All that piece or parcel of land situate in the parish of Kembla, county of Camden, and Colony of New South Wales, being part of E. R. Stack's (now J. Bovard's) 300 acres: Commencing at the bridge over Mullet Creek, at a point formed by the intersection of the southern side of that bridge with the left bank of that creek; and bounded thence north-westerly and westerly by the south-western and southern sides of the road from Dapto Station to Bong Bong, being lines bearing north 84 degrees 43 minutes west 1 chain  $31\frac{8}{10}$  links, north 65 degrees 57 minutes west 2 chains  $83\frac{1}{10}$  links, north 73 degrees west 2 chains 90 links, south 89 degrees 12 minutes west 8 chains 60 links; thence by lines bearing south 7 chains 88 links, east 10 chains  $48\frac{2}{10}$  links, and north 30 degrees 24 minutes east 3 chains 93 links, to a stake on the left bank of Mullet Creek aforesaid; thence by that bank of that creek north-easterly and northerly, to the point of commencement,— as shown on plan catalogued Ms. 668 Sydney, in the Department of Lands, containing 10 acres or thereabouts; and said to be in the possession of J. Bovard.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this fifteenth day of April, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

No. 1.

J. M. Chanter, Esq., M.P., to The Secretary for Lands.

Moama, 25 April, 1892.

ENCLOSED please find report of a large public meeting strongly protesting against the intended action of your Department to alienate portion of the common. I would respectfully urge that the residents are themselves the best judges of the necessity for keeping these commons intact, that Deniliquin is the depôt for millions of sheep, cattle, &c., and that a very large number of residents are engaged as teamsters in carrying the vast quantity of wool from stations in Riverina to the railway station here, and this commonage is necessary to depasture their working bullocks and horses. The loss of the common would be a serious blow to the town and district, and I respectfully urge upon you to comply with the wishes of the people to permanently retain the land as commonage.

Yours, &c.,  
J. M. CHANTER, M.P.

I have not had any opportunity of discussing this matter with my colleague Mr. Barbour, but I feel that I express his opinion also.—J.M.C. Referred to the District Surveyor for report.—J.O'D. (*pro U.S.*), 2/5/97. The D.S., Hay. Mr. Chanter, M.P., informed, 2/5/92.

[Enclosure.]

[Enclosure.]

EXTRACT from the *Pastoral Times*, Deniliquin.

## MEETING ON THE COMMONS QUESTION.

A PUBLIC meeting was held in the Town Hall on Thursday evening last for the purpose of protesting against the proposal of the Minister for Lands to cut up and dispose of a portion of the Deniliquin Commons. The meeting had been called by the Mayor in response to a requisition signed by about forty ratepayers and commoners.

The MAYOR (Mr. GEO. CHANDLER) occupied the chair, and explained the objects of the meeting as above stated. The proposal of the Minister had been before the Municipal Council, and it was then suggested by him that if the commoners objected to the alienation they could requisition him to call a meeting, and he would do so. That course had been adopted and the meeting was called. There might be a difference of opinion in the council on the subject, and it was therefore desirable that outside opinions should be obtained. He might mention that anyone who felt disposed could move amendments to any of the resolutions which were to be submitted. He then called upon Mr. WOOLDRIDGE to move the first resolution.

Mr. WOOLDRIDGE moved as follows,—“That this meeting in the interests of the town and district of Deniliquin, strongly protests against the proposal of the Minister for Lands to alienate any portion of the temporary commons surrounding the town.” His opinion was that the commons were not large enough to justify the cutting up of them into small lots, and moreover, these small lots would not be of sufficient size to enable the settlers upon them to make a living unless the water was laid on to them. The commons were largely used by stock coming here for sale, for trucking and other purposes, and it would be a great advantage to the town if they could be enlarged instead of being curtailed. He was in communication with a number of gentlemen in Melbourne who had proposed to form a large company for meat-freezing and other purposes, and sending the meat to the London market. That large company, he might say, was not likely to be formed, but the advisability of forming several small companies with the same object, in several of the inland towns of New South Wales, of which Deniliquin would be one, was now under consideration, and if the commons were lost here, so would also be the chance of getting one of these branches established in the town. He might further say with respect to this proposed big company, that those who had taken shares in it could either have their money returned or could transfer it to the other smaller companies referred to. He then moved the resolution.

Mr. DOYLE wished to ask a question, but was ruled out of order by the Chairman.

Mr. W. J. DAVIES, in seconding the motion, said he endorsed all that Mr. Wooldridge had said. He was opposed to the cutting up of the commons, and had expressed the same views when he was in the council. If they were cut up for irrigation purposes it might be profitable to those who went on to the small lots into which they would be divided, but, as they were now they could not be worked to satisfactory results. He considered that the commons were no larger than they should be, because Deniliquin was the depôt for stock from all the back country which was being sent through to the Melbourne markets. If they allowed any portion of them to be sold they would assist in diverting the large numbers of stock which now passed through here to some other trucking centre, and thus ruin the trade they now had. Some time ago he noticed a letter in the *Deniliquin Chronicle* signed “Red Gum,” and it was evident to him and to others who that writer was. There were about 24,000 acres of these commons, and since the management of them had been transferred from the council to trustees they had paid off an overdraft of £700. That showed whether they were profitable. “Red Gum” said that it was desirable to settle people on 40-acre blocks, but he (Mr. Davies) thought that neither 40 acres nor 140 acres were sufficient for the proper maintenance of a man and his family.

A VOICE: Was it Barbour who wrote it?

Mr. DAVIES said they could draw their own conclusions. He was satisfied who wrote the letter. “Red Gum” said that the commons were not a necessity, but he (Mr. Davies) disagreed with him. There were hundreds and thousands of bales of wool going through here, and the commons were a necessity for the maintenance of the teams of the men engaged in that traffic. “Red Gum” also said that the commons were not a source of profit, but that was disproved by the fact that the commons had paid enough into the trustees to enable the latter to discharge an overdraft of £700 during the last few years, and they must have been a profit to the commoners to enable them to pay so much money into the trustees. “Red Gum” also said that the commons were not a convenience to the ratepayers or the commoners, or at the most to a few of them only. That was absurd because there were so many people who depastured stock on the common, and if such a privilege was not a convenience and a profit to them they would not so largely take advantage of them. He (Mr. Davies) hoped that the public would sign largely, because if they allowed the 4,000 acres to be cut off they would probably soon lose the lot either by selection or public auction. (Cheers.)

The MAYOR declared the motion carried unanimously, but his attention was drawn by Mr. Jameson to the fact that he (Mr. Jameson) had held up his hand against it.

Mr. GEORGE EVANS moved the second resolution as follows:—“That a petition be drawn up and left for signature at the Town Hall in accordance with the preceding resolution.” He said that this common question was interesting to every resident in the district. If it had not been for the commons, he, for one would not have been a resident. His wife had not been getting bigger but his family was (laughter), and when he found that he could run twelve head of stock on the commons at such a cheap rate he took advantage of the privilege and settled down in Deniliquin. Others would do the same, if the same privileges were continued, and if they did not take advantage of the privileges offered it was their own fault. With the Minister for Lands it was a question of £ s. d., and as he wanted money, he thought the easiest way of getting it was to cut up and sell the land, but he (Mr. Evans) would like to know who would take land here in 40, 60, or even 100 acre blocks? They would find it was not profitable in such small blocks, and they would take the first opportunity of selling it to the highest bidder. If there was finality of selection it might be alright, but even then, who would be foolish enough to sacrifice his rights for the purpose of taking up only 100 acres in any part of the Colony? If they got the land it would probably find its way into the hands of the neighbouring squatters. It was proposed to cut up the worst part of the commons, but he thought if they cut them up at all they should cut up the best parts of them, and then he would probably go in for a piece himself. He thought 80 or 90 per cent. of the ratepayers would sign the petition. For his own part, he knew what it was to get a bit of grass on the cheap, and he considered that the loss of this land would be the worst thing that could happen to the town. (Cheers.)

The motion was seconded by Mr. M. J. CAREW and carried.

Mr. A. T. EMRY proposed the third resolution as follows:—“That the Municipal Council be requested to forward the petition, when signed, to the Members for the district for presentation to the Minister for Lands, and that the Municipal Council and Members for the district be asked to use their influence to have the prayer of the petition granted.” He believed it would not be in the interest of the town to cut the commons up as proposed, and to attempt the settlement of people on such small holdings would be a mistake. When the matter was first spoken of, he had thought that it would be a good thing to make room for more settlement around the town, but since he had time to think over it, and to hear other opinions, he felt justified in changing those he had at first held. He thought now it would be unwise to alienate any portion of the commons, because it might ultimately get into the hands of the large landowners, and would be a positive loss to the town. The motion was seconded by Mr. J. ROSS, who said that there were 300 commoners on the roll, and each and all of them got direct benefits from being on the commoner's roll.

The motion was carried.

The MAYOR said that although there was a difference of opinion on the subject in the council, he knew that the wishes of the meeting in regard to the resolution just passed would be respected, and they would be forwarded on as requested. Those having contrary opinions had failed to come forward, and unless they made a counter demonstration they had lost the opportunity of being heard. (Cheers.)

After a vote of thanks to the CHAIRMAN the meeting terminated.

## No. 2.

## Mr. Surveyor Broughton to The District Surveyor at Hay.

Sir,

Deniliquin, 3 June, 1892.

Adverting to your instructions, No. 2 of 11th January, 1892, directing a report on the commons throughout the Deniliquin district, I have the honor to furnish the following report on the permanent and temporary common at Deniliquin:—

1. The area of commons at Deniliquin is 23,000 acres (close approx.); the population of the municipality is about 2,700 people; the number of commons allotted is 369; the number of stock grazed by them on the commons is 1,230 horses and cattle; the resident carriers also graze up to 360 horses and cattle; the travelling stock that passed through the commons from 1st January, 1891, to 31st December, 1891, was 528,482 sheep, 26,229 cattle (travelling stock should not remain more than one and a half days on the common).

I am of the opinion that there are very few persons, if any, deriving a benefit off these commons without authority, as the trustees keep a herdsman constantly riding over them, whose duty is to see that there are no loafing stock. I consider that the area of these commons is in excess of present or future requirements.

2. The sites embraced by these commons comprises a fair proportion of red sandy loam, well adapted to the growth of cereals, red clay that will grow a good crop of wheaten hay in a fair season, and black clay which produces a very good pasturage—the latter soil predominates slightly; the timber is box and gum, chiefly the former, and the latter is only found in vicinity of Edwards River. I consider the townspeople have an abundant supply of firewood, irrespective of that on the commons, which also afford a very good supply; and by brown tint on tracing, I have shown approx.—from my local knowledge—the position of the area of timber, which is about 9,000 acres, but I may point out that wood-cutters are precluded by the trustees from cutting anything but dead wood, and not any of the timber has been ringbarked or destroyed.

3. I recommend that an area of about 3,700 acres, as shown by red etching on tracing, and which embraces the different classes of soil, be at present excised from the common, and that, pending the question of construction of Jerilderie-Deniliquin Railway, the consideration of a further excision of a further area to remain in abeyance.

The areas that I consider would be most suitable are from 40 acres to 160 acres, but final determination on that point should depend on preliminary survey, as the variation of soil will make a material difference in the value. The value of the land embraced by the proposed revocation is from £2 10s. to £3 15s. per acre.

The commons have been improved by tanks and fencing by the trustees, and I am of the opinion that if the box and gum timber was judiciously ringbarked the carrying capacity of the commons would be increased two-fold.

The part proposed to be revoked is not improved.

I have, &amp;c.,

J. BROUGHTON.

Forwarded to the Under Secretary for Lands. This report has been obtained in compliance with Circular No. 91/73, and in view of it I would recommend that the part of the Deniliquin Temporary Common shown by red etching on tracing, comprising about 3,700 acres, be subdivided for special area into areas suitable for settlement, to be determined after preliminary survey. In regard to the 3rd paragraph of Mr. Broughton's report, I am of opinion that although the matter of the railway from Jerilderie to Deniliquin has been shelved by the Public Works Committee, further excision from the commons should await disposal of the area recommended for subdivision, and if it be considered that a demand exists sufficient to warrant such further excision, the necessary action can be taken later on.—J. L. THIRTON, D.S., 25 August, 1892. The Under Secretary for Lands.

The District Surveyor's recommendation that 3,700 acres of the Deniliquin Common be subdivided for alienation, is submitted. The commonage at present comprises 23,000 acres.—J.O'D., 5/9/92. R.H.D. Special.—F.H.W., 8/9/92. Submitted.—W.H., 8/9/92. Recommendation of D.S. approved.—H.C., 19/9/92. The District Surveyor, Hay, for measurement.—J.O'D., for the U.S., B.C., Lands, 27/9/92.

## No. 3.

## The Council Clerk, Deniliquin, to The Secretary for Lands.

Sir,

Town Council of Deniliquin, Town Hall, Deniliquin, 28 June, 1892.

I am directed by my council to forward you the following resolutions passed at their last meeting, and to request that you will take into consideration, and if possible give effect to their wishes.

Resolutions:—

1. "That in the opinion of this council it is desirable that a short Act of Parliament be introduced during the ensuing session to provide for the cutting up of the commons within the population areas by leasing only."
2. "That all country commons trustees be communicated with, requesting their cooperation in the above movement by urging the Members for their respective districts to vote and support the contemplated Act."

My council instruct me to intimate that the above resolutions have been passed with a full knowledge of your determination to cut up the various country commons, and with the desire on their part of promoting *bona fide* settlement.

My council know that in the past, enormous quantities of land have been taken up by selectors around this town, and on the completion of their respective residences have been sold to the large landholders adjoining, thereby causing the aggregation of large estates. By this means this town has suffered in the past, and is hemmed in on all sides by runs, preventing small farmers from settling in its vicinity.

Should

Should the common be sold in a similar manner my council fear that what has occurred in the past will again obtain, and at the conclusion of the residence periods it will be found that the boundaries of the runs have come so much closer to the town, and no permanent advantage has accrued to it. To obviate this my council think that land should be leased and not sold, and they respectfully submit that any Act providing for the foregoing purpose should contain the following or similar provisions.

1. That the acreage of leases should vary according to proximity to the town, and character of the soil from a minimum of 50 acres to a maximum of 200 acres.
2. That the leases should be for a term of ten years in the first instance, with a right of renewal for five years thereafter.
3. That the Municipal Council should have some voice in the choice of eligible lessees by reducing the number of competing applicants to (say) three before a ballot is taken.
4. That 10 per cent. at least of the holding shall be cultivated each year.
5. That residence shall be compulsory.
6. That leases shall be transferable after the first three years to any person otherwise eligible who does not hold any other lease from the Crown.
7. That no lessee shall hold more than one lease; but, in the cases of families, the head of the family may hold a lease in trust for each of his children over 16 years of age.
8. That, in the event of termination of leases, all improvements shall be valued and paid for by incoming tenants.
9. That, at termination of fifteen years, all leases shall be open for competition by auction at such increased rental as may be determined, subject to the provisions *re* valuation in the preceding clause.

My council think that if an Act be passed in which the foregoing principles are embodied, the prosperity of this town will be greatly promoted, and that the disadvantage occasioned through the loss of the commonage (which has been of great importance to the inhabitants for so many years) will be reduced to a minimum.

My council would also point out that they have improved the common by fencing and tanks, and would ask that a certain amount of permanent common should be set apart to protect and compensate them for such improvements.

I have, &c.,

THOMAS C. GILLIES,

Council Clerk.

The suggestion by the Deniliquin Municipal Council, that an Act of Parliament be introduced, providing for the cutting up of commons within population areas by leasing only, under certain conditions herein specified, is submitted.—J.O'D., 26/7/92.

Special.—F.H.W., 27/7/92. The letter may be acknowledged and the council informed that their suggestion will receive due consideration in connection with other proposed amendments of the law.—W.H., 28/7/92. Approved.—H.C., 8/8/92. Acknowledged and informed, 26/10/92. Deputation consisting of R. Barbour and J. M. Chanter, M's.P., and Alderman Moltine and Alderman G. Evans. Received.—H.C., 29/9/92.

#### No. 4.

#### Petition.

To the Hon. The Minister for Lands, New South Wales.

The Petition of the undersigned ratepayers and residents of the district of Deniliquin,—

HUMBLY SHOWETH:—

That your Petitioners feel aggrieved at the announcement of your intention to cut up a portion of the Deniliquin Commons for conditional purchase into small areas.

Your Petitioners beg to assure you that doing so will be injurious to the town and district of Deniliquin, and would deprive stock-owners and others of the facilities the Deniliquin Commons have afforded them in past years for the purpose of trucking stock to market and for local sales and resting carriers' teams.

Your Petitioners are of opinion that a large portion of the land is only fit for grazing purposes; that graziers cannot make a living on small areas, and, consequently, the land in the course of a few years would fall into the hands of the large land-owners adjoining.

We do not anticipate that the selling of these lands would increase the population, or otherwise benefit the town, unless the best parts of the commons were picked out, and cut up into small areas of about 20 acres, and water laid on to them, and sold with compulsory conditions as to cultivation.

We also beg to remind you that Deniliquin is one of the largest and most important stock centres or depôts in this Colony, and that a large amount of carrying is done by teams from the railway, and, consequently, a large common is of vital importance to the town.

Trusting that you will reconsider this matter.

Your Petitioners will ever pray, &c.

David Braid, carrier, Deniliquin,  
Thomas Braid, carrier, Deniliquin,  
Peter Wilkinson, wheelwright, Deniliquin,  
And 117 other signatures.

Deputation consisting of Alderman Moltine and Alderman George Evans; introduced by J. M. Chanter, Robt. Barbour, M's.P.

Received.—H.C., 29/9/92.

## No. 5.

## Memo. by The Secretary for Lands.

IN view of the personal representations of Aldermen Moltine and Evans, representing the Municipal Council of Deniliquin, and supported by Messrs. Barbour and Chanter, M's.P., the papers may be forwarded to the District Surveyor, with instructions to extend the area of subdivision so as to embrace the area roughly hatched in red pencil, excluding the permanent common. The areas near the town might come down to 10 acres as a minimum, then 20, 40, to 80 acres approximately, 80 acres being the maximum. This matter may be pushed on with all reasonable despatch.

H.C., 29/9/92.

The District Surveyor, Hay, for subdivision.—J.O'D. (for the U.S.), B.C., Lands, 6/10/92. Messrs. Barbour and Chanter, M's.L.A., informed, 6/10/92, (posted). Transferred to Mr. Surveyor Broughton for preparation of a design based upon the instructions above set forth.—J. L. TRITTON, D.S., 11 October, 1892. Papers now returned in accordance with District Surveyor's telegram of this day.—J. BROUGHTON, Surveyor, Deniliquin, 6 November, 1892. Messrs. Chanter and Barbour informed in reply to their personal inquiry by order of the U.S., 15/11/92. Papers returned to the District Surveyor for subdivision.—J.O'D. (*pro* U.S.), 15/11/92. The District Surveyor, Hay. D.S.O., Hay, 17/11/92. To Mr. Surveyor Broughton.—J. P. GARVIN (*pro* D.S.), 17/11/92.

## No. 6.

## R. Barbour and J. M. Chanter, Esq's., M's.P. to The Secretary for Lands.

*Re* Temporary Commons—for special area, Deniliquin, county Townsend.

Dear Sir,

Sydney, 30 September, 1892,

On behalf of Alderman Moltine and Alderman G. Evans, of Deniliquin, to whom you explained the contemplated excision of a portion of the temporary commons, and the making of it into a special area. I have to request that you will enlarge the area (so as to take in the north-east corner) to about 5,000 or 6,000 acres, that corner being higher and dryer and if anything better for cultivation.

We have, &amp;c.,

ROBT. BARBOUR,  
J. M. CHANTER.

## No. 7.

## Telegram from The District Surveyor, Hay, to The Under Secretary for Lands.

Hay, 25 October, 1892.

SURVEYOR BROUGHTON asks if he may allow trustees to peruse the papers referring to proposed subdivision of parts of temporary common at Deniliquin, would there be any objection, the matter in them is purely official?

I have, &amp;c.,

J. L. TRITTON,  
District Surveyor.

There is no objection to the trustees seeing the Deniliquin Common papers. The District Surveyor may perhaps be so informed by wire.—J. O'D., 26/11/92. R.H.D., 26/10.

Special. I have grave doubts of the wisdom of this. Recently there have appeared paragraphs in the local papers commenting adversely on the question of dealing with this common. I think the trustees should set out what information they require. If the papers were at head quarters, hesitation would be shown in allowing them to be seen indiscriminately at the present stage.—F.H.W., 26/10/92. R.H.D., 26/10/92.

The trustees should specify what information is desired by them, when it is probable their wishes may be met without infringing the rules in connection with the custody of office papers.—W.H., 26/10/92. The D.S., Hay, informed, 28/10/92.

## No. 8.

## Telegram from The Under Secretary for Lands to The District Surveyor, Hay.

10 November, 1892.

PLEASE return miscellaneous, seven four nought seven, Departmental, Deniliquin Common papers immediately.

WM. HOUSTON,

Under Secretary for Lands.

Papers received from Mr. Surveyor Broughton, and now herewith.—J. P. GARVIN (*pro* D.S.) 11/11/92.

The Under Secretary for Lands.

No. 1.

The Surveyor-General to The Under Secretary for Public Works.

Surveyor-General's Office, Sydney, 21 December, 1880.

Is it probable that a tramway is to be extended from the bridge across Parramatta River to Gladesville, through or touching the Field of Mars Common?

The work of sub-dividing the late common is in progress, but, if necessary, it could be suspended in part should a probability exist as to probability of intersection or near approach of a tramway.

P. F. ADAMS.

Inquiry may be made to the Commissioner for Railways.—C.O., 31/12/80. Yes.—J.H., 5/1/81.  
Write at once.—C.O., 7/1/81. Under Secretary for Public Works requested accordingly, 12th January, 1881.

## No. 2.

The Under Secretary for Public Works to The Under Secretary for Lands.

Sir, Department of Public Works, Sydney, 29 January, 1881.

In reply to your letter of the 12th instant, I am directed to inform you it appears from a report which has been received from the Commissioner for Railways that it is proposed to construct a tramway over the bridges across Iron Cove and Parramatta River, and thence on to the Field of Mars Common, I am therefore to request that you will have the goodness to defer the proposed day of sale of the land of the common pending a further communication from this Department.

I have, &c.,  
JOHN RAE.

Submitted for reference to Surveyor-General. No date for the proposed sale has been settled yet.—J.G.B., 3/2/81. The Surveyor-General,—This is a reply to a letter written on within suggestion.—C.O., 3/2/81.

The sale has not been recommended, and I am not in favour of pressing it. I should be glad to have an early intimation of what is to be done in tramways, in order that my design may be amended to suit it.—P. F. ADAMS, B.C., 23rd February.

The Under Secretary for Lands, for the Under Secretary for Works. The Under Secretary for Works may be written to.—C.O., 7/3/81. Very urgent. Yes.—J.H., 8/3/81. Write. (See approval within).—C.O., 9/3/81. Inform.—J.G.B., 9/3/81. Informed, 24/3/81.

## No. 3.

The Surveyor-General to Mr. Licensed-Surveyor Bucknell.

Sir, Surveyor-General's Office, Sydney, 24 February, 1881.

I have to request that you will be so good as not to make any measurements in pursuance of the design for subdivision of the Field of Mars Common that are likely to require alteration should the Government determine on carrying out a system of tramways by which access would be afforded to that and.

I am, &c.,  
P. F. ADAMS,  
Surveyor-General.

The survey of the eastern part of the design will only be proceeded with pending decision of tram routes.—WALTER A. BUCKNELL, Licensed Surveyor, 16/3/81.

## No. 4.

The Commissioner for Railways to The Under Secretary for Lands.

Sir, Department of Public Works, Railway Branch, Sydney, 28 July, 1881.

Referring to your letter of the 24th March last, No. 81-875, Alienation, and previous correspondence respecting the construction of the proposed tramway-line to Ryde and the subdivision of the Field of Mars Common, I have the honor to inform you that a survey has been made of the proposed tramway, which shows that the probable route of the line will not pass through the Field of Mars Common, but within 48 chains of it.

I may add that the construction of this line has not yet been approved, nor will it be considered this year.

I have, &c.,  
C. A. GOODCHAP,  
Commissioner for Railways.

For the information of the Surveyor-General.—C.O., 4/8/81.

## No. 5.

Extract from the *Daily Telegraph*.

FIELD OF MARS TRAMWAY.

To the Editor of the *Daily Telegraph*.

Sir, 26 July.

An anonymous writer in your paper complains of "the very objectionable means employed to gain a point for the sake of private interests in the advocacy of the Woolwich route." I suppose he means by the members of the deputation who presented the petitions to the Premier on 16th instant. I may as well, for the sake of accuracy, inform those interested that the petition showed, and the members of the deputation stated, that "the majority of the landowners on the Field of Mars, the majority of the aldermen of Hunter's Hill, and it was believed the majority of the adult male householders and residents of Hunter's Hill (excepting lunatics), had signed the petitions." It is quite true that Mr. Alderman M'Neill, Mr. Alderman Joubert, Mr. Alderman James Brown, and Mr. Alderman Weekes did not sign the petitions—Mr. Alderman M'Neill possibly because he was absent from the Colony (otherwise I am informed he would have signed), and the other three because probably no opportunity was afforded them to do so, and the absence of their signatures was no regarded as an insuperable bar to the granting of the prayers of the petitions. Besides, it is well known in this district that any proposition supposed to emanate from me would receive the most uncompromising opposition from "Resident" aided by the three aldermen lastly referred to, for they always, when I was an alderman, unitedly opposed any efforts of mine for the benefit of the inhabitants. For instance, the introduction of gas was prevented by them; the planting of trees in the borough streets they have always opposed; even the repairing of the main roads of the borough, such as Ryde Road, when proposed by me, they invariably opposed, in order that they might have the money appropriated to bye-streets of little utility comparatively, except to themselves individually. They also opposed the construction of wharfs and baths, and the proposals to endeavour to improve or exercise control over the ferry service and propositions for the establishment of a reading-room and library.

library. In fact, every proposal for the improvement of the municipality has been opposed by them when it did not emanate from one of their number, and I know of no useful proposition any one of them ever made. It is not to be wondered at, therefore, that those gentlemen "are strongly opposed to the Woolwich line." I think, however, that they would find it difficult to give any good reasons for their opposition. At any rate, I have never heard them give any good reason, for anything they ever did except that they were each and all, including "Resident," determined to oppose anything I might propose. As it happens, however, I did not originally propose this Woolwich route. To the former Minister for Lands, Mr. James Squire Farnell, M.P., is due the credit for the pointing out and advocacy of this route while he was in office, and probably had I not joined in with its advocates, it would have received no opposition from the gentlemen I have named. Many of the inhabitants of Ryde who have advocated the Drummoyne and Glebe or Pymont routes did so on perfectly fair grounds. They simply wish for a tramway that does not cross the water by ferry, but they forget that some time ago they unanimously, in a crowded public meeting, protested against any tramway going by the same route they now so very inconsistently, though I admit not very enthusiastically, support. But then, although the inhabitants of Ryde said they preferred the present steam ferry to the Drummoyne tramway, the latter would be of some benefit to them, as the railway is now. They would have the benefit of the expenditure of £200,000 in their district or along the route, and they would have a fourth alternative route, though it would take more than one-half longer in time to travel over than the others. Hunter's Hill residents would have no such advantages from that route being adopted, and surely they may be permitted to urge the adoption of a route which, it is admitted by "Resident" even, will increase the value of their properties; but then it will increase the value of land I am interested in, and that is where the shoe pinches "Resident" and his influential aldermen. Surely, sir, there is something in this controversy more than appears on the surface when writers cannot write calmly and give their reasons for their opposition without introducing into print private matters in which I am incorrectly supposed to be interested. There must be private reasons or revengeful spite, envy, and uncharitableness which prompts people to write under the concealed names of "Resident" and "Drummoyne," and to impute base motives to me for advocating that which I have advocated publicly for many years, and which, as I have before stated, was years ago unanimously declared at a full meeting of the Hunter's Hill Council ("Resident" only, I think, being absent) to be the best way of joining these suburbs to the metropolis, and which, I believe, is best for the interests of all concerned. If I, as to some extent a public man, and responsible to the public for my acts, were to allow a proposal such as the first-contemplated circuitous, costly, and dangerous route to be adopted by the Government without raising my voice against it in the press and in Parliament, and without pointing out another route which I know to be better, because more direct, much cheaper, and more likely to be remunerative and of more service to a greater number of people besides being within the means reasonably sought to be procured and available for the construction of the line, I should indeed have cause to be ashamed of myself. The consciousness that I have a good case, and am backed up by large and "influential" (I do not like the word) support, quite as "influential" as the "influential" opposition of your no doubt "influential" "Resident" will enable me to fight this matter out, I hope, to a successful issue. My own interests and those of the public are so large that it will pay us to fight to the last against such a robbery of public funds and such an injustice to the country districts of the Colony, as well as to the public generally, as would be perpetrated by the adoption by Government of this secretly proposed and would-be illegal expenditure of £200,000 under the plea of "extension of tramways without Parliamentary sanction." "Urge the Government to go on at once with the construction of the tramway *via* Balmain, as surveyed, and to call for tenders at once" is forsooth the cry at some public meeting or deputation. What do they think Government is coming to that they would venture to adopt such an absurd proposal without Parliament having a voice in the matter? That some route must be adopted is certain, or the Government must return the money of the purchasers of the common, but it must be one sanctioned by Parliament, or within the means of the funds at the disposal of the Government, which have been admitted not to exceed £40,000. Where, then, can £200,000 come from?

Yours, &c.,  
C. E. JEANNERET.

B.C., Railways. This matter has been represented as very pressing, as the Treasury is urging the Lands Department to submit, at an early date, some more of the Field of Mars to auction, which they are unable to do until the question of the tram route is settled.—J.B., 18/9/81. Urgent.

## No. 6.

### Office Memorandum.

*Re* Sale of Allotments, Field of Mars Common.

Surveyor-General's Office, Sydney, 17 June, 1884.

A STRICT search has been made for the previous papers in the within case without success, and I am unable to obtain a copy of my minute, which, so far as I remember, advised that no sale should take place, until the question of tram or railway communication had been considered.

I would, in the absence of papers, advise a lithograph being sent to the Department of Works, inquiring as to proposed communication.

It can be definitely stated that no interference can take place with the whole or part of the allotments, a sale of them might take place.

P. F. ADAMS,  
Surveyor-General.

The Under Secretary for Lands.

The reference to the Department of Works may be made.—C.O., 23/6/84. The Under Secretary for Public Works written to, 26/6/84.

Submitted. No reply having been received to letter of 26th June, I personally made inquiry at the Works Department, and its various branches, this morning, with the result that the receipt of the letter cannot be traced. A copy may be sent with another lithograph.—R.H.D., 20/8/84.

Yes.—C.O., 21/8/84. Under Secretary for Works, with copy of letter 26th June, and lithograph, 21/8/84.

## No. 7.

## Office Memorandum.

22 October, 1884

THE accompanying tracing is forwarded to my honorable colleague, the Minister for Works, in reference to our conversation as to the probable direction to be taken by the tram or railway routes in the vicinity of, or through, the Field of Mars Common.

I should be glad if the probable routes could be marked on the tracing at an early date, as it is desirable to bring some of the land to auction sale.

J.S.F.

The Under Secretary for Works.—C.O., B.C., 22/10/84. Railways.—J.R., B.C., 23/10/84. Mr. Cowdery.—L.P.J., B.C., 24/10/84. Mr. Avern.—G.C. (*per* L.C.L.), 3/11/84. Mr. Thomson for compliance, 6/11/84. Routes of proposed tramways shown on plan.—M.T., 12/11/84. Assistant Engineer.—Proposed lines on plan herewith.—G.C., 14/11/84. Commissioner.—G.C., 15/11/84. Not very well shown. Please give description, and make the route shown on plan more discernible.—C.A.G., 18/11/84. Mr. Cowdery, B.C. Mr. Thomson.—G.C. (*per* D.H.A.), 22/11/84. Line marked in red (broad line) and description attached.—M.T., 26/11/84. Tramway Engineer. Commissioner.—G.C. (*per* D.H.A.), 28/11/84. This is marked No. 5 route. What has been done to justify the assumption that this is the land which will be taken.—C.A.G., 3/12/84. Mr. Cowdery.

The line marked on plan is one of several trial lines which have been made to Ryde in accordance with previous instructions, which includes the line through the Field of Mars Common. If a line is to be made through the Field of Mars the route indicated is the most practicable.—G.C., 23/12/84. Commissioner.

It seems to me that the line has been taken without regard to the land which will be required, it may be, owing to the grades, necessary to take it as shown on plan, but only extreme necessity would justify such a route, and I must know something more about it before I give countenance to the proposal to take the line as indicated. Why should not the roads (which are 1 chain wide) be more largely availed of. It would seem, without further information, as if they had been capriciously avoided, instead of being availed of.—C.A.G. Mr. Cowdery, B.C.

Mr. Thomson to make a careful inspection of the different routes, and report thereon, as soon as he can. District, Sydney. Report on my S5-57, attached.—M.T., 13/3/85. Tramway Engineer.

## No. 8.

## Office Memorandum.

Tramway through Field of Mars Common to Ryde.

THE line starts from the present terminus at Leichhardt crosses the Parramatta River by the existing bridges, and passes through the open ground of the Lunatic Asylum; thence through reserve at Tarban Creek, Eltham Estate, Field of Mars Common, and through a rich fruit country, to the junction of road at Ryde, about 2½ miles from the proposed railway station Homebush to Waratah line.

Plan and section of this line are not yet made, but the steepest grade will not exceed 1 in 20, and only in part, and fair curves can be obtained.  
Engineer, Existing Railways and Tramways. M.T., 26/11/84.

## No. 9.

The Under Secretary for Lands to The Under Secretary for Public Works.

Sir,

Department of Lands, Sydney, 11 December, 1884.

I am directed by the Secretary for Lands to request that an officer of the Department of Public Works be allowed to assist in laying down the lines of tram or probable railway extension passing through the Field of Mars Common, in order that action as regards the amendment of boundaries and subdivision of the area embraced therein may be taken.

I have, &amp;c.

F. H. WILSON

(For the Under Secretary).

Railways.—J.R., B.C., 13/12/84. Mr. Cowdery, B.C., 17/12/84.

## No. 10.

## Office Memorandum.

Field of Mars—Subdivision of part of, for Auction Sale.

SOME time ago it was decided to offer at auction the part of the common sub-divided, and more recently cleared (both streets and allotments) by the unemployed.

With a view to avoid complication as to means of communication in the neighbourhood, either by tramways or railways, contemplated or otherwise, certain papers (Aln. 84-4,159), with a large tracing, were, on the 22nd October last, forwarded to the Department of Public Works, with a view to routes (probable or otherwise) being indicated thereon, in order that: 1st. Portions likely to be required for such purposes might be withheld from sale; and 2nd. That proximity to lines of communication would warrant an upset price on a higher scale than for lots not so favourably situated.

As yet the papers have not been returned, and the case is therefore at a standstill.

Whilst it might be possible to proceed with the sale without close reference to the question of means of communication, it would certainly be inadvisable to do so without a determination of the probable routes.

The

The mere knowledge of such a possibility of a tramway or railway being in a particular neighbourhood tends to enhance the value of the land adjacent, and as the proceeds of the sales of the common are, by the resumption Act of 1874, to go towards cost of bridge over the river, and as large expenses have been incurred in survey, &c., this point may be held to be of very great importance.

Again, it would be injudicious to sell land in the present, which in the near future would have to be resumed for purposes indicated, and at a price, no doubt, far in advance of that realised.

Against this, however, it may be observed there is a demand for land in this neighbourhood, and of this character; and it is, therefore, urged that it would be well to bring this land forward for sale as early as practicable, without withholding too much from public competition on account of requirement for possible and probable means of communication by tram or railway, an alternative which would be avoided if the routes were determined.

C.O., 14/2/85.

Write officially to the Works Department, and request the earliest attention to the matter. Draw special attention to the fact that large amounts of money have been expended, and that the Minister for Lands is anxious to sell the lands for recouping the Treasury.—J.S.F., 14/2/85.

Urgent. Correspondence Branch.—R.H.D., 16/2/85. Under Secretary for Works, 19/2/85. Mr. De Low. No reply having been received to letter of the 19th February ultimo, this is now resubmitted for further instruction, as it is a case of great importance.—R.H.D., 25/3/85. Perhaps an early reply may be urged.—C.O., 25/3/85.

### No. 11.

The Under Secretary for Lands to The Under Secretary for Public Works.

Sir,

Department of Lands, Sydney, 19 February, 1885.

Referring to my blank cover communication of the 22nd October last, number 84-4,159, Alienation, enclosing a tracing of the land at the Field of Mars, it is proposed to sell by auction, and requesting that you would cause the tramway or railway routes proposed or otherwise to be noted thereon, in order that any land required therefor might be reserved from sale, I am directed by the Minister for Lands to invite your attention thereto, as it is necessary that action should be taken in the matter as speedily as possible.

2. I am desired by Mr. Secretary Farnell to point out that there are demands for the sale of land in this neighbourhood, and it is desirable that the railway or tram routes should be indicated. Such a course would undoubtedly enhance the value of the several allotments, and tend to a more profitable result from the sale.

3. I am also to add that large amounts of money have been expended in clearing the land, and as the proceeds of the sale are by Act of Parliament to be applied for a specific object, it is all the more desirable that every effort should be made to realise the highest possible price for the land.

I have, &c.,

CHARLES OLIVER,

Under Secretary.

Railways.—J.R., B.C., 21/2/85. Commissioner, 85-4,912. Previous papers are with you. Please expedite as much as possible.—D.C.M'L., 26/2/85. Mr. Cowdery.

### No. 12.

#### Office Memorandum.

21 February, 1887.

On the 24th March next, sixty-two allotments of Crown lands, containing an area of 147 acres, in the Field of Mars, near Hunter's Hill, Ryde, and Lane Cove, are to be offered for auction sale at the rooms of Messrs. Mills and Pile, and the prospect of the sale would be considerably improved if any definite information would be given as to the tram-line between Sydney and Ryde.

In September, 1885, when the first sale, which realised £61,500, took place, it was generally understood, although not officially announced, that tram communication was certain, the only question remaining unsettled being the particular route, which had, I understand, been reported upon and marked. However, nothing has since been done, and therefore, unless the matter is finally decided, it is anticipated that the sale will only realise such an amount as the present condition of the means of communication would induce purchasers to invest.

If tram communication could be promised, the sale would, I feel satisfied, be improved from 50 to 100 per cent.

C.O.

The Minister for Lands earnestly recommends the suggestion herein to the early and favourable consideration of the Minister for Works.—T.G., 21/2/87. Urgent.

I should like to have particulars what would be estimated cost of tram, and has any proposal been made to carry it out. Mr. Oliver states that there is an understanding it was to be constructed.—J.S., 21/2/87. Very urgent.—C.A.G., 22/2/87.

### No. 13.

#### Cabinet Memorandum.

CABINET authorise the Minister for Lands to announce in connection with the sale of the Field of Mars Commons, that the Government intend to construct a tramway to that locality.

H.P., 18/4/87.

No. 14.

## No. 14.

C. E. Jeanneret, Esq., M.P., to The Secretary for Lands.

Sir,

Sydney, 11 May, 1887.

I see the Government propose to submit to Parliament a proposition to construct a tram-line to the Field of Mars.

I desire to point out that if the construction of a tramway by the Government is justifiable, which I doubt (because by the Field of Mars Common Resumption Act, the surplus after constructing the bridges, is to go to the Consolidated Revenue Fund), the only way in which it can be constructed, so as to be of any benefit to the inhabitants of Hunter's Hill, Gladesville, and Ryde, and at all profitable to the Government, is to run it from the south-east portion of the Field of Mars through the main thoroughfares of Hunter's Hill to Woolwich (the Atlas Works), a distance of  $2\frac{1}{2}$  miles. This could easily be done, and passengers could then reach Sydney by the two or three ferries now running there in, say, fifteen to twenty minutes at a much less cost than it would be possible for them to do by tram, *via* the Glebe; and in half the time.

The following resolutions were passed unanimously by the Hunter's Hill Borough Council on 11th January, 1884.

Resolved,—

1st. That in the opinion of this Council the best and nearest approach to the metropolis is by way of Ryde Road, Church-street, Drummoyne-street, Alexandra-street, and Ferry-street, and Woolwich Road to Onion's Point, and thence by ferry and vehicle steamers to Sydney.

2nd. This being so, it is desirable that a tramway should be constructed by the Government, or failing the Government taking it up, then by private enterprise along the same streets.

About the same time the inhabitants of Ryde and Gladesville, in public meeting assembled, condemned the proposal of the Government to extend the tramway from Leichhardt to Ryde as useless and injurious on account of the distance, the expense and the loss of time it would cause, and the injury to the Great Northern Road over which it would travel.

I have now, on behalf of a large number of inhabitants of Hunter's Hill, to request that you will cause a survey of the Woolwich route to be made, and that pending the receipt of a petition, now in course of signature, in favour of this route, you will not commit yourself to any other as the inhabitants of Hunter's Hill are (in proportion to their numbers and holdings) largely interested in the disposal of the funds arising from the sale of the common, for they have derived the least benefit from the erection of the bridges, the distance to Sydney Post Office by them being 9 or 10 miles as against 3 or 4 by the direct route.

I have, &amp;c.,

C. E. JEANNERET.

P.S.—Since writing the foregoing, I have ascertained the following facts:—The distance from Sydney tram terminus to Ryde by the surveyed route is over 12 miles, and nearly 8 miles from Leichhardt. The distance from the terminus to the stone quarry, Field of Mars, Hunter's Hill end, is about 11 miles. The distance from Ryde to the Sydney terminus by the proposed Woolwich route is about  $7\frac{1}{2}$  miles, and from the quarry to the common about 6 miles. The time taken by tram from Sydney to Leichhardt (5 miles) is forty-one minutes, so presumably it would take one hour and forty minutes to reach Ryde, which can easily be reached by the proposed new route in forty minutes, at a fare of 6d. or 9d., as against 10d. to 1s., it would be necessary to charge by tram. Besides, the family and ladies contract system on the Parramatta, reduces the bulk of the expense.

## No. 15.

E. J. C. Bryant, Esq., to The Secretary for Lands.

The Mercantile Building, Land, and Investment Company (Limited),

Sir,

Park and Castlereagh Streets, Sydney, 20 May, 1887.

As this company has now in course of subdivision the 227 acres recently purchased from J. S. Farnell, Esq., and known as Farnell's Point, through which the surveys Nos. 3 and 4 of the proposed tramway to Ryde pass, I shall esteem it a favour if you will advise me at the earliest possible moment which is the line decided upon or preferred, so that our subdivision can be made to accommodate your exact route, by running a main street right through, or so that some allotments may be reserved from sale.

I have, &amp;c.,

EDWIN J. C. BRYANT,

Manager.

## No. 16.

## Office Memorandum.

Field of Mars Tramway.

As desired by the Minister, I have had the papers referring to the Field of Mars tramway collected and placed together. It will be observed that the Cabinet, on the 18th April last, decided that the tramway should be constructed, and the question now to be determined is the route and when the work should be carried out. With regard to the former, there are two communications herewith—one from the Mercantile Building, Land, and Investment Society, pointing out that two of the trial lines pass through some property about to be sub-divided, and desiring to know the route which will be adopted. The other communication is from Mr. Jeanneret, suggesting a route in a direction which has not, so far as I am aware, been hitherto considered. No doubt the society and Mr. Jeanneret have interests which they are desirous of protecting, perhaps improving, and while it may be proper to fully inquire into any propositions made, the points for consideration beyond all others, are the interests of the travelling public, including those who have purchased land within the Field of Mars subdivision at high prices, and to induce others to purchase and settle upon the land which has not yet been offered for sale, but is subdivided and will be offered in suitable quantities as soon as the direction of the tram-line is settled.

As

As the success of the sale of this large area of land—some 5,000 acres—depends very much upon the direction in which the tram-line is taken, and its speedy commencement, I venture to suggest, as contributing to the former being speedily determined, that the Railway Department be urged to have the matter of the direction of the route reported upon at once, and that the officer entrusted with the duty should consult with Mr. District-Surveyor Deering, who is familiar with the subdivision of the Field of Mars, and could, I am sure, render valuable assistance in selecting the most suitable route.

C.O.,  
27/5/87.

Approved.—T.G., 28/5/87. The Under Secretary for Works.—C.O., B.C., 28/5/87. Submitted.—J.R., 28/5/87. Railways.—J.R., B.C., 28/5/87.

Marked by lands as very urgent.

The Commissioner should direct Mr. Cowdery to place himself in communication with Mr. Deering with reference to the best route. Before their final report is ready to be made, I will associate with them a third authority to finally recommend.—J.S., 30/5/87.

Engineer for Existing Lines, B.C., 31/5/87.

### No. 17.

The Metropolitan and Coast District Surveyor to The Under Secretary for Lands.

Tramway Route through the Field of Mars Common.

13 June, 1887.

1. Some months since, in accordance with Mr. Secretary Copeland's instructions of 15th December, 1886, the cemetery site and approaches were inspected by me.

2. Since that date the Government has expressed an intention to construct a tramway through the Field of Mars Common, now sub-divided, and it was inexpedient to submit any recommendation until a tramway route should have been proposed or decided upon. Action has already been taken to this end, and which will be referred to hereafter in this report.

4. Tramway.—Consequent upon the Government having determined to construct a tramway, the Engineer for Existing Lines and Tramways has desired me to offer any suggestions as to route, &c., that may be advantageous to the public (at the request of the Honorable the Secretary for Lands). I have suggested, after some consideration, that the route most conducive to public requirements is that marked A, B, C on litho., and a continuation as shown upon lithographs, and already transmitted to the officer referred to.

As a proper approach to the cemetery is closely connected with the proposed tramway route, I beg to propose that this report be transmitted to the Department of Public Works for the consideration of the Engineer for Existing Lines and Tramways, with whom I have already entered into the matter verbally, both beyond the point "C" and prior to reaching the point "A," where the tramway must, I think, be constructed, and to which levels have already been taken.

JOHN W. DEERING,

Metropolitan and Coast District Surveyor.

May be referred as proposed.—S.F., 16/6/87. Approved.—T.G., 18/6/87. The Under Secretary for Public Works.—R.H.D. (for the Under Secretary), Department of Lands, B.C., 25/6/87. Railways, B.C., 27/6/87. 87-2,140. Papers *re* tramway to Field of Mars Common. Mr. Cowdery, 31/5/87. Engineer for Existing Lines, who has previous papers on the subject or in connection with it.—A.R., B.C., 1/7/87.

### No. 18.

Extract from the *Sydney Morning Herald*.

PROPOSED FIELD OF MARS TRAMWAY.

To the Editor of the Herald.

Sir,

As the route of this tramway is now under consideration, and a survey is being made of a line to cost considerably over £190,000, and which cannot be expected to pay working expenses, while a line which would cost under £30,000 and be remunerative is not being properly considered by the authorities, I wish to state certain facts within my knowledge, with a view to a better understanding of this question being arrived at.

This common, of over 6,000 acres, was formerly vested in trustees, for the use of the inhabitants of the eastern farms and parish of Hunter's Hill.

About twenty years ago it was surrendered to the Crown by the Commoners, in consideration of the promise to construct a bridge to connect the north with the south side of the Parramatta River. The submitted cost of the bridge was £40,000, while the value of the common, as appraised by Richardson and Wrench, was £30,000. An Act of Parliament was passed to legalise the sale of the common, the proceeds to be paid into the consolidated revenue to a separate account to be available for the construction of a bridge. It was afterwards found that the cost of a bridge at Bedlam Point or at Shepherd's Point—the two sites proposed—would be greater than was expected, and it was decided to build two smaller bridges, one across the Parramatta River and one across Iron Cove, to connect with the Sydney side of the harbour, and another across Lane Cove, to connect with North Shore, and to postpone the sale of the common until the bridges were completed. The cost of these bridges and of clearing and preparing the common for sale amounted to £227,211 3s. 7d. up to April, 1887, while the sales of the common to the present date amount to only £70,295 18s. 1d., so that at this time there is in reality a debit against the common account to £156,915 4s. 6d. There remains a large portion of the common in remote parts thereof yet to be sold, which, according to a return laid before Parliament, on 8th ultimo, is valued by Government at £200,000. If this estimate is realised there will be a surplus of £43,084 15s. 6d., less expenses of sale. No promise was ever made by the Government that the surplus or any portion of it should be devoted to a tramway or any other local improvement until Mr. Secretary Garrett in 1887 authorised Mills and Pile to announce that a tramway "would be made to the common," without stating which

which way it would go. It has been generally understood that the Government would recognise the claims of the district to have any surplus which might arise devoted to local improvement. The question then is, how shall it be expended? Some portion of it should be reserved for roads and bridges, which will be necessary on this large estate when it is sold and settled upon, and a portion should be expended in providing direct and rapid means of transit to the city, because the land for the most part is unfit for cultivation, and can only be used for residential sites required by persons having daily business in the city. Without some such provision the land will remain uninhabited. At present the £70,000 worth of land sold would not, if resold, realise half that sum, although it touched on roads traversed by a line of omnibuses, partly maintained at the public expense in the way of subsidy to carry mails, and is also intersected by the Northern railway, running at cheap fares, and with many inducements to settlement. The forthcoming route proposed was the one now being surveyed. It was projected before the railway now running to Ryde was thought of, but at a public meeting at Ryde it was unanimously condemned, and a deputation waited on the Minister for Works and protested against it, as it would be useless to the inhabitants and injurious to the traffic on the roads, besides being likely to be dangerous and expensive.

The deputation asked for the resumption of land for and the construction of a light railway.

This the Government refused, but ultimately the Great Northern Railway was made to Ryde, thus meeting the requirements of those landowners who were most anxious for the railway *via* Balmain.

The distance from Sydney to the most central part of the common by railway is about the same as that of the proposed Balmain line of tramway, viz., 15 miles, but from the same point to Sydney, *via* Woolwich, is less than half of that distance. The inhabitants of Ryde have now three routes open to them—the railway, the omnibus, and the steamers.

By the construction of the tramways *via* Woolwich, they would have four, and the latter route would be the favourite, both with them and the Gladesville people, while it would unite the whole district. make the common easily accessible and valuable, and reduce the time of journey from Ryde by nearly one-half. This Woolwich route was referred to by Mr. J. S. Farnell, when Minister for Lands, at a public celebration, as “the route which must ultimately carry the passenger traffic from Ryde, Field of Mars, Gladesville, and Hunter’s Hill, to Sydney,” and his remarks were endorsed by his hearers, with one exception, and that one was the gentleman who led the deputation to the Minister for Works last week to protest against the tramway, and who fears that his steamboat trade may suffer from the competition. The Hunter’s Hill Council unanimously resolved that this route was the best and shortest route to Sydney, and decided to ask the Government to construct a tramway by it, and that, failing the Government doing so, private enterprise should be encouraged to do it. Local party feeling, however, prompted opposition, and a local option vote was carried by a bare majority, after great opposition, so reversing the decision of the Council. Mr. Alderman H. M. L. Pike, formerly a Government surveyor for the district, and Mr. Surveyor Schleicher, both state that in their opinion, this is the proper route for the tramway to take, and that there are no engineering difficulties in the way. Mr. Pike writes to the Minister that this tramway will cost £170,000 less than the one *via* Balmain.

It is well known that the route by Balmain cannot be a profitable one, but there are substantial persons ready to guarantee the Woolwich tramway to be profitable, and as electric power or compressed air can be obtained (without the construction of special machinery) from the Atlas Engineering Company, the chief objection raised by some of the inhabitants against steam-motors will be removed.

The inhabitants of Hunter’s Hill ask now for a trial survey of this route, and as they have little advantage from the bridges, and would have none from the tramway by the longer route, their request should be granted.

It is a wonder that the Government should propose to extend the present system of tramways on this line, at a cost of nearly £200,000, while the whole tramway system is under condemnation, and must soon be replaced by one more in keeping with the progress of the times.

Besides the only justification there can be for making a tramway to the Field of Mars at all is that money may hereafter be available from the sale of the common to meet the expenditure.

I have already shown that the total sum the Government expect after paying present claims is but £43,000. How then can £200,000 be expended, and why should the country be robbed of this large sum to construct a line not one person in ten thousand of our population wants, while the country districts, and in our own suburbs tens of thousands, are clamouring for railways, roads, and city railways extensions which this money would to a large extent provide.

I am, &c.,  
C. E. JEANNERET.

#### No. 19.

### Memo. from The Secretary for Lands to The Metropolitan and Coast District Surveyor.

Mr. Deering,

What has been done about the Field of Mars Common?

5 July, 1887.

T.G.

Report No. 1,735 of this date.—J. W. DEERING, 14/7/87.

[Enclosure.]

Intended Tramway to the Field of Mars Common, now sub-divided.

14 July, 1887.

THE Honorable the Secretary for Lands has verbally requested me to state the action taken in connection with the above subject.

With the Engineer for Existing Lines and Tramways I have had two or three interviews. The sections of trial lines already taken, four in number, he has transmitted to me for my inspection, and some time since I forwarded to him a litho., showing a proposed tramway route, coloured red thereon.

We both agreed upon a route, along which levels should be taken and a section be prepared. This is now in progress by a tramway surveyor.

It may be desirable to state that both Mr. Cowdery and myself are agreed that the tram-line must enter the Field of Mars at the south-east corner of portion 297.

From this point I have recommended that the line proceeds westerly to portion 290, thence northerly by the road adjoining the cemetery to the main road to Pitt Water, &c.

A

A litho. showing this proposed route has been transmitted by me to the Under Secretary for Lands.

Upon the Sydney side of portion 297, I beg to recommend that the tram-line proceeds from the present terminus at Leichhardt to Iron Cove Bridge (1½ miles), and thence across that bridge to the Parramatta River bridge; thence bearing to the left before reaching Ryde Road, and avoiding the Eltham Estate (now sub-divided), to the south-east corner of portion 297, by a line sketched by me upon the plan in the office of the Engineer for Existing Lines, &c., in accordance with previous instructions received by me.

The Under Secretary for Lands.

JOHN W. DEERING,  
Metropolitan District Surveyor.

In submitting this report it is proper that I should invite the attention of the Minister to the fact that no further sales can be made on the southern or Sydney side of the Field of Mars until the position of the tram route is determined, that is, so far as the common is concerned. Where the line is to approach Sydney from is not material, and therefore it is very desirable that, so far as it affects the common, the line should be decided upon.—C.O., 15/7/87.

Of course it is a matter of first importance to this Department to ascertain without delay at what point the proposed line will touch the common, and the direction in which it will pass through it. Next to that, however, it is of importance that the line from Sydney to the common should be made as short as possible. Having this object in view, it strikes me that it is unwise to start from the present terminus at Leichhardt. It has been suggested that a line could be taken from the line at George-street down Harris-street, and by the road from that street through Balmain, by Glebe Island Road to and through Callan Park to the Iron Cove Creek Bridge, and on to the bridge over the Parramatta River. Some such line as this, which would be much shorter than the line starting from Leichhardt, might be inspected before a final decision is arrived at. If some such line as that now hinted at was adopted it would still come into the line mentioned by the District Surveyor before it entered the common. Therefore, the settling of the question as to the point at which the common should be entered is not interfered with, and may be at once decided upon.—T.G., 15/7/87.

The Under Secretary for Works.—C.O., B.C., 16/7/87. Railways.—J.R., B.C., 25/7/87.

### No. 20. Petition.

To the Honorable the Premier and Executive Council of New South Wales.

The humble petition of the undersigned, owners and purchasers of land in the Field of Mars Common,—

Respectfully sheweth,—

That your petitioners bought land from the Government on the common, on the understanding that a tramway would be constructed so as to make their lands fairly accessible from Sydney, as residential sites for business men.

That until this is done their land cannot be made available for the purposes intended.

Your petitioners pray that you will carry out the promise made by the Government to construct a tramway, and that it may be made by the shortest route to Sydney, whether it entails a transshipment to a ferry or not.

And your petitioners, as in duty bound, will ever pray, &c.

CHAS. E. JEANNERET,  
Hunter's Hill.  
A. T. FLEAY,  
Newtown.  
A. TORNAGHI,  
Hunter's Hill.

[Here follow forty-three other signatures.]

This petition of the majority of the purchasers of the Field of Mars Common is presented to the Premier on their behalf by C. E. Jeanneret, M.L.A., 16/7/88.

### No. 21. Petition.

To the Honorable the Premier and Executive Council of New South Wales.

The humble petition of the undersigned, residents, land-owners, and others, in the District of Hunter's Hill, Gladesville, and Ryde,

Respectfully sheweth,—

That your petitioners are residents on, or owners of, or interested in lands which formerly had commonage rights to the Field of Mars Common.

That your petitioners gave up their common for the erection of bridges to connect their district with Sydney.

That the bridges only partly serve for the object for which they were erected, and that while they are a great public benefit they do not serve your petitioners as a daily means of travel to and from the city.

That a more direct route exists *via* Woolwich.

Your petitioners pray that a tram-line may be constructed from Ryde and Gladesville through Hunter's Hill to Woolwich, to be connected with Sydney by suitable ferry-boats.

And your petitioners, as in duty bound, will ever pray.

CHAS. E. JEANNERET, M.L.A.,  
Hunter's Hill.  
E. W. FOXALL,  
Alderman, Woolwich.  
A. TORNAGHI,  
Alderman, Hunter's Hill.

[Here follow 106 other signatures.]

This petition of the majority of the aldermen of Borough of Hunter's Hill and of the adult male residents of Hunter's Hill and Woolwich is presented to the Premier by C. E. Jeanneret, M.L.A., on behalf of the Petitioners, 16/7/88.

## No. 22.

C. E. Jeanneret, Esq., M.P., to The Under Secretary for Lands.

Parliament House, 16 July, 1888.

I UNDERSTAND that the surveyor on the Field of Mars tramway has nearly, if not quite, completed his work—can you get him put on to the Woolwich survey at once so as to save loss of time and money? I am sure that you will see that it is of no use further considering the Balmain and Drummoyne route, because of the difficulties and expense attending the construction of any tramway by that route. If anything is to be done with the 4,000 acres of unsold land at Field of Mars, it can only be after the tramway is commenced, therefore, the sooner the line to be adopted is decided on the better.

Yours, &c.,

C. E. JEANNERET.

Register and return with the petition sent me yesterday, also a copy of report of deputation.—C.O., 17/7/88.

[*Enclosure.*]

Tramway to the Field of Mars.

A DEPUTATION of gentlemen interested in land in the Field of Mars District, accompanied by Mr. Nobbs, M.L.A., waited upon the Premier yesterday, and presented two petitions in favour of the construction of a tramway from the Field of Mars to Woolwich, instead of that which it had been proposed should be laid down from Sydney, *via* Pymont to the Field of Mars.

One of the petitions was signed by residents of Hunter's Hill, and the other by gentlemen who had purchased land at the Field of Mars.

Sir Henry Parkes promised to carefully consider the representations contained in the petitions.

## No. 23.

C. E. Jeanneret, Esq., M.P., to The Under Secretary for Lands.

Dear Sir,

Parliament House, New South Wales, 28 July, 1888.

With reference to the petition presented to the Premier in the office of the Minister for Lands, signed by the majority of the purchasers of the Field of Mars, asking for a tramway from the Field of Mars by the shortest route, I have been requested to ask if the Minister will please have the Woolwich route surveyed and an estimate made of the cost.

The surveyors are at Ryde, and the survey could be made in a few days.

I have, &c.,

C. E. JEANNERET.

The whole of the papers relating to the proposed tramway should be collected, and a summary of them, especially as to order of dates, and difference of objects should be made.—H.P., 17/9/88. The Under Secretary for Public Works.—C.O., B.C., 18/9/88.

This matter has been represented as very pressing, as the Treasury is urging the Lands Department to submit at an early date some more of the Field of Mars to auction, which they are unable to do until the question of the tram route is settled.—J.B., 18/9/88.

1892.

NEW SOUTH WALES.

## FISHERIES OF THE COLONY.

(REPORT OF THE COMMISSIONERS OF FISHERIES FOR THE YEAR ENDING 31st DECEMBER, 1891.)

Presented to Parliament, pursuant to Act 44 Vic. No. 26, sec. 69.

### REPORT of the Commissioners of Fisheries for New South Wales on the Fisheries of the Colony, for the year ending 31st December, 1891.

The Commissioners of Fisheries to The Colonial Secretary.

Sir,

In submitting our Report on the Fisheries of the Colony for the year 1891, we have the honor to state that the constitution of the Board of Commissioners is unchanged. Mr. Solomon Herbert Hyam, whose previous tenure of office expired on the 14th June last, having been re-appointed.

#### *Finance.*

The revenue of the Fisheries Department has not, we regret to state, improved, on the contrary, it has suffered a reduction in the total of £109 14s. 6d. This reduction is the result of decrease in each of the principal sources from which the revenue is derived, viz., Fishermen's and Fishing boats licenses—deposits on applications for leases for oyster culture—fees on the transfer of leases—deed fees and rent on leased areas. In the matter of expenditure we record a reduction of £1,023 19s. 5d. This reduction is to a considerable extent due to the repeal of the Regulations providing rewards for the destruction of cormorants and shags, and partly to a saving effected in official salaries.

#### *Official Staff.*

Apart from the appointment of Mr. R. A. Fraser, the pilot at the Richmond River Heads, as an Acting Assistant Inspector of Fisheries, the staff remains the same as in 1890. We have found it necessary to make a slight alteration in the location of some of the inspectors. Mr. Gordon has been transferred to Sydney to assist in the oversight of the waters in the Home Division. Mr. Aldrich has been transferred from George's River to the Tuggerah Beach Lakes, and Mr. Hesse to the George's River. It is expected that these changes will be attended with some improvement in the oversight of the closed waters in our more important fisheries.

#### *Oyster Culture.*

In this industry the forebodings anticipated in our last Report bid fair for early realisation. While in 1889 only 6,914 bags of oysters were won from the beds of the Colony, in 1890 but 6,092 bags were obtained, being about one-third of the quantity brought into consumption. Last year, however, the products of our beds count only 4,727 bags, as against 21,423 actually consumed. We have been thus dependent on Queensland and New Zealand, from which the complement came, not, as previously, for two-thirds of our supply, but for nearly three-fourths of it. The cause of this is, as stated in our last Report, to be attributed to the ravages of what is popularly known as the worm disease, which still has a fast hold on several of our most promising fields, and so far has resisted all attempts at eradication. The uncertainty thus created of the results of efforts at culture may, in some measure, account for only 6,525 yards of foreshore having been leased during 1891, as against 12,600 yards during the previous year.

26—A

year. With such a pest to contend against, oyster culture does not furnish a very promising field for enterprise; indeed, so barren have some portions of hitherto oyster-bearing waters become that we have felt ourselves warranted in recommending the surrender of leases in cases where it could be demonstrated that all the efforts, which (as we are pleased to be able to record, were in many instances earnest and persistent) the lessees had made had failed to overcome the trouble.

But, while thus readily admitting the difficulty under which culturists have been labouring, we deem it our duty to assert that the evil, of which we have already complained, namely, the absolute neglect of some lessees to practice culture at all, simply contenting themselves with collecting what oysters they may happen to find on their leased areas, has not in the least decreased; while, in addition, we have to record that unprincipled lessees, not content with totally despoiling their own areas, systematically rob the large areas of unleased Crown lands of every available shell; indeed, we have proved over and over again that these unprincipled leaseholders send to market ostensibly from their small area of one or two hundred yards more oysters than a *bona-fide* leaseholder can collect from an area of as many thousands of yards. It thus falls out that even those localities in which the worm disease is not so prevalent cannot be profitably occupied either for culture or for the propagation of the oyster by natural means.

Of course the faultiness of the existing law, to which we have so often called attention, is responsible for this. When amended legislation, something similar to that which we have proposed, shall have been enacted, it will be possible to check this wholesale robbery; and it is to us a matter of extreme regret that Parliament has so far been unable to take up the very important and really pressing work of amending the fisheries laws generally.

#### *Fish Acclimatisation.*

Passing from the very unsatisfactory results achieved in oyster culture, we approach with some degree of pleasure the subject of our further attempts to acclimatise the trout. Through the good offices of Mr. J. A. Rutherford, the honorary secretary of the Acclimatisation Society, at Wellington, New Zealand, we were successful in obtaining from that Society 20,000 of the ova of the brown trout. These were carried here free of freight charge by the Union Steamship Company's steamship, the "Hauroto," and we here record our thanks to the Company for their kind assistance. The ova arrived on the 22nd August, and were at once placed in the hatching troughs in the rear premises of our department. It opened out in excellent order; much of it was in so advanced a stage that the hatching process commenced almost immediately, the remainder following in due course, and attended with only a fair proportion of loss. Just at the time the fry was losing the yolk sac unseasonably warm weather set in, and, although every possible precaution was taken to counteract its effect and the effects of rust in the water supply, they were telling so fatally on the fry that we lost no time in distributing it for liberation in suitable streams throughout the Colony.

We hope that the results of this and our previous efforts will in due time become apparent by the appearance of the adult fish in large numbers in many of our waters. We shall not relax our efforts in promoting the distribution of this salmonide, as we intend in the next season to repeat the process, by procuring ova and hatching it for liberation. We hope that our further effort may not be so materially marred by hot weather as the attempt we have herein recorded.

The fry hatched during the last season were liberated in the following waters:—The basin, Hawkesbury River; Picton Lakes; Wentworth Falls; waters near Tenterfield; Reedy Creek; Shoalhaven River; the Snowy River; head of Mooney Creek, Hawkesbury River; the reservoir at Orange and Summerhill Creek; the Mann River, at Glen Innes; the reservoir at Prospect; Stonehenge; the Page; the Macdonald and the Woronora Rivers; the heads of the Richmond, Nambucca, and Bellinger Rivers; Lake George; Nepean River; Kiah Lake; Cudgegong River; Wollondilly River; Guyra Lake; tributaries of the Hunter, near Scone; Macquarie River, near Bathurst; Deepwater, New England; and the reservoir at Manly. In arranging this distribution we were largely assisted by gentlemen resident in the various localities, who, often at some inconvenience, most willingly undertook the liberation of the fry. We avail ourselves of this opportunity to thank those gentlemen for the aid they so freely rendered.

In connection with the subject of trout acclimatisation, we record our grateful acknowledgments to the Commissioners of Fisheries, Tasmania, for their valuable presentation to the Colony of 5,000 ova of the *fario*. This gift was offered at the instance of Mr. Philip Seager, one of the Commissioners, who was on a visit to New South Wales in July last, when he exhibited a most lively interest in our fisheries. We were enabled to afford him opportunities for visiting Lake Macquarie, Newcastle, Port Hacking, and other fisheries. His views and opinions respecting them are set forth in his highly interesting letter of the 3rd August, a copy of which will be found amongst the appendices to this report. We especially invite its perusal.

We

We regret that, so far, circumstances have not favored our securing a supply of golden perch and Murray cod fry for distribution in waters comparatively adjacent to the metropolis. We hope, in a few months time, to be in a position to effect this.

*The Fishing Industry.*

We record a larger monetary result from this source than for any previous year—the amount realised from sales at the Fish Market being £42,277 12s. 9d., an increase of £3,583 2s. upon that of 1890, and £7,966 9s. 3d. upon the total of 1889. The quantity estimated in baskets was 3,098 less than the previous year, while the schnapper and other kinds of fish, sold by the dozen, show an increase in dozens of 433½. The quantity condemned as unfit for food was 600½ baskets less than are recorded for the previous year, while the quantity seized as being below the weights prescribed by the Fisheries Act exceeds the quantity in 1890 by 5½ baskets. This may in a measure be accounted for by the more general use of sunk nets by Italians and other foreigners. These sunk nets are very destructive to young fish, to the fry, and to the feeding-grounds, and we are glad to know that legislation prohibiting their use is about to be enacted.

We note the establishment of the New South Wales Fishermen's and Fish Consumers' Co-operative Association (Limited), its object being to open up the fish trade of the Colony in its wholesale, retail, and producing features, under conditions which are intended to ensure a thorough system of distribution of the supply amongst town and country residents. We consider the attempt to effect this is deserving of commendation and support. The Company has erected suitable buildings on a site fronting the railway line at a point near the Eveleigh station. Facilities are thus present for the transfer of the fish direct from the railway trucks to the market stands without the disadvantage of intermediate handling. Residents at Redfern, Waterloo, and Alexandria have thus a market brought to them whence they can obtain their fish supply under most favourable conditions. We see no reason why markets like this one could not be established for the convenience of other suburbs and the more populous towns which are accessible by sea or rail.

Of the several waters which have contributed the fish supply Lake Macquarie, as usual, is first, with 14,124 baskets, a slight decrease of 397 baskets on the take for 1890. Tuggerah and Port Stephens show a substantial decrease, the former 1,944 and the latter 2,288 baskets. Botany shows a decrease of 538 baskets, while from Port Jackson, the Hawkesbury, and Lake Illawarra we record an increased supply of 34, 1,179, and 631 baskets respectively.

From the northern rivers we note an increase of 1,092 baskets from the Clarence River, while at the Richmond, fishing, except for local consumption, has not been prosecuted at all.

We learn from the Clarence River Inspector's report that certain fishermen have taken advantage of facilities afforded by the owners of the steam-tug "Marvel" to test the yields of some of the off-shore grounds. They succeeded in obtaining some very large takes of schnapper. On one trip 1,350 fish were captured in four hours.

Banks and reefs similar to those now being brought into use at the Clarence occur more or less along the whole length of the seaboard, and it does seem astonishing that enterprise is not forthcoming to secure the wealth which these grounds should yield. Possibly when the success which has attended the Clarence River fishermen's effort becomes known it may stimulate those in other localities to attempt the discovery of the new grounds which surely exist at by no means great distances from the coast.

Iluka, a village on the Clarence River, bids fair to become an important fisheries centre. The Canning Company, now for some time established, is about to extend its operations with improved machinery; and an enterprising firm, Messrs. Summers and Company, have entered upon the business of fish curing and smoking. With the class of fine fish to be found on this coast it should not be difficult to establish a large export business.

The natural facilities which exist at the Clarence for the manufacture of fish into a preserved article of consumption are present also at nearly all our fishing-stations; and when we hear, as we frequently do, from our inspectors on remote waters that only a supply sufficient for local consumption is captured, because the risk attending transmission in good condition of a catch to the metropolis is too great to be undertaken, we confess astonishment that enterprise is not forthcoming to avail of the wealth latent at the very doors of people resident near those waters, and which is to be won by comparatively small outlay and only moderate exertion.

Referring again to the marked decrease in the quantity of fish received at the market, we have not any hesitation in attributing it, in a large degree, to the disregard fishermen have shown in observing the restrictions it has been found necessary to place upon net-fishing—we refer to the closure of certain portions of waters against the use of fishing nets. The protection from disturbance of spawning fish, the young fry,  
and

and the nursery and feeding-grounds, is absolutely essential ; but if so many fishermen will, as we regret to say they do, resist the efforts we thus make to increase and preserve the continuity of supply, it cannot be a matter for surprise that the returns exhibit such a material decrease.

Although we make the most of the means of oversight we have at command to protect the closed waters, yet, if those who should be most interested will not aid us in our efforts, it will not be possible except at considerably increased cost to the country, to secure the benefits which the restrictions imposed ought to obtain.

#### *Inland Waters Fisheries.*

Owing to the lengthened course traversed by the Murray River, which is drawn upon at all points for such a supply as may be required, it is difficult to arrive at any reliable estimate of its actual annual yield.

From the vicinity of Moama and Koondrook or Swan Hill the Inspector reports that quite 1,000 baskets, about 35 tons, have been captured. The advantages expected to accrue from closure against net-fishing of the Murray tributaries and other waters in the counties of Wakool, Townsend, and Cadell are beginning to be obvious. We hope that by the time railway communication shall have been established with Jerilderie the advantages of these closures may be turned to practical account, by providing means for developing a trade with Sydney and some of the populous towns *en route*.

At the beginning of summer a mortality amongst the cod, the cause of which cannot be satisfactorily determined, occurred in some of the lagoons and creeks near Deniliquin. It was by some attributed to abnormal increase of temperature, while others again claimed that it was due to the effects of an aquatic weed, *Arzolla rubra*, with which these waters were densely covered. About 3 tons of fish died, and to prevent pollution had to be removed and buried.

The supply at Lake George is reported to have considerably increased ; in the creeks and closed waters this increase is very noticeable—the catch, however, has not been so great as in previous years. This lake is the present nearest source from which the metropolis can draw its supply of cod. From its large extent, about 20 miles by 6 miles, it is capable of meeting the operations of several fishermen, who would find a ready market for their catch either in Sydney or along the main railway line.

Mr. Frederick Nelson, the local police officer, who for some years has held the supervision of this water, has resigned his position as Inspector of Fisheries, having received promotion in the police force, which involved his removal from the district. We have pleasure in recording that Mr. Nelson performed his duty in connection with the fisheries with zeal and attention and to our satisfaction.

We propose to invite one or two of the leading residents in the locality to undertake an honorary supervision of this fishery. If we succeed we shall effect a saving of the salary hitherto paid—£20 per annum.

For detailed information respecting the fisheries on any particular river we invite attention to the Reports which appear in the Appendices.

## APPENDICES.

## Fisheries of New South Wales.

Sydney, 3 August, 1891.

I HAVE to express to you my thanks for the opportunity you have afforded me of inspecting some of the fishing grounds of New South Wales.

You are aware of the great and active interest I have for many years taken in fishing matters in Tasmania.

I regret very much to learn of the decline in the production of oysters on your natural beds. This appears to me to be a matter of very serious importance which doubtless has occupied the attention of your Commissioners with a view to some steps being taken to resuscitate the industry. That the industry can be revived, and the supply of oysters for market very largely increased, can admit of little doubt.

I am not sufficiently acquainted with your oyster fishery to express any very definite opinion upon the causes of failure, but from what I can learn I fear that a too eager desire on the part of lessees to make the most of their reserves for market purposes may have much to do with the decline. The worm disease has, I am aware, been very troublesome in the northern waters, but the indomitable perseverance of Mr. Anderson, manager to Mr. F. Gibbens, in his reserves on the Hunter River, prove that attention to cultivation will in the end produce satisfactory results. I saw a considerable number of oysters dredged by Mr. Anderson from beds which he assured me were almost barren six months before. The oysters I saw were in a stage of advancement which would make them marketable in a short time, and the quantity of spat at different stages of growth was in the highest degree satisfactory. This good result is commendable to Mr. Anderson's pertinacity in giving every attention to his beds under the most adverse circumstances, entailing a very large outlay during a long series of years without any return. Although the worm is still troublesome, the bad effects are not so prominent as heretofore, and Mr. Anderson has confidence that it will soon disappear.

My suggestion as to the possible cause of the decline of the industry is strengthened by a visit I paid to Port Hacking, which is closed against the professional fisherman, and available to the public for pleasure. In these waters the oysters are very abundant, and spat is deposited in enormous quantities. It occurred to me that unless some more extensive use is made of the oysters, injury will follow, and it is matter for serious consideration whether some scheme should not be devised by which Port Hacking spat might be disposed of to lessees of foreshores for the purposes of stocking. The oysters in Port Hacking approaching the sea do not, I am informed, grow to any size, and if these were removed to beds suitable for their growth the production of marketable oysters would be largely increased.

The waters available for fishing in New South Wales are so extensive as to lead to the belief that the fishing industry should be a most valuable one, and I am surprised to find that, where some of the fishing grounds are so close to the city of Sydney that means have not been adopted to bring the fish alive to the market. In Tasmania the larger quantity of fish are brought alive to market in well-boats and smacks, and similar vessels might possibly be used with advantage in New South Wales.

The enclosure near the sea at Lake Macquarie, which you have advised should be used as an experimental station is a matter of great importance to your fisheries as affording means of observation of your marine fishes not readily accessible elsewhere. It may also be deserving of consideration whether your revenue might not be considerably enhanced by the leasing of this or similar enclosures when they have become thoroughly stocked, but under conditions which would provide against their depopulation. Under any circumstance, the enclosure referred to might well be dealt with as an experimental station, and if it be so dealt with I shall be very much surprised if the success does not exceed your expectations. In the event of the introduction of any foreign marine fishes the enclosure would be invaluable.

I was surprised to find so insufficient a method of dealing with the ova of salmonoids. If the Commissioners desire to acclimatise this group of fishes in New South Wales some more modern mode of dealing with them must be provided. If with the climatic advantages of Tasmania it be found necessary to have breeding-ponds with modern appliance for hatching, there surely exists a much greater reason for the use of similar methods in New South Wales where the climatic advantages are not so great. Ova of salmonoids has for many years past been transmitted to New South Wales from Tasmania, in small quantities, but apparently with little result, and if the fishes referred to are to be acclimatised in New South Wales it can only be done quickly and thoroughly by the aid of a hatchery and ponds where large quantities of ova can be dealt with and a good stock of breeding fish maintained. I would remind you that the colonies of Victoria and New Zealand have found it to be to their advantage to have breeding-ponds.

With reference to the site of the proposed ponds at Berrima which I inspected, I have no hesitation in saying that it appears to possess all the qualities necessary. The elevated position above sea-level (about 2,200 ft.) produces a climate which cannot be found in the lower country. The river forms a connecting link with other streams and eventually joins the Hawkesbury, thus affording a ready access to the sea for the migratory forms. The position pointed out to me as that selected for the proposed ponds has much to recommend it. Although it would be decidedly advantageous to have the river water conveyed to the ponds by means of troughing, which cannot be done on the site under review, there will be no difficulty in adopting other comparatively inexpensive methods of raising the water by windmill, pump, or other means. The temperature of the locality on the day of my visit was quite as low as the Tasmanian winter, there being a heavy frost with ice on the shallow pools adjoining the river, and I was informed by old residents that the summer is very mild. With these advantages I would strongly urge upon your Commissioners the desirability of constructing the ponds as suggested by you, and I am glad to find that so excellent an authority as Mr. Ogilby, of the Australian Museum, concurs in your proposal.

If the ponds be constructed, I would advise that the bottom be formed of cement on brick or concrete, which will provide against leakage, a source of much trouble at the hatchery in Tasmania, where the bottom is gravel on the ordinary soil. I think you will find that, in addition to rectangular ponds, a few circular ponds with connecting rill will be very convenient. If the Commissioners establish the ponds, the acclimatisation of brown trout and other species of salmonoids can be proceeded with more expeditiously than under your present system. In three years you will have a breeding stock from ova of this year—with Californian trout, two years—or by the importation of a few yearlings you can shorten  
the

the period. When the Wingecaribee River is stocked a fish-trap can readily be constructed at a suitable spot near the vicinity of the ponds, and by the stripping of the fish and artificial fertilisation of the ova large supplies of fry can be procured for the stocking of other streams. This is the method adopted in Tasmania, and this season upwards of 70,000 have been procured and are now in the hatching-boxes at the river Plenty.

On my return to Hobart I shall have much pleasure in obtaining and forwarding to you a sketch plan of the salmon ponds and hatchery at the river Plenty, which may be of service to you in the event of ponds being constructed in New South Wales.

I have communicated with the Chairman of the Commissioners of Fisheries in Tasmania upon the subject of a supply of trout ova for New South Wales, and I have much pleasure in informing you that 5,000 brown trout ova have been allotted to your Commissioners, which, I trust, may be acceptable to them. The ova will be forwarded when they have reached the "cyed" stage.

I shall be happy to report to my brother Commissioners in Tasmania what I have seen in New South Wales, and I am so impressed with the advantages of cultivating the rock-oyster of New South Wales, which apparently matures with such rapidity in suitable localities that I will strongly advocate an attempt to acclimatise it in Tasmania. An effort in this direction was made some years ago, the stock being deposited in pure sea water on the rocks in the river Tamar, at George Town. Judging from my observation at Port Hacking, a greater chance of success will be attained by depositing them where the salinity of the water is not so great.

I trust that these general observations which I have made with much hesitation, owing to my limited knowledge of your waters, will not be unacceptable. They are written, as I have already said, at your request, with no desire to in any way criticise the management of your fisheries, but simply as the views of an impartial observer.

PHILIP S. SEAGER.

### Tweed River Fisheries.

Tweed Heads, 7 January, 1892.

I HAVE the honor to forward report on the fisheries of this river for 1891.

Fish are very plentiful in this river, but there is no market on the river, and moreover, a number of the people have nets for their private use. Four fishermen who tried fishing here last year could not make a living, and had to give it up. They caught a quantity of schnapper and blue groper at Cook's Island, which they got a ready sale for. Some of the oyster leases are in fair condition.

Sea-mullet were not seen coming in till the 4th of May, but they must have been coming in before that time; as they were plentiful up river from the beginning of March; began passing out in the beginning of July; none seen after the 16th of July. Bream are always plentiful here. Whiting have been plentiful this summer, and larger than usual. Very little spawn has been seen during the year.

About one half of the oyster leases are in fair condition, with a quantity of oysters on them large enough for market, but as they are not full grown, and a quantity of young oysters adhering to them, the oyster lessees have decided not to disturb them for twelve months. Other leases are useless; some destroyed by freshes in 1890, and others having been stripped too bare, and no spat on them. One hundred and seventy-eight bags of oysters were shipped to Sydney and eight bags local consumption in 1891. Have not seen any sign of worm or mud disease on this river. There is a great quantity of spat on all of the beds that are in fair condition. One of the lessees has laid down fifty-one bags of spat, taken from ballast heaps, besides putting any on the foreshore of his leases out in deep water. There are some splendid hauling grounds for seines on the river, and if there was a market near at hand there would be employment for a number of fishermen.

WILLIAM MCGREGOR,  
Acting Assistant Inspector of Fisheries.

### Richmond River Fisheries.

Ballina, 20 January, 1892.

REPORT on the Fisheries under my supervision for the year 1891:—

The oyster crop has not been so good this year owing to the smallness of them. They did not grow to the market size, but plentiful and healthy; spat has been plentiful, also healthy. I think this is owing to the heavy rain we had in this district during 1890, but we expect to have a big crop here this year—1892. Net-fishing:—Nothing has been done at that only for local consumption, owing to the scarcity of fish. The last quarter of 1891, sand whiting has been in fair quantities, but other river fish not at all plentiful. No fish has been sent from this river to the Sydney market during 1891.

R. A. FRASER,  
Assistant Inspector.

### Clarence River Fisheries.

Palmer's Island, 16 January, 1892.

I HAVE the honor to submit report of the fisheries under my supervision for the year 1891.

The supply of fish, notably mullet, bream, whiting, flat-head, and jew-fish, has been fairly good, and little or no interruption has been caused by floods or freshes, the shipments of fresh fish to Sydney show a considerable increase to that of the previous year.

It is to be regretted that better facilities are not afforded for the convenience of the fishermen, with regard to the shipping of fish in ice to the metropolis. Under the present circumstances the men are compelled to convey their fish in open boats to Palmer's Island public wharf to pack for shipment. The long exposure at this season of the year must necessarily be injurious to the fish.

This inconvenience has been caused by the shoaling of the river near Iluka, which prevents the ocean steamers from calling at that wharf, where the greater portion of the fish were formerly shipped.

The facility afforded by the steam tug "Marvel" for proceeding to the fishing grounds at sea, has resulted in some extraordinary hauls of schnapper being made during the winter months, large quantities of which found their way to the metropolis. On one single trip no less than 1,350 fish were hooked in about four hours.

The

The Iluka Fish Canning Company's operations are still in abeyance although the necessary capital has been subscribed, but I am informed by the proprietors that a start will be made almost immediately after the necessary repairs and alterations are completed, and the addition of a wharf suitable for the ocean steamers to call at, has been erected.

An enterprising firm, under the name of Summers & Co., has commenced operations at Iluka, in the business of fish curing and smoking, and have succeeded fairly well as regards the quality of the fish so treated, a little drawback has been experienced in obtaining a regular supply of fish suitable for smoking, which difficulty, however, can be overcome by the use of the meshing-net, whereby the large fish only will be captured.

An attempt has also been made to catch schnapper for curing purposes by the aid of a small steamer, but so far not very satisfactory results have been obtained. A sample of the above fish has been forwarded to the Southern Fish Market, Sydney, as a trial shipment.

The number of baskets of fresh fish sent to Sydney during the year was 4,842, of which number 337 baskets were schnapper.

Locally, there has been about 400 baskets consumed. The greater part of these were sent to Grafton.

For breaches of the Fisheries Act, viz., fishing without license, four persons have been summoned and nominal fines inflicted. The number of licenses issued to fishermen during the year was forty, and the number of boats fifteen.

#### *Oyster-beds.*

In giving a detailed account of the several leases, and commencing at the top, or lake beds Nos. 2,181 and 2,182, it is satisfactory to note that they are slowly but surely recovering, and are at present in a better condition, and contain a better show of young oysters than they have done for the previous five years. Pending the issue of spat licenses, the present lessees have done nothing towards the cultivation of oysters, as required by the Fisheries Act. Under these circumstances, the natural inference is that the spawn which appeared on these areas during last winter has come from the oysters which were laid down on the reserve adjoining, and which also are at present in a good state of preservation, and increasing in numbers. No. 2,176 lease, immediately below and adjoining the reserve, shows even much better prospects than those areas situated above, and should no floods occur I anticipate an extra good crop during next spawning season. No. 860 lease, also adjoining this area, shows no sign of improvement. On the contrary, I think nearly the whole of the oyster-bearing portion is covered to a depth of from 1 to 7 inches of mud, the result of the numerous floods and freshes which have occurred of late years. Coming still further down to No. 519 lease, I find a large portion of the upper end is covered in sand, and contain no oysters; in fact, this lease has given very poor returns since 1887. The lower end, however, shows a large quantity of oysters, but they do not attain the size they ought. This, I think, may be attributed to the fact of the current just above this lease being divided into three separate channels, and in consequence of this the oysters do not get sufficient food. However this may be, there are exactly similar oysters to be found on No. 888 lease, lower down the channel, where the current is divided in the same manner. No. 258 lease is at present in good condition and giving good returns, but unfortunately a portion of the upper end of the area is sanding up. No. 518 lease adjoining is also in a fair condition. No. 262 lease still maintains its reputation for production, as also does No. 64 lease; in fact, these two latter leases supply the largest quantity of oysters from the Clarence River. Nos. 888 and 769 leases have not produced any but a few straggling oysters for years past, and no attempt at cultivation has been made. Of the main river leases, Nos. 1,093 and 1,665, since the flood of 1887 very poor returns have been obtained from these areas, and at present they show very little sign of improvement.

#### *Public Oyster Reserves.*

Of these there are three, one being situated in the North Arm, and was set apart chiefly for the purpose of enabling lessees to obtain spat to stock their areas, and at that time (January, 1887) large quantities of young oysters were obtainable, but the flood of that year, followed by that of 1890, seems to have completely annihilated them, as none has appeared since. A large portion of this part of the North Arm bears evident traces of having at one time been a series of extensive oyster-beds, and probably there was at that time an outlet at Woody Head, but, by reason of this outlet becoming closed and the current diverted, an insufficient current of salt water, and the accumulation of mud in consequence, has effectually destroyed them. On the reserve at Yamba an inexhaustible supply of oysters can be found and should be abundantly sufficient to meet all public requirements. Of the reserve in Lake Channel, there is every prospect of its being a success for the purpose for which it was set apart, viz., an experiment to stock the upper beds with spawn from oysters that were laid down.

#### *Worm Disease.*

This disease seems to have almost if not entirely disappeared, and I think the floods have played a very important part in its eradication. I also incline to the belief that a great deal is owing to the restriction against the hauling of fishing nets on the oyster-beds being enforced. This practice, if persisted in, has a direct tendency to drive the fish off these areas.

It is well known amongst the fishermen that good hauls of bream and whiting can be made on the oyster-beds, when they cannot be had in any other part of the river, the reason for this is that there is abundant feed to be had amongst the shells; and further, they are also good spawning-grounds for the fish. During dredging operations large numbers of bream may be seen following the dredge at every haul, thus proving their efficiency as scavengers and that they should be encouraged rather than driven away. And further, the hauling of nets on the oyster beds at spawning-time must destroy a great deal of spawn, and, considering the miles of hauling-grounds there are on the Clarence River, this restriction cannot be said to press heavily upon the few fishermen who follow that calling.

#### *Spawning.*

During the year I have paid particular attention to this important question and find as a result that the oysters are liable and do spawn little or much at any time during the year, but only under certain climatic conditions; for instance, oysters that are in good condition and situated in shallow water, and the water not too fresh, will give off their spawn immediately on the lowering of temperature caused by southerly

southerly weather, and this no doubt, is the chief cause of oysters suddenly falling off in condition during the dredging season. On the other hand, oysters situated in deep water, and consequently not influenced by the sudden changes of temperature, will be found to spawn at regular seasons, the same as a great many of our marine fishes, that is, during the winter months.

The output of oysters from the Clarence River for the years was 520 bags, while the output for the previous year was 1,195, thus showing a decrease of 675 bags. This marked difference may be accounted for from the fact of the beds having had a rest after the 1887 flood for a period of two years; the result of this was an extraordinary crop, which was not wholly taken off until the early part of 1890, when wet weather again set in, which very naturally made the lessees doubly anxious to obtain as many oysters as possible before another flood should destroy them. The wet weather of this period terminated in a flood, which eventually destroyed fully three parts of those that were left, but with favourable weather there is every prospect of a good supply for next year.

#### Other Rivers.

The condition of the oyster leases at the Evans River, which I visited on one occasion, was very promising, the lessees having taken the precaution to place spat collectors, viz., stones, shingles, and slates, on all the available places, which, on examination were fairly stocked with spat. The natural formation of this river is very favourable for the production and growth of oysters, they being near the ocean, prevents the destruction by any ordinary flood, yet a sufficiency of fresh water finds its way into it from the surrounding hills. It also abounds in rocks, in the crevices of which enormous quantities of oysters can be seen, but cannot be taken; this fact alone is sufficient to ensure succeeding crops, even if artificial means were not resorted to. The output from this river for the year was very small, but this was chiefly owing to the extraordinary high flood of 1890, which broke through from the Richmond River, and scoured the whole bottom, carrying everything with it into the sea, or depositing it in unsuitable places for oyster growth.

The Sandon River has not produced any oysters in quantity since 1887. The supply of oysters at present is chiefly consumed by pleasure parties during the summer months. The leases that were taken up on this river have, with one exception, been surrendered, owing, chiefly, to the want of a road to a place of shipment, and resident lessees. It is quite possible, if a road were made a profitable business might be established, both in the cultivation of oysters and fishing, combined, perhaps, with poultry or other pursuits, providing that the person resided there.

On my visit to the Woolli Woolli River, I found the conditions for oyster life to differ materially to that of either the Evans or Sandon Rivers, for while these latter rivers abound in rocks there is scarcely a rock to be seen on the former; on the contrary, the river abounds in soft sand and mud, and is not conducive to oyster life, except during a succession of continually dry seasons when no scour takes place. In consequence of the inadaptability of this river for the cultivation of oysters the present lessee has applied for permission to surrender.

JAS. MASSINGHAM,  
Acting Assistant Inspector of Fisheries.

#### Iluka Fish Curing and Canning Works.

Palmer's Island, 20 October, 1891.

I HAVE the honor to inform you that I have latterly paid several visits to the Iluka Fish Company's Works, and from information which I can gather, and to all appearances, a start will be made before the expiration of the year. The cuttings from the *Clarence and Richmond Examiner* will show that efforts are being made to insure its success.

In reference to Messrs. Summers, Hoarty, and Co.'s advertisement, I may state that I interviewed them, and find that Mr. W. Summers has had (in addition to his experience in England) considerable experience in the same business in Queensland, he having to relinquish business in that colony on account of irregularity of supply of fresh fish for curing purposes. This firm are at present purchasing their fish from the fishermen, and are turning out a superior article, a sample of which I have tried.

Mr. Summers informs me he has had applications from persons in Grafton for shares in the business, but at present he declines to enlarge.

JAS. MASSINGHAM,  
Acting Assistant Inspector of Fisheries.

ILUKA CURED AND SMOKED FISH.—We, the undersigned, beg to inform the general public that we have always on hand a large variety of the choicest fish, cured and smoked, the like of which has never been done before in Australia. The Clarence Heads cannot be beat for quality of fish. Whiting, bream, schnapper, flathead, jew-fish, sea mullet, &c., are very plentiful, and will be sold at very reasonable prices per dozen. They will be packed in small boxes and cases, to satisfy all customers. All orders promptly attended to, and sent by the return steamer. Send for a small sample first, for we are sure you must soon call again.—SUMMERS, HOARTY AND CO., New Yarmouth Fish Curing Co., Iluka, Clarence River. N.S.W. W. Summers, jun. (late of Great Yarmouth, England) has had fifteen years' experience in England. Look out for the bloaters and the findon haddocks.

THE FISH INDUSTRY.—A company for carrying on the export of fresh fish and fish canning at Iluka has been successfully launched, and active preparations are being made for an early start. The works hitherto in use at Iluka will be utilised; the former proprietors (Messrs. M'Donald and Rankin) being allowed £400 in fully paid up shares in the concern, out of £1,000. Almost the whole of this is subscribed. A wharf is in course of construction at the works, and it is the intention of the company to go into the industry on a large scale. They estimate they will be able to sell tinned fish at a reduction of 25 per cent. on those formerly treated at the works; while the article will be, if anything, superior to that previously made here. A directorate for the company has been formed, with Mr. W. J. Campbell, of Grafton, as chairman, and articles of association prepared. Extensive improvements will be carried out at the present works, and provision will also be made for fruit canning should it be at any time deemed expedient to enter on that industry. We trust the business will prove successful, and that the promoters will be rewarded for their plucky enterprise.

Bellinger

### Bellinger River Fisheries.

Pilot Station, Bellinger River, 4 January, 1892.

I HAVE the honor to inform you in respect to the fishing industry on this river, that it is simply nil.

There has been two parties that have given net-fishing a trial during the year, but both had to give it up owing to the scarcity of fish in the river.

The oyster fishery is doing fairly well. Mr. N. Hanley, the only lessee working on the river, having shipped to Sydney during the year 286 bags of oysters, valued at about £430.

I expect that there will be a very large increase in the shipments in the course of another year or two, the frequent freshes in the river during the last two years having cleaned the beds and destroyed the sea-weed that was such a drawback to the beds.

The spat last year was very plentiful, and appears to have taken well on all the beds and on all the ballast-heaps about the river.

THOS. STEWART,  
Pilot.

### Nambucca Fisheries.

Nambucca, 5 January, 1892.

I HAVE the honor to submit for your information the annual report for 1891.

*Oysters.*—The two principal beds of the river, leased by Messrs. Prospechal and West are improving, the floods of 1890 having removed the mud and slime, leaving the old shell and stones more clear, to which the spat adhere more freely. The young oysters on the rocks of the foreshores are in a very healthy condition. No dredging has taken place this year.

*Fish.*—The sea-mullet season commenced on the 15th of April, closed on the 14th of June, and was only a moderate one. Salmon were observed along the beach from the 14th of October to the 10th of November, but none were observed in the river. No net-fishing has taken place for the Sydney market; only for the local requirements.

W. J. WHAITES,  
Acting Assistant Inspector of Fisheries, Nambucca.

### Macleay River Fisheries.

Pilot Station, Macleay River, 18 January, 1892.

I HAVE the honor to forward for your information my report on the Macleay River Fisheries during the year 1891.

This river has had a fair supply of fish during the past year, and some of the fishermen have done fairly well. One thousand five hundred and seventy-one baskets have been shipped for Sydney market, besides a large local consumption.

The heavy rains and freshes in the river several times during the year have driven a great many of the fish out to sea, and the flood water has also killed a quantity of the young fish.

There have been eight licensed fishing boats and about sixteen men employed in fishing, but most of them do not fish all the year round, but are engaged on their farms and other employment during several months of the year.

The sea-mullet came in this river on the 21st of March, and kept coming in and going out in large shoals up to the 24th of May. This river at present has a fair supply of fish particularly flat-tail mullet, but white fish are getting very scarce.

In my last year report I mentioned that the fish was yearly decreasing, and as this river has never been closed, I beg to recommend the closing of this river against net-fishing for a period of twelve months. The portion to be closed from the upper end of Shark Island upwards, and from Shark Island to the Macleay Heads, a distance of 7 miles, to be open for net-fishing.

J. A. JAMIESON,  
Assistant Inspector of Fisheries.

### Manning River Fisheries.

Manning River, 7 January, 1892.

I HAVE the honor to forward the annual report of the condition of the natural oyster-beds on the Manning River.

I might state that I tested the deep water natural oyster-beds in the south channel in the following months:—April, July, September, and December, and I am pleased to say that most of the beds are in a flourishing condition.

I have also tested the main river beds in March, July, and December. I am pleased to be able to state that in July I found spat and a few young oysters on Cuttin bed, M'Dermid's bed, and Scott's Creek bed.

In testing Cuttin bed again on the 10th December, we averaged from 100 to 200 of young oysters and spat per haul.

On the 21st December we tested what is locally known as M'Dermid's bed, on which we averaged from twenty-five to thirty of young oysters and spat.

On 22nd December we tested Scott's Creek bed, on which our average was from fifty to sixty of young oysters and spat per haul.

I might mention that there was not the least sign of spat or young oysters on any of the main river beds until about last March, when we found spat on one portion of Cuttin Bed. By the above you will see that there is a steady improvement on the main river beds.

The young crop of oysters in the south channel has also greatly improved, still the oysters are rather small for market as yet. The lessees (Messrs. Woodward and Comino) have each a boat in the south channel, just to keep the beds clean, and they forward a few bags of oysters to Sydney occasionally.

One of the lessees intends shipping some of the new crop about March, that is, if the oysters are matured enough by that time.

Freshes.—

Freshes.—We have had no less than seven freshes on this river during the year, which occurred on the following months and dates:—March, from the 11th to the 16th; May, from the 2nd to the 8th; June, from the 9th to the 18th, and again from the 24th to the 30th; September, from the 15th to the 24th; December, from the 4th to the 10th. These freshes have done the natural deep water oyster-beds a deal of good, as it has kept the bottom of the river clean.

There has been 189 bags of oysters imported by Mr. Woodward, which were laid down in Scott's Creek bed. The change of water and continual freshes was greatly against these oysters, as the following will show,—in picking them up again they only obtained 106 bags, which left a loss of eighty-three bags.

Oysters collected on this river during the year:—272 bags, of which 245 bags were shipped to Sydney, and twenty-seven bags retained for district use.

Spat.—There has been sixteen bags of spat collected on this river during the year, at 2s. per bag, £1 12s., which I forwarded to the Treasury on the 28th March; eleven bags, £1 2s., and on the 16th May, 10s. for five bags.

#### *Applications for Leases.*

Manning River, applied for the undermentioned lessees:—

Mr. A. Comino, 500 yards, South Channel.  
 Mr. H. Woodward, 100 yards     "  
 Mr. H. Woodward, 400     "  
 Mr. H. Woodward, 200     "  
 Mr. H. Woodward, 200 yards, at Wallis Lake, Cape Hawke.  
 Mr. F. J. Gibbins, 600 yards, at Camden Haven.  
 Mr. J. F. Gibbins, 800     "

All of which I measured during the year and forwarded the reports to the Department of Fisheries.

#### *Leases cancelled during the year.*

Mr. S. H. Laten, 300 yards, South Channel.  
 Mr. William Osbourn, 100 yards, Main River.  
 Mr. William Osbourn, 100 yards, Pelican Bay, Main River.

#### *Fish.*

There is not much done in fishing for Sydney market on this river, as it is not what we call adapted for fishing, and the fish have not been as plentiful during the year as they have been in other years, which I attribute to the continual freshes.

Sea-mullet made their first appearance in the early part of March in very small shoals, and did not come up the river as usual.

Whiting and bream came into the river in October. Salmon came into the river in the early part of August, and are still in the river.

The principal fish in this river are flat-tail and sand mullet, bream, whiting, black fish, flat-head, jew-fish, salmon, and tailor.

#### *Fishermen and boats.*

There have been eight yearly licensed fishermen, three yearly licensed fishing boats, two half-yearly licensed fishermen, and one half-yearly licensed fishing boat working on this river at times.

#### *Fish caught during the year.*

There have been 820 baskets of fish caught, of which 391 baskets have been shipped to Sydney, and 429 baskets retained for local consumption.

Trusting that the above report will be satisfactory.

ANDREW GYLER,  
 Assistant Inspector.

### Wallis Lake Fisheries.

#### *Fish.*

THERE are no particulars of interest to note.

There was the usual abundance of fish in all the bays and inlets. One boat and two men are fishing for local consumption, and two boats with four men for salting. One hundred and fifty-four bags of salt fish have been shipped from here during the year. Messrs. Belford and Woodward have started a small fish-preserving industry. They shipped nineteen cases, each containing six dozen of fish.

#### *Oysters.*

The oyster fisheries are in a flourishing condition. Spat set in in the month of May in large quantities, and can be traced for 2 miles up the river. Nearly all the foreshores have a good supply of young oysters. Young oysters or spawn can still be found at the heads on the ballast stones. Mr. Woodward has imported about 250 bags of oyster shells, and had the shells laid down on some of his leased beds. Those shells have proved a great success. Most of the shells are now covered with young oysters.

Mr. Woodward's experiment to catch spawn at the heads has proved a failure. The sand has washed in and buried the stones and the roots and branches of the trees which he had laid down. Exports for the year 1891, 224.

A. H. KENDALL.

### Hawkesbury River Fisheries.

Hawkesbury River, 11 January, 1892.

I HAVE the honor to forward my annual report on the net and line fisheries, and oyster fisheries of the Hawkesbury River, the district under my supervision.

With your permission, I will first deal with the net and line fisheries.

This industry is carried on all the year through, giving an average employment to about thirty-five men, more or less.

The total quantity of fish caught and carried into consumption during the past year has been 4,659 baskets. The whole of this is now carried by railway. A great part goes to the Sydney market, but a large percentage is also sold in the suburbs of Sydney, and other inland towns.

I beg to state that a large part of this river has been closed against net-fishing, and that only the very lower part of the river has been open for fishing. The waters closed against fishing on this river, including tributaries, embrace an area of 150 miles in length, and after carrying a depth of 40 feet, are now, and have been all the year well stocked with all sorts of fish, including different species of mullet, bream, black-fish, perch, whiting, jew-fish, prawns, sole, and flathead.

I would beg to call your attention to the fact that garfish seldom come any distance up this river, and usually keep near the coast, and I would herewith most respectfully recommend that, bearing in mind the destructive nature of the garfish net, that these nets should be confined near the sea coast, and that nets of larger mesh should be encouraged, in order that the young fish may escape.

I beg to state that the blubber has this summer been again very troublesome, often preventing the fishermen from hauling their nets.

Sharks have again been very numerous this summer, particularly in Cowan Creek, whilst schnapper have become scarcer than ever.

Of the oyster fisheries of the Hawkesbury River, I beg to state that this industry, which once gave employment to a large number of people is now in a very languishing and unsatisfactory condition, and their total extermination appears to be only a question of time, unless a different system of leasing be immediately substituted.

The Oyster Act of 1884 has absolutely failed in its object.

The worms in oysters, which committed such havoc several years ago, have not yet wholly disappeared, but are now mostly confined to low water oysters. They are certainly a hindrance to oyster culture, but the true cause of the failure of culture is the indiscriminate leasing of small areas, and the stealing of one from another, which disheartens any honest man.

Oyster spat was seen during the month of July, which, I believe, came out of Berowra Creek, but I do not think that much of it has taken any growth, particularly as the river was at that time partly in freshet.

The total shipment of oysters during the past year was 707 bags, a large percentage of which was New Zealand oysters, laid for fattening purposes. I would beg further to state that during the past year no oyster culture has taken place, and no spat has been paid for.

P. SMITH,  
Assistant Inspector.

### Nelson's Bay (Port Stephens) Fisheries.

Fisheries Office, Nelson's Bay, Port Stephens, 4 January, 1892.

IN obedience to your circular memorandum, dated the 16th December last, I have the honor to submit my report on the fisheries under my supervision for the past year, as follows:—

Owing to this disadvantage—the distance from market and consequent high freight and charges imposed upon the fishermen's product (admittedly fair in themselves under existing circumstances) — net fishermen have had little inducement to ply their calling in the lower portions of the harbour during the year, *i.e.*, those of them who, when they fish, despatch their fish by steamer to Newcastle for transshipment by rail to Sydney. Most of the fish sent by that route are caught in these lower waters.

A number of men, principally hailing from Newcastle side, have, until recently, been fishing in the upper waters, making Telligerry Creek their camping ground, and carting the fish overland to Stockton for disposal in and around Newcastle.

Doubtless the bulk of the fish so caught have been taken from closed waters, but with one exception the parties have succeeded in eluding the vigilance of the inspectors, due in a great measure to natural facilities afforded them, and to the system of telegraphy, so to speak, in vogue between them and their sympathisers.

I am unable to state the quantity of fish carted overland from these upper waters, but am inclined to the opinion that it does not fall far short of that sent round by steamer.

The Myall Lake, distant about 15 miles from the harbour of Port Stephens, and connected therewith by the Lower Myall River, abounds in multitudes of good fish. The lake is but little influenced by the tides, and as yet it has remained almost untouched by fishermen and their nets. The reason that that is so is on account of the shoals in the Lower Myall, which impede any but vessels of the smallest draught from entering the lake. At certain seasons of the year large schools of fish make their way down the Myall and seem to pass outwards to the ocean. Freshets in the lake also cause the fish (amongst which is the perch) to make their exit from the lake.

Approximately there has been about 4,500 baskets of mixed fish despatched per steamer during the year. On an average about thirteen men and five boats have been working, exclusive of those fishing in the upper waters. It will be seen that the fish supply (that sent by steamer) has decreased by about 800 baskets when compared with the supply for 1890. Two nets have been seized in closed waters, and in connection with one of these seizures the parties were convicted at the Newcastle Police Court.

I have again to report a decrease in the supply of oysters, in consequence of the ravages of the worm. In many instances the deposits of oysters have been entirely eradicated, and there seems no prospect of any improvement of their condition. No doubt the continuous stripping of the deposits on Crown land time after time, which is done by unprincipled lessees (whom I regret it is difficult to detect), and who do so to stock their leases near their homes, has had something to do in regard to their diminution. However, I venture to say that were the worms all to die to-morrow it would take years of judicious management for the deposits to recuperate.

Approximately there has been about 600 bags of oysters despatched during the year, showing a decrease of about 300 bags as compared with 1890.

Three applications for leases have been lodged with me and dealt with by the Department during the year; and three surrenders have been applied for.

There

There have been two convictions under section 10 of the Oyster Fisheries Act of 1884, and two under Regulation 34 of that Act.

I have had no opportunity of ascertaining what quantity of crayfish has been caught this year, as consignments of them have been shipped aboard different steamers outside the Heads. The crayfish season is from 14th June up to Christmas.

H. LAMAN,  
Assistant Inspector of Fisheries.

### Brisbane Water Fisheries.

Brisbane Water, 23 January, 1892.

I do myself the honor to forward you the following report on the fisheries of Brisbane Water for the year 1891. Owing to the greater part of the waters being closed against net-fishing, the catch of fish has been very limited. The produce was, as usual, shipped partly by steamer, partly by rail, and part by local consumption to Sydney. The closed waters have been abundantly supplied with fish, line fishers in closed waters have been catching fish in large quantities. Splendid whiting, bream, flathead, jew-fish, and some very fine schnapper have been caught at the reef; in fact, it has been a great harvest for line fishers. A great many pleasure parties visit Brisbane Water for line fishing. Many boat parties have caught as many as twenty-five dozen of mixed varieties per day. The closing of the waters from netting of fish has been productive of much good. These waters are fine as a nursery; the flats, creeks, and bays being alive with fish. All through the past year different parts of my district, and particularly the closed waters, have been regularly visited and well watched. The quantity of fish forwarded to market for the year 1891, is 168 baskets.

The state of the leased oyster-bed in my district is good. There has been no sign of worm or mud disease here. The foreshores are now getting what they very much required, that is a spell. The general spatting occurs from October to January, but in my opinion spatting, more or less, takes place all the year round. The quantity of oysters supplied from here this year has been eighty-four bags.

No leases for oyster culture has been applied for during the year 1891.

W. N. CAIN,  
Assistant Inspector, Brisbane Water.

### Hunter River Fisheries.

Fisheries Office, Newcastle, 11 January, 1892.

I HAVE the honor to forward annual report of the fisheries of the Hunter River for the year 1891. There have been 5,698 baskets of fish caught for the year. Fish was plentiful. There have been several freshes, which drove large shoals of fish down the river. From January to June mullet was plentiful all over the river. From July to October fish of all kinds were very scarce. From October to December, fish plentiful.

There were ninety-eight licensed fishermen and thirty-two licensed boats fishing in the Hunter River for the year.

*Prawns.*—There were fifteen boats and thirty men employed catching prawns in the Hunter River this season. There have been 926 baskets sent to Sydney, 835 baskets to Melbourne, 917 baskets for use in Newcastle, and four baskets sent to New Zealand. Prawns have been very scarce from January to June, plentiful the first part of the season, but dull of sale in Sydney. Prawns are now plentiful all over the river. There have been 100 baskets dried for sale to Chinamen. Generally the prawns have been more plentiful this season than they ever were before.

*Oysters.*—There have been 133 bags of oysters taken from the oyster-beds. Oysters are improving on the back channel and main channel beds, but there is no improvement on the bay beds. The worm is in some of the old oysters in the back channel and in the old shells in the bay. There have been several floods in the Hunter last year, which stopped the spawn from setting in the bay.

Mr. Anderson has two men cleaning the oyster beds in the bay with dredges.

HENRY CURAN.

### Lake Macquarie Fisheries.

Swansea, 28 January, 1892.

THE Assistant Inspector has the honor to report the following particulars in connection with the fisheries under his charge:—

#### *Baskets of Fish.*

The baskets of fish sent to market this year total 14,521, being not so large as last year's total by 392.

#### *Boats and crews.*

There have been from twenty-seven to thirty boats employed on the lake during the year 1891. There have been six boats from Newcastle and two or three from Botany and Tuggerah Lakes, but some of them only stopped for a short time. There has been an average of fifty-four to sixty fishermen employed on the lake during the year.

#### *Chinese.*

There is only one camp of these men, three in number, with one boat, who send their fish to Sydney and Newcastle. They have not dried any fish, as far as can be ascertained, for the year.

#### *Supply of Fish.*

The fish in the lake and channel have been very plentiful, in spite of the great hindrance to the fishing, caused by the immense quantity of blubber which prevents parts of the lake being fished, and may act beneficially in that way. Sharks about the entrance and channel are very much more numerous this year than the previous one. The sharks at the entrance do not seem to stop the fish from coming up the channel into the lake, for bream and young schnapper have been thicker in the lake for the last four months than has been known for the last two years; one fishing-boat was fishing on Pulbah Island for two and a half months in the one place.

*Transport*

*Transport to market.*

The fishermen who send their fish by train from Dora Creek still have to stay to load their own baskets of fish in the train, but at Toronto they only have to put their baskets of fish on the platform.

*Prosecutions.*

The Inspector has great pleasure in reporting that the breaches of the Act in fishing on the closed waters and in using illegal nets have been unusually small. Only one prosecution was inflicted by the Inspector for a fisherman fishing without a license. Two parties were prosecuted by Sub-Inspector Smithers, one for fishing in closed waters and the other for using an illegal net.

WM. BOYD,  
Assistant Inspector.

**Tuggerah Beach Lake Fisheries.**

Wharf Road, Concord, 2 February, 1892.

I HAVE the honor to forward my report on the Tuggerah Beach Lakes Fisheries for 1891.

From 1st January to 4th July there were 4,744 baskets caught.

About 150 baskets have been used locally, being cured and smoked, and are got up very nicely.

There has been great quantities of blubber in the Lakes, and this I consider to be an advantage to the fisheries, as it prevents the fishermen from using very long lengths of net.

The principal fish caught were mullet, black-fish, gar-fish, bream, and flat-head.

The entrance from the sea, the entrances to the two upper lakes, the large flat on the east of Lake Budgewoi, and the principal creeks with their entrances have again been closed against net-fishing.

On 4th July I left Tuggerah Lakes for the Parramatta River, since which time I have been with Inspector Smithers.

CHARLES GORDON,  
Assistant Inspector.

30 January, 1892.

I HAVE the honor to submit the following report of the fisheries of Tuggerah Lakes during my supervision.

The fish supply being very good, there being no less than 3,586 baskets taken from the Lake during eighteen weeks. The closed waters were all well stocked, with fish especially.

The sea entrance, Ourimbah Creek, Wyong Creek, and the big flat on the eastern side of Budgewoi Lake, which were swarming with young fish, especially mullet, in fact young fish were very plentiful all round the shores of the Lake, where the nets could not disturb them owing to the shallow water and the weeds. Some very good perch were caught by anglers about a mile above Wyong Bridge.

I consider the lake is in a prosperous state, and every prospect of a good supply of fish for the ensuing year.

JOHN F. HESPE,  
Assistant Inspector of Fisheries.

**Home Fisheries.**

Sydney, 19 January, 1892.

I HAVE the honor to forward you my report for the year 1891.

I have attended at the fish market, Woolloomooloo, at an early hour every morning during the year. The fish supply brought there each day was very good both in regard to quantity and quality from all the different fishing places. From the Clarence, Macleay, and Manning Rivers, also from Gosford and various other places some very fine whiting were received. Also there has been a fair proportion of schnapper from several places, the largest quantity being brought during the cool months from the Clarence River.

There has been a plentiful supply of the finest prawns brought to market during the prawn season that I have ever seen; the supply was so large that they were sold at a lower price than on previous years.

Near the end of the year the new fish market close by the Redfern Railway Station was opened. From the accounts I have received a fair quantity of fish appears to have been brought to this market. In my opinion the Woolloomooloo market is situated in the best part of the city for such a place, being so centrally positioned and having plenty of space all round for the convenience of the carts.

During the year I have regularly visited the oyster-shops and wharves to obtain records of the quantity of oysters brought to Sydney, also to see the quality of the oysters sent, and I consider that the oysters from Cape Hawke, Wallis Lake, Clarence River, Manning River, Richmond River, Port Macquarie, the Bellinger River, and various other places are generally very fine.

In the winter months there was a large import of oysters from New Zealand and from Queensland also, while the supply from the New South Wales beds was smaller. Since the New Zealand oysters have ceased coming we have received large imports from Queensland.

The oyster-beds about the harbour are almost destroyed, which I believe is the work of picnic parties.

It is my business to make up a monthly report of the home fisheries, and the information given by each Assistant Inspector is generally satisfactory.

In regard to my different duties, I have been assisted by the two-boatmen when not called away elsewhere.

THOMAS MULHALL,  
Assistant Inspector Fisheries, Sydney.

**George's River Fisheries.**

27 January, 1892.

I HAVE the honor to submit the following report of the fisheries under my supervision during the year 1891.

In January and February, fish were very scarce in all parts of George's River. Owing to the scarcity, I recommended the closing of certain portions of the river, which were closed on 18th April. From about the beginning of March, fish of all kinds improved slightly, and at the end of the year, all the upper portions of the closed waters held a living mass of fish; notably mullet. From July to October  
fish

fish were very scarce in the open waters of Botany Bay and George's River, with the exception of mullet. Since October, mullet has been in great abundance; in fact, I might say that Botany Bay, George's River, and all the inlets are swarming. I never saw them more plentiful since I have been in the district. Whiting, bream, and black-fish were not so plentiful in the early part of the year, as they were last year, or the year previous, but they improved greatly towards the latter part of the year. Prawns, also, have been scarce during the year, the cause of which I cannot explain. Young fish, principally mullet and whiting, are to be seen in great quantities, on all the flats, both in open and closed waters. During the early part of the year the anglers caught some very large jew-fish and flathead. Whiting were also caught, but they were small, but towards the end of the year I found them greatly improved, as I saw some really fine fish caught. I anticipate a great season for white fish for the ensuing year.

I am pleased to state that our fishermen are improving in their method of fishing; they now practice a style known as bull-ringing, by which means they can fish all along our coast for garfish, and great quantities are captured in this manner.

#### *Oyster Fisheries.*

In April, Mr. T. Wray, in his diving dress, tested all his deep-water oyster beds in George's River and found the worm or mud disease still very bad, nearly all the oysters being dead, and those not dead, in a very bad state, with the said disease. I also find some oysters, between high and low water marks, infected with the disease. The only oysters that escape are those on the mangroves and coblers pegs, and these are very scarce, owing to the public, who are on the river in large parties, collecting same, and who cannot be stopped collecting them for their own consumption, under the fifteenth section of the "Oyster Fisheries Act." I may mention that through the quantities taken by the public, lessees are unable to collect any spat to lay on their leases.

J. D. GRANT,  
Assistant Inspector of Fisheries.

### Wollongong Fisheries.

Wollongong, 30 January, 1892.

I do myself the honor to present the following report on the fisheries in my district for the year ending 31st December, 1891.

#### *Lake Illawarra.*

During the year there has been a considerable increase in the output of fish from Lake Illawarra, as against that of last year, 4,643 baskets being forwarded to the metropolitan market, and 1,090 baskets consumed locally, making a total of 5,733.

In the earlier part of the year fish were scarce owing to the freshness of the water, referred to in my last year's report; and on account of this scarcity it was deemed necessary to make a modified closure of portion of the foreshores at the latter end of the year for a term of two years.

However, the supply of young fish during the year has not at all diminished, and for the latter part of the year the supply of the finer sorts of ground fish has been very good. All through the year salmon have been in large numbers in the lake, proving very destructive to the young spawn. This is the first time during my supervision here that I have noticed them in any quantity.

Jelly-fish have also been most numerous, causing considerable trouble to the fishermen, who at times during the warm weather have been forced to abandon hauling operations completely in some of the grounds.

*Oysters.*—With regard to oysters, no spawn has been noticed in the entrance, although there has been a fair growth of the oysters attached to the numerous whelk on the flats.

#### *Tom Thumb Lagoon.*

In consequence of the over-netting of these waters, it was found necessary to close them. This was done on the 21st July. The result so far has been beneficial, and by the end of the two years proclaimed should have recouped themselves.

*Oysters.*—There is a large quantity of whelk oysters in this lagoon; these are gathered considerably by the general public. No disease has been noticed.

#### *Minamurra River.*

Fishing operations are still confined to a couple of fishermen, who dispose of their catch in Kiama and district.

The two beds of oysters held under lease have produced for the year eighteen bags. There has been a heavy fall of spat during the latter part of the year, which shows a marked and healthy growth. The lessee, however, has done little or nothing towards improving the leases under his control. No disease here.

#### *Southern Fisheries.*

I have visited the Southern Fisheries, as far south as Bateman's Bay, to measure and report on three applications for oyster culture, and also to report on surrender of two leases under sub-section 8 of section 4, at the Shoalhaven.

The former leases inspected I found to be in a healthy condition, and fairly well stocked.

#### *Shoalhaven and Crookhaven.*

The areas held under lease inspected by me have been, with a few exceptions, overworked. These having reserved so little, none for spawn, the bearing capabilities of the foreshores are so reduced as to leave them in a very unsatisfactory condition; the result is that the lessees find that their leases are now all but valueless; and this, I must say, is most apparently owing to their greed in trying to force the utmost out of the beds. Also, several of the leases have suffered severely from mud deposited during the floods.

*Re dredge-beds,* these have been almost completely destroyed by disease and mud, and I am of opinion it will be years if ever they recover themselves.

There has been a good fall of spawn in Pelican Rocks and rocks inside entrance.

The total quantity of oysters shipped from Greenwell Point for the year has been 484 bags.

*Currumbene*

*Currumbene Creek.*

The areas held under lease in this creek I found well stocked and in good condition. Also the foreshores being well stocked with young oysters. This I attribute to the leases being systematically worked. No disease exists here.

*Fish.*

The supply of fish forwarded to the metropolitan market from Shoalhaven was 4,875 baskets fish, 212 baskets prawns, and 10 baskets of lobsters. From Ulladulla 1,038 baskets fish.

The latter represents only about one-third of the quantity really forwarded to the metropolis, as most fishermen meet the coasting steamers en route, and so forward their fish, it being their only means of getting them to the Sydney market.

During the winter months there were seventy-eight men working between Shoalhaven and Ulladulla, whose average catch would be from 260 to 300 baskets of fish per week.

These fisheries are well stocked with the best varieties of fish.

In conclusion, I would point out that the whole of these important fisheries are being worked by men over whom there is no supervision exercised, excepting when I visit the localities, also the number of fishermen working in the district is increasing, and I believe the number will still increase, as in twelve months' time the railway will be open to Nowra, and the output and facilities for transport to the metropolitan market will be greatly increased thereby.

D. W. BENSON,  
Assistant Inspector of Fisheries.

**Shoalhaven Oyster Fisheries.**

Unanderra, 9 March, 1891.

I do myself the honor to forward for your information the following report on the oyster-beds generally in the Shoalhaven.

The oyster bearing areas in this district I found in a fairly healthy condition. On some of the beds, I found the mud or worm disease, but not to any great extent.

The supply of spat is poor, considering the large area of this water, those leases occupied by Woodward and Hairer having the best show; this I attribute to the leases being fairly well stocked with fine marketable oysters, and not overworked. Those leases are the only ones that are worked in a systematic manner.

On the other leased areas visited by me, I found them to have been worked very low, and almost devoid of oysters.

**Currumbene Creek, Jervis Bay, Oyster Fisheries.**

Unanderra, 9 March, 1891.

I FORWARD the following report on the oyster deposits in Currumbene Creek, Jervis Bay:—

I found the foreshores on inspection to be literally packed with mangrove and cobbler's peg oysters, showing a very vigorous growth. Spat is very plentiful in all parts of this creek, and in no individual case have the leases suffered by overworking. These leases are worked in a systematic manner, and by so doing, the lessee while obtaining a very fair return, is at the same time improving the producing powers of his holdings.

Here nature is not interfered with in the way of removing foreshore oysters to deeper water for spawning, the lessee removing only a certain quantity to the deeper water for fattening, thus leaving the greater part of the matured oysters on the foreshores for spawning, and so far the lessee is well satisfied with his experiment.

No disease exists amongst the oysters in this creek. Off leases 1,373, 1,372, and 130 I have taken a few samples to show growth and forward them herewith.

D. W. BENSON,  
Assistant Inspector of Fisheries.

**Lake George Fisheries.**

Bungendore, 3 October, 1891.

I BEG to report that for some months past, owing to the very bad weather, no fish have been caught in Lake George until this week, when one was caught 12 lb. weight, consequently I have not had anything to report; but now, as the winter is fairly over, and better weather appears to be set in, I expect to have something of interest to report.

I may state that the prospect of the present fishing season here is looked upon with much interest, as a large supply of fish is expected to be caught this season.

During the past winter the lake has risen fully 5 feet deeper than it was on your last visit. Boats can now be brought close up to the shore. To give you some idea how the lake has risen, old Mrs. Murphy caught a 12 lb. fish in front of her own house with a hand line 20 yards long this morning. The wind is blowing a strong southerly gale, and very cold. We must have warmer weather before much fish is caught.

The small carp are appearing very numerous in the lake, such as those Mr. Glover sent you last night.

I trust we will be successful this season in obtaining some perch and cod fry from the Queanbeyan River.

Some nice fish have been caught there already this season.

I am having a special trial for fish next week.

FREDK. NELSON,  
Acting Assistant Inspector of Fisheries.

Bungendore, 31 December, 1891.

In submitting my report for the year 1891, I have the honor to report that although I have exerted myself in every possible way in the interest of the fisheries of this district, I have very little of interest to report except that the closing of Butmaroo Creek, and a portion of the lake against net-fishing has been the means of increasing the fish considerably, and this is very noticeable in the creeks.

Owing

Owing to the quantity of rain that has fallen during the past winter the creeks have been flooded to such an extent as to clean them of all *débris*, &c., and has opened deep channels at the mouths of the creeks, whereby the fish have free access from the lake to the creeks. This I have proved beyond all doubt as during September and October last there were plenty of fish in the creeks, as many were caught with hand lines; this has not occurred for years past, consequently there must be a decided improvement. A very large quantity of fish has been caught this season, and only by means of the cross-line. This simple means of fishing goes to prove there must be a large quantity of fish in Lake George.

The fish are very healthy and in good condition, and beside the cod there are a large number of carp and perch visible. The spawning season still seems to be a matter of difficulty to ascertain, although the cod shows signs of spawning all through the summer months.

FREDK. NELSON,  
Acting Assistant Inspector of Fisheries.

### Murray River Fisheries.

Deniliquin, 25 January, 1892.

I HAVE the honor to submit my annual report in connection with the state of the fisheries in this district, as required by your circular letter of the 16th December last.

1. During the year 1891 there were 162 baskets of fish sent to the Victorian markets by way of the Deniliquin and Moama Railway Company, the gross weight of which was 6 tons 10 cwt. 2 qr., but this does not nearly represent the quantity caught even by those who follow fishing as an occupation. A very large quantity is sent away to Echuca and thence by rail to various towns in Victoria, and much more is caught on the lower portions of the district and forwarded either *via* Koondrook or Swan Hill to the same places. From the last-named place I estimate that at least 20 or 30 tons of fish, caught in the Murray and the adjacent ana-branches, lakes, and lagoons on this side of the main stream are annually sent away. Besides this there is an immense quantity caught by those who follow angling as a pastime, so that a fair estimate of the quantity of fish actually caught within the year would be about 1,000 baskets.

