made each set of these figures less than under more favourable circumstances they otherwise would have been favourable circumstances they otherwise would have been.

favourable circumstances they otherwise would have been.

At Burwood the class met in a room in the School of Arts. Although at the commencement it was necessary, because of the large number of students to divide this class, that the teaching might receive the undivided and undisturbed attention of those present, and that all might have opportunities of individual questioning, and share alike in personal attention to the practical portion of the lectures, yet the room very suitable, generally was often overcrowded. The Sydney class was held in the Design Room, School of Arts. At Hunter's Hill the class met in the Public School, which in every way answered my requirements.

Through the liberality of the Department everything that was necessary was supplied.

As was stated above, the majority of the students were mothers of families. These women, recognising the great value this teaching would be to them in the care of their families, gave such attention, and exercised such an influence on the younger students, that there never was any necessity to reprove a student.

to reprove a student.

The syllabus furnished has been adhered to, so far as that could be done in two terms. In demonstrating the practical portions of the lectures the attendance of a girl was engaged, upon whom students were afforded the opportunity of imitating my modes of nursing the sick.

The progress of students has been highly satisfactory, but it is only in the practical application of the knowledge in the homes of the students that the progress can be measured.

A true judgment as to the advantages accruing to students can only be formed from a measure of the student's appreciation of the lectures, and from individual applications of the knowledge.

Numerous letters confirmatory of appreciation on the part of the students have been received, and personal opportunities of judging in their own homes how much others have beenfited by the teaching have been afforded. At the invitation of several members of the class, and under the auspices of the Department, three lectures were delivered at Hunter's Hill to women whose household duties prevented them attending the ordinary classes. These lectures were so numerously attended that there was not sitting room in the building for the whole audience. Under the auspices of the Ladies' Sanitary Association the same three lectures were delivered in the Sussex-street Mission Church. These lectures were so well attended that another course has been asked for during the coming year."

## Mathematics.

"The course of studies as laid down in the calendar has been carried out during the year, and there has been no demand for the extension of the teaching to any of the higher branches of mathematics.

mathematics.

"The progress of students has not been as satisfactory as could be desired. This can be accounted for in many ways, as (1st.) the time of the students is, as a rule, so occupied that they can find little time to prepare and revise their work, and thus they depend entirely upon the short time during which they are present in class; (2nd.) the attendance, especially towards the end of the year, is irregular; (3rd.) many of the students have left school when very young. For the above reasons, and also on account of the limited time given to each subject, it can readily be understood that it is very difficult to work the students up even to the present standard.

The conduct of the students is, and always has been, exemplary. The present condition of the classes with reference to numbers is not as satisfactory as was expected. During the first and second terms of this year there was a large increase, but during the last term there was a considerable decrease in the number attending for technical arithmetic, although there was a slight increase in the attendance at the geometry, algebra, and trigonometry classes as compared with the same term of last year. With regard to the inture prospects, it is hoped that when the classes are all located in the one building there will be a marked improvement in the mathematical classes."

## Caligraphy and Correspondence

"The accommodation for the classes was ample. The conduct of the students has been exceptionally good, notwithstanding the defective condition of the class-room as regards ventilation.

The course of instruction given was that laid down in the calendar, which was closely

adhered to.

The students, and also the ex-students, have expressed their sense of the material advantages accruing from these classes. They are being increasingly appreciated, and will be substantially augmented during the coming year. It is gratifying to learn that the employers of clerical labour regard the commercial classes with much favour.

The progress of the students has on the whole been very satisfactory. With the view of exhibiting the results of the instruction, a large specimen-book is being prepared, which will, on completion, be submitted for public inspection.

The subject of "Correspondence" naturally goes hand-in-hand with business penmanship, and affords to the student of caligraphy ample opportunity for testing the benefits he has derived from a study of the latter subject. The student is expected to be able to write a clear, swift, flowing band before entering this class. He must also have a knowledge of grammar, composition, &c. Business subjects of a popular character are dealt with. Commercial signs, abbreviations, and technicalities, are also taken up and fully explained."

Latin.

"The work has been very satisfactory throughout the year. Of the two boys from the class who went up for the Junior, one was A in Latin, the other B. Several are preparing to matriculate

next March.

The accommodation is all that could be desired. Appliances are not required. The conduct of

students has been excellent.

The course of studies examined upon is different in the authors from that actually followed, as The course of studies examined upon is different in the authors from that actually followed, as each pupil works at the author set for any examination he may have before him. As far as the grammar is concerned, the first year course is, perhaps, too extensive. The progress is satisfactory. The class numbers at present thirty-four, and as long as it offers its present unequalled conveniences of cheapness and adaptability to the needs of the individual student will always be a success.

The class is largely composed of public teachers, who propose to take advantage of the new arrangements between the Department of Instruction and the University, and can at a nominal cost fit themselves for matriculation as they could do nowhere else."

#### French.

"The accommodation provided for the pupils is in every way satisfactory. The conduct of the students has been very good. The course of studies pursued has been confined for the first year's pupils to McMillan's First Book and the conjugation of the regular verbs; for the second year's pupils to McMillan's Second Year Course with the conjugation of all the irregular verbs, to translations from French into English, and to dictation of passages read principally from French newspapers; and for the third year's pupils, to doing a considerable portion of McMillan's Third Year Course, to reading Racine's "Phedre," and to dictation and conversation.

The progress made by the pupils generally has been satisfactory, and the condition of the classes (composed of 45 students) gives strong evidence of the popularity of the study; and there is every reason to believe that now that the course of studies will better meet the needs of the University examinations and of the Department of Public Instruction, the number of pupils in all probability will be considerably increased. The efficiency of the classes would be greatly enhanced by an extension of the hours of teaching, for as this must obviously be, to a large extent, individual, the time allowed has been found to be altogether inadequate.

The importance of a knowledge of the French language can scarcely be overrated. To a clerk in a merchant's office or in a bank, with the increasing relation between these dependencies and France and her colonies, it is almost indispensable. More especially so, as French is not only the diplomatic language all over the world, but is the language selected for international correspondence in all the principal establishments of the European continent. To the Public School teacher, and to the female teacher especially, it is equally important, for, being a compulsory subject with the latter, it goes a long way in fitting her for her profession. Nor can it be too highly estimated in the case of the mariner, so often required to understand Fren by a knowledge of the French language."

## Short-hand.

Short-hand.

In 1891 there were 1.255 students in the technical classes and 740 in the Public Schools studying short-hand. The system in use is that invented by Isaac Pitman. Although offers have I cen made to introduce other systems, it has not been thought advisable to accede to them. It is by having one system only that uniformity of teaching and uniformity in examinations can be secured. By adhering to this plan it is possible for a student changing his residence—and removals are very frequent in the Colony—to proceed to another teaching centre and take up the course of instruction at the point which he had reached in the previous school.

As the large curolment for this subject proves it to be one of very general interest, I quote at some length a report received from the Examiner of the senior (corresponding and reporting) sections.

The Examiner of the senior classes reports that—"Of the 164 candidates, 92 came up to be tested in regard to their ability to take notes of speech sand furnish transcripts of their notes. Eleven candidates took dictation at three rates of speed, 120, 80, and 60 words a minute; 2 at 120 and 80 words a minute; 12 at 120 and 80 words a minute; 9 at 120 words a minute; 3 at 120 and 80 words a minute; 3 at 120 and 80 words a minute; 6 at 80 words a minute; 3 at 120 words a minute; 6 at 80 words a minute; 6 at 80 words a minute; 7 at 120 and 80 words a minute; 7 at 120 and 80 words a minute; 80 at 120 words a minute; 9 at 120 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80 words a minute; 120 and 80

in the second grade; 10 secured "Honors" in the 60 words a minute division, 4 were marked "First Grade," and nine "Second Grade." Of the other students 65 passed in the "Manual," and will, therefore, receive certificates that they have a pretty good knowledge of the theory of Pitman's short-hand. Of the 65, 2 were marked as "Premiers," and 9 scored "Firsts"; the effect of either of these distinctions being that the winner may hope to quickly enter the ranks of the speed makers. The remainder of the 65 successful "Manual" students were marked "Second Grade," which means that they are progressing towards the goal through which they must pass before they can hope to become note-takers.

The Examiner adds—"That this examination is very much in advance of any that have preceded it. In December, 1890, the total number of candidates was 63; in December last it was 164, being an increase of 101. In December, 1890, the maximum speed was 100 words a minute; in December last it was 120 words a minute. In December, 1890, only 22 students in all passed, including 2 who secured "Honors" and 3 who were marked "First Grade." Of those who came up in December last, 115 have passed—3 in 120 words a minute, 24 in 80 words a minute, 23 in 60 words a minute, and 65 in the "Manual." Out of the 63 who were examined in December, 1890, 41 failed to pass; but out of the 164 who presented themselves in December last, all but 49 have passed. So that it is clear that there has been a very marked improvement in every direction."

In the elementary section, i.e., those studying the "Teacher," no less than 209 presented themselves for examination, and 140 passed. The importance of this preliminary training cannot be over-estimated, as by far the greater proportion of those who fail in the attempt at making themselves masters of short-hand, do so because they have not completely grasped the first principles as contained in the "Teacher."

#### Physics.

The total number of enrolments for the year has been 88 as against 77 for 1890, and but for the fact that the Telegraph Department has had a telegraph class in operation (for the first time) during the present year this increase would have been greater, the enrolments for telegraphy being only 16 as against 22 for 1890.

The conduct of the students has been exceptional, and the progress made by those who attended

regularly more than fair.

The accommodation and appliances have been sufficient for the present year. The work done has been in strict accordance with the syllabus in the last-published calendar.

#### BATHURST,

The Resident Science Master reports:—During the present year, the following classes have met regularly. The total enrolment in each class is also shown:—

14	French	25
17	Phonography	38
10	Cookery	
8	Practical Geometry	17
7	Mechanical Drawing	2
55	Building Construction	7
39	Perspective	3
3	Freehand and Model	•
9		18
	10 8 7 55 39 3	17 Phonography 10 Cookery

The total enrolment in all classes is 308.

their own disposal is limited.

During the year some of the classes have remained small, notably those in botany, geology, and mineralogy; yet even in these there have always been some students who have attended regularly, so that it has not been necessary to suspend the meeting of any of the classes. Others again have been very large, especially those in book-keeping, mathematics, and phonography. The art classes showed a marked improvement during the year, not so much in the actual number of students enrolled as in the regularity of attendance and attention shown by those who joined. In all the classes very few students who joined early in the year left before its close, although, as usual, some were lost owing to removal. A great deal of sickness was prevalent in Bathurst during the latter part of the year, and this reduced the average attendance in some cases considerably.

The future prospects of the school are very promising. Most of the present students are expected to continue their attendance, and many others have expressed their intention of joining. It seems to be very generally recognised now that when a boy leaves school he has not completed his education, but that at least he should take a course of book-keeping, phonography, mathematics, or drawing, these being the subjects which are thought likely to be immediately useful, and some of the students of these subjects afterwards take up chemistry, geology, or physics. A desire has been expressed that a class in type-writing should be formed, and a considerable number of names of intending students has been given in. A very general desire also exists for a class in English, a deficiency

1-2 A

deficiency in which is especially felt by the students in phonography; and if a class of this kind under a competent teacher were sanctioned, it would be well attended. A class in caligraphy would also be very useful, the handwriting of many students of book-keeping being very indifferent.

Reports continue to reach us from time to time of promotion gained or benefit derived from the knowledge obtained in the classes, so that there is hardly a single case of a student who has attended the classes regularly and studied diligently who has not directly reaped advantage from so doing. One of our book-keeping students has recently been promoted to the position of first assistant accountant in the largest store in the city, and many other cases might be cited. The fact that a youth is a student of our classes appears to be regarded as a distinct recommendation to him when applying for an appointment. appointment.

French.—The teacher of this class reports as follows:—"Two classes have been in work this year. In the senior the matriculation standard has been aimed at. In the junior more elementary work has been done, and extra hours have been devoted to oral and conversational French. The students have been uniformly well-conducted."

Technological Museum.—Before closing this report I desire to refer to the Technological Museum. This institution was open to the public towards the close of last year, and during the present one has been well attended, the average being about thirty visitors daily, while on some occasions, such as public holidays, the attendance is considerably larger. During the year the class-room available for the display of specimens has been doubled, and the new cases are already well filled, so that very shortly it will be quite impossible to display all the exhibits in the present building. Most of the specimens shown have been received from the Technological Museum, Sydney; but a number of very valuable ones, about two hundred in all, are from local donors.

In order to render the Museum more generally useful, I have during the last three months given a series of fortnightly lectures, lasting half an hour each, on the various classes of exhibits shown. The subjects treated have been the following:—

How to Examine Minerals.
The Rocks of Bathurst—two lectures.
The Timbers of New South Wales.
Growth of the Sugar Cane and Manufacture of Sugar.
Copper Ores and their Treatment.
The Snakes of New South Wales.
The Ores of Lead.

The attendance at these lectures has not been large, but great interest was shown by those present. Miners and prospectors visit the museum, and either desire to be shown particular minerals or bring specimens for identification. This is done as far as possible by the museum attendant, Mr. W. Pascoe, or by myself. Specimens given to the museum are sent to Sydney for identification.

During the year I have given two popular lectures, illustrated by lime-light views, in the large hall of the School of Arts, lent by the committee of the institution free of charge. One was on the Jenolan Caves, especially in relation to geology, and the other on popular astronomy. The attendance at both was good, being estimated at at least 300 on the second occasion.

#### ORANGE.

Book-keeping and Short-hand Classes are in operation. At first the classes met in one of the rooms of the Town Hall, but at the beginning of the second term they were transferred to the Public School, where a large room has been specially lighted for the purpose. From several causes the classes have not made the progress I expected, but the reports of the teachers are so hopeful that I look for a decided advance during the current year.

The teacher of the Book-keeping Class reports as follows:—This class has been only moderately successful during the past year, chiefly owing to the very wet weather which prevailed for five months last winter. The accommodation is more than sufficient for my class. The appliances are ample, and the conduct of the students has been excellent. The course adopted by me is: exercises in theory and practice from Henry Manly's "Book-keeping by Double Entry," Jones system of rough balance, and the usual office systems of interest and other calculations. The progress of some of the students has been rapid, so much so that they thought it unnecessary to continue the study; others slow, and one or two hopeless cases, owing to insufficient education. The class is now composed of working students, and with several promising ones who intend joining next term, the prospect of the class is much better than it was last year.

The teacher of the Short-hand Class reports:—"The accommodation for the pupils in the Orange Superior Public School is all that could be desired. I have at the present moment quite as many pupils as I can teach satisfactorily, and intending students are seeking information with the object of joining the classes. The conduct of the students on the whole has been exemplary, with the exception of one or two who, however, when reminded of the penalty that would be meted out to them for disobeying the rules became submissive and attentive.

The course of studies for the junior classes embrace the "Teacher," and for the senior the "Manual," working from dictation, exercises in

## GOULBURN.

## Report of Resident Science Master.

Accommodation for Students.—The science room and art room are comfortable, well lighted, and ventilated; they are centrally situated, and well adapted to the present class requirements. These rooms are also used by the architectural, short-hand, and typewriting classes. The workshop which is attached to the adjoining museum is of sufficient size for the present manual training and woodworking classes, but when the modelling and stone-cutting classes are at work the carpenters' benches have to be removed from one end to give the necessary accommodation. The building is scarcely suited to our winter climate, and it has only a gas stove for warming it, and both students and teachers find it somewhat uncomfortable. The stage of the hall containing the museum is used by the class at sick-nursing, in summer time it is satisfactory as a class-room, but during winter it is exceptionally cold and draughty in spite of a good fire. The hall used as a museum is at present quite satisfactory.

As to appliances—the scientific apparatus has been increased during the year, and the subjects taught are well illustrated; the collection embraces some valuable instruments which are kept in good order. The museum collection of minerals, rocks and fossils, have been of special value as aids to teaching. The art classes are well supplied with casts for freehand drawing, but a set of photographs illustrating the studies for model drawing is much wanted, as well as additional vases and objects similar to those in use at the Sydney College.

The

The conduct of students attending the various classes has been very good. As to the courses of study, the receipt of a detailed syllabus for each subject will define the work of the classes, and if due notice is given of any alterations, and the questions set at the annual examinations are kept within the same lines, satisfactory results may be expected.

Science—Inorganic Chemistry.—Two separate courses of lectures have been given, one dealing with the non-metals, and the other with the metals. The theory of Chemistry has been very carefully explained. A few students have worked analyses of simple and compound substances.

Physics.—Two hours a week has been spent at this subject. The work has been more thorough and practical than in previous years. The students have shown great interest in Electricity and

Geology.—Geikie's class-book has formed the basis of the lectures, but the geology of New South Wales has not been neglected, and a few excursions have been made into the immediate district of Goulburn. The collections of rocks and fossils have been well used.

Mineralogy.—The work has been almost entirely practical, blow-pipe and chemical tests being freely used.

Art.—The subjects include freehand, model, geometrical and perspective drawing. The various models have been carefully studied. Very few students appear to appreciate the value of geometrical and perspective drawing.

Book-keeping. -The exercises in Chambers' works have been carefully worked.

Arithmetic.—This is usually a large class, but in most cases the students require elementary

teaching.

Mechanical Drawing.—Various copies have been used, as well as Ripper's book. The students who enter for this subject usually take geometrical drawing also, as generally speaking they have no The students knowledge of the latter subject.

Architectural Subjects. - These courses have been carried out by means of instruction in architectural drawing, also in building construction.

Modelling, and Stone and Marble Carving.—This class was commenced during the 2nd term, and has been attended by eight young men engaged in the trade, and the instruction they received was of special benefit to them.

Sick-nursing.—The teacher reports that the syllabus has been strictly followed.

Short-hand .- Pitman's phonographic "Teacher," "Manual," and "Reporters' Companion" have

Typewriting.—The Remington Manual, caligraph exercises, oral explanations, and questions on construction of machines, cleaning and aligning of type, and writing from printed copy.

Manual Training.—The boys have been taught the use of tools, and to construct various articles mentioned in the syllabus.

Lathe and Fret Saw. - Explanations of tools, and the working of various exercises.

Progress of Students.—Many students have shown perseverance and ability and have conscientiously studied at home. At school the work has been steadily pursued and satisfactory progress has been made. The various subjects have been carefully explained and illustrated. Many students are irregular in attendance and show but little interest in the subjects they take up. The attendance at lessons has been greatly interfered with by bad weather, and latterly by the prevailing epidemic. A large amount of teaching on the one hand and learning on the other has been done, which the annual examinations do not reach, as many students have not confidence to submit to the ordeal, and others are not yet prepared. others are not yet prepared.

Remarks on the present condition and future prospects of the classes.—Speaking generally the condition of the school is very satisfactory. The number of enrolments, 440, is greater than in any previous year. With vigorous and liberal management aided by enthusiastic teachers the school should have a bright future. As to the advantages accruing to students from the knowledge gained in the classes it may be stated that 7 students are Public School Teachers, while 6 others come from private schools. The knowledge gained at the classes has been used in their own teaching. One student has gained the position of science master at the High School, Ballarat. Two students have become pharmaceutical chemists. One student who has passed examinations in chemistry, physics, geology, and mineralogy has decided to spend the remaining part of the summer prospecting parts of the Colony for gold and other metals, another student has entered the agricultural college, and has found his scientific knowledge of value. One student has established himself as an architect. Many students are engaged at various trades and apply the knowledge gained at the school to their practical daily work. Several typewriters have been introduced to printing and other offices and are manipulated by former students. The teacher of sick-nursing reports that a student extemporised a splint and bound up her mother's broken arm with a triangular bandage pending the arrival of medical aid. A few of the young men who attended instruction in the use of the latthe were carpenters or joiners.

Scientific Society.—This society continues in a flourishing state, and has done much to cement

Scientific Society.—This society continues in a flourishing state, and has done much to cement the friendship existing between those attracted by scientific study. It has also afforded an opportunity for those who are not students to ally themselves to the Technical School and help on its work. The members held a conversazione in August last which was attended by about 250 visitors. A large number of papers embracing many interesting subjects, have been read at the meetings which are held monthly on Saturday evenings. The Society subscribes to the following periodicals:—Science Gossip, Science for All, Scientific American, Supplement, and the English Mechanic.

Technological Museum.—Up to the 1st December, 1891, the total number of specimens and exhibits in the Museum was 1,934 of which 1,519 were received from the Sydney Museum, and 415 were locally contributed. There are a number of specimens which require table cases for display, so that 3 new ones of that description are wanted. The total number of visitors for the year 1891 was about 6,000 being an average attendance of 20 for each day on which the Museum was opened. The Museum attendant, Mr. M. P. Hansen, has been faithful in the discharge of his duties, and has done much to make the Museum a success.

Special Prizes.—Mr. E. C. Bryden, President of the Scientific Society, H. S. Gannon, and E. W. Kelso, M.A., offer a prize of £5  $\bar{5}$ s. to the student obtaining the highest number of marks in any two science subjects at the annual examinations, a second prize of £2 2s. for the same subjects is also offered. The Committee of the Mechanics Institute has annually voted the sum of £3 3s. as prize

money.

The Lime Light Lantern has proved a great acquisition. Three public lectures have been given, two on the Jenolan Caves, and one on Geology. In each case the lantern was managed by one of the students. A lecture on Derbyshire and the Peak was also given by Mr. E. C. Bryden before the members of the Scientific Society. The lantern was used to produce the experiments illustrating Light in the Physics class.

Sick Nursing.—There is ample accommodation for the present number of pupils, but the appliances provided are not all that could be desired. Life-sized charts—especially the skeleton and that showing the veins and arteries—are particularly necessary where a large class is assembled. It has been found that practical demonstration is taken more readily than theoretical instruction by the students attending here. It has been found absolutely necessary to have a bedstead and bedding; also

also a few models showing the various structures of the human frame would prove a great boon. Out of sixty-eight students only two were found to be inattentive. The course of studies followed out strictly the syllabus laid down. As to the progress of the students, considering that they have been under instruction for four months only, it is very satisfactory, as has been evidenced by the usefulness of many of the class during the recent influenza epidemic in this city. The present condition of the class is good, and there is every reason that those now attending will return after the vacation, and that probably new pupils will join. It would be the greatest boon if the senior students—commencing at 19 years of age—had a couple of lectures given to them on midwifery, as valuable lives have been lost through ignorance of that branch of home nursing where no medical man or trained nurse was procurable. Many of the students have expressed to me and to others their great satisfaction in having learned how to prepare and apply poultices—so much needed amongst us lately—and to make beds without disturbing the patient. The students have been taught how to bandage in thirty-two different ways with the triangular bandage, which is a more suitable adjunct for home nursing than the roller bandage; they were also shown the various knots indispensable in surgical work. In the opinion of medical men, clergymen, and others, who come frequently into contact with sickness, the establishment of the sick nursing class is one of the most useful steps which has been taken by the Department of Public Instruction. Department of Public Instruction.

## WEST MAITLAND.

The Resident Master reports—At the Technical School all the established classes, with the exception of one which lapsed, have been well attended, and four additional classes, viz., scientific dresscutting, book-keeping, typewriting, and a ladies' class for fretwork and carving have been opened. In addition to the ordinary classes the rooms of the school are used for meetings of the Scientific Society, Hunter River Bee-keepers' Association, and the Philharmonic Society. In fact it would be difficult to find a family of young people in West Maitland where one of the number is not in some way connected with the Technical School.

One visiting the different class prome of any time denies the made with the Technical School.

One visiting the different class-rooms at any time during the week will find students at work, and at night the school presents a very busy scene. The following is a list of the classes with the number of students:—

7	Vest Maitland—			
	Freehand drawing	59	Mathematics	57

The Art and Carpentry classes have suffered severely through insufficient accommodation, but in view of the completion of the purchase of the proposed site for the Technical College in High-street, some of these classes can be conducted there, which will temporarily relieve the crowded class-rooms. Such classes as Book-keeping, Mathematics, and Shorthand, where pens, &c., are the only necessaries, have been conveniently accommodated in the Girl's High School.

I was invited to meet a sub-committee of gentlemen from the Agricultural and Horticultural Association, to confer with them in reference to a list of prizes which they are prepared to offer at their next exhibition; these prizes are offered for the advancement of Technical Education in the Northern district. After some discussion the following list was drawn out:—

Architectural drawing required in Building Construction.—Subject, circular headed window. Prize, 10s.

Prize, 10s.

Mechanical drawing.—Subject, details of slide valve and link motion. Prize, 10s.

Carpentry and Joinery.—Those working at the trade. Subject, window-frame. Prize, 10s.

Amateurs.—Subject, model panel door to scale. Prize, 10s.

Manual Training.—Subject, knife-box. Prize, 10s.

Carving in Wood.—Subject, from plaster cast No. 7; design, lotus. Prize, 10s.

Turning.—Subject, goblet, vide page 65, Woodward's "Manual Training." Prize, 10s.

Fretwork.—Prepared wood supplied. Three hours competition in the pavilion on the ground.

Prize, 10s.

Prize, 10s.

Frize, 108.

Freehand drawing.—Second year subject; first prize £1; second, offered by Mr. Hollings, 10s.

Freehand drawing for juniors, first year. Prize, 10s.

Modelling.—Competition on the ground, subject to be set by Mr. Hollings; first prize, £1; second prize of 10s. offered by Mr. E. Norman.

Typewriting.—Subject to be dictated in the Eastern pavilion. Prize, 10s.

Shorthand.—Subject to be read to students in the Eastern pavilion. Prize, 10s.

The following special prizes have also been offered:-

Drawing, showing plan and elevation of the entrance to the Maitland Town Hall, from a model to be prepared by Messrs. Coles and Noad, for any lad under the age of 17 years attending the West Maitland Technical School, offered by his Worship the Mayor, R. A. Young, Esq. Prize £3 3s.

Best made dress, for the encouragement of the Scientific Dresscutting class. Prize £1, offered by the Mayoress, Mrs. R. A. Young.

Human figure subject, in monochrome, either oil or water colour; open to any student in a Technical class in the Colony. Prize £1, offered by Mr. Harry Tuck, jun.

The Art classes include Freehand drawing, Model drawing, Perspective, Practical Plane Geometry, Modelling, and are under my own supervision. The enrolments are about equal to last year's, but the work has been superior throughout, although I cannot yet boast of much home-work from the students. Nearly every student has worked through the course specified in the calendar for the respective years. A good deal of figure-drawing in charcoal was done by the third-year students, in addition to the monochrome studies required by the calendar. In the Perspective class a good deal of time was lost in the early part of the year by irregular attendance, curtailing the time later on for the completion

completion of the course as per calendar. The second-year students completed their course in good time, as also the Practical Plane Geometry class. I may say that the new text-book for this subject is an admirable one, and simplifies the work very much. Architectural drawing, Building Construction, and Mechanical drawing are also under my charge, and although at the commencement of the year they were badly attended, later on the attendance improved, and I anticipate a really good attendance next year. The course laid down in the calendar was made the basis of studies during the year. In view of impending changes it would be useless to enumerate insufficient appliances; but I would like a few models of machinery. The advantages accruing to the students by the knowledge gained in the Art classes is apparent by the variety of trades represented, viz., blacksmiths, carpenters, coachmakers, cabinetmakers, stonecutters, plasterers, engineers, painters, &c. There is also attending these classes a number of pupil-teachers, and in our manual classes the leading students have all passed through the Art classes.

Public High Schools.—The subjects of study are Freehand and Model drawing at the Girls' High School, and Freehand drawing and Practical Plane Geometry at the Boys' High School. The progress has been satisfactory in Freehand drawing, but somewhat disappointing in Model drawing. Several of the students sat for examination in Model drawing, but the results were unsatisfactory. No matter how particular one is with reference to guide lines and rules of Perspective, young people, at examination time, seem to throw all rules to the winds, and draw the figures often without using even a centre line. The reason for this, apparently, is that they imagine the drawing will occupy more time than that allowed, and become flurried. Had I startèd with one model, and added a fresh one in the proportionate time, I believe the result would have been better, especially as little shading is done in the first year. The Practical Plane Geometry, especially the part relating to solids, was useful to the boys in their manual training lessons, and next year I purpose taking the four subjects—Freehand and Model drawing, Practical Plane Geometry, and Perspective—systematically in both schools, and in view of the encouragement I have received from the cultured principals at the head of these establishments, feel confident of success." ments, feel confident of success.'

Book-keeping.—The room used has been in every way suitable for the purpose, space being ample, and ventilation perfect. An alteration is needed in shutters of windows fronting the street; as they cannot be fastened, and the class is liable to interruption if same are left open during the heat of summer months. No complaint can be made regarding appliances, but a better style of penmanship may eventuate if desks were six inches wider. The conduct of students has been, without exception, admirable, and has been of great assistance in this, my first essay, in teaching outside of an office. During the two terms the class has been established, our work has comprised two sets of merchants' books, a general resume by means of questions and answers, special lessons in the various forms of cash-books, interest, balance-sheets, &c. The progress of students has been slower than was anticipated during the first term, owing to the fact that the greater part of the pupils had forgotten the rules of arithmetic. I may mention that not one of the class was able to work out the first question of simple interest met with during our studies. A marked improvement was noticeable in this respect in the second term. The pupils have evinced considerable interest in the work done, and the idea having now been mastered, the progress of those who join again next term should be much more rapid. There is every probability of the late scholars continuing the study, and a good result may be looked for at next year's examination. Most of the students being tradesmen, or occupying positions where no knowledge of this subject is obtainable, will reap the benefit when conducting businesses of their own, or combining their present occupation with that of good book-keeping, where there is not sufficient work for a special man.

Woodworking Classes.—The instructor reports as follows:—I have no complaint to make with

work for a special man.

Woodworking Classes.—The instructor reports as follows:—I have no complaint to make with regard to the conduct of students, which throughout has been all that could be desired. No thorough course of studies can well be carried out with our present accommodation, as no one room of the six which compose the workshops is large enough to accommodate a class, so that the giving of theory lessons has not been very successful, owing to the extreme difficulty in imparting them. Despite our drawbacks the progress has been very marked. Taking advantage of being allowed to make things for themselves on payment of the cost of materials, the boys and young men have thrown themselves most heartily into their work, and a large number of useful articles has been made. The work includes such exercises as stools, towel and clothes horses, brackets, wheelbarrow, knife and nail boxes, pastry boards, bookshelves, easels, &c. This class includes a number of young farmers, four of whom have lately been engaged in the construction of a model stud and weatherboard four-roomed cottage, the roof of which has still to be constructed to complete the model. Great progress has been made in the fretwork section, especially so with the ladies' class. In this case also the majority of the work has been appropriated by them on paying for the material used. Progress has also been made in the carving section, but owing to the cramped space and the heated state of the room, the work has somewhat suffered. The turning section has also suffered in like manner. Tool-handles, for class purposes, bicycle handles, and other small articles for themselves forming the chief subject for practice. Students complain that after a hard day's work, the working of a lathe by foot-power is almost out of the question, but with gas-power the number of students would be such as to render it necessary to have two or three additional lathes of somewhat lighter construction than the present one. The classes in all sections have been exceedingly w

District Classes.—At Singleton the numbers in the Art classes have kept up to the average, some of the students riding in from Broke, 15 miles away. In the case of the Modelling class, as I have no convenience at the class-room, the work has been done at home by the students and brought to me for inspection and correction. I feel sure, nevertheless, that they will pass the examination successfully. From what I have seen at the Phonography class I shall expect to hear of some really good passes, as the students take a most intelligent interest in their work, one man riding in from Warkworth, 12 miles away. When men ride these distances for instruction they mean hard work, and, as a rule, the teachers have no reason to blush for them at examination times. The accommodation is very fair and appliances suitable. The conduct of students is satisfactory as far as good behaviour is concerned, but the Singleton people have always distinguished themselves by the excellence of their debating societies, and the students appear to inherit this trait somewhat to my discomfort. Numerous applications have been received for an Art class at Raymond Terrace, the Municipal Council undertaking to provide the class-room. This rivalry and emulation among the small centres in this district for Technical Classes gives me much pleasure as it shows that the people appreciate the advantages of Technical Education, and that they judge rightly when they ask first of all for a Drawing class.

## NEWCASTLE.

The Resident Master reports that during each term of the year now ending, the number of enrolments has increased, having been for the first term 343; for the second term, 387; and for the third term, 422. The coal-mining classes decreased by 31 students, i.e., from 84 in the first term to 53 in the third term, but this loss wiil be more than made up when other arrangements are effected in connection with the teaching. Taking the losses into consideration the increased number of students during the year is very satisfactory, and still more so in comparison with the enrolments prior to Technical Education being made a branch of the Department of Public Instruction, since which time the number has been almost quadrupled.

These numbers do not include the students in the Phonography classes at the Public Schools.

The accommodation available for the classes is commented on variously by different teachers. The teacher of Physics considers it insufficient. The teacher of Dressmaking states, "The accommodation is very limited, the lessons being given in a small room which is also used for modelling in clay and for shorthand writing, much space being occupied by the boards and materials for those classes." The teacher of Boilermaking reports the accommodation as being rather limited. On the other hand the teachers of Mathematics, Freehand and Model drawing, Coal-mining, Science classes, Steam and the Steam-engine, express themselves satisfied with the accommodation. It will certainly tend to promote the progress of Technical Education in Newcastle when a large number of classrooms can be provided under one roof. If other classes as Carpentry, Cookery, and Book-keeping are formed some provision for increased class-room accommodation will be necessary.

In reference to the sufficiency of appliances for class instruction in various subjects it is hardly necessary to enter into details, there being but few things required by some of the teachers, and these can be made known by requisitions—the main requirements being, better gas-burner in Bolton-street school; more light and ventilation in the School of Arts class-rooms, where the heat is often so excessive as to deter students from attending. This, however, is a matter for the School of Arts Committee sive as to deter students from attending. to deal with.

The conduct of the students has been highly creditable; there has not been a single complaint, is instance of misconduct. All appear eagerly earnest to obtain the utmost benefit possible not one instance of misconduct. from the instruction given them.

The course of study has been in each case in accordance with the syllabus relating to the special subjects. It would be very advantageous to the students if two evenings a week were given to such subjects as Chemistry, Metallurgy, &c., in which, in the case of most students, practical home-work is difficult or impossible.

In reference to the future prospects of the Technical Classes in this district, I am thoroughly convinced that year by year they will gain in strength and grow in public estimation, and this more especially when they have a local habitation, and are made more generally known. It is by no means infrequent to hear students remark on entering that they only recently became aware of the existence of such opportunities for improvement. The classes cannot be made too well known. Notices of the classes might be advantageously painted on boards or walls at every public school.

The Coal-mining classes are attended by earnest students, working miners or overmen, and as these classes relate to the staple industry of the district, and draw to themselves many of the best men, they should be continuously increasing in numbers, and I feel that every year they will be more highly appreciated. It is to be hoped that in the new Mining Act the coal-mining certificates won by examination after two years course of study by men thoroughly conversant with practical mining may be recognised as sufficient to qualify the holders as coal-mining managers. If they are not so recognised it will be desirable that publication should be made of full particulars as to subjects required and conditions necessary, that a syllabus may be prepared in agreement therewith.

Instances are frequently presenting themselves of the practical value of the technical instruction obtained in these classes. The appreciation of the teaching is evidenced by the attendance of men engaged in various trades, thus: there are stone carvers in the Modelling class, Boilermaker apprentices in the Boilermaking class, coal-miners of some experience and attainments in the Mining classes. Clerks are required from the Phonography and Typewriting classes. As an illustrative instance of the educational advantages obtainable at the classes, and a by no means solitary instance, I may mention the case of a coal-miner, a married man with several children, who had received but a poor education in England, but who attended the Mineralogy class here, passed his examination 2nd grade, still continued his studies, then passed 1st grade. He procured for himself two good microscopes, made fire-clay blast gas furnaces and cupel furnace as good as those imported from England; extended his studies to other subjects, and is now an authority in his district on matters connected with minerals. He has been sent to various metalliferous districts, and there has been received with deference as an authority by the old resident metal miners. and there has been received with deference as an authority by the old resident metal miners.

Such men become centres for distributing knowledge to other working men, and become more than doubly valuable in aiding the development of our country's resources.

Steam and the Steam-engine.—The teacher of this class reports as follows:—"The course of study has been of an elementary character and in strict conformity with syllabus forwarded together with arithmetic as far as vulgar and decimal fractions, including square and cube root. An outline of the work done from syllabus is as follows:—Principles of work, heat and light. Early engines. Single acting condensing engines. Direct acting condensing engines. Non-condensing engines. Expansion of steam. Lafid and marine boilers. Marine engines. Locomotive engine and boiler and details of engines. The conduct of students attending this class has been everything a teacher could wish, they having given every attention and interest in the work put before them. They have made fair progress, and I consider that, judging by the present, it would be safe to carry on this class another year as I have no doubt we shall have sufficient students. The number now on roll being fifteen. This class was commenced to give young men a better chance of meeting the requirements of the Coal-mines Act, 1890, wherein it was stated that every engineman must have a certificate of competency or service, and I think when the above Act comes into force we shall have more students than during the last year, because young men who intend taking charge of engines or boilers, having to pass their examination as the Government direct, will attend such class to obtain a theoretical knowledge of the subject.

The accommodation has been ample for the number of [students who have attended this class, Steam and the Steam-engine. -The teacher of this class reports as follows:-

The accommodation has been ample for the number of students who have attended this class, having never had a greater number than sixteen present at one time."

#### BROKEN HILL.

The Report of the Resident Science Master is as follows:—"The enrolments of students for the various classes during the year is shown hereunder:—

Physics	8	Freehand drawing	25
Chemistry—Theory:	19	Mechanical drawing	8
Applied Mechanics	4	Architectural drawing	4.
Geology	7	Perspective drawing	3
Mineralogy	9	Geometrical drawing	1
Staircase and hand-railing	12	Mathematics and Tech-	
Starround and Mark Tarring		nical Arithmetic	16

The classes were commenced and carried on for the first three or four weeks of the term at the Central Public School; but owing to the distance out of the town, the attendance was anything but encouraging. Arrangements were, however, made for temporary premises nearly in the centre of the town, with the result that the numbers rapidly increased.

With two or three exceptions the conduct of the students has been very good; in fact, their attention to their work gives great encouragement for the next year.

The course of studies has been carried out as far as possible in all the classes according to the demands of the curriculum, and with a view to the practical outcome for the students benefit.

The progress of the classes has on the whole been satisfactory. During the last five or six months it has not come up to what was expected owing to the prevalence of influenza, which prostrated several of the best students, some of whom have died from that complaint. Even at the examinations, some of the candidates were more fitted to be in their beds than in the class-rooms, and two or three others have so overworked themselves that they were almost unfit to sit for the examination.

examination.

The Tasmanian silver-fields have drawn several of our students away, but taking all things into consideration the future prospects of the school are encouraging. The change in the syllabus of the chemistry and physics classes somewhat threw them back, but the students, seeing what was laid down for them to do, set themselves resolutely to work in order to pass a creditable examination; the results have been such as to show them what they can accomplish when they strive.

The great drawback to the rapid advancement of students is in many cases the want of a good primary education; but as the public schools have opened night classes, this will soon be a thing of the past, as several are attending with the intention of qualifying themselves for the higher or technical branches.

The prospects for next year seem at present to be very bright, but much depends on the water supply; that failing, everything else has to go down also.

At present there is a great advantage which did not exist last year—the afternoon shift-men (during the week of that shift) can now be taken in the day-time, which prevents the loss of one lesson out of three or two as the case may be.

If there was a certainty of the erection of the permanent buildings during the next year it would give a great impetus to the work, as the students would then be encouraged to attend the theory classes preparatory to the practical ones.

Mathematics.—On the whole a noticeable improvement has been made. The enrolment of four during the first term was increased to sixteen during the third term. This change was due chiefly to reasons hereinafter mentioned. The accommodation is sufficient. For next year's course, the revised standard calls for certain diagrams, &c. The conduct of the students is, without exception, praise-worthy. It has been necessary to give individual instruction. The majority of the students have had to acquire the most elementary portions of the science, and their work shows various stages of progress. The miners, as a rule, have but a crude knowledge of subjects not purely practical. This fact has rendered it an anxious task. I'our of the most advanced would have completed the full course had not the influenza epidemic left three of them in a state, during the third term, quite unfit to pursue their studies with the necessary zeal. Consequently but one student has taken the full course at the examination. The number of examinees for the arithmetic paper has been diminished for the same reason. The branch of mathematics that has elicited the most interest is arithmetic. The wants of many employees in the workshops on the mines and elsewhere have made a slight change in the course necessary. The new text book (M'Farlane's) is very suitable for local requirements, and the branches treated upon offer special inducements in this district. The present condition of the class from a teacher's point of view is eminently satisfactory, but owing to causes above stated, judged by the results obtained at the examination, it is not so. During the earlier portion of the year the results obtained at the examination, it is not so. During the earlier portion of the year the results obtained at the examination, it is not so. During the earlier portion of the year the results of the work were most discouraging. At the commencement of the third term, however, it was arranged to give an extra lesson on Saturday mornings. This worked very well. Mine

enrolment for the third term.

Mechanical Drawing and Applied Mechanics.—The accommodation has been far superior to that of last year, and there has been no hindrance from this cause. The conduct of the students has been all that could be desired; the order has been very good. Students in the mechanical drawing class have been initiated into the understanding of plans, elevations, and sections of machinery, by means of models of machines which they could take in pieces and put together again; particular attention has been paid to work of general utility. The students have occasionally worked from chalk sketches on blackboard, enlarged drawing copies, and examples from Cryer and Jordan's work on mechanical drawing. It is gratifying to record that great progress has been made, especially when we consider that, with one exception, they are all new to the work. When the rough work first performed is compared with that of a later date the progress is marked. We look forward with hopefulness, despite the carping of those who are not in a position to judge of the work that has been done and redounded to the profit of more than one mine on the Barrier; there is so much scope for usefulness in our school, even supposing the erection of our new building be delayed for one or two years. Three of last year's students in mechanical drawing now occupy positions of responsibility as foremen on the British Mine and Proprietary, one of the number within the past term has testified to the benefits he has derived, and the general usefulness of his studies in connection with our local school. A fourth student who belonged to the applied mechanics class last year has since occupied a leading position in connecting with the Lixiviation Plant constructed under his supervision. One of the students who loined the drawing class this year, a miner by trade, has been engaged during his spare time preparing working drawings of mining machinery for his uncle who is underground manager of one of the two largest mines on the Barrier Silver-fi

Staircase and Handrailing.—The students take great interest in their work and their progress has been satisfactory. The classes have been successful in the past and will continue to be of educational value to this mining centre. The population is estimated at about 25,000 to 30,000, and there is every prospect of this school becoming one of the most useful in developing the talents of the young people of this town.

#### . Granville and Parramatta.

The following is a list of the classes established at this Branch School and the number of students enrolled in each:

Parramatta.

Mechanical Drawing
Carriage Building
Geometrical Drawing
Mathematics
Agriculture
Phonography
Chemistry
CHEBISH V

The accommodation for pupils is as good as can be expected in buildings not specially designed for the purposes of Technical Education. It has been found that the models borrowed from the Museum are a great help in teaching mechanical drawing. Those supplied to the model drawing class during the year have added to the interest and usefulness of that class.

On October 5th, a number of the students visited the Hawkesbury Bridge, when the teacher had an opportunity of illustrating some of the lessons of the class-room by the structure. On November 3rd, the Technical Workshops, Harris-street, were visited by some of the students.

ber 3rd, the Technical Workshops, Harris-street, were visited by some of the students.

Agriculture.—The accommodation for the students has been sufficient this year. For the advanced class next year it would be desirable to provide bench accommodation, with Bunsen burners (say twelve) to be used in the practical lessons of agricultural chemistry. The conduct and attention of the students have been exceptionally good. The course of studies was the same as in the elementary class in Sydney, with some slight modifications in favour of subjects of local interest or of special interest to the students. The progress made by the students has been very marked. This has been ascertained by examination papers during the year, and by visits to the gardens of several of the students. It is strange that with a number of manufacturing industries in and near Granville, employing hundreds of men, most of whom have a piece of ground attached to their homes, that only nineteen should join the agricultural class. This is only a slight increase on last year; but it is believed that as the advantages of such a class become better known more students will join in future. It would be desirable to start a class in advanced agriculture (including agricultural chemistry) next year for the students who have gone through the elementary subjects this year, the new students joining next year forming the elementary class. The advantages accruing to the students from the knowledge gained in this class are shown in a very striking manner in the intelligent way in which their gardens, and in some cases a few acres of land, are cultivated. Now, ashes, bones, and household refuse of all kinds, that were once wasted, are known to be valuable manures, and are utilised in the production of wholesome vegetables. production of wholesome vegetables.

#### Parramatta.

Freehand Drawing.—The studies of this class have been confined to the first year's course; the accommodation and appliances for the students have been commed to the first year's course; the accommodation and appliances for the students have been found sufficient. The conduct of the pupils has been all that shoul be desired, and they have shown considerable progress during the year. The present condition of the class is satisfactory, and as nearly all the students have expressed their intention of joining next year, the future prospects seem to be favourable.

Shorthand.—This class commenced in the middle of 1890, and has from the first been a success. I started the year 1891 with 15 students and finished with 19. The accommodation for the students has been excellent and the appliances all that could be desired. The conduct of the students of this class has been exemplary, and their interest in the art is growing as they begin to know that phonography, like all other useful arts, requires a little perseverance before it is mastered. I have carried on the elementary class with instruction in the "Teacher." The corresponding class with the "Manual" with dictation; and the reporting section the "Reporter's Companion" and Commercial Letter, with discussions on phonographic outlines. The progress of the students has not been as satisfactory as I should like, mainly because they will not in the majority of cases practice the art outside of the class-room. The future of this class appears to me to be encouraging as the interest in it gradually increases. it gradually increases.

Chemistry.—The teacher states: The chemistry class was commenced at Granville on 24th August of this year. The class is held at the Granville School of Arts, the accommodation being sufficient for at least 30 pupils; the number at present on the roll is 14. The appliances in the class-room are sufficient. The apparatus for demonstrating the lessons in the chemistry is almost complete, a few more inexpensive re-agents being necessary. This apparatus is kept in a large, well-lighted closet, which is kept locked, and of which I have the key. The students are for the most part seniors, and take an intelligent interest in the study. Synopsis of the lessons given:—Matter and energy, atoms, molecules, atomicity, valency, oxygen and ozone, hydrogen, acids, salts, bases and alkalis, the oxides of carbon, hydro-carbons. The lessons are illustrated by experiments. The progress of the students has been as satisfactory as can be expected, seeing that the class has been in operation only one term. The Granville chemistry class should be large and prosperous, as the inhabitants consist for the most part of operatives connected with large works of a technical and semi-chemical nature. Greater publicity of the advantages to be gained might improve the class in the matter of numbers. Chemical knowledge must be practically useful to men engaged in any kind of engineering and metallurgical works. useful to men engaged in any kind of engineering and metallurgical works.

## Armidale.

The teacher of drawing reports as follows:—"The work done during the past year has, on the whole, been satisfactory, and the conduct of the pupils has been good, some being very studious. Most of them prefer freehand and model drawing, and it has been difficult to impress upon them the benefits to be derived from the study of geometry and perspective. Some of the students, however—plasterers, &c. (for example)—have expressed their sense of the usefulness of the knowledge gained from the studies pursued at the school. As neither geometry or perspective were taught until July last, the progress in those two studies has been fairly good.

"The room that is used for the school is large, and will admit of the classes growing a good deal. The arrangements for lighting are very good, and the appliances will be perfect when two more tables are added.

tables are added.
"The school has increased considerably during the last term, and there are a number who intend to become pupils when the school reopens.'

The report of the Teacher of Shorthand is as follows:—"The work done during the two months I have had the classes in Armidale has been of a satisfactory nature. The class was started with bills, but before the end of the quarter the number had increased to 24. Throughout that time since I have had the classes in Armidale has been of a satisfactory nature. T 18 pupils, but before the end of the quarter the number had increased to 24.

the conduct of the pupils was good, and, with the exception of one or two, they all seemed anxious and willing to learn. Some have made remarkably rapid progress, and I am confident that had there been but another month prior to the examination, several other students would have gone up. The advantages accruing to pupils are likely to be very great, as half of them are clerks, to whom knowledge of shorthand is almost indispensable. The future prospects of the class I regard as being very bright. Already I have taken the names of several new pupils, and before the end of next quarter I confidently hope to have a class numbering 34 pupils."

The results of the examination held in December were:—Freehand, model and perspective drawing, 12 passes—4 being in the first grade. In elementary shorthand 4 students passed—1 in honors, 2 in the first grade, and 1 in the second grade.

## Wagga Wagga.

In May last, a new branch school was opened at Wagga Wagga, and, as may be seen from the following reports, has met with much success. Additional classes will probably be formed at an early date. For art drawing, fifty-three students have been enrolled, and twenty for the shorthand class. The results of the examination held in December are very satisfactory, considering the short period these classes have been in operation. There were fifteen passes in freehand drawing, first year, three of them being in the first grade. In elementary shorthand, one pupil passed in the first grade, and one in the second grade.

The teacher of the art class reports as follows:—"This school (commenced Second Term, 1891) although rather slow to expand, shows every appearance of being firmly established; and as the com-

The teacher of the art class reports as follows:—"This school (commenced Second Term, 1891) although rather slow to expand, shows every appearance of being firmly established; and as the community is just beginning to understand the value of such education, a fair future may be looked forward to. The district is strictly pastoral and agricultural; there are no manufactories, and being so far removed from the cities will account for the too small interest shown in extended educational improvement. Art is backward here, in fact (pictorially) it may be said scarcely to exist.

"In the school the accommodation for students is very good, and quite adequate to the present requirements. The appliances are sufficient, excepting casts for the forthcoming Second Year's Course. The conduct of students in the past two terms could scarcely have been better. The course of instruction has been in the First Year, freehand drawing.

"The progress of the students is very satisfactory, and in some cases, shows great improvement. The apparently firm establishment of the class, the conduct and satisfaction of the students with their progress, and the general good feeling of the community would point to the prospects as most favourable."

Shorthand.—The teacher of the class reports as follows:—"The shorthand class in connection with the Wagga Wagga Technical School, was opened on 20th July, 1891. The class is held at the School of Arts, and the accommodation, although not all that could be desired, answers the purpose fairly well. The appliances required in connection with the teaching of shorthand are not numerous, and are at present in sufficient quantity. As regards the conduct of the students, it may be said that those of an age to recognise the value of the art on the whole, displayed diligence. The junior pupils, sent by their parents, have at times been difficult to manage, but latterly have shown a tendency towards improvement in this respect. Since the formation of the class, the senior pupils who were in a position to attend with some regularity, have made what may be considered satisfactory progress. It is believed that the majority intend continuing the study of the art, and their positions in life are such that it cannot fail to prove highly useful to them in their after career."

#### Petersham.

At the beginning of the year the classes were removed from the old Church of England school-room to a more commodious building in the same street. This building has been suitably lighted and temporarily supplied with the ordinary appliances for technical classes. The following table shows the classes at this branch, with the number of students in each.

Freehand Dra	awing	*************************	
$\mathbf{Model}$	,,	***************************************

Shorthand		•	

All the classes have come out well at the examinations. Desire has been expressed for the establishment of classes for instruction in carpentry and joinery, fitting and turning, chemistry, book-keeping, and cookery. If practicable some of these will be established during the current year.

The art teacher reports that the advantages derived from the classes now in operation have often been commented upon. Many students have gained important positions or promotion through the knowledge acquired from this source. Only a few weeks ago two of the most promising students of the mechanical section were appointed draughtsmen and overseers in the railway works on the Queensland border.

The Petersham school is in a flourishing condition, and has every prospect of continued success.

## Newtown.

The classes are held at the Public School. The room provides adequate accommodation and is well lighted, but from its bad acoustic properties great difficulties are experienced in working two classes on the same evening. As this defect also seriously affects the day-school; steps will be taken at an early date to remedy the evil.

Cooking classes for technical students, and for the pupils of the local Public School, were established during the year, but discontinued in November, in consequence of the resignation of the teacher (Miss Nisbet). Rooms at St. George's Hall were rented for these classes, but they were not very convenient. The following is a list of the classes in operation, and the number of students attending each:—

The

The character of the work may be seen from the following reports:—

Freehand and Model Drawing.—The teacher states: The course of studies is the same as laid down for the Sydney College, with the addition of a subject given each week for home work. The long interval between the lessons is in a manner shortened by this means, and the student's interest in his drawing, instead of being allowed to flag when he leaves the class-room, is carried with him to his home and workshop, and there directed to the forms presented by the cominon objects with which he comes daily in contact. The work done in this way is taken home and corrected, and marks awarded according to merit. On the following week the drawings are returned, and anything of interest suggested by the subject illustrated on the blackboard. As an encouragement, prizes were offered by myself to the two students obtaining the highest number of marks during the year, and these I have to request may be presented to them at the forthcoming annual presentation.

Progress of Students.—As the instruction is confined to the First Year Course, a very great part of the time is necessarily given to preliminary work such as blocking in drawings, the use of constructional lines, proportion, &c., the results from which are more real than apparent. If the use of elementary rules and methods have been thoroughly taught in the first year, a foundation will have been laid ensuring the stability of subsequent work, and in the second and third years the work may reasonably be expected to show marked progress. My aim has been to get from each student a correct outline drawing, done in a workmanlike manner, and this has been in most cases successfully obtained. A few have made shaded drawings, which I will be happy to forward for examination if desired. The present condition of the classes is decidedly encouraging. There has been a steady increase in the enrolments from their commencement up to the present time, and the interest taken by students in their work is shown by the fac

#### Kogarah.

Notwithstanding the great interest taken in the classes by residents, as manifested by the sum of £11 being contributed for prizes, this branch school makes but little headway. The two classes in operation—mechanical drawing and shorthand—judging by the results of the annual examination, are efficiently taught.

operation—mechanical drawing and shorthand—judging by the results of the annual examination, are efficiently taught.

The teacher of shorthand reports that the accommodation is satisfactory, and that twenty-nine students have shown an earnest desire to take advantage of every opportunity for improvement.

The teacher of mechanical drawing reports that, "The class occupies an excellent upper room of large dimensions in the Kogarah School of Arts, capable of accommodating twenty students with comfort. I may also add that the institution itself is centrally situated in a healthy elevated position in the municipalities of Rockdale, Kogarah, and Hurstville, and about8minutes walk from the Kogarah and Carlton railway stations.

"It is important that the students should have many varieties of models illustrating the various parts of machines. It is in the practical measuring of such that they acquire greater interest and proficiency than is afforded by mere drawing from prepared copies, although the latter, in many cases, are excellent. Provided with a good assortment of models, the class stands in need of little else.

"The conduct of students has been excellent. The student, unacquainted with drawing, is given simple geometrical figures which familiarise him with the use of the instruments, and enables him to grasp the methods of mechanical drawing. This stage usually does not occupy more than one month. He is then given a printed and dimensioned copy of some portions of machinery of a more complicated nature than the preceding lesson, which gradually becomes by easy stages more difficult as he proceeds. Although an important feature, drawing from dimensioned sketches and inking in finished drawings have not formed a large part of the curriculum of the class this year owing to the students not having completed the graduated course with the printed copies.

"The progress of the students has been satisfactory. There is little to be said regarding the condition and prospects of the class beyond what the weekly reports

In addition to the classes already mentioned there were drawing classes in operation at North Sydney, Paddington, Waverley, Lambton, and Seaham; and shorthand classes at the Glebe, Marrick-ville, North Sydney, Tamworth, Paddington, Bega, Eskbank, Liverpool, Wollongong, Stockton, and

Most of these classes are efficiently conducted and have produced satisfactory results. Several of the teachers of suburban classes complain of the annoyance they and the students are subjected to from boys who assemble in the school-grounds or at the school doors, and do all they can to interrupt the work. The teachers of the Public Schools, however, readily do what is in their power to put down the nuisance, but in one case the aid of the police had to be invoked to put a stop to stone-throwing.

Among the minor branch schools, the agricultural class at Hornsby and that at Moruya for the study of geology and mineralogy, deserve special mention. The work of the classes may be best learned from the reports of the teachers.

Geology and mineralogy.—The accommodation provided at the local Mechanics Institute is not at all convenient. A large hall, used in turn for dancing, theatrical performances, and concerts, is the place where the lessons have been given, and during the cold and wet of the past season there has been much real discomfort. Appliances have been freely provided by the department for the purposes of the classes. There has been no difficulty in obtaining any material necessary to illustrate the lessons as laid down in the syllabus adopted by the department. The conduct of the students could not have been better—they have been silent and attentive throughout. The course of studies has been according to the syllabus forwarded in yours of 13th July last. The method of the lessons given before that date agreed exactly with the requirements as therein expressed, and practical demonstration was resorted to in every case where possible. The progress of the students has not been such as would enable any of them to undergo successfully the annual examination. While they evince great interest during the lessons and take notes to a limited extent, they do not appear, with two or three exceptions, to study the subject at home. This necessitates constant repetition, and consequent slow progress. The class has been somewhat disorganised through the prevalence of bad weather. This has been an exceptionally inclement season and regular attendance, an essential in such a study, has been in some cases an impossibility. The warmer months, during which the next year's first term will be held, should have a favourable effect upon the attendance. The department has provided apparently for every difficulty, and I am unable to make any suggestion which would improve upon the arrangements.

This has long been looked upon as a mining district, but beyond some alluvial mining and the propring of a few quarter reads bearing and the provided apparently for every difficulty.

This has long been looked upon as a mining district, but beyond some alluvial mining and the opening of a few quartz reefs bearing gold of small importance, nothing has been done of late to justify that name; but in the course of the lessons given during the past year, the students and occasional visitors from the district have had their attention drawn to the possible existence of minerals of a commercial value other than gold amongst our hills, and there are indications that this information is beginning

beginning to have some effect upon many who through their occupations are continually in the "field." The committee of the Mechanics Institute has initiated the collection of specimens of all the local minerals procurable, and a case for their exhibition after classification is now being made for the Institute. The rocks of the district have acquired a new interest to the students, as well as to others, and the attention now directed to what formerly was passed without notice is certainly a hopeful sign.

#### Hornsby.

Hornsby.

Agriculture.—Last year, at the request of the local fruit-growers, Mr. Angus Mackay, F.C.S., the Lecturer in Agriculture, delivered several lectures at Hornsby, and the starting of this class in February last was the outcome of these lectures. The class was started at the beginning of the first term. The accommodation for the students has been quite sufficient this year. For the advanced class next year it would be desirable to secure a room or building where bench accommodation, with Bunsen burners (say twelve), might be fixed to be used in the practical lessons of Agricultural Chemistry. The conduct and attention of the students have been very good. The course of studies was the same as in the Elementary class in Sydney, with some slight modifications in favour of subjects of local interest or of special interest to the students, such as fruit-growing for instance, to which special attention was given. The students have made good progress during the year. This class is held in the centre of a fruit-growing district, and although most of the students come long distances, I believe the future prospects of the class are assured. It would be desirable to start a class in Advanced Agriculture (including Agricultural Chemistry) next year for the students who have gone through the Elementary subjects this year, the new students joining next year forming the Elementary class. The advantages accruing to the students from the knowledge gained in this class will be apparent when it is remembered that two-thirds of the students are either fruit-growers or sons of fruit-growers in the neighbourhood.

**Technical Work in connection with Public Schools.**

## Technical Work in connection with Public Schools.

Manual Training.—I have great pleasure in reporting that the students of the Training College have taken up the work in manual training with much earnestness and enthusiasm, and that the majority of the teachers of the schools to which these classes have been attached have rendered me hearty co-operation and support. This is as it should be, for unless the teachers are on our side much of the effort to spread Technical Education will be fruitless. There is a great amount of prejudice against the manual training, on the part of both teachers and parents, probably through a misconception of its design, and a want of knowledge of its results. The able and exhaustive report on Technical Education and Manual Training by Mr. Edward Combes, dealing, as it does, very prominently with the latter subject, appears at a very opportune time. Mr. Combes's long experience with the business of Technical Education, and the minuteness and accuracy of his observations, give special weight to his conclusions. The excellent results already attained in France and in the United States should convince the most sceptical that the general introduction of manual training into the schools of New South Wales cannot take place too soon. I cannot refrain from quoting a few paragraphs of Mr. Combes's report:—

weight to his conclusions. The excellent results already attained in France and in the United States should convince the most sceptical that the general introduction of manual training into the schools of New South Wales cannot take place too soon. I cannot refrain from quoting a few paragraphs of Mr. Combes's report:—

"By Technical Education is understood the careful and practical instruction of our youth in the scientific and artistic knowledge demanded by any branch of industry, so as to make each one of them a most thoroughly efficient and economic workman."

"To fully effect this we must ingraft the industrial element into education, and this can only be accomplished by instruction in manual training at an early age."

"Manual training is not supposed to take the place of the workshop or to make artisans. It is a kind of teaching that has shown itself to be a great power in the development of mental capacity, giving a relish to school-work by connecting it with actual work. It continues the Kindergarten method of object-lessons, and develops the senses of touch and perception. It brings the eye and hand into unison, which, in itself, is half the battle in training a pupil to express his thoughts by drawing and construction."

"Manual training exercises the judgment and the executive faculties, cultivates the power of thought, and induces originality. These make it an absolute necessity as a branch of common school instruction, if we are to do the best we can for the masses. It was our own great philosopher Locke who said,—'Since it cannot be hoped that a child will have time and strength to learn everything, the result is, that he should be taught especially those branches of which he is most in need, and which will be the greatest and most frequent use,' and there can be little doubt that it would greatly improve the remaining 5 per cent."

"As I before stated, all the Normal Schools of France train their students to teach manual training, and it has been conclusively proved that half the ordinary school

thinking public have begun to be impressed with the importance of these truins, and are even now crying for reform."

It is a satisfaction to find that the syllabus for manual training adopted here is in accord with that of the best schools reported upon by Mr. Combes.

Manual Training Classes have been established at Fort-street, Crown-street, Blackfriars, Sussex-street, Maitland, and Goulburn. At Fort-street, where the workshop has been considerably enlarged during the year, the classes are for the benefit of the students in training as well as the pupils of the school, The instructor, Mr. Powrie, who has proved himself well worthy of his position, reports:—

"The accommodation for students is all that could be desired. The conduct of students is good. The course of studies has been much curtailed this year owing to delay in completion of new workshop. We have done a fair amount of practical and theoretical work, but not so much drawing as I should have liked, owing to not having sufficient time, and also to boys not having the necessary drawing implements. Considering the time we have been able to hold classes, I think the majority of students have made very good progress, while some have done exceedingly well. I have every reason to believe that the classes are in a very good position, we having at the end of the last quarter 148 students on the roll, 155 being as many as we can accommodate. As a proof of the popularity of the classes, many of the students in training come and work in the workshop during their lunch-hour, and of an evening after their work is done in the Training School. One great drawback I have to contend with is that most of the boys attending these classes do not arrive at the school until half-past 9; and leave for lunch at half-past 12, thereby having one hour and a half instead of two hours for each lesson. During the year the students have made several stands for drawing-room in Training School, treeguards, repairs to desks, &c."

At Crown-street and Blackfriars workshops have been

guards, repairs to desks, &c."

At Crown-street and Blackfriars workshops have been erected, and at Sussex-street a portion of the purpose. The classes at these three

the school-room has been partitioned off and fitted up for the purpose. The classes at these three schools are under the charge of Mr. Henry Gale, who furnishes the following report:—

"The accommodation as regards space is all that is required. The benches, tools, &c., are sufficient for all purposes at present. A few presses are needed for students' work. The progress made by the boys during so short a time, according to my experience as a foreman in charge of boys in workshops

workshops of various kinds for about fifteen years, is very satisfactory, and their conduct on the whole is very good. The pupils now begin to realise the results at which their manual training aims. Consequently, I think the spirit of emulation is aroused, and the progress of the classes is fairly assured. The advantages gained are the correct ideas of practical work as compared to theoretical drawing, together with the healthful exercise of manual work apart from their mental training."

At Maitland the schools provided for are the Maitland High School, West Maitland Superior Public School, St. Ethel's Public School, and East Maitland Public School. Mr. F. Coles, the instructor, has been remarkably successful, although he works under very great disadvantages. Details as to his classes are given in the report upon the Maitland Technical School.

At Goulburn, with the sanction of the trustees of the School of Arts, a workshop has been erected at the rear of the Technological Museum. The space is too limited to allow of more than seven benches, but the building will serve for several years yet. The pupils of these classes come from the following schools:—Goulburn Superior, North Goulburn, South Goulburn, and Eastgrove.

In arranging matters at Goulburn I have received much valuable assistance from Mr. D. J. Cooper, the District Inspector of Schools, who has taken a warm interest in the work, and, in fact, in all matters connected with the development of Technical Education. The pupils of the various classes were examined at the end of the year, and the practical work shown was of a high order.

The Examiner of the Manual Training work reports:—

"The results of the Manual Training are highly satisfactory in both theoretical and practical work."

#### Shorthand—Public School Section.

Shorthand classes have been formed in connection with twenty Public Schools. These classes are Shorthand classes have been formed in connection with twenty Public Schools. These classes are taught after school-hours by a special teacher, and a special fee is charged. In places where the teacher of the Public School takes interest in the class good work is done, but in others the enthusiasm of the pupils is short-lived. The value of shorthand is admitted, but some of the boys are not prepared to devote the necessary amount of study to become proficient in its practice. One teacher, whose experience fortunately is exceptional, reports:—"The pupils entered on their work with very evident interest, and I may say I was most hopeful regarding the future work of the class. As the novelty began to wear off the pupils began to lose interest and attend rather irregularly, until now it seems to me as though the only pupils who put in an appearance are those whose parents recognise the ultimate advantage that must accrue from a knowledge of shorthand, and insist that they shall attend." Mr. Ramsay and Mr. Christie, the teachers who visit the majority of the schools, report in quite a different strain.