2. In the past year fish have been more than usually abundant in all the waters included within the counties of Townsend, Wakool, and Cadell, where they are reserved by proclamation from net-fishing, and this increase is wholly attributable, in my opinion, and in that of many experienced persons with whom I have conversed, to the wisdom of the action which resulted in the proclamation referred to.

3. There were eleven boat licenses issued last year.

4. During the same period I seized twenty-five gill-nets and two very large bag-nets which were being illegally used within the boundaries included in the proclamation against net-fishing. No owners appeared to claim the property, and on application to the Police Magistrate at Deniliquin they were confiscated and forwarded on to Sydney.

5. The advantages derived by keeping the rivers closed against net-fishing are amply demonstrated by the success which has attended the amateur fishermen, for when, in past years, a few pounds only could be caught by them in a day's fishing it is not now uncommon to find them returning with 1 cwt. or more as the proceeds of a few hours recreation.

6. A rather singular circumstance was noticed in some of the lagoons and creeks of the district this year, notably the one situated right in the town of Deniliquin, hundreds of dead fish were seen on the surface of the water just after the commencement of the summer, and much speculation as to the cause of the fatalities resulted. By some it was thought that the deaths were due to the largely increased temperature of the water; others said that they were due to the fact that the water was densely covered by the aquatic weed *arzolla rubra*, and that they suffered from asphyxia, while others again asserted that the water was so polluted that it was unfit for fish to live in, this latter was untenable, because the lagoon in the town is still full of fish, and the pollution, if any, has not been abated. In this particular lagoon about 3 tons of fish died, and after being taken out of the water, to prevent further pollution they were buried on the adjacent banks by the Municipal authorities.

7. Great trouble has been experienced, as usual, with the Victorian fishermen, who reside on the other side of the river, and only come over to the New South Wales side at night when they pursue the nefarious occupation of illegal netting, when the opportunity offers, a close watch is kept upon them, and this has resulted in the seizure, at least, of some of their nets, which had been left in the water in the expectation that they would not be discovered. The operations of these men are principally confined to the creeks and lagoons in the county of Wakool and on the Poon Boon run, where there are many large lakes and lagoons.

8. With railway communication with Jerilderie, and thence to Sydney, it is probable that the fishing industry in the fresh water rivers and creeks, lagoons, and lakes of the Deniliquin District would be greatly developed, as then a local market would be opened up for the produce of the fishermen's occupation. As things are now, the fishermen send their produce to Melbourne; and as the points of despatch are situated on a great length of Murray River frontage an immense quantity is forwarded to Melbourne principally, and to other towns of Victoria, much of which would otherwise be sent to Jerilderie, and other towns on the line of railway were such opened. Another aspect of the question is, that under present circumstances nearly all the fishermen are of Victorian residence, and have Victorian opinions; but with a market for their produce on this side they would probably be induced to come over and reside here, the result being that there would be an increase in our population, and a new and thriving industry would be established.

OSBORNE WILSHIRE,  
Assistant Inspector of Fisheries, Murray and adjacent waters.

Moama, 26 January, 1892.

I now have the honor to state that during the passed year I have seized three bags and one gill-net.

I also beg to report that young fish of the various kinds known to these waters are plentiful, though large fish are not so numerous as they were two or three years ago, no doubt to a great extent attributable to the illegal netting that is still being carried on, notwithstanding my efforts to stamp it out, which is made difficult through the fishermen having my movements watched. If I go up the river a messenger is at once despatched to warn them; in the meantime those down the river cast in their nets,  
and

and when I go down the river the same tactics are carried on upwards. Nevertheless, I am happy to say that this net-fishing evil is not nearly so bad as it was, though still carried on to a considerable extent, were it not that nearly the whole of the fishermen engaged in illegal net-fishing on the Murray live on the Victorian banks of the river. Line fishing is carried on to a very large extent on both sides of the Murray, especially on Sundays and public holidays, when not only the people living in the neighbourhood nearly all turn out to fish, but very large numbers come from long distances.

JOHN A. MANTON,

Assistant Inspector of Fisheries.

### Breeding of Prawns.

Waratah, 21 October, 1891.

I SINCERELY regret the delay in replying to your queries *re* the breeding of prawns, but I have been exceedingly busy shifting from Port Stephens back to the Hunter where I am now fishing.

In the Hunter River there are two distinct species of prawn, commonly known among prawners as the yellow head or river prawn, and the white head or sea prawn. The former is very delicate as compared with the latter, and is rarely found nearer the mouth of the river than Hexham, excepting in flood times, as it appears to be partial to brackish rather than salt water, while the latter is rarely caught above Hexham, excepting in very dry seasons.

The yellow-head is not nearly so good for market as the white-head, as the latter is a larger species; its flesh is firmer, and it keeps longer.

Although they differ much in appearance, yet their mode of spawning and breeding is very similar, and usually takes place between the months of February and May, but they are influenced considerably by the weather. When the spawn commences to mature, or appear on the legs, the prawn leaves its natural haunts or feeding grounds, and travels up small creeks or drains into salt or brackish water, swamps, or marshes, where the spawning matures, after which the old prawns generally return to their regular feeding grounds; but when they remain at the spawning place they attain an unusual size.

When the young prawns are about one-third grown they collect together in shoals and peregrinate towards the river in search of feeding grounds, frequently accompanied by the old prawns that have remained behind.

I have frequently found them as far inland as the Hexham swamps, about 2 miles from either creek or river.

If you acquaint me of your next visit to Newcastle I will endeavour to see you, when I will be able to give you further details, also details of my experiments in collecting and hatching of spawn (fish) at Port Stephens since I last saw you. The latter will afford me the greater pleasure, as I can give you the address of several gentlemen who were eye witnesses to the experiments. I will also show you some of the prawn spawning grounds, when you can test the veracity of my statements.

The Chief Inspector of Fisheries, Sydney.

E. E. BULL.

### Trout in Brogo River.

Wollongong, 22 December, 1891.

I do myself the honor to forward the enclosed letter from a friend of mine, who was spending a few days at the Brogo River.

In it he makes reference to some brown trout he saw, and knowing the deep interest you take in the acclimatisation of these fish, I have taken the liberty of writing you, as the information, *re* growth, &c., since liberation, being reliable, may be of some interest.

Since receiving his letter I have seen Mr. Thomson, and he says the trout are very vigorous and well marked. They were watched by him for some time, so that he has no doubt about the species.

These, I have no doubt, will be the trout liberated by the department during the year of 1888.

D. W. BENSON.

Dear Mr. Benson,

18 December, 1891.

You will no doubt be surprised to receive a letter from me, but it is on a subject in which I know you feel interested. When at Brogo some few days ago I took a walk up the river, and saw a number of trout rising at the flies on the water. Having done a fair amount of fishing at home, I took particular notice of them. They were from 9 to 10 inches long, and appeared of the brown species. When I visit the place next will try and procure you one.

Yours, &c.,

J. B. THOMSON.

### Moruya Fisheries.

Fisheries Station, Moruga, 5 January, 1892.

I do myself the honor to forward annual report of condition of fisheries and oysters at this station during the year 1891.

Fishing has been in a very languishing state. There have been three licensed fishermen, but they have had great difficulty in earning a livelihood. In the first place, owing to scarcity of fish in the river, also poor local demand for same when caught, and when fish are plentiful there are no means of sending them to the Sydney market.

The principal fish caught in the river during the past year were mullet, bream, and black-fish, garfish, trevally, and whiting, very scarce.

There were shoals of salmon observed travelling north during the months of October and November, but very few entered the river.

Schnapper were not very plentiful on this part of the coast during the past year, but still an improvement upon the last few years.

Regarding oysters, there is nothing fresh to report. There has been no attempt at oyster culture by the lessees, nor improvement of their respective areas.

There have been only fourteen bags of oysters sent away from this district during the past year to Braidwood and Sydney.

A. SUTHERLAND.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**FISHERIES ACT AMENDMENT BILL.**  
(PETITION FROM CERTAIN LICENSED FISHERMEN OF BOTANY BAY, PRAYING THE HOUSE TO  
PASS THE BILL.)

*Received by the Legislative Assembly, 21 March, 1893.*

To the Honorable the Speaker and Honorable Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned, Licensed Fishermen of Botany Bay,—

SHOWETH:—

That your Petitioners are licensed fishermen, plying their calling in and adjacent to Botany Bay, Port Jackson, Tuggerah Lakes, George's River, Lake Macquarie, Brisbane Water, and the Hawkesbury River.

2. That your Petitioners are desirous of being represented upon the Fisheries Commission, so that they may have direct representation by practical men elected by the licensed fishermen.

3. That your Petitioners are desirous of seeing passed into law a Bill, introduced into your Honorable House by Mr. J. H. Carruthers, one of the Members for Canterbury, by which it is provided that two members of the said Fisheries Commission may be elected by the licensees.

Your Petitioners therefore pray that your Honorable House may speedily pass the said Bill.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 28 signatures.*]

Similar Petitions were received:—

On 22nd March, 1893—From certain licensed fishermen of Tuggerah Lakes; 18 signatures.

Do do do Brisbane Water; 2 do

NEW SOUTH WALES.

NET-FISHING IN PORT HACKING PROHIBITION ACT.

(PETITION FROM CERTAIN LICENSED FISHERMEN OF BOTANY BAY AND GEORGE'S RIVER.)

*Received by the Legislative Assembly, 13 December, 1892.*

To the Honorable the Speaker and Honorable Members of the Legislative Assembly.

The humble Petition of the undersigned Licensed Fishermen of Botany Bay and George's River,—

SHOWETH :—

That your Petitioners are unable to gain a decent livelihood owing to the closing of many of the waters in which they have in years past been accustomed to haul their nets, and notably owing to the permanent closing of the whole of Port Hacking by Act of Parliament.

(2.) Your Petitioners believe that Port Hacking abounds with shoal fish, such as mullet, garfish, blackfish, and other edible and marketable fish not caught with the line, and your Petitioners desire to see the Act referred to amended so as to permit of nets being hauled in Port Hacking under proper regulations.

And your Petitioners pray that your Honorable House may pass an Act to amend the Act closing Port Hacking as above mentioned.

And your Petitioners, as in duty bound, will ever pray.

FISH SENT TO SYDNEY MARKET FROM LAKE ILLAWARRA.  
(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 18 May, 1893.*

*[Laid upon the Table of the House in answer to Question No. 1, of 18 May, 1893.]*

Question.

1. MR. CAMPBELL asked THE COLONIAL SECRETARY,—

- (1.) How many baskets of fish have been sent to the Sydney market from Lake Illawarra each year since the establishment of the Fisheries Commission?  
(2.) What was the yearly and total value of the fish so supplied during the said period?

Answer.

RETURN showing the number of Baskets of Fish sent to the Sydney Market from Lake Illawarra each year since 1882, and the Yearly and Total Value of the Fish so supplied since that period.

Year.	No. of Baskets.	Value.	Year.	No. of Baskets.	Value.
		£    s.    d.			£    s.    d.
1882 ... ..	6,240	3,432 0 0	1888 ... ..	5,189	2,853 19 0
1883 ... ..	7,176	3,946 16 0	1889 ... ..	6,855	3,770 5 0
1884 ... ..	7,020	3,861 0 0	1890 ... ..	3,256	1,790 16 0
1885 ... ..	8,736	4,804 16 0	1891 ... ..	3,887	2,137 17 0
1886 ... ..	6,032	3,316 12 0	1892 ... ..	3,977	2,188 7 0
1887 ... ..	4,447	2,445 17 0	1893 (to 30 April) ...	1,047	555 17 0

Total number of baskets, 63,862. Total value, £35,104 2s.

1892-3.

—  
LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

REPRESENTATIVES AT THE PHILADELPHIA  
AND CHICAGO EXHIBITIONS.

(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 2 February, 1893.*

[Laid upon the Table of this House in answer to Question No. 10, of 18 January, 1893.]

Question.

- (10.) REPRESENTATIONS AT THE PHILADELPHIA AND CHICAGO EXHIBITIONS:—MR. STEVENSON asked THE COLONIAL SECRETARY,—
- (1.) How many persons receiving salary, fees, or travelling expenses represented New South Wales at the Centennial Exhibition at Philadelphia in 1876?
  - (2.) What was the total cost to New South Wales of that Exhibition?
  - (3.) How many persons receiving salary, fees, or travelling expenses have been appointed or received promises of appointment to represent New South Wales in connection with the Chicago Exhibition?
  - (4.) What is the total estimated cost to New South Wales of the Chicago Exhibition?

Answer.

(1.) Two—Mr. Augustus Morris, Executive Commissioner; Mr. Charles Robinson, Secretary. An attendant was employed in Philadelphia at 10s. per diem.

(2.) £6,068 14s. 10d.

(3.) The only appointments approved of and confirmed by the New South Wales Commission are the following:—Mr. Robert Hudson, J.P., General Superintendent—salary at the rate of £500 per annum, and travelling expenses; Mr. J. E. Carne, F.G.S. (Geological Surveyor), Superintendent of Mineral Court—salary paid by Department of Mines, and allowance of £1 per day to be paid by the Commission; Mr. Alexander Bruce (Chief Inspector of Stock), Superintendent of Wool and Live Stock Sections—salary to be paid by Department of Mines, and allowance of £1 per day to be paid by the Commission; Mr. Thomas Pugh, Assistant General Superintendent—salary at the rate of £350 per annum, and travelling expenses; Mr. W. Fitzwilliam Terry, Superintendent of Liberal Art Section—£350 per annum, with travelling expenses; Mr. Thomas Ford, Overseer, Mineral Court—salary at the rate of £250 per annum, with travelling expenses; Mr. Joseph F. M'Guinness, Shorthand Clerk and Typewriter—local salary, £2 10s. per week (which will probably be increased in Chicago), with travelling expenses. By travelling expenses the Commission understands only expenses while actually travelling in the service of the Commission. The appointment of Mr. E. J. Welch as Private Secretary to the Executive Commissioner was also approved by the Commission; that gentleman, however, has resigned, and the Commission are informed that the vacancy caused by his resignation has not been filled up.

(4.) In response to the request of the Colonial Secretary, contained in letter of the 25th November, 1891, the Commission held a special meeting on the 2nd December; and, after full inquiry by the Administrative Committee and Committees of the Commission, the meeting decided to report, as the result, that it was of opinion—"That an adequate representation should be secured for a sum not exceeding £30,000 (this sum to include all charges in Sydney and the United States)," and the Colonial Secretary was so informed.

1892-3.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## APPOINTMENT OF MR. MARTIN, M.P., TO POSITION IN CONNECTION WITH CHICAGO EXHIBITION.

(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 21 March, 1893.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 2nd March, 1893, That there be laid upon the Table of this House,—

“Copies of all correspondence, minutes, &c., in connection with the appointment  
“of Mr. James Martin, one of the Members of this House, to a position  
“in connection with the Chicago Exhibition, and also information as to  
“what sum of money (if any) has been paid to Mr. Martin, and when  
“payment of the same was made.”

(Mr. Wright.)

### Minute Paper for The Executive Council.

Colonial Secretary's Office, Sydney, 13 October, 1891.

Appointment of Special Commissioner for the World's Columbian Exposition, in 1893.

I RECOMMEND the appointment of James Martin, Esq., M.P., as Special Commissioner for the World's Columbian Exposition, at Chicago, in 1893, to report on manufactures and manufacturing processes, without salary, but with travelling expenses while in America.

HENRY PARKES.

The Executive Council approves of the appointment herein recommended.—ALEX. C. BUDGE, Clerk of the Council. Approved.—JERSEY, 13/10/91. Min. 11-53, 13/10/91. Confirmed, 19/10/91.

### Extract from the *Government Gazette* of 20th October, 1891.

Colonial Secretary's Office, Sydney, 16 October, 1891.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint

JAMES MARTIN, ESQ., M.P.,

as Special Commissioner for the World's Columbian Exposition, at Chicago, in 1893, to report on manufactures and manufacturing processes.

HENRY PARKES.

### Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, &c., &c., &c.

To our Trusty and Well-beloved James Martin, Esq., M.P.,—

Greeting:

WHEREAS by an Instrument under the Great Seal of Our Colony of New South Wales, bearing date the 28th day of September last, We did appoint certain Gentlemen therein named to be Commissioners to collect,

[870 copies—Approximate Cost of Printing (labour and material), £2 9s. 9d.]

collect, classify, arrange and provide for the safety and preservation of exhibits, and to make all arrangements in Our said Colony for the effective representation of New South Wales at the World's Columbian Exposition, to be held in the City of Chicago, in the United States of America, in the year 1893: And whereas it hath appeared to Us to be expedient to appoint a Special Commissioner for the said Exposition to report on manufactures and manufacturing processes: Now therefore know you, that We, of Our especial grace have thought fit to appoint, and do hereby appoint you to be such Special Commissioner accordingly.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Right Well-beloved Cousin and Councillor VICTOR ALBERT GEORGE, EARL OF JERSEY, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this 20th day of October, in the fifty-fifth year of Our Reign, and in the year of Our Lord one thousand eight hundred and ninety-one.

JERSEY.

By His Excellency's Command,  
HENRY PARKES.

Entered on record by me, in Register of Patents, No. 14, pages 204 and 205, this 20th day of October, 1891.—For the Colonial Secretary and Registrar of Records, CRITCHETT WALKER, Principal Under Secretary.

### The Principal Under Secretary to J. Martin, Esq., M.P.

Sir,

Chief Secretary's Office, Sydney, 21 October, 1891.

I am directed by the Colonial Secretary to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint you to be Special Commissioner for this Colony at the World's Columbian Exposition, at Chicago, in 1893, to report on manufactures and manufacturing processes, without salary, but with travelling expenses while in America.

2. I am directed to enclose herewith a Commission that has been prepared in your favour, and to state that a notification of your appointment has been published in the *Government Gazette* of the 20th instant.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

### The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir,

Colonial Secretary's Office, Sydney, 21 October, 1891.

I am directed by the Colonial Secretary to state, for the information of the Colonial Treasurer, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint James Martin, Esquire, M.P., as Special Commissioner for this Colony at the World's Columbian Exposition, at Chicago, in 1893, to report on manufactures and manufacturing processes, without salary, but with travelling expenses while in America.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

### The Principal Under Secretary to The President of the Chicago Exposition Commission.

Sir,

Colonial Secretary's Office, Sydney, 21 October, 1891.

In transmitting to you the accompanying copy of a Commission, I am directed by the Colonial Secretary to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint James Martin, Esquire, M.P., as Special Commissioner for this Colony at the World's Columbian Exposition, at Chicago, in 1893, to report on manufactures and manufacturing processes, without salary, but with travelling expenses while in America, and that a notification of Mr. Martin's appointment has been published in the *Government Gazette* of the 20th instant.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

### The Colonial Secretary to The President of the Chicago Exposition Commission.

Sir,

Colonial Secretary's Office, Sydney, 22 October, 1891.

I have the honor to inform you, as President of the Commission appointed to make the necessary arrangements for the representation of this Colony at the World's Columbian Exposition to be held in Chicago in 1893, that the Governor, with the advice of the Executive Council, has appointed \* \* James Martin, Esquire, M.P., another member of the Commission, to be Special Commissioner to report on manufactures and manufacturing processes, in America. It may be explained that the intention and purpose of this latter appointment is that Mr. Martin should, so far as is practicable, visit the manufactories and foundries represented at Chicago and report from time to time on the actual operations, methods, and results, in order to furnish to the people of this Colony the fullest information and benefit obtainable from the collected specimens of inventive skill and industry in the World's Great Exposition

\* \* \*

I have, &c.,

HENRY PARKES.

J. Martin, Esq., M.P., to The Principal Under Secretary.

Sir,

Sydney, 249, Clarence-street, 14 February, 1893.

Referring to the conversation I had with you after my interview with the Premier, Sir George Dibbs, *re* travelling expenses, I respectfully suggest that the sum of £700 be placed to my credit at the Bank of New South Wales, head office Sydney, which sum I shall account for in detail immediately on my return. I believe I can do the work at a cost not exceeding £500, but after careful consideration, and keeping in view the fact that I shall have to employ stenographers and typewriters in addition to the ordinary expenses, and further, in the event of my requiring a further sum, the expense of cabling for remittance, and having same remitted by cable, I decide to suggest that £700 be made available for me.

I am, &c.,

JAMES MARTIN.

Mr. Martin states that £500 will be too little, and now asks for £700 for travelling expenses.—C.W., 14/2/93. Approved.—G.R.D., 14/2/93.

The Principal Under Secretary to J. Martin, Esq., M.P.

Sir,

Chief Secretary's Office, Sydney, 14 February, 1893.

I am directed to state that the Chief Secretary has approved of the sum of £700 being placed at your disposal as a Special Commissioner for New South Wales, to report on manufactures and manufacturing processes at the World's Columbian Exposition, 1893, and that the Colonial Treasurer has been invited to cause the sum to be placed in the Bank of New South Wales to your credit—the advance to be accounted for.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

The Principal Under Secretary to The Secretary of the Chicago Exposition Commission.

Sir,

Chief Secretary's Office, Sydney, 14 February, 1893.

I am directed to state, for the information of the Commission, that the Chief Secretary has approved of the sum of £700 being placed at the disposal of Mr. James Martin, to meet travelling and other expenses as Special Commissioner appointed to report on manufactures and manufacturing processes at the World's Columbian Exposition, Chicago, 1893, the amount to form a charge against the vote taken for the Commission.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir,

Chief Secretary's Office, Sydney, 14 February, 1893.

I am directed to state that the Chief Secretary has approved of the sum of £700 being placed at the disposal of Mr. James Martin, M.P., who has been appointed a Special Commissioner for New South Wales to report on the manufactures and manufacturing processes at the World's Columbian Exposition, Chicago, 1893, and to request that you will invite the Colonial Treasurer to have the goodness to cause the sum to be placed to the credit of Mr. Martin in the Bank of New South Wales, to meet travelling and other expenses—the advance to be accounted for.

2. I am further desired to state that an intimation has been sent to the effect that the money will be paid direct, and not through the Commission.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

Seven hundred pounds placed, on the 17th February, 1893, to the credit of James Martin's public account in the Bank of New South Wales.

The President of the Chicago Exposition Commission to The Principal Under Secretary.

Sir,

Sydney, 23 February, 1893.

I have the honor to acknowledge the receipt of your letter of the 14th February instant, stating that the Chief Secretary has approved of the sum of £700 being placed at the disposal of Mr. Jas. Martin, M.P., to meet travelling and other expenses, as Special Commissioner, appointed to report upon manufactures and manufacturing processes, at the World's Columbian Exposition, Chicago, 1893, the amount to form a charge against the vote taken for the Commission; and, in reply, to state, for the information of the Hon. the Colonial Secretary, that the Commission having done everything in their power to minimise and avoid expenditure, are surprised to find from your letter that such a large item of expenditure has been sanctioned without their knowledge or approval.

I have, &c.,

W. McMILLAN,  
President.

Submitted.—C.W., 28/2/93.

1892-3.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

EXHIBITS FROM NEW SOUTH WALES TO THE  
CHICAGO EXPOSITION.

(RETURN RESPECTING)

*Ordered by the Legislative Assembly to be printed, 2 February, 1893.*

- RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 12th January, 1893, That there be laid upon the Table of this House,—  
“A Return of the Exhibits from New South Wales to the Chicago Exposition,  
“as far as practicable, up to date.”

*(Mr. Dawson.)*

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

## CHICAGO EXHIBITION.

(RETURN RESPECTING PICTURES RECENTLY PREPARED BY THE GOVERNMENT PRINTER.)

*Ordered by the Legislative Assembly to be printed, 16 May, 1893.*

[Laid upon the Table of this House in answer to Question No. 1, of 21 March, 1893.]

### Question.

1. MR. RAE asked THE COLONIAL TREASURER,—Will he lay upon the Table a Return giving the following information in connection with the 600 pictures recently prepared for the Chicago Exhibition :—
- (1.) The rate per picture charged to the Commission, and the lowest tenders from private firms ?
  - (2.) The total cost of production, including :—(a) Operators' salaries while making the negatives required ; (b) operators' travelling expenses while engaged on the above work ; (c) chemicals and materials required in preparation of the negatives referred to ; (d) salaries of employees while making enlargements ; (e) chemicals and materials used and spoilt ; (f) cost of making wood stretchers ; (g) cost of linen and drawing paper used ; (h) cost of mounting and preparing the same ; (i) cost of retouching "spotting," &c., by artists ; (j) cost of printing titles ; (k) cost of printing catalogues ; (l) number of sheets of bromide paper used and spoilt, and value of the same ?

### Answer.

- (1.) Rate per picture :—

589	Enlargements, 40" × 30" @ £1 7s. 6d. each.	
1	Panorama, 5' × 40" @ £2 13s. 4d.	
2	do 7' 8" × 30" @ £1 18s. 4d. each.	
2	do 11' 6" × 1' 9" @ £4 14s. 0d. "	
3	do 12' 2" × 2' 5" @ £4 14s. 6d. "	
2	do 15' × 30" @ £4 14s. 2d. "	
1	do 21' 6" × 30" @ £6 2s. 8d.	

- (1.) Lowest tenders from private firms :—

£5 5s.; £3 10s.; £3; £1 7s. 6d.; and £1 5s.

(In some of the above tenders the negatives were to be supplied by the Government, and the titles of the pictures were not stipulated for.)

600

- (2.) The total cost of production, including—

BOOKS AND PAMPHLETS PREPARED FOR THE CHICAGO  
EXHIBITION.

(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 21 March, 1893.*

[Laid upon the Table of this House in accordance with promise made in answer to Question No. 2,  
of 9 February, 1893.]

Question.

- (2.) BOOKS AND PAMPHLETS FOR CHICAGO EXHIBITION:—MR. STEVENSON asked THE COLONIAL SECRETARY,—
- (1.) What books and pamphlets have been compiled for the Chicago Exhibition?
  - (2.) What is the price to be paid to the authors in each case, and the names of the same?
  - (3.) What is the number of copies of each work, and the cost of printing and publishing the same?

Answer.

Title of Publication.	Name of Writer.	Price paid to Writer.	No. of Copies printed.			Total Cost of Printing.
			For Commission.	For Stock.	Total.	
Fish and Fisheries of New South Wales (Popular Treatise).	Mr. Phillip Cohen...	£ s. d. 30 0 0	10,000	.....	10,000	£ s. d. 48 0 0

\* This sum was paid for clerical assistance in obtaining data, but nothing paid to the Editor.  
† Nothing paid to Author. † 600 copies to be at disposal of Commission.  
‡ Of this work, 20,000 copies were obtained by resolution of the Commission at 9d. each.  
§ Mr. Parsons has declined to carry out the work entrusted to him, in consequence of ill-health.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

GOVERNMENT LABOUR BUREAU.

(FIRST ANNUAL REPORT.)

*Ordered by the Legislative Assembly to be printed, 28 February, 1893.*

The Superintendent, Labour Bureau, to The Principal Under Secretary.

ANNUAL REPORT of the Government Labour Bureau, from 18th February, 1892, to 18th February, 1893. THE Bureau has now been in existence for twelve months, and the following is an outline of its operations during that time:—

It was first opened at the Post Office stables, Castlereagh-street, which premises we occupied for two months, and upon these being required by the Postal authorities, application was made to His Worship the Mayor for the use of the Exhibition Building, which was kindly granted and placed at the disposal of the Government for the use of the Bureau.

We opened at the Exhibition Building on the 2nd April, and remained there until the 29th September. During these six winter months this large hall was used as a shelter, where from 500 to 700 slept nightly, blankets being supplied by the Government.

Bathing, cleaning, &c., being carried out by a committee of the unemployed, under the direction of the Superintendent.

To keep in order this large crowd nightly was no easy matter, many of them being city habitual loafers—and some worse,—who would not work, and to whom compulsory bathing and cleanliness was a terror.

But by firmness and strict adherence to rules, together with the assistance of the police, nothing very serious occurred.

During this period Mr. S. Maxted and myself received in private donations from several ladies and gentlemen the sum of £180 sterling, also parcels of old clothing, food, &c., which were distributed to those most urgently requiring it.

In addition to this we have given 30,960 rations on behalf of the Government during the year. The average number of families getting relief weekly is 220, and the average number of rations weekly at present is 520.

Cost of rations, consisting of 3 lb. meat, 4 lb. bread,  $\frac{1}{4}$  lb. tea, 4 lb. sugar, at 1s. 6d. each; total cost, £2,324 11s. 6d. to date.

Upon receiving notice from His Worship the Mayor that the Exhibition Building was required at the end of September, I obtained from the Honorable the Acting Colonial Secretary the use of the premises we at present occupy, viz., a Government building at the rear of No. 2 Police Station, junction of George and Pitt Streets.

I had the necessary alterations made, and opened on 2nd October, 1892.

A good yard is attached, in which a weather-shed has been erected, and it is well adapted, convenient, and in every way suitable for carrying on the business of the Bureau.

When the Bureau was opened there were thousands of unemployed in and around Sydney appealing to the Government for employment, holding public meetings, and canvassing the general public for aid to assist them to live, and at times the situation was desperate and indeed dangerous.

The opening of the Labour Bureau in Sydney just then, and the making of its functions known throughout the Colony by means of circulars, advertisements, and the co-operation of the press generally, that all kinds of labour could be promptly supplied and sent free on application, without fee or charge (leaving the matter of wages to be arranged between employer and employee), had at once a good effect amongst the unemployed, and a considerable change for the better took place, in the hope that the steps taken by the Government would be the means of finding many employment in the country and sending them to it.

The first month 4,965 registered as unemployed.

Work was found for 1,129. They were sent to their employers in various parts of the Colony.

During the first three months the number registered as unemployed was 8,945, while work was found for 2,942.

During the first six months 13,447 were registered, and the number sent to work was 5,867.

The number of unemployed appearing so large, notwithstanding the number sent to work, and knowing also that a good number had found employment indirectly through the Bureau, I consulted Mr. Suttor, Acting Colonial Secretary, on the advisability of making a re-registration.

It was decided to commence that work on the 30th August, 1892, all the old tickets were called in for the purpose of finding out the probable number of unemployed in and around Sydney.

The number of re-registration to date amounts to 2,472, and those of new registrations to 5,153, making a total on the books of the Bureau at the present date of 7,625. The number sent out to work for

the year is 8,154, principally consisting of station and farm hands of all kinds, married couples, cooks, carpenters, smiths, painters, wheelwrights, navvies, bakers, bricklayers, brickmakers, bridge-hands, grooms, general-usefuls, gardeners, masons, labourers, butchers, miners, sleeper-cutters, plumbers, sawyers, engineers, tailors, &c., fencers, clearers, &c.

These have been sent to all parts of the Colony, and amongst them are 152 married couples, also fifty-four married men who have been sent to the country, and who, in a number of cases, being convinced that a better living could be made there, have sent for their wives and children, making a total of 206 married families, who have permanently settled down in the country.

A large number of boys, averaging from 12 to 16 years of age, have been sent to farmers and others, with the consent of their parents, and are doing well.

The operations of the Bureau have not been confined to getting employment for unskilled labour only, many professional gentlemen having been sent out, viz., tutors, draughtsmen, artists, civil and mechanical engineers, solicitors, musicians, &c.

Situations have been found for eight governesses, and several daughters and sisters of the unemployed have been found places as domestic servants, through the agency of the Bureau.

In addition to this, a large number, probably over 2,000, have obtained employment indirectly through the Bureau.

Employers requiring a number of men for a temporary job, and others who require men for a permanent work, frequently come to the Bureau and take them away without troubling to let us know.

We have no record of these unless they happen to apply for a pass to reach their destination.

In order to give every facility to those looking for work, I have set apart a room with every requisite, where anyone who thinks he can get employment can write asking for it, and if they have not the means for postage, their letters are forwarded for them.

In this way, also, a large number of deserving men have obtained employment.

Estimating those who have thus obtained employment indirectly through the Bureau at 1,850, in addition to 8,154 shown on our books as sent to work, it will be seen that employment has been found for 10,004 who have obtained work directly and indirectly through the Bureau for the year.

I regret to report that the number out of employment registering at the Bureau has considerably increased during the last two months, amongst whom are a large number of tradesmen, principally in the building line, also clerks, accountants, and shop hands, in consequence of contractors, merchants, and shopkeepers in and around Sydney shortening hands through the general depression that prevails.

The number of men coming from the other Colonies registered is also increasing.

The daily attendance at the Bureau of men looking for work is from 400 to 600.

The correspondence in connection with the Bureau has greatly increased during the last six months. The institution is now so well known throughout the Colony that scores of letters are received daily. The necessary replies to these, together with the careful selection and engagement of men, seeing them away by rail or steamer, the issue of passes, keeping records, books, and other matters of office detail, keep my staff, consisting of Secretary, three clerks, and a messenger, fully occupied, all of whom do their work faithfully and well.

The relief department, under Mr. S. Maxted and myself, is worked by one clerk (who also acts as inspector) and an assistant at £1 per week, also perform their duties satisfactorily.

Up to July last year free passes were given without guarantee, and finding the system was abused by private registry offices and others, it was decided, after consulting with the Hon. F. B. Suttor, Acting Colonial Secretary, that in the future an order should be taken signed by the employee or the employer for a refund of cost of railway or steamer pass to be deducted out of first month's wages. In other cases a personal guarantee is accepted, copies of which are attached.

I am pleased to report that out of a total of refunds signed for since 5th July, 1892, to the present date I have received the sum of £1,151 5s. 10d., leaving £1,325 4s. still outstanding, a large portion of which is not yet due, as we give one month and in some cases two and three months time to pay it.

In the selection of men we are careful to select the most suitable required for the work (their references, &c., being examined), and in every case the person chosen gets all the information we have as to the nature of the work, locality, wages, &c., but in no case do we interfere with the wages, leaving that to be arranged between employer and employee. No preference is given, excepting to married men with large families, and then only when they are suitable for the work.

I have received hundreds of letters from both employers and employees, which go to prove that our efforts in the selection of men have been satisfactory to both parties. At the same time we have occasionally been imposed upon by unreasonable employers, who have no idea of treating an employee as a man, and also by worthless men who will not work when it is found for them in the country, but prefer loafing about the city, or, on receipt of first wages, getting drunk and clearing out.

Although the number of unemployed on our books is less than it was six months ago, and notwithstanding the large number we have sent to work, the general depression and want of employment from which the Colony has been suffering so long does not seem to decrease; on the contrary, the shortening of hands in many of our large houses in the city and the increased number of men looking for work and registering at the Bureau during the last two or three months, is evidence of the great depression still prevailing; and there is little hope of prosperity until the people are fully employed. How to bring this about is one of the most important questions of the day.

Many of those endeavouring to solve the unemployed difficulty say, "Let the people go on the land." This seems a very simple method of settling the question, but it should be remembered that very few of the unemployed have any means. They would require to be assisted, and indeed provided for, for at least nine or twelve months by the Government; again, there are many of the unemployed who have no taste, desire, or idea of becoming farmers or agriculturists, and, without these characteristics, or the energy or perseverance to acquire them, are not likely to succeed if put on the land.

There are, however, a large number of others unemployed that, if they had the opportunity and the necessary assistance for a time, would not only succeed on the land themselves, but would be rearing families who would in time also become producers, at the same time making room for those engaged in other avenues of employment. I would respectfully submit the advisability, if the Government can see its way, to adopt some scheme of village settlement, by setting apart an area of suitable land convenient to markets, and surveyed in blocks, say, of 10 acres to 20 acres, which could be taken up on approved conditions, and under strict supervision, by those desirous of settling on the land. I

I have no doubt if some such scheme could be carried out the result would be beneficial to a number of the unemployed and to the country. In this way dairy and poultry farming should be a large factor in absorbing the unemployed.

The future of the butter industry alone should be a bright one in this Colony, seeing what is being done in the colony of Victoria in this direction at the present time.

The Irrigation and Water Conservation Bills when passed into law will not only bring into occupation and use large areas of land at present almost useless, but will also be the means of absorbing large numbers of those at present unemployed.

The mineral resources of New South Wales are not equalled by any of the other colonies; if greater facility could be given for further development, and with the right to mine on private property, doubtless increased employment would be found for thousands.

There are many other avenues of industry which could be referred to with a view of solving the unemployed difficulty, but any scheme to be successful must have the hearty co-operation, energy, perseverance, and a large measure of self-reliance on the part of those whom it is intended to benefit.

The appended Schedules will give the operations of the Bureau for the year in detail.

JOSEPH CREER,

Superintendent.

SCHEDULE OF DETAILS *re* THE ANNUAL REPORT FROM THE GOVERNMENT LABOUR BUREAU,  
1892 and 1893:—

- A.—Registration, &c.—Married and Single, &c.  
B.—Men sent to work and their Trades—Country.  
C.— Do do do Locally.  
D.—Refunds to date; forms used.  
E.—Trades and Callings.  
F.—Arrivals from other Colonies, and Foreign Parts.  
G.— Do from different districts of New South Wales.  
H.—Average registration for the year.  
I.—Police Reports.  
J.—Number of each Trade or Calling registered for half-year.

(A.)  
SCHEDULE giving details as to Registration and disposal of men:—

Number registered during the year	18,600
Married men	7,449
Single men	11,151
Children represented by parents	18,483
Do self-supporting	1,629
Do depending on parents	16,854
Number sent to work for the year:—	
Locally (Town and Suburbs)	2,312
Country	5,842
Total	8,154

(B.)  
PERSONS sent to work to all parts of the Colony by railway or steamer and Locally, from  
18th February, 1892, to February, 1893:—

Railway passes used	5,443
Steamer do	344
Fares paid for in advance	55
Locally (City and Suburbs)	2,312
Total for the year	8,154

(B.)  
COUNTRY WORK.

NUMBER of Persons in various Trades or Callings, and Wages paid, sent out for first year ending 18 February, 1893:—

76 Bakers—20s. to 35s., and found.	165 Miners—Current wages, contract rates.
72 Butchers—25s. to 50s.; found	347 General-usefuls—From 10s. to 25s., and found.
216 Cooks—	
Hotel—20s. to 50s.; found.	9 Tailors—Piece-work, current rates.
Restaurant—20s. to 30s.; found.	92 Blacksmiths—40s. to 60s. per week.
Surveyors—20s. to 36s.	33 Clerks—20s. to 60s. per week.
Camp—27s. 6d. to 30s.; found.	75 Grooms—15s. to 30s. week; found.
Hospital—£60; quarters.	17 Firemen—25s. to 35s. per week; found.
Station—20s. to 25s.; found.	85 Bricklayers—10s. to 12s. per day.
34 Boilermakers—Current rates.	16 Brickmakers—From 20s. per 1,000.
43 Bootmakers—30s. to 50s. per week.	44 Waiters—15s. to 30s.; found.
56 Drivers—20s. to 30s., and found.	249 Carpenters—
42 Engineers—40s. to 50s. per week.	House—9s. to 11s. per day.
112 Gardeners—12s. 6d. to 30s. per week, and found; 6s. to 8s. per day.	Bridge—9s. to 12s. per day.
9 Grocery hands—25s. to 50s. per week.	Station—25s. to 35s.; found.
6 Kitchen hands—15s. to 20s., and found.	462 Station hands—15s. to 30s.; found.
388 Farm and Orchard hands—	3 Ironworkers.
Men—12s. to 25s. week; found.	5 Patternmakers—8s. to 11s.
Youths—10s. to 15s. week; found.	240 Painters—8s. to 12s.
Boys—5s. to 10s. week; found.	51 Printers—Current rates.

- 34 Plumbers—8s. to 10s. per day.  
 152 Married couples—£55 to £90 per annum.  
 9 Machinists—Current rates.  
 76 Clearers—15s. to 30s.; found and contract.  
 125 Fencers—Contract; 20s. to 30s.  
 84 Sawyers—25s. to 40s.  
 163 Coachbuilders—  
   Builders—9s. to 10s.  
   Trimmers—8s. to 10s.  
   Painters, &c.—9s. to 11s.  
 9 Tinsmiths—From 8s. per day; 30s. per week;  
   found.  
 7 Turners—From 8s. to 10s.  
   Store hands—As arranged.  
 111 Wool hands—  
   Classers—As per agreement.  
   Scourers—20s. to 32s. 6d.  
   Washers—20s. to 30s.  
   Pressers—25s. to 32s. 6d.  
 37 Wheelwrights—9s. to 12s. per day.  
 35 Shipwrights—9s. to 11s. per day.  
 5 Tutors—From £30 to £70 per annum.  
 16 Surveyors' hands—Chain-men, axe-men, flag-  
   men—20s. to 30s. per week, and found.  
 4 Upholsterers—Contract.  
 11 Saddle and harness-makers—From 30s. to 50s.  
   per week.  
 94 Plasterers—8s. to 10s. per day.  
 19 Tank-sinkers—By contract.  
 77 Bushmen—15s. to 30s. per week; found.
- 32 Barmen and boots—20s. to 30s. per week;  
   found.  
 33 Charcoal-burners—By contract and from 30s.  
   per week, and found.  
 517 Shearers—20s. per 100.  
 3 Vignerons—20s. to 30s. per week, and found.  
 722 Labourers—  
   Navvies—7s. to 8s. per day.  
   Quarrymen—7s. to 9s. per day.  
   Platelayers—9s. to 10s. per day.  
   General—6s. to 7s. per day.  
 6 Musicians—As arranged.  
 30 Drapers—30s. to 50s. per week.  
 1 Cordialmaker—As arranged.  
 2 Curriers—From 8s. per day.  
 16 Store-hands—As arranged.

#### FIRST YEARLY RETURN, POLICE REPORTS.

THESE reports are of men registered at the Bureau, who, having been arrested for the various offences as specified, have had their tickets taken from them by the arresting constable and forwarded to this Department, with a report on each case. The loss of the tickets deprive them of all benefits at the Bureau, and the tickets are not returned to the owners for periods ranging from one week to four weeks, and then only on promise of reforming. This has resulted satisfactorily in most cases, as will be seen by comparing each half-year's Return.

**WORKING OF THE GOVERNMENT LABOUR BUREAU.**

**REPORT.**

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 26th April, 1893, "*with power to send for persons and papers, to inquire into and report upon the working of the Government Labour Bureau,*"—have agreed to the following Report:—

After having made as wide an inquiry as the time at its disposal would admit, and examined witnesses of all shades of opinion and from all classes, your Committee find—

1. That the Government Labour Bureau, on its present basis, is necessarily ineffective, inasmuch as its powers are limited, and its usefulness curtailed by the fact of its functions being confined solely to the registration for employment of workmen located in Sydney.
2. That the centralisation of the whole of the machinery of the Bureau in Sydney has a tendency to attract unemployed persons to and concentrate them in that city.
3. That in a haphazard way the Bureau has succeeded in obtaining employment for large numbers of persons who were registered on its books in Sydney, but no systematic attempts are shown to have been made to discover the state of the labour market outside the metropolis, or to procure work locally for men who were unemployed in the country districts.
4. That in many cases men were sent by the Bureau to employment in districts where a large amount of suitable local labour was available.
5. That there is a danger of the institution being made use of by unscrupulous persons to lower wages, by importing into districts already overstocked with unemployed large numbers of men from the Bureau, the officers of the Bureau having no authority to interfere to prevent a reduction of wages by this means, and no agencies to ascertain the state of local labour markets.
6. That, in consequence of the above defects, the Government Labour Bureau is rapidly becoming (if it has not already become) obnoxious to the wage-earners of New South Wales, especially those in the country districts.
7. That there has been a careful and conscientious endeavour on the part of the Superintendent and Secretary to make the Government Labour Bureau a useful institution; but the limited scope of their powers and the narrow sphere of their operations have greatly impeded them, and rendered their efforts abortive.
8. That something more is necessary for the substantial alleviation of the present industrial distress than a mere Bureau for the registration of unemployed workmen located in Sydney.

Your Committee therefore recommend,—

- (a) That the Government Labour Bureau should form part of and be merged in a Department of Labour under a responsible Minister of the Crown.
- (b) That the functions of the present Government Labour Bureau be enlarged in the following directions: 1. By the establishment of branches in the large centres of population, and agencies throughout the country for the purpose of collecting information as to the condition of the local labour market, and forwarding such information periodically to head-quarters.

2. By a Statistical Branch to compile and tabulate the most accurate statistics concerning the condition of trade and commerce, the state of the labour market in all its manifold phases in every centre of population; the rates of wages, the hours of labour with other local usages, the prices of clothing, provisions, and house-rent, means of communication and methods of transit, the area, price, and general conditions of lands open for lease or purchase, and the most profitable methods of utilising the same according to market, rainfall, and climatic conditions generally.
- (c) The compulsory registration and licensing of all private Registry Offices, together with Governmental supervision of the same in the interests of those who make use of them.
  - (d) The extension of the operations of the Bureau to women, by the institution of a separate section under female control.
  - (e) The establishment of State Farms, to which destitute persons should be sent for temporary relief in return for labour rendered, and the elementary training of such persons in agricultural pursuits, on lines similar to the Labour Colonies of Holland and the State Farms recently instituted in New Zealand.
  - (f) The fostering of Village Settlements for the permanent employment of those relieved through the Bureau, and others.
  - (g) The development of the principle of co-operation as applied to the execution of public works.
- 

In conclusion, your Committee is strongly of opinion that if the recommendations with regard to decentralisation and local registration are not carried out, the Government Labour Bureau should be abolished altogether as a costly and ineffective piece of Governmental machinery.

JOHN D. FITZGERALD,  
Chairman.

No. 3 Committee Room,  
Sydney, 2nd June, 1893.

---

## PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 2 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald,		Mr. Houghton,
Mr. Langwell,		Mr. McGowen,
		Mr. Waddell.

Mr. J. D. FitzGerald called to the Chair.

Entry from Votes and Proceedings appointing the Committee read by the Clerk.  
Committee deliberated.*Resolved*,—That Joseph Creer (*Superintendent of the Government Labour Bureau*) be summoned to give evidence next meeting.[Adjourned till Thursday next, at *Two o'clock*.]

THURSDAY, 4 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Ewing,		Mr. Houghton,
Mr. Langwell,		Mr. Rae,
Mr. Waddell,		Mr. Wall.

Joseph Creer (*Superintendent of the Government Labour Bureau*) called in, sworn, and examined.  
Witness withdrew.[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY, 9 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Ewing,		Mr. Houghton,
Mr. Langwell,		Mr. McGowen,
Mr. Rae,		Mr. Waddell,
		Mr. Wall.

Joseph Creer called in and further examined.  
Witness withdrew.[Adjourned till To-morrow, at *Two o'clock*.]

WEDNESDAY, 10 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Langwell,		Mr. Wall.
---------------	--	-----------

Committee deliberated.

[Adjourned till To-morrow, at *Two o'clock*.]

THURSDAY, 11 MAY, 1893.

MEMBERS PRESENT:—

Mr. Ewing,		Mr. Houghton,
Mr. Langwell,		Mr. McGowen,
		Mr. Waddell.

In the absence of the Chairman, Mr. Waddell called to the Chair *pro tem*.

Joseph Creer called in and further examined.

Witness withdrew.

Francis Edward Bloxham (*Secretary of the Government Labour Bureau*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY, 16 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Langwell,		Mr. Waddell.
---------------	--	--------------

Francis Edward Bloxham called in and further examined.

Witness withdrew.

*Ordered*,—That Mr. Whiteley King be summoned to give evidence next meeting.[Adjourned till To-morrow at *Two o'clock*.]

WEDNESDAY,

WEDNESDAY, 17 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton,		Mr. Langwell,
Mr. Rae,		Mr. Waddell.

Committee deliberated.

Resolved,—That Mr. T. H. Hall (*Secretary of the General Labourers' Union, Bourke*) be summoned to give evidence on Thursday, 25th May, 1893.

[Adjourned till To-morrow, at Two o'clock.]

THURSDAY, 18 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton,		Mr. Langwell,
Mr. McGowen,		Mr. Rae.

Whiteley King (*Secretary to the Pastoralists' Union of New South Wales*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow, at Two o'clock.]

FRIDAY, 19 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton,		Mr. Langwell,
Mr. McGowen.		

Whiteley King called in, and further examined.

Witness withdrew.

[Adjourned till Tuesday next, at Two o'clock.]

TUESDAY, 23 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton,		Mr. McGowen,
Mr. Rae,		Mr. Waddell.

William Currie (*Manager of the Steamship Owners' Association, Free Maritime Labour Office*) called in, sworn, and examined.

Witness withdrew.

George Lewis (*District Government Officer*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Thursday next, at Two o'clock.]

THURSDAY, 25 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton,		Mr. Langwell,
Mr. McGowen,		Mr. Rae,
Mr. Waddell,		Mr. Wall.

Thomas Hicks-Hall (*Secretary of the General Labourers' Union, Bourke*) called in, sworn, and examined.

The Chairman having retired, Mr. McGowen called to the Chair *pro tem*.

Witness withdrew.

[Adjourned till To-morrow, at Two o'clock.]

FRIDAY, 26 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Ewing,		Mr. Houghton,
Mr. Langwell,		Mr. McGowen,
		Mr. Rae.

John Little (*Manager of Glenariff Station*) called in, sworn, and examined.

The Chairman having retired, Mr. Ewing called to the Chair *pro tem*.

Witness withdrew.

The Clerk submitted claims, for witnesses' expenses, from T. H. Hall, £13 7s. 6d., and John Little, £11 14s.

Claims considered and passed.

Ordered,—That James Smith and J. C. Watson be summoned to give evidence next meeting.

[Adjourned till Tuesday next, at Two o'clock.]

TUESDAY,

TUESDAY, 30 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton;		Mr. Langwell,
Mr. Rae,		Mr. Waddell.

James Smith called in, sworn, and examined.

Witness withdrew.

John Christian Watson (*President of the Trades and Labour Council*) called in, sworn, and examined.

Witness handed in "Outline of the functions of the New Labour Department in Great Britain," extracted from a speech by Mr. Mundella. [*Appendix.*]

Witness withdrew.

[Adjourned till To-morrow, at *Two o'clock.*]

WEDNESDAY, 31 MAY, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Langwell,		Mr. McGowen,
Mr. Rae,		Mr. Waddell.

The Chairman read a letter from Mr. George Lewis (*District Government Officer*), requesting to be excused from attendance on account of previous engagements.

Joseph Creer called in and further examined.

Witness withdrew.

Arthur Rae, M.L.A. (*a Member of the Committee*), made a solemn affirmation, and examined in his place in the Committee.

[Adjourned till To-morrow, at *Two o'clock.*]

THURSDAY, 1 JUNE, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton,		Mr. Langwell,
Mr. McGowen,		Mr. Rae.

Committee deliberated as to their Report.

[Adjourned till To-morrow, at *Two o'clock.*]

FRIDAY, 2 JUNE, 1893.

MEMBERS PRESENT:—

Mr. J. D. FitzGerald in the Chair.

Mr. Houghton,		Mr. Langwell,
Mr. Rae,		Mr. Waddell.

The Chairman submitted Draft Report.

Same read, amended, and agreed to.

Chairman to report to the House.

LIST OF WITNESSES.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

WORKING OF THE GOVERNMENT LABOUR BUREAU.

THURSDAY, 4 MAY, 1893.

Present:—

MR. EWING,  
MR. HOUGHTON,  
MR. RAE,

MR. J. D. FITZGERALD,  
MR. LANGWELL,  
MR. WADDELL,

MR. WALL.

JOHN D. FITZGERALD, ESQ., IN THE CHAIR.

Mr. Joseph Creer called in, sworn, and examined:—

1. *Chairman.*] What position do you occupy in connection with the Labour Bureau? I am the superintendent. Mr. J. Creer.
2. You have issued some reports on the working of the Labor Bureau? I produce the reports. 4 May, 1893.
3. Since it was established how many men have obtained employment through its books? Very nearly 9,000.
4. *Mr. Houghton.*] Did they all find employment? Some of them obtained employment at registry offices and were sent by the Labour Bureau to their work.
5. *Mr. Langwell.*] Do these figures represent the number who have obtained employment or the number who have passed through the books? Nine thousand have passed through the books. The total number sent from the registry offices to the Bureau and from the Bureau to their work is 269.
6. *Chairman.*] To what particular districts in the country were they sent? To all the districts throughout the Colony.
7. Can you give the number sent to each district? No. I have a return of the number sent to the Western Districts.
8. Do you remember the number sent to the Bourke District? A return was laid on the table of the Legislative Assembly on the 6th September which gives the number sent to the Western Districts. I produce a copy of the return.
9. *Mr. Wall.*] Is it a return of persons actually employed through the Labour Bureau, or does it include those who were employed at various registry offices and got free passes at the Bureau? A number of the persons in the return would be from private registry offices.
10. Can you state the number of passes which were issued by the Bureau to those who were employed through its agency, outside registry offices? The whole of them got their passes at the Bureau; I cannot give the number exactly.
11. Can you state the number of men employed by the Bureau who obtained passes for the Western Districts? The total number sent out to the Western Districts was 1,058.
12. *Chairman.*] Have you kept a record of the rates of wages paid to those persons who were sent into the Western Districts? We have nothing to do with the wages question, and the only record we have is the application from the employer stating what wages he will give when he writes for the men.
13. Is that compulsory on the part of employers engaging men? No; we have nothing to do with the wages—that is left entirely to the employer and the employee; but most employers when they write state

Mr. J. Creer. state the wages they will pay. Here is a bundle of applications which came in one month. The letters from the employers are read to the men and it is for the men to accept or reject the offers.

4 May, 1893.

14. Has any complaint ever been made to you by men or by any organisations or any individuals that the rate of wages had been lowered through the agency of the Bureau? No; I do not know of any complaint that has ever been made to us except what I hear by common report that the Bureau has been the means of reducing the rate of wages.

15. Do you ever receive letters from men who have obtained employment through the Bureau? Yes.

16. Upon what subject do they generally write to you—to refund fares? No; they generally say how they like their place and the work. Here is a parcel of letters taken out of a bundle which has come from employees giving us the character of the men, and from the men as to how they like the work.

17. Has any complaint ever been made in these letters as to a reduction in wages, or as to disappointment with the rate of wages on reaching their destination? Yes; some men have written to say that they were disappointed at not getting the wages that they expected to get, but very few of them have done so.

18. Did that mean the wages current in the district to which they were sent? I suppose it did.

19. Though it is not your duty to inquire into the matter of wages still you know of complaints being made that the operation of the Bureau has tended to reduce the rate of wages? Yes; a few, and only a very few, have made complaints.

20. Have you read the *Hansard* report of the debate on my motion for the appointment of this Committee? I have.

21. Have you read the following document signed by Messrs. Hall and Wood of the Shearers' and Labourers' Unions, which I quoted in my speech:—

By referring to the returns tabled in the House on September 6th, 1892, we find that 1,058 free passes were issued to that date from Sydney to this district alone. Of this number twenty-nine were engaged for Gundabooka Station, yet at the roll-call for starting shearing over 200 men who had congregated together at that station in search of work were turned away. For Nocoleche Station the credit is sixteen passes. At this station the wool-scouring is done by a contractor who engaged some ten of his men in Melbourne, agreeing to pay boat and rail fares to Bourke. The boat fares (10s. each) were paid all right, but the Labour Bureau supplied the trainage, and amongst the 230 men turned away from this station were fifty fully qualified to do this particular work. Coionga Downs and Glenariff show forty and forty-four passes; in other words simply boycotted all local men. Of the twenty-six credited to Fort Bourke fully one-half were New Zealand shearers engaged by the shed overseer, a wool-classer from that Colony. At Toorale, over 350 local men were turned away, and 130 was the surplus at Dunlop—twenty-nine and thirty-five free passes respectively.

I have a copy of the circular to which I have written an answer.

22. *Mr. Rae.*] To whom is it addressed? It is not addressed to anyone. It is as follows:—

Referring to the circular attached, from the Bourke Shearers' Union, first it is inferred that 1,058 were sent to the Bourke District alone, but that is the total number sent to the whole of the Western Division of the Colony, including Dubbo to the Queensland Border (see Return published 6th September, 1892).

It is also implied that the 1,058 were all shearers, whereas the number of shearers is only 370, and 196 station hands, rouseabouts, woolscourers, cooks, and the others labourers, blacksmiths, carpenters, butchers, bakers, &c., &c., and tradesmen of all kinds as you will see by return; 68 were sent to Messrs. Smith, Finlayson, & Jones, railway contractors, 25 to Messrs. Turnell & Barbour, railway bridge builders, and other employers requiring men other than shearers.

Again, all the shearers sent produced papers showing they were engaged, many recommended by Members of Parliament, most of them produced agreements and receipts for deposit of £1 penalty that they would carry out their agreements. Surely under these circumstances, we were justified in sending them.

From 18th February to 6th September, 1892, the total number sent to 39 stations in the Western Division was 566, and about two-thirds of these were shearers.

The refund business came into existence in July, 1892. And from the number referred to up to present date we have received £196 10s. 10d. from stations, viz., Gundabooka, Nocoleche, Coronga, Fort Bourke, Toorale, and Glenariff, which goes to show the *bona-fides* of the men. I may also mention that most of the shearers sent produced their Union tickets, to show they were Union shearers, and some were recommended by officers of the Shearers' Union.

Again, none of these went at reduced wages; every agreement produced showed they were all engaged at the regular wages. I may also mention that many hundreds applied to be sent to the Bourke District to shear, &c., but doubting their *bona-fides* I would not send them. I have no doubt, however careful, some would manage to impose on me.

The statement that ten men were engaged in Melbourne by a contractor, and obtained free passes to Nocoleche Station from the Bureau is an error and incorrect.

Again, the statement that one-half of the twenty-six men sent to Fort Bourke Station were New Zealand shearers, engaged by the shed-overseer, a wool-classer from that Colony, is incorrect, only two men from New Zealand, who produced agreements showing they had paid £1 deposit, were sent from the Bureau; if others from that Colony reached there they must have paid their own fares—they were not sent by the Bureau.

This I think is sufficient to contradict the assertion in the circular—any other information will be gladly supplied.

It has been insinuated by members of the Shearers' Union that the Bureau has been used by Mr. Whiteley King and the Pastoralists' Association for the purpose of getting shearers and other men sent to the country, with a view to the reduction of wages to the detriment of local men.

I beg to assure you that neither Mr. Whiteley King or any member of the Pastoralists' Association ever applied to me for a free pass for anyone.

Only 225 out of the 566 sent to the different stations were shearers, the balance, 341, were cooks, carpenters, scourers, rouseabouts, clerks, storekeepers, and station hands of all kinds. Hundreds of persons applied for passes to districts to shear, &c., but were refused.

23. *Chairman.*] Have you heard of any complaint of a similar character from any other district? No.

24. Will you now describe the method of issuing free passes—do you issue free passes to everyone who applies? Certainly not.

25. Under what conditions do you issue them? A man who wishes to obtain a free pass must produce a letter, to me, from an employer, or an agreement showing that he has work to go to, or there must be some other very strong reason why I should send him to his work. For instance, in addition to the letter from the employer offering work, I often have recommendations from members of Parliament who know or profess to know the man, assuring me that there is work waiting for him at his destination. Then there is the case of a man who has come down from the country, through sickness or accident, and has been in the hospital for several weeks, sometimes months, and comes out of the hospital without a penny to go to his home in the country. He gets a discharge from the hospital, which he produces to me with the letter of recommendation from the doctor asking me to send him back to his destination. I do so, but otherwise no man gets a free pass from me unless he can assure me, in writing generally, too, that he has work to go to. Of course, I use considerable discretion in questioning a man to ascertain whether he has a *bona-fide* claim to get a free pass. Not one person out of every six who applies for a free pass gets one.

26. You issue the pass on the condition that the man refunds the money, if possible? We have done so since July last, but previous to that time they got their passes and were not asked to make any refund.

27. Do the men enter into a bond to refund the money? Yes; if I may be permitted, I will mention how we came to ask for a refund of the fare: I found that a very large number of men were being sent to the Bureau by the keepers of registry offices for a pass to take them to their engagement. A man would bring his agreement from the registry office to work for a certain man, at a certain wage, for a certain time. But in questioning the men, I found that they had paid a considerable sum to obtain employment—some of them as much as £5, and others as low as 10s.—to the registry office keepers. I do not remember exactly how I got the information, but I was led to believe that several of the registry offices not only obtained a fee for finding work for a man, but actually the expense of sending him to the work, and that they had in addition a sum of money which really ought to go to pay the man's fare. That is one strong reason why I consulted the Colonial Secretary on the subject. Again, about the same time when the great bulk of the shearers applied for free passes to go to the country with their printed agreements from the Pastoralists Association, I thought that the cost to the Government of sending them was a very large item. For these reasons I consulted the Acting Colonial Secretary, Mr. Suttor. He sent for Mr. Whitely King, and, I think, Mr. Alexander Wilson, of the Pastoralists' Association. We discussed the matter in the Colonial Secretary's office, and I submitted it was unfair that the Government should be put to the expense of sending the men into the country free. Besides I thought it was possible that a number of men might come down to Sydney from Bathurst, Goulburn, and other places, for the purpose of getting a free pass to go to a station. It was arranged that an order should be obtained from each man on his employer to refund the amount of the fare, and since July last that has been done in every case.
28. *Mr. Wall.*] Was it the result of the conference with Mr. Whitely King? We did not discuss the matter with Mr. Whitely King. Mr. Suttor and I devised the best scheme after we had consulted with Mr. Whitely King and Mr. Wilson. It was really the effect of the interview. I was led to believe that a number of registry offices had obtained the cost of the fares.
29. *Mr. Rae.*] Why were Mr. Whitely King and Mr. Wilson brought in? Because the agreements brought to me by the men were signed by them. Up to that time I did not know Mr. Whitely King from Adam; I had never been in his office, and had never conversed with him. Finding from the agreement that the shearers had deposited £1 each with the Pastoralists Association, and that Mr. Whitely King was the Secretary to the Association, I waited upon Mr. Suttor and submitted the matter to him; he sent me down to the office of the Pastoralists' Association; Mr. Whitely King and Mr. Alexander Wilson were in the office, and I brought them up to the Colonial Secretary's office.
30. *Chairman.*] You stated that recommendations from Members of Parliament had the effect of causing you to give free passes—is that so? In some cases.
31. What do you mean? In the case where I saw the recommendation was of such a nature that a pass ought to be given it was given.
32. Did the Members who made the recommendation guarantee the payment of the fare? Some of them did.
33. *Mr. Langwell.*] In what way? They signed a guarantee form that I sent to them to be signed. I may state here that the result of the interview with Mr. Suttor was that I drafted an agreement to be signed by a man previous to his obtaining a pass. It is in this form:—

[COAT OF ARMS.]

Government Labour Bureau, Pitt and George Streets West, near Railway Station, Sydney, 189 .  
In consideration of a railway pass being granted to me from Sydney to Station, and costing £ , I hereby undertake to proceed as directed to the employ of and to remain in the said employ until such amount be duly earned by me, and I further agree to refund that amount out of my first month's wages when earned, and authorise same to be deducted by my employer out of such wages and forwarded to you.

Witness,—

(Signed)

To the Superintendent, Government Labour Bureau.

Witnessed by the clerk, and I forward a copy of the order to the employer with the following notice:—

Government Labour Bureau, Pitt and George Streets, West, near Railway Station, Sydney, 189 .  
A RAILWAY pass, costing , from Sydney to Station, having been granted to engaged by you in order that he may reach his employment, I will thank you to remit that amount to me out of his first month's wages, when earned, he having agreed to your deducting same, as per agreement (copy) enclosed.

Yours obediently,  
JOSEPH CREER,  
Superintendent.

To

And if I have any doubt about the employer accepting that order upon him I take a personal guarantee from the employee in the following form:—

[COAT OF ARMS.]

Government Labour Bureau, Sydney, 189 .  
PERSONAL GUARANTEE.

In consideration of a railway pass being granted to from Sydney to Station, and costing £ I, the undersigned, hereby agree and undertake to refund and pay back to Joseph Creer, Superintendent of the Government Labour Bureau, the above amount, within one month of date of this agreement, should the said fail to do so as agreed upon.

Witness,—

(Signed)

To the Superintendent, Government Labour Bureau.

And if the money is not paid at the proper time I send a note in the following terms:—

[COAT OF ARMS.]

Sir, Government Labour Bureau, Junction Pitt and George Streets, Sydney, 189 .  
Referring to order drawn on you, dated , we are still without £ cost of railway ticket, sending No on your account to Please be good enough to remit same and oblige

To

Your obedient Servant,

34. *Chairman.*] You have books in which to register the names in Sydney? Yes.

35. Have you any method for registering names outside Sydney? No.

36. You have no branch of the Bureau in any district? No; except at Broken Hill, but that is closed.

37. That was started at the termination of the strike? I stopped the issue of passes at Broken Hill on the 1st of this month. When I left Broken Hill I authorised the police magistrate to issue passes; but from reports I received, and in view of the cost to the Government, I, after consultation with the Principal Under Secretary, wrote to the Police Magistrate and requested him to stop the issue of them, except in very urgent and extreme cases.

Mr. J. Creer. 38. Do you think you have all the unemployed of Sydney registered on your books? They generally avail themselves of the services of the Bureau? I cannot say, but I think the great bulk of them are on our books.

4 May, 1893.

39. How many are there on your books at the present time? I shall ascertain the exact number for the Committee.

40. Did you not have something to do at one time with relieving the distress among the wives and families of the unemployed? Yes, and I do now.

41. How do you give the relief? Last winter during the height of the depression, when considerable distress existed in the city amongst the families of the unemployed, the Government were appealed to to give some relief. The Government consulted with Mr. Maxted, Inspector of Charities, and myself, as to the best means of relieving the distressed families—the women and children chiefly; and we were authorised to relieve real cases of distress which we have done up to the present time. We decided that a ration should be 3 lb. of meat, 4 lb. of bread,  $\frac{1}{4}$  lb. of tea, 4 lb. of sugar, and we contracted with Mr. Kidman to supply that ration for 1s. 6d. That is the ration for each adult, and a child gets half a ration. If a man out of work, with, perhaps, no means of subsistence at all, applies for relief I ask him to send in a written application, giving his address, the number of his children, when he was at work last, or if he is earning anything, and as soon as it is received by me it is referred to the inspector, who visits the place and makes an inquiry into the circumstance, and he furnishes me with a report. I go through the application and the report, and I either grant or refuse relief according to its nature. The relief is granted twice a week, on Wednesday and Saturday.

42. Who are the inspectors? We did with one inspector for a considerable time, but there are two inspectors now, they are the inspectors in connection with the State Relief Department. As the officer who fills up the rations and gives them out at the Bureau has a considerable amount of spare time, I send him out every day to inspect as many cases as he possibly can, so that we employ sometimes two inspectors and sometimes three. Every case passes through my hands.

43. What are the names of the inspectors? The names of Mr. Maxted's inspectors are Mr. Hawthorn and Mr. Doist, and the man whom I send from the Bureau is Mr. Sterling.

44. *Mr. Ewing.*] Mr. Hawthorn and Mr. Doist are trusted officers of Mr. Maxted's? Yes.

45. *Chairman.*] Do you expect that there will be a large number of unemployed this winter? The number has been increasing for some months.

46. You expect that if they increase proportionately there will be acute distress this winter? Yes, it is increasing now.

47. Did the number of unemployed and the distress increase last winter? It did; in the winter months the number of unemployed was very large. Last winter the cost of relieving the distress was not very great to the Government, for this reason that a large amount of relief in the form of kind and money was sent to the Bureau by private citizens. Mr. Maxted and myself distributed last year £190 worth of boots and blankets alone to families. Then we received a considerable quantity of bread, meat, and vegetables, and old clothes of all descriptions, which we distributed to the worst cases.

48. *Mr. Houghton.*] In addition to that there were two committees in the city to relieve the men who were on your books? There were more than half a dozen committees.

49. The Citizen's Committee was formed under the auspices of the Mayor of Sydney? Yes; they expended thousands.

50. *Chairman.*] Has the Bureau any other functions other than finding employment for men and relieving distress? No.

51. You have nothing to do with the rates of wages? No.

52. Do you make any inquiries? Yes.

53. Of what nature? Yesterday a man came to engage two or three men. He offered a rate which we thought was low, and we suggested to him as we often do that if he wished to get a good man he should increase the wage. Frequently we have induced men to increase the rate.

54. *Mr. Lanquell.*] That would only occur where the employer applied personally to you? We have also written. If we thought a man was offering a low wage for work which was worth more, we have tried to induce him in his own interest to give a better wage.

55. *Mr. Rae.*] In the event of persons sending for men in this city, where it is well known men are plentiful, would the Bureau supply the men even though it might be well understood that they were to take the place of persons who had gone on strike on account of a reduction in wages? I do not know that we have done so. If an employer writes for men his letter is read to the body of men in the yard, and if there is a strike on the fact is pretty well known, but, as a rule, men will not go where there is a strike. For instance, a strike occurred at Hoskins's foundry some time ago and the employers came to the Bureau. Mr. Bloxham, who engages the men, read the offer to them in the presence of the employers. We did not know that there was a strike at the foundry, nor were we informed, nor did the men in the yard know that there was. A number of the men went to the foundry, but they did not go to work. The employees who struck were there.

56. You do not take upon yourself to judge as to whether men have struck rightly or not. You simply read the letter you have received, and the men can avail themselves of the opportunity to go if they choose? We do not interfere.

57. Suppose they do not choose to go, are their names put in a book for that reason? There has never been such a thing done; no man has been put back from obtaining work at any other time simply because he would not go to work where there was a strike.

58. In the event of a man refusing to take a position which you offer, do you put his name further down on the list? There is no such thing as putting a man further down on the list; in fact, there is no list. Where the work is legitimate, where there is no strike or trouble, and it is optional for a man to take the work, if he is the father of a large family, and refuses to go to work, and he is obtaining relief from the Bureau, I would strike the family off the relief list. You must bear in mind that we have hundreds of men who are too lazy to work when it is offered.

59. *Mr. Ewing.*] Do you strike the man or the family off the list? A man applies for relief for his family. There may be other considerations afterwards, where the wife and children would not be allowed to suffer.

60. *Chairman.*] Do you make any inquiries as to the state of the labour market in the district from which the application comes? No.

61. Don't you think it would be right to make such inquiries? It might be.

62. Don't you think you should have branches or correspondents in the various districts? That is a matter of policy; it might be of advantage to have branches throughout the district.
63. Have you heard anything of the Board of Industry recently appointed in England by Mr. Mundella? Only what I have read in the Press.
64. You are aware that that Board has appointed a number of correspondents in different parts of the country? Yes.
65. Do you not think the Bureau would be better equipped if you had the secretaries of Trades Unions, and other reliable authorities as labour correspondents in different parts of the Colony? It is possible that it might do some good. When I was returning from Broken Hill I inquired closely into the working of the Victorian Labour Bureau, which had branches in all the towns of the colony. The superintendent told me that they were of no earthly use, that they were a source of considerable expense, and that they were doing no earthly good; he said he could do better without them.
66. *Mr. Rae.*] Did he give any reasons for expressing that opinion? He explained that if a man living 100 miles from Melbourne wanted to engage so many men he would write a letter down to Melbourne; and that the letter would be referred back to the town, but the delay was so great that frequently he would get men himself.
67. *Mr. Wall.*] Is it not rational to believe that he would first apply to the town before sending to the central Bureau? There is a good deal to be said in favour of the establishment of labour agencies. A question was asked on this subject in the House, and I wrote a report for the Colonial Secretary. It is possible that if the Sydney Bureau had a branch at (say) Bourke, men would apply for a pass, and show very good reasons for wishing to come to Sydney; they would come here and stay for a time, and then apply to get a pass to go back to Bourke.
68. *Mr. Langwell.*] That is the chief objection? That is one of the objections.
69. That has nothing to do with the employment, but only with the travelling? It is well understood that men are so unprincipled that they would do this.
70. *Chairman.*] Do you not think that if there is only one Government agency whereby labour can be obtained it has the effect of concentrating the unemployed round Sydney? Very likely it has.
71. Do you think that is a good state of things? No.
72. Is it a bad state of things? Yes. It has not the effect of concentrating men in Sydney to the extent it would have if the men engaged at the Bureau in Sydney were employed in Sydney. If there were relief works or anything of that kind it would concentrate men out of employment here from all parts of the country.
73. *Mr. Langwell.*] Was the Victorian Bureau conducted on similar lines to the Sydney Bureau? Yes; I furnished the superintendent with all the forms for the Bureau.
74. I suppose you are aware that the Victorian Government have decided to close their Bureau? I saw a statement to that effect in the newspaper.
75. *Chairman.*] I suppose you remember the relief works that were started in Sydney and upon which we spent an immense sum, and which did very little good? Yes.
76. I think the money was used to improve the private estates of certain individuals? Yes.
77. You would not advocate the establishment of a system of relief works here now? Certainly not similar to that which existed here some years ago. I should like at times to have some means by which I could test whether men would work or not, I mean some means of making them earn their relief before they got it.
78. Do you not think a relief work which could be made self-supporting by the exertions of the men would be a desirable thing? I do.
79. Have you inquired into any schemes of that character? I have thought over many schemes and I have read of many schemes.
80. Do you know anything of village settlement schemes? I am in favour of them from what I have read.
81. Do you know the particulars of the New Zealand village settlement scheme? I have not read the New Zealand Act, but from the reports I have read I am satisfied that the village settlement scheme has done a vast amount of good, and I have no doubt that a village settlement scheme would do good in this Colony.
82. You are aware that it is the corollary of the Labour Bureau? Yes.
83. The mere fact of finding out that a man is unemployed is insufficient to do him any material good, and unless you can find him employment the expense of maintaining the Bureau is unnecessary? It would be of no use to have the Bureau if the men did not get employment.
84. Although the fact has not been proved, still it is probable that the necessities of unemployed men have been made use of by certain employers to reduce the rate of wages? That may have been done.
85. Although you are not concerned in that, having no power one way or the other, do you not think some other way might be devised under which the toil of the men would be rewarded and they would be made independent of both employers and State? If you will refer to the latter part of my report you will see what I said on the subject.
86. Will you quote the passage? On page 2 of my report I wrote as follows:—  
 And there is little hope of prosperity until the people are fully employed. How to bring this about is one of the most important questions of the day.  
 Many of those endeavouring to solve the unemployed difficulty say, "Let the people go on the land." This seems a very simple method of settling the question, but it should be remembered that very few of the unemployed have any means. They would require to be assisted, and indeed provided for, for at least nine or twelve months by the Government; again, there are many of the unemployed who have no taste, desire, or idea of becoming farmers or agriculturists, and, without these characteristics, or the energy or perseverance to acquire them, are not likely to succeed if put on the land.  
 There are, however, a large number of others unemployed that, if they had the opportunity and the necessary assistance for a time, would not only succeed on the land themselves, but would be rearing families who would in time also become producers, at the same time making room for those engaged in other avenues of employment. I would respectfully submit the advisability, if the Government can see its way, to adopt some scheme of village settlement, by setting apart an area of suitable land convenient to markets, and surveyed in blocks (say) of 10 acres to 20 acres, which could be taken up on approved conditions, and under strict supervision, by those desirous of settling on the land.  
 I have no doubt if some such scheme could be carried out the result would be beneficial to a number of the unemployed and to the country. In this way dairy and poultry farming should be a large factor in absorbing the unemployed.
87. You are distinctly in favour of village settlements and strongly advocate their adoption? Yes.

- Mr. J. Creer. 88. *Mr. Wall.*] Have you considered the question of village settlements? Not very much.
- 4 May, 1893. 89. You have not gone into any details? No; I have written for a copy of the New Zealand Village Settlement Act.
90. In your capacity of Superintendent of the Labour Bureau you will submit a report to the Government on the measure? I shall.
91. Can you furnish a return of the number of persons who have been employed through the Bureau and have either been re-employed through the Bureau or are still registered on its books? I could not give the number.
92. *Mr. Rae.*] Do you keep a record of those persons who have been employed through the Bureau and who have come back to be re-employed? No.
93. *Mr. Wall.*] Is it not a fact that a number have been employed through the Bureau and have returned to the Bureau to seek for other employment? Yes.
94. You keep no record? No.
95. You stated that you have received some communications from persons who have been employed through the Bureau stating that it tended to reduce the rate of wages? No; I stated that some letters were received from employees stating that they did not get the wages they expected to get when they went to their employment.
96. I thought you stated that the operations of the Bureau had tended to reduce wages? We have not received any communication of that kind.
97. Have you had any correspondence from outside agencies seeking to relieve the labour market in Sydney? We have advertised throughout the whole of the Colony, and we have communicated with police magistrates, mayors, and other leading people throughout the Colony.
98. Have you made any suggestion in regard to the establishment of outside agencies in the various districts where men could register their names? No; some eight months ago something cropped up with respect to agencies, and I furnished the Colonial Secretary with a report.
99. Nothing further has been done? No.
100. Seeing that the Bureau is established to afford facilities to the people to obtain employment, do you not think that the fact of compelling men to register in Sydney must tend to concentrate labour in and around Sydney, if they have first to come here to seek employment? There is no doubt that if they must come to Sydney to register, in order to seek employment, it must tend to concentrate labour in Sydney.
101. Take the case of employers, if they have to apply to a central Bureau for labour, and the persons out of employment attend there every morning in search of employment, is it not possible that under a system of that kind a district may be flooded with a number of unemployed, when the wants of the district could be supplied locally? It could not be flooded. If a man did not want labour he would not apply. We should only send the requisite number if he did.
102. If men were not likely to come here to register, and persons seeking employees came here to obtain employment, it would have a tendency to send men into a district where local men could be employed if there were any means of knowing what men were out of employment? No doubt it would. It is possible that those persons out of employment in a district would not take work if it were offered. We have received letters to that effect.
103. Can you furnish the Committee with the cost of the Relief Department up to date, and the number of persons who have been relieved? Yes; it has cost £2,400.
104. Has the number on the books increased very much since the Bureau has started? Yes.
105. What is the number on your books at the present time? Nine thousand I think; I estimate that the number of unemployed in and around Sydney is from 5,000 to 6,000.
106. *Mr. Rae.*] How comes there to be 9,000 men on your books then? We have 9,000 names registered on our books; the registration goes on and the men go out to work.
107. *Mr. Wall.*] Do you not strike a man's name off when he goes out to work? No; we could deduct the number of those who have gone out to work from the total number registered.
108. *Chairman.*] I understood you to say that there were 9,000 unemployed men on your books now? No.
109. Have you any idea of the number? I will ascertain the number.
110. *Mr. Wall.*] Will you furnish a return showing the total cost incurred for free passes since the establishment of the Bureau, and the amount which has been refunded by the men? I shall procure the information.
111. You stated that you are in the habit of furnishing passes to persons engaged by labour agencies in the city? Yes; there are very few now, the reason probably being the introduction of the personal guarantee.
112. If a large number of persons came to the Bureau and stated that they were employed through an agency in the city, would you furnish them with passes? No. When I imagined that the agents were getting the cost of the fares of the men from the employers who engaged them, I demanded from the agents a guarantee to pay the amount of the fare previous to sending anyone. I hold them responsible for the payment of the money.
113. Will you furnish the Committee with the number of cases in which you have obtained these guarantees, and the amounts which you have received from the agents? Yes.
114. *Mr. Langwell.*] How many men, engaged through private agencies, have been sent on free passes obtained from the Labour Bureau? Two hundred and sixty-nine, and fares have been refunded to the amount of £130 6s. 3d.
115. How many passes would that amount cover? I can give the amount in each case. No refund was demanded till July last.
116. *Mr. Rae.*] How many of the 269 persons were sent through private offices before the guarantee was demanded? A considerable number.
117. *Mr. Langwell.*] You have not considered the Pastoralists' Union as a private registry office? Certainly not.
118. Why did you apply to Mr. Whitely King and Mr. Wilson to consult with the Acting Colonial Secretary and yourself if you did not consider the association a private registry office? Because they engaged so many men for different stations. They sent so many men with agreements that I thought the squatters could very well afford to pay the fares of the men.
119. Did you not think that they were in exactly the same position as registry offices? No; because they never sent me a man.
120. Mr. Whitely King never sent you a man? He never applied to me personally. He never wrote me a letter or sent a man to me.
- 121.

121. Don't you know that he sent all the men who applied to you with agreements to get free passes? Mr. J. Creer. I know that he never sent one of them.
122. How do you think they came there? They came of their own free will, because they had not the means to go to the stations. 4 May, 1893.
123. Do you know, for a fact, that he never recommended one man to go to you? I do.
124. That is a very strange statement to make? It is not very strange at all, because I know, from a letter he sent me, that he never recommended a man to come to me.
125. Mr. Rae.] Nor Mr. Wilson either? No. Mr. Whitely King wrote me a letter in which he says:—  
Under no circumstances have I authorised any men engaged by me to apply to you for passes, as I have been anxious to leave no ground for any charge that might be brought against the administration of your office such as have frequently been made, to the effect that the Labour Bureau is established in the interests of this organisation. It is true that several men have asked me for such letters, but I have always refused them. I have also received several applications for free passes into the country, but I have always informed applicants that we have not the power to grant any such concession, and that the only means by which they can reach the country on free passes is by the registration of their names with you, and some evidence of their ability to obtain work if sent to the country.
126. Mr. Langwell.] Why did you send for him to consider this matter? Seeing that a number of men came to me with agreements signed by Mr. Whitely King, I thought that it was only right that he should be consulted.
127. The fact of his name being attached to the agreements was sufficient without a letter or recommendation to get a man a free pass? No; it would have no more influence than your letters would, perhaps not quite so much.
128. How did these men get passes then? Because they had agreements to go to work. So far as I could ascertain they were destitute, and it was my duty, in my opinion, to send them to a place where they could obtain employment in the ordinary way.
129. Did any one of the 566 men sent to the different stations bring you a letter signed by anyone recommending them for a free pass? It is possible that they did.
130. Or was Mr. Whitely King's signature on the agreement sufficient to get them a free pass? No.
131. How did they get free passes? They had not means to get work, and when they produced an agreement showing that they had work to go to my duty was to send them to work, and not to keep them hanging round Sydney, and loafing. In many instances they paid £1 to obtain employment. Mr. Whitely King never influenced me at all.
132. The fact of his name being on the agreement showed you that it was *bonâ-fide*? Yes.
133. You have said that you do not make inquiries as to the current rate of wages when you are engaging anyone for a district? We know the current rate pretty well—we have had inquiries made all over the Colony.
134. From what sources do you get your information? From employees and employers—from almost all sources. We have nothing in the world to do with the wages. We never interfere with the wages.
135. If anyone in the country sends down for a number of men, you do not inquire as to the wages current in the district, but simply announce that so many men are wanted, and send them away? Whenever a man writes for a number of men, the letter is read, and the wages are as stated in many letters.
136. But suppose the wages are not stated in the letter? We have frequently written to know what wages are to be paid.
137. You do not make any inquiries as to the rates when men are out on strike before engaging men? No.
138. Have you ever discovered that you have sent men away to take the place of men at reduced wages? No.
139. You have not heard of that? The manager of a mine called the Curlewis applied for seven men about three weeks ago. His letter, in which he stated the rate of wages per ton and the day-work per yard, was read to the men, and seven men were sent up. We knew nothing of any strike or disagreement at the mine. We heard indirectly that when the men arrived there it was to work for a lower wage than he was offering to his old men. I believe some of the men remained and the others did not. The manager wrote to the Bureau and explained the whole matter. It was certainly a reduction on what he formerly paid.
140. Did you ever hear of a similar case occurring in the Bourke district? No.
141. Do you recollect sending sixty-eight men to Smith, Jones, and Finlayson, the contractors for the Nyngan-Cobar railway? It is very likely that we did.
142. You never made any inquiries or you never heard that they were sent to take 1s. a day less than the men engaged there were getting? No; we have sent a large number of men to this firm.
143. I am referring to a special lot who were sent on a particular day? I remember the case now. We know perfectly well that the wages that were offered to the men were current wages.
144. Where did you get that information? We had sent men previously to the firm, and we knew from the reports of these men that they were giving current wages.
145. You have stated that the circular which was issued by the Union was incorrect? The circular by implication is certainly incorrect. It implies that the men were all shearers.
146. You say that the numbers which are given in the circular are not correct? In the circular it is stated "for Nocoleche Station the credit is sixteen passes. At this station the wool-scouring is done by a contractor who engaged some ten of his men in Melbourne, agreeing to pay boat and rail fares to Bourke. The boat fare (10s. each) was paid all right, but the Labour Bureau supplied the trainage." That is incorrect.
147. How do you know it is? Because I know what men I sent. They were not Melbourne men at all. There were not sixteen men sent to Nocoleche Station. Only seven were shearers to start with. Of these men one was thirty years in New South Wales, one twenty-six years, one eleven years, one two months from Adelaide, one six years, one forty-five years, one ten years, one fifteen years, one two years, one ten years, one twelve years, one eight years, one four years. That part of the circular is untrue from beginning to end, and so it is everywhere else as far as figures are concerned. They also state "of the twenty-six credited to Fort Bourke, fully one-half were New Zealand shearers engaged by the shed overseer, a wool-classer, from that colony." The implication is that the wool-classer brought his men over from New Zealand and that I sent them to Fort Bourke, whereas only two of them came from New Zealand.
148. Mr. Rae.] Have you any guarantee that they gave correct particulars as to where they came from? Of course, a man may tell me a lie, but these men were registered on my books long before these engagements were made.

- Mr. J. Creer. 149. *Mr. Langwell.*] I do not find one shearer among the names on this list; you did not send anyone as shearers at all—but they are all shed hands? Yes; we did.
- 4 May, 1893. 150. How many? Fourteen shearers out of the twenty-six. The return which you hold in your hand was prepared to show that the men did not come from New Zealand, but the return from which I am quoting these figures shows their occupations.
151. In regard to the number of years you state the men have been in the Colony, if you were told that the information was wrong you would hardly believe it? I should hesitate to believe it; I do not see why men should state an untruth to enable them to register in my books. The registration was not done to enable them to get to Fort Bourke, but it was done long before the engagements were made.
152. *Mr. Rae.*] All of them? I could not say that. No doubt I have been imposed on by some men. A man may come from New Zealand or Adelaide and tell me that he is a resident of New South Wales. Men, as a rule, do not come to me for a pass before they register. The first thing they do is to register.
153. You did not reply in any way to the circular which Mr. Hall and Mr. Wood sent you? They did not send me a circular as they should have done. It was very cowardly on their part not to do so.
154. It was sent to somebody else, and then sent on to you? I got one. I think that when they were making allegations against the Bureau they should have had the manliness to send me one, and then I could have answered it.
155. You did not make any answer because you did not get a circular direct? It is not likely that I would answer them under the circumstances.
156. It was in May last that I understood you to say the meeting took place between Mr. Whitely King and Mr. Wilson and Mr. Suttor and yourself? No; at the end of June, because we commenced the refund business in July.
157. There were not a great many shearers left here then? A great many.
158. Not nearly as many for the Bourke District as there would be for the other districts? The great bulk of shearers that went through the Bureau were for the Bourke District.
159. The principal part of them went away before the refund system was begun? There would be a large number for that place.

TUESDAY, 9 MAY, 1893.

Present:—

MR. EWING, MR. LANGWELL, MR. RAE,		MR. HOUGHTON, MR. MCGOWEN, MR. WADDELL,
MR. WALL.		

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Joseph Creer, Superintendent of Government Labour Bureau, recalled and further examined:—

- Mr. J. Creer. 160. *Chairman.*] Have you procured for the Committee the information which you promised to obtain at its last meeting? I have prepared the following return which gives the information that was asked for by the members of the Committee:—
- 9 May, 1893.

Total number registered from the 18th February, 1892, to 31st August, 1892, when re-registration commenced .....	13,723
Number sent to work for the same period .....	5,972
Leaving at this date, 31st August, on the books as unemployed .....	7,751
Total number of registrations from 31st August to 6th May, 1893 .....	7,070
Total number of tickets re-issued to those remaining on the books at 31st August.....	2,805
	9,805
Total number sent to work from 31st August to 6th May .....	3,070
Leaving at this date, on the books as unemployed .....	6,805
Total number sent to work from 18th February, 1892, to 6th May, 1893 .....	9,042
Sent away from private registry offices previous to refunds being enforced .....	97
Sent away from private registry offices since date of refunds being enforced, 5th July .....	172
	269
	£ s. d.
Amount received as refund on the 172 passes.....	130 15 3
Railway passes to the end of April, 1893.....	9,774 18 8
Steamer „ „ .....	367 5 10
Total.....	£10,142 4 6
Amount received as refunds to date .....	£1,474 11 10
Gross total received, exchange about £17 10s. For the last three or four months the average number registering daily, 36. May 8th (yesterday), 77 registered. Average per week coming from the other colonies:—Victoria, 14; South Australia, 3; New Zealand 6; Queensland, 6.	
Total number of families applying since the commencement of relief .....	1,744
Weekly average of families at present relieved .....	200
Total, children (say).....	6,468
Weekly average at present of rations .....	475
Total to 6th May, 1893—	
Rations .....	35,537½
Amount of cost .....	£2,665 6s. 3d.

161. *Mr. Ewing.*] You regard the Bureau, I presume, simply as a place where employers or those desiring employment can get it? Yes; they get more than information, they get employment.
162. It is virtually a place, I suppose, where employers wanting men and men wanting employment can register their wants? Yes.
163. You have nothing to do with the rates of wages? Nothing, whatever. 164.

164. How do you come to interfere with regard to men who have refused employment and who wish to obtain employment subsequently? We interfere in this way; yesterday, for instance, a man whose wife and family are getting relief was sent to work, and we were informed by a letter that he refused to work. I caused a letter to be written to his employer asking whether he had worked or not, or whether he had got work to do in any other part of the district, because I thought it would be unfair on my part to relieve his wife and family when he was working. Again at times there are men who will refuse to work. The generality of these men are what I term loafers—men who will take everything they can get from the Bureau in the form of relief, but will not work to earn it. I have to exercise a great deal of power sometimes to make these men go to work, both for their own good and the good of their families. I have always regarded it as unfair to the State to keep the family of a man who will not accept work when it is offered to him. I use discretionary power, but I never “black list” a man. I do not allow a man’s wife and children to starve, and that is the order I got in respect to granting relief.
165. Having made up your mind as to a man’s character, how does he stand; suppose you have come to the conclusion that a man does not want work, how do you act? A man of that class very seldom comes to the Bureau afterwards, he clears.
166. It is forced upon you to decide whether a man is fit or not? Yes; whenever a man is engaged to go out we send a letter to his employer, asking him to write and inform us as to his character, and if the character we receive is a good one it stands for the man. We should know the man if he should come back to the Bureau. We are able by this means to recommend a man or not to an employer.
167. In your opinion should a man who is going to work know exactly the surroundings in connection with that work? Yes, he does. The letters are read to the men exactly as we receive them, and it is for them to accept or reject.
168. Do you think that a man who goes to take the place of a man on strike knows all the surroundings? He knows all we know about it.
169. Do you think it is wise that the Government should furnish men with a knowledge of industrial troubles? I do not know if the Government could. There might be trouble on and nobody know of it.
170. Do you think that things would be improved by the Government taking notice of industrial disturbances, and permitting them to be made known when a man is applying for employment? I do not know what the Government could do in a case of that kind. When a strike takes place it is pretty well known amongst the men. In fact they may know when we do not know.
171. *Mr. Langwell.*] In making an inquiry as to the state of the labour market in a district, have you ever received information that there were more men unemployed than were required to do the work in a district? Frequently.
172. Has that ever prevented you from sending men from the Bureau to the district? No.
173. You still send men? For this reason we do: We have the letters from the Police Magistrate or the Mayor, or Town Clerk, stating that there are a number of men in the district unemployed; perhaps a month or two afterwards we receive an application from persons wanting men; we read the application to the men; they accept and they go.
174. Independent of the information you have received that there are a number of unemployed men already there? Yes; a number of men have desired to go away to certain districts, and I have told them that from information I have received by communication there are hundreds of men out of employment there, and that it is of no use for them to go there. I give them the information regularly according to the communications which are received.
175. You received a petition last year from Bourke signed by over 700 unemployed there? I do not remember.
176. Do you not remember receiving a petition which was presented to the Premier and by him referred to you? I may have, but I do not remember the circumstance. I received a circular from the Colonial Treasurer stating that there were a number of unemployed at Grafton, and giving the names of the men.
177. The petition to which I refer I saw on your table when your offices were in the old building? It is very likely you did. Perhaps it was sent to me to make some statement on it.
178. The fact of the petition being presented by 750 unemployed men at Bourke did not prevent you from sending men to Bourke afterwards? It would not if an employer wrote for men.
179. Was it or is it the intention of the Bureau to confine its actions to this Colony only, or do you send men out of the Colony? Not out of the Colony.
180. You do not engage men for any place out of the Colony? No.
181. I think you stated on Thursday that it is a customary thing when a man is engaged, and a ticket is granted to him, to send an order on his employer to pay the fare out of his first month’s wages? We send the order that the man signs.
182. In all cases? Yes, where there is an employer.
183. You do not send anybody on his mere word, but he has to produce a letter or an agreement? No. There are cases where I have sent a man on the recommendation of a Member of Parliament who perhaps was acquainted with him and knew that he could get work.
184. We all know that a Member’s recommendation is sufficient to get a man a free pass, but an individual applying himself would not get a free pass? It would depend on circumstances. I would take the circumstances of the case into consideration, and I might be inclined to grant him a free pass. For instance, three men who have been discharged from Government offices came to me yesterday, and stated that they wished to go prospecting. The circumstances of their case were such that I thought it was my place to grant them a free pass. They all guaranteed to refund the money. I sent them to George’s Plains.
185. Is it not the rule to send anyone who applies? No.
186. You keep a record of every person you send out from the Bureau? Yes.
187. And you also keep the letters which they produce when they apply for a pass? Yes.
188. Do you remember sending a man named Vernon, to Bourke in January last? Yes.
189. Did he present a letter when he applied for a pass? He did.
190. Can you produce the letter? I believe I can. He got a guarantee, and I think a letter of recommendation from a Mr. Drayton, but it turned out to be a forgery.
191. Was the forgery on the part of Vernon? Yes. It was a very clever forgery; it deceived me at any rate. I have gone into the matter thoroughly.

- Mr. J. Creer. 192. You have stated both on Thursday and to-day that you invariably send along the order signed by the employee for the amount of his fare to be deducted out of his first month's wages? Yes; unless it is guaranteed by somebody here.
- 9 May, 1893. 193. Is not this the order which was signed by Vernon? It is.
194. What date does it bear? The 25th January.
195. Can you explain the reason why it was not posted from the Bureau till the 19th April? This may be a reminder.
196. It is not a reminder, but the original order? I cannot explain why it was not posted till the 19th April. The clerk is supposed to send the order away on the night the man goes, and as a rule the order goes by the same mail as the man. There may have been some season for detaining this order, but I do not know of any at present.
197. You stated that his guarantee was supposed to be signed by Mr. Drayton, but the signature is a forgery, will you explain why you sent this to Mr. Chapman at Bourke? Because Mr. Chapman was the man who was going to employ Vernon. The letter you have is the letter he produced at the Bureau, stating that he would get employment from Mr. Chapman, of the *Western Herald*. We have had a letter from Mr. Chapman on this matter.
198. How long since? Two or three days. It took some time to get the particulars from Mr. Drayton. We had to find out from Mr. Drayton that the signature was a forgery. We applied to Mr. Drayton for a refund of the fare.
199. You do not know anything of Vernon's whereabouts? No.
200. Would you prosecute him if you did? We might, if we got the information, prosecute him on a charge of obtaining a free pass on false pretences.
201. Don't you think it advisable to do so? I do.
202. I am led to believe that this is of daily occurrence? Nothing of the kind.
203. If I can bring a lot more cases to prove that it is? You cannot bring many, there may be a few. I dare say I am imposed on by some people.
204. *Mr. Houghton.*] Mr. Drayton denies that the signature is his? Yes; he admits that the man wanted him to sign it. He says the man was working at *Truth* office, and asked him to sign the guarantee form, and to give him a letter of reference to Mr. Chapman, whom he knew very well. I took the signature on the papers to be the signature of Mr. Drayton. When Mr. Chapman wrote down to say that he knew nothing about Vernon, and that he was not responsible for the payment of his fare, we then applied to Mr. Drayton, who denied that he had signed any guarantee; we sent him the guarantee we received with his signature, and he then explained the whole case. We have explained the case to Mr. Chapman.
205. A charge of forgery would lie against Vernon? Yes.
206. *Mr. Langwell.*] Would it be much trouble for you to get a list of men recommended by any particular gentleman? No.
207. Will you furnish the Committee at its next sitting with the names of the men recommended by Mr. Willis? Yes; I have often refused him. I refused him two days ago.
208. Have you ever heard of selectors and such persons getting free passes from the Labour Bureau in Sydney on the recommendation of Members of Parliament? I do not know of any cases. I do not remember a man as a selector ever applying for a pass to go to the country.
209. But you would not know that he was a selector? He would tell me that he was going to work in the country.
210. You say you have not engaged anyone at the Bureau, or passed anyone through the Bureau who had been engaged to go to another colony? I have never granted a pass to anyone to go to another colony. I am not supposed to grant a pass to any other colony.
211. Not for anyone to go out of the Colony? No.
212. I could show you that a number of men, on an agreement, have gone through the Bureau out of the Colony into Queensland? They have not got a pass out of the Colony.
213. They got a pass to go as far as our railways would take them and they have been engaged here to go out of the Colony? That I do not deny. For instance a number of men may go through Bourke in the shearing season to Queensland. The railway would carry them only as far as Bourke. I never grant a pass out of the Colony.
214. They might be engaged to work in the Colony? I do not see any harm in that; I would do that; I have done so. There are not many cases of that kind.
215. You stated on Thursday last that Messrs. Hall and Wood have made a mistake in their circular in stating that 1,058 men had been sent to the Bourke District? To the Western District. If you will refer to their circular you will see that they mention the Western District.
216. You say that 1,058 men have not been sent to the Bourke District? What do you call the Bourke District?
217. I call the Bourke Electorate the Bourke District? No.
218. Have you any idea as to how many men have been sent to the Bourke District alone? No; I do not know the boundaries of the district. In our return we give the number of men sent to the Western District.
219. You took the whole of the Western Land Division for the Western Division? I think so.
220. Do you know that nearly the whole of the men who have engaged for the Western District have gone into the Bourke district? They have gone into the Western District.
221. Not necessarily? They have gone up to Dubbo.
222. I see that Messrs. Hall and Wood, in their circular, say the Bourke District? This return means the Western District.
223. You stated on Thursday that the numbers which they quoted in their circular as to the passes issued for the Western District, but not for Bourke District, were incorrect? I did not say anything of the kind. I said that the return applied to the Western District, and that their remarks as to the men sent to a station having come from New Zealand were incorrect. I said that their statement that a number of men came from Melbourne and paid their steamer fare to Sydney and that I sent them on to their work was incorrect. I also said that their statement that half the number of the men who went to Fort Bourke station came from New Zealand was incorrect.
224. According to the information which you have? Yes, as their names are registered. 225.

225. You do not think it would be advisable to establish an agency of the Bureau in the different districts? I did not say that at all. Perhaps it would be advisable. I should like to see the system tried.
226. Did you not say on Thursday that agencies had proved to be a failure in Victoria? I did say so and I spoke on the authority of the Superintendent of the Victorian Bureau.
227. You stated that they found in Victoria that by the time an employer had sent down to the central Bureau and got information about the labour market in his district he had got men there? I did not say that exactly. I said that the delay in sending from the district to the head-office might be of such a character that the employment would be filled up and that the men who would go from the head-office would find that the work was filled through that delay.
228. That through the delay it was filled by the men in the district? That it might be filled by men from somewhere and that men would be sent from the head-office to this place as well.
229. *Mr. Wall.*] You regard the Labour Bureau as a medium for affording employment for the people only? Yes.
230. You read the letters you receive from the employers, and if any men avail themselves of the opportunity to go you send them on to the place irrespective of any consideration as to whether there are people available in the district or not? Yes.
231. It does not enter into your consideration to ascertain the condition of the labour market in the particular district to which you send any men? It enters into my mind. I know perfectly well the state of the market in the various districts.
232. You send men on just the same? Yes; if an employer writes for five or ten men his letter is read, and if the men accept we send them. There may be 101 reasons why employers send to us, although there are men unemployed in the district.
233. With regard to facilities for employing people locally, you have no regular organised mode of giving employment outside your Sydney office? I have no mode of giving employment at all except that I supply those who apply to me.
234. There is no other means of people obtaining employment through the Bureau other than through the head-office at Sydney? That is so; we get a list of the various contracts let by the Public Works Department every week, and if I see that men are likely to be wanted at a place, I immediately correspond with the contractor, and inform him that if he wants men we have any number of men of the class he wants awaiting work at the Bureau. We send out thousands of circulars to all parts of the country.
235. If you hear of any work likely to be opened up in any country district you communicate with the district, and endeavour to obtain employment for those registered at the Bureau? Yes.
236. Provided that there were a vast number of unemployed in a particular district, they would not be able to avail themselves of your efforts unless they registered through the Bureau here? Yes, they would. Many of them write from the country, to be registered here, and we send them forms to fill up.
237. If any people in the district where a work was to be opened up desired to avail themselves of the benefits afforded by the Bureau, they would require to communicate with the Bureau here? Yes.
238. You have no local offices through which they could obtain that employment? No.
239. As regards extending the operations of the Bureau, have you any idea of the probable cost of establishing some agency for the registration of persons who are seeking employment outside the Bureau? No; I have not taken the matter into consideration. I do not know where they would be established.
240. Don't you think that if you had an agency in the various districts which could be cheaply conducted it would be of very great benefit in affording employment to local persons, and would not have the effect, which many people think the Bureau has, of centering people in Sydney seeking employment? There is no doubt that it would.
241. You have had a good deal of experience in connection with labour movements? Yes.
242. Do you think the Bureau has afforded extra facilities for giving employment? I am sure that it has.
243. Have you ever heard that in the registry offices in Sydney certain unjust demands are made upon persons applying for or obtaining situations? Yes; I have heard of a number of cases.
244. They have to agree to pay a portion of their first wage to the registry office before they obtain the right to go to a place? Yes.
245. You stated the other day that you had furnished a number of persons employed at the labour agencies in this city with a free pass to enable them to reach their situations—do you know any cases where that practice has been resorted to? Yes.
246. Do you think it is desirable that the Labour Bureau should assist labour agencies to carry on a reprehensible practice of that kind? I do not. I never attempt to assist a labour agent. But I attempt to assist the people who are victimised by the labour agents taking their last shilling to get them a job and then possibly leaving them penniless and homeless and unable to get to their work. In such cases I have stepped in and sent them to their work.
247. If the Bureau furnishes a pass to these persons to enable them to reach the employment into which they have entered through the medium of the labour agents and in respect of which they have been victimised, does not that assist them in some degree? It does in some degree, but what is to become of the poor people otherwise. Are they to become a burden on the State? Only a fortnight ago a man with his wife and child came to me and said that they had been engaged by a registry office to go as a married couple at 27s. a week. I sent them back to the labour agent to get a guarantee that he would be responsible for the repayment of the fares, but he would not sign a guarantee. The people were homeless and had not a house to sleep in; they had work to go to if they could get to the place, and I undertook to send them, taking an order on their employer for the amount of the fares.
248. If persons in the country who are employing people through the labour agencies in Sydney knew that those persons could not reach their situations unless they were employed through the Labour Bureau, don't you think it would have the effect of inducing employers to make their applications to the Bureau in the first instance? It might do. I am quite certain that it has done in hundreds of cases. If there were no Bureau they would go to the agents, but in consequence of its existence they come direct to the Bureau.
249. These employees can reach their destinations with the same facility through being employed through the labour agents as they could through being employed through the Bureau? It is not so easy for the simple reason that I demand of the agents a guarantee that the fare will be refunded.
250. Is that a guarantee irrespective of whether they have any situation or not? Yes.

- Mr. J. Creer. 251. But, notwithstanding the guarantee, do not you think that it is giving an advantage to private labour agents that they did not have before the Bureau was established? There is no doubt that it does assist them, if they can get so much from a person for finding him employment and leave him stranded in the street when he cannot get to his work. I do not assist for the sake of the labour agents but for the people's sake.
- 9 May, 1893. 252. Before the Bureau was established they could not send men on to their employers at the expense of the Government? Unless the men or the employers paid it.
253. Mr. Houghton.] How did the men employed through private registry offices get to their destinations in the country before the Bureau was established? As far as I understand the rule adopted by private registry offices was that either the person accepting a situation had to get to his work at his own cost or the employer had to remit his fare.
254. And was it the rule for the employer in such a case to deduct the amount of his fare from his wages? Yes.
255. Was that almost the invariable practice? I think it was, I have read scores of agreements. The rule was that if a man remained with his employers for a certain time he would forego the cost of his fare, but if he did not stay that time it would be deducted from his wages.
256. In your evidence at the last meeting you said you could not give the number of men sent to each district, but that you could give the number sent to the Bourke District; does not the report which you have produced give the number of men who have been sent to each district? Substantially it does. I do not remember saying that I could not give the information. I could supply the figures for each district.
257. Will you explain the *modus operandi* which is followed in the engaging of men? Every morning after I have gone through my letters all applications are posted on a black board, half an hour or a quarter of an hour before Mr. Bloxham goes on to the platform to select the men to fill the applications; he calls out that certain men are wanted for so and so; he reads the letter to the men, giving all the information in his possession; he then looks at their references and judges as to their fitness to fill the situations; the men who are not fit for the situations go down, and the men who are fit ballot for the situations.
258. Do you receive any complaints from the men who are booked at the Bureau as to the manner in which the selections are made? There have been one or two complaints. There was a complaint made to me yesterday, but it was quite groundless. A certain employer wrote that he wanted a certain man, and that he will take no other—he may have employed the man before; and the name of that man is put on the board so that he can see it, and asked to come up. Again, we post on the board the names of a number of men required to see me or Mr. Bloxham. The men in the yard when they see the names on the board imagine that those persons are picked for certain work. It is nothing of the kind. No preference is given to any man, except in this respect, that if a man with a large family is receiving relief from the Bureau, and he is suitable for a situation, we endeavour, if possible, to give him employment for his family's sake.
259. How many men are engaged on the staff of the Bureau? There are myself, Mr. Bloxham, three clerks, a messenger who assists Mr. Bloxham in the selections, and a caretaker. Then for the relief branch there are a clerk, who receives 8s. 6d. a day, and another clerk, who gets £1 a week to assist.
260. What salary does each officer receive? I get £400 a year; Mr. Bloxham, £300 a year; the clerks get 8s. 6d. a day; the messenger, 5s. 10d. a day, and the caretaker, 10s. a week.
261. What are the working hours of the clerks? From 9.30 to 5, or thereabouts.
262. Is anything in the shape of overtime paid to any members of the staff? The only overtime we have had, so far, was in preparing the return which was asked for by Mr. Langwell.
263. Has it not been the custom for a long time for one of the staff to see men under engagement away by train or steamer? It is always done.
264. Don't you recognise that as overtime, if it is done outside the ordinary office hours? We arrange with a man. If a man goes to see three or four men off by steamer, he gets 1s. 6d. for it, and the caretaker whenever he sees men go away by train gets 1s. for it.
265. If a member of your staff had to see men off by three trains starting at different hours, would he receive one fee of 1s.? We never have anything of that kind.
266. No case of men leaving by three trains? No; we may have a man going away by the morning train, but that is very rare. In nearly every case our men go away by the 8 o'clock p.m. train.
267. You stated in your evidence the other day, that from the 1st of the present month you had stopped the issue of free passes to unemployed men at Broken Hill? Yes; except in urgent cases.
268. What would you consider urgent cases? The Police Magistrate would inquire into the urgency of the case, and would communicate with me. I may mention that 1,000 men have been sent away from Broken Hill who were not given in our figures at all.
269. It is computed that there are 2,000 unemployed men in destitute circumstances in Broken Hill. By what means can they possibly get away in order to seek employment elsewhere if you stop the issue of passes to them? I will admit that there is nothing of the kind. When I was at Broken Hill I took particular note of the number of men who were unemployed, and taking into consideration the number who have been sent away since I left, certainly, the unemployed when I was there should have all been sent away, unless a great number of unemployed have been created since I left. We have not received 1s. from any man who has been sent away from Broken Hill.
270. You will admit, I think, that the men you sent away were not actually engaged? A great many of them were.
271. Is it not the fact that you sent away a large number to South Australia in search of employment? A great many of them did.
272. How could you expect a guarantee from a man whom you sent out of the Colony in search of employment? Why could we not expect a guarantee from them as well as from anyone else?
273. But if a man had no employment to go to, and he was in destitute circumstances, you granted a free pass? If a man got to work, surely he ought to refund his fare. The agreement he signed was to refund when he got employment.
274. There are no avenues of employment for the 2,000 unemployed men who are stated, according to a newspaper telegram last week, to be in destitute circumstances at Broken Hill? They must be getting unemployed continually up there. It must be because the work has lessened.

275. Is not the work lessening up there through retrenchment in nearly all the mines? That must be the reason. Mr. J. Creer.
276. You have stated that notwithstanding that you have received information that there are a number of unemployed persons in a district, if you receive applications for men to go there you send them? Yes. 9 May, 1893.
277. You will admit, I think, that that is a very pernicious system? It may have its ill effects, but surely if a man writes to me for men, no matter where he writes from, and men are here wanting work, am I not there to send the men to work? When we have received a communication from a district where we know there were a large number of unemployed we have very often written to the applicants, and the answers we got were that they would not take the local men, but that they wanted men from the Bureau.
278. In those cases if you refused to supply them, they would be compelled to take local men? I do not know.
279. Suppose the Bureau refused to supply men in such cases, do you think the employers would apply to private registry offices, and be served? I am sure they would; and they do.
280. You have stated that the Superintendent of the Victorian Bureau urged as a reason why the branches were not a success, that a man would send first to the head office, and that his application would be sent to the branch in the district before his wants could be supplied; is there any necessity for him to send to the head office? That is the system they had. The superintendent explained that the delay did not meet the circumstances of the unemployed, and that a branch was of little or no benefit to the men themselves. I should have stated last week, when I was referring to the establishment of the Victorian Bureau, that it follows a very different system of registration to that which we follow. In each case a man goes to the Bureau to register his name, but at the Melbourne Bureau the men are asked, "what wages will you take?" I heard a man say in reply to this question, "Half-a-crown a week—anything you like—my food." We have nothing to do with the wages at all.
281. That is the difference between the two systems? Yes.
282. Do you know anything of the working of the New Zealand Labour Bureau? No more than I have read in the newspapers.
283. You are aware that in New Zealand the head of the police in every small town is an agent of the central Bureau? Yes.
284. If we had a branch in each centre of population, where men might be employed locally, do you not think it would be infinitely better than the present system of compelling employers to send to Sydney for any men they require? There is no doubt that it would afford a more ready opportunity to local unemployed men if there were branch offices at which they could register, and know if any work were obtainable.
285. You would recommend the establishment of branch offices, would you not? Yes.
286. You think it would be the means of greatly increasing the advantages of the Bureau? Yes.
287. You remember that shortly after the Bureau was instituted last year, the unemployed in Grafton enrolled themselves with the Mayor of the city, that he in his turn forwarded a list of the unemployed in the town to the Member of the district, Mr. John See, and that their representative in his turn sent that list on to you? Yes.
288. Did you, after getting that list, receive any applications for men, or comply with any applications from men to work in that district, and send them there from Sydney? No. I do not think we ever sent a man there. We have had one application from Grafton, but it was received a long time after that from the railway contractors.
289. If the unemployed in each town were to enrol themselves in a similar way, and the mayor were to send a list of the unemployed on to you every month, and you received applications from men to work in the district, you would refer the applicants to the mayors of the respective towns, and allow them to take the men they require from the local register? Certainly. I would forward the applications to the branch office to be dealt with there.
290. Suppose a man is engaged in Sydney to work in Queensland, and you grant a free pass to enable him to get as far as the border of this Colony, what guarantee have you that he will refund the fare? That has only been done in the case of men going to shear, where, perhaps, the station was situated on the borders of Queensland, and the nearest route would be to Bourke by rail. We would take an order from the men on the station manager for a refund of the fare to Bourke.
291. Would you accept the guarantee of a station manager living in another colony? We would get our money from the station. I have issued a pass in several cases to enable a man to get to a station just over the border in Queensland.
292. In every case, before issuing a pass, you require a guarantee of the refund of the fare from the man, notwithstanding that the station to which he is going may be in Queensland, or in another colony? Yes. It is very rarely that we are asked to send men to Queensland, or any other colony. Last year I was not aware where the stations were situated, but I am getting a little more conversant with their locations now. I do not think the fact that a station is in Queensland should prevent me from issuing a pass to a man to go as far as Bourke if he has work to do at that station.
293. Do you know whether the mechanics in the community enrol themselves on the books of the Bureau? I know they do.
294. To any appreciable extent? In very large numbers.
295. *Mr. Rae.*] Who pays the 1s. 6d. that the clerk receives for accompanying men to the train or the steamer—the men or the Department? It has been put on in about two cases—it is stopped now—it is paid out of petty cash.
296. Is it not the fact that a considerable number of men were sent by steamer for the Lismore-Tweed railway contract, and that they had to sign an order for 1s. 6d. above the amount of their steamer fare? Not one of them had to.
297. *Mr. M'Gowen.*] Did they have to sign an order for 2s. 6d. above the £1 that the Bureau paid for them? No.
298. *Mr. Rae.*] Did these men pay anything above their fare, or sign any guarantee? I was at Broken Hill at the time they went; but I understand from Mr. Bloxham that the men, forty-five of them, were charged 25s. each, which is the current steamer fare, but that, after charging them that fare, the owners of the boat offered to take them for £1 each, because of the number that were going. The correspondence will

Mr. J. Creer. will show that it was the intention of Mr. Bloxham to refund the men the difference of 5s., but, unfortunately for the Government, not one of them, I think, has paid his fare. To send a man by steamer is a different thing from sending a man by railway. The former is a cash transaction, and the other is not. I suppose, Mr. Bloxham looked to getting as great a return for the cash outlay as he could. With respect to a charge of 1s. 6d. each being made for seeing the men off, no such thing was done in this case.

9 May, 1893.

299. Has it been done in any other case? It has been done in other cases since. I allow a man 1s. 6d. to go down to a steamer to see that these men take their berths. We do not give them their tickets, but we see the men go on board and we hand the tickets to the stewards. It takes the clerk two hours sometimes to see the men go off by a steamer. If five men went by a steamer one charge of 1s. 6d. would be made for the lot.

300. Had the men to find the 1s. 6d. in cash or was it added on to the guarantee? It was added to their account.

301. *Mr. Langwell.*] Were the forty-five men who went by steamer charged 1s. 6d. each, or did you charge 1s. 6d. for the lot? It was not charged at all in that case.

302. *Mr. Rae.*] Suppose a number of men went away when the practice was in vogue, was each person charged 1s. 6d., or would they be charged 1s. 6d. in all? I think, only 1s. 6d. altogether. I do not think the charge has been made in three cases. When four or five men go away one of them is a kind of ganger, and it may be charged to that man.

303. Have these occasional charges been made only in the case of men going away by steamer? That is all.

304. They have never been made in any case where the men went by rail? No.

305. Have the men in any case, other than the two or three instances you spoke of, whether they went by steamer or by rail, been charged or signed a guarantee for any amount above the actual fare? Not that I am aware of.

306. You could not be perfectly certain of what has been done by others? I could not be certain that a man might not do such a thing, but I can see no reason for his doing so.

307. No one has any authority for doing so? No; I cannot see what motive a man would have for making a charge.

308. It is entirely within your own discretion to say whether these charges should be made or not? The 1s. 6d. was charged in my absence.

309. The Department had to pay cash to send the forty-five men away by steamer to the Lismore-Tweed railway contract? Yes.

310. Did the steamship company voluntarily reduce the fare or were they asked to do so by Mr. Bloxham? I cannot very well say. I think that in view of so many men going, an offer was made to carry them for a reduced fare. Mr. Bloxham will be able to give full information on that matter. It should be borne in mind that not one of them has yet paid a shilling towards his fare.

311. Do you assume that because a certain number of men will not pay their fares it is a legitimate thing to put an extra 5s. on them all in the belief that those who do pay may help to make up the bad debts of those who do not? We do not do it, that was the only case where it was done. At the least 500 men applied to go, but we refused to send them. A letter came back immediately stating that there was no employment, and that there were thousands of men there. A great many men went on their own account, and paid their own fares.

312. The men whom you sent were charged an extra 5s.? Yes; but they never paid it.

313. Is your salary fixed by the Colonial Secretary, and are the salaries of your staff in any way fixed by yourself—have you any power to lower or fix a salary? No. The Bureau is only a sub-department; Mr. Critchett Walker is my immediate chief, and everything has to be submitted to him.

314. Have you any power to discharge? Yes.

315. You could discharge any subordinate? I could discharge a servant at any time, and appoint one in his place, I suppose.

316. Could you increase or diminish the staff? I should not attempt to do so. I should only make a recommendation.

317. Do you think the whole of the present staff are necessary in order to properly conduct the Bureau on its present basis? All I can say is that the unemployed are increasing so much that we are kept fully employed.

318. How long is it since the unemployed commenced to increase; has it been a constantly increasing business? No; some months ago there was a decrease, and then they began to increase. Seventy-seven men were registered yesterday—that is the largest registration for many months.

319. I suppose that in the shearing and harvesting season there is a decrease, and with the approach of winter there is an increase? Yes.

320. A report has appeared stating that a certain number have been sent out to work. Does that represent the gross number who were sent out to work, or does it represent only those who retained their employment? Suppose, for instance, I get a job through the Bureau, but find that for some reason or other the work will not be suitable, and I decline to start; would my name still be entered on your books as having obtained employment through the Bureau? If you went up the country “yes,” because you would obtain a pass; but if it were a local job “no,” because if we got a report from your employer that you did not start you would not be booked.

321. Suppose the employer did not report? We do not book until we get his report. Every pass is booked.

322. Is there any obligation on the part of an employer to report to the Bureau if there is no ticket to guarantee; suppose you simply send a man out to a job, has the employer to report that the man has made his appearance? No. There are very few employers who will not. Suppose a man comes up and says that he wants a man to garden, or to be generally useful. We may select three men whose references are pretty equal; the three men go down to the applicant, he will make a selection, and he will then tear off a slip at the bottom of the circular we send, and fill in his name, and that man is booked.

323. The others would not appear on the books at all, other than as applicants? That is all.

324. Suppose a man and his wife were sent up country as a married couple to a station, and they had a family; is it not the fact that you count the whole number as having been sent to work by the Bureau? No.

325. Is it to be taken as literally true then that every individual who has gone through the Bureau, and who was guaranteed as having got employment, really obtained employment? With the exception of the 269 men who were sent to us from the registry offices for a pass, we take credit for this number because we issued the passes, every one of the number. Mr. J. Creer.  
9 May, 1893.
326. Of course, you took credit for any men who came from the office of the Pastoralists' Union with a signed agreement? Yes; every pass is booked.
327. Wherever a pass is booked the man is credited with having obtained employment through the agency of the Bureau? Yes.
328. In no case otherwise? No.
329. Suppose a man obtains employment and leaves it, either almost immediately or after a trial of a few hours or days, and he comes back to the Bureau, and is sent out somewhere else, the Bureau, I understand, would be credited with having sent him out on each occasion? Yes.
330. And also with those who go into the country with free passes, whether they happen to get work or not? Yes.
331. I suppose then you will admit that the return of the number of men who have obtained employment through the agency of the Bureau, is only reliable in the sense that they were sent through the Bureau, but is not reliable in the sense that the men have obtained employment? I do not admit anything of the kind. I say the figures in the return are reliable.
332. As far as you are aware? I say they are reliable. Not a large number, but a very small number on arrival at their destination may refuse to work.
333. Irrespective of the few who arrive at their destination and refuse to take their employment, there are others, I understand, who get free passes and are sent out, but you have no absolute knowledge that they have any employment to refuse or accept? I am not aware of any man who has gone out who has not given evidence sufficient to show that he will have work to do.
334. Suppose I were to send a man down to you with a letter stating that I believed he had reasonable opportunity of getting work, you would take that letter as reasonable evidence that he would get work? Not in every case; I have refused a number.
335. Have you in all cases got reasonable evidence that a man will get work when he applied for a pass? If a man can show me something I can accept as proving that he has work to go to, I will send him.
336. What would you accept; what is your definition of "reasonable evidence"? The most definite evidence would be a letter from an employer stating that he had engaged him.
337. What would be the least evidence you would take; what would you consider "reasonable evidence" when you had not an absolute certainty? It is impossible to say. I judge each application on its merits, and I am a pretty good judge of human nature. I do not accept everything a Member of Parliament tells me, for I know that men go to Members and tell them lies. I question each man, and I find out what a Member of Parliament would not, because he would not go to the trouble to inquire. I do the best I can to ascertain that each case is genuine, and that the man has employment to go to, and then I send him. If I have a doubt that he is trying to get a trip to the country I refuse him.
338. *Mr. McGowen.*] Some serious allegations were made in the *Evening News* which it is only fair you should have an opportunity of denying. One allegation was that the Bureau had sent a man to an iron-worker in Sydney to a job, and that when he arrived there the employer said he had never applied to the Bureau for anybody, but had simply advertised in newspapers. Have you ever sent a man to a job unless you had received a personal application from the employer? Yes; I inquired into that case immediately I read the article, and there is no truth in the statement. In order to find employment for as many men as we possibly can, we send out a circular wherever we think that men are likely to be employed. For instance, we get a return from the Public Works office of the number of contracts let, and we immediately communicate with the contractors with the view of ascertaining how many hands they will want. Again, if we see that a number of men are advertised for in the *Sydney Morning Herald* we communicate with the advertiser by telephone, if possible. In that way we have found employment for a number of hands. As regards sending men where we have no idea that there is work to do, we could not do such a thing if we wished.
339. You have never sent any men to a job, and they have been refused when they got there? We may have sent men when we saw an advertisement and the men may have been refused simply because they did not suit.
340. It was stated in the *Evening News* that in this particular case that when the men got there the job had been filled, and that the employer said that he never sent to the Bureau, but had simply advertised? That is possible. Yesterday, for instance, an employer sent for a man by letter, but before our man got there a man was engaged in his place and he had to come back.
341. I suppose it is an invariable custom for the men who come back to complain about being sent on a fool's errand, are they marked by the officers of the Bureau for complaining? No. There is no such thing as a "black list" and never will be while I am superintendent.
342. In a case of that kind the man would take the same chance as any other man? Yes.
343. Even though he had complained? Yes. It is very seldom they do complain; they seem to be satisfied with what we do to a large extent.
344. The Bureau does not take any notice of the wages that are offered to the men? No.
345. Were the men who were sent to the Lismore-Tweed railway contract informed, before they were sent, that they would get the current rate of wages? We have the employers' letter stating that they would.
346. Do you know that in nearly every case the men refused to work at what they considered starvation wages? I do not know that. I believe a lot of them are working there now. We know that some of them did not work and came back. The whole of the correspondence can be produced.

THURSDAY, 11 MAY, 1893.

Present:—

MR. EWING, | MR. HOUGHTON,  
MR. LANGWELL, | MR. M'GOWEN.

T. WADDELL, ESQ., IN THE CHAIR.

Mr. Joseph Creer, Superintendent of Government Labour Bureau, recalled and further examined:—

Mr. J. Creer. 347. *Mr. Langwell.*] Have you procured the information which I asked for at the last meeting? The information is embodied in the following return which I have prepared:—

11 May 1893.

LIST of applicants for railway passes recommended by W. N. Willis, Esq., M.P., since printed return of free passes was laid on the Table of the House, September, 1892:—

Total number recommended, 35. Granted, 27; refused, 8—total, 35.

Particulars of passes granted and used by the applicants.

Date.	Names.	Occupation.	Destination.
1892.			
28 November...	T. Hoffnung and W. Johnston.....	Farm hands .....	Bourke.
1893.			
1 February ...	J. Downie and W. Pirie .....	Shearers .....	Byrock.
4 " ..	G. Knowles and W. Murphy.....	Station-hands .....	Bourke.
7 " ..	G. White, G. Downes, and H. Watkins.....	" .....	Bourke and Cobar.
14 " ..	A. Campbell, F. Curtis, and G. Mulvaney.....	" .....	Bourke.
14 " ..	F. Cherry .....	Engineer.....	Byrock.
20 " ..	R. Shepherd, R. Bates, and W. Gilston .....	Station-hands ... }	Bourke.
20 " ..	G. Brown, and F. Lahene .....	"} .....	Byrock.
27 March .....	J. M'Kernan .....	Bricklayer .....	" .....
25 April .....	J. Lynch .....	Station .....	Bourke.
<i>Granted, but did not use.</i>			
9 January.....	M. Bray.....	Station .....	Bourke.
14 " ..	C. Foley .....	" .....	Orange.
17 " ..	P. Moore .....	" .....	Bourke.
18 " ..	L. Hourigan .....	Trainer (horse) .....	" .....
24 " ..	J. Salisbury .....	Driver.....	" .....
17 February ...	T. Johnston and W. Campbell.....	Station .....	" .....
<i>Applied for but refused.</i>			
17 January.....	W. Smith .....	Shearer .....	Bourke.
18 " ..	H. Lorenzen and W. Mitchell .....	Not named.....	" .....
19 " ..	P. G. Cavanagh ; 31st, W. Murphy, J. Knowles.....	Shearers .....	Albury and Bourke.
19 February ...	Not named ; 23rd, W. Davis.....	Not named.....	Byrock and Bourke.

348. *Chairman.*] Did Mr. Willis recommend the application of any person to whom a pass was not granted? Yes.

349. Did Mr. Willis give any special reason in favour of these men? He assured me in his letters that the men had work to go to. Some of them he engaged to work on his own station, and he guaranteed the fares. In every case the letter would point out that the men had work to go to.

350. Was it stated in the letters that the men had been in the Bourke district before, and wanted to go back? I do not think there are any letters to that effect. In some of the letters he guaranteed that the fares would be refunded.

351. Do you think that the Labour Bureau has had a tendency to lower the wages of the working classes? I do not think it has had that effect. As a practical man, having lived amongst men all my life, and being a Unionist too, it has surprised me that, with the thousands of unemployed we have, not only in Sydney, but all over the country, the wages offered are as high as they are in many respects.

352. In some cases the employers in their letters have stated the wages they would give? In most cases. The principal reduction in wages has been in the case of farm hands. Formerly they got £1 a week, but now in some cases they get 15s. a week. That is about the only great reduction there is.

353. When the Labour Bureau was started were there many men out of employment in Sydney, and was there any considerable amount of excitement among this class with reference to their position? Judging from the crowd of unemployed that flocked around the Bureau when it was opened, and the agitation that was going on among the men, I came to the conclusion that they were on the point of a revolution, and that something serious would have occurred.

354. Did the operations of the Bureau seem to alleviate that state of things? We had to break that down to a very large extent, and it did put a stop to or prevent the dangerous feeling which existed when it was started.

355. Since the time when that feeling of great discontent existed amongst the unemployed is the general condition of the country any better or worse with reference to employment? It is considerably worse.

356. How does it compare at the present time with what it was at this time last year? We have considerably fewer unemployed about Sydney now than we had at this time last year.

357. Does the same strong feeling of discontent prevail amongst the men? No; the unemployed we have to deal with now are as peaceable and orderly as any other section of the community.

358. Do you ascribe the change in the feelings of the men and in the numbers of the men asking for work to the operations of the Bureau, or to what? To some extent to the Bureau, which the more sensible of the men look upon as an agency for finding them employment, and to the good sense of the men generally in realising that nothing is to be gained by revolutionary preaching, and that they should bear their lot as peaceably as they can in the hope they may be employed. They see every day a number of men sent away, and they live in the hope that they also may get work. Hence the good order which they maintain.

359. Are there a large number of private registry offices in Sydney? There are a large number.

360. Both before it started and at the present time? Yes.

361. Are the keepers of these places in the habit of making a charge? Every one of them does.

362. What charge would be made for finding an engagement for a man for any ordinary work? I know of one case where a charge of £5 was made. 363.

363. But that would be an exceptional case? It was. As far as I can glean I think their charge is 10s., 15s., 20s., and 30s. The amount just depends on the character of the situation.
364. Does the Bureau make any charge for finding work for men? No.
365. The Bureau, therefore, to a large extent relieves those persons wanting work in the city from the charge to which they would be put if they had to apply to a private agency? Yes.
366. It has had the effect of finding work for a considerable number of people who otherwise, probably, would have had to go to a private agency, and if they happened to get work to pay handsomely for the privilege? Yes; a case occurred only this morning. A man and his wife applied at a private registry office, and having paid the fees to get their names entered in the book, they were led to believe that a gentleman—I think he resided in the Molong district—could employ them; they were kept going backwards and forwards to the office several days, but being in great distress, having spent their last shilling, they made an application to the Bureau. They explained their circumstances, and stated that a certain man in a certain district would give them employment, according to the information which they received at the registry office. We, on their behalf, wrote to the man, and we got a reply this morning, stating that he had no employment whatever for any such parties. I should imagine that the object of the registry office keeper was simply to get the fee, and string the parties on with the idea that there was a probability of their getting employment.
367. In that respect you think the Bureau will be of considerable advantage to the working classes of the city? I think it has been, and will be, of very considerable advantage.
368. Has it come to your knowledge that the Labour Bureau of New Zealand has given satisfaction? From all I have read in the newspapers I think it has. I may state here that I have applied to Mr. George Lewis, the local Government officer, who was sent by the Government of New Zealand to inquire into their village settlement scheme, to know if he can supply me with a copy of the New Zealand Act, and any other information in connection with the working of the Bureau, but he is away at the present time.
369. When the Labour Bureau was opened here, I suppose you had no experience of a similar institution to go by? Not the slightest.
370. As time wore on, I suppose, you were able to make considerable improvements in the working of the Bureau? We did.
371. Do you think it would be advisable to establish any agencies in the country districts;—do you think it would assist you to ascertain the places where men are required, and the places to which men should not be sent? For a considerable time I know from communications with the principal people in the different centres that there have been large numbers of unemployed in those centres, and if we had an agency in each centre, or some person who would be responsible to me, it is quite possible—indeed, probable—that an employer would get the labour he wanted from the locality instead of sending to me for it.
372. You think that if men were available for particular kinds of work in any locality the employers would be likely to engage them on the spot? Yes; I should like to see the idea carried out. I do not think the expense would be very great.
373. Is not the primary object of the Bureau to find employment for men, and to distribute them to those places where men are wanted? The primary object is to endeavour to find employment for men, and to send them to it. Through advertising in the first instance, and through sending circulars all over the country, the Bureau is well known. We get hundreds and hundreds of applications for men from all parts of the Colony.
374. Sometimes you receive letters from men who have been employed through the Bureau stating how they were getting on? Yes.
375. Do they, in the majority of instances, appear to be satisfied with their engagements? Yes; there are exceptional cases. I ask the employers to write to us, and give us the characters of the men, and say how they are suited. We have received thousands of letters from various employers, stating how the men have suited them, and explaining their general characteristics. These letters we regard as being of considerable value. Suppose a man stays six months in one employment, and the employer comes back to the Bureau, we know the class of man he will require.
376. In proportion to the number of men you have sent out, have you received many complaints as to the rates of wages? Very few indeed.
377. *Mr. Langwell.*] You have stated that at the time the Bureau was opened the unemployed were on the point of a revolution in the city? As far as I could judge.
378. You attribute the stoppage of that revolution to the opening of the Labour Bureau? To a large extent.
379. Has the opening of the Bureau been the means of closing any of the private registry offices? I cannot say; but I have heard that it has done so.
380. In your opinion the Bureau has been of great advantage to the workers of Sydney? I am sure it has.
381. Do you think it applies generally to the workers of the Colony? I am sure it does.
382. Not only to the workers of the city, but to the workers of the Colony? To the workers with whom it has had to do.
383. You have only had to do with city men? There may be unemployed in certain parts of the country that I do not know of. Of course, it does not apply to them.
384. You know it has been of great advantage to the workers in the city, but you do not know that it has been of any advantage to the workers in the country? I am sure I cannot say. In a number of cases unemployed men in the country have written to me asking to be registered, and I have communicated with them.
385. *Chairman.*] Do you think the Bureau has had any tendency to bring unemployed men from the country to wait for employment in Sydney, or have they written to the Bureau in almost all cases where they wanted employment through your agency? I do not think for one moment that the institution of the Bureau would drag unemployed to Sydney, when the numbers of the unemployed in the city have been published throughout the Colony. I do not think any man of common sense would come down from the country to a place in which he knew there were a large number of unemployed.
386. You think the operation of the Bureau would not have a tendency to bring them down? No.
387. You have stated that the Bureau does not confine its attention to the work of finding employment, but to a certain extent assists some Government officer to relieve distressed families in the city and the suburbs? Yes.

Mr. J. Creer.  
11 May, 1893.

388. Do you think that through the agency of yourself you have been able to give substantial and valuable assistance to the officer who has been distributing the relief in determining genuine cases from the reverse? We must have eased to a large extent the Benevolent Asylum, the Soup Kitchen, and several other charitable institutions which have given relief.

389. Do you think the Bureau has rendered any substantial service in ascertaining genuine cases from the reverse? I am quite sure it has. Cases have come under my own notice where it has prevented starvation or absolute distress.

390. Where a large number of men are unemployed, and are asking the Government to assist them in getting employment, do you think the Bureau would render substantial assistance in determining which men are genuinely and honestly wanting to get work? Of course it would.

391. *Mr. Ewing.*] You think it is a wise thing to have outdoor relief in connection with the Bureau? It is, while so much severe depression prevails.

392. Who did the work which is done by you and Mr. Maxted? It was never done at all excepting two years ago when the Casual Labour Board or some other Board gave relief. I am certain that there would be absolute starvation if the Government had not consented to grant to unemployed people who are in distressed circumstances.

393. *Mr. Langwell.*] The same rations could have been granted apart from the Labour Bureau? Certainly.

394. *Chairman.*] Could they have been granted with the same certainty of relieving only genuine cases? If the same inspection took place, yes.

395. The inspection would have to take place? Yes.

396. *Mr. Langwell.*] The inspection as to the *bona-fides* of a case is not made at the Bureau? Except in a special case, such as where a woman and her children have not had a bite to eat for some time, a ration is not given before an inspector has visited the locality in which the man resides, and made a report to me.

397. Have a number of married men, with wives and families in great distress, come to the Bureau to seek employment, and got relief? Yes.

398. Have you been able to ascertain at the Bureau which men were genuinely seeking employment, and which men were trying to loaf? Yes; we have proved it beyond doubt in several cases. If a man has been on the books receiving relief, and we have formed the impression that he did not want to work, we have asked him to take work; and if he refused, we could see at once what sort of a man he was.

399. That is apart from the relief? It was because he was getting relief that we tested his *bona-fides*.

400. *Chairman.*] Where you find that men are only feigning to get work, and you are relieving their families, do you stop the rations, and throw upon him the burden of supporting his family? As far as the man is concerned we have, but in some of the cases we have had to relieve the mother and the children.

401. *Mr. McGowen.*] In the article which appeared in the *Evening News* recently, the following passage occurs:—"We find that five firemen and six deck hands are down as being engaged at current rates. Are these not the eleven men who were sent down to the Maritime Free Labour Bureau, and on arriving there found they were wanted to take the place of the men on strike on the steamer "Tweed." The men one and all refused to ship under the conditions";—were these the eleven men for whom you claim credit in your return? I have made an inquiry, and can find no truth whatever in the statement. There have been men applied for from the Maritime Free Labour Bureau, and an officer of that Bureau has come up and put the facts of the case before the men, and the men have gone, but as for supplying men to take the place of the men on strike on the "Tweed," we have no evidence whatever that any such thing was done.

402. In your report you take credit for having supplied eleven men, whom you classify as six firemen and five deck hands? I do not think the men mentioned in my report are the same at all.

403. Are these the men who went down to the "Tweed"? We do not know; in my report I classify the number of men sent to different kinds of work.

404. Did you ever send carters to carpenters' jobs? Yes; under these circumstances. The Orient Steamship Company, whom we have supplied with a large number of carpenters and other mechanics from time to time, telephoned to the Bureau for some carpenters. The clerk who took the message understood that it was "carters" they required. Some carters were sent straight away, and on their arrival at the work they found it was carpenters who were required. Before the carters had actually arrived at the work we had ascertained that it was carpenters that were wanted, and we selected some carpenters, and they went away at once. The mistake arose through a misunderstanding on the part of the clerk in receiving the message.

405. It is also stated in the article in the *Evening News*:—"Somewhere about August last year a notice appeared on the board, wanting eight men for clerical work. On application being made it turned out that the clerical work was bill distributing at 5s. per day";—is this one of the jobs to which clerks were sent to at 60s. per week? Nothing of the kind. The work which was applied for would be clerical work. I have an idea as to what is alluded to. A number of men, not strong enough to do heavy work, were sent out to do canvassing.

406. It is also stated in the article that a "tutor who must be well recommended" was sent out to a cooper's job? I do not remember any such case.

407. *Chairman.*] Have you had to dismiss or dispense with the services of any subordinate officers? Yes.

408. More than one? Yes.

409. Have you any reason to believe that any of the hostile reports in regard to the Bureau have been written by any of the dismissed officers? I have no doubt that the reports were written, or that the information on which they were founded was given, by one person in particular.

410. *Mr. Houghton.*] Is it not an invariable rule for a man seeking employment through a private registry office to be charged a fee for any situation which he may get? It has been explained to me by some men that when a man goes into a registry office with a view to getting employment he pays a fee for registering his name, then he is charged so much for advertising, and if an employer is found for him he has to pay another fee. I know cases where 5s., 10s., 20s., and 30s. have been charged. Some agents have told me that their fees were as low as 5s.

411. The amount of the fee depends upon the value of the situation? I suppose so.

412. *Mr. Langwell.*] You said that you know of a case where a fee of £5 was charged;—what occupation did the man follow? He was a drill instructor.

413. For a school? Yes; we supplied the man afterwards. It was an appointment under Government to some extent, and the Government should have applied to the Bureau instead of going to a registry office.

Mr.

Mr. Francis Edward Bloxham, Secretary to the Government Labour Bureau, called in, sworn, and examined :—

414. *Chairman.*] You are secretary to the Government Labour Bureau? Yes.

415. How long has it been in existence? Since February, 1892.

416. Had you had any particular experience with reference to the employment of men before you were appointed to this position? Yes; for many years.

417. Were you in the habit of getting employment for men in the Western district? Yes; I had had a large experience of all classes of men.

418. Do you think the Bureau has rendered any substantial service in the way of finding employment for the unemployed about Sydney? Undoubtedly.

419. Do you think the operations of the Bureau have had a tendency to lower the wages of the working classes throughout the Colony? So far, the attempts to lower wages have been remarkably few. In the Western district, including the Bourke district, there has been no attempt so far as I can see.

420. Do you think the operations of the Bureau will have a direct tendency to lower the rate of wages? So far, there has been none. Farm wages in the coast districts have been gradually getting lower for some years; for what they used to get £1 a week they get 15s. a week. That is the only noticeable place where wages have gone down.

421. Do you think the bad times would have had that effect if the Bureau had not been in existence? The Bureau has had no such effect.

422. Has the increasing depression had the effect of decreasing wages? Undoubtedly it has. It has had a tendency to lower wages all over the Colony, but it has not been so marked as in the coast districts. It seems to be more marked in the coast districts, and in clerical work in the city, than in any other way.

423. Have you in your official position been able to assist a number of men to join together and take contracts on the co-operative principle? Yes, in several instances. We have brought under the notice of employers the possibility of doing this. In some instances they have made a trial and it was fairly successful. For instance, two or three months ago some work was required to be done in connection with the railway advertising hoardings. It was suggested that some of the unemployed should be given an opportunity to tender for the work, and the suggestion was adopted. Out of a large number who applied—forty, I think,—six men were balloted for, and it was arranged that the six should examine the plans and specifications which were lying in the Bureau, and put their prices in. They put their prices in; two of them got the work, and these employed three or four of the non-successful applicants, and the other men they employed they selected from the general body. They finished the work in a most satisfactory way; indeed, so much so, that they are getting further contracts from the same source. That is another branch of co-operation which has, so far as I know, never been tested. Instead of having forty or fifty men cutting down the price the number was reduced to half a dozen men, who fixed their own rates, and had no competition from outside.

424. In some cases of that kind the distinct tendency of your efforts has been to keep up wages? Yes; there are other instances of co-operation where men took clearing work together. Where jobs are let every effort is made to get some of those men in on the co-operative basis.

425. You have heard some complaints about sending men to the western district? Yes.

426. Have you sent men off to Bourke after receiving a letter from Mr. Woods, the secretary to the Shearers' Union, and Mr. Hall, the secretary to the General Labourers' Union, stating that there were a great many unemployed men there? We have had no letter or complaints from them.

427. Did you not receive a letter stating that there were more unemployed men at Bourke than would be required? Not to my knowledge. I am in a position to know what number of men are there.

428. Do you grant every application which is made for a pass to go up country or do you exercise a discretion in the matter? If we had given a pass in every instance many thousands of passes would have been issued. About one application in every six or seven is granted. To-day fifteen or sixteen passes were applied for and refused. That occurs every day.

429. *Mr. Houghton.*] They had no work to go to? They say they have, but they have nothing to show that they have. They want to get out to look for work.

430. *Chairman.*] Did you ever notice when you resided at Bourke that numbers of men go to the district from this part of the Colony and also from New Zealand during the shearing season? Yes; they do every year.

431. Has that been a common occurrence for many years? Yes; it always has been. During the last five or six years the number from New Zealand has gradually increased.

432. Do you think the operations of the Bureau have had a decided tendency towards sending men out there during the shearing season; do you think that nearly the same number would have gone if the Bureau had not been in existence or has it had a tendency to send more men there? That is hard to say. The men from New Zealand get to where they are going irrespective of the Bureau; the men from Victoria get to where they are going somehow or other irrespective of the Bureau. If they come to the Colony with the intention of getting to the western district they carry out that intention.

433. Do you think that if they did not get passes in many instances they would get there all the same? Yes. As a rule, they are provided with sufficient means to reach their destination when they leave their own homes.

434. *Mr. Langwell.*] You stated that you have had a good deal of experience in the engagement of men;—where did you have that experience? In Bourke.

435. As an employer of labour? As an agent of employers and as an employer of labour.

436. Where you for many years engaging men for employment? Yes.

437. How many men did you engage in a year? Before the Shearers' Union started pretty well all the stations in the district.

438. Pretty well all the sheds, or only one or two? A great number of them. I did not employ them exactly, but I got letters from employers to book the men and send them down—not only shearers but also station hands, married couples, cooks, and rouseabouts.

439. You always charged a fee for finding employment or engaging a man? For a time I did, but for some time I charged no fee. After a time I found that there was such a tremendous number of them that it necessitated the engagement of a clerk—afterwards a second clerk—and a fee was then charged. I think the fee for entrance was 2s. 6d., and some small fee was charged afterwards, but which very frequently was never received.

Mr. F. E.  
Bloxham.

11 May, 1893.

- Mr. F. E. Bloxham.  
11 May, 1893.
440. The establishment of a branch of the Shearers' Union did away with that? Not altogether.
441. As far as the shearers were concerned? Yes.
442. What is the state of the labour market in the western district? I know that it is bad at the present time.
443. It has been bad for a long time; it was bad when you were living in Bourke? Yes.
444. Are you informed that it has been getting any worse lately? Yes; at this time of the year it gets worse in the western district.
445. Did you see the petition signed by 700 odd men, unemployed in the western district, which was presented to the Premier, and by him forwarded to the Labour Bureau, protesting against its action in sending men up there to take work? I do not remember seeing the petition personally, but I remember that there was one.
446. You are aware that complaints have been made continually in that district since the opening of the Bureau? Yes.
447. Have you seen a joint letter, signed by the secretaries to the Shearers' and Labourers' Unions? I do not remember having seen one.
448. Having had an opportunity to read a copy of their circular, will you now say whether you have seen a copy of it before? Some portions of the circular seem familiar. It has come under my notice in some way, but not as a letter to us.
449. In the circular, Messrs. Hall and Wood say, "By referring to the returns tabled in the House on 6th September, 1892, we find that 1,058 free passes were issued to that date from Sydney to this district alone";—is that true? I cannot tell you. The return would be made up from the books in the Bureau, and it would be correct. The district it would refer to would be a pretty wide one. It does not necessarily mean Bourke.
450. It is the western land division, but they have taken the return to apply to the district? We started, I think, from somewhere about Dubbo. I remember marking out a line as to what would be looked upon by pastoralists and others up there as the western district. Every train that leaves Redfern takes a certain number of men from Sydney to these places, and gathers them all along the line from Bathurst, Orange, Wellington, Dubbo, Nyngan, and right up to Bourke. I remember that in one particular week about 200 men went. It was at once stated, in one of the local papers, that these 200 men were rammed into Bourke by the Bureau, but as a matter of fact I do not think that one of them was sent from the Bureau.
451. You have said that you have some recollection of a petition being presented;—has it had any effect upon you or the management of the Bureau in sending unemployed to the district? Personally, I cannot say that it has, because I know so well the overcrowded state of the district. We have always been very careful indeed in dealing with men who were trying to get there—even with old Bourke men.
452. Suppose you received an application from an employer in the district;—has your knowledge of the overcrowded state of the labour market in the district prevented you from complying with the application? Not where an employer sent for a man or several men or for a married couple.
453. If an employer sends for fifty men, they are sent just the same? There is no instance of an employer having sent for fifty men from this district.
454. Not one? I am speaking, of course, in a general way, and I do not remember a single instance of fifty men having been sent for from the Bourke district.
455. When I speak of the Bourke district, I mean the Bourke Electorate? The Cobar railway might have taken in a good number. It has had over fifty. I was confining myself to station matters.
456. Were you aware that when Smith, Jones, and Finlayson applied to the Bureau for a number of men those men were to take the places of the men on strike at 1s. a day less? Certainly not.
457. Have you heard so since? No; we heard from the men that they were well satisfied with the work, and from the contractors that they were well satisfied with the men.
458. You did not hear anything about the men from the Bureau supplanting the men on strike at 1s. a day less? Somebody said so, but there was no report to that effect. I think the rate was about 8s. 6d. per day. It was supposed to be the current rate they were paying at the time. There was a large number of men here, and it was a great Godsend for some of them to get work.
459. You never took into consideration the fact that although it might be a Godsend to some people here, it might have the opposite effect with the people in the district? We know at times that a district is overcrowded, but still where an employer sends to the Bureau for men, it is evident that he will not have the local men. We receive letters to that effect sometimes. For instance, we got a letter a few days ago from a station, in which the writer stated that he wanted a particular class of man, whom he described rather minutely. He said, "I will not take any of the men who are passing up here, but if you have a man who you think will suit this place under the conditions I have named—the wages were good enough—send him along." A man was not sent along, but two or three applied. A man who was not exactly in the district, but still up the country applied; he was not taken, but one of the other men was sent for.
460. Do you think that in a case of that kind the employer takes that course because he has an objection to local men, or because he wishes to reduce wages? No; I do not think it is done with any idea of reducing wages. There seems to have been no reduction yet.
461. But you have stated that since the opening of the Bureau there has been a reduction of 5s. per week in the wages of farm labourers in the coast district? No; I said that during the last few years in the coast districts the wages had been gradually going down. A man said to me, referring to a certain district, "We used to get 20s. a week, but now we only get 15s."
462. You do not know of any reduction in any other district? No substantial reduction, which may be fastened on as a reduction. The general rate of station, and other wages, seems to have been kept up, with the exception of a few instances, which, of course, will occur anywhere.
463. You say you have started a new line of co-operation? Not a new line. I gave an instance of another branch, which might be called co-operation.
464. Were the tenders for this work sent in to the Labour Bureau? No; the plans and specifications were lying in the office of the Bureau, and the tenders had to be sent to the office of the gentleman who superintends the Government advertising.
465. You had a look through the different tenders? No.
466. You arranged with the men on the books to decide among themselves what tenders they would send in?

in ? I did not arrange with the men. A large number applied in the first instance, but instead of having the whole of the men tendering for the job and cutting at each other I reduced the number to half-a-dozen, who could put their heads together and arrange their own prices or send in a single tender. They saw the plans and specifications in the Bureau ; they made out their own papers ; some of them brought their tenders to the Bureau thinking that they had to be left there ; they were given stamps, and they posted them to the person's office.

Mr. F. E.  
Bloxham.  
11 May, 1893.

467. Were the tenders called through the Bureau ? Yes ; the employer came to us and said he was going to advertise for tenders for railway hoardings. He asked us if we had some carpenters on the books. I told him that we had a first-class lot of men. He supplied the plans and specifications, and instead of his having 200 or 300 tenders to deal with he had only six.

468. There were no tenders called through the newspapers ? None whatever—there was no competition outside.

469. He simply came to the Bureau and called for tenders among the unemployed, and accepted the lowest tender ? I do not know whether he accepted the lowest tender. He sent word that he had accepted so-and-so's tender.

470. Could this work have been done on a weekly wage ? Not very well, I think. It extended over thirty-two stations. Only one of these things perhaps had to be done at each station. I think they had a free passage up and down the line.

471. Do you not think he could have come and offered a wage for carpenters to have done this work ? I do not think so. There was no one to over-see them.

472. Do you think he got his work done at a reduced rate by calling for tenders ? No ; the rates seem to have been remarkably even.

473. Is that the only case where tenders have been called ? No ; there has been clearing done by gangs.

474. By tender ? Yes. Suppose a man wants a place cleared, and 100 men applied for the job, and perhaps only six are wanted, I tell them to select amongst themselves a ganger for each gang of six men ; then I deal with the gangers, and they draw for the work. The ganger of the successful gang goes to the work, sees what it is, and tries to arrange with the principal. We have nothing whatever to do with the price.

475. How many clearings have you had ? I cannot say—not as many as I should like.

476. What is the largest acreage that has been undertaken ? There have been no large acreages.

477. You have never had a case of 120 men going to one job ? No.

478. Have you had twenty men on a job ? We have had over that, I think.

479. Does the employer when he applies for the men fix the rate of wages for each man, or have they to arrange that outside ? No ; they arrange mutually between them.

480. Have any tenders been lodged with the Bureau and decided by the employer afterwards ? Yes.

481. Are tenders called at so much per acre ? Yes. Perhaps three or four gangs who know the country 10 or 12 miles from Sydney have stated what they would clear the land for, but the job has seldom come off.

482. Do you think that with a crowd of unemployed calling for tenders has not a tendency to reduce wages ? It has not been done in that way.

483. That has been the intention in calling for tenders ? No ; the intention was to give each man the privilege of competing at whatever price he liked.

484. Suppose a tender is called amongst a crowd of men who perhaps are wanting " tucker," and the employer says, " I will give £3 or £2 an acre for this work," do not you think that men who are depending on getting this work probably to keep themselves and their families, will put in for less than £2 an acre ? Yes ; if there was an opportunity offered to them, but that has always been carefully guarded against.

485. In what way ? If there are more than two or three applying they can say " We will put in for so much." They have done so, and seldom has there been a job let in that way. They have nearly always asked for more than the employer would give—frequently double what he offered.

TUESDAY, 16 MAY, 1893.

Present:—

MR. LANGWELL,

MR. WADDELL,

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Mr. Francis Edward Bloxham recalled and further examined:—

486. *Mr. Langwell.*] Do you recollect a return being laid upon the table of the Legislative Assembly showing the number of men who have been sent to the western district on free passes ? Yes.

Mr. F. E.  
Bloxham.  
16 May, 1893.

487. Can you say whether any of the men who were sent to different stations in the western district were engaged through the Bureau ? A number of them engaged married couples, general station hands, and different tradesmen for station works. One station, for instance, engaged married couples, wheelwrights and blacksmiths.

488. The owners and managers of these stations applied for the men through the Bureau ? Yes ; Fort Bourke, Toorale, Pirillie, Coronga, Wilga, and several others did.

489. Were any of these 556 persons engaged directly through the Bureau ? I cannot say definitely without referring to the books. The married couples and station hands may have been applied for by station owners and possibly not included, but I think that the return includes the number who have been written for as well as those who have produced agreements here.

490. Will you ascertain if any of the 556 persons whose names are given in the return have been engaged through the Bureau ? I will.

491. As a rule, station managers do not apply for station hands in any quantity during shearing time ? No.

492. They have not applied to you to engage any shearers ? No ; there have been rouseabouts applied for. General station hands have been applied for at different times.

493. I mean shed hands ? Not any large number.

494. The majority of those who have gone have been sent on the production of an agreement signed by Mr. Whitely King ? The majority have.

Mr. F. E.  
Bloxham.  
16 May, 1893.

495. *Mr. Waddell.*] Are you aware of the lines on which the Victorian Labour Bureau was run before it was closed;—did it meddle in any way with the rate of wages, or did it proceed on the same lines as your Bureau proceeds? To a certain extent it did. The Melbourne people, before their Bureau was opened, applied to our Bureau for information. We sent them a copy of our papers, and every information that we possessed. They adopted a portion of our system, but in matters of detail they seem to have adopted a different basis. For instance, I understand that a man would state when he was being registered what wages he would go for and he would be given a card saying who he was, and what wages he would go for. We have nothing to do with wages, and the men are not asked what wages they will go for. The men are furnished with all the information that an employer gives in his letter. If the applicants state the wages, as they almost invariably do, the wages are announced to the men, and they simply refuse or accept as they think fit. There is a material difference in the working of the two Bureaus on that point and also in other matters of detail.

496. Have you brought any of the letters which you have received from the men who have gone to work and the employers who have employed the men? Yes; I have a number of all kinds of letters here.

497. You ask the employers, as a rule, when they come to engage a man to let you know how he gets on? Yes.

498. And do you ask the men to write and let you know whether they are satisfied? Yes; both employer and employee are always requested to report.

499. *Mr. Langwell.*] Here is a letter from Mr. Rumble in which he states that during the last six months he has engaged through the Bureau about half a dozen men for his father, a large farmer and mill proprietor in the Murrumburrah district, and that with one exception the men had given every satisfaction; have you received any letters from the men themselves? I do not remember at the moment, but I should not wonder if there are several from this place amongst the number.

500. Are the letters which you produce, selected, or have they been taken indiscriminately from the number? Indiscriminately. We have drawers filled with letters, written from different places in relation to all kinds of men by the employers, and also from the employees which upon the whole are of a most satisfactory nature.

501. *Mr. Waddell.*] Did you select the letters with a view of giving the Committee a general idea of what the correspondence is? Yes.

502. Does the Bureau do anything in the way of providing employment for females? Yes; besides the large number of married couples sent out; we have been applied to frequently by people who think we register females for general service. We announce the fact to the men whenever we receive an application for a female servant, so that they may tell their wives, or sisters, or relatives, or friends.

503. The Bureau is open to do what it can to find employment for females as well as males? Yes; we are sending them away almost every day—to-day we sent one.

504. Have you given any attention to the subject of village settlement as it has been carried on in Victoria as a means of finding employment for the people? Yes; a little since I read of Mr. Tucker's efforts in that direction. I had the pleasure of hearing him describe in Sydney the other night the working of village settlements in Victoria.

505. As far as you can form an opinion, have they been successful as far as they have gone? Certainly, to the extent they have gone, but it is only a small branch of a very large subject.

506. As far as the project has been carried out, do you think it has been successful? Apparently it has been very successful.

507. Do you not think that if it has succeeded so fairly well in Victoria it might be carried out with success here;—do you not think the conditions in this Colony are equally favourable? The conditions are just as favourable if not more favourable than they are in Victoria.

508. Has Mr. Tucker a sound knowledge of everything that has been done in connection with village settlement in Victoria? He is the Chairman of the Board which deals with village settlement. He and the Rev. Dr. Strong are the two principal members of the Board. Everything is done by the Board without payment. An amount of about £2,000 was subscribed and subsidised by about the same sum by the Government to establish the settlements.

509. Is Mr. Tucker in Sydney at the present time? Yes.

510. Has he stated the number of men who are employed in connection with village settlement in Victoria? I think he said 700 persons. He contributed a letter to yesterday morning's *Herald*, in which the Committee will find some very valuable information.

511. *Chairman.*] Do you believe that the system of centralising the operations of the Bureau in Sydney has a good tendency;—do you not think that corresponding agencies or branches should be established in various districts? It might be beneficial in some of the large centres.

512. The procedure seems to me to be this:—A man has come all the way from Bourke for the purpose of registering his name and getting employment, and he has to go all the way back to be employed? Not necessarily; though, as a rule, that is what it means. There are men in different parts of the country who write down and are registered. The following is sent to these men which they fill in and return:—

## REGISTER.

No.	Name.	Date.
	Age.	
	Where born.	
	How long in New South Wales.	
	Trade or calling.	
	How usually employed, and for what periods.	
	References or character produced.	
	Married or single.	
	Ages of children.	
	How children employed.	
	Present residence or address.	
	How disposed of.	
	Remarks.	

Then

Then this card is sent to them :—

## LABOUR BUREAU.

SECOND ISSUE.

Mr. F. E.  
Bloxham.

16 May, 1893.

O.  
Name

(Calling is inserted here)

N.

J. CREER, Supt.

NOTE.—This Card to be presented on application.

513. What benefit is that to the men? If an employer should apply for a man in that particular class in that vicinity and the man is available he will be put into communication with the employer. It has been done in several instances, but it is not very general.

514. Do you not think that a district like Bourke is of sufficient importance to warrant the establishment of a branch of the Bureau? I think it is well worthy of trial. Whether it would be successful or not would remain to be proved.

515. Do you think the operations of the Bureau could be extended in that direction? I think it would be well worth trying in all large centres.

516. You must base that opinion upon your experience that the working of the Bureau is not wholly satisfactory;—is the working of the Bureau what you would desire it to be? No; its functions are not large enough.

517. You think that its functions should be extended? Yes.

518. So as to make the Bureau useful to the greatest possible degree? Yes; I think that in the direction you suggest it is quite probable that some improvement would be shown.

519. How do you ascertain the state of the labour market in each district? We are in constant communication with all sorts of people—clerks of petty sessions, police, and private individuals, and we have a general knowledge of the labour market.

520. Would it not be better to appoint a central authority for the purpose of getting statistics? I think it would.

521. The accounts of a labour market in a district must be conflicting? We find that they are conflicting, but you generally get a fair deduction of what is correct from the majority of the statements.

522. Do you not think that absolute accuracy ought to be obtained in regard to the labour market? Yes; it is always altering so much that frequent reports would be necessary—more than a report once a year.

523. Suppose you were out of employment in the country, and you knew that the local employers were applying to Sydney for men, do you not think you would be compelled by your necessities to come to Sydney to get work through the Bureau? That is a supposititious case, but I suppose that would be the conclusion a man would naturally arrive at. There have been no instances that we know of—but there may possibly have been some.

524. Are there no instances of men flocking into Sydney to register? Not necessarily to register. We find that a large majority of those who register, and have registered for a long time past, come from the city and suburbs.

525. It is not improbable that if a man knew that the employers in his district were applying straight to the Bureau, he would come to Sydney? The natural tendency would be for him to do so.

526. You know there is a law which seems to bring about an aggregation of people in large centres? Yes.

527. And the statistics seem to show that that law applies to Sydney? It applies to all large capitals, and more particularly to those where food and shelter are provided in times of distress.

528. That law is, of course, governed by the difficulties of obtaining employment in the country? No doubt it is.

529. And the greater publicity the unemployed movement gets in the city? Yes; it is constantly brought under their notice.

530. Being almost within ear-shot of the Legislative Assembly, and certainly within ear-shot of the press, it would have a natural tendency to bring any man who had a grievance into town if he were unemployed? Yes.

531. Do you not think that the operations of an ideal department or Bureau of Labour should be in the direction of establishing a branch in each large centre? Yes.

532. I see that the first question which a man has to answer when he comes to be registered is his "age." I suppose his age has a great deal to do with the facility with which he obtains employment? I cannot say that it always has. Employers write for various classes of men. For instance, an employer wrote to-day for a gardener. He stated in his letter that the gardener must be an old man with a knowledge of pruning, and so on, and the reason he gave was that he wants the man to keep his little garden tidy, and to teach his children practical gardening. Employers apply for all classes and kinds of hands. When a man registers in the first instance you will get the truth pretty well in his answers to these questions. When an employer applies for a man, and gives any particulars as to age, the register can be turned up and a man's age ascertained. The Bureau is used largely for obtaining information.

533. Do you find any difficulty in getting employment for aged men? There is a difficulty; but the worst difficulty is in finding employment for clerical hands, and it is getting worse every day.

534. By the expression "clerical hands," you mean men with fair educational attainments? Yes.

535. Have you any clergymen registered on the books of the Bureau? There are some—three or four, I think.

536. Any solicitors? Yes.

537. How do you know that they are solicitors;—do they show you their papers? One man showed a medal which he had gained in competition with eighty men in one of the principal Irish Universities. He was waiting for an opening until he could get the money from his people to register. One solicitor was working as a wharf labourer. Other men we have registered are now practising as solicitors. I know of one or two instances.

538. Then you have educated men on your books? We have men with all classes of degrees. A tutor, for instance, was recently applied for through a friend in Sydney, and the applicants who were sent down to

555. You know the Bourke district very well? Yes.

556. You know that there are always a number of men in the district in certain seasons of the year;—do you not think it would effect a great saving in railway fares if an agency were established there, and the local men were employed, instead of engaging men in Sydney and paying their fares to Bourke? Yes; but the railway fare is no actual cost.

557. Do you not think it is necessary that it should be carried out? I have already stated that it is worthy of a trial, but whether it would be successful or not would remain to be seen. I think it might be tried at Bourke, Bathurst, Newcastle, and a few of the large centres.

558. Do you not think that if agencies were established, the money which it now costs to transfer the men to these different centres from Sydney would be saved? It is not an actual payment, it is only a book entry; but the money received for the fares is really a source of income for the railways.

Mr. F. E.  
Bloxham.  
16 May, 1893.

THURSDAY, 18 MAY, 1893.

Present:—

MR. HOUGHTON,  
MR. LANGWELL,

MR. MCGOWEN,  
MR. RAE.

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Mr. Whiteley King called in, sworn, and examined:—

559. *Chairman.*] What position do you occupy? I am Secretary of the Pastoralists' Union of New South Wales.

560. How long have you held that position? Since the union was established; about three years.

561. What are the purposes of the union? To secure unity of action amongst pastoralists.

562. Has it no further functions? A number of objects are set out in our rules. The principal objects are to maintain freedom of contract and to prevent strikes.

563. What is freedom of contract? That has been defined by our Pastoralists' Federal Council.

564. The definition is on record, I presume? Yes.

565. In connection with the association you have a kind of labour bureau? We have a labour department so to speak.

566. What are its functions? Its functions are purely to engage such labour as we may be asked to engage by the members of the union—nothing further.

567. Have you applied on some occasions to the Government Labour Bureau for free passes? Never.

568. You have sent a great many men into the country? Yes; a large number.

569. Do you keep a record of the number you send? Yes.

570. How many did you send during the 1892 season? I understand you to mean labour which was actually engaged. I may explain that we have a number of men registered on our books who are not engaged by the union at all, but who may be engaged as occasion demands. These men do not enter into this calculation at all, which embraces only men who have been engaged for stations during shearing. As far as I am able to answer your question I should say that we engaged about 500 men during the shearing season of 1892. We have no record of anything else.

571. *Mr. Langwell.*] That is for the whole of the Colony? Yes.

572. *Chairman.*] They were engaged as shearers? Shearers and shed hands.

573. General station hands? No, shed hands.

574. You keep a record of the rates of wages I presume, which are paid to the men when they are engaged? No; there is only one rate for shearing.

575. You pay the union rate? Yes, £1 per hundred.

576. But you make a stipulation that they shall not be union shearers? No; we have never made a stipulation of that kind.

577. Do you remember an occasion when you were sent for by the Acting Colonial Secretary, Mr. Suttor? Yes.

578. Will you state the object of the interview? Yes. As far as I remember Mr. Suttor sent a message to me through Mr. Creer whom he had summoned that morning in consequence of some statements which had been made in the House the previous night, or which appeared in the newspapers that day to the effect that the Pastoralists' Union had been using the Labour Bureau for the purpose of transporting labour into the back country on free passes. I assume that Mr. Suttor had sent for Mr. Creer to inquire into the truthfulness of the charge; that Mr. Creer had made his statement to the Minister, and that thereupon the Minister had desired to see me. I saw Mr. Suttor in the presence of Mr. Creer.

579. No one else? And Mr. Alexander Wilson who was chairman of our executive at the time. I was able to satisfy Mr. Suttor that the Pastoralists' Union was not in any way using the Labour Bureau for any purpose whatever.

580. Do you send your own men into the country districts? We only engage men who come to us for employment, and who register their names with us.

581. Practically, you are performing the same functions as the Government Labour Bureau are performing in respect of those who avail themselves of your office? Yes, we engage any men that are required by our members. We do nothing unless we are formally requested. We make no charge.

582. Have you forms in which your members set forth their request? Yes.

583. Have you any objection to place them on record? I have none of them with me.

584. Will you supply them at the next sitting? I shall see.

585. Are the men whom you send forwarded at their own expense, or at the expense of the employers, or the Bureau? They find their own way to the stations. Directly the men are engaged the Pastoralists' Union has nothing more to do with them.

586. *Mr. Langwell.*] As a matter of fact you do not send any one but simply engage them? Yes.

587. *Chairman.*] You inform them as to where an appointment is to be found? Yes. I am speaking of ordinary times. Of course when we had the shearing difficulty on, a year or two ago, we sent men to the country and paid their expenses.

Mr. W. King. 588. When was that? I think it was in June or July, 1891.

18 May, 1893. 589. *Mr. Rae.*] You do not in any ordinary case undertake to forward men? No. Unless the station manager who requires ordinary station hands writes to us and says "I wish you would arrange for railway tickets, and draw upon me for whatever it costs." That has been done several times, but the practice is simply to make engagements.

590. Do those who seek employment through your office pay any fee? They pay no fee for registration or engagements; but, in accordance with custom, they make a deposit of £1—I am speaking of shearers—to guarantee that they will fulfil the engagement so far as I am concerned, and attend at the station for which they are engaged at the proper time. Upon arriving at the station at the proper date the station is instructed by me to place the £1 to the credit of the shearer.

591. With or without interest? Without interest.

592. What is the average number of men on the books of your association? I cannot tell you.

593. Can you get the information? Yes; I shall have to take a monthly average.

594. Do the same men patronise your establishment season after season? Yes.

595. You have select clients so to speak? We get to know our own men.

596. Amongst these men are there any members of the Australian Shearers' Union? Yes; a number.

597. Who accept the definition of freedom of contract? Yes; the Shearers' Union has done so officially.

598. What proportion do the members of the Australian Shearers' Union bear to the others? That I could not tell. Unless the man volunteers the information we have no means of knowing that he is a member of the Shearers' Union. We do not ask the question. Every one of them may be a member of the Shearers' Union for all I know.

599. *Mr. Langwell.*] Last year was the first year in which you sent any men away to the country? No.

600. In which you engaged men and let them go themselves? I fancy that in 1891 men were engaged in a similar way. That was after the Sydney conference.

601. After the conference there would not be many? A few. Of course the great proportion of the shearing would be over.

602. Speaking generally, last year was the first season in which you engaged men and allowed them to get to their stations the best way they could? Yes. Previous to that, of course, that is, during the shearing difficulty, we had been engaging men and sending them out by train at our own expense.

603. Last year you sent 500 men to different members of your union? Five hundred men to first sheds.

604. That would be the whole number I take it that you engaged that season? Just so.

605. Can you give the number of shearers and the number of shed hands? Three hundred and seventy shearers and 130 shed hands.

606. What part of the Colony did the 370 shearers go to? With the exception of two stations, they all went to the Bourke district—to Bourke and the northern part of Cobar.

607. How many men went to the two stations that are not in the Bourke district? Twelve.

608. That would leave a total of 358 shearers to the Bourke district? Yes.

609. Did the 130 shed hands go to the same district? They did.

610. As a matter of fact the men who were engaged by you in 1892 were engaged for the Bourke district? Practically. You understand that these were for first sheds; shearing starts in Bourke first. All these men went under engagements to other districts later on.

611. The Acting Colonial Secretary sent for you and Mr. Alexander Wilson? Mr. Wilson was not sent for. I met him on the way up and he accompanied me.

612. At what time of the year was it? I imagine it would be late in the year, while shearing was on, because, if I remember rightly, I was sent for in consequence of a statement that we were sending out shearers through the Labour Bureau to the back country.

613. You say you were sent for owing to some statements in the House or in the newspapers? I have very little recollection—I assume that was the Colonial Secretary's reason for sending for me, I can think of no other reason.

614. You simply engage men at your office and allow them to get to the stations the best way they possibly can? Yes.

615. You say your association has never used the Labour Bureau? No.

616. You have never given a man a letter to Mr. Creer? To the best of my knowledge and recollection I have never given a man a letter to Mr. Creer, and I have never done anything to assist a man to get a free pass. As we had constant applications for free passes and for letters to the Bureau I gave an instruction in the office, which is still standing, that no such letter should be given.

617. What was the object of the Acting Colonial Secretary in asking you to meet him in conference? I cannot say—I can only assume that it was in consequence of something that was said.

618. What was the result of the conference as far as you were concerned? Practically nothing. As far as I know I was simply sent for to give the Acting Colonial Secretary information as to what we were doing, and to help Mr. Creer to refute the charges which had been made. I speak entirely from recollection. The occurrence never assumed much importance in my mind, I did not retain the facts.

619. Do you know that prior to your meeting Mr. Suttor and Mr. Creer free passes were issued without any guarantee from the men that they would refund the money? I do not know.

620. Are you not aware that after your interview with Mr. Suttor, each man who was sent away had to sign an order on his employer to refund the fare out of his first month's wages? I am not aware of anything that was done by the Labour Bureau; I had no knowledge of what the Bureau was doing beyond what was advertised, or of the methods it employed in the performance of its work.

621. You are not aware that anything was the result of your meeting with the Acting Colonial Secretary and Mr. Creer? I have no recollection of anything.

622. You wrote a letter to Mr. Creer to clear him of the charge that the two institutions were working together? I wrote no such letter for any such purpose.

623. Have you written a letter to Mr. Creer upon the question of issuing free passes? I have.

624. You state in your letter, "I have also received several applications for free passes into the country, but I have always informed applicants that we have not the power to grant any such concessions, and that the only means by which they can reach the country on free passes is by the registration of their names with you, and some evidence of their ability to obtain work if sent to the country?" Yes; I have a copy of the letter here.

625. Have you in any case told the men who were engaged by you, that on the presentation of the agreement signed by you, they would get free passes from Mr. Creer? Never. Mr. W. King.
626. Not in any case? No; my instructions that the men who are engaged by us are not to be sent to the Bureau, or have anything to do with it through us are emphatic. If they know anything about the Bureau they have a perfect right to go there of their own accord. We do not help them to go there. 18 May, 1893.
627. You have never informed any of those persons engaged by you that on the registration of their names at the Bureau, and the presentation of their agreements as a guarantee that they would get work in the country, they would be granted free passes? I have never told a man so—it may have been done by others.
628. Is not the latter part of your letter, “and some evidence of their ability to obtain work if sent to the country,” substantially the same thing? It may be. Everybody in the city knew exactly how men could get free passes. It was not my business to make any mystery of the methods of the Labour Bureau. If a man came to me and said he wanted to get into the country, I would naturally tell him—in fact I consider I should not have been doing him a good turn if I did not—“If you want to get work in the country you had better go to the Labour Bureau.” As far as our transactions are concerned we have nothing at all to do with the Labour Bureau, and we do not assist in sending our own men there.
629. Do you know, as a matter of fact, that of the 370 men who were engaged by you for the Bourke district, nearly all went up on free passes? I am not aware of it, from my knowledge of the men and the localities from which they applied,—I should think that in the majority of cases it was not so.
630. You have a list of the sheds, and of the number of men you sent to the Bourke district, I presume? Yes.
631. Does it in any way correspond with the Parliamentary return that is lying on the table? In this return there are some stations mentioned to which we did not send men at all. If I had time to take the figures out, I think the opinion I have just expressed would be found to be pretty correct. It is almost impossible to do it on the spur of the moment.
632. There are some included in that return? I should say that out of the twenty-one men sent to Berrawinia Downs, the lists do not tally at all, because in that case a few of the men were Bourke men, and I should say that not a single man went through the Labour Bureau. In fact I am positive that not a single man mentioned in the first case was engaged by the Pastoralists’ Union.
633. How many men did you engage for Berrawinia Downs? Fifteen, and not a single man went from Sydney.
634. You engaged forty-four men for Glenariff? We engaged more than that. Forty-four men went through the Labour Bureau for Glenariff, and if you engaged more than that number they did not all go? I do not know; I assume that the men engaged by us did all go.
635. I am not saying that they did not all turn up at Glenariff station, but they did not all take advantage of free passes from the Labour Bureau? I cannot say.
636. You say you engaged more than forty-four men for this station, but the return from the Labour Bureau says that only forty-four men applied for free passes? I should say that the majority of the men who were engaged by us did not go to the Labour Bureau, for the reason that a number of them were already in the Bourke district, and in other cases they came from other parts of the Colony, and not from Sydney.
637. How many men did they engage during shearing time? Twenty-eight shearers, and twenty-four shed hands.
638. Have you any idea what they wanted these forty-four men for who went through the Labour Bureau if, as you say, the majority of the men you engaged, and you engaged more than forty-four men, did not go through the Bureau? No; the men we engaged would be wanted for shearing—they were shearers and shed hands. Some of them were already in the district. They would not come down here to go through the Labour Bureau. The men who go through the Labour Bureau must be men who start from Sydney, or who pass through Sydney. In our books we register the name and address of every applicant for work. Most of our engagements are effected by correspondence. In many cases we do not see the men at all.
639. This portion of the Parliamentary return is headed “Number of persons sent by free passes to stations in the western district on production of agreements, &c.,” and you say that if these forty-four men went to Glenariff Station they did not go on your agreements? The majority of the men who were engaged by us did not go through the Labour Bureau, because my figures show that men were engaged in other parts of the Colony, and that some of them were in the district already.
640. How many were in the district? Seven.
641. Out of a total of twenty-eight? I do not know that they were all shearers—some of them may have been shed hands.
642. Seven out of the total number required were in the district? Yes.
643. Where did the rest come from? From other parts of New South Wales.
644. Not Sydney? Some of them would be from Sydney.
645. Were there not a number from other districts? From all over the Colony.
646. You do not think they took advantage of the Labour Bureau? I certainly do not think that those who were in other parts took advantage of it.
647. What other parts were they in? It would be impossible to say without referring to my books. Every man’s address is registered directly we get his application. It is from that place that he effects his engagement. He does not necessarily come to Sydney to engage. I may say that having some idea that this examination would take a certain direction I had this return prepared. I have only set out those whose engagements were effected from the Bourke district. I did not expect that the examination would relate to any other districts.
648. You cannot say whether the seven were all shearers or shed hands? Probably they were all shearers.
649. The return also shows that twenty-six men took advantage of free passes to go to Fort Bourke Station? These men did not go through us at all, as we engaged only five men for Fort Bourke. The others were all engaged, I believe, in New Zealand.
650. Shearers or shed hands? Shearers. As far as we are concerned no shed hands were engaged for Fort Bourke. 651.

- Mr. W. King. 651. The rest of the men who went through to Fort Bourke were engaged in New Zealand? I think they were New Zealanders engaged in New Zealand and brought to Melbourne by the man who was in charge of the shed.
- 18 May, 1893. 652. *Mr. Rae.*] Did they sign agreements in New Zealand? I do not know. Shearing agreements are signed on the station. We do not sign any agreements in the office. We simply effect an engagement and tell the shearer where to go. He deposits his £1 and if he means work he goes up to the station and signs the agreement there.
653. Did you send any men to Nocolche? Yes; thirteen shearers and ten shed hands.
654. Were any of the shearers you engaged living in the district? No.
655. Did any of the shed hands? No.
656. Do you think that any of these took advantage of free passes from the Labour Bureau? I could not say, because the information I have here says the men were engaged in other parts of New South Wales, that is, other than the Bourke district.
657. Did you engage any men for Toorale? We engaged forty shearers.
658. Were any of these shearers living in the district? Yes, five.
659. You do not charge any fee for the engagement of the men? None whatever.
660. They simply leave a deposit of £1? That is all.
661. Are there any further conditions? No; excepting that the man shall turn up at the station on the day he is wanted. All they have to produce is £1.
662. Has he not to produce a reference from his last employer? The only other thing he has to produce prior to engagement is a reference.
663. *Mr. Rae.*] You stated that the Fort Bourke men were engaged in New Zealand. If men are engaged in New Zealand, or anywhere else out of the Colony, and they come through Sydney, is it customary for them to visit your office? No.
664. To have any communication with you? If they come through Sydney the man in charge generally calls in and has a yarn. We have nothing to do with the engagement. He simply comes to say "I am here," and so on. The men were all engaged in the south of New Zealand; but my impression is that they came by way of Melbourne. In that case they would not come to Sydney at all. I cannot speak positively.
665. When men go to your office to engage I suppose you generally inquire where they come from, and where their homes are? Yes.
666. As a general rule you would know whether men who were engaging through you belonged to this Colony or to a neighbouring colony? Undoubtedly we would.
667. Can you tell us either from the office records or from memory about how many men came from New Zealand in the 1892 season who were engaged through your office? A very small number. The number I have here is sixty-eight; but that includes all the colonies. We have shearers from all the colonies writing to us.
668. Would that mean those who engaged in any way, or who engaged personally? In any way—by correspondence and on personal application.
669. *Mr. Langwell.*] Is it not a fact that most of those coming from New Zealand and Tasmania to go to the Riverina district pass through Victorian Branch of Pastoralists' Union? As a matter of fact, the Pastoralists' Union in Victoria did very little engaging last season.
670. Most of the men would go to Riverina by way of Melbourne rather than by way of Sydney? I suppose they would.
671. In speaking of Fort Bourke Station, you stated that men engaged in New Zealand came over here and had no direct communication with your office. Is it customary for your members to engage shearers in that way? Fort Bourke is the only station I know of that engaged shearers last season in that way.
672. I suppose they engaged them through a man who undertook the wool-classing? He had been up there two or three seasons classing or was a shed overseer or something of that sort. He simply brought the men from his own district.
673. Do you keep a record of where your members obtained shearers other than through you? If a man who had fifty shearers engaged twenty-five through your office, you would not know where he got the others from? No.
674. Some of your members may have engaged men in a similar manner from New Zealand or other colonies without the fact being officially known to you? It is quite possible, but I do not think it is likely.
675. Why? Because I think that if men were engaged in any other way than as they came along to the station, they would acquaint us with what they were doing. I never heard of a case of the kind.
676. You do not know officially how many men did go into the district? We have nothing to do with the engagement of men for the stations, unless we are specially requested by the members. If they do not request us it is not our business to find out where they get their men. I assume that if they do not engage through us they engage elsewhere.
677. All your members can engage locally, if they like? Certainly. As a matter of fact, we do not push the thing at all.
678. *Mr. Rae.*] An engagement is a matter of convenience rather than a matter of rule? Yes.
679. Have you engaged many men for the present season under the system which was in force last season? Yes; we have filled eight sheds.
680. I suppose they are all in the western district? All in the early districts.
681. Approximately, what number of shearers would that mean? I should say about 220.
682. Would they be shearers? Shearers alone.
683. Would any of these men be local men? A large number would be local men. I should say that in some sheds more than half the number engaged by us are local men.
684. Have you engaged shed hands for these sheds? Some shed hands.
685. You have engaged about 220 shearers for eight sheds up to the present? Perhaps I did not make myself quite clear—eight sheds are full-handed up to the present. We have made many engagements for other sheds which perhaps are only half full at present.
686. About how many shed hands would the eight sheds represent? As far as we are concerned—nineteen.

687. I suppose you became aware through the press that after your interview with Mr. Suttor, at which Mr. Wilson was incidentally present, it was determined that the issue of free passes indiscriminately, should be stopped, and that free passes should only be issued on the production of a guarantee from the employer that the applicant would be engaged? I am not aware of any such change being made. As a matter of fact, I did not know that that was not necessary from the first. Mr. W. King.  
18 May, 1893.

688. Was the letter you wrote to Mr. Creer written subsequently to your interview with the Colonial Secretary, or afterwards? My recollection is, that it was written almost immediately after the establishment of the Bureau.

689. How do you think it became known to Mr. Creer that a large number of men were engaged through your office? I think I can form an idea. The men who went to Mr. Creer produced our agreement, showing that they had work to go to.

690. Would not the agreements be signed by you? They would be signed by me as agent for the owner—that is, if they were shed hands agreements. We do not sign the shearers' agreements here.

691. *Mr. Langwell.*] You give the shearers a form? We give them a form stating, "We have received your application, deposit, and reference; and we have reserved you a pen at — station, where shearing will start, so and so."

692. That is signed by you as Secretary of the Pastoralists' Union? It is signed by me as Secretary of the Pastoralists' Union, and as agent for the owners.

693. It takes the form of an agreement? It is an agreement, but it is not the shearing agreement.

694. Probably that is what Mr. Creer means, when he says that so many men were sent to the Bureau with agreements from your office? I did not know he had said so. He may call them agreements.

695. What do you term them? Receipts for deposits and instructions.

696. It is practically an agreement that the man would be employed? I suppose in law it would be held to be an agreement. It is not what we understand to be a shearing agreement.

697. It appears that Mr. Creer must have granted free passes to a large number of men in virtue of their holding these agreements, and that he subsequently consulted with the Acting Colonial Secretary, and through him with you on the subject. You are not aware, you say, of the fact that after that consultation it was decided not to issue a free pass unless the applicant produced an agreement from his employer? I am not aware of anything of the sort.

698. Has there been any change in the way in which pastoralists engage men through your office? As far as I know there has been no change. We engage the men exactly as we did before the interview with Mr. Suttor. Certainly there has been no change in consequence of any change in the methods of the Labour Bureau.

699. *Mr. Houghton.*] As a rule, how many men come from New Zealand to shear in this Colony every season? I could not tell you.

700. You stated that you did not engage a large number of men who came through Sydney to shear in the country, but that they were engaged by the owners of the stations? In the particular case cited that is so.

701. *Mr. Langwell.*] It has been asserted generally that the operations of the Labour Bureau tend to reduce wages? I cannot see that it can be so; there is no reduction as far as the shearers are concerned.

702. Do you know the current rate of wages for shed hands in the western district? As far as the Pastoralists' Union is concerned my Council has nothing at all to do with the rate of wages fixed by its members for shed hands—it is left in the hands of the district committees, because we say that the people in the district know better their conditions and requirements and what a fair rate should be, than we can in Sydney. As far as I can remember from the reports I have received the district committee at Wanaaring fixed the shed hands rate at 25s. per week and rations, or 7s. a day under our No. 2 agreement, the men finding their own cook and rations. I do not remember having received any report from the Bourke district.

703. In engaging shed hands you have instructions from the employers as to what the rate of wages will be? Sometimes we have and sometimes we have not.

704. The shed hands signed their agreements with you? Yes.

705. Are not the wages inserted in the agreements? If we know what rate of wages have been fixed for the district, we do; if we do not know, the agreement cannot be completed until inquiry is made.

706. Do you think the engaging of men in Sydney for a distant district like Wanaaring or Bourke tends to reduce wages? I do not see how it can.

707. *Mr. Rae.*] Would you in any case engage men at other than the rates fixed by the district committee? Certainly not.

708. *Mr. Langwell.*] If the district committee decide on a rate of wages for station hands and shed hands, the members of the Union in that district must abide by that decision? Certainly.

709. *Chairman.*] Do you desire to make any further statement to the Committee to-day? During the examination several references have been made to a letter which I wrote to Mr. Creer. I do not know if the letter has been put in evidence, but it is as follows:—

Joseph Creer, Esq., Superintendent Government Labour Bureau, Exhibition Buildings, Sydney,—

Dear sir,

Pastoralists' Union of New South Wales, Sydney, 6 April, 1892.

I have your favour of the 5th inst., and in reply have to say that your suggestion that I should provide men engaged by me with letters asking for free passes comes as a surprise.

Under no circumstances have I authorised any men engaged by me to apply to you for passes, as I have been anxious to leave no ground for any charge that might be brought against the administration of your office, such as have frequently been made, to the effect that the Labour Bureau is established in the interests of this organisation. It is true that several men have asked me for such letters, but I have always refused them. I have also received several applications for free passes into the country, but I have always informed applicants that we have not the power to grant any such concession, and that the only means by which they can reach the country on free passes is by registration of their names with you, and some evidence of their ability to obtain work if sent to the country.

I note that in many instances you have been obliged to keep the agreements furnished by me, and as this is in opposition to my wish I will do myself the pleasure of calling upon you to-morrow morning with a view to ascertaining by what representations from the men you were induced to adopt this course.

Yours faithfully,  
WHITELEY KING,  
Secretary.

The Committee will see that the effect of withholding these agreements would be that if the men got their free passes and their agreements were in Sydney they would never go to the stations, because they would have no authority to go. I stopped it directly I got to know what was being done.

Mr. W. King. 710. *Mr. Houghton.*] In the opening sentence of your letter you state that Mr. Creer had written to you suggesting that you should abstain from sending any more men to him for free passes? No; it is just the opposite.

18 May, 1893.

711. *Mr. Langwell.*] Now that your letter has been put in in evidence, will you furnish the Committee with Mr. Creer's letter? I have searched all through the office, and I am sorry to say that I cannot find his letter.

712. *Mr. Rae.*] You would have no objection to furnish his letter if you had it? I would not. When I could not find the letter it occurred to me that possibly he had sent a note, as he often did, across the corner of a letter, perhaps belonging to the man by whom he sent it down, and I may have let it go back in that way. I hunted all through the letter-books last night and this morning, but it cannot be found.

713. *Mr. Houghton.*] I presume that somebody must have called upon Mr. Creer and stated that you sent him there? I thought that some men had gone there representing that I had sent them.

FRIDAY, 19 MAY, 1893.

Present:—

MR. HOUGHTON, | MR. LANGWELL,  
MR. MCGOWEN.

J. D. FITZGERALD, Esq., IN THE CHAIR.

Mr. Whiteley King recalled and further examined:—

Mr. W. King. 714. *Chairman.*] Have you been able to find the letter that Mr. Creer wrote to you? No; as I explained yesterday, it is not on the file in the office.

19 May, 1893.

715. Have you brought a copy of the forms which the Committee desired you to bring? Yes; the authority which is sent to us by the members of our union to engage hands for them is in the following form:—

Station, 1893.

To The Secretary, The Pastoralists' Union of New South Wales, 63, Pitt-street, Sydney.

Dear Sir,

I hereby authorise you to make the necessary arrangements for engaging shearers and shed hands for this shed for next season's work, and appoint you to act as my agent in the engagement of the necessary number of men, as per particulars supplied below.

Yours faithfully,

Owner or Manager.

Date of Starting  
Machine or Hand Shears  
Number of Shearers on board  
Number of Shearers to be engaged  
Number of Shed hands to be engaged  
Description of Shed hands to be engaged  
Number of Sheep to be shorn  
General duration of shearing weeks.

The following is a copy of the letter which we send to the shearers, upon the receipt of applications:—

Sir, The Pastoralists' Union of New South Wales, Exchange Corner, 63 Pitt-street, Sydney, 1893.

In reply to your application, I am now in a position to reserve a pen for you in one of the early sheds on receipt of £1 deposit (to be credited to you in the station books upon commencement of work) as a guarantee that you will enter upon your engagement. All applications will be dealt with strictly in the order in which applications are received at this office.

Discharge certificates or references from former employers indispensable.

Please fill and return form at foot hereof. If you have previously engaged through this office, please state the number of your certificates.

On receipt of your application, accompanied by a deposit, I will inform you (as soon as the necessary arrangements are completed) of the date on which the shed at which you are to shear will commence work.

Yours faithfully,

WHITELEY KING,

Secretary.

Name and full address  
Nos. of Certificates  
Machine or hand shearer  
Where shearing last season  
Average tally  
Signature

After the matter has gone through our books, and we have reserved pens for the shearers, we send them a letter with a receipt for their deposit in the following form:—

Sir, The Pastoralists' Union of New South Wales, Exchange Corner, 63 Pitt-street, Sydney, 189 .

Herewith I enclose receipt for £1, being amount of deposit accompanying your application for a shearing pen (which amount will be credited to your account in the station books upon commencement of work) and have to advise that I have reserved a pen for you at where shearing will commence (weather and other circumstances permitting) about Please acknowledge receipt of this letter.

Yours faithfully,

Secretary, as agent for the abovenamed station.

N.B.—Shearers are informed that with the reservation of pens the responsibility of the Pastoralists' Union ceases. Any claims which may subsequently arise must be regarded as claims against the station, and must be dealt with on the spot.

*Specimen.*

the sum of pound sterling, being amount of  
Shearing Pen, to be credited upon commencement of work.

Secretary.

716.

716. Have you been able to average the number of men who are registered on your books a month? I find that it is very difficult to get an exact average. There is no great rush upon us during a certain portion of the year. It is only during certain months that we have any number. I find that we do not keep a complete record during the off season, but taking the period from February up to the present time, the average number of registrations per month on the books was 240 shearers. We cannot give an average of the shed hands applying, because a great many men come in and make applications for work, but from their appearance, and the occupations they had previously been engaged in, we consider them so manifestly unsuitable for station work that their names are not registered. That often happens in the case of shearers too. Men come along and say they are shearers, being anxious to get into the country anyhow; but on inquiry we find that they are not likely to be good shearers. As they cannot produce references, or tell us where they shored last, we do not register them. As far as we can give the average for shearers it is about 240 a month, and we have 490 shed hands registered on our books—that is, men who we believe to be thoroughly capable for shed work.
717. In your evidence yesterday, I think you stated that occasionally you had informed men who were anxious to get the work which you had secured for them that there was a Government Labour Bureau? No. What I said is practically contained in my letter to Mr. Creer. Men have come to us and asked us to help them to get free passes, and we have told them that we have no power to help them in that respect, and that there is no means of their getting into the country unless they can show the Labour Bureau they have work to go to. Then we have told them the system pursued by the Bureau, namely, that men must register their names at the Bureau, and prove that they have work to go to. We have simply given them that as general information.
718. Do you think any of your men have travelled to their districts on free passes issued by the Bureau on the strength of their having been engaged by members of your association? I am quite unable to say that they have done so, but I should assume that it is quite likely that they have.
719. *Mr. Langwell.*] The average number of shearers on your books per month during the four months of this year is 240? Strictly it is 240.25.
720. The total number on your books for four months would be 160? Nine hundred and sixty-one.
721. Out of a total number of 960 you have engaged only 220? Oh, no. We may have engaged them all for all I know. The 220 men who are engaged were engaged for sheds which are now full-handed. There may be many men now engaged for sheds which are only partly full. One may require thirty men for his shed, and we may have fifteen already engaged. These fifteen men are not included in the 220 men.
722. I understood you to say yesterday that 220 shearers had been engaged this year up to the present time? Two hundred and twenty for the eight sheds I specified.
723. You said you had eight full sheds and that the number of men would be about 220? We have filled eight sheds, having engaged 220 shearers for those sheds. Of course we have completed a great many more engagements this season, but the sheds for which the other men are engaged are not full.
724. So that they do not count? No; I have only figures for the eight sheds which are full.
725. Can you say about how many have engagements out of the 960? I should say that perhaps 100 of the men are not yet engaged. Some may not have forwarded their £1 deposit or a reference and they are not engaged because we are waiting for them to complete our conditions.
726. You also say that since February you have registered 490 shed hands in your books? We have 490 registered. That of course does not include many personal applications which it would not have been worth while for us to register for the men were manifestly unfit to take the work.
727. You told us yesterday that you had engaged only nineteen shed hands? That is all for the eight sheds specified. As a matter of fact we send very few shed hands away.
728. In the letter you send to shearers on receipt of their application you say "discharge certificates or reference from former employers is indispensable." Do you keep a black list? No.
729. You do not keep a list of the men whom employers tell you not to engage? During the strike I think we had something of that sort.
730. What I mean is that you do not keep a list of men who are unionists or who have not given satisfaction or who have taken a prominent part in shearing disputes? No.
731. You really deal with the applications as they come in? Absolutely in order of priority.
732. Irrespective of any reports which you may have received from former employers? Yes, so long as the men have satisfactory references.
733. *Mr. Houghton.*] By what means did the men engaged by you reach the stations before free passes were issued by the Labour Bureau? Much in the same way, I assume, as a great many of them do now. A great many of them walk from Sydney.
734. Supposing you engaged a number of men to work on stations in the country, and they could not obtain passes from the Labour Bureau in Sydney, would you, on behalf of the station-owners, supply them with railway tickets? No, not unless we had explicit instructions to do so, and an authority to draw on the station owner for the amount. If he asked us to advance the railway fares we would supply the tickets and draw on him for the amount.
735. Otherwise the men would have to pay their own fares, and reach the stations the best way they could? Yes; our business ends with the reservation of pens.
736. I take it that all men required by members of your association for station work are employed through your office? Oh, no! As I said yesterday, only a very small proportion of the pastoral labour required is engaged through our office.
737. What I mean is that all men engaged in Sydney to work for members of your association, are engaged through your office? I do not think so; in fact I know it is not so.
738. Do you know whether any men required by the members of your association are engaged through the Labour Bureau, or through private registry offices? I do not know that any are engaged through the Labour Bureau; but in an accidental way I learned that men are engaged for the country by private offices. I do not think that that applies so much to general shearing, or anything of that sort. I think it is only when an occasional man is wanted for a particular work. For instance, several private labour offices have written to me asking me questions about the country, or the owners of stations, or something of that kind, indicating that they are engaging four or six rabbiters, or something of that sort. It occurs very rarely.
739. You know Hittman's labour agency in Pitt-street? I do not know it. I have had communications of that character with it.

Mr. W. King.  
19 May, 1893.

- Mr. W. King. 740. Do you know whether that labour agency engages any considerable number of men to work for the members of your association? I do not know that it does, I never heard of any case.
- 19 May, 1893. 741. You have not seen the notices published outside that agency at different times "Wanted so many hands for such and such a station"? I have never seen any. I do not know whether I quite understood what Mr. Langwell asked me just now with reference to a black list. I understand him to mean by a black list a list indicating that certain men should not be engaged because they are prominent unionists.
742. Mr. Langwell.] Do you receive instructions from any employers not to engage certain men? No.
743. What would you call a "satisfactory reference"? A reference signed by any man who, upon reference to our list of stock owners, we find to be a sheep owner—a reference that bears on its face the mark of genuineness. We have had references sent which on their face were forgeries, and which, upon investigation, we found were forgeries.
744. Suppose any person outside your association—myself, for instance—were to certify that a man is a good shearer, would it be considered a "satisfactory" reference? If you sent any one to me with a reference from yourself, whom I know, it would be quite sufficient.
745. Chairman.] Do you keep minutes of all the proceedings of your association? I keep minutes of the proceedings of my council.
746. In the minutes of your council, I presume, you record all motions that are passed at its meetings? Yes.
747. You said just now that during the strike you did not keep a black list? Not a black list.
748. What was it? It was merely a confidential return sent by the station owners to the office in connection with the men we had engaged for them as shearers during the shearing difficulty. You will understand that in the hurry of engaging a large number of men, it is impossible for us to wait for references and all that kind of thing. We could not tell whether a man was really a good shearer. We had to take his word that he was, and we sent him up and paid his fare. What we were desirous of finding out was which men had deceived us as to what they could do.
749. Mr. Langwell.] Did you receive information from the secretaries of district committees advising you not to engage certain men in certain districts? I do not remember receiving anything of the sort.
750. Chairman.] I presume that return was compiled on the motion of your council? I do not think it was. I think it was undertaken on my own motion.
751. Without any instructions from the council? Yes.
752. Did a man's action or prominence in a trade union have anything to do with the character of the list sent down by the station owner or the list sent by one station owner to another station owner? I hardly follow you.
753. I understand that there is a list current amongst the members of your association? Certainly not. In the old times—that is long before the Pastoral Union was established—it was the practice for one owner to send a list to another owner in his particular district, of the men thought not competent or not desirable to have in his shed.
754. Do you know of any custom among stock owners of marking certain men from one shed to another shed at the present time? No; I know that in years gone by one sheep owner who had finished his shearing before his neighbour commenced, would send across a list on which was indicated the desirableness or otherwise of engaging such a man for his shed, but I have not heard of anything of that sort for a long time past.
755. Is there any further statement which you desire to make to the Committee? I only wish to say that men have very often come to me with letters from Members of Parliament asking me if I could give a man work, and in several instances men have come to me with letters from Members of Parliament addressed to Mr. Creer, upon which he had written in the corner asking me if I could give the men work. I have in my possession letters addressed to Mr. Creer by Members of Parliament asking him to give the bearers free passes to Bourke. One letter reads:—"Please give the bearers Messrs. so-and-so passes to Bourke. They say they can obtain employment, and their cases appear to be deserving ones."
756. By whom is it written? I have no desire to withhold any information; but I do not think it would be quite fair to give the name. I do not want to be charged with a breach of confidence. It was sent on with this note by Mr. Creer, "Can you put these men on at any of the stations?"
757. Mr. Langwell.] You did not send these letters back? No.
758. I take it that Mr. Creer did not grant passes if he had not these letters in his possession to show that the passes had been granted, consequently there are some cases in which passes have been refused? He may or he may not, I do not know what he would do.
759. Chairman.] What was your procedure upon the receipt of such letters? Both letters were sent about the middle of last year. If we wanted men, and the bearers of the letters were respectable men and could give us references, we would have no reason for refusing them. If we considered them as applicants we would ask them to make an application in the usual form. But as a matter of fact, these particular men got no work from us, because they were not shearers, and we had no reason for sending shed hands into the country. We had no ordinary station work for them.
760. Mr. Houghton.] How many letters written by Members of Parliament have been sent on to you by Mr. Creer? I suppose I received twelve or fifteen.

TUESDAY, 23 MAY, 1893.

Present:—

MR. HOUGHTON,  
MR. RAE,

MR. MCGOWAN,  
MR. WADDELL.

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Mr. William Currie called in, sworn, and examined:—

- Mr. W. Currie. 761. Chairman.] What position do you hold? I am Manager of the Steamship Owners' Association, Free Maritime Labour Office.
- 23 May, 1893. 762. What are the objects of this labour office? That I cannot say. I am supposed to come here and give evidence as to the working of the Government Labour Bureau.

763. Will you explain the functions of this labour office? That I cannot say; your best plan will be to summon the Chairman of the Association. I am simply an employee of the Association.

764. You perform certain functions, do you not? Yes; simply according to the instructions of our Association.

765. You do something—you do not do it unconsciously? Certainly not. I simply do it according to the instructions I receive from my Association.

766. According to those instructions do you engage men? We do not engage men.

767. In accordance with the rules of your Association you keep an office where the names of certain men are registered for employment? Any man who comes to the office and wishes employment on the wharfs gets it if he is able to do the work. One time we did register the names in order to keep the men together, but now we do not. No matter who come, as long as they want work, they get it if it is to be had, without regard to kin, creed, or anything else.

768. The office sends men on to the wharfs as they are required—you engage men? We do not engage men. We may get an order from a certain company to send so many men. There is a waiting-room where the men can hang round. They are directed to where work is available whenever a boat comes in. I get my orders; I simply tell the men off. There may be 500 or 600 men there.

769. *Mr. McGowen.*] What do you mean by the expression, "I get my orders";—do you mean that you get an application for a certain number of men? I get my orders from the wharfs for fifty or sixty men.

770. *Chairman.*] And you supply the men? The men are waiting about there, and I send them off to get the work.

771. What qualifications are the men required to have in order to obtain employment? They do not require to have any qualification as long as they can do a good hard day's work.

772. Do you engage any man who applies to you privately provided that he is able to do an honest day's work? Certainly.

773. There are no disqualifications which may prevent him from being engaged, such as being a Unionist or anything like that? Not the slightest. I do not recognise either free-labourers or Unionists. No matter who come if they want work. I am a neutral party in the matter. I take those whom I think are best able to do the work. That is what I am placed in the office for.

774. Speaking from memory, about how many men in a week do you assist to obtain employment? The average number of men who go out—perhaps one man may go out twice—would be between 600 and 700 men per week.

775. To what do you send them—to all kinds of wharf work? It does not matter what it is, to whatever work is obtainable.

776. Coal lumping? Yes.

777. Able seamen? That is a different grade altogether.

778. Do you send able seamen to ships? Yes; at the approval of the officers of the ships.

779. Do they apply to your Bureau for seamen? Yes; we keep a register of seamen. We keep the addresses of the men in case we want a man in a hurry, and if we do we send a messenger for a man.

780. I suppose you have a record of all the men who have been sent to employment from your office—will you get the particulars for the Committee? My report goes in to the Association every week. I should advise you to summon the secretary who receives my report.

781. Do you know of any cases of distress amongst the men with whom you come into contact at the Bureau? Yes; I have met a good few cases and I have always tried to relieve them.

782. Are you empowered in any way by your employers to relieve cases of distress? I am instructed to give married men, especially those with families, a show, if possible, if they are able to do the work.

783. The class of work is wharf work and coal lumping? Yes.

784. Any stewards' and cooks' work? Yes; all branches of maritime work; it is a free maritime labour office.

785. What wages do you pay to those who are sent through your office? As regards cooks and stewards, seamen and firemen we do not trouble at all about the wages. The wharf labourers get 1s. an hour for day work and 1s. 6d. an hour overtime.

786. Is that the ordinary wage? Yes; I understand it is the wage which has been paid right along.

787. For how many hour's work? The wharf work varies very much; sometimes a boat may start at 6 o'clock in the morning and finish about 10 o'clock. The men are not always working; they are standing by to obtain work from 6 o'clock in the morning to 6 o'clock at night.

788. Are they paid for that? Certainly not. If a steamer comes in and she wants to start at 6 o'clock in the morning and the men are there they get a show. As a rule, lately it has not lasted for more than three or four hours.

789. You do not make any inquiries, you say, as to whether the men are Unionists or non-Unionists, or anything else? No.

790. Have you at any time during your connection with this office, had any knowledge of what is known as a black list; that is, a list of certain men being prevented from obtaining work through their having taken prominent part in labour matters or disputes? Not to my knowledge. Through quarrelling with other men I have had to black-list some men. I do not know whether they are Unionists or not—and give them a fortnight's holiday.

791. What do you mean by saying that you have had to give the men a fortnight's holiday? If a man begins to kick up a row on a wharf and dispute with his fellow workmen, and it is reported to me by the wharfinger, I say to the man, "You can take a fortnight's holiday, as you cannot agree with your fellow-workmen," but I never block a man for that.

792. It has been currently reported that certain men have been blocked through having taken a prominent part in the late maritime dispute? Not by me.

793. *Mr. McGowen.*] You have never received any instructions from your Association to refuse employment to any of these men? None at all. That I can say conscientiously.

794. *Chairman.*] You are not able to provide work for all the men who apply to you? Sometimes they do, but sometimes it cuts very small.

795. How does the work vary? It varies to a great extent, according to the cargoes coming into the port, and the cargoes going out.

796. Does the season of the year make any difference? Certainly.

Mr.  
W. Currie.  
23 May, 1893.

Mr.  
W. Currie.  
23 May, 1893.

797. How about the coming winter season;—is there likely to be more or less work? My opinion for some time has been that we shall see about the worst winter this year that the Colony has ever seen.

798. Do you think that will be the case round the wharfs? I think it will.

799. You think there will be great distress? I do not say that I think there will be great distress. There will be a certain amount of work. The cargoes which are coming in are very small.

800. Can you suggest a remedy for this state of distress, or lack of employment? There might be various schemes. One point is this: that nearly all the cargoes which used to come in from the other colonies are now being carried right through by other steamers. There has been a very great falling off in the imports for the last three months.

801. *Mr. Houghton.*] There is not so much transhipping as there used to be? Very little. There used to be a lot of work done through the transhipments, but now the stuff goes right through by a through steamer.

802. *Mr. McGowen.*] We understand, from the manner in which you work the Bureau, that it is simply an office where you do not engage men? No; we do not engage men in the proper sense of the word. I am simply a servant of the Association.

803. Without any instructions? I have my instructions, or else I should not be there.

804. Your instructions are that if men are wanted to unload a vessel you are to send them? Yes.

805. The men are informed that before they can get employment in the unloading of a vessel they have first to see you? No; it is a thoroughly understood thing now with all the men about the wharfs that they have to receive a ticket from this office. They get employment without the ticket occasionally.

We do not make any objection to that as long as they are able to do the work. We leave that question to the judgment of the wharfinger, but still it furnishes a record. I pick out the men and I send them down to the boats. I may send them to the A.U.S.N. Co.'s Wharf, to Howard Smith's Wharf, to Circular Quay, or anywhere—it does not matter where, so long as the number that are required are sent.

806. The ticket shows that the men have been through your office—it is a proof of their *bona fides*? Certainly.

807. Have you a copy of the ticket? Yes; it reads as follows:—Casual.—Free Maritime Labour Office, 36 Clarence-street. 189; name; commence work at To.

807½. You do not keep a record of the men who want work? I did keep a register, but I have not kept it up for some time, for the simple reason that I know the men. There is not one man out of the 600 or 700 men who come round the Bureau that I do not know both by name and face.

808. You have received certain instructions from your employers to see that married men should get a preference when there is work to be done? Certainly.

809. And to prevent any man from getting two jobs as against another man getting only one job? Yes; we try to divide the labour as much as possible.

810. How do you do that without a register? I can do it.

811. You may have a very good memory to remember the faces of 600 or 700 men, but you cannot tell whether one man worked last Tuesday, and another man did not? No; it would be a very hard job for anyone to do that.

812. How can you prevent one man from getting two jobs as against another man getting one job? I give these tickets out every morning before 6 o'clock. I know the men who have had a ticket.

813. From memory? Yes; I know them by the list I take.

814. That is something after the style of a register? Not exactly.

815. Suppose you give 300 tickets on Monday morning, you put the names of the 300 men in the book? Not in a book, but on a list. If a man has had a ticket and he comes back when I am giving out other tickets he knows that I will say to him, "You have had a show to get work; it is your own fault that you have not got work. I shall give the other men a show."

816. What do you mean when you say it is "his fault"? Some of the men, even after they have got a ticket, hang back if they know that another boat is coming in that will give them a longer job. If they have the slightest idea that another steamer is coming in that will be a longer job, instead of taking the work that is offered they will rather hang back taking their chance that they may be missed and get a ticket for the longer job.

817. I suppose a large percentage of the men are married? Yes.

818. It does not require much discrimination on your part to give them a preference—as a general rule I suppose, if one man is employed on the Monday it will be another man's turn on the Tuesday, and so on right through the week? That is the way I do, to the best of my power.

819. That is what you mean when you say that you have an instruction to give a preference to the married men? Yes.

820. Can you mention any case where you have given a married man two days' work as against one day's work to a single man? I can. For instance, I gave married men employment yesterday, first on the "Oonah," where they got about two hours' work, and then on the "Flora." These are men who have come to me and represented in a very clear light that they were almost starving, and they proved their statements.

821. You say that you keep a register of seamen;—you mean that you keep a record of their names in the book? Yes.

822. And their addresses? Yes; and also the last ship they were discharged from, and the date of their discharge.

823. Have you any reason for reporting their discharge? As a rule, the chief officer or engineer would like to know the ship a man last belonged to before employing him.

824. Do not they ever make any inquiry as to the reason why a man was discharged? There is no necessity if he has a V. G. discharge.

825. The ship that a man may have been discharged from may be away from the Colony when the officer wants a seaman;—does he not want to know why he was discharged? He may ask a man that question. I do not, as a rule, ask the question. I leave the officer in charge to ask the question.

826. During the last maritime trouble a man was discharged who was a delegate of the Seamen's Union from the ship over which all the difficulty occurred. In a case of that kind, would you register the man at your Bureau if he applied to you? Certainly we would, as long as the Association had no objection.

827. Supposing you had registered the man who was discharged from the "Corinna";—do you think your Association would have remonstrated with you? That I am not in a position to say. 828.

828. You are doubtful? I am not at all doubtful, because I think our Association have overlooked these matters entirely.
829. If you are not doubtful you can give an answer straight away? I cannot offer an opinion, because I do not know the circumstances of that case. It occurred before I joined the Association. It was long before the strike.
830. Are the instructions which you have received from your Association of such a nature that if a man were to apply to you under similar circumstances you would register him at your Bureau? I might register him, but as far as the registration is concerned it would not be any criterion whatever, because the engineer might not approve of him.
831. Would you not send the man down to the position? If the man was at all suitable I would send him down for the opinion of the engineer.
832. You mean suitable as far as his ability is concerned as a workman? Yes.
833. There is nothing in your instructions that would prevent you from so acting in a case of that kind? No.
834. As far as your instructions go you can employ any man, no matter whether he was discharged from a vessel because he took a leading part in the maritime strike? —
835. Do you remember a little difficulty which occurred on the steamer "Tweed"? I do.
836. Eleven men were sent down to the "Tweed" from the Government Labour Bureau—six deck hands and five firemen, I think? Yes.
837. Were the men sent through you;—did they report themselves to you as they came from the Labour Bureau? No; I have often said to Mr. Bloxham, "If you know any good able-bodied men who want work and I can assist you in any way I shall certainly do so." On this occasion I think I telephoned up to the Bureau and asked, "Have you any seamen or firemen?" Mr. Bloxham said, "We have a number on our books," and some men came down.
838. How many? I could not say; but the men had neither discharges, nor permits, nor anything else. They were utterly useless. They were the biggest lot of scrubbers I ever looked upon in my life.
839. You could not give them work, simply because they were not fitted for it? No, they were not fitted. I told Mr. Bloxham that the men had not permits or discharges. One had a permit, I think, but it was tattered and torn in all directions.
840. Therefore, you could not allow the men to go to the "Tweed"? I could not possibly.
841. You say the men are waiting about your office from 6 o'clock in the morning until 6 o'clock at night? I did say so, but I should explain that it just depends on the orders we have on hand the night before. If we know that the boats are not going to commence work until 8 o'clock in the morning I simply put a notice upon the board saying that there will be nothing at all until after breakfast.
842. There are between 600 and 700 men that you can see any day in the week? Yes.
843. Can you say how much employment a week a man gets from your office? No; I should have to go through the various books to get the information.
844. Do you think every man gets eight hours work a week? Yes.
845. Do you think it goes much beyond eight hours work a week? Yes; some of these casual men have earned £2 5s., £2 10s., and £3 in a very busy time, but not in these times.
846. Could you not give us any idea of what these men average from one week to another? I could not give you an average unless I went through the whole lot.
847. Is it an over estimate to say that each man earned 24s. a week all the year round? I do not think it is. For six months they might average a lot more—they might average enough to keep them going for the other six months in the year.
848. They never average more than £2 10s. a week do they? Oh, yes.
849. With overtime? Yes; I have seen casual hands make £3 and £3 5s. a week.
850. Even supposing that they did, that would not keep them for six months out of the year if they worked six months? You could strike an average of about £1 a week for the other six months.
851. Do you think the men average 24s. a week all the year round? My opinion is that they average a little bit more. I mean those who stick to their work and attend to it.
852. Sober, steady, willing men? Yes.
853. Do you think the average would be 30s. a week? It would come very close to that amount.
854. *Mr. Rae.*] Since the institution of the Government Labour Bureau, have you noticed any difference in the labour market in regard to the number of men who are seeking employment in wharf work? I have noticed a good deal of difference one way and another. I notice that a good number of country people have been coming down and seeking employment.
855. Could you say that it has been more noticeable from the time the Labour Bureau was started? They have been coming and going in various ways.
856. You say that there are a large number of country people seeking employment on the wharfs;—would you say that, on the whole, the number has been more or less during the last eighteen months? I would not say that there have been more. I think there have been fewer. A number of old faces that we had about the place have returned. They have gone up country and come back again and asked to get back to work, which, of course, we never refuse.
857. Have there been any number of new applicants who were not formerly following that line of work? Yes; there have been a good number lately in Sydney.
858. Country people? No, more city men. Men from the various warehouses, even storekeepers in large houses, who were only too glad to start on the wharfs if they can get a show.
859. On the whole, there have been more of late than there used to be? Yes.
860. Do you think the Labour Bureau has had any noticeable effect on the labour market in Sydney? Not the slightest, not as far as I am concerned.
861. Can you say whether the wages in the various branches of maritime labour have been lowered of late? No, not to my knowledge in any sphere.
862. Have they stood at about the same? They have stood at about the same. From what I understand they were five years ago they are exactly the same.
863. The increase in the number of applicants for work on the wharfs and in other branches of maritime labour has not had any effect, so far, on the rate of wages? Certainly not. We have never attempted to reduce wages at all.
864. Do you think a reduction is likely to be brought about—is there any move in that direction? Not as far as my knowledge goes.

Mr.  
W. Currie.  
23 May, 1893.

Mr.  
W. Currie.  
23 May, 1893.

865. Are the rates of wages fixed by the Steamship Owners' Association, or is it optional with each owner to employ the men at whatever wages he may choose to give—is there an association scale? That I do not know. Each member of the Association is paying the same rates of wages, as far as my knowledge goes.
866. *Mr. Houghton.*] There is a standard rate for each kind of maritime labour? Yes; wharf-labourers are paid 1s. an hour from 6 a.m. to 6 p.m., and 1s. 6d. an hour from 6 p.m. to 6 a.m.; coal-lumpers get 1s. 6d. an hour for day-work and 2s. 3d. an hour overtime work. The coal-lumping work varies a great deal. A man may get two or three days work in the week right through.
867. *Mr. Rae.*] Are these general rates fixed by mutual agreement amongst the steamship owners? That I cannot say. As far as I can see there is not the slightest inclination to reduce the rates of wages. Of course, the market is over supplied with labour, but still the men have to take their chance.
868. There is no such thing as under-bidding? Not the slightest.
869. *Mr. Houghton.*] Will you explain the meaning of the term "Free maritime labour"? The meaning is very simple. It is that a man is free to come to seek employment and if there is any employment to give to him he will get it.
870. It has no reference whatever to Unionism? Not the slightest.
871. How long have you been manager of the Bureau? Since August, 1890.
872. Had you any previous connection with maritime labour matters? Not directly.
873. Were you in any way employed in maritime labour matters previous to your engagement as manager of this labour office? I have been in the shipping business since my boyhood.
874. Where? Both at Liverpool and in the colonies.
875. You lived in Queensland for a long time? Yes.
876. In what capacity were you employed there? I was shipping clerk to the A.U.S.N. Company.
877. You have stated that as far as your knowledge goes there has been no alteration in the rates of wages for maritime labour during the last five years? Yes; not to my knowledge.
878. You stated that wharf labourers are now paid 1s. an hour for day labour, and 1s. 6d. an hour for overtime? Yes.
879. Are you aware of the fact that previous to the last two and a half or three years, wharf labour was paid at the rate of 1s. 3d. an hour for day work, and 1s. 9d. an hour for overtime? I am not aware of that fact.
880. Notwithstanding that you have had all this connection with maritime labour? Yes; but the matter of wages never concerned me at all.
881. I understand that you took up the managership of the Bureau shortly after the termination of the maritime labour strike, in 1890? It was at the commencement of the strike—on the 29th August.
882. You have stated that provided a man is capable of doing the work required of him, he is entitled to employment through the medium of your office? Yes.
883. Can you give the name of any man who has applied to your office for employment, and been refused on the ground that he took an active part in the maritime labour strike? Not to my knowledge at present.
884. In the engagement of men, you make no distinction whatever between Unionists and non-Unionists? Not the slightest.
885. What means have you of ascertaining the capacity of any man who applies to you for employment? I have nothing whatever to do with that. If I send a man down it is entirely with the wharfinger to say if the man is suitable to do the work or not.
886. You stated in answer to the Chairman that as long as a man was capable of doing the work required of him you sent him on? Yes; that is exactly what I say now.
887. Now you say it is for the wharfinger to decide the capacity of any man sent to him by your office? Yes.
888. In the case of a man who is applying for employment for the first time through your office, how can a wharfinger possibly ascertain his capacity before the man is tried at the work? He can tell in a very short time. A wharfinger who is accustomed to the working of ships and to wharf labour will find out in a short time whether a man can do the work or not.
889. How did you form the opinion that the Government Labour Bureau has had no noticeable effect on the labour market? I said as far as we were concerned.
890. Do you think your office has had any appreciable effect on the labour market? That is rather a wide question to ask.
891. It is not a means of providing employment but it is only a means of enabling men to get to their employment is it not? It is an office established by the Steamship Owners' Association, and they can explain their views far better than I can.
892. Is it not a fact that at the institution of this Bureau you were endowed with certain instructions as to the manner in which you would conduct the business of the office, and what was the nature of the instruction? At the time it was opened I was endowed with no instructions at all.
893. Was a pledge required of the men applying to you for employment? No.
894. Is it a fact that for a long time after the institution of your office a man known to take any part whatever in Union matters —? Excuse me, sir, you are getting away from the point of issue. I decline to answer the vague questions you are putting.
895. *Chairman.*] In answering a question you used the expression "casual men"—what are they? They are all casual men round about there.
896. There are no permanent hands at all? Yes.
897. How many? The A.U.S.N. Co. have their permanent hands.
898. That is a permanent staff? Yes. At nearly all the wharfs they want a certain number of permanent hands to look after the interests of the wharf and the stacking.
899. What would they be—watchmen, and so on? Not exactly watchmen, but leading men.
900. You stated that it seemed to you that a number of country people are coming into the city? There are a good few people coming in from the country who have been attached to the Bureau before.
901. Do they get down towards the wharfs? Yes; a man comes down from the country and he says, "I have returned again; is there any show of getting work"; and I say, "Yes," if there is any show. They are city men who have gone to the country and come back again.
902. Through the Labour Bureau? That I cannot say.

Mr.

Mr. George Lewis, District Government Officer, called in, sworn, and examined:—

903. *Chairman.*] What position do you hold in the Government Service? I am District Government Officer. Mr. G. Lewis.  
23 May, 1893.
904. Have you any knowledge of village settlement schemes? Yes; more particularly with reference to New Zealand. I had an opportunity last year of observing village settlements in New Zealand, and obtaining information from the most reliable sources with reference to them.
905. Has that information been embodied in an official report? Yes.
906. Has the report been presented to Parliament? It is about to be laid upon the Table of the Legislative Assembly.
907. You examined the whole of the village settlements in New Zealand? No; unfortunately my time did not permit.
908. How many did you examine? I examined several in the North Island. Some were in the early stages of development, and some were more permanent.
909. How many men were there in each settlement? I will give you the figures for the settlements in the province of Canterbury, in the South Island. There were 166 settlers with their families; they obtained areas ranging from 4 to 50 acres; the total area selected was 5,217 acres, and the area under cultivation was 3,613 acres. There were twenty-two settlements, namely:—Ashburton, Arundel, Alford Forest, Alford, Arowhenua, Chertsey, Dromore, Fairlee Creek, Glenavy, Geraldine, Hakatcramea, Hinds, Hurunui, Medbury, Oxford, Oraii, Rakaia, Rangitota, Winslow, Waitaki, Waimati, Waitaki.
910. There is a Labour Bureau in New Zealand? Yes.
911. Did you become acquainted with its working? Yes; I inquired into its working and forwarded a report on it to the Government.
912. Is it worked in connection with village settlements? Yes; it is linked rather intimately, I think, with the village settlement system.
913. Were they both formulated at the same time, or was the Bureau in existence before the village settlement system was introduced? I think the village settlement system was introduced about 1874 or 1875, but it was revived by the late Mr. Ballance, in 1886, and from that date it has been attended with success. The Bureau was started, I think, about two years ago.
914. It is part of a Department of Labour? The Department of Industry.
915. I presume its functions are to register the names of men unemployed? Yes; its functions are to establish branches in various centres in both Islands; to observe where labour is plus and where work is minus, and to endeavour to equate both of these.
916. Is there a central office? There is a central office in the seat of Government at Wellington.
917. I presume it is under the superintendence of the Minister of Industry? It is under the superintendence of Mr. Rees, who is very ably supported by Mr. Tregear.
918. Amongst the schemes for equating the two things are village settlements? Village settlements come in as an incident rather than as a part of the Bureau. In New Zealand they have started a system of co-operative labour in connection with public works.
919. I presume you have made a report on the subject to the Government? I have.
920. Have you a copy of that report? I have, but I would explain to the Committee that it is a confidential report at the present time. It has not yet been laid upon the Table of the Legislative Assembly.

THURSDAY, 25 MAY, 1893.

Present:—

MR. HOUGHTON, MR. LANGWELL, MR. MCGOWEN,		MR. RAE, MR. WADDELL, MR. WALL.
------------------------------------------------	--	---------------------------------------

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Mr. Thomas Hicks Hall sworn and examined:—

921. *Chairman.*] What position do you hold? I am Secretary of the General Labourers' Union. Mr.  
T. H. Hall.
922. Did you issue a circular conjointly with Mr. Wood, and send a copy to each Labour Member of the Legislative Assembly? Yes. 25 May, 1893.
923. In the circular some statements are made with regard to the operations of the Government Labour Bureau;—do you desire to explain its operations in the Western District? It just depends.
924. The purport of the circular was to complain of the operations of the Bureau? It was, but it contains one error. I stated the number of free passes issued for the district at 1,058, but I found afterwards that I had understated the number according to the return.
925. The Union you represent is a very strong body? It numbered 2,870 men in that district alone in 1892.
926. Who are not all employed, I presume? Not more than one-fifth of whom are employed.
927. If there is any employment in the Bourke district I presume the members of your Union are able to do the work? Yes. I can safely assert that there is no class of work, excepting probably such work as the management of stations, which we cannot find men capable of doing amongst our members. The men are capable of doing all classes of bush work.
928. I presume there is no necessity to send to any bureau in Sydney for men to perform the work in that district? It is just the other way about. We would prefer if you could find work for 1,000 of those unemployed there.
929. Then the sending of these men by the Bureau was unnecessary? It was worse than that. It was a straight out crime to send men to take the work of those who were on the ground.
930. Do you think that has been done? I can give instances of its having been done. I stand by the whole of the statements in the circular, except the one in which I understated the number of free passes issued.
931. Have you ever known any cases where the wages have been reduced through the operations of the Labour Bureau? Certainly.
932. Can you give any instances? The whole of the Paroo stations, without exception.

Mr.  
T. H. Hall.  
25 May, 1893.

933. The Superintendent of the Government Labour Bureau has corrected your statement with regard to the 1,058 free passes, and he says that that number applies, not to the Bourke district, but to the whole of the Western Division, ranging from Dubbo to the Queensland border? The men sent to Dubbo and the Queensland border were very few, probably the odd fifty-eight; but to the 1,000 we must add the number sent by Members of Parliament, and the 566 sent to different stations, who are not included in the 1,058.

934. You did not state in the circular that the men were all shearers? No.

935. *Mr. Langwell.*] You never inferred that they were? No; I am speaking generally of shearers and labourers.

936. *Chairman.*] You stated that the Bureau has had a tendency to reduce the rates of wages—can you give some instances? Immediately on the conclusion of the shearing last year—that is, after the busy season for which these men were specially brought, and which lasts from six to eight weeks—the whole of the stations on the Paroo, from Wanaaring to Hungerford, made an all-round reduction of wages, not by simply sacking all hands in a body and saying, “I am going to reduce the wages,” but by discharging a man here and there, wherever it was convenient, and replacing him by a man at 5s. per week less.

937. What is the rate per week? Twenty-five shillings has always been the rate previous to the present season.

938. And it has been reduced to £1? Yes, with the exception here and there of an occasional old hand, who, from a special knowledge of the country—it is scrub country into which every man cannot go—is still kept on at a higher rate. That occurs only here and there. The big bulk of the station hands have been reduced by 5s. per week.

939. Have they been replaced by men from the Government Labour Bureau? The men who were brought up at shearing time obtained from six to eight weeks, in some cases ten, weeks' work, and then they were thrown out of work. Two or three weeks on the track exhausts what they have earned; they are hard up and have to take any work. The pastoralists have no necessity to send to Sydney for special men for this work, because they have men at their doors. It was the introduction of so many into the district for the shearing season which gave a surplus of unemployed labour, and thus caused a reduction of the wages.

940. You think the reduction was absolutely brought about by the men who were sent from Sydney through the Labour Bureau? Yes.

941. You know of sheds where a reduction has been brought about in this way? Yes; I can speak distinctly of Berrawinia, Elsinora, Nocolchi, and Urisino. I specify these four stations in this return for the reason that some of the other stations had reduced the rate by means of the free passes given by the Pastoralists' Union in the previous year. But, of course, to explain thoroughly the working of the Bureau it is not necessary to prove that the men were brought from the Bureau to these particular sheds. I could give the names of, say, twenty sheds, not mentioned in this return, which reduced the wages last year; not because they were getting the men themselves, but because the crowd of unemployed labour which was caused by the men sent up gave them the chance. For instance, according to this return twenty-nine free passes were obtained from the Labour Bureau for Elsinora. When this station started shearing, the men refused to go to work at the wages offered, with the result that they all left the station, with the exception of two, and a fresh lot of men were brought from Sydney the following week, and accepted the wages offered.

942. Which was a reduction on the standard wages? Yes; you will understand that I am speaking of the labourers, and not of the shearers.

943. *Mr. Houghton.*] Did the fresh lot come through the Labour Bureau? That I cannot assert. I can only assert that, according to this return, they had twenty-nine men through the Labour Bureau. Whether the second lot were a portion of the twenty-nine men or not, I cannot say. I may add that for the second lot they made certain provision, which prevented the men from getting away. A man was sent up with them to take charge.

944. *Chairman.*] Who sent the man? Mr. Whiteley King, of the Pastoralists' Union.

945. Do you mean to say that twenty-nine men got free passes through the Labour Bureau, who were accompanied by Mr. King's man? I say they got twenty-nine passes from the Labour Bureau, but I would not say whether the second lot came through the Bureau. I only know that they came from the Pastoralists' Union.

946. *Mr. Langwell.*] What you mean is that according to the return, twenty-nine men went to that station, but you are not prepared to say whether they were in the first lot or the second lot? That is it. The man who came with them got them, in addition to their free passes, coach fares to Wanaaring from Bourke; and from Wanaaring to the station, waggonettes were provided.

947. *Chairman.*] At whose expense? The coaches and waggonettes were provided at the expense of the station, or the Pastoralists' Union.

948. *Mr. Langwell.*] You say you understated, in your circular, the number of free passes issued? Yes.

949. Have you gone carefully through the return? No.

950. Had you done so before you issued the circular? I misunderstood the purport of the return. I took the whole of the free passes, as stated in answer No. 1, issued by the Bureau, to the Western District, at 1,058. I have been informed since, that had I gone through the return correctly, and added up the different totals, it would have made more than 1,058.

951. You do not infer in the circular that the men were all shearers who were sent to the Western District? There is no question of shearers; they were simply working men.

952. In the first place you say “for Nocolchi Station, the credit is sixteen passes. At this station, the wool-scouring is done by a contractor who engaged some ten of his men in Melbourne, agreeing to pay boat and rail fare to Bourke. The boat fare (10s. each) was paid alright, but the Labour Bureau supplied the trainage”;—do you know that to be a fact? Yes; the statement of the men who were so engaged is my authority.

953. Did you get the information from any of the men who were engaged in Melbourne, and went up through the Labour Bureau? My informant, who I believe to be a reliable man, was working for the same contractor, Mr. J. Smith.

954. Was he one of the men engaged in Melbourne? He told me that he was.

955. And that he got a free pass himself? Yes. I know misstatements have been made at times, and I should like to add that he said that in giving his name he gave a wrong address to the Labour Bureau. He did not tell them where he had come from truly.

Mr.  
T. H. Hall.  
25 May, 1893.

956. Do you know of many similar cases where men who have been engaged through the Labour Bureau have given false names and false addresses? For me to come here and say that I know people who have defrauded the Government would be rather invidious.

957. Have you been informed that such is the case? Yes; in twenty or more different cases.

958. In your circular you say that one half of the twenty-six men sent to Fort Bourke Station were New Zealand shearers, engaged by the shed overseer, a wool-classer from that colony;—is that a fact? Yes; I think I can pretty safely swear to that as being a dead solid fact. But there again the possibilities are that when these men got their free passes they gave wrong names and wrong addresses.

959. You think the same thing was done in regard to Fort Bourke Station as was done in regard to Nocolechi Station? Yes.

960. Do you know that they are from New Zealand? Yes; I knew several of them personally in New Zealand.

961. Just about the time these men were sent into the Bourke district had you anything to do with the sending of a petition from the unemployed in the district to Sydney for presentation to the Premier? It was drawn up during my absence from Bourke. I only came through just in time to see it posted, I think, to yourself.

962. You say that the Bureau has had a tendency to reduce the wages in that district? Yes.

963. You have named some stations where a reduction has taken place;—since the establishment of the Bureau has there been a general reduction in wages? A general all-round reduction.

964. Do you attribute that partly or solely to the granting of free passes? Warraraweena, for instance, reduced the rate a fortnight since from £1 to 17s. 6d., and when the men spoke of the reduction as being unfair, the manager said, "Well, if you do not care to accept the reduced wages, all I have to do is to send to Sydney, and I can get as many men as I like through the Bureau." It is a case of Hobson's choice with the men. The fact that the Bureau is prepared to send up men prevents the local men objecting to a reduction as they otherwise would do.

965. Do you think that if an agency or a branch of the Labour Bureau were established in Bourke it would be better for the district than the present system of engaging men in Sydney and paying their train fares to Bourke? Yes; if the district agency could absolutely prevent men from being sent from Sydney so long as there were locally unemployed, but not otherwise.

966. Are there many unemployed in the district? Within 10 miles of Bourke I can safely assert there are about 600 unemployed; and when I speak of Bourke I speak of the immediate vicinity of the town. I estimate for the district there are between 2,000 and 2,500 unemployed.

967. Are you in a position to get reliable information as to the number of unemployed throughout the district? I do not think any men, not even the police, are in a better position to gauge the number of unemployed than I am.

968. That is through your position as secretary of the General Labourers' Union? Yes.

969. At the time these 1,058 men were sent to the Bourke district, were there many men at the different stations awaiting engagements? Right through the whole district they were simply jammed up full. In March last year I went to some little trouble to obtain special information. It was just about the time the Bureau commenced operations. I collated the letters I received and sent the results down to the *Australian Workman* with a request that they might be published, which they did. I have still one or two of the letters. A man writing at Brewarrina on 10th March, 1892, says:—

I made it my business from time to time to take a walk around the different bends of the river in the immediate vicinity of the town, and I counted sixty-three men camped, and I should think there are fully another twenty boarding in the different pubs., all *bona-fide* workers, looking for a job.

970. That is not an answer to my question; in your circular you say "that at Toorale over 250 local men were turned away, and that at Dunlop, the adjoining station, there was a surplus of 130 men"? That is so.

971. These men were looking for employment at the time other men were being imported from Sydney into the district to do the work? As far as the number of unemployed at the two places is concerned, that statement—of course, within ten or twelve men—is approximately correct.

972. Why did not the first lot of men go to work at Elsinora? Because of a reduction in wages. They wanted 30s.; the employer offered 25s.; they afterwards sent one of the men and agreed to accept 27s. 6d. as a compromise, but this he refused to give, and they left.

973. Was 30s. a week the current rate at that time for shed hands? Yes.

974. Do you think he was trying to take advantage of these men being strangers to the district to reduce the rate of wages? Not individually.

975. Collectively? Collectively, the employers were.

976. Have you an idea of the number of men sent to the district last season? Only from what is contained in this return.

977. Do you think that would be the total number of men sent? The chances are that in a few cases the employers may have paid a few fares from the Pastoralists' Union. The only source of information I have is this return.

978. Your circular was based on the information given in the return? It was my sole source of information as to the number of free passes.

979. The other information you obtained in your position as secretary of the General Labourers' Union? Yes.

980. *Mr. Wall.*] Are you secretary of the General Labourers' Union, or only secretary of the Bourke branch? I am secretary of the Bourke branch.

981. When does shearing commence on the Paroo? As a rule, it commences about the end of June. This year it started on the 1st of May.

982. In March last year you say a large number of people were camped on the banks of the rivers? Yes.

983. Is it not customary, immediately prior to shearing, for a lot of men to be camped about the rivers? Yes, a fair number; but not to have great numbers turned away from every shed as it starts in rotation.

984. You state that your Union comprises about 2,870 men, and that about a fifth of the number are in work? Yes.

985. So that about 2,290 members of the Union are unemployed? Yes; approximately.

- Mr. T. H. Hall.  
25 May, 1893.
986. Is it not a fact that a large number of shearers in both the Paroo and Bourke districts are migratory? A proportion of them are.
987. How many of the 2,290 unemployed members, in your opinion, reside in the Bourke district? I should say 80 per cent.
988. What is their usual employment in the district when they are not shearing? Let it be understood that I am not dealing with shearers altogether.
989. How many members of the General Labourers' Union who reside in the Bourke district are out of employment in the district? Of those who are registered on the books I should say about 1,500.
990. Are the persons employed on the stations you have referred to registered members of your Society? A proportion of them only.
991. Have you received any official complaint from these persons that the rate of wages has been reduced by the sending of people through the Labour Bureau? The men have complained to me verbally.
992. You cannot submit any official complaint? No; not in writing.
993. You stated that certain persons informed you that they did not give their proper names at the Labour Bureau when they were coming through, and also that station owners can enforce a reduction of wages by threatening to send to the Labour Bureau for men? Yes.
994. Could they not send to any other agency in Sydney and get men? With this difference, that if they did the employer would probably pay the fare.

[Mr. McGowen took the Chair.]

995. Are you aware that the employers make themselves responsible for the fares of the men who are sent through the Bureau? Suppose an employer cannot be found?
996. If the employer is held responsible by the Bureau for the repayment of the man's fare, it would not place him in a much better position if he had to apply to another agency? Slightly.
997. Inasmuch as he would get credit? He would not only get credit, but if a man came and he was kept for a week or a fortnight the first draw on his wages would be for the fare, so that the man may work for three or four weeks and get nothing.
998. With regard to the persons who you stated gave wrong names to the Labour Bureau, you cannot say whether they undertook to pay their passages, and that they gave fictitious names in order to evade the payment of the money? May I suggest that it is not fair to ask me to give an answer which may bring certain persons within the reach of the law.
999. I have no desire to do that; I am only asking in a general way if it has been done? A little while ago a man came into my office, and I asked "How did you get up"; he said, "There were five of us; one of us came up and he wrote a letter and sent it down to the Bureau saying he would employ us, and on the strength of his letter we came up." The men said the names they gave were fictitious ones.
1000. If it is a custom with the Labour Bureau to refuse to issue a free-pass except upon the production of a letter showing that the applicant has work to go to, and if it is also a custom to hold the employer responsible for the man's fare—if that principle were carried out in its integrity, without any abuses, it would not be as objectionable as it is? The whole of the conditions are bad so long as the agency of the Government is used to send men to a place where hundreds of men are out of work.
1001. I should prefer to get a direct answer to my question;—if the Labour Bureau gets a guarantee from the employer that he will refund the railway fare of the man he engages, and if it also gets a personal guarantee from the person who states that he has obtained employment, and there is any abuse of these two practices, the evil is greater than it would be if the conditions of the Bureau were faithfully fulfilled? I do not understand the purport of the question. You ask an abstract question on two conditions. It is something like asking me which of two evils is the worst.
1002. That is exactly what I want to get at? I admit that both of them are so bad that, as far as I am concerned, I cannot see anything between one or the other. It is something like asking me whether I would prefer to cut my throat or drown myself in the river.
1003. You stated that on the Paroo if the men do not accept a reduction in their wages they are threatened by the employer with the alternative of sending to the Bureau and getting men from Sydney, and that, therefore, the men are forced to accept the reduced rate? Yes.
1004. If employers are compelled to give a personal guarantee to refund the fares advanced by the Labour Bureau, what difference would it make if they were to apply to another agency in Sydney, outside the Bureau, to send up a number of men? Now I grasp the question, and I reply that it is not just that the Government, even through its paid officers, should assist employers to reduce the rate of wages.
1005. Would not the establishment of a local agency do away with the necessity of sending men to various districts where their services are not required? I think the establishment of local agencies is really necessary if the intention is to keep the Bureau going. I feel certain that if local agencies were established there would not be any necessity to issue free passes.
1006. If the Bureau insists upon getting a personal guarantee from the employer that he will refund the fare, and the employer can obtain men through the local agency by giving a personal guarantee that he will refund the fare? The difference, as far as the employee is concerned, would be absolutely none.
1007. If a branch of the Labour Bureau were established in your district, would you co-operate with it, and register your men at the Bureau, and endeavour to find employment locally? Personally, I think they would.
1008. I suppose you have communication at times with the members of your Union as regards the opportunities of obtaining employment in different parts of the district? Yes.
1009. The establishment of an agency of the Bureau would afford you a considerable amount of information, and do away with the necessity of employers having to send to Sydney for men, and of the State having to pay their passage to Bourke; it would be so much a saving that the necessity would not exist, and men could be found in the district? I say there has been no necessity in the past. Your question infers that there has been a necessity.
1010. Well, call it a practice? In that form I should say that it would probably do away with the practice.
1011. The facilities for obtaining employment have considerably diminished throughout the Colony during the last few years? Speaking of the Colony as a whole, probably yes.
1012. If there are a large number of unemployed in Bourke and there are a large number of unemployed in Sydney, and you have a large number of unemployed all over the country, the inference is that there are not so many opportunities for obtaining work as there were? Quite so.
- 1013.

Mr.  
T. H. Hall  
25 May, 1893.

1013. Do you not think that has had some effect in leading to a reduction in wages? As far as the Bourke district is concerned, I do not altogether agree that work is so very much less there this year than it was in former years. The work there is of a peculiar character. With the exception of one line, droving, there has not been any big reduction of employment.

1014. If there has not been any big reduction of employment, and you have 2,050 members of your Union unemployed, the inference is that you have considerably more men than you can hope to find employment for in the present condition of affairs? Yes.

1015. How long does the busy season continue there? Approximately from the 15th July to the 15th October.

1016. Taking the condition of the general labourers, who receive £1 5s. a week during that busy season, they would earn £20? Barely that.

1017. Then they would have to depend on precarious employment for the remainder of the year? They might get a week or two weeks work.

1018. Have you known any arrangements to be made by the Pastoralists' Union with their secretary to send people to the district and reduce the price of shearing? The general wages of labourers, not of shearing.

1019. Have you any information as to persons being engaged, through the Labour Bureau or in any other way, at a lower rate than that prevailing in the district? The whole of these men who are mentioned in this return have been engaged through the Pastoralists' Union.

1020. You say the ruling rate of wages for general hands is 25s.? That was not during the shearing season, but during the off-season.

1021. During the shearing season what is the rate for general hands? It was reduced last year on over twenty stations from 30s. to 25s.

1022. Can you cite a single case where persons have been employed outside the district at 25s. to take the place of men who required 30s.? Yes.

1023. Are you able to give the name of one man? No; probably I could have got the names of thirty or forty men had I known that the information would be required.

1024. Summarising your evidence, you think that the manner in which the Bureau is used to bring people into the district, where their services would not be required, has a tendency to reduce the rate of wages? It has a big tendency to reduce wages.

1025. And you think that if the Bureau is continued, and a district agency is established, the members of your society will take advantage of the agency, and that it will do away with the practice of importing men into the district? Yes.

1026. *Mr. Houghton.*] Besides the objections which you have stated, have you any other objections to the working of the Bureau in Sydney? There are a lot of objections, but the question is whether it is advisable to bring them up here.

1027. The object of the Committee is to elicit every possible information as to the manner in which the Bureau is conducted. As far as I understand your evidence, you object personally, and I believe the members of your organisation generally object to the Labour Bureau in Sydney, because it has sent a large number of men to the Bourke district, where there were already a number of men who could not obtain employment? Yes.

1028. You are of opinion that, but for the existence of the Bureau, the men would not have gone into your district? Yes; a large proportion of them would not.

1029. Suppose the Government had not established the Labour Bureau, and the employers in your district had wished to reduce the wages, would they not have been just as able to get their men through private registry offices if they had advertised, as they were through the medium of the Labour Bureau? As a rule, it would not pay the employers up there. I can quote one instance. Twenty-six free passes were issued in the case of Fort Bourke. The shearing does not last more than about four weeks, and the train fare to Bourke is £2 16s. You can count up how much a man will get out of the work if he has to pay his train fare.

1030. But is it not a custom for a man engaged in Sydney to have his fare, which is paid by his employer, deducted from his earnings? Quite so.

1031. Consequently, if a pastoralist in your district required fifty men, and he applied for the men at a private office in Sydney, and the men had not the means to get to their destination, he would pay their train fare, on the condition on which the Labour Bureau in Sydney issues a free pass? Unless a man is really jammed he would not go for four weeks at 25s. a week, and pay £2 16s. train fare.

1032. If a man obtains a pass from the Labour Bureau, he has to refund the amount? He is engaged for a definite period of six months. Of course they may sack him, but he thinks he is going to get six months' work when he starts, which makes a big difference.

1033. Would it not be just as advantageous to the pastoralists in your district to obtain any number of men that he may require through the medium of a private registry office, provided that he has to refund or guarantee the payment of the fare which is paid by the Labour Bureau? But he has never done it.

1034. It was not the condition on which the free pass was issued when the Bureau first started; but it is the condition on which it is issued now? The circular deals solely with the working of the Bureau last year. It does not apply in any way to this year.

1035. It deals with the working of the Bureau previous to the refund of the fare being required? It deals simply with the free passes.

1036. Suppose an employer requires fifty men and he engages that number through the Labour Bureau or a private registry office, and he has in each case guaranteed the payment of the fare, is there any advantage in his getting the men through the medium of the Bureau? I see absolutely none one way or the other.

1037. If an employer in your district wanted fifty men to-morrow at a reduced rate, and he applied to a private registry office for men, do you think he would get them? I feel certain that he could get not only fifty but 500, possibly 1,000, to-morrow if necessary.

1038. You spoke just now of free passes given by the Pastoralists' Union in previous years;—was it the custom for the Pastoralists' Union to issue free passes to the men they engaged in Sydney? They did it the previous year. They engaged several special trains and brought men up.

1039. That was during the strike? Yes.

Mr.  
T. H. Hall.  
25 May, 1893.

1040. *Mr. Langwell.*] Was it customary, prior to the opening of the Labour Bureau for employers in your district to engage men in Sydney? Prior to that event, as far as I am concerned, I do not know of a single man, except possibly a special hand, ever having been engaged outside the district.
1041. *Mr. Houghton.*] Last year was the first year since the threatened strike in your district, and there was, to say the least of it, a coolness evinced by the pastoralists towards your men? Say a boycott straight out.
1042. There was a decided objection in some quarters to your men? In nearly all quarters there was a practical boycott of the local men with very few honorable exceptions.
1043. Do you know that during the time the Labour Bureau was issuing free passes a number of Union men travelled to their respective districts on these passes? Possibly some of them may have.
1044. Do you know that if Mr. Petrie, the representative of the General Labourers' Union in Sydney, required to get a member of the Union or any other man into the country he had only to apply for a pass to a Member of Parliament and it was issued? It was not even necessary to apply to him. A man had simply to apply to a Member and get a pass issued. A man came into my office last week, and I asked, "How did you come up," and he said, "I came down from Melbourne in a boat; I bowled into Lyne's office; I told him I had a couple of mates outside who also wanted to come up, and we all got passes."
1045. They cannot do that now? It was done within the past three weeks. The men got the passes, the words "want of means" being put down.
1046. Will you explain why you and Mr. Wood did not send a copy of your circular to the Superintendent of the Labour Bureau, so that he might be in a position to answer your statements? I sent a copy of the circular to the *Australian Workman*, the Trades and Labour Council, several daily papers in Sydney, and the whole of the Labour Members. It was published in the workers' organ, and I thought I had made the circular sufficiently public. I did not think of the necessity of sending a copy to Mr. Creer. If I had thought of it I should have sent one.
1047. Do you not think if you have a complaint to make against an institution the first person to whom you should complain is the Manager? Yes; but I did not look upon Mr. Creer as the person who had the management of the institution; I looked above him, to those who were behind him.
1048. He has the management of the institution? Mr. Creer is not there to manage the institution. He is there to obey instructions; to do what he is required to do.
1049. He is allowed a great deal of latitude? It was not out of any discourtesy to Mr. Creer that a copy of the circular was not sent. It was done simply because I did not recognise him as being the person who managed the institution. I thought it might have a chance of affecting the estimates.
1050. You are aware that Mr. Creer has denied many of the statements contained in your circular? Will you specify one statement which he has denied?
1051. He has denied your statements with reference to the men from Melbourne and New Zealand? Probably he did not have the information which I have afforded the Committee, viz., that a large proportion of men give wrong addresses and names. I was not aware that Mr. Creer had denied the statements when I was asked the questions.

FRIDAY, 26 MAY, 1893.

Present:—

MR. EWING,	MR. MCGOWEN,
MR. HOUGHTON,	MR. RAE,
MR. LANGWELL.	

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Mr. John Little called in, sworn, and examined:—

Mr. J. Little.  
26 May, 1893.

1052. *Chairman.*] What is your occupation? I am manager of Glenariff Station.
1053. You employ a good many hands in the shearing season? A good number.
1054. How many on an average? There are slack times when we reduce our number to the lowest limit, but at shearing time, if we strike an average, there will be perhaps an average of twenty men during the year.
1055. How many during the shearing time? About fifty.
1056. Do you manage for a company? Yes; the Australian Joint Stock Bank.
1057. Do they belong to the Pastoralists' Union? Yes.
1058. Have you ever engaged men through the Labour Bureau? Yes.
1059. How many? Perhaps I have engaged ten or a dozen.
1060. About what time? Nearly all within the last nine months.
1061. At different periods? Yes, as occasion required. What I am speaking of are the men whom I engaged personally. I engaged men as my requirements needed.
1062. Were the men engaged by letter from you to Mr. Creer? Yes.
1063. None of them were engaged primarily through the Pastoralists' Union? None of these that I speak of. Of course I mean ordinary hands, such as married couples and rouseabouts during the year.
1064. You do not include any shearers? No; only the men I engaged myself.
1065. How many men were engaged through the Labour Bureau, either by yourself or by anyone else to your knowledge? Between thirty-five and forty.
1066. Were they all brought into the district on free passes? I do not know. Passes were given to the men, and an order was given on me to deduct the amount from their wages, and send it to the Labour Bureau. It was a free pass in the first instance, but they have paid for it all the same.
1067. Going back to 1891, before this system of issuing passes and deducting the amount from the men's wages was introduced? I got some men by free pass at the time of the strike.
1068. How many men have you engaged through the Pastoralists' Union during this period? Twenty-four.
1069. All shearers, I presume? No; six shearers, and eighteen rouseabouts.
1070. Since last shearing season? Since last season, and including that season.

1071.

1071. Why did you send all the way to Sydney for hands, especially shed-hands? I considered that I Mr. J. Little could get them there at less trouble, and possibly could be supplied with as good men.
1072. Were there no unemployed men in the district round your shed? I think so. About shearing <sup>26 May, 1893.</sup> time there are always unemployed there.
1073. Did you make any application in the district in which you live for men? No.
1074. It is your custom to send direct to the Pastoralists' Union or the Bureau? It has been my custom since this system was inaugurated. Until that year, or the year before, I, like others, engaged men whenever I could. Whenever a man presented himself I engaged him if he seemed suitable for the work which I should require of him.
1075. And you paid the recognised current rate of wage in the district? Yes.
1076. Do you know any case where wages have been reduced through the operation of the Labour Bureau? No, not one.
1077. Do you know of any pastoralists who have taken advantage of the Labour Bureau to import men into their district for the purpose of obtaining cheaper labour than could be obtained in the district? No.
1078. It has not occurred at your own station? No. What I aimed at was to get a good class of men at the current rate of wages.
1079. What rate do you pay? £1 a week, and from £75 to £85 for married couples.
1080. One pound a week for shed hands? Twenty-five shillings a week for shed hands. That is the rate which was settled by the conference between the shearer and the pastoralists, and which is recognised right along the line.

[*Mr. Ewing in the Chair.*]

1081. *Mr. Langwell.* Do you know the number of men that were engaged by you last year through the Pastoralists' Union? I could not say exactly. I can give you an approximate idea. I know that I paid twenty-four sums of £2 10s. 6d.
1082. You mean that you refunded the train fares of twenty-four men? Yes.
1083. You think that is the total number you engaged? Yes.
1084. That is including shearers and shed hands? Shearers, shed hands, cooks, and others for 1892.
1085. I do not wish you to say that that is the exact number if you are not sure? I am not sure.
1086. Mr. Whiteley King has stated the exact number which were engaged by you? I do not know what number was engaged, but I know the number for whom I refunded the fares. I am basing my statement on that number.
1087. Did you engage many local men for your shearing and shed work? Not many.
1088. How many shearers did you put on? Thirty-two.
1089. How many shed hands would be required to wait on the thirty-two? Over twenty.
1090. How many local men do you think you employed? The difference between twenty-four and fifty-two. I am not sure about the number that came, for this reason—that I received very short notice to attend here. I simply looked over the books to see the number of the fares I have refunded.
1091. You are quite confident that you have refunded the fares of only twenty-four men? Yes; the fare of every man I engaged since then, I have refunded.
1092. You are speaking of the shearing season of 1892? That is so.
1093. Mr. Whiteley King has told the Committee that he engaged fifty-two men for you last year; do you think he is correct? He may be correct.
1094. There is a wide margin between the two? If he did they must have paid their own fares. I daresay he did. I know I engaged a few men on the ground.
1095. As a matter of fact did you not engage nearly all the men you required in Sydney? Yes.
1096. You would not say that Mr. Whiteley King is wrong when he says he engaged fifty-two men for you? No.
1097. Do you think you would refund all the claims that were sent in when you paid the fares for twenty-four men? I refunded all but one.
1098. As a matter of fact, a return from the Labour Bureau shows that forty-four men were sent to your station on free passes, so that in the case of twenty men no refunds have been made? Yes. I am certain about what I have refunded. I know as a general thing I expected them to engage all the men I wanted. In the meantime I have said to fellows hanging about, "If you are there, and I do not happen to be fooled, there is a chance for you." I do not think there were many openings to be filled.
1099. You think they were all filled from Sydney? Nearly all.
1100. Did you send any instructions to Mr. Whiteley King to get these men to come to the Labour Bureau? No; I did not care what they did.
1101. You made no arrangement for them to reach your station? None at all.
1102. You left it to him to engage your men, and let them reach Glenariff the best way they could? Yes; I think some reached the station without the assistance of the Labour Bureau. A good many must have done so. I remember now, that some came from Nyngan. Some shearers came from places not so far away as Sydney. Perhaps that would account for the discrepancy in regard to the number. He engaged them in the bush as well as in the city.
1103. Forty-four men are registered as going from Sydney to Glenariff; you said you engaged ten or twelve station hands yourself;—are those ten or twelve station hands included in the twenty-four? No.
1104. Have you refunded the fares of the men you engaged yourself? Yes; except one which I shall refund in a day or two.
1105. In all the other cases you have refunded the fare? In all but one.
1106. Is it not a fact that almost every year, at shearing time, there are a number of unemployed men in your district? Yes.
1107. Then what is the reason why you sent to Sydney and engaged men there instead of engaging local men? It is a change from the order of things that had existed up to that date, and from last year's experience I feel very well satisfied, and have done the same for this year.
1108. Have you any objection to engage local men? No; except this, that we belong to the Pastoralists' Union, and I think it is only fair for a man to stick to his own colours.
1109. You think it is fair for a man, if he belongs to a Union, to stick to that Union? I think so.
1110. Do you know who represents the proprietors of the bank on the Pastoralists' Union? Yes; Mr. Fairbank.