Ramsay and Mr. Christie, the teachers who visit the majority of the schools, report in quite a different strain.

Mr. Ramsay reports:—"One of the boys from the shorthand class at the Boys' High School obtained a position in the General Post Office. The shorthand test he underwent was exceptionally severe, I may say unfairly so, but he passed it in the most creditable manner. During the year a number of pupils from the Public Schools have succeeded in obtaining Pitman's Certificate of Proficiency. If not out of place, I should like to be permitted to express my obligations to Mr. J. W. Turner, Head-master of Fort-street School; Mr. J. Coates, Head-master of the Boys' High School; and Mrs. Garvan, Head-mistress of the Girls' High School, for the kindly manner in which they have brought the subject of shorthand before the pupils of their respective schools, and for the generous assistance they have always afforded me in my work. At the recent breaking up of Fort-street School Mr. Turner was good enough to devote three prizes to pupils of my shorthand class."

Mr. Christie reports:—"When I take charge of the class the pupils have had five hours of ordinary work, and no doubt some of them would like to be free. There are opportunities, while I am correcting the week's home-lesson, for one or two of such to disturb or divert the attention of the pupil who is being instructed in some rule or principle which he may have misunderstood, or it may be that he is not giving the attention required to understand the explanation of rules for the coming week's work, and the ground has to be gone over three or four times for that reason. I think it would be of great benefit, from an educational point of view, if the younger branches of the school attendants were encouraged to join the shorthand classes, so that much more of the school-life would be available to instill it into their minds. The principles of shorthand should grow with them, and as they grow older, with a good knowledge of the art gained early, it would be put to

## Cookery Classes in Public Schools.

## Practical Instruction in Horticulture and Bee-culture in Public Schools.

Practical Instruction in Horticulture and Bee-culture in Public Schools.

The arrangements reported last year are still in force. Mr. Gale, the lecturer, has prosecuted his duties with praiseworthy zeal and diligence, and with marked success. He has visited 137 schools in the following districts:—Newcastle, Maitland, Cowra, Queanbeyan, Cooma, Bega, and Grafton, and has furnished reports upon the condition of the playgrounds attached to the various schools.

While on these journeys Mr. Gale gave twelve lessons in Public Schools and forty-seven public lectures, besides furnishing information in answer to verbal inquiries.

The efforts made by the Department through such means as Arbor Day, bonuses to Public School teachers, and the influence of Mr. Gale's visits, have already produced a very beneficial effect. In all parts of the Colony the improvement in the appearance of many of the school-grounds has attracted considerable attention, and has been very favourably commented upon.

During the year 88 bonuses, in accordance with the terms of circular dated 21st April, 1890, have been granted to teachers, and 33 sets of gardening-tools have been supplied to 21 schools.

Loans

## Loans of Lantern-slides.

Teachers of Public Schools may obtain loans of lantern-slides on condition that they pay the se of carriage and guarantee their safe return. The number availing themselves of this privilege expense of carriage and guarantee their safe return. The number availing themsel has not been as large as I anticipated, but possibly the matter is not fully known.

#### Library.

The library is continually receiving additions of the newest technical works, and now contains 1,700 books and 1,000 pamphlets. During the year the library had to be kept in this office; from this circumstance it was of very little use to students. In the course of a few days the books will be removed to the new College, and will be at the disposal of the students and teachers from 10 a.m. to 8 p.m. The following is a list of the periodicals regularly taken:—

#### Australian.

Building News. Agricultural Gazette. The Vigneron. Horticultural Handbook. Engineering Journal.

The Architect. Industries. Carpenter and Builder. Gardening World. Ironmonger. Iror. The Builder. The Mechanic. Sanitary Record. Science and Art. Decorative Art Journal. .. Educational Gazette. Rural Australian. Pharmacy Journal. Pharmaceutical Journal.

#### English.

The Electrician. The Engineer. The Engineer:

#### American

The Machinist. Scientific American. Scientific American Supplement. Scientific American, Building Edition. Engineering and Mining Journal.

Builder and Woodworker. Agriculturist. The Hub. Washington Agricultural Bulletin.

Technology.

#### Technological Museum.

The Technological Museum and the branches at Bathurst, Goulburn, Maitland, and Newcastle have, under the able management of Mr. Maiden, the Curator, rendered much valuable service to the Technical College and to the Colony at large.

From Mr. Maiden's report it will be seen that the central museum in Sydney was visited by no fewer than 112,632 persons during 1891, an increase of 19,957 over that of the preceding year. When the mean, shabby appearance of the iron shed that at present does duty as the museum building is considered, the very great number of visitors is a striking proof of the excellence of the exhibits, and of the desire of many of our people for information upon technical matters. The country museums have also secured a good share of public patronage, as the record of attendances will show:—Bathurst, 9,390; Goulburn, 5,952; Maitland, 6,000; Newcastle, 4,500.

Every effort is made by the Curator to give the branches as complete and attractive a collection as possible; but with the limited funds at our disposal, and the very confined space available for preparation of exhibits at the central Museum, it is not an easy matter to be continually adding to the stock of these institutions.

One of the most striking features of the Technological Museum is its collection of Australia's

stock of these institutions.

One of the most striking features of the Technological Museum is its collection of Australia's great staple product—wool. This collection includes typical specimens of every variety of wool produced in Australia, from the first fleece shorn in New South Wales down to the latest clip, and also samples from every wool-producing country in the world. This splendid collection is well known throughout Australasia, and is believed to be without an equal in the world. It is a matter for regret that it cannot be advantageously displayed. The formation of the new department for instruction in matters pertaining to wool and sheep will render this collection more useful, and at the same time give greater facilities for making substantial additions to it.

A new feature in the Museum work—an exhibition of native flowers—was inaugurated in August, and has proved a marked success. Numbers of persons have voluntarily helped the movement by bringing or sending bunches of flowers, and numbers of others have taken advantage of the facilities offered for the study of Australian botany. It is hoped that now that the beauty of our Australian flora is brought under notice, the ruthless destruction of our trees and flowers will be stopped.

Much has been done by the Museum on behalf of our native timbers. There are many of our

Much has been done by the Museum on behalf of our native timbers. There are many of our indigenous trees that yield wood of great value to the cabinet-maker, the carriage-builder, and the carpenter; but as little or nothing was known of their beauty or durability they have not been

Mr. Maiden, by having the logs prepared and polished, and by persistently directing attention to their good qualities, has forced these woods into notice, and into the manufacturers' hands. Among others, the Railway Commissioners have been so pleased with the beauty of several varieties that they are now used in the decorative part of railway carriages.

In all the wood-working classes connected with the Technical College the native timbers are used wherever practicable, so that the two sections of the Technical Education mutually assist each other.

each other.

Full particulars of the important work of the Museum, not the least of which has been the preparation of useful publications for general distribution, will be found in Mr. Maiden's report.

It is only right that I should here express my gratitude to Mr. Maiden and his staff for their

loyal and zealous co-operation.

Summary of Statistics for 1891, showing comparison with two previous Years.

	1889.	1890.	1891.	Increase in 1891 over 1890.
Number of classes ,, enrolments of students, ,, individual students Average attendance Number of students examined, ,, students passed Amount of fees received from pupils Teaching staff Visitors to Technological Museum ,, Branch Museums in country towns.	2,586 1,185 1,219 823 £1,918 8s. 11d. 69	225 6,580 5,207 1,885 1,538 864 £2,901 16s. 4d. 113 92,675	295 8,466 6,688 4,641 2,178. 1,491  134 112,632 25,842	70 1,886 1,481 2,756 640 627 21 19,957 Not established until late in 189

The results of the year's work may be reviewed with satisfaction: the sphere of operations has been greatly enlarged, classes and students have increased considerably, higher work has been accomplished, and the proportion of passes at the examination exceeds that of former years.

## Science and Art Department, South Kensington. Examinations—1891.

Works of students of the technical classes are sent annually to South Kensington for classification by the examiners of the Science and Art Department of Great Britain. Returns received of the works sent in March last show that a high percentage of prizes has been gained this year, and that more awards have been given than in any previous year. In the United Kingdom payments are made to teachers of successful students, and the sums which would be payable to the Colonial teachers, were the funds of the Science and Art Department available for work executed in the Colonies amount to £51 2s.

were the funds of the Science and Art Department available for work executed in the Colonies amount to £51 2s.

Mr. Alfred Spain gained a bronze medal for a design for a town hall. The other students obtaining prizes are—Architectural Design—Holland Andrews, Joseph A. Kethel, two prizes; Modelling from the cast, Joseph Buckley, two prizes, John Hankinson, four prizes, George Harvey, three prizes, Edward Mueller, R. S. Larcombe, Edward Paton, three prizes; Modelling from Drawings—Edward Mueller, Edward Paton; Linear Geometry—James Nangle, W. J. Taylor. Linear Perspective—George Poole. Details of Architecture from Copies—Byera Hadley, Edward Nancarrow. Mechanical Drawing—Benjamin Rourke. The works of the following students have been adjudged by the examiners as worthy of free studentships—Holland Andrews, Joseph Buckley, Byera Hadley, George Harvey, J. A. Kethel, Edward Mueller, Edward Nancarrow, Edward Paton, and Alfred Spain. As an evidence of the interest that is attached in Great Britain to these examinations, it may be stated that this year the number of works sent up for examination was as follows:—48,636 from 241 Schools of Art and branch schools; 43,246 from 338 Science Schools, and 40,335 from 272 Art Classes.

The following candidates passed the Technological Examinations of the City and Guilds of

## ANNEX H.

267, Cleveland-street, 14 January, 1892. Sir. I have the honor to submit my first annual report, on the work done, since my appointment as lecturer in geology in April last.

Lectures.

I have delivered 28 lectures on geology, mineralogy, and kindred subjects in the chief mining centres of the western and southern parts of the Colony. I venture to think that these lectures have been eminently successful. They have been well attended in every instance, and evidently appreciated. I attribute much of this success to the fact that the lectures dealt, as far as possible with local geology. The illustrations of the various geological conditions were drawn from examples with which the audiences were familiar. In order to give this local colour and interest to the lectures, I found it necessary to spend a few days in each district examining the country around. I may state that the lectures are always illustrated by diagrams, drawings, and specimens of minerals and rocks; simple chemical tests are also made use of when necessary or useful.

Much information has also been given by the examination of minerals, &c., brought up for inspection after the lectures, and by discussing these matters with miners and others anxious for information.

## Museum Work.

During my visits to the country I have collected upwards of two-hundred (200) dressed specimens of minerals, rocks, and fossils. I have examined and named these at the Technological Museum. The specimens thus collected have been found useful to the country museums and the various geological classes.

## $Laboratory\ Work.$

Many rare and doubtful specimens of minerals have been brought to me, or sent in by miners and prospectors for identification. The information required is always given, particularly to working men. This often entails no small amount of laboratory work. In naming the specimens too, collected for the Museum, I have had to slice a number of rocks for microscopical examination. I have also taken photographic negatives of some interesting geological features and micro-photographs of rock slices. Copies of these will be furnished at an early date to the various geological classes.

## Original Research.

I have furnished two reports during the year. (1) On the Pambula gold-field, with practical suggestions as to the best methods of saving the fine gold. (2) At the request of the Mayor and Municipal Council of Dubbo I furnished a report on the geology of the water-bearing drifts of Dubbo. The geology of these drifts throws considerable light on the permanence of the water-supply of Dubbo. I have also published two scientific papers:—

1. A contribution to the geology and petrography of Bathurst, 64 pages and 5 plates.

2. A contribution to the microscopic study of Australian rocks, 52 pages and 3 plates.

I have. &c..

The Superintendent.

I have, &c., J. MILNE CURRAN.

ANNEX I.

List of teachers of public schools awarded bonuses for horticultural improvements, arranged in order of merit:

Thos. E. Pyman, Rathburry.
E. J. Hodder, Rose Hill.
J. R. Jarvie, Upper Pyralmul.
James Naylor, Bombala.
J. D. Lobban, Kempsey, East.

William Turnbull, Crome. J. J. Callaghan, Hamilton.

ANNEX J.

REPORT OF CURATOR, TECHNOLOGICAL MUSEUM, TO SUPERINTENDENT OF TECHNICAL EDUCATION.

I have the honor to submit my second annual report for the year 1891 of the museum, since it has formed an integral portion of the Department of Public Instruction—the eleventh annual report made since I have been curator.

since I have been curator.

There is no longer necessity for me to hope that steps will be taken to improve the housing of the museum, for a contract has been let for a splendid building to accommodate the collections, and the work is well advanced. My next report I hope to date from the new museum, which will give space and facilities for carrying on the work which I have not hitherto enjoyed.

The continued marked improvement in the attendance of visitors is a matter for congratulation. I may, however, mention here that the attendance for 1891 has been 112,632, an increase of 19,957 over that of the preceding year.

**Contents of Report**

Contents of Report.

Principal purchases. Principal donations. Wool section. Colonial timbers.

Wattles—
Selling of wattle-bark by assay.
Wattle-bark extracts.
Wattle seed.

Sida retusa or Paddy Lucerne.

Eucalyptus oils.

Reports on minerals, &c.
Public school teachers and the museum. Reports on the country museums. Scientific societies of West Maitland, Goulburn,

and Bathurst.

Descriptive catalogues, &c. Raw material for research. Original research by museum staff.

Exhibition of native flowers.

Principal Purchases.

During the past year the Minister for Public Instruction purchased a large collection, consisting of 723 species of shells, formerly belonging to the late Rev. J. E. Tenison-Woods, which have almost all been sent to the various country museums, while a few are available for exchanges, also a miscellaneous but valuable collection of fossils, likewise formerly belonging to the same distinguished naturalist.

Collection of colonial timbers for the Sydney and country Technological Museums.

A collection of kindergarten appliances

Principal Donations.

Principal Donations.

Amongst the principal donations received during the year may be mentioned:
Nine flying-machines, by Mr. Law Hargrave, representing the results of his various experiments during a number of years; they are fully figured and described in the proceedings of our Royal Society, and on that account possess additional interest.

A number of valuable antique Greek and Roman coins, together with some modern ones, by Mr. John Jennings. This gentleman, whose knowledge of numismatics is considerable, has generously given much of his time in classifying and arranging the collection of coins.

An exceptionally fine tanned crocodile hide, from Northern Queensland, by Messrs. J. Forsyth and Sons, of Willoughby, Sydney.

A fine collection of shells, consisting of 201 species of land and marine shells, presented by the Council of the Royal Society of Sydney, for the Newcastle Museum.

Five series (each consisting of 68 specimens) of New South Wales minerals for the country technological museums, from the Department of Mines, Sydney.

A valuable series of emeralds and geological and mineral specimens, illustrating their occurrence in New South Wales, from the New South Wales Emerald Proprietary Company, Sydney.

A fine miscellaneous collection of minerals and rocks (principally Australian), from Mr. James M. Smith, manager Australian Mining Standard, Sydney.

A

A valuable collection, chiefly consisting of vegetable fibres, but also including medicinal substances, resins, timbers, tans, &c., from the Director of the Royal Gardens, Kew.

Six series, each consisting of eight different kinds of sugar-canes, to complete the series of sugars, and specimens to illustrate its extraction and refining, already presented by the Colonial Sugar

Refining Company of Sydney.

A large and valuable number of specimens through the Agent-General:

(a.) Specimens to illustrate the process of manufacture of steel and iron in its separate stages, from Messrs. Charles Cammell & Co. (Ltd.), Sheffield. Some very fine photographs and drawings are included in this exhibit.

(b.) Series to illustrate the various stages in the manufacture of saws and files of different kinds, cutters of various sorts, plane-ircns, &c., &c., from Messrs. Jonas & Colver, Sheffield.

(c.) Large mounted photographs, showing Hadfield's manufactures—e.g., steel-forged pins, common and shrapnel shells, &c.—from Messrs. Hadfield's Steel Foundry Company (Limited), Sheffield.

(c.) Large mounted photographs, showing Hadfield's manufactures—e.g., steel-forged pins, common and shrapnel shells, &c.—from Messrs. Hadfield's Steel Foundry Company (Limited), Sheffield.

Wool Section.

The year which has just closed has been the most successful we have had as far as the acquisition of wools is concerned. It will be observed, on reference to the proper appendix, how large a number of valuable donations has been received from colonial growers, but prominent attention should be drawn to the magnificent collection of American wools, presented by W. G. Markham, Esq., Chairman American Wool-growers' Association, Rochester, New York. The collection comprised wool taken from the back, shoulder, and belly respectively, of 122 different sheep, belonging to nearly as many prominent growers. The get-up and packing of this exhibit was beyond all praise. Each sample was placed in screw-top, clear, white-glass bottles, and packed splendidly. Accompanying the consignment were schedules (printed for the occasion), giving the fullest particulars in regard to each sample. The exhibit has created a great deal of interest amongst Australian wool-men.

During the past year I have written to a large number of English wool-growers, asking for samples of their wools, and to manufacturers for series illustrative of their productions, and have already received a number of specimens, with promises of others next season. No effort is being spared to make the wool section as complete as possible—a worthy representation, in fact, of our staple product. Amongst others, applications were made to the manufacturers of Bradford (the chief centre of the English worsted and woollen manufactures), and likewise to the local Technical School. These applications were collectively considered by the Bradford Chamber of Commerce, and that influential body has appointed a committee to see that the manufacturers of Bradford and district are represented in all their stages in the Technological Museum.

The wool section has been much visit

warding educational series of wools to all the principal agricultural shows of the colony.

A representative collection of Australian wools has been sent to the Massachusetts Institute of Technology, Boston, which is the largest and most important institution of the kind in America. This collection will do much to educate Americans in regard to Australian wool.

A collection of wools, suited to the Japanese market, has been sent, with full particulars, to an Industrial Exhibition at Osaka, Japan. There is a large demand in Japan for medium and low-grade merino wools, and a market in that country for such products from Australia would be welcomed.

The third annual descriptive catalogue of wools has been printed, and is expected to be received from the Government Printer in a few days. Applications for these descriptive catalogues are received from distant countries, as well as our own colonies, and of No. 1 but a few copies remain.

A number of plates in the highest style of chromo-lithography have been executed by Messrs.

S. T. Leigh & Co., of Sydney, under the supervision of Mr. Hawkesworth. They represent about ninety different types of wool, and are all drawn from nature. Such a publication has not before been issued in these colonies, and promises to be of high educational value. The descriptive matter has been written and will be ready for the printer in a few days.

Special reports on collections of wools have been sent, during 1891, to the undermentioned gentlemen. These reports are made by the museum wool-classer after careful examination of samples sent for the purpose. These reports are frequently of the fullest character, and are much appreciated by wool-growers, wool-scourers, and others. The museum is, I am proud to say, the only institution in these colonies in which wool reports of this nature can be obtained. They have done more than anything else to cause wool-growers to take an interest in the wool-section, and to supply it with specimens valuable for educational and referential purposes.

IN.B.—Separate reports were made on each of the samples.1		COLONIA
1.v.p.—Separate reports were made on each of the samples.		COLUNIA

#### COLONIAL TIMBERS.

No opportunity has been lost during the past year to add to our already fine collection of colonial timbers. The botanical collector, with praiseworthy zeal, has sent down a large number of northern woods, properly authenticated by herbarium specimens, which have been filed in the museum. In addition, I have from time to time secured fine planks of our colonial timbers from Sydney timber merchants. These are from 12 to 14 feet in length and often the full width of the tree. We have about 25 different planks already, representing a large proportion of the colonial timbers sent to market. By means of such specimens our own people and strangers have far better opportunity of judging the value and capabilities of a timber than with small pieces. Our collection of colonial timbers cannot be fully opened out until some time after the new museum is ready for occupation, as very many are stored for the present, and will require to be cut and dressed. I am very anxious to be able to properly display the timber collection, for it is a very large and valuable one.

A collection of the principal New South Wales timbers, with particulars as to sizes, qualities available, and prices, has been sent to M. Lucien Henry, at Paris, in the hope that a demand in France for our timbers may be stimulated.

By request of the Sydney Architectural Association, on the 3rd August, I delivered a lecture

By request of the Sydney Architectural Association, on the 3rd August, I delivered a lecture before that body on "Some ornamental New South Wales timbers." The lecture was illustrated with many fine specimens from the museum, and was fully reported in the Building and Engineering Journal and Builders' and Contractors' News at the time.

I continue to receive many enquiries in regard to wattle-barks and wattle culture. I have been consulted by numerous people from the other colonies who are taking up land for wattle growing, and literally by hundreds of our own people. Hardly a day passes without enquirers, and, during the planting and stripping season, I have frequently had more than six people in one day making enquiries in regard to some branch of the industry.

Letters from New Zealand show that wattle growing has obtained a hold in that colony to an extent I was previously unaware of. Acacia decurrens and Acacia nyucantha are the two wattles chiefly grown. One correspondent has 500 acres of the former and 100 acres of the latter. His plantation is near Mercer, not far from Auckland; and I recently analysed a sample of his five-year-old pycanntha bark, which gave the very satisfactory result of over 36 per cent. of tannic acid. This emphasises my opinion that A. pycnantha will be found to flourish in many parts of New South Wales. In fact I have on several occasions received herbarium specimens of flourishing young trees, whose owners were surprised to learn that they were A. pycnantha. In many parts of New South Wales. In fact I have an one several occasions received herbarium specimens of flourishing young trees, whose owners were surprised to learn that they were A. pycnantha. In many parts of the Colony this species promises well, and it is worthy of cultivation as an ornamental tree, apart from considerations of the value of its bark. I have a number of plants eighteen months old, and nearly 5 feet in height. They grow in a Sydney suburb in virgin soil, and have never been artificially watered.

In the public park of Burwood, Sydney, Acacia pycnantha trees, from seed planted in July, 1890, are in several instances 6 feet in height and over, and one is no less than 9 feet high, and with a stem 2½ inches in diameter.

The black or green wattle (Acacia decurrens) and its varieties, is very well known in this colony, and can take care of i

the market, it is a reflection on New South Wales that her people cannot do newise. There is a good deal of money in this.

Wattle-seed.—There have been loud complaints of the cost of the black or green wattle-seed (Acacia deciarens), which, owing to a heavy demand on small stock, could not be purchased by retail buyers at less than from 5s. to 7s. 6d. per pound last season. Such a price for seed has militated seriously against wattle growing. The past season has been a very successful one in New South Wales for the collection of wattle-seed, and I believe a large quantity has been collected, for I have urged many people to lay in a stock of it. I have known large quantities to change hands this past season at the hitherto unheard of prices of 6d. to 1s. per pound for cwt. parcels, so I hope that during the coming season seed will be available to planters at a price hardly (if anything) exceeding the price of that of Acacia nucnantha.

## Sida retusa or "Paddy Lucerne."

This plant, often known as Queensland hemp, and very often by the name Sida retusa (strictly rhombifolia), is a well known weed pest chiefly on the northen rivers. It yields fibre of good quality, as has been known for a number of years. I have again drawn public attention to the plant by means of three articles in the "Sydney Mail" showing what the plant is, where it is to be found, what is the nature and commercial value of its fibre, and so on. Hitherto the great drawback has been the high cost of treatment of the fibre, but I have brought under notice an American process, by fibre experts, which is exceedingly cheap, quick, and which yields a splended product. I shall be happy to receive correspondence on the subject, as it will be a great advantage to keep an agricultural pest under control through the utilization of its fibre. I am anxious to have this process tried on a large scale, and hope that the correspondence I have received on the subject from America, Samoa, and various parts of the colonies will result in successful tackling of the well known Sida retusa problem, for it has been a bete noir far too long already. noir far too long already.

## Eucalyptus Oils.

The demand for these substances increases year by year, and during the past two years it has been largely stimulated on account of the influenza epidemic and partly because their value is becoming better known. I have been consulted by several people who are engaged in the industry, or who are contemplating entering on it. I have reported on a number of oils, chiefly of Queensland origin, a very promising one from South Australia, and two from New South Wales. I have determined the approximate oil yield of a number of small parcels of eucalyptus and melaleuca leaves. The manufacture of

of eucalyptus oil is destined to attain a far greater magnitude than it has hitherto done, and in various parts of this colony there are vast tracts of oil-yielding eucalyptus not yet utilized. If twigs bearing flowers and fruit be sent to the museum I shall always be happy to advise as to probable oil yield of the species.

Exhibition of Native Flowers.

In August last, Mr. W. S. Campbell carried out the idea of exhibiting at the Horticultural Society a number of our native flowers, fresh, in vases containing water, and labelled with their common and botanical names. About thirty bunches were thus displayed and proved very attractive. I borrowed the idea, and from August up to the present day, I have exhibited glass bottles of native flowers properly named. The success of this wild flower show was instantaneous. I have had as many as 410 bottles of different wild flowers on view on one day, and for nearly three months the number never fell below 300. At times the vicinity of these flowers has been crowded to excess for hours together. Numerous students have studied them, and have been supplied with fresh specimens for dissection where desired, while amateur artists have been fixed up as conveniently as circumstances would allow, and supplied with flowers for painting. The collection has almost exclusively been maintained by friends, as many as a dozen consignments in one day having reached the museum when flowers were plentiful. They have been sent from long distances in New South Wales, and, in several instances, from Victoria. I have also exhibited a number of cultivated Australian plants, whether found in New South Wales or not. At the present time, I have not many more than a hundred kinds of flowers on view. The stiflingly hot building and the comparatively flowerless season of the year combine to prevent a display at present comparable to the spring shows; but I exhibit what I can get, in order to help students, who find it easier to study even partly-faded flowers than pressed ones. I have kept a register of those who brought in flowers, and the list is a very long one. The following ladies and gentlemen should be specially mentioned as having frequently brought in exhibits:—Mrs. Starkey, the Misses Beyer, Miss Georgina King, Mr. J. H. Mayes, Mr. W. S. Campbell, Hon. Dr. Norton, M. L.C., Mr. H. C. Russell, Scc. Sydney Hospi

## REPORT ON MINERALS, &C.

It would be simply impossible to record even briefly all the interviews which have taken place at the museum with persons who come in search of information in regard to minerals, &c.; nevertheless, in this way I am confident much useful work has been done.

The mineral collections are arranged technologically, in contradistinction to the strict scientific sequence (say) of Dana, and miners and others appreciate this greatly.

Correspondence on the subject of minerals, &c., is very heavy, and comes from other colonies as well as our own. The following, in particular, have been reported on:—Pottery clays (we have abundance of splendid clays, some of which are regularly used in our own technical classes), fire-clays, coal, asbestos, two supposed platinum discoveries, copper ores, cobalt ores, emery, gold and silver ores (actual or supposed), together with miscellaneous minerals and rock collections. The reports are usually based on analyses more or less full. In this way not only are residents of the country districts assisted by determination and advice, but the museum is also benefited frequently by valuable specimens. specimens

A few small collections of minerals for country schools of art have also been named during the

A few small collections of minerals for country schools of art have also been named during the past year.

In this connection, I may allude to an event which has occurred during the past year, which is of much importance to the museum. I refer to the appointment of the Rev. J. Milne Curran, F.G.S., as geological lecturer to the technical education branch. That gentleman is full of zeal for the collection of specimens, and during every lecturing trip he always sends consignments to the museum, usually in bulk, sufficient for each mineral or rock, to be represented in the Sydney Museum, each of the country museums, and often for exchanges. This matter of exchanges is of the highest importance, and I hope to deal with it as it deserves to be dealt with, when we get into the new museum buildings. Specimens may frequently be obtained from institutions by exchange, which cannot be obtained through commercial channels, and moreover they are properly authenticated.

Father Curran in his journeys in the colony also encourages persons who attend his lectures and others to send specimens to the museum, and he is but at the beginning of his usefulness in this respect. The appointment of a travelling geological lecturer is, I am able to say, already much appreciated by the class of persons who were intended to benefit by his instruction; and as Curator of the Department's Museum, and putting its interest in front of everything, I can say that the lecture-ship will result in the highest benefit to the museum and its country branches.

## Public School-Teachers and the Museum.

I have named a large number of plants, minerals, and rocks, for country school-teachers, and have given hints for collecting and preserving such subjects, wherever I thought they were needed.

I have now a large number of correspondents amongst country teachers, and additional ones are gradually finding out that I am only too pleased to help them in ascertaining the names and uses of the natural production of their neighbourhood.

We have now a large number of teachers who take an interest in agricultural pursuits, and to several the museum is indebted for useful exhibits of their products. In this connection, I must particularly mention Mr. C. E. Wilson, of Walli, near Carcoar, who from time to time has sent to the museum a surprising number of specimens of cereals, pulse, and other useful crops, all grown by himself in experimental patches.

## Reports on the Country Museums.

Local Technological Museums exist at Goulburn, Bathurst, West Maitland, and Newcastle. The museums in the three former towns are a credit to each district, and the local science and art masters take the warmest interest in them. Candour will not allow me to bestow such unstinted project on the purpose on the purpose of Newcastle. praise on the museum at Newcastle.

## West Maitland Scientific Society. .

The valuable collections of this society have finally been handed over to the West Maitland Technological Museum on the following terms. The conditions have been complied with, and the West Maitland Museum now has a strong natural history side to it:—

1. That no original specimen be removed, but duplicates not required may be so removed if considered desirable.

sidered desirable.
That the society have access to the specimens at all reasonable times.
That the committee may remove any specimens they may require at any time, provided that they notify the resident art master of their intention.
That the specimens be properly classified and displayed within a reasonable time.
That as far as may be possible and convenient the specimens be labelled "Maitland Scientific Society Loan Collection."
That in the event of the museum being closed or removed from West Maitland, the collection be handed back in its entirety to the society.

#### Goulburn and Bathurst Scientific Societies.

In each of the above cities flourishing scientific societies are in existence, fostered by the resident science masters, and aided by the collections in the local Technological Museums. A very successful conversazione in connection with the Goulburn Society was held in August, and one at Bathurst in December, which latter I attended. These societies are doing much good from both educational and social points of view.

No society of the kind is in existence in Newcastle, which is to be regretted.

#### Descriptive Catalogues, &c.

The third annual catalogue of the wool section is in the press.

A book of chromo-lithograph illustrations of various types of wool, together with descriptive letter press, is almost ready for the printer.

Both the above are by Mr. Hawkesworth.

A descriptive catalogue of the vegetable fibres in the museum by the assistant-Curator is almost ready for the printer.

Descriptive catalogues—(1) of minerals, by the laboratory assistant, and (2) of gums, resins, &c., by the Curator, are well advanced, and will soon be ready for the printer.

## Raw Material for Research

During the past year I have supplied raw material from native plants to scientific chemists in the adjoining colonies and Europe. We know so very little in regard to the composition and properties of a number of our barks, resins, etc., and the labourers in this particular field of research are so few in Australia that, for years to come, many of our plant products will have to be sent to England and elsewhere for examination until the chemical students of our University and Technical College take up this work themselves. No man in Australia may truly say, "I desire to undertake original chemical research in regard to our native plant products, but do not know how to obtain material."

An important research on material supplied from the museum was published during the year. Its title is as follows:—"The Carbohydrates of Manna from Eucalyptus Gunnii and of Eucalyptus honey." By F. W. Passmore, Ph. D., in the Journal of the Pharmaceutical Society of Great Britain. [3.] xxi. 717.

Original Research by Museum Staff during 1891.

(By the Curator.)

1. "Wattles and Wattle-Barks," being hints on the conservation and cultivation of wattles, together with particulars of their value. Second edition. Royal 8 vo., pp. 79, with ten illustrations. Price, 1s. The first edition was exhausted in six months. The greatly enlarged second edition has been much sought after. I have sold £26 worth, and the Government Printer has also sold a great many.

2. Notes on Australian Economic Botany, No. 2. (Linnean Society of New South Wales.) On foods, stock poisons, essential oils, substances reputed medicinal, and timbers.

3. On the Occurrence of a Gum in Echinocarpus (Sloanea) Australia. (Linnean Society of New South Wales.) This is, perhaps, the first occasion on which a full account of a gum from the Tiliaceæ has been published.

3. On the Occurrence of a Gum in Econoccurpus (South Wales.) This is, perhaps, the first occasion on which a full account of a gum from the Tiliacese has been published.

4. Notes on Eucalyptus Oils. (Bulletin of Pharmacy, Detroit, U.S.A., October.) Scented or perfumed oils, mallee oils, other eucalyptus oils, E. globulus and E. amygdalina as oil-yielders, &c.

5. On Angophora Kino. (Linnean Society of New South Wales.) Descriptions and analyses of the kinos (gums) of the so-called apple-trees of Eastern Australia.

6. The Examination of Kinos as are in the diagnosis of Eucalypts, part iii. The Turpid Group. (Linnean Society of New South Wales.) This group treats of those kinos which contain catechin. The paper treats of a large number of species, and embodies a large mass of information on the subject.

7. On the Oleo-resin of Canarium Muelleri, together with notes on Manila Elemi. (Royal Society of Queensland.) Account of the composition of the oleo-resin of a newly-discovered Queensland tree, with observations in regard to its points of resemblance to and divergence from manila elemi.

8. On two hitherto unrecorded exudations from the Leguminosæ:

I. Kino from Milletia (Westaria) magasperma.

II. Gum from Mezoneurum Scortechini.

These are exudations from large climbers found on the northern rivers. The substances are not of economic interest.

These are exudations from large climbers found on the northern rivers. The substances are not of economic interest.

9. On the exudations from Australian species of Pittosporum. (Australian Association for the advancement of Science, Hobart meeting.) The Pittosporums yield gum-resins of an interesting type. Analyses are given, and the gum-resins are described.

(By the Assistant-Curator.)

10. Illustrations of New South Wales Plants. (Linnean Society of New South Wales.) A plate of Acacia prominens, with dissectional drawings. It is proposed to depict other unfigured New South Wales plants of special botanical interest.

(By the Laboratory Assistant.)

11. On the Occurrence of Barite (Barytes) in the Hawkesbury sandstone, near Sydney. (Linnean Society of New South Wales.) This mineral is here recorded for the first time as existing in the Hawkesbury sandstone. The paper is both chemical and mineralogical.

12. On Kaolinite. (Royal Society of New South Wales.) Samples of this mineral taken from the Hawkesbury sandstone were shown to be perfectly crystallised. An illustration is given in which the separate plates of Kaolinite are depicted; also showing previously unrecorded cleavage planes, which appear to account for the formation previously given.

**Port of Rotanical Collector**.

## Work of Botanical Collector.

Mr. W. Bäuerlen, the botanical collector, has remained on the Richmond River during the past year, and has enriched the central and local technological museums with numerous specimens of great value. I am anxious that he shall remain on the Richmond for a few months longer in order to complete all the material, of which he has only either flowers or fruits.

## Work of Geological Collector.

Work of Geological Collector.

Mr. W. W. Froggatt was only appointed geological collector on the 21st April last. He has been collecting in the Yass district, Wellington Caves, Mount Vincent (West Maitland), Blayney, and Wollongong districts, and has made numerous short trips from Sydney. In addition, he has remained in the museum, dressing, labelling, and preparing for exhibition the numerous specimens collected by the Rev. J. Milne Curran, F.G.S., the lecturer in geology to the Department. Mr. Froggatt's entomological training has enabled him to be usefully employed in going over the section of economic entomology, and of preparing numerous sets of specimens to show the life history of various useful and injurious Australian insects. He has written a pamphlet on the beetle (Anobium paniceum), which has caused considerable havoc in English-made boots in a Sydney warehouse. It has one coloured plate, and is in the printer's hands. At present he is engaged in visiting the country museums in turn, going over their natural history collections, and also collecting local minerals, rocks, and fossils for these museums.

J. H. MAIDEN.

Technological Museum, Sydney, 23rd January, 1892.

## APPENDIX XX.

## ARCHITECT'S REPORT.

## Buildings.

DURING the year there have been delivered to the Department, ready for occupation, the following buildings, &c., viz.:—

No.	Description of work.	Accommodation.	Cost.
63 19 14 19 452	Public school buildings Teachers' residences Weathersheds Additions providing accommodation Additions, repairs, and improvements not providing accommodation.	1.204	£ s. d. 54,304 18 10 12,505 12 0 1,001 7 0 5,601 1 7 31,912 8 6

The school accommodation has thus been increased this year by 8,448 at a cost of £59,906 0s. 5d., or about £7 per head, against 7,834 last year at a cost of £43,162 14s. 4d., or about £5 10s. per head, and 7,561 at a cost of £42,036 6s. 8d., or about £5 11s. per head for 1889. Some of the buildings erected during the year were of a more ornamental character than that adopted during the previous few years, amongst which I may mention as examples, the new buildings at Kogarah to accommodate 400 at a cost of £3,170; Burwood, to accommodate 581, at a cost of £2,689 15s. 2d.; Summer Hill, 433, at a cost of £2,857 9s. 8d.; and Woollahra, 472, at a cost of £2,600, and in a large number of cases where new buildings are erected both residences and weathersheds are included, thus increasing the cost per head of the accommodation provided in the school building. I have only been able to keep the residences and sheds separate where distinct contracts have been entered into for those works only.

The following works in connection with the Technical College and High Schools at Ultimo were completed during the year:—

Engineering workshops       4,267       0       0         Chemical laboratory       2,660       0       0         Shafting for workshop       158       2       0         Gasfitting for workshop       149       15       0         Laying 4-in, main       56       10       0         Benches for workshops       47       15       0         Raising chimney-stacks       30       0       0         Increasing ventilation       12       10       0         Asphalting workshop-floor       128       0       0         Carvings for College       393       5       0         Boundary-wall and steps       370       0       0         Plumbers' benches       33       0       0         Stone tablets for High Schools       117       2	luring the year :—	£	s.	d.

Plumbers' benches		370	0	0	
Stone tablets for High Schools	Plumbers' benches	33	0	0	
	Stone tablets for High Schools	117	2	0	

In addition to these works, contracts have been entered into and are now in progress for the undermentioned buildings, viz. :-

No.	Description of work.	Accommodation.	Cost.	
26 8 1 4 62	Public school buildings Teachers' residences Weathershed Additions providing accommodation Additions, repairs, and improvements not providing accommodation.	80	£ s. 43,295 10 4,504 7 49 0 617 17 6,061 16	5 0 0 6

It will thus be seen that in the works now in progress, all of which will probably be completed during 1892, additional accommodation is provided for 4,872 at a cost of £43,913 8s. 11d. or about £9 per head, and this number will undoubtedly be largely increased during the year 1892.

Among the school buildings in progress the following are of a much superior and more expensive class of building than the Department has erected during the past few years:—

±	,	
Name of School.	Accommodation.	Cost.
Albury	440	£4,536
Cleveland-street	600	4,389
Leichhardt	400	6,328
Wagga Wagga South	<b>5</b> 36	4,223

The cost per head of the accommodation provided in these cases averages about £10, being about 80 per cent. above the average cost of the buildings crected in 1889 and 1890.

The following works are also in progress at Ultimo, viz.:—

19,535	0	0
471	17	6
48	0	0
75	13	0
28	10	0
~	_	6
16,220	0	0
110	0	0
169	15	0
249	0	0
21	8	6
	-	0
19,365	10	0
	19,535 575 471 48 75 28 8 4,257 16,220 110 169 249 21 213	19,335 0 575 10 471 17 48 0 75 13 28 10 8 2 4,257 0 16,220 0 110 0 169 15 249 0 21 8

A great number of these works will be completed during the first quarter of 1892, and the whole of them will probably be finished by the end of the year.

Plans and specifications have been submitted for the erection of the electrical engineering workshops at a cost of about £5,000, and I am instructed that tenders will be invited for the work when the question of site has been definitely settled.

The total outlay for works certified for by me during the year is £170,289 6s. 8d. in 1,912 certificates averaging about £89 each against an outlay of £110,187 14s. 3d. in 1,600 certificates averaging £69 for last year.

## Correspondence.

The number of papers received, registered, and dealt with during the year is about 10,000 against 9,200 last year, and the number of letters, reports, &c., written and despatched is 6,091, against 5,884 last year, besides 352 orders for school furniture, against 238 in 1891. The contracts entered into number 500 for which a set of contract documents had to be prepared in each case, and a number of small works were carried out under Ministerial authority, but for which no contracts were entered into.

## Plans and Specifications.

During the year 1,080 plans and 892 specifications have been prepared, against 1,272 plans and 1,051 specifications last year.

The cost of the office for salaries amounted to £5,367 2s., and for travelling expenses to £1,425 0s. 11d., making a total of £6,792 2s. 11d. or 3.9297 per cent, on the outlay.

Staff.

Staff.

At the close of the year the staff consisted of 4 draftsmen, 3 junior draftsmen, 1 temporary draftsman, 3 clerks, and 8 clerks of works, or 1 draftsman less than it consisted of at the end of 1890, and although the work of 1890 was greatly in excess of previous years, yet a glance at the statistics for this year will show that there is still a substantial increase on the work of 1890. In my report for last year, I stated that if there was no slacking of the work during 1891, I should be compelled to ask the Minister for an increase in the staff, both clerical and professional, and as the work had in no way decreased when I was preparing my estimates for 1892, I recommended the appointment of an additional clerk of works, an additional draftsman, and an additional clerk, but this recommendation was not, I understand, approved of by the Minister, which I very much regret.

There are at the present time a great number of works deferred, and when the estimates for 1892 are passed these will, I presume, be proceeded with at once. This will make the strain on my officers very heavy, but I shall endeavour with the very limited staff at my disposal to keep pace with the same and prevent the work, if possible, getting into arrears.

1

very heavy, but I shall endeavour with the very limited stall at my disposal to the very leavy, but I shall endeavour with the very limited stall at my disposal to the very limited stall at my disposal to the very limited stall at my disposal to the very limited stall at my disposal to the very limited stall at my disposal to the very limited stall at my disposal to the cheerful obedience I receive from them all that I have so far been able to keep pace with the increasing work and to give no just cause for complaint as to delay. This desirable state of things is only attained by everyone working at what may be termed "high pressure," and I do not think any larger amount of work can be properly done without an increase in the number of clerks and clerks of works, even if the draftsmen's work can, by the free use of lithography, be got through.

WILLIAM E. KEMP,

Architect for Public Schools.

### APPENDIX XXVII.

# REGULATIONS UNDER THE PUBLIC INSTRUCTION ACT OF 1880.

Department of Public Instruction,

Sydney, 1st July, 1891.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulations, for carrying out the provisions of the Public Instruction Act of 1880, being made in accordance with the 37th section of that Act. These Regulations are intended to supersede those of 12th February, 1886, and of subsequent dates.

J. H. CARRUTHERS.

### PUBLIC SCHOOLS.

1. Application for the establishment of a Public School must be made in the following form:

Application for the establishment of a Public School at

Post Town,

The undersigned, on behalf of the residents at hereby request that a Public School may be established at that place, under the provisions of the Public Instruction Act.

	1	••	•••	••	•••				••	٠.	٠.	٠.		٠.		٠.		٠.,			٠.

Note.—Supplies of these forms will be sent to Teachers of Schools under this Department, from whom only they can be obtained by p rents or guardians of children.

### SUPERIOR PUBLIC SCHOOLS.

9. Any Public School may be declared a Superior Public School, if, after due inquiry, it shall be found that the attendance thereat is sufficient to enable a class to be formed of not less than twenty pupils, who have been educated up to the standard that completes the course prescribed for a Fourth Class.

10. In addition to more advanced work in the ordinary subjects, lessons in other branches shall be

given to the highest class, as under:—

To Boys.—In Mathematics, Latin, Science, and Drawing.

To Girls.—In French, Drawing, and Sanitary Science.

Instruction may also be given in such other branches as the Minister may from time to time

Instruction may also be given in such other branches as the Minister may from time to time consider expedient.

11. No special fee shall be charged.

12. Necessary text-books shall be supplied by the Minister.

13. In cases where the regular staff is unable to teach any prescribed subject efficiently, the Minister may employ a special teacher for such subject, and pay him such salary as he may deem expedient, provided that the special class so taught shall be drafted from the highest class, and contain not less than twenty pupils.

not less than twenty pupils.

14. The course of instruction to be carried out in the highest class of a Superior Public School shall be that prescribed for a fifth class in the Standard of Proficiency; and such portions of the course shall be studied each year as will coincide with the subjects prescribed annually for the Junior or Senior Examinations of the Sydney University.

### EVENING PUBLIC SCHOOLS.

15. Application for the establishment of Evening Public Schools must be made by petition to the Minister of Public Instruction in the form quoted after Regulation 30.

### Signatures to Petition.

16. Every such petition must be signed, on behalf of not fewer than ten persons, by the parents, guardians, or other residents of the locality in which it is desired to establish an Evening Public School.

### Persons not eligible to be Pupils.

17. No person below the age of fourteen years shall be received as a pupil in any Evening Public School, until such person has received a certificate under section 35 of the Public Instruction Act; and ro teacher or pupil-teacher employed in any school established or maintained under this Act shall be eligible for admission into such Evening Public School unless authorised by the District Inspector.

### Appointments of Teachers.

18. Teachers of Evening Public Schools will be appointed by the Minister, but no teacher can be appointed unless he has been trained and classified.

Place

#### Place of holding Evening Public Schools.

19. An Evening Public School may be conducted in any Public School-room, in any class-room attached thereto, or elsewhere in a suitable place.

### Furniture and Apparatus.

20. The ordinary school furniture and apparatus of any such Public School may be used in the management of an Evening Public School.

#### Books.

21. Necessary supplies of reading books will be granted to Evening Public Schools.

#### Time of Meeting.

22. The pupils of an Evening Public School shall meet for instruction three times weekly at least, and every such meeting shall be of not less than two hours' duration.

#### Course of Instruction.

23. The course of instruction shall comprise Reading, Writing, Dictation, Arithmetic, Grammar, and Geography, and such other subjects as the Minister may from time to time determine.

#### Instruction to be Secular.

24. The instruction imparted must be secular, in accordance with section 7 of the Public Instruction Act.

### Fees.

25. Every pupil in an Evening Public School shall pay to the teacher weekly, in advance, a fee not exceeding one shilling; but the Minister may relieve any pupils from the payment of school fees where inability to pay is satisfactorily shown, and shall make good the payment to the teacher.

26. The salaries of teachers of Evening Public Schools shall be at the following rates:—
For an average attendance of 10 to 15, £20 per annum.

		7 F L OO GOOT	
,,	,,	15 to 20, £26	,,
12	,,	20 to 30, £32	,,
	• • • • • • • • • • • • • • • • • • • •	20 to 40 £28	
27	**	30 to 40, £38	3.2

### Fuel and Light.

27. The expense of providing fuel and light must be borne by the Teacher.

#### Registers.

28. A class roll for recording the attendance of pupils, and a lesson register, shall be kept in every Evening Public School.

#### Returns.

29. Quarterly and annual returns shall be furnished in the same form as in Public Schools.

#### Inspection and control.

30. Evening Public Schools shall be subject to the same inspection and control as Public Schools.

#### FORM OF PETITION.

To the Honorable the Minister of Public Instruction.

The petition of the undersigned parents, guardians, and other residents, humbly showeth:—
That your Petitioners desire that an Evening Public School may be established at in accordance with the provisions of section 10 of the Public Instruction Act of 1880.

That your Petitioners guarantee the regular attendance for a period of months at such school, when established, of the persons named in the annexed Schedule.

That your Petitioners undertake, on behalf of the said persons, that they shall conform to the Regulations for the conduct of Evening Public Schools now in force or that may hereafter be framed by authority. authority.

And your Petitioners will ever pray.

SCHEDULE showing the names of persons who will attend an Evening Public School at

### PUBLIC HIGH SCHOOLS.

31. Examinations for admission to Public High Schools as well as for Scholarships and Bursaries shall be held half-yearly, in June and December, and at these examinations Scholarships and Bursaries may be awarded to those who gain the most marks and show the requisite proficiency, as follows:—

### SCHOLARSHIPS.

- 15 (7 to boys and 8 to girls in June; 8 to boys and 7 to girls in December), Sydney High School.

  5 Bathurst Girls' High School.
- 10 (5 to boys and 5 to girls), Maitland High School.

### BURSARIES.

- Bursaries.

  10 half bursaries for Metropolitan and Sub-metropolitan children tenable at the Sydney High, Grammar, or Superior Schools.

  5 full bursaries (2 to boys and 3 to girls in June; 3 to boys and 2 to girls in December) for country children tenable at the same schools.

  2 full bursaries in June and 3 in December, Maitland Girls' High School.

  2 full bursaries in June and 3 in December, Bathurst Girls' High School.

  5 full bursaries, Maitland Boys' High School.

  In the case of children whose parents reside within convenient access of the country schools only half bursaries will be awarded, and no child so residing will be permitted to compete for a Sydney bursary. Vice versa, no Sydney child may compete for a country bursary.

  Every applicant for either a scholarship or a bursary must state in his application what school he intends to enter.

  Country children are expected to attend the High School nearest by a practicable route to their places of residence. In exceptional circumstances, however, the Minister may, on application being made, sanction a departure from this rule. The application should accompany the form notifying intention to compete.

82. There shall be two groups of subjects for examinations, one for Scholarships and one for Bursaries. They are

### FOR SCHOLARSHIPS.

- (1.) Grammar.—To parse the more difficult words in a passage of about six lines. To distinguish the true subjects and the true predicates in sentences. To correct inelegant or ungrammatical expressions. To exemplify the correct usage of picked words.
- (2.) Dictation.—To write a passage of about fourteen lines, dictated from some standard author or from an ordinary newspaper, with correct spelling and punctuation.
- (3.) Arithmetic.—To solve questions in Proportion, Vulgar and Decimal Fractions, Interest and Discount.*
- (4.) French (for girls) As prescribed for Fifth Classes in Public Schools, First Half-year.
- (5.) Euclid (for boys only).—Book I, Definitions, &c.; Propositions 1 to 20 inclusive.
- (6.) Algebra (for boys only).—First Four Rules.

#### FOR BURSARIES.

- (1.) Grammar .- As for Scholarships.
- (2.) Dictation.—As for Scholarships.
- (3.) Arithmetic.—As for Scholarships.
- History.—Henry VII to Victoria inclusive, as prescribed for fourth classes in Public Schools; History of Australia as taught in Public Schools. (4) History .-
- (5.) Geography.— Europe, Asia, America, and Australia, as prescribed for third and fourth classes in Public Schools.
- (6.) Drawing and Music.—As prescribed for third and fourth classes in Public Schools.
- Candidates shall be eligible for admission to a High School who pass satisfactorily in the subjects numbered (1), (2), and (3), and in one other subject selected from Nos. (4), (5), and (6) in either group.
- 33. A Scholarship will be tenable for three years, subject to good reports from teachers, and will entitle a pupil to a free grant of text-books and to free education in a State High School. A bursary will be tenable for three years, subject to good reports from teachers, and will entitle a pupil to a free grant of text-books and to free education in Sydney High School, in a Sydney Superior Public School, or in the Sydney Grammar School, or in one of the Country High Schools. When a pupil holding a Bursary must necessarily board away from home in order to attend one of these schools, an allowance not exceeding £30 a year, in addition to free education and text-books, will be made.
- 34. No pupil will be awarded a Bursary whose parents or guardians are in a position to pay for his education; but, subject to this proviso, the examination for Bursaries will be open to all boys and girls under fourteen years of age who have attended a Public School with reasonable regularity for the two years preceding the date of examination.
  - 35. The examination for scholarships will be open to all boys and girls under fourteen years of age.
- 36. Candidates who compete for a Bursary or Scholarship more than once will be eligible for a Bursary or Scholarship only for the period remaining out of three years from the date of their first competition, and no candidate will be permitted to compete after having attended a High School.
  - 37. The fee to be charged at a High School shall be £2 2s. per quarter payable in advance.
- 38. The fees shall in no case be the property of the teachers but shall be forwarded to the Cashier for payment into the Consolidated Revenue Fund.
- 39. The parents or guardians of candidates for Bursaries or Scholarships must fill in and forward to the Under Secretary the necessary forms of application at least six weeks before the date of examination. Such forms may be obtained at this office.

### STATE BURSARIES FOR UNIVERSITY EDUCATION.

- 40. Ten Bursaries, six to boys and four to girls, tenable for three years at the Sydney University, will be awarded annually on the position of candidates at the March Matriculation Examination.
- 41. Candidates must be under eighteen years of age, and must have attended a State High School, a Public School, or, as State Bursars, the Sydney Grammar School, for the year previous to the examination; and they must produce satisfactory testimonials of character from the headmasters of the schools they have attended.
- 42. They must satisfy the Minister of Public Instruction that their own and their parents' means are unequal to the expense of the University education. To a successful competitor who resides at such distance from the University as to be unable to travel to and fro daily a full bursary will be awarded, while to one who resides in the metropolitan or sub-metropolitan inspectoral district, within easy access of the University, part of a Bursary only will be awarded. The candidate's status as to whether he can be deemed eligible for a full Bursary or part of a Bursary will be decided by the Minister before his admission to examination. admission to examination.
- 43. A Bursary shall entitle pupils to text-books and free education, together with an allowance not exceeding £20 per annum to those who need not board away from home, and not exceeding £50 to those who must necessarily do so.
- 44. Every Bursar must matriculate at the University and attend lectures; and he shall continue to hold the Bursary only on condition that his conduct be good, and that he pass creditably the examination at the end of the first and second years after his matriculation.
- 45. The parents or guardians of candidates must fill in and forward to the Under Sccretary the necessary forms of application for University Bursaries at least six weeks before the date of the Matriculation examination. Such forms may be obtained at this office.

### PROVISIONAL SCHOOLS.

- 46. Application for the establishment of a Provisional School must be made in the form shown after Regulation 55.
- 47. A Provisional School may be established in any locality where not fewer than twelve, but not more than nineteen, children between the ages of six and fourteen years can regularly attend such school: provided that no Provisional School shall be established within four miles, by the nearest route practicable for children, of any existing Public, Provisional, or Half-time School.

40 mi
48. The necessary school buildings and furniture for a Provisional School, as well as the requisite books and apparatus, will be provided at the cost of the Department, subject to the following conditions:—  (a) That the grant in aid of the building and furniture shall be limited to £45, when, in the opinion of the Inspector, the average attendance will be from 12 to 15, and to £60 when the average attendance is likely to be 18; that payment shall not be made until the building has been erected, and reported by an Inspector or other officer of the Department of Public Instruction to be ready for occupation.
<ul> <li>(b) That the building shall be placed on Crown lands, if a site thereon central to the school population and otherwise suitable can be obtained, and that, if built on private land, the right-of-way shall be secured, and the property leased to the Minister of Public Instruction for a term of years, as may be agreed upon, at a peppercorn rent, the Minister having the right to remove the building before or at the expiration of that term.</li> <li>(c) That where the average attendance is expected to range from 12 to 15, the schoolroom</li> </ul>
shall measure 14 feet in length, 12 feet in width, and 9 feet in height to the wall-plates, and shall have a pitched roof, two windows, a boarded floor, and a fireplace; two out-offices must also be provided, and the following articles of furniture supplied, viz.:—  2 desks, each 10 feet 6 inches long.  2 forms, each 10 feet 6 inches long.
1 book-press or box. 1 table, 3 feet by 2 feet. 1 chair.
(d) That when the average attendance is expected to be 18, the schoolroom shall measure 17 feet in length, 14 feet in width, and 9 feet in height to the wall-plates, and shall have a pitched roof, two windows, a boarded floor, and a fireplace; two out-offices must also be provided, together with the following articles of furniture, viz.:—  4 dosks, each 7 feet 6 inches long.  4 forms, each 7 feet 6 inches long.
1 book-press or box. 1 table, 3 feet by 2 feet.
1 chair.
(e) That the applicants for a Provisional School state, on the usual form of application, the arrangements which they deem best for having the building creeted, and the furniture supplied, with the least possible delay.
49. Teachers of Provisional Schools will be appointed by the Minister, after their competency for the office has been ascertained.
50. To ensure the continuance of a Provisional School, the provisions of the Public Instruction Act must be duly observed, and an average attendance of not less than 12 pupils maintained.  51. Provisional Schools shall be classified in the following manner:—  Schools with a server of the description of the provisional Schools with a server of the description.
Schools with an average attendance below 20, but not below 18.  First-class Provisional Schools.
Schools with an average attendance below 18, but not Second-class Provisional Schools.
Schools with an average attendance below 15, but not Third-class Provisional Schools.
52. The Salaries of Teachers of Provisional Schools shall be at the following rates:— In First-class Provisional Schools, £96 per annum. In Second-class Provisional Schools, £84 per annum. In Third-class Provisional Schools, £72 per annum.
53. School fees shall be paid at the same rate as prescribed for Public Schools, and the sums received shall be paid to the Consolidated Revenue.
54. Provisional Schools must be conducted in every respect as Public Schools, and be subject to all the provisions of the Public Instruction Act with respect to religious instruction.  55. The course of secular education shall embrace Reading, Writing, Arithmetic, Grammar, Geography, and History, with needlework for girls, whenever practicable; and the instruction must be imparted in accordance with the prescribed standards of proficiency.
Schedule.

If a school building has been provided without cost to the Department, or can be rented, describe it.

Can

Can a suitable and central site be obtained on Crown land? If not, is there a site on private property that can be rented by the Department for a term of years at a peppercorn rental, on the understanding that any building erected by the Minister may be removed before or at the expiration of that term?

What arrangements are deemed best for having the requisite building erected and furniture supplied with the least possible delay, in accordance with article 3 of the Regulations for Provisional

Annex to Application for the establishment of a Provisional School.

WE the undersigned, parents (or guardians) of childre residing within the undermentioned distances of the proposed Provisional School at , hereby undertake that our children, whose names are inserted below, shall attend the said school regularly and punctually:—

Name of Parent or Guardian. (*To be written by) himself.)	Distance from proposed School.	Distance from nearest existing State School.	Age.	Religious Denomination.

If the Parent or Guardian be unable to write, his mark must be witnessed by one of the local promoters.

### SCHOOLS TAUGHT BY ITINERANT TEACHERS.

### (A.) Half-time Schools.

56. Wherever twenty children, between the ages of six and fourteen years are residing within an estimated radius of 10 miles from a central point, and can be collected in groups of not less than ten children in each, the Itinerant Teacher shall visit two such places only, and the schools so established shall be designated Half-time Schools.

57. Applications for the establishment of Half-time Schools must be made in the form appended; but aid will not be granted towards the maintenance of such schools unless suitable school-houses be provided by the applicants.

provided by the applicants.

58. No schoolroom shall be approved unless it be at least 10 feet in width, be floored, be provided with a fireplace, and be properly lighted and ventilated.

59. A full supply of furniture and school books shall be granted as a first stock to all schools newly established, and further grants will be made from time to time, as may be deemed expedient.

60. The same Registers are to be kept, and the same Returns furnished as in Public Schools.

61. Every teacher must divide his time between the schools under his charge, in such a way as to effect the largest amount of good. Where practicable, he is to devote the mornings to the teaching of one school, and the afternoons to the teaching of the other; but, if found more suitable, other arrangements may be adopted, under the authority of the Inspector charged with the supervision of the schools. The parent or guardian of each child is to be supplied by the Teacher with a time-table showing the hours at which school opens and closes.

62. Half-time Schools shall be classified in the same manner as Public Schools, according to the total average attendance of pupils at the stations at which teacher gives instruction.

63. Teachers shall be paid the full rates of salary attached to the classification of their schools.

64. The scale of fees for Half-time Schools shall be, for five days teaching—

For one child in a family, three pence.

For one child in a family, three pence.
For two children in a family, six pence.
For three children in a family, nine pence.
For four or more children in a family, one shilling.
The sums received shall be forwarded by the Teacher to the Cashier for payment into the Consolidated

Revenue.

65. Teachers shall be paid an annual allowance of £10, where necessary, for forage, in addition to the salary attached to their schools.

66. As regards instruction, every Half-time School is to be conducted in all respects as a Public School.

67. Teachers are required to insist on the carrying out of a systematic course of Home Lessons.

68. Teachers shall be held directly responsible to the Inspectors under whose supervision they are placed. are placed.

69. At the end of each month a report upon the work done during that period must be furnished by Teachers to the Inspector.

Application for the establishment of Half-time Schools at Post Town

Date

Sir. beg to apply to the Minister of Public Instruction for the establishment of Half-time and under the 23rd section of the Public Instruction Act of 1880. Schools at have the honor to be,

The Under Secretary,
Department of Public Instruction.

Your most obedient Servant,

Information to be supplied by Applicants.

Describe the position of the proposed schools and their distance from each other.

What other schools maintained or aided by the Minister are within two miles of the site of the

proposed schools, respectively?

If none are within two miles, give the name of, and the distance to, the nearest State school.

Are there any Primary Schools not aided by the Minister within two miles of the proposed schools? If so, of what character, and how attended?

State the number of children from four to fourteen years of age, living within a radius of two

miles of the site of each of the proposed schools :-

Annex

Annex to application for establishment of a Half-time School at

WE, the undersigned, parents (or guardians) of children residing within the undermentioned distances from the site of the proposed Half-time School at hereby undertake that our children, whose names are inserted below, shall attend the said school.

Name of Parent or Guardian. (*To be written by himself.)	Distance from proposed School.	Distance from nearest existing State School.	Name of child.	Religious Denomination.	Age.
		_			

* If the parent or guardian be unable to write, his mark must be witnessed.

#### (B.) House-to-house Schools.

- 70. Teachers not necessarily trained may be employed in house-to-house teaching; they must be persons of good moral character, and must satisfy the Inspector that they are capable of imparting the rudiments of an English education.
- 71. The mode in which their time shall be apportioned between the several families visited by will be determined by the Minister, on information furnished by the Inspector.

  72. The subjects of Instruction shall be limited to Reading, Writing, Dictation, and Arithmetic.

  73. It is required that the teacher shall supplement his oral instruction by a systematic course of
- 74. At the end of each month a report upon the work done during that period must be furnished by the Teacher to the Inspector.

- 75. The remuneration of teachers engaged in the work shall be at the rate of £5 per annum for each pupil in average attendance, up to a maximum salary of £100 per annum.

  76. In addition to such remuneration, they shall be allowed, where necessary, a sum of £10 per annum as forage allowance. Application for payment should be made at the end of each quarter.

  77. As a condition to payment of salary, they must keep a record of the pupils' attendance in a satisfactory manner, and furnish punctually and accurately such returns as may be required by the Department. Department
- 78. Necessary text-books and materials will be supplied on requisition, as in the case of other schools.
- 79. The school fees payable shall be at the same rate as prescribed for half-time schools, and the sums received shall be forwarded to the Cashier for payment into the Consolidated Revenue.

Application for the appointment of an Itinerant Teacher for the District of

Place. Post Town, Date

Sir.

We hereby request that the Minister of Public Instruction, in accordance with the provisions of section 23 of the Public Instruction Act, will be pleased to appoint an Itinerant Teacher to instruct the children residing in the vicinity of , and within 10 miles of , and within 10 miles of that place.

The information necessary for the Minister's decision is appended hereto.

We remain, Sir, Your obedient Servants.

Information to be supplied by Applicants for the appointment of an Itinerant Teacher. NAMES of Teaching Stations, their distances from the most central position, and the number of children to be instructed at each :-

### GENERAL REGULATIONS.

Grants of School Books, &c.

80. Grants of school books and apparatus shall be made from time to time, as may be deemed expedient, to all schools under supervision of the Minister, in proportion to the average number of children in attendance. A full supply will be granted to schools newly established.

Requisitions for School Materials.

81. Requisitions for supplies should be forwarded at the end of a quarter only.

Character of School Books:

82. Such books only as are supplied or sanctioned by the Minister shall be used in any school for ordinary instruction.

-2 M

### 274

Apparatus.

83. The term Apparatus shall be held to include maps, diagrams, pictures, black-boards, easels, ball-frames, and Kindergarten appliances.

Registers, &c., to be kept.

84. The undermentioned Registers and Forms shall be kept, according to directions supplied with them, by every teacher: (a) Admission Register, (b) Class Roll, (c) Daily Report Book, (d) Punishment Book, (e) Lesson Register, (f) Time-table, and (g) Programme of Lessons for each Class.

#### Returns.

85. Quarterly and Annual Returns shall be furnished from every school. Each Quarterly Return must be neatly made out in duplicate, one copy to be retained by the teacher as a record, and the other to be furnished to the Inspector on the last Saturday preceding the Midwinter and Christmas vacations, and in other cases on the last Saturday in the months of March and September. The Annual Return must be forwarded, with the Quarterly Return, immediately after the close of the December quarter.

#### Default as to Returns or Registers.

86. Negligence in compiling or sending Returns, or in keeping School Registers, shall render a teacher liable to a fine, or, if repeated, to a loss of classification. Any teacher guilty of fraudulently making false entries in any Register or Return will be dismissed.

### Appointment and Training of Teachers.

87. Every applicant for employment as a teacher, unless he be a University graduate, or a person holding a certificate from a recognized training institution, must show that he has gained in the Colony, either as a pupil in a State School, or otherwise, a sufficient experience of the established Public School system to warrant his employment. Every untrained applicant must undergo a course of training before being permanently appointed, and he must sign an undertaking to accept such employment in any locality indicated by the Minister.

### $Position\ of\ Teachers.$

88. Teachers employed under the Department of Public Instruction are Civil Servants of the Crown, and are entitled to the advantages and subject to the restrictions of that position.

### Teachers not to seek Outside Influence.

89. Teachers are appointed, promoted, and removed on a due consideration of their claims and merits. They are, therefore, prohibited from seeking the interest of influential persons outside the Department to obtain promotion, removal, or other advantage. Any infringement of this Regulation will be severely dealt with.