- Mr. J. Little. 1111. The bank is directly represented on the Pastoralists' Union, and not by you as manager of the station? I have nothing to say.
- 26 May, 1893. 1112. You simply act according to instructions? Yes.
1113. You stated that one reason why you sent to Sydney was that you get a better class of men? I did not say that.
1114. That you get a good class of men? That was my object.
1115. Did you not always get a good class of men in the district before you started sending to Sydney? Not always.
1116. In what respect were they not good men? Perhaps we would find learners representing themselves as shearers, and that sort of thing.
1117. Apart from shearing, as far as shed hands are concerned? My experience is that at shearing time you have to break men in. You never get the same class of men the second year.
1118. Your experience is that you have to break your men in every year? Yes.
1119. I suppose you mean a proportion of the men? Most of them.
1120. As a rule, have not the men who live in the back country generally a better idea of shed-work than men who come up from the city? No; I have found that men from the city are just as good.
1121. As a rule? I could not say as a rule. I have had one year's experience to go by, and I may have been fortunate in getting an exceptionally good lot of men, but last year I was never better served.
1122. There has been no reduction of wages, you say, in that part of the district? No.
1123. Not in the case of shed hands? No.
1124. Or in the case of a station hand? No.
1125. One pound a week is the rate you pay? That is the rate I have always paid.
1126. Always? Yes.
1127. For how many years? Sixteen or seventeen.
1128. In that district? Yes.
1129. That is for general station work? General station work—boundary riders, general rouseabout men, and so on.
1130. Has that been the general rate in the district for sixteen or seventeen years? Yes, as far as my memory goes.
1131. You have been in the same district for sixteen or seventeen years, and you have not known any neighbouring stations to pay their general hands more than £1 a week? I have known them to pay more; but I have also known them to pay less.
1132. Is it the minimum rate? Yes.
1133. In several cases within the sixteen and seventeen years they have been receiving 25s. a week? I have men I am giving 25s. a week to.
1134. For general station work? Bullock drovers—trustworthy men I can rely upon, and who have been with me for that length of time.
1135. Do you know the number of men you have engaged this year for shearing? About fifty.
1136. About the same as you engaged last year? About the same.
1137. Your shed hands are receiving the same wages as they did last year? Yes.
1138. You do not know of any reduction in that district? No; I have never heard a reduction suggested.
1139. There has not been any reduction within the last few years? They are higher than they have been for the last few years. For general shed hands 22s. 6d. was paid in the district three or four years ago. I have paid it myself.
1140. Do you mean to say that 22s. 6d. was the general rate throughout the district? It was the maximum.
1141. Or the minimum? No; my remarks apply to the district within a radius of 50 miles of Bourke? I think that was the maximum (say) eight or nine years ago.
1142. What would be the minimum? £1.
1143. So that there is actually an increase in wages to shed hands for the last eight or nine years? Yes; as far as my immediate neighbourhood is concerned. I do not know about Queensland.
1144. At any rate, within 50 miles of Bourke? Yes.
1145. *Mr. Rae.*] In your district, are men seeking work exceptionally plentiful this year or during the last two or three seasons? I do not think so.
1146. You do not think there are any greater number of unemployed than there have been? I do not think so.
1147. You do not think the operations of the Bureau have had any great effect in causing more men to be imported into the district? If it has it has had the contrary effect of bringing more from the district to the city.
1148. Will you explain how;—are there any free passes back? No; the tendency is for people to come to the city, for no reason at all, perhaps, other than that it is a city.
1149. In what way would the Bureau cause that tendency to be increased? They could come to the Bureau, and get a better chance of getting back into the same district, or, perhaps, some other district.
1150. You think the effect caused by sending a number of men from the Bureau to country districts would be counterbalanced by the greater number who would come to the city, knowing that by means of the Bureau they could get away from the city easily? Yes; to a certain extent that would have a counterbalancing influence.
1151. It would be hard to say to what extent such an influence would work? Yes.
1152. Speaking broadly, are you inclined to think that that influence would in any way nearly counterbalance the effect produced by the number of men sent to country districts through the Bureau;—would the fact of the Bureau existing in the city, and offering facilities for men to get to other parts of the Colony, be a sufficient inducement to bring as many men, or about as many men, away from the country districts? I do not think so. I do not think it would counterbalance, but, on the whole, if more men would leave the city for the country than would return.
1153. On the whole, you think that the Bureau has had a tendency to bring more men into your district than would otherwise have gone? I know it has brought men into it that, perhaps, would not otherwise have gone, but whether it is more or not I would not say.
1154. Have you ever adopted the practice prior to the last two seasons of bringing men from Sydney to do your work? Yes,
- 1155,

1155. You never engaged as many men as you engaged during the last two years? No.
1156. It is not customary? No; I have sent very often for married couples, and that sort of thing.
1157. *Mr. Langwell.*] That you could not obtain in the district? I would not say that. I thought that perhaps I should get better served in the city.
1158. *Mr. Rae.*] As a general rule, prior to the institution of the Bureau, in the majority of cases you engaged local labour? Yes.
1159. Outside special cases, such as you have referred to? Yes.
1160. Do you think the recent practice you have adopted of bringing men from the city has been generally followed during the last couple of seasons by the pastoralists in the district? It has not been generally followed.
1161. Has it in any considerable number of instances been followed; have there been many men taken up by other pastoralists in the same way as you have done? I think so, in a good many instances.
1162. For what reason have so many men been imported by various squatters or station managers; was there a dearth of local labour prior to the establishment of the Bureau? It was owing not so much to a dearth of local labour as, perhaps, to a desire to get men suited for special work. There was more likelihood of getting that class from the Bureau than from the country, where you have no knowledge of what a man can do until you try him.
1163. By what means do you get that knowledge of the men you obtain from the Bureau? At the Bureau they profess to make inquiries into a man's previous occupation, and find out what work he has been accustomed to.
1164. Outside of special employment, such as married couples, or any extra reliable men, taking ordinary station work, at shearing time, or general station work during the remainder of the year, has there been any difficulty hitherto, as a rule, in obtaining a supply of local labour? There has been a difficulty in getting the class of man you want at the time you want him.
1165. Has there been any dispute between employers and those seeking work as to the rates of wages in your district? Not that I am aware of.
1166. Prior to the establishment of the Bureau, had there been any strikes on account of refusing to accept certain rates? No.
1167. Neither in the case of shearers nor in the case of shed hands? No.
1168. They have always accepted the rates? I speak of since the great strike in 1891.
1169. Prior to that event, had there been, during the last few years, any disputes, either locally or generally in the district, as to the rate of wages for shearing or general work? I think occasionally. In isolated cases, perhaps, the rouseabouts struck for higher wages.
1170. Had you ever such strikes or disputes? No.
1171. You have been aware of them in other places? Yes.
1172. Can you say whether such disputes, as a rule, have ended favourably to the men's demands or to the employers' terms? Generally speaking, I think, favourably to the employees' demands?
1173. In other words, when they have either struck against a threatened reduction or for an increase? I do not know of any case where anyone threatened a reduction.
1174. They have struck for an increase? They have accepted a certain rate, and then struck for a higher rate.
1175. In every case the demands on the part of the employees have been for higher rates? Yes.
1176. And as a general rule you say they obtained higher rates? I think so.
1177. *Mr. Langwell.*] You never had a case yourself? No.
1178. *Mr. Rae.*] Can you say whether there has been any general rate in the district, or have the wages differed at the different stations? Each man endeavours to get his work done as cheaply and as well as he can. If my neighbour can get his work done for 6d. a week better than I can, he would be considered a better manager than I am.
1179. Then, I suppose, if he were managing a station for a bank or any large financial institution, he would have a better show of promotion, other things being equal? These things are all judged by £ s. d., and I suppose a man who got his work done better than I did for less money would be considered the better man.
1180. He would be in higher favour with his employers? Just so; he would deserve it any way.
1181. You stated that you know of no strike for a higher rate of wages, and that the general rate of wages is £1 a week for station work? Yes.
1182. By a general rate you do not mean a rate general to your own station, but a common ordinary rate? It is the rate which prevails in my neighbourhood as far as my knowledge goes.
1183. If the general rate is £1 per week, and the men have had successful strikes for higher rates, what was the general rate prior to those strikes? I do not know that they have struck for higher rates for general station work other than shearing.
1184. There has been no demand on the part of the regular hands? Not that I know of.
1185. With regard to shed hands, who are understood to be the men employed in connection with the shearing, what was the general rate of wages prior to 1891? Taking myself as a representative of the pastoralists, with the same failings and wishes to get my work done better and cheaper than anybody else, I have paid the highest, and the highest I have paid for shed hands at shearing time was 22s. 6d. If I thought a man was exceptionally good, I might give him perhaps a little more and say to him, "Keep it dark," and all that sort of thing, but I never paid more than 22s. 6d.
1186. Why should he keep it dark—to avoid raising a feeling of discontent in the minds of the other men? Yes.
1187. I presume that, on the whole, the men did not consider that altogether a fair wage? I think they must have done so, or they would not have worked for it so long.
1188. Have you noticed any difference in regard to the general demeanour of the men or the rate of wages they are willing to accept since the inauguration of the General Labourers' Union in your district? No.
1189. They have not taken any organised action in endeavouring to raise wages? No.
1190. Or altering the conditions? No.
1191. Then, practically, this Union does not affect you? It has not made itself felt yet with me.
1192. Do you anticipate that it is likely to do so? I assume that when a Union is formed it is to make some alteration,

Mr. J. Little.  
26 May, 1893.

- Mr. J. Little: 1193. I presume it is to make an alteration for the better or to resist any alteration for the worse—it has a double object in view? Yes.
- 26 May, 1893. 1194. Has the General Labourers' Union in your district ever made a demand on behalf of its members for a higher rate? I do not think they have, as far as my memory carries me.
1195. They have not issued any manifesto or scale? I do not think so. Perhaps they may consider me beyond the pale. I have not received any manifesto.
1196. Why should you imagine that you are beyond the pale of any such communication? One can only wonder why he is exempted from these honors.
1197. *Mr. Langwell.*] If such a manifesto were issued, would you not receive the information from the secretary of the District Committee of the Pastoralists' Union? I do not know; I am not sufficiently well versed in the way they conduct their affairs to be able to say.
1198. Does not your District Committee get all the information they can and supply the members with it? I do not know.
1199. *Mr. Rae.*] You are not personally a member of the Pastoralists' Union? No.
1200. And anything connected with the working of the station which might be affected by the Union would be communicated to you, as manager, in due course? Yes.
1201. I suppose you can tell the Committee whether any scale for labour in your district has been fixed by the Pastoralists' Union or the District Committee? I am not aware of any scale but that which was fixed by the Pastoralists and Shearers Unions at the Conference.
1202. Are you aware that as a matter of fact the pastoralists and shearers did not effect any agreement with regard to shed work? No.
1203. You are not aware that the agreement was confined merely to shearers? No; I thought that the agreement included shed work, or that if it was not included it was implied, else I do not know why we should have paid 25s.
1204. Have you, since that agreement between the two Unions, paid 25s. for shed work? Ever since.
1205. And you supposed that to be the effect of the agreement? Yes.
1206. And, consequently, felt bound to pay that rate as a member of the Pastoralists' Union, or as working under that Union? Yes.
1207. Does that supposed agreement leave any option with you as to what wages you would pay? It does not with me.
1208. You are bound to pay it? As I read the result of the conference I thought it was suggested as a fair thing, and was looked upon as such by the two parties; and I felt that it was incumbent upon me to carry out the suggestion.
1209. A certain scale having been agreed upon, or at any rate tacitly understood, you did not hold yourself free to make any reduction; therefore, the operations of the Bureau would not enable you, if you so wished, to get cheaper labour? No.
1210. The only purpose which the Bureau serves in your case is to supply the class of labour you require and when you require it? Yes.
1211. If this practice of sending to the Bureau for men is at all general, do you not think it must displace a large quantity of local labour which hitherto found employment? I think the result will be in that direction.
1212. Do you think it would be in any way advantageous if an agency of the Bureau were established in (say) Bourke and other centres at which the various classes of local labour could be registered, and employers supplied from the branch instead of from the central office? I should think so.
1213. Would it in any way tend to employ local labour by sifting it out as it were and finding the required class of labour for the various employers? Yes; I think it would draw the attention of people seeking employment to Bourke, Byerock, or other places in the neighbourhood, where the attention of those wanting men would also be drawn. It would be the means of drawing two classes together and effecting a number of engagements that are now effected in Sydney.
1214. On the whole, that would be more economical to both sides, would it not? I do not know. It does not cost me anything to send down to the Labour Bureau.
1215. Then who bears the cost? The man who is employed.
1216. You paid certain refunds on account of the men sent to you;—was the money paid to the Bureau or the Pastoralists' Union? To the Bureau.
1217. Do you deduct the sum from the employee's wages? Yes.
1218. He is entirely at the loss of the sum? Yes.
1219. In the event of a man proving unsuitable and of your wishing to get rid of him before he has earned the amount, what position would you be in? I should be in the position I am in now—he would not have earned his money and I should not pay it.
1220. Would you then be required to refund it to the Bureau? No.
1221. In getting men up through the Bureau have you signed any guarantee to refund the fare? No.
1222. Not on any occasion? Never.
1223. About what date did you last obtain labour through the Bureau? About two months ago. A married couple was the last lot I engaged.
1224. Did you obtain them directly by writing yourself, or through the Pastoralists' Union? By writing myself; I do not trouble the Union except for shearers.
1225. No guarantee of any kind was demanded from you? No.
1226. It has been stated in evidence that in every case since July last the Bureau has demanded a guarantee from the employee on the one hand and from the employer on the other, but you explicitly state that no such guarantee has been demanded of you? I have never given a guarantee.
1227. Then, on what ground did you deduct the amount which you refunded to the Bureau? The employee gave the Bureau an order upon me to deduct the amount from his wages.
1228. The Bureau forwarded an order to that effect to you? Yes.
1229. In the event of your being dissatisfied with a man and discharging him before he earned the amount of the fare, you would not honor the order? No; but a case of that kind has not occurred. I should not have done so if it had.
1230. You would hold yourself perfectly free, if it suited you, to discharge a man immediately you found that he did not suit you? Yes. There is a moral obligation I would not hold myself free from, but in other respects I would be perfectly free, if the man did not suit, to let him go.

1231. I think you said you would not hold yourself free to depart from the scale for shed hands laid down by the Pastoralists' Union? I feel bound to carry it out. Mr. J. Little.  
26 May, 1893.
1232. Does that alter the pre-existing state of things in regard to station hands outside the shearing season—the wages of general station hands have never been affected in any way by the supposed agreement? I do not think so.
1233. They stand at the same as they did before? Yes.
1234. You simply make your own bargain with anyone you please? Yes.
1235. *Mr. Houghton.*] Has the establishment of the Labour Bureau been any inducement to you to send to Sydney for men to work on your station? Yes; when one wants men, he must send to the place where he is most likely to get them. The Bureau being in Sydney where men are plentiful and applicants being anxious for employment, I sent there for men.
1236. Supposing the Bureau had not been established by the Government, and you were anxious to obtain men in Sydney. Could you not have obtained men just as readily through the medium of a private registry office? I do not think I could have got men quite as readily.
1237. Why not? Because one would have to go to several offices, perhaps, to get the men you wanted. I have had some experience of registry offices, and I have never got as good men from them as I have got from the Labour Bureau.
1238. Do you know of any registry office in Sydney that devotes special attention to the requirements of station owners? I have seen their advertisements in the newspapers. I have tried two or three of the offices that professed to devote special attention to the requirements of station-owners, and I have been very much disappointed with them.
1239. You remember that prior to the establishment of the Bureau, there was a strike in the Bourke district amongst the shearers? Yes.
1240. Do you know that a registry office in Sydney was employed almost exclusively in engaging men to take the place of those who would not go to work? No; I never heard of it before.
1241. You know that a large number of men were sent from Sydney to work in the Bourke district during that strike? Yes.
1242. But you are not aware that one particular registry office was engaged in finding men to work on the different stations? No.
1243. You have stated that you have never offered a reduced rate of wages to the men you have engaged at the Bureau? Yes.
1244. And that, as far as your knowledge leads you to believe, no reduction has been offered by station owners in your district since the Bureau was established? Yes.
1245. You stated also that your reason for sending to Sydney for men was because you are better satisfied with the men you get from Sydney? Yes.
1246. How long is it since you first sent to Sydney for men? To the Labour Bureau?
1247. I am not speaking of the Labour Bureau at all; I want to know if you sent to Sydney for men before it was started? I have sent occasionally for a married couple, perhaps for ten or twelve years.
1248. That would be to registry offices? Yes.
1249. You have had only one shearing since the Bureau was started;—have you engaged any considerable number of men outside those who applied for shearing work only? No.
1250. And you get practical shearers from Sydney through the Bureau? Yes.
1251. *Chairman.*] When does the shearing commence in your district? It will commence in August.
1252. You have already engaged men for that shearing? Yes.
1253. Through the Labour Bureau? Through Mr. Whiteley King.
1254. *Mr. Houghton.*] Is there any antipathy on your part to the local men that induces you to send to Sydney? I have no antipathy to the local men. We do not get as good a class of men in my district.
1255. If you want practical shearers, surely you would not send to Sydney for them? I would after my experience of last year.
1256. *Mr. McGowen.*] You are aware that the Bureau is established not only in the interests of the employer, but also in the interests of the employee? Yes. I should hope it would be more in the interests of the employee.
1257. While the Bureau does a certain amount of good to you as an employer, it has a tendency to do an injury to the residents of the district;—do you see that phase of the question? Yes.
1258. You have stated that you have never signed a guarantee to deduct a man's fare from his wages? Yes.
1259. Did you ever sign a document for Mr. Creer in this form:—
- In consideration of a railway pass being granted to \_\_\_\_\_ from Sydney to \_\_\_\_\_ Station, and costing £ s. d., I, the undersigned, hereby agree and undertake to refund and pay back to Joseph Creer, Superintendent of the Government Labour Bureau, the above amount, within one month of date of this agreement, should the said \_\_\_\_\_ fail to do so as agreed upon.
- ? No.
1260. *Mr. Langwell.*] You have never made yourself responsible for a man's fare? No fear.
1261. *Chairman.*] Prior to last year or so you engaged men for your work locally? Yes.
1262. Last year you engaged them at the Labour Bureau? Not all the men.
1263. Speaking generally? I engaged some at the Bureau.
1264. Was that alteration in the procedure because of the establishment of the Bureau, or because you joined the Pastoralists' Union, and became a fighting body for the time being? Because of the Bureau, as far as I am concerned, and I did actually get better men from the Bureau than I got locally.
1265. There are two influences in existence since the establishment of the Bureau, and the fact of the pastoralists fighting the shearers;—which is the reason why you employed men in Sydney? Because they could be got there.
1266. Because it is a big reservoir that you can put your tap in when you want something? I do not know that you are justified in putting that construction upon it.
1267. You can get labour there at any time? Yes; I have always got it there when I wanted it. I think I can get it at any time.
1268. *Mr. McGowen.*] What makes you engage men in May when you do not start shearing until August? One likes to prepare his household for what is likely to take place.
1269. You could bring men almost from England to do your shearing? Yes.

Mr. Thomas Hicks Hall recalled and further examined:—

Mr.  
T. H. Hall.  
26 May, 1893.

1270. *Mr. Rae.*] I understood you to say this morning that there are a large number of unemployed in the Bourke district, that a large number of them are members of your Association, and that you attribute the large overplus of labour this year and last year to the operations of the Labour Bureau to a great extent? Yes.

1271. Is it a fact within your knowledge that men sent directly through the Labour Bureau from Sydney or elsewhere to the western district caused the displacement of local men? Quite so.

1272. These local men would proceed, I presume, from the stations which were starting next in order to work—that is, higher up or lower down the river as the case may be? Yes.

1273. Would the men succeed in getting work there, or would the same thing be repeated at those stations? Previous to last year and the year before, naturally there would be a fair number of men at the early sheds, and the surplus—possibly thirty or forty men—might be turned away; then, as the shearing proceeded it would come to the middle sheds—that is, the second starting in order—and these would just have sufficient to fill their requirements. The third or late sheds would be filled from those who had finished at the first sheds.

1274. Consequently, the men would get a run of work? They would get a run of work of sixteen or eighteen weeks. Last year there was this difference, that starting with a fair number of unemployed at the first stations the number of unemployed seemed to increase rather than decrease right up to the finish.

1275. The conditions were reversed practically? Yes.

1276. The overplus in the early sheds would be swallowed up as they went to the later sheds, and, before they got to the very late sheds, the first lot would have finished their work, and be ready for a second cut in? Yes.

1277. I suppose, then, that the average amount of work is reduced? Last year it was reduced practically from eighteen weeks to eight weeks.

1278. Do you know whether any considerable number of men failed to obtain work at all during the shearing season? I know personally of over sixty men who travelled the whole of last year without getting one single day's work. One man was in my place the day I left Bourke, and he has had two weeks' work in seventeen months. He has travelled during the whole of that time, except during the last couple of weeks. I am not speaking of drunken loafers, but of capable industrious men.

1279. I suppose the cause alluded to by you would operate indirectly at times. It would not always be the case, that the men were merely displaced at a certain stage, by the fact that men were brought up direct from the Bureau? It operated worse indirectly than directly. The stations which brought the bigger number of men had been what we call blackleg stations—paying a lower rate than the current rate. As far as these stations were concerned, the reduction was not felt, but the surplus sent allowed other stations, which had previously been good stations, to take advantage of the opportunity to reduce wages. I may instance Bellalie, Morton Plains, and Maranoa, as stations which did. I could mention other stations which did.

1280. Those stations reduced the wages on account of the overplus of men? Yes; but they did not obtain any themselves, I think—that is, none worth speaking of.

1281. They availed themselves of the men imported by others? Yes.

1282. Was that practice general in the district? That was the practice throughout the district last year.

1283. On the whole, there has been a reduction instead of an increase in the current rate of wages with the exception of shearing? Yes.

1284. Are you aware whether the men who have come up through the Bureau of late have been compelled to sign a guarantee for the refund of the passage money? I know they have.

1285. Is it within your knowledge that the employer has to sign a guarantee to refund the fare out of the man's wages? I never heard of it. The employee has to give a guarantee, I know.

1286. Do you think the working of the Bureau can be improved in any way? Yes.

1287. What plan would you suggest for preventing the crowding out of local labour by men from other districts? The employers should be compelled to prepay the fare in this case, as he would have to do in the case of a private registry office, and he would see that he was getting a good, capable man, instead of anything that was likely to be sent. Speaking broadly, I think the Bureau would be a good thing if it were worked properly, but the only advantage at present is clearly to the Sydney men, who can come up and swamp the local men out of the market. It is not fair. If you have a Bureau you should have a branch in Bourke, which would allow men, if they get work in (say) Wagga Wagga, or Sydney to remove there. They are placed at a big disadvantage at the present time.

1288. Did you say that, on the whole, the Bureau offers facilities for employers to concentrate large bodies of men in special districts at any time it may be desirable? That was the reason the circular was issued.

1289. Do you think that could be counteracted in any way by the introduction of local branches? If carried on honestly and straightforwardly. I think that is the only way in which it can be done. I see no other way out of it.

1290. *Chairman.*] On the whole, do you believe that the State ought to interfere in the way that the Bureau is supposed to interfere between employer and employee? In the way it has interfered I certainly think the State has been assisting an employer as against an employee.

1291. In principle; if it were properly managed, you do not object to it? No.

1292. Although you see its defects? I see defects in the present system.

1293. Is it not practically creating a reservoir of unemployed labour for the capitalist to tap when he wishes? I think we should take over the work of the registry offices in the country as well as in the town, and do away with the frauds which have been carried on.

1294. In principle, you think the Bureau, if properly managed, would be a wise institution? I think it should be.

1295. You want decentralisation? Mainly decentralisation.

1296. You do not think that the State ought to advance to the employer the railway fare? I explained yesterday that I knew of very many cases where frauds have been practised upon the Government.

1297. *Mr. Langwell.*] How long have you been in the Bourke district? Pretty well seven years.

1298. What was the minimum rate of wages for shed hands in the Bourke district prior to 1891? I did not see any working in 1890 for less than 30s. per week at shearing time, and 25s. a week all the year round. I do not include the boys. I believe cases have occurred where lower rates have been paid. I am speaking of the general rate for the district.

1299. Are you acquainted with the mode of working the New Zealand Labour Bureau? Only from what I have gleaned from the official records. I have spoken to men who have come over from New Zealand, and they all speak highly of the work of the Labour Bureau.

TUESDAY, 29 MAY, 1893.

Present:—

MR. HOUGHTON,	MR. RAE,
MR. LANGWELL,	MR. WADDELL.

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Mr. James Smith called in, sworn, and examined:—

1300. *Chairman.*] What is your occupation? Clerk and telegraphist.
1301. Have you any knowledge of the working of the Government Labour Bureau? A pretty practical one, I think.
1302. You were employed at the Labour Bureau? Temporarily.
1303. How long? Off and on about six months, I dare say.
1304. Why did you leave? There is a lot to say in connection with that matter.
1305. Were you dismissed or did you leave? I was not dismissed. I knew that I should get the sack if I did not leave.
1306. Do you desire to make a statement in regard to the working of the Labour Bureau? Yes.
1307. *Mr. RAE.*] Do you know anything as to the manner in which the figures have been compiled showing the number of men sent to employment through the Bureau? Yes; they are deliberately faked, to use a vulgar term.
1308. That is to say, they are incorrect? They were made up really to give the Bureau a standing—to make out that it was doing more work than it really did.
1309. Will you explain how they are faked? In the first place it is stated that work was found for 1,129 during the first month of its existence, and that the number sent to work for the year was 8,154. From the manner in which it is put, one would naturally assume that the Bureau found employment for these men. It did not, for the simple reason that up to July any man who could bring a letter showing he had work to go to could get a pass.
1310. Was any inquiry made to ascertain whether the letters were genuine or not? They could not very well—they did their best, I dare say. It was a matter of impossibility to prove whether they were genuine or otherwise. I know that in one case a man got two passes to go to Newcastle. He did not have work to go to, but he got two separate passes, and he will be counted as two men in the return. In another case, two young fellows, who came down from Bourke on an excursion train, over-stayed their time. They came down to see Mr. Creer, and he telegraphed to their father, who was in Bourke, to see if he would be responsible for the payment of their fares; the father replied that he would, and passes were granted to them.
1311. Were the fares repaid? I could not say—I had nothing to do with the monetary department. Again, a woman came down from Broken Hill, and she got a free pass to Newcastle. Again, numbers of men employed by the Pastoralists' Union, and so on, all got passes besides other men who went to the sugar mills on the Clarence, to Eden, and to other parts of the Colony.
1312. Before you go any further, do you know whether the men who were engaged by the Pastoralists' Union to shear or to do other work on the stations, were sent to the Labour Bureau by the Pastoralists' Union? Yes. In some cases they did come up directly from the Pastoralists' Union—at least they said so. I cannot give the names, but I remember men coming up and saying they had come up from the Pastoralists' Union.
1313. Did they produce any letters to that effect? They had an agreement from the secretary of the Pastoralists' Union stating that they were employed as shearers for different stations and giving the names of the stations.
1314. Can you state of your own knowledge whether any of these letters were addressed to the Bureau? I could not say anything about that.
1315. It is stated in the annual report of the Bureau that in the first month of its existence 4,965 persons were registered as unemployed, and that during the first three months work was found for 2,942 persons. Were you there during the first three months of its existence? I was there in and out of the office more or less all the time.
1316. You were only engaged casually? Yes; I was not working in the office the first three months, but I was in the office pretty well all day as a rule.
1317. Were you officially connected in any way with any body of unemployed? Yes; I was secretary of the unemployed.
1318. Before the opening of the Labour Bureau? After. I got connected with the unemployed the week before it shifted to the Exhibition Building. But prior to that time several men I knew took letters to the Bureau stating they had work to go to, and got both steamer and railway passes granted to them.
1319. It is stated in evidence that this system was abandoned in July last year, is that a fact? It is.
1320. Do you know whether any free pass has been granted without getting a guarantee since that time? I would not like to be certain on that point. I think a pass was granted without getting a guarantee in the case of a man named Henry. I would not be certain, but I am pretty well positive that there was no guarantee taken in his case. He was a clerk in the Bureau when it first opened.
1321. Were you not employed in the office? Yes.
1322. During the time you were so employed, were you aware of any men being engaged through the Labour Bureau by other labour bodies, such as the Maritime Free Labour Bureau, or the Pastoralists' Union, or any other employers' association? Yes; I know three cases where the Maritime Free Labour Bureau applied for men.
1323. Did they get the men? They were sent.
1324. Have you any idea how many there were? Yes; in two cases eleven men were sent on one occasion, and thirty-five men on another occasion; but as regards the first case I could not say how many were sent. The first application was made either at the end of June or the beginning of July.
1325. Do you know why they applied—was it because there was a scarcity of men, or because there was a strike on? As regards the first case I could not say; but as regards the second case, when eleven men were sent, there was a strike aboard the "Tweed." One Saturday afternoon, when Mr. Bloxham and I were in the office, he asked me to go out and call for seamen and firemen, which I did. Eleven men were sent

Mr. J. Smith.  
29 May, 1893.

- Mr. J. Smith. sent down, but when they got there they found they were wanted to ship on the "Tweed," and one and all refused to do so.
- 29 May, 1893. 1326. It was not known before they went that they were wanted for the "Tweed?" No; I do not think Mr. Bloxham himself knew—anyhow he did not tell me that the men were wanted for the "Tweed."
1327. What in regard to the other case when thirty-five men were wanted? Word came up one day for some men to do labour work. I was sent down with the men. Mr. Curry was not in, and I had to wait about two hours. The "Barcoo" was in with wheat from Melbourne for the flour mill at the foot of Bathurst-street. The regular wharf labourers wanted 1s. an hour to discharge this cargo, and it was refused. When I saw Mr. Curry, the regular wharf labourers had started work at the old rate.
1328. One shilling an hour? It was 10½d.,—I think—it was not 1s. anyhow. The men did not get what they wanted.
1329. Were none of the men you took down engaged? Their names were taken, and they were asked to come down at 5 o'clock next morning; they were told they would get some little work. Some got an hour and a quarter's work, some got nothing, and some got two or three hours' work.
1330. The eleven men who you say were engaged under a misapprehension, were not informed that they were required to take the place of the men on strike? Not until they got down there.
1331. Do you know anything of the shipment of men for the Lismore-Tweed railway contractor? Yes; but these men were not to take the place of men on strike. Forty-five men were sent there.
1332. What had they to sign;—what was the cost of shipping them? One pound per head was the amount of their fare.
1333. Is the report that they signed for more, correct? Yes; for £1 2s. 6d.
1334. What was the 2s. 6d. for? That I could not say.
1335. Did each one sign for £1 2s. 6d.? Yes.
1336. You are sure of that? I am positive.
1337. Did you ever accompany any men to the train or to the steamer? Yes, to both.
1338. In what manner were the men franked on the railways; did they receive ordinary tickets? Whoever was sent to see the men off took the orders on the Railway Department for tickets. He presented the orders at the ticket window and got ordinary tickets in exchange. Sometimes the ticket clerk would write something on the back to show that it was not exactly an ordinary ticket.
1339. Were the tickets given to the men while they were in the train, or were they given some time previously? I used to see the men into the train and then give them their tickets. I was supposed to wait until after the train had left.
1340. Would there be any possibility of the men bringing others in on their tickets? Not of late. I believe that was the case at first.
1341. Do you know anything of the manner in which the books of the Bureau are kept—had you anything to do with the keeping of the books? No, I had general work to do; I was like an emergency man.
1342. How many officials were there at the Bureau and what were their duties supposed to be? There were six officials in the Bureau proper, namely the superintendent, the secretary, the accountant, the general clerk, the registrar, and the messenger.
1343. *Mr. Houghton.*] What about the caretaker? He has nothing to do with the clerical work.
1344. *Mr. Rae.*] No doubt you have read in the press that there have been misappropriation of funds at the Bureau;—will you explain to the Committee what checks they have against one another, and how it is possible for this thing to be done which is alleged? Strictly speaking there is really no check against the two men who handle the money—the chief clerk and the accountant. I will explain the way it is done. When a man is going away on a free pass he signs an order on his employer to refund the money within a certain time; a duplicate of this order is kept by the chief clerk. In the course of a week or so the order is forwarded to the employer with the request that he will pay the money. The money is forwarded by cheque, in stamps, or by postal order. It generally comes addressed to Mr. Creer. He opens the letters, and if he sees that a letter contains any money he calls in the chief clerk and hands over the money to him. The chief clerk ticks it off in his book, and then he pays it over to the accountant who is supposed to take a note of it. These two officials have the handling of the money. Mr. Creer never kept a record of the amounts. If he had got a return for the week showing the names of the men sent out their destination, and their fares, and ticked off each name as he got the money, he would have had a check. Not only had he no check, but the accountant was in the habit of going out and cashing the cheques and postal orders, and bringing the money back, paying the exchange on the cheques. I know, for a positive fact, that the money was not paid into the Treasury as it should have been. It was kept for three or four days, until a few pounds had accumulated, and then Mr. Creer took it down to the Treasury.
1345. Was the money supposed to be paid into the Treasury, or was it supposed to be paid into a banking account? It was paid into the Treasury direct.
1346. It is stated in the report that so many men of various trades and professions have been sent out from the Bureau;—do you know how that information is obtained—it is simply taken from the men's own statements? It is taken from the pass-book.
1347. Is it taken from their own statements when they register? No; these are supposed to be tradesmen going out to work.
1348. What provision was there, or is there, to prove that a man is really going to employment;—is there any opportunity for men to be sent on bogus errands? Yes; every chance. Suppose, for instance, a letter comes in this morning to say that a man is wanted to go out baking or cooking up country. A notice is stuck up, "Wanted a cook, or a baker." Men apply for the job; one is picked, and he is sent out. They have really no idea whether that is a genuine application or not.
1349. Suppose a man gets up country and wishes his mates to be sent up on the free pass system, and he writes a note pretending to offer them work, would they be sent up without any inquiry being made as to whether he was a *bona fide* employer or not? Yes; there is no possibility of knowing whether an application is genuine or not. A letter comes to the Bureau, a notice is put up, and a man is forwarded.
1350. Suppose I go to the Bureau and say, "I have a letter from a gentleman I know up country offering me work there";—can I get a pass on the strength of that letter although it may be a bogus offer from a friend of mine who has gone up country? Yes; you can get a pass on that. If they felt any doubt about an application they would write or telegraph to see if the employer would become responsible for the fare, but in very few cases that is done.
1351. They generally take it for granted? Yes.

1352. *Chairman.*] Do you know any cases where such devices have been resorted to? I could not say anything about that.
1353. You swear that you have not known any cases of that kind? Not of my own knowledge.
1354. *Mr. Langwell.*] You stated that the figures in this annual report were deliberately faked? Yes; the returns are put here deliberately to mislead. That is my meaning of faking.
1355. I understand you to mean, when you say the figures are faked, that the figures are not correct? They are correct from one book, but they are not correct as showing the number of men sent out by the Bureau.
1356. You gave as a reason for stating that they are faked, that one man got two passes? I was going on to explain, when Mr. Rae started to cross-examine me, that the man I was speaking about and other men, perhaps, would be sent out to a job and would not take it, but they are all included in this return as being sent out to work. The Bureau never got these men work. For instance, it is stated in the report, "462 station hands, 15s. to 30s.; found." I say that not 20 per cent. of these men were sent out direct by the Bureau. Again it says, "517 shearers at 20s. per 100"; I say there was never a notice on the board for shearers. These men all came already engaged.
1357. *Chairman.*] Were they registered in the books of the Bureau? They had to be registered before they could get free passes. The Bureau takes credit for finding this work, but it did not. Again, it is stated that 111 wool-hands—classers, scourers, washers, and pressers—were sent out. I am certain that not one was engaged through the Bureau.
1358. *Mr. Langwell.*] The information we have from Mr. Creer is the same as you are giving, that the men have gone through the Bureau, but that the Bureau has not found employment for them? Do you not think the statements in the report are misleading?
1359. Can you cite any other instances of that kind? It states that forty-six sugar-mill hands were sent out. The majority of the men, if not all, had work to go to, and they got passes to go to their work. Work was never found for them by the Bureau.
1360. Do you know anything as regards the 104 sleeper-getters? The majority of them are right.
1361. Do you know anything about work being got for them through the Bureau? Yes. I remember one lot of forty-five going last March. Since that time I saw different parties off who were engaged directly through the Bureau.
1362. *Mr. Houghton.*] In what capacity were you employed at the Bureau? I was for three months in the Relief Department, and had to bear a hand in the general department. For three months I was caretaker, and had to bear a hand in the office.
1363. You had clerical work to do in the office? Yes; for three months straight off, and off and on for another three months.
1364. How long is it since you left? I left on the 4th January last.
1365. You stated that men have come down to the Bureau and said that they were sent there by the Pastoralists' Union? They brought a letter up from the Pastoralists' Union. I did not say they were sent up by the Pastoralists' Union.
1366. What was the nature of the letter they brought? Just an agreement. They came up with an agreement and made an application for a free pass.
1367. They were not actually sent by the Pastoralists' Union for the purpose of getting a free pass? I could not swear that.
1368. From your knowledge of the manner in which passes were issued by the Bureau, do you not think that the knowledge that the Bureau would issue passes conditionally upon the men having work to go to was the reason why these men applied for passes? Certainly.
1369. You stated that the money which was refunded on account of the passes was paid into the Treasury;—do you mean that it was paid into some Bank to the credit of the Treasurer? No; it is paid into the Treasury itself.
1370. *Mr. Waddell.*] Why did you leave the Bureau? I daresay if I had fought out the matter I should not have had to leave. After I had seen forty-five men off and tallied them off correctly, one of the clerks and I got "wined." A letter was written by the man who took my place containing several deliberate falsehoods, but it was not shown to me. I knew from Mr. Creer's antipathy to drink that if I did not take the sack I would get the sack.
1371. Were you dismissed by the secretary first? No; because I worked after that.
1372. After seeing a number of men off to the Richmond you got the worse for drink? Yes; after I had finished my work.
1373. Did you absent yourself from the Bureau on the following day? I was there at work on the following day—the day Mr. Creer came back.
1374. You were not absent at all? No; any statement to that effect is a deliberate falsehood.
1375. Is it true that Mr. Bloxham, the secretary of the Bureau, told you that your services would not be required any longer after that particular occasion? No; he never did.
1376. Did the superintendent of the Bureau inform you to that effect? I never saw the superintendent until a fortnight or three weeks after the event had happened.
1377. After the event you worked for two or three weeks before you got discharged? No; I say it was a fortnight or three weeks before I saw Mr. Creer.
1378. How long was it after the affair happened before you were discharged? About four or five days.
1379. You say you never were absent on account of drink at any time during office hours? No; because on the following day I was with Mr. Bloxham upstairs giving out the work.
1380. At the same time, you admit that you were discharged and that was the reason accorded to you? I do not admit that I was discharged—I left of my own accord. If I had stayed on and had been shown this letter or known about it I am sure there would have been a different face on the matter. I do not think Mr. Creer can have such a bad opinion of me when he will give me this letter of his own free will recommending me to a personal friend of his for work. Here is a letter that Mr. Bloxham gave me. I certainly asked Mr. Bloxham for the letter. With regard to the forty-five men whom I saw away by the steamer, as I had had a little experience of shipping matters Mr. Bloxham put the matter in my hands, and left me to arrange with the captain of the steamer for the shipment of the men. I shipped the men to Mr. Bloxham satisfaction. Mr. Munro, the accountant, told Mr. Bloxham that he would be in town all the evening, and would go down to the wharf and see how I got on; Mr. Bloxham told me not  
to

Mr. J. Smith.  
29 May, 1893.

- Mr. J. Smith. to allow him to interfere with me at all, and that if he attempted to do so to sit upon him. I went down to the place where I had arranged to meet the men and I found that Mr. Munro had seen the mate and had made different arrangements from those I had made with the captain. Forty-eight men were supposed to go. I tallied forty-five men aboard and brought the return back to the office and gave it in next morning. Mr. Munro tallied the men too; but the list of forty-five men showed that three different men were absent. When the return came back from the contractors, my tally was found to be the correct one, so that I could not have been drunk on duty.
- 29 May, 1893.
1381. You admit that you left the Bureau owing to certain differences which occurred? Yes.
1382. You say that where men have been sent to the country there has been no inquiry at all to find out whether their representations that they had work to go to were correct or not? No; a letter, for instance, is received this morning applying for a certain number of men and a notice is put up at 11 o'clock, so that there cannot be any inquiry made as to the *bona fides* of the jobs. If the Bureau had agencies in different parts of the country it could ascertain.
1383. Does the superintendent not take the precaution sometimes to ascertain as far as he possibly can whether the representations of the men are correct or not? It is impossible to find out. In one or two cases I know they have caught a man, but the cases were very flagrant ones. A man came up with a letter purporting to be a week or two old, but the ink was barely dry.
1384. You stated that the return sent in by the Labour Bureau has been deliberately faked? My meaning of "to fake" is to mislead. This return is compiled from the "daily outwards book," which shows the number sent away on passes, and the numbers sent out locally. This report in order to be correct should read in this way. "The number of persons sent out to work in the city and suburbs; the number of persons sent out to the country for whom work is found by the Bureau; and the number of persons who obtained passes to get employment in the country." If the report were prepared in that way it would not be misleading. In this report the two classes are grouped together, and credit is taken by the Bureau as if it had sent out the whole of the men to work.
1385. What makes you think that the officials have prepared the return so as to deliberately mislead? To keep the show going and get their salaries.
1386. Do you swear that the thing has been done deliberately and intentionally? I am certain of it. They knew that would mislead.
1387. You stated that when the superintendent receives a letter with a cheque or post office order he does not make a note of its receipt, but simply hands over the cheque or the order to the chief clerk who, after he has taken a note of it, hands it over to the accountant? Yes.
1388. You refer to that system as one which would be likely to cause errors? Peculation.
1389. Are you aware what course of procedure is adopted in similar circumstances in a merchant's office in this Colony? I never worked in a merchant's office, but I could give my railway experience.
1390. Suppose a merchant receives a letter with a cheque enclosed, would he make a note of the fact, or would he simply hand over the cheque to his clerk? I have never worked in a merchant's office; but if I were a merchant I most certainly would. It would be a simple matter to do.
1391. Would the Secretary for Railways, for instance, make a note, in case of that kind? I do not know. I know that in the city of Dunedin, the head centre of the New Zealand railway system, if any money came into the station the head of the department always took a note of it, and then passed it on to his junior. If Mr. Creer had kept a petty cash-book, he would have had a check on all this money. It would be a simple matter to jot down the items each day as they came in.
1392. *Mr. Rae.*] Was there no cash-book kept? Yes, but not by Mr. Creer.
1393. *Mr. Waddell.*] What position did you occupy in the Bureau? I was in the relief department for three months, and on the reduction of the wages I threw it up; then I was caretaker and emergency clerk. I relieved any one.
1394. You had nothing to do with the handling of the moneys? No; I relieved the registrar, and occasionally assisted Mr. Bloxham in giving out the work; and during Mr. Creer's absence at Broken Hill I did the correspondence.
1395. *Mr. Rae.*] Mr. Waddell, in questioning you as to the return being faked or misleading, seemed to me to draw from you an inference that it is not correct as regards the numbers? I think it is correct.
1396. I understood you to state that it was misleading as regards the way in which the numbers were placed? That is what I meant.
1397. *Mr. Houghton.*] In your opinion, has the Bureau been the means of conferring a benefit upon any considerable number of working men? It has certainly found work for a considerable number, but nothing like permanent work. In the majority of cases the work found for the men has really been casual work—for a day or a week or so. The only work of a permanent character was found through your own action, and that was at North Shore. If the granting of the relief is considered a benefit they have got a benefit from the Bureau. I think the sooner the relief department is placed under the Director of Charities the better for the Bureau. I can guarantee that the better class of working men in this city do not register at the Bureau for that very reason. They are afraid of being treated as paupers. The men are looked upon as paupers. If men go to the Bureau for a job, and they do not care about the job and refuse it, they are looked upon as loafers.
1398. *Mr. Rae.*] You think it impairs the usefulness of the Bureau to have the relief department connected with it? It does.
1399. *Chairman.*] Are there any marks made against the men who refuse to accept employment which they consider uncongenial? There are not exactly marks made. I remember a man who was sent to a job coming back, and telling Mr. Bloxham he was told when he got to the place stated in the *Herald* advertisement that the job was filled, and that the Bureau had never been applied to. He asked Mr. Bloxham whether that was the way in which a man should be treated. He did not speak altogether in a civil manner. Mr. Bloxham ordered him to go out. The man would not go; Mr. Bloxham called for a policeman, and a country policeman put him out. It occurred during the strike. Mr. Bloxham stated partly to me and partly to another clerk that he would know the man again if he came up. I have known a man who came up like that to be told that the job would not suit him—as much as to say that he would not get a show.
1400. Why is it as much as to say that he would not get a show? Before a man gets a chance to know what work it is, he is told "It will not suit you."
1401. Are men suitable for all classes of work? No; they only go on guess work in giving a man work.
1402. In this instance do you say the man was suitable? I do not say that. 1403.

1403. I want to elicit definite reasons for your thinking that certain men had been marked, either through their behaviour or their unfitness for certain positions? That is one case.
1404. What was the language that the man applied to Mr. Bloxham? I could not say exactly. It was not offensive, nor was it civil; it was a cross between the two. It was just what you might expect of a man who had been sent on a fool's mission.
1405. Was it the fault of the Bureau officers? It was the fault of the Bureau officers in sending the man to a job for which no men had been applied for to the Bureau. He accused Mr. Bloxham of taking this job from the *Sydney Morning Herald*, and sending him out on "spec." If the job came off, well and good. In this case it did not; and the man objected, stating that they did not do their work in that way at the Melbourne Bureau. I remember a few words he used. Mr. Bloxham told him it was a pity he was not back in Melbourne. The man kept on talking, and Mr. Bloxham ordered him out, stating that he would know him again. A couple of months ago something similar occurred. Some ironworkers were wanted at the Glebe. Two men had been out and had come back, and the notice was still on the board. They got asking Mr. Bloxham about the job—an advertisement had appeared in the newspapers—but he stalled them off by telling them that he was not at liberty to tell them where the job was.
1406. *Mr. Houghton.*] As a rule he is very civil to the men? In a great measure he has the confidence of the men. Mr. Creer has not their confidence, not because he means to be against the men, but because his nature is unsympathetic.
1407. Has he not great cause for irritation at times? No; Mr. Bloxham is the man who does the whole of the work of the Bureau. He is the only man—excepting, of course, the registrar—who comes directly in contact with the men.
1408. You know that many attempts at imposition have been practised which would irritate the superintendent? Yes; but Mr. Bloxham is the man who has all the work to do in connection with the men. Mr. Creer is brought very little in contact with the men. I dare say Mr. Creer would be greatly irritated through the men groaning at him in the street. They have no confidence in him, but they have in Mr. Bloxham. I believe if Mr. Bloxham were at the head of the department it would get on better than it has done.
1409. *Chairman.*] Do you think the usefulness of the Bureau can be enlarged in any way? Very much.
1410. In what way would you suggest? I would adopt the New Zealand idea, and have a branch of the Bureau in every leading town. I would have an agency wherever there was a Government official, and let these officials collect information as to the state of the labour market—that is to say, as to the work offering, the number of men available, and the rates of wages. This information could be sent to the head-office, and to the different branches, and if a weekly summary were posted up, the men would know where not to go and where to go.
1411. You advocate the adoption of the New Zealand system? Yes; pure and simple. There are one or two suggestions I should like to make. First, as regards the method in which work is given out at the Bureau. When an application is made for a cook or a labourer, a notice is put up on the board, "Wanted a cook," or a "labourer," without giving any further particulars. I would suggest that the name of the district and the rate of wages should be mentioned in the notice. In that case a man would know, without having to wait all day, whether it would suit him or be worth stopping for. Very often a man has to wait until 2 or 3 o'clock in the afternoon, only to find that the wages or the job will not suit him. I would also make a suggestion in regard to the card. The card which Mr. Creer issues simply contains the number and the name of the man. It should show whether the man is suitable for the work he applies for or not. Any man can go up now and apply for anything he likes. I would suggest that the card should state whether the man is married or single, and the nature of his occupation. A glance at the man's card would show whether he was suitable for the work or not.
1412. Have you any further statement to make? I do not think so.

Mr. John Christian Watson called in, sworn, and examined:—

1413. *Chairman.*] What is your occupation? I am a compositor.
1414. You are President of the Trades and Labour Council of New South Wales? Yes.
1415. You have been appointed by that body to attend before this Committee and give evidence upon the subject of the inquiry? Yes.
1416. Do you know anything of the working of the Government Labour Bureau? I do not know anything about its working except in regard to its effects. I know nothing of the details: As far as I have been able to judge, it does not seem to be in any way fulfilling the expectations of the labouring classes.
1417. Do you think it acts to the detriment of the labouring classes? I think it does as it is constituted.
1418. In what way? I think the mere shifting of large bodies of men from one centre to different portions of the country is detrimental, because in many instances, possibly through the Bureau officials not knowing the state of the local labour market, it has had the effect of flooding that market.
1419. Have you known any instances where that result has occurred? I have been informed that it has occurred in Bourke. At various times we have received complaints from many places in the country of labour having been sent where it was not necessary.
1420. Have you ever heard any complaint of the operation of the Bureau having tended to reduce wages? Yes. We have had complaints made to our body by numbers of workers that men have been sent from the Bureau to the order of certain gentlemen who had contracts, and they were expected to work for reduced wages. That was stated to have occurred at Pymont. We have had several other instances. We have heard that if the men did not accept the reduced wages it was immediately thrown at them by the employer, "We can get plenty of men at the Bureau to take the job at these wages."
1421. I presume you believe that such an institution is necessary for the collection of labour statistics? Yes; I believe in a Bureau. I believe most certainly it could be made a very useful institution if it were properly organised and administered.
1422. In what way do you suggest it could be improved? I think the first and most essential improvement would be the establishment of branches—not necessarily expensive ones—throughout the country. Either the police or some other Government officials who could spare the time, could act as the agent of the Bureau, and so place the head-office in thorough touch with local wants.
1423. You share the general opinion that it is an act of Governmental stupidity to bring men all the way from a district to register themselves as being out of work for the purpose of being sent all the way back to that district? I am of that opinion. It seems rather a backward way of doing business.

Mr. J. Smith.  
29 May, 1893.

Mr.  
J. C. Watson.  
29 May, 1893.

Mr.  
J. C. Watson.  
29 May, 1893.

1424. You think that if the Bureau is to continue it should have branch offices? I think without that it will never be of any use as far as working people are concerned. It will simply mean that a number of people are transported from town and put out of sight. No proper supervision, no discretion can be exercised, unless the officials know how the labour market stands locally.

1425. The function of the Labour Bureau is to bring employers and employees together; the mere registration of names will not have the effect of employing a great number of those out of employment? No; personally I do not look to the Bureau to effect any great reform in the way of finding work for people, except to put them in touch with those who are willing to give them work. I do not believe it will create work.

1426. In your opinion the Bureau would be very useful in providing work for the citizens? I think it would.

1427. More especially if associated with some other system of providing employment, such as village settlements? Yes; I think it would assist in that direction very largely if it were given increased powers. I daresay that in order to give the Bureau these powers you would have to create a department of labour or industry.

1428. Do you know anything of such a department elsewhere? There is such a department in New Zealand, where the Minister for Labour has under his control all matters affecting labour, including a Labour Bureau and village settlements.

1429. Are you fully seized as to the working of the Bureau in New Zealand? Not as fully as I should like to be. I have written to New Zealand for information on the subject.

1430. As far as you know you think it is a better system than our system? Yes; from what I know of it it seems to me something which we might very well introduce here.

1431. You would advocate its introduction into this Colony? Yes.

1432. Have you any knowledge of the Department of Industry recently created in England? Only from the press.

1433. Have you read the outline of its functions which Mr. Mundella gave in a recent speech? Yes; I hand in an extract from the *Daily Chronicle* in which he gives an outline of its functions. (*Vide Appendix* —). As regards the possibility of the Labour Bureau doing away with registry offices, I think it has reduced the sphere of their operations to a certain extent. I think that is a highly desirable thing from what I know of the working of some of these offices.

1434. Do you know anything of the working of the Pastoralists' Union Labour Office? Yes; a little.

1435. Do you know anything of the working of the Maritime Labour Bureau? Yes.

1436. Do you know whether either of these offices only gives employment to those who profess themselves to be outside the Labour Unions? I know that for a fact, more especially in regard to the Maritime Labour Bureau.

1437. Do you know whether either of them has reduced the rates of wages? As regards the Pastoralists' Union Labour Office, I do not know definitely, but I know that the other office has reduced the rate of wages, more particularly as regards the overtime for wharf labour.

1438. What wages were paid to wharf labourers before the maritime strike? For day work 1s. an hour for ordinary lumping work, and 1s. 3d. an hour for bag stuff; and for overtime, 1s. 6d. for ordinary lumping work and 1s. 9d. for bag stuff.

1439. Those rates have been reduced? Yes; the men are working now in many instances for 1s. an hour overtime and on Saturday afternoons, which used to be counted as overtime.

1440. Do you know anything of village settlement schemes? Yes, a little.

1441. Are you connected with a movement to establish a village settlement scheme in this Colony? Yes, I am a member of a committee which is charged with the work of formulating a scheme, and if possible carrying it into effect.

1442. Can you, in a few words, describe the nature of the scheme? We propose to ask the Government to introduce a Bill which will empower them to give us certain Crown lands, and, if necessary, some assistance to the people whom we shall put on those lands, and who will work co-operatively and sharing equally in all profits, in associations under the control of trustees, who will be appointed under the Bill to carry out the details of the settlement.

1443. Where do you propose to get the lands? There are some Crown lands in the Warragamba Valley on the Nepean, at Eurimba in the Gosford district, and at Kempsey on the Macleay River, and at other places.

1444. Have you a printed copy of your scheme? No; it is not formulated yet. We have drafted a Bill.

1445. Have you a copy of the rules of your association? No; we are getting copies of the Victorian and New Zealand rules to guide us in the drafting of our rules.

1446. Will you furnish the Committee with a copy of your rules as soon as they are drafted? I will if I can.

1447. You think the Government Labour Bureau as it is constituted is a failure? I think it is more than a failure. I think it is a menace in many instances to local workers in many parts of the Colony. People who are located in one spot are liable to have the work they usually expect to get flooded by people from Sydney or some other part of the Colony through the Bureau officials not having any proper knowledge of the state of the local labour market.

1448. But you think that by the extension of its functions and the establishment of co-operative village settlements to absorb those who cannot obtain work, or to absorb men suitable for agricultural co-operative settlements, the Bureau can be made a useful Governmental institution? I am most certainly of that opinion. I think it would then supply a great want. It would put people out of the reach of those harpies who run registry offices. I have known several instances where registry offices have charged a man a week's wages for getting a job valued at £1 a week. A man has to pay £1 and more down, before he will get a job worth £1 a week and rations.

1449. *Mr. Houghton.*] Do you know of any instances where they have sent several men after one position? Yes; I know an instance where several men were persuaded that they were to get the one job. They all paid their fee.

1450. *Mr. Langwell.*] I suppose your evidence concerning the Labour Bureau embodies the information which you have received in your position as the President of the Trades and Labour Council? Nearly wholly so.

1451.

Mr.  
J. C. Watson.  
29 May, 1893.

1451. In that position you receive a lot of information from societies that are located in the interior, but which are affiliated with the Council? Yes.
1452. Do you think that the working of the Bureau as it is conducted tends to swell the number of unemployed in Sydney? I believe it has that tendency to a certain degree by dragging men here with the idea that once they have registered their names at the Bureau in Sydney they will have some sort of employment found for them, or some provision made for them in the shape of rations or something else.
1453. You think the operations of the Bureau should be extended? I think so.
1454. You think that there should be a branch of the Bureau in different centres in the interior? I would make the branches as numerous as possible.
1455. The branches, I suppose, would have to inform the head office as to the state of the local labour market? Yes; as frequently as possible.
1456. If the Government refused to establish these branches which you suggest, you think it would be better in the interests of the workers of the Colony to close the Bureau? I do. I think without these branches it is worse than useless.
1457. You have stated that you know of cases where a man has had to pay £1 before he could obtain employment? I know that of my personal knowledge.
1458. Do you know of any of these private registry offices having had to close since the opening of the Government Labour Bureau? Not personally.
1459. Do you think the working of the Labour Bureau has in any way affected their trade? I think it has reduced their trade.
1460. But not sufficiently to cause them to close their doors? I do not know about that—I think it has reduced their trade.
1461. Do you think that if the Bureau were continued for five or six years and its operations were not extended, these private registry offices would close? I do not think so; I think it simply takes away a portion of their trade.
1462. Your impression of the Labour Bureau is that it is simply another registry office? That is all it is—simply and purely a registry office, though not as good a one as it might be.
1463. *Mr. Rae.*] You stated that you are aware of a number of men being sent through the Labour Bureau to Bourke? Yes.
1464. Taking your own trade, are you aware of any instances of a country office or a country town having been supplied with men through the Bureau? I know that as soon as the meat works at Bourke were about to be opened the manager was informed that he could get any number of men through the Bureau, but the Butchers' Union took the matter up and they paid the passages of their men, which passages the men are refunding to their Union.
1465. In addition to the administrative reforms you have suggested, and the village settlement scheme, do you know of any other scheme or system which could be advantageously adopted in connection with the Bureau? I think that apart from the village settlements, which are more of a permanent nature, the Government might establish some training farms, where people could get some idea of what they would have to do in the village settlement.
1466. Similar to those mooted in New Zealand? Yes.
1467. *Mr. Howthorn.*] You stated that you regard the Government Labour Bureau simply as a registry office? Yes, as it is conducted.
1468. Do you know if it has been the custom for the Labour Bureau to supply free passes to men who obtained employment through the private registry offices? Yes.
1469. If that custom were stopped would it not be the means, to a large extent, of taking away the trade of private registry offices? I think it would.
1470. If the men who go to private registry offices were compelled to pay their passage money, or to get to their employment as best they could, without any assistance from the Labour Bureau, do you think it would, to a very material extent, affect the trade of private registry offices? I think so.
1471. Would you not advocate that that custom should be stopped? Yes; I think it might be stopped with advantage to the country and with no harm to the people, more especially to the people in country districts.
1472. Is it a fact that during the last two and a half or three months the wages paid to maritime labour of all classes have been reduced? Yes; they have been materially reduced in nearly every branch of maritime labour.
1473. And the steamship owners have adopted what you may call "constant" men with a view of further reducing the wages? Yes; they have a number of men called "constant men" upon whom they can call at any time to do the work, and who are only paid at the rate of £2 2s. a week, which, of course, is not 1s. an hour, the rate that was ruling formerly.
1474. *Chairman.*] Have you any further statement to make? I do not think there is anything else I can touch upon. I can only reiterate that the whole desire and attitude of our body towards the Labour Bureau is that its operations should be extended in such a manner as to make it advantageous to the whole of the people. At present we consider it is not so. Without branches and without means of ascertaining the condition of local workers it is a menace to the condition of the people in country districts, and at the same time it is of no advantage to the people of these districts. It is of no advantage to send people to a district where they are to get no work, and it is a very great disadvantage to the persons already in the district. We wish to see the Bureau so improved that it will work in a better manner than it has done hitherto.

WEDNESDAY, 31 MAY, 1893.

Present:—

MR. LANGWELL,		MR. RAE,
MR. MCGOWEN,		MR. WADDELL.

J. D. FITZGERALD, ESQ., IN THE CHAIR.

Joseph Creer, Superintendent of the Government Labour Bureau, recalled and further examined:—

- Mr. J. Creer. 1475. *Mr. Waddell.*] Have you had a clerk named James Smith in the employ of the Labour Bureau?  
Yes.
- 31 May, 1893. 1476. For how long was he an officer of the Bureau? Previous to the inauguration of the Bureau he was secretary of the unemployed committee that was appointed by the unemployed to keep the exhibition building in order. He acted as the secretary of that committee almost the whole of the time we were at the Exhibition Building.
1477. Was he afterwards employed by the Labour Bureau for a time? Yes; he was employed for a time as an assistant in the relief department, and then as a caretaker of the present premises.
1478. Did he leave your employ of his own accord or was he dismissed? No; I dismissed him.
1479. Did he ever absent himself from his work during office hours? Frequently. The moment he got any wages or money he would start drinking, and could not be found. I dismissed him on three or four occasions. I pitied him because there was something the matter with one of his ankles, but ultimately he was that bad that I dismissed him.
1480. Did he ever absent himself for a day at a time from his post? Frequently.
1481. Do you remember Smith being sent with another officer of the Bureau to see some men off to the Richmond one night? He was dismissed over that affair. It occurred the day before I returned from Broken Hill. He was sent down by Mr. Bloxham to the wharf to see a number of men off to the Lismore-Tweed railway contract. He got drunk on the wharf and would have fallen into the harbour and been locked up had not one of the clerks in the office who happened to be there put him in a cab and sent him home.
1482. Did he not see the men off that night? No; he was too drunk to do anything.
1483. Was there any other officer of the Bureau seeing them off? Yes; a clerk named Munro happened to be there, and he saw them off.
1484. Munro saw the men off and not Smith? Yes. The next day a report was made to me, and I inquired after Smith for a few days, but could not see him.
1485. Did he not come back the next day? I believe he was locked up in his bedroom.
1486. Did he come back to the Bureau on the following day? I think he came back that night.
1487. Was he at work at the Bureau on the following day? No; he did not work any more after that occasion. I sent him a letter requesting him to leave the premises when I got particulars of his conduct.
1488. *Chairman.*] The officers who see men off are supposed to keep a tally? The men take the passes with them.
1489. Do they keep a list of the men sent away? They have each man's name and pass.
1490. On this particular occasion some forty-five men, I think, were sent away? About that number.
1491. And I believe three men were missing from the muster? I think they were.
1492. Were two lists of the men handed into you subsequently, namely, one by Smith and one by Munro? I cannot remember. It was done in my absence. I arrived in Sydney on the very day on which the men were going away, and Smith's conduct was reported to me on the following day. Mr. Bloxham, who has all the papers, would know all about the matter. I know that Smith was too drunk and too incapable to see any man off.
1493. Do you remember writing to Mr. Whiteley King at any time? Yes.
1494. Have you got a copy of the letter? No.
1495. Do you not keep a copy of the letters you write? I do as a rule.
1496. Why was this the exception? Simply because it was a kind of memo.
1497. Can you state the purport of the letter? Yes. A number of men were in the habit of coming to me with shearers' agreements for the purpose of getting a pass to enable them to get to their station, sometimes a month or six weeks before shearing would commence. I thought it was a mistake to send them away so long before their work commenced. I thought they would only knock about the place and could not get employment. Seeing that a number of men were resorting to this practice and pressing very hard to get away, I wrote a short note to Mr. Whiteley King to say that these men represented that if they could get a pass to take them to the stations they would get work at lamb-marking or some other station work until shearing commenced. My memorandum to Mr. King was to this effect, "as you make an engagement for a station if you mention in the agreement that the men can get work at the station at lamb-marking or any other work as soon as they arrive then I shall send them." It was with a view of obtaining some record that the men could get work the moment they were sent to the station that I wrote to Mr. King.
1498. Mr. Whiteley King in reply to that memorandum sent you a letter from which you quoted a paragraph. We have since obtained a full copy of his reply, in which, writing under date 6th April, 1892, he says:—"I have your favor of the 5th instant, and in reply have to say that your suggestion that I should provide men engaged by me, with letters asking for free passes comes as a surprise." Did you write to Mr. King suggesting that he should provide men with letters asking you for free passes? I wish we had the letter. I thought Mr. Whiteley King would have the letter. My suggestion was that if he knew that the men could get employment at once, he should say so in a letter to the men, which could be produced to me. The men always told me that they could get work on the station the moment they arrived, at lamb-marking or some other work.
1499. Then Mr. King says in his letter:—"I will do myself the pleasure of calling upon you to-morrow morning." What transpired at the interview? I explained the whole matter to him. That was the first time I ever saw him.
1500. In the first annual report of the Bureau the figures given for station hands are "462 from 15s. to 30s. and found," and the heading "country work" would imply that these persons had been employed from the Labour Bureau. Were these 462 station hands employed through the agency of the Bureau, or were

were they simply sent by the Bureau? Many of them probably were employed directly through the Bureau. Others would be sent to the Bureau perhaps with an agreement from Mr. Whiteley King, but would be sent away by the Bureau. Mr. J. Creer.  
31 May, 1893.

1501. Then it is simply a Bureau to obtain free passes, and not a Bureau to obtain employment? We do obtain employment.

1502. Do you not think it is rather misleading, in stating the exact number of men who were employed through the Bureau in the year, to give the number of men for whom employment has been obtained by others, and who have only made use of the Bureau to obtain free passes? You will see by my report that these men were sent by the Bureau. I do not say that the Bureau found employment for every one. What I say is that these men have been sent by the Bureau to their employment.

1503. In the case of the 111 wool hands, I presume the same explanation will apply? Yes.

1504. And also in the case of the 517 shearers? Yes.

1505. For many of these 517 shearers work was obtained by Mr. Whiteley King? They would be engaged by Mr. Whiteley King.

1506. And sent on to you for free passes? I do not say they were sent on to me, I have never admitted that at all. Mr. Whiteley King says he never sent a man to me; I do not believe he ever did. The men came to me for passes with a view to get to their work.

1507. *Mr. Langwell.*] You stated that you dismissed James Smith on three or four occasions, that he frequently absented himself from his work, and that when he went down to see these men away to the Lismore-Tweed Railway contract he was so very drunk that had it not been for another officer of the Bureau, he would have fallen into the water and been locked up? Yes; that was what was reported to me.

1508. I understand that he had a bedroom on the premises while he was caretaker? Yes.

1509. You stated that you sent him a letter requesting him to leave the place; was it done on account of his drunken habits? Yes, and on no other account. The very moment he got money he got drunk. That was my experience of him.

1510. Did you give him a letter recommending him to any one else who might want a man? I gave him a letter of recommendation, I think, to Mr. John Osborne, of the *Australian Star*. I would do so again with any man under certain circumstances.

1511. Was it not a general recommendation? I think it was addressed to Mr. John Osborne, of the *Star*.

1512. Do you know if Mr. Bloxham gave him a letter too? I do not. Smith was a man of some ability and I should never hesitate if I could do anything for the man.

1513. Except to employ him yourself? I would not employ him. I had quite enough experience of him. I thought that if he got to a place somewhere else he might be better. He came to me after he was dismissed, and assured me he would take the pledge and conduct himself in the future as a man should do. He is a man who could very well have made a living. I proved that he had sufficient ability to make a good living, but his weakness was drink. When he got means he preferred to lead a lazy loafing life to earning an honest living. That is my opinion of the man after a considerable amount of experience.

1514. If that is your opinion of the man, do you not think you were doing an injustice to others in giving him a letter of recommendation? No; the possibility is that he might go somewhere else. If he would take the pledge and reform he might do very well.

1515. Have you seen a copy of the evidence which has been taken by the Committee? I have seen a copy of my evidence.

1516. You have not seen any other evidence? No.

1517. Have you not seen Mr. Whiteley King's evidence? No.

1518. In the course of your evidence you handed in a letter which you had received from Mr. Whiteley King? Yes.

1519. Did you hand in the letter in full? I handed in the letter as I received it.

1520. Have you seen the first part of the letter which was handed in by Mr. Whiteley King? I have his letter now.

1521. You were aware when you were making the quotation that you were not quoting the whole of the letter? I read a paragraph from the letter that bore upon the question which was asked me, and then I handed the letter over to the reporter.

1522. In your evidence you stated that a number of men who went to Fort Bourke were engaged in New Zealand and got free passes from you? I do not think I stated that.

1523. Do you remember bringing a list showing the number of men that went to Fort Bourke, and the time that they have lived in Sydney according to the register? Yes.

1524. You stated then that you were pretty well sure that the men did not come from New Zealand? I did not say anything of the kind. I said that only two had come.

1525. I asked you if it were a fact that the whole of them had come from New Zealand and you said "No"? Yes.

1526. If Mr. Whiteley King has said that the whole of the men were engaged in New Zealand would you say he was right or wrong? I would not say one thing or the other; I could not tell. I go by what they registered at the Bureau. What I gave you is a copy of what they gave us.

1527. Would it be any news to you to hear that the way these men registered is not correct, and that the time they gave as the duration of their residence in Sydney is not correct? I would not be surprised. I dare say some of them have given me wrong information. I find that some have registered in one name and come back with another name. Some men will do anything.

1528. You had a special audit made of the books of the Bureau lately? No; I do not think there was any special audit.

1529. The Books of the Bureau have been audited? Yes. A revenue officer from the Treasury in the performance of his duties came and audited my books and went through the accounts.

1530. Is it a fact that there was a deficiency? There was a deficiency previous to the auditor coming. The moment he came I reported to him that some money had been misappropriated.

1531. Was it on your report that the books were audited? No.

1532. The audit would have taken place anyhow? Yes.

1533. What was the amount of the misappropriations? I think it was £21 18s. 1d.

1534. No action was taken with regard to those who had misappropriated the money? No; except that they were dismissed. I reported the matter to the Principal Under Secretary; the money was refunded, and the men were dismissed.

- Mr. J. Creer. 1535. What positions were they filling? One was the pass-clerk and the other was the accountant. They worked in collusion.
- 31 May, 1893. 1536. Had they been long in the employment of the Bureau? From the commencement.
1537. Have you any way of checking the moneys which are refunded on behalf of the men? Of course, we have. When a letter with money comes in it is handed over to the pass-clerk, and he credits the person from whom it comes with the amount, and sends an official acknowledgment of its receipt. The cheque is then handed by the pass-clerk to the accountant, who keeps a ledger account of the amount.
1538. Who keeps a check on the pass-clerk? I am supposed to keep a check on everybody.
1539. As a matter of fact, do you keep a check upon them—do you keep an account of all the moneys which are handed to you? I do not keep an account personally, but my clerk does. I frequently go through the accounts.
1540. Who keeps a check on the pass-clerk to see that he does hand the money over to the accountant? I do not know that there would be any check. Whenever a cheque comes to me in a letter I hand the letter and the cheque to the pass-clerk; he has a book in which are written the names of every one who has been sent away, and he will credit the person whose fare the cheque represents with the amount, and fill up a receipt, which is sent away. The moment he has done that he is supposed to hand over the cheque to the accountant, who keeps a ledger account of all cheques. Then, whenever £20 or £30 has accumulated, I pay the money into the Colonial Secretary's Office.
1541. But supposing he omits to make out a receipt? That is just what he did.
1542. Do you personally keep a check on all moneys which are handed to the pass-clerk? I do not personally.
1543. Does anyone? No; I do not believe there is anyone who could do anything of the kind. We keep a clerk for the purpose. We cannot have half a dozen persons keeping a check on one another.
1544. *Chairman.*] It seems to be inconceivable that you, instead of keeping a record of the money which passes through your hands, should deliberately give it to a clerk who is entirely irresponsible? I have had thirty years' business experience, and I never knew business to be transacted in any other way. I suppose I have had as many cheques and as much cash pass through my hands as most men. No one in all my experience keeps a tally, he hands the cheque or the money to the clerk whom he employs for that purpose. What does he keep clerks for except to do that? I have transacted a good lot of business myself, but I never knew anything of the kind to be done.
1545. It is not your own money? It is not done in any other Government office that I am aware of. The Committee may as well know how it was done. A man is supposed to have the amount of his fare deducted out of his first month's wages, and if a cheque has not been sent in, say, two months, a reminder is sent that the amount is still owing. In this case a man was applied to a second time, and immediately he received the reminder he wrote me a letter to say that on a certain date he called at the office and paid a cheque, and that he stood over the clerk while he was making out the receipt. He paid the cheque on behalf of somebody else. When I got his letter I was surprised, and I dictated a letter to be sent to the man asking him to give the name of the drawer of the cheque, the date on which it was paid into the Bureau, and the name of the person who gave the receipt. The clerk saw that I was determined to find out the truth. I read from his countenance in an instant that he was guilty. He came to me the next day and confessed that he had received the cheque. The first thought which struck me was that it did not end with that cheque. When I came into the office next morning I spoke about the matter again. I went out in such a way as to give them the idea that I was making an inquiry. I returned at 1 o'clock, and called the clerk upstairs, and I said to him, "This is not the whole of the money. There are other moneys which have been taken." He never spoke. It struck me directly that the two were working together. I said, "You are not alone in this affair; and the best thing you can do is to make a confession to me, and go down to your desk and state on paper exactly what moneys have been manipulated." And he did so.
1546. *Mr. Langwell.*] How long a period did the misappropriations extend over? Six or seven months.
1547. It was purely through an accident you found out about the misappropriations? It was ascertained accidentally. I had implicit confidence in the two men.
1548. If the man had not given you full particulars do you think you could possibly have found out how much he had appropriated? Perhaps the inspector would have found it out when he came to audit the books.
1549. Suppose the clerk omitted to send a receipt, how could it be found out? We have a book which shows that so much money is owing. The books are checked, and it might have been found out in many ways. In this case, in order to ascertain exactly what money was misappropriated, a letter was written to every person who was supposed not to have refunded the fares of his men. It might have gone on for a considerable time, but it just cropped up in that way. If you have two men in your employ who will act in collusion it is a very difficult matter to check them. I have had sufficient experience to know what it is.
1550. Do you consider the monetary transactions of the Bureau anything like ordinary business transactions? Yes; they are nothing but business transactions.
1551. Not in a general way of business? They are exactly like any other business. You get a cheque for a debt, you credit the amount. There is no difference between transacting the monetary business of the Bureau and transacting the monetary business of any other affair that I am aware of.
1552. *Mr. Rae.*] You say that a special audit has been made of the books in connection with this matter? It might have ended in a special audit in consequence of my reporting the matter to the inspector the moment he came.
1553. What was the date of the audit? It was about the 1st May. The auditor was at the office for two or three weeks.
1554. Has any report of that special audit been made? I reported the whole matter officially to the Principal Under Secretary.
1555. Has the auditor recommended that any different method of book-keeping should be adopted at the Bureau? I dare say he will report to his superior officer. He recommended to me certain alterations in the book-keeping, which I am carrying out.
1556. About what date did you discover the embezzlement? I do not know exactly, it was a few days before the auditor came.

1557. On the discovery of the defalcations did you acquaint any Government officer with the fact? Yes; the Principal Under Secretary. Mr. J. Creer.  
31 May, 1893
1558. Immediately? Yes.
1559. Was not the audit consequent upon the discovery which was made? I do not think so. I acquainted the Principal Under Secretary about 10 o'clock one night in the Colonial Secretary's Office, and the next morning the auditor was at the Bureau. He could not possibly have come in consequence of any report I sent in—he was coming there anyhow. He knew nothing about the matter at all. Immediately he came I reported the whole thing to him.
1560. On reporting the matter to the Principal Under Secretary had you dealt with the men who had embezzled the money? Yes; they were dismissed.
1561. Did you dismiss them? They were not sent out of the place, but they were under dismissal. When I explained to the inspector how I had found out the matter, and the necessity for making a thorough audit of the books, with a view to ascertain if there were any other defalcations, he suggested that it would be well to keep the men about for a day or two, as they might be able to give information with respect to particular items in the books, and thus facilitate the audit.
1562. Did the men refund the amount which they had embezzled? Yes; at the end of the month when his salary was due one of them refunded the amount he embezzled, and the other refunded the amount he embezzled a day or two before his salary was due.
1563. Was any understanding arrived at with the man who gave the information that if he made a full confession he would not be prosecuted? No; nothing of the kind. How could I, the head of a sub-department, make any such condition? I could not have done so if I had wished. I reported the matter to my superior officer.
1564. Why did you not institute criminal proceedings against the men for embezzlement? It was not for me to institute criminal proceedings; it was for me to act under instructions.
1565. You had no power to institute criminal proceedings? I would not do such a thing without instructions.
1566. Who embezzled the money? Whiteside and Munro.
1567. Was Munro the man who saw the men off at the time Smith was drunk? Yes.
1568. Was it in any way consequent upon a statement made by Munro that you dismissed Smith the next day? He was not dismissed upon a statement made by Munro at all. A gentleman who happened to be on the wharf that night wrote me a letter giving me particulars of Smith's conduct on the wharf. When I got that letter on the following day, I asked Munro if his statements were true. I did not get the information from Munro.
1569. Munro had not previously reported the matter? No.
- 1569½. You stated that after Smith had filled the position of secretary of the unemployed committee at the Exhibition Building, he was employed in the relief department at the Bureau as an assistant, and subsequently as caretaker of the Bureau? Yes.
1570. Was he employed in any clerical capacity at all? As assistant to the relief officer, he would have clerical work to do. He would assist that officer in making out the applications and the receipts.
1571. Did he at any time, in the absence of an official, or in a pressure of work, do general duty? Yes. When I was at Broken Hill there was a rush of work, and Mr. Bloxham engaged Smith for a time.
1572. Sometimes he did casual general work? He did anything he was asked to do.
1573. He was what you might term a general casual hand? Yes.
1574. Was he paid a special fee for the special work he did, or did he receive a regular weekly salary? When the citizen's committee broke up, and the unemployed committee was knocked on the head, Smith still acted as secretary to the unemployed committee. When I employed him in the relief department he got 30s. a week; then I recommended that he should get £1 per week, rations, and a bedroom. When we were shifting from the Exhibition Building he made a very strong appeal to me to allow him to occupy the position of caretaker, as he had no friends and nowhere to go to. Being a man for whom I had a good deal of sympathy, and I have done a good deal for him, I gave him 10s. a week, a room, a bedstead and bedding, and rations. In addition to that 10s. a week Mr. Bloxham gave him £1 a week when I was away at Broken Hill.
1575. When he did special general duty he got special remuneration? Yes.
1576. When he was not employed regularly was he supposed to be about the place the whole of the day? No, but he was supposed to look after the premises at night. His chief duties as caretaker would be to brush out the office at night, and to see that the place was locked up.
1577. In the day his time was his own practically? Chiefly it would be his own.
1578. You stated that he was frequently absent for a day at a time, or perhaps for a few hours? Yes.
1579. In virtue of the position which he occupied as caretaker, only doing work at odd times, had he not a right to be absent? He had no right to be absent at night. I found on several occasions that whenever he got money he would get drunk, and another man—the man who is now caretaker—would do Smith's duty.
1580. With regard to the audit—was it made by one or two auditors? One.
1581. Did he recommend you to adopt any system for the better safeguarding of the funds you receive? Yes; there was a slight alteration made in the way we keep our books. In both the day-book and the ledger an alteration simplifying the matter has been made on his advice.
1582. Was that calculated to be a more effective check against peculation? I think it is. I think it is so simple and effective that it would be a difficult matter to peculate.
1583. *Mr. Waddell.*] Did the auditor recommend you yourself to keep any account of the moneys you received as a check on the others? No.
1584. Simply to pass them on to the pass-clerk? Simply to pass them on. It would be impossible for me to keep an account personally. We do not want half-a-dozen men to keep an account of the moneys.
1585. He did not recommend you personally to keep a check? No; he simplified the two books, which is a considerable improvement. I may say that when the Bureau was started I had nothing to go by. I had not an order or a book, or an example, or an instruction to go by. I was sent for by the Premier and asked if I would take charge. I said, "Yes." He said, "Well, go and do it." I had to concoct a system of working the Bureau, and improve it as I went along. Last week I read a report of the system which is adopted in connection with the New Zealand Bureau, and the system which I introduced, and which

Mr. J. Creer. which is in force still, and that system are as nearly alike as any two things can be alike. I gave an outline of our system to the Victorian Bureau, and it was adopted there. We got some 13,000 persons, all of a heap, to handle, and we had to handle these men, and devise a system of working the Bureau, from step to step. It is no wonder that something wrong took place when I had to handle that number of unemployed men, and watch every detail of the working minutely. These clerks I have were unemployed in the streets when I started the Bureau. I had implicit confidence in their honesty.

31 May, 1893.

1586. You were engaged in commercial pursuits for a number of years? Yes.

1587. Have you had a large experience in the conduct of business affairs? I conducted a very large auctioneering business for about thirty years.

1588. Did you conduct your business on the lines on which such businesses are conducted? Yes; it was a successfully conducted business at any rate.

1589. When you received a cheque in the course of business did you make an entry of its receipt, or did you simply hand over the cheque to your clerk? I never entered the receipt of moneys, and I never knew a business man who did. What do men employ clerks for? No business man in any extensive business does such a thing.

1590. So far as your knowledge of commercial affairs goes, do you think it is a usual thing for the head of a business establishment, or the head of a Government office, to keep a record of any cheques he receives? I know it is not a usual thing. It is usually kept by the officers appointed for the purpose. I conduct the commercial part of the business of the Bureau exactly the same as I conducted my own business, and that was a very extensive one.

1591. *Mr. Rae.*] Do you pay any moneys you receive into the Treasury? No; to the accountant at the Colonial Secretary's Office.

1592. Would it be an improvement if the Bureau were allowed to have a banking account, and to pay all moneys you receive to the credit of that account? The question of appointing me a revenue officer was discussed with the inspector. I do not remember the reason why I cannot be appointed a revenue officer, but there is some technicality standing in the way. Every few days, whenever there is a sum of £20, £30, or £40, I make out an account and pay the money into the accountant at the Colonial Secretary's Office, and he pays it into the Treasury.

1593. He has no check beyond the periodical audit? He has the vouchers I give him, and then the Treasury Inspector comes round and looks through the books.

1594. *Chairman.*] You swear that the money is paid into the Colonial Secretary's Office? Yes.

1595. It has been stated on oath that it is paid into the Treasury? I have never paid a shilling into the Treasury.

1596. Has any one else paid a shilling into the Treasury for the Bureau? No.

1597. It is entirely untrue that it has been paid into the Treasury? Yes.

1598. It is paid into the Treasury by the accountant to the Colonial Secretary's Office, but not by you? It goes into the Treasury, but not through me.

1599. Have you ever sent men to positions that have been advertised in the *Sydney Morning Herald*? Yes.

1600. Without any application from the advertiser? No. In the morning Mr. Bloxham will look at the *Sydney Morning Herald*, and if he sees that a man is advertising for an engineer or a gardener he will take a note of the address, give a letter to a man that is suitable for the work, and send him down to the place. In that way these men get employment.

1601. *Mr. Langwell.*] A month or two ago, when a company was about to establish meat freezing works in Bourke, did you write to the secretary offering to supply them with the whole of the labour that they might require? No; there is no truth in the statement.

1602. Were you in correspondence with the secretary? With the manager, but not with the secretary. Mr. Rosenthal called at the Bureau and informed us that he would probably engage a number of men to go there. He was asked whether he would undertake to deduct the train fare from the wages of any man whom he might engage through the Bureau and remit the money to me. I have a letter stating that he would. He wrote a letter stating that he had engaged a foreman, and that the foreman would engage the men that he should require. Two days ago I received a cheque from Mr. Rosenthal for £14 or £16 on account of the butchers who were engaged and sent through the Bureau.

1603. It is not a fact that you wrote offering to supply them with all the labour they might require? No. I have had the pleasure of reading the reports of the New Zealand Bureau, and of the Victorian Bureau, and I can say we have done more business in three months than both of them have done in a whole year.

1604. *Mr. Langwell.*] Which three months? Any three months.

1605. *Chairman.*] What do you mean by business? We have sent more men away, and had more men to deal with. That will show you what we have had to do.

1606. *Mr. Langwell.*] Is it a fact that certain Members of Parliament put in an hour or two every day, or a good deal of their time, in the Labour Bureau? No; I wish members would come down frequently and see what we do. I have never known a Member of Parliament to put in an hour at the Bureau. I have known members to come in occasionally with some man for whom they would like to get a job, or a letter inquiring if I could do anything for so and so. As to members coming down to the Bureau and sitting down for an hour and making an investigation such a thing has never taken place.

Arthur Rae, Esq., M.L.A., a member of the Committee, made a solemn affirmation and was examined in his place:—

A. Rae, Esq., M.P. 1607. *Chairman.*] You are one of the Members for the electoral district of the Murrumbidgee in the Legislative Assembly, and a member of this Select Committee? I am.

31 May, 1893. 1608. Do you know anything of the working of the Bureau of Industries in New Zealand? Yes.

1609. You have lately paid a visit to New Zealand? Yes; last year about the termination of its first year's existence.

1610. You devoted a good deal of time to the investigation of its work? Yes; I saw the secretary as well as the Minister of Labour.

1611. Have you any documents in connection with the working of that Bureau? Yes; I have a copy of the report on the Bureau of Industries which was presented to both Houses of the General Assembly last year.

1612. The system of discovering unemployed is somewhat different in New Zealand, is it not? The A. Rae, Esq., M.P.

1613. The system of discovering the number of unemployed is not confined to one centre? No. On 31 May, 1893. the contrary the whole policy of the Bureau is decentralisation. I may say that one of the main objects, as expressed in this annual report, was to relieve the congested state of the labour market in the large centres, and for that purpose it was deemed specially advisable to have what you might term distributing agencies throughout the country.

1614. How many distributing agencies are there? This report, which was issued on the 1st last June, states:—

For this purpose 200 agencies were established, for economical reasons the agents being elected from officers already in the Government service, and in the country districts the duties generally being allotted to sergeants of police and local constables, as these officers are thoroughly acquainted with the needs and capabilities of the population surrounding them. These agents forward on the last day of every month a schedule stating particulars as to unemployed persons in their district, and make report as to the various works, private and public (if any), in their locality needing more workmen. In this manner the *minus* or *plus* quantities of available labour can be generally equalised.

1615. You think that has advantages over the centralising system which is in vogue in this Colony? I think it has advantages so great that they make all the difference between the Bureau being an agency for good and an agency for evil. I may state that in addition to the provisions for agencies under the control of the police or other Government officials there are, apart from the head Bureau at the capital, three branches, namely, one at Christchurch, one at Dunedin, and one at Auckland.

1616. *Mr. Langwell.*] Who has control of the whole of these centres;—are they under a Minister? First of all they are under the immediate supervision of the secretary of the Bureau of Industries, and he in his turn is under the Minister of Labour.

1617. *Chairman.*] The Bureau of Industries in New Zealand is one arm of a great Department of State? It is.

1618. It is part of a great systematic whole? It is. I may state that it has all along been considered to be merely a subsidiary part of the whole control of industries vested in the Minister of Labour. The report, for instance, from which I am quoting is subdivided as follows:—"Bureau of Industries, extension of operations, State farms, factories, labour in Europe, wages in New Zealand."

1619. It is a Bureau of labour statistics generally with branches? Yes; In addition to that it is connected with the village settlement schemes, and the co-operative employment of labour on public works and the various Legislative measures for the improvement of industrial and social conditions of the people are all allied to it, such as an Act for the abolition of the truck system of paying wages, the Factories Act Amendment Act, the inspection of boilers and engines and all machinery on land, the engagement of apprentices, the engagement of children who are in reformatory institutions, and all measures which may be considered to be at all allied to the amelioration of the condition of labour.

1620. Do you favour that system? Yes; I think it has a tendency as it were to more highly organise the whole community, so that the wants and requirements of each section or each class can be more readily ascertained and supplied.

1621. I suppose every effort is made to keep the class of men above suspicion who are aided and assisted through the agency of this Bureau? Yes; as the report states:—

Every effort, short of espionage, is used to ascertain the *bond-fides* of applicants and to prevent the railway passes falling into the hands of rogues. Few, it is believed, of the "loafing" fraternity have defied the scrutiny of the department, the true loafer rather desiring to loiter about the streets of towns than to be sent to heavy work in bush districts, where he must either toil unremittingly or starve.

1622. Have you any record of the results of the operations of the Bureau of Industries? Yes; it is stated in this report:—

The result of the establishment of the Bureau was encouraging in the extreme. The congestion of labour in the large towns was reduced and a true test applied to those who declared themselves as in want of work. The total number assisted to employment from the 1st June, 1891, to the 31st May, 1892, is 2,974, of whom 2,000 were sent to private employers, and the others to public works. Only a few of these can be credited to the months of January, February, and March, which being summer months have called on all the resources of extra labour for harvesting, grass-seeding, hay-making, &c. The bush-felling, which takes place during the winter months, absorbs our surplus applications for employment.

1623. You alluded just now to the co-operative employment of labour on public works;—will you kindly describe the operation of that system? Yes; it is described in this report in the following way:—

The public works above spoken of have been carried on under a new system designed to supersede the contracting middleman, by whom very large profits were formerly made, inducing a constant tendency towards reduction of wages. The new system is that of constructing roads and railways by what are called co-operative contracts. In these, a small party of men, generally six in number, is allotted a certain section or length of road or line; one of them is elected a "ganger" and trustee for the others, to deal for them with the Government. The Government Engineer states a price for the portion of work, and, as this is done by an unprejudiced officer, it is generally accepted without murmur by the men. The results usually have been very satisfactory. Progress payments are made fortnightly, for the benefit of the men's families, and the whole amount is paid up in cash on the work being passed by the Engineer. It is the intention of the Government to provide small farms of 10 or 15 acres each for these workmen, in village settlements, so that they may be induced to make their homes in country districts, and thus in some degree to neutralise the centralising tendency of modern industrial life.

It has been found that the information gathered and disseminated by the Bureau has been of great service to those who have not become destitute nor applied for free passages. Much time and money were formerly spent by those seeking employment wandering through districts already glutted with workmen, while in other unknown places labour was in demand. That has now been altered, and undoubtedly to the gain of both employer and employed.

Other attempts are being made by the Bureau for the benefit of the deserving workmen needing employment. The system by which Cook's tourists enjoyed certain advantages of reduced prices, &c., when journeying for pleasure, has been partially applied to others travelling for necessity. This is done by the issue to the Bureau Agents of labour coupons, which are given in small quantities to unemployed in country districts, and which enable the bearer to get food, bed, &c., in certain hotels and lodging-houses at reduced rates. Employment being obtained, the coupons are no longer allowed to be used, but full prices are charged.

To show further the way in which all the interests of labour bearing on one another are worked together by means of the Department of Labour, men in the first place who can be engaged on co-operative public works are so engaged—that is the first step towards supplying their requirements. In the second place they endeavour, as far as possible, to supply these men with permanent employment after such works as they are engaged on have been completed, by setting them on the land on either village homesteads or farm homesteads, thus endeavouring to make the work of the Bureau permanent in its effects as applied to each individual, so that there need not be a constant recurrence of applications for employment from the same man.

A. Rae, Esq., M.P., 1624. Is it in contemplation to make provision for those men who are not competent to undertake the duties in connection with village settlement? Yes, as this report discloses:—

31st May, 1893.

The Government has intimated its intention to initiate the experiment of establishing a few State farms in New Zealand. The leading idea in this scheme is to provide places of refuge and instruction for those persons who, not being able to succeed in getting employment in their own trades in towns, may be encouraged to undertake work in the rural districts, and be prepared to engage in it. A State farm is to comprise about 1,000 acres of land fit for agricultural purposes, and to this farm will be drafted the surplus workmen of the towns. Many of the "unemployed" applying at the Labour Bureau are clerks, stewards, firemen, tailors, printers, &c., who, crowded out of their regular employments, are in a state of destitution; these being in addition to a large body of general labourers who, though used to the pick and shovel, have no knowledge of work upon farm or station. All these could be sent with advantage to an institution where, in return for food and shelter, and perhaps some small wage, they could assist in the general work of a farm, and make its cultivation pay expenses, while, in the meantime, the workmen themselves were being trained to habits and duties fitting them for the general labour-market. It is desired that buildings should be erected by the men themselves, with the help of some skilled assistance, that cottages should be built for married men with families, and that, to those who show themselves interested and capable, co-operative shares in the profits of the farm should be given. In most cases these farms would be "transit-stations," through which a steady current of labour, changed from "non-effective" to "effective," should pass. The farms would each be under the control of a practical "captain of industry," who would be held responsible for the training and discipline of the men, and who would endeavour to make the undertaking as remunerative as possible to the State without losing sight of its primary object—namely, the relief of pressure upon the deserving poor.

About seventy years ago (in 1818), a scheme somewhat similar to this was attempted to be carried out in Holland. Labour colonies were started by a private society, but were taken over by the Government in 1859. There were at that time three colonies, and these are still in existence: one at Frederiksoord, another at Willemsoord and a third at Wilhelminasoord; of these we may take Frederiksoord as a typical example. It is now a fertile district about 16 miles in length, an oasis set in the midst of dreary moorland; it has been entirely redeemed from the waste by the efforts of the settlers. It comprises about 5,000 acres, including six large model farms employing 90 labourers, and 224 small farms each capable of supporting a family. There are five schools (accommodating 500 children), a college for gardening, two Protestant churches with houses for ministers, a Roman Catholic church with priest's house, a Jewish Synagogue and teacher's house. The population averages about 1,800. On a destitute family first arriving in the labour colony, the head of the family is given work as a labourer at current wages for three years, and he may then receive one of the small farms and become a free farmer, always promising that he has done his work as a labourer faithfully and well. If he does not succeed as a farmer he may return to his condition as a labourer, in which capacity he receives a free house and garden. Provision is made for sending away the drunken and idle. The farming families pay a small rent to the colony, and subscribe to a medical and clothing fund; the infirm old people are pensioned off. The colonies have been very successful, and there is no difficulty in filling up any vacancies.

The sketch above given of the Dutch labour colonies proves the possibility of destitute persons succeeding in living in co-operative societies under fostering Government care; still these colonies more resemble special settlements than the State farms about to be established in New Zealand, although the State farms could easily cease from being transit centres if required, and could become co-operative farming communities. The so-called "Beggars colonies" at Veenhuizen and Ommerschans, in Holland, are really "penal settlements" in the country; to these are sent for terms of two years the mendicants and others forming the scum of great cities, for purposes of reclamation, and that useful occupations may be learnt. New Zealand has at present no distinct criminal or pauper class, and therefore no such institutions need consideration, unless we allow that employment on farms is the proper alternative for the ordinary prison discipline.

There is little doubt, however, that if farm-colonies could be established for elderly and aged persons, a great boon would be extended to many deserving old people who now find their declining days passing away in the dull monotony of refuges, or "boarding-out" by charitable aid. The cultivation of gardens would give them pleasure, healthy exercise, and sometimes a little pocket-money, while their self-respect would be preserved and heightened by a sense of usefulness in the world.

I may state that since the publication of the report land has been secured in various districts near to each of the larger cities for the purpose of establishing State farms, and operations will be commenced very shortly on the first one near the capital city.

1625. Do you think that the work of village settlements in New Zealand has been satisfactory? From what I have seen and from what I have read, I think, on the whole, it has been satisfactory, but that like most other experimental efforts of the kind in its inception many mistakes were made, and many failures, or partial failures, resulted before the system attained anything like the success that it now seems in a fair way of attaining.

1626. Can you state the terms on which they give the land? Yes. In the first place, the land is let on the perpetual-leasing system. Under the late Government that system was abrogated for a time, and the system of freeholds was introduced. But since the Ballance Government assumed office the perpetual-leasing system has been re-enacted, and has met with such general approval that the greater part of those taking up land under that system are more satisfied with that condition than they were with the old condition of acquiring a freehold. On the whole, the system in regard to both village settlements and the other settlements seems to be fairly rooted in the favour of the people.

1627. Can you give the Committee an outline of the regulations under which the land is selected? The regulations are as follow:—

1. The land to be selected under these regulations shall be held on perpetual lease for the first term of thirty years, and for subsequent terms of twenty-one years, without any right of acquiring the freehold.
2. The rental shall be based on the capital value of the land, which shall in no case be less than 20s. an acre.
3. No charge will be made for the lease, which shall be in the form in the Schedule hereto, beyond the sum of 10s. for registering the same in the Land Transfer Department.
4. Renewals of leases shall be subject in all respects to the provisions of sections 151 to 155 of Part IV of "The Land Act, 1885."
5. Married men will have preference as selectors under these regulations.
6. No greater area than 20 acres will be allotted to any one applicant.
7. Subject to such conditions as the Steward of Village Settlements may prescribe, and within the first five years of the date of the selection, an advance of a sum not exceeding £20 will be made to assist a selector in the erection of a house on his selection; and in bush lands a further sum not exceeding £2 10s. an acre will be advanced for bush-felling and for grassing from such sums as may be appropriated by Parliament for these purposes.
8. The annual rent shall be 5 per cent. on the capital value of the land, together with 5 per cent. on such sums as may be advanced in terms of clause 7, payable half-yearly, on the first day of January or July next ensuing after the lapse of six months from the date of the selection and advances respectively.
9. All applications for land under these regulations shall be made to the Commissioner of Crown Lands for the district. Where more applications than one are made on the same day for the same land, the right to occupy the land applied for shall, subject to clause 5, be determined by lot amongst the applicants.
10. Each selector or transferee will be required to occupy his selection as his home, and to make permanent improvements as required by clauses 11 and 12.
11. Each selector shall within two years cultivate one acre, and within four years the half of the remainder, of his selection.
12. Permanent improvements shall mean—
  - (a) Fencing the land with timber or other durable materials, not being a brush fence; or
  - (b) Breaking up and laying down the same in English or other cultivated grass; or
  - (c) Breaking up and planting or sowing root or other crops therein; and, in case of bush lands, the felling and clearing of timber and sowing of grass.

13. Selectors will not be allowed to subdivide or sublet their holdings ; but, with the consent of the Commissioner of Crown Lands for the district, they may transfer them, provided that all the conditions of these regulations have been fulfilled to date of application to transfer. No person who has an interest in any land in the Colony shall be eligible as a selector under these regulations. A. Ræe, Esq.  
M.P.

14. Each selector will only be allowed to take up one section under these regulations, which must be held for his sole use and benefit, and not for any other person whomsoever. 31 May, 1893.

15. Any selector who shall fail to comply with these regulations in any respect shall, upon sufficient proof thereof to the satisfaction of the Commissioner, forfeit his interest in the land selected.

16. In case any doubt shall arise as to the construction of these terms and conditions with reference to the selection and occupation or clearing of any land, or otherwise arising thereunder, the same shall be settled by the Commissioner.

J. W. A. MARCHANT,  
Commissioner of Crown Lands.

The Minister of Lands under whom the village settlements are placed put the superintendent of village settlements at my disposal for a few days. With that officer I went through several village settlements and acquired particulars of others. He stated, speaking broadly, that three conditions only are requisite to success, namely, suitable locality, right class of land, and right class of men, and he gave me numerous instances of men who were not previously acquainted with agricultural pursuits being eminently successful in the cultivation of small areas under this system, and other similar instances came under my direct observation. One or two individuals whom I had previously known as artisans in far distant parts of the country, who solely by industry and ordinary intelligence had placed themselves in far better positions than they could have otherwise hoped to occupy, besides relieving the labour market and thus making an opening for others who were not suitable perhaps for these pursuits.

1628. What do you mean by the expression "suitable locality," I suppose it means the quality of the land and its proximity to a town? That is meant to a certain extent, but in addition to that it means passably good means of communication, so that on the one hand the persons living there will not feel themselves entirely isolated from other communities, and on the other hand will be able to convey their surplus produce to market by fairly good roads.

1629. From your knowledge of New South Wales, do you think the transplantation of such a system of village settlements would be a success in this Colony? I do, providing that extra care is taken in the choice of localities.

1630. Under the same wise precautions as are taken in New Zealand? Yes; I would recommend that in any similar system in New South Wales the choice of locality as to rainfall and proximity to market is of more importance than it would be, other conditions being equal, in New Zealand owing to the general climatic conditions being more favourable there than they are here. I would also recommend that slightly larger areas should be adopted here which could very well be afforded as we have so much more territory.

1631. From your knowledge of the working of the New South Wales Labour Bureau, do you not think the limit of its usefulness is very cramped? I do. In fact speaking entirely of my own observations and general experience, quite independent of other mens' evidence and opinions, on the whole I think it is an evil rather than a good.

1632. You think that it tends to concentrate unemployed men in a big city? Not only has it that tendency, but a far greater evil than that is the irresponsible manner in which it floods outside localities with labour and thus inevitably reduces the wages, the amount of labour obtained, and the general independence of the residents in the localities.

1633. You think it could be made the nucleus of a labour department such as exists in New Zealand? I think it could if it were devoted more especially to receiving and compiling statistics concerning the state of trade and labour. I believe also that the existing unions in the country districts could do good service in helping to furnish that information.

1634. You think the information should be taken locally, and that the men, if possible, should be engaged through local agencies? Yes; under general supervision. The whole of my experience of the New Zealand system has proved that it wants sympathetic administration of such a department in order to make it a success.

## WORKING OF THE GOVERNMENT LABOUR BUREAU.

## APPENDIX.

## A.

[To Evidence of J. C. Watson.]

## OUTLINE OF THE FUNCTIONS OF THE NEW LABOUR DEPARTMENT IN GREAT BRITAIN.

[Extract from a Speech by Mr. Mundella.]

THE work of collecting, digesting, and publishing statistical and other information bearing on questions relating to the conditions of labour will in future be intrusted to a separate branch of the Board of Trade. This branch will take over the work of the present Commercial Department at the Board of Trade, and will consist of three distinct departments—Commercial, Labour, and Statistical—the whole being under the superintendence of Mr. Giffen, as Controller-General.

The special staff in the central office of the Labour Department, which will occupy separate buildings of its own (temporarily in 43, Parliament-street), will consist of a Commissioner for Labour (in general direction of the department), a Chief Correspondent, three additional Labour Correspondents (one of whom will be a lady), and about thirty clerks of all grades.

Local correspondents will be appointed in a number of large provincial towns, so far as possible, in the same centres as are contemplated for factory inspection. These local correspondents will be charged with the duty of informing the department of important events affecting labour which take place in their districts, and of supplementing, where necessary, the inquiries of the central office by local investigation. It is possible that in the future the local centres thus established will have additional duties cast upon them.

The main branches of work contemplated at present, besides the continuation and extension of the work hitherto carried on by the Labour Correspondent and others in the Commercial Department of the Board of Trade, in regard to wages, strikes, trades unions, immigration, hours of labour, &c., are the following:—

1. A Labour Gazette will be issued, at first monthly, but perhaps more frequently hereafter. Its object will be to supply accurate information on subjects of special interest to workmen and workwomen. Thus Mr. Burnett's monthly report on the state of the skilled labour market will appear in a more fully developed form in the Gazette. There will be also an account of trade disputes, begun closed or in progress during the month, and of important industrial negotiations, such as arbitrations, changes of sliding scales, apportionment of work between different trades, &c.

A monthly digest will be published of reports from factory and mines inspectors to the Home Office on the state of labour in their districts, so far as it comes within their province; on accidents, proceedings under the factory and Workshops Acts and Mines Regulation Acts; and it is hoped so far as practicable, to refer to important proceedings under the Employers' Liability Act; to action taken by local authorities with regard to the sanitary condition of workshops, and by local authorities under the Acts bearing on the housing of the poor. Important meetings and conferences, *e.g.*, the trade union and co-operative congresses, meeting of the Miners' Federation, international congresses on labour questions, &c., will be noticed.

It is proposed to obtain from the Chief Registrar of Friendly Societies a monthly account of all trade unions, workmen's co-operative societies, and friendly societies registered or dissolved during the month.

It is hoped, by arrangement with the Board of Agriculture and otherwise, to obtain for the Gazette from time to time particulars as to the working of the Acts for providing allotments and small holdings, and other matters bearing on the condition of agricultural labour.

At frequent intervals reports on matters specially affecting women's labour will be prepared for the Gazette by the lady labour correspondent. An effort will be made to supplement the report of the chief labour correspondent on the state of the skilled labour market by obtaining each month accurate particulars as to changes in volume of employment in certain irregular trades, *e.g.*, (possibly) London Dock Labour (in continuation of the inquiry completed for the Royal Commission on labour by Mr. Charles Booth). Besides treating of these and similar special labour subjects, it is hoped to give statistics in the Gazette on such subjects as pauperism, savings banks, education, (especially in its industrial aspects), exports and imports, and the retail price level of the chief articles of ordinary consumption by workmen as well as comparative tables of wholesale prices of leading articles in the chief markets of the world. Notices will be inserted of the more important events affecting labour in various foreign countries; and a list will be periodically published of Government publications both in the United Kingdom and abroad, which treat of labour matters, with a short popular abstract of the contents of the more important of these documents, and of important legislation at home and abroad, passed from time to time having an important bearing on labour.

The Labour Gazette will be published at 1d., and a large number of copies will be gratuitously distributed to free libraries, workmen's organisations, mechanic's institutes, chambers of commerce, and other institutions.

2. Special inquiries will be undertaken from time to time by the Labour Department into important subjects bearing on labour on which adequate information is not at present available. Among the subjects requiring such special inquiries which the department hopes to enter upon shortly are:—

- (a) The amount and causes of fluctuations of employment in certain seasonal and irregular trades, and their effects on the conditions and efficiency of the labour employed.
- (b) An account of actual attempts made in the United Kingdom or abroad to relieve distress by providing public work either by relief works, municipal or national workshops, farm colonies or the like, and the causes of their failure or success.
- (c) Certain questions bearing on the conditions of child employment both in and out of factories and workshops.
- (d) An account of the effects on labour of noxious processes in use in certain typical groups of unhealthy trades, *e.g.*, potteries, white lead works, cutlery, chemicals, &c., treated so far as practicable both from the statistical and the scientific and medical points of view.

Other important matters which may also probably demand special inquiries are the economic effects of alien immigration, various methods of wage payment and adjustment, (*e.g.*, sliding scales, profit-sharing, co-operation, &c.), work of married women, cost of living, hours of labour, overtime, &c.

3. The department also will be prepared to carry out such special inquiries as may be ordered from time to time by Parliament into labour questions.

4. The department hopes to publish an annual report of its proceedings, framed so far as possible so as to be a handy book of reference for workmen to the principal labour questions which have engaged the attention of the department during the year.

1892-3.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## LABOUR BUREAU IN NEW ZEALAND.

(REPORT *RE* WORKING OF.)*Ordered by the Legislative Assembly to be printed, 7 June, 1893.*

## The District Government Officer to The Principal Under Secretary.

Sir,

District Government Office, Sydney, 14 July, 1892.

In accordance with instructions from the Colonial Secretary, conveyed by cablegram upon arrival in Wellington, I put myself into communication with the Prime Minister (Hon. J. Ballance), who introduced me to the Hon. Mr. Reeves, the Minister of the Crown charged with the administration of the Bureau of Industries, and to Mr. E. Tregear, the Secretary, to both of whom I am largely indebted for the assistance and help they afforded.

Prior to 1891 every department of mechanical industry and labour had been stimulated to an abnormal extent, owing to the expenditure of large sums obtained by loans in the European market. Harbour works, railways, bridges, roads, and various other public works of a kindred character were pushed on with vigour from the year 1870 to 1890 inclusive, covering a period of twenty years, so that no less a sum than about £27,000,000 was spent by loans and revenue in public works, in addition to a large annual expenditure by the network of Local bodies which cover the whole of the North and South Islands of the Colony of New Zealand, and as this expenditure commenced when the population of New Zealand numbered only 248,400, it is not to be surprised that the abnormal stimulus should produce a very large increase in the population, resulting in a total of 667,031 souls at the end of 1890; but, as a policy of abstention from further borrowing, and the introduction of a rigorous system of retrenchment, necessitating a cessation of all the larger public works, was adopted, a sudden congestion immediately became apparent in the Cities and more important Towns, but as public works and other avenues of remunerative employment were found in the Australian Colonies, a large exodus of men and their families began at once to take place to these Colonies, and as in the stream of outgoing population were included many desirable settlers, the Government determined by a careful investigation to ascertain the cause and the actual state of the labour market throughout the two islands of the Colony.

Upon a close examination it was ascertained that while the larger towns were *plus* the labouring classes, the smaller towns and various districts were *minus* the labour required, even to perform the seasonable requisite work, such as harvesting, grass-seeding, hay-making, &c., &c.

While very many *bonâ fide* workmen were asking for work, and verging to the "winter of their discontent," it was equally apparent that the "professional unemployed, loafing agitator" was reaping a rich harvest. Action and energetic measures were at once taken to meet this suddenly new condition of things, following so quickly upon a season of remarkable activity.

## Bureau of Industries.

When the facts became known the Government determined to establish a Bureau of Industries, which has now been in existence for twelve months, the object of this new departure being to observe the movements of labour, and to endeavour to equalise its distribution in proportion to the demand ascertained to exist in the various towns or districts throughout the Colony.

In organising this office or department of labour the time of four officers became partly engaged, the officer-in-charge being Mr. E. Tregear, who receives £325 per annum. This gentleman is also Chief Inspector of Factories in connection with the Act for regulating and supervising factories, assented to in 1891, and his three assistants are also employed upon duties in connection with the Factories Act. (It should here be observed, that the Government derive a revenue of £1 per annum, as fees for registration of factories or work rooms.)

For purposes of economy, the officers selected at the agencies or centres were more generally the sergeants of police, or the local police constable, as it was considered that these officers were more thoroughly acquainted with the real needs of the districts, or population surrounding them. On the last day of each month, each of the officers in charge of an industrial district, forwards to the Bureau of Industries, at Wellington, a schedule, stating the number and names of the unemployed registered at the office, giving the occupation, and other necessary particulars, and what action has been taken to meet the cases in question.

If employment has been found for the men in the town or district where they have been consigned, the receiving district report the fact in the monthly return; the administration is peculiarly adapted to the conditions, natural and social, which here prevail. It is important that this fact should be remembered by those unacquainted with New Zealand, and the distribution of the population that is obtained there.

The

The physical features have made it specially adapted for the establishment of large and important settlements, remote from one another. This will be seen by a reference to the populations of the four principal cities. *Auckland*, on the northern part of the North Island, with its immediate surround, had an estimated population of 51,127 souls in April, 1891. *Wellington*, the seat of Government, situate at the southern end of the North Island, contained a population of 31,021 souls in April, 1891. *Christchurch*, situated on the east coast of the Middle Island, included a population of 47,846 souls. The city and surroundings of *Dunedin*, situated still further south, on the east coast of South Island, yielded a population of 45,865 souls.

It will thus be seen that while Wellington is the seat of Government, and is rapidly becoming an important commercial centre, yet not one of these chief towns or cities is sufficiently great in population or wealth to overshadow the others as a metropolitan centre.

The soil and water being more equably distributed, certainly more generously, especially in the winter months, than are found in the remote districts of Australia, the men do not therefore gather or collect in one metropolitan district or centre only, but are scattered by the employment that is so variously distributed.

### Assistance afforded.

When the men are enrolled, assistance is afforded, suitable employment is found for them if possible, preference being given to married men. They are further assisted by railway passes, in some cases given to those seeking employment, by their own effort; but, with a view to help the men to preserve their self-respect, and to encourage self-reliance, and with a view to discourage a weak or unmanly spirit of dependence, passes are given to those proceeding to engagements only as advances, orders upon the employers against future wages being signed by the men receiving the assistance. I was informed by the Honorable Mr. Reeves that a very large proportion of these are honored upon maturity and returned as a reward of the man's labour. I enclose *Appendix B*, which is the form or order to a railway station-master of any station for a railway passage. These are signed by the district officer, after he has satisfied himself as to the sincerity and honest integrity of the applicant.

These orders are numbered in a single series.

*Appendix C* is a form of agreement to refund to the Government the cost of railway, coach, or steamer fare paid by the Bureau of Industries for the applicant.

*Appendix D* is a form of request to applicant's employer to deduct from his earnings and remit to the Government the amount of fare paid by the Government for a deserving applicant.

Thus a spirit of independence is encouraged, and further assistance is afforded to the really deserving working men to enable them to get good meals and beds at cheap rates. Twelve coupons are issued, upon payment by the local agents of the Bureau, to each needy applicant. Each of these enables him to obtain one meal or a bed, at a cost of 6d., being half the amount usually charged by the hotel or restaurant keeper of the locality or district.

The method adopted by the Government of New Zealand has eventuated in the removal of labour to towns or districts where labour was required.

Through the active operation of the Labour Bureau, ninety-six agencies have been established in the South Island and ninety-three in the North Island.

As an illustration of the effect of distributing the population by the method adopted, I was informed at Dunedin that in the month of June last year a large number of men—from 450 to 500—were clamouring for work, and unable to obtain it, but that at the present time (the middle of winter) not more than forty unemployed, including the "chronics," who will not leave the town, can be found there, though the commercial activity of Dunedin itself is not considered at present to be normal.

In the twelve months' work now closed employment has been found for 2,974 as follows:—2,000 men in private employment and 974 upon public works.

The cost incurred in conducting the work connected with the Labour Bureau included fares on Government railways, fares on Manawata railway, fares on Union Steamship Company, fares on coach, postage and telegrams, moiety of salaries, other steamer fares—£2,318 16s. 4d. Refunded by men, £53 4s. 1d.

I was informed that from £80 to £100 is to be refunded within the next three months.

### Prevention of Imposition.

Every effort is made to prevent the railway and other passes from falling into the hands of rogues, as it is believed that constant vigilance is required to prevent the Labour Bureau from being imposed upon by the loafing fraternity, who are prepared to discount any security they may become possessed of, after heavily mortgaging every particle of honour. Here, as elsewhere, it is found that the true loafer prefers to loiter about the streets of towns and cities than face what they call the "hardships of bush-life."

### Method of Public Works.

In pursuing my inquiries relative to the 974 men formerly unemployed, but now engaged upon railway and other public works, I was informed by the Minister for Public Works, the Hon. Mr. Seddons, that the public works spoken of have been carried out under a new system, designed to supersede the contracting middleman, by whom (I was informed) very large profits were formerly made, and who endeavoured to reduce wages, so as to increase his own profits. The new system, is that of constructing roads (for the Government subdivision or sale of land), and railways by what are called co-operative contracts.

I cannot do better, than quote an extract from the Hon. Mr. Seddons' public works statement made last year.

"Contemporaneously with the question of the necessity of inaugurating a new system in connection with the construction of public works—a system which in the near future, I think, must obtain throughout. I allude to the system of constructing works on the co-operative principle, that is, giving the work direct to the workmen, and dispensing with middlemen altogether; an opportunity for introducing the system occurred in connection with the construction of certain sections of the Ngakawan railway extension to Mokihinni. Public tenders had been invited, for certain sections of the railway the conditions being of the most liberal character. No deposit was required, and the work was cut up into short lengths. Almost immediately

immediately the tenders were accepted for some of the sections, the contracts were thrown up, and it became a choice, therefore, between calling for fresh tenders on the original method, and giving the co-operative principle a trial. On arriving in Westport, I found a large number of men who had flocked there from different parts of the Colony, expecting to get employment on the construction of this railway. To avoid the delay that calling fresh tenders would have involved, I decided to let the sections referred to—three in number—on the co-operative principle, and asked the men to divide themselves into parties of about fifty each, and to select from each party certain trustees, the trustees to take from the Government the work in the ordinary way, but the work itself to be done by the whole of the men, each one having equal interests with his fellows; the price to be given to be fixed by the Engineer in charge of the work. On this the men went to work in a few days. They have now almost completed their contracts, and are very well satisfied with the result.

“As often occurs when new methods are adopted, there was a little friction at first, and a little difficulty in the classification of the men. The strong and able-bodied men did not altogether like to work for the aged and the feeble, but after classifying both the men and the work, and giving the lighter work to the aged and less capable men, and the heavier work to those best fitted for it, the earnings as a whole proved satisfactory, and the men are quite prepared to go to work again on the same principle, if further work was available.

“The experience gained in this instance has indicated the course which it will be advisable to adopt in the future. It should be arranged:—

“(1) That the men form themselves into parties voluntarily.

“(2) In case there are more men than work can be found for, the men of equal capabilities should ballot amongst themselves as to who is to get the work;

“(3) And that a classification of the men be arranged beforehand, so that the abler and stronger men and those accustomed to the work might receive the largest share of the profits, the next or second class a slightly lower rate, and older and weaker men a somewhat lower rate again.

“By so doing, the feeling of a man working for his fellows would be avoided, also the feeling on the part of others, that they were dependent on their fellows. With a suitable classification on the lines that I have indicated, the system would, I am satisfied, work on the whole admirably.

“Considering that the system is only now being tried for the first time, in connection with our public works in New Zealand, it must be conceded, that it has proved fairly successful; and as we gain further practical experience with its working, I have no hesitation in saying, that it will ere long be recognised as the proper system on which our public works should be constructed.

“The Colony in the past, has not received the benefit that it should have received from the public works expenditure.

“We have had contractors who have made large fortunes, and who have taken the money so quickly and easily made, and spent it in the mother country, or in the other colonies.

“Again, we have had large sums of money expended in the different districts, yet the districts have not profited by the expenditure. We have had large estates made valuable by the construction of works, and yet we have not increased the settlement on the land. Had the system of co-operation obtained in years gone by,—had lands adjoining the works been thrown open for settlement, as the work progressed,—had those employed shared in the profits in addition to their wages, which is the principle of the co-operative system,—then, as they shared their profits, so they would have taken up the lands and settled thereon.

“It is necessary that a remedy should be devised for the mistakes of the past, and that remedy is the construction of works on the co-operative system, and the simultaneous throwing open of land for settlement in the vicinity of the works. The work will not cost the Colony any more, and a large portion of the money expended on the same will come back to the Treasury in the shape of payments made for the purchase or rent of lands.

“Another advantage to each district will also ensue. In calling for tenders for works on a large scale, it has often occurred that in the locality in which the work is situated there has been a large amount of labour available, but the contractor coming as he frequently does from another provincial district, brings his own men with him. The work therefore instead of providing labour for those resident in the district, has the reverse effect, as men who go there expecting to obtain employment, do not receive it owing to the contractor having brought his men with him, and hence the labour market in the district, instead of being relieved, is congested more than it was before.

“Not only so but, as our experience has recently demonstrated, we have had the labour market glutted in one part of the Colony, whilst in other parts, labouring men are not obtainable. I attribute this inequality to a large extent, to the system that has obtained in the construction of our public works. There is doubtless a certain class of public works, where technical skill is required—such as large bridges and so forth—in which the old system of doing the work by public tender, and having a middleman in the shape of the contractor, will for a time be necessary; but in the course of time, even this, as working men gain more experience, and the absurdity of the middleman being kept to make a profit from both the Government and the workmen, is more clearly recognised, will be seen to be entirely unnecessary.

“There will also sometimes be a difficulty in carrying out what I have suggested, as regards settlement of lands, owing to the lands in some parts of the Colony being held by the natives or by private owners. As a case in point, take the construction of the North Island Main Trunk Railway. If we proceed with the construction of that line to any material extent, it will happen that the further we progress through, or approach towards native lands, the more difficult it will come for the Government to deal with the natives, and the higher the price we shall have to pay. The same also applies as regards private lands. Take, for instance, the Blenheim to Awatere Railway. The completion of that work means that every pound which the Government spends upon the railway will give an increased value of twice that amount to the land through which the railway runs, and which is held by a very few individuals. The Government considers, therefore, that it would be folly, under these circumstances, to construct these railways much farther, until arrangements have been made with the natives for the purchase of their lands and with the owners of private lands, that they will lease or dispose of the lands to be benefited on terms to be agreed upon between the Government and the owner of such lands.”

Upon further inquiry I found that the experience had led to a modification of the method since the above statement was delivered, as it is found better and really necessary, where the men were not acquainted with one another's capabilities, to form them into *smaller working parties* than originally intended.

The

The average strength of the parties now is not more than eight to ten men, and for these small parties a trust deed is not required, but simply directs each party to elect two of its number as "head men," who are the leaders or representatives of the party in dealing with the Government Engineer (who, as Mr. Seddons stated, occupies the position of the middleman, minus the profits), and give acquittances on behalf of the party for payments received.

The classifying of the men is also more easily arranged under the small gang system, as they do not need to have differently graded men in the same gang.

The system at present prevailing was, I am informed, as follows:—

When a piece of railway, say, 3 miles in length, is to be constructed, the number of men that can be employed on it is estimated—say, sixty men. When these are selected, they go on to the ground, either all at once or in batches, according to circumstances, and arrange themselves in parties, with the assistance of the engineer in charge of the work. Each party elects its head man; all the members of the party sign a printed order—the Treasury authority—empowering the head man to receive payment on their behalf.

The members of the party also sign a printed set of the specifications, conditions, and schedule of prices, the prices having been previously fixed by the engineer. Each party has a section of the line assigned to it, and is paid for the work done at the previously-fixed rate, there being no lump contract sum, and the right being reserved to the Government to stop the works at any time.

The selection of the men is made through the Labour Bureau. When a portion of railway is to be put in hand, the Labour Bureau is advised by the Department of the nature of the work and the number of men required, and the Bureau then takes the responsibility of providing the men and sending them on to the ground.

When the railway fares are paid by the Bureau the engineer is informed of the amount, and it is deducted from the men's earnings.

The parties are supplied by the Works Department with tents and tools, and the cost of the tools is deducted from the earnings, the tools charged for being shovels only.

The following statement, furnished to me in the course of my inquiries, show the earnings of 798 men, who have taken contracts of eight sections of railway under the co-operative principle inaugurated by the Hon. Mr. Seddons:—

RAILWAY.	Men employed.	Average earnings per diem.	
		s.	d.
Whangarei-Kamo ... ..	106	7	7½
Grahamstown-Te Aroha ... ..	205	7	7½
N. I. Main Trunk (Mokau) ... ..	*141	7	7½
N. I. Main Trunk (Makohine) ... ..	54	8	10
Wellington-Woodville (Makakahi) ... ..	61	7	9
Wellington-Woodville (Pukemuke) ... ..	59	7	9½
Greymouth-Hokitika ... ..	83	8	11
Seaward Bush (Waituna) ... ..	86	8	3½

Seven hundred and ninety-eight men were employed in all, and the success of the system stands attested by the above figures.

I was informed that there was no difficulty whatever in dealing with the men under this system; that, instead of the bulk of the work being allowed to slumber, as under the old contract system, and only picked men employed, now the lengths in course of construction can be subdivided and proceeded with at once, and that the system will permit *all men who are willing to work to obtain it*; even those who are unacquainted with pick and shovel work at first, may be drafted into separate parties at similar rates to others, and acquire ease and facility for working after they have become accustomed to the labour.

### Payments.

Progress payments are made monthly, for the benefit of the men's families, and the whole amount is paid in cash on the work being passed by the engineer.

As a result of this method, a large amount of money is being circulated by these men, and thus the whole of the various ramifications of commercial life receives a healthy stimulus in proportion to the amount expended; but it does not end here. A number of persons thus employed are found settling upon village homestead areas of from two to fifty acres, close to the line where their work had been obtained.

Thus the Labour Bureau has succeeded in New Zealand in moving labour, where it is found in congested or excessive quantities, to districts where a natural demand has absorbed it, and by a co-operative system of contract, which is capable of considerable extension and development, is obtaining the construction of public works as effective, and at lower prices than under the former system; and, further, by the removal of many of these men from the habits of town or city life, habits of thrift have been inculcated, which, in many cases, have led them to settle upon lands available for that purpose, a portion of the money thereby flowing back to the revenue of the Colony.

In reference to village and homestead settlement, I propose reporting, as directed, at a later date.

I should have stated that I am indebted to Mr. Blow, Under Secretary for Public Works, and other gentlemen, for the assistance they rendered to me in prosecuting inquiry with reference to the co-operative system now in operation in New Zealand.

I have, &c.,  
GEORGE LEWIS.