#### General Qualifications.

90. As a general rule, no person will be appointed as a teacher unless he has been examined and classified. In some cases a teacher may be appointed provisionally who has not undergone examination; but his appointment will not be ratified until his competency has been tested in that manner.

### Examination and Classification.

91. The attainments of Teachers, Students of the Training Schools, and Candidates for employment as Teachers, shall be tested by written and oral examinations, and their skill in teaching determined by their ability to manage a school or class; and, according to such attainments and skill, they will be classified in the following grades:—The first, or highest, class, will have three grades, distinguished as IA with Honors, IA (without Honors), and IB; the Second Class will have three grades, distinguished as IIA with Honors, IIA (without Honors), and IIB; and the Third Class will have three grades, distinguished as 3A, 3B, and 3C. A classification awarded to a Teacher, a Student of the Training School, or a Candidate for employment, after his first successful examination, shall be provisional only, and he confirmed at the end of three years from the date of examination if the Inspectors' reports upon and be confirmed at the end of three years from the date of examination if the Inspectors' reports upon his school work be fully satisfactory: provided that the classification of any Teacher in the School Service shall be liable to reduction or cancellation for inefficiency, gross neglect of duty, or serious misconduct on the part of the person holding such classification.

### Commencement of duty.

92. When a teacher is appointed to a school, he must report to the Inspector of the District the fact of arrival at his post, and the date of commencing duty.

### Resignation of a Teacher.

93. A teacher is required to give not less than one month's notice of his intended resignation, which shall take effect on the last day of the month indicated. Before receiving salary for the last month, he must hand over to a person duly authorized all school property belonging to the Minister, and make out, in duplicate, an inventory of the same: one copy, to be forwarded to the Inspector, the other to be left with the School Records.

### ${\it Teachers \ not \ to \ engage \ in \ other \ Occupations.}$

94. Teachers in the service of the Minister are prohibited from engaging in any occupation not having a distinctly educational character, unless the sanction of the Minister has been previously obtained.

### Duties of Teachers.

Duties of Teachers.

95. The duties of Teachers shall be:—
To observe faithfully these Regulations.
To carry out the suggestions of Inspectors.
To teach according to the Course of Secular Instruction.
To maintain the discipline prescribed in the Regulations.
To keep the School Records neatly, and to furnish Returns punctually.
To see that the undermentioned documents are kept posted in a conspicuous place in the school-room, namely:—(a) The Regulations; (b) Notice to Visitors; (c) Course of Secular Instruction; (d) Time-table; (e) Programme of Lessons; (f) Scale of Fees; (g) Proclamation as to obligatory attendance; List of Public School Board.
To take charge of the school buildings and all property belonging to the Minister, and to be responsible for keeping the school premises in good order and tenantable repair—reasonable wear and tear excepted—and to see that they are not used for any private purposes without the Minister's permission.

### Teachers' Wives.

96. In a school containing female children but no female teacher, it will be the duty of the teacher's wife to teach needle-wook to the girls during at least four hours in each week. In forming an estimate of the efficiency of a school, the competency and usefulness of the teacher's wife, and the time she devotes to school duties, will be taken into account.

Assistant

#### Assistant Teachers.

97. Assistant teachers may be appointed to schools in which the average daily attendance exceeds seventy. They may be (a) persons who have served for four years as pupil-teachers, or, (b) persons who have been examined and classified.

#### $Pupil \cdot teachers.$

98. Pupil-teachers may be employed to serve for not less than four years in any school in which the average attendance has not been less than fifty for the preceding quarter, provided that the teacher holds a classification not lower than Class II.

### Conditions of Appointment.

99. Candidates for the office of pupil-teacher must be not less than thirteen nor more than seventeen years of age, and free from any bodily infirmity likely to impair their usefulness. They must also pass an examination in the subjects specified in Regulation 101.

#### Remuneration.

100. The remuneration of a pupil-teacher will consist partly of instruction to be given by the teacher, for at least one hour on every school day, and partly in a yearly salary.