\* There were a few Maoris employed upon this section (one party only), whose earnings were at the rate of 1s. 11d. only per diem.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

STATE LABOUR FARM FOR RELIEF OF UNEMPLOYED.  
(CORRESPONDENCE RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 21 February, 1893.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 9th February, 1893, That there be laid upon the Table of this House,—

“Copies of all correspondence and other documents between the Colonial Secretary and any other persons, having reference to the proposed formation of a State Labour Farm for the relief of the unemployed, and other matters appertaining thereto.”

(*Mr. Schey.*)

Mr. W. Morris and others to The Acting Colonial Secretary.

Sir,

Exhibition Building, Prince Alfred Park, 8 July, 1892.

Will you be so kind as to inform the undersigned deputation of destitute unemployed, recorded as such to a resolution, as an humble Petition to the hon. Acting Colonial Secretary, a body of men who take no part and deplore the statue meetings as inimical to their interest in obtaining work, and highly approve of the Government Labour Bureau, and the painstaking efforts of the head of this Department in striving to obtain work for us under private enterprise, and our object is to strengthen the hands of the Government against those who are pecuniarily interested in our destitution, to enable the Government to stretch every point to carry out their good intentions in finding us work. Will you kindly inform us if you will receive this deputation, and if so at what time and date will you receive them?

We have, &c.,

WILLIAM MORRIS.

J. SMITH.

H. R. BALDING.

I think these men should make their representation in writing in the first instance.—F.B.S., 8/7/92. Inform.—C.W., 8/7/92.

The Principal Under Secretary to Mr. W. Morris and others.

Gentlemen,

Colonial Secretary's Office, Sydney, 8 July, 1892.

With reference to your communication of the 8th instant, asking whether the Colonial Secretary will receive a deputation from the unemployed, I am directed to request that you will make your representations in writing in the first instance, when the matter will be considered.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

W. F. Schey, Esq., M.P., to The Colonial Secretary.

Sir,

Legislative Assembly, Sydney, 15 September, 1892.

I desire to bring under your notice two letters which, under dates of \*11th July and \*9th August last, were addressed to Mr. Suttor, Acting Colonial Secretary, by H. R. Balding and William Morris, representing a large number of workmen registered at the Government Labour Bureau. They embodied a request for an interview, which I now respectfully ask you to grant, so that they may lay their views before you.

Trusting that you will comply, and asking the favour of an early notification of the time convenient to yourself,

I have, &c.,

WM. F. SCHEY.

Say I'll see them so soon as the crisis is over.—G.R.D.

699—

The

## The Principal Under Secretary to W. F. Schey, Esq., M.P.

Sir, Colonial Secretary's Office, Sydney, 20 September, 1892.  
In acknowledging the receipt of your letter of the 5th instant, I am directed to inform you that the Colonial Secretary will be pleased to accord Messrs. H. R. Balding and William Morris, representatives of a number of workmen registered at the Government Labour Bureau, an interview as soon as the present Parliamentary crisis is over.

I have, &c.,  
CRITCHETT WALKER,  
Principal Under Secretary.

## W. F. Schey, Esq., M.P., to The Principal Under Secretary.

Sir, Legislative Assembly, Sydney, 12 October, 1892.  
Further referring to my call at your office to-day, I beg to say that I shall be glad to know when the Hon. Sir G. R. Dibbs will be pleased to receive the deputation of H. R. Balding, W. Morris, and others, referred to in my A. 92-47 of 15th ultimo, and your reply to same that the Premier would receive them after the termination of the late Parliamentary crisis.

Asking the favour of early reply,

I am, &c.,  
WM. F. SCHEY.

Friday week at 11:30 will perhaps suit.—C.W., 13/10/92.

## The Principal Under Secretary to W. F. Schey, Esq., M.P.

Sir, Colonial Secretary's Office, Sydney, 14 October, 1892.  
Referring to your letter of the 12th instant, I am directed to inform you that the Colonial Secretary will be prepared to receive at 11:30 o'clock a.m. on Friday next, the 21st idem, a deputation from Messrs. H. R. Balding, William Morris, and other representatives of a number of workmen registered at the Government Labour Bureau.

I have, &c.,  
CRITCHETT WALKER,  
Principal Under Secretary.

## W. F. Schey, Esq., M.P., to The Principal Under Secretary.

Sir, Parliament House, Sydney, 18 October, 1892.  
Referring to your 92-13,287 of 14th instant, I beg to say that it has been deemed advisable to somewhat extend the deputation and its scope, so as to include not only the direct proposal previously spoken of for dealing with the unemployed question, but to include also a similar proposal which it is thought would have a great and beneficial effect, although in a more indirect manner.

Trusting that Sir George Dibbs will afford us the additional opportunity thus sought,

I have, &c.,  
WM. F. SCHEY.

## Deputation submitting a Scheme for the Relief of the Unemployed.

21 October, 1892.

PRESENT:—Messrs. Schey, Langwell, Rae, and Williams, M's.P.; Mr. Lindsay, representing the Australian Workers' Union; and Messrs. Morris, Balding, and Smith, representing a number of unemployed registered at the Labour Bureau.

*Mr. Schey:* A large number of unemployed have sent in a petition, asking that instead of being fed they may be given some employment, such as clearing Crown lands, or, in fact, any other work giving them the privilege to earn what they require for the support of themselves and their families. We ask you to take note of the fact that there is distress which appears to be of a permanent character. The Labour Bureau has distributed over 20,000 rations, and the Benevolent Asylum, as stated in a circular just issued, has had 500 cases of relief a week; and in view of the fact that the distress appears to have become permanent, some further steps should be taken to deal with the matter as a whole, and not as an epidemic which may pass away. We beg to suggest that an institution be started somewhat on the lines of the German labour farms, but more particularly on the lines of the Dutch Colonies, two of which are known as Beggar Colonies, and the other a voluntary institution of much the same character. There is a great deal of Government land, which we estimate to be fit for this purpose, at the Warregamba Valley. This is within 40 miles of Sydney, and, I believe, within 12 miles of a railway station; it is watered by Cox's Creek. We suggest that the Government should set apart at first 2,000 acres of this land, and let some of the unemployed go upon it, clear it for cultivation, and put up fences and residences for those who would afterwards go there, the idea being that eventually the land will support not less than 4,000 persons who are now usually out of employment, and that they may produce simply for use and not for sale or profit. Thus the work that would be done would be entirely for the purpose of supplying the people there with the means of livelihood. We are quite aware that it would be impossible to carry on all the industries necessary to maintain the people on the place; but we are of opinion that the surplus of what the land would produce could be devoted to the purchase of other necessary commodities. The Government require a large amount of timber which could be obtained from the land, and be prepared and stacked for use. The valley is the one through which the survey passed from Blacktown. The Government reserved the whole of the land sometime ago with the idea that the railway would eventually go through it. It has been ascertained that there are several payable seams of coal, and as the Government uses a large amount of coal every year, we think they should open them out, and if this were done there would be the necessity for the construction of a tram-line. We propose no new experiment. In the cases I have quoted—that is, the voluntary association and the beggar colonies—their success has been practically demonstrated; and as they have been in operation since 1859, ample time has passed to show that they are perfectly practicable. The Government has already spent in rations something over £1,500 for which no return of any kind is made, and we have the unfortunate spectacle of men and women being pauperised. We are fully convinced that such an establishment might be made entirely self-supporting, and that the Government would be able eventually to find work for every person who was genuinely unemployed, and at the same time at no cost whatever. We are prepared to fill in the particulars of the scheme at any time.

Sir

*Sir George Dibbs* : Don't you think you have cribbed from Sir Henry Parkes' ideas ?

*Mr. Schey* : No ; if anything, he has cribbed my opinions. I sketched in these ideas some twelve months ago in a lecture, though I cannot claim any credit in the matter. We suggest to you that such a scheme as this is a serious matter, and we are actuated by the very best intentions. It is a matter of sincere grief that we should have such a large portion of the population unemployed ; and it appears to me that this state of things is growing worse every year, and that there is no probability under present circumstances of it being stopped. We don't propose under such a system to interfere with the ordinary avenues of employment at all. We don't propose any wage system in such an establishment, so that we should not disturb the operations of capital in any way. There would be sufficient diversity of employment that something would be found for every man and woman to do ; and the production being entirely for the supply of the establishment, and not in any way for sale or profit, there would be no failure in the ordinary way arising from lack of a market. There are a number of people in the Colony who are prepared to deal with this matter, and the only thing that blocks them is the state of the law at the present time. There are people here who are prepared to take up land by paying for it under the present law, and to do as we suggest to you ; but that which prevents them is that the Government deals with every man as an individual, and compels him to work and reside on his own piece of land, thus isolating him and doing away with the comforts of civilization. Now, these people believe that if they can be allowed to live in a village, that they would get on very much better than it would be possible to do now. They are prepared to pay for the land. They only ask the Government to do one thing, and that is, that they should be allowed to work and act in the matter co-operatively, and therefore are practically asking the Government for nothing. They are prepared to put their own money into the scheme, and only ask for facilities to enable them to live together. In the course of a year or two we should be able to draw four or five thousand respectable, hard-working men together, many with money, who would be taken from their present occupations, thus leaving open many avenues for those at present unemployed.

*Messrs. Morris and Balding* also spoke, and pointed out that a number of men who had been sent away to the country from the Labour Bureau had returned the cost of their passes, and in this way £600 had been received already at the Bureau. They presented a petition in support of their request, which had been signed by 424 people at the Bureau after having been open for five hours.

*Mr. Rae* : The Australian Workers' Union, of which I am a member, has now been formed some time, and has enrolled a great many names in Sydney, and it is anticipated that it will form one large union. The various unions have not met with that success in conducting strikes which they deserved, and they are turning their attention to other matters, especially co-operation. An undertaking such as that mentioned, to be sufficiently large to absorb the whole of the unemployed, would be beyond our means at present, and we wish to know what the Government will be likely to do. If you cannot do what we may reasonably expect you to do, then we would be prepared to indicate what we as a union are ready to do in the matter.

*Sir George* : What are you prepared to do ?

*Mr. Rae* : That depends on what the Government will do in the matter of giving us land under a collective ownership, so that those persons who settle on the land will not be compelled to stay on any individual section, but be able to congregate together in a village. We don't wish to go into any abstract theorising. It is simply to carry out co-operative work in production. It has been proved that co-operative work in distribution has been a great success, and there is no reason why it should not be successful in production. A similar measure has been under the consideration of the New Zealand Parliament, and their intention is to start what are called State farms, with something like a thousand acres, which would be as productive as two thousand here, and on to which would be drafted the unemployed, whether they have been accustomed to farming operations or not. Under the direction of skilled assistance they would be able to learn those kinds of farming work which would prove useful. The idea is that these farms should be worked under the co-operative system under State supervision. I know there is an objection on the part of some of the members of your Government to the State doing too much, or what they consider too much, but we don't ask the Government to do any more than simply to grant the land and some assistance towards starting the enterprise, to exercise the necessary supervision, and to put the matter into the form of a trust. Those representing the Workers' Union would be quite willing to contribute a portion of the funds of the Union to take up the enterprise ; and, provided they could acquire the land under the conditions indicated, to form, in conjunction with the Government, a trust to supervise the scheme. These are our propositions in general terms, but of course it is impossible for us to state to what extent we can go until the Government let us know how far they will go. The present state of things cannot continue with any degree of safety to the State. There are at present a great number of unemployed in Sydney, and the same condition of things exists all over the Colony.

*Mr. Langwell* : If you will not look favourably on our first request, we, as members of the Workers' Union or General Labourers' Union, would throw out another suggestion : We consider the unemployed question as a national question, and that some relief should be given by the State ; but in the event of the Government not feeling themselves in a position to do this, the Workers' Union is willing to step in and take up the task. They are not, however, in a position to do so wholly on their own responsibility. There must be assistance by the Government. There must be a grant of land, vested in trustees, and if this be acceded to the Workers' Union is willing to expend a certain sum of money for the success of the scheme. The scheme in any case would be a great object lesson, and I think the Government should render all the assistance in their power to relieve the number of men and women from the condition they have been in for some long time past. A scheme is projected for starting a co-operative colony outside of Australia, and I am in a position to state that not a few, but hundreds, of the very best men taken from the back parts of Queensland, New South Wales, and South Australia, not being satisfied with the present condition of things, are going to throw in what means they have and go to the Argentine.

*Sir George* : They will wish themselves back again ; I have been there and know something about those countries.

*Mr. Langwell* : However they are going, and have everything prepared. A few have already gone, but the first batch will be leaving here at the beginning of next year. I don't think anyone who has the welfare of this or the other Colonies at heart should desire to see the best men of the country leaving us.

If

If the Government only sees its way to grant a portion of land to found a colony it may be the means of preventing a great number from going away. It is no imaginary scheme but one that has been tried for a number of years in Holland.

*Mr. Lindsay*: With reference to the remarks made about the Argentine scheme, I think it is the place of every Government to make the conditions of society so good that the people would not be so quick to leave it.

*Sir George*: The people should make the conditions of society themselves so that they should not want to leave it.

*Mr. Schey*: Every Government in every civilised land recognises more or less that they must relieve the unemployed, and feed the poor, and we are only asking you to do the same.

*Sir George*: The Government will not find work for the unemployed, they will not clear scrub, and they will not repeat the folly of the past. I am rather disposed to look favourably upon your colonization scheme because it will do this kind of good: it will let those gentlemen, who are patriotic enough to attempt to carry it through, have a good taste of dealing with human nature. Mr. Copeland has some scheme to amend the law in the way of allowing a gathering on the land in the manner referred to. I will have a talk with the Cabinet about what has taken place to-day, and I am perfectly certain the Government will do what it can to assist the people, if the people will only show us that they are eager to assist themselves. I would like to add now that it is a disgraceful state of things for any country that men should have to seek work from the Government. It is the fault of our system for years past. We have taught our people to look upon the Government for everything they want instead of being self-reliant. The Government has done everything for them until it is unable to do more, and we find men of good character and real sterling grit compelled to go to the Labour Bureau to seek for bread. A great tribute to the respectability of some of these men is that they have repaid the cost of their passages and sent for their wives and families.

*Mr. Langwell*: They are compelled to do that.

*Sir George*: But a lot of this money has been voluntarily returned, and it shows that there is real distress; but that distress is the outcome of the system carried on in this Colony for the last twenty years. I am just as much to blame, but I have lived long enough to see the error of our ways. As soon as the facility for borrowing ceases, then up comes the unemployed cry. I will bring the matter before the Cabinet as I favourably entertain the views of assisting the people on the soil. But has there been any disposition exhibited on the part of the labouring classes in this community to help themselves out of their own difficulties? There has been a want of elasticity in the labouring classes with regard to the difficulties in which they find themselves and in which those who employ them find themselves. I am an employer of labour and should only continue to employ labour so long as I can exchange a sovereign and get something out of the change myself, but in my own private business I have been changing the sovereign for the last five years and been giving 18s. 6d. back, every farthing of which has gone in labour. When a difficulty occurs you say we will have our pound of flesh and we will make no concessions to those who employ us. Employers cannot afford to engage men at the rate of wages demanded, and there is no elasticity in your unions to overcome the difficulty.

*Mr. Rae*: Elasticity means taking reduced wages.

*Sir George*: Is that not better than going about the streets as they do? Is it not better that these men, who are accepting bread in charity, should take 6d. a day less wages rather than refuse to take the reduction and literally starve?

*Mr. Lindsay*: National co-operation.

*Sir George*: National humbug. There is too much national humbug and too little self-reliance. The men will not go with the times, up and down. I have seen more prosperity with half the rate of wages ruling to-day.

*Mr. Rae*: If you find you cannot do anything more than what you indicate, supposing the Union we speak of places a scheme before you by which it will undertake to carry out the enterprise, will the Government offer the necessary land?

*Sir George*: In all probability—that is we will place the land in trust, and when you can afford to pay for it you can do so. You are on the right track now and wish to endeavour to help yourselves.

### W. F. Schey, Esq., M.P., to The Colonial Secretary.

Sir,

Legislative Assembly, Sydney, 16 November, 1892.

I do myself the honor to remind you of the deputation which waited upon you on the 21st ultimo, making certain proposals for the relief of the unemployed difficulty, &c., and also of the letter under date \* 25th ultimo, signed by the members of the said deputation, in which were contained certain definite proposals with the aforesaid object. To that letter no answer has yet been received, and it is feared that in the press of official business the matter may have escaped your memory.

It is of course needless for me to enlarge upon the great national importance of the question, but to us it appears certain that no greater or more lasting monument to your administration could remain than the initiation of the first successful scheme for dealing with the great unemployed problem, at least so far as this country is concerned.

We shall, therefore, esteem it a favour if you will return us a categorical answer to the various points raised in the letter now under view at the earliest date which you may find possible.

You will be aware that certain proposals were made on behalf of the "Australian Workers' Union," and I have now to inform you that Mr. Spence, the General Secretary of that organisation, has just come from Victoria to Sydney for the especial purpose of going more fully into the matter, and he will be most happy, in conjunction with one or two others, to wait on you at your convenience, to further discuss the matter and afford any additional information that you may desire, and that he may be able to impart. We shall, therefore, esteem it a favour if you will notify me early of the time and place which you are pleased to appoint in that behalf.

Asking your kindly and prompt consideration, and on behalf of the deputation,

I have, &c.,

WM. F. SCHEY.

1892-3.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## LISMORE TO THE TWEED RAILWAY.

(REPORT OF THE SUPERINTENDENT OF THE GOVERNMENT LABOUR BUREAU ON MEN FORWARDED TO MESSRS. WILCOCKS AND FIRTH'S CONTRACT, MURWILLUMBAH, TWEED RIVER.)

*Ordered by the Legislative Assembly to be printed, 28 February, 1893.**[Laid upon the Table of the House in answer to Question No. 7, of 28 February, 1893.]*

## Question.

7. GOVERNMENT LABOUR BUREAU :—MR. SCHEY *asked* THE SECRETARY FOR PUBLIC WORKS,—
- (1.) Has he yet, as per promise made to Mr. Schey some weeks ago, called for a Report from the Government Labour Bureau, *in re* some forty-three men sent, passage paid, to the order of the contractors for the construction of the Lismore-Tweed railway?
  - (2.) If so, has he arrived at any conclusions on the matter; and will he state the nature of them (if any).
  - (3.) Has he given any instructions *re* the matter; if so, will he say what and when?
  - (4.) Has he any objection to lay the said Report and any documents having relation to it upon the Table of this House for the information of Honorable Members?

## Answer.

REPORT *re* Wilcocks and Firth's contract, Tweed River, Murwillumbah.

IN December last, Messrs. Wilcocks and Firth notified that 1,000 men were required for their railway contract at Murwillumbah.

In view of the fact that the contract was only a short distance from Brisbane, whence most of the men would find their way, and that hundreds of men had already applied to the Bureau here to assist them in getting to this work, the local agents for the contractors were at once communicated with, and all information available was obtained. The contractors were also telegraphed to, and replied under date 21st December as follows :—“*Re* your communication of the 17th instant (December) we will find work for any men available for pick and shovel work, provided they are suitable and competent.” Upon receipt of this, the contractors were asked if the men's fares would be refunded if they were granted passes, and the following reply received :—“30th December.—Will recognise men's orders if duly signed and forwarded here.”

Arrangements were then promptly made to forward fifty men per steamer. Of these forty-five only left. Although, in all, between 500 and 600 men applied to get on to this work, it was not considered advisable to send any more, pending reports both from the contractors and from the men sent. The latter were men who had experience in such work. They were given to distinctly understand that in going they were being sent simply as labourers on the works, and no specified class of work or rate of wages were named.

A letter was received from the men, dated 2nd January, expressing complete satisfaction as to the general arrangements, the trip, &c.

Upon the 7th January, a report was received from the contractors, stating that in view of the men wanting “to pick and choose their places, and dictate where they would work, &c,” they were not suitable.

Two of the men, Hewitt and Ranken, who returned to Sydney, report, under date 18th January, that they were treated badly by the contractors, and give a detailed account of their experience.

Notwithstanding the constant and urgent appeals from many hundreds of men to be sent forward to these works, it was decided that, under the circumstances, no more men should be assisted to go there, as the result of the preliminary trial appeared not to be satisfactory to either party. However, many of the applicants obtained all available information, and numbers of them found means of going on their own accounts (some of them having given orders on their wages to the owners of some of the boats running there). The contractors have been requested to make a further report, and to forward the amount of fares due upon the orders given by the men on their wages.

These are now being awaited.

JOSEPH CREER,  
Superintendent.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**FREE PASSES ISSUED BY LABOUR BUREAU.**

(RETURN OF FREE PASSES ISSUED BY THE LABOUR BUREAU, SINCE OPENED, TO THE WESTERN DISTRICT.)

*Ordered by the Legislative Assembly to be printed, 7 September, 1892.*

[Laid upon the Table of this House in answer to Question No. 14, of 6 September, 1892.]

Question.

14. MR. LANGWELL asked THE ACTING COLONIAL SECRETARY,—
- (1.) The total number of free passes issued by the Labour Bureau, since opened, to the Western District?
  - (2.) The names of employers to whom employees were sent, and the number sent to each, and on whose recommendation?
  - (3.) The number of free passes issued on the recommendation of Members of this House, and the number recommended by each Member?

Answer.

(1.)

THE total number of free passes issued by the Labour Bureau, since opened, to the Western District—1,058.

(2.)

NUMBER of persons sent by free passes to the Western Districts, inclusive of those engaged at the Bureau on personal application, or by letter from employer; those sent on producing authentic documents of having work to go to; and also on the recommendation of Members of Parliament.

1892-3.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## WEIGHTS AND MEASURES.

(REPORT OF BOARD OF INQUIRY APPOINTED TO INQUIRE INTO THE ADMINISTRATION OF THE WEIGHTS AND MEASURES ACT, WITH MINUTES OF EVIDENCE AND ANNEXURES.)

*Ordered by the Legislative Assembly to be printed, 23 March, 1893.*

## REPORT.

WITH reference to the minute of the Honorable the Minister of Justice of 7th January last, appointing us to act as a Board of Inquiry as to the working of the Weights and Measures Office, and to inquire into the following matters, namely:—

The working of the office in its relation—

- (1.) To the public.
- (2.) To the Ministerial Department.

The nature and quality of instruments used.

The efficiency of the Inspector—

- (1.) From an administrative,
- (2.) From a scientific, point of view,

with a view to correcting existing abuses (if any), and to place the office in such a condition as will render it most serviceable and efficient to the public, and so place it under the supervision and direction of the Department of Justice, so as to preserve a proper departmental control over its working, with instructions also to extend the inquiry to any matter about which the Board considered the Minister should be informed, having regard to the object he has in view, and to make suggestions as to future management, reorganisation, or extension of the scope of the Weights and Measures Office as at present constituted,—

we have the honor to furnish the following report in connection therewith for the information of the Minister.

The scope given by the Minister's minute was so extensive that it necessarily meant a long and searching inquiry into many matters which would hardly appear at first sight to be altogether relevant to the matter in question.

We first of all interviewed the Inspector of Weights and Measures at his office, and there carefully inspected the nature and quality of the instruments used, and we are satisfied that the office is well supplied with instruments of the highest class for the purposes for which they are required under the Act, and they are kept in thoroughly proper order. We are also satisfied with the efficiency of the inspector from a technical point of view, but not altogether from an administrative one; but with this question we will deal later on.

With a view of obtaining the fullest information from the general public in all matters connected with the inquiry, we requested the Under Secretary of Justice to cause advertisements to be inserted in the daily newspapers, notifying that a Board of Inquiry had been appointed, and advertisements appeared accordingly.

Having been authorised to hold the sittings of the Board in No. 2 Court-room, Supreme Court, we held our first sitting there on 19th January last, Mr. Evans,  
Inspector

Inspector of Weights and Measures, was present, and he was asked whether, in view of matters arising which might affect him, he had any objection, as far as he was concerned, to the inquiry being held. He informed the Board that he had none whatever, and was perfectly willing to give the Board all information in his power. Mr. Evans was accordingly present at each sitting of the Board, and was invited, after each witness had made his statement, to put such questions to the witness as he thought proper.

On each occasion on which the Board sat reporters from the newspapers were present, and reports of the proceedings appeared in the different newspapers, and we consider that the publicity given to the proceedings assisted the Board most materially in carrying out the duty imposed, by letting the public know exactly what was taking place, and thereby inducing persons who might otherwise have been unwilling to do so to appear before the Board and make statements. Altogether sixteen public sittings were held, and forty witnesses were examined, who represented various interests, not only connected with the Weights and Measures Act, 16 Victoria No. 34, but the Sydney Coal Delivery Act, 9 Victoria No. 8, and the Bread Act, 6 William IV No. 1.

Mr. Evans was first examined generally as to many matters connected with his position; was allowed, as before stated, to ask each witness such questions as he thought proper; and at the close of the examination of the other witnesses was most carefully examined upon all matters that had been given in evidence which appeared to affect him in any way.

*Matters relating to the Inspector of Weights and Measures and his Office.*

We propose first of all to deal with matters affecting Mr. Evans, Inspector of Weights and Measures, as several of the witnesses, principally scale-makers, raised strong objections to many of his actions, namely:—

- (1.) That Mr. Evans charged fees unauthorised by the Weights and Measures Act; and even were the fees in question authorised, he in many cases exceeded these charges.
- (2.) That he charged without authority cab fare or travelling allowance for visiting scale-makers' premises.
- (3.) That he sold to them approval tickets at 6d. each, with the words, "Tested and approved of," together with the date and the signature "J. W. Evans, Metropolitan Inspector" upon them, for placing upon beam and counter scales, which in many cases he had not examined at all.
- (4.) That he made a maximum and minimum charge to scale-makers unauthorised by the Act in connection with the testing of weighing-machines.
- (5.) That he was in the habit of charging a fee when a weighing-machine was sent to him if he found it incorrect, and another fee when it was sent to him corrected.
- (6.) That in some instances he charged a fee of 3d. each for verification certificates to be shown to the owners of machines.
- (7.) That he was in the habit of issuing annual notices to owners of weighing-machines, requesting them to secure the renewal of their weighing-machine certificates, and thereby to a certain extent taking business out of the hands of the scale-makers.
- (8.) That he has on several occasions sold scales, weights, weighing-machines, &c., thereby becoming interested to a certain extent in trade.
- (9.) That he is in the habit of adjusting weights in his office by adding to or taking from them pieces of lead, so that the weights shall be correct.
- (10.) That he has refused on several occasions to attend scale-makers' shops unless a fee for cab hire or travelling allowance is paid to him.
- (11.) That Mr. Evans' employees were allowed by him to compare and stamp weights.
- (12.) That he instructed his solicitors to send a letter to a person named S. W. Harper, who had purchased a scale-making business for his (Harper's) son, informing him that if a sum of money (£15 14s. 10d.), due by the former proprietor of the business (Cook) was not paid, he would refuse to attend at his (Harper's) son's place of business.

- (13.) One person (Mr. H. Baskerville) directly charges that Mr. Evans on one occasion endeavoured to intimidate him into paying a fine which had been imposed, but afterwards cancelled.

All these matters were most carefully inquired into, and it appears to us—

- (1.) That Mr. Evans charged fees of £1 ls. and £2 2s. for testing weigh-bridges, 6d. per cwt. for testing weighing-machines, 2s. 6d. each for testing steelyards, and in addition to these he in many cases charged an extra 6d. on each weighing-machine. This is borne out by the evidence of several of the scale-makers, and by Mr. Evans' own admissions, in which he states he charged the 6d. over, which was reckoned for booking and other expenses, and he also states that he made the charges for testing weigh-bridges, weighing-machines, steelyards, &c., under authority of the 8th, 9th, 16th, and 17th sections, in conjunction with the Second Schedule of the Weights and Measures Act.
- (2.) He admits that he charged travelling expenses in cases where scale-makers might have brought their machines to his office, even although they drove him to and fro, the reason given being that he wished to discountenance scale-makers calling him away from his office.
- (3.) Messrs. R. Wedderburn, J. Wedderburn, J. Cable, P. Harper, Jabez Wedderburn, and M. Gleeson, state positively that they have on different occasions purchased from Mr. Evans or his assistant "approval tickets," at a cost of 6d. each, for placing on beam and counter scales, which in many cases Mr. Evans has not seen at all; and Mr. Charles Blakeney, one of Mr. Evans' employees, also states that he has on several occasions sold the tickets in question to scale-makers. He understood the scales for which they were required had been seen by Mr. Evans, and Mr. Evans has also sold these tickets. Mr. Evans, however, denies this; still, in view of the positive statements of the persons named, it appears to us that the correctness of this denial is very doubtful, and that such a practice should have been allowed to exist is, in our opinion, most reprehensible. It appears to us that he issued, or allowed to be issued, these approval tickets for beam and counter scales, and these were placed on scales without his having examined them. Mr. Evans states in the last part of his evidence that the Act does not mention any examination of any dead-weight machines, such as beam and counter scales, but that he examined them when requested by the owners, and considered he was entitled to charge a fee for doing so.
- (4.) He admits that he established a maximum and minimum scale of charges for examining and testing weighing-machines for scale-makers—that is to say, a minimum fee of 2s. 6d. for all machines under 5 cwt., and a maximum fee of 5s. 6d. for all machines over 10 cwt.—and that he had no authority to do so, but it was a matter of arrangement with the scale-makers and the office, in order to simplify matters. This maximum charge, however, appears to have been exceeded, as there are tickets produced by scale-makers with the exhibits, which show that 6s. was charged for a 12 cwt. machine, 7s. for a 14 cwt. machine, 8s. for a 16 cwt. machine, and 10s. 6d. for a 22 cwt. machine.
- (5.) He admits charging a fee when an incorrect weighing-machine was sent to him—namely, half the ordinary fee—when the owner insisted upon his testing the machine when in a dirty condition and when he could see it was incorrect, and charging the full fee when the machine is sent to him to be tested after correction by a scale-maker.
- (6.) Mr. Evans admits that he made a charge of 3d. each to R. Wedderburn for giving him verification tickets to show to the owners of weighing-machines, customers of R. Wedderburn, when requested by Wedderburn, and that he was justified in doing so for the extra work, cost of printing the tickets, &c.
- (7.) He also admits having established a practice of sending notices annually to owners of weighing-machines, reminding them to have their machines tested; but it is admitted by R. Wedderburn and J. Wedderburn that the practice was discontinued some time ago, owing to the representations made by several of the scale-makers.

- (8.) He admits having sold a set of globe weights to R. Wedderburn, to be used for testing steelyards before submitting them for inspection, and some 56-lb. test weights also to him, which he (Mr. Evans) had procured at his own expense, pending the arrival of the standard 56-lb. test weights from England; but he positively denies having sold any weighing-machines, scales, &c., which R. Wedderburn, J. Wedderburn, and E. Moore, state that he has done. Moore's evidence has not been corroborated, and although we sent a request to Mr. Cullen to appear, he did not do so, but sent a statement, of which we could not well take notice. Mr. Evans did not produce any evidence to rebut Moore's statement, except Blakeney, one of his employees, who could not really throw any light on the subject. His other employee (Patterson) admitted that on several occasions he had bought scales and machines cheap, and had sold them without Mr. Evans knowing anything about the matter, as he generally took the machine to the stable. When Mr. Evans heard of this they had a dispute and he left the employment for a year.
- (9.) He admits that he has been in the habit of adding lead to and subtracting it from weights sent to him to test at his office, as he believed the 13th section of the Act gave him authority to do so. We think it was imperative for him to do so, and it cannot be looked upon as adjusting weights. That he did not charge a fee for doing so, but suggested to the owners that they might, if they so desired, place a contribution in the hospital box in his office, which is periodically cleared by the hospital authorities.
- (10.) He admits that he has refused on occasions to attend the shops of scale-makers to test weighing-machines, &c., but only in cases where money has been owing to him by the scale-maker.
- (11.) He admits that his employees have been in the habit of comparing, &c., and stamping weights and measures. Mr. Evans should not have permitted them to do this unless they were properly authorised. This authorisation was obtained for Patterson when he (Mr. Evans) was absent from Sydney on departmental duty, in writing and verbally from Mr. Delohery, whilst this inquiry was being held.
- (12.) He admits that he consented to the letter being written to Mr. S. W. Harper by Mr. Williamson, but that it was written by Mr. Harper's (who is also a client of Williamson and Williamson) instructions, and this is also borne out by Mr. T. M. Williamson's evidence, although it seems to have been rather injudicious on the part of Mr. Evans to have been a party to such a transaction. Unfortunately, Mr. S. W. Harper did not appear to give evidence, the letter having been referred to only by his son, P. Harper.
- (13.) With reference to the statement of H. Baskerville that Mr. Evans made strong threats to induce him to pay a fine which had been cancelled through informality, which statement is substantiated by evidence of Messrs. David Price and William Hill, it is almost impossible to imagine that these apparently respectable men should combine and conspire together to accuse Mr. Evans of having done this. Mr. Evans stoutly denies this direct accusation, and gives a totally different version, which is plausible, but admits his inability to substantiate it, as Patterson, who was with him, could not have heard the conversation that took place, as he was 5 or 10 yards away.

Mr. Evans was appointed to his present position by the Stipendiary Magistrates in 1883, and receives a salary of £300 per annum from the Department of Justice, and is allowed quarters and light; but it has been a most difficult matter to ascertain from him the total amount of moneys he has received as salary, fees, and moieties of fines imposed under the Acts during the past three years. When first asked to give the Board some idea of this he stated that he could not exactly say how much he had received during the last three years as fees, that he never kept a note of the amount in his books, that he had never been instructed to keep any books of account with regard to the duties of his office. Again, he states, "It is impossible for me to tell what money I have received only for half-fines." Later on, when more closely questioned, he gives a fairly reasonable statement, after going through what records he had of the number of weigh-bridges, weighing-machines, steelyards, &c., for the examination of which he has received fees during the last three years, and of the total amount of moneys which he has received during

that

that period as salary, fees, half-fines, &c., although the amounts for salary, machines, &c., examined, and half-fines, do not quite tally with the amounts shown by his bank pass-book. His bank pass-book was in rather a complicated state, owing to the fact that he has been passing moneys through his private account, which are connected with some societies in which he was interested, and it is only by his own showing that he could get any idea which entries represented income in connection with his position as Inspector of Weights and Measures; for instance, his bank pass-book shows that during the year 1890 the sum of £1,347 6s. 0d. was passed through the account. Of this amount he states that only £601 8s. 6d. were for salary, fees, half-fines, &c. In the year 1891, £1,360 2s. 2d. were passed through the account. Of this amount, £831 5s. 0d. are represented to us as being for salary, fees, half-fines, &c.; and in 1892, when he had resigned his connection with the society above, the sum of £989 4s. 9d. was passed through the account, of which sum £777 3s. 0d. are represented as salary, &c. To each of these amounts for salary, &c., must be added the sum of £15, about which sum he states he uses per annum as petty cash without its having been placed to his account.

This would show that in—

	£	s.	d.
1890 he received	616	8	6
1891 „	846	5	0
1892 „	792	3	0

These amounts, however, do not altogether tally with the amounts he states in his evidence he has received for salary, examining machines, half-fines, &c.

	1890.			1891.			1892.		
	£	s.	d.	£	s.	d.	£	s.	d.
Salary	300	0	0	300	0	0	300	0	0
Weigh-bridges	47	5	0	72	9	0	61	19	0
Weighing-machines	167	3	6	254	8	6	258	9	0
Steelyards	7	10	0	8	15	0	10	0	0
B. and C. scales (approx.)	10	0	0	10	0	0	10	0	0
Weights and measures	32	10	0	58	10	0	78	0	0
Moiety of fines	47	0	0	137	2	6	68	15	0
Totals	£611	8	6	£841	5	0	£787	3	0

After every endeavour we have been unable to arrive at a satisfactory conclusion as to what income he has derived from his official position during the last three years. He states that his expenses amount to £400 per annum for assistance, rent of stable, groom, cost of private information, and his legal and printing expenses amount, in addition, to between £30 and £40 per annum; say, total expenses, £430 per annum.

When he was first asked if he was aware for what purpose he received his salary of £300 per annum, he said he could not tell, as he had no definite statement for what it was paid. Later on he states that he is of opinion the £300 per annum paid to him as salary is for the purpose of defraying any law expenses to which he might be put in carrying out the provisions of the Act, and obtaining assistance.

He also stated that when he was appointed his duties were not defined in any way by the Magistrates nor the Minister of Justice, and that he has never received instructions since for carrying on his duties, and that he has had to depend on the Act and his own judgment.

He also states that he had not asked the Stipendiary Magistrates nor the Minister of Justice for instructions for making charges for matters which were not clearly set out in the Act.

It is clear to us that since the present inspector's appointment, he has been under no active control, and has conducted his office in such manner as he pleased. We give him credit for efficiency from a technical point of view, as well as energy in the discharge of his duties, but we consider he acted very wrongly in not asking the Magistrates or the Minister of Justice for instructions in connection with his duties.

It

It is absolutely impossible for one man to properly carry out the duties of Inspector of Weights and Measures in such a large and populous district as the Metropolitan Police District, and if the present Act is to continue in force we would suggest that additional competent inspectors be appointed for the district.

The inspector or inspectors should have definite instructions as to their duties, and the nature of the books they are to keep, and the charges they should make.

*General information.*

Other matters of importance which came under our notice, were the discrepancies in the weighing of firewood by the Railway authorities, referred to by several witnesses. This is a matter of so much importance that we think the evidence relative to it should be brought under the notice of the Railway Commissioners.

As a matter of fact, the Inspector of Weights and Measures has no authority whatever to inspect or examine any weighing instruments belonging to the Railway authorities, owing to section 81 of 51 Vic. No. 35 (Railways Act), and we consider that every inspector of weights and measures should have authority, and be instructed in the interests of the public, to inspect all weighing instruments wherever situated.

The sale of fuel other than coal, more especially firewood, appears to be surrounded with fraud, and the retail sale of firewood should be conducted in a similar manner to that in which coal is at present supposed to be.

The present arrangements in connection with the sale of coal appear to be highly unsatisfactory, as the Act under which it is done is only in force within 5 miles of the obelisk in Macquarie-place, and, in our opinion, it should be in force all over the Colony.

The licensing of public weigh-bridges, and of the clerks in charge of them was also pointed out, and that, owing to the present way weighbridges are conducted, a great deal of collusion may exist between the person in charge of a weighbridge, and either the buyer or the seller of goods weighed upon it, which should be prohibited.

Most important evidence was given by Mr. G. H. Knibbs, Lecturer in Surveying at the Sydney University and President of the Institute of Surveyors, and Mr. D. M. Maitland, surveyor in charge of city surveys, to which particular attention is invited, in connection with making a legal standard of length for measuring land.

Evidence was given by some of the leading bakers referring to their interpretation of matters under the Bread Act, as to the inspectors taking the weight of different batches, and the reduction of the time in which the inspector should be allowed to weigh from twenty-four to twelve hours after baking, owing to the nature of the climate.

We think that fancy bread should be properly defined, and that the Inspector of Weights and Measures should have power to prosecute bakers without seizing the bread, if it is underweight, not only when found in the bake-house but when it is in the cart for delivery.

*Standard Weights and Measures of the Colony.*

On Wednesday, 1st February, we inspected the standard weights and measures of the Colony, which are directed by Act of Parliament 16 Vic. No. 34, to be kept in the Colonial Treasury. We found that instead of being so kept they were placed in a space, partitioned off with deal boards of a highly inflammable nature, on the ground floor of the Government Stores Department. The keys of the room in question, and of the boxes in which the weights and measures are contained, being most carefully kept in a fire-proof safe at the Treasury, in charge of Mr. Newcombe, the Receiver, in whose care the standard weights and measures are supposed to be.

It cannot be expected, in view of his other numerous important duties, that he could take efficient charge of these valuable deposits, which would require a person with technical knowledge to keep in proper condition.

The weights examined were contained in boxes properly partitioned, but in all cases containing much dust, which would tend to wear the weights whenever they were handled. The cells in the partitions into which the weights fit are lined with baize, to diminish friction, but this has, in the course of years, become decayed and moth eaten, so as to be now of very little use for the purpose intended. It

would

would be advisable that the boxes should all be thoroughly cleansed and relined where required with black velvet, or some similar material, not of wool, if the present weights are to be retained.

The weights examined were :—

- 1st. A 56-lb. avoirdupois weight, which was stained with some streaks of carbonate of copper, which would interfere with the accuracy of the standard.
- 2nd. A 28-lb. avoirdupois standard weight, in fairly good condition.
- 3rd. A 14-lb. avoirdupois standard weight, in good condition.
- 4th. A set of standard avoirdupois weights, from 7 lb. downwards to fractions of an ounce, which seemed in fairly good condition, except as to the smaller weights, which were exceedingly roughly made, and not in very good order.
- 5th. A set of standard troy weights from 6 lb. downwards, which were in fairly good condition, and had not been much used.

Besides these standard weights there were the following, stated to belong to the Government :—

- 1st. 100 oz. downwards unmarked as to whether avoirdupois or troy, the small weights rough and in bad condition.
- 2nd. Set of weights, 300 oz. downwards, unmarked as to whether avoirdupois or troy.
- 3rd. Set of weights, 300 oz. downwards, troy weight.
- 4th. Set of weights, 300 oz. downwards, troy weight.

These 2nd, 3rd, and 4th had very rough small division weights, not in good order.

Such weights as these last four, as they are not standards, should be kept elsewhere.

The measures of capacity examined were contained in three boxes, to which the same remarks apply as to those in which the weights are kept. The measures themselves are apparently accurate but dirty, and the glass covers which fit accurately were very dirty. The boxes were :—

- 1st. Containing a 1-bushel measure.
- 2nd. Containing a  $\frac{1}{2}$ -bushel and 1-peck measure.
- 3rd. Containing 1 gallon, one  $\frac{1}{2}$  gallon, 1 quart, and so downwards to the  $\frac{1}{2}$  gill measure, actually the complete set as required by law.

The measures of length examined were :—

- 1st. A standard yard measure, which is so dirty and tarnished that the divisions can only be read with difficulty, and in which the fiducial points are very indistinct. This measure also has the division of the foot into half-inches and 1 inch into tenths. This "standard" is quite unsuitable to be the standard measure of length for an active population of over a million.
- 2nd. There was an ordinary groove and bar yard measure, which is not a standard.

On inquiry we found that there were no appliances by which the standard weights could be made available for use, and, strange to say, this is not required by the Act. Weights can only be used when there is a balance on which to use them, and this instrument must be of such sensitiveness that it will, whilst taking the highest weight of a set without any distortion or bending of the beam, be sensitive with that weight on both pans to the lowest weight of the set. Actually, two such balances would be required, one for the larger and one for the smaller weights, to ensure due sensitiveness. There is one pair of scales kept in a box in the Treasury of extremely faulty construction for delicate work, in fact no better than a grocer would use for selling tea. It would not, from its appearance, carry more than 7 pounds, and would then require perhaps 4 or 5 grains to turn the scale. This would be, say, 1 part in 10,000 of its maximum load, whilst balances for use with standards should turn easily with 1 part in 500,000 at least, with the maximum load on.

(Chemical balances are commonly made to turn with 1 part in 1,000,000 under similar conditions.)

With regard to the standard of length, there are no means of regulating the temperature of the bar to the standard one, namely, 60 degrees Fahrenheit whilst in use.

use. This would be a matter of indifference if it were to be compared only with others of brass of exactly similar composition to itself, for then the expansion of each would be the same. If, however, the composition of the measure compared with it were different and the more if it were composed of a different substance, as iron, zinc, copper, or wood, excessive errors would be introduced at temperatures different from the standard one, owing to differences in expansion and contraction.

The same remarks as to the necessity of having means to control temperature applies also to the case of liquid measures, so as to connect them with the standard weight, for the British standard of measure is the gallon, which is defined as the space or measure occupied by 10 lb. of distilled water at 60 degrees Fahrenheit. The importance of this is obvious when it is considered that the increase of bulk in water between 40 degrees F. and 212 degrees F. or 172 degrees F. is 4·3 per cent.

*Recommendations of the Board.*

We recommend :—

- (1.) That a Bill be framed for submission to Parliament on the same lines as the present English Weights and Measures Acts 41 and 42 Vic., ch. 49 and 52, and 53 Vic., ch. 21, so far as they are applicable to the Colony, repealing the present Act 16 Vic., No. 34, and under which the following provisions should be made namely :—
  - (a) For placing the administration under the Bill in the hands of a Minister of the Crown, advised by a Board of three persons, who might be representatives of legal, commercial, and scientific interests, and who, as a matter of economy, might be Government officials.
  - (b) For the appointment of one inspector for the Colony, with head-quarters at Sydney, and sub-inspectors also for the Colony, to travel when required, the Board examining all applicants for these positions, and recommending to the Minister the most suitable persons for appointment by the Governor and the Executive Council. The persons so appointed should receive payment by salary only, all fees, fines, &c., under the Act, being paid into the Consolidated Revenue.
  - (c) For the establishment of legal standards for land measurements, and for the testing of water, gas, and electric meters.
  - (d) For the making by the Board, subject to the approval of the Governor and Executive Council, of regulations in connection with the working of the Act defining the duties of inspectors and the fees to be charged for testing, comparing, and stamping all weights and measures of length and capacity.
  - (e) For the verification and stamping of all weights, measures, and weighing instruments of every description used for the purpose of trade, after a time to be stated in the Bill. Any person having in use for trade any weights, measures, and weighing instruments that have not been so stamped, being liable to a penalty.
  - (f) For the empowering of inspectors, with the approval of the Board, to destroy any weights, measures, or weighing instruments so incorrect, as to be incapable of adjustment.
  - (g) For the licensing by the Board of all dormant weighbridges, and the fixing of a scale of charges to be made for weighing on them; as also for the licensing of clerks or other persons in charge of these weighbridges; and the cancellation of such licenses in the event of any malpractice being proved against the clerk or person in charge, to the satisfaction of the Board.
  - (h) For the licensing of all scale-makers on proof of their qualification to the Board, and on payment of a fee.
  - (i) For the sale of all goods by weight; penalties being imposed upon persons selling made up packages of goods without the net weight they contain being stated thereon, or should such packages be found to contain less than the net amount so stated.
  - (j) For the inspection of weights and measures and weighing instruments used in connection with the weighing of goods on the railways of the Colony.
  - (k) For the sanction in writing of the Board, before the initiation of any prosecution in connection with weights and measures. (2.)

- (2.) That an entirely new set of weights and measures of the most modern description, which have been compared with the English standards, should be obtained from the Board of Trade, and made the standards of this Colony. Balances should also be obtained for the purpose of testing other weights and measures against them. Such standards should be deposited in some secure room in the Treasury where suitable arrangements should be provided for making tests of measures at the standard temperature of 60 degrees Fahrenheit. Such standards should be in the custody of the Board, who should be responsible for them.
- (3.) That the Sydney Coal Delivery Act should be wholly repealed or so amended as
- (a) To bring it into operation all over the Colony.
  - (b) To give the Inspectors of Weights and Measures power to at any time weigh coal or other fuel in transit for delivery.
- (4.) That the Bread Act 6 William IV No. 1 should be amended so as—
- (a) To alter the designation of Examiner of Weights and Measures under the Act, to that of Inspector of Weights and Measures.
  - (b) To give increased power to Inspectors of Weights and Measures for the prosecution of sellers of light weight bread, and
  - (c) The definition of fancy bread.

*Note.*—We consider that it would be advisable to include all matters relating to fuel and bread in the Bill proposed to deal with weights and measures.

W. M. MACFARLANE, P.M.,  
Inspector of Petty Sessions Offices, Chairman.

WILL. A. DIXON, F.I.C., F.C.S.,  
Lecturer on Chemistry, Technical College.

N. LARKIN,  
Inspector, Police.

Sydney, 13th February, 1893.

Mr. Evans raises no objection to the Board of Inquiry being held.

THIS deponent, *James William Evans*, states as follows:—I am an Inspector of Weights and Measures for the Metropolitan Police District, and was appointed by the Stipendiary Magistrates to that position on 23rd November, 1883, and am paid a salary of £300 per year by the Department of Justice; the Government pay £200 per year for an office, and I and my family are allowed to live there; prior to six months ago I never kept any books showing amounts received by me as fees, but since then I have kept a rough diary, showing the amounts received by me daily. I cannot say exactly how much I have received during the last three years as fees, and have never kept a note of the amounts in my books; since my appointment I have, I think, made about 3,000 inspections per year; I cannot say positively, as I have only made a record in cases where other action would be taken; being well known I have occasion very often to shift from one locality to another; every day, except Saturday, from half-past 8 until 11 I have been attending on public in my office, engaged in testing and examining weighing and measuring appliances; after 11 o'clock I go out to suburbs making inspections and attending to complaints till 1 o'clock; then from that until 2 o'clock I attend to anyone; from 2 o'clock till 5 o'clock I am out inspecting; on Mondays and Thursdays from half-past 9 o'clock till 5 o'clock I am in the office all day; on Saturdays the assistant remains in the office till 11 o'clock, disputes are a common occurrence; I sometimes have three a week, when two persons dispute I (Mr. Evans) am called in to test everything and settle the dispute in weights and weighing; it is not compulsory that druggists' weights should be examined; when avoirdupois weights are used they come under my (Mr. Evans') jurisdiction; chemists only sell in bulk by avoirdupois weight, and prescriptions are made up by apothecaries' weight; my district comprises the Metropolitan Police District, except North Shore, where Sergeant Abercrombie is the inspector; my weights are tested by comparison with the standard weights and measures at the Treasury; I have not tested my copies of standard weights and measures with the standards deposited in the Treasury for about three years and a half, because there are no proper weighing appliances to test them equal to those in my office; the weights in the Treasury are dated 1835 and the standards I have are dated 1887; the copies I have are certified to be copies of the Imperial standard weights and measures; the copies that are sent to the country are submitted to me first of all; I test and regulate them by my own standards; they are then taken to the Treasury and formally tested in the presence of an officer of the Treasury; I superintend this; the Treasury test is merely a formal matter, and of no good at all, for want of efficient balances; after the test has been made at the Treasury the weights are verified by an officer in the Treasury; he places them under lock and key, and then they are sent away; the officer who looks after this at the Treasury is not qualified, practically or technically, to do the work; he depends on me; the weights and measures sent to the country are imported articles and procured from a contractor here; they are not stamped, and have not been verified before being sent from England, and are often very inaccurate; I have often got a private set of weights from England which have been verified by the Board of Trade, and bear the stamps of that Department; previous to five or six years ago the copies of weights and measures were often sent to the Clerks of Petty Sessions, without previous verification here; the weights and measures sent to the country are of good material, but the measures of capacity are now almost out of use, as nearly all transactions are done by weight, it is compulsory that verified weights and measures be used for purposes of trade; I do not interfere with measures of length if the people have one good length; I take no action with regard to ordinary lengths marked on the counter; there is no supervision with regard to measures of length, only the yard; I would recommend that mural standards be used with regard to length in measurements of yards, chains, links, and inches; I have not made a report to the Treasury, the Magistrates, or any one that the weights at the Treasury were useless; the balances in my office were imported specially for my office use; there is no balance of any accuracy at the Treasury; there is a set of weights at the Treasury; I have a set of weights at my office which was intended for the Treasury, but they ignored them owing to their being improperly delivered; I believe the standard weights at the Treasury have never been tested since 1835; I have nothing to do with testing meters, either of gas or water, I know nothing of quantity of water sold in this district during the year, I have

to

to deal with Sydney Coal Delivery Act, which is only operated upon for 5 miles from the obelisk in Macquarie-place; I also deal with the Bread Act; as far as possible I see that the provisions of the Coal Delivery Act are carried out stringently; I cannot intercept coal delivery carts in transit; the provisions of Coal Act relating to coal being delivered are practically inoperative; by the provisions of the Coal Act a man has to carry a weighing-machine if it is carried in bags; there is no public weigh-bridge for weighing in bulk; there are a number of private ones, which are under my supervision; I can pull up the coal-carters to see if they have a weighing-machine; the carters in most instances carry the machines, and I have prosecuted a large number of persons for not doing so; it is not a common thing to see boys hawking coal in carts in the suburbs within the area; there are many small dealers who, knowing my office hours and public indifference, take advantage of this; the sale of firewood is a complete system of fraud; wood is generally sold when in small quantities of about forty pieces to the quarter; many small dealers never deliver more than 14 cwt. for a ton; I would suggest that the sale of wood would be regulated under same Act as coal, and should be regulated by weight; coke and coal in bulk should be sold by weight, and go to a weigh-bridge; all commercial transactions should be determined by absolute avoirdupois weight, excluding fluids, minerals, or gems; a great deal of fraud is going on in connection with selling of fruit, the cases being made too small, and there is absolutely no control over dealings in transactions of buying and selling; there is no way of controlling milk measures; the general taper form of measures is bad and tends to fraud, no divisional lines should be used, but a separate measure for each quantity, and all measures should be cylindrical in form, the measures should be of equal depth and breadth; if they are allowed, subdivisions should be made by having a glass window; all measures should be duplicates of the standard measures; I consider that porcelain or earthenware weights should not be used, because they absorb moisture, and change the weight from time to time; this is referred to in the "Pamphlet of weights and measures, inspectors, and inspection model regulations of 1890" [Sec. 51 Vic., No. 35, Sec. 81.]; I have nothing to do with the Government railway weigh-bridges, owing to a clause in the Railway Act having taken away the control of the inspector of weights and measures; I inspect scales and weights in all other public institutions, but without any fee, as far as Parramatta, there being no person there receiving a salary for such a duty; I have been appointed a special constable for the purposes of the Bread Act; I have made numbers of inspections of bakeries up to last year; up to nine months ago I inspected all the bakeries in my district, and in many cases have prosecuted people for having bread of light weight; I have nothing to do with the adulteration of bread; I consider the inspector under the Bread Act should have power to seize the bread, not only in the bake-house, but also in carts when they are on delivery. [See case *ex parte* Brown, about 1887.] I have two assistants in my office, which are paid by myself; one is James Patterson, a nephew of mine, 26 years old, to whom I pay a salary equal to £2 10s. per week; he has been with me since I have been Inspector of Weights and Measures, with the exception of a few months, when he went to the country; the other is Charles Blakeney, who is no relation; he is about 22 years old; I pay him £1 per week; Patterson accompanies me in all cases of inspection, in case he may be wanted as a witness, and at other times during my absence he acts for me; if I am absent from my office, attending law courts, &c., he examines, compares, and verifies machines, weights, and measures in urgent cases, but holds no authority but that delegated from me; Blakeney only prepares the machines, weights, and measures for my inspection to see that they are clean, but only compares and verifies by stamping avoirdupois weights and measures; I am acquainted with the last English Act of weights and measures, and think it would meet all the requirements for this Colony, but object to clauses giving power to local authorities; I consider it is impossible for any one man to carry out the duties of inspection of such a large place as the Metropolitan Police District efficiently; when I was appointed, in 1883, the office was neglected, and the work was not done at all; the work has increased a hundredfold in the last ten years, many additional weigh-bridges being used, the Act of Parliament compelling grain produce to be sold by weight, has also increased the work, and with the present staff the supervision is inefficient; I have made several reports relative to this, one to Minister of Justice, which was verbal; Mr. Clarke was then Minister of Justice; when I found I could do nothing in the matter, I did not persevere; when I was appointed, my duties were not defined in any way by the magistrates who appointed me or the Minister of Justice, and I have never had instructions since for carrying on my duties, and have had to depend on the Act and my own judgment; I have never been instructed to keep any books of account with regard to the duties of my office; I have not the necessary time to do it myself, and there is not a person on the staff appointed to do it; before my appointment to these duties, I was never connected with scale-making; I am an engineer or whitesmith by trade; since my appointment I have not been connected directly or indirectly with any scale-maker in this city, and never did anything in that kind of business myself as far as pecuniary interest was concerned; in cases of persons offending against the Act, I make out informations and summonses myself, submit them to Mr. Williamson, my solicitor, and then take them to the Police Court, where they are signed, and the police serve the summonses; the cost of the summons, 5s. 6d., is retained at the Court in cases of conviction; half the fines in these cases would be given me, not including my solicitor's fees; I sometimes withdraw my informations where I had more than one information against one person, and the person had been fined heavily in one case; I have never settled cases with persons whom I prosecuted before going into Court; I never employ a solicitor except in difficult cases latterly, and I am not interested pecuniarily in the costs awarded to my solicitor, although I draw them myself and pay them to him; I have known cases where I have refused to stamp weights and measures submitted to me for verification, on account of tendency to fraud and inaccuracy, and have heard of them being stamped by other inspectors; in adjoining districts, if defective weights and measures are submitted to me for verification, and are grossly incorrect, I have no authority to destroy them.

Made at Sydney, on the 19th day of }  
January, 1893, before,— }

JAS. W. EVANS.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *James William Evans*, further states:—It is impossible for me to tell what money I have received, only for half-fines, and where accounts were paid by cheque, but I sometimes give receipts from a book, and do not enter or keep the butts of these receipts; I did try a system of receipts by transfer paper, but discontinued that on account of the dirt and annoyance caused, and there was no advantage to

be derived from it as a check; I produce a list of machines I have examined, and fees received from them during last twelve months; I produce statement showing number of weighing-machines examined and compared by me last year, also steelyards, amounting to £404 9s., but have not entered the half-fines received; I charge under authority by the Schedule of the Act for examining and comparing weighing-machines, viz., for examining, comparing, and stamping all iron weights or weights of other descriptions not made of brass, within their respective jurisdictions; I derive my authority from the schedule referred to, and the 9th, 16th, and 17th sections of the Act; there is not a word about weighing-machines in the schedule referred to; in all cases in the office the schedule price is charged for fees for examining weights, measures, or weighing-machines; outside the office, for examining weights or weighing-machines, I charge fees set forth in the schedule; I also charge cab hire of (say) 1s. for attending place of examination; there is no authority under the Act for charging cab hire; I have no authority from anyone to charge cab hire or travelling allowance; I have no authority to leave the office to test weights or machines; I receive a salary of £300 per annum, but cannot tell you for what it is paid, as I have no definite statement for what it is paid; I am in habit of testing weights, measures, and weighing-machines in public institutions, but am not paid for it; on one occasion I made a charge for doing so, but it was disallowed by the Treasury. Persons having weights and measures incorrect often ask me to get some person to adjust them; I do not recommend any person in particular at any time, nor do I recommend any scale-maker; on one occasion, some years ago, Mr. Tooth, of Tooth's brewery, applied to me for a person to adjust his weigh-bridge, as one scale-maker had failed to do it; I suggested the names of two other scale-makers to him, who I thought would do the work; when I examine weighing-machines I charge according to the schedule scale for iron weights; I made the charges on the authority of the 16th and 17th sections of the Act, backed up by the custom of my predecessor; he kept no books of account; when I took charge of the office there was nothing for my guidance; there is a certificate given for each machine tested, giving the weight and name of owner; when I took office I went to various places where machines were tested, and got information from a Mr. Wedderburn and other scale-makers; I, with regard to payment of fees for weighing-machines and for cab hire or travelling expenses, took precedent from Mr. Dent, my predecessor, also Mr. Mitchellson, who was before him; I knew of my own personal knowledge that cab hire or travelling expenses were paid to Mr. Mitchellson for attending tin-smelting works, of which I was then manager; Mr. Wedderburn was the scale adjuster; I always, when the extra charge was made, informed the individual charged of this; I cannot say if I gave a receipt showing cab hire or travelling expenses; I gave a receipt for the full amount in a lump sum; everything with regard to staying in and going out of the office is in my own hands, although I stated to the Chairman of this inquiry that I had no authority to leave the office; my office exists in the public interest, and the extra charges were made in that interest, so as to enable me to remain in the office as much as possible; I do not think it my duty to go out of the office examining machines, &c.; I consider it not my duty to go out examining machines, &c., where they could be brought to me, but went out as a matter of expediency; I made a charge for cab or travelling expenses only going one way, but it is only in the case of scale-makers that I charge cab fare or travelling allowance, but if I examine machines in large firms, I make no charge for cab fare or travelling expenses; a scale-maker is generally in attendance in these firms; when a scale-maker has several machines to be examined at one time I only charge cab fare one way, but do not include that in the ticket I give him; I do this, not for the sake of the money, but to discourage persons from calling me away from the office; with regard to my sending out notices recommending persons to have their machines examined by me, there is no authority anywhere in the Act for doing this, but I do it to prevent owners or proprietors of machines allowing them to get in bad order; it is not an advantage to me to do so, as it entails a lot of work, and it tends to prevent my finding machines out of order, and so obtaining convictions against the owners, but at the same time I receive fees for examining them; I am of opinion that the £300 per annum paid to me was for the purpose of defraying any law expenses I might be put to in carrying out provisions of the Act, and in obtaining assistance; I am aware that no other Inspector of Weights and Measures in the Colony receives salary, but I am sure they are not so liable to incur actions, damages, and similar expenses as anyone in my position, whose whole time is devoted to this work; the certificates of my predecessor given for adjusting machines had, I think, the fees marked on them; I give suggestions to scale-makers with regard to how machines should be examined, so as to obtain uniformity of action in the machines, so as to follow the practice of good authorities of Great Britain and other countries; when I took the appointment I considered that remuneration was to come from the fees apart altogether from the £300 per annum.

Taken at Sydney, this 20th day of }  
January, 1893, before.—

JAS. W. EVANS.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Robert Wedderburn*, states as follows:—I am a scale-maker, and reside at 226, Sussex-street, Sydney; I have been a scale-maker for twenty-nine years, quite fifteen years of that time I have been in Sydney; I know Mr. Evans, Inspector of Weights and Measures, and have known him since his appointment; I would like to make a statement, and cannot see anything in the Act authorising the charge made for platform machines and counter scales, for which the public have been over-charged, which I know of my own knowledge; providing the inspector is correct in charging 3d. for each half hundred-weight for platform machines under the Schedule, a four hundred-weight machine should be 2s.; why should the inspector charge 2s. 6d. for a machine of one hundred-weight and a half, as shown by receipt marked A, or why 2s. 6d. should be charged instead of 2s., on receipt marked B? I also produce fifteen other receipts marked C, in each of which I maintain there is an over-charge of 6d. [*Mr. Evans here acknowledges that the receipts were given by him.*]; I also produce forty-two receipts marked D for examining platform scales, in each of which there is an over-charge made of at least 6d.; I also produce twenty-three verification certificates marked E, in which 3d. is charged for the receipt, and in several of them 6d. has been charged for verification of scales; I produce a notice signed by Mr. Evans, marked F, which was sent to me by Messrs. Parson Brothers, and another signed in a similar way and marked F also; the notices should not be issued, because the people trust to us scale-makers, and we attend to their work, and keep their machines in proper adjustment; it is the place of the inspector to go round to the people, and see to the machines, but not to send them notices; I also produce special notice marked G, which, I believe, was sent to Messrs. Baker & Co. by Mr. Evans; the sending of the notices to the people by Mr. Evans, damages me as a scale-maker; the sending was objected to, and Mr. Evans has

[Mr. Dixon here has to leave, and Mr. Evans states he has no objection to the inquiry being continued by the Chairman and Mr. Larkin.]

has promised myself and others that he will not send further notices ; through these certificates being sent out, work which I should have got has been sent to Mr. Evans, and other scale-makers have got the work ; the system practised by Mr. Evans is practised in no other part of the world in which I have been ; the districts in England in which I have been are Middlesex, Greenwich, Deptford, Lewisham, Woolwich, and Gravesend, and in all of these districts the same scale of charges practised here is used there, but there scales were never charged for ; to my knowledge the inspector here charges one person £1 1s., and another £2 2s., for adjusting a weigh-bridge, and he told me he charged the different rates because one is public and the other private ; the Act here is defective, because it does not make reference to platform machines, weigh-bridges, and steelyards, and counter weighing-machines, also in not stating whether an inspector is allowed for cab fare or travelling expenses for coming down to my place for adjusting machines, as he has done so on some occasions when I have brought him in my own conveyance ; the inspector, when he charges me for cab fare or travelling allowance, does not give me a receipt, as I pay these items in lump sums when paying my accounts, and I have several times given him money for cab fare or travelling allowance ; he says it is not his duty to give me a receipt to give the public ; I have often asked Mr. Evans to give me a receipt for moneys I have paid to him for stamping weights, but he would not give me any ; at one time he would not give me any receipts, but after several discussions he gave me a receipt and charged 3d. for it ; he gave receipts called verification certificates for showing to owners of machines, and charged 3d. for them ; I produce a book marked *Exhibit H*, which came from Mr. Evans' office, and which shows the names of people having weighing-machines, together with date when they were last examined by the inspector, and it will give the board some idea of the sum received for examining machines by Mr. Evans, as the bulk of the machines was examined by him in my office ; I also produce two small books marked *Exhibit K*, which show the amounts paid by me to Mr. Evans, and for which I have had no receipts ; the word "ticket" occasionally used in these books, for each of which a charge of 6d. was made by Mr. Evans, refers to *Exhibit L* ; the writing in books [*Exhibit K*], is in the handwriting of Mr. Evans or his assistant ; what is wanted badly in this Colony is a board, so that a private person can get justice done by the board if he thinks an error has been made, so that an inspector should consult a board before prosecuting anyone, as at the present time there is only the Minister of Justice to apply to, and an inspector's residence should be away from his office, as persons going there on business do not want the case made too public ; the system generally in England is that each inspector is allowed an assistant, and he has only a small district to go over, and he has his proper office hours ; I cannot show the amount of money paid by me to Mr. Evans.

*To Mr. Evans* : I cannot say whether I got the book [*Exhibit H*], from Mr. Lees in your office, and cannot say if I gave him 10s. for it ; I am not aware that *Exhibit G* was left by you when inspecting machines of Mr. Baker ; the verifications for which a charge of 3d. was made, were not provided at my suggestion ; the verification certificates are not issued to me except at my request ; the charge of 3d. was lately struck out of one notice.

Taken at Sydney, this 20th day of }  
January, 1893, before,— }

ROBERT WEDDERBURN.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Robert Wedderburn*, further states as follows :—I have on several occasions purchased scales and weights from the Inspector of Weights and Measures ; one set was a 14-lb. set of brass globe weights ; to the best of my recollection it was within the last two years, but I cannot recollect what I paid for them ; some four or five years ago I purchased a second-hand cotton weighing-machine ; to my knowledge I bought no more machines from him, but bought either four or six 56-lb. weights from him some time during the last three years ; I wanted these weights for testing my own steelyards, and I paid about 3s. 6d. each for them ; I believe these are my only transactions with the Inspector of Weights and Measures as far as buying was concerned, and for all of which I paid him in connection with my running accounts to him for stamping weights, measures, &c. ; I pay the inspector a considerable amount of fees ; I cannot say for the last three years how much I have paid the inspector as fees, but I can say approximately for the last six months ; I produce list marked *M*, showing the amount of fees from 1st July, 1892, to 23rd December, 1892, the total amount of which is £51 11s. 9d. ; I decline to answer whether the inspector ever tests weights or weighing-machines which have not been adjusted by a scale-maker ; the inspector does not to my knowledge repair weighing-machines or scales ; sometimes last year when I spoke to the inspector about the overcharge of 6d. on each machine, as shown in receipts put in on Friday last ; he said to me that he would not come out of his office unless he was paid travelling expenses ; I do not charge my customers for travelling expenses ; I pay it out of my own pocket ; my customers do not complain of excessive charges for stamping to the best of my belief ; the inspector tests and passes ; there has been a system of tickets lately introduced for which a charge of 6d. is made, the Inspector issues these tickets and charges 6d. each ; when the inspector has been visiting my place to pass big weighing-machines I have called his attention to smaller counter scales that I have had from my customers, he has seen them and passed them as correct, and I have sent up and got the tickets for them and pasted them on ; all the weights have been passed almost always at his office ; on several occasions I have had scales and weights in to repair ; I have taken the weights to the inspector's office and said I wanted the tickets for the counter scales, and would give the name and address of the person to whom they belonged ; I have got the tickets from the inspector without the inspector seeing the scales at all ; I get verification certificates from the inspector when I have gone for the tickets, and I pay him for them ; the inspector has on several occasions declined to come to my shop for stamping and testing weights and measures unless he was paid for doing so ; I have asked the reason, and he has told me because the Government does not allow him anything for expenses for a clerk, and he also said he was never supposed to give any receipts for the same reason ; the inspector's recognised time for attendance at his office has been from 9 a.m. to 4 p.m. on Mondays and Thursdays ; of late the office has been open all day ; I have had a great deal of inconvenience through the inspector being away from his office during the recognised hours for his being there ; his assistant attends to his duties of adjusting and stamping weights during his absence, but not big platform machines ; on several occasions he has passed a number of 1-lb. scales ; no one but his assistants do his work in his absence ; I know the area under the inspector's supervision ; I do not think he can attend to the whole work satisfactorily ; I think it would require from six to eight inspectors and a chief inspector to be always at home in order to do the work satisfactorily ; to my knowledge there are about fifty weigh-bridges in the Metropolitan District ; I produce tickets from 403 to 985 marked *Exhibit N*, also tickets marked

marked *Exhibit O* ; there must have been passed 519 platform machines up to October 28th, 1892, from June 16th, which makes a total of 1,504 machines passed by the inspector ; I also produce tickets marked *Exhibit P*, showing that between 20th August, 1891, and 22nd December, 1891, 692 machines were passed if the book out of which they were taken was numbered consecutively ; I produce tickets from steelyard certificate book marked *Exhibit Q*, between dates of April 19th and September 5th, 1892, numbered in red ink 48 and 103 respectively ; no mention is made of weigh-bridge certificates ; the platform certificates vary in price from 10s. 6d. down to 1s. 6d. ; the inspector on several occasions tours the outlying districts to see that the weigh-bridges have been done ; I would suggest that a notice be put in the paper for storekeepers, &c., to bring all their certificates, to show how many machines have been passed.

*To Mr. Evans* : You offered to sell me the globe weights, and I purchased them ; I did not beg of you to sell me the globe weights ; you asked me to buy them and I did so ; I don't know if I paid you the price you gave for them ; I bought the Cotton platform machine from you, and not from your nephew, Mr. Patterson ; the 56-lb. weights were used by you for the purpose of testing steelyards ; I had no weights of that description ; at that time I think new 56-lb. weights were worth from 4s. to 4s. 6d. each ; it is not possible to buy new weights of that kind in this Colony ; these 56 lb. were given to me as a favour for testing steelyards, but I paid for them ; I have obtained the tickets I mentioned, called scale tickets from the inspector and from his clerk, and for the purpose of pasting on counter scales to show that they had been passed by you without having seen them ; the tickets or certificates I mentioned do not constitute a receipt ; Patterson, your nephew, is not, I consider, competent to test machines ; I believe he has been with you more than five years, but during that time he has been away on several occasions.

Dated at Sydney, this 23rd day of }  
January, 1893, before,— }

ROBERT WEDDERBURN.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Herbert Raymond*, states as follows :—I am a general merchant, and carry on business at 77, Pitt-street, Sydney, and 22 and 24, Druitt-street, Sydney ; I deal with bark, wood, coal, and produce amongst other things ; I come here as a user of weights and scales, and have had dealings in this business for about twenty-five years ; I have two dead weight and two platform weighing-machines in use ; my chief complaint is in connection with wood and coal, in which I have been engaged for about a year ; I have a copy of the Sydney Coal Delivery Act, and adhere strictly to it ; my coal drays carry scales, and two 56-lb. weights, in accordance with the Act ; my coal-bags are large, and hold 1 cwt. easily ; in weighing out coal I place an empty coal-bag on the side of the weights for tare, and so make the contents of each bag 112-lb. net, in accordance with the Act ; I weigh wood in a similar way in baskets, 1 cwt. at a time, and as far as I am concerned there is no fraud in sale of firewood ; whilst I act up to my interpretation of the Act I have constantly noticed coal carts, not owned by small dealers, but the largest people in the trade, travelling without any scales at all ; I stopped a cart only a few days ago, and asked the driver, whom I knew, where his scales were ; he said he had no scales, but had the weights under the coal bags, and the inspector was quite satisfied when he saw the weights ; and I feel sure from my own knowledge of the business that coal cannot be sold legitimately at the prices I know it to be sold at with any profit ; with regard to the style of scales carried, which I believe is laid down by the inspector called "dead-weight machines" ; with two 56-lb. weights the weight of the machine and weights is about 1½ cwt., and I would suggest that steelyards be used, for it would be more merciful to the horse, and would answer the purpose just as well, I would think ; I have two platform machines, and I hand in a certificate for 6 cwt., where I object to be charged 6d., which I consider 6d. above the charge, according to the inspector's view ; the machine for which I have certificate, marked *Exhibit R*, was inspected in Wedderburn's shop ; I want to draw attention to the foot-note at the bottom of certificate, viz., "This certificate expires twelve months from date of issue" ; I have received notices from the inspector of date of expiration of these certificates, and I fail to see the authority for the twelve month's test system under the Act ; I consider that any intelligent man can test a weighing-machine, therefore it is the weights belonging to the machines only that require the attention of the inspector, and that the weighing-machines are kept properly clean, should not require to be repaired so often as once a year ; the inspector, instead of sending these notices of expiration of time when scales should be tested, which I interpret into a demand for an annual contribution to his income, should call and inspect the scales where they are used, to see if they are correct, and, if not, to take proper action ; I do not agree with the inspector's evidence that there is such a large proportion of rogues in any trade or trade generally ; if there are no scales of any description in the cart there is no check to prevent a man parting with coal at any time when on delivery ; in my opinion a great number of the coal-bags do not hold 1 cwt. of coal as required ; where coal was sold in bags of description mentioned there would be a deal of fraud ; when we get special orders for lump-coal, which is delivered in bulk always, if the carter is dishonest there is nothing to prevent him from parting with some of it before delivery ; small coal is sold in bags even for manufacturing purposes ; very large coal consumers buy a cargo and pass it over their own weigh-bridge, and that does not come under the supervision of the Inspector of Weights and Measures ; under the Coal Act there is no reference made to wood, and there would be more likely to be fraud than coal ; mountain coal delivered at the railway is sometimes short ; the wood is sold to us under railway weights ; I have weighed it and found it fairly right ; I do not weigh it generally ; I take it for granted that it is right ; in my opinion, wood and all kinds of fuel should be sold by weight, and under the same system as coal is at present supposed to be sold ; the inspector never calls at my office with respect to weights and weighing ; to my knowledge, I did not know him until he spoke to me this morning.

*To Mr. Evans* : I do not speak as a machine-maker ; by testing a scale I take that the scale is right when the beam is on the balance without weights, or with a 56-lb. weight, which would be a further test ; I do not know that a machine when at zero might be correct, and when weighted to its full weight it might be seriously incorrect ; I have not made inquiries of my employees whether you have ever been at my premises ; I further state that weights or measures should not require stamping every year when once stamped, and would not say that further inspection would not be necessary.

Dated at Sydney, this 23rd day of }  
January, 1893, before,— }

HERBERT RAYMOND.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Thomas Martin*, states as follows:—I am a travelling scale-maker; I reside at Granville; I have been in the business for thirty-seven years; I have had some small transactions with Inspector of Weights and Measures, as I was working for Robert Wedderburn some five years ago; I was sent by Mr. Wedderburn to Ashfield to adjust weights and scales; I was sent to a store, it was a grocery store; when I went there I told some person in the house that I had been sent by Wedderburn to adjust scales and weights; some conversation took place between the old lady and myself, and as a consequence Mr. Wedderburn and I went to the inspector's office; I was ordered out of the inspector's office by Mr. Evans himself; I understand my business thoroughly, having been in it since I was thirteen years old, and have to complain of the inspector here adjusting weights and scales, and taking it out of the hands of scale-makers; I never saw the same system existing in any part of England or Victoria, as it does exist here; in the country I have seen weights that have been altered by the country inspectors of Weights and Measures, so as to make them apparently correct, on an incorrect machine, the weights having again to be altered when the machine was corrected.

*To Mr. Evans*: I have seen the weights and scales adjusted in your office by the putting in and taking out pieces of lead in the weights; I have not seen you altering the machine, only the weights belonging to the machine; when I have brought weights and scales to your office, they might require more or less shotting; I worked at the Fresh Food and Ice Works four years ago last Christmas; you did not lend me any troy weights, and I do not remember that you lent me any other weights to carry on my business; you brought the weights down for testing the weigh-bridge; I do not know how long they remained there; I never kept a shop of my own in Sydney; I worked as a journeyman scale-maker in Sydney.

Dated at Sydney, this 23rd day of }  
January, 1893, before,— }

THOS. MARTIN.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Henry Edward Johnson*, states as follows:—I am of the firm of Johnson & Company, and carry on business at Sydney as a seed merchant and produce agent; I am interested in weighing-machines and weights and scales; great inconvenience is caused to the public by people having to bring their weights and scales to the inspector instead of him coming to see them, as on some occasions the scales and weights have been away from the place of business when wanted, and one occasion my scales were away a whole day, and great inconvenience was caused thereby; my reasons for suggesting this are that it would be less expense to the public, and scales would be less likely to get out of order as getting them carted, knocks them about considerably, and owners of scales would be more likely to see that they would be inspected, as there would be less expense, consequently the fees would be more numerous, also correct scales would be more numerous; and the inspector would be able to see the weights and scales at the place where they are used when passing at any time, and would see if scales had been tested from his note-book; I receive a great deal of produce from the wharfs, and weigh it in bulk over weigh-bridges, and on several occasions I have weighed it on more than one weigh-bridge, and found it not to be correct; there would be between two weigh-bridges a difference of  $\frac{1}{2}$  cwt. to 1 cwt.; I think an inspector should come round inspecting the weights and scales; I have been in business in Sydney nearly five years, and never knew him to visit me once; I have received a notice from him saying that the weights and scales were to be tested; I have put them on a cart, and they were sent up to his office; I have received a receipt from him; I will post up the receipts.

*To Mr. Evans*: I am quite aware that there may be a discrepancy in the weigh-bridges in Sussex-street, owing to windage, but have never reported the matter; I do not think it any fault of the inspection.

Dated at Sydney, this 23rd day of }  
January, 1893, before,— }

HENRY EDWARD JOHNSON.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Thomas Henry Dearin*, states as follows:—I am a coal merchant and reside at "Pacific Hotel," Druitt-street, Sydney; I have been connected with the fuel business for the last twenty-nine years, I wish to give information with regard to fuel, and also weights and measures; I am the owner of a 4-ton weigh-bridge, it was first tested by Mr. Evans in 1884; after testing it and giving me the certificate which I produce [*Exhibit S.*] he asked for a fee £2 2s. which I paid him; in 1886, I found my weigh-bridge was not acting fairly; I had it adjusted by Bowrey Brothers; one of the conditions of Bowrey was, that it was to be made to work to satisfaction of the inspector, which was done; I paid them £4 for doing it, and Mr. Evans made a further demand of £2 2s. for examining it, which I paid, I produce the certificate received marked T; in September, 1890, Mr. Evans again examined the machine, and made a demand of £2 2s., after it had been adjusted by Bowrey Brothers, I produce the butt of the cheque [*Exhibit U.*] I paid him; I consider I had no right to be charged £2 2s. for this as I consider it black-mailing; he examines the bridge with his own weights which I had to bring with my own carts, and return them to his office, on each occasion giving the utmost limit Mr. Evans did not take more than half an hour to examine the weigh-bridge; he simply stands and looks at the beam while the weights are being taken off; with regard to the Coal Delivery Act I take exception to Mr. Evans' position which is not defined at all; it is a matter between the coal merchant and his customer as to weighing of coal, and Mr. Evans might be called in as a disinterested person, but Mr. Evans follows the coal carts of his own accord, and without any demand from a purchaser he would cause the coal to be weighed, should there be any deficiency instead of the customer taking action to have the coal merchant fined, Mr. Evans, who is supposed to be the disinterested party, takes a summons out and becomes the prosecutor, and receives half the fines in cases of conviction; it is not the duty of Mr. Evans to see that coal carters carry weights in their carts, that is outside of his jurisdiction, I am of opinion that if Mr. Evans attended to his legitimate work he would have ample time to carry it out; Mr. Evans did not visit my place between 1884 and 1886, or 1886 and 1890, to examine my weights and weigh-bridge; if Mr. Evans came at end of twelve months according to the notice at bottom of certificate I do not think he would be entitled to a fee; the first time I did not object to a charge of £2 2s., the second time I objected to the amount to Mr. Evans, but not to his right to charge; Mr. Evans said it was the fee paid by others.

To

*To Mr. Evans*: I am not aware that the Supreme Court has defined the position of the Inspector of Weights and Measures, and a special constable with regard to the Sydney Coal Delivery Act in case *ex parte* Cinnamond; I was prosecuted by you for light coal, but I am aware that the purchaser sent for you, but to explain this, some years ago I had an order for half a ton of coal, having a weigh-bridge, I weighed the whole lot taking off the tare, the cart I was using on this occasion weighed  $9\frac{1}{2}$  cwt.; I called to my carman what he should tare, he gave me  $9\frac{1}{2}$  cwt., he should give me an additional 10 lb. for the bags, I had allowed him  $9\frac{1}{2}$  cwt. tare, and thought I was giving correct weight, and as a consequence I was short the weight of the bags; I never saw you at my place, as far as I can remember, in the years I have mentioned, nor have I heard of you being there.

THOS. H. DEARING.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

*Thomas Henry Dearing* further states: Mr. Evans compels us to carry beam scales or dead-weight machines which are very heavy and cumbersome, and I think that steelyards would be quite sufficient for the purpose of weighing coal, as it is allowed by butchers in weighing meat which is a more valuable commodity, and it would lessen the weight to be carried in the cart.

*To Mr. Evans*: I think that if a steelyard is a perfect weighing-machine for a butcher, it should be a perfect weighing-machine under the Coal Act.

January, 1893, before,— }

THOS. H. DEARING.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Henry Baskerville*, states as follows:—I am a storeman in employ of Mr. Thomas Stewart, hay and corn merchant, Cleveland-street, Redfern; I have charge of weights and measures in connection with my business; I know Mr. Evans, and have had some transactions with him; he came to my place on the 23rd November last; he said that weights, one a  $\frac{1}{4}$ -cwt. and a 600-lb., belonging to a weighing-machine, were incorrect; I told him they had been examined some time previously; I had no certificate for them; he called to a man whom he had in the buggy with him to bring in some appliances; I think testing appliances; the man said he had forgotten to put the appliances in the cart that morning; he then took the weights away; some days after a constable brought a summons for Mr. Stewart; he served the summons to me; I gave it to Mr. Stewart, who told me to look after the matter; I went to the court on a Friday at Redfern, and found that the case had been disposed of on Thursday; I saw an official of the court, and he told me that as the summons had been illegally served the Magistrate had allowed Mr. Evans to withdraw it; I was also informed that the weights were at the court on the Thursday; I went back to the store, and at about 12 o'clock the inspector drove up again; he spoke to a Mr. Hill first, who referred him to me; Mr. Evans told me he had called about the summons he had issued for me, and said that if the fine of 40s. was not paid by 3 p.m. a warrant would be issued for the recovery of the same he also stated that he was not at the court on the Thursday when the case was heard, nor had he been at the court on the Friday, and that he only just had ascertained from me that the summons had been illegally served; he also stated that the weights were then in his trap outside, and that he had not them at the court either on Thursday or Friday; he told me the best thing I could do was to pay the fine of 40s., and thereby save a second exposure in the paper; he said he would summons again, and it would appear like a second conviction; as I declined to pay the fine he threatened to summon me as well as Mr. Stewart; I told him that it was unfair to summon me too; that I was only a servant in the matter; he also said that he would take good care that the summonses would be served next time, as he would bring them himself; he said he would have me fined £5; that he would have me fined by Captain Fisher, who was a very erratic man, and depended on the state of his stomach the night previous for his decisions in the morning; that he had seen him fine men £10 when it should have been 10s., and 10s. when it should have been £10; he also stated that he had also small shop-keepers fined £3 by Captain Fisher; that Captain Fisher was a great tyrant; that the man who heard the case on the Thursday was a fair man; Mr. Stewart was summoned again, and fined 20s.; each time Mr. Evans has examined the 6-cwt. machine he has charged 3s. 6d.; I had no control over the weights taken away by Mr. Evans after he took them away; I never saw them tested; I consider Mr. Evans' object in saying all this to me was to terrify me into paying the fine, which really did not exist.

*To Mr. Evans*: You were not alluding to the Weights and Measures Act when you instanced Captain Fisher fining men £10, &c.; I did not know that Captain Fisher was not officiating in the district at that time; I was not aware that there was such a magistrate on the Bench; you told me that the weights had lost their plugs, but you did not show them to me; you did not test the two weights that you said were short; you had two or three weights which you put on the platform of the weighing-machine, but you did not test the two weights in question before me; you have never returned the weights to me; I further state that the conversation referred to took place in the presence of two witnesses; Mr. Evans had a man outside in the buggy; he did not hear what was said, as far as I know.

*To Mr. Evans*: I was strongly advised to say nothing of this conversation on the second occasion at the court, as it reflected on another person.

H. BASKERVILLE.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *David Price*, states as follows:—I am a retired transit officer, and am a builder by trade, but am not following any occupation at present, and reside at Old South Head Road, Waverley; I know Mr. Baskerville; I remember being in Mr. Stewart's store with him on 9th December last, when Mr. Evans came; I heard the statement made this morning by Mr. Baskerville of a conversation between him

him and Mr. Evans on that day; every word of the statement is correct; Mr. Hill was also in the store at the time; Mr. Evans had no one with him in the store; he had a man in his buggy outside the store, but it would be impossible for him to hear the conversation.

[Mr. Evans does not wish to ask any questions.]

DAVID PRICE.

W. M. MACFARLANE, WILL A. DIXON, N. LARKIN.

This deponent, *William Stewart Hill*, states as follows:—I am not doing anything at present, and reside at 45, Young-street, Redfern; I am a nephew of Mr. Thomas Stewart; I was in Mr. Stewart's store about 9th December last; I heard a conversation between Mr. Evans and Mr. Baskerville; the conversation referred to in the statement made by Mr. Baskerville this morning is correct; I heard the whole of the conversation; Mr. Price was present; no one was with Mr. Evans in the store; there was someone in the vehicle outside; he could not have heard the conversation between Mr. Evans and Mr. Baskerville; the buggy and man were about 20 yards from the door at the time.

[Mr. Evans does not wish to ask any questions.]

W. S. HILL.

W. M. MACFARLANE, WILL A. DIXON, N. LARKIN.

This deponent, *James Wedderburn*, states as follows:—I am a scale-maker and adjuster, and carry on business at 63, Liverpool-street, Sydney; I have been a scale-maker seventeen years; twelve years of that time I was in Sydney and three years in New Zealand; previous to this I was in my father's shop at Greenwich, Deptford, and London, in Middlesex, England; I have had many transactions with Mr. Evans, Inspector of Weights and Measures; I paid him fees for examining weights and measures; the amount of money I paid to Mr. Evans by cheque from 1885 was about £320; I produce list [*Exhibit V*] showing the amount of money paid by me as fees; I have kept books to show what I have paid Mr. Evans; I took the items in the list from my bank passbook; Mr. Evans has never given me a receipt for moneys paid; I have asked him for a receipt; he said he had no right to give me a receipt, that the ticket he gave was a receipt in itself; he has given me certificates after he has examined weighing-machines, weights, and measures; the charges are marked on them; I produce certificates [*Exhibit W*] in which the overcharge ranges from 6d. to 1s. 6d.; I never understood what the overcharge was for; I demurred to these overcharges, and Mr. Evans said he was justified in charging as he did; I told him some of my customers were complaining of the overcharge; I do not think there is anything in the schedule of the Act authorising a charge to be made for examining weighing-machines, weighbridges, or steelyards; I paid no travelling expenses or cab hire to Mr. Evans; he told me he would not come down to my place to examine weighing-machines, &c., as he was not supposed to go down, and he would require me to pay 1s. extra for travelling expenses; I told him it would be just as convenient for me to bring the machines, &c., to his office as it would be for him to come down to me, providing he was always at his office to attend to the examining the machines, &c., and that if the other scale-makers brought their machines to his office I had no objection, but I would not pay the cab fare; I took my machines to his office, with exception of a short period; from that time he gave me a schedule of his charges [*Exhibit X*], which are more in accordance with the schedule of charges under the Act, but there is a footnote stating that if the charges are booked it would be 6d. extra for each machine; I produce some certificates; there is no authority under the Act for a maximum fee of 10s. 6d. and a minimum of 2s. 6d., as shown in receipts [*marked X*]; latterly I have been paying according to list of prices given by the inspector; I charge my customers all the moneys I pay to Mr. Evans; they complain of the charges being excessive, in case, for instance, of where a 6-cwt. weighing-machine was charged 3s. 6d. instead of 3s.; on some occasions I have taken scales and balances to the inspector's office, and they have been stamped by a man named Patterson in the office; on other occasions Patterson has come down to my office to examine scales and balances; on occasions I have shown Mr. Evans counter scales and he has passed them in my shop; I have afterwards sent up to his office and purchased verification certificates, which I have pasted on the different machines; I was charged 6d. for these tickets, which was whole charge in examination of the counter scales; I do not think there is any such charge mentioned in the Act; I have on some occasions purchased these tickets and put them on machines that Mr. Evans had never seen; he would know of this; I have said to Mr. Evans, "I have some small scales requiring tickets"; he would then give me the tickets, on which it is stated that he had examined the scales, and I would paste them on the scales without his having seen them at all; the tickets are procurable from Mr. Evans and his assistants; I do not receive any receipt for these tickets; as far as this is concerned, a dishonest scale-maker might purchase these tickets and paste them on machines that are grossly incorrect; the inspector issued notices annually to his customers to say that their machines should be tested; I do not consider this issue of notices interfered with my business; these notices have been lately discontinued; Mr. Evans told me they would be discontinued; I believe it was done owing to the action of myself and others; generally speaking, there is generally someone in the office when Mr. Evans is away on business; both of those in the office attend to the stamping of weighing-machines, &c.; I do not think they are competent to do this, although I have had to submit to it; I know about the area of the Metropolitan district, and consider it too large for one man to look after; I cannot say how many weighbridges there are in the Metropolitan District; the fees, I believe, are for examining a private weighbridge £1 1s., and for a public one £2 2s.; I have on one occasion, about eighteen months ago, purchased two of Key's platform weighing-machines from Mr. Evans; I think I paid 35s. each for them; Mr. Evans told me he had these machines and they were for sale, and I could have them if I liked them; I bought a lot of old iron weights about two years ago; I cannot say what I paid for them, but I do not think it was much more than old iron price; about eight to twelve months ago I bought about a dozen second-hand 56-lb. weights; for some of them I paid 3s. 9d. each, which was usual price for second-hand weights at that time; about six or eight months ago I bought two brass bell weights; they were second-

hand ; I paid 6s. or 7s. for them ; there were no more transactions between me and Mr. Evans I believe ; the items referred to were charged to my account, and I eventually paid the charges for them ; if altering weights and taking balance of machines constitutes adjusting machines, the inspector has done this ; if the inspector examines a machine and finds it incorrect, I have known him to make a charge ; then, when it is taken to him corrected, he charges another fee ; I produce a verification ticket and an attesting ticket [*Exhibit XX*] for one and the same machine, which proves my assertion ; in the testing ticket [*Exhibit XX*] a fee of 2s. 6d. is charged, and in verification ticket a fee of 5s. 6d. is charged ; on one occasion after a Fairbank machine had been tested at my shop by Mr. Evans, the weights belonging to the machine were sent to his office for stamping and to receive verification ticket ; the weights were taken in charge by a young man in the office, and in trying to stamp the weight, which is a slip weight, and is a 1-cwt. slip weight, by trying to stamp on the cast-iron instead of the leaden plug, which proved to my mind that the young fellow is not competent to do the work of stamping weights, &c., and thereby broke the weight ; I have never been on bad terms with Mr. Evans ; there has been no illfeeling between us ; he came down to my shop, telling me this inquiry was to be held ; I told him I was going to make a statement ; Mr. Evans did not ask me to come, nor did he ask me to stay away ; the charge of 6d. for ticket for putting on counter machines does not include the charge for the weights belonging to it, the weights being charged for according to the Schedule to the Act ; as far as I know there is no authority in the Act for stamping slip weights ; the slip weights belonging to the machines are not charged extra for being stamped, the weights being part of the machine ; independent of the charge of 6d., there is no other charge made for the certificate given.

*To Mr. Evans :* I have complained to you of the incompetence of Patterson ; I did not know that on different occasions Patterson has done your work ; I have never complained particularly, but I have told you that it required competent men to test and stamp machines ; the fact of your selling me Key's machine led me to believe that they belonged to you, and I paid you for them, and you transacted the business altogether ; I never explained to my customers that the 6d. overcharge was made for booking, nor did I tell them that the 1s. 6d. overcharge for booking ; there were never any disputes as to my accounts with you ; I always paid them ; I have taken counter machines to your office for testing, but very rarely, because I believe you placed complete trust in me ; you sold me the tickets ; the tickets were pasted on as a matter of security for my customers ; I never took exception to paying stamping fees on platform machines beyond the overcharge ; about three or four years ago I did raise the question of paying fees for platform machines, and you admitted it was a moot point as to your ability to charge, but it was only in conversation ; I am aware that many people were prosecuted and convicted for not having platform machines stamped.

Taken at Sydney, this 25th January, }  
1893, before,—

JAMES WEDDERBURN.

W. M. MACFARLANE, N. LARKIN.

This deponent, *James Cable*, states as follows :—I am a scale-maker, and reside at 72, Druitt-street, Sydney ; I have been in the trade thirty-five years, and have only been in Sydney ten years next March ; I have only been about four months in the business with Mr. Harper, my partner ; I have had transactions with Mr. Evans with regard to stamping ; I paid him fees amounting to £21 within last four months ; the payments are initialled in a receipt-book by the person in Mr. Evans' office to whom the money is paid ; I pay fees for testing and examining platform weighing-machines, and cannot see a word in the Act authorising the payment of these fees ; Mr. Evans charges fees for every test, and allowing that 6d. is charged for 1 cwt., I am charged properly ; I have received no receipts from Mr. Evans ; the only receipt [*Exhibit 2A*] is initialling my receipt book ; Mr. Evans makes no overcharge for testing—whether he tests machines, &c., at his own office or at our shop his charges are the same ; he charges 1s. per visit when he comes to our office for testing machines, &c. ; I do not know what the 1s. charge is made for ; I never charge my customers the 1s. per visit ; I have to charge it to myself ; the customers do not complain of the excessive charge ; the inspector visits our place to adjust small scales ; we do not bring them to his office ; if the customers want the scales overhauled a ticket is pasted on ; I send to the inspector's office for as many tickets as I want, and am charged 6d. each ticket for each scale ; we fix the inspector's ticket on the scale as to its correctness, but in many cases he does not see the scales ; the charge of 6d. for the tickets is not authorised by the Act ; in addition to paying 6d. per ticket we have to pay the schedule fee for examining the weights belonging to the scales ; I cannot say positively whether we get these tickets from the assistants as well as Mr. Evans ; I know they are got from his office ; we get no receipts for these tickets beyond those in our receipt-book ; as far as these tickets are concerned a dishonest scale-maker might paste these tickets on machines which were grossly incorrect ; I know that notices were issued annually with regard to machines, &c., being required to be tested, but the practice has been discontinued ; I know the area of the Metropolitan district, and consider it too large for one man to do ; I think there are about fifty weigh-bridges in the Metropolitan district ; I believe the fee is £2 2s. for testing and examining them ; on one occasion I purchased a machine at Mr. Evans' office ; I believed it belonged to his nephew ; I bought it for 30s. ; I had no other transactions with Mr. Evans ; the inspector has never declined or threatened to decline to come to our shop ; we have been in the habit of sending up word and he comes down ; I had no conversation with him about this inquiry ; I have never been charged a fee of 3d. for a verification certificate ; I think it would take one man two years to make an inspection of all machines, &c., in the Metropolitan district taking the practice as it is done in England ; to my knowledge there are many public-houses in Sydney where the pots are not stamped ; I think the Act should be amended so as to make it similar to that in England ; it should be compulsory that weights and measures of all descriptions should be stamped ; it is not customary for any inspector to put in and take out lead from any weights unless the scale-maker is in attendance.

Made this 25th day of January, 1893, }  
at Sydney, before,—

JAMES CABLE.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Thomas Riley*, states as follows:—I am a manager of the Federal Manufacturing Company, and carry on business at corner of King and York Streets, Sydney; I have scales and weighing-machines; we have a 10-cwt. and a 7-cwt. weighing-machine at the office—about three years; the inspector visited our works, and the foreman told me I was to bring the 10-cwt. machine to the inspector's office; I sent the scales in and got a notice from the inspector to say that the scales were not complete, and I had to take them away to some scale-maker; two or three days after I found that the scales had been sent to a scale-maker, I presume by the inspector; I then went down to Mr. Cook, a scale-maker, and found the scales there; I then took the scales away and paid £1 1s.; I got a receipt from Cook; twelve months later I got a notice from the inspector to take the weighing-machine to the office again; I sent it in again, and received a notice from the scale-maker, who called at our office; I think his name was Bowrey; I saw Bowrey in reference to the scales; he gave me advice which I was not satisfied with, and I sent the scales to R. Wedderburn, who did the scales for me; after I had taken the scales home again, and about two months after I got a notice saying the scales were to be sent in again, but nothing further has been done in the matter; I sent the 7-cwt. scales to the inspector's office, and had to send them to Wedderburn, scale-maker; as far as I know I never received any receipts or certificates from the inspector.

Taken at Sydney, the 25th January, }  
1893, before,— }

THOMAS RILEY.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Percy Harper*, states as follows:—I am a scale-maker, and reside at 72, Druitt-street, Sydney; I was an apprentice to Mr. Cook, but I have been in business on my own account since last June; I have paid Mr. Evans fees for transactions with him; I am in partnership with Mr. Cabel; there is no word in the Act authorising the charge for testing weighing-machines, weigh-bridges, &c.; the only overcharge the inspector makes is 1s. for visiting our shop; I do not know what the 1s. is for; in our book it is down as "visit" in the handwriting of the inspector's clerk; we do not charge our customers the 1s. for visiting; we pay that ourselves; for small work we purchase tickets from the inspector at 6d. each, which we put on the scales, and in many instances he has never seen the scales, although it says on the ticket "tested and approved," and signed "J. W. Evans"; in additions to the charge of 6d. we have to pay for stamping weights; I go up to the office and get the tickets from the inspector or his assistant; Mr. Evans did send out notices, but discontinued it on account of some dispute with scale-makers; Mr. Evans told me he discontinued the practice; there is usually a lad at the office when Mr. Evans is away, who tests the weights and stamps them; I do not think he is competent to do the work; if the inspector examines a machine and finds it incorrect he charges a fee; I have seen a man at the office paying for testing, and having to take the machine to a scale-maker; Mr. Evans has declined to come to our shop; on one occasion, when my father purchased the business from Mr. Cook, he received a letter from Williamson and Williamson, Mr. Evans' solicitors, saying that if a bill, £15 10s., which was owing by Mr. Cook to Mr. Evans was not paid Mr. Evans would decline to come to the shop; I have never been charged a fee of 3d. for verification tickets; I have had no conversation with regard to this inquiry with Mr. Evans; Mr. Evans' shop is not more than five minutes walk from our office.

*To Mr. Evans:* Boys in my shop never stamp any weights; the lad at your office has on one or two occasions refused to stamp weights for me, saying they were not good enough, and saying you would not stamp them; it would appear that the lad at your office showed some care in refusing to stamp some weight that he had any doubt about; there was no understanding between you, my father, and myself that the lawyer should send the letter; we knew Cook owed the money, but it had nothing to do with us; my father had to pay the £15 10s., but eventually settled it with Cook.

1893, before,— }

PERCY HARPER.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Alexander Kethel*, states as follows:—I am a timber merchant and wharfinger at Market Wharf, Sydney; I have been following commercial pursuits for between thirty and forty years, and for last fourteen years I have had business with Inspector of Weights and Measures; I have only one weigh-bridge, which, to my knowledge, was the first put up for public use in Sydney; I have had weighing-machines, and have given them up for the weigh-bridge, for purpose of weighing; I have paid the inspector fees for testing and inspecting the weigh-bridge; I have paid fees ever since I have had it; I have it tested quarterly by the inspector; I first of all have the machine adjusted and tested, if necessary, by a competent scale-maker; I then send the inspector notice that this is being done; the inspector sends down several tons of weights; he tests the bridge with various quantities of weights; it is a 10-ton weigh-bridge; the weights vary from 1 or 2 cwt. to several tons; when he has satisfied himself that the bridge is correct and proved, he issues a certificate to that effect; then I pay him a fee of £1 1s. for each examination of the weigh-bridge; there is nothing mentioned in the Schedule to the Act authorising the payment of the fee for this; I believe the fee charged is cheap at the price; I have been paying the inspector £4 4s. per year for testing the weigh-bridge; I have generally got Mr. Evans to test the weigh-bridge on a Saturday afternoon, and it generally takes him about two hours to do it; my manager of the weigh-bridge tells me that Mr. Evans frequently calls in between times to test the weigh-bridge, and satisfy himself that it is correct, for which service he neither claims nor receives any remuneration; I think there would be about the same amount of trouble in testing a 4-ton weigh-bridge as in testing a 10-ton weigh-bridge; the weigh-bridge might be correct with small weights, and would be incorrect when tested with heavy weights, or the reverse; in my opinion an amended Act should be passed, giving the inspector greater powers in prosecuting defaulters, fixing the scale of fees charged, authorising the appointment of a number of assistants to enable the inspector to do his work thoroughly, and placing the office under immediate control of a Cabinet Minister; I am of opinion that it is impossible for one man to perform the duties of Inspector of Weights and Measures for the Metropolitan district; the inspector's Department should be placed under immediate control of a Ministerial Department, so that the Inspector, reporting

reporting to the Minister through the Under Secretary, would receive that protection in the performance of his duties to which he is entitled, because the Inspector of Weights and Measures, having to prosecute persons for breaches of the Weights and Measures Act, has, in my opinion, both in the person of Mr. Dent and Mr. Evans, been subjected to unwarranted blame and abuse; I am of opinion that everything should be sold by weight; I think that if a new Act were passed it should give the Inspectors liberal salaries, and all fees should be paid into the Consolidated Revenue Fund.

*To Mr. Evans:* I have never arranged with you for paying £1 ls. for testing the weigh-bridge; it was my custom to pay this to your predecessor; I think every weigh-bridge should be tested quarterly; I do not pay you the fee direct; I pay this fee to the scale-maker, who charges it in his bill; my manager has reported to me that you have called at my place with weights and tested the weigh-bridge at intervals; in any dispute between weigh-bridges this has been your custom to my knowledge; I have never heard within my business acquaintance of any complaint being made about you in your official capacity, or against the charges made by you in performing your different duties; wherever your name has been brought forward in the performance of your duties it has been spoken of with approbation.

Made at Sydney, this 27th January, }  
1893, before,— }

A. KETHEL.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Solomon Herbert Hyam*, states as follows:—I am a produce merchant at Wharf-street, Market Wharf, Sydney; I have been following commercial pursuits for over thirty years; I have two weighing-machines; one is about a 12-cwt., and the other a 6-cwt. machine; with regard to these machines, I have a scale-maker, who calls several times a year, who repairs and renovates the machines, and takes them to the inspector, who examines them, and issues a certificate to say that the weighing-machine is in perfect order; the certificates are pasted on the scales; the charge is a very small one in proportion to scale-maker's charge; I cannot say exactly what the charge is; the inspector in the ordinary course of business visits the place testing the machines; I heard Mr. Kethel make a statement this morning, in which he made some suggestions which I cordially indorse; now that there are so many weigh-bridges in Sydney, it is not necessary to have so many weighing-machines; so far as I know, there are no weigh-bridges belonging to the Corporation in Sydney; anyone can use a weigh-bridge in Sydney so long as he pays a fee.

*To Mr. Evans:* I have never heard any accusations against you in the discharge of your duties; I know that the general opinion is that you are competent to perform your duties, and I am of the same opinion.

January, 1893, before,— }

S. H. HYAM.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *John George Purves*, saith as follows:—I am a baker at Glebe; I am also President of the Master Baker's Association; I wish to speak in reference to the Bread Act; in clause 3 of the Bread Act, it defines that bread should be made in 1, 2, and 4 lb.; in clause 11, the inspector should call at bakehouses to test the weight of the bread; he would then test each shape of bread, which is all made from the one dough, and in testing the weight of different sized loaves, say a 2-lb. loaf, the inspector would take his definition of the word "denomination," so that if he found any of the various shapes deficient, he would then test four loaves from each shape, taking the average of each shape; I claim that it being all one dough, the "denomination" should mean 1 lb., 2 lb., or 4 lb., and in the event of any shape being found deficient, the average of the whole of the class, 1, 2, or 4-lb., should be taken, that is—it takes from twenty to twenty-five minutes to fill an oven with a batch of bread, and a quarter of an hour to draw it, and this should be filled with 2-lb. loaves; therefore the loaf going in first comes out last, and one loaf gets about half an hour longer in the oven; therefore it would become lighter weight, so that unless the average of the whole batch was taken, some of the bread would be light, through no fault on my part; this is owing to conditions in which the weighing is carried on, and I think the average of the whole batch should be taken; at the present time no baker is safe if the inspector likes to be over zealous in working this Act, even though he has no intention of working a dishonest action; all bread seized by the inspector is confiscated; in taking the average of bread as I have stated it the deficiency would be so small, that confiscation should not take place for instance in 400 loaves; there might be only a deficiency of 12 oz. on the lot, and this would show that there would be no attempt at dishonesty on the part of the baker; another clause of the Act says that bread so weighed should be under twenty-four hours old, and the onus of this falls on the baker, and I think twenty-four hours is too long a time to allow the inspector to claim prosecution for light bread in that time, as owing to the nature of the climate here bread dries more quickly, and I consider that within twelve hours after baking is sufficient time to allow of an inspection; I consider the maximum and minimum fines in cases of conviction should be left to the discretion of the Magistrate, as I consider the fine of 5s. per oz. under the Act is not sufficient fine for a dishonest baker, and it is too much in case where shortness of weight is merely due to accident; in clause 5 reference is made to household or wheaten bread, specifying that every loaf should be marked H or M; this is unnecessary, and as a matter of fact is not done; the weights and scales used in the bakehouse for weighing the dough should be exempt from inspection; I could not avoid the deficiency in the bread when baked; I could not allow for the deficiency, because it is almost impossible to regulate the weight of the loaves.

*To Mr. Evans:* I think that the weight of all bread should be clearly defined; at present there are only two exemptions, and that is twist loaf and French loaf; I have no complaint to make as to your performance of your duties; I think you treated us very fairly under a very bad Act.

Made at Sydney, this 27th day of }  
January, 1893, before,— }

J. G. PURVES.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Adolph Shadler*, states as follows:—I am a baker at Hunter-street, Sydney, North Shore, and Ashfield; I have been at this business forty years in Sydney, I have heard Mr. Purves make his statement this morning, and I indorse everything he has said, I would add that the Bread Act which has been in force since 1835, is practically useless in this Colony, one of the greatest faults that I have to find is that it does not define what is "fancy bread" under this Act, only batch bread was considered full-weight bread, and all other shapes were considered "fancy bread"; in course of time one shape after another became full-weight bread in the Inspector's and the Magistrates' judgments; now all bread is considered "full weight" with the exception of "Twist and French loaves," even now there are different opinions as to what are and what are not "French loaves," I consider all kinds of bread should be designated, and even "fancy bread" should not be made more than 4 oz. under the weight of "full-weight bread"; Mr. Evans has handled with tact and discretion, an Act, which in the hands of some other man might have been a terror to the trade; I know nothing of the Act in England, with regard to bread; although every cart of mine has to carry a scale, I have not had one customer in forty years asks the carter to weigh the bread.

Made at Sydney, this 27th day of }  
January, 1893, before,— }

A. SHADLER.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Felix Greenwood*, states as follows:—I am a baker at Macdonaldtown; I have heard the statements made by Mr. Purves and Mr. Shadler this morning, and I indorse them, in addition I would like to state that if every baker would be compelled to weigh all his bread that he sells in his shop, the same as it is done in London, this will do away with any prosecution, for a customer will see his bread weighed.

January, 1893, before,— }

F. GREENWOOD.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Frank John Lawn*, states as follows:—I am a clerk in charge of all Government matters connected with Wood, Paton, & Co., late M'Lean Brothers and Rigg, I have held the same position for last seven years, I have transactions with Inspector of Weights and Measures; I have been contracting to supply weights and measures to the Government for four years, and pay the inspector fees for stamping weights and testing weighing-machines; I cannot say what the firm has paid to the inspector as fees during last twelve months; I have sent beam scales, and tripod scales to Mr. Evans for testing, we have to send the weighing-machines, &c., to the inspector; to test the machines at our place of business the inspector would have to bring his appliances with him; I once sent weights and scales to the inspector and he has refused to stamp them, it was within last three years, the weights and scales were for the Government, and were not of the best quality as required; we have to send the scales, &c., required by the Government to Mr. Evans to be passed by him; he gives receipts for moneys we have paid for stamping; the inspector charges a fee for every test he makes; he has tested weighing-machines at our place of business, I have never purchased weights, scales, or machines from the inspector; if I take a machine to the inspector and he finds it incorrect, he does not charge a fee until it is corrected by a scale-maker; I have never asked Mr. Evans to test machines at our place of business; I have nothing to do with matters outside Government contracts in connection with Mr. Evans, for inspectors' use; he would ignore scales, &c., not of the best quality; weights, scales, &c., for Government Departments have to be sent to the Government Stores without his knowing anything about it.

Taken at Sydney, this 27th January, }  
1893, before,— }

FRANK J. LAWN.

W. M. MACFARLANE, WILL A. DIXON, N. LARKIN.

This deponent, *Thomas Bowrey*, states as follows:—I am a member of firm of Bowrey Brothers, carrying on business at 294, Pitt-street, Sydney; I have transactions with Inspector of Weights and Measures; for last three years I have paid him about £308 as fees; I keep books, and get this from them; he gives me certificates for each machine he has passed, which I regard as a receipt; amongst other things he tests weigh-bridges and weighing-machines; to my knowledge there is no direct authority in the Act for charging fees; the inspector charges for very test he makes; he does not charge strictly in accordance with the Act, even allowing for his ability to charge for testing weighing-machines; for instance, it was his practice to make a charge of 3s. 6d. for a 6-cwt. machine, when it should have been 3s.; I never questioned the over-charge of 6d.; for testing the Union weighing-machines, which weigh up to 240 lb. he would charge 2s., even if they weighed less; I have never paid him an extra charge at my place of business to what I would pay in his own office; I have never paid any money for cab fare or travelling allowance, nor have I been asked to do it; my business is about 100 yards from the inspector's office; I pay less now for testing machines than formerly, as I am only now charged 3s. for testing a 6-cwt. weighing-machine; I charge my customers the whole of the moneys I pay to the inspector and they do not complain of the charge being excessive; he tests all scales and balances adjusted by me; I take small scales to his office to be tested; when I get beam or counter scales in nine cases out of ten I deliver them to my customers without the inspector having seen them; I have never seen the scales adjusted by the inspector; when a customer wants a ticket I send up to the inspector's office for it; there is a system of tickets introduced for which I pay 6d.; I have not affixed these tickets on machines which have not been seen by the inspector; the inspector issues notices annually to his customers; he did this till a month ago; I think the fact of his doing so interferes with my business, because the machines are only annually sent for adjustment, and between these times a scale-maker has no show of adjusting customers' scales, &c.; if this calling-in process were discontinued, and the scales found incorrect, they would still go to a scale-maker; when the inspector is absent from his office his two assistants attend to his duties; the name of one of these assistants is Patterson; I do not know the name

of

of the other ; they test weights and measures and stamp them ; I think they are competent to do this ; they do not test weighing-machines to my knowledge ; Mr. Evans does that himself ; I know the area of the inspector's district, and consider there should be one chief inspector and three inspectors to do the work in this district ; there are about fifty weigh-bridges in the district ; these are dormant weigh-bridges ; the fees for testing these weigh-bridges are £2 2s. for each one ; there is more work in testing a 10-ton weigh-bridge than in testing a 4-ton weigh-bridge ; it would take the inspector from half an hour to an hour to test the weigh-bridge, providing all assistance was at hand for putting weights, &c., on the weigh-bridge ; I have never purchased weights, scales, &c., from the inspector ; on two occasions I purchased platform machines from his assistant, Patterson ; it was over two years ago ; they were old machines, and I do not know what I paid for them ; I paid the money to Patterson, and to my knowledge Mr. Evans was not in any way connected with this ; the inspector does not adjust machines himself to my knowledge ; if he examines a machine, and finds it incorrect, I have never known him to charge a fee ; he only charges a fee when he passes the machine corrected ; he has never declined or threatened to decline to attend my shop to test machines, &c. ; I have never been charged a fee of 3d. for a certificate similar to *Exhibit E* ; nor have I received any such certificate ; I never received from Mr. Evans a schedule of his charges to my knowledge ; I have never received list of fees from him similar to *Exhibit X* ; I was not aware that he had a maximum charge of 10s. 6d. and a minimum of 2s. 6d. for testing weighing-machines ; Mr. Evans asked me on two or three occasions to come to this inquiry ; I was not coming at first ; within the last six months I think the charge of 6d. for a certificate has been discontinued ; I do not know why it was discontinued ; no people came to my place for having scales, &c., adjusted on recommendation of Mr. Evans ; he always examines scales before I fix the tickets ; all inspectors should be in one office, and work under instructions from the chief inspector ; there are four scale-makers in this city ; Bowrey Brothers, James Wedderburn, Robert Wedderburn, and Cabel and Harper, and all adjusting, &c., is done by those four firms ; I think I do the most business of the four firms in the city in last three years ; I do all the heavy work in the city ; I have about twelve weigh-bridges under my control ; the amount given by me as being paid to Mr. Evans is as correct as possible ; the work that the inspector has to do for me varies ; sometimes it is heavy and sometimes it is light ; there is a weigh-bridge at the Hunter River Steam Company's office, which is tested twice a year, and 30s. is paid to the inspector for doing so ; of all the weigh-bridges that I look after, except Mr. Kethel's and the Hunter River Steamship Company's, the fee is £2 2s. annually ; Mr. Evans said the other scale-makers were to be there, and I should be there also.

*To Mr. Evans:* If anyone said "you sent me to his place to adjust a machine, it would be incorrect" ; I do not think you have given me any preference in the matter of work ; you have never sent me to any place for work at your recommendation ; I heard that your assistant, Patterson, was appointed to do your work during your absence ; I think he did his work satisfactorily, and is competent to do his work.

Made at Sydney, this 27th day of }  
January, 1893, before,— }

THOMAS BOWREY.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Philip Pring*, states as follows :—I am a traveller for P. J. Elliott & Company, fuel merchants, at Woolloomooloo Bay, and have been for thirty years ; I have been secretary of Fuel Merchants' Association since its inauguration about six years ago ; the honest portion of the fuel merchants formed an association, seeing the Sydney Coal Delivery Act was of no use whatever ; the association drafted a new Fuel Bill, copy of which I produce marked *Exhibit 2 X* ; they took the Bill to Mr. Evans and submitted it for his approval ; he approved it ; Mr. A. Allen, M.P., took charge of it to get it passed through the House ; the Bill was eventually shelved ; under the Sydney Coal Delivery Act the inspector has no power at all, and I consider that he should have power to weigh coal anywhere, and all descriptions of fuel should be sold by weight ; I also consider that the inspector should have power to go on any railway premises and test the machines and the goods, because we have proved the railway weights in many instances to be incorrect ; now the weigh-bridges at Darling Harbour are much improved, but they are not anything like what they ought to be ; I consider that automatic machines should be used for weighing ; I consider that there is a great deal of under-weight coal and other fuel sold now ; had we an improved Fuel Bill it would require a chief inspector and three or four inspectors to do the work satisfactorily ; the auctioneers at the railway sell by freight weight, and if there is any objection it must be made before the truck is touched ; the buyer, unless it is glaringly short has half of the wood taken away before he finds out that it is short ; it is then too late to object, and in consequence of this I am satisfied that the buyer is subjected to serious loss ; my suggestion is that wood should be weighed on delivery ; the inspector should have authority, apart from the Railway Commissioners, to inspect and test weigh-bridges, &c., on all railway premises ; since Mr. Evans' appointment he has made an improvement with regard to weights and weighing ; he has given notice that he was going to enforce the rule with regard to weights and weighing, such as enforcing the carrying of the dead-weight machines, &c.

*To Mr. Evans:* If you had taken action without giving us notice it would refresh your pocket with regard to half-fines in cases of conviction ; a custom had cropped up of using bags that would contain less than 1 cwt. of coal, and you advertised in the papers the proper dimensions of a coal-bag that would contain 1 cwt. of coal.

Taken at Sydney, this 27th January, }  
1893, before,— }

PHILIP PRING.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Bernard Gorman*, saith as follows :—I am a fuel merchant at Balmain ; I am sole agent of Mr. David Nott, of the woodmill, Narellan, for the suburbs ; a good deal of the short weight in fuel is caused through dirt accumulating in the trucks and never being cleaned out—that is, after the wood is taken out of the trucks a lot of dirt and rubbish is left in the bottom, which should be added to the tare of the truck, or the truck should in all cases be thoroughly cleaned out before being sent to the mill, as the dirt is added on to the next load of wood instead of being added to the tare of the truck ; on

one occasion, on 31st December, 1892, I received a load of wood by truck No. 7,000; it weighed 8 tons 5 cwt.; it came back weighing 8 tons 2 cwt.; the next time it came back 8 tons 1 cwt.; that was when it was cleaned out, thereby making the shortage 4 cwt., making a difference of 6d. per ton to the buyer; I agree with Mr. Pring as to the inspector having no power under the Act; in many wood-carts there are false bottoms which can be adjusted when the cart is loaded to make it look a very large load, and when the cart is empty it appears as an ordinary cart.

Taken at Sydney, this 27th January, }  
1893, before,—

BERNARD GORMAN.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Frank Bell*, states as follows:—I am in charge of Goldsbrough, Mort & Co.'s grain business, and also honorary secretary of Wholesale Produce Association (*Exhibit Y*), and have come here to represent the latter; the principal point that the association wishes to have decided is that all men in charge of weigh-bridges should be licensed, and that fraudulent weighing should be made punishable by loss of license and other punishment; it is believed that there is collusion between certain persons in charge of weigh-bridges, and buyers and sellers; the point that is the main trouble is the tare weights in the dray; it is not thought that weigh-bridges themselves are generally incorrect or out of order; we would like to have a more rigid inspection of weigh-bridges, so as to prevent any possibility of their getting out of order, as at present we think there cannot be sufficient inspection on account of the large amount of work the inspector has to do; a very loose system is adopted at the weigh-bridges with regard to the record of the tare itself when the tare is taken, and we should like to have it enforced that the tare tickets should be issued each morning to each dray, to be rechecked during the day in the case of several weighings, as in one instance a trader, to find out how his weigh-bridges actually did work, sent his dray with the same load to several weigh-bridges, with instructions to driver to give tare at any approximate figures that occurred to him, the result being that variation amounted to 7 cwt., as recorded on the tickets the gross weight showing no noticeable variation; that is, the men in charge of the weigh-bridges simply asked the driver what the tare was, and took his word for it; in case of importations by sea the buyers have to meet drafts, based upon invoiced goods, and as it is the usage of trade here for weigh-bridge weights to be accepted as final the discrepancy between invoiced weights, and on resale to the trade, is often very serious; the Railway Commissioners at the despatching station only weigh approximately for the purposes of freight; at the delivery station they weigh accurately, the result is that farmers' weights and weights at delivery station hardly ever coincide, and as the weigh-bridge weights here are final it is a serious matter to producers in the country; we always accept railway weights taken at this end, that is, at the delivery station, and I would suggest that representations be made to the Railway Commissioners to have the weighing done accurately at every despatching station; weigh-bridges should have a certain charge set out for weighing; the tickets given at the weigh-bridge to the buyer and seller should be made out legibly; many produce merchants think that it would be better to have an automatic machine to print the tickets, and record the weights, and no weigh-bridge should be used that would not weigh down to 7 lb.; the present system of only issuing triplicate tickets is not a good one for purposes of trade, as there should be in every instance three tickets, together with the block-ticket; the main complaint of men in the trade is that they have to send small platform-machines to the inspector's office to be tested; my reason for suggesting that a tariff should be settled for charging fees at weigh-bridges is to prevent undue competition and the employment of incompetent weighers at low rates of wages.

*To Mr. Evans*: Regular inspection of weigh-bridges should be made at intervals of a no longer period than three months; it is the custom to accept railway delivery weights.

Taken at Sydney, this 30th January, }  
1893, before,—

FRANK D. BELL.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Edward Joseph Peter Kelly*, states as follows:—I am a manager of West Wallsend Coal Company, at Edward-street, Pyrmont; I would like to draw attention to the Government weights at Darling Harbour; in buying a truck of wood at Darling Harbour yards we have to exercise greatest care, as we have to take the weights there, and in many instances the weight of wood is very short; during last twelve months we have purchased trucks of wood containing, by railway weight, 667 tons 4 cwt., which, by our weighing on our own weigh-bridges, weighed only 660 tons 3 cwt., showing a dead loss of 7 tons 1 cwt. [*Exhibit Z*]; I have not made any remonstrance about this to the present Railway Commissioners; I believe a good deal of short weight is caused through trucks not being cleaned out after each delivery, and the system of taking the weight of the truck when it is moving over the weigh-bridge is not a good one with the present system of weigh-bridges; we have one weigh-bridge and two platform machines at our works; the weigh-bridge is tested by Mr. Evans every twelve months, for which he is paid a fee of £1 1s.; the weigh-bridge is a 5-ton one, and situated in Edward-street, Pyrmont; we send to Mr. Evans' office for about two or three tons of weights; I think the testing would take from half an hour to an hour; Mr. Evans does not take the weights back again; we send the weighing-machines to different scale-makers, and Mr. Evans inspects them when they are there; we weigh for the public on our weigh-bridge, for which we make a charge; the weigh-bridge is not thrown open to the public, although we let people round about use it as a matter of compliment; there is no notice up to say that it is a public weigh-bridge.

*To Mr. Evans*: I think you gave us more attention than you gave most people, and on one occasion about five years ago you had one of our carters fined for delivering coal without having first delivered his ticket.

1893, before,—

H. J. DURIEU.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Benjamin Neville Mayman*, states as follows:—I am representative of Henry Pooley and Son, of Liverpool and London, weighing-machine, weigh-bridge, and weights and measures manufacturers, &c., also of Imperial Chambers, O'Connell-street, Sydney; I have been in Sydney only about a month, and previous to that I was with Pooley and Son from boyhood; I have a thorough knowledge of the Imperial legislation in connection with weights and measures, and the practice and procedure of inspectors relative thereto; with regard to the control of inspectors my deliberate opinion, based on experience from the United Kingdom, is, that inspectors of weights and measures throughout the Colony ought to be under the control of a Central Board sitting in Sydney, and they (the inspectors) should be guided in the performance of their duties by regulations specially drawn up by the Board for the purpose, that is, such regulations as have been issued by the Board of Trade in London, inasfar as they are applicable to this Colony; I think all disputes between the public and inspectors on questions of procedure should be referred to the Board for settlement; the constitution of the proposed Board should be such as to secure correct and impartial administration of the law, with as little extra expense to the country as possible; the legal profession might be represented by a gentleman of proper and sufficient attainments; commerce by a man of good sound business capacity, and the Board might also include a weighing-machine expert, who could advise when necessary on technical matters; to secure efficient supervision of weights, measures, and weighing-machines, I think that inspectors of weights and measures should be obliged to pass an examination as to their fitness for the post; in England, such an examination is conducted under the direction of the Standards Department of the Board of Trade; the extent of each inspector's district, as well as his duties, ought to be clearly defined; no inspector should have any interest whatever, either in fines or fees; there does not seem to be anything in the present Act authorising a charge to be made for inspecting and stamping weighing-machines; the charges for this work ought to be fixed by law, and clearly set out; to my knowledge, the charges authorised by the English Amending Act of 1889 are satisfactory, and sufficient to maintain the cost of the office of inspector of weights and measures; with regard to taking machines to the inspector's office for stamping, the practice in England is to compel owners of machines up to 5 cwt. capacity to take them to the inspector's office; machines above 5 cwt. capacity are usually stamped on the owners' premises; my opinion is that all public weigh-bridges should be licensed, and there should be a schedule of charges provided for weighing; the license also licenses the persons in charge of the weigh-bridges; travelling expenses should be allowed to an inspector in cases where the expense is actually incurred; the question of travelling expenses should be referred to the Central Board; prior to passing the English Act, in 1839, constables were appointed inspectors of weights and measures, but it was found to be so unsatisfactory that it was discontinued; all measures of capacity should be of equal depth and breadth, and taper measures should not be used; in my opinion, steelyards would be quite sufficient for purpose of weighing coal in bags on delivery, if freely suspended in the cart; the inspector should have power to weigh the coal in a cart whenever he shall so desire; in the case of defective weights or measures being taken to the inspector to be stamped he should have power to seize and destroy them; by defective weights or measures, I mean those that are incapable of adjustment; the power of seizing incorrect weighing-machines should not be compulsory if they can be adjusted by a scale-maker; the notice of such incorrectness should be given to the owner, and in case he does not heed this, prosecution should follow; all weights, measures, and weighing-machines should be inspected and stamped by an inspector of weights and measures, and when once stamped should be legal throughout the Colony, except when found incorrect; inspectors in England when finding a stamped machine incorrect, deface the stamp, and the machine cannot be used until corrected and restamped; a fee is not charged for obliterating the stamp, but it is charged for restamping; the English practice with regard to machines that have been slightly altered having to be restamped is unsatisfactory, as it is an inducement more to keep the machines in bad order than in good order; since the Act of 1889 has come into practice in England fraud has been greatly diminished, particularly with regard to sale of coal; the greatest frauds in England at the present time are practised by small dealers; in London alone there were in last two years about 200,000 seizures made amongst small retailers, the general report showing that poor people did not receive more than 50 per cent. to 75 per cent. of their proper weight with regard both to food and coal; when I came out here I brought out a letter of introduction to Mr. Evans, and I have heard him spoken of in London as a man who takes a great interest in his work; since I have been here I have been through the large towns in Queensland, where the same Act is in force as here, and I find that in Sydney more rigid inspection is practised here than anywhere there; in Liverpool, England, with a population of over 500,000 people, there are eight men employed in inspecting, &c.

*To Mr. Evans:* The inspector in Liverpool is under the control of Town Council; in case of carting weights to test machines, the owner of the machine should supply cartage; I am taking up our late agent, Mr. Osborne's work, here, and to my knowledge you have not had any dealings of a pecuniary interest in our firm.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *John Howard Keep*, states as follows:—I am the Australian representative of W. and T. Avery (Limited), manufacturers of every description of weights and weighing-machines, Birmingham, England, and carry on business at 491, Kent-street, Sydney; I have been connected with the firm for four years, but I have had intimate connection with it in matters relating to weights and measures for twelve or fourteen years; I am thoroughly conversant with the English Act, including the amending Act of 1889, by which the working of the weights and measures was handed over to the County Councils, but I am of opinion, as there is no Local Government in this Colony at present, it seems to me very

very necessary that there should be a central control of weights and measures, but in my opinion the control should be in the hands of proper Ministerial authority, carried out by proper officers and supernumeraries throughout the Colony; I consider the question of weights and measures of such importance that it should be under absolute Government control; the Government then should have the appointment of inspectors and sub-inspectors throughout the Colony, all of whom should qualify by examination for their positions; as regards stamping, examination, and passing of weights, measures, and apparatus, I would suggest following the English procedure, which insists that all such, used for purposes of trade, shall be approved, stamped, and passed by the inspectors; this covers all descriptions of machines; all fees and fines should be paid in direct to the Government, inspectors being salaried officers of the Crown; the weigh-bridges and persons in charge of them should be licensed; the tare weight of drays should be taken each morning, and the driver should have a ticket showing the tare weight; steelyards should be quite sufficient for weighing coal in bags, and steelyards are used in England for that purpose; there is at present a personal weighing-machine in Mr. Evans' office, which was exhibited by my firm at the International Exhibition; I believe it was presented to the office by my predecessor, and I shall most likely present machines to other public bodies, it being one form of advertising.

*To Mr. Evans:* The machine in question is of no practical use to the office or the inspector; it is merely for taking a person's height and weight; with reference to the tare of drays, I suggest that the tickets be printed by means of a special attachment to the beam of a weigh-bridge, such as is commonly used in England at the present time; in the whole of the Colonies, Sydney is the only place approaching method and completeness with regard to inspection of weights, measures, &c., is to be seen; I consider it is part of an inspector's duty to add, lead to, or take it from a weight prior to stamping, if necessary, under the latter part of the 13th section of the Act, an inspector would be justified in doing so; I have heard nothing against you in your official capacity to my knowledge; your (Mr. Evans') action with regard to inspection is very much to the advantage of honest traders, and I consider you capable in every respect to undertake and carry out your present duties; you are not pecuniarily interested or in any way whatever with our firm.

J. HOWARD KEEP.

W. M. MACFARLANE, N. LARKIN.

This deponent, *George Handley Knibbs*, states as follows:—I am a lecturer in surveying at the University of Sydney, also President of the Institution of Surveyors; I do not think there is anything in the Weights and Measures Act regulating the standard of length with regard to measurements of land; there are two units used in the sale of land, one the foot, the other a link (one hundredth part of a chain), and there is nothing in the existing Act to define what a link or a chain is; it is generally assumed by surveyors throughout the Colonies that the English standard of length as provided by statute law governs the unit; I have reason to believe that the copies of the English yard in this Colony, deposited at the Treasury, are not suitable as geodetic standards, that is to say, with regard to the measurements of land, great discrepancies exist between the units used by different surveyors; at a recent meeting of Inter-colonial Conference of Surveyors held at Melbourne, Mr. Ellery, Government Astronomer, who was present at the Conference, stated he thought that there was a great difference in standards used by different surveyors, but there was not much difference in the geodetic standards of the different Colonies; some idea of the importance of discrepancies of standards may be had when it is remembered that the Government of this Colony alone pays about £100,000 annually in the form of survey fees this is for Government use only; there is very great difficulty, owing to want of the proper standard of length, in securely determining the boundaries of landed property, the matter has been under the notice of the Institution of Surveyors for about three years; on the 11th day of March, 1890, resolutions were submitted and passed by the institution; in the opinion of this association it is desirable that the 10-foot geodetic bar ordnance intermediate, No. 4/0 1 4/, be adopted as a legal standard for surveyors in the Colony, that an accurate and convenient standard in terms of the geodetic bar fitted with adequate testing appliances be made available for the use of surveyors; the resolutions were communicated to the Acting Surveyor-General, and I understand that the Department of Lands is now putting into effect the requests therein contained, at the same time I think it would be better that it be declared a legal standard for the Colony; section 17 of the report of Conference referred to states: That the legal measures of lengths used in all Australasian surveys being the English measures of length as provided by English statute law, standard 66 feet and 100 feet in length, in terms of such legal standard, should be established in the principal Australasian Cities, and adopted as the standard of surveys in all the Colonies; the objection to the present standard yard is that the marks denoting the terminals are not sufficiently delicate, nor is the temperature at which a standard length is well known; the geodetic standard referred to is a more suitable standard because the terminals are more delicate, and any error has not to be multiplied so often; I am of opinion that for purposes of ordinary survey of land, these geodetic standards in charge of Government Astronomer of the Colony are sufficiently accurate; it is hoped that the standards of the different Colonies be identical; I would refer the Board to the review of the existing legislation of weights and measures, written by Mr. Lucas, warden of standards at Adelaide, a paper upon, which was read by Mr. Lucas at the Hobart meeting of the Australasian Association for the advancement of science held in January, 1892; there is a standard laid down at Sydney Observatory by means of the geodetic bar for the purpose of testing surveyors' measures; it was tested some time after it was laid down, and found to be .04 of an inch in error, but its error is not now known, and it is not at all a suitable standard for testing surveyors' measures; for private surveyors the use of the standard is not compulsory; Government measures are tested without attention being paid to the temperature generally; the chains can be adjusted with the Observatory standard; in using steel-tapes it would be necessary to mark the temperature and tension at which they are standard, and that is all that is required as far as testing is concerned; I am of opinion that the standard length I have mentioned should be included in any Act dealing with weights and measures generally; if the tension and temperature at which a steel-sape is standard is once known, it need not again be compared with the standard; the standard at the Observatory is not suitable, because it is subject to rough usage of surveyors in correcting their chains.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Edward William Fricker*, states as follows:—I am a book-keeper to W. Cowell & Company, fuel and produce merchants, Factory-street, Darling Harbour; I have considerable dealings with railways in connection with buying of wood; we buy about eight trucks, containing on an average about 5 tons each, according to railway weight, and occasionally find great discrepancies between railway weights and the weights obtained by us at public weigh-bridges; I have found as much as 1 ton or  $1\frac{1}{2}$  tons being short out of a 5-ton truck; a short time ago it came to our knowledge of a dealer buying a truck of wood, and finding it 2 tons short; the practice is that the auctioneer sells by the weight marked on the truck, which is the weight taken at Clyde for freight purposes; we have complained to the railway authorities about the short weight, and they have refused to recognise the weight marked on the truck for any other purpose than freight; the auctioneer sells the truck with the weight marked on it, more or less; this is very unfair for both buyer and seller at times; sometimes if we find the truck short weight, we cannot have it weighed without permission of the auctioneer, and if we cart it away and weigh it at public weigh-bridges, and then find it considerably less than the weight said to have been sold to us, we have no redress; if a little more care were taken by railway authorities in weighing the trucks at Clyde, there would be more satisfaction as the trucks are weighed while moving, instead of being allowed to stand, and it appears as if some were weighed by guess work; I think some responsible person, apart from the railway authorities, should have power to inspect and test the weighing-machines on the railway; about eighteen months ago we had a 5-ton public weigh-bridge; it was before I was with Cowell & Company.

E. W. FRICKER.

W. M. MACFARLANE, N. LARKIN.

This deponent, *James Mosely Raison*, states as follows:—I am Manager of M'Ilwraith and Street's wharf, Sydney; we have two weigh-bridges, one on each wharf, which we use daily; the weigh-bridge at M'Ilwraith's wharf is a 10-ton, and the one at Street's wharf is similar; they are public weigh-bridges, anyone can weigh over them on payment of a fee; I have been in charge of the wharf seven years, and the bridges were there when I came, Mr. Evans inspects and tests them about every three months; the last time but one that he came, he came on his own account, and brought a trolly with weights on it; he tested both bridges; I told him I would not pay him a fee; he said he did not want it; I pay about £2 2s. when I call upon him to have each weigh-bridge done; I do not think I ever paid him more than £2 2s. for each bridge every year, that is about the average; if the weights for testing are brought to me, I have to send them on to the next weigh-bridge to be tested; if the bridge is in proper order, it only takes a few minutes for the inspector to test them; about fifteen to twenty minutes each bridge; we have a weighing-machine, but never use it; the public have never complained of the bridges; I am very particular in the clerk I select to look after the weigh-bridge, and if any complaints are made against him, he knows he is liable to dismissal; I insist on the tare of a cart being taken for a cart, two or three times a day, and a ticket given each time, because the horse might be changed during the day, and this might make a difference of a  $\frac{1}{2}$  cwt.

*To Mr. Evans*: When you come in, you see that the beam balances, and that takes  $\frac{1}{4}$  hour, you then put the weights on and test the bridge, and it would then take at the outside about one hour and a half to test each bridge; I have no complaint to make against you; I consider you are a very just man; what I said before was that it would take about fifteen to twenty minutes to test without weights.

1893, before,— }

J. M. RAISON,

Manager.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *James William Evans*, further states as follows:—In the Metropolitan District there are 51 weigh-bridges; in the year 1890 I examined 30, in the year 1891, 43, and in 1892, 39; there are 15 weigh-bridges which weigh exclusively for the public, for which a fee of £2 2s. is charged annually; for private bridges that do not weigh for the public I charged £1 1s., except in some instances; for those of Dearn's, in 1890, and Colonial Sugar Company's and Tooth's, I also receive a fee of £2 2s. for testing; in the year 1890 I received a total sum of £47 5s., in 1891, £72 9s., and in 1892, £61 19s., for testing weigh-bridges; it takes sometimes three-quarters of an hour and sometimes two hours for testing the bridges; I cannot say how many weighing-machines there are in my district, but in the year 1890 I examined 895, and in year 1891, 1,292, and in year 1892, 1,349; I charged 6d. per cwt. up to 11 cwt., and 6d. over, which was reckoned for booking and other expenses, and for anything over 11 cwt. to 20 cwt. I charged a fee of 5s. 6d. for each weighing-machine; I charged a minimum fee of 2s. 6d. for all machines under 5 cwt.; in 1890 I received £167 3s. 6d., in 1891, £254 8s. 6d., and in 1892, £258 9s., for testing weighing-machines; as a rule, to test a  $\frac{1}{2}$ -ton weighing-machine it would take from ten minutes to quarter of an hour; it is usual to take from ten minutes to quarter of an hour to test a weighing-machine whatever the size, this is after the machine is placed in the position for testing, as I superintend the placing in position, which takes about one half hour; approximately in the years 1890, 1891, and 1892, I inspected 60, 70, and 80 steelyards respectively; I received a fee of 2s. 6d. for examining each steelyard; the total amounts received by me for those years being £7 10s., £8 15s., and £10; to test a steelyard that is complete and correct it would take from ten minutes to a quarter of an hour, also if everything was ready for testing it; otherwise, when steelyards have to be tested four or five times, I only charge one fee; I cannot tell how many beam and counter scales I have examined during the three years, nor do I know what fees I received for them; I charge a fee of 6d. for testing each one; I cannot say whether each year the revenue I derived from this source amounted to £5 or £50; it would take from five minutes to quarter of an hour to test the beam and counter scales; if a man brought beam and counter scales to me I would test them and charge the ordinary fee; I was in the habit of charging travelling expenses in cases where circumstances did not prevent people bringing them to me; when I have visited places for purposes of inspection I have charged a fee when a scalemaker had to take me in his own conveyance, because it was taking me away from my proper function and the public had to wait till I came back; this was to discourage people from taking me from my office, as I have stated hours for being in the office, and this is the time that scalemakers come and insist on my going to their premises; I have not been in the habit

habit of selling scale-makers approval tickets at 3d. or 6d. each for placing on scales; I have heard that Messrs. J. Wedderburn, R. Wedderburn, and Mr. Harper have stated that I do this, but my assistant in the office has been used as a "cats paw," he believed that I saw the scales on which the tickets were to be placed; if one of these witnesses stated he purchased these tickets from me without my having seen the machines on which they were to be placed, it is incorrect, I never sold the tickets myself; the fee of 3d. or 6d. is for the inspection, and the ticket is to show that the machine has been inspected and tested; these tickets have printed on them my signature, and they are numbered, and I give numbers of these to my assistant for him to place on scales if they were correct; I authorised him to charge a fee of 6d. when he put the tickets on the scales; I never inquired further about the matter; up to last July I do not know how much I received for these tickets; the only way I could tell how many tickets I had printed would be to get it from the printer; it never struck me that this was a very loose way of doing things, and, as a matter of fact, some of these tickets might have been distributed and placed on scales I have not seen; I am not in the habit of selling verification tickets at a charge of 6d. each, but by special arrangement with Mr. Robert Wedderburn, I gave him these certificates after my inspection, at his request, to show his customers, and I charged him a fee of 3d. each for them; I charged the 3d. for the cost of printing and the extra expense and trouble I was unnecessarily put to; I only issued these tickets when Mr. Robert Wedderburn requested them; I do not know what the cost of printing these tickets would be; I believe I had authority to make these charges by the 8th, 9th, 16th and 17th sections of the Act in conjunction with the Second Schedule to the Act, and I had valuable opinions about this point; I never asked the Stipendiary Magistrates who appointed me, or the Minister of Justice what instructions were to be given to me with regard to this matter; I have sued people for fees for verifying weighing-machines, and have obtained a verdict, but no further action was taken in a higher court; this was only the one case in which I sued, and it was some four or five years ago; it never struck me that it was not a fair thing to charge 6d. per cwt. for testing weighing-machines, or £1 1s. and £2 2s. for weigh-bridges; I have never noticed the scales of fees charged for testing weighing-machines, &c., under the English Act of 1889; I would be surprised to learn that under that Act the fee for testing a weighing instrument of 10 tons and over is only 10s., and for a 1 cwt. machine and above 56 lb. the charge for testing is 1s.; the prices I have been charging are considerably lower than those in Melbourne, the difference is that I retain fees for my own use, and the inspector in Melbourne does not; in Melbourne the prices are for examining and comparing balances, beams, steelyards, and other weighing-machines, including stamping when necessary, for each cwt. up to 10 cwt. the fee is 9d., for each additional cwt. over that 6d.; for examining and comparing any weighing-machine on the premises of the owner, for each cwt. the fee is 1s.; slip weights are only of value to the machine to which they belong, and are not variable; those of one machine might not be suitable to another; the machines are only a medium by which the values of the slip weights are established, and are not charged for; in 1890 I estimate that I received for examining, comparing, and stamping weights and measures £32 10s., in 1891 £58 10s., and in 1892 about £78; I based the 1890 calculation on the average takings of 12s. 6d. per week, and the 1891 and 1892 returns I based the calculations of last six months of 1892, a record of which I kept; I then reduced the 1891 return, as I know the work had considerably increased in 1892, but till six months ago I never kept a record of this; I think it would have been practicable to do this, as I was asked for a record in 1890, but I had not the means of doing so; in 1890 I received £47 as half fines, in 1891 £137 2s. 6d., and 1892 I think £68 15s. in cases of conviction; I had a salary in connection with the lodge I belong to; I had a private income from other sources of between £40 and £50 per year, but in middle of 1891 I relinquished the offices from which I was receiving this income; only £25 a year of this was certain, the remainder I received at the discretion of my superiors; I bank at Bathurst-street branch of Bank of New South Wales, and nowhere else; I pay all the moneys I receive into the Bank except some small amounts for petty cash; of all the moneys I receive not more than £15 per year is not paid to my credit in the Bank; I have a Bank pass-book, and it shows that a sum of £1,347 6s. was paid in to my credit in the year 1890, and this includes the sum of £601 8s. 6d. fees and salary as Inspector of Weights and Measures; in 1891 I paid in £1,360 2s. 2d. to my credit in my Bank; this includes £831 5s. as fees, half-fines, and salary; in 1892 I paid in £989 4s. 9d., which includes £777 3s. as fees, half-fines, and salary; the sum of £745 17s. 6d., difference between amounts paid to my credit in 1890 and £601 18s. 6d. salary fees and half-fines, represents £25 salary from my lodge; exchange cheques and lodge cheques passed through my account, as I had the disbursement of funds in connection therewith; the 1891 difference was caused in the same manner; and the sum of £212 1s. 9d., being difference between £989 4s. 9d. paid to my credit in 1892, and £777 3s. as half-fines, fees, &c., was made up by exchange cheques and accommodation to friends; my expenses for assistance and a horse and buggy, &c., and for matters in connection with cases, amounted to about £400 per year; in addition to this, my legal expenses cost me personally from £15 to £20 per year; printing must cost £15 to £20 per year; when I was first appointed I received a salary of £200 per year, and from March, 1885, I was allowed to live in the same house I am in at present; the first two or three years I was charged about £70 a year by the Government for rent, but on consideration of my having to take care of valuable implements in the office and keeping it in order, I was allowed to live in the office rent free; in this house there are three attic rooms upstairs and four rooms and an ante-room on the ground floor; there are also a kitchen and two small rooms, one at each end of the verandah; I use two rooms directly, and I have a private one also as private office; I use the front room for keeping any instruments, the other room I use as an office, and the ante-room is a private office, and the rest of the rooms I occupy; my salary was raised in 1888, I think, to £300 per year on my own repeated representations to the Minister of Justice that I could not afford to keep assistance and go on as I had been doing; I am allowed gas light by the Government but not fuel; the gas would be worth £8 per year, I burn gas in my office a great deal at night to attend to my business; I took receipts from books but the butts of these books will not give any definite information; the words on the bottom of some certificates "This certificate expires from twelve months from the date of issue," the certificate acted as a guarantee for a machine for twelve months provided it was not tampered with and I would not be responsible after twelve months; I issued these notices on my own responsibility; I had no authority; I issued general notices giving the public instructions how to act when machines, &c., were to be tested and giving names of all scalemakers; I have regulated weights and slip weights in my office by adding to or taking from them pieces of lead, this would only occur when a weight would need some slight correction; I made no charge for doing this, but I told persons whose weights I regulated in this way that they could give something to the hospital-box  
in

in my office; the box is in charge of some official of the hospital, and he clears it out at intervals; I believe the 13th section of the Act gives me authority to add to, or take from, weights pieces of lead where the machine is otherwise in good order; I have declined on occasion to go to scalemaker's shops when money has been due by them to me until the money was paid; the letter written by Messrs. Williamson and Williamson to S. Harper was not written by my instructions but by my consent, Mr. Williamson told me Mr. Harper had suggested to him the advisability of writing this letter; the weights for testing weigh-bridges are taken to them by the scalemaker or owner of the bridge, but at times when I go to make tests I have the weights carted down to the weigh-bridge at my own expense; I do not give a certificate for machines to be used only for coal; I sometimes seize weights, measures, &c., weighing-machines, I smash some up, send others to the foundry, and if they are fit to be repaired I send them back to the owners through a scalemaker; when weights, scales, and weighing-machines are brought in and found incorrect, I have charged a fee of half the Schedule fee, that is, when the machines are very dirty and the owner insists on them being tested, when the machines are brought back corrected I charge the full fee; for testing weighing-machines on owners' premises I have not charged above the Schedule rate; I gave a list of my Schedule fees to J. Wedderburn, he told me he wanted to show his customers the legal fee; I gave the lists [*Exhibit X*] to J. Wedderburn; there is nothing in the Act authorising a maximum and minimum charge for testing weighing-machines, but it was a matter of arrangement with the scalemakers and the office in order to simplify matters and to make a regular code of charges; I do not consider carting weighing-machines to and from my office is likely to damage them, and as a matter of expediency it is better that they should be brought to the office than to be examined where they are used; it would be the most unsatisfactory and unreasonable system that could be practised; there are greater facilities for examining and observing errors in these machines at the Inspector's office; I have never sold weighing-machines or scales; the Globe weights, I sold to Robert Wedderburn for standards, and he uses them for that purpose now; I had to purchase 3½ tons of test 56-lb. weights myself; when I got notice of the standard weights of this description having been shipped in England I sold a lot for ballast to Buzacott and Armstrong, others to scalemakers, as I did not want them when I got the proper standard weights; the standard weights were the Government weights; beyond this I have never sold scales, weights, or weighing-machines to anyone; the Globe weights were brought to my office for purpose of stamping; I did not like to stamp them as they were so like the standards; he said if I would give him some others for them he would give them to me; I gave him 25s. for these weights and Wedderburn got the weights for the same money; I stamped them; I believe that any competent person deputed by me can stamp and compare weights, scales, &c.; my assistant has only the authority given by me for stamping and comparing weights and measures; since this Board was appointed I have obtained authority from Mr. Delohery, S.M., for my assistant, Patterson, to act in my place; he also had authority to act when I was in Melbourne from a Stipendiary Magistrate, but there is nothing in writing about it this time; there is one portable balance at the Treasury, but I have never used it for comparing weights with standards, because it is so rusty and dirty; when I have compared weights, &c., there, I have taken down my best portable balance for the purpose of testing the weights. The weights at the Treasury are not carefully preserved; these standard weights have very primitive arrangements for their keep, the cases in which they are kept are not as suitable as they ought to be for so important an article; the cases should be air-tight, and the weights should be well padded with chamois leather; the standard yard measure of length is a very old one; the statements of the amounts given by R. Wedderburn, J. Wedderburn, and Mr. Bowrey are correct I believe; the lad who broke J. Wedderburn's slip weight was not competent; he had no right to do it, and he has since been parted with; there has been no open ill-feeling between myself and the scalemakers in Sydney, but I consider it has been exhibited in a marked way by some of them during this inquiry; I consider that under the Bread Act fine as it is at present fixed is the best preventive against fraud; the classes of bread and the powers of the inspector want to be strictly defined; I have at present a Pooley's 8-cwt. platform machine in my office; it was lent to me some years ago by Pooley's agent, Mr. Osborne, to do some work, and it has since been left at my office at his request; I will consult the present agent of Pooley as to its disposal; I have a Fairbanks personal machine in my office, but it belongs to Mr. Fairbanks, and will be handed over to him when he returns to Sydney; I have not received a bicycle from W. and T. Avery's firm as a present for my son; I purchased it through Avery; I have not invited a Mr. Cullen to my office to buy scales, nor have I sold them to him, but a set of Union scales was sold to him at my office by the owner, who was in no way connected with me; I do not consider the price at which it was sold above its value; I have had, I think, four different assistants in last three years; I use "O. S." stamps for issuing notices, &c., by consent of the Department of Justice; I have heard of unqualified scale-makers going round the country and levying blackmail on tradesmen; I know Baskerville only by seeing him in connection with summons I issued against him; I went to Thomas Stewart's place and said a 14-lb. weight and a 28-lb. weight and a 600 cwt. weighing-machine were incorrect; Patterson was with me; I called him to bring in some weighing appliances; I brought these in myself; I asked Patterson for my 28-lb. weight; he said he left it behind; I said "Give me the other set that will make 28lb."; I tested the machine, and, as a result, I took away the 14-lb. and 28-lb. weights; I summoned Mr. Stewart; I went to court on Thursday; the case was heard *ex parte*, and a fine was inflicted of 60s. and 5s. 6d. costs; next morning the Assistant C.P.S. at Redfern telephoned to me that the case of Stewart's was cancelled, as there was insufficient service; I went to Stewart's store on the Friday and asked Baskerville for Stewart's private address; I did not say to him that if a fine of 40s. was not paid a warrant would be issued for recovery of the same; I did not state to him that I was not at the court on Thursday when the case was heard, and did not say I only had just heard that the case had been dismissed; I did not say the weights were not at the court on the Thursday or Friday; I did not tell him that he had better pay the 40s. to save a second exposure; the conversation, Baskerville says, took place between us, I deny, totally, although it was corroborated by Messrs. Price and Hill; they were in the building at the time, but I don't know where; I was standing on the threshold of the front door; Patterson was outside in the buggy with the horse about from 5 to 10 yards down the street; he could not have heard the conversation that took place between Baskerville and myself; I never saw Hill before that occasion; I had seen Price; beyond this one occasion I never had any dispute with any one of these parties; when I asked Baskerville for Mr. Stewart's private address he asked me what did I want it for; I told him I would have to issue a fresh summons; he said "You have no need to do that unless you like; the summons was quashed and let it stop";

stop"; I said my instructions were different—that I was a servant of the court, and had to do what I was told; he said, "I suppose you want a Christmas box, and are hungry after the fines"; he made use of some more insulting remarks; I said I wanted Mr. Stewart's name and address, and I might take his as well; I told him he was very insulting, and I left; I was in the place about seven minutes.

JAS. W. EVANS.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *James Williams Evans* (further) states as follows:—Sometime in 1888 Lees had been compiling a book for me and after he had finished it I accused him of giving improper information to the scale-makers, which he denied, and I told him to go; he has not assisted me from that time until the present inquiry, I think; he is a very distant connection of mine, but I don't take any interest in him; I never handled or sold verification tickets; the entry in book marked "2A," produced, viz.:—"7 tickets at 3s. 6d.," is in my handwriting; I did not sell these tickets, the entry is simply a copy from the assistants' day book; I consider that the Act does not make it compulsory in me to examine beam or counter scales, but I do so when I am requested by the owners, and consider I am entitled to a fee for examining, &c.

Taken at Sydney, this 3rd day of }  
February, 1893, before,— }

JAS. W. EVANS.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Armine Lees*, states as follows:—I am a teacher, but at present out of employment, and reside at 64, Burlinson-street, Ultimo; I see book marked "H"; about end of 1888 or beginning of 1889 I compiled a book for Mr. Evans from butts of certificates showing the weighing-machines which had been tested, the butts of certificates were each marked with the name of scale-maker through whom the machine came in; at request of R. Wedderburn I supplied him with list of the machines up to that date which were marked with Wedderburn's name; I supplied each of the other scale-makers with a similar list; I received payment for my services from them but cannot say how much; Mr. Evans did not know of this at the time that I had supplied these lists; shortly after I supplied the lists R. Wedderburn asked me to supply him with list of other machines in the book; I declined to do so; I spoke to Mr. Evans about the matter; he was very angry about it and we had a quarrel; I have done no work for him since till the present time; the lists in question were given to scale-makers because they appeared to have kept no record of the machines they had tested; at the time I speak of I was employed off and on for six months; I had nothing to do with the practical work of the office.

*To Mr. Evans:* You accused me of divulging the secrets of the office at the time we had the row.

February, 1893, before,— }

ARMINE LEES.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *William Joseph Camphin*, states as follows:—I am Assistant Clerk of Petty Sessions at Redfern; I remember that on 8th December last a case was tried at Redfern Police Court against Thomas Stewart for breach of Weights and Measures Act; on this day Mr. T. Stewart was summoned by Mr. Evans for breach of Weights and Measures Act; the defendant did not appear; the case was heard *ex parte* and defendant fined by Mr. Delohery, S.M., £3, with 5s. 6d. costs, &c.; after Mr. Evans had left the court some time, I noticed that proof of service stated that summons had been left at defendant's shop, and I pointed out to Mr. Delohery that service was bad; he then cancelled the conviction and had the papers marked insufficient service of summons; he directed me to inform Mr. Evans of these facts; I telephoned to Mr. Evans personally next morning; I believe on Thursday afternoon some person came in and said he was in Mr. Stewart's employ and wanted to pay the fine; I told him the conviction had been cancelled and I could not take the fine.

*To Mr. Evans:* You were present at court on the Thursday; I told you through the telephone it would be necessary to get Mr. Stewart's private address and summon him again; Mr. Stewart was convicted for this offence on 15th December, 1892, by Captain Fisher, and fined 20s. and costs 5s. 6d., or seven days, after pleading guilty; in the first case when you gave evidence you did not show any animosity towards defendant; my impression is that it was on Thursday afternoon that the person came to pay the fine.

February, 1893, before,— }

W. J. CAMPHIN.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Duncan Mearns Maitland*, states as follows:—I am a surveyor in charge of city surveys under Lands Department, Sydney; I have heard the evidence given by Mr. Knibbs read over, and it appears to me perfectly correct; the Lands Department are now laying down a 66 feet and 100 feet standard for testing surveyor's chains in one of the corridors of the new part of the Lands Office in order to secure protection from the weather and as even a temperature as possible; it is proposed to lay the Standard down in terms of Geodetic Bar Ordinance No. 4; until that is done, we cannot give an absolute standard for Government surveys in the country, but we give the closest possible approximations to surveyors in charge of districts by forwarding steel bands, giving a certain temperature and tension which are standard, applying a "Constant" for correction at the Observatory Standard; when our standard is fixed, it can be used for testing by any surveyors, private or Government.

February, 1893, before,— }

D. M. MAITLAND.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This

This deponent, *Thomas Michael Williamson*, states as follows:—I am a solicitor of Supreme Court, practising in Sydney; I remember our firm writing a letter to Mr. S. Harper about a debt of £15 10s., due by Edward Cook to Mr. Evans; the letter was originally written under Harper's instructions; I have been legal adviser to Mr. Harper for a number of years; he saw me and mentioned he was purchasing from Mr. Cook the scale-maker's business for his son, Percy Harper, and Mr. Cable; a deposit had been paid under the contract, and before Mr. Harper paid the balance he desired to know could he compel Mr. Cook to pay the fees due to Mr. Evans; I told him that if the contract was to the effect as stated, Cook was to pay all liabilities in connection with the business—that he could deduct it from the purchase money or compel Cook to pay it before the completion of the contract; Harper then said, in order to prevent any dispute with regard to exact amount owing to Mr. Evans, he would suggest my writing a letter on behalf of Mr. Evans to himself, and demanding the amount due; I subsequently saw Mr. Evans, told him what had transpired, and with his permission I wrote the letter; Mr. Harper said he did not want any unfriendliness between Mr. Evans and his son, and the whole letter was written with concurrence of Mr. Harper and Mr. Evans; my firm are solicitors to Mr. Evans.

*To Mr. Evans*: You have been in frequent consultation with me about matters in connection with working of Weights and Measures Act, and I have on several occasions obtained counsel for you; it has been in every instance my custom to charge you the full amount of usual fees; your legal expenses that have been paid to me average about £20 or £30, with exception of one year, when they were £70 to £80; I think you have been exceedingly cautious in the way in which you administered the working of the Act; as mayor and alderman of municipalities of about fifteen years, I think it would be very injudicious to have the working of Weights and Measures Act connected at all with the Municipal Council; I consider that the present system of working the Act should prevail, with exception that there should be more inspectors; the inspector should be directly responsible to the Bench.

Taken at Sydney, this 3rd day of }  
February, 1893, before,— }

THOS. M. WILLIAMSON.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Edward Moore*, states as follows:—I am an assistant in employ of C. C. Cullen provision merchant, Market and George Streets, Sydney; I remember about September last Mr. Cullen purchasing counter scales from Mr. Evans; I was in the shop one day Mr. Evans came round inspecting; Mr. Cullen asked him had he scales for sale; Mr. Evans said he had some scales to suit him, and said the price would be £2 2s.; Cullen said, "That's all right, that will do"; a day or two afterwards, on 18th October, I went to Evans' office to pay a sum of about £1 2s. due as balance on some scales; I saw Mr. Evans; he called an assistant; told him to take the money and give me a receipt for £2 2s.; the receipt I received I now produce [*Exhibit 2b*]; it was signed by the assistant Blakeney; the scales were never taken away by us from Evans' office, and sometime about two months after Mr. Cullen sold same scales to Mr. Anderson for the sum of £1 5s. for which I gave him a receipt, and an order to take away the scales from Mr. Evans' office.

*To Mr. Evans*: When you came to inspect some of the weights some were light and you seized them and the steelyards; it was when you were testing the weights on your own machine that Mr. Cullen asked you about the scales; Mr. Cullen asked you where he would get weights if you took the light weights away; you said at Lassetters', and Mr. Cullen got them there; Lassetters is the cheapest place and the weights are stamped; Mr. Cullen was summoned and fined for these weights; it was between the time Mr. Evans came to the place and the time he went to court that I paid the money.

Taken at Sydney, this 3rd day of }  
February, 1893, before,— }

EDWARD MOORE.

W. M. MACFARLANE, N. LARKIN.

This deponent, *Jabez Wedderburn*, states as follows:—I am in employ of J. Wedderburn, scale-maker, and am his nephew; I have frequently purchased at Mr. Evans' office from Mr. Evans himself, and from the assistant, in Mr. Evans' presence, verification tickets—half a dozen at a time—for beam and counter scales for Mr. J. Wedderburn; frequently we have had the dates left blank on these certificates, so that we could date them when placing them on machines, and I have frequently, and it was the rule to place these tickets on machines without Mr. Evans or his assistant having seen the machine, as it was a great saving of time to Mr. Evans; about two or three weeks before Christmas I was in the office; Mr. Harper, of Cable and Harper, was there; I saw him ask Mr. Evans for verification tickets, and Mr. Evans gave them to him, and he took them away; Patterson has often stated to me that he does not get more than 15s. or £1 a week from Mr. Evans, with his keep.

Taken at Sydney, this 3rd day of }  
February, 1893, before,— }

JABEZ WEDDERBURN.

W. M. MACFARLANE, N. LARKIN.

This deponent, *James Patterson*, states as follows:—I am assistant and driver to Mr. Evans, and live with Mr. Evans; I am his nephew; I have been with him since he has been Inspector, with exception of twice; once I was twelve months away, and a second time three months; I have been continually with him for last four years, with exception of a day or two at a time; in last four years and a half I have been every week getting £2 5s. in cash, and get 1s. or 2s. 6d. from him occasionally, and in addition to that I receive my board and lodging; my duties are to clean the office up, and attend to Mr. Evans; I help him with big weighing-machines in the office; I test weights and scales with the standards, and stamp them; when Mr. Evans is not there I test the weighing-machines, but do not verify them; I call Mr. Evans' attention to them when he comes in; he gives the tickets for them; I never give tickets for weighing-machines; I know what approval tickets are; I know nothing of the sale of them; I don't sell them; I never saw Mr. Evans sell approval tickets to scale-makers; I know nothing whatever of them; I have sold big weighing-machines; I buy machines cheap, and sell them again at a good profit;

I have sold machines out of the office; I have sold four or five; I sold one to Cable; it was a small platform machine; I sold two platform machines to J. Wedderburn; I can't remember the persons I sold the others to; I know Jabez Wedderburn; I told him I was getting £1 per week when I first went to Mr. Evans; I have not often told Jabez Wedderburn I was getting 15s. per week; when I a second time left Mr. Evans we had a row over my buying a weighing-machine; he did not want me to bring it to the office, and I saw no harm in it; the first time I left I was not satisfied with the wages.

*To Mr. Evans:* I was not correct in saying I got £2 5s. a week, with board and lodging; I get 25s. a week, and reckon my board and lodging £1 per week; the Cotton machine I sold to Robert Wedderburn about two years ago; I got 35s. for it; Mr. Evans had nothing to do with it; if I bought a machine in this way you would never see it; I used to bring the machines down to the stable; you had nothing to do with the machines I sold to James Wedderburn; I got into a row with you over this, because you did not like me to do anything like buying and selling machines; you had nothing to do directly or indirectly with the machines I sold to Cable; I bought the machine from a man named Stehr, at Glebe, and paid a van to take it to the stable; you knew nothing of it till I sold it to Cable; when you were in the markets you had a few weights for testing; I can't recollect what quantity of 56-lb. weights you bought; I think it was 3 or 4 tons; you used these weights for testing machines; when the Government standards came out you sold the best of your own weights to scale-makers, some also to Morris to be melted down; others were sold for ballast; when you were in Melbourne, and on each occasion I was acting for you, I had authority from the magistrates.

*To Mr. Larkin:* I managed the business when Mr. Evans was not there; I never saw or handled the approval tickets; I tested and verified weighing-machines while Mr. Evans was away, but not while he was present.

Taken at Sydney, this 3rd day of }  
February, 1893, before,— }

JAMES PATTERSON.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Michael Gleeson*, states as follows:—I am in employ of James Wedderburn, scale-maker, Liverpool-street, Sydney; I have been with him about four years; I know what "approval" tickets are; I have purchased some on several occasions; I bought these tickets from Mr. Evans himself; I got them, but Wedderburn paid 6d. each for them; I took them away and put them on scales that Mr. Evans has not examined; I bought them two, three, and four at a time, some were Imperial, and others beam scale tickets; I also purchased tickets for putting on coal scales, at 1s. each, that Mr. Evans had not seen; Mr. Wedderburn always paid for them; I had got tickets for pasting on platform machines; I have taken them down to the shop; Mr. Evans first came down and adjusted platform machines with our weights, then I would go up for the tickets.

Taken at Sydney, this 3rd day of }  
February, 1893, before,— }

M. GLEESON.

W. M. MACFARLANE, WILL. A. DIXON, N. LARKIN.

This deponent, *Charles Blakeney*, states as follows:—I am a clerk to Mr. Evans, and have been with him about a year and three weeks; I was 21 last November; I test and stamp only weights and measures; sometimes I complete the test and stamp them without Mr. Evans seeing them before they go away; I know what approval tickets are; Mr. Evans has charge of them; scale-makers generally get them from me, at other times from Mr. Evans; he gives me fifty at a time, and they are numbered so that he can tell how many are used; the scale-makers generally come up, get the tickets, and take them away; no one else but Mr. Evans and myself has anything to do with the tickets; I generally make out certificates for platform scales; when the approval tickets are purchased from us the date is always on them; when verification tickets are made out the butts, which are a *fac simile* of the tickets, are kept, but after they have been entered in the books the butts are destroyed; when we get a fee for stamping weights and measures we do not give a receipt, but enter the items in a day-book; this was done till six months ago; before that they were entered on slips of paper and no entry was made; when the scale-makers come up they simply say they want some tickets; if Mr. Evans was not there they would not say he sent them; when the people came up and asked for these tickets I would give them, because I thought Mr. Evans had seen the machines, &c., for which the tickets were required; I always deposit the money at Bathurst-street Branch of Bank of New South Wales; the tickets refer to the tickets for small counter scales and not platform machines, with one exception; I remember some time in October Mr. Cullen buying a set of Union scales at Mr. Evans' office; the machine was in the office when I went there; I received the money for it and paid it in with my cash; I gave receipt produced for the money I received; the machine, after being bought, was left at the office, and might be there now; when Cullen came in Mr. Evans was not there; he came in first and paid a deposit when Mr. Evans was there, and told me how much to take; Cullen paid the balance and Mr. Evans was not present; I don't know a man named Edward Moore; he paid no money in connection with the machine Cullen bought.

*To Mr. Evans:* If the weights and measures were grossly incorrect, I would send them back; if only slightly incorrect, I would keep them for you; the Union scales, you said, belonged to some other gentleman.

Taken at Sydney, this 3rd day of }  
February, 1893, before,— }

## Special Notice.

To Barker &amp; Co.,—

Your immediate attention is directed to the weighing-machines, scales, and weights, and you are recommended to have them re-adjusted promptly, the Hyde machine especially.

JAMES W. EVANS,  
Inspector for the Metropolitan District.

## A BILL TO REGULATE THE SALE AND DELIVERY OF FUEL IN THE COUNTY OF CUMBERLAND

WHEREAS it is expedient to regulate the sale and delivery of fuel in the Colony of New South Wales Be it enacted by Preamble  
the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative  
Assembly of New South Wales in Parliament assembled and by the authority of the same as follows —

1 This Act may be cited as the "Fuel Delivery Act of 1887" and the Act nine Victoria Number eight intitled Short title and  
"An Act for regulating the sale and delivery of coal in the city of Sydney and its vicinity" and ten Victoria number two repeal of Acts  
intituled "An Act to amend the Act for regulating the sale and delivery of coal in the city of Sydney and its vicinity" shall be  
hereby repealed but such repeal shall be without prejudice to any conviction had or proceedings commenced thereunder  
previous to such repeal

2 In the construction of this Act the word "fuel" shall include coal coke breeze and wood used as firewood and the Interpretation  
term "authorized officer" shall mean any duly appointed Inspector of Weights and Measures or any Police Officer authorized  
to execute any powers or duties under this Act

3 All fuel which shall be sold from and out of any ship lighter barge or other craft or from any waggon truck cart All fuel to be  
wharf warehouse or other place within the said Colony shall be sold by weight and not by measure or count and every sold by weight  
person who shall sell any fuel contrary to this section shall on conviction be liable to a penalty of not less than forty  
shillings nor exceeding £10

4 If any seller of or dealer in coal shall knowingly sell one sort of coal for and as a sort which they really are not For preventing  
or knowingly sell wet coal with the view of fraudulently increasing its weight every such seller of or dealer in coal shall the sale of one  
forfeit and pay for ever such offence the sum of ten pounds per ton for every ton of coal so sold and so in proportion for  
any smaller quantity another  
Penalty £10

5 That with any quantity of fuel exceeding one hundred and twelve pounds delivered from any lighter ship barge Seller's ticket to  
or other craft or from any wharf warehouse or other place within the Colony the seller thereof shall deliver or cause to be be sent with  
delivered to the purchaser or to his agent or servant immediately on the arrival of the cart waggon or other carriage or fuel  
lighter barge or craft in which such fuel shall be sent and before any of such fuel shall be unloaded a paper or ticket in the  
form following that is to say—

Mr A.B (here insert the name of the buyer)

Take notice that you are to receive herewith (here insert the number) tons (here insert the description of the fuel  
if any particular sort is ordered or contracted for and if coal is ordered or contracted for specify the colliery) coal  
in (and insert here the number of) sacks containing (here insert the weight) pounds of coal in each sack.

Signed C D (here insert the name of the seller in words at full length)

E F. (here insert the name of the carman in words at full length)

The Act of 50 Victoria No directs that with any quantity of fuel of one hundred and twelve pounds or  
exceeding a paper or ticket describing the quantity and if any particular sort is ordered or contracted for the  
sort of fuel sent by the seller shall be delivered to the purchaser or his agent or servant before any part of  
such fuel shall be unloaded that a weighing machine shall be carried with every waggon cart or other carriage  
and the carman is required to weigh gratuitously any such fuel which shall be chosen by the purchaser or his  
agent or servant and if any carman refuses to weigh such fuel as aforesaid or drives away the cart waggon or  
other carriage before such fuel is weighed or otherwise obstructs the weighing thereof he is liable to a penalty  
not exceeding twenty pounds

And in case any such seller do not deliver or cause to be delivered such ticket as aforesaid to the purchaser of such fuel or Penalty on seller  
to his servant before any part of such fuel is unloaded every such seller shall for every such offence forfeit and pay any sum for neglect  
not exceeding twenty pounds and in case the carman driver or other person attending such cart waggon or other carriage On carman  
or the person having the charge of the lighter barge or craft laden with any such fuel to whom any such ticket shall have driver, &c  
been given by or by the orders of the seller in order to be delivered to the purchaser shall (having so first received the same  
from the seller or any person by the direction of the seller) refuse or neglect to deliver such ticket to the purchaser of such  
fuel or to his servant before any part of such fuel shall be unloaded such carman driver or other person so offending shall  
for every such offence forfeit and pay any sum not exceeding twenty pounds

6 All coal coke or breeze sold from any lighter barge or other craft or from any wharf warehouse railway truck or Coal &c, to be  
other place within the said Colony in any quantity exceeding one hundred and twelve pounds except coal carried and delivered in  
delivered in bulk as heremafter mentioned shall be carried and delivered to the respective purchasers thereof in sacks each sacks containing  
sack containing either one hundred and twelve pounds or two hundred and twenty four pounds net Provided always that a certain  
any coal coke or breeze sold from any ship lighter barge or other craft or from any wharf or place within the said colony quantity  
in any quantity exceeding one hundred and twelve pounds may be carried and delivered to the respective purchasers Coal, &c, may  
thereof when specially ordered in bulk in carts or other carriages or in any lighter barge or other craft be delivered in  
bulk

Cart to have weighing machine

7 If any carman or driver of any cart waggon or other carriage laden with fuel for sale or to be delivered to the purchaser thereof by any seller of or dealer in or carrier of fuel from any ship lighter barge or other craft or from any wharf warehouse railway truck or other place within the said Colony shall not have placed in or under his cart waggon or other carriage a perfect weighing-machine with proper weights then and in every such case every such carman or driver of such cart waggon or other carriage not having such machine so placed thereon shall for ever such offence forfeit and pay any sum not exceeding twenty pounds Provided always that fuel which shall be carried or conveyed in bulk or in any cart waggon or other carriage belonging to the purchaser of such fuel may be so carried or conveyed without the carman or driver being obliged to carry a weighing-machine therewith or any person being subject or liable to any penalty in respect thereof.

Proviso

Penalty for using unjust weighing-machine or light weights

8. Every such carman or driver using light weights or an unjust weighing machine shall forfeit and pay a sum not exceeding ten pounds and the employer of such carman or driver shall forfeit and pay a sum not exceeding fifty pounds such sums so to be respectively forfeited as aforesaid to be recovered in the same manner as if they had been penalties imposed by this Act and such weighing machines and weights respectively shall be liable to be examined seized and forfeited if found defective in manner directed by the Act of the said Governor and Council passed in the sixteenth year of Her Majesty's reign intituled "An Act to amend the Laws relating to Weights and Measures."

Penalty on carman for driving fuel away without weighing if required

9. If any carman or driver of any cart waggon or other carriage in which fuel shall be carried in sacks or otherwise for delivery to the purchaser thereof from any ship vessel lighter barge or other craft or from any wharf warehouse railway truck or other place within the said Colony shall neglect or refuse to weigh by the said machine any such fuel in manner hereinbefore directed when thereunto required by the purchaser of such fuel or by his servant or other person acting by for or under the authority of such purchaser or if any such carman or driver shall drive away or permit or suffer the said cart waggon or other carriage to be driven away without weighing in manner herein directed the said fuel or shall hinder obstruct or otherwise prevent the purchaser of such fuel or his servant or any other person whomsoever from examining the said machine or weighing all or any of the said fuel in such cart waggon or other carriage then and in every such case every such carman or driver so offending shall for every such offence forfeit and pay any sum not less than five pounds nor more than twenty pounds Provided always that every inspector of weights and measures appointed under the Act 16 Victoria No. 34 or any Act amending the same shall by virtue of his office as such inspector have full power and authority to require the carman or driver in charge of such cart to proceed to the destination or address specified in his delivery-note and there weigh before such inspector all such fuel on delivery at such purchaser's premises if required and the aforesaid penalties shall apply in regard to any refusal on the part of such carman or driver to comply with requirements of this section

All the fuel sent to be weighed if desired by the purchaser.

10 If any purchaser or his servant or any other person acting by for or under the authority of such purchaser who shall require any fuel to be weighed as aforesaid shall find the fuel to be deficient in weight and shall signify to the carman or other person attending such cart waggon or other carriage his desire to have all the fuel contained in such cart waggon or other carriage or any part of such fuel weighed or reweighed in the presence of some police officer or other authorised officer in that behalf then and in every such case the carman or driver of such cart waggon or other carriage in which such fuel shall be brought shall and he is hereby required to continue and remain at or before the house lodging or other premises of the purchaser of such fuel with such fuel and the cart waggon or other carriage until such fuel is weighed and if any such carman or driver shall drive away or permit or suffer to be driven away such cart waggon or other carriage before the fuel contained therein shall be weighed without the consent of the purchaser thereof or his servant or such other person as aforesaid then and in every such case such carman or driver shall for every such offence forfeit and pay any sum not exceeding twenty pounds

Purchaser to procure attendance of authorised officer if desirous of having fuel reweighed.

11. That such purchaser or his servant or other person as aforesaid so desiring such fuel contained in such cart waggon or other carriage to be weighed shall and he is hereby required to procure the attendance of some police officer or other authorised officer or indifferent or credible person to be present at the weighing of such fuel and all the sacks in the case of coal coke and breeze both with and without the said coal coke or breeze therein shall accordingly be weighed with the said machine by the carman or other person attending such cart waggon or other carriage in the presence of the purchaser of the said coal coke or breeze or his agent or servant if they shall attend to see the same weighed and of such police officer or other person and in case such purchaser or his agent or servant shall not attend for the purpose of seeing such coal coke or breeze so weighed then such carman or other person shall proceed in the weighing of such sacks in his absence and in case such carman or other person shall refuse or neglect to weigh such sacks or any of them in manner aforesaid he shall forfeit and pay for such offence any sum not exceeding ten pounds and the police officer or other person who may be present may weigh the said sacks or any of them as aforesaid and in case upon the weighing of any such sacks it shall happen that any sack or sacks shall not contain either one hundred and twelve pounds or two hundred and twenty-four pounds net of coal coke or breeze as the case may be then and in every such case the seller of such coal coke or breeze shall for every such sack of coal coke or breeze that shall be found so deficient forfeit and pay any sum not exceeding five pounds Provided also that the like penalties shall apply in regard to all sales of wood or for any failure to comply with the requirements of this section in respect to any refusal or neglect on the part of such driver or carman to weigh such wood on demand or for any deficiency in weight thereof.

Penalties how recovered

12 All fines penalties or forfeitures imposed by this Act shall be recovered in a summary way before any Police or Stipendiary Magistrate or any two Justices of the Peace and one half of such fines forfeitures and penalties shall be paid into the Colonial Treasury and form part of the Consolidated Revenue of the Colony and the other half shall be paid to the authorised officer prosecuting for same.

Penalties incurred by carmen may be recovered from their employers who may recover them back

13 That when any carman driver or other person employed by any seller of or dealer in fuel shall have been convicted of any offence against this Act the penalty or forfeiture for the same respectively shall be paid by the seller or dealer by whom such carman driver or other person shall have been employed at the time when such offence was committed shall be recovered in a summary way before any Police or Stipendiary Magistrate or two Justices of the Peace if beyond the boundaries of the Metropolitan Police District Provided always that such carman driver or other person shall be liable to repay to such seller or dealer the amount of such penalty and the costs attending the same and in case of non-payment thereof the amount of such penalty shall be recovered by such seller or dealer respectively against such carman driver or other person in a summary way before any Police or Stipendiary Magistrate or two Justices of the Peace as aforesaid.

[*Exhibit Y.*]

THE WHOLESALE PRODUCE ASSOCIATION OF SYDNEY.

*Weigh-bridge Rules.*

The following rules have been adopted by the Association as necessary to the proper and equitable working of all weigh-bridges.—

It has been agreed that members of the Association will refrain from utilising, and as far as is in their power will prevent others from utilising, any weigh-bridge which (1) is not in future worked strictly in accordance with the Rules as subjoined, and (2) which is not attended to solely by competent and trustworthy adult weigh-bridge clerks

The following are the rules referred to.—

- (1) Drays shall be tared each day *before* loading, except only in the case of a load taken to a wharf for shipment or delivery on the wharf, in which case it shall be optional either (1) to tare the dray on such wharf before loading, or (2) immediately after unloading and before leaving the wharf, and prior to putting on another load.
- (2) In the event of Rule 1 not being carried out, the owner or agent of the goods will refuse to recognise or pay for the weighing, and also will charge purchaser an average weight computed on the basis of previous deliveries of the same or similar line
- (3) No weigh-bridge clerk shall accept the tare of any conveyance as given by the driver of such conveyance, or by another weigh bridge, but shall determine such tare by weighing over the weigh-bridge of which he is in charge, in accordance with Rule 1.
- (4) The weigh-bridge clerk shall in all cases, as far as practicable, himself count the number of packages on any conveyance and check the brands of same, and the particulars as to number and brands so obtained by him shall be written in ink on the weigh-bridge ticket, and shall be signed in ink by him.

(5.) All goods shall be weighed over a weigh-bridge recognised by the Association, provided only that goods removed from a wharf having a weighbridge attached thereto shall not be weighed at a bridge attached to and worked in connection with another wharf.

FRANK D. BELL,  
Hon. Secretary,  
c/o Goldsbrough, Mort, & Co. (Ltd.)

Sydney, 1st July, 1891.

We, the undersigned, hereby agree to refrain from using any weigh-bridge not worked in accordance with the rules as above set forth, and further undertake, as far as possible, to prevent other traders from weighing goods over any such weigh-bridge :-

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## METROPOLITAN INSPECTOR OF WEIGHTS AND MEASURES.

(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 2 February, 1893.*

RETURN to an *Order* of the Legislative Assembly of New South Wales, dated 10th January, 1893, That there be laid upon the Table of this House a Return showing,—

- “ (1.) If the Inspector of Weights and Measures is an officer under the control of any Minister, or responsible alone to the Magistrates in Petty Sessions, from whom he received his appointment.
- “ (2.) The extent of district under the supervision of the Metropolitan Inspector of Weights and Measures; whether he has an assistant; if so, the salary the assistant receives, and the Vote from which it is paid.
- “ (3.) The salary the Inspector of Weights and Measures receives; whether half the fines imposed under the Weights and Measures Act is received by him; and is he provided with an official residence, and the rent paid for the same.
- “ (4.) The fees the Inspector of Weights and Measures is entitled to receive under the law upon which he acts; the charges he now demands and receives; by what authority he charges at the rate of 6d. per cwt. on weighing-machines and weigh-bridges, and if such charges are paid into the public Treasury.
- “ (5.) The practice in reference to the public taking weighing-machines to the Inspector's office to be tested, and the duty of the Inspector as regards testing them on the premises of their owners.
- “ (6.) The Inspector's hours of attendance at his office for the purpose of testing and stamping, and the arrangements made for an officer to attend during his absence.”

*(Mr. J. D. FitzGerald, for Mr. McGowen.)*

(1.)

THE Metropolitan Inspector of Weights and Measures occupies a position in this matter which is somewhat anomalous, inasmuch as he is appointed under section 7 of the Weights and Measures Act, 16 Vic. No. 34, by the Justices in Petty Sessions within the Metropolitan District. The duty of appointing the present Inspector was performed by the Metropolitan Bench of Stipendiary Magistrates, under the Metropolitan Magistrates Act, 1881. He is, however, paid salary by the Department of Justice. As a matter of practice, the Inspector is virtually under the sole control of the Minister of Justice, from whom he obtains all necessary authorities, and officially regards as the head of his Department.

649—

[870 copies—Approximate Cost of Printing (labour and material), £1 12s. 6d.]

(2.)

## (2.)

The supervision of the Metropolitan Inspector extends to the Central, Water, Newtown, Redfern, and Balmain Petty Sessions Districts within the Metropolitan District of Sydney. The Inspector states that he employs two assistants, whom he pays out of his own private purse; and that one of these remains in the office while the other accompanies him as attendant, and where required as witness of seizures, &c.

## (3.)

The salary which the Inspector receives is £300 per annum. Under section 20 of 16 Vic. No. 34 the Court of Petty Sessions has power to award out of any forfeiture following on conviction, together with costs, "a just and reasonable recompense and satisfaction" of the Inspector; but the practice is to award half of every fine imposed. The Inspector uses three rooms of his office for the purpose of carrying out his official duties. He is allowed to occupy privately two ground-floor and three attic rooms under the same roof as his office; and he states that it is understood this would be an expedient arrangement, inasmuch as the valuable plant appertaining to his duties would be under his constant care. The rent paid by the Government is £200 per annum.

## (4.)

The fees the Inspector is entitled to receive are for examining, comparing, and stamping weights and measures, and the amounts thereof are specified in the schedule of fees attached to the Weights and Measures Act, and the Inspector reports that he does charge such fees accordingly. He states that he also charges cab-hire when required to attend at places at such a distance from his office as would not prevent owners of weighing-machines from bringing them to him to be tested. The authority for which he charges at the rate of 6d. per cwt. for examining, comparing, and stamping weights and weighing-machines and weigh-bridges is the schedule of fees referred to, which, read in connection with 9th and 16th sections and the general provisions of the Act, he considers embraces the examining, comparing, and stamping of all weights and weighing-machines, including weigh-bridges, and consequently such charges are not paid into the public Treasury.

## (5.)

The Inspector states that the public send their weighing-machines to his office periodically as a matter of convenience and security to themselves; and should this be neglected a notice is sent to the owners of the machines at stated periods recommending that they should take this course. As no means are officially provided for carrying heavy test-weights about, and as there are not sufficient Inspectors to attend to that duty, it is found more expeditious and economical to send machines to the Inspector's office. The Inspector says he is always prepared to test machines on the premises where they are used if the owners are willing to incur the extra expense of having the test-weights carted to their premises; and test-weights are always taken to the spot whenever a dispute arises as to the weights of materials.

## (6.)

The Inspector reports that, unless he is engaged elsewhere by appointment, he is in attendance at his office from 8.30 a.m. till 11 a.m., and from 5 p.m. till 6 p.m., and generally from 1 p.m. till 2 p.m.; but on Mondays and Thursdays he attends from 9.30 a.m. till 6 p.m.; and that one assistant remains at the office to receive and deliver material, to prepare work for the Inspector's examination, and to conduct the detail work of the office, such as the comparison or balancing of avoirdupois weights, &c., but that all essential tests and final comparisons are performed by the Inspector, who is necessarily responsible for all acts done in his name.

1892.

NEW SOUTH WALES.

# FIRE BRIGADES' BOARD, SYDNEY.

(EIGHTH ANNUAL REPORT.)

Presented to Parliament, Pursuant to Act 47 Vic. No. 3, sec. 7.

The Chairman of The Fire Brigades' Board to The Colonial Secretary.

Sir, Fire Brigades' Board, Head Quarters Fire Station, Sydney, 14 March, 1892.

In pursuance of section 7 of "The Fire Brigades Act, 1884," I have the honor to present the Report of my Board upon the operations of this Department in the year 1891.

I have, &amp;c.,

CHARLES BOWN,  
Chairman.

## REPORT OF THE FIRE BRIGADES' BOARD FOR THE YEAR 1891.

THE Metropolitan Fire Brigades Board has the honor to present its eighth Annual Report, being that for the year 1891.

The assessed revenue for the year was £11,400, of which one-third was levied upon each of the three contributories under the Act—that is to say, £3,800 was contributed by the Colonial Treasurer out of the Consolidated Revenue, £3,800 by the Insurance Companies, and £3,800 by the proclaimed Municipalities. Revenue and Expenditure.

The expenditure of the Department, as shown in the annexed Abstract of Receipts and Disbursements, did not exceed the estimate, though, owing to the increase of the area requiring and urgently soliciting protection, it yearly becomes increasingly difficult to limit the outlay without lowering the standard of efficiency which the Department has attained.

The total amount held at risk by the contributing Insurance Companies was returned as £58,207,183, an increase of £1,058,795, which, though large, is only a third of the increase shown by the returns of the previous year. Since the first year of the operation of the present Act, which is dated 1884, the amount so held at risk by the aforesaid companies has risen from £36,690,987 to the present large sum, showing the great increase of £21,516,196. Insurance Companies.

Two companies having retired from business, their names disappear from the schedule (*Appendix 1*), while four are added to the number, making a total of forty-eight contributing companies, or two more than in the previous year.

The assessments returned by the contributing municipalities, twenty-eight in all, amounted to £4,694,207, against £4,546,996 in the year immediately preceding. The roll of names, however, underwent considerable alteration; the boroughs of Granville and Kogarah having come under the operation of the Act, Drummoyne being established as a separate municipality from Five Dock, and St. Leonards, St. Leonards East, and Victoria having amalgamated into the municipality of North Sydney. Late in the year the boroughs of Botany and North Botany were proclaimed, and consequently they will become contributories in the ensuing year. Exclusive of the two municipalities which were not previously within our jurisdiction, the increase on the amount of the assessments was merely the insignificant one of £5,243. Municipalities.

Taking a general retrospect of the operations of the year, it is pleasing to notice that conflagrations of the magnitude which characterised the year 1890 have not been experienced, although the fires reported (*vide Appended Table*) were more numerous. Retrospect.

The very large measure of success which has attended the efforts to extinguish fires may be fairly attributed to the efficiency of the Metropolitan Fire Brigade, and to the continued endeavour of the Board to keep it abreast of the most advanced Fire Department in equipment and discipline. For the accomplishment of this end the efforts of the Superintendent of Fire Brigades and his officers, supplemented by the active and cheerful support of the whole Brigade, deserve the highest commendation. The Brigade now consists of thirty-seven members of all ranks, a number which is found scarcely adequate for the responsibilities cast upon it, and which, with regard to the efficient protection of the steadily-spreading metropolitan area, must be considerably increased in the near future. Metropolitan Fire Brigade.

The number of alarms of fire received during the year was 348, an average of very nearly one per day. Particulars and classification of the fires attended are supplied in tabulated form in the report of the Superintendent of Fire Brigades, appended hereto.

**Inquests.** Out of 262 actual fires which occurred during the year, inquests were held by the City Coroner, at the Board's request, into four; the circumstances connected with each case appearing to require such investigation. Of these, three resulted in committals for trial, and the fourth in a verdict of arson against some person or persons unknown. It will appear, therefore, that the power of demanding inquests, committed to the Board, has been exercised with extreme caution and with proper judgment.

**Erection of Fire Station, Circular Quay.** It is with pleasure that we have to report that the Fire Station to protect the northern end of the city is now in course of erection by the Government on a site at the junction of George and Queen Streets, close to Queen's Wharf, Circular Quay, a position commanding the wharves, shipping, and large bonded and other warehouses in that busy portion of the city. Building was begun on the 7th of July last, and we look for the completion and occupation of this Station in the current year. In making provision for its proper equipment an order has been transmitted to Messrs. Shand, Mason, & Co., the celebrated London manufacturers of fire appliances, for a telescopic fire escape ladder of the latest model, with improvements recommended by Superintendent Bear, capable of extension to an altitude of 80 feet. Owing to the exceedingly lofty buildings which abound in the metropolis, and which appear annually to be increasing in number and height, the necessity for having a ladder of such dimensions has been for some time under consideration.

**Powerful new steam fire engine.** The large and powerful new steam fire engine ordered from Messrs. Shand, Mason, & Co., at a cost of over £1,400 (mentioned in our last report), has only just arrived; the delay being caused by difficulties connected with the construction of so powerful an engine on a new pattern. Those, however, the manufacturers report, have been overcome. At the tests made at the works, prior to shipment, 100 lb. of steam were obtained from cold water in 9 minutes 55 seconds; and with a steam pressure of from 110 to 120 lb., a  $1\frac{3}{4}$  inch jet of water was thrown horizontally to a distance of 318 feet. This engine, which is of the patent equilibrium type, is calculated to work at a steam pressure of 100 to 125 lb. per square inch, but is capable of being worked much higher; it discharges 1,000 gallons of water per minute, and will project a  $1\frac{3}{4}$  inch jet to a height of 200 feet. It is fitted with three steam cylinders, three double-acting pumps, has a suction no less than  $7\frac{1}{2}$  inches in diameter, and five deliveries. Four of the latter are for  $2\frac{3}{4}$  inch hose, and one for  $3\frac{1}{2}$  inch. Many improvements on the old style of fire engines have, on Superintendent Bear's specification, been added to it, and it stands unrivalled as the most powerful land steam fire engine that has yet been produced. This latest addition to the Department's appliances should prove a most valuable auxiliary in combatting those conflagrations, which from time to time must be expected among the ever increasingly lofty blocks of buildings which, for want of a proper Building Act, continue to be erected in the metropolis; and no doubt it will be the means of saving property to a value incalculably greater than its primary cost. We again reiterate our persuasion of the urgent necessity for an Act to control the erection of buildings in the city and suburbs.

**Building Act; necessity for.** To the movement for widening Moore-street our support was given, and the decision to carry it into effect has our hearty commendation. The great fire of 1890, which devastated the block between that dangerously narrow thoroughfare and Hosking-place, and was with great difficulty prevented from crossing it into the adjoining block, illustrated the necessity for wider streets, if only as fire-breaks, in those crowded quarters of the city where vast warehouses with quantities of inflammable stocks are only separated by narrow lanes. Such lanes offer little impediment to the progress of the fire-fiend, and too often act only as funnels creating draughts to assist the flames, at the same time not allowing access to burning buildings.

**Inflammable Liquids' Bill.** The present dangerous system of storage of inflammable liquids, such as kerosene, gasoline, &c., without sufficient supervision, is an evil that calls for immediate attention and remedy. With that object this Board forwarded to the late Colonial Treasurer, at his own request, as far back as July, a carefully prepared Bill to amend the law relating to the keeping, selling, and conveyance of those liquids; but inflammable liquids still continue to enter the colony without sufficiently stringent regulations, such as public safety demands.

**Amended Fire Brigades' Act.** The long promised Amended Fire Brigades' Act, for the Metropolitan District, another much needed measure, providing, amongst other things, for the extension of the Board's power,—to provide for the prevention of fire, as well as for its extinction when it has broken out, has also not yet been brought forward.

**Telephone Fire Alarms.** The Telephone Fire Alarm system continues to work admirably, and is gradually being pushed further into the suburbs as means permit. It is found, however, to be impossible to establish it satisfactorily in any district before permanent men are placed at some centre of connection to receive and transmit alarms; and for this cause we have been unable to comply with many pressing solicitations for the erection of Fire Alarms in numerous districts.

**Volunteer Fire Companies.** The Volunteer Fire Companies in the districts wherein they operate have been the means of preventing much loss by fire, and have given valuable assistance to the permanent brigade, especially at the larger fires in the city and suburbs. Nineteen companies, situated in different boroughs, were subsidized during the year, at an expenditure of £2,317, besides a considerable additional sum granted for equipment, rent, and other items, and the provision of fire-extinguishing apparatus, under municipal control, in districts where no fire company exists. Particulars as to the location of these companies, their equipment, and respective subsidies, &c., are supplied in the schedule marked Appendix V; a return of the number of fires attended by each is also supplied in another table.

**Newtown Fire Station.** During the year the old watch-house at the Newtown Railway Bridge, which had been granted by the Government for use as a Fire Station, was demolished, owing to the necessities of the duplication of the railway line. The Government then purchased at our solicitation a site for a Fire Station in Australia street, Newtown, which is the centre of a large and increasing district. On that site we are erecting a Fire Station at a contract cost of £540, wherein it is proposed to establish a partially paid Auxiliary Fire Corps, by which the Newtown Volunteer Company will be absorbed.

**Auxiliary Fire Corps.** The establishment of an Auxiliary Fire Corps marks a new departure which must have considerable extension in the future. Within a circumference of a mile radius from the station just mentioned are included the whole of Newtown, Macdonaldtown, and Darlington, and portions of Camperdown, Glebe, Redfern, Alexandria, St. Peters, Petersham, Marrickville, and Leichhardt. Most of these municipalities have for some time been pressing for increased fire protection by means of Fire Alarms. The district is becoming almost urban in character, containing a large population which shows a steady yearly increase, and

and has been outgrowing the protection afforded to it. It was evident that a Telephone Fire Alarm system could not be satisfactorily established within that area without some centre to connect with where provision could be made for the reception and transmission of alarms, day and night, and for the constant attention which telephones require. For this Volunteer Stations were not available, being unoccupied by day, the Volunteer Firemen being absent at their various private occupations. The difficulty is one to which most anxious consideration has long been devoted, with the conclusion that in the establishment of the system of Auxiliary Fire Corps its best solution was to be found. The Superintendent of Fire Brigades reported that, in his opinion, the district above-mentioned could no longer be adequately served by a Volunteer Fire Company, and finally it was decided to inaugurate the auxiliary system, and place the Corps at the Fire Station in Newtown, which accordingly is being built with a view to the accommodation of such a body. We are pleased to report that the Municipal Councils interested, and also the captain and firemen of the Newtown Volunteer Company, cordially approved of the proposal. The Company, by unanimous resolution, has transferred to the Board the plant in its possession, to be replaced by improved fire-extinguishing appliances for the Auxiliary Corps. It is proposed to place an experienced senior fireman of the Metropolitan Fire Brigade in charge of the station, making him directly responsible for attention to the telephones and care of the plant and gear, &c., also to provide eight or ten auxiliary firemen, who shall reside within a prescribed distance from the station, and whose residences will be connected with it by telephone, so that alarms can be given without the neighbourhood being disturbed by the clanging of the objectionable fire-bell. The establishment of this corps will no doubt cause a considerable drain upon the resources of this Department, and was, therefore, not undertaken without earnest consideration, and the conviction of its absolute necessity. In other important districts similar need of an increasingly urgent nature exists, and the Municipal Councils are continually pressing for further protection. To these the new system must be extended as opportunity offers, for, as population and fire risk increase, it becomes apparent that they outgrow the protection afforded by Volunteer Companies, good service though they may have rendered in the past. The fact that in the case of fires occurring in the daytime Volunteer Firemen are frequently at work in other localities, out of reach of any alarm of fire, leaves the neighbourhood wherein they operate to a great extent unprotected, and as the districts increase in importance, the necessity for reform in this respect becomes more urgent.

The improvement in the means of access to the water supply for extinguishing fires is most marked, and we have much pleasure in acknowledging the efforts of the Board of Water Supply and Sewerage to meet the representations of this Department in this important matter. The obsolete fire plugs were finally abolished from all the mains in the city at the close of the year, modern hydrants taking their places. The Board also has intimated that it confidently expects those remaining in the Municipality of Redfern will similarly be replaced by hydrants by the end of March, thus completing a corresponding commendable change in the suburbs. The Board of Water Supply is to be complimented upon the accomplishment of this long desired improvement, which for fire purposes is of inestimable value.

The estimate of the expenditure of this Department for the current year was adopted after the most economical revision, and before the adoption of the scheme for an Auxiliary Corps, at £13,740, to provide which a levy of £4,580 will be made upon each of the three contributories under the Act.

The area of the Board's jurisdiction shows a steady tendency to extend, making necessary additional means to respond to the augmented responsibility involved.

In the enlarged district within which they have been called upon to operate, we have to offer our congratulations and thanks to the officers and men of the Metropolitan Fire Brigade, and to the Volunteer Firemen, who have gallantly, and to a very large extent successfully, responded to the increased tax upon their courage and energies, and have without doubt been the means of saving from destruction an immense amount of property.

Schedules are appended, showing the Department's receipts and expenditure for the year, the contributions of Insurance Companies and Municipalities, the subsidies paid to Volunteer Fire Companies, their equipment, and other information. The report of the Superintendent of Fire Brigades is also submitted, with which are included particulars concerning the Metropolitan Fire Brigade, a list of the telephone fire alarms at present established, details and classification of the fires attended, and other technical information with reference to the working of this Department.

14th March, 1892.

CHARLES BOWN,  
Chairman.

## APPENDIX VII.

## Mr. Superintendent Bear's Report.

Metropolitan Fire Brigade Head Quarters Station,

27 February, 1892.

To the Fire Brigades Board,  
Gentlemen,

I do myself the honor to submit to your Board, herewith, my Eighth Annual Report of the working and general efficiency of your Brigade, and the several Volunteer Fire Companies, together with the details of fires attended in the city and suburbs for the year ending the 31st December, 1891.

The total number of alarms received for fires, or supposed fires, was 327; of these 52 were false alarms, 13 proved to be only chimney alarms, and 262 were actual fires. Of the actual fires 216 were slight or trifling, 27 were serious, and 19 resulted in total destruction. Of the 262 actual fires 163 were insured, 26 not insured, and in 73 instances the insurances on the buildings or contents could not be ascertained. In addition to the ordinary fires there have been 20 chimney fires requiring the attendance of firemen with hand-pumps only, and 1 casualty in which life was endangered or lost, but in which no damage was done to the building or its contents, making an aggregate total of 348 calls for fires, false alarms, chimney fires and casualties. The fires of 1891 as compared with those of 1890 show an increase of 27, in the chimney fires attended with engines a decrease of 6, and those attended by firemen with hand-pumps a decrease of 13.

In the fires which were slight there has been an increase of 11, in serious an increase of 15, and in fires which resulted in total destruction an increase of 1. Among the buildings totally destroyed are classed shed buildings, weather-board cottages, &c. Attached are detailed statements of the various fires attended by the Brigade and the Volunteer Fire Companies, as well as those unattended, but which have been reported to the Brigade from various sources, and a member of the Brigade has been sent to obtain the necessary particulars. The various summaries appended show the particular dates, times of call, time of outbreak, trades, localities, insurances, hourly and daily, weekly and monthly. There is also appended a summary of the supposed origin of fires for the year.

Referring to the summary of localities it will be noticed that in the city of Sydney alone there were 181 calls, 129 of which were for actual fires, 28 were false alarms, and 8 were chimney fires reported as houses on fire, and 16 were chimney fires attended by firemen with hand-pumps only.

Of the actual fires in the city there were in Brisbane Ward, 24; Denison Ward, 20; Bourke Ward, 18; Gipps and Macquarie Wards, 16 each; Cook Ward, 13; Fitzroy and Phillip Wards, 11 each.

In the suburbs there were 166 calls, of which 133 were for actual fires, 24 were false alarms, 5 were for chimney fires reported as houses on fire, and 4 were for chimney fires attended by firemen with hand-pumps only. The suburbs affected in regard to actual fires only were as follows, viz.:—Redfern, 16; Newtown, 12; Paddington, 10; Balmain and Glebe, 9 each; Ashfield, 8; Alexandria, Waterloo, Woollahra, and ships in the harbour, 6 each; Manly, Marrickville, Petersham, and Waverley, 5 each; Botany, 4; Burwood, Granville, Leichhardt, and Parramatta, 3 each; Camperdown, Darlington, and North Sydney, 2 each; Macdonaldtown, North Botany, and St. Peters, 1 each.

In summarising the trades, it will be observed that private dwellings have been mostly affected by fires, the number for all classes of damage being 96; but taking the actual trades into consideration, the most notable stand in the following order, viz.:—Stables, 17; grocers, 13; drapers, milliners and dressmakers, licensed victuallers, 8 each; Government buildings, ironfounders and engineers, printers and stationers, restaurants, ships, 6 each; builders, commission agents, stores and storekeepers, tobacconists and hairdressers, 5 each; boot-makers and boot factories, sheds occupied, 4 each; boarding-houses, butchers, fruiterers, and greengrocers, furniture dealers, general dealers, importers, ironmongers, sheds unoccupied, 3 each; chemists, confectioners, corporation yards, fancy goods dealers, jewellers, offices, saddlers and harness-makers, tailors, 2 each; other trades affected, 1 each. These are to be found in the "Summary of Trades."

The strength of the Brigade is as follows:—Two large steam fire engines, 5 small steam fire engines, 2 7-inch manual engines, 4 6-inch manual engines, 6 under 6-inch manual engines, 3 telescope ladders, 1 ladder van, 1 hose van, 1 steam engine tender, 6 hose reels, 20,362 feet of hose, most of which is in good and fair condition, 12 horses, 53 telephones erected, 6 telephone switch boards, 52 telephone fire alarms erected, 37 firemen, including Superintendent, Principal Foreman, and coachman.

The

The under-mentioned Volunteer Fire Companies hold plant on loan from your Board, viz., Alexandria, Ashfield, Burwood, Leichhardt, Granville, Manly, Newtown, St. Leonards, Waverley, North City, Randwick, Standard Brewery, Woollahra. Six Volunteer Fire Stations are also invested in the hands of your Board.

The following comprise the Volunteer Fire Companies within your Board's jurisdiction:—Alexandria Volunteer Company, subsidised, £100; Ashfield Volunteer Company, subsidised, £100; Balmain (2 stations) Volunteer Company, subsidised, £200; Burwood Volunteer Company, subsidised, £100; Darlington Volunteer Company, not subsidised for the year 1891; Glebe Volunteer Company, subsidised, £150; Granville Volunteer Company, subsidised, £50; Leichhardt Volunteer Company, subsidised, £50; Manly Volunteer Company, subsidised, £75; Newtown Volunteer Company, subsidised, £175; North City Volunteer Company, subsidised, £125; Paddington Volunteer Company, subsidised, £150; Paddington Brewery Volunteer Company, subsidised, £147 10s.; Parramatta Volunteer Company, No. 1, subsidised, £85; Parramatta Volunteer Company, No. 2, subsidised, £85; St. Leonards Volunteer Company (2 stations), subsidised, £200; Standard Brewery Volunteer Company, subsidised, £150; Waterloo Volunteer Company, subsidised, £100; Waverley Volunteer Company, subsidised, £100; Woollahra Volunteer Company, subsidised, £175.

The total amount paid as subsidies to the various Volunteer Fire Companies during the year was £2,317 10s. In addition to the subsidies new plant has been supplied in many cases to Volunteer Companies to replace that condemned as unfit for further use. The approximate value of the whole of your Board's plant, together with the land and stations held in trust, is £68,898. The value of the Volunteer Fire Companies plant is not included in this sum.

During the year the members of the Newtown Volunteer Fire Company passed a unanimous resolution handing over the whole of their plant, which is a very good one, to your Board, on the condition that as good a plant be always maintained in the borough. This I consider to be a move in the right direction, as I have always maintained that the whole of the fire extinguishing plant should be vested in your Board for various reasons—the chief of which is, that all the apparatus would be subjected to periodical tests by proper officers, and anything found defective would be repaired or replaced, if necessary, at once by new gear. At present, I regret to have to say, that some of the Volunteer Companies keep the least amount of hose that it is possible to do, and often replace their defective hose by new of very inferior quality, which will in fact only withstand the test of about two fires. In the case of Newtown it is proposed to establish an Auxiliary Fire Brigade in the place of the present Volunteer Company. The Auxiliary Brigade will be recruited from the ranks of the present Volunteer Company, with one resident permanent fireman. Provision has been made in the station now being erected to accommodate several single men, those residing away from the station being connected up by electric bells, thus doing away with the necessity for the objectionable fire-bell. The members will be paid a small retaining fee, and a stated sum per hour for each time they are called out. The adoption of this system will also allow of the establishment of a number of street telephone fire alarms, which are much needed in the districts which will be protected by this station. I anticipate that we shall be in possession of the new station about May next. Our street telephone fire alarms have rendered good service during the year, and have proved a very valuable addition to our means of obtaining quick and reliable information concerning fires. Compared with other cities our returns of false alarms through them are very few. The police have also found them useful in the transaction of their business. Several municipalities have made urgent application for alarms to be placed in their districts; but, while fully recognizing the justice of their claims, I cannot recommend the erection of them under the present volunteer system. It is imperative that someone permanently should be in the stations to which these alarms are connected, not only for receiving calls to fires and police reports day and night, but for the purpose of attending to the batteries, and seeing that the alarms are kept in perfect order. I am strongly of opinion that it will be necessary to establish an Auxiliary Fire Brigade in any thickly populated district before we can entertain proposals for street fire alarms.

The undermentioned are the members of the Metropolitan Fire Brigade:—

Name.	Rank.	Date of Appointment.	Where stationed.

Edward R. Hills .....	do .....	23 July, 1891 .....	do
James Morris.....	3rd class fireman, and coachman .....	1 Dec., 1891 .....	do

Your Brigade has been called upon to mourn the loss of one of its members during the past year, that of Charles William Bowers, who was killed on the morning of the 10th July by falling off the sliding pole at No. 2 Station, George-street West. Charles William Bowers joined the Brigade on the 5th May, 1887, and served from that time with zeal and energy, and was an exceedingly good member. Bowers was accorded a public funeral, and buried at the Rookwood Cemetery.

During

During the year the following additions were made to the fire alarm system, viz. :—No. 48, Elizabeth-street, Redfern ; No. 49, M'Arthur and Harris Streets ; No. 50, Figg and Harris Streets ; No. 51, Bowman and Harris Streets. An extension was also made from the St. Peter's Council Chambers to the Police Station in the Cook's River Road.

The following is a list of the positions of the telephone fire alarms, Nos. 53 and 54 having been erected at the beginning of the present year:—

## TELEPHONE FIRE ALARMS.

No. of Box.	Fire Station to which the Box is connected.	Position of Alarm.
1	Head Quarters M.F.B., Castlereagh-street .....	Corner of George and Park Streets.
2	" " " " .....	" York and King Streets.

51	" " " " .....	" Bowman and Harris Streets.
52	Operating Room, Telephone Exchange, G.P.O.	" George and Barrack Streets.
53	No. 4 M.F.B., Marrickville .....	" Parramatta Road and Johnston-street, North Annandale.
54	" " " " .....	" Johnston-street and Booth-street, North Annandale.

All Volunteer Fire Stations with the exception of Burwood and Parramatta, all Theatres and Music Halls, the Government Printing Office, the Railway Department, the Town Hall, and Messrs. Hoffnung, & Co., are in direct communication with our three permanent Fire Stations. The Police Stations are also connected through the Central Police Station. The various wharves, warehouses, business houses, and many public buildings are also in telephone communication by means of the General Post Office Exchange, which is open to receive and transmit calls for fires at any hour of the day and night, and arrangements have been made by which the watchmen employed by the principal business houses report through to Head Quarters Station several times during the night.

Arrangements are also about to be made by the Railway Department to establish a more efficient communication between their different works and our stations.

The extension of the system of telephone fire alarms is not proceeding as rapidly as I could wish, owing to the want of necessary funds for the purpose, and even if funds were available I could not recommend the erection of alarms while the present volunteer system is in vogue.

The new Fire Station for the protection of the northern end of the City was commenced on the 7th of July, and I have every reason to believe that we shall be in possession of it before the end of the present year. The duties in connection with the temporary station are very heavy and entail changing horses and men every eight hours besides the risk of fire happening while the changes are being made.

The water supply of Sydney and the Suburbs has been greatly improved during the year. At present there are over 1,000 screw-down hydrants laid in the City, and the Water and Sewerage Board are still making great efforts to further improve the pressure and flow of water. The facilities for obtaining the water readily have also been increased by the substitution of ball hydrants for the old fashioned fire plugs, which the Board anticipate that they will be able to entirely do away with by April next.

At the end of the year the attendance of turncocks at the Head Quarters Station was discontinued, as the introduction of a thorough system of hydrants at recognised distances under constant pressure rendered their presence unnecessary at the out break of a fire. Arrangements are however being made to allot certain districts to each turncock, and when these are completed it is proposed to place them in telephonic communication, so that in case of a large fire we could command their services. This arrangement will also be beneficial in the ordinary working of both the Fire Department and the Department of Water Supply and Sewerage.

I trust that your Board will take steps during the year to procure a site for a permanent fire station in Pymont, somewhere in the vicinity of Harris and Union Streets, the locality of which is about a mile from any of our stations. A Pymont station would not only be a protection to the large warehouses being erected there, but it would be handy to the centre of the city, as well as convenient to Balmain.

I have to thank the officers and members of the Volunteer Fire Companies for their valuable assistance during the year, and for their endeavours to maintain a harmonious feeling between the different companies. The officers and members of the Police Force have as usual rendered us very efficient assistance during the year, and I have to express my obligations to them. I have also to tender my thanks to the city turncocks and to the public generally for their valuable co-operation.

The necessity for a hose and coal tender having been made apparent, one was built by the members of the Brigade, utilising the wheels, axles, and frame of a steam fire engine condemned some years ago. This is always ready, and carries 1,260 feet of hose and 16 cwt. of coal, besides a variety of other appliances. A small spring-cart has also been built, which is used for visiting fire alarms, &c. A large number of hose couplings have been made, and a quantity of other work has been performed in the workshops at head-quarters by our men with a view to keeping down the expenditure to the lowest possible limit. The only cost has been the materials required for the work.

In addition to these works, the fire alarms and nearly the whole of the electrical apparatus has been kept in order by the members of the Brigade.

The discipline and general efficiency of the Brigade is, in all respects, satisfactory, and, although the duties at times bring a severe strain on the whole of the staff, the work has been performed cheerfully and well.

In conclusion, I beg to tender my most sincere thanks to your Board for the cordial support it has awarded me.

I have, &c.,

WILLIAM D. BEAR,  
Superintendent of Fire Brigades and Inspector of Kerosene.

APPENDIX VIII.

List and Details of Fires attended by, or reported to, the Metropolitan Fire Brigade, or Volunteer Fire Companies, for the Year ending December, 1891, Sydney, New South Wales.

Date.	When discovered.	Time Call.	Locality.	Name of Tenant.	How Premises occupied.	Construction of Premises.	Origin or supposed cause of Fire	Insurances.		Extent of Damage, &c.	Extinguished by

1892-3.

## NEW SOUTH WALES.

## FIRE BRIGADES' BOARD, SYDNEY.

(NINTH ANNUAL REPORT.)

Presented to Parliament, Pursuant to Act 47 Vic. No. 3, sec. 7.

## The Chairman to The Colonial Secretary.

Fire Brigades' Board, Head Quarters Fire Station,

Sir,

Sydney, 15 February, 1893.

Pursuant to "The Fire Brigades Act, 1884," section 7, I have the honor to present the Report of the Fire Brigades' Board upon the administration of the Department within the Metropolitan District during the year ending 31st December, 1892.

I have, &amp;c.,

CHARLES BOWN,

Chairman.

## REPORT OF THE FIRE BRIGADES' BOARD FOR THE YEAR 1892.

PURSUANT to section 7 of the Act constituting the Fire Brigades' Board, we have the honour to report upon the operations of the Department under our control during the year 1892.

The biennial election to the Board took place in March, and resulted in the return of Alderman Board. J. C. Beare, J.P. (re-elected), by the Municipal Council of the City of Sydney; Charles Hellmrich, Esq., J.P. (re-elected), by the other proclaimed municipalities in the metropolitan area; Walter Church, Esq., J.P. (re-elected), by the Fire Insurance Companies having their headquarters in New South Wales; William C. Goddard, Esq., J.P. (in the room of M. W. S. Clarke, Esq., M.A., retired), by the other Fire Insurance Companies carrying on business in the colony; and Edward J. Love, Esq. (re-elected), by the Volunteer Fire Companies. By a unanimous vote, at the first meeting of the new Board, Mr. Church was elected Vice-Chairman.

The amounts held at risk by the contributory insurance companies (Appendix I) were returned Insurance Companies. at £58,415,945, which again showed an excess over the return of the previous year, though the rate of progress continued to decline, being £208,762 for the year under review, against £1,058,795 for the year 1891. Meanwhile the number of offices doing business in the colony was reduced from 48 to 45, the business of the Queen Insurance Company having taken over by the Royal, the Sydney Mutual absorbed by the City Mutual, the Hamburg Magdeburg, and General, withdrawn from the colony, and the Australian Traders' Mutual, British Australian and New Zealand, and Transpacific, Companies ceased business. In place of these seven, only four new companies were added to the list, viz., the Atlas, Caledonian, North Queensland, and Queensland Mutual.

The contributing municipalities, thirty in all, were increased by the addition of Botany and North Municipalities. Botany; the total assessment upon which the contribution was levied being £5,263,655, while for the previous year twenty-eight boroughs returned £4,694,207. Deducting the assessments of the two additional councils, there is shown a nett increase of £523,245. During the year the Act was extended to Rookwood, which will therefore contribute in the current year.

To provide for the outlay of the Department, the three contributories under section 13 of the Fire Brigades' Act, the Colonial Treasurer, the aforesaid Insurance Companies, and Municipalities, Revenue and Expenditure. respectively contributed £4,580. With regard to the Insurance Companies, the contribution, which, pursuant to the Act, was levied *pro rata*, according to the amounts held at risk by them, was equivalent to a tax of 1·88 pence in every £100. On the other hand, the Municipalities' contribution was equal to 1s. 8·88d. per £100 of assessment. In evidence of the economy which is exercised in our expenditure, it may be pointed out that, notwithstanding the great expansion of area to be protected in consequence of repeated extensions of the Act to distant scattered districts, by which the outlay is increased most disproportionately to the amount of contribution received, the revenue levied in 1892 was considerably less

than that of the first year of the operation of the Act. In that period the contributions of the Insurance Companies fell from 3'6d. to 1'9d. per £100 of amount at risk, while the rate per £100 of assessment in the case of the Municipalities showed the considerable reduction, from 3s. 7'23d. to 1s. 8'88d. These taxes we submit are inconsiderable, having regard to the benefit accruing therefrom.

Owing to expenses in connection with the establishment of the fire station in Australia-street, Newtown, and the Auxiliary Corps, referred to on page 3 of our last report, the income of the Department fell short of the expenditure by £714. Similar rigid economy has been exercised in estimating the probable outlay for the current year, which has been adopted at £16,500.

**Fires.** 390 alarms were received by the Metropolitan Fire Brigade, of which, exclusive of false alarms and chimney fires, 314 were for fires resulting in more or less damage;—an increase of 52 upon the number recorded during the previous twelve months. Among these were six fires on vessels in the harbour, in which, although one timber-laden ship was severely damaged before the flames were subdued, the Brigade was successful in preventing the loss of valuable vessels and cargoes, which otherwise would probably have been totally destroyed.

**Harbour water outside operation of F. B. Act, 1884.** In this connection it may be noticed that in consequence of some oversight in drafting the present Fire Brigades' Act, the waters of Port Jackson are exterior to the area of operation of this Department, and the Marine Insurance Offices do not contribute for risks afloat; nevertheless, the Brigade has always been held in readiness to attend any vessel requiring its services. In view, however, of the vast quantity, of property always exposed to fire risk at wharf and in stream, in the port of this great commercial centre, a conference was held in August between delegates of the Sydney Underwriters' Association (representing the Marine Insurance Offices) and of this Board, at the invitation of the former, whereat a basis for joint action in cases of ship-fires was arranged, and the subject of the Association procuring a chemical engine and special pumps, &c., for dealing with such fires, was also discussed. It is hoped that when the long-desired amendment of the existing Fire Brigades' Act is effected, authority may be conferred upon the Board to deal with fires on the harbour waters, and to levy upon those interested a sufficient contribution to maintain necessary special plant for that purpose. The protection of the immensely valuable property afloat and on the wharves in such a port as Sydney must be incomplete until a powerful steam fire-float has been provided. The need of some such protection has evidently been felt by the harbour authorities, for, as far back as 26th June, 1888, we are given to understand that the Marine Board approached the Under-Secretary for Finance and Trade with a request for the Government to subsidise one of the steam ferry companies to hold a horse ferry-boat ready day and night to transport fire engines to any ship that might require them, and has also moved in a similar direction since that date.

**Fire Station, Circular Quay.** The Fire Station at the corner of George Street North and Queen Street, referred to in our last report as being erected by the Government for the protection of the northern end of the city, was completed, and at once occupied for duty, on the 25th ultimo. It stands in a magnificent position to control outbreaks of fire on ships lying at wharves, and in the bonds and other buildings, with their immensely valuable and often very inflammable contents, in that quarter of the metropolis. It is a substantial structure, and reflects great credit upon all connected with its erection. The plans of the building were drawn by the Government Architect, and the utmost has been made of the limited space of ground available. It is fitted with the most modern appliances for ensuring speed in turning out to fires, and a detachment of eight of the Metropolitan Fire Brigade has been stationed there, with two steam fire-engines, horses, &c.; and a fire ladder capable of extension to eighty feet will be added on its arrival from London, whence it has been ordered. To this station the fire-float must eventually be attached.

**Newtown Auxiliary Corps.** The intention, mentioned in our last annual report, to establish a partially-paid Auxiliary Fire Corps in Newtown, has been carried into effect, and a compact station erected upon the site in Australia-street granted for the purpose. Two permanent firemen are quartered there, and attached to the station are also a number of auxiliaries, who receive certain fees for attendances at fires, &c., and as retainers. These auxiliaries were members of the Newtown Volunteer Fire Company, which voluntarily disbanded on the inauguration of the partially-paid corps, and handed over to this Department the fire extinguishing appliances in their possession. The new system has worked satisfactorily during the brief period of its existence, and is being keenly watched with a view to possible future developments.

**Balmain, site Fire Station.** For a site for a fire-station to protect the populous suburb of Balmain, the Legislative Assembly voted a sum of £1,200; and negotiations, which we understand are now almost complete, have been entered into to secure a suitable site.

**Eastern suburbs, and North Sydney.** The eastern suburbs and North Sydney, with their large populations, stand in need of similar provision, the latter suburb being cut off by the harbour waters from the assistance of the city stations, which can be rapidly concentrated upon other points of danger. We regret that the municipal council of North Sydney has lately weakened the protection of their borough, by taking steps to compel the vacation of the premises at the Town Hall hitherto occupied as a fire-station by the St. Leonards Volunteer Fire Company, the reason assigned being that the room was required for municipal business.

**Inquests** In only three cases, out of the before-mentioned 314 fires, advantage was taken of the power conferred by the Fire Brigades' Act (Sec. 6, Sub-sec. 7, and the regulations thereunder), to move the City Coroner for inquiries into the causes of the fires. In two of these, verdicts of arson were returned against persons unknown, and the third resulted in the committal of two men, who were afterwards convicted at the Criminal Sessions, of setting fire to the premises occupied by them, and were each sentenced to five years' penal servitude.

**Need for Building, and Inflammable Liquids Acts, and for amendment of the Fire Brigades Act. Water supply** The much-needed legislation to amend the Fire Brigades Act, to control the traffic in inflammable liquids, and a Building' Act—the necessity for all of which has been strongly pointed out in previous reports—has not yet been enacted; meanwhile every year increasingly shows more urgent requirement for such action to safeguard life and property.

Improvements continue to be effected in the means of obtaining water for extinguishing fires, and we are indebted to the Board of Water Supply and Sewerage for continued efforts in that direction. Within the area of our jurisdiction there now remain none of the wasteful old-fashioned fire-plugs which hitherto hampered the firemen in dealing with outbreaks. Early in the year those which still remained were replaced by the more serviceable hydrants, of either the screw-down or ball pattern,

The system of fire-alarm telephones adopted here continues to grow in favour, and, with confidence, we assert its superiority to all other at present existing. Telephone fire-alarms. Twenty-two additional telephone-alarms have been added during the year, making seventy-four in all. Among these were the installation of eight in Newtown and the neighbouring boroughs, connected with No. 5 Fire Station, Australia-street, and eight in Woollahra, extending from the boundary of Waverley to that of Paddington. We have now under consideration proposals to institute others in Paddington, Marrickville, the Glebe, and other municipalities; and it is anticipated that an important installation must be carried out in Balmain, in connection with the proposed site for a permanent fire station, referred to in a former paragraph.

The Metropolitan Fire Brigade has been increased to forty-seven men, all told, in order to supply Fire Brigades the new station at Circular Quay, as well as that at Newtown. To this number must be added the seven partially-paid auxiliaries at the latter station. We are pleased to report that the Brigade maintains its high standard of efficiency, and to acknowledge the efforts of the Superintendent of Fire Brigades and his officers to secure that discipline to which must be ascribed the success which has attended the firemen in their frequently perilous duty. In this they have been readily assisted by the Volunteer Fire Companies, and we are pleased to notice that the Superintendent, in his report appended hereto, renders special acknowledgment to the volunteer firemen, and also expresses his obligation to police, turncocks, and the general public, for their co-operation. Eighteen Volunteer Fire Companies were subsidized to the extent of £2,106, besides provision of horses, engines, hose, &c., in special cases.

Particulars of the Department's receipts and expenditure, details of the fires attended, and other information, are furnished in the Superintendent's yearly report and other appendices, to which attention is invited.

February 15, 1893.

CHARLES BOWN,  
Chairman.

## APPENDIX VII.

## Mr. Superintendent Bear's Report.

Metropolitan Fire Brigade,  
Head Quarters Station,

18 January, 1893.

To the Fire Brigades' Board.  
Gentlemen,

I do myself the honor to submit my Ninth Annual Report of the working and general efficiency of your Brigade, and the several Volunteer Fire Companies, together with the details of fires attended in the city and suburbs for the year ending 31st December, 1892.

The total number of alarms received for fires or supposed fires was 390; of these 47 were false alarms, 29 proved to be only chimney alarms, and 314 were actual fires. Of the actual fires 270 were slight or trifling, 21 were serious, and 27 resulted in total destruction. Of the 314 actual fires 234 were insured, 58 not insured, and in 22 instances the insurances on the buildings or contents could not be ascertained. In addition to the ordinary fires, there have been 46 chimney fires requiring the attendance of firemen with hand-pumps only, and 1 casualty in which life was endangered or lost, but in which no damage was done to the building or contents, making an aggregate total of 437 calls for fires, false alarms, chimney fires, and casualties. The fires of 1892, as compared with those of 1891, show an increase of 52; in the chimney fires attended with engines, an increase of 16; and those attended by firemen with hand-pump only, an increase of 26.

In the fires which were slight there has been an increase of 54; in serious, a decrease of 6; and in fires which resulted in total destruction, an increase of 4. Among the buildings totally destroyed are classed shed buildings, weatherboard cottages, &c. Attached are detailed statements of the various fires attended by the Brigades and the Volunteer Fire Companies, as well as those unattended, but which have been reported to the Brigade from various sources, and a member of the Brigade has been sent to obtain the necessary particulars. The various summaries appended show the particular dates, times of call, time of outbreak, trades, localities, insurances, hourly and daily, weekly and monthly. There is also appended a summary of the supposed origin of fires for the year.

Referring to the summary of localities it will be noticed in the City of Sydney alone there were 204 calls, 137 of which were for actual fires, 15 were false alarms, 18 were chimney fires reported as houses on fire, and 34 were chimney fires attended by firemen with hand-pumps only.

Of the actual fires in the city there were in Macquarie Ward, 29; Bourke Ward, 23; Cook Ward, 20; Brisbane Ward, 15; Denison and Phillip Wards, 14 each; Gipps Ward, 12; Fitzroy Ward, 10.

In the suburbs there were 232 calls, of which 177 were for actual fires, 32 were false alarms, 11 were chimney fires reported as houses on fire, and 12 were for chimney fires attended by firemen with hand-pumps only. The suburbs affected in regard to actual fires only were as follows, viz.:—Balmain and Redfern, 17 each; Newtown, 13; Ashfield, Glebe, and Paddington, 12 each; Waverley, 8; North Sydney, Parramatta, and ships in the Harbour, 6 each; Canterbury, Manly, and Waterloo, 5 each; Burwood, Petersham, St. Peters' and Woollahra, 4 each; Alexandria and Granville, 3 each; Auburn, Botany, Darlingtown, and Randwick, 2 each; Arncliffe, Camperdown, Concord, Drummoyne, and Macdonaldtown, 1 each.

In summarising the trades, it will be found that private dwellings have been mostly affected by fires, the number for all classes of damage being 97; but taking the actual trades into consideration, the most notable stand in the following order, viz.:—Licensed victuallers, 20; hairdressers and tobacconists, 14; grocers, drapers, and milliners, 13 each; bakers and confectioners, 10; Government buildings, 9; druggists and chemists, unoccupied premises, 7 each; fruiterers and greengrocers, open yards, restaurants and ships, 6 each; butchers, sheds, and stables, 5 each; places of amusement, buildings in course of erection, churches, commission agents, plumbers, printers and stationers, 4 each; bootmakers, cabinetmakers, engineers and ironfounders, 3 each; bedding manufacturers, boarding-houses, chemical works, grass paddocks, importers general, offices, oyster saloons, photographers, warehouses, watchmakers and jewellers, wood and coal merchants, workshops, 2 each; other trades affected, 1 each. These are to be found in the "Summary of Trades."

The

The strength of the Brigade is as follows:—Two large steam fire engines, 5 small steam fire engines, 2 7-inch manual engines, 4 6-inch manual engines, 6 under 6-inch manual engines, 3 telescope ladders, 1 American ladder truck, 1 ladder van, 1 hose van, 1 steam-engine tender, 8 hose reels, 22,359 feet of hose, most of which is in good and fair condition, 12 horses, 51 telephones erected, 7 telephone switch boards, 72 telephone fire alarms, 41 firemen, including Superintendent, Principal Foreman, and coachmen.

The undermentioned Volunteer Fire Companies hold plant on loan from your Board, viz. Alexandria, Ashfield, Drummoyne, Burwood, Leichhardt, Granville, Manly, North Botany, North City, Randwick, St. Leonards, Standard Brewery, Waverley, Woollahra. Six Volunteer Fire Stations are also invested in the hands of your Board.

The following comprise the Volunteer Fire Companies within your Board's jurisdiction:—Alexandria Volunteer Company, subsidized, £132; Ashfield Volunteer Company, £114; Balmain Volunteer Company (2 stations), £200; Burwood Volunteer Company, £100; Drummoyne Volunteer Company, not subsidized; Glebe Volunteer Company, £150; Granville Volunteer Company, £50; Leichhardt Volunteer Company, £50; Manly Volunteer Company, £75; North Botany Volunteer Company, not subsidized; North City Volunteer Company, not subsidized; Paddington Volunteer Company, £150; Paddington Brewery Volunteer Company, £162 10s.; Parramatta Volunteer Company, No. 1, £85; Parramatta Volunteer Company, No. 2, £85; Randwick Volunteer Company, not subsidized; Rookwood Volunteer Company, not subsidized; St. Leonards Volunteer Company (2 stations), £180; Standard Brewery Volunteer Company, £125; Waterloo Volunteer Company, £100; Waverley Volunteer Company, £100; Woollahra Volunteer Company, £175. £72 18s. 4d. was also paid to the Newtown Volunteer Fire Company, up to its disbandment at the end of May.

The total amount paid as subsidies and bonuses to the various Volunteer Fire Companies during the year was £2,106. In addition to the subsidies new plant has been supplied in many cases to Volunteer Companies to replace that condemned as unfit for further use. The approximate value of the whole of your Board's plant, together with the land and stations held in trust, is £81,439. The value of the Volunteer Companies' plant is not included in this sum.

THE undermentioned are the members of the Metropolitan Fire Brigade:—

Name.	Rank.	Date of Appointment.	Where stationed.

74	Darlinghurst and Randwick Police Stations	Carlton Street, Kensington Estate.

Most of the Volunteer Fire Stations, Theatres, and Music Halls, the University, Government Printing Office, Railway Department, Town Hall, and Messrs. Hoffnung, & Co.'s Warehouse are in direct communication with our permanent Stations. The Police Stations are also in communication through the Central Police Station. The various wharves, warehouses, business houses, and many public buildings are also in telephone communication by means of the General Post Office Exchange, which is open to receive and transmit calls for fires at any hour of the day and night; and arrangements have been made by which the watchmen employed by the principal business houses report through to Head Quarters Station several times during the night. The new Fire Station for the protection of the northern end of the city, which was commenced on the 7th July, 1891, will (I have every reason to believe) be complete by the 26th January of this year.

The large steam fire-engine, which was ordered of Messrs. Shand, Mason, and Co, of London, in 1890, arrived in the early part of the year, and forms a valuable addition to the plant.

As mentioned in my report of last year, the Newtown Volunteer Fire Company disbanded, and, in June, handed all their plant over to your Board. A new Station has been erected in Australia-street, Newtown, at which are stationed two permanent men, and seven auxiliaries or partially-paid men. Judging from the results of the past seven months, I have every reason to believe that an extension of the auxiliary system to some of the other suburbs would be beneficial.

Hose reels and all the necessary hose and other appliances have been placed at Drummoyne and North Botany, where volunteer fire companies have been formed. A volunteer company has also been formed at Rookwood; but I must question the wisdom of such distant places asking to come under the provisions of the Fire Brigades Act.

The Telephone Fire Alarms have proved a great success during the year, the timely and full intelligence which can be transmitted by them showing very clearly their superiority over mere bell-ringing alarms. I am of the opinion that any extension decided on by your Board will be of great benefit to the districts.

Many improvements in the water supply of the city and suburbs have been effected during the year, and at present there are 1,580 screw-down hydrants in the city, while in the suburbs all the old-fashioned plugs have been replaced by ball hydrants. The Water and Sewerage Board are still making efforts to further increase the facilities for obtaining water.

The telephone fire alarms, and nearly the whole of the electrical apparatus has been kept in order by the members of the Brigade.

I have to thank the officers and members of the Volunteer Fire Companies for their valuable assistance during the year. The officers and members of the police force have as usual rendered very effective assistance, and I have to express my obligations to them. I have also to tender my thanks to the turncocks and to the public generally for their valuable co-operation.

The discipline and general efficiency of the Brigade is in all respects satisfactory, and although the duties at times bring a severe strain on the whole staff, the work has been performed cheerfully and well.

In conclusion I beg to tender my most sincere thanks to your Board for the cordial support it has awarded me.

I have, &c.,

WILLIAM D. BEAR,

Superintendent of the Brigades and Inspector of Kerosene.

APPENDIX VIII.

List and Details of Fires attended by, or reported to, the Metropolitan Fire Brigade, or Volunteer Fire Companies, for the Year ending December, 1892.

Date	When discovered.	Time of Call.	Locality.	Name of Tenant.	How Promises occupied.	Construction of Premises.	Origin or supposed cause of Fire.	Insurances		Extent of Damage, &c.	Extinguished by

## NEW SOUTH WALES.

**FIRE BRIGADES ACT, 1884.**

(REPORT OF THE GOULBURN FIRE BRIGADES BOARD.)

Presented to Parliament pursuant to Act 47 Vic. No. 3, sec. 7.

## The Goulburn Fire Brigades Board to The Colonial Secretary.

Sir,

Goulburn, 27 January, 1893.

We have the honor to present you with the seventh annual report of the Goulburn Fire Brigades Board.

The Brigade continues to maintain its prestige as thoroughly efficient, and now numbers twenty-six full members and three call-boys.

In consequence of the decision of the Supreme Court in the Denilquin case some four years ago, and in the absence of amending legislation since, we have been unable to enforce the payment of the subsidies due by the various insurance companies.

Some of these have taken advantage of this, and have failed to contribute. We hope that at an early period legislation will be passed that will enable those in charge of the Fire Brigades to compel the companies to subscribe their quota towards the maintenance of the brigades.

Statement of the year's receipts and expenditure is herewith forwarded.

A. M. BETTS, Chairman.  
W. R. RILEY.  
E. HOWARD.

A. M. BETTS, Chairman.  
W. R. RILEY.  
E. HOWARD.

Examined with the vouchers and found correct,—

C. E. MACKENZIE.

27th January, 1893.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

GOVERNMENT PRINTING OFFICE.

(COST AND DESCRIPTION OF WORK DONE, FROM 1 JANUARY TO 31 DECEMBER, 1891.)

*Ordered by the Legislative Assembly to be printed, 30 August, 1892.*

ANNUAL RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6th May, 1884, That there be laid upon the Table of this House annually, a Return showing,—

- “(1.) The total cost, wages, and material of the printing, bookbinding, photography, and lithography done for each Department of the Public Service, at the Government Printing Office, during each year ending 31st December.
- “(2.) A statement, in tabular form, showing the title of each book, pamphlet, and collection of photographs or lithographs published at the Government Printing Office during each year ending 31st December; such statement to show the number of copies of each produced, and the total cost of each set.
- “(3.) That a statement of the number of copies, and the cost of printing (labour and material), be printed on the title-page of each Return or Departmental Report laid before Parliament.”

*(Mr. Hutchinson.)*

## GOVERNMENT PRINTING OFFICE.

(I.)

Government Printing Office,  
Sydney, 16 August, 1892.CHARLES POTTER,  
Government Printer.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

GOVERNMENT PRINTING OFFICE.

(COST AND DESCRIPTION OF WORK DONE, FROM 1 JANUARY TO 31 DECEMBER, 1892.)

---

*Ordered by the Legislative Assembly to be printed, 7 June, 1893.*

---

ANNUAL RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6th May, 1884, That there be laid upon the Table of this House annually, a Return showing,—

- “(1.) The total cost, wages, and material of the printing, bookbinding, photography, and lithography done for each Department of the Public Service, at the Government Printing Office, during each year ending 31st December.
- “(2.) A statement, in tabular form, showing the title of each book, pamphlet, and collection of photographs or lithographs published at the Government Printing Office during each year ending 31st December; such statement to show the number of copies of each produced, and the total cost of each set.
- “(3.) That a statement of the number of copies, and the cost of printing (labour and material), be printed on the title-page of each Return or Departmental Report laid before Parliament.”

(*Mr. Hutchinson.*)

---

656—A

[770 copies—Approximate Cost of Printing (labour and material), £27 13s. 9d.]

Government Printing Office,  
Sydney, 31 May, 1893.

CHARLES POTTER,  
Government Printer.

1892-3.

NEW SOUTH WALES.

**IMMIGRATION.**

(REPORT ON, FOR 1892.)

Presented to Parliament by Command.

The Officer in Charge of Immigration to The Principal Under Secretary.

Sir,

Immigration Office, Sydney, 6 January, 1893.

I have the honor to submit, for the information of the Colonial Secretary, my report on Immigration for the year ending 31st December, 1892.

Operations under the Regulations have been confined to the nomination of wives and families by husbands and fathers, of good moral and industrial qualifications, being residents in the Colony.

Of the total of 179 immigrants who so arrived all were nominated in the Colony, none were selected by the Agent-General.

They consisted of 98 individuals above 12 years of age, and of 81 under 12 years of age.

One death occurred (that of a child) during the voyage.

The appendices herewith annexed give full detailed information relative to Immigration during the past year:—

- A.—General Statistical Information.
- B.—Nationality of Immigrants.
- C.—Religious Persuasions.
- D.—Education Attainments.
- E.—Distribution into Country Districts.

I have, &amp;c.,

FRANK J. JOSEPHSON,

Officer in Charge of Immigration.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

ASIATICS AND COLOURED PERSONS IMMIGRATION  
AND REGULATION BILL.

(MESSAGE No. 27.)

---

*Ordered by the Legislative Assembly to be printed, 2 February, 1893.*

---

JERSEY,

*Message No. 27.*

*Governor.*

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to regulate the Immigration into New South Wales of persons of Asiatic and coloured races to provide for the regulation of Asiatics and coloured persons resident within the Colony to amend the "Chinese Restriction and Regulation Act of 1888," to make such amendments in Statute Law as may be necessary to give full force and effect to legislation for the above objects, and for purposes incidental to or consequent upon the same.

*Government House,*

*Sydney, 31st January, 1893.*

---

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

INTRODUCTION OF AFGHANS AND CAMELS INTO THIS COLONY.

(PETITION FROM CERTAIN RESIDENTS OF BROKEN HILL, SILVERTON, WILCANNIA, AND SURROUNDING DISTRICTS, AGAINST.)

*Received by the Legislative Assembly, 17 May, 1893.*

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

GENTLEMEN,

Your Petitioners humbly pray,—

1. That it is against the best interests of the European population of New South Wales in general to allow unrestricted entry to alien races.

2. That whereas the cities are subject to unfair competition in trade (on account of the difference in our civilization), the country districts, besides this, are threatened with a large influx of camels from Port Augusta in South Australia, to compete for the carrying trade of the whole Western District.

3. Outside of the great injustice this will be to European carriers who have made their homes in these places, and pay heavily through the Customs, these aliens will have all the benefit of coming into districts that have been pioneered by Europeans at great risk and cost to themselves and families. They will have the advantage of opened-up roads, Government wells and tanks and public watering-places that have been erected in many instances at great cost to the State.

4. The public reap next to nothing by these nomadic races: As colonists they are a failure; they pay no rates or taxes, having no settled place of abode; their habits of frugality are worthy of imitation in some instances, but owing, as before stated, to the difference in civilization, this does not count; like the Chinese, two or three hundred pounds is a fortune to them, and they retire to India in a few years, when other relatives or friends are ready to take their places and bring more camels.

5. Outside of the dangerous nuisance these animals are to the travelling public, they are a serious menace to stock, breeders of horses, and great cattle; it having been calculated that over £60,000 worth of stock is engaged in and required for the carrying business in the Broken Hill and Wilcannia districts alone.

6. It has yet to be shown that these animals are required in this district, as during the drought of 1891-92 horse teams visited and delivered stores wherever required at rates greatly below what camel teams asked.

7. To summarise in conclusion:—(1) They are undesirable colonists; (2) they are a source of danger to the travelling public, and in towns great numbers of accidents have occurred through them; (3) they reap all the advantages of opened country, paying nothing whatever in return in Customs or taxes; (4) outside of bare keep for food, the whole of their money goes to India, not even clothes being purchased in the Colonies; (5) they will seriously affect the stock-breeding and pastoral industry; (6) there is no proof that they are required, the public, except a small class, being served by Europeans.

Therefore, your Petitioners pray that your Honorable House will take immediate action against the unlimited ingress of Afghans and camels into the Colony of New South Wales.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 2,554 signatures.]

1892.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## KANAKA LABOUR.

(CORRESPONDENCE RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 24 November, 1892.*

Memo. from Mr. Police Superintendent Garvin to The Inspector-General of Police.

Armidale, 12 July, 1892.

*Re Cane Season of 1892, on the Clarence, Richmond, and Tweed Rivers.*

I HAVE to report that temporary stations have been formed at Chatsworth on the Clarence and Rous on the Richmond; at each of the places named I have provided a constable.

The season opens at Cudgen on 1st proximo. At this place a number of men, about 370, will be employed, among whom will be about 100 Kanakas. After pay, these men invariably get on a drinking bout, and as ill-feeling exists among the whites towards the Kanakas, very disorderly behaviour takes place. It will be absolutely necessary that a second constable be sent to Cudgen during the season to assist the constable stationed there.

It will be seen from the constable's report that one man is not safe among so many of the class that are employed there. I beg to apply for the service of an extra foot constable, a strong able-bodied man. He can return to Sydney at termination of season—about December. I am unable to provide a man for this duty, as I really cannot weaken another station in the district.

Will the Inspector-General be good enough to cause a constable to be sent to Cudgen, to go from Sydney direct per steamer to the Tweed River, by the end of this month?

THOS. GARVIN,  
Superintendent.

I beg to submit this report to the Colonial Secretary's perusal. An additional constable will be sent as requested.—E. FOSBERY, I.-G.P. The Principal Under Secretary, 14/7/92.

[Enclosures.]

Police Station, Cudgen, 1 June, 1892.

CONSTABLE BROWN reports, *re* the attached telegram, that the cane season will commence about the 1st of August next, and that there will be about 370 men employed during the crushing season.

The constable reports that the men employed at Cudgen during the crushing season are the roughest lot of men, as they mostly come from Brisbane.

The constable states that a second constable is required at Cudgen during the crushing season, as one constable has no power over such a rough lot of men. The constable states that it takes two constables all their time to keep order, especially when Kanakas and white men are drinking together.

There are also two hotels a distance of 2 miles apart, and in the season the constable has to patrol there very often at night time.

The constable states the first season he was at Cudgen he was assaulted and kicked about, having been there the first part of the season by himself.

J. L. BROWN,  
First-class Constable.

D. Carroll, Esq., Sub-Inspector of Police, Lismore.

Forwarded to Superintendent Garvin, in reply to his C.M., 92-391. I believe that a second constable is really required at Cudgen during the cane season.—D. CARROLL, Sub-Inspector, Lismore, 8/6/92. Mr. Superintendent Garvin, Armidale.

Telegram from Lismore to Constable Brown, Cudgen.

31 May, 1892.

WHEN will cane season commence (probably)? Number of men employed. Will a second constable be required; if so, state reasons? Report fully to me first post.

D. CARROLL,  
Sub-Inspector.

Police

Police Department, Armidale, 27 May, 1892.

[Memo.]

Cudgen Cane Season.

FURNISH me with a report stating when the next cane season will commence; the probable length of time it will last; the probable number of men who will be working about Cudgen during the season, and if the assistance of a constable will be required, and the reasons why he will be required.

THOS. GARVIN,  
Superintendent.

Police Station, Lismore, 22 June, 1892.

*Re* Cane-cutting Season, Richmond and Tweed.

SUB-INSPECTOR CARROLL reports, that the cane-cutting season will commence as follows:—  
Broadwater, 8th July, and continue until the end of the year.  
Rous, about 1st of August, and will last until end of the year.  
Cudgen already reported on; please see Constable Brown's report of the 1st instant.

D. CARROLL,  
Sub-Inspector.

Thos. Garvin, Esq., Superintendent of Police, Armidale.

Telegram from Armidale to Sub-Inspector Carroll.

22 June, 1892.

FURNISH report by post showing when sugar season commences at Rous, Broadwater, and Tweed respectively.

THOS. GARVIN.

Memo. from The Inspector-General of Police to Superintendent of Police, Armidale.

Police Department, Inspector-General's Office, Sydney, 14 July, 1892.

I HAVE sent Mr. Garvin's report, *re* cane season, for the Colonial Secretary's information. I was not aware that there were any Kanakas employed. Did they come overland from Queensland?

An additional constable will be sent at once, and the officer and police generally should be on the alert in case of disturbance.

E. FOSBERY,  
Inspector-General of Police.

Memo. from Mr. Police Superintendent Garvin to The Inspector-General of Police.

Police Department, Armidale Station, 16 July, 1892.

*Re* Kanaka labour on the Tweed, &c.

For years, eight at least, Kanaka labour has been employed in cane-fields on the Tweed, noticeably at Cudgen, where they work in gangs, planting, stripping, cutting, and carting cane to the mills. These men all came from Queensland at different times; they are all well up to this kind of work, and there has been for some years between them and Europeans, especially when drinking bouts are on, an ill-feeling.

Kanakas get the same wages as white men; they will not work for less.

Cudgen is the principal place where Kanakas are employed, but I have seen them working on different farms and mills, as well as on the Tweed. There are some also employed on the Clarence, about Maclean and Chatsworth, but not many.

I have called for a return of Kanakas employed on the Tweed, Clarence, and Richmond, in such form as will afford the Inspector-General information that might be useful should he require it at any time.

I have already warned Sub-Inspector Carroll, who is in charge of that sub-district, and police generally on the Tweed, to be on the alert in case of any disturbance between the whites and the Kanakas.

THOS. GARVIN,  
Superintendent.

Submitted for the information of the Acting Colonial Secretary, in connection with previous papers, forwarded on the 14th instant.—E. FOSBERY, Inspector-General of Police, B.C., 18 July, 1892. The Principal Under Secretary, &c.

Legislative Assembly, 20 October, 1892.

- (6.) IMPORT DUTY ON SUGAR:—*Mr. Sharp* (for Mr. HOUGHTON) asked THE COLONIAL SECRETARY,—  
(1.) Is it a fact that an import duty of £5 per ton is imposed upon sugar?  
(2.) Is it a fact that for some time past the owner of Cudgen, one of the largest sugar plantations in the Tweed district, has been replacing white labour with Kanakas imported from Queensland?  
(3.) Will he take steps at an early date to introduce a Bill to prevent the entrance into this Colony of Kanakas and other coloured labourers by the imposition of a tax similar to that imposed upon Chinese?

*Mr. See* answered,—

- (1.) Yes.  
(2.) I am not aware, but inquiries are now being made.  
(3.) This matter is engaging the attention of the Government.

Telegram from Constable Brown to The Inspector-General of Police.

Cudgen Scrub.

*Re* Kanakas, it is a fact that some five or six Kanakas joined Labour Union under delegate from Trades and Labour Council, Sydney, about twelve months ago; man named M'Mahon was labour delegate.

CONSTABLE BROWN.

This contains all the additional information I can obtain in reference to Parliamentary questions by Mr. Perry.—E. FOSBERY, Inspector-General of Police. The Principal Under Secretary, 20/10/92.

Constable

## Constable Draper to Mr. Police Superintendent Garvin.

Police Station, Murwillumbah, 3 November, 1892.  
SENIOR-CONSTABLE DRAPER was unable to obtain information with reference to Tumbulgum portion earlier, Constable Brown being absent on temporary duty.

T. G. DRAPER,  
Police Constable.

## The Inspector-General of Police to The Principal Under Secretary.

15 November, 1892.

## Employment of Kanakas in the Colony.

MR. HAYNES, M.P., states that he has received a telegram from the editor of the *Tweed Advocate*, at Murwillumbah, informing him that 120 Kanakas are working on one plantation alone, and 109 on other plantations in the Tweed River district. We learn that Mr. Haynes has written to the Premier, Sir George Dibbs, on the matter, and that he has intimated his intention of bringing the facts before Parliament without delay.

Submitted for the Colonial Secretary's information.

ED. FOSBERY,  
Inspector-General of Police.

## SITE FOR PUBLIC BATHS AT LAVENDER BAY, NORTH SYDNEY.

## No. 1.

The Council Clerk, North Sydney, to Government Surveyor S. E. Perdriau.

Sir,

Borough of North Sydney, Town Hall, 25 April, 1892.

In reply to your letter, dated 12th August, 1891, suggesting that the Baths Committees should propose some suitable sites for baths in lieu of that at Lavender Bay, resumed by the Government, I am directed to inform you that the Council has approved of the following site, viz., the land between George-street and Walker-street, Lavender Bay, and bounded on the north by the railway line, which is asked for in lieu of compensation for loss of baths at head of Lavender Bay.

The Council also desire that the following places be dedicated as sites for baths, viz. :—

1. Foot of Bay-street, Berry's Bay.
2. Foot of Peel-street, Careening Cove.
3. Foot of Ben Boyd Road, Neutral Bay.
4. Near foot of Hayes-street, Neutral Bay.
5. Head of Shell Cove.
6. Robertson's Point.
7. Western side of Great Sirius Cove, near Spofforth-street.
8. Whiting Beach, near Little Sirius Cove.
9. Eastern corner of Balmoral Beach.

I have, &c.,

W. BARNETT SMITH,  
Council Clerk.

## No. 2.

Government Surveyor S. E. Perdriau to The Metropolitan District Surveyor.

Ten sites for baths at North Sydney.

Sir,

43, Phillip-street, 12 May, 1892.

In compliance with your instructions of the 4th August, 1891, No. 731, on miscellaneous individuals 91-2,346, and in view of the application contained in the Council Clerk's letter of 25th April, 1892, now attached thereto, I have the honor to report as follows:—

The information afforded me in said letter is altogether too indefinite, with the single exception of the area above indicated, the locality only of the land desired to be leased is given. I beg to suggest that applicants be requested to comply with the usual custom in such cases, viz., to forward a plan or tracing showing as precisely as possible the dimensions and position of the areas applied for, and perhaps it may be deemed desirable that the usual deposit receipt for £10, paid into the Treasury, should accompany such application.

With regard to the site, there are several reasons which, in my opinion, are sufficient for the refusal of the application.

(a) The site is too valuable. It appears to me to be advantageously situated for a goods or coal depôt in connection with the railway, and if the application be entertained, I would suggest that the matter be referred to the Commissioners for Railways in the first instance.

(b) The site is naturally much more exposed to public view than was the former. It would be necessary to have a close roof and sides on baths here to make them private, for there are many valuable dwellings immediately surrounding and overlooking the site, of which they command a full view, being elevated so much above the water level; also bathers would be seen from the train, which will be about 25 feet above high-water level at this part.

(c) Another reason against the adoption of this site is that although the water there is now fairly clear it is at the head of the bay, and beyond the influence of the current of the tide, which is an important consideration in maintaining the cleanliness of the water in a bath; moreover, the sewage from Walker and George Streets, draining from populous areas, converges, and is discharged into the harbour at this point.

(d) Where it is proposed to erect baths at the ends of streets I would suggest that the whole of the frontage thereof be not so occupied, but that sufficient width, say, 12 feet, be retained for access to the water.

(e) In all ten sites are applied for.

The number appears to me to be excessive, and at least double the present requirements.

Perhaps the Council might be informed that an application would be entertained for the lease of the sites upon which, if approved, they would at once erect the structures.

(f) Cost of inspection and report (half day), £1 1s.

I have, &c.,

STEPHEN E. PERDRIAU,  
Government Surveyor.

## No. 3.

The Metropolitan District Surveyor to The Under Secretary for Lands.

Application by the Council of the Borough of North Sydney for sites for public swimming baths.

APPLICATION is made for a site for another swimming bath in Lavender Bay, in place of that which has been resumed for railway purposes.

The site resumed at the head of Lavender Bay was injudiciously selected, and it is fortunate for the public who used them that the baths have been closed in such a summary manner.

The

The site applied for, viz., along the frontage between George-street and Walker-street would not be suitable in respect of position, and there are many objections to be advanced against it, as set forth in Mr. Perdriau's report, paragraphs *b* and *c*, and, moreover, there is no Crown land to be appropriated, and it may be regarded as inflicting serious damage to vested interests, to allow of baths being built opposite family residences and ornamental grounds.

I think that the surrounding circumstances do not admit of this site being utilised for public baths, and I would beg to advise that the Borough Council be informed accordingly.

Perhaps it may not be out of place here to point out the advantage offered by a floating swimming bath in that it may be moved from place to place as circumstances may render desirable, and thus it might be feasible to allow of such a bath on the eastern side of the bay.

Application is made for nine other sites for public baths, the sites being merely indicated as at foot of Bay-street, Robertson's Point, &c.