#### SUBJECTS OF EXAMINATION FOR TEACHERS AND PUPIL-TEACHERS.

101. The subjects in which teachers and pupil-teachers shall be examined for classification are those stated hereunder.

### FOR A THIRD-CLASS CERTIFICATE.

```

^{*} Note.—These groups of subjects are styled Alternative, because candidates are allowed to choose from them the Group in which they wish to be examined. Candidates are required to confine themselves to one group.

Alternative Groups for Males.

Group I.

Algebra—Full value, 1,000 marks. Including the Binomial Theorem.

Text Books—Colenso's Algebra, as revised by Hunter, or

Hamblin Smith's Algebra.

Euclid—Full Value, 1,000 marks. Books I to VI, with Deductions

Text Books—Mackay's Euclid, or

Todhunter's Euclid.

Plane Trigonometry—Full value, 1,000 marks.

Text Book—Todhunter's Trigonometry for Schools and Colleges.

* Group II.

Latin—Full value, 2,000 marks. Virgil, first two Books of Æneid; Livy, Book 21. Horace's Odes, Books I, II. Questions on Grammar. Composition.

Text Books—Dr. Smith's Larger Latin Grammar.

Abbott's Latin Prose through English Idiom.

Greek—Full Value, 1,000 marks.

Greek—Full Value, 1,000 marks.

Text Books—Xenophon's "Memorabilia." Books I and II.

Smith's Smaller Greek Grammar.

Abbott's Greek Prose Composition.

French—Full value, 1,000 marks. Grammar, Translation, Composition.

Text Books—Subjects as for Senior University Examination of the current year.

Havet's French Grammar.

Hallerd's French Grammar.

Hallard's French Grammar.

-Full value, 1,000 marks. Grammar, Translation, Composition.

Text Books—Subjects as for Senior University Examination of the current year. Otto's German Grammar.

†Group III.

Physics—Full value, 750 marks.

Text Book—Ganot's Physics.

Chemistry—Full value, 750 marks. Inorganic.

Text Book—Roscoe's Class Book of Elementary Chemistry (Macmillan).

Geology—Full value, 750 marks.

Text Book—Jukes' or Geikie's Geology.

Botany-

-Full value, 750 marks. *Text Book*—Oliver's Lessons in Elementary Botany.

Physiology—Full value, 750 marks.

Text Book—Huxley's Elementary Lessons in Physiology.

Sanitary Science—Full value, 750 marks.

Text Book—Wilson's Handbook of Hygiene.

Euclid – Full value, 1,000 marks. Books, I to VI, with Deductions.
Text Books—As in Group I.

Algebra—Full value, 1,000 marks. Inclusive of the Binomial Theorem.

Text Books—As in Group I.

Latin-Full value, 1,000 marks. Cæsar, De Bello Gallico. First two books. Virgil's Æneid. Book I.

Text Books—As in Group II.

Group V.

Euclid-Full value, 1,000 marks. Books I to VI, with Deductions.

Text Books-As in Group I.

Algebra—Full value, 1,000. Inclusive of the Binomial Theorem.

Text Books—As in Group I.

And any two Sciences of the Science Group already specified in Group III. Full value, 1,000 marks.

Group VI.

Latin—Full value, 2,000 marks. Virgil's Æneid. Books I, II.
Livy. Book XXI.
Horace's Odes. Books I, II.
Grammar and Composition.
Text Books—As in Group II.

Together with any two of the Sciences in Group III. Full value, 1,000 marks.

Text Books-As in Group III.

Alternative Groups for Females.

Group I.

-Full value, 2,000 marks. Grammar, Translation, Composition.

Text Books—Subjects as for the Senior University Examination of the current year.

Havet's French Grammar.

Hallard's French Grammar.

Group II.

German—Full value, 2,000 marks. Grammar, Translation, Composition.

Text Books—As for Males.

Latin—Full value, 100 marks. Via Latina, to exercise 93; Appendices 2 and 5. Easy translations.

Cassar, De Bello Gallico. (Chaps. I to III).

*French (for Females)—Full value, 150 marks. Macmillan's French Course, Second Year. Macmillan's
First French Reader, pages 1–73.

School Management—Full value, 50 marks. Gladman's School Method. The Kindergarten Principle (Laurie's Kindergarten Manual).

School Management—Full value, 50 marks. Gladman's School Method. The Mindergarten Timerpo (Laurie's Kindergarten Manual).

Needlework (for Females)—Full value, 50 marks. 1. A young child's dress, showing gathering and stroking, ornamented with various stitches as shown in former samplers; tucks to be run, frill-whipped and hem-stitched to be used as a trimming. Also cut out any garment required as in former classes. 2. A six-inch sampler done in coloured silk with threads drawn showing all the various stitches used in needlework various stitches used in needlework.

Nore 1.—The course herein prescribed is for all pupil-teachers alike. It is recommended, however, that the Sydney University Matriculation subjects (as set forth in the by-laws and annually published in the Calendar) be also studied by those pupil-teachers who may desire or intend, after admission to the Training School, to present themselves at the Matriculation examination and to compete, in subsequent University examinations, for the privilege of remaining three years in training and proceeding to the final examination for the Bachelor of Arts degree.

Nore 2.—Any pupil-teacher who may have passed the Junior or the Senior University examination in Euclid, Algebra, Latin, or French may be exempted from further examination in such subject or subjects in Classes IV, III, and II.

Nore 3.—Drawing must be taken by all candidates for scholarships, even though the standard has been previously satisfied.

satisfied.

Note 4.—See also Note 4, at end of Subjects of Study for Teachers.

102. An examination of teachers shall be held yearly in each Inspector's district. Teachers who desire to be examined, with a view to promotion, must apprise the Inspector of their wish at least one month before the date of examination, and furnish him with a list of the alternative subjects, if any, upon which they are prepared for examination.

Promotion

^{*} From female pupil-teachers in country districts the following will be accepted in lieu of French, where it can be shown that the examince has had no means of acquiring a knowledge of the language in question:—

**Euclid and Algebra.**

**As for Males.**

**As for Males.**

### Promotion for Good Service.

103. Teachers can be promoted from one class to another by examination only. But in each class a teacher may, without examination, be advanced to a higher grade for good service, counting from 1885; that is to say, if in the last five years during which he has held his classification, his school has increased in efficiency, if the Inspectors' Reports throughout that period have been satisfactory, and the Report for the fifth year indicates that the applicant's practical skill is equal to that required for the grade sought, and if his general conduct has merited the Minister's approval.

### Promotion by Removal.

104. Teachers desirous of being promoted to more important schools must intimate their wishes to the Inspector of the district, in writing. A list of such teachers will be kept in the Department of Public Instruction; and, except in special cases, promotions will be made in accordance with the principle of classification and seniority.

#### . Efficiency of Teachers.

105. In judging of the efficiency and usefulness of Teachers and of their claims to promotion, the successful work carried on by them in connection with (a) the initiation and management of School Savings' Banks, (b) the planting and beautifying of school grounds, (c) the instructing and drilling of Public School Cadet Corps, and (d) the passing of pupils at the Junior or Senior Examinations, will have full value awarded to it.

### Classification of Schools.

106. Primary schools established or maintained under this Act shall be classed as follows:-

#### First Class Schools.

All schools in which the average daily attendance is not less than six hundred in three departments, boys', girls', and infants', and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Second Class Schools.

All schools in which the average daily attendance is not less than four hundred children nor more than six hundred in three departments, boys', girls', and infants', and in which the standard of proficiency prescribed for that class of school is fully reached.

#### Third Class Schools.

All schools in which the average daily attendance is not less than three hundred nor more than four hundred in three departments, boys', girls', and infants', and in which the standard of proficiency prescribed for that class of school is fully reached.

### Fourth Class Schools.

All schools in which the average daily attendance is not less than two hundred nor more than three hundred in two departments, and in which the standard of proficiency prescribed for that class of school is fully reached.

### Fifth Class Schools.

All schools in which the average daily attendance is not less than one hundred nor more than two hundred children, and in which the standard of proficiency prescribed for that class of school is fully reached.

### Sixth Class Schools.

All schools in which the average daily attendance is not less than fifty nor more than a hundred children, and in which the standard of proficiency prescribed for that class of school is fully reached.

### Seventh Class Schools.

All schools in which the average daily attendance is not less than forty nor more than fifty, and in which the standard of proficiency prescribed for that class of school is fully reached.

### Eighth Class Schools.

All schools in which the average daily attendance is not less than thirty nor more than forty children, and in which the standard of proficiency prescribed for that class of school is fully reached.

### Ninth Class Schools.

All schools in which the average daily attendance is not less than twenty nor more than thirty children, and in which the standard of proficiency prescribed for that class of school is fully reached.

### Tenth Class Schools.

All Public Schools in which the average daily attendance does not reach twenty.

### Condition of Retention in Class.

107. Where a school fails to meet the conditions above specified, the Minister may remove such school to a lower class.

### Eligibility of Teachers for appointment to certain Schools.

108. Teachers who have gained their classifications by examination, or by promotion under Regulation 103, shall be eligible for appointment to any school or department, in accordance with the following Schedule:-

Class of School or Department.	Teacher's Classification.
_ I	I.A.
II	. 1.B.
III , ,	II. A. with Honors.
IV	II. A.
V	II. B.
VI	II B.
VII	III. A.
VIII	III B.
IX	
x	

109. A teacher may be removed from the school in which he is employed to another of a lower class, should he fail, through any default on his part, to maintain the requisite number of pupils in average attendance, or to satisfy the conditions of the standard of proficiency.

#### Teachers' Emoluments.

110. The salaries	of male t	eachers shall	be according to the following scale:-	
For a teacher	in charge	of a school of	the First Class	£400
$\mathbf{D_o}$	do ¯	do	Second Class	336
$\mathbf{Do}$	đo	_ do	Third Class	252
$\mathbf{Do}$	do	do	Fourth Class	240
$\mathbf{Do}$	do	do	Fifth Class	228
$\mathbf{Do}$	do	do	Sixth Class	216
$\operatorname{Do}$	do	do	Seventh Class	180
$\operatorname{Do}$	do	do	Eighth Class	156
$\mathbf{Do}$	do	do	Ninth Class	132
$\mathbf{Do}$	do	do	Tenth Class	108

In schools ranking below the fourth class, the salaries of unmarried male teachers, of married teachers who are not assisted by their wives, as required by regulation 96, and of female teachers in charge, shall be £12 per annum less than the foregoing rates.

111. In addition to these salaries, residences, vested or rented, shall be provided for classified male teachers in charge of classified Public Schools; but a residence rented for a teacher shall be as near as practicable to his school practicable to his school.

#### Mistresses.

112. The salaries of mistresses shall be according to the following scale:-
For a mistress in charge of a girls' or infants' department of a
School of the First Class

1001 01	the First Class	£300
Do		252
$\mathbf{Do}$	Third Class	204
Do	Fourth Class	109
Do	Fifth Class	100
20	£ 11011 C1035	1.80

#### Assistant Teachers.

### 113. Salaries shall be paid to assistant teachers as follow:

To a First Assistant, holding a First Class Certificate, in a school of the First Class To a Second Assistant, holding a Second Class Certificate, in a school of the	Male. £250	Female. £168
First Class	150	120
To a Third Assistant, holding a Third Class Certificate in a school of the		
First Class.	108	100
To a first Assistant, holding a Second Class Certificate, in a school of the		
Second Class	180	144
To an Assistant holding a Second Class Certificate, in a school of the Third,		
Fourth, or Fifth Class	150	114

#### Pupil-teachers.

### 114. Salaries shall be paid to Pupil-teachers at the following rates:-

T1 . 01	Male.	Female.
First Class	£72	£48
Second Class	60	36
Third Class	. 10	
Figure 1. Class	40	30
Fourth Class	42	24

### Work-mistresses.

115. Work-mistresses may be appointed to schools of the first and second classes; and their salaries shall be at the following rates:-

In a First Class School with an average daily attendance of not fewer than 250 girls.  In a First Class School with an average daily attendance of fewer than 250 girls.	ብ ነበር
In a Second Class School	
In First Class Schools with an attendance of 250 girls In First Class Schools with an attendance of fewer than 250 girls In Second Class Schools	1.

117. Each Work-mistress shall be required to keep a record showing the names of the pupils, as well as the dates of commencing and completing each piece of work. The record is to be preserved for the information of the Inspector, and of the Directress of Needlework.

118. The regular Teachers of such classes as may be receiving instruction in Needlework will be expected to assist the Work-mistress in the performance of her duties.

### TRAINING SCHOOLS.

### Classes of Candidates.

Classes of Candidates.

119. The Minister may authorize to be received into the Training Schools, annually, three classes of candidates, namely, First Class, or Scholarship Candidates—Thirty pupil-teachers whose term of service has expired, and who have obtained the highest marks among those passing the entrance examination successfully; Second Class, or Half-Scholarship Candidates—Twenty pupil-teachers whose term of service has expired, and who have obtained, after the first thirty, the next highest marks among those passing the entrance examination successfully, and are prepared to pay half the cost of their maintenance while in training; Third Class, or non-Scholarship Candidates—Other Pupil-teachers whose terms of service have expired, untrained teachers who have had charge of schools, and persons entering the teaching profession for the first time, who have passed the entrance examination successfully, and are prepared to pay the whole cost of their maintenance while in training.

### $Qu\^alifications.$

120. Candidates must apply for admission in a form prescribed by the Minister. They must, except in the case of pupil-teachers, be not less than twenty years of age, and, as a general rule, not more than thirty; they must be free from any bodily infirmity likely to impair their usefulness as teachers, and be persons of active habits and unblemished reputation. They must also satisfy the Minister as to their previous history and their qualifications.

### Conditions of Admission.

121. Before admission, every candidate must make a declaration that he intends, in good faith, to tollow the profession of a teacher in schools under the Minister, and that he will accept a situation in any district, as the Minister may see fit. He must also procure a guarantee from two responsible persons that the whole expense of his training defrayed by the State will be refunded, if, from any cause whatever, he shall not enter the service of the Minister, or shall leave it in less than three years from the date of his first appointment.

Terms

1—2 N

### Terms of Training.

122. Entrance examinations shall be held yearly in December; and the periods of training will be one year, two years, or three years, as may be found expedient.

#### Allowances during Training.

123. The following allowances may be made to students who satisfy the aforementioned conditions and pass successfully the prescribed examinations:—To scholarship students, £6 per month; to half-scholarship students, £3 per month. When the school is prepared to receive students into residence, these allowances are not paid, board and lodgings being provided instead.

### Practical Training.

124. The students shall be trained in the practical management of schools by attendance at the Practising School.

#### Examinations.

125. Oral examinations of the students shall be held periodically to test their attention and progress; and written examinations shall take place yearly, in December, when classifications will be awarded according to attainments and teaching skill to students who have completed their course. No certificate shall be given until the Inspector's Report shows that the student is successful in the management of a

#### GOVERNMENT OF SCHOOLS.

#### Public School Boards.

126. The Minister reserves to himself the power of controlling, through his officers, the internal management of schools; but, for other purposes, he will avail himself of the assistance of Public School Boards, wherever suitable persons are found to fill the office.

127. Every Public School Board, at the first meeting thereof, shall elect from the members a Chairman, whose duty it will be to correspond with the Minister on behalf of the Board; and the Board may in like manner appoint such other honorary officers, being members of the Board, as the Board may depend expedient

may deem expedient.

128. A Public School Board may, by resolution passed at a duly constituted meeting thereof, appoint any member or members to perform the duty, prescribed by the 19th section of the Public Instruction Act, of visiting any of the schools placed under the supervision of the Board; and it shall be the duty of the member or members so appointed to report the results of any such visitation to the Board, who will, if necessary, report to the Minister.

129. The grounds upon which any Public School Board shall exercise the power conferred on it by the section beforementioned to suspend a teacher for misconduct, shall be the following:—Unfitness on the part of such teacher to perform his duties from intemperance, immoral conduct, gross neglect of duty, or continued absence from duty without leave.

130. Public School Boards shall, before leaving the school under visitation, report to the Minister any case in which a teacher is suspended by them, and apprise the Inspector having charge of such school by letter. may deem expedient.

any case in which a teacher is suspended by them, and apprise the Inspector having charge of such school by letter.

131. Public School Boards are expected to use every endeavour to induce parents to send their children regularly to school, and to report the names of any parents or guardians who refuse or fail to educate their children, for which purpose necessary forms will be provided.

132. When the course laid down in Regulations under the 13th section of the Public Instruction Act for relieving parents and guardians from payment of school fees by the Minister is not convenient, application may be made by parents or guardians to the Public School Board of the district; and, if satisfied as to the inability of the applicants to pay school fees, such Public School Board may issue a certificate of exemption from payment thereof for a period not exceeding three months, and shall thereupon report the case to the Minister.

133. In fixing the hour for special religious instruction, in accordance with section 17 of the Public Instruction Act, the Public School Board should take care that the daily routine of the school, as laid down in the Regulations, is not unduly interfered with.

134. In addition to the powers conferred on such Boards by the Public Instruction Act, the Minister entrusts to them the following duties:—(a) To take care that the school buildings are not used for any improper purpose. (b) To see that a sufficient quantity of suitable furniture and apparatus is provided. (c) To take precautions for excluding from the school, during its ordinary business, all books not sanctioned by the Minister. (d) To inspect periodically the School Registers and Records. (e) To see that the school is open on all the usual school days, and that the teacher is present at his work. (f) To observe whether the teacher discharges his duties, to report his conduct to the Minister when he is in fault, and to protect him from vexatious complaints.

### Inspectors of Schools.

135. Inspectors and other persons deputed by the Minister to visit any school shall be furnished with proper credentials. Every teacher is required to treat such persons with deference; to carry out their suggestions for the improvement of the school; and to obey their instructions in all matters relating to the Public Instruction Act and these Regulations.

### Duties of Inspectors.

136. Inspectors are to enforce observance of the provisions of the Public Instruction Act and of the Regulations; but their decisions shall be subject to appeal to the Minister. They are to examine into condition of the schools, and to inquire into all matters which it may be expedient to report to the Minister. They are authorized to determine all questions of school management, and to take the teaching of a class or of a school into their own hands for a time, to show the teacher how defective methods may be improved.

### Annual Inspections.

137. Once at least in the year, every school in each Inspector's district shall be visited by him and the pupils be examined as to their proficiency in the several branches of instruction as authoritatively prescribed. He shall, within six days of such inspection, send a report thereupon to the Minister, together with such observations on the state of the school generally as shall appear to him to be called

### Conduct of Inspectors.

138. In their intercourse with teachers, Inspectors should be guided by feelings of respect for the teacher's office, and of sympathy with his labours. They should exhibit towards teachers every possible courtesy, treating them at all times with the consideration and kindness which the difficulties of their position demand. position demand.

### Observati Book.

139. The Inspector's remarks upon the state of a school visited by him, shall, at the close of the examination, be entered in the Observation Book of the school, which, as a record, is to be carefully preserved. Entries therein must not be erased or altered.

School

#### SCHOOL ROUTINE AND DISCIPLINE.

#### Punctuality.

140. With a view to the proper training of their pupils, teachers must conduct the operations of their schools with punctuality and regularity.

#### Cleanliness.

141. Habits of personal neatness and cleanliness are to be encouraged among the pupils, not only by precept, but by the personal example of the teachers, and, if necessary, may be enforced. Teachers are also responsible for keeping the schoolrooms and furniture clean and arranged in an orderly

#### Order and Conduct.

142. Teachers are to instil into the minds of their pupils the necessity for orderly and modest behaviour, as well as for obedience to teachers and to the rules of the school. Pupils should also be trained to exhibit respect for the property of others, whether public or private; to regard the feelings of their fellows; to be honest and truthful, attentive under instruction, and conscientious in the discharge of every duty.

### Government of Pupils.

143. In the government of pupils a teacher must avoid all degrading punishments. His discipline should be mild but firm, his manner kindly, his demeanour cheerful, and his language marked on all occasions by strict propriety. While overlooking no offence, his aim should be to prevent the necessity for punishment by effecting the improvement of the offender.

### Corporal Punishment.

144. Corporal punishment may be inflicted, but by the principal teacher only, or by an assistant with his approval. It should be restricted as much as possible to extreme cases; and the teacher must keep a record of the time and place of punishment, its amount, and the nature of the offence.

### Expulsion of Pupils.

145. No pupil shall be expelled from any school except by the authority of the Minister.

146. A pupil may, nevertheless, for gross insolence, persistent disobedience, profanity, or immoral conduct, be, by the teacher, forthwith removed from the school: provided that, in every such case, the matter shall be reported without delay to the Minister; and, until its settlement by him, the pupil shall not be re-admitted.

#### Playground Supervision.

147. The conduct of pupils in the playground must be carefully supervised by the teacher; and he must see that, in proceeding to school and returning from it, their behaviour is orderly.

### Religious Views of Pupils or of Parents.

148. Nothing must ever be said or done by any teacher, in a pupil's hearing or presence, calculated to offend the religious views of that pupil, or of any other in the school, or of the parents of any such pupil.

#### Daily Routine.

149. In all schools maintained or aided by the Minister, the daily routine shall be that specified hereunder: Provided that, by permission of the Minister, the time of assembling may be half an hour later than so specified; in which case, the several times stated will be later in the same proportion.

## Morning.

At 8:45. Pupils to assemble in the playground. All school materials to be prepared for lessons.

At 8:55. Pupils to be arranged in ranks, inspected as to cleanliness, and marched into school.

At 9. Lessons (or Special Religious Instruction) to commence; as noted in the Time-table prescribed by Rule 150.

At 10:30. Recess for ten minutes, to be spent in the playground by pupils and teachers. At 10:45. Lessons to be resumed according to the Time-table. At 11:55. Class-roll to be called and marked.

At 11:55. Class-roll to be called and marked. At 12. The school to be dismissed for mid-day recess.

### Afternoon.

From 12 to 1·20. Recess for dinner and recreation, under the superintendence of the teachers At 1·20. At 1·25. At 1·30. Lessons to re-commence as noted in the Time-table.

At 3·25. The Roll to be called and marked.

The representation of the superintendence of the teachers Pupils to re-assemble in the playground. School materials to be prepared for lessons. Pupils to be arranged, inspected, and marched into school.

Lessons to re-commence as noted in the Time-table.

The Roll to be called and marked.

At 3.30. The school to be dismissed.

### Time-table.

150. The Time-table to be observed in the schools is the following, except that, in cases within the proviso to the preceding Regulation, the time in each instance will be half an hour later than specified:—

From 9 to 10. Special Religious Instruction; or, in Public and Provisional Schools, where no Religious Teacher is in attendance, Ordinary Instruction.

From 10 to 12. Ordinary Instruction.

From 12 to 1:30. Recess for dinner and re-assembling.

From 1:30 to 3:30. Ordinary Instruction.

### Special Religious Instruction.

151. Where the time specified for special religious instruction is inconvenient, some other hour may be fixed by mutual agreement between the Public School Board, the teacher, and the person giving such instruction.

### · acations and Holidays.

152. The vacations sanctioned by the Minister are—three weeks at Christmas, one week at Easter, and a fortnight at Midwinter. The holidays allowed, other than those occurring in vacation, are—the Anniversary of the Colony, of the Queen's Birthday, and of the Prince of Wales' Birthday; and Good Friday.

Teachers are to enter on their Time-tables these Vacations and Holidays.

### Closing Schools.

153. No school is to be closed upon any school-day without the written direction of the Minister or other person duly authorized by him on that behalf.

### ${\it Infectious~Diseases}.$

154. The attendance of any pupil suffering from any contagious, offensive, or infectious disease, may be temporarily suspended by the teacher under rules approved by the Minister.

Instruction

### Instruction in Schools.

Course of Instruction.

155. The Course of Secular Instruction, as the term is defined in the Public Instruction Act, shall he as follows for each class :-

#### INFANTS' DEPARTMENT.

(Course, 2 years.)

Reading-Primer and Reader I-" Australian School Series."

Reading—Primer and Reader I—"Australian School Series."
Writing—On slates, from copies and dictation.
Arithmetic—Notation to four places, and Simple Addition on slates; casy mental operations in Addition and Subtraction, and the Multiplication Tables to "7 times."
Object Lessons—Familiar Objects, Domestic Animals, Common Vegetables, Common Materials.
Form—Lines and Angles, Three and Four-sided Figures, Curved-line and other Plain Figures,
Colour—Primary, Secondary, and Tertiary Colours; Combination, Shades and Tints.
Singing—Simple Melodies by Ear.
Scripture—Narratives and Moral Lessons.
Drill—Inspection Drill, Free Exercises, Gallery Exercises, Marking Time.
Drawing—On Slates, Lines, Angles, Parallels.

### FOR PRIMARY SCHOOLS AND FOR BOYS' AND GIRLS' DEPARTMENTS.

First Class.

(Course, 11 year.)

Reading—Primer, Reader I—A. S. Series; or, I.N.B. Series as far as Book II, Section III, Lesson 8. Writing—On slates from copy.

Dictation—From Lessons read.

Arithmetic— } As in Infants' Department.

Scripture—Narratives and Moral Lessons; Old Testament, No. 1.

Object Lessons -

As in Infants' Department. Drawing-

Needlework—Hem, top-sew, make holland or calico work-apron or sachet. Name to be marked.

Second Class.

(Course, 1 year.)

(Course, 1 year.)

Reading—Reader II, A.S. Series, or I.N.B. Series, Book II, with Sequel I.

Writing—On slates from copy; in copy-books.

Dictation—From Lessons read.

Arithmetic—Notation; Simple Rules; Mental Arithmetic—Simple Rules, Tables, Money.

Object Lessons—Domestic Animals, Common Objects, and Materials, Common Animals, and Vegetables.

Singing—Simple Melodies by Ear; Scale Exercises, Two and Three Pulse Measures.

Scripture—I.N.B., Old Testament No. I; Moral Lessons.

Drawing—Freehand, on Slates; Simple Right-lined and Curved Figures.

Drill (for Boys)—"Infantry Drill for 1889"; Squad Drill with Intervals; Sections 1, 2, 3, 4, 5, 6, 25, 26; Marching, 12, 13, 15, 16, 17, 18, 19, 31, 32, and 50; Exercises, 1, 2, 3, 4.

Drill (for Girls)—Dressing with Intervals; Turnings by Numbers; Free Exercises and Body Flexions (six exercises); Marching in Single Rank.

Needlework—Hemming, Top Sewing, Feather Stitch, Satin Stitch; a Pinafore, Pillow-slip, &c.; Seams top-sewed and felled-finishel with tapes.

Third Class.

(Course, 2 years.)

Reading - Readers III and IV, A. S. Series; or, I.N.B. Series, Books III and IV; Synonyms, Meanings, Derivations; Repetition of Poetry, 130 lines.

Reading—Readers III and IV, A. S. Series; or, I.N.B. Series, Books III and IV; Synonyms, Meanings, Derivations; Repetition of Poetry, 130 lines.

Writing—In copy-books.

Dictation—From the Reading Lessons, with correct spelling and punctuation.

Arithmetic—Compound Rules and Reduction; Simple and Compound Proportion. Mental Arithmetic—Prices of Dozens and Scores, Exercises in Buying and Selling Transactions, and in Proportion.

Grammar—All the Parts of Speech; Accidence, Parsing and Analysis of Simple Sentences; the Rules of Syntax; Composition—Letter-writing, description of places and events.

Geography—School Locality, Cardinal Points, Definitions, Map of World; Outlines of the Geography of Australasia and Polynesia; Physical Geography, and Towns of New South Wales and Europe; Mapping.

Object Lessons—Animal and Plant Life, with Special Reference to Agriculture; the Human Frame and Laws of Health; Elementary Physiology; Important Manufactures.

History—Nelson's Brief History of England; History of Australia; Outlines of English History.

Singing—Part-singing; Notation, Pitch, Accent, Length of Sound; Double, Triple, and Quadruple Measures; Time Signatures; Scale, &c.

Drawing—On Paper; Freehand Exercises from Models and Common Schoolroom Objects; Geometrical Figures, with Rulers and in Freehand.

Scripture—I.N.B. Old Testament No. 1; New Testament No. 1.

Needlework—Plain Under-garments, Stitching, Herring-boning, Eyelet and Button Holes, Felling, Running, Darning, &c.; Sampler showing various stitches used in needlework.

Drill (for boys)—"Infantry Drill for 1889"; Physical Training, section V, Exercises 5, 6, 7; Marching—Sections 7, 8, 10, 11, 20, 21, and 22; and Squad Drill, sections, 37 to 50.

Drill (for girls)—File Marching; Wheeling in File; Marking Time; Changing Step; Free Exercises while Marching and Marking Time.

Fourth Class.

(Course, 1 year.)

Reading-Reader V to Lesson 56, AS. Series; or I.N.B. Fourth Supplement, to page 155. Repetition Reading—Reader V to Lesson 56, A S. Series; or I.R.B. Fourth Supplement, to page 100.

of Poetry—100 lines.

Writing—In copy-books.

Dictation—From any portion of books read, with punctuation.

Arithmetic—Practice Vulgar and Decimal Fractions; Interest; Discount, Profit and Loss; Mensuration of Surface Mental Arithmetic.

Common Accidence Parsing and Analysis generally: framing Sentences: simple Essays.

Grammar—Accidence; Parsing and Analysis generally; framing Sentences; simple Essays.

Geography—Physical features and Chief Towns of Asia and America; Mapping.

Object Lessons—As in Third Class (advanced), with the Chemical and Physical principles involved in

Agriculture; Health Elementary Physical Science.

History—Nelson's History of England for Junior Classes, Henry VII to Victoria; History of Australia. Also Work of Class III. Singing.

Singing—As in Third Class; Sharps, Flats, Transition, Staff Notation, Key and Time; Signatures and Intervals fully; Three Part Songs; Easy Passages at Sight.

Drawing—Freehand Drawing, from copies of common objects, which should be enlarged or reduced from the example; Drawing Plans and Elevations of Plane Figures and Rectangular Solids, in simple positions; Drawing Geometrical Figures with Instruments; Drawing to Scale in a limited

manner. Scripture—I.N.B. Whole Series.

Scripture—I.N.B. Whole Series.
Euclid—Book I, to Proposition XII.
Drill (for boys)—"Infantry Drill for 1889"; Company Drill; Formation and Movements—Sections
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 20, 22.
Drill (for girls)—Marching in line; Balance Step, with and without advancing; Body and Limb Flexions; Pole Exercises; Dumb Bells (\frac{1}{2} \text{lh.}).

Needlework—The Work of the Previous Standards, with advanced skill; Patching in Calico, Flannel, and Print; Cutting out Garments, and Setting Work. Ornamental Work and Knitting to be introduced when standard of plain needlework prescribed for the Third Class has been completed.

### Fifth Class.

(Course, 1 year.)

Reading—As prescribed for University Junior Examination.

Writing—As in Fourth Class.

Dictation—On unruled paper, ordinary prose—15 corsecutive lines.

Arithmetic—Full Course, from Hamblin Smith's Manual, or any equivalent. Mensuration—Regular Surfaces and Solids.

Geography— S As prescribed for Junior and Senior Public Examinations at the Sydney University.

Natural Science-Physics or Physiology, or one of the Science Subjects prescribed for University Examinations or

Cooking : For girls

Cooking: For girls

Geometry—Euchd, Books I and II, with easy exercises.

Algebra—Hamblin Smith's Algebra to Chapter 13.

Latin (for boys)—Abbott's "Via Latina," to page 53, with the first conjugation and the verb sum.

French (for girls)—Macmillan's Progressive French Course to the end, with Macmillan's "First Reader," to page 28, or an equivalent.

Needlework—As for Fourth Class; Child's Frock in Washing Material; Cutting out and Fixing Work Fancy Work and Knitting at discretion of Work Mistress.

Drill (for boys)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Drill (for girls)—As for Fourth Class.

Solventy — Similar to Class IV, but of greater difficulty; Drawing from Common Objects and from Casts of Ornaments in Light and Shade; Plans and Elevations of Circular Solids, with sections.

Music—As in Third and Fourth Classes; Major and Minor Modes; Inversions, &c.

Scripture—As in Fourth Class.

Note 1.—Where there are pupils in a Fifth Class in third half-year, it is expected that Trigonometry will be introduced; also Euclid Book III; Algebra to Quadratics.

Note 2.—Where there are not as many as ten pupils to form a Fourth Class or a Fifth Class, as required, the Fourth Class and Fifth Class courses are to be taken as additions to the courses of the Third and Fourth Classes respectively.

# THE STANDARDS OF PROFICIENCY FOR THE SEVERAL CLASSES IN SCHOOLS SHALL BE AS FOLLOW:—

### FOR INFANTS' SCHOOLS.

### First Half-year of Enrolment.

First Half-year of Enrolment.

Reading—To read Primer, Part I (Australian School Series), to Lesson 20.

Writing—To write on Slates—i, u, n, w, v, r, w.

Arithmetic—To count and read up to 10; to know ball-frame exercises in Addition, and Addition of other Concrete Quantities as far as 10.

Object Lessons—Familiar Objects.

Form—The different kinds of Lines and Angles.

Colour—First (Primary) Colours.

Singing—Simple Melodies by Ear.

Scripture—Narratives and Moral Lessons.

Drill—Inspection Drill for Cleanliness; Free Exercises; Gallery Exercises.

Drawing—On Slates—Lines, Angles, and Parallels.

### Second Half-year of Enrolment.

Reading—To read Primer, Part I, to the end.

Writing—To Write on Slates all the Letters of the Alphabet, with easy combinations.

Arithmetic—To Count and Read as far as 20; Addition, in single column, to 20; to add and subtract mentally numbers not involving results higher than 20.

mentally numbers not involving result Object Lessons—Domestic Animals.
Form—Three and Four Sided Figures.
Colour—Secondary Colours.
Singing—Simple Melodies by Ear.
Scripture—Narratives and Moral Lessons.
Drill—As for last half-year.
Drawing—As for last half-year.

### Third Half-year of Enrolment.

Reading—Primer, Part II, to the end.

Writing—To Write on Slates from Copies.

Dictation—Words from Lessons Read.

Arithmetic—To Read and Notate as far as 100; Addition to three places—three addends; Mental Arithmetic up to 30; tables to "4 times."

Object Lessons—Common Vegetables.

Form—Curved Line Figures.

Colour—Tertiary Colours.

Singing—Simple Melodies by Ear.

Serioture—Narratives and Moral Lessons

Scripture—Narratives and Moral Lessons.

Drill—As for last half-year.

Drawing-As for last half-year.

#### Fourth Half-year of Enrolment.

Reading—Australian School Series—Reader I, to the end.

Writing—On slates from copies.

Dictation—From lessons read, 8 lines.

Arithmetic—To read and notate up to 1,000; Addition, 4 places, 4 lines; mental operations in Arithmetic and Subtraction; Multiplication Tables to "7 times."

Object Lessons—Common materials.

Object Lessons—Common materials.
Form—Other plain figures.
Colour—Combination; shades and tints.
Singing—Simple melodies by ear.
Drawing—Freehand Drawing on slates—lines, angles, and parallels.
Scripture—Narratives and Moral Lessons.
Drill—As for previous half-years, with marking time—(1) with left foot; (2) with right foot; (3) with left foot and right foot alternately.

Drawing-As for previous half-year.

FOR PRIMARY SCHOOLS AND FOR BOYS' AND GIRLS' DEPARTMENTS.

#### FIRST CLASS.

### First Half-year of Enrolment.

Reading—One of the following books, or an authorized equivalent :-

1. Australian School Series: Primer I, to Lesson 40.

2. I. N. B.: Book I, to Sec. II, Lesson 12.

Writing—To write on slates, from the blackboard, the following letters, with their combinations, in words of four letters—i, u, n, m, o, a, c, e, v, w, r, t, d, l, b, h, j, f, y, g, p, q.

Arithmetic—To count and read any number as far as 20; to add in single columns numbers not involving a higher result than 20; to notate as far as 20; to add and subtract, mentally, numbers not involving results higher than 20.

Drawing—Freehand Drawing, on slates—lines, angles, and parallels.

Object Lessons—As for Infants' Schools; oral lessons on form and colour, on the properties of common

object Lessons—As for Infants Schools; oral lessons on form and colour, on the properties of common objects and materials, and on common animals and vegetables.

Needlework—Hem 2-inch Strips with coloured cotton.

Singing—Simple melodies by ear.

Scripture—Narratives (Old Testament No. 1)—Moral Lessons. (First and Second Classes may be taken together.)

Drill—As for Infants' Schools, first half-year.

### Second Half-year of Enrolment.

Reading-1. Australian School Series: Primer II, to the end.

Reading—1. Australian School Series: Frimer 11, to the end.

2. I. N. B.: Book I, to the end.

Writing—To write on slates from copies.

Dictation—Words from lessons read.

Arithmetic—To read and notate easy numbers as far as 100; to work sums in Addition—three addenas; to add, mentally, numbers involving results not higher than 30; Multiplication Tables to "4 times."

Drawing—As for first half-year.

Object Lessons—As for first half-year.

Needlework—Hem and top-sew together strips with coloured cotton, and plain hems.

Singing—Simple melodies by ear.
Scripture—Narratives and Moral Lessons; Old Testament, No. 1.
Drill—As for Infants' Schools, first half-year.

### Third Half-year of Enrolment.

Reading—1. Australian School Series: Reader I, to the end.
2. I. N. B.: Book II, to Section III, Lesson 8.
Writing—On slates from copies.

Writing—On slates from copies.

Dictation—From lessons read.

Arithmetic—To read and notate numbers as far as 1,000; to work sums in Addition to 4 places, 4 lines; to perform easy mental operations in Addition and Subtraction; Multiplication Tables to "7 times." 
Drawing—As for first half-year.

*Object Lessons—As for first half-year.

Singing—Simple melodies by ear.

*Scripture—Narratives and Moral Lessons: Old Testament, No. 1.

Drill—As for Infants' Schools, fourth half-year.

Needlework—Make Work-apron or Sachet with holland or calico. Name to be worked.

											SECOND

Note.—The enrolment of each pupil in the several classes of an Infants' School must show the time of such pupi in the school and not in the class.

*In small schools, the First and Second Classes should he combined for Object Lessons and Scripture, and should receive in each subject not less than one half-hour lesson per week; the inspection to be conducted on the lessons actually given.

#### SECOND CLASS.

### First Half-year of Enrolment.

One of the following books, or an authorized equivalent:
1. Australian School Series: Reader II, to Lesson 50.
2. I.N.B.: Book II, to the end.

Writing—In copy books.

Dictation—Eight lines from lessons read.

Arithmetic—Notation as far as six places, three lines; Subtraction; Multiplication by two digits; Mental

Arithmetic; More difficult operations in Addition and Subtraction; Multiplication Tables to

"12 times."

Singing-Simple melodies by ear; Easy Exercises on the Modulator.

Singing—Simple melodies by ear; Easy Exercises on the Modulator.

*Scripture—Old Testament, No. 1.

Drawing—Freehand Drawing on slates, of simple right-lined and curved figures.

*Object Lessons—Properties of common objects and materials, common animals, and vegetables.

Drill (for boys)—"Infantry Drill for 1889"; Squad Drill with intervals; Sections 1, 2, 3, 4,6, 25, 26; Marching, 12, 13, 15, 16, 17, 18, 19, 31, 32, and 50.

Drill (for girls)—Dressing with intervals; turnings by numbers; free exercises and body flexions (six exercises); marching in single rank.

Needlework—Hem and top-sew a 9-inch sampler of jaconet with coloured cotton, and feather-stitch all round. Initial or name in satin-stitch.

### Second Half-year of Enrolment.

Reading-1. A. S. S.: Reader II, to the end.

2. I. N. B.: Sequel I, to the end. Writing—In copy-books.
Dictation—Eight lines from lessons read.

Dictation—Eight lines from lessons read.
Arithmetic—Notation to 9 places, 3 lines; Multiplication in full; Short Division; Mental Arithmetic; Exercises in simple Rules; Tables—Money.
Singing—Tonic Sol-fa Notation—Scale Exercises (without accidentals); two and three pulse measures (without subdivision of pulse); simple melodies.
*Scripture—Old Testament, No. 1; Moral Lessons. (Moral Lessons to be given orally.)
Drawing—Freehand Drawing on slates, of simple right-lined and curved figures.
*Object Lessons—As for previous half-year.
Needlework—Make a plain pillow-slip, pinafore, handkerchief, or similar useful article; seams to be top-sewed and felled-finished with tapes.
Drill—As for previous half-year; and Physical Training, section 5; Exercises 1, 2, 3, and 4.

### THIRD CLASS.

### First Half-year of Enrolment.

Reading—One of the following books, or an authorized equivalent:

1. Australian School Series: Reader III, to Lesson 20.

2. I.N.B.: Book III, to Lesson 30.

Repetition from memory of twenty lines of poetry.

Writing—In copy books.
Dictation—Eight lines from lessons read.

Dictation—Eight lines from lessons read.

Arithmetic—Notation, Long Division, Addition, Subtraction, and Multiplication of Money; Mental Arithmetic—Easy Exercises; Tables—Weights and Measures.

Geography—To know the school locality and the cardinal points; and the names and positions of the Continents, Oceans, and chief divisions of land and water marked on a Map of the World.

Grammar—To define the noun, pronoun, adjective, and verb, and to distinguish each in easy sentences.

†Singing—Tonic Sol-fa Notation: scale exercises; easy time exercises; two, three, and four pulse measures (pulse, half-pulse, hold marks, and rests); simple two part songs and rounds.

History—Celtic Period to Henry II; to page 21, Nelson's Brief History of England.

Drawing—On paper, from simple rectangular and circular models, and from common objects about the school-room; also simple geometrical figures, to be drawn with rulers and in free hand.

Scripture—Old Testament, No. 1; New Testament, No. 1; Moral Lessons.

Object Lessons—Lessons on animals and plants, with special reference to agriculture; on the human frame, and laws of health; on elementary physiology; and on important manufactures.

†Drill (for boys)—"Infantry Drill for 1889"; Physical Training as for Second Class; Marching—Sections 7, 8, 10, 11, 20, 21 and 22.

Drill (for girls)—File marching; wheeling in file; marking time; changing step; free exercises while marching and marking time.

marching and marking time.

Mework.—A plain chemise, gathered at neck into a stitched band, ornamented with feather-stitching; or similar useful article which can be completed by stitches already taught.

### Second Half-year of Enrolment.

Reading—1. Australian School Series: Reader III, to the end.
2. I.N.B.: Book III, to the end.

Repetition from memory of thirty lines of poetry.

Writing—In copy-books.

Dictation—Twelve lines from the reading lessons.

Arithmetic—All the Compound Rules; Mental Arithmetic.

Grammar—To distinguish readily all the parts of speech.

Composition—To write a letter of not less

Geography-To know the outlines of the Geography of Australia, Tasmania, and New Zealand.

^{*} In small schools, the First and Second Classes should be combined for Object Lessons and Scripture, and should receive in each subject not less than one half-hour lesson per week; the inspection to be conducted on the lessons actually given.

[†] Note.—In Schools below the Sixth Class, the standard in singing for Second Class shall also be that for Third Class ‡ Note.—In schools below the Sixth Class, the standard for drill will be that for the Second Class.

Object Lessons—As for previous half-year.

History—To death of Richard III; to page 44 of Nelson's Brief History of England.

Singing—Staff Notation (movable doh system); Treble Clef; Pitch and Time; Names; Relative Value of Notes; Two-part Songs and Rounds from Tonic Sol-fa Notation.

Drawing—As for previous half-year.

Scripture Lessons—Old Testament, No. 1; New Testament, No. 1.

Drill (for boys)—"Infantry Drill for 1889;" Physical Training, section 5; Exercises, 5, 6, and 7; Squad Drill, sections 37, 38, 39, 40, 42, 43, 44, 45, 46, 47, 48, 49, 50.

Drill (for girls)—As for first half-year.

Needlework—A linen sampler, with threads drawn, showing the various stitches used in Needlework, namely: top-sewing, stitching, herring-boning, various feather-stitching, eyelet and button-holes, small square of darning, loops; name done in satin-stitch. Third Half-Year of Enrolment. Reading—1. Australian School Series: Reader IV, to the end of Lesson 30.
2. I. N. B., Book IV, to end of Section II. Repetition from memory of forty lines of poetry. Repetition from memory of forty lines of poetry.

Writing—In copy-books.

Dictation—Twelve lines from the Reading Lessons.

Arithmetic—Reduction; Miscellaneous Exercises in Simple and Compound Rules; Mental Arithmetic;

Easy Questions in Buying and Selling.

Grammar—Parsing of Simple Sentences; Accidence, and Analysis of Simple Sentences. Composition—

To write on paper a letter of not less than twelve lines.

Geography—New South Wales—Physical Features and Chief Towns; Mapping.

Object Lessons—As for first half-year.

History—Nelson's Brief History of England, to page 70; Outlines of English History, to the Abdication of James II. of James 11.

Singing—Staff Notation—\(\frac{2}{4}\) and \(\frac{3}{4}\) times; Time Exercises on Minim and Crochet (with corresponding rests); Scale Exercises on the Staff; Two-part Songs and Rounds from Tonic Sol-fa Notation.

Drawing—As for first half-year.

Scripture Lessons—Old Testament, No. 1; New Testament, No. 1.

Drill (for boys)—Same as second half-year.

Drill (for girls)—As for first half-year.

Needlework—1. Sampler as in last half-year.

2. A pair of drawers tucked finished with button-holes in hand; or similar useful articles. 2. A pair of drawers, tucked, finished with button-holes in band; or similar useful article. Fourth Half-year of Enrolment. Reading—1. Australian School Series; Reader IV, to the end.
2. I. N. B., Book IV, to the end.
Synonyms, Meanings, Derivations; Repetition from memory of forty lines of poetry. Writing—In copy books.

Dictation—Twelve lines from the Reading Lessons, on paper.

Arithmetic—Simple and Compound Proportion, with Miscellaneous Exercises in back Rules Mental Arithmetic. Arithmetic.

Grammar—Parsing and Analysis of Sentences, with a knowledge of the Rules of Syntax; Composition.

Geography—Europe—Physical Features and Chief Towns of each Country; Mapping.

Object Lessons—As for first half-year.

History—English History; Nelson's Brief History, to the end; Outlines of English History to the present time; History of Australia.

Singing—Staff Notation, ²/₄, ³/₄, and ⁴/₄ Times; Time Exercises on Minim, Crochet, and Quaver' (with corresponding rests); Scale Exercises on the Staff, introducing fe and ta; Two-part Songs and Rounds, from Tonic Sol-fa Notation.

Drawing—As for first half-year. from Tonic Sol-ta Notation.

Drawing—As for first half-year.

Scripture Lessons—Old Testament, No. 1; New Testament, No. 1.

Needlework—1. Running and felling seams with tucks run and gathered into band, in chemise or similar useful article; name or initial in satin-stitch.

2. Darning in stocking-web material.

3. Button-holes in cloth.

Drill (for hors)—Same as for second half-year. Drill (for boys)—Same as for second half-year.
Drill (for girls)—As for first half-year. Values of Subjects taught to Third Class. Marks. Note 1.—Where there are not ten pupils to form a Fourth Class, the standard prescribed for the first half-year in the Fourth Class shall be that for the fifth half-year in the Third Class.

Note 2.—The work prescribed in Object Lessons, Scripture, and Drawing, is for the whole period pupils remain in the Third Class. The examination will be on the subjects taught.

Note 3.—When the standard of plain needlework prescribed for the Third Class has been completed, ornamental work, or knitting, or both, should be introduced. FOURTH CLASS. First Half-year of Enrolment.

Reading—One of the following books, or an authorized equivalent:—

1. Australian School Series: Reader V, to end of Lesson 22.

2. I. N. B.; Fourth Supplement, to page 63.
Repetition from memory of fifty lines of poetry.

Writing—In copy-books.

Dictation—Twelve consecutive lines from Lessons read.

Arithmetic—Practice; Vulgar and Decimal Fractions; Mental Arithmetic—the full course, as treated in any Standard Work.

Grammar—Parsing passages from Reading Lessons; Accidence; Analysis of a Compound Sentence; Composition.

Geography-

Geography—Asia; Physical Features and Chief Towns of each Country; Mapping.
Object Lessons—Lessons on Animal and Plant Life, and on the Chemical and Physical Principles involved
in Agriculture; more Advanced Lessons on Third-class Subjects, with Light, Heat, and Air in
relation to Health; also Lessons on Elementary Physical Science.

History—English History: Nelson's "History for Junior Classes"—Henry VII to James II; revision
of Third-class Work; Australian History.

Singing—Staff Notation only; Key Signatures, C, F, and G; Structure of Scale, Tetrachords, Common
Marks of Expression, Abbreviations, and Symbols. Time Signatures, ²/₄, ³/₄, ⁴/₂, and ⁶/₃ Times; Easy
Accidentals; Time Exercises on Minim, Dotted Minim, Crotchet, and Quaver (with corresponding
rests); Three-part Songs and Rounds; very easy passages at sight.

Drawing—Freehand Drawing, from copies of Common Objects, which should be enlarged or reduced from
the example; Drawing Flans and Elevations of Plane Figures and Rectangular Solids, in simple positions; Drawing Geometrical Figures with Instruments; Drawing to Scale in a limited manner.

Scripture Lessons—The whole series (Fourth Class and Fifth Class may be taken together).

Euclid—Definitions of, Book I.

Scripture Lessons—The whole series (Fourth Class and Fifth Class may be taken together).
Exclid—Definitions of, Book I.
Drill (for boys)—"Infantry Drill for 1889"; Company Drill; Formation and Movements—Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 20, 22.
Drill (for girls)—Marching in Line; Balance Step, with and without advancing; Body and Limb Flexions; Pole Exercises; Dumb Bells (\frac{1}{2} \text{ lb.})
Needlework—1. Sampler with greater skill than before.
2. A petticoat with tucks run, gathered and stroked into band; or similar useful article.
3. Darning and button-holes, as in last half-year.

### Second Half-year of Enrolment.

Reading-1. Australian School Series: Reader V, to end of Lesson 56.

2. I. N. B., 4th Supplement, to page 155. Repetition from memory of fifty lines of poetry.

Myriting—As for last half-year.

Dictation—Selected passages of twelve consecutive lines from books read.

Arithmetic—Interest; Discount; Profit and Loss; Mensuration of Surfaces.

Grammar—Accidence; Parsing and Analysis generally; Simple Essays.

Geography—America; Physical Features, and Chief Towns of each Country.

Object Lessays—As for first half-year.

Object Lessons—As for first half-year.

History—English History (Nelson's "History for Junior Classes")—William III to present time;

History—English History (Nelson's "History for Junior Classes")—William III to present time;
History of Australia.

Singing—Staff Notation only; Key Signatures, B.D. D. E.D. A; Time Signatures fully; Time Exercises as in last half-year, with Dotted Notes, Ledger Lines, Accidentals, Definitions of most common Musical Terms; Three-part Songs and Rounds; Easy Passages at Sight,

Drawing—As for first half-year.

Scripture Lessons—The whole series.

Euclid—Book I, to Proposition 12.

Drill (for boys)—As for first half-year.

Drill (for girls)—As for first half-year.

Needlework—1. A plain night shirt, showing top sewing, stitching, button-holes, and gathers, and finished with gussets; or a night-dress tucked and trimmed, or any similar article.

2. Patching in calico and flannel.

3. This class will be expected to set their own sewing, with the advice of the Workmistress; and pupils over 14 years of age should be able to cut out and fit garments specified in Third Class.

### FIFTH CLASS.

### First Half-year of Enrolment.

Reading—The Text-book prescribed for the University Junior Examination. Writing—In copy-books.

Dictation—Passages of ordinary prose, fifteen consecutive lines.

Arithmetic—Compound Interest, Profit and Loss, as treated in Hamblin Smith's Manual, or any equivalent; Mensuration; Area of Regular Surfaces.

As prescribed for the Senior or Junior Public Examinations at the Sydney University. History-

Natural Science-Physics or Physiology, or one of the Science Subjects prescribed for the University Examinations or

Cooking: For girls.
Euclid—Book I.•

Euclid—Book I.

Algebra—As shown in Hamblin Smith's Algebra, up to Chapter 6, omitting Exercises 15 to 32.

Latin (for boys)—Abbott's "Via Latina" to Exercise 21, page 29.

French (for girls)—Macmillan's Progressive French Course, to Lesson 25.

Drawing—Similar to Class IV, but of greater difficulty; Drawing from any Common Objects and Casts of Ornaments, in Light and Shade; Drawing Plans and Elevations of Circular Solids with Sections.

Music—Key and Time Signatures fully; Time Exercises on all the ordinary notes and Rests, with Dots, Triplets, Simple Passages at sight, Syncopation, Modulation, Double Dotted Notes, Double Sharps and Flats, Three-part Songs.

Scripture Lessons—The whole series. (The C ass may be taken with Fourth Class in this subject.)

Drill (for boys)—

Drill (for girls)—

As for Fourth Class.

Needlework—

- Needlework-1. Patching in print, flannel, and cloth.

  2. A linen sampler as in Third and Fourth Classes; also a child's dress made of washing material.
  - 3. The pupils will be required to cut out and fix their own sewing; also any garment named in former classes.

#### Second Half-year of Enrolment.

Note 1.—Where there are pupils in a Fifth Class in third half-year, it is expected that Trigonometry will be introduced; and provided the pupils are able to work as far as page 104 of Todhunter's "Trigonometry for Beginners," full marks (100) will be awarded. (Euclid in the third half-year, Book III; Algebra to Quadratics.)

Note 2.—Music—In separate boys' and girls' departments the sexes may be combined for singing lessons at the discretion of the teachers; but the teachers of the respective departments will be held responsible for instruction in the theory of music.

Note 3.—Dnul—In all schools under one teacher, the standard for the second-class shall be the highest required for any class. Subject to this provision, rifle drill should be taught to third and higher classes whenever not fewer than ten pupils can be assembled.

Note 4.—Writing—All writing will be rejected as a failure if there is no attempt made to imitate the copies set.

Note 5.—Arithmetic—Pupils of girls' schools will not be expected to work Discount, Stocks, or Cube Root.

### Provisional Schools.

156. The last preceding Regulation, with all others respecting routine, discipline, and inspection, shall apply equally to Provisional as to other schools.

### Special Religious Instruction.

157. No pupil is to be required to receive Special Religious Instruction if the parents or guardians of such pupil object to such religious instruction being given.

## General Religious Instruction.

158. Where any parent or guardian objects to a pupil receiving the General Religious Instruction prescribed in the Course of Instruction, notification to this effect shall be made to the teacher in writing.

### Denominational Books.

159. The Teacher, in all schools under the superintendence of the Minister, shall see that the religious books employed in the Classes for Special Religious Instruction are confined to the time and place of such instruction, and not left in the way of children whose parents may object to them.

## Methods of Teaching.

160. Every Teacher shall make himself acquainted with improved methods of teaching, and practise them in his school; and, as the efficiency of Teachers will be judged of by the attainments, as well as the moral improvement of their pupils, results, as well as the mode of instruction, should be kept in view.

## Teaching power to be justly distributed.

161. Teachers shall provide for the equitable distribution of their time through all the classes, so that the instruction of no pupil be neglected.

### Person's visiting Schools.

162. Visitors shall have access to every school maintained or aided by the Minister, during the hours of Secular Instruction—not to take part in the business or to interrupt it, but simply to observe how it is conducted.

## Duty of Teachers to Visitors.

163. Every Teacher shall receive courteously visitors seeking to inspect his school, and afford them access to the schoolroom, and liberty to observe what books are in the hands of the children or on the desks, what tablets are on the walls, and what is the method of teaching; but teachers shall not permit any person to interrupt the business of the school by asking questions of the children, examining classes, calling for papers, or in any way diverting attention from the usual business.

Official

#### Official Visits.

164. The restriction expressed in the preceding Rule will, of course, not interfere with the provision in Section 17 of the Public Instruction Act, whereby access is afforded to Religious Teachers for the purpose of communicating Special Religious Instruction.

#### Visitors' Book.

165. Every Teacher shall have the "Visitors' Book" lying upon his desk, in which the visitors may enter their names, and, if they think proper, any remarks. Teachers are by no means to erase or alter any remark so made.

## INSTRUCTIONS TO TEACHERS.

THE following Instructions, issued for the information and guidance of Principal Teachers of Schools and of Mistresses of Girls' and Infants' Departments, are also to be acted upon as far as practicable by Teachers generally.

## I. Instructions relating to Principal Teachers only.

The Principal Teacher will keep a Teachers' Time Book, and will see that all Teachers enter therein the time of their arrival at and departure from school.

2. He will report to the Inspector all Teachers absent from duty without leave, and any who are

habitually unpunctual.

habitually unpunctual.

3. He will visit the other School Departments once a day at least, to ascertain that the Teachers are at their posts and are observing the Time-tables. He will see that all documents required by the Regulations are exhibited in their proper places. It is not intended that he shall interfere with the teaching, the discipline, or the internal management of the other Departments; nor is he at liberty to remove children therefrom to his own Department without the sanction of the Inspector; but he is empowered to decide questions relating to the general order and routine of the entire school, subject to appeal to higher authority.

4. He will, with the concurrence and aid of the Heads of Departments, arrange for the regular cleaning of the schoolrooms, will see that the water-closets and all external premises are kept clean, and that the fences and gates are uninjured by the pupils. He will report promptly any damage done to the school buildings, as also any necessity for emptying the water-closets. If the water for the use of the pupils should become bad, the Inspector should be informed to that effect; and, in dry seasons, care is to be taken to prevent any persons, other than the pupils or the Teacher's family, from obtaining water from the school tanks or wells.

5. He will receive all letters addressed to Teachers at the School, and deliver them to the owners.

from the school tanks or wells.

5. He will receive all letters addressed to Teachers at the School, and deliver them to the owners as soon as convenient. At the same time he will impress upon Teachers that having private letters addressed to them at the school is an inconvenient arrangement, justified only by urgent circumstances. Letters intended for pupils, and non-official letters addressed to Pupil-teachers, should be forwarded to the purpose convenient. the parents of the persons concerned.

6. Persons visiting the School, or calling upon Teachers, should in the first instance be brought to

6. Persons visiting the School, or calling upon Teachers, should in the first instance be brought to the Principal Teacher.

7. He will receive and investigate complaints from perents and others. It is expected that he will attentively consider such complaints, that he will endeavour to ascertain whether they are well founded, and that he will afford the redress which their nature may require or suggest.

8. The Principal Teacher will register all children applying for admission to the School, and will determine the Department for which they are fit.

9. Under the heading in the Annual Return, "Number of Scholars on the Records," pupils who have left, but who have subsequently been re-enrolled in the same school during the year, should only be counted once. A School with two or more Departments is to furnish but one Annual Return, in which children transferred from one Department to another during the year are only to be counted once.

## II. INSTRUCTIONS RELATING ALIKE TO PRINCIPAL TEACHERS AND MISTRESSES OF DEPARTMENTS.

10. He will give vigilant attention to the ventilation and temperature of the rooms, and will especially avoid an excessive degree of heat. At each recess the doors and windows should be opened so as to secure an effectual change of air. Windows should be opened, where practicable, by lowering them from the top; and children must not be allowed to sit in a strong current of air.

11. He will note the methods employed and the discipline maintained by the several Teachers under his immediate supervision, and will have power to interfere whenever he may consider either to be defeative.

to be defective.

to be defective.

12. He will arrange his classes, if four or more, in sections, each section to contain two or three classes; and will place in charge of each section an Assistant Teacher, who, when the staff admits, will be aided by a Pupil-teacher.

13. For all purposes of classification and examination, the actual attendance of a pupil in days shall determine his half-year in class, such half-year to consist of 110 days.

14. When a subordinate Teacher relinquishes the charge of a class or section, it should be examined by the Head of the Department in the presence of the outgoing Teacher and his successor. A record of the condition of the class or section, as elicited by such examination, should be entered in the Lesson Register, and be attested by the signatures of all the persons concerned.

15. A similar course should be followed with respect to the materials used by the class or section in charge of the outgoing Teacher.

16. He will carefully preserve in the School all completed records and duplicate returns, for the use of future Teachers.

17. Corporal punishment must not be inflicted except by the Head of the school or Department.

use of future Teachers.

17. Corporal punishment must not be inflicted except by the Head of the school, or Department, or—under his direction and responsibility—by an Assistant Teacher. Pupil-teachers are, under no circumstances, to be allowed to inflict corporal punishment. Careful attention must be paid to the Regulation which provides that corporal punishment "should be restricted as much as possible to extreme cases." Failure or inability to learn is not to be regarded as an extreme case; and corporal punishment is not to be recognized as a proper aid to teaching. The boxing of pupils' ears is strictly forbidden, as is also the corporal punishment of female pupils twelve years of age and over; and no corporal punishment may be inflicted for neglect to prepare home lessons. All cases of corporal punishment are to be recorded, at the time the punishment is inflicted, in the Punishment Book supplied to all schools by the Department. Department.

18. Home Lessons:—

(a.) No home lessons or written exercises of any kind shall be given to children attending Infants'
Schools or First Classes in other schools.

Schools or First Classes in other schools.
(b.) Children in the Second Class shall have no written exercises of any kind; but they may be required to prepare lessons on Reading, Spelling, or Tables, provided such work take up not more than half-an-hour each evening.
(c.) Children in the Third Class may be given home lessons four evenings in the week, the subjects being left to the discretion of the Teacher; but each night's lessons must not take more than one hour to complete.
(d.) In the case of Fourth and Fifth Classes it is left to the discretion of the Teacher to give such home lessons as he may consider necessary.

home lessons as he may consider necessary.

19. Pupils shall not be detained in School for study or for punishment during any part of the

forenoon rece

forenoon recess.

20. The Teacher shall make the necessary arrangements for the proper oversight of the playground during recesses. It is competent for the head of a School or of a Department, the staff of which contains more than one Teacher, to so arrange that each helf of the staff shall be relieved of playground supervision during an equal portion of the recess for dinner. Principal Teachers and Mistresses of Departments must undertake playground duty equally with the other Teachers.

21. He will construct Programmes of Lessons for classes in his Department taught by Pupilteachers, and will decide upon the suitableness of those framed by Assistant Teachers. His signature is to be attached to these documents, in evidence that they have been examined by him and have received his approval.

received his approval.

22. He will devote a portion of his time weekly to the instruction of each class in his Department.

23. He will examine each class in his Department at least once a month, and will record the results, note the defects, and enter suggestions for their remedy in a book kept for the purpose. Such entries should be signed by himself and the Teacher of the class.

24. He will be responsible for the progress of all children in his Department, and for the condition of the Department in all other matters, excepting those points of organization for which he cannot reasonably be held accountable.

reasonably be held accountable.

25. He will devote at least one hour daily to the instruction of Pupil-teachers, and will see that all the prescribed subjects are duly studied by them. Suitable programmes are to be prepared, and a Register is to be kept showing (a) the time of commencing the daily lesson and the time at which it was concluded, (b) the exercise or home-lesson appointed for the day. It must be clearly understood that Mistresses of Departments are to perform a fair share of the work of instructing Pupil-teachers.

26. He will be responsible for posting Quarterly Returns on the last Saturday preceding the Midwinter and Christmas vacations; and, in other cases, on the last Saturday of the months of March and September. In country places, where no post leaves on Saturday or the preceding Friday evening, the Returns must be sent, without fail, by the first subsequent opportunity.

27. In making application for increased assistance, he will give attention to the following Rules, by which the numerical strength of Teaching Staffs is regulated.

In a mixed school, or in a sevarate Bovs' or Girls' Department, having an average attendance of—

In a mixed school, or in a separate Boys' or Girls' Department, having an average attendance of—50 pupils, the staff may consist of Teacher and Pupil-teacher.

70 pupils, the staff may consist of Teacher and Assistant.

80 to 110 pupils, the staff may consist of Teacher and 2 Pupil-teachers.

110 to 140 pupils, the staff may consist of Teacher, Assistant, and Pupil-teacher.

140 to 180 pupils, the staff may consist of Teacher, Assistant, and 2 Pupil-teachers.

180 to 220 pupils, the staff may consist of Teacher, Assistant, and 3 Pupil-teachers.

220 to 270 pupils, the staff may consist of Teacher, 2 Assistants, and 2 Pupil-teachers.

270 to 310 pupils, the staff may consist of Teacher, 2 Assistants, and 3 Pupil-teachers.

310 to 350 pupils, the staff may consist of Teacher, 2 Assistants, and 4 Pupil-teachers.

350 to 400 pupils, the staff may consist of Teacher, 3 Assistants, and 4 Pupil-teachers.

450 to 500 pupils, the staff may consist of Teacher, 3 Assistants, and 5 Pupil-teachers.

450 to 500 pupils, the staff may consist of Teacher, 3 Assistants, and 6 Pupil-teachers.

1n every separate Infants' Department having an average attendance of—

450 to 500 pupils, the staff may consist of Teacher, 3 Assistants, and 6 Pupil-teachers.

In every separate Infants' Department having an average attendance of—
60 pupils, the staff may consist of Teacher and a Pupil-teacher.
100 to 120 pupils, the staff may consist of Teacher and 2 Pupil-teachers.
120 to 160 pupils, the staff may consist of Teacher, Assistant, and Pupil-teacher.
160 to 200 pupils, the staff may consist of Teacher, Assistant, and 2 Pupil-teachers.
200 to 240 pupils, the staff may consist of Teacher, Assistant, and 3 Pupil-teachers.
240 to 300 pupils, the staff may consist of Teacher, 2 Assistants, and 3 Pupil-teachers.
300 to 340 pupils, the staff may consist of Teacher, 2 Assistants, and 4 Pupil-teachers.
340 to 380 pupils, the staff may consist of Teacher, 3 Assistants, and 5 Pupil-teachers.
440 to 480 pupils, the staff may consist of Teacher, 3 Assistants, and 6 Pupil-teachers.
480 to 550 pupils, the staff may consist of Teacher, 3 Assistants, and 7 Pupil-teachers.

28. Principal Teachers and Mistresses of Departments, respectively, are empowered to grant leave 28. Principal Teachers and Mistresses of Departments, respectively, are empowered to grant leave of absence to Assistants and Pupil-teachers employed under their supervision for a period not exceeding one day, subject to the conditions stated in paragraph 3 of the Rules regulating leave of absence. It must, however, be distinctly understood that such leave of absence can only be granted in cases where the necessity for it is clearly shown. In forwarding applications for leave of absence for more than one day, the Principal Teacher or Mistress of a Department, will state thereon the arrangements proposed for the performance of the duties of those applying; will express an opinion as to whether such arrangements are satisfactory; and will state what previous leave has been granted, and on what terms, during the past twelve months. Applications for sick leave for three or more days should be accompanied by medical certificates. medical certificates.

29. All correspondence and returns (except those relating to fees) should be sent to the Inspector under whose immediate supervision the school is placed. Salary abstracts should be sent direct to the

Accountant

Accountant.

30. Teachers of all ranks are required to abstain from participation in any public meetings or other gatherings on party, political, or sectarian topics, and generally to refrain from all action in such matters calculated to give offence to any section of the community or to impair their own usefulness as teachers; they must also abstain from public controversy upon the merits of the system of education now in force, and from acting as local preachers, lay readers, or local correspondents of newspapers.

31. It is incumbent on teachers to attend to directions given them by Inspectors, and all departmental orders issued to them must be strictly observed. Should a Teacher at any time feel aggrieved, he may appeal to the Minister for redress, but such appeal must be made in a proper and respectful manner. Pending an appeal, no Teacher will be justified in disobeying orders, nor in the course of an appeal shall he knowingly make unfounded charges or improperly introduce subjects foreign to the matter of appeal.

32. No Sectarian or denominational publications of any kind whatsoever shall be used in school, nor shall any denominational or sectarian doctrines be inculcated.

33. It shall be the duty of all Teachers to impress on the minds of their pupils the principles of morality, truth, justice, and patriotism; to teach them to avoid idleness, profanity, and falsehood; to instruct them in the principles of a free Government; and to train them up to a true comprehension of the rights, duties, and dignity of citizenship.

## REPORT OF THE MINISTER OF PUBLIC INSTRUCTION.

To His Excellency the Honorable SIR FREDERICK MATTHEW DARLEY, Knight, Lieutenant-Governor of the Colony of New South Wales and its Dependencies.

May it please your Excellency,—

I have the honor to submit to your Excellency the Report of the Department of Public Instruction for the year 1892. The Report deals fully with the educational work carried on under the provisions of the Public Instruction Act of 1880, and embraces summaries of similar work done in State-aided Institutions of an educational character.

The number of schools on the list in the year was 2,502, embracing 2,724 separate departments, with accommodation for 222,411 pupils. The gross enrolment of pupils was 239,364, the mean quarterly enrolment, 186,207, and the average attendance, 132,580. The staff of teachers, all grades included, numbered 4,636. By additions to 39 existing buildings and the erection of 136 new buildings, accommodation was provided for 10,541 more children than in 1891.

2,488 schools, comprising 2,717 departments, were inspected during the year. In Primary Schools, 142,109 pupils were examined—87,778 in the course of instruction for Classes I and II, and 54,331 in higher-class courses. 589 High School pupils were also examined. In the different classes of the Primary Schools, 81 per cent. passed in reading, 81 per cent. in writing, 72 per cent. in arithmetic, 78 per cent. in object and science lessons, and 74 per cent. in drawing. In Superior and High Schools subjects from 66 to 100 per cent. satisfied the standard, while in all the schools inspected the discipline was reported as satisfactory. During the year, 90 candidates were successful in obtaining Scholarships and Bursaries for secondary or higher education.

Cookery and needlework instruction for girls and manual training for boys were considerably extended. The number of School Savings Banks increased by 17, and the Cadet Force showed an enrolment of 6,221. The Technical Education Branch of the Department also made satisfactory progress.

The total expenditure of the year under the Public Instruction Act was £768,395 2s. 3d., and towards this sum school fees amounting to £77,524 9s. 10d. were collected and paid into the Treasury. The

853-A

cost of maintaining the Technical Branch was £37,873 16s. 9d., including £5,709 12s. 7d. spent on the Technological Museum. The sum of £4,388 14s. 9d. was paid as fees by students.

The whole work carried on and the results achieved are shown in detail under the divisions which follow:—

## I.—Schools, Accommodation Provided, Attendance.

The total school population between the ages of 4 and 14 years, estimated on the basis of the last census returns, was 290,403; and of this number, 66,455 were from 4 to 6 years, and 223,948 from 6 to 14 years, the statutory school age. 2,502 schools, containing 2,724 departments, were in operation, as compared with 2,457 schools and 2,670 departments open in 1891. During the year, 141 schools, or 142 departments, were established, comprising 24 Public, 57 Provisional, 45 Half-time, 10 House-to-house, and 6 Evening Schools. Twentynine Provisional and 4 Half-time Schools were raised to the rank of Public Schools, and 15 Half-time and 6 House-to-house Schools to the rank of Provisional Schools; while 23 Public and 21 Provisional Schools were reduced to Half-time or House-to-house Schools. Ninety-six of the schools in operation during the whole or some portion of 1891 do not appear on the list of schools open in 1892, and of those actually in operation in that year 47 were closed before the last quarter. The number of schools open at the close of 1892 was 2,455, containing 2,677 departments. The net increase for the last quarter of 1892, as compared with the last quarter of 1891, was 68 schools, or 77 departments. The whole school accommodation available was equal to 222,411 places.

The schools in operation in 1892 were organised and classified as follows:—

1.	High Schools	3 :—					Schools.	, Į	epartments.
	$\mathbf{U}$ nclassed	•••	•••	•••	***	•••	5	•••	5

Two hundred and fifteen applications for the establishment of new schools were received, namely, 34 for Public Schools, 123 for Provisional Schools, 28 for Half-time Schools, 21 for House-to-house Schools, and 9 for Evening Schools. Of these, 126 were granted, and 69 were declined, while 20 remained under consideration at the close of the year. The total number of children to be accommodated in the new schools granted is 2,795. The Department has erected, or is taking steps to supply, buildings for 1,524 children, while for the remaining 1,271 children the local promoters are to provide school-rooms. The schoolrooms to be erected by promoters are generally for small settlements, whose permanency is very doubtful.

The number of applications received, and the action taken with regard to them, are shown in the following table:—

Applications for the establishment of Schools.

Schools.		į	Number received.	Number granted.	Number declined.	Number still under consideration.
Public Schools Provisional Schools Half-time Schools House-to-house Schools Evening Public Schools	•••		34 123 28 21	13 76 23 8 6	16 37 2 11 3	5 10 3 2 0
Total			215	126	69	20

Full details respecting these applications will be found in Appendices I, II, III, IV, V.

The number of schools in operation in 1881, the first full year during which the Department was under Ministerial control, as compared with the number open in 1892, is given in the following table:—

School	s.			Number of Schools in oper	or Departments	Increase.
				1881.	1892.	1881-1892.
High Schools		•••			5	5

Accommodation		•••		. 98,721	222,411	123,690

* Decrease.

From the foregoing table it will be seen that, Evening Schools excepted, all kinds of schools received very considerable increases in numbers for the period under notice. Primary Public Schools increased by 657 in the eleven years, and Superior Schools by 173. Provisional and Half-time Schools show increases respectively of 102 and 248, while of House-to-house Schools, first started in 1883, there are now 85. During the eleven years referred to the Evening Schools have decreased from 57 to 15.

In addition to the schools established and maintained under the Public Instruction Act, the following State supported or aided schools are still in operation, namely, the Sydney Grammar School, the two Industrial Schools, and the School for the Deaf and Dumb and the Blind.

School Premises and Sites.—The number of school sites acquired during the year was 165. Of these, 91 were Government grants; 36 were resumed under the Public Works Act, 51 Vic. No. 37; 36 were purchased; and 2 were gifts from private individuals. The cost of the purchased sites amounted to £16,078 9s. 3d., and the sum of £531 3s. 5d. was paid on account of those resumed. The balance to be paid for the latter, when the claims have been settled, is approximately £9,611 17s. 3d. Full particulars as to the sites will be found in Appendix XXII.

Buildings.—At the close of 1892, existing school premises afforded room for 215,066 pupils, about 95 per cent. of this accommodation being invested premises. Of the school-places counted in 1891, about 4,783 were lost in 1892 by the closing of schools and by the giving up of old buildings. The net increase for 1892 was 7,045. Taking the building-work done in the last two years, it may be observed that, in 1892, 51 new schools and residences were erected under the Architect's supervision, as compared with 82 built in 1891; while the additions numbered 28, as compared with 19; the premises repaired, 418, as compared with 452; and the places provided, 7,511, as compared with 8,448, for the same period. It may also be noticed that the number of small school-buildings and residences erected under the Inspectors' supervision was 98, as compared with 75 put up in 1891, and that the number of places provided in 1892 was 3,030, as compared with 2,720 in the previous year.

At the close of 1892, the following additional works were in progress:—43 new buildings, 17 additions, and 13 buildings for small country schools, the whole to provide for about 6,973 children. Eight new weather-sheds were also in course of construction, and repairs and improvements were being carried out in 132 existing buildings:

Full particulars respecting the building-work completed in the year, and that in progress at its close, are given in the following tables:—

The amount expended on Public School sites, buildings, furniture, repairs, and rents in 1892 was £157,681 10s. 3d. The total expenditure on these items since 1880 is £2,277,006 1s. 3d.

School Attendance.—School returns for the year show a gross aggregate enrolment of 239,364, as compared with 233,719 under instruction in 1891. Deducting the usual 12 per cent. for multiple enrolments, it will be seen that the number of individual pupils at State Schools was 210,641. This number equals 17.7 per cent. of the total population of the Colony.

The gross and corrected enrolments for the last five years, taking 12 per cent. as representing the multiple enrolments in each year, are given in the following table:—

	Years.		Gross Aggregate	Corrected Aggregate	In	crease.
	ı cars.		Enrolment.	Enrolment of Distinct Pupils.	Gross Enrolment.	Corrected Enrolment
1888		•••	212,150	186,692	2,992	2,632
1889		• • •	217,289	191,215	5,139	4,523
1890			221,864	195.241	4,575	4,026
1891	• • • •	••.	233,719	205,673	11,855	10,432
1892	•••		239,364	210,641	5.645	4,968

In addition to the 210,641 pupils enrolled in schools under the Public Instruction Act, there were 1,156 in attendance at other Stateaided Schools, namely:—

The Sydney Grammar School	•••		•••	 495
The Industrial Schools				 562

Total				1 150

Estimating the mean population of the Colony for 1892 at 1,189,775, the population of the statutory school age was 223,948. Of this number, 174,230, or 77.8 per cent., attended State Schools, and 49,712, or 22.2 per cent., received instruction in Private Schools and at home, or else remained altogether untaught. From the latest returns of Private Schools attendance it appears that the total enrolment was 46,380. As of this enrolment 33,870 pupils were between the ages of 6 and 14, it will be seen that of the total statutory school population of 223,948 about 208,100, or 93 per cent., were enrolled at

State

State and Private Schools, while 15,848, or 7 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 29,298 under 6 years of age, and 20,951 over 14 years, were also enrolled for school attendance—37,739 at State Schools, and 12,510 at Private Schools. Thus, of 315,062 children in the Colony between the ages of 4 and 15 years, 211,969 attended State Schools, and 46,380 attended Private Schools; while the remainder, 56,713 received instruction at home, had completed their education, or were untaught.

The average quarterly enrolment was 186,207, and the average attendance 132,580, showing increases respectively of 7,929 and 10,052. The regularity of attendance, as tested by comparing the average attendance with the enrolment, was slightly higher than in 1891.

In the first half of the year 125,316 pupils, and in the second half 132,554 pupils, attended the ordinary day-schools 70 days or more, while the number who attended 140 days or more in the year was 117,239.

The percentages of the enrolment attending 70 days or more in each half-year and 140 days or more in the year, since 1888, are as follow:—

1	70 days or more in first half-year.	70 days or more in second half-year.	140 days or more in the year.
1888	65.5 per cent. 68.8 ,, 58.4 ,, 57.9 ,, 67.7 ,,	76·1 per cent. 71·5 ,, 72·3 ,, 68·7 ,, 71·5 ,,	64.8 per cent. 67.8 ,, 65.7 ,, 65.7 ,, 63.3 ,,

The enrolment, average attendance, and attendance for the number of days required by statute are shown and compared, for the last five years, in the following tables:—

## (a) Quarterly Enrolment and Average Attendance for 1892.

		Average A	ttendance.

In the following table the results as to average attendance in the principal Australian Colonies are compared for the last five years:—

	New Sou	th Wales.	Vie	Victoria.		South Australia.		Queensland:	
Years.	Average Quarterly Enrolment.	Percentage in average Attendance.	Average Quarterly Enrolment.	Percentage in average Attendance.	Average Quarterly Enrolment.	Percentage in average Attendance.	Average Quarterly Enrolment.	Percentage in average Attendance	
1888 1889 1890 1891	160,919 164,701 170,357 178,278 186,207	69·73 69·56 68·48 68·72 71·20	185,208 190,497 191,175 195,478	69·02 68·69 69·97 72·19	38,595 38,504 38,540 38,974 *	73 40 73 28 71 65 76 48 *	53,269 56,860 57,640 60,962 *	73·07 72·43 70·84 73·82	

* Returns for 1892 not available.

The main facts relative to school attendance may be summed up thus: -208,100, or 93 per cent. of the statutory population, were enrolled for school attendance; 174,230, or 77.9 per cent., at State schools; and 33,870, or 15.1 per cent., at private schools. Of the ordinary school population between four and fifteen years-258,349, or 82 per cent., were at school; 211,969, or 67.3 per cent., at State schools: and 46,380 or 14.7 per cent., at private schools. 210,641 children attended schools under the Public Instruction Act; 173,942 being of the statutory school age, and 15,411 above it. The mean quarterly enrolment was 186,207, or 88.4 per cent. of the year's enrolment; and the average attendance was 71.2 of the quarterly enrolment. 63.3 per cent. of the quarterly enrolment attended school 140 days or more in the year. Of the average enrolment, 71.1 per cent. attended school 70 days or more in the last half-year. Comparing the year's attendance with that for 1891, the following points may be noticed:—The year's enrolment was increased by 4,968, or 2.3 per cent.; the mean quarterly enrolment was increased by 7,929, The percentage of the population enrolled quarterly, or 4.4 per cent. and the corresponding percentage in average attendance in 1892, were respectively 15.6 and 11.1, as compared with 15.3 and 10.5 in 1891.

Compulsory Clauses of the Public Instruction Act.—During the half-year ended 30th June, 1892, 22,555 children failed to attend school for 70 days, as required by the Act. As satisfactory excuses, however, were received from 15,189, the number of legal defaulters amounted to 7,366. The parents or guardians of 5,863 of these were cautioned, and prosecutions were authorised in 1,503 cases.

For the half-year ended 31st December, 1892, there were 18,619 children who failed to make the prescribed minimum attendance. Satisfactory explanations were received in regard to 12,624, the parents or guardians of 4,119 were cautioned, while in 1,876 cases legal measures were taken.

In view of the distress prevailing in the Broken Hill district, it was deemed expedient not to prosecute for the December half-year's default. The parents and guardians concerned have, however, been cautioned.

The default for the half-year ended 30th June amounted to 3.9 per cent. of the average enrolment for the year, while for the December half-year the percentage was 3.2.

There has been no increase in the staff of School Attendance Officers. These are stationed throughout the Colony as follow:—Metropolis, 4, and the rest in the undermentioned towns: Armidale, Tamworth, Bathurst, Goulburn, Grafton, Taree, Maitland, Newcastle, Wallsend, Bowral, Wagga Wagga, Wellington, Parramatta, Hay, Liverpool.

Although defects in the existing Act have been fully exposed in previous Reports, it is necessary to repeat that until the Act be amended as indicated, children's non-attendance at school and their employment in factories, &c., cannot be effectually dealt with. The more serious of those defects may be specified as follow:—

- I. Provision to deal effectively with children found idling about the streets during school-hours who are evading the law.
- II. Authority to ascertain conclusively the total number of children in the Colony of statutory age.
- III. Placing the onus of proof of age and of the fulfilment of minimum attendance on the parents or guardians.
- IV. The power to compel teachers of private schools to furnish accurate returns of enrolment and attendance.
- V. The inclusion of a clause making it penal to employ children of school age, unless educated up to standard requirements.

Collection of School Fees.—In regard to the collection of school fees, it may be mentioned that during the year leniency has been exercised throughout the Colony in dealing with arrears, particularly in regard to Broken Hill, where the recent labour troubles have somewhat interfered with the regular receipt of wages. It was found necessary to authorise legal action for the recovery of arrears in 163 cases, but debts in a considerable number of other cases have been cancelled. The total amount of fees collected during 1892, and paid into the Consolidated Revenue, was £77,524 9s. 10d.

## II.—Inspection.

The arrangements for carrying on the work of inspection are unchanged. The inspectoral staff comprises a Chief Inspector, a Deputy Chief Inspector, 9 District Inspectors, and 26 Inspectors. Although this staff is sufficient to make a minute inspection of all

schools

schools once within the year, it is not strong enough to ensure a second inspection during the same period. Notwithstanding, it is satisfactory to be able to report that vigorous efforts were made to accomplish the latter result in the year just closed. Not only were all schools open at the time of the Inspectors' visits thoroughly examined, but nearly one-half were inspected a second time. The total number of inspections was 3,886, and the schools inspected 2,712.

The details of inspections made during the last three years are shown in the following table:—

Year.	No. of Schools.	No. of Schools inspected.	No. of Schools inspected twice.	Total No. of Inspections.		No. of Pupils examined.	No. of Inspectors.
1890	2,627	2,587	704	3,291	40	127,515	35
	2,662	2,623	986	3,609	39	132,044	35
	2,728	2,712	1,174	3,886	16	142,109	<b>3</b> 5

The particulars for each district stand thus:-

District.	No. of Inspectors.	No. of Schools.	No. of Schools inspected.	No. of Schools inspected twice.	Total No. of inspections.	No. of Schools not inspected.	No. of Pupils examined.
Armidale	4	302	302	121	423		10,439

The inspected and the uninspected schools were:—

]	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
Inspected	1,934	341	340	84	13	2,712
Uninspected	4	3	6	1	2	16
Totals	1,938	344	346	85	15	2,728

The Course of Secular Instruction and Standards of Proficiency.—Constant attention has been directed to the branches constituting the prescribed school course, to the time devoted to the teaching of the different subjects, and to the standards laid down for determining the degrees of proficiency required of the several classes in schools. Modifications, usually unimportant in character, have from time to time been made in these matters, and the general tendency of these modifications has been to give greater satisfaction to the teaching body, and to add to the efficiency of school instruction.

The working of the standards of proficiency will necessarily depend on the Inspectors applying them. It cannot be expected that these officers will in all cases agree in their estimates of the pupils' work, but it is expected that they will endeavour so to conduct their examinations as to ascertain as far as practicable the true value of the teachers' labours.

Character of Pupils' Attainments and Progress in Learning.—142,109 pupils were present at inspection, being an increase of 10,065 scholars, or 7.6 per cent., over the number examined in 1891, and of 14,594 scholars, or 11.4 per cent., over the number in 1890. All were examined in reading, 99 per cent. in writing, 79 per cent. in dictation, 97 per cent. in arithmetic, 37 per cent. in grammar,  $38\frac{1}{2}$  per cent. in geography, 39 per cent. in history, 97 in Scripture and moral lessons, 93 per cent. in object lessons, 97 per cent. in drawing, 90 per cent. in music,  $1\frac{1}{2}$  per cent. in French, 8 per cent. in Euclid, 4 per cent. in algebra, 8 per cent. in mensuration,  $3\frac{1}{2}$  per cent. in Latin, 15 per cent. in trigonometry, 78 per cent. (of girls) in needlework, 95 per cent. in drill, and 6 per cent. in natural science.

Of the 142,109 pupils examined in reading, 10.6 per cent. were in the alphabet, 22.6 per cent. were in monosyllables, 28.6 per cent. were in easy narrative, and 38.2 per cent. in ordinary prose. Of 141,284

141,284 pupils examined in writing, 41.9 per cent. wrote on slates, and 58.1 per cent. in copy-books or on paper. Of 138,596 pupils examined in arithmetic, 58.7 per cent. were tested in simple rules, 24.8 per cent. in compound rules, and 16.5 per cent. in the higher rules. Of 54,808 examined in grammar, 47.6 per cent. were learning the elementary part, and 52.4 per cent. the advanced part of the subject. In geography, of 54,811 examined, 46 per cent. were tried in the elementary portions of the subject, and 54 per cent. in the advanced part.

A comparison of some of the foregoing percentages, with the results in corresponding subjects during the previous year, is shown in the subjoined table:—

	•	1891.	1892.	Increase per cent.	Decrease per cent.
	Total number of pupils examined	132,044	142,109	7.6	
Percentages of pupils examined in	Reading, who were tested in ordinary prose	57·8 14·0 49·0 52·3 37·7 96·1 95·5	38·2 58·1 16·5 52·4 54·0 39·0 97·0 95·0 97·0 93·0	1·1 ·3 2·5 3·4 1·7 1·3 ·9 	······································