It is submitted that the Council be informed that such applications should be made separately as for special lease, with a sketch showing the site desired, attached to each application, and in respect of each there should be the usual deposit of £10.

E. TWYNAM,  
District Surveyor.

8th June, 1892.

Submitted that the Borough Council be informed as suggested by the District Surveyor, and further, as regards their application for compensation that the latter should be made to the railway authorities.—J.O'D., 13/6/92.

F.H.W., 15/6/92. The Council of the Borough of North Sydney may be informed in terms of the District Surveyor's report.—W.H., 15/6/92. Approved.—H.C., 24/6/92. Council Clerk informed, 28/6/92. The Chief Surveyor, Metropolitan Survey Office. Mr. Elwin.—E.T., 1/7/92.

#### No. 4.

### Application for a Special Lease by J. Halstead.

Crown Lands Acts ; Regulation No. 150.

I, JAMES HALSTEAD, hereby apply for a Special Lease for baths, to be erected, covered, and enclosed, fronting my own property, purposes of the land hereunder described, and shown on the accompanying plan and tracing, and I offer to pay an annual rental thereof of £10. Enclosed is a receipt showing that a deposit of £5 has been paid to the Colonial Treasurer.

Signed this 22nd day of June, 1892.

J. HALSTEAD,  
North Shore.

To the Chairman of the Local Land Board, at Sydney.

#### Description :

Land District of \_\_\_\_\_ county of Cumberland, parish of Willoughby.  
I am the owner of the adjoining property.

J. HALSTEAD.

Refer to the District Surveyor for report.—B.S.L. (*pro* Chairman), 22/6/92.

[Enclosure.]

Suspense Account—New South Wales.

(No. 17,712.)  
RECEIVED from James Halstead the sum of £6 sterling for deposit on application for special lease for baths at county Cumberland, parish Willoughby, awaiting disposal of application—£5 deposit, £1 survey fee : £6.

The Treasury, 22 June, 1892.

C. E. A. ROBERTS  
(*Pro* Treasurer).

#### No. 5.

### The Metropolitan District Surveyor to Mr. Surveyor S. E. Perdriau.

Crown Lands Act of 1884.

Special Lease—Baths, Lavender Bay—Sections 89-92, Regulations 161-163—Applied for by James Halstead.

Instruction No. 543. Metropolitan and Coast District Survey Office, 27 June, 1892.

MR. SURVEYOR PERDRIAU is requested to report upon the enclosed application at his earliest convenience.

E. TWYNAM,  
District Surveyor.

#### REPORT.

1. Is the land applied for available for special lease? State whether Crown land, reserved, or otherwise? Yes. Unreserved Crown land below high-water mark.
2. Is the land occupied or improved in any way? No, except a very small part by a bath at the south-west corner.
3. If a modification of boundaries is necessary, obtain signature of applicant to the same? Not necessary.
4. Having in view the public interest generally, do you recommend that this special lease shall be granted? Yes; but I do not think the site very suitable pending diversion of sewage, which will probably be effected in two years' time.
5. Propose an annual rental; also term of lease? Ten years, at Fifteen Pounds (£15) per annum.
6. Submit a sketch of proposed lease upon other side (*vide* plan, cat. C. 527-2,030)? Sketch accordingly.
7. Report the cost of fulfilling this instruction? Field and office, 1 day—£3 3s.

STEPHEN E. PERDRIAU,  
Government Surveyor,  
7th July, 1892.

Remarks.

*Remarks.*

ANY detailed information of sufficient importance to note is of value; such, for instance, as to whether the application is *bonâ fide* and for the purpose set forth.

## Sketch.\*

If the frontage is limited and of special value care must be taken in the apportionment.

The survey may be made by magnetic needle bearings, with a connection from some point defined upon official plans.

Applicant intends constructing a public bath. This is a central site for the purpose.

S.E.P.

## No. 6.

The Under Secretary for Lands to The Council Clerk, North Sydney.

Sir,

Department of Lands, Sydney, 28 June, 1892.

Adverting to your letter of the 25th April last, stating that your Council had approved of the land between George-street and Walker-street, and bounded on the north by the railway line, as a site for baths at Lavender Bay, also asking that land at Careening Cove, Berry's Bay, and various other places may be dedicated as sites for baths, I am directed by the Secretary for Lands to inform you that your application for compensation for baths site resumed at Lavender Bay should be made to the Railway Commissioners, and that your application for other sites (ten in all) should be made separately as for special lease on the prescribed form, with a sketch showing the site desired attached to each application, and in respect of each there should be the usual deposit of £10.

The site suggested along the frontage between George-street and Walker-street would not be suitable in respect of position being overlooked by many houses, and adjacent to the outlet for sewage from the populous areas around George and Walker Streets. Moreover, there is no Crown land to be appropriated, and it may be regarded as inflicting serious damage to vested interests to allow of baths being built opposite family residences. It may not be out of place to invite your Council's attention to the advantages of floating swimming baths which can be moved from place to place, and it might be feasible to allow of such a bath on the eastern side of the bay.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary

*(per R.H.D.)*

## No. 7.

The Metropolitan District Surveyor to The Chairman, Land Board, Sydney.

Special lease 92-24—Metropolitan—James Halstead—Special lease, 90th section—Lavender Bay, parish of Willoughby, county of Cumberland.

11 July, 1892.

1. THIS is an application to lease for public baths an area of 5 perches below high-water mark of Lavender Bay, as indicated by red colour on enclosed plan.

2. Under Mr. Perdriau's report there is no objection in the public interest generally to the application being entertained. It is therefore recommended, subject to the concurrence of the Engineer-in-Chief for Harbours and Rivers, that a lease of the area in question be granted, at a rental of £15 per annum, the term of lease to be limited to five years, at the expiration of which an extension can be considered.

3. Attention is invited to the fact that the Municipal Council of North Sydney has applied for a site for a similar purpose in this locality, and it has been suggested that a floating bath would best meet the circumstances.

*Vide* Miscellaneous Departmental, 92-4,063.

4. Description for *Gazette* notice herewith. Cost in this case, £3 3s.

E. TWYNAN,

District Surveyor.

Notice to *Government Gazette*, 14/7/92. Also to *Herald and Star*, 15/7/92. A report from the Engineer-in-Chief for Harbours and Rivers is desired.—B.S.L. (*pro* Chairman), 16/7/92. The Under Secretary for Lands. The Under Secretary for Works.—F.H.W. (*pro* Under Secretary), B.C., 16/7/92. Harbours and Rivers.—D.C.McL. (*pro* Under Secretary), B.C., 18/7/92. Mr. Josephson for report.—For Engineer-in-Chief, J.No. P., 18/7/92. I see no objection to this application being granted subject to the specified conditions.—J.P.J., 19/7/92. Engineer-in-Chief for Harbours and Rivers. I concur with Mr. Twynam.—C.D., 21/7/92. The Under Secretary for Public Works. The Under Secretary for Lands, B.C., 22/7/92. The Chairman, Land Board, Sydney.—J.P.M. (*pro* Under Secretary), B.C., 25/7/92. J. Halstead notified to appear on 15/8/92, at Sydney Steamship Owners' Association rooms, 29/7/92.

## [Enclosure.]

Description for *Gazette* notice of an area of 5 perches below high-water mark of Lavender Bay, parish of Willoughby, county of Cumberland, applied for under the 90th section for public baths by James Halstead.

COMMENCING at the south-east corner of a measured reclamation of 6½ perches, approved to be alienated to J. F. Burns, and bounded on the south-west by a line bearing south 8° 27' east, 25 feet on the south-east by a line bearing north 6° 33' east 40 feet 7 inches; on the north-east by a line parallel to the first-mentioned boundary, bearing north-westerly 43 feet 2 inches to the north-east corner of the aforesaid reclamation of 6½ perches; and on the south-west by the north-east boundary of that reclamation area, bearing south-easterly to the point of commencement.

No. 8.  
*Gazette Notice.*

Local Land Board Office, Sydney, 14 July, 1892.

APPLICATION FOR LEASES FOR SPECIAL PURPOSES.

It is hereby notified for general information, that the under-mentioned applications have been received for special leases, under the provisions of the 92nd section of the "Crown Lands Act of 1884" of the lands, and for the purposes hereunder stated.

Any objections lodged at this office within four weeks from the date of this notice will receive due consideration.

T. W. HARRIOTT,  
 Chairman.

Applicant, James Halstead; locality of land applied for, Lavender Bay; area, 5 perches; purpose for which lease is desired, public baths. Will the District Surveyor be good enough to furnish a tracing of the case shown hereon for the use of the Marine Board?—B.S.L. (*pro* Chairman), 5/8/92. The President of the Marine Board for any objections that may exist to the granting of the application for special lease enumerated hereon.—B.S.L. (*pro* Chairman), L.L.B., Sydney. Local Land Board, Sydney, 8/8/92. The inspector.—G.S.L., 9/8/92. Does not interfere with the navigation of the harbour.—E. B. MAIDES, Inspector Marine Board, 16/8/92. The Marine Board have no objections to offer.—GEO. S. LINDEMAN, 23/8/92.

No. 9.

The Council Clerk, North Sydney, to The Chairman, Local Land Board, Sydney.

Sir, Borough of North Sydney, Town Hall, 4 August, 1892.

I am directed by His Worship the Mayor, to object, on behalf of the Municipal Council of the Borough of North Sydney, against the granting of James Halstead's application for a special lease of land at Lavender Bay, for public baths, as notified in the *Government Gazette*, of 29th July, No. 548.

The Council has recently been in communication with the Department of Lands, in relation to the establishment of baths at Lavender Bay, and applied for a site for that purpose not far from the one now applied for by Mr. Halstead, but the Department objected on the ground that the site was unsuitable in respect of position, being overlooked by many houses, and adjacent to the outlet for sewage from the populous areas around George and Walker Streets.

The same objection applies to Mr. Halstead's application, as the baths, if erected at the site applied for, will be close to the outlet of the George-street sewer, and directly overlooked by a large number of houses on the western side of Lavender Bay.

I have, &c.,  
 W. BARNETT SMITH,  
 Council Clerk.

Considered by Metropolitan Board, at Sydney, on the 15th August, 1892.—T.W.H., Chairman.  
 Objection.—J.P.M.

No. 10.

The Chairman, Local Land Board, Sydney, to Mr. J. Halstead.

Crown Lands Act of 1884—Notice to Appear at Local Land Board.

New South Wales, }  
 to wit. }

You are hereby notified to attend at the Sydney Steam Shipowners' Association Room, at O'Connell-street, Sydney, on the 15th day of August, 1892, at 10 o'clock in the forenoon, when the matter or question stated at the foot hereof will be investigated.

On proof of due service of this notice, the investigation may proceed whether you appear in Court or not.

Given under my hand, at Sydney, this 15th day of July, 1892.

T. WARRE HARRIOTT,  
 Chairman.

Matter for Investigation.

Special lease of 5 perches of land, for the purpose of erecting bathing establishment at Lavender Bay, section 90, parish Willoughby.

No. 11.

R. Imray, Esq., to The Chairman, Local Land Board, Sydney.

Gentlemen, 73, Clarence-street, Sydney, 15 August, 1892.

It having come to my knowledge that an application is being made to institute public baths in Lavender Bay, as one of the residents owning property, I beg most respectfully to lay before you my emphatic objection to such a course, and trust that you will refuse to grant the application.

I have, &c.,  
 ROBT. IMRAY.

Brought before the Metropolitan Local Land Board, at Sydney, on the 15th August, 1892.—  
 T.W.H., Chairman.

## No. 12.

## Decision of Local Land Board.

Crown Lands Act of 1884—(Part II., section 14, sub-section 4.)

New South Wales, }  
to wit. }Special lease  
92-24, 5 perches  
at Lavender  
Bay; section 90,  
parish of Wil-  
loughby.

WHEREAS on the 15th day of August, 1892, it became a matter for investigation and appraisalment by us of the land sought to be specially leased under the application noted in the margin, made by James Halstead, for the purpose of baths, and having taken evidence and inquired into the said matter, we recommend that a lease be granted for the purpose of a bathing place, under conditions that bathers be excluded from public view by a construction to be approved by the Minister or whom he may appoint, and removal, without compensation at the cost of lessee to be effected at determination of lease, if desired by the Minister. The term of lease to be five years, and we appraise annual rental at £15.

Given under our hands, at O'Connell-street, at Sydney, in the Colony of New South Wales, this 16th day of August, 1892.

T. WARRE HARRIOTT,  
Chairman.FRED. A. FRANKLIN,  
HENRY EAGER,

Members.

See protest from the Borough Council of North Sydney.—B.S.L., 6/8/92. Present. Informed.—B.S.L., 18/8/92. No appeal lodged.—B.S.L., 13/9/92. The Under Secretary for Lands.

Application for special lease for baths at Lavender Bay. The application is opposed by the Borough Council of North Sydney and by Imray & Co. No objection is, however, offered by the Harbours and Rivers Department. The Board recommend granting of a lease for a term of five years at a rental of £15 per annum, under conditions that bathers be excluded from public view by a construction to be approved by the Minister for Lands. The usual conditions as to bathing-places are enclosed. Submitted in view of the objections. Specially.—J.P.M., 15/9/92.

R.H.D., 15/9/92. F.H.W., 23/9/92. Where are the papers relating to the application by the Borough Council alleged to have been refused.—W.H., 15/9/92.

Will the Chief Draftsman please attach a litho. showing the relative position of the land applied for as site for bath, and that under special lease application by Mr. Halstead.—J.P.M., 16/9/92.

Papers required by the Under Secretary are now herewith, *vide* 92-4,063, Miscellaneous Departmental, also an illustrative tracing marked "A," from which it will be seen that the Chief Surveyor's objection applied to land lying between George and Walker Streets.—J.P.M., 21/9/92.

Submitted. It is apparent that there is a marked difference between the applications of the Borough Council and that of Mr. Halstead. The reasons for the refusal of the former are cogent, while similar objections do not apply in Halstead's case. The recommendation of the Board is submitted for approval.—W.H., 22/9/92.

Approved.—H.C., 26/9/92. Lease may be dated from 1st instant for 5½ years.—J.P.M. (for Under Secretary), 5/10/92. Mr. Lackey. Rent called for. Treasury advised. Voucher to Treasury, £3 3s.—J.P.P., 6/10/92.

## [Enclosure.]

Term of lease, from 1st October, 1892, to 31st December, 1897; rent, £15 per annum; area, 5 perches.

## Conditions.

The land to be used only for the purpose for which the occupation is granted. No right to purchase the land will be conferred. The lessee to remove the structure at his own cost, and without compensation, within six months of determination of the lease, should he be required in writing by the Government to do so. A good and substantial structure is to be erected, within six months from this date, upon the land leased, to the satisfaction of the Harbours and Rivers Department, and such structure is to be kept in good and efficient condition, and in a thorough state of repair, throughout the currency of the lease. The right is reserved to terminate the lease at any time during its currency should the land be required for public wharves, railways, or other public purposes, by giving not less than six months' notice in writing to that effect. Should the land be required by the Government for any public purpose during the currency of the lease, any erection upon it may be retained without compensation beyond the cost price, less a sum for deterioration. The baths to be erected in such a manner as to screen bathers from the view of the public, and to be conducted under the following regulations and charges for their use, *viz.*:—The baths and premises shall be kept open to the public from daybreak until dark on every lawful day, and on Sundays, Good Friday, and Christmas Day from daybreak until the hour of nine in the morning; but before any person shall be permitted to enter for the purpose of bathing, a fee not exceeding three pence for adults and one penny for children not exceeding twelve years of age shall be paid to the party having charge of the baths, and for such fee each adult shall be provided with two towels (and each child with one towel), and other conveniences for dressing, and have the sole use for the time of one of the compartments provided for the purpose. All persons who may visit the baths shall, whilst within the premises conduct themselves in a decent, orderly, and proper manner; any person breaking this rule to be immediately expelled from the premises. If any person under the influence of liquor shall be found upon the premises he shall be immediately expelled therefrom. Dogs shall not, upon any pretence whatever, be permitted upon any part of the premises. The premises to be open for entry and inspection by any officers appointed to that duty by the Minister for Lands.

THIS deponent, *Stephen Edward Perdriau*, of Sydney, staff surveyor, representing the District Surveyor, being duly sworn, maketh oath, and saith as follows:—I know the 5 perches in Lavender Bay, applied for as a site for baths by Mr. J. Halstead; it extends from the limit line of the purchased reclamation 30 feet—43 feet on north side and 25 feet on south side; the width is 40 feet 7 inches; nothing has yet been done towards occupying the site; the depth of water at the outer end is from 8 feet to 9 feet 6 inches at low water; about an average of 2 feet on limit line; there is a stage and pontoons on land adjoining this on south, to which no objection has been made I am aware of; there is no structure beyond the limit line from this site to head of the bay; it is about 250 feet from this site to head of the bay; the water on the limit line shallows from the site to nothing; the applicant owns two terraces of nine houses, which would overlook this bath; they are the nearest dwellings to the site; I know of no objection to it if properly covered and sides made opaque; I think £15 a year a sufficient rent for five years' lease.

Sworn by Deponent, at Sydney, this }  
15th of August, 1892,— }

T. WARRE HARRIOTT, Chairman.  
FRED. A. FRANKLIN, }  
HENRY EAGER, } Members.

STEPHEN E. PERDRIAU.

THIS

THIS deponent, *James Halstead*, of Lavender Bay, boat-builder, being duly sworn, maketh oath, and saith as follows:— I made an application for site for baths fronting my own property, Lavender Bay; I propose it to be 50 feet wide by about 90 feet long; my frontage is 250 feet; this is to be at the northern end of it; I intend it to be close boarded to low water and then 8 feet to 10 feet above high water, with parts covered over with boards, 9 x 2½ in. planking, and covered with an iron shed, for plunge baths and warm baths to avoid any one overlooking; a portion of the bath is to be on my own ground, and only extends 37 feet into the harbour from the limit line on south side; these baths will be covered over and cannot be overlooked by houses alongside it; George-street sewer will be 100 feet away from it.

Sworn by deponent, at Sydney, this }  
15th of August, 1892,— }

J. HALSTEAD.

T. WARRE HARRIOTT, Chairman.  
FRED. A. FRANKLIN, } Members.  
HENRY EAGER, }

THIS Deponent, *Richard Albert Watson*, of Circular Quay, hotel proprietor, being duly sworn, maketh oath, and saith as follows:— I own the land at foot of George-street, Lavender Bay; have built wall and reclaimed, and I object to the site applied for by Mr. Halstead being occupied by baths; I consider it would be a source of annoyance to the neighbourhood, because they could be overlooked, but if covered in that objection would be done away with; I also think that the approach by water would be interfered with materially; I have only a boat-shed on my land at present; I have no jetty; I had a bath on my land and had it filled in because it was a source of annoyance.

*Mr. Halstead*: I have only a shed on the land, as already stated.

Sworn by deponent, at Sydney, this }  
15th August, 1892,— }

Amount of rent called for	3 15 0
---------------------------	--------

Balance of deposit available	
(as above)	2 17 0

Amount still to be paid	£0 18 0
-------------------------	---------

Sir, Department of Lands, Sydney, 6 October, 1892.

Referring to your application for permission to lease a portion of Crown lands at Lavender Bay, parish of Willoughby, county of Cumberland, for public baths, I have the honor to request that you will pay to the Colonial Treasurer the sum of £3 15s., being rent from 1st October, 1892, to 31st December next. On notice of receipt of this amount authority to occupy the land will issue in due course.

The charges against your deposit and survey fee of £6 are £3 3s. and the balance will be applied towards payment of rent now called for.

The sum of 18s. therefore remains due, and if not paid within one month from this date your application will be deemed to have lapsed.

I have, &c.,

WM. HOUSTON,  
Under Secretary  
(Per J.P.M.)

Term of Lease:—From 1st October, 1892, to 31st December, 1897. Rent, £15 per annum; area, about 5 perches.

## Conditions.

The land to be used only for the purpose for which the occupation is granted. No right to purchase the land will be conferred. The lessee to remove the structure at his own cost, and without compensation, within six months of determination of lease, should he be required in writing by the Government to do so. A good and substantial structure is to be erected, within six months from this date, upon the land leased, to the satisfaction of the Harbours and Rivers Department, and such structure is to be kept in good and efficient condition, and in a thorough state of repair throughout the currency of the lease. The right is reserved to terminate the lease at any time during its currency should the land be required for public wharfs, railways, or other public purposes, by giving not less than six months' notice in writing to that effect. Should the land be required by the Government for any public purpose during the currency of the lease, any erection upon it may be retained without compensation beyond the cost price, less a sum for deterioration. The baths to be erected in such a manner as to screen bathers from the view of the public, and to be conducted under the following regulations and charges for their use, viz.:—The baths and premises shall be kept open to the public from daybreak until dark on every lawful day, and on Sundays, Good Friday, and Christmas Day from daybreak until the hour of 9 in the morning; but before any person shall be permitted to enter for the purpose of bathing, a fee not exceeding 3d. for adults and 1d. for children, not exceeding 12 years of age, shall be paid to the party having charge of the baths, and for such fee each adult shall be provided with two towels (and each child with one towel), and other conveniences for dressing, and have the sole use for the time of one of the compartments provided for the purpose. All persons who may visit the baths shall, whilst within the premises, conduct themselves in a decent, orderly, and proper manner. Any person breaking this rule to be immediately expelled from the premises. If any person under the influence of liquor shall be found upon the premises he shall be immediately expelled therefrom. Dogs shall not, upon any pretence whatever, be permitted upon any part of the premises. The premises to be open for entry and inspection by any officers appointed to that duty by the Minister for Lands.

## Special Lease.

Deposit and survey fee	£6 0 0
Less expenses incurred	3 3 0
Balance available towards payment of rent	£2 17 0
Amount of rent called for	£3 15 0
Balance of deposit available (as above) towards pay- ment thereof	2 17 0
Amount still to be paid	£0 18 0

Sir, Department of Lands, Sydney, 6 October, 1892.

I have the honor to inform you that it is proposed to grant authority to occupy as a special lease, under section 90 of the Crown Lands Act of 1884, about 5 perches for public baths, parish of Willoughby, county of Cumberland, to Mr. James Halstead, of North Shore, at a rental of £15 per annum.

Mr. Halstead has been directed to pay the sum of £3 15s. for rent from the 1st October, 1892, to the 31st December next, and I have to request the favour of a report immediately upon that sum being credited to Revenue.

The charges against the deposit and survey fee of £6, placed in suspense account on 22nd June, 1892, are £3 3s., and the balance £2 17s. may be applied towards payment of rent now called for.

Term of lease, from 1st October, 1892, to 31st December, 1897.

I have, &c.,  
WM. HOUSTON  
(Per R.H.D.)

## No. 15.

J. Ward, Esq., to The Under Secretary for Lands.

Dear Sir, "Noorooma," Upper Bayview-street, M'Mahon's Point, 7 October, 1892.

I learn to-day that an application has been made for a lease at Lavender Bay, for the purpose of erecting swimming baths.

As a resident of Lavender Bay, I beg to protest against any such lease being granted. It is quite likely that a deputation of those who will be sufferers, should this lease be granted, will present a petition to the Minister, praying that he will refuse the lease.

I have, &c.,  
JOHN WARD.

## No. 16.

O. Hals, Esq., to The Under Secretary for Lands.

Sir, "Sunny Bank," Lavender Bay, 7 October, 1892.

It having come to my knowledge that an application is being made for permission to establish a swimming bath in Lavender Bay, directly opposite this house, I beg to herewith enter a strong protest against any such application being granted, as the establishment of such a place will be very detrimental to the peace of the present inhabitants of this neighbourhood.

Yours, &c.,  
OSWALD HALS.

## No. 17.

E. M. Dietrich, Esq., to The Under Secretary for Lands.

Sir, Sydney, 7 October, 1892.

It has this day come to my knowledge that an application has been made for a lease for the purpose of erecting swimming baths at Lavender Bay.

As a property owner, and resident of Lavender Bay, I beg to protest against any such lease being granted to any person.

I may inform you that this protest will be followed by a deputation which will present a petition to the Minister, praying that he will not consent to such a manifest injustice, being meted out to all the other property owners and residents in this charming locality.

Trusting that you may deem it advisable to stay progress in this matter until after the deputation has presented the petition, when I trust the evidence we shall bring forward will justify you in not granting the lease referred to.

I have, &c.,  
EDWIN. M. DIETRICH.

## No. 18.

L. Leplastier, Esq., to The Under Secretary for Lands.

Sir, 263, George-street, Sydney, 7 October, 1892.

I understand that an application is being made to your Department for a lease of a certain part of the western side of Lavender Bay, North Sydney, in order that Public Baths may be erected thereon.

If this be so, I beg to submit a most emphatic protest against same being granted, as it must prove most objectionable to the inmates of my house, which I have erected at a very considerable cost.

I shall be very pleased to afford you any information within my power, or to arrange for an inspection by any officer you may appoint, and I feel sure that my objections will be found to be fair and reasonable.

I have, &c.,

L. LEPLASTIER,  
Of "Hawthorn," East Crescent-street, Lavender Bay.

## No. 19.

S. MacDonnell, Esq., to The Under Secretary for Lands.

Sir, Norwich Chambers, 56, Hunter-street, Sydney, 7 October, 1892.

As a property holder at Lavender Bay, I protest against a lease being granted to Mr. Halstead, or to anybody else for the purpose of erecting swimming baths at Lavender Bay. My land has water-frontage, and rises steeply from the water.

Such baths would damage the value of my property, from which they must be overlooked, and to which they would prove an intolerable nuisance.

I have, &c.,  
S. MACDONNELL.

## No. 20.

J. McNeal, Esq., to The Under Secretary for Lands.

Sir, The Commercial Bank of Australia (Limited),  
273, George-street, Sydney, 7 October, 1892.

It has just been mentioned to me that a Mr. Halstead has applied for a lease of part of the waters of Lavender Bay for utilisation as baths.

The baths, if erected, will be in full view of a number of private residences, and with all due respect, I submit that those interested in these residences should have an opportunity of expressing their views upon the matter before any lease is granted, for unless the baths can be so constructed as to shut out from view the bathers therein, a very great injury will be done to all the private properties in the vicinity.

I have, &c.,  
JOHN McNEAL,  
Inspector.

## No. 21.

R. Imray, Esq., to The Secretary for Lands.

Sir, 73, Clarence-street, Sydney, 7 October, 1892.

Having been informed that permission will probably be granted for the erection of public baths at Lavender Bay, North Sydney, I have the honor to confirm my letter to you of the 15th August, wherein I protested against such erection, and would now further point out that in the event of this scheme being carried through the property of myself and others in the immediate neighbourhood will be seriously depreciated, by reason of the very objectionable doings and acts of larrikinism so frequently perpetrated by a class who cannot well be excluded from the baths, the same being public.

A deputation will have the honor of waiting upon the Minister for Lands to-morrow, bearing with them a numerous signed protest against the erection of these baths, and will, I am convinced, adduce sufficiently strong reasons why permission should not be accorded to this scheme.

I have, &c.,  
ROBT. IMRAY  
(Per L.B.)

## No. 22.

F. W. Uther, Esq., to The Secretary for Lands.

Sir, 322, George-street, Sydney, 7 October, 1892.

Having learned that there is an application under consideration by your Department for permission to erect and carry on swimming baths in Lavender Bay, I beg most respectfully to protest against such permission being granted, as the placing of swimming baths in that locality will create a positive nuisance, and will seriously depreciate the value of all properties in the neighbourhood. Trusting that this matter, which is of so much interest to all residents in the locality, will not be granted.

I have, &c.,  
FRED. W. Uther,  
Lavender Bay.

## No. 23.

F. J. Drew, Esq., to The Under Secretary for Lands.

Dear Sir, 8A, Barrack-street, Sydney, 7 October, 1892.

It having come to my knowledge that Mr. Halstead, boat-builder, of Lavender Bay, North Sydney, is proposing, with the sanction of the Government, to erect public baths in Lavender Bay, I desire, as a resident in this locality, to enter my protest against such a thing being allowed, it being quite unnecessary, and, in my opinion, likely to create disturbance and discomfort to the whole of the residents of that suburb.

Yours, &c.,  
FREDK. J. DREW.

Messrs. Drew, Dietrich, Hals, Imray, Lepastier, MacDonnell, M'Neal, and Uther enter protests against granting a special lease for the purpose of a public bathing-place at Lavender Bay to Mr. Halstead. Mr. Dietrich urges that proceedings be stayed pending the result of a petition protesting against the lease, which is proposed to be submitted to the Minister by a deputation. As the lease has been approved it is not apparent that the protests can be entertained, especially as previous objections had been considered by the Board before recommending that the lease should be granted.—J.P.M., 10/10/92.

Special. Objections were called for on 14th July last.—R.H.D., 10/10/92. F.H.W., 11/10/92. Submitted that the objectors be informed that the lease has been approved on the recommendation of the Local Land Board, and that objections were called for in July last, and heard by the Board previous to its recommendation. The lease having been approved, it is presumed that no action can now be taken to meet the views of the objectors, even if such course were desirable.—W.H., 11/10/92.

## No. 24.

The Council Clerk, North Sydney, to The Under Secretary for Lands.

Sir, Borough of North Sydney, Town Hall, 8 October, 1892.  
I have the honor, by direction of His Worship the Mayor, to forward you a copy of a letter received from Mr. Dietrich in reference to Mr. Halstead's application for a lease for the purpose of erecting swimming baths at Lavender Bay, and to inform you that the Council will take the matter into consideration at its next meeting.

I have, &c.,  
W. BARNETT SMITH,  
Council Clerk.

[Enclosure.]

Gentlemen, Sydney, 7 October, 1892.  
It has come to my knowledge that the application for a lease for the purpose of erecting public swimming baths in Lavender Bay is still in course of progress.

I notice your adverse resolution, and would ask you if any protest against the lease being granted has been sent to the Minister for Lands, or if such has not already been sent do you purpose doing so.

I may inform you that a petition is in course of signature protesting against the lease being granted, and further that a deputation will wait on the Minister for Lands this coming week, and would ask if the Council will co-operate. Ample notice as to time and date I shall be pleased to send you.

The Mayor and Councillors, North Sydney.

Yours obediently,  
EDWIN M. DIETRICH.

## No. 25.

E. M. Dietrich, Esq., to The Secretary for Lands.

Sir, S, York-street, Sydney, 10 October, 1892.  
The property owners and residents of the western shore of Lavender Bay, are desirous of presenting a petition, praying that you may not consent to granting a lease to any one for the purpose of erecting a public swimming establishment in Lavender Bay.

I would feel grateful if you would kindly inform me what day and hour it would be most convenient to receive the deputation.

Notice of which has already been sent to the Under Secretary for Lands.

Thanking you in anticipation, and trusting you will give me a fair notice so as to enable me to notify the many gentlemen who are anxious to attend.

I have, &c.,  
EDWIN M. DIETRICH.

A deputation desires to interview the Minister in reference to Mr. Halstead's special lease, for baths, at North Shore, Lavender Bay, and request the favour of an appointment.—J.P.M., 12/10/92. Submitted.—R.H.D., 12/10/92. Special.—Inform in terms of minute of the Under Secretary on miscellaneous leases, 92-7,850. (See No. 23).—H.C., 12/10/92. E. M. Dietrich.—M., 14/10/92.

## No. 26.

The Under Secretary for Lands to E. M. Dietrich, Esq.

Sir, Department of Lands, Sydney, 14 October, 1892.  
With reference to your letter of the 10th instant, desiring that an appointment be made to receive a deputation of residents and property owners of the western shore of Lavender Bay, with a view to presenting a petition, praying that the application for swimming baths, at Lavender Bay, made by Mr. James Halstead, be not granted, I have the honor, by direction of the Secretary for Lands, to inform you that, as the lease has been approved, upon the recommendation of the Local Land Board, and objections were called for by notice in the *Government Gazette*, of the 14th July, 1892, and heard by the Board previously to its recommendation, no action can now be taken in the direction sought, viz., to prevent the lease being granted.

I have, &c.,  
WM. HOUSTON,  
Under Secretary  
(Per R.H.D.)

## No. 27.

E. M. Dietrich, Esq., to The Secretary for Lands.

*Re* application for lease for public bathing establishment in Lavender Bay.

Sir, S, York-street, Sydney, 14 October, 1892.  
The following information has come to my knowledge, and should play an important part in the refusal of the above-mentioned application, viz.:—That on the 28th April, 1892, the North Sydney Council made an application for permission to erect public baths, on that piece of water frontage land between the foot of Walker-street and George-street, recently resumed by the Government.

On the 28th of June, 1892, a reply was received by the North Sydney Council from the Department of Lands to the following effect, viz.:—"The site suggested between George and Walker Streets would not be suitable in respect to its position, being overlooked by many houses, and being adjacent to the outlet of sewage from the largely populated area round those streets.

We trust the reply to be given to the present application, will be the same as that given to the North Sydney Council on 28th June, 1892, as we are convinced that reply was sound, and entirely consistent with facts; and as the site of the present application is contiguous to that refused by the Land Department on 28th June, 1892.

The

The property owners and residents of Lavender Bay trust the opinions of the officers of the Lands Department have not changed since that date, particularly as the objections expressed are intensified in the present application, the habitations being more numerous, and the main drain from Blue's Point Road, and surrounding neighbourhood, empties itself into Lavender Bay, 80 feet from the proposed site.

Trusting that these further and weighty objections will have the desired effect of the application being refused.

I have, &c.,  
EDWIN M. DIETRICH.

No. 28.

J. Halstead, Esq., to The Under Secretary for Lands.

Dear Sir,

Lavender Bay, 15 October, 1892.

I am informed Mr. Dietrich, and a few residents of Lavender Bay have petitioned against me erecting my baths, and a deputation is about to wait on you to that effect, but I trust that the Honorable Minister and yourself will seriously consider the selfishness on the part of these people.

I may state that the gentlemen who are raising the objection have their own private baths erected in the Bay for their own and friends convenience, these baths are more exposed than mine will be.

The majority of the people who have signed the petition are friends also, some not even residents of North Sydney.

If it were necessary for me to get up a petition to erect baths, I could have it signed by nearly all the population of North Sydney, as bathing accommodation is very insufficient, the public bath having been resumed by the Government. I intend that my baths will be well enclosed and well conducted, more so than some of the private ones.

My own houses are the only ones that any nuisance might occur to.

I have already expended a great deal of money in erecting same.

I have, &c.,  
JAS. HALSTEAD.

No. 29.

E. M. Dietrich, Esq., to The Under Secretary for Lands.

Sir,

8, York-street, Sydney, 15 October, 1892.

Your favour of the 14th of October, 1892, in reference to our application to present a petition to you in protest to an application for permission to erect a public bathing establishment in Lavender Bay.

I am pleased to note that the application has only been approved, and again must urge on you to stay progress, so as to give the residents and property owners on the western shore an opportunity of stating their objections, which after all is only a fair demand, as the request comes prior to the lease being granted.

We particularly urge on you to grant our request, as we surmise you would not intentionally injure all the other property owners for the interest of one man.

As to the notices in the *Government Gazette* calling for objections, it is hardly fair to make this omission irrevocable, as none of us were aware of such notice, and we trust that such an omission will not induce you to allow such an undesirable and intolerable nuisance to be forced on the residents of Lavender Bay.

I have, &c.,  
EDWIN M. DIETRICH.

Halstead's special lease for baths at Lavender Bay.—Mr. Dietrich had an interview with the Under Secretary on Friday last, I think, and perhaps the information he received would make any reply to this letter beyond an acknowledgment unnecessary. Mr. Halstead, in referring to the opposition to his lease, says if it were necessary he could get a large petition signed in favour of the baths.—J.P.M., 18/10/92. Submitted.

No. 30.

The Under Secretary for Finance and Trade to The Under Secretary for Lands.

Special lease—First payment.

Sir,

The Treasury, New South Wales, 17 October, 1892.

I have the honor to inform you that the sum of £3 15s. was paid into this office on the 15th instant, being rent during 1st October to 31st December, 1892, of the special lease mentioned in the margin.

I have, &c.,  
W. NEWCOMBE  
(For the Under Secretary).

Lessee, James Halstead; lease of 5 perches for public baths at county Cumberland, parish Willoughby.

No. 31.

Questions and Answers, Legislative Assembly, Wednesday, 19th October, 1892.

Question.

17. PUBLIC BATHS AT LAVENDER BAY :—Mr. Cullen asked THE SECRETARY FOR LANDS,—

(1.) Is it a fact that on the 25th of April the North Sydney Council made application to the Government for permission to erect public baths at the head of Lavender Bay, and that on the 28th June the application was refused, on the grounds that many houses overlooked the proposed site, and that it was adjacent to the outlet of the sewer.

(2.) Is it a fact that a private individual applied a few days after for a similar privilege, and, notwithstanding the urgent protests of the residents of the Bay, the Government has approved of his application?

(3.)

- (3.) Is it a fact that the site of the public baths applied for by the private individual is more exposed to the view of private residences, and nearer to the main sewer down George-street, than the site applied for by the Council?
- (4.) Is it a fact that the Department of Lands has refused to receive a deputation of the residents of the Bay, whose object was to present a petition against the establishment of the proposed baths?
- (5.) Seeing that the local residents are unanimously opposed to the erection of the baths, will he stay the granting of a lease until they have further opportunities of urging their objections?
- (6.) Is he aware that the applicant has already, and before the lease has been granted, commenced the construction of the baths; and will he order the discontinuance of such construction, pending further inquiry?
- (7.) Why, in view of the refusal to the North Sydney Council of the right to construct public baths in Lavender Bay, should a private individual's application be approved?

*Answer.*

Mr. Copeland answered,—

- (1.) The Council, by letter of the 25th April, asked for a site for baths, but the area desired was not available, having been appropriated for railway purposes. The Council was so informed on the 28th June, and also that the site described by it was overlooked by many private houses.
- (2.) On the 22nd June, 1892, Mr. Halstead applied on proper form to lease a site for baths in front of his own property. On the 14th July (and on subsequent dates) objections were called for by notice in *Gazette*, and in the *Star* and *Telegraph* on the 26th, same to be lodged prior to the 14th August last. Only two objections appear to have been received in time, and they were considered by the Local Land Board, who reported on the 16th August, recommending the issue of a lease. Since the time for lodging objections expired some ten letters have been received, protesting against the lease, but prior to receipt thereof the Minister had approved of the Board's recommendation.
- (3.) One of the conditions attached to the lease is that bathers shall be screened from the view of the public. The sewer is apparently on the north side of George-street. The land applied for by the Council fronts George-street, and Mr. Halstead's site is 140 feet further from the sewer than the site applied for by the Council.
- (4.) Mr. Dietrich wrote on the 7th instant to the Minister to stay proceedings, pending the receipt of a petition to be presented by a deputation, to which a reply was sent on the 14th instant, to the effect that the lease had been approved, and that objections called for in July last had been considered by the Board, and further, that no action can now be taken to meet the views of the objectors, even if thought desirable.
- (5.) The lease having been granted, I see no grounds of justification for withdrawing it, especially as the Council and local residents saw no objection to a bath when the Council's application was under consideration.
- (6.) (a) No. (b). I see no reason for taking this despotic action.
- (7.) This is answered by No. 2.

No. 1.

Office Memorandum.

Minute Paper.

*Subject* :—Resumption of Cavill's Swimming Baths, Lavender Bay.

Department of Public Works, Sydney, 25 April, 1892.

MR. F. CAVILL, the late proprietor of the swimming baths at Lavender Bay, waited upon the Minister on Saturday last, to bring under his notice what he considered to be a great hardship in respect of the resumption of the baths, and the offer to him of £500 as compensation as a matter of grace.

Mr. Lyne had the papers before him, and went fully into the matter, explaining that the offer was simply a matter of grace, and that he was not disposed to increase the amount, in fact he definitely declined to do so, for the reason fully disclosed in the papers.

Mr. Cavill then asked whether the Minister would assist him to procure a site for baths elsewhere, and Mr. Lyne promised that he would have the matter investigated if Mr. Cavill would submit a plan showing the site he proposed.

This Mr. Cavill has now done, the site suggested by him being indicated in blue on the accompanying sketch.

497—

It will be seen that he is asking for 200 feet on the western side of the promontory, on which "Mrs. Macquarie's Chair" is situated.

The Lands Department will have to be applied to respecting the proposal, but the Minister would like Mr. Darley to look into it and see whether there be any objection on the part of this Department to the granting of a lease of the site in question.

A sketch is also attached showing the kind of baths which Mr. Cavill proposes to erect.

Mr. Lyne would be glad to be furnished with a report upon the subject as soon as possible.

J.B.

Urgent. Mr. Darley.

The proposed baths would occupy a space about 115 feet long and 66 feet wide outside the sea-wall on the eastern side of Farm Cove. I think if the structure was made to a neat and ornate design, to the approval of the Government Architect, that there would be no objection. The Marine Board should be consulted as to whether the structure would interfere with the space dedicated for mooring H.M. ships of war.—C. W. DARLEY, 26/4/92. The Under Secretary for Public Works.

Submitted.—J.B., 30/4/92.

I do not think this structure could possibly interfere with the mooring of H.M. ships, and therefore this paper may be forwarded to the Secretary for Lands direct. As this Department deprived Cavill of the baths at Lavender Bay, I should like to let him a frontage at or near the spot asked, provided he agrees to erect a slightly and suitable structure to be used as new baths.—W.J.L., B.C., 5/5/92.

Under Secretary for Lands, and two plans.—J.B., 5/5/92.

Submitted that a report from the District Surveyor may be called for, prior to Mr. Cavill being asked to apply for a special lease, which application would be dealt with on its merits.—J.P.M., 10/5/92. R.H.D., 10/5/92.

Submitted, in view of minute of the 5th instant, by the Honorable the Secretary for Public Works.—W.H., 10/5/92.

I fully concur with the Secretary for Public Works that as that Department deprived Mr. Cavill of his baths at Lavender Bay, it would be desirable to grant him a lease in a suitable position. The District Surveyor may make a report on the position suggested, and may treat the matter as urgent.—H.C., 12/5/92.

The District Surveyor, Sydney.—J.P.M. (for U.S.), B.C., 13/5/92.

## No. 2.

### The Chief Surveyor to The Under Secretary for Lands.

#### Site for a Floating Swimming Bath.

23 May, 1892.

MR. CAVILL was lessee of the swimming baths at the head of Lavender Bay, which have been resumed in connection with the Milson's Point branch of the Northern Railway; he now desires to obtain a site for floating baths, to be moored near the shore in a place which shall be convenient for public use.

It is recognised that such a bath should not be more than (say) 25 feet from the shore, in order to be easy of approach by a gangway; also that it should be moored off land, under control of the Department, with access thereto, unless with consent of proprietors if moored off alienated land.

Mr. Cavill desires to obtain a site in Farm Cove, near the point known as "Mrs. Macquarie's Chair" (indicated as No. 1 on the plan herewith), and in regard to this or any site in Farm Cove, I am of opinion that there would be objection to any such floating structure, for no matter how ornamental, it would be an obstruction and would be an eyesore, and not in harmony with the surroundings of this, which may be regarded as the most picturesque bay of Port Jackson.

I feel confident that such a site would meet with opposition on part of a considerable section of the public.

There is a site alongside of, and eastward of Fort Macquarie (No. 2), to which, in my opinion, there is similar objection, but perhaps in somewhat less degree, as there is to the site desired at "Mrs. Macquarie's Chair" (No. 1).

Accompanied by Mr. Cavill, I also inspected a site (No. 3) northward of, and adjacent to the University Boating Club sheds, which might be utilised; but I am averse to recommending it as I am impressed with the desirableness of keeping the foreshores of the Domain and the Gardens, and the approaches thereto as free as possible from any erections or structures, floating or permanent. And touching the foreshore of the Domain, on to Woolloomooloo Bay, I think the Corporation, and other baths there, should soon be removed; circumstances have changed since they were erected, and there are objections to be advanced against public baths in close proximity to a park so much frequented.

Of course the desirableness of public swimming baths must be readily admitted, as they afford the means of health and recreation to the community; but at the same time it would not be judicious to sacrifice anything of the most picturesque foreshore of the most beautiful recreation ground in the country, when there is such a vast extent of water frontage available around the city and environs, to which access is obtainable by numerous ferry-steamers and trains.

It is not known what the intentions of the Government may be with regard to the extensive frontage around Lavender Bay which has been resumed for railway purposes; and it may be practicable to select a suitable site somewhere along the eastern shore—the probable difficulty would be means of access. There can be no doubt that Mr. Cavill has selected the site most desirable for his purpose, viz., sheltered from the north-easterly winds, and in a bay into which there is little or no noisome drainage; but the objections which I have pointed out are weighty, and would, I think, soon be urged in a forcible manner. Moreover, it is probable that it would be expedient to bring the matter under notice of the Colonial Secretary, the Domain being under his jurisdiction, and the Marine Board before entertaining the application for this or either of the other two sites (2 and 3).

It is suggested that the Minister for Public Works might be moved to state the intentions of the Government with regard to the railway frontage in Lavender Bay, for, if there be no intention of utilising it immediately for wharfage, it might be practicable to locate a swimming bath there, if access thereto can be provided across the railway line.

E. TWYNAM.

It

It appears that it would be objectionable to entertain Mr. Cavill's proposal for a lease for a swimming bath at the extremity of "Mrs. Macquarie's Chair," which is much frequented by the public. The proposed structure would also interfere with the free navigation of the bay by yachts and small boats. Action might, however, be taken in the first instance as suggested in the concluding paragraph of Mr. Twynam's report.—W.H., 26/5/92.

Urgent. Forward to the Minister for Works.—H.C., 26/5/92. The Under Secretary for Public Works.—J.P.M. (for U.S.), B.C., 27/5/92. Submitted.—J.B., 28/5/92. Is my honorable colleague in favour of granting Cavill the concession asked for by him?—W.J.L., 30/5/92. Under Secretary, Lands.—J.B., B.C., 31/5/92. Submitted—*vide* minute of the 26th inst. on back hereof.—W.H., 2/6/92.

I see no objection to No. 1 site, provided the Marine Board urge no forcible objections. It may be pointed out that the bathers will be invisible to persons outside, and in any case they will wear drawers. Subject as above, I should see no objection to granting a five years' lease, when, if the arrangement was found objectionable, a renewal of the lease could be refused. Forward papers to Marine Board and ask them to expedite, as the matter is urgent.—H.C., 2/6/92. Under Secretary Finance and Trade, with papers, 3/6/92.

### No. 3.

#### The Under Secretary for Lands to The President, Marine Board.

Sir,

Department of Lands, Sydney, 3 June, 1892.

I have the honor, by direction of the Secretary for Lands, to forward herewith papers quoted above, respecting a proposed site for swimming baths at Mrs. Macquarie's Chair, with a view to ascertaining whether the Marine Board entertain any objection to a special lease being granted to Mr. Cavill for the purpose in the position shown, marked "1" on the accompanying lithograph.

I have to request that the report be expedited, as the matter is urgent.

I have, &c.,

WM. HOUSTON,  
Under Secretary

(*Per* R.H.D.)

Approved.—J.S., 8/6/92. The Secretary, Marine Board.—F.K., 8/6/92. See minute attached.—GEO. S. LINDEMAN, 15/6/92. The Under Secretary for Finance and Trade. The Secretary for Lands.—I concur in the views expressed by the Marine Board.—J.S., 20/6/92. The Under Secretary for Lands.—F.K., 20/6/92. Submitted.—F.H.W., 22/6/92. W.H., 23/6/92.

[*Enclosure.*]

15 June, 1892.

THE Marine Board strongly object to the proposed baths being moored anywhere in Farm Cove, which at the present time is the most finished and beautiful bay in Port Jackson.

It is also so crowded occasionally with men-of-war and yachts as to make it desirable to conserve all the water space possible in this favourite resort.

The height at Mrs. Macquarie's Chair, overlooking the site marked "1," is also the termination of a favourite carriage drive. It would be, therefore, very undesirable to allow bathers to occupy the waters near this frequented spot. The Board offer no objections to the site marked "3" on the accompanying plan.

By order,

GEO. S. LINDEMAN.

### No. 4.

#### Mr. F. Cavill to The Secretary for Lands.

Sir,

49, Alfred-street, North Sydney, 7 July, 1892.

In reference to my proposed floating baths in Farm Cove, I am informed that the Marine Board are opposed to its being placed in that site.

I feel certain that their opposition would be removed if they saw the actual structure. There cannot possibly be any objection to the bath being placed there, as every care will be taken to prevent its becoming a nuisance.

I would therefore respectfully request that I might be allowed to place it there for twelve months in order to test the public opinion. Should the supposed objection be found to exist, I will undertake to remove it at the end of that period.

I have, &c.,

FRED. CAVILL.

Attach to other papers in the case.—H.C., 8/7/92.

I have personally inspected the site marked "No. 1" on accompanying litho., and unofficially had the benefit of Mr. Darley's, Chief Engineer, opinion on this question, and notwithstanding the objections of the Marine Board, endorsed by my honorable colleague, the Treasurer, as well as the adverse report of the Chief Surveyor (Mr. Twynam), I personally can see no forcible objection to the establishment of ladies' and gentlemen's baths at the eastern side of Farm Cove. It is essentially necessary to the health of the people, and particularly desirable in developing the rising generation of both sexes, that every encouragement should be given to bathing. Nothing can be more calculated to produce a vigorous race than the exercise of swimming. But for this practice to become popular, suitable and convenient sites must be chosen on our foreshores, where the water is freest from contaminations incident to the harbour. These advantages seem to be more attainable in Farm Cove than in any of the other situations suggested. As to bathing at this site being objectionable to the frequenters of the carriage drive past Lady Macquarie's Chair, this does not appear to me to carry much force. In the first place, the bathers will not be visible; in the second place, if they were visible, they will bathe in dresses; in the third place, bathing is extremely indulged in at such places as Brighton, Scarborough, and other fashionable resorts in England, and at St. Kilda, and occasionally at Coogee in these colonies; and lastly, the probabilities are that the carriage people will themselves be very glad to indulge in the use of the baths and be benefited thereby. It is intended that the bath-house shall be an ornamental structure, so as in no way to detract from the beauties of the situation, while the benefit to our daughters of being taught to swim by mistresses of the art

art will be a lasting source of pleasure and safety to them through life, and would much outweigh any fanciful objection to a bathing-house being located in this position. The building, which is purposed to be moored 15 feet from the wall, can in no possible way interfere with navigation or with the moorings of the men-of-war, while to adopt either Nos. 2 or 3 sites would be objectionable, as the vessel would be exposed to the north-east, east, and south-east winds. Under all the circumstances, therefore, I have decided to approve of a lease being granted for No. 1 site, but for one year only, in case my judgment should prove erroneous. Should, however, no valid objection be found to exist, the lease at the end of the first year shall carry with it the right of renewal for a further term of five years, without increase of rental. The plans of the bathing-house must be submitted for the approval of the Minister, and the vessel moored by piles, so as to avoid the moorings extending into the Cove, and in the event of the lease not being renewed at the end of the first year, he must remove the bathing-house without compensation. Mr. Cavill may now be advised to make a formal application, which may be forwarded to the Board, as the within minute merely expresses my own personal views on the subject.—H.C., 11/7/92.

Send form 45.—J.P.M., 12/7/92. Mr. Cavill asked, and form sent.—J.P.M., 15/7/92. Forwarded to Chairman, Local Land Board, Sydney (in connection with any application that may be made).—J.P.M. (for U.S.), B.C. Lands, 14/7/92.

---

No. 5.

Application by Mr. F. Cavill.

Crown Lands Acts Regulation No. 150. Application for special lease.

I, FREDERICK CAVILL, hereby apply for a special lease for floating swimming baths.

Purposes of the land hereunder described, and shown on the accompanying plan and tracing, and I offer to pay an annual rental thereof of £10. Enclosed is a receipt showing that a deposit of £5, and a survey fee of £1, have been paid to the Colonial Treasurer.

Signed this 26th day of July, 1892.

To the Chairman of the Local Land Board at Sydney.

FRED. CAVILL,  
49, Alfred-street, N.S.

DESCRIPTION.

Land District of Metropolitan, County of Cumberland, parish of Alexandria. For floating baths, Farm Cove. Commencing at a point on the east side of Farm Cove, about 50 feet northerly from the north side of jetty, as shown on tracing, and about 12 feet west from sea-wall; thence west 50 feet into the waters of Farm Cove; thence north 200 feet; thence east 50 feet; thence south 200 feet to the point of commencement.

Referred to District Surveyor to note.—B.S.L. (*pro* Chairman), 28/7/92. Observed and noted.—E. TWYNAM, District Surveyor. The Chairman, 4/8/92. Forwarded to the District Surveyor for survey and report as to annual value.—B.S.L. (*pro* Chairman), 8/8/92. Mr. Surveyor Perdriau. For the necessary action.—E. TWYNAM, District Surveyor, 11/8/92.

[Enclosure.]

New South Wales, The Treasury, 26 July, 1892.

RECEIVED from Frederick Cavill the sum of £6 sterling for deposit on application for a special lease for a floating dock at Farm Cove, awaiting disposal of application. £5 deposit, £1 survey fee—total £6.

C. E. F. ROBBERDS  
(*Pro* Treasurer).

---

No. 6.

Mr. F. Cavill to The Under Secretary for Lands.

Sir,

49, Alfred-street, North Sydney, 31 July, 1892.

In compliance with the request contained in your letter of the 15th instant, I have the honor to forward herewith, for the approval of the Minister for Lands, a plan of the proposed floating swimming baths for Farm Cove.

I may also state that I agree to the condition laid down in your letter referred to, and have duly forwarded an application for a special lease to the Chairman of the Local Land Board.

I have, &c.,  
FRED CAVILL.

Forward to the Chairman of the Local Land Board.—W.H., 2/8/92.

---

No. 7.

Memorandum by The Secretary for Lands.

As this matter is urgent, inasmuch as Mr. Cavill will not be able to have the baths ready for the coming season unless the case is immediately dealt with, I think the case might be dealt with by the Board without giving the twenty-eight days' notice usual in such matters. This course may, I think, be safely adopted, inasmuch as the Minister for Works, also the Engineer for Harbours and Rivers, both favour the proposal, and see no objection whatever to granting the concession. Mr. Perdriau may be asked to furnish a report to the Board by Monday next.—H.C., 12/8/92.

The Chairman, Local Land Board, Sydney.—B.C., 12/8/92. For the information of the District Surveyor, with regard to furnishing evidence in this case.—T. WARRE HARRIOTT, Chairman, 12/8/92.

Mr. Levick. As this appears to be a direction to dispense with the prescribed course in considering applications for special lease, a notice to applicant, to the Department of Harbours and Rivers, and to the Marine Board should be furnished, stating that the case will be brought before the Local Land Board on Tuesday, 16th (say, 11 o'clock).—T.W.H., 12/8/92.

Applicant, Harbours and Rivers, and the Marine Board notified as to date of hearing.—B.S.L., 12/8/92.

## No. 8.

The Chairman, Local Land Board, Sydney, to The Engineer-in-Chief for Harbours and Rivers.

Department of Lands, Sydney, Land Board Office, 12 August, 1892.

Sir, Metropolitan Special Lease, 92-28—Frederick Cavill.

I have the honor to inform you that the application for a special lease of an area on the east side of Farm Cove, about 50 feet northerly from the north side of jetty, made by Frederick Cavill for the purpose of floating swimming baths, will be dealt with by the Local Board, at Steamship Owners' Association Rooms, 7, O'Connell-street, on Tuesday, 16th August instant, at 11 a.m.

I have, &c.,

T. W. HARRIOTT,

Chairman  
(Per B.S.L.)

## No. 9.

## Decision of Local Land Board.

Crown Lands Act of 1884—(Part II., section 14, sub-section 4).

New South Wales, }  
to wit. }

WHEREAS, on the 16th day of August, 1892, it became a matter for investigation and appraisalment by us of an area applied for as a special lease under the application noted in the margin, made by Frederick Cavill, for the purpose of floating swimming baths, and having taken evidence, and inquired into the said matter,—

In the absence of any evidence brought before us in opposition to granting this application, we can report no objection to the granting of a lease as noted by the Minister, if the approach from the public Domain can be legally provided for, since the purpose appears to be such as can be brought under the provisions of section 89.

We appraise the rental for one year at £20, but we are of opinion that the amount of rent should be reconsidered should the site be leased for a longer term.

Given under our hands, at O'Connell-street, at Sydney, in the Colony of New South Wales, this 16th day of August, 1892.

T. WARRE HARRIOTT, Chairman.  
HENRY EAGAR, Member.

Noted in register. No appeal lodged.—B.S.L., 13/9/92. Boards recommendation is submitted. If approved of, perhaps the conditions on paper A should be adopted, and the date of commencement of lease fixed.—J.P.M., 14/9/92. Very special.—R.H.D., 14/9/92. F.H.W., 14/9/92. May perhaps be approved, with the necessary changes in the conditions to suit a floating bath.—W.H., 14/9/92. Approved.—H.C., 15/9/92.

## [Enclosure.]

THIS deponent, *Frederick Cavill*, recalled, being duly sworn, maketh oath, and saith as follows :—I think £100 a year would be far too much ; I held baths at Lavender Bay for ten years ; I paid nothing for four years, but had to expend money on the baths ; from first to last I expended over £2,000 ; I was limited to 3d. as charge to general baths, and eventually to 6d. for ladies' baths ; the takings for the bath would be from £300 to £400 a year, and the accommodation would be for ten times as many as the present baths.

Sworn by deponent, Fred. Cavill, at Sydney, this }  
16th of August, 1892,—

FRED. CAVILL.

T. WARRE HARRIOTT, Chairman.  
FRED. A. FRANKLIN, }  
HENRY EAGAR, } Members.

THIS deponent, *Frederick Cavill*, of North Sydney, professor of swimming, being duly sworn, maketh oath, and saith as follows :—I made an application for a site for baths in Farm Cove ; I propose they should be floating baths, occupying an area of 200 feet by 50 feet, and moored to piles driven on outside lines, secured by eight piles, as shown on plan ; they are to be covered sufficiently to prevent overlooking, but sufficient open space will be left for ventilation ; I propose to connect it with the land by a platform attached to the land, and shifting or movable on the deck of the baths ; I propose to remove a portion of the stone wall about 4 feet to give access from the Domain to the baths ; I don't propose to exercise that right except under authority of the Government ; I expect to have to pay for any alteration there to suit my purpose, but I cannot claim any right to do so ; the depth of water is about 7 feet at low tide at deep end of bath, and 3 feet 6 inches at shallow end ; on site proposed I should get sufficient water to float it ; it is to be constructed on pontoons, placed at intervals ; the bottom is hanging, and floats up and down inside the lining, and could be put to a single level if necessary ; it can be readily cleansed by this means ; I reckon it will be worth from £1,500 to £2,000 when complete ; I am engaged in the structure now.

Sworn by this deponent, Fred. Cavill, this }  
16th of August, 1892,—

FRED. CAVILL.

T. WARRE HARRIOTT, Chairman.  
FRED. A. FRANKLIN, }  
HENRY EAGAR, } Members.

THIS deponent, *Stephen Edward Perdriau*, of Sydney, staff surveyor, representing District Surveyor, being duly sworn, maketh oath, and saith as follows :—I know the area on the eastern side of Farm Cove applied for by Mr. Cavill for floating baths ; it is 50 feet northerly from the Governor's jetty in the Outer Domain ; the area proposed to be occupied is 50 ft. by 200 feet, and that is 12 feet from the reclamation wall ; 200 feet by 50 feet will be 36½ perches ; without the approach the height of the wall above the pathway will be about 2 ft. 6 in. ; I do not know under what authority the land was reclaimed ; the whole of the Domain, of which this forms a part, is a public reserve, but has never been claimed as a reserve ; as I am aware of no dedication, and I don't know whether it was reclaimed under an Act of Parliament ; I know of no objection to placing the baths here so long as they are sightly, and bathers are not exposed to public view ; it is well out of the most frequented part of the Domain, and of navigation of passage of vessels of any importance ; no moorings laid down that would be interfered with ; they will not materially interfere with access to the Governor's jetty ; it is the most attractive and profitable

profitable site for baths in Sydney harbour; the depths of water at the corners of the site are, at low tides—N.E. corner, 6 feet; N.W. corner, 14 feet; S.W. corner, 10 feet; S.E., 18 inches; judging from the value of similar positions to this on the east side of Circular Quay, where it would be worth about £1,000 a year, and on the eastern side of Woolloomooloo Bay, where the water frontage land is well worth £40,000 an acre, I think this site is worth £100 a year for five years lease; applicant is not put to the expense of acquiring any land adjoining the site.

STEPHEN E. PERDRIAU.

Sworn by deponent, at Sydney, this }

## No. 10.

### Office Memorandum.

Cavill's baths, Farm Cove—Proposed special lease in connection herewith—As to conditions.

SUGGESTED:—

1. The lease not to confer any right to purchase any land, either below or above high-water mark.
2. The lease to be for one year only, with the right of renewal for a further term of five years without increase of rental, should the Minister approve of such renewal prior to expiration of the first year's tenure.
3. The plans of the bathing-house, and all external works connected therewith, to be submitted to and approved by the Minister for Lands prior to commencement of same.
4. The bath to be moored to piles, to avoid extending moorings into Farm Cove, and in such a manner as not to interfere with the navigation of the Cove.
5. If an extension of the lease be not granted the lessee must remove the bathing-house, piles, and all works connected therewith, within two months from date of notice, in writing, to do so, and without compensation.
6. The right is reserved of terminating the lease at any time after the expiry of one year by giving not less than six months' notice in writing to that effect.
7. If the lease be terminated, as in condition six, or expire by effluxion of time, the lessee to remove all buildings, piles, structures, &c., within two months of such termination or effluxion, without compensation.
8. The baths to be open to inspection by any officer appointed by the Minister for Lands for that purpose.

Memo.—The above conditions are submitted. Nos. 2 to 5, both inclusive, are founded on the Minister's memo, of 11/7/92, on papers 5,143. Nos. 1, 6, 7, and 8 are taken mainly from the printed set, marked "A," herewith. The others in that set may not be deemed applicable, as Mr. Cavill's own interest will no doubt do all that is required.

Attention is also drawn to the point whether any maximum charge for bathing is to be made a condition of the lease.

Attention is also drawn to the rent. The Minister, in his memo of 11/7/92, says the rent during the period of renewal (if lease be renewed) should not be increased. The Board in its report of 16th August last remarks:—

"We appraise the rental for one year at £20, but we are of opinion that the amount of rent should be reconsidered should the site be leased for a longer period."

R.H.D., 21/9/92.

No reference to charges should be made in the conditions. The rent should probably be the same for the renewed period as for the twelve months' tenure. [*Vide* decision of the 11th July last.] The conditions as proposed are submitted for final approval.—W.H., 21/9/92.

Approved as amended. [*See* amendment in clause 6.]—H.C., 26/9/92. Rent called for. Treasury informed. Deposit and survey fee to be applied towards rent.—J.P.M., 27/9/92.

[*Enclosure.*]

19 September, 1892.

THE lease does not confer any right to purchase the land. The lessee is to remove the structure at his own cost, and without compensation, upon determination of the lease, should he be required in writing by the Government to do so. A good and substantial structure is to be constructed within six months from this date, upon the land leased, to the satisfaction of the Harbours and Rivers Department, and such structure is to be kept in good and efficient condition, and in a thorough state of repair, throughout the currency of the lease. The right is reserved to terminate the lease at any time during its currency by giving not less than six months' notice in writing to that effect. The baths to be constructed in such a manner as to screen bathers from the view of the public, and to be conducted under the following regulations and charges for their use, viz. :—The baths and premises shall be kept open to the public from daybreak until dark on every lawful day, and on Sundays, Good Friday, and Christmas Day from daybreak until the hour of 9 in the morning; but before any person shall be permitted to enter for the purpose of bathing a fee, not exceeding 3d. for adults and 1d. for children not exceeding 12 years of age, shall be paid to the party having charge of the baths, and for such fee each adult shall be provided with two towels (and each child with one towel), and other conveniences for dressing, and to have the sole use for the time of one of the compartments provided for the purpose.

All persons who may visit the baths shall, whilst within the premises, conduct themselves in a decent, orderly, and proper manner, any person breaking this rule to be immediately expelled from the premises. If any person under the influence of liquor shall be found upon the premises he shall be immediately expelled therefrom.

Dogs shall not, upon any pretence whatever, be permitted upon any part of the premises.

The premises to be open for entry and inspection by any officers appointed to that duty by the Minister for Lands.

It is not thought necessary to call for objections, as "bathing-places" come under the 90th section Act of 1884.

It is submitted whether the conditions as amended would be suitable for Mr. Cavill's special lease for baths site at Farm Cove. J.P.M.

Submitted specially.—R.H.D., 19/9/92. F.H.W., 20/10/92.  
Mr. De Low, 19/9/92.

## No. 11.

## Mr. F. Cavill to The Secretary for Lands.

Sir,

49, Alfred-street, North Sydney, 29 September, 1892.

I have the honor to forward you plans of floating bath for Farm Cove for your approval.

Mr. Darley, of the Harbours and Rivers Department, thinks it would be advisable to place the baths a greater distance from the shore, in order to allow floating refuse to pass by. I would, therefore, ask to be allowed to place the bath at a distance of not more than 20 feet, instead of 12 feet, as shown on plans.

I have, &amp;c.,

FRED. CAVILL.

Submitted.—J.P.M., 29/9/92.

Cavill's baths,—The plan is submitted for the Minister's consideration, &c., in accordance with conditions of lease. The request to extend the space between the wall and the baths is also submitted. The plan shows the distance to be 12 feet.—R.H.D., 29/9/92.

Refer to Works for views of the Engineer for Harbours and Rivers.—W.H., 30/9/92. The Under Secretary for Works, B.C., 30/9/92. Harbours and Rivers.—J.W.H. (for U.S.), B.C., 1/10/92. I see no objection to the issue of a lease in the terms named herein. The distance out from the wall, 20 feet, may also be approved of, as it can form no obstruction.—C.D., 4/10/92. The Under Secretary.—P.W. Submitted.—J.B., 4/10/92. Approved.—W.J.L., 7/10/92. The Under Secretary for Lands.—J.B., B.C., 7/10/92. Submitted.—J.P.M., 8/10/92. R.H.D., 10/10/92. Special.—F.H.W.

The only special feature is as to the proposal to moor the structure 20 feet from the sea-wall, instead of 12 feet, as at first proposed, to which there is no objection by the Harbours and Rivers Department.—W.H., 10/10/92. Approved.—H.C., 10/10/92. Fred. Cavill.—J.P.M., 11/10/92, end of October.

## No. 12.

## Mr. J. T. Foley to J. Morgan, Esq., M.P.

Geological Survey, New South Wales,

Department of Mines, Sydney, 13 October, 1892.

My Dear Morgan,

I know that you will help me if you can; and if you can see your way to it under the following circumstances, I wish you to try.

The baths which I hold under lease from the City Council are held by the Council under lease from the Department of Lands at a rental, and now, much to my surprise, and without the knowledge or concurrence of the City Council, piles are being driven in the waters of Farm Cove, to enable Mr. Cavill to moor thereto floating baths, thus inflicting injustice upon both the City Council and myself. May I ask you to make such inquiries into this procedure as will have a tendency to conserve the interests of

Yours truly, and oblige,

J. T. FOLEY.

Submitted, that Mr. Foley, through Mr. Morgan, M.P., may be informed that full consideration has been given to the matter, and that it is not considered necessary to disturb the lease granted to Mr. Cavill.—J.P.M., 18/10/92. R.H.D., 19/10/92. Special.—F.H.W., 20/10/92. For approval.—W.H., 20/10/92.

Approved.—H.C., 5/11/92. J. T. Foley (per J. Morgan, M.P.) informed.—8/11/92. Under Secretary for Lands. That permission be granted F. Cavill for entrance to floating baths, Outer Domain, Farm Cove, 20/10/92.

## No. 13.

## Mr. F. Cavill to The Secretary for Lands.

Sir,

Floating Baths, Farm Cove, 20 October, 1892.

Mr. Moore, of the Botanical Gardens, called on me this morning, and stated that I had no right to make an entrance from the Domain to the baths, and that unless I obtained permission from the Colonial Secretary he would immediately close them up.

I called on Mr. C. Walker, the Principal Under Secretary, in reference to the same, and he says that he has nothing to do with the Domain,\* and advised me to see you. Will you please send him (Mr. Moore) the necessary permission.

I have, &amp;c.,

FRED. CAVILL.

\* This is a mistake; I never said anything of the kind.—C.W.

Mr. Cavill has a special lease for floating baths in Farm Cove; the approach to the baths is from the Outer Domain, not the Botanic Gardens. A small portion, probably 12 feet of the sea-wall built by the Government, will require to be removed to enable Mr. Cavill to use the area of water surface, *i.e.*, for the lease to be operative. Perhaps the Hon. the Colonial Secretary may be invited to grant the necessary permission to Mr. Cavill.—R.H.D., 20/10/92. Submitted.—F.H.W., 20/10/92. W.H., 20/10/92.

I hope my honorable colleague the Colonial Secretary will give his approval to this matter as it is urgent. There has been so much delay that the bathing season will be lost to the public, if approval is deferred.—H.C., 20/10/92.

The Principal Under Secretary for Lands.—R.H.D. (for U.S.), 20/10/92. Refer to Mr. Moore for report as to whether there would be any objection to the proposed entrance to the baths.—C.W., B.C., 21/10/92.

Mr. Cavill, the owner of a floating bath in the bay, broke through the retaining sea-wall without any authority, so far as I knew. As Director of the Domain, I intimated to Mr. Cavill that the Colonial Secretary's sanction must be obtained, or I should have to close up the opening made.—C. MOORE, Botanic Gardens, Sydney, New South Wales, 22/10/92.

This may perhaps be sanctioned.—C.W., 22/10/92. Approved.—G.R.D., 22/10/92. Inform Mr. Moore and Mr. Cavill.—C.W., 24/10/92. Mr. Cavill and the Director of the Botanic Gardens, 24/10/92.

## No. 14.

Mr. A. Byrne to The Honorable the Premier.

A. Byrne, *re* permission granted to Mr. Cavill to moor baths in Farm Cove.

37, Princes-street, Sydney, 24 October, 1892.

Excuse the liberty I take in calling your attention to a matter of very great importance to the citizens of Sydney. I have heard that permission has been granted for five years to a Mr. Cavill to moor baths in Farm Cove. I understand that consent was given at a Cabinet meeting. I only hope that you were not back from your Advance Australia trip when the Cabinet sanctioned such a request.

To myself and every one I have spoken to on the subject, we are of opinion that it is an abuse of power to place such a thing in the prettiest bay in Port Jackson; it is also a disfigurement and an encroachment on the limited water of such a popular place. Hoping it is not too late for the best Ministry in every sense that has ever been in office in New South Wales to reconsider this matter. Hoping you will excuse this hurried note from a political friend.

Respectfully yours,  
A. BYRNE.

P.S.—I visited the spot yesterday, and some of the passers-by were very strong about it, some saying it was the first, but not the last. I hope it is.

Minister for Lands.—G.R.D., 25/10/92. The Under Secretary for Lands.—C.W., P.U.S., B.C., 26/10/92.

## No. 15.

## Question and Answer.

LEGISLATIVE ASSEMBLY, WEDNESDAY, 26 OCTOBER, 1892.

*Question.*

19. FLOATING BATHS IN FARM COVE, SYDNEY HARBOUR,—MR. PARKES *asked* THE SECRETARY FOR LANDS:—

- (1.) Who gave permission for the erection of floating baths in Farm Cove, Sydney Harbour?
- (2.) The name of the lessee?
- (3.) What rent per annum will he pay, and what is the term of lease?
- (4.) Did the application go through the usual course, and if not, why not?
- (5.) Did the Public Works Department report upon the matter; if so, was it in favour of, or against the lease?
- (6.) Has he any objections to lay upon the Table of this House, all papers connected therewith?

*Answer.*

Mr. Lyne answered,—

- (1.) The Minister for Lands, on the report of the Land Board.
- (2.) Frederick Cavill.
- (3.) £20 per annum; the lease to be for one year, with right of renewal for a further term of five years, subject to the Minister's approval of such renewal, prior to the expiration of the first year's tenure.
- (4.) Yes.
- (5.) Yes; the Works Department saw no objection to the issue of the lease.
- (6.) There will be no objection, if the papers are moved for in the usual manner.

## No. 16.

Mr. F. Cavill to The Secretary for Lands.

Sir,

Floating Baths, Farm Cove, 5 November, 1892.

I much regret that I am unable to comply with the conditions laid down in my lease, *viz.*, of paying the balance of rent (£14) in advance, and therefore pray that I may be given one month's grace to enable me to do so; apologising for the great trouble I have already given you.

I have, &c.,  
FRED. CAVILL.

What is the total rent this lease is appraised at.—H.C., 8/11/92. The rent is £20 per annum. Mr. Cavill has paid £6 as deposit, which has been applied as part payment of rent, leaving a balance of £14 to complete payment of first year's rent.—J.P.M., 10/11/92. W.H., 14/11/92.

May have till 15th December, on which to pay balance.—H.C., 14/11/92. Mr. Cavill informed, 15/11/92.

## No. 17.

The Under Secretary for Lands to Mr. J. T. Foley.

Sir,

Department of Lands, 8 November, 1892.

With reference to your letter of the 13th October last, addressed to Mr. Morgan, protesting against Mr. Cavill's occupation of part of Farm Cove for the purpose of erecting baths, I am directed to inform you that the matter has received full consideration, and it is not deemed necessary to disturb the lease granted to Mr. Cavill.

I have, &c.,  
WM. HOUSTON,  
Under Secretary

## NEW SOUTH WALES.

# COINAGE ACT, 1891—EXCHANGE OF LIGHT GOLD COINS.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

The Treasury, New South Wales,  
5th July, 1892.

## COINAGE ACT OF 1891.—EXCHANGE OF LIGHT GOLD COINS.

His Excellency the Governor directs the publication, for general information, of the following Circular Despatch from the Secretary of State for the Colonies, enclosing copy of an Order of Her Majesty the Queen in Council, providing for the exchange of light Gold Coins under the Coinage Act, 1891.

JOHN SEE.

Sir,  
Downing-street,  
16th April, 1892.

I have the honour to transmit to you, for the information of the Colony under your government, the accompanying copy of an Order of Her Majesty the Queen in Council, providing for the exchange of light Gold Coins under the Coinage Act, 1891.

I have to request that you will take steps to publish this order in the usual manner in the Colony under your Government.

I am, &c.,  
KNUTSFORD.

The Officer Administering  
The Government of New South Wales.

At the Court at Windsor, the 16th day of March, 1892.

Present :—

THE QUEEN'S MOST EXCELLENT MAJESTY IN COUNCIL.

WHEREAS by the Coinage Act, 1891, it is enacted as follows :—

“(1.) It shall be lawful for Her Majesty, by order in Council, to direct that gold coins of the realm which have not been called in by proclamation and are below the least current weight as provided by the Coinage Act, 1870, shall, if they have not been illegally dealt with, and subject to such conditions as to time, manner, and order of presentation as may be mentioned in the Order, be exchanged or paid for by or on behalf of the Mint at their nominal value :

“(2.) For the purposes of this Act a gold coin shall be deemed to have been illegally dealt with where the coin has been impaired, diminished, or lightened otherwise than by fair wear and tear, or has been defaced by having any name, word, device, or number stamped thereon, whether the coin has or has not been thereby diminished or lightened” :

And whereas it is expedient to provide for the exchange of such gold coins :

Now, therefore, Her Majesty, by and with the advice of Her Privy Council, in pursuance of the said Act, and of all other powers enabling Her Majesty in this behalf, is pleased to order, and it is hereby ordered, as follows :—

Any gold coins of the realm which have not been called in by proclamation and are below the least current weight as provided by the Coinage Act, 1870, shall at any time after the seventeenth day of March, 1892, if they have not been illegally dealt with, be exchanged or paid for by or on behalf of the Mint at their nominal value, subject to the condition that they must be tendered during business hours at the Bank of England in London, in parcels of a nominal value not less than one hundred pounds each, and must be left there for such time before the exchange or payment as may be reasonably necessary for examination and weighing in order to ascertain whether any coin has been illegally dealt with within the meaning of the said Act.

And the Master of Her Majesty's Royal Mint is hereby directed to carry into effect the provisions of the said Act for exchanging or paying for at their nominal value all such coins as are so tendered, and have not been illegally dealt with.

C. L. PEEL.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**MINISTERIAL PICNICS.**

(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 28 February, 1893.*

[Laid upon the Table of the House in answer to Question No. 22, of 6 September, 1892.]

Question.

22. MINISTERIAL PICNICS:—MR. DANAHEY asked THE COLONIAL TREASURER,—

- (1.) Have any vouchers been sent in by any firm, catering company, or trading society, and if so what, for the supplies to the Government, or any officer on behalf of the Government, or any Minister, of wines, spirits, cigars, groceries, or other refreshments in connection with picnics, visits, or excursions, given, authorised, or undertaken by the Ministers or any of them during the recess?
- (2.) What amount, if any, has been paid or claimed from the public funds in respect of the vouchers referred to in the preceding Question?
- (3.) Will he be good enough to lay upon the Table of this House copies of such vouchers?

Answer.

Name.	Particulars.	Amount.
1. W. G. Cassidy ... (Paid 23 June, 1892.)	Ministers and party, opening Yass Tramway ...	£ s. d. 19 5 0
2. R. H. Watson ... (Paid 30 May, 1892.)	Minister for Works and party, inspecting reclamation Works, Sydney Harbour ...	3 0 0
3. W. G. Cassidy ... (Paid 4 November, 1892.)	Parliamentary party to the opening of the Cobar Railway, and to inspect rabbit infested country ...	26 19 0
4. Sydney Fotheringham ... (Paid 23 July, 1892.)	Military Service Inquiry Commission, inspecting headlands, &c., Hawkesbury River ...	73 4 11
5. Civil Service Co-operative Society (At the Treasury, not yet paid.)	Goods supplied for the proposed trip to Lord Howe Island, and afterwards given to the unemployed...	37 6 10

The Auditor-General, who has possession of all paid vouchers, states:—"That the above payments are applicable to the terms expressed in Mr. Danahey's question. Several Ministers accompanied His Excellency on his recent trips, but the expenses thereof are charged to the Governor and party."

The Treasury, New South Wales,  
23rd February, 1893.

---

SUPPRESSION OF GAMBLING.

(PETITION FROM THE BAPTIST UNION OF NEW SOUTH WALES, IN ANNUAL SESSION ASSEMBLED,  
IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 25 October, 1892.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Baptist Union of New South Wales, in Annual Session assembled,—

RESPECTFULLY SHOWETH :—

That this Session deplors the alarming prevalence of betting and gambling in New South Wales, and strongly urges that stringent legislation be adopted to repress these evils. It believes that not only should the law against totalisators be more effectively enforced, but that the gigantic sweeps that are carried on in the most barefaced manner should be stopped; and that to this end the Government should no longer foster the evil by allowing the Post Office to be used for that purpose.

Further, that as part of the legislation required, the publication of all betting information in newspapers and other forms should be strictly prohibited.

Your Petitioners, therefore, pray your Honorable House to take such measures as in its wisdom it may deem best to carry out the objects herein named.

And your Petitioners will ever pray.

*[Here follow 3 signatures.]*

PHEASANT-RICHARDSON GLOVE CONTEST.

(POLICE REPORT RESPECTING GLOVE CONTEST BETWEEN THOMAS PHEASANT AND JAMES RICHARDSON.)

*Ordered by the Legislative Assembly to be printed, 13 September, 1892.*

[Laid upon the Table of this House in answer to Question No. 9 of 13th September, 1892.]

Question.

- (9.) PHEASANT-RICHARDSON PRIZE FIGHT:—MR. MARTIN asked THE ACTING COLONIAL SECRETARY,—
- (1.) Were the police present at the Pheasant-Richardson prize fight, which took place in the Darlinghurst Skating Rink on the night of the 6th instant?
  - (2.) Has any report been made by the police as to what took place during that fight?
  - (3.) If so, does such report coincide in important particulars with that which appeared in the *Evening News* of the 7th instant?
  - (4.) Has the Government taken any steps to put a stop to such brutalising exhibitions?

Answer.

REPORT by Mr. Inspector Bremner to Mr. Superintendent Read.

*Re* glove contest between Thomas Pheasant and James Richardson, at the Darlinghurst Skating Rink, on the 6th instant.

Sir,

No. 3 Police Station, Sydney, 10 September, 1892.

I have the honor to report that Sub-Inspector Robinson and myself were present on the 6th instant, when a glove contest took place at the Darlinghurst Skating Rink between Thomas Pheasant and James Richardson.

The contest was carried out under the Marquis of Queensberry rules; they boxed with gloves about 5 oz., padded with horse-hair, which is about the usual size used at boxing contests. The ring was 24 feet, and ropes passing through studding posts about 4 feet high, which gave way when the combatants were clinched and pressed heavily against the ropes; in consequence they fell off the stage, which is a little over 2 feet 6 inches high. The studding was again partly fixed, but not sufficiently to prevent it giving way when they pressed heavily against the ropes.

The contestants boxed eight rounds, of three minutes each round, and one minute being allowed between rounds. Each of them was knocked down, or fell, several times during the contest; they fell twice when clinched through slipping on the boards. At the conclusion of the contest Richardson had a slight discolouration of one eye, otherwise he was unmarked. Pheasant's nose was bleeding from a blow he got in the sixth round; his upper lip was swollen; he was struck several times about the ribs, but none of the blows appeared to be severe. There were about 600 persons present at the contest, and during the last two rounds most of them were standing on chairs round the ring, and as Mr. Robinson and myself were outside the chairs we could not see all that took place.

Pheasant and a man named Hefferman boxed in the same hall last month. On that occasion I stopped the contest after the seventh round, and on this occasion I was going to the referee to request him to stop the contest when Pheasant was counted out; he was knocked down, and did not get up before 10 seconds.

On two occasions proceedings were taken against persons for boxing under similar rules; the cases were dismissed. It is difficult to know when to stop glove contests, as the greatest amount of

punishment is in the first five or six rounds, after that it is more a matter of endurance. I think that all glove contests for prizes should be stopped, as it has a demoralising effect on youths who frequent these places.

I have been informed that a glove contest will take place at the same hall, on the 13th instant, between a man named Barron and Michael Ives, under the Marquis of Queensberry rules.

I have, &c.,

JAMES BREMNER,

Inspector.

P.S.—The detailed report in the *Evening News* of the boxing contest is exaggerated in describing the punishment which the combatants inflicted on each other. The number of falls is correctly given, but it occurred mostly through the combatants' feet slipping on the boards, and not by being knocked down.

---

Forwarded to the Inspector-General of Police.—G. READ, Superintendent, 12/9/92.

GLOVE CONTESTS.

(PETITION FROM J. E. MOULTON, PRESIDENT OF THE NEW SOUTH WALES CONFERENCE OF  
WESLEYAN METHODISTS, PRAYING FOR A LAW TO PROHIBIT.)

---

*Ordered by the Legislative Assembly to be printed, 8 March, 1893.*

---

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the New South Wales Wesleyan Conference, now in Session,—

SHOWETH :—

That this Conference, comprising over two hundred ministerial and lay representatives from all parts of New South Wales, observes with grave concern the continuance of what are known as "Glove Contests" in the City, and regards them as debasing and inhuman exhibitions, and calculated to engender and develop lawlessness of the very worst type.

Your Petitioners would therefore pray your Honorable House to enact, with the least possible delay, a law which will make such exhibitions illegal and impossible.

And your Petitioners, as in duty bound, will ever pray.

J. E. MOULTON,  
President, New South Wales Conference.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

GLOVE CONTESTS.

(PETITION FROM CERTAIN RESIDENTS OF REDFERN AND VICINITY, AGAINST.)

*Received by the Legislative Assembly, 21 March, 1893.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The Petition of the undersigned, residents of Redfern and thereabouts,—

RESPECTFULLY SHOWETH :—

That there have been disgraceful and degrading spectacles presented at recent pugilistic encounters.

That two of these encounters terminated with fatal results.

That these prize fights are a menace to both the moral and physical life of the community.

That they tend but to demoralise the people of the country and to create a spirit of lawlessness.

That they have a pernicious influence on the youth of the land.

That they are a disgrace to our civilisation.

Your Petitioners therefore pray, in view of these facts, that your Honorable House will introduce some drastic measure which will make the recurrence of such disgraceful scenes impossible; that is if the existing law does not effectually cope with the evil.

And your Petitioners, as in duty bound, will ever pray.

**GLOVE CONTESTS.**

(PETITION FROM CERTAIN RESIDENTS OF SYDNEY AND SURROUNDING DISTRICTS AGAINST.)

---

*Received by the Legislative Assembly, 29 March, 1893.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned would respectfully draw the attention of your Honorable House to the degrading and disgusting exhibitions which are constantly taking place in and around Sydney in connection with prize-fighting contests.

Your Petitioners, believing that "Righteousness exalteth a nation," and that "sin is a reproach to any people," earnestly pray that your Honorable House will speedily pass a measure that will make impossible these entertainments, and the too frequent result by death of the same.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MESSRS. E. J. SIEVERS, T. F. WALLER, AND J. H. KIRKPATRICK,  
LAND VALUATORS AND ARBITRATORS.

(RETURN SHOWING PAYMENTS TO.)

*Ordered by the Legislative Assembly to be printed, 19 January, 1893.*

[Laid upon the Table of the House in answer to Question No. 7, of 13 October, 1892.]

Question.

7. TEMPORARY APPOINTMENTS AS LAND VALUATORS DURING 1891-2:—MR. NEILD asked THE SECRETARY FOR PUBLIC WORKS,—

(1.) What persons have been temporarily or occasionally employed by the Government during 1891 and 1892 as land valuers?

(2.) What amounts have been paid to such persons, respectively, for such services?

Answer.

(1.) Messrs. E. J. Sievers, T. F. Waller, and J. H. Kirkpatrick.

(2.) Mr. E. J. Sievers—Salary (from 1st July, 1891, to 31st August, 1892, 14 months, at £600 per annum) ... .. £700 0 0

Expenses ... .. 34 19 0

£734 19 0

Mr. T. F. Waller ... .. 531 13 0

Mr. J. H. Kirkpatrick ... .. 445 5 11\*

[Laid upon the Table of the House in answer to Question No. 10, of 24 November, 1892.]

Question.

10. MR. T. F. WALLER, VALUER AND ARBITRATOR:—MR. LANGWELL (for MR. BLACK) asked THE SECRETARY FOR PUBLIC WORKS,—Will he lay a Return upon the Table of this House, showing all the payments made to T. F. Waller, as Valuer and Arbitrator, since the present Ministry took office?

Answer.

The total sum paid to date is £531 13s. The following statement shows payments made to Mr. Waller for land valuations and arbitrations on account of the various branches of this Department:—

Name of Branch.	Reporting on Shea's Creek Storm-water Sewer— Macnamara's Claim	Valuation Fees.	Arbitration Fees.	Travelling Ex- penses.	Total Amount paid.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Railway and Tramway Construction .....	61 15 0	319 13 6	54 17 6	436 6 0

Water Supply and Sewerage .....	.....	.....	and expenses.	.....	
					£531 13 0

\* Including charges for shorthand notes, typewriting, &c.

[Laid upon the Table of the House in answer to Question No. 21, of 27 October, 1892.]

Question.

21. MR. WALLER, LAND VALUATOR:—MR. LONSDALE *asked* THE SECRETARY FOR PUBLIC WORKS,—
- (1.) Is Mr. Waller, who acts for the Government in many valuation and arbitration cases, a civil servant?
  - (2.) If not, when was he first employed by this Government, and in what capacity?
  - (3.) Has he ever been appointed a Royal Commissioner; if so, by what Ministry?
  - (4.) What fees were paid to him as such Commissioner?
  - (5.) How often has he been employed by the Government since the present Ministry came into office, and in what particular matters?
  - (6.) What fees have been paid to him in respect of these last matters?
  - (7.) What fees are still due to him?
  - (8.) Has Mr. Waller been employed to value land resumed by the Crown?
  - (9.) Has a Mr. Siever, who until recently acted as assistant valuator, been dispensed with; if so, on what grounds?
  - (10.) Why was Mr. Waller employed as valuator on the part of the Crown?
  - (11.) Is he still so employed; if not, when was he last employed, and in what case?

Answer.

- (1.) No.
- (2.) On 16th February, 1892, as valuator of land resumed from Mr. Edwin Godfrey.
- (3.) Yes; by the Hon. G. R. Dibbs, as Commissioner on the Casual Labour Board Commission.
- (4.) £703 10s.
- (5.) In fifty-four cases, in connection with the valuation of land resumed from the following parties, viz.:—1. John McLeod. 2. R. P. Allen. 3. T. J. Ewing. 4. B. Broadhead. 5. Robert Marshall. 6. J. P. Garvan. 7. O. B. Wareham. 8. Geo. Johnson. 9. Henry French. 10. Angus M'Swan. 11. J. J. Driscoll. 12. A. H. A. Hammond. 13. Jane M'Lean. 14. Jacob Christy. 15. W. Graham. 16. P. J. Hogan. 17. Thos. Robinson. 18. Simon Bathgate. 19. R. W. Reddacliffe. 20. Hy. M'Cauley. 21. Chas. Fagan. 22. A. J. Simmons. 23. Harrison and others. 24. Thos. Broughton. 25. F. W. Buckland. 26. Patk. O'Maley. 27. Charlotte Archdale. 28. R. Hargrave. 29. Eleonora Gold-mining Company. 30. J. B. Kelly. 31. Thos. Fenwick. 32. Wm. Wigmore. 33. T. W. Green. 34. E. Godfrey. 35. H. M'Quade. 36. William Weir. 37. N. Hawkins. 38. Wm. Budd. 39. S. Ross. 40. Geo. Taylor. 41. Jas. Morrissey. 42. Investment Company. 43. John Blue. 44. Grant and Collier. 45. Webb (Trustees of). 46. Carr (Trustees of). 47. Van de Polder. 48. Alexr. M'Bean. 49. N. J. Simmons. 50. John Auschan. 51. Robert White. 52. F. R. Furlonger. 53. Mrs. King. 54. Mr. Waller has also been employed in connection with the valuation of land resumed for the King-street and Ocean-street Tramway.
- (6.) £531 13s.
- (7.) The total fees cannot at present be given, as the accounts have not yet been rendered.
- (8.) Yes.
- (9.) Yes. Mr. Siever was employed by the Department for a stated time as an experienced valuer. On the expiration of his engagement he was retained to dispose of some cases of importance, on completion of which his services were dispensed with, the term of his engagement having expired.
- (10.) Because he was eminently qualified as an expert, having had very extended experience in land valuations.
- (11.) Yes. He is not paid by salary, however, but by fees, according to work performed.

[Laid upon the Table of the House in answer to Question No. 14, of 31 August, 1892.]

Question.

14. MR. WALLER, ARBITRATOR, CULCAIRN-COROWA RAILWAY:—MR. LONSDALE *asked* THE SECRETARY FOR PUBLIC WORKS,—
- (1.) How many cases of disputed compensation were arbitrated upon in connection with the Culcairn-Corowa railway?
  - (2.) Who was the arbitrator appointed by the Minister to represent the Crown, and in how many cases was he appointed?
  - (3.) What were the qualifications of the person appointed for the position?
  - (4.) What amount has been paid to the Crown Arbitrator for his fees and expenses, and what have been his total charges in connection with the said cases?
  - (5.) Were awards made against the Crown valuation in any cases; and, if so, in how many?
  - (6.) Had the same gentleman been appointed arbitrator in any other cases in connection with the Department; if so, in how many—what have been his total fees for same?
  - (7.) In how many cases has Mr. Waller been appointed arbitrator, and what has been the amount paid or due to him during the last ten months for the same?

Answer.

- (1.) Eight.
- (2.) Mr. John Hunter Kirkpatrick acted as arbitrator in fourteen cases.
- (3.) An intimate knowledge for many years of land values, and specially in the particular district referred to.
- (4.) Arbitration fees, £283 10s.; travelling expenses, £91 11s. 5d.; total, £375 1s. 5d.\*
- (5.) Yes; in eight cases.
- (6.) Yes; in four cases. The total fees cannot at present be given, as the accounts have not yet been rendered.
- (7.) In ten cases. Amount paid, £351 14s.; expenses, £3 2s.; total, £354 16s.

NOTE.—Mr. Waller was not an arbitrator in the case. Mr. J. H. Kirkpatrick was the Crown Arbitrator.  
\* Including charges for shorthand notes, typewriting, &c.

LEGISLATIVE ASSEMBLY,  
NEW SOUTH WALES.

MORT'S DOCK AND ENGINEERING COMPANY.

(RETURN RESPECTING CONTRACTS LET BY THE GOVERNMENT TO.)

*Ordered by the Legislative Assembly to be printed, 4 October, 1892.*

*[Laid upon the Table of the House in answer to Question No. 11, 7 September, 1892.]*

Questions.

- (11.) CONTRACTS LET BY THE GOVERNMENT TO MORT'S DOCK AND ENGINEERING COMPANY:—MR. JOHNSTON *asked* THE SECRETARY FOR PUBLIC WORKS,—
- (1.) How many contracts have been let by the present Government to Mort's Dock and Engineering Company?
  - (2.) What is the date and amount of each contract?
  - (3.) Is a pilot steamer under construction at Mort's Dock; if so, is she one of those contracts?

Answers.

- (1.) Three.
- (2.) 1. (a) Pilot steamer, 15th December, 1891, £19,989.  
(b) On 28th June, 1892, a tender of £2,728 was accepted for additional work (electric plant and search-light, spare machinery gear, floating fire-engine, service, &c.), making a total cost of £22,717.
2. Two steel boilers and fittings for the Schmidt dredge, 26th May, 1892, £1,615.
3. Lifts for the Departments of Lands and Public Works, 13th July, 1892, £6,707.
- (3.) Yes; yes.

1892.

## NEW SOUTH WALES.

## NEW HEBRIDES.

(DESPATCH RESPECTING BRITISH INTERESTS IN.)

Presented to Parliament by Command.

The Secretary of State for the Colonies to The Right Honorable the Earl of Jersey,  
G.C.M.G., &c., &c.

(New South Wales.—Confidential.)

My Lord,

Downing-street, 29 August, 1892.

I have the honor to transmit to your Lordship, for communication to your Government, a copy of a memorandum which was left at this Department on the 20th ultimo by Sir George Dibbs, on the subject of British interests in the New Hebrides, and for which I request you to return to him the thanks of Her Majesty's Government.

2. I propose to notice very briefly a few of the points referred to in this important memorandum.

3. \* \* \* \* \*

4. As regards the question of land tenure in a country which is not under British jurisdiction, I have to observe that Her Majesty's Government do not perceive that any effective regulations could be framed or enforced. It is, however, the case that an endeavour was recently made to arrive at an understanding with France touching a joint recognition of land titles, but the overtures of this country were not favourably received by the French Government. This proposal did not, indeed, include the appointment of a resident commissioner of each power, but the French Government had some time previously expressed a doubt whether the presence of a permanent British officer residing in the group was consistent with the terms of the existing agreement.

5. Your Government, no doubt, would agree that inter-insular traffic is to be discouraged when no sufficient means exist of supervising it. This position has been consistently maintained by successive governments, and before a new departure in the direction indicated could be entertained, it would be necessary to show that a system of safeguards was not only feasible, but could be enforced in practice, without involving extravagant demands on the Home Treasury, which, I may observe, I should not feel justified in pressing on that department.

6. The power of punishing offences is, as your Government are also aware, now vested in the joint commission, and no change in that respect can be made at present. Under existing regulations, no French or British Naval officer can take isolated action, except in circumstances specially provided for.

7. In reference to the remarks made by Sir George Dibbs, as to the difficulties experienced by settlers in replacing lost or broken arms, I may remark that the question is now under consideration whether the High Commissioner's regulation referred to might not be so far modified as to allow of the carriage of arms and ammunition in British vessels consigned as cargo and intended only for the use of persons other than natives.

8. Her Majesty's Government do not consider that the scope of the High Commission could be so far enlarged as to extend protection to white men against crimes and attacks by natives, but a question has lately been before the law officers of the Crown, as to whether an ordinance might not properly be passed in Fiji providing for the detention in that colony of natives of the Western Pacific Islands, who are shown to have perpetrated criminal acts against British subjects.

9. The inequalities pressing upon British subjects in certain respects, in connection with the High Commissioner's regulations, have not been overlooked by Her Majesty's Government, but the efforts which have been made to induce France to join in a joint engagement to check the abuse of the arms and liquor traffic, in the New Hebrides, have unfortunately not been successful. Your Government will be aware that Her Majesty's Government are now engaged in the more general scheme of an international agreement with this object, which, if arrived at, would be applicable not merely to the New Hebrides, but to the Western Pacific generally.

10. It will be noted with satisfaction that notwithstanding the somewhat unequal position in which British subjects are placed, it has been recently pointed out by the High Commissioner for the Western Pacific that English commerce appears to be outstripping that of France in the New Hebrides, the truth of which conclusion has been acknowledged by a portion of the French press.

I have, &c.,  
RIPON.

[Enclosure.]

## BRITISH INTERESTS IN THE NEW HEBRIDES.

1. DEPUTATIONS to the Premiers of the Australian Colonies, correspondence with the Governments, complaints from missionaries and residents, and press articles and criticisms, have drawn attention to the present unsatisfactory position of British traders and settlers in the New Hebrides, in their being made subject to regulations and restrictions, and liable to penalties and punishments, from which the settlers and traders of other nationalities are free. It is evident that under such conditions an injustice is suffered by British subjects, and that the effect must be their inability to compete with the subjects of other nations.

2. \* \* \* \* \*

3. While some of the British regulations are not suited to the altered circumstances of the Islands since the latter have been opened up by steam communication, others of them would be most excellent as a protection to the natives, and most useful as a support to the honest trader, if universally applied; but as they are now applied to British subjects only, the natives are not protected in the slightest degree, and encouragement is given only to foreign settlers and traders or to those undesirable British settlers and traders who will break the law when opportunity offers. One effect of this inequality is that some, once British subjects, have now adopted foreign nationalities, and British owned ships are sailing under foreign flags.

4. All connected with the Islands recognise that with the spread of commerce and civilisation in the South Seas, and with the constantly improving steam communication in the New Hebrides, there must be increased settlement. The various Australian Colonies, the respectable British residents, the missionaries, and the Australasian New Hebrides Company, desire that the settlement shall be British, and shall be reputable, and are therefore unanimous in urging that action should be taken to induce such settlement, and that a strenuous effort be made to have suitable regulations universally adopted and enforced for the efficient protection of the natives, and for the extension to all nationalities of equal liberty in things right, equal restriction in things doubtful, and equal prohibition in things wrong. Surely, in the interests of the natives alone, which interest the existing British regulations are meant to, but do not, conserve, this reasonable request cannot be refused.

5. If reputable, industrious, and permanent settlement is to be fostered, the regulations suggested should provide a means of obtaining secure land tenure. The natives are not merely willing, but anxious for decent settlers to come amongst them and readily grant a tenure to land, which tenure, properly acquired, is never disputed by them. But there is no recognition of title by the two supervising powers—the mere registration of deeds being specifically stated not to be recognition. Planters are therefore afraid at present to give the years of labour, and go to the heavy expense required for the cultivation of most tropical products, when some day Britain or France may annex, and may or may not recognise their titles. The appointment of a resident commissioner by each power would remove this difficulty, as these commissioners could scrutinise, and accept or reject the titles submitted to them, their joint acceptance binding both powers, in case of annexation by either, and the acceptance by only one commissioner binding only on the power he represents.

6. Other regulations should, while thoroughly safeguarding the natives, allow the settler to engage labour, either on his own island, or on any other island of the group. Such labour is a necessity, as white men cannot work in the climate. In some cases the labour can be obtained on the island where the planter resides; in others, there is not sufficient population, or the natives are too erratic for regular work, or, as in one or two islands, they are too uncivilised and dangerous, so that, for the planter's safety, it is absolutely necessary those he is constantly among, and at the mercy of, should be procured from a more civilised and peaceable neighbourhood. By such regulations the natives who desire to earn the money got by hiring could do so on their own islands, and where they would have the climate and food they are accustomed to, instead of, as now, having to go much further afield amongst more alien conditions.

7. Naturally, also, if reputable and peaceful settlement is to be induced, reasonable security of life and property is important. On some of the islands this already exists, and on the others could be readily provided by vigorous, but just and patient authority. Those most capable of judging agree that once the offensive natives know the punishment for unprovoked crime will almost certainly reach the offender, such crimes will almost disappear. Punishment is inflicted now, but is usually too indiscriminate to be effective. When a village is fired on from the sea the innocent are quite as likely to suffer as the guilty; in fact, more so, as those who committed the crime are probably in hiding in the bush. Knowing this, the worst characters are not restrained by any fear of punishment, and openly scoff at the retributive power of the British Navy. What is required is slower but more equitable process of the discovery and the capture of the real offenders. This in islands, none of which are very large, and where each tribe is confined to comparatively narrow limits by the hostility of its neighbours, would be usually quite possible, and often easy, especially under the direction of a resident commissioner. The real offenders secured, punishment could be tempered with mercy, as it is not so much the degree of punishment as its certainty that will prove the restraining influence.

8. The difficulties under the present system of legitimately and successfully carrying on trading or agricultural operations are almost insurmountable, and matters are often complicated by the British Naval officers having to do what they admit to be unwise or unjust that they may carry out to the letter the regulations of the High Commissioner of the Western Pacific, which regulations, though excellent in certain circumstances, are not specially framed for the circumstances of the New Hebrides. Appeal to the High Commissioner can bring no redress, as he says:—"In the action of this joint Naval Commission the High Commissioner has no voice whatever, nor (although he is always furnished by the Naval Commander-in-Chief with reports of action taken) is he in any way previously consulted."

Reference to the Naval authorities elicits the reply that, although the High Commissioner does not personally direct their actions, those actions are guided entirely by his general regulations. The inconvenience and the danger of this had been more than once shown. For instance, under certain circumstances settlers may be left without the slightest defence against the most treacherous natives, and their lives be thus endangered. The High Commissioner says this is not meant to be so, and is not so, as settlers may land with sufficient arms for their own protection, but, as happens frequently, if these arms are lost or broken, or become useless in the damp climate, they can only be replaced by steam or sailing vessel, the master of which vessel becomes liable, under the High Commissioner's regulations (No. 1) of 1884, to a fine of £10, or imprisonment for three months. Recently six settlers on Santo, fearing attack

owing

owing to the threatening attitude of the natives, after the unprovoked and unpunished murder of a most respectable white settler, Mr. Sawers, asked for a repeating rifle each. The Secretary of the Australasian New Hebrides Company approached the Admiral, who could give no guarantee that his officers would not stop the steamer, and punish the captain that might carry them. He said, "I can understand it is necessary to those men's safety they should have the arms, but I cannot see how they are to get them without a breach of the regulations, and it is my duty to carry out the regulations." Thus, the curious, though serious, situation was reached, that men were to be left undefended, and possibly lose their lives, by the enforcement of regulations which the gentleman who frames and imposes them declares do not leave settlers without sufficient means of self-defence.

9. It must also be stated that an idea is abroad that the present administration is deliberately opposed to British settlement and to the growth of British influence in the New Hebrides, as, otherwise, it would itself have moved to remedy the inequalities which are retarding that settlement and that influence. However erroneous this view may be, colour is lent to it by the apparent desire to consider British settlers as beyond the pale of British support or British protection, though quite within the pale of British punishment. In reference to protection to life, the High Commissioner writes:—

"As a general principle it can, therefore, only be repeated that when, for their personal objects, men withdraw themselves from the operations of the institutions of their country, and settle in savage regions, they take their lives in their own hands, and have no right to expect to receive the forcible support of the State whose sheltering protection they have left." And he adds:—

"The exigency of the principles enumerated above has doubtless been modified by the declaration relative to the New Hebrides, signed at Paris on the 26th January, 1888, agreed upon between the Governments of Great Britain and France; but it is a modification merely, by agreement between Sovereign powers, the extent of which must necessarily rest with such powers, and not their subjects or citizens respectively."

In this the High Commissioner intimates that the attitude assumed towards settlers in the New Hebrides is that they are men who cannot expect the support of their own country, because, for their own personal objects, they have withdrawn from the operation of its institutions, and does not appear to recognise that, being (under the Western Pacific Regulations, and quite outside the Paris agreement) within the jurisdiction of British laws, they are evidently not beyond the operation of their country's institutions. No wonder that British residents in the New Hebrides think they are under the ban of their own Government, when they are informed that their property, their persons, and their lives are subject to forfeit by that Government for breach of its laws, but that they cannot claim for their property, their persons, or their lives, even reasonable protection by those laws. In fact, that they are to suffer for their British connection by disabilities and punishments inflicted, and are not to expect to profit by support and protection extended; while, should protection be occasionally granted, it is as a matter of grace, not of right, and its continuance is not to be calculated upon.

10. Another peculiarity of the situation is that the British Navy is practically in the employ of the foreign traders. If a foreign trader thinks, or knows, an English competitor, or his vessel, is committing some breach of the British regulations, he causes a charge to be laid before the Commander of a British man-of-war, and the latter is bound to investigate, and, if a breach has been committed, to punish. No doubt such breaches should be punished, but it certainly seems an unbecoming position for our Navy to occupy—that of being practically a business adjunct of foreign traders, to be employed at their beck and call, to aid in their monopolising business which the British trader is punished for carrying on. In many ways this inequality is galling. A British Commander may sentence a British subject to three months' imprisonment for (say) selling spirits to natives on a complaint originating with his neighbour and competitor, a French trader, and that very day may dine with the French trader on board the French man-of-war. Both these traders are engaged in exactly the same business, which is certainly objectionable, and should be stopped, but the sale of intoxicants to the natives is not diminished by the punishment of only one of the traders. It goes on as extensively as ever, but the business of one participant is destroyed, and he is branded as a felon, while the business of the other participant is increased; and he is met as an honored fellow guest by the officer who punished his British neighbour. This is certainly not as it should be.

11. If the necessity of an improvement in present conditions is admitted the question arises as to whether the other Powers will agree to impose on their subjects the requisite regulations. This can only be answered by the Powers themselves, and what is urged is that Great Britain should put the question and get the answer. Some years ago an arrangement of the sort was proposed, and only failed through want of consent by the United States, but France then expressed her concurrence, and could scarcely now withhold it. If Great Britain and France decide to assume a joint protectorate no other nation is likely to object to any laws adopted by these powers being applied by them to its subjects in the islands as to the English and French; but if a joint protectorate is not considered desirable, and the consent of the United States and Germany is required that should be obtainable, in view of their acceptance of the joint Samoan regulations.

12. But, it may be asked, presuming an international assent were obtained to regulations of the nature asked, could efficient means be provided for their enforcement? In reply, it may be pointed out that in the group there is always, in the shape of English and French men-of-war, *far more force* than is required to support any regulations deemed necessary; that the British Navy has now to enforce the present stringent British regulations; and that resident commissioners would provide a continuous and experienced oversight which could scarcely be evaded, instead of the present more intermittent oversight of constantly changing Naval officers.

13. Whether the adoption of the means suggested would place matters in a thoroughly satisfactory condition or not the new condition cannot fail to be a vast improvement on the present, which subsidises the worst element amongst the settlers and traders, injures British interests, and leaves the natives exposed to every evil.

14. Objections will be raised to any change, especially by those interested in other South Sea groups, who do not wish to see real settlement in the New Hebrides, but Great Britain and the Australian Colonies will not be true to their traditions if, seeing the undesirable state of affairs existing in the New Hebrides, they make no energetic effort to remedy it.

**PICTURESQUE ATLAS COMPANY.**

(PETITION FROM W. R. GULLICK, GENERAL MANAGER OF THE PICTURESQUE ATLAS PUBLISHING COMPANY (LIMITED), FOR LEAVE TO APPEAR IN PERSON OR BY SOLICITOR OR COUNSEL.)

—  
*Received by the Legislative Assembly, 16 February, 1893.*  
—

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The humble Petition of the Picturesque Atlas Publishing Company (Limited), of Sydney, in the Colony of New South Wales,—

(1.) That on the 24th day of January, in the year of our Lord one thousand eight hundred and ninety-three, your Honorable House appointed a Select Committee with power to send for persons and papers to inquire into and report upon the action of the Picturesque Atlas Publishing Company (Limited), in regard to the sale of a publication registered and known as the "Picturesque Atlas of Australasia," and their subsequent action in respect to their clients in the law courts of the Colony.

(2.) That your Petitioners therefore humbly pray that your Honorable House will be pleased to grant them permission to appear before the said Select Committee in person, or by Solicitor or by Counsel; and, if necessary, to adduce such evidence and send for such papers and persons as your Petitioners may be advised, together with power to examine and cross-examine witnesses called before the said Committee.

And your Petitioners, as in duty bound, will ever pray, &c.

W. R. GULLICK,  
General Manager of the Picturesque Atlas Publishing Company (Limited).

NEW SOUTH WALES.

PICTURESQUE ATLAS COMPANY.

(PETITION FROM JAMES H. RAINFORD, J. H. DECENT, AND P. R. HOLDSWORTH, PRAYING THAT THE SAID J. H. DECENT MAY BE HEARD IN PERSON, OR BY COUNSEL, BEFORE SELECT COMMITTEE.)

*Received by the Legislative Assembly, 28 February, 1893.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Picturesque Atlas Defence Association,—

RESPECTFULLY SHOWETH:—

That we, the undersigned executive officers, request that you will permit Mr. J. H. Decent treasurer of the above Association, at his own cost, personally or by counsel, to watch on behalf of the committee, subscribers, and general public, the proceedings now pending before the Committee appointed by your Honorable House. The Company has been allowed this privilege, and your Petitioners feel convinced you will grant them the same concession.

Mr. J. H. Decent is seised with the whole of the facts and well qualified to represent the interest of the Associations, subscribers, and general public. Praying your Honorable House will grant the prayer,—

Your Petitioners, as in duty bound, will ever pray.

## NEW SOUTH WALES.

## PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR AND IN CONNECTION WITH A GENERAL CEMETERY AT CUNDLE,  
PARISH OF CUNDLE, COUNTY OF MACQUARIE.)

Presented to Parliament, pursuant to Act 51 Vic. No. 37.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
THE "PUBLIC WORKS ACT OF 1888," 51 VIC-  
TORIA No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
(L.S.) of Her Majesty's Most Honourable  
Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief  
of the Colony of New South Wales and  
its Dependencies.

WHEREAS I, VICTOR ALBERT GEORGE, EARL OF JERSEY, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain Public Work, that is to say, a General Cemetery at Cundle, in the said Colony, for which public funds are lawfully available, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out, under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority, and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taken the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette, and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the said "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from

all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee: And I declare that the following is the Schedule of the land hereinbefore referred to:—

## SCHEDULE.

All that piece or parcel of land situate in the parish of Cundle, county of Macquarie, containing 20 acres 3 roods: Commencing at a point bearing south 39 degrees 8 minutes east and distant 22 chains 46 $\frac{7}{10}$  links from the south-east corner of portion 94 of 49 acres, parish of Taree; and bounded thence by the west, south-west, and south-east sides of a designed road 1 chain wide bearing respectively south 3 degrees 20 minutes west 2 chains, south 20 degrees 25 minutes east 2 chains, south 36 degrees east 2 chains, south 53 degrees 10 minutes east 2 chains, south 78 degrees 40 minutes east 2 chains, north 84 degrees 30 minutes east 2 chains, north 74 degrees 45 minutes east 2 chains, north 62 degrees east 2 chains, north 53 degrees 40 minutes east 2 chains, north 46 degrees 45 minutes east 2 chains, north 54 degrees 30 minutes east 2 chains, north 64 degrees east 2 chains, north 71 degrees 30 minutes east 2 chains, north 82 degrees 15 minutes east 95 links; thence by a line bearing south 4 degrees 30 minutes west 8 chains 10 links to the left bank of Dawson's River; thence by that bank of that river upwards to a point bearing south 35 degrees west from the point of commencement; and thence by a line bearing north 35 degrees east 8 chains 50 links to that point.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this first day of July, in the year of our Lord one thousand eight hundred and ninety-two, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

## NEW SOUTH WALES.

# PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR GENERAL CEMETERY AT SUTHERLAND.)

Presented to Parliament, pursuant to Act 51 Vic. No. 37.

**NOTIFICATION OF RESUMPTION OF LAND UNDER  
THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA  
No. 37.**

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Honorable Sir FREDERICK MATTHEW  
(L.S.) } DARLEY, Knight, Lieutenant-Governor  
FREDK. M. DARLEY, } of the Colony of New South Wales  
*Lieutenant-Governor,* } *Administering*  
*the Government.* } and its Dependencies.

WHEREAS I, Sir FREDERICK MATTHEW DARLEY, the Lieutenant-Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, a General Cemetery at Sutherland, in the said Colony, for which public funds are lawfully available, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888" as an authorised work by the Minister for Public Works as Constructing Authority, and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Lieutenant-Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the said "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent

that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee; and I declare that the following is the Schedule of the land hereinbefore referred to:—

## SCHEDULE.

All that piece or parcel of land situate in the parish of Sutherland, county of Cumberland, and Colony of New South Wales: Commencing on the south boundary of Thomas Holt's 218 acres at a point bearing north 89 degrees 46 minutes west and distant 50 links from the north-west corner of S. W. Gray's portion of 31 acres 1 rood 5 perches, being a north-east corner of the National Park; and bounded thence on part of the north by part of the south boundary of Thomas Holt's 218 acres, being a line bearing north 89 degrees 46 minutes west 19 chains 99½ links; on part of the west by a line bearing south 14 minutes west 19 chains 98½ links; again on the north by a line bearing north 89 degrees 46 minutes west 7 chains; again on the west by a line bearing south 14 minutes west 27 chains 51 links; on the south by a line bearing south 89 degrees 44 minutes east 25 chains 13 links; on the south-east by a line bearing north 20 degrees 13 minutes 30 seconds east 7 chains 52½ links; again on the north by a line bearing north 89 degrees 41 minutes 54 seconds west 73½ links; and on the east by a line bearing north 18 minutes 6 seconds east 40 chains 44 links, to the point of commencement,—containing 113 acres 2 roods inclusive of roads, and said to be in the possession of the Trustees of the National Park.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this first day of May, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

- No. 13.—Memo. as to differences in quantities.

**REPORT on Sericulture, by W. S. Campbell, F.L.S.**

W. S. Campbell, Esq., F.L.S., to The Under Secretary for Mines  
and Agriculture.

Sir,

Department of Mines, 23 December, 1892.

In accordance with your instructions, dated 2nd November, 1892, "to inquire into the question of sericulture, and furnish a report thereon, as soon as possible, which should bear upon the present state of the industry, its possibilities, the result of past expenditure of public money, present work, and procedure of officers in charge."

I have now the honor, most respectfully, to submit my report, which has taken me longer to complete than I expected, for it involved a great deal of research and inquiry, far more than can be apparent.

I have made as exhaustive an investigation, as was possible for me to do within a reasonable time, into the history of the introduction of sericulture, or rather attempts to introduce it, into New South Wales, in order to ascertain why such attempts did not succeed, I have also traced out the causes of failure of similar attempts in other countries.

The possibilities of the industry I have carefully considered, and I feel confident that my deductions, from the immense mass of evidence I have been able to obtain and sift, are correct.

794—A

It

It is necessary for me to refer to action that has been taken with respect to sericulture in other countries, from time to time, and also to refer to its general history; but this I have done as concisely as is consistent with its importance, and as being, to some extent, a guide in determining any future action that may be considered necessary towards assisting, fostering, or encouraging the industry in this Colony.

Since the foundation of New South Wales various attempts have been made, from time to time, spasmodically, as it were, by private persons to establish the sericulture industry. Some of these attempts were feeble and half hearted, but others, more vigorous, were made by well-intentioned but over-sanguine individuals who were either, as far as I can gather, entirely ignorant of the subject, or who had insufficient means to carry out their projects. Attempts were also made by well-informed persons who might have succeeded if their efforts had been supported by the State. As far as I can ascertain from any records procurable, no assistance towards the establishment of the industry was ever directly afforded, nor was any money expended by the State until assistance in the form of a loan bearing interest at 5 per cent. per annum was made to the Italians at "New Italy," and the appointment of Mr. Reginald Champ to initiate the industry.

History shows that in nearly every country, if not in all countries in which sericulture has been established, and become a most important and valuable industry, the State has been the means of its very birth, development, and ultimate success, by assistance and wise encouragement.

It may not be out of place to relate here a remarkable fact in connection with the development of sericulture in Japan. "The date of the introduction of the silkworm into Japan seems somewhat obscure. But commencing with the fifth century of the Christian era, the industry has spread rapidly. In fact, the people addicted themselves to the pursuit with such ardour that, in fear lest other branches of agriculture should be altogether abandoned, the Japanese Government has, at times, forbidden the extension of mulberry cultivation, or attempted by sumptuary laws to restrict the use of silk garments to certain classes."

The silk industry originated in China in most remote times, and it is mentioned even so far back as B.C. 2700 in the old Chinese traditions. "When it was a Royal occupation to rear the silkworm and to weave the silk into robes of gorgeous attire; and to the Consort of one of the Emperors is ascribed the honour of first discovering the habits of this valuable insect and the nature of the thread it spun." I find in a translation, by Jennings, of the Shi King or old "poetry classic" of the Chinese, (a very remarkable work) references are made, in many of the odes, written upwards of 1,000 years B.C., to the silkworms and the mulberry.

From China, sericulture gradually spread probably through Northern India, to Persia, and finally to Europe about the year A.D. 530. It may not be generally known that silk weaving was a recognised industry in England before the year A.D. 1363, and is referred to by Act of Parliament, 37 Edward III., Cap. 5 and 6. The silk-yarn used was, I believe, obtained from Syria, and it is said that this was unravelled from silk fabrics obtained from China. The practice of unravelling silk fabrics is mentioned by Aristotle, and these fabrics also were obtained from China, and were unravelled and rewoven into much finer goods at the Island of Kos, near Asia-Minor, about the year B.C. 400. The Romans afterwards did the same sort of work. The early history of the spread of silk production and manufacture is extremely interesting, but it is unnecessary to touch upon it further at present; however, its modern history is of considerable importance.

In France the silk industry is said to have begun, or, rather, an attempt was made to introduce it, sometime during the thirteenth century, in much the same manner, apparently, as attempts have been made to introduce it into New South Wales. But it made no progress until the year A.D. 1521, "during which Milanese artisans were invited and went to Nismes to teach the French peasantry how to manage the white mulberry-tree, to take care of the silkworms, and to harvest their silk. The infant industry thus initiated was enthusiastically encouraged by King Henry Quatre, and of such good quality were the mulberries, and so carefully tendered, then and since, that the first bush planted on that occasion is still said to survive."

After about a century, the industry was greatly assisted and encouraged by Louis XIV, and continued to improve both in the production of raw silk and local manufacture, until the Revolution, towards the close of the eighteenth century, greatly interfered with and nearly destroyed it. However, "one of the very few good things Napoleon Bonaparte did for France was to foster sericulture so that under his encouragement the crop once more began to increase" until the year 1850, when the terrible contagious silkworm diseases began in France, rapidly extended throughout Europe, and eventually through the rest of the silk-producing world, and almost annihilated the whole silk industry. Again the State came to the rescue, by the appointment of M. Pasteur who devised the means by applying science to avoid the use of deceased worms, but unfortunately the silkworm diseases have by no means been stamped out or eradicated in the present silk-producing countries, and probably never will be; and it is, therefore, absolutely necessary to take great precautions, involving considerable expense, to keep them in sufficient check to enable the silk industry to be carried on.

In a minute written by me to the Honorable the Minister for Mines, on 29th March, 1889, respecting Mr. Brady's silkworms, I invited the attention to the expense in connection with keeping the diseases in check, as follows:—"I understand that Mr. Brady claims that his silkworms are entirely free from the terrible silkworm disease which some years ago almost ruined silk production in Europe, Asia, and China, until M. Pasteur discovered a method for combating it; but to keep silkworms free from the disease must be very expensive, judging from the following report, made to the United States

States Department of Agriculture. After Pasteur made his discoveries which resulted in the establishment of his system of microscopical selection in the production of silkworm eggs, Signor Susani, of Milan, was one of the first to put the process into operation on a commercial scale. He has now the largest establishment of this sort in the world, employing 3,000 hands during the coupling season, and 750 for microscopical examinations." Therefore, if Mr. Brady's worms were used, being perfectly healthy, the expense of 750 hands could be saved. "During the year 1870, the Austrian Government opened an experimental station at Goutz, with a view of studying 'the malady of the silkworm.'"

Italy, where silk culture is one of the principal sources of wealth, was not long in following this example, and in the month of April, 1871, a Royal decree, established at Padua, an institution called the Experimental Sericultural Station. The Italian Government and the City and Chamber of Commerce, Padua, pay the expenses of the institution. Its objects are,—

1. To study the raising of silkworms under the best conditions, and experiment with the products thereof.
2. To study the feeding of silkworms by means of physiological and chemical experiments.
3. To study the diseases of the silkworm and of the mulberry.
4. To produce and distribute healthy silkworm eggs for silk-growers.
5. To experiment with new varieties of eggs as well as with other articles which concern the Magnanerie.
6. To undertake all such studies and experiments as might be useful to sericulture.
7. To distribute circulars, and to deliver lectures so as to make generally known the best means of succeeding in silk culture.
8. To give the greatest possible publicity to all matters connected with the sericultural industry in the kingdom of Italy.

"The station has done inestimable service for sericulture, it having granted diplomas to 250 pupils, who now occupy places in the sericultural observatories and spread their knowledge among silk-growers."

My researches into the history of the introduction of sericulture into many countries lead me to believe that, in the same manner in which the industry has been fostered, aided, or encouraged in France by the State, so it has been in all other silk-producing countries, in various ways; and so it must be in New South Wales from the very necessities of the peculiarities of the industry.

In some countries it was even forced on the population; for I find, for instance, "Florence early became a centre of the silk trade, and in order to ensure entire success, each peasant in Tuscany was compelled to plant at least five mulberry-trees on the land he cultivated."

It will be as well to take a glance at the attempts made to introduce sericulture into Great Britain and Ireland, and, incidentally, America, being important as well as interesting, before proceeding to consider the efforts made to introduce it into New South Wales.

From the time of King Edward the Third, until about the year 1824, English Governments, from time to time, endeavoured to foster the silk-weaving industry by Acts of Parliament, and the imposition of duties on manufactured silk articles; but these actions do not seem to have resulted in any benefits to the manufacturers, but rather the reverse. However it is unnecessary to enter into this matter in detail as it bears only slightly on my subject, which is the production of raw silk to feed the manufactories. The attempts to produce raw silk have failed owing chiefly to the severe and changeable climate. The most notable endeavour was that made by King James the First. Burbidge says, "Mulberry-trees were introduced into England early in his reign by James the First, who spent £935 in planting them near his palace; and by Royal edict about the year 1605, offered packets of mulberry seeds to all who would sow them for the purpose of encouraging the cultivation of silkworms for the promotion of silk manufacture in this country. The Royal patronage rendered the tree so popular that there is scarcely an old garden of gentleman's seat which existed in the seventeenth century in which a mulberry-tree is not to be found. In 1609 Sieur de la Foret, who had in France a nursery of 500,000 plants, travelled over the midland and eastern counties of England for the sale of mulberry-trees, and he distributed not less than 100,000." This species of mulberry was the *morus nigra*. It is frequently to be met with in gardens in New South Wales and other colonies, and is generally known as the "English mulberry."

John Evelyn in his "Sylva," published 1669, strongly advocated sericulture for England. "About this time," he says, "or a little after it was that King James did with extraordinary care recommend it to this nation by a book of directions, Acts of Council, and all other princely assistance. But this did not take no more than that of Henry the Fourth's proposal about the environs of Paris who filled the highways and gardens of France with the trees, beginning in his own gardens for encouragement. Yet I say this would not be brought into example till the present great Monarch by the indefatigable diligence of Monsieur Colbert (superintendent of His Majesty's manufactories) who has so successfully revived it that it is prodigious to consider what an happy progress they have made in it, to our shame be it spoken; who have no other discouragements from any insuperable difficulty whatever, but our sloth and want of industry, since wherever these trees will grow and prosper, the silkworms will do also; and they were alike averse, and from the very same suggestions where now that manufacture flourishes in our neighbour countries. It is demonstrable that mulberries in four or five years may be made to spread all over this land, and when the indigent and young daughters

daughters in proud families are as willing to gain 3s. or 4s. a day for gathering silk and busying themselves in this sweet and easy employment, as some do get 4d. a day for hard work at hemp, flax, and wool; the reputation of mulberries would spread in England and other plantations." Writing of James' failure Butler remarks, "but though this first attempt fell through, others since carried out at different places, as Slough, Nottingham, Yatley, &c., have been more successful and have demonstrated that it is quite possible for good silk to be produced in this country. The climate is too changeable to permit of the permanent establishment of silk-production, and the expenses attending the process have always been found to be heavy for it to be financially a success; it has been found cheaper to import the raw material than to produce it on the spot. The rearing of silkworms in our own country, therefore, is still merely a pastime, and an 'education' as the French call them are carried out on an extremely insignificant scale, smaller than anyone would dream of undertaking if it were done to utilising the silk."