This table shows a decrease in the percentages of pupils examined in drill and object lessons. With these exceptions an increase is observable in all the subjects mentioned. Viewing the attainments generally, it will be seen from the information here given that, in addition to reading, which is taught to all scholars, more than 95 per cent. of the pupils in our schools are instructed in the following subjects:—Writing, arithmetic, Scripture and moral lessons, object lessons, drawing, and drill. Music is taught to 90 per cent., dictation to 79 per cent., 37 per cent. learn grammar,  $38\frac{1}{2}$  geography, and 39 per cent. history; 78 per cent. of the girls learn needlework, while other subjects such as can be taught to the elder pupils only range from 1 to 8 per cent.

With regard to the proficiency of the pupils examined, the results of inspection show that in reading 81 per cent. of the examinees passed, in writing 81 per cent., in dictation 74 per cent., and in arithmetic 72 per cent. The standard was satisfied by 74 per cent. in grammar, 76 in geography, and 72 and 77 per cent. respectively in English and Australian History. In Scripture and moral lessons 76 per cent. passed, 78 in object lessons, 74 in drawing, and 76 per cent. in music. In other subjects the percentages were:—French, 71; Euclid, 77; algebra, 76; mensuration, 66; Latin, 74; trigonometry, 77; needlework, 84; drill, 77; and natural science, 78. with last year, the above percentages show marked improvement. The proportion of passes was 1 per cent. higher in dictation, arithmetic, geography, music, trigonometry, needlework, and natural science; 2 per cent. higher in Scripture and French; 3 per cent. in writing, grammar, English History, and drill; 4 per cent. in object lessons; 5 per cent. in Australian History, drawing, Latin, and algebra; 6 per cent. in Euclid and mensuration. In every subject there was an increase in the number of passes. The

The following table summarises the progress in efficiency made in the different classes of schools during the past five years:—

a. 4a.		Percentage up to or above the Standard.						
Class of Schools.	1888.	1889.	1890.	1891.	1892.			
Public	85	86	88	92 .	95			
Provisional	65	62	56	71	77			
Half-time	72	74	69	81	81			
House-to-house	67	<b>7</b> 3	70	81	76			
Evening Schools	87	90 ·	100	92	92			
All Schools	80	82	81	88	90			

These figures show that the results are much better than in 1891. While the percentage of schools up to or above the standard has remained the same as for last year in the case of Half-time and Evening Schools, there has been an increase in efficiency of 6 per cent. in Provisional and of 3 per cent. in Public Schools. The total efficiency of all schools was greater by 2 per cent. than in 1891, and very satisfactory progress has been made.

Vocal Music.—Of 128,453 pupils present at inspection, 76 per cent. satisfied standard requirements in this subject, 1 per cent. more than in 1891. All the Metropolitan schools were examined by the Superintendent of Music, who reports "that there can be no doubt of the steady, if somewhat leisurely, advance our schools are making in the study of music and singing." During the year the test of singing at sight has been generally applied in the case of the upper classes, and in many schools fairly difficult passages, sometimes in two and three part harmony, staff notation, were rendered with an ease which cannot but be regarded as satisfactory evidence of the progress made. Similar tests in tonic-sol-fa were used in the lower classes with varying results. The attainments of the pupils range from "very fair" in the fifth and fourth to "fair" in the lower classes.

Discipline.—In estimating a teacher's usefulness and skill, great stress is laid by the Department's Inspectors on the character of the discipline that distinguishes the school under his charge. Unless the pupils are attentive under instruction and accustomed to yield a prompt and implicit obedience, satisfactory results in schoolwork cannot reasonably be looked for. It is gratifying to find that, with few exceptions, teachers fully recognise the importance of placing the discipline and moral tone of their schools on a sound basis, and that efforts in this direction have been attended with a large In no other department of school management measure of success. do our schools show to greater advantage. In general, the government is mild but firm, the teaching is carried on with a quiet earnestness, and correct moral principles are instilled into the minds of the pupils. Weak discipline is ordinarily associated with poor, ineffective instruction, and a teacher ignorant of the essentials and true value of good government can have but an imperfect perception of the higher functions of his office.

As aids to the maintenance of good discipline, a methodic and well-arranged school routine and a regular observance of military drill are of the highest value; and it is satisfactory to find that teachers in general are fully sensible of the importance of these points. The ordinary arrangements for teaching are such as provide for the constant and profitable occupation of the pupils, while sufficient attention is devoted to drill to secure a becoming quietness and order in the school operations.

Drill.—Marked progress has been made in drill. Of 135,463 pupils examined, 77 per cent. were found to be up to or above the standard. This is an improvement of 3 per cent. upon 1891, and is a pleasing evidence of the attention paid to the subject. The Superintendent of Drill visited and examined every school in the Metropolitan District in military drill, calisthenics, gallery exercises, and physical drill, and reports that he is well satisfied with the efficiency exhibited by the scholars.

During the year instruction was given by Captain Mulholland twice a week to the Hurlstone College students in school drill, calisthenics, infants' drill, gallery exercises, dumb-bell and wand exercises;

also in marching, play-ground order, and orders for marching in and out of school. He reports that "the results of a twelve months' course of physical training upon the students is very marked, the carriage and deportment show very great improvement, and the physique generally is greatly improved." Instruction was also given by him on Saturdays to female pupil-teachers of the third and fourth classes in similar exercises.

High Schools.—The schools in operation were the same as in 1891. The total enrolment for the year was 882, and the average daily attendance 614.9. For 1891 the numbers were 878 and 624.3 respectively. The figures for each school are shown in the following table:—

School.				$\begin{array}{c} {\rm Total} \\ {\rm enrolment.} \end{array}$	Average quarterly enrolment.	Average daily attendance.
Sydney (Boys)		•••		352	277	252·1
., (Girls)	•••		•••	360	264	236.1
Maitland (Boys)		•••		75	54	48.8
" (Girls)		•••		50	47	40.3
Bathurst (Girls)	•••	•••		45	44	37.6
Total	s			882	686	614.9
Total	s for 1	391		878	695	624:3

At the beginning of the year the Sydney Boys' School took possession of the new buildings in Harris-street, Ultimo, erected in proximity to the Technical College premises. The excellent accommodation and the additional conveniences for teaching provided have increased the comfort of both the masters and the boys, and must conduce to the attainment of even higher results and greater efficiency than have been already realised by the institution.

The Girls' High School now occupies the whole of the premises between Castlereagh and Elizabeth Streets, and has ample accommodation.

The contract entered into for the erection of a new Boys' High School at East Maitland was completed in the first half of 1892, and on 26th July last the premises were formally declared open by the Minister. The buildings, which stand on a central and well-elevated site of 5 acres, afford adequate accommodation, and are fully equipped with all the accessories of a first-class school. A residence has been erected for the Principal Master, in which provision has been made for the reception of resident pupils.

At West Maitland more suitable premises than those at present in use have been secured for the Girls' High School, but, for various reasons, have not yet been occupied.

All the High Schools were fully examined by officers of the Department, who speak in high praise of the discipline and general management. The results of examination show that, as regards the attainments of the pupils, the schools maintain their prestige, the percentages of passes ranging from 65 for mensuration to 100 per cent. for botany, singing, and physiology. Other percentages are:—English,

87; geography, 86, French, 79; German, 94; drawing, 80; dictation, 78; Greek, 91; needlework, 94; history, 73; and geometry, 73. The average for all subjects was 83 per cent. The following table shows the results achieved in connection with the examinations conducted by the University:—

School.	No. of Passes Junior Examination.	No. of Passes Senior Examination.	No. of Passes Matriculation Examination.	Total Number of Passes.
Sydney (Boys) ,, (Girls) Maitland (Boys) ,, (Girls) Bathurst (Girls)	. 57 . 5 . 14	5 ,3  1 2	35 15 6 2 1	105 75 11 17 11
Totals	. 149	11 .	59	219
1891	. 113	16	30	159

As compared with 1891, the number of passes at the Junior Examination was greater by 36, and for Matriculation by 29. There was a falling off, however, of 5 as regards the passes at the Senior Examination. For all schools the total number of passes was 219, an improvement upon 1891 of 60.

These results are highly gratifying, the more so when it is remembered that they have been accomplished without any interference with the ordinary school-work, which, as has been already shown, evidenced a high state of efficiency.

Under the Bursary system, 6 candidates, 3 boys and 3 girls, were successful in obtaining Bursaries at the University Matriculation examination in March last.

The total expenditure on High Schools for the year was £8,950 9s. 4d., while the amount received from fees was £4,293 19s. The actual cost to the State was, therefore, £4,656 10s. 4d., or at the rate of £5 5s. 7d.

State Scholarships and Bursaries—Under the Scholarship and Bursary Scheme, examinations were held during the year, 98 candidates being successful. Of these, 26 males and 35 females obtained scholarships for High Schools and Superior Schools; 21 males and 10 females bursaries for High and Superior Schools; and 3 males and 3 females University bursaries.

Of the 61 successful competitors for High School Scholarships, 16 boys and 15 girls have since attended the Sydney High Schools; 10 boys and 11 girls the Maitland High Schools; 9 girls have attended the Bathurst High School. Of the 31 successful competitors for High School Bursaries, 7 boys and 5 girls have attended the Sydney High Schools; 8 boys and 2 girls the Maitland High Schools; 2 girls the Bathurst High School; 5 boys and 1 girl, Superior Schools; and 1 boy the Sydney Grammar School.

Ten University Bursaries are available annually. In 1892, however, only 6 candidates presented themselves for examination, 3 boys and 3 girls, all High School pupils. These were all successful.

In addition to the 98 competitors who obtained High School Scholarships and Bursaries, 920 candidates passed the examination for admission to High Schools. The total number of examinees was 1,095, and of these 92.9 were successful.

Superior Public Schools.—At the close of 1891 there were 78 Superior Schools in operation, and during 1892 that number was increased by 14, making a total of 92. These comprised 231 departments. The new schools are situated at Wollongong, Raymond Terrace, Croydon, Katoomba, Penrith, Granville, Woollahra, Bowral, Hurstville, Bega, Minmi, Plattsburg, Hamilton, and Annandale. The number of pupils attending Superior Schools for the last quarter of the year was 65,033, being an increase of 7,829 on the numbers for 1891.

There can be no doubt as to the very wide popularity of these schools, and their establishment throughout the country districts is a gratifying circumstance. There they not only supply the place of High Schools, but they become exemplars of good organization, good discipline, and good methods of teaching. To warrant a school being declared a Superior Public School, it must have an attendance thereat "sufficient to enable a class to be formed of not less than 20 pupils who have been educated up to the standard that completes the course prescribed for a fourth class."

All schools of this class underwent a searching examination during the year. Their condition, as disclosed by the Inspectors' reports, affords ground for much satisfaction. They are provided with the best educational appliances, are well organized and disciplined, and effectively taught.

The total number of successful pupils who attended the University Examinations from Superior Schools was 432, namely, 15 seniors and 417 juniors, while other Public Schools, not classed as Superior, sent up 5 seniors and 96 juniors. These give a total of 533, which is 33·3 per cent. of the aggregate number of passes. If High Schools be added, the passes from schools under the Public Instruction Act represent 43·2 per cent. of the whole.

Evening Public Schools.—Nine applications for the establishment of Evening Schools were received. Six were granted, and 3 refused. The total number of schools in operation was 15, but 7 collapsed before the end of the year. On 31st December, therefore, there were only 8 schools in existence, attended by 149 pupils.

The experience gained in regard to these schools shows that their usefulness is very limited. Even when established under the most favourable conditions, they maintain but a fitful existence. One quarter, or at the most two, is the usual limit of their continuance. Pupils must have attained the statutory age of 14 years to be qualified for admission, and those in operation are attended by males only. The course of instruction is confined to reading, writing, and arithmetic, and none but certificated teachers are eligible to conduct them.

House-to-house Schools.—Including 8 established during the year, the number of House-to-house Schools in operation was \$5. Seven of these closed after a brief existence, leaving 78 at the end of the year.

A House-to-house School is composed of the children of families residing in localities several miles apart. Each locality forms a teaching-station, and the teacher journeys from station to station, and collects as many children as possible at a central point. The instruction is confined to reading, writing, dictation, and arithmetic. Every teacher is required to supplement his oral instruction by a systematic course of home-lessons. Unless this portion of his duties were faithfully attended to, much of his time and his teaching would be wasted. At the end of each month the teacher is required to furnish to the Inspector a report of the work done during that period. Of the 84 schools inspected, 76 per cent. were found up to or above the standard requirements. There can be no doubt that this class of school is doing good service in localities where the school population is insufficient to form a permanent school.

Technical Education in connection with Public Schools.— Elementary technical education is still carried on in connection with Public Schools. These include Kindergarten Schools and classes, drawing, oral lessons on common objects and in elementary science, planting and cultivating school-gardens and playgrounds, manual training in workshops for boys, and needlework and cookery for girls.

Kindergarten.—The Kindergartens at Fort-street, Riley-street, Australia-street, Alexandria, and Armidale West continued in operation during 1892. Apart from these fully-organized institutions, Kindergarten Classes were started at the following schools, in addition to similar classes mentioned in last Report as having been in existence in 1891:—Annandale, Ashfield, Ballina, Castlereagh-street, Cleveland-street, Cooma, Darling Road, Eastgrove, Enmore, Islington, Kogarah, Nicholson-street, Petersham, St. Mary's, St. Peters, St. Leonards North, Singleton, Summer Hill, and Woollahra The five complete Kindergartens have an attendance of 1,343 pupils; while in the infants' departments and junior divisions of the 32 schools where Kindergarten classes have been formed there is an enrolment of between eight and nine thousand.

During the last three or four years all the students of the Training Schools, both male and female, have received instruction in the theory and practice of Froebel's system, so that upon their appointment to Public Schools they are competent to introduce, if necessary, so much of what they have learnt as may be deemed suitable to the particular schools to which they are appointed. A knowledge of the Kindergarten principle as laid down in Laurie's Kindergarten Manual is required by the Regulations from all pupil-teachers presenting themselves for examination.

Drawing.—At the regular inspections of the schools held during the year, the Inspectors examined 138,209 pupils in this \$853—C important

important subject, of whom 102,479, or 74 per cent., reached or exceeded the prescribed standard of proficiency. This is an improvement of 5 per cent. upon the results of 1891. 182 school departments in the Metropolitan District were visited by the Superintendent of Drawing, who examined 34,706 pupils, namely, 10,476 boys, 10,276 girls, and 13,954 infants. The results show that 22,920, or 66 per cent., were up to or above the standard, being 1 6 per cent. better than the previous year. The Superintendent reports that the efficiency of the schools is increasing, "a result chiefly owing to the spreading interest in the subject among the teachers."

At the High Schools the work done is described as "sound and thorough"; at Hurlstone Training School "the teaching is most efficient, and the results of examination are satisfactory." The work of the training students at Fort-street has made a great advance, and improvement has been effected in connection with the Pupil-teachers' classes.

Arbor Day and the Planting of School-grounds.—In last year's Report the purposes and advantages of Arbor Day were fully set forth. From information furnished by the Inspectors, it would appear that the Department's action in systematizing tree-planting by the inauguration of Arbor Day has been attended by results of an encouraging nature. Most of the trees planted have thriven, and this is mainly attributable to the care and attention bestowed upon them by teachers and pupils. Not only, therefore, have the children benefited by this method of beautifying their surroundings, but they have also derived valuable instruction through being so closely identified with tree-planting work.

Since the first Arbor Day, held here in 1890, not less than 1,133 applications for trees have been received and dealt with, and the steady progress which these figures denote may be regarded as an evidence of the fact that the Arbor Day movement continues to maintain its popularity.

During the year trees were planted in 392 schools, and were obtained from the Botanic Gardens and the Gosford State Nurseries.

The expenditure in connection with tree-planting this year is much below that of last year. A large saving was made by reducing the subsidies from one pound to ten shillings for each one pound contributed by the residents. The maximum grants were as follow:—

To 1st, 2nd, or 3rd class scho	ols		 £12
To 4th or 5th class schools		•••	 10
To 6th or 7th class schools			 8
To schools below 7th class		•••	 5

It may also be pointed out that of the 392 schools where trees were planted this year only 145 applied to the Department for the prescribed assistance, the rest, apparently, having defrayed any expenses that may have been incurred entirely out of local funds.

A sum of £353 13s. 4d. was paid in Arbor Day subsidies this year, as against £1,462 15s. 4d. for last year, and the cost to the Department for freight on the trees supplied amounted to £58 12s. 4d., as against £104 16s. 11d. for 1891.

Manual Training.—All the classes in operation in 1891 were continued during 1892. The Metropolitan classes are held at Fortstreet, Crown-street, Sussex-street, and Blackfriars. At each of these schools a workshop is provided. Only pupils of the schools named attend these classes. At Goulburn and at Maitland one workshop serves for all the schools of each town, the boys attending at hours arranged. In addition to these classes, the students of the Fort-street Training School, to the number of 53, received instruction.

A small workshop has been erected at the Boys' High School at East Maitland, and in September last the West Maitland classes moved to new workshops, which provide ample accommodation.

Including the training students, the total number attending the manual training classes was 420. The Instructors and Examiners speak highly of the interest taken in the work, and of the progress made during the year. The Committee appointed in connection with the Technical Education Branch, to examine the works submitted for transmission to the Chicago Exhibition, commended much that came from these classes, the exhibits from Fort-street being specially mentioned for excellence of finish.

Cookery Instruction.—The cookery classes in operation in 1891 were continued through 1892. During the year additional classes were organised, which provided instruction in cookery for the pupils of the schools at Balmain, Carr's Creek, Darlington, Grafton, Grafton South, Hamilton, Kelso, Milltown, Newcastle, and Wickham.

Very important work was effected in connection with the training of a staff of teachers. For this purpose the house adjacent to the Fort-street School, up to that time occupied by the Principal of the Training School, was fitted up as a Training School of Cookery. A class of 16 students was formed in January, who, after a six months' course of training, all passed a satisfactory examination in domestic hygiene, domestic economy, practical cookery and housekeeping, and in demonstration and test lessons. These now constitute the teaching staff under the Directress, and are giving evidence of valuable service.

The number who received instruction in the High and Public Schools was 1,352, of whom 665 attended the practice classes, 550 the demonstration classes only, and 137 the domestic economy lectures.

The report of the Directress will be found in Appendix XVI.

Needlework.—Of 49,146 female pupils who were examined in needlework, 41,711, or 84 per cent., were found to be up to or above the prescribed standard, an improvement of 1 per cent. upon the results of the previous year. The Directress of Needlework visited 78 schools

in the Metropolitan District, and examined 11,700 pupils. She reports that the results, with few exceptions, were very good, and that "there continues to exist among the pupils that spirit of emulation and rivalry which is the true secret of success."

The female pupil-teachers throughout the schools are reported to be attentive to the instructions of the work-mistresses, and to show great proficiency in needlework and design.

Public School Savings Banks.—Seventeen new banks were opened during the year, making the total number in operation 619. The amount deposited in the year was £12,441 16s. 3d., while the withdrawals reached the sum of £12,599 16s. 6d. £9,048 7s. 6d. of this was for current use, and £3,551 9s. was transferred to the Government Savings Banks for deposit to the credit of children's own accounts therein.

As compared with the figures for 1891, the deposits and transferences show a decrease of £10 10s. 3d. and £23 2s. 10d. respectively, and the withdrawals for current use an increase of £864 18s. 10d. There can be no doubt that these results are directly attributable to the great depression which has affected all classes in common throughout the Colony. It affords no evidence of any lack of appreciation of the advantages of school savings banks on the part of parents or pupils, but, on the other hand, shows their great value in providing a fund upon which depositors may fall back in their time of need. the six years school banks have now been in operation the aggregate deposits are £67,664 6s. 2d., and the number of banks has steadily increased from 255 in 1887 to 619 in 1892. Of the total sum deposited in the six years, £40,231 0s. 1d., or 59.4 per cent, has been withdrawn by depositors for current use, £20,123 9s. 8d. has been transferred to pupils on separate accounts in the Government Savings Banks, and the balance, £7,309 16s. 5d., still remains in the school banks to the credit of depositors.

Teachers.—The supply of teachers has been more than adequate for all requirements. Except in the cases of House-to-house and the lowest class of Provisional Schools, all vacancies were filled by classified teachers trained under the Department, or by pupil-teachers who had gone through the full pupil-teacher course, but had not been successful in obtaining admission to the Training School. office of teacher in the two classes of small schools above-mentioned, about 140 persons were received into the service during the year. These are young men and women of not less than 18 years of age, who have, as a rule, obtained their education in Public Schools, and have undergone a short course of training in schools taught by teachers holding a classification of at least III A. After training they are required to pass an examination showing that they possess the necessary attainments, and have a satisfactory acquaintance with school methods and The number of teachers, including all classes, whose connection with the Department ceased during 1892 from resignation, dismissal, death, or retirement, was 212.

The following table will give full information respecting the number of teachers on the roll for the last quarter of 1892, and the several classes into which they are divided:—

	I	A.	I	В.	11	A.	II	В.	III	A.	111	В.	111	C.	Uncla	ssified.	To	als.	Grand

Exclusive of High School teachers, work-mistresses, and pupil-teachers, the number was 3,248, or 116 more than in 1891. Of these, 57.5 per cent. were males, and 42.5 per cent. females; while 75 per cent were classified teachers and Training School students, and 25 per cent. were unclassified teachers. The latter have passed the usual examinations, and been certified, and nearly all are in charge of small country schools. Of the total number of classified teachers, 8.4 per cent. were in Class I, 35.5 per cent. in Class II, and 56.1 per cent. in Class III. In 1891 the percentages in the three classes were, respectively, 7, 38.1, and 54.9, and in 1890 they were 6.5, 37.8, and 55.7.

Pupil-teachers.—The number of pupil-teachers employed was 1,282, consisting of 444 males and 838 females. They were classed as follows:—First class, 242; second class, 250; third class, 301; fourth class, 436; probationers, 53.

During the year 716 applicants for appointment to the office of pupil-teacher were examined, and of these 464 were successful. About 290 of those who satisfied the examiners have been appointed to schools, leaving 174 for whom it has not yet been practicable to find employment.

The pupil-teachers continue to be favourably reported on by all concerned in their training. They are, as a body, well conducted, industrious and studious, and painstaking in the performance of their somewhat arduous duties.

Fort-street Training-school.—The training of male teachers continues to be satisfactorily carried on at Fort-street. Fifty-three students have attended the course of training during the year; 5 being seniors in their third year, 22 seniors in second year, and 26 juniors admitted

admitted at the beginning of 1892. Thirty-five of the number hold full scholarships, 17 half-scholarships, and 1 is attending at his own cost. Of the seniors who had been granted the privilege of a third year's course, 4 passed the Bachelor of Arts examination in December last, and 1 obtained the degree of Bachelor of Science. Eleven of the second-year students matriculated at the University in March, 1891, 8 in March, 1892, and 3 who failed to pass will be again examined in March, 1893.

In December the whole of the students, except those in their third year, were examined at the Training School in school management, music, and drawing, their examination in other subjects depending upon their year of training and their connection or otherwise with the University. The various examinations for which the students presented themselves are shown in the following table:—

Nature of 1	Examina		Number of Students.			
2,000,00					Seniors.	Juniors.
University, 1st year					10	9
" 2nd year					12	
,, 3rd year	• • • •	•••			4

,, 2nd year	• • •		8	
,, 3rd year	• • •		4	******
Bachelor of Science, 3rd year		•••	1	
Special Training School Examination	•••	••	•••••	15
Total	•••		20	23

In the case of the University examinations, the students who did not pass failed in either one or two subjects, and will be granted a deferred examination in March, 1893.

Test, criticism, and specimen lessons have been regularly given as in previous years; and, in addition, each student was employed in the Practising School as assistant (in rotation) for a week at a time. Opportunities have also been afforded students of becoming acquainted with the working of the Kindergarten system; and instruction has been given on the application of Froebel's methods to junior classes in Public Schools. During the year instruction in manual training has been given regularly to the students. At the close of the year an examination was held under the superintendence of the Technical Education Branch, which resulted as follows:—

			Nature of Pas	77.11		
			1st Grade.	2nd Grade.	Failure.	Total.
First-year students		3	7	14	2	26
Second-year students	•••	1	3	10	8	22
Totals		4	10	24	10	48

Only such students were examined as had not previously satisfied the requirements of the syllabus in manual training.

The Training College battalion, consisting of the students in training and the pupil-teachers attending the Saturday classes, continues to do satisfactory work. It now consists of 214 members, inclusive of officers.

No alteration has taken place in the staff during the year.

Hurlstone Training School for Female Students.—All the female students reside upon the school premises. It is satisfactory to be able to state that during the year their health has been very good, and their conduct and attention to work highly praiseworthy. The number of students undergoing training was 54, 18 being seniors in second year and 36 juniors. Of these, 30 held full scholarships, 17 half-scholarships, and 7 attended at their own cost.

Nine students have attended the University lectures, 8 being in the first year in arts and 1 in the second year. Eighteen students, 17 seniors and 1 junior, presented themselves for matriculation in March last, of whom 8 seniors passed. The unsuccessful ones failed in Latin only, and for the remainder of the session received instruction with a view to passing the departmental examination at the end of the year.

The practical training of the students was carefully attended to throughout the year. Each junior had three weeks' attendance at the Practising School, and was required to give special criticism lessons in the presence of her fellow-students. The students also received instruction for one hour every Saturday in Kindergarten methods.

Systematic instruction has been given in music, drawing, drill, cookery, calisthenics, and needlework. In most of these subjects the students have acquitted themselves very creditably.

The staff of teachers remained the same as for 1891.

Teachers' Examinations.—The total number of examinees of all classes during the year was 3,548, showing an increase of 15 upon the number for 1891. The percentage of passes of teachers was 53.6, as against 51:1 in 1891, and of pupil-teachers 90:3, as against 85:5. The total number of pupil-teachers reported on is less than that for 1891, the reason being that under a new arrangement the second, third, and fourth class pupil-teachers who hitherto have been examined in June of a year were not examined until December. The results of the examinations of these latter will appear in the Report for 1893. Of the first-class pupil-teachers examined in December, the male examinee who succeeded in obtaining the highest number of marks was Mr. James McDowall, of the Pyrmont Superior Public School; while Miss Emily Cruise, of the Horseshoe Bend Public School, West Maitland, headed the list of female pupil-teachers. Mr. McDowall obtained 722 marks out of a possible 850, or 84.9 per cent.; and Miss Cruise gained 607 marks out of a possible 700, or 86.7 per cent. These pupilteachers will be presented with the Jones Memorial medals, which are awarded annually to the candidates, male and female, who show the highest

highest proficiency at the examination for admission to the Public Training Schools. Altogether, the pupil-teachers, over 90 per cent. of whom gained promotion, must be credited with having done exceptionally good work.

Of students of the Training School who were examined, 2 males were recommended for a third year's course, while 1 female, on account of marked success as a second-year student at the University, was recommended for a fourth year's training, in order to assist her in obtaining the B.A. degree.

The work entrusted to the Board of Examiners proceeded in a satisfactory manner during the year, and the members still retain the confidence of the teaching profession. It is with pleasure that I again record my appreciation of the assistance rendered to the Board by the Local Committees who kindly undertook the work of supervising the examinations of pupil-teachers and High School candidates in centres of population where there are no resident Inspectors.

The following table furnishes the results of the several examinations in detail:—

		Results.

Teachers' Mutual Assurance Association.—During the year three members of this Association died, and in each case the claim, amounting to about £80, was promptly met. Since the formation of the Association in 1869, the average annual death-rate has been 1·2 per cent., a very low rate of mortality. Taking the years 1882 to 1892 inclusive, the amount paid annually by way of premium has averaged £1 4s. 6d., being slightly over  $1\frac{1}{2}$  per cent. on the sum payable at death.

Ordinary members continue to pay a call of 5s. on the death of any of their number, but, in accordance with a rule adopted in 1889, teachers joining the Association under 25 years of age are required to pay 3s., and between the ages of 25 and 30, 4s. only per call. The smallness of these payments should have the effect of popularising the Association among the younger members of the teaching profession.

It is understood that a still further reduction is contemplated, whereby teachers above the age of 30 years, desirous of joining the Association, will be received on more favourable terms than at present.

Teachers' Emoluments.—Under the regulations Primary Schools are divided into ten classes, and to each class is allotted a fixed rate of salary. The salaries of teachers of all ranks are given in the subjoined table:—

^{*} In schools ranking below Class IV the salaries of unmar d teachers and of married teachers not assisted by their wives, as required by regulation, are £12 per annum less than the rates stated above.

In addition to the salaries quoted, residences, vested or rented, are provided for classified male married teachers in charge of classified Public Schools. Where a residence is rented, it must be as near as practicable to the school premises.

853—D

Half-time Schools.—Half-time Schools are classified in the same manner as Public Schools, and teachers are paid the full salary attached to the classification of their schools, with forage allowance of £10 a year where necessary.

House-to-house Schools.—Teachers are paid at the rate of £5 per annum for each pupil in average attendance up to a maximum salary of £100 per annum, with forage allowance as in Half-time Schools.

Evening Schools.—Teachers are paid, in addition to school fees, a salary of £20, £26, £32, or £38, according to the number of pupils in average attendance.

## LOCAL SUPERVISION.

During the year twelve additional sub-districts have been formed, and Public School Boards appointed thereto. In addition to the appointment of these Boards, 89 members have been added to 50 already existing Boards. At the end of the year the number of Boards in operation was 280. On 51 of these ladies have been appointed to the number of 101.

## SCIENTIFIC AND TECHNICAL EDUCATION.

This branch of the Department's work is under the supervision of the Superintendent of Technical Education. In January the new Technical College at Ultimo was opened for the reception of students, and all the metropolitan classes are now carried on in that building.

In addition to the classes at Ultimo, branch classes are conducted in most of the centres of population in the Colony, as will be seen from the following list, namely, Armidale, Ashfield, Bathurst, Bega, Broken Hill, Burwood, Eskbank, Glebe, Goulburn, Granville, Hamilton, Hornsby, Hunters Hill, Kogarah, Lambton, Liverpool, Maitland East, Maitland West, Marrickville, Merewether, Minmi, Morpeth, Moruya, Newcastle, Newtown, North Sydney, Orange, Paddington, Parramatta, Petersham, Plattsburg, Raymond Terrace, Seaham, Singleton, Stockton, Uralla, Wagga Wagga, Wallsend, Waverley, Wickham, and Wollongong.

Thirteen of the classes in operation in 1891 were discontinued at the end of that year, leaving 282 with which to begin 1892. Applications for new classes were numerous, but most of them were for various reasons declined; 24 new classes were, however, started, bringing the number up to 306. The following table will show how the classes are distributed:—

Classes in operation.	Number.	Enrolment.		
Sydney Technical College Suburban classes Classes in country towns Classes connected with Public Schools			75 -14 147 -40 	$   \left.\begin{array}{c}     3,858 \\     4,902 \\     1,329 \\ \hline     10,089   \end{array}\right. $

Deducting from the total enrolment all cases where students have joined two or more classes, the number of individual students enrolled for the year was 8,295. The average attendance for the year was 6,205.3.

The staff employed during the year consisted of 13 lecturers, 5 resident science masters in charge of branch schools, and 110 teachers and assistants. In addition to the ordinary class work, popular lectures in geology and mineralogy, agriculture, and beeculture have been given in various parts of the Colony. Practical lessons have also been given in 97 country schools in subjects connected with horticulture.

The

The number of students examined in 1892 was 3,332, including 240 public school pupils tested in shorthand and 289 in manual training. Of these 2,271 (or 68.2 per cent.) satisfied the examiners.

At the national competition at South Kensington, held under the auspices of the Science and Art Department of Great Britain, works sent by the students of the Sydney Technical College secured two bronze medals and eight book prizes. Thirty-six students also passed the technological examinations of the City and Guilds of London Institute, and were awarded certificates.

The Technological Museum and its branches in Bathurst, Goulburn, Maitland, and Newcastle have maintained their popularity, and have proved a means of widespread usefulness. The new building at Ultimo is now approaching completion, and will afford about three times as much space as is available in the present premises in the Domain. It will permit of the proper classification and display of the exhibits, and increase the usefulness of the museum as an educational agency. During the year 144,253 persons visited the Sydney museum and 40,332 the branch museums.

The total expenditure on technical education during 1892—including £5,709 12s. 7d. spent on the Technological Museum—amounted to £37,873 16s. 9d. Of this sum £33,485 2s. was a Parliamentary grant and £4,388 14s. 9d. was paid as fees by students.

Details of the work carried on will be found in the report of the Superintendent (Appendix XXI).

## PUBLIC SCHOOL CADET FORCE.

At the end of 1891, the Public School Cadet Force numbered 6,888, while 1892 closed with an enrolment of 6,221, showing a decrease of 667. The greatest strength for 1892 was for the June quarter when the enrolment was 6,695, but still less than that for the previous year. There can be no doubt that the falling off which has taken place is attributable, not to any lack of interest on the part of pupils, but principally to the depression which has been universally felt throughout the Colony. Under present arrangements, the expense of providing boys who join the corps with the necessary uniforms has to be borne by their parents, and this has been found at the best of times to be a hindrance in the way of many lads desirous of enrolling themselves. Until more prosperous times set in, it is possible, therefore, that no large increase will take place upon the present strength.

A new corps was established in February last, that of the pupil-teachers of the Newcastle District, which has given an impetus to drill in that neighbourhood.

The several corps have well maintained their efficiency during the year. The annual review of the whole force was not practicable, as in 1890 and 1891, but the corps were on several occasions combined for special purposes. Among these may be mentioned:—

A parade of the Western Corps at Bathurst, in April last, in connection with His Excellency the Governor's visit to that city.

The drill competition at the Public Schools Athletic Association Meeting, when the Physical Drill Prize was won by Redfern Superior School Corps; and the Public Schools Drills Competition Shield by the Fort-street Model School.

The Queen's Birthday Review.

The Cadet Artillery, the Metropolitan Senior Cadet Infantry, and the Ambulance Corps' Camp at La Perouse, 30th September to 3rd October.

The Encampment of Metropolitan Cadets at Middle Head, 28th November to 8th December.

The Shooting Competition at Randwick, on 16th and 17th December, for Cadet Challenge Shield, carried off by the Orange Superior School team.

Full details as to these meetings will be found in the Commanding Officer's Report, Appendix XX.

At the close of the year the strength of the Force was as follows:—

								Number.	Enrolment.
						•	-		1

		••							

The amount available for Cadet purposes in 1892 was £13,482 17s. 9d. The total expenditure amounted to £12,341 14s. 9d., leaving a balance of £1,141 3s.

#### FINANCE.

The sum available in 1892 for expenditure under the Public Instruction Act was £785,448 17s., made up as follows:—

	£	s.	d.
Balance from 1891	5,448	17	0
Amount received from Treasury on account of Vote			
for 1891	. 10,000	0	0
Amount received from Treasury on account of Vote	9		
for 1892	. 709,000	0	0
Amount received from Loan Vote—Buildings	45,000	0	0
Amount received from Loan Vote—Land	16,000	0	0
	£785,448	17	
	2700,990	1.1	

The total outlay in the year was £768,395 2s. 3d., namely, £157,679 6s. 9d. on school premises, and £610,715 15s. 6d. on maintenance of schools, administration, &c. The balance at the close of the year was £17,053 14s. 9d.

General

#### General Statement of Expenditure for 1892.

#### I. On School Premises:—

£ s. d. For sites, new buildings, additions, repairs, &c ... 157,679 6 9

#### II. On Maintenance of Schools, &c.:-

1. Teachers' salaries and allowances in Primary Schools		s. d. 9 10

2. High School salaries and maintenance expenses	7,484 1	L4 6		
State Scholarships and Bursaries	1,961 1	LO 4		
3. Administration, including Training Schools and enforcement of school attendance	57,130 1		610,715 15	6

£768,395 2 3

The amount of school fees collected and paid into the Consolidated Revenue was £77,524 9s. 10d., namely, £73,230 10s. 10d. from Primary Schools, and £4,293 19s. 0d. from High Schools. Deducting this sum from the total expenditure, there will remain £690,870 12s. 5d. as the net school expenditure derived from State funds, showing a decrease for the year of £2,781 16s. 4d. as compared with the like outlay for 1891.

The total expenditures under the following heads in 1881, 1891, and 1892, were:—

	188 Expend		e.	Per- centage of total expen- diture.	189 Expend		re.	Per- centage of total expen- diture.	189 Expend		ıre.	Per- centage of total expen- diture.

* Included under Chief Inspector's Branch.

The foregoing statement shows that of the total year's expenditure of £768,395 2s. 3d., nearly  $20\frac{1}{2}$  per cent., was spent on school premises, 71 per cent. on the maintenance of Primary Schools,  $7\frac{1}{4}$  per cent. on administration and inspection (including the training of teachers and the enforcement of school attendance), and  $1\frac{1}{4}$  per cent. on High Schools. In 1891 the corresponding percentages were:—Premises, 25 per cent.; maintenance of Primary Schools,  $66\frac{3}{4}$  per cent.; administration,  $7\frac{1}{4}$  per cent.; and High Schools, 1 per cent.

1

The

The following table exhibits the number of schools, the number of pupils, and the State expenditure for each of the last five years:—

,	Number of Schools.		The State Expenditure.									
Year.		Number of Pupils.	On School Premises.	On Maintenance of Schools, including Administration, &c.	Total.	Less School Fees.	Net State Expenditure.

Information respecting educational institutions connected with the Department, but not carried on under the provisions of the Public Instruction Act, is furnished in the following summaries:—

#### THE SYDNEY UNIVERSITY.

The number of students attending lectures in 1892 was 598, being an increase of 66 on the attendance for the previous year.

Of 194 who presented themselves at the ordinary Matriculation examination, 124 were successful. In addition to these, 7 passed the entrance examination for Medicine and Science, 35 the Articled Clerk's Examinations, 22 the Senior Public, and 119 the Junior Public Examination. Thus the total number of matriculants for the year was 307, which included 27 students from the Training Schools, 4 pupils of the Sydney High Schools, and 2 pupils of the Maitland High Schools, who were awarded Bursaries. The number of Professors and Lecturers on the University Staff during 1892 was as follows:—14 professors, and 14 lecturers. Of these, 7 professors and 5 lecturers were paid out of the Challis Fund. Two lecturers who delivered courses of University Extension lectures gave their services gratuitously.

The year's expenditure was £40,083 7s. 3d., of which sum £18,100, or about 45 per cent., was granted by the Government. The year's total income was £37,590 19s. 7d.

#### THE SYDNEY GRAMMAR SCHOOL.

The total enrolment of pupils for 1892 was 495, of whom 162 were under and 333 over the statutory age of 14 years. Compared with 1891, the enrolment has decreased by 16, and the pupils under 14 years by 22, while those over that age have increased by 6. hundred and sixty-eight new pupils were admitted, being 2 more than the number for 1891. Of these, 98 were under and 70 above the statutory age. The mean quarterly enrolment was 420, and the average daily attendance 401, showing an increase over last year of 16 and 20 respectively. The University examinations were attended by 73 pupils, an increase of 1 on last year's attendance. The results were:—Junior Public Examination, 57 attended, 54 passed; Senior Public Examination, 6 attended, all passed; and Matriculation, 10 attended and passed. Twenty of the juniors and 4 seniors also qualified for matriculation. The income of the School for the year amounted to £8,646 16s. 5d., comprised of—

State grants	• • •	•••		£2,799		<b>2</b>
School fees	• • •	• • •		5,736		0
Other sources	• • •	• • •	• • •	110	17	3
				£8,646	16	5

The year's expenditure reached the sum of £9,372 14s. 11d. The cost per pupil in average attendance was £22 12s. 8d., of which £20 15s. 9d. represented the cost for tuition, and £1 16s. 11d. for buildings, &c. The cost per pupil in 1891 was £26 18s. 4d. The expense to the State was £6 19s. 8d. per head of the average attendance, as against £7 9s. 2d. in 1891.

The Head Master reports the main developments during the year to have been the further extension of Natural Science teaching, and the introduction of systematic physical training. The School is now provided with a Laboratory and a Science Lecture-room, and a good deal of practical work is done in addition to the regular lessons in Chemistry and Physics. A gymnasium has been erected, and is utilized daily under competent superintendence. The test of the intellectual work of the School, as supplied by the University examination results, is regarded as satisfactory. The successful candidates at the Junior Examinations were drawn from five different forms in the School.