Referring to James' action in England an American writer says, "the same Monarch ordered the planting of trees in the American colonies, and he then essayed to enforce the silk industry by fine and premium" \* \* \* "The Huguenots brought the culture to South Carolina and even there manufactured silk. Law (of South Sea Bubble fame) brought it to Mississippi, and in 1734-5 Oglethorpe planted it in Georgia and it is historical that he presented Queen Caroline of England with 8 pounds of raw silk, from which Charles II wore robe and hose at his coronation; and still later (in 1755) the Princess Dowager and Lord Chesterfield boasted of wearing American silk." \* \* \* "Premiums were bestowed and penalties enforced to fix the industry in the colonies, for the Treasury of England complained that no foreign commodity more exhausted her exchequer than the importation of raw silk to feed her 40,000 silk manufactories. But neither Royal favour, hope of reward, or fear of punishment availed, for England paralysed one hand by the arbitrary use of the other in sanctioning a charter to a joint stock company of London, privileged to take African negroes to the colonies, which caused all other enterprise to be abandoned for that of cultivating tobacco. There was a struggle, however, here and there still to sustain silk-culture, for in 1744 a filature had been established in Savannah, and silk from this quarter was quoted at 2s. above that imported from any other country, and this convenience of reducing the cocoon to silk thread encouraged its raising; but, most unfortunately, the filature was burned, consuming a large stock of raw material. Then followed the Revolution, which made breadstuffs the first consideration; yet, many women of the land continued to raise silk for their own use, mixing with it wool for homespun garments; but with peace came cotton, then the gin, whereupon followed the monarchy of slavery."

In the year 1825, a great effort was made by a large and influential company, having a capital of £1,000,000, in shares of £50 each, designated "The British, Irish, and Colonial Silk Co.," to introduce silk-culture into Ireland. Under the directions of this company, the celebrated Italian work on the art of rearing silkworms, written by Count Dandolo, was translated and published in England. I was anxious to ascertain for certain why this company did not succeed, for it has been stated that it was due to want of labour, but I was very doubtful on this point, and I am glad to say I found the proper reason given in the following extract, which gives also some useful information as to the spread of the mulberry:—

"Mulberries are mentioned by the early Greek writers, Theophrastus, Dioscorides, and Galen, and among the Romans by Virgil, Horace, Pliny, &c. All these writers are supposed to refer to the black mulberry (*M. nigra*), which must have been the species first employed for feeding the silkworm after its introduction to Western Asia and the South of Europe. Dr. Tozzetti states that the introduction of the white mulberry into Italy is of a date long posterior to that of the silkworm. These were imported into Sicily in 1148 by King Ruggieri after he had conquered Thebes, Athens, and Corinth. The Lucchese are said to have learned the art of rearing them from the Sicilians, and introduced it into Florence, when in 1315 they took refuge there from the sack of their own city. Pognini has, however, proved that silk was produced in Florence in, and previous, to the year 1225, and from Italian histories and chronicles it appears that there were silk factories there before 1266. From Sicily, mulberry-trees were brought to France about 1494. The black mulberry is mentioned by Tusser in 1557, and it is stated that the first trees were planted at Syon house in 1548, but the first Duke of Northumberland said, previous to 1824, that he could trace these trees back three centuries. Indeed, there is every reason to suppose that, as very old mulberry-trees were found near Monasteries they had been introduced by the Monks whilst they were in possession of these establishments. Bacon enjoyed in London the shade of a mulberry-tree, and Shakespeare, as is well known, had a favourite one at Stratford on Avon. We have seen two others that were raised from this celebrated tree and planted by Garrick at his villa near Hampton Court, where they are, or were, very lately, still alive. They had been planted in line with hollies apparently of the same age, and were the common black mulberry." \* \* \* "*Morus alba*, the white mulberry is a native of China and of the north of India according to some authors; but in the latter Dr. Royle states (Botany of Himalayan Mountains) that it is not found wild. It is said to have been unknown to the ancients, although some allusion is made to its fruit in their writings. In the Journal of the Horticultural Society (IX, 170) it is mentioned that a variety of the white mulberry said to be delicious eating, but unknown in Europe, is now abundant in Beloochistan, Afghanistan, and probably in Persia, and apparently of a very ancient cultivation there. It is by no means impossible that some knowledge of it may have reached such of the ancient writers as may have been in the East or had communication with it. It is commonly supposed that cuttings of the white mulberry were first brought

brought into Tuscany from the Levant by Francisco Buonvinici in 1434. In the following year a law for encouraging its cultivation was made in Italy, and in the course of the fifteenth century the white mulberry had gradually, but entirely, superseded the black as far as regards its cultivation for the feeding of silkworms, which produces the silk spun in Europe. The tree grows to the height of 20 or 30 feet, and has a heart-shaped, or ovate undivided or lobed serrated and rather glossy leaf. The fruit is white or pale red. The tree is of more rapid growth than *M. nigra*, and its leaves contain more of the glutinous milky substance resembling caoutchouc which gives tenacity to silk produced by the worms which feed on them, and is found in all plants on which they exist. The white mulberry and its varieties are more tender than the black which, as above stated, has withstood for more than 300 years our severest winters; but not so the white, for in most winters its shoots are killed back, more or less, and in less than thirty years the tree becomes very stunted. Hence, without due precautions, it could not be grown in this climate (England), to supply food for silkworms. If cut down, however, like raspberry canes, the white mulberry pushes again very rapidly, and if not constantly nipped almost in the bud, a profusion of leaves would soon be produced.

Herein, we suppose, must have lain the error by which a British, Irish, and Colonial Silk Company formed in 1825, must have failed independent of other adverse causes which may have existed. This company imported 26,000 white mulberry-trees from the south of France into Ireland, and soon after 200,000 more. The speculation, however, proved unsuccessful, though we know from experience that fine silk has been produced abundantly in Britain, the silkworms being fed on the leaves of the black mulberry, those of the white mulberry and of the Osage orange being used as occasional substitutes. The deaths of the worms under such conditions have not been above 3 per cent. In such a company the question of success would resolve itself into two heads—1st, the proper management of the mulberry plantation, which would be very easy; and secondly, the price of labour. The labour might be performed by otherwise unemployed persons, at a rate, we suppose, remunerative to both employers and employed."

#### SERICULTURE IN NEW SOUTH WALES.

It seems very probable that the introduction of sericulture into New South Wales may have been contemplated in the early days of the Colony from the fact that the mulberry was found to thrive admirably.

In the year 1825 the Australian Agricultural Company was formed in England, and its original prospectus showed that it was the intention of the company to plant, amongst other things, the mulberry for silk production. However, "the grand idea of vineyards, olive oil, opium, silkworm cultivation, and orange groves, which found applauded passages in speeches in the House of Commons and Court-room of the company were never extended beyond the resident managers gardens."

Sir Thomas Mitchell writing in 1831, and referring to Mr. John Macarthur's garden at Parramatta, said:—"Here I saw \* \* \* magnificent mulberries of thirty-five years growth, umbrageous and green."

I find in Mr. Surgeon R. G. Jameson's work, *Recent travels in New South Wales, &c.*, published in 1842, the following very interesting and significant remarks:—"The wool of New South Wales connects her with the rest of the world and bringing to her shores the wealth and the products of other lands, but there remain other resources, the development of which presents a yet unopened field for the industry of the colonists and a wider range of commercial intercourse. Of these prospective resources the culture of silk is especially deserving of attention. The mulberry-tree grows to great perfection and the silkworms already introduced have shown by their instinctive industry, that a great trade in raw silk might be carried on from the shores of Australia as easily as from those of China or Italy. The scarcity and high price of labour, must, for many years, constitute a feature in the Australian Colonies and in all communities widely dispersed will militate against the employment of adults in this climate. But where the work to be performed demands no hardships, no exertion of physical strength and but an hour or two of occupation which does not merit the name of labour, it seems reasonable to conclude that the employment of young persons of either sex in the management of silkworms might be rendered conducive to very serviceable objects.

In reducing this proposition to a practical shape it will be adopted by a fundamental principle that the labours of those employed is worth a certain sum per day to be given to them in the shape of maintenance and in the shape of education. Such an arrangement it may be presumed would diminish the burden of the parent without injuring the health or moral interests of the child. The strong and well founded objections that present themselves for the employment of juvenile labour for many hours of the day in manufactories would not apply to its employment in which I have vaguely attempted to advert to. Like all untried systems this would appear at first sight to be surrounded with difficulty, but we may ask, what great or useful undertaking was ever yet accomplished without difficulty?"

Braim, in his *History of New South Wales, 1845*, says, "the olive is peculiarly fitted for our soil, and so also is the mulberry, which would enable us to manufacture silk even in large quantities. This has we know been tried on a small scale, and been attended with complete success."

In the year 1845, a very able article "on the rearing of the silkworm, and the cultivation of the mulberry in Australia, by Phalæna, a Mr. Campbell, appeared in the *Oddfellows' Magazine*, published in Sydney; and attention was directed to this article by very favourable criticisms which appeared in the *Sydney Morning Herald*, in November and

and December, 1845. "We may as well now pronounce our opinion," said the writer in the *Herald*, "that it is a clear and well written paper, calculated to be useful both in directing public attention to a new and great source of employment and wealth for this Colony, and in affording valuable hints to those who have already studied the subject, and who can best appreciate the results of those patient and minute, yet pleasing cares, so peculiarly necessary in this branch of industry as a source of gain." \* \* \* "It is remarkable, but quite consistent with everyday experience, that all companies formed for the cultivation of silk, have, so far as we know, failed in their object. Companies formed for its culture in England and Ireland have thus been unsuccessful, but this we do not attribute to their being companies alone, for we know an experienced individual, an Italian, who came from Italy purposely to try the rearing of the silkworm in England, and also was obliged to give it up. A company tried it in the Sandwich Islands, and we do not say that their experiments were not judicious and careful. The fact is, a severe drought destroyed the plants, moreover they could not hatch the eggs of the same season, in short they also abandoned the attempt. A similar association was formed in Jamaica, and worked during two seasons. Its success for the first season was by no means encouraging. During the second it was better. But in that colony, as in all countries of the Northern Hemisphere, especially the intertropical, great casualties to the worms arise from the heavy rains. We shall not be surprised to learn that this undertaking is also relinquished." This was followed, in the *Herald*, by a series of articles on sericulture by another writer. Apparently a good deal of attention must have been given to the subject at that time.

About the year 1848, a gentleman named Buezeville, made an effort to establish a sericultural farm at Eastwood, near Ryde, but he did not succeed in carrying out his project, simply from want of means. His failure was talked about for years in the neighbourhood, as I perfectly well remember. This gentleman, who had acquired a practical knowledge of sericulture in Europe, evidently foresaw great potentialities in the industry if it once became established in New South Wales, but he was looked upon as "a visionary," and even as a "humbug," by the neighbours, in consequence of his want of success, but no consideration seemed to have been allowed for his crippled means, which was the true cause of failure. I have heard it said that an endeavour was made by the late T. S. Mort and others to obtain assistance from the Government, to enable Mr. Buezeville to carry on his experiment, but without success. I cannot discover any official documents bearing on the subject. This attempt to establish sericulture is probably that referred to by Flannigan in his History of New South Wales, thus, "The experiment which had been made to grow silk, on an extensive scale in the Colony, proved a failure, chiefly in consequence of the want of the proper species of mulberry."

No attention appears to have been given to sericulture in the Colony for some years after this. In a speech made at a meeting of the Silk Supply Association of London, held on the 18th May, 1869, Sir Daniel Cooper threw some light on the reasons for this neglect. He said, "He had passed many years on the east coast of Australia, and more than twenty years ago this subject of cultivating silk was started in Sydney in the hope that a company might be formed and silk become a permanent production in New South Wales. He did not think the thing was properly managed or properly started, and then the gold discovery came, and the silkworms and things of that sort were forgotten."

In the year 1862, or about that time, Mr. Charles Brady took the matter in hand and spent many years at his own expense, and carried through many very important and valuable experiments of an entirely new character; and that gentleman, in a letter to the Colonial Secretary, dated 17th March, 1870, invited attention "to a subject which, under present circumstances, may become of large and immediate importance to the interests of the Colony." As this letter contains a great deal of information of much value, I append a copy [*Appendix*, No. 1]; but I beg to quote one or two passages, to which I wish to invite particular attention: "It is manifest that silk-growing in these colonies, once established or fairly set going, would give lucrative employment to large numbers of persons of both sexes, and tend greatly to elevate as well as to enrich them; time was when the peasants of Europe were, at least, as unimpressionable and as difficult to receive new ideas as our own wide and thinly-spread population is now supposed to be. Such as our colonists are, we may, at least, consider that, if worthy of being entrusted with political power, they are not unworthy, by reason of their want of intelligence, of having such attention bestowed on their welfare as may, in some degree, make up to them for the disadvantages under which people who live in the bush necessarily labour. In truth, our distant settlers have yet few benefits conferred upon them, and any new export raised in any part of the Colony enriches not only the producers, but is capital gained to the community;" and "my operations have all been carried out by myself, unsupported by any extraneous aid; what I have effected alone and single handed is work that, in every other country where any parallel success has been accomplished, has been done by Governments with the resources and at the cost of the State. I take no reproach to myself for not having before communicated with you on this subject; and I think that the very fact of my having effected what I have done without assistance is valid argument why Governments should be very reticent in taking up every likely scheme for promoting new industries; but now that success is a demonstrated fact, and the opportunity so good, I venture to suggest to you that it may be sound policy not to ignore the experience and knowledge gained." \* \* \* "I, therefore, shall be happy, should you determine to pursue the matter, to afford you without reserve any information you may be in need of and any personal assistance I can render. The Government already possesses several useful varieties of mulberry, and other silk-producing plants at the Botanic Gardens, and I would willingly supply other varieties in my possession in which they are

are deficient. In regard to the silkworms themselves the case is difficult; besides myself there is no one in the Colony, as far as I am aware, qualified to judge of their value. It by no means follows that what succeeds with me will do equally well with inexperienced and perhaps careless or clumsy hands; hence I am not disposed to risk the liability to reproach or to be held responsible for the possible failures of others. Should you, therefore, approve of my suggestion, and accept as a free gift from me such stock as may be required, I will, on timely notice, furnish any quantity of acclimatised silkworms or silkworms eggs of any varieties, races, or species I possess that may be needful to spread the culture throughout the Colony. I say as a free gift, as this will relieve me to some extent from discomfort in case of an unsatisfactory result. If the worms perished or did not turn out well the loss would be mine, and if, as I think we may reasonably hope, they take a fair hold on the country, I entertain no doubt a liberal Legislature, in due time would mark its sense of service."

In the year 1869, a despatch was received by the Colonial Secretary from Earl Granville enclosing a copy of the proceedings and resolutions to establish the Silk Supply Association of London. A meeting of gentlemen connected with the silk trade, manufacturers and persons interested in the English colonies, was held on 18th February, 1869, and an association was formed for several purposes, one of the most important being to "stimulate the production of silk by cottage cultivation and otherwise, in every country where the mulberry is capable of growing food for silkworms." The reason for this was "for fully seventeen years the silk trade of Europe had been suffering from the spread of infectious silkworm diseases, and the crisis had now become so acute that on 18th February, 1869, the Silk Supply Association was formed in London to take measures for the arrest of the evil and to promote silk farming in every (English) country devoted to the growth of the mulberry." The silk manufacturers in England became greatly alarmed lest the supply of silk to feed their extensive mills should cease altogether. "The effect of these diseases was gradually to curtail the annual crop of silk available for international commerce until a point was reached when the silk industry of the world was threatened with extinction. Previously to the disaster reaching such a point of acuteness, Italian savants had endeavoured by researches and suggestions to save the trade from collapse, but with little practical result. Pasteur afterwards took the difficult matter in hand, and to the discoveries and recommendations of that eminent physiologist and chemist, all sericulturists owe the great change for the better which has lately occurred."

It is a remarkable fact which does not seem to have been properly appreciated (owing possibly to the glory which surrounded Pasteur's subsequent wonderful researches and discoveries), that during the time such a miserable state of affairs, as abovementioned, existed in all silk-producing countries, we had in this Colony pure bred races of the old original stock of silkworms perfectly free from diseases of any kind, owing to the careful experiments and exertions of Mr. Charles Brady, who had succeeded in eliminating all traces of disease. Dr. George Bennett, M.D., Hon. Secretary, Acclimatisation Society of New South Wales, writing to Her Majesty's Minister at Florence, 18th May, 1870, referring to this matter said "It is well for me to explain that the subject (the raising of silk and silkworm graine in the Colony) is not quite a new one to us, and under the immediate observations of this Society some remarkable experiments have been carried on here continuously for several years last, past. Diseased and weak worms have been introduced by Mr. Charles Brady from Europe, and from elsewhere others sound but more or less inferior in quality. Some of this diseased and feeble stock after treatment by him for several generations in this climate, have, under the influence of fresh food grown in the new soils of this Colony, gradually improved in constitution, and some breeds even appear to afford reasonable hope of becoming perfectly sound and ultimately restored to the original vigour of the parent stock before the disease appeared.

Dr. Wallace, a well-known authority in England on silkworms, in a series of articles on silk-culture published in "Cassell's Technical Educator," says, "The Cape, California, New Zealand, and Australia are also specially favoured districts. In fact, the disease is eliminated and quite disappears under proper treatment in the latter country. Mr. Chas. Brady, of Sydney, New South Wales, writes, 'The mulberry of all varieties thrives here remarkably well; and I have every reason to believe that the silkworms may, even if severely diseased on introduction, become quite sound by proper treatment under our invigorating atmosphere. My experiments have been uniformly successful in regard to eliminating disease.' I have myself received from Mr. Brady, eggs of a celebrated European race (Milanais), now very subject in Europe to disease, which have been pronounced, after microscopic examination by skilled experts, to be perfectly free from all signs of disease. It is specially desirable to renovate the old races of *Bombyx mori* which have been ennobled in former generations for the quality of their produce but which are now nearly exterminated from the prevalence of disease—by importing graine into new localities where disease is unknown. Settlers in Australia, New Zealand, and similar localities should specially consider what great pecuniary advantages are offered to them from this branch of sericulture."

It is hardly possible to realise, at the present day, the immense importance that the results of Mr. Brady's experiments would have been to the silk industry of the world, had Pasteur's investigations either not been made, or had failed altogether, for then the silk producers would not have been enabled to combat, more or less successfully, the diseases which at one time threatened to annihilate the silk industry. The industry would have been saved and New South Wales would now, most certainly, be one of the most important silk-producing countries in the world.

Healthy

Healthy silkworm graine or eggs became extremely scarce and costly, so much so that as much as £3 3s. per ounce was obtained for eggs from this Colony. Such being the case prospects seemed most favourable for the establishment here of an important and profitable industry, namely, that of graining or the breeding of silkworms for the production of eggs or graine for export. Several persons about this time made mulberry plantations, and some did this, I believe, with a view to produce eggs only.

One of the best known of these persons was the late Mrs. Bladen Neill, of Corowa, who took a most active interest in sericulture, her object being "to aid in the enlargement of the silk-growing industry in Australia and New Zealand, not only for the advantages of the colonies themselves, but with a view of adding to the sources from which the English manufacturers draw their supplies of silk, and also to provide such means of new employment for women, and particularly for poor educated women, as may be properly connected with silk-growing." Her motives were greatly inspired by philanthropic reasons, but her admirable intentions and over-sanguine expectations were never realised. The Government of Victoria either granted to, or reserved for, the Victorian Ladies' Silk Association, presided over by Mrs. Neill, 1,000 acres of land at Mount Alexander, near Castlemaine, said to be an unsuitable locality, where a number of mulberry cuttings were planted. Mrs. Bladen Neill made a plantation of mulberries at her farm at Corowa, New South Wales, another unsuitable locality, where the dust from a wide dusty road caused the mulberry leaves to become dirty and unsuitable for food for the silkworms; but I believe this plantation was more successful than that at Mount Alexander. Sir Samuel Davenport, of South Australia, when examined before the Vegetable Products Commission of Victoria, referring to Mrs. Bladen Neill's attempts and failure, said, "I know that in your country, some years ago, a celebrated lady, Mrs. Neill, with a great deal of enthusiasm went into the subject, and studied in Italy, and so on. I used to correspond with her, and knew something of what she was doing, but in that case, unfortunately, it seemed to me, they went into the production of a large quantity of silkworms long before they had food for them. Now a starved animal of any class, a sheep, a bullock, or a silkworm can never do any good without food, and the first thing to grow is the mulberry in large quantities." A very celebrated authority on the silkworm, Captain Thomas Hutton, F.G.S., &c., in a pamphlet published at Calcutta in 1870, "Remarks on the cultivation of silk in the Australian colonies," wrote, "The sericulturist who begins to tremble at the probable outlay before anything is done, had better not begin the speculation at all; for I feel fully convinced that many of the failures recorded have been due rather to the stinginess of the speculator than to anything else. It is as well, therefore, at the very outset, to lay it down as a rule that experiments of this nature carried on in a 'shilly-shally, fiddle faddle' scale can never succeed, and that it is the most wretched economy imaginable to stint the worms in anything that is conducive to their welfare. It is, in fact, precisely this very stinginess on the part of the ryots that causes the silkworms of Bengal to produce such poor cocoons."

A writer in the *Sydney Morning Herald*, 1869, said, "Silkworms were introduced here some years ago; but the venture failed, in the first place because no market was open for the cocoons and silk; in the second because the persons who undertook the business were imperfectly informed of what was to be done to insure success.

The market now appears to be accessible through the agency of the Association, and all we now require is the knowledge of which I speak. If this can be imparted in the way suggested all will be plain sailing, or rather plain winding, for the mulberry will grow anywhere in New South Wales."

In Queensland, about 1874-5, great results were expected from a large private sericultural venture; but in consequence of a want of practical knowledge in the management of silkworms, failure resulted.

A most disastrous failure in New South Wales, was that of a well-designed, private, and energetic attempt, at Lavington, near Albury, by Messrs. Affleck and Howard. In 1880 the newspapers reported that great loss had occurred with the silkworms. In the season of 1882 another loss occurred, and this was attributed to a sudden climatic change; but at last, in 1883, the truth became known. In May, 1883, the *Town and Country Journal* reported:—"Mentioned with regret. For the past eight years the mulberry farms at Lavington have been one of the lions of the district, to all interested in the development of the sericultural industry. Mr. Thomas Affleck, of Glenmorns, was the first to commence the industry, and he has now a large area under mulberry-trees. Mr. John Howard followed soon after, and both of these gentlemen have devoted a great deal of time and money to a purpose which, after all, is not likely to be accomplished. Year after year they met with different obstacles, but persevered in the hope that the succeeding season would bring them a reward for their labours. This year they confidently reckoned upon a successful rearing, but once more the whole of the worms were carried off by Pebrine, and I understand the experiments will be discontinued. This is a cause for regret, but not for surprise, as both gentlemen have been heavy losers by the enterprise. The cause of the failure is said to be the difficulty in procuring good graine. If this could be overcome, Sericulture might become a profitable industry on the Border."

The disease mentioned, "Pebrine," is most dangerous and contagious, and one of the worst of the diseases which spread through the silk-producing countries, as before mentioned. In an experiment in Asia Minor, made with dust from nurseries in which silkworms had died the previous year. "After sifting and mixing a few particles with distilled water, a microscopical examination revealed hundreds of corpuscles upon each disc. Some of the same dust was then sifted over mulberry leaves, and given to silkworms in different ages, when, after two or three days, the mortality in every instance was found

to

to be very great." The report as to the difficulty in obtaining good graine seems remarkable, in view of the fact that we possessed in the Colony, at the time, some of the best and most healthy graine in the world. The fact was, I believe, that diseased graine had been imported from Europe. A lady, who had seen these mulberry plantations at their best, informed me that the variety of mulberry planted was the *Morus multicaulis*. This is by no means one of the best kinds for general feeding.

In the year 1864, a Mr. Jno. M. Bate, of Sydney, published a small pamphlet on silk-cultivation, and dedicated it to his Excellency Sir John Young. In this little work Mr. Bate says, "I have mentioned in my letters, published in the Sydney papers, that in one season, many years ago, that with a very limited supply of food, my two brothers and myself reared silkworms that produced upwards of 10 lb. weight of wound silk—all the operation, from the hatching to the winding having been done by ourselves under many difficulties, from want of food, suitable accommodation, &c., &c., with the sole assistance of a man to cull the leaves (who had to go all over Sydney to get them); and this was done without interfering with our ordinary studies or employments. The cocoons were as large, firm, and as heavy as I believe are produced in the most favoured parts of Europe, and the yeild of silk was equally good."

Dr. George Bennett, M.D., interested himself considerably in the establishment of sericulture in this Colony. Writing to the Colonial Secretary on the 7th June, 1870, he said, "To direct attention and impart a knowledge of facts about the rearing of silkworms the present time seems very appropriate. First, the extremely critical condition of all European breeds gives the gravest reason to fear that if they experience adverse weather another year the whole may become utterly extinct, or for all practical purposes so unavailable for stock to breed from that all the European silk-producing countries will, of necessity, have recourse to importations of eggs from other countries where the disease affecting the silkworms does not exist or is less severe." Dr. Bennett then refers to a very remarkable discovery made by Mr. Charles Brady, one of such importance that if it can be made use of in this Colony in the event of sericulture becoming established it will make an immense difference in favour of profits. Secondly "writes Dr. Bennett" the well-known operations of Mr. Brady in the Colony have already caused considerable attention to be directed to Australia, and the very remarkable system originated by that gentleman and carried on from time to time during several years under the observations of this society, of producing a succession of daily broods and crops of silk during a great part of our long season is highly encouraging. This very important fact, so honorable, and, if rightly understood, so calculated to do good to the Colony, was thus commented on by Mr. Dickens, President of the Silk Supply Association, of London, at a public meeting held at Coventry. "The fact of producing silk day by day was most wonderful, and was what was not done in any other part of the world, and Mr. Chadwick, M.P., at the same meeting took occasion to say in reference to this Australian plan 'that the daily production of silk which would be as important a fact as ever occurred in the silk trade.' Thirdly, there are now most excellent varieties of silkworms in the colony from which beginners could be supplied wherewith to commence the creation of a new export." In a paper read before the Society of Arts in London, 26 April, 1876, Mrs. Bladen Neill referred to the same subject thus, "No account of silk culture in Australia would be complete without a tribute of praise to the unwearied and scientific labours of Mr. Charles Brady, of Antony, Tweed River, New South Wales, who has devoted his life to the study and improvement of silk culture. We owe to him the means of producing successive and daily hatchings at pleasure, as well as the introduction into Australia of the best races of silkworms known; these will doubtless produce in time. He probably knows more about silkworms than any man living." Many attempts have been made to effect this artificial hybernation, but no one has succeeded but Mr. Brady, and to him only the art is known.

Dr. Bennett referred to the "best races of silkworms," so that I take the opportunity, here, to invite attention to the great importance of breeding and rearing silkworms of only the very best kinds; and I will also invite attention, presently, to the extraordinary increase that has been effected in the production of silk, when proper intelligence and skill are brought to bear on the breeding, the selecting, and the improving of silkworms.

Mr. Brady resided for many years near the Tweed River, where, on his farm, he planted and tested a great many varieties of the mulberry, in order to determine the best and most suitable kinds for the locality, because different climates affect the value of varieties; and, at the same time, he perfected his "Australian races" of silkworms, and kept them up to the highest standard, prepared at any time to undertake the supervision of the sericultural industry, which he was led to expect would be carried on, or initiated by the Government. He long since proved the extraordinary suitability of the north-eastern coastal districts of the Colony for sericulture; and this has lately been substantiated by recent developments at "New Italy," near the Richmond River, to which I shall refer more particularly later on.

The establishment of hardy races of silkworms which are absolutely free from disease, and which produce a uniformity of cocoons, and consequently silk, is, I may mention, of the utmost consequence for commercial purposes. The same amount of labour is required to produce cocoons of poor quality, as is needed for the production of the very best; in fact an experienced sericulturist informed me that "it costs more to produce a bad cocoon than it does a good one." In order to make this matter perfectly clear, I must refer to a circumstance which took place in another country.

At one time a very large silk industry was carried on near Smyrna, in Asia Minor, but it became well nigh if not totally ruined by the effects of the silkworm diseases which had spread through the district, and nearly all the mulberry plantations were

cut down and destroyed. But, "through the almost herculean and untiring exertions of an English gentleman, Mr. John Griffitt, during long and anxious years, the silkworm diseases had been combated and throttled one by one, by the aid of science, the dissecting knife, the mortar, and the microscope, and latterly by following up the brilliant discoveries of M. Pasteur of the Institute of France."

"Some years ago," said Mr. Griffitt, "I obtained a quantity of indigenous graine of a very fine race, but unfortunately it was much diseased. I raised the worms the moment they were hatched in separate cells in order that those contaminated might not infect the healthy, and from the few sound specimens I acquired my present robust race which I have since continued to improve. It is in every way superior to all the other varieties I have raised, not only in vigour but likewise in the weight of the cocoon and quality of silk it yields. From 1 oz. (of 30 grains of eggs) I obtain regularly from 150 to 155 lb. of fresh cocoons, 12 lb. of which, taken from the bushes where they have spun, produce over 1 lb. of silk of the finest quality, while the loss in double cocoons is only from 4 to 6 per cent., whereas that connected with other races has proved to be from 15 to 30 per cent." This improved race seems to have been still further improved, judging from the following, according to Mr. Cochran:—"The silk harvest at Bournabat, and wherever Mr. Griffitt's graine was distributed last spring was of the most satisfactory character. That gentleman's privately conducted 'education' of 1½ oz. yielded 60,000 worms, all of which arrived at maturity without exhibiting a trace of disease and spun the extraordinary weight of 93 okes of cocoons or 255 lb., equal to the unprecedented return of 170 lb. per ounce of eggs set to hatch. The average crop of the adjoining farmers and peasants, although not so great, having been 42 okes or 115 lb. is still far ahead of recent returns from Europe. These figures according to M. Maillot, Director of Sericulture at Montpellier, for the French Government are,—from Italy 23 kilogrammes (62 lb.) and from France 28 kilogrammes (77 lb.) per ounce of eggs. If such returns are good from the two great silk farming countries of Europe, in what category are the magnificent crops of Mr. Griffitt and his friends to be placed?" It will be seen that Mr. Griffitt's improved races yield almost three times the weight of cocoons from an ounce of eggs or graine as is produced from the same weight of eggs of the unimproved races of silkworms in Italy and considerably more than twice as much as is produced in France. This is an excellent illustration of what can be accomplished by great skill and knowledge applied to the breeding and selecting of silkworms, but it can hardly be understood in New South Wales where the silkworm, unfortunately, is considered nothing but a toy. However, when a similar system is applied to the breeding of cattle, sheep, or pigs its importance can be appreciated. "When we as a people" wrote a contributor to the *Town and Country Journal* "cease to regard the industry as *infra dig.* or child's play, and acknowledge to ourselves that we are not a sufficiently intelligent people to be good silk growers we shall be on the right tack towards taking it up successfully. The tool will come to the hand that can use it, and this great staple of production with all its wonderful power of attaching small proprietors to the soil, dotting the land with happy homes and thus helping to form a substantial yeomanry, will open its mine of wealth to us when we have shown ourselves capable of working it."

The French Government has been taking active measures lately to encourage silk-production as well as of silk-reeling as will be seen from the following "Edict of 4th April, 1892, containing instructions relative to carrying into effect the law of 13th January, 1892, to give special encouragement to sericulture, which is as follows:—For six years to come silk growers or raisers of silkworms shall be given a bonus of 5d. per kilogramme of cocoons and the manufacturers a bonus on a graduated scale per filature in proportion to the work done annually, which will also be on a sliding scale, &c."

It seems very evident from this and other articles published officially, that the silkworm diseases have by no means been overcome. In some of the silk-producing districts the returns of silk are decreasing, and the yield is so small as barely to give a profit.

In New South Wales, several prominent and well-known citizens have from time to time taken a great interest in sericulture, and have exerted themselves to encourage the industry. Amongst them were the late Mr. Thos. S. Mort, the late Mr. Henry Prince, the late Mr. George Thorne, the late Mr. James Manning [see *Appendix, No. 3.*], Dr. George Bennett, and Messrs. Robt. D. Adams and J. K. Fry. I heard Mr. Mort on several occasions publicly express his views with respect to sericulture, and he seemed to be very much impressed with the feeling that it would become a great industry in the colony, and that it was worthy of every encouragement. The visitors' book at the Randwick Destitute Children's Asylum bears the following remark by that gentleman dated 13 August, 1861, written with reference to experiments in sericulture made by the late Mr. May then Superintendent. "My ramble over this admirable home has given me the greatest pleasure. I strongly commend to its promoters the extensive planting of the silkworm mulberry, believing as I do that the Institution may be made the 'nucleus' of a silk growing population, an occupation that would render the Institution self supporting, besides being the means of adding immensely to our national wealth."

The Agricultural Society of New South Wales took up the matter of sericulture warmly during the years 1869 to 1874, and published considerable useful information in its Journal and offered prizes for silk at its exhibitions. However, after 1874, interest in the subject appears to have declined and eventually ceased. A useful diagram of instructions, showing silkworms in their various stages, published at the Government Printing Office, was distributed by the Society in 1871. I obtained a copy at the time and still have it.

A collection of cocoons was either lent or given to the Society by Mr. Brady in 1871, who wrote, "I have sent to the Agricultural Society for inspection a collection of cocoons. I am doubtful whether I am not going too far in advance of public intelligence. There has been so little earnestness shown, and so general a smallness of mind as to the nature of the silk industry, I am indisposed to trouble myself any more about the public. It is, therefore, out of regard to yourselves and the few who do take an intelligent interest in what has been done, and who comprehend the good it must do to the Colony, that I have taken the trouble to put the cocoons together. They show above view about half a hundred different kinds. Each cocoon represents a separate variety, and being in juxtaposition, the different characters of each are very apparent. All have been reared at this place during the season just concluded, and you must remember what a season we had for bad weather, and other disadvantages, you may in some degree understand the amount of labour and constant attention it has required to rear them. Each kind and breed has been reared separate and on its appropriate food. Here you see in results part of what we have been able to accomplish, and in these results the absolute demonstration of all the capabilities of the country for this the most lucrative of all pursuits. People can also see we are long past the time of experiment, that not only is the foundation completed but the superstructure well forward. You will observe in the cocoons themselves signs which indicate in some perfect health and in others weakness. You must understand that I have always confined my attention to improving the health and the constitution of the worms (for every one of the European varieties, without exception, was severely diseased when imported) and naturalising them to the Colony. No attention was or could be given to rear for silk, indeed, the two are to a great degree incompatible, for in rearing for graine, that is healthy stock, you must avoid the processes most advantageous in rearing for silk. The cocoons show the particular characteristics of the respective types. I write this letter entirely in the interests of the Society and intending silk growers."

Cochran writing sixteen years after Mr. Brady in 1887 says, "but a large education and a considerable production of eggs are clearly incompatible with a copious harvest of silk. In other words, the farmer should make up his mind at an early point in his technical career whether he will devote his energies to the first branch or the last."

Of the gentlemen mentioned who took a great interest in sericulture, the late Mr. George Thorne and Mr. J. K. Fry, practically tested its suitability for the Colony and encouraged its establishment as much as possible.

Mr. George Thorne, devoted a great deal of time and labour to the matter, and, up to his death, which occurred about eighteen months ago, took a very keen interest in the subject and aided as much as he could its initiation at "New Italy," and his daughter, Miss Thorne, has continued his work, but not to the same extent. This work was begun and carried on for some years at Rose Bay, near Sydney, and at first Mr. Thorne had considerable difficulty in procuring a sufficiency of food for his silkworms. He afterwards removed to Castle Hill, and carried on his work more extensively as soon as his mulberry-trees had attained sufficient size. Several varieties were planted, but the *Morus alba* was the kind chiefly dependent on for a supply of food. A most careful record of experiments and results was kept, and this must be of considerable value. Silkworm graine (or eggs) was obtained from Europe and America, and Mr. Thorne was very successful with it; but on one or two occasions "Pebrine" broke out amongst the worms, and all those affected were destroyed at once. Mr. Thorne exhibited on many occasions, both cocoons and reeled silk at exhibitions in the colonies and elsewhere and gained several medals for his excellent exhibits; notably a gold medal at Amsterdam in 1883, and bronze medals at the Indian and Colonial Exhibition in 1886; the United States Centennial in 1876; Melbourne International in 1888; Agricultural Society in 1876 and 1877.

Mr. Thorne took considerable trouble to disseminate useful information respecting sericulture wherever he could do so. He strongly urged the settlers, fruitgrowers, and others in his immediate neighbourhood to plant a few mulberries and make a little addition to their incomes by silk-culture, but either from apathy or a fear that there would be a difficulty in finding a market for any silk produced, no one seems to have entered into the industry. There are a few trees here and there and a few silkworms are kept for amusement or curiosity. But latterly some little interest appears to have been aroused, and Miss Thorne receives many inquiries about the rearing of silkworms. Last year she distributed directions and young silkworms, just hatched, to about twenty persons in various parts of the Colony, and during the present season nearly as many. Many inquiries have also been made respecting a market for cocoons. The public schools are taking some interest in the matter and apply for information. At the Baulkham Hills School the children have been keeping the worms for some time.

Mr. J. K. Fry made many most useful experiments extending over many years, and as these were done with a view to determine whether silk-culture could be made a profitable industry in the Colony, the results of his experience must necessarily be of very considerable value. I may say that Mr. Fry thinks highly of sericulture and that if it were but once started on a proper foundation it would be profitable and ultimately become an immense industry. He insists, particularly, on persons having a knowledge of the subject before trying to rear silkworms.

In my many inquiries into the possibilities of sericulture becoming an industry in New South Wales, I have met many other intelligent and far seeing persons who have a thorough belief in its suitability for the Colony, and who are of opinion that it will be profitable if it once becomes well established and, as it were, "catches on." There are others, however, well intentioned, no doubt, but who have really never thoroughly understood or mastered the subject, who insist persistently that the want of suitable

suitable cheap labour in the Colony is a sufficient preventive to the industry ever becoming profitable. This bugbear is invariably, and too often, dangled as a deterrent before the eyes of those who are willing to enter upon, or assist in promoting, the industry. This bugbear or delusion can, I believe, be disposed of and cleared away without difficulty. I have been exceedingly careful to look into this question fully, and one result is, that so far as I can possibly ascertain, none of the failures which have occurred in any efforts to establish silk-culture have been caused by a want of labour. Mrs. Bladen Neill, in her lecture delivered before the Society of Arts in London (which I previously referred to) said, "The very important question of labour remains only to be mentioned, and it may perhaps surprise you all to hear that an education" (the rearing of silkworms) "upon the rapid Cavalloni system can be made at considerably less cost in Australia than in Italy, and I say this from practical experience, having resided on a large estate near Verona last season, when I studied the cost of everything connected with silk-growing. I could not have had a better master than Signor Ferrari, upon whose estate silk is so largely cultivated; his reputation for what is considered high farming indeed is widespread, his vineyards are perfect pictures of beauty."

Mr. J. Griffitt, of Smyrna, before referred to, wrote "The loss suffered by Turkey since 1857 is incalculable. I remember the time when the wife of every gardener in the vicinity of Smyrna obtained, from her crop of cocoons, a sufficient return to enable her to pay for the clothing of her family for the entire year, but disease swept away our beautiful indigenous races, and this branch of industry was almost wholly abandoned." It seems to me that it would be quite practical for the wives of many struggling settlers in this Colony to earn the same results if sericulture were but established here, and proper instruction afforded to all who wish to learn. A few pounds sterling, 10 or even 5 per annum would indeed be welcome to many a poor wife, especially when it could be gained, without interfering to a great extent with household duties, in about six weeks, for during the greater part of that time the labour of attending to the silkworms is but light.

Mr. C. V. Riley, M.A., Ph. D., entomologist to the American Government, writing on the subject of sericulture, wrote "The greater value of labour here as compared with labour in the older silk-growing countries has been in the past a most serious obstacle to silk-culture in the United States, but conditions exist to-day that render this obstacle by no means insuperable. In the first place comparative prices, as so often quoted, are misleading. The girl who makes only 20 or 30 cents a day in France or Italy does as well, because of the relatively lower prices of all commodities there, as she who earns three or four fold as much here. Again, the conditions of life are such that every woman among the agricultural classes, not absolutely necessary in the household, finds a profitable avenue for her labour in field or factory, so that the time given to silk raising must be deducted from other profitable work in which she may be employed. With us, on the contrary, there are thousands—aye hundreds of thousands—of women who, from our very condition of life, are unable to labour in the field or factory, and have, in short, no means, outside of household duties, of converting labour into capital. The time that such might give to silk-culture would therefore be a pure gain, and in this sense the cheap labour argument loses nearly all its force." I might mention here that the Americans aim at producing "raw silk" to use in their silk manufactories instead of importing it from other countries, but I shall refer to this more particularly later on.

Mr. J. K. Fry tested very carefully the cost of producing cocoons, and in his evidence before a Select Committee, on Mr. Brady's claims, said, "To my mind, the labour difficulty is no difficulty. One season I resolved that I should do everything myself and have no assistance. From the getting up in the morning until the last feed at night I did everything. I collected the leaves from my ground, I fed the worms, I cleaned them, and did everything. Then it simply became a matter of arithmetic. If one man can attend to so many thousand silkworms, ten men can attend to ten times the number or more, because division of labour would materially help. I know it became perfectly clear to my mind that the labour difficulty was no difficulty."

R. C. Haldane in "Subtropical climates and industries," says, referring to silk culture, "The industry is one which is very well adapted for families who wish to increase their incomes by a few weeks of light and interesting work which may easily be performed by women and children. As it is the general custom for the daughters of small settlers to stay at home rather than go to service, sericulture offers employment for girls of this class, which would enable them to add a considerable sum to the family income."

It is worthy of mention here that when about three years ago I visited Mr. Brady at the Tweed River, in connection with my report on his claims, he informed me that the education or rearing of silkworms took considerably less time than it does in Europe—a difference of several days, and this was confirmed lately by the Italians at "New Italy," who expressed to me their great surprise and pleasure to find that the work of rearing their silkworms took considerably less time than was the case in Italy. This is of much importance when considering the labour question. There are many other and natural advantages which we enjoy, which should also be taken into consideration.

As bearing greatly upon the supposed labour difficulty, it is now necessary for me to explain, that the most profitable kinds of silkworms are those known as the "Annuals," which produce *only* once a year a crop of cocoons. They then become moths, lay their eggs and die. There are other races known as Bi-voltines, Tri-voltines, &c., which produce, some two, others three crops, and so on, during a year; but the silk produced by them is of inferior quality to that produced by the Annuals, and the cocoons

cocoons yield a much less quantity of silk. The Annuals, therefore, are the silkworms depended on and reared to produce the largest proportion of silk by far in the world. By the process of artificial hybernation, discovered by Mr. Brady, and previously referred to by me, a crop of Annuals can be produced at any time during the year at pleasure, so that a periodical or continuous "education" of silkworms may be carried on whenever there is available food, or as long as food may be available. Mr. Brady exhibited at the Colonial and Indian Exhibition, London, 1886, silkworm cocoons, partially sun dried. Ordinary growth of the country for the production of silkworm graine only, and in connection with this exhibit was appended the following information, which is of value, as it explains the matter very clearly:—"The labour difficulty (a purely supposititious difficulty) has until now forbidden production of cocoons for silk—the production of first-class graine is incompatible in the same rearing with the production of first-class cocoons for silk. With proper attention, together with appropriate food, treatment, &c., the same silkworms yield more silk for filature than if 'educated' for graine. Hitherto, the production of graine has been so profitable as to preclude attention to the raising of cocoons at Antony.

"The great inducement to enterprise, the culture of the mulberry silkworm in New South Wales, is the long proved power of the climate and country, as exemplified by the practice of the exhibitor for many consecutive years to provide and hatch out, day by day, or week by week, month by month, or at any rate, predeterminal intervals as desiderated, continuous successions of strictly annual worms of any approved breeds for about 200 days in each year, and also, to provide proper food-leaf in proper condition at the proper time throughout, thereby greatly extending, in fact, creating a factory system of production. Thus a number of rearings can be arranged beforehand according to the strength of the working staff, and with the available supply of mulberry leaf for food.

"Then after a certain number of days or periods corresponding to arrangements, and assuming that the management of the graine has been duly attended to the proper time, it necessarily follows that after the necessary time from commencement for the growth to maturity of the worms and at prescribed intervals, be these intervals days or weeks, continuous hatchings out presents the strange and unparalleled phenomena peculiar to New South Wales of mulberry silkworms in every daily or periodical stage of progression. Those of one day's hatching and each succeeding day's hatchings (every day's must be kept severely separate) up to the moment of cocooning—that is worms of every age and daily growth during and through every moult—the cocooning and all the several changes of form (metamorphosis) simultaneously in like daily and contemporaneous succession, and so on in like manner and equal steps, the emerging and coupling of the moths and deposit of eggs (the graine again) until operations are finally closed for the season, when the staff employed can respite for a winter spell and themselves recruit, while refit and preparations are made for another season. So on each and every day, at its due date—a crop of silk—immediately convertible into cash."

"Thus the whole course of the natural life history of the domesticated mulberry silkworm is here seen at one and the same moment—worms of every age and size from one day old to full grown ones mature and making their cocoons—also are seen at the same time the moths emerging, and the eggs again, daily, during the whole period foreshadowed and arranged beforehand. In the hands of a skilled person the process is as much under control as the machinery of a factory, kept alive, going and maintained by nature's own action by means of this silkworm's only natural food—the mulberry leaf."

"This food from mulberries of many varieties is in this climate produced in great abundance, and under judicious management is easily made to furnish daily, from end of July until April following, food-leaf in all stages of growth appropriate in condition for worms in all stages of their growth. A very fertile soil—a temperature of mild frosts (a deal too mild) in our short winter. Summer heats from about 75 degrees to 95 degrees F. and upwards (occasionally) in shade, and a rainfall, not very unevenly (though there is generally a sort of monsoon or 'wet' season from January to April, a mostly dry winter following) distributed throughout the year, ordinarily equal to from 1 inch to 1½ inch weekly. A bright elastic atmosphere at all times, even at night. The summer heats ever tempered by cool breezes. These several items (of great importance in rearing mulberry silkworms), together with the pervading influence of the abounding eucalypt, account largely for the health, vigour, and comfort of the inhabitants as well as of the silkworms raised in the district."

"It must, however, be clearly stated that few men are capable alone of the prolonged strain of exertion and attention necessitated by the abovenamed high-class culture of the best or profitable kinds of the mulberry silkworm. Men of experience and energy, or women with adequate knowledge, &c., and not stinted in the matter of food, could every year realise very considerable sums of money if well supported by a small, yet efficient staff to rely on, with needful labour including male and female. Such men and women would soon find and demonstrate that the actual silk-producing powers of Australia can be made to yield, at no distant date, results in no way inferior to the raw production of wool."

"Wool is produced in this country (New South Wales) mainly from natural grasses without care or cultivation, under conditions subject to many and severe vicissitudes; it gives constant employment to a comparatively small amount of labour for one annual crop. Silk by the process roughly outlined above would afford constant occupation for large numbers of people, old and young, from the pick and shovel man up to the trained and skilled agriculturist. Cocoons in vast quantities would be carried to market—the fruit of intelligent management and control of the powers of vegetation  
and

and insect life such as we actually have them. Simply told, we can produce at convenience as many crops of silk as we can utilise all the food provided without waste. Mulberry plantations (mulberries sustain a deal of drought, and of heat, and of cold) are immensely more profitable than land under grass—are permanent—yearly increase in yield and in value of the yield as they grow for a very long while—this cultivated food is reliable, besides being cheaper than indigenous or natural herbage, and will supply under proper management without injury, repeated demands for the insects.”

“The methods here sketched of the routine of daily practice of the exhibitor, illustrates the ‘marvellous power of little things.’ This art of multiplying small results might, if encouraged and developed, yield fiscal returns of immense material importance. The mere fact of a faculty which may be termed merely brain power, with a slight extra outlay of capital, or of the farmer’s own labour only, of multiplying results large or small at his own will, would, at the very least, greatly encourage and turn to profitable account much mental and bodily labour, besides material, now and up to now absolutely neglected and wasted, or extravagantly and unthrifly used. This Australian invention of raising silk so much cheaper than can be grown elsewhere, would necessarily soon outstrip the yields by the ancient mode current in other countries, and place this Colony in a commanding position in the markets of the world; which, adding considerably to the present productive resources of the Colony, the prosperity of a silk industry once established, would encourage, by a newly-created diffusion of wealth, all other existing occupations, trades and handicrafts, and also probably cause the introduction of many others yet unknown or strange.”

Dr. Cleland, of South Australia, has given considerable attention to sericulture for some years. In a paper read before the members of the Central Agricultural Bureau, 6th March, 1890, he said: “Much of the profit of rearing silkworms will depend on the possibilities of rearing more than one crop of cocoons in the same house, in the same season. As yet I have not succeeded completely in doing so.”

It seems quite clear, that if a system of successive hatchings at will could be made available for those who may enter upon the industry, sericulture should be very profitable, for then the production of silk would be limited only by the supplies of food available.

In many parts of the Colony the mulberry grows with great luxuriance, particularly the northern coast districts, where some varieties become almost evergreen, owing to the mildness and salubrity of the climate, and it yields larger supplies of food than elsewhere, even in its own native habitat. But for sericultural purposes considerable care and management would be necessary to produce the best results, in providing different varieties for different purposes, in judicious pruning, and in many other matters which I cannot venture to enter upon here.

If any settler or farmer wished to carry on sericulture as an adjunct to his other crops, a few acres from the farm might easily be spared for mulberries, more especially so as they would thrive and become productive in places where it would be unprofitable, perhaps, to grow ordinary farm crops. On squattages the mulberry would be a profitable food on occasions of the failure of natural pasture, for all kinds of stock. Cows fed on them yield excellent milk. John Evelyn, in his “*Sylva*,” 1669, says, respecting the mulberry: “The timber (amongst other properties) will last in the water as well as the most solid oak, and the bark makes good and tough bast ropes. It suffers no kind of vermin to breed on it, whether standing or fell’d, nor does any caterpillar attack it save the silkworm only. The loppings are excellent fuel; but that for which this tree is in greatest and most worthy esteem is for the leaves, which (besides the silkworm) nourishes cows, sheep, and other cattell, especially young porkers, being boiled with a little bran; and the fruit excellent to feed poultry. In summe whatever eats of them will, with difficulty, be reduc’d to eat anything else as long as they can come by them; to say nothing of their other sovereign qualities, as relaxing of the belly, being eaten in the morning, and curing inflamations and ulcers of the mouth and throat, mixed with *Mel. Rosarum*, in which receipt they do best being taken before they are over-ripe.”

There would be no difficulty for any one who intends to plant mulberries to ascertain near enough for practical purposes the minimum area to be planted to produce sufficient food for the number of silkworms his available labour could attend to properly. “The average quantity of eggs in those countries (Italy and France) is now about 2 ounces for each family. Under such circumstances the European farmer is not called upon to employ extra labour, nor are the services of the men of the family required except during the last few days of the rearing. It will be understood that the confining of this work to the women and children necessitates the planting of the mulberry-trees in a convenient place near the house, their periodical pruning in such a shape that their leaves can be gathered economically and quickly, and a further condition, perhaps axiomatic, that the persons in charge of the work shall possess such experience as will enable them to perform their labours without serious mistakes or useless friction. It would be an imputation, which I should be far from placing upon the women of our farming classes, to suggest that they are not as able as their sisters in Europe to become expert silk-raisers in a short time.”

If it be determined by the Government that sericulture shall be aided, fostered, and encouraged, it will be advisable to start the industry in two or three localities or centres where it is most likely to take root. At each centre there must be a small establishment where information of the very best possible sort may be available for everyone, where instruction can be given, and the work open to view. “To raise cocoons successfully demands very little physical strength, nor does it demand talent or skill of a high order, but it does demand intelligence, patience, perseverance, and system, from which there shall not be the slightest relaxation.” The industry would spread fast enough from the “Centres” as soon as the neighbouring farmers and others would be able

able to recognise that there is profit in it. The more it spread, and the larger the areas planted with mulberries, the better it would become, and the better the chances for all connected with it of obtaining increased profits. But whilst this is being encouraged the greatest care must be taken to avoid, and prevent the spread of exaggerated statements as to the probabilities of immense profits being obtained in a very easy way, as well as misleading calculations, for such things can only lead to disgust, and will certainly and effectually prevent healthy progress.

In the United States report of the Secretary of Agriculture, 1890, appears the following statement:—"An examination of the lots received from these small raisers shows also the difficulty of teaching them the work by the distribution of printed matter. Our pamphlets have been prepared in accordance with the methods adopted by the best silk-raisers of Europe, and wherever our experience has shown them to be deficient in certain points, we have, upon the printing of a new edition, endeavoured to bring them more into accord with the needs of our people. One of the points we have called attention to with especial emphasis is the necessity of feeding the worms liberally and regularly, and still of the lots which we have received, many show unmistakable evidence of underfeeding and neglect. This is most distinctly emphasised when we receive a lot of cocoons from one raiser which will average as large as figure A annexed, while another raiser, with no more experience, and with eggs from the same lot, sends in others of the size indicated in Fig. B."

"To the more successful one we pay about 35 cents per lb. of fresh cocoons, but the failure is well compensated at 20 cents per lb. It is scarcely necessary to point out the fact that poor quality and consequent low price are almost always the companions of light weight in the crop, so that side by side we have a person who realises 10 dollars from the cocoons produced from a quarter ounce of eggs, and another who realises less than 1 dollar. In fact, we have on several occasions paid less than 10 cents for the cocoons raised from such a grower. All of this emphasises the fact that, if silk-culture is to be established in the United States, it is absolutely necessary that means should be taken to come into actual contact with our people in order to teach them to raise silkworms successfully. There seems to be no better way than by the establishment of a few model rearing rooms, where silkworms can be properly raised every season in the full view of everybody who chooses to examine into the industry. There might be created several centres from which the industry could be spread over such portions of the country as are climatically adapted for it. At present far more harm is being accomplished by assisting would-be silk-raisers to make inevitable failures, and thus augmenting the number of persons who believe, beyond all power of persuasion, that silk-culture is a delusion and a snare to the unwary agriculturist."

In many parts of New South Wales the settlers are sadly in need of some crop to take the places of those which do not pay, or which yield such small profits as hardly to be worth the growing; for instance, maize is a crop which, in many localities, barely pays the grower, but it is persevered with, simply from the fact that the farmers know of nothing better to take its place. I find, on referring to the Statistical Register for 1891, that the average yield for the northern coast districts was as follows:—

Richmond River	...	...	...	...	34.45 bushels per acre.
Clarence	"	...	...	...	36.48 " "
Grafton	...	...	...	...	36.85 " "
Macleay	...	...	...	...	37.69 " "
Hastings and Manning	...	...	...	...	36.32 " "

General average for the above districts, 36.51; and I find that the average yield for the whole Colony is but 32.77 bushels.

The yield of sugar-cane also averages very low:—

Richmond River	...	...	...	...	23.64 tons per acre.
Clarence	"	...	...	...	17.66 " "
Grafton	...	...	...	...	28.12 " "
Macleay River	...	...	...	...	33.02 " "

The general average being 21.51 tons per acre, which, at the highest price paid the producers of sugar-cane at the sugar mills, means only about £10 18s. gross per acre per annum, being for the most part a two-year crop. This is without deducting the cost of production, and I doubt whether very many of the farmers clear more than £5 per acre per annum from this crop. These are the two most important crops raised in the districts named; but dairying is likely to spread largely, and is in some places profitable, and is likely to become more so; and I see no reason why sericulture may not become an adjunct, likely to bring additional profit.

At the central establishments, a great deal, if not all, for a time, of the "graining" or the general management of silkworm eggs, which is the most important work in connection with sericulture, would have to be done; and this work should only be entrusted to very skilful and intelligent persons. This "graining" is a matter, or art, altogether apart from the raising of cocoons for silk; because the silkworms set apart for the production of eggs need different treatment and different foods to those which

which are reared for silk alone; the objects being to breed silkworms which produce uniformity of cocoons and silk, "the most valuable reeled silk is from homogeneous cocoons"; to obtain as much improvement in yield as possible; the preservation of a high standard; and the prevention of any inroad of disease. Good graine (or good eggs) is the foundation stone, as it were, of the whole business of sericulture. As an example of the importance of vigour of race, I may mention that a Frenchman in 1845, got 1 lb. of cocoons from  $7\frac{1}{2}$  lb. of leaves, the largest proportion known. Dandolo thought it good to get 1 lb. from 14 lb. leaves; and during the bad time 1 lb. from 33, or even 50 of leaves was the general ratio.

The following valuable information having reference to the subject of "graining," was kindly given to me by Mr. J. K. Fry:—

"Previous to the silkworm disease which devastated Europe, it had come to be seen in Italy and France that it was best to have the rearing of graine in skilful hands specially devoted to this part of the business. The methods of rearing for silk and for graine are in some respects directly opposed. Hence, certain distinctive fine races of silkworms came to the front, each having its own repute, and the ordinary rearers bought their eggs from the special rearers instead of saving some of their own worms for reproduction; but the disease maimed all the fine races, and exterminated many, and threw the whole business of scientific egg-rearing into utter confusion. It was from such diseased races that Mr. Brady had from careful breeding and severe and continuous selection, through a course of years, to get, and succeeded in getting, a new, pure-bred, and healthy race, as the first fruits of the new Australian climate. Beginning at the highest point attained by the European rearer, namely, that skill in breeding meant permanent improvement in product, it was for the Australian skilled rearer to make that highest point his starting point towards a systematic improvement in the breeding of silkworms; and there was no estimating the extent to which improvement could go. Mr. Brady produced several races, each with its distinctive excellence, and each probably distinctly best for a distinctive locality. But beyond this there is a peculiar feature to be mentioned. Mr. Griffitt, a famous silk-grower in Smyrna states, that out of 60,000 moths of mixed breeds he could select as perfect only seventy-six, about half male and half female, which seventy-six showed such an abnormally vigorous development as almost required them to be called 'a freak of nature.' These few units treated separately, gave him an exceptionally fine race; and now he has no reason to allow any percentage of loss in his annual rearings. So with Mr. Brady, from whose writings he probably learned the method. For, some fifteen or more years earlier, Mr. Brady led the way into this region of science, and sometimes out of many hundred moths, discovered a single pair, one male and one female, particularly adapted to be the progenitors of a race finer than any yet possessed, suggesting vast possibilities for the future. More than this, out of 40,000 or 50,000 eggs he has mentioned in a letter from him to Dr. George Bennett, through careful examination with the naked eye, a single pair of eggs superior to all the rest (which eventually through all the transmutations turned out to be one male and one female) a superiority of which the microscope confirmed, and which the subsequent rearing demonstrated. But in order to these possibilities it is obvious that as a *sine qua non* the rearing of graine should be exclusively in skilled hands; and it is a grave question whether for this country's permanent welfare in silk-growing, the rearing of graine should not be a Government function, in other words, whether all export of silkworm graine by traders should not be required to be under Government stamp or guarantee. For, as regards these eggs, they might be worth in Europe their weight in gold, or, on the other hand not worth their cost of transmission; besides doing irreparable damage to the reputation of the country, which ought to be an object of supreme importance in the interest of silk-growing, as the late Mr. T. S. Mort used pointedly to remark in his public speeches."

#### YIELD OF MULBERRY LEAF.

There is considerable difficulty, I may say it is well nigh impossible, in arriving at a proper estimate of the yield or likely yield of an acre of mulberries in this Colony; however, I respectfully submit information that will, no doubt, prove useful.

I found when I questioned practical men, who were well informed and familiar with the subject by experience and study, as to the results in value, &c., in silkworm rearing, that they are very careful, and shy even, in giving any answer whatever. And when replies to inquiries can be elicited their opinions vary considerably and appear contradictory. There are many reasons for this; different points of view are taken, then natural conditions vary so greatly, such as soil and climate, and climate especially accounts for a great deal of diversity of opinion, or rather statement of opinion. Besides this each one has his own peculiar ideas, or appropriate method of work and treatment. As for instance, one person, who has perhaps been successful, prepared his mulberry plantation in the first place, by deep trenching, very careful working of the ground, and by planting his trees well and properly. But in quite a different manner, another has cleared his land in a very rough way, and planted his mulberries after very little or very shallow cultivation of the soil, or perhaps there has been no cultivation at all. Some men look forward to permanent and yearly increasing results, year after year, later on after a more or less protracted delay. Therefore as the methods vary so greatly, it is useless to state an average outturn which shall not be misleading. Most persons whose ideas are worth having, generally confine their estimates to what may be obtained in any named locality or district, the data supplied concerning which their own knowledge and experience elsewhere of actual and measured and weighed returns may warrant. All careful and judicious writers, particularly the best informed and qualified to instruct, and of the greatest experience, have been very careful and guarded in their statements.

John

John M. Bate (in the pamphlet before referred to) page 12, says, "an acre of mulberry 'shrubs' full growth in France is expected to yield nearly 8,000 lb. of leaves. Sufficient to produce 40 lb. raw silk, which at only 27s. per lb. = £54 an acre."

"Observer," *Town and Country Journal*, 15th July, 1882, says, "At end of ten years (in New South Wales but not stating where) 20 acres mulberry leaf=fifty bales cocoons."

Mr. Cobb, Secretary to Silk Supply Association, London, gave at a meeting of the Society of Arts, 26th January, 1877, as his estimate from an acre of land carrying 500 to 600 trees in the colonies, when three years old, would yield (each tree?) 20 lb. of leaves, which 20 lb. would produce 1 lb. of cocoons; and basing his estimate for 1 ounce of graine at 16 lb. of leaves for food at 10s. per cwt. £8, and allowing £2 for cost of eggs (seed graine), labour £8, and petty expenses £2. Result, £20 per acre.

Now, at the present time, 1892, we know for certain that the cost of grain may be considerably less, and the yield of leaf, by reason of superior conditions, cultivation and mangement, very considerably more per acre.

When visiting Antony, on the Tweed River, Mr. Brady informed me that owing to the soil and splendid climate at his place, he found that 100 trees, of proper sorts, are sufficient per acre, and more profitable than a greater number. Of course thorough cultivation and management was an important factor in Mr. Brady's results. I may mention that he strongly condemns the idea of stripping the trees (although they might appear most vigorous to anyone) more than once a year, except in cases of great necessity, his practice and advice is, particularly to beginners, to extend the plantation rather than treat the trees with undue severity, especially when they are young. I have heard it stated, that among the better classes in Italy, it is considered to be the most wise and profitable course to adopt, to strip, even mature mulberry-trees, three times only in four years, thus allowing one whole year's spell after three years cropping.

Mr. Ramos, in 1839, found, by trial under the careful superintendence of the Government of India, that the consumption of mulberry leaf (locality, Island of Bombay) was under 25 lb. (Cape Mulberry?) per thousand worms from egg to cocoon.

Lardner, 1831. Origin of silk manufacture by E. R. Porter (Board of Trade), *Cyclopedia*, page 103. At six years of age, an average tree should give 12 lb. leaf. A well cultivated tree (age not stated) should yield every season about 30 lb. "good leaves," and that it was not uncommon in the south of France to see "large trees" able to furnish five times the quantity.

Boullenois, edition 1851, page 30—besides stating in a note that rarely at the test did 100 eggs yield so many as fifty cocoons; says that with 2,200 lb. of the best leaf a rearer might get 45,000 to 50,000 cocoons, weighing up to about 154 to 176 lb. English. Allowing the trees to be robbed of their leaves only every other year to avoid deterioration as much as possible; thus treated they should give, at seven or eight years after planting, 33 to 44 lb. each tree; and at nine to ten years old, 88 to 100 lb.; one crop in the two years.

In France the yield per English acre may be estimated as equal to 7,500 or 8,000 lb. in good seasons from well-grown trees on fair land, in times before the panic caused by the silkworm disease prompted the owners to root up and destroy old and most productive mulberries. The value of a crop of leaves from the same trees may vary from year to year as between 2s. 6d. and 10s. or 11s. per cwt. English, or (say) £10 to £40 per acre, for sale to the people who actually reared the silkworms but who did not grow the food for them.

In Italy it was much the same thing, though the destruction of the mulberries in consequence of the panic was not so severe as in France. I may mention that in New South Wales Mr. Brady's experience for many years has shown a considerably larger crop in weight, as well as more uniform and reliable than in the two European countries named. The appearance and vigour of these trees struck me directly I saw them. As Mr. Brady used the leaf grown, for his own purposes, I could not obtain a quotation of a sale price.

Dr. Cleland, of South Australia, expressed his opinion "that if the cultivator of the white mulberry-tree can find a sale for his leaves at one-eighth of a penny per pound, his returns per acre should be as good as those of the growers of grapes for wine." If this can be so profitable in a dry climate like South Australia, what would not the profit be in such a favourable climate, for the mulberry, as that of the north-eastern coast districts of New South Wales?

Dr. Schomburgh, Adelaide, 1871—"For many years with all my energy, I have advocated sericulture as a paying industry and advised the extensive planting of the mulberry. There is no doubt that the production of silk will become one of our future and most important industries, which will at the same time be a practical and useful aid to the ordinary occupation of our farmers."

Mrs. Bladen Neill, 1873. Pamphlet—On the silkworm. "Most farmers can plant a quarter acre of mulberries which will yield sufficient leaves for an ounce of graine or about 40,000 worms."

#### SILK INDUSTRY IN THE UNITED STATES.

There is evidently a strong desire in the United States of America that the Government of that country should provide knowledge and adequate means to enable its own agriculturists to profit by the local demand by its own manufacturers for raw silk.

The supply of raw silk is at present wholly from foreign sources, as the domestic output even of cocoons of local produce "is too small to have any influence whatever." Italy, France, China, and Japan are yet the principal and, indeed, only sources of supply.

The following statistics from the English Board of Trade Journal, Vol. XI, September, 1891, will give an idea of the magnitude of the imports of raw silk:—

1886—	Total imports, 4,754,626 lb ;	average value, \$3.67, at 4/2 ...	£3,589,905
1887—	" 4,599,574 "	" 4.06 "	3,890,473
1888—	" 5,172,929 "	" 3.89 "	4,598,117
1889—	" 5,329,646 "	" 3.48 "	4,278,785
1890—	" 5,943,360 "	" 3.92 "	4,821,077
1891—	" 4,619,733 "	" 3.67 "	

(eleven months)

Five years 1886–1890 amount, £19,570,769.

" American imports from France are about holding their own, those for 1890 amounting to 279,488 lb. as against 276,633 lb. in 1887," sustained by reason of quality, while receipts from China have not been equal to those of 1886, they have steadily increased since 1886, both in amount and in total value, as follows:—

1886 .....	1,476,215 lb.;	value, \$4,421,151, at 4/2 .....	£921,073
1887 .....	1,076,280 "	" 3,685,192 "	767,748
1888 .....	1,016,945 "	" 3,155,668 "	657,435
1889 .....	1,118,807 "	" 3,618,286 "	753,809
1890 .....	1,130,491 "	" 3,726,996 "	776,457

Besides the foregoing I have found by referring to the published authoritative reports of the United States Department of Agriculture, noteworthy indications of the active and sustained efforts by the Department of State, and also by the Governments of individual States, separately, for a number of years, to create and foster a production of cocoons in their country. The large outlay, authorised by the National Government as well as the Governments of several States, separately, and annually expended not merely to manufacture the material known as raw silk, but more particularly to establish at home, the production of cocoons, or the raw material from which raw silk is manufactured. The manipulation and reeling (not winding) of cocoons by machinery transforms them into the raw silk of commerce. The actual demands for this so-called "Raw Silk," of late years, for local working up in the United States factories into various textile fabrics, have caused payment to foreign countries of the large amounts shown in the table I have given.

The United States Government fully alive to the importance of the facts have adopted a policy evidently designed to have a double effect; that is to cause the distribution at home of the ready money, hitherto sent out of the country, now about four millions sterling, by encouraging or promoting the growth of cocoons, and thus supporting agriculture in their own territory by a revenue from a new source to a very considerable extent. And also the manufacturing interests both in town and country by the employment of a considerable amount of skilled labour and machinery for the conversion of home-produced cocoons into home-produced raw silk by the reeling and throwstering processes, &c., for the supply of their home factories wherein various fabrics are now manufactured (chiefly in the Eastern States) and are already superseding the imported articles. If well carried out this policy would, so far as silk is concerned, render the United States independent of the foreigner.

I am unable to show by detailed statistics what is done with cocoons or raw silk "imported" and noticed under the general term "silk," imported silk manufactures not included. As roughly illustrative, how a provision of material to work upon affects a community, I respectfully beg to add the following statements, which I take as regards the United States from the last edition of Mulhall, 1892, and the United States Census returns for previous to 1890. The latest, those of the decennial period ending 1890, are not yet published or procurable.

PAGE 359, in the United States Census Returns.

Year.	Factories.	Operatives.	Capital.	Manufactures.
			£	£
1850	67	2,000	200,000	400,000
1870	86	7,000	1,000,000	2,000,000
1890	332	31,000	4,000,000	7,300,000

THE consumption of silk was as follows:—

Period.	Lb. yearly.	Value of Textures.
		£
1861 to 1870	1,200,000	2,500,000
1871 to 1880	1,400,000	3,000,000
1881 to 1887	3,500,000	7,200,000

THE yearly average value of all silk manufactures consumed was:—

Period.	American.	Imported.	Total.	Shillings per inhabitant.
	£	£	£	
1861 to 1870	2,500,000	3,100,000	5,600,000	3/-
1871 to 1880	3,000,000	5,000,000	8,100,000	4/-
1881 to 1887	7,200,000	6,800,000	14,000,000	5/-

The Balance-sheet was approximately as follows :—

Period for ten years.	Raw silk.	Manufactures.	Net result.
	£	£	£
1861 to 1870 .....	14,000,000	25,000,000	11,000,000
1871 to 1880 .....	15,000,000	30,000,000	15,000,000
1881 to 1887 (seven years).....	20,000,000	50,000,000	30,000,000
27 years.....	£49,000,000	£105,000,000	£56,000,000

This shows that, given a quantity of material of the sorts in question, for every £1 of cost or value, at least an equal amount is produced (if that is the proper term to use) by and to the workers up of it, and a profit left besides which may be said to be capital added to the good.

The above general statements are from Mulhall ; I now beg to submit an extract from the United States official report itself, as given in Tenth Census.

MANUFACTURES of silk, 1st June, 1880 :—

The number of factories reported, 288 ; capital, real and personal, invested in business, \$15,371,575, at 4s. 2d. = £3,202,411 ; number of looms, 6,452 ; gross value of manufactured products, \$32,966,090, at 4s. 2d. = £6,867,935 ; net value of manufactured, that is, finished goods, \$27,688,170, at 4s. 2d. = £5,768,368 ; total amount paid in the year for wages, \$7,531,505 (?) (this must probably be for the year ending 30th June, 1880) = £1,569,063.

The number of workpeople (silk mill operatives):—8,860 males, 9,211 females, total persons, 18,071. Rate of wages per week, female, \$3 to \$3.37, this lowest to raw silk cleaner = 12s. 6d. to 14s. Rate of wages per week, male, £5 6s., highest to designer.

As a useful illustration I add a comparative statement of the annual average consumption of articles of silk, chiefly of clothing and luxury, in some countries per individual of their populations, and thus, incidentally, their probable relative wealth and comfort as indicated by the use of silk.

Period.	Spain.	Austria.	United States.	France.	United Kingdom.
1831 to 1840 .....	.....	.....	.....	3 shillings.....	.....
1841 to 1850 .....	.....	.....	.....	4 " .....	.....
1851 to 1860 .....	.....	.....	.....	5 " .....	10 shillings.
1861 to 1870 .....	15 pence .....	17 pence .....	3 shillings ...	8 " .....	11 " ..
1871 to 1880 .....	17 " .....	26 " .....	4 " .....	9 " .....	10 " ..
1881 to 1887 .....	22 " .....	25 " .....	5 " .....	11 " .....	8 " ..

Instruction gained from these figures points to the importance, and clearly shows the interest all classes have in the employments of labour other than their own. The farmer or tiller of the soil, who, producing other commodities besides substances for food, provides also material obtained from the soil by cultivation, and thereby creates means which yet greater numbers of other persons, including unskilled as well as skilled labourers, use to work upon and gain a constant employment, or, in short, obtain subsistence and all necessaries, whilst these new fresh workers again help the farmer by consuming the rest of his farm produce. "A thriving agriculture is the beginning and foundation of national progress and prosperity." The people of the United States, including the rulers and the ruled, being alive to the facts appear to be also alive to the truth of the old saying, "the farmer feedeth all."

There is now a Bill (Mr. Mitchell's), of which I have seen a copy, before the Senate of the United States which has been read twice, and referred to the committee on Agriculture and Forestry, "For the development and encouragement of silk-culture in the United States under the supervision of the Secretary of Agriculture."

The Secretary of Agriculture is directed to establish a number of silk experiment stations, not exceeding five in number, in different parts of the United States. The said silk-culture stations shall be a part of the present experiment stations in the States in which they are located and now established and receiving appropriations from the Treasury of the United States. The work at each station to be under the supervision of the director of such station, who is to carry on work under rules and regulations prescribed by the Secretary of Agriculture. A sum of \$5,000 (about £1,000) is appropriated to each station established, to be drawn from the Treasury of the United States.

The Secretary of Agriculture to have power to diminish, at his discretion, the appropriation to be used at any station and to discontinue payments if the work in relation to silk-culture, performed at the station, is not in accordance with his rules, &c.

WOOL AND SILK-COCOONS.

I have already referred to several public meetings which were held in Sydney, sometime between the years 1870-1876, to consider the advisability of establishing the silk-rearing industry. At one of the meetings, at which a number of prominent citizens were present, including Mr. T. S. Mort, Mr. Henry Prince, Mr. R. D. Adams, the Revd. Father Pacilio, Mr. James Manning, and several others, Mr. Mort, who took a great interest in the subject and had given it a great deal of consideration, in referring to an exhibit of cocoons raised by Mr. Brady, remarked that if that gentleman "were given a start of ten years with such cocoons he will produce silk in quantities which will surpass, in value,

our

our present crop of wool," and also that "the production of silk would, in value as an export, soon rival and exceed the value of the wool export"; but the majority of those present seemed to be rather amused at these remarks, and evidently considered them to be bordering on the ridiculous, and were not inclined to treat them seriously, although one gentleman gave it as his conviction that a pound weight of silk-cocoons could, in this country (Australia), be produced at a less cost than a pound weight of wool. As I took a great deal of interest in the question of silk production I thought over this carefully, and have done so frequently since that time, and I now consider it my duty, while preparing this report, to investigate this question in order to determine, if possible, whether there may be any good grounds for such a belief, as it seems to be a matter of considerable importance.

In regard to the production of wool the case seems clear enough from the fact that the food of the wool-producing sheep, consisting, as it does, of natural grasses or pasture and needing no labour to produce, may be considered as being "cheap food" almost unlimited in quantity and, as it were, ready made; and that sheep can feed themselves, and require comparatively little nursing; and as official statistics abound it may seem easy enough to get at the cost of producing a pound of wool, but I submit that to obtain a statement of net results was an exceedingly difficult matter.

The great difficulty is in regard to silk-cocoons. To a pastoralist the idea of having to employ labour extensively, the necessity of having to cultivate, to plant the mulberry, and tend to it for years whilst growing leaf, the only food for the silkworms, would forbid him to entertain a notion that there could be any possibility in such a slow and expensive proceeding being profitable, and that it could yield more valuable and reliable results than the natural provision of ready made grass at less cost, especially taking into consideration the labour in connection with the daily, almost hourly, feeding of silkworms by hand, and the gathering of artificial food.

I have taken great pains to obtain and authenticate, as well as possible, any facts or information I could gather. With regard to wool the statistics are very difficult to deal with, as there is a complete absence of certain details necessary to show net results. I have been obliged to have recourse to private friends for assistance and information, without which my conclusions would be worthy of but little confidence. The figures given me by various persons, and from different quarters, have been supplied me on the understanding I do not reveal the sources which are, of necessity, private concerns of the persons. I believe them to be reliable in a general way, although I should have been glad had my information been wider in extent. I am very thankful for the confidence and friendly feeling which assisted me immensely in my investigation.

From the reports of the Stock Branch of this Department, with valuable assistance from the Government Statistician, I can gather that at the end of 1891 the stock depastured in the Colony of New South Wales was 61,831,416 sheep and 1,702,870 cattle (horses and dairy cattle not included). There appear to be no data on which to compute the actual amount of capital invested in pastoral pursuits, but the approximate value of land estimated for pastoral purposes, together with the value of improvements on all pastoral land (both Crown and alienated), together with the value of sheep and cattle, is about £139,520,000.

There now comes a difficulty which it is hard to deal with satisfactorily, and that is how to rank and apportion, fairly, between cattle and sheep, because both together are often kept on the same run or station. I believe an old method of reckoning was six sheep as being equal to one head of large stock. The Stock Branch, I believe, reckons eight, while the Statistical Department considers ten sheep equivalent to one cattle. Therefore on each of these bases the figures would be:—

At 6 sheep = 1 cattle	...	10,217,220 sheep for the 1,702,870 cattle.
8 "	"	13,622,960 " " " "
10 "	"	17,028,700 " " " "
Taking these as a start, 10,217,200 added to 61,831,416 = 72,048,616 sheep.		
"	"	13,622,960 " 61,831,416 = 75,454,376 "
"	"	17,028,700 " 61,831,416 = 78,860,116 "

therefore, if 78,860,116 stand charged in a rough way at £139,520,000, the portion of the capital deduction made for the part of the cattle, about £109,418,291, will remain for a sort of first charge on the 61,831,416 sheep in the case of 10 sheep being equal to 1 cattle. If 8 sheep to 1 cattle, the 61,831,416 share of the approximate value of alienated land for pastoral purposes, together with the value of improvements on all pastoral land, Crown as well as alienated, together with the value of sheep and cattle, will be £114,330,269; and at 6 sheep to 1 cattle, £119,734,663, or—

Per head of cattle, 1,702,870 at £30,102,000	
10 " sheep, 61,831,416 at 109,418,000	78,860,116 = £139,520,000
<hr/>	
Per head of cattle, 1,702,870 at £25,189,731	
8 " sheep, 61,831,416 at 114,330,269	75,454,376 = £139,520,000
<hr/>	
Per head of cattle, 1,702,870 at £19,785,337	
6 " sheep, 61,831,416 at 119,734,663	72,048,616 = £139,520,000

The yield of wool at end of 1890 was estimated equal to about 269,686,034 lb. Value of clip estimated at £8,991,396, for number of sheep, 55,983,431, being at the rate of rather over 4½ lb. of wool per sheep, worth a little over 8d. per lb., or about 3s. 6d. per sheep.

The

The yield at the end of 1891 was 357,096,954 lb. Estimated export value £11,036,018. For number of sheep, 61,831,416, being at the rate of over 5 $\frac{3}{4}$  lb. of wool per sheep, worth about 7 $\frac{3}{4}$ d. per lb., or over 3s. 6 $\frac{3}{4}$ d. per sheep.

To both years the value of increase of stock must be added, and, also, the value of the sheep slaughtered, which was estimated in the year 1891 at £859,300 for the carcasses, to which may be added the value of the skins, &c., is in all about £2,000,000, perhaps rather more than less.

As near an estimate as I can make from different data, which I can obtain, that is the return from sheep, and taking into account all value obtained besides the wool (but not including the increase of stock, which may probably be about 10 per cent., nor the rise and fall of the market, nor other matters which are doubtful and difficult to deal with), would be 8d. per sheep added to the 3s. 6 $\frac{3}{4}$ d. or 4s. 2 $\frac{3}{4}$ d., cash, for the yearly crop, from such information as I have been able to get, in the gross. From this 4s. 2 $\frac{3}{4}$ d. deduction has to be made for wages, station expenses, rents, &c.

The 61,831,416 sheep and 1,702,870 cattle together depasture on 165,133,000 acres of land, of which about 132,136,000 acres are Crown lands, rented for pastoral purposes at an average annual rent of 1 $\frac{3}{4}$ d., and 32,997,000 acres of land, private property, which, probably, cost its owners from 35s. to upwards of 40s. per acre (say) more than £60,000,000.

Each acre produces about 2 $\frac{3}{10}$  lb. of wool at 7 $\frac{3}{4}$ d. per lb. means a yield of 1s. 5d. per acre.

I will now consider the yield per acre, assuming that the 1,702,870 head of cattle are reckoned as being equal to the following numbers of sheep, at the rates of six sheep equal to one head of cattle; eight sheep equal to one head; and ten sheep equal to one head:—

Weight of wool from

72,048,616 sheep	=	414,279,542 lb.;	value,	£12,833,659
75,454,376 "	=	438,862,662 "	"	13,440,310
78,860,116 "	=	453,445,667 "	"	14,046,958

The sheep are depastured on 165,133,000 acres of land, therefore the number of acres required to maintain each sheep would be (and the value or yield per acre):—

72,048,616 sheep,	2.29 acres,	yield per acre	2.61 lb.,	worth	1s. 6 $\frac{1}{2}$ d.
75,454,376 "	2.18 "	"	2.63 "	"	1s. 7 $\frac{3}{4}$ d.
78,860,116 "	2.09 "	"	2.75 "	"	1s. 8 $\frac{3}{4}$ d.

In regard to silk-cocoons, I am at a loss for sufficient data upon which to estimate the cost of a mulberry plantation in any country, nor do I know of any other than statements, mostly very loose, as to the yield of mulberry leaf, or as to the yield of cocoons to the acre. I give in the appendices sufficient reliable facts to enable a judgment to be made of the profit to be derived without entering the domains of speculation or romance.

Referring to the only statistics I can find about the number of mulberry-trees, viz., the figures in Mulhall [*Appendix*, No. 5], which are very incomplete for my purpose, nor do I find it easy to fit a known produce of cocoons to any stated number of mulberry-trees in more than one single instance. That authority says: "In 1835 the number of mulberry-trees in France in that year was 14,880,000." In another appendix (No. 5) will be found the average annual produce of cocoons in France during the decade, 1831-1840, was 11,527,000 kilos, value, francs, 42,840,000. English, 25,381,400 lb., value, £1,785,000, an average per lb. of 16 $\frac{3}{4}$ d.

I can find no reliable statement of the actual acreage in any country under mulberry, such as can be found with regard to vineyards, orchards, &c., for the mere guesses of the number of mulberry-trees occupying any actual defined area are not worthy of serious attention. The best authorities in this Colony consider 100 mulberry-trees quite sufficient for one acre of the best and most productive land, and from 120 to 200 trees for generally good land. Having some knowledge on agricultural and horticultural matters, and having carefully observed the growth of various species of mulberries growing under various circumstances, I consider that the above numbers on one acre of land should not be exceeded. From what I can learn from others, and from the general tenor of any information I obtained from a vast number of books (all the most valuable of which in French, Italian, and English I have carefully studied), I am satisfied that the number of mulberry-trees, per acre, should not anywhere exceed 200 trees. At this rate (200 per acre) Mulhall's 14,800,000 would occupy only 74,000 acres, a very small area indeed on which to raise a return of £1,785,000, cash, worth of fresh cocoons, equal to only 2s. 5d. a tree, per annum, and £24 10s. an acre yield to the grower. This is by no means extravagant, though it seems probable that a yet smaller area than the 74,000 acres and its products were, and still is, the foundation, and maintained most largely the great city of Lyons as well as other large cities. [*Appendix*, No. 3.]

I now most respectfully beg to invite attention to extracts in the appendices, particularly to the statements in No. 3, Lyons and Smyrna; No. 3, France; No. 6, Italy, in which authentic and undeniable facts are given of the gains from raising cocoons of £12 1s. 9d., £10 3s., £29 15s. to each rearer of silkworms. In the case of France no less than 141,400 cultivators, giving a little over £10 each, and in Italy not fewer than 559,155 breeders for at most two months' work; but work with knowledge, care, and cleanliness. I might remark that the carriage of 40,000 tons of cocoons would add a considerable amount to the railway revenue of the Colony.

When looking at the facts concerning the production of wool, it may be seen that to raise £11,000,000 or £12,000,000 worth of wool for export nearly 62,000,000 of sheep must be raised and cared for during a whole year; that the capital for their

cost must have amounted to more than £109,000,000; that the wool by last returns, the crop, was 357,000,000 lb.; that its average value was about 7½d. per lb.; that the area actually used to pasture these 62,000,000 of sheep is not less than 165,000,000 of acres, an average of about 2.66, or slightly more than 2½ acres for one sheep; that the capital invested for purchased land is about £60,000,000, the salaries or expenses of owners or managers actually conducting the business, the wages of constant or permanent hands and temporary services, shearing, &c., cost of rations, &c., together with a year's share of cost of improvements and "dead plant," cost of carriage from station to port. There is no need to endeavour to ascertain, which is impossible to do, the additions to stud stock nor the value of increase, which could only be guessed at, to know for almost certain that out of the 7½d. gross return for the wool per lb., and 8d. an equivalent for cash of the 62,000,000 of sheep for the known value of the carcasses, skins, &c., deduction must be made for ascertainable expenses amounting to at least 4½d. per lb.; 5½ lb. the weight of fleece at 4½d. is equal to 2s. 1½d., or a little more than half of the 4s., leaving the balance to meet unknown expenses and risks of droughts, fires, and floods.

On the other hand, compared with this is the cost of cocoons and the net return on a comparatively small outlay of capital.

In respectfully submitting this portion of my report, which must be, necessarily, crude and incomplete (but, I think, at the same time of value) I beg to remark that the subject is worthy of much better investigation.

#### COST OF PRODUCING 1 lb. WEIGHT OF SILK-COCOONS.

The cost of producing a pound weight of cocoons in this Colony must of necessity depend on a great many circumstances, as the tenor of previous portions of my report will indicate.

These silkworms which are well bred, and wisely and properly selected, such as those reared by Mr. Griffitt, of Smyrna, produce double, and indeed, sometimes, treble as much silk, as indifferently bred, poor kinds of worms; and, in the opinion of a skilled sericulturist, it costs more to produce a bad cocoon than it does to produce a good one.

In cases where sericulture may be carried out rather extensively, the necessary appliances, buildings, utensils, &c., &c., must remain idle for at least ten months of the year, if only one crop of cocoons can be reared; but if a succession of crops can be reared, these buildings, &c., &c., can be kept in almost constant use, and this must add considerable to cash returns.

A rearing may be done on a small scale by an individual rearer, or by a family in any rank of society (for in this manner nearly all the cocoons of the world are produced), whose time during the seven or eight weeks could not, perhaps, have been employed at all usefully, or, at any rate, not in any sense productive of money gain. Even if the cost of sheds, buildings, or utensils, can be reckoned an expense, which is but seldom, the amount per lb. of cocoons would be extremely trifling.

The chief expense would be in cases where the mulberry-leaf has to be purchased for the silkworms' food, just as hay, corn, or other food, is bought for working horses or dairy cattle.

Whether the rearer of silkworms uses his or her own grown leaf or purchased food, and his or her own families or hired assistance, it is certain that in silk-producing countries a good profit is obtained with healthy worms.

It is difficult to estimate the value of mulberry-leaf in this Colony, or at what price it can be produced. I have already given Dr. Cleland's opinion that one-eighth of a penny per lb. would pay growers well in South Australia. Of course some kinds of leaves are much superior to others, and it is possible, according to Count Dandolo, to raise 1½ lb. of cocoons on 20 or 21 lb. of leaf.

In a general way it may be considered that 20 lb. of leaves, which may be bought for 2½d. or 3d., will produce 1 lb. of cocoons, and, allowing 1d. per lb. for other expenses, the balance would be the reward for the rearer for his or her time, thus profitably employed. I think that in this country, with any good management, the net profit should be at least 8d., for 1 lb. of fresh cocoons would be worth at least 1s. In fact, in many cases, the net profits should very nearly be the shilling.

#### NEW ITALY.

On the 7th November I visited the settlement known as New Italy, where a number of the Marquis du Ray's New Ireland emigrants had taken up selections under the Crown Lands Act, and settled down soon after they arrived in this Colony. I was accompanied by Mr. Reginald Champ, who had been appointed, nearly two years ago, to initiate the sericultural industry.

It was in consequence of the experience and knowledge gained by the Italians in sericulture at their native country Venetia, in Italy, and the fact that the mulberry flourished in the district, that the late Government decided to aid and encourage the industry here. This, then, is the first attempt that has ever been made by the State, to introduce in a practical manner the sericultural industry in New South Wales.

"New Italy" is situated in the county of Richmond, about 8 miles south of the township of South Woodburn. I visited the farms where plantations of mulberries had been made by sixteen Italians who had obtained loans of money from the Government; and also the farms of others who now desire to obtain the loans they asked for but which they had not taken. I found that the men, with a few exceptions, were absent, some cutting sugar-cane under contract with the Colonial Sugar Refining Co., and others were engaged at the sugar-mill on the Richmond. The sugar season  
extends

extends over a period of about six months, and the money earned during that time is the main support of the families. I was able to obtain the information I required from the women, who were busy at work on the farms.

I found everyone much excited about the unexpected results of the late, and first, rearings of silkworms. They were all greatly pleased, as well as surprised, at the successful result of their experiment which had not been anticipated, considering the age of the majority of the mulberries, and the poor and rough conveniences which were available to enable them to rear the silkworms. They informed me that they can hardly understand how easy it is to manage silkworms at New Italy, compared with the difficulties they used to meet with at home. They were greatly surprised at the health and vigour of the worms, for, notwithstanding the rough manner in which they had to be reared here, there were no deaths and no losses whatever. In Italy they were certain to lose at least 20 per cent. of the silkworms, and the labour of rearing, in spite of all conveniences, is very considerable, owing to severity of climate.

At New Italy the silkworms were reared in all sorts of places—kitchens, bed-rooms, sheds, anywhere under some sort of cover; the little houses were crowded with silkworms in all sorts of contrivances for trays. Three-bushel bags stretched on rough sapling frames seemed to be much in favour. The food used was chiefly obtained from one-year old plants raised from the cuttings distributed by Mr. Champ, and also from the plantations of seedling mulberries. There were a few matured trees in the settlement, chiefly the *Morus multicaulis* species, and the leaves of these trees were used for the first feedings of the silkworms, but during the final and most important stage in the life of the worm the leaves were obtained from the young trees. It is during the last stage that the silkworm secretes the matter which forms the silk, and nearly the whole effort of the worm is directed to gather as much silky matter from the leaves as possible, within the time after the last moult, it remains a caterpillar.

It has generally been considered by the best authorities on sericulture, that the mulberry needs age, from four to eight years, before the leaves secrete the best gummy matter for silk, so that it seems rather remarkable that the silk produced at New Italy has turned out to be as good as it has done, and some of it equal, perhaps, to the best. The silk is a very fair sample indeed, and the cocoons, although not so regular in quality as could be desired, are on the whole good, and some amongst them very good.

The Italians are very satisfied with the results of their work, so far, as it gives an indication of what they will be able to produce when they shall be able to grow a sufficiency of food for the number of silkworms they may be able to attend to. It is in consequence of this success that those Italians who hesitated to accept the loans offered, and which were applied for under encouragement, now desire to set to work and plant mulberries as largely as circumstances will permit.

The greater part of the rearing had been completed before my arrival, and most of the silk had been reeled from the cocoons, but I was able to see a number of worms being fed, and others spinning their cocoons. Anyone could see at a glance that the women were very expert in managing the worms. They seemed to be delighted to get to the business to which they had been brought up to again; and they took the keenest interest in the silkworms, which they treated quite as pets. As the worms showed signs of spinning they were placed on brushes made from branches of shrubs or trees, and long tufts of dried grass. Some of the brushes were very large, others small, the branches and twigs being tied up together into the shape of brush brooms, and these were put in corners and out of the way places, until the cocoons were completed by the silkworms.

I was fortunate in being in time to see the work of reeling the silk from the cocoons, for it was most interesting to me to watch the skill with which it was managed. The woman who was reeling, Mme. Pazzutti, had been brought up to this particular branch of the silk industry from childhood, and, although, she had passed through several years of very hard and different sorts of work since she last reeled silk, she had by no means forgotten her art, and her expertness was surprising.

I ascertained that there are six of the Italian women who are experts at reeling silk, and that they could easily give instructions to children and others if, or whenever, it might be desirable.

As soon as Mr. Champ knew that there was a probability of a considerable number of cocoons being produced, he made application to the Principal Under Secretary for the purchase of a small reeling machine which had been obtained from Europe by the late Mr. George Thorne, of Castle Hill, and which could be bought for the sum of £12 (I saw this machine within the last few days, and the price seems to me to be most reasonable); but Mr. Champ's application does not appear to have been considered. However, two Italians, Antonio Murandi and Antonio Pazzutti, made a singularly ingenious machine, but necessarily a rough one, by which a woman can wind off two skeins of silk at a time, and more than a pound a day. This photograph [*See Appendix—Photo., fig. 2*], taken by me, whilst the machine was at work, will give a rough idea of it; I was not able, with the small hand camera and from the position of surrounding buildings to take a better view. The two skeins of silk can be seen on the wheel which is being turned by the little girl who is standing just behind it.

It cannot be expected that the silk reeled by such a rough machine could be of the best quality, and it is surprising that it has turned out so well as it has done, for the threads of silk, or filaments, were passed through holes made in hoop-iron, instead of through glass-beads or agates, and these threads were again passed through wire-eyelets on a little movable frame worked backwards and forwards by the action of the large wheel in order that the silk should be properly spread and not bunched up. Very

Very considerable interest has been aroused in the immediate neighbourhood of New Italy, at Woodburn, and in the Richmond River district, at the results of the Italians' work, and several residents who have large interests in the district, and with whom I had conversations on the subject, consider the prospects of a new industry to be excellent, and one which will eventually be of immense importance to the district, but that it will first need some encouragement and assistance by the State.

I made very careful inquiries as to the general opinion about the labour required, and whether the want of labour would prevent sericulture making progress, but no difficulty whatever on this point is anticipated. Most of the settlers in the district have large families, and there seems to be a growing anxiety as to what is to become of the children. This is the opinion of many men who have thought well on the subject, and given it much consideration.

I may mention that being obliged to travel to several parts of the district, to carry out other instructions, far distant from New Italy, I took the opportunity to obtain the opinions of all whose opinions were worth asking, and there is a general agreement that there would be no difficulty about labour if sericulture were once established. I was much surprised to find that considerable interest was being taken in the subject of silk growing in places where I least expected that it would be thought about.

I made many inquiries about the Italians, and found that they are considered to be a most honorable, trustworthy, hardworking, and thrifty people.

When sericulture was initiated at New Italy, it was considered by the residents of the surrounding district (with one or two notable exceptions) to be a very paltry affair, and Mr. Champ's appointment was looked upon with great distrust, and the whole thing was ridiculed; but since the Italians have shown what can actually be produced the greatest interest is generally being taken in sericulture, and the feeling now respecting it and Mr. Champ is the very antithesis of what it used to be, and the greatest desire has been expressed that the Government should continue to assist the Italians to the extent promised, and that the experiment be continued.

The few persons who, besides the Italians, obtained some mulberry cuttings and seeds from Mr. Champ, by the permission of the Government, planted and sowed them, more, I think, from curiosity than from a genuine desire to enter upon the sericulture industry; however, from what some of them informed me, I believe, they are now quite alive to its importance.

The country about the settlement of New Italy is undulating, bearing a hardwood forest, the chief timber being ironbark, blackbutt, tallow-wood, peppermint, stringybark, sheoak, &c. The soil, which is considered to be extremely poor and worthless in comparison with the rich alluvial brush land on the banks of the Richmond and Clarence Rivers, or the soil of the "Big Scrub" in the Richmond River district, is better than it seems to be at first sight, or when it is in a state of nature, and this is apparent where it has been well cleared and cultivated. The timber is very heavy and difficult to clear. The country and soil have very much the appearance of many of the heavily timbered portions of the county of Cumberland—both districts overlying coal-measures. When the Italians first settled at New Italy they had great difficulties to contend against, being strangers, almost unable to speak a word of English, and being extremely poor, they had great difficulty to live. When I visited the place a few years ago the women were working like men, clearing timber, digging out stumps, cutting and squaring timber for railway sleepers, and so on. The women still work hard, and so do the children; but the general appearance of the farms has very much changed for the better, many of the original huts have given place to substantial cottages built of well squared solid slabs, and there is a look of comfort and neatness about the dwellings, too often absent from those of the settlers generally in the district. They seem to have an abundance of good vegetables for home use and some for sale; and all the gardens have some well cared for flowers, of which they seem to be very fond and proud. The grape vine succeeds very well, and grapes are produced abundantly. Some wine is made for home use, and most of the grapes are sold in the district. This is the chief crop they have to depend on.

I think that most of them now own a few cattle and a horse or two. They save and collect every scrap of manure they can for their gardens. The farms and gardens are all well fenced, and, considering the difficulties they had to contend against, and their up hill struggle, they have done wonderfully well, and are an example of energy and perseverance.

The mulberry succeeds admirably here, in fact its growth is surprising. The cuttings planted a little more than one year ago have grown into trees, many of them to a height of 10 or 12 feet, having stems with a diameter of from  $1\frac{1}{2}$  inches to 2 inches.

This photograph [*See Appendix—Photo. fig. 2*], taken at random, shows one of these young mulberry-trees which was planted as a cutting about one year ago. It is planted with a number of others in a vineyard, and shows how advantageous it is to plant in soil that has been well prepared. The two Italians standing near this tree are each about 80 years old. The old woman is extremely active and sprightly. I found her hoeing away amongst her sweet potatoes with wonderful vigour. This old couple take the greatest interest in sericulture, and the man had just finished making several trays of different sizes for his silkworms next season. These trays were made of vine cuttings tied neatly together with strands of stringybark. On the alluvial banks of the Richmond River a variety of mulberry may be seen growing near many houses, between Woodburn and Lismore, and there are many trees lower down the river. This variety is, I am almost sure, the *Morus Indica*, wrongly named by the settlers the "Cape mulberry." The foliage of this variety grows very thick and dense, so that it forms an admirable shade tree. Floods do not affect it in the least. I found the same variety, here and there, throughout

throughout the district between the Richmond and the Tweed Rivers, and also on the Clarence River, growing everywhere with great luxuriance. I also noticed the "Cape" mulberry growing near the Clarence. The *Morus multicaulis* is also common in the district. When visiting Mr. Brady, on the Tweed, about three years ago, I spoke to him about the *Morus indicus* and its luxuriant growth. He told me that he thought this had spread from plants originally distributed by him.

The Italians consider the climate of New Italy to be very healthy, and they suffer but little, if any, sickness. The children look very strong and healthy, and the climate seems to suit them admirably. The climate also seems to be admirably adapted for the silkworms, which thrive splendidly. I was informed that the time from hatching to spinning here occupies about eight days less than it does in Italy, and the Italians consider that the worms require less feed here. They say that in Italy the worms require 25 lb. of leaves to produce 1 lb. of cocoons, but that here 20 lb. of leaves will produce 1 lb. of cocoons, and that a tree two years old here will yield 12 lb. of leaves, whilst only from 2 to 4 lb. can be obtained from one three years old in Europe. However, it is only from very exact experiments that perfectly correct estimates can be formed.\*

I was informed by one of the Italians that a gentleman named Oscar Meyer came to New Italy some time before Mr. Champ's first visit, with a view to induce the Italians to enter into the sericultural industry, but he was not successful. He left his card which was shown to me.

I visited a reserve, No. 14,836, 19½ acres, which has been reserved from sale for sericulture. Five acres have been well cleared ready for the plough.

This photograph [See Appendix—Photo. fig. 3] shows a portion of the cleared land, a part of the fence, and it shows the sort of timber that has been cleared away. It will also give a good idea of the general character of the timber at New Italy, although in some places the timber is much heavier than this. The 5 acres were cleared by Mr. Champ in order to make a mulberry plantation, and to sow a large quantity of mulberry seed which had not been distributed. The work of planting and sowing was not carried out owing to the suspension of operations by the Government. The mulberry seed is in charge of a gentleman at South Woodburn, but unless it is sowed before very long it will probably perish. Its value is, or rather its cost was, about £45. One bag of seed was sent to the Forest Department, and 71,000 plants were obtained, of which about 11,000 are now available.

The work of clearing the 5 acres of the reserve has, apparently, been well done, and the land is quite ready for the plough. The situation of the reserve is good, well elevated, and about the centre of the settlement; so that if it be determined to carry on the work already begun, of aiding, fostering, and encouraging sericulture, great use might be made of this portion of land.

The mulberry seedlings raised by the Italians, from seed distributed by Mr. Champ, number about 25,000 or 30,000. They have grown very well indeed, although standing only an inch or two apart in the seed beds, for numbers of them are upwards of 5 feet in height. Great use was made of the leaves from these young plants for food for the silkworms that were reared. The Italians told me that in Italy, seedlings three years old would not be so fine as these one year old seedlings.

As far as I was able to ascertain, I think that about 180 lb. weight of cocoons were raised at New Italy, but numbers had been given away and distributed about the district, and no accurate account of the weight had been kept.

The Italians had saved a number of cocoons for "graine," and the moths were laying their eggs when I visited New Italy. I think that, considering the conditions under which the silkworms were reared, the worms obtained from the eggs are likely to deteriorate. This may not be apparent at the next rearing, but it will become evident in course of time if the silkworms are reared under similar conditions to which they were at first. "Graining," or rearing, silkworms for their eggs requires the special attention of very skilled persons, and is a separate branch (or should be) of sericulture.

I was informed that the Italians had some eggs sent out to them from Italy by friends there, but they were (I think, fortunately) destroyed in transmission. The greatest care should be taken in importing eggs from Europe, where the very worst of the silkworm diseases have not been eradicated.

Dr. Cleland, of South Australia, in his report previously referred to by me, says: "I would like to draw attention to the possible danger of importing disease with silkworm eggs from Europe. It seems to me that these should be quarantined as well as any other live stock. There might be some isolated Government farm in time where a cultivation of the imported eggs could be made, and where, if found diseased, they could be destroyed."

The Italians are quite satisfied that sericulture, when once firmly established, will be sufficiently profitable to enable them to remain at home altogether, instead of, as at present, being obliged to absent themselves for, at least, half the year. They will be satisfied to obtain small profits. The women are exceedingly anxious for their husbands to remain at home. It is evident, therefore, that the establishment of sericulture will be a very important matter to these settlers. I

\* NOTE.—I find, curious enough, on consulting Count Dandolo's excellent work on "The Art of rearing Silkworms," published in 1825, the following remark, which leads me to think that the Italians may be quite correct in their opinion as to the silkworms requiring less food at "New Italy" than is the case in the colder climate of Italy:—"The results of my experiments," says Dandolo, "tends to show that in warmer climates than ours the silkworms consume rather less leaf than I have stated, because the quality of the leaf is more nutritive. In the favourable regions of Dalmatia I obtained, in 1807, 1½ lb. of cocoons from 15 lb. of leaves, and 15 lb. of cocoons yielded 1½ lb. of silk, although it was not so fine and delicate as ours."

I carefully examined all papers relating to sericulture at New Italy, and it appears that, in accordance with instructions from the Colonial Secretary, Sir Henry Parkes, the Inspector-General of Forests, Mr. J. E. Brown (accompanied by Mr. Reginald Champ), visited New Italy and made a very favourable report as to the suitability of the settlement for silk-culture. Mr. Brown, on the 28th October, 1890, wrote: "According to your instructions, I entered carefully into the subject of the probability of establishing the industry of sericulture in the settlement, and have much pleasure in reporting that, in my opinion, it is one of the most important that could be undertaken in connection with it." \* \* \* "Taking all these matters into consideration, then, I have respectfully to recommend that every encouragement should be given by the Government to the settlers of New Italy to establish a thorough system of reproductive sericulture in their midst." Mr. Champ also made a report addressed to the Director-General of Forests.

Immediately after these reports were made (on 31st October, 1890), a petition was sent to the Colonial Secretary from the Italian residents of New Italy, through the Italian Consul, Dr. Marano, asking for assistance to enable them to make a start in the sericultural industry.

In the beginning of December, 1890, Mr. Champ was instructed by the Colonial Secretary to visit Adelaide; and on the 19th December, Mr. Champ reported: "Referring to your instructions of the 3rd instant, I have the honor to report that I returned yesterday from my visit to Adelaide, and to Dr. Cleland, of that city, and in accordance with the said instructions, have made satisfactory arrangements with this gentleman for the supply of the New South Wales Government of the necessary quantity of silkworm graine from his present small stock of Japanese silkworms." Mr. Champ further reported that the quantity of graine, or eggs, which he estimated would be required by the Italians in two or three years would be between 300 and 400 ounces, and he "arranged with Dr. Cleland to supply a maximum of about half that quantity to be delivered as may be desired by the Government at the expiration of two or three years." The other portion of the graine, Mr. Champ proposed should be obtained from Mr. George Thorne, of Castle Hill. Mr. Champ said, "In the absence of any authority for a supply being obtained from this gentleman, and his worms being very considerably more forward than those of South Australia, he was kind enough at my request to multiply his stock to the needful extent this year on his own account, so that they can be still more largely increased next season if desired." He adds, "Should you see fit to appoint me to see that the project is properly carried out, either with the Italians or otherwise, I shall be pleased to do my utmost to ensure its success, and am confident the ultimate results will well repay whatever expenditure it is intended to incur." In a letter to the Principal Under Secretary, dated 11th March, 1892, respecting his qualifications, Mr. Champ wrote, "As regards my knowledge of sericulture, I have had about ten years experience, gained as follows:—In the year 1881 I entered the firm of Henry Zweifel & Co., raw silk merchants, who did the principal trade of the port with Italy and France, and I there gained considerable experience of the European methods of silk production. In the year 1886 I was dispatched to China (Canton) to buy and inspect silk, and it was during my residence here amongst the Chinese producers that I gained my principal knowledge."

On the 10th December, 1890, Mr. Champ was instructed to proceed to New Italy, on the Richmond River, and "make inquiries with a view to ascertain the number of inhabitants who are willing and able to undertake sericulture in that district, and also to what extent they will require assistance, and fully report on your visit." Mr. Champ informed me personally that after his report had been received by the Colonial Secretary, Sir Henry Parkes informed him that the sum of £1,500 was, or would be, granted for the loans to be made to the Italians, &c., and that he was verbally instructed to return to New Italy, and that the money would follow.

On the 6th March, 1891, Mr. Champ reported that he had arrived at South Woodburn, on the Richmond River, on the 26th February, and stated that he had informed the Italians of New Italy "that the Government is willing to give them the help asked for to start sericulture," and he urged the necessity for affording the promised assistance. No reply was received to this letter, and Mr. Champ was subsequently informed that the delay was due to preparation of bonds. On the 18th April, he telegraphed to the effect that if he did not receive instructions to the contrary he would come to Sydney. During this visit to Sydney, Mr. Champ went to Liverpool to see a few Italians who had settled there (and who had belonged to the same expedition as their fellow countrymen at New Italy), to ascertain whether they were willing to take up sericulture, and he reported the result of his visit on the 30th April, 1891.

Whilst in Sydney Mr. Champ, referring to the work he had done, applied for remuneration at the rate of £500 per annum, and said, "I am willing to continue my duties in regard to the introduction of the industry into the Richmond River district, or other parts of the Colony, on payment to me by the Government of this same salary (£500) per annum plus the usual travelling expenses," and on the 6th May, 1891, the Colonial Secretary approved of the appointment of Mr. Reginald Champ with salary at the rate of £500 per annum and the usual travelling allowances, "to take effect from the 30th January last."

On the 30th April, 1891, Mr. Champ submitted the names of the Italians who required assistance, the number in family, number of selection, number of acres in each selection, number of acres to be planted with mulberries, number of cuttings required, and the amount of money asked for on loan for the first twelve months; and he also submitted a schedule of the Italians at Liverpool and their requirements. With respect  
to

to these schedules, Sir Henry Parkes wrote, the following minute:—"I have consulted with the Treasurer on the proposal to turn to practical advantage the experience and special training of the Italian residents of 'New Italy' in the production of silk as a permanent industry. Hitherto all attempts at silk cultivation have been futile from the want of practical knowledge. These Italians, with their wives and children, appear to be the very persons to prosecute the project to a success and to permanently establish the industry as a profitable undertaking. They have been visited both by the Director-General of Forests and by Mr. Champ (a gentleman having an intimate knowledge of the silk trade, as well as of the latest methods of silk cultivation), and every means has been adopted to ascertain the trustworthiness and general character of the persons it is proposed to assist in following this industry. The Attorney-General has prepared a draft bond (A.B.) for the persons who receive assistance to execute for the payment of the advances. Under these conditions, and directing that the utmost care and precaution be exercised for the protection of the Government, I approve of the schedule of advances submitted by Mr. Champ, exclusive of the residents near Liverpool," dated 5th May, 1891.

Mr. Champ visited Adelaide again in the beginning of May, 1891, "to make arrangements for transport of a large quantity of mulberry trees and cuttings," and on the 21st May reported that these arrangements had been completed. He then visited Mr. George Thorne, at Castle Hill, who promised to supply a number of trees and cuttings gratis. On the 18th November, 1891, Mr. Champ submitted that it would be very desirable that a house should be erected for him at New Italy, to cost about £400 or £450. Then, on the 30th November, he wrote respecting accommodation at South Woodburn.

When Mr. Champ first went to the district after his appointment, he was unable to obtain a house at South Woodburn, which is the nearest township to New Italy; he therefore resided at Lismore with his family, until he could obtain a house at Woodburn.

On the 30th November Mr. Champ applied for the sum of £190 for further advance to the Italians, and on the 9th February, 1892, he received £135, but was not informed why the full amount asked for was not sent. On the 10th February he sent a letter to the Principal Under Secretary, explaining his reasons for applying for £190.

Thinking it desirable that a cheap house for rearing silkworms (a magnanerie) should be erected on a reserve in a central part of the Italian settlement, Mr. Champ wrote to the Principal Under Secretary, recommending the erection of one; but no reply to his letter having been received, he telegraphed, saying that if he did not receive instructions to the contrary he would come to Sydney. Not receiving a reply to this he came to Sydney, and had his recommendation for a silkworm house approved on the 17th August. The cost of this house was not to exceed £80.

On the 3rd August, Mr. Champ submitted a statement as to the distribution of mulberry-trees and cuttings to the Italians, and a few of the neighbouring farmers. It appears that 13,000 cuttings were sent from Adelaide on 11th July, 1891, addressed to Mr. Champ, care of the Forest Department, Sydney; but for some reason, which is not known, the cuttings, and some young trees, were delayed in Sydney for twelve days, consequently most of the cuttings perished, not more than 5 per cent. struck root. The 300 young trees, however, grew. It is possible that the loss may not be so great as it might seem, for after seeing the plants, which are growing, I am disposed to think that most of them were from a variety of mulberry\* (supposed to be of *M. alba*), known about Sydney as the "Cape mulberry," which is by no means a desirable or useful kind to plant largely. It is useful as a change of food, or as a "medicine" for the silkworms, but it yields inferior silk. Mr. Champ does not appear to be very well acquainted with the various species and varieties of mulberry. From Mr. George Thorne, of Castle Hill, 100 young mulberry-trees were received, and about 75 per cent. grew. Also about 1,800 cuttings, of which about 25 per cent. rooted; they were in a very dry condition when received.

In view of the erection of a magnanerie or silkworm rearing-house, and wishing to make a mulberry plantation, and to sow a large quantity of the white mulberry seed which, on his recommendation, had been obtained from Europe at a cost of £86 5s., Mr. Champ recommended, on the 28th August, 1891, that an area of 5 acres of a reserve (since notified, on 28th November, 1891, as 14,836, "Reserve from Sale for Sericulture, 19½ acres") should be cleared, grubbed, ploughed, and fenced, the work to cost about £200. This recommendation was approved on 29th August. Tenders were then accepted and the work was completed. On the 5th October Mr. Champ wrote to the Principal Under Secretary, requesting that the first instalment for payment of work done might be paid, and on the 4th November a reply was received enclosing a receipt to be signed before payment could be made. The receipt was returned signed on the 30th November, and in the letter transmitting this Mr. Champ sent interim receipts for balance of payment, £52, and for fencing, £30 3s. 6d. The money for the first instalment, £25, was received by Mr. Champ on the 17th May, 1892. The other moneys were received on 16th June, 1892. Mr. Champ wrote several letters urging that the contractor should be paid.

The silkworm graine, or eggs, which had kindly been presented, through Mr. Champ, to the Italians, by Miss Thorne, of Castle Hill (which had been reared by her late father, Mr. George Thorne), amounting to about four ounces, or about 160,000 eggs, and

\* Note.—I do not think this mulberry is a species of *Alba*. I believe it is a native of Japan, and plants or cuttings were taken thence to the Cape of Good Hope, about 200 years ago, by the Dutch. It was also taken to St. Helena, and from both those places it was brought to Sydney. The leaves produce good silk, but in small quantities.

and some graine presented by Dr. Cleland, of Adelaide, was distributed by Mr. Champ, about the beginning of October. This was reported to the Principal Under Secretary by Mr. Champ, who inquired, at the same time, whether his recommendation to purchase the reeling machine, made in July last, was approved.

On the 10th October, 1892, a petition was sent to the Colonial Secretary by the Italians at New Italy, praying that the Government will continue operations that have already been started, until they are in a position to make the industry profitable; they said, "So far as we have been able to proceed, every circumstance points to a favourable conclusion of such experiments," and "In all our experience in Italy, whence emanates the great bulk of high-class silks in the world's markets, we have never seen such favourable indications of production as are now before us, although we have at command at present only the most rude means of obtaining a crop of silk; the successful rearings are taking place in sheds which in our native country would probably only result in an entire loss of the crop."

I respectfully submit that Mr. Champ's work has, from all I can gather in the district, been performed under very discouraging circumstances. Public opinion was altogether against him, and the idea that sericulture would ever be established in the district was ridiculed, although one or two of the residents had great faith in the industry.

Amongst the Italians, he was met, at first, with a good deal of suspicion and discouragement, and had many difficulties to overcome. I believe, as far as I could judge, that Mr. Champ performed his work to the best of his ability, and as well as adverse circumstances would permit.

#### REELING.

[See also Appendix No. 10.]

There is an important matter to be considered, if it be determined by the Government to take action with respect to sericulture, namely, the advisability of making careful experiments to determine whether the reeling of silk from the cocoons, and producing "raw silk," can be made a commercial success, or whether it would not be more profitable to simply desiccate the cocoons, and press them for shipment to Europe.

Silk-reeling is a branch of sericulture (or, in fact, is an industry by itself) which depends on the raising of cocoons for supplies, but has, otherwise, really nothing to do with that part of the business.

Although I am doubtful as to the probability of silk-reeling becoming a commercial success, at the same time I think it would be highly desirable to have the matter settled as soon as a sufficient supply of cocoons would be forthcoming; and I respectfully suggest that a "Filature" be established at New Italy, and that experiments be made on a sufficiently large and business-like scale to determine this matter beyond all doubt. The expense need not be very great, and amongst the Italian women, as I previously mentioned, there are six expert reelers. This I consider a most fortunate circumstance, which should be taken advantage of. The woman I saw at work reeling informed me that the girls, with a little teaching and practice, would very soon acquire the art, and there would be no difficulty about it.

I have thought over this matter very carefully, and, taking everything into consideration, I think that the extraordinary opportunity which presents itself of testing the possibilities of a very large industry (connected with, but apart from, sericulture) becoming established should not be lost.

I find that the American Government is extremely anxious to establish a silk-reeling industry in the United States to save the immense import of raw silk from foreign countries which is required to supply the silk manufactories. Great attention is being given to the improvement of silk-reeling machines, whereby saving in cost of reeling may be effected.

In a circular, published 5th October, 1891, by the Ladies Silk Cultivation Society, of St. Diego County, California, it is stated, "in the fourth year one acre well cared for will support the worms hatched from  $6\frac{1}{2}$  oz. of eggs (40,000 to the oz.), and yield a net profit of 226 dollars 25 cents, if the cocoons are sold. If they are converted into silk the acre will net 357 dollars 50 cents, allowing 1 dollar 50 cents per day to each labourer except the reeler. In this State the regular wages paid for reeling is 40 dollars per month. An expert can reel 1 lb. of 16 oz. per day."

Dr. Cleland says, "We come now to the third stage, or the reeling of the cocoons into raw silk. This portion of the industry is considered a very profitable one. The more reason on this account that our original leaf-growers should still continue and manage to share this profit as well as the others. The young women previously engaged in rearing cocoons would be available for reeling purposes. The work is not pleasant, but is essentially fitted for female labour. In Italy I was charged at the rate of 2s. per lb. for reeling the raw silk from the cocoons. Even if it would cost 3s. in this Colony (South Australia) it would still pay well. It would be necessary to have skilful instructors, and the most improved machinery. In a former communication to the Central Agricultural Bureau, I gave it as my opinion that 1 lb. of raw silk would cost, from first to last to produce, 8s. Suppose that it was to cost 10s. per lb., the Co-operative Company would still make a profit of 5s. per lb., for I received 15s. per lb. in Italy for some that was reeled there. When the quantity turned out amounted to  
tons

tons in weight it would be difficult to see why the industry might not be made a financial success. I think I might say that the man or men who ever do this will deserve well of their country."

In a report to the Governor of the State of Kansas, U.S., for 1889-90, the Silk Commissioner remarks—"I visited the filatures at Washington and Philadelphia to investigate and inform myself with regard to the best methods of reeling, but found nothing practically better than our own. However, Mr. Phillip Walker, in charge of the silk section at Washington, was engaged in perfecting the Terrell Automatic Reel, which, when completed, will greatly lessen the expense of reeling, and the filatures will then become self-sustaining." He further remarks, respecting sericulture generally in the State—"With the same encouragement and fostering care, I see no reason why the silk industry should not succeed as well, and be of as much real value and profit to the people of our State as the production of sugar." He also states that fifty-four families received for the cocoons they produced 1,254 dollars, or an average of 23 dollars 22 cents per household. The time occupied was but six weeks, and the money received at a time when there is little income from the farm, and every dollar is acceptable. The work can be done by the aged and young members of the household, who are unable to go to the field and perform hard-labour, and it is especially adapted to the girls of the family."

I think these opinions will show that the question of reeling is worthy of consideration. The work must be done with great care, and no faulty raw silk submitted to market, for it will be of the most vital importance to the trade that a good name be established to be afterwards maintained with the strictest care.

There need be no difficulty, on the the other hand, in finding a market for dried cocoons when they can be produced in sufficient quantity; but they must be properly desiccated, and the expense of doing this will, I think, be trifling in comparison with reeling.

In tendering advice to the stewards of the silk section of the New South Wales Agricultural Society's Exhibition for 1871, Mr. Brady wrote "The term '*stoved*' should be expunged as implying a necessity for a particular mode of treatment. The proper term is desiccated, the precise meaning of which is that the whole cocoon, just completed by the worm, is subjected to some drying process (the mode of which should be left to the option and skill of the exhibitor) by which the drying is carried to that extent by which all moisture and unctious matter are removed so perfectly, that upon pressure even under an hydraulic press, the grub contained in the cocoon is reduced to mere dust and no amount of pressure will soil or tarnish the silk of the cocoon."

Mr. Thomas Dickens, President of the Silk Supply Association of London, in his guide to sericulture says "Cocoons thoroughly desiccated, may be pressed and packed for transport, and will yield as good silk as if reeled at once in the localities where they are produced." He also remarks about reeling "This operation, although simple not costly, and conveniently performed by women and children, requires careful, special training and much experience, so that the operators may become accustomed to the touch and manipulation of the fine filaments. It is therefore strongly urged that silk-growers do not attempt this process until they shall have successfully carried out the plan recommended for producing and exporting cocoons. Good cocoons will realise far more than silk defectively reeled from them.

It may be gathered from this report that sericulture in its widest meaning may be said to embrace four very distinct sorts of work, viz., the cultivation of the mulberry; the rearing of silkworms expressly for graine or eggs; the rearing of silkworms for cocoons only; and the reeling of silk from the cocoons, and each of these branches requires special knowledge and skill; and, in fact, the more this is applied the better chance of success. This is either not generally understood or else is overlooked by those who have not studied the subject, and who consider the whole thing to be merely child's work, because nearly every boy or girl who can obtain a few mulberry leaves, generally manages to rear a few poor worms, and wind off a few pretty little skeins of worthless silk. Juvenile labour can, when properly directed, be made great use of; and it is absolutely necessary, where silk is being raised for commercial purposes, that the work be guided by well trained and skilful persons, who have a thorough acquaintance with the business. I respectfully invite particular attention to this matter, as I so fully believe that the ultimate success of the sericultural industry in this Colony will depend in a great measure on a proper training of those who may engage in it. But, I may add, I foresee no difficulty in spreading proper information from central establishments as I have suggested.

I observed, when at New Italy, that the Italian children seemed to pick up the sericultural work, almost by a sort of intuition, even in the short space of time they could obtain any experience. I was surprised at the knowledge shown by the little girl who was turning the reeling machine for her mother. She explained to me how the filaments of silk had to be crossed and passed over the wheel, and many other things, evincing the greatest possible interest in the silk-reeling. The greatest interest, too, was being taken in the matter by young English or Australian residents at South Woodburn for some graine, or eggs, had been obtained from the Italians, and silkworms were being reared by several, and the occupation of attending to the worms seemed to give unbounded interest and pleasure. I noticed many indications amongst the residents which convinces me sericulture would gain ground rapidly after it once becomes fairly well established. If this industry should be taken to by young members of the community, from feelings of interest and pleasure, as well as profit, they would very soon become experts if they had the advantages of proper guidance and instruction.

EXPENDITURE

## EXPENDITURE BY THE GOVERNMENT ON SERICULTURE.

The expenditure of money made by the Government in connection with the initiation of sericulture at New Italy has been as follows:—

	£	s.	d.
Mr. Champ's salary to end of 1892 ... ..	958	12	0
Mr. Champ's salary for January, 1893 ... ..	41	8	0
Preliminary expenses paid to Mr. Champ previous to his appointment by the Colonial Secretary's Department ... ..	182	10	0
For expenses and report paid to Mr. Champ by the Forest Department previous to his appointment ... ..	42	8	6
Mr. Champ's travelling expenses since his appointment... ..	213	8	0
Clearing and fencing 5-acres Reserve, New Italy ... ..	107	3	6
Loan to Italians at 5 per cent. ... ..	608	0	0
Sundries, about ... ..	10	0	0
	£2,164	10	0

Some expenses were incurred by the Forest Department in obtaining cuttings of mulberries from Castle Hill, in planting them, and also in sowing mulberry seed. I cannot obtain particulars as to cost, but I think it might be estimated at about £25. As no plants have been yet supplied to New Italy by that Department I do not think this can be charged to sericulture at New Italy.

No other expenditure of public money has ever been made by the Government, that I can discover, for sericulture, and no scheme has ever yet been formulated to introduce the industry into the Colony; nor, in fact, does much, or any, interest appear to have been taken in the subject beyond the setting apart 1,280 acres for a sericultural reserve on the Tweed River, selected by Mr. Brady as being a suitable spot to begin operations. This was proclaimed by Mr. Secretary Farnell on 5th December, 1872. One or two small special leases were granted for sericultural purposes, but I cannot ascertain that any use was made of them for the purpose applied for. The reserve of 1,280 acres was leased at a nominal rent to Mr. Brady, but as he did not receive the assistance from the Government, which he affirms he was led to expect, and which he and others are convinced was intended to be afforded him to carry out his project of establishing the sericultural industry, he was unable to make any use whatever of the land. He lived near this reserve for many years fully believing that steps would be taken towards the establishing of the industry, and that his services, experience, and remarkable discoveries would be availed of; but nothing was ever done.

In the report published by the Commissioners on the International Exhibition held at the Garden Palace, Sydney, in 1879, on sections 242 to 249, silk and silk fabrics, &c., of which I append a copy, marked [*Appendix*, No. 2], there appear indications that the Government at that time wished to take some action with respect to sericulture, for Mr. Josiah Smale, of Macclesfield, who was a judge in the sections referred to, mentioned in his report that "just before leaving Sydney I had an interview with both the Ministers of Lands and Mines of New South Wales who told me they would do all in their power to assist sericulture in the Colony. They will lease, say, up to 500 acres at a nominal rental for this object, but the use of this land must be wholly confined to silk-culture." I beg to invite attention to other important matters contained in this report, but I entirely disagree with his views on the necessity for Chinese labour or any other labour than will be found available here.

## SUGGESTIONS AND CONCLUSION.

In submitting my report I feel the greatest difficulty in suggesting a method by which the Government might effectively aid, foster, or encourage sericulture, without obtruding on, or interfering with private enterprise.

The real difficulty of establishing sericulture is the fact, remarkable as it is, that in no part of the British dominions are the English people, or ever have been, in any place, acquainted with the occupation of silk raising as a productive pursuit. Nowhere is there to be found that traditional training by father to son and mother to daughter, which ensures the best of all knowledge in a craft which comes and grows, from childhood upwards, with the practical experience of everyday life. The very difficulty which now presents itself has been the very difficulty in, former times, which it was necessary to meet in every European country where sericulture now flourishes.

There is no doubt of the existence of a very general desire, by some persons, to obtain assistance, and who are confident that success cannot be attained without help, and I have no doubt that I may be expected to offer a favourable opinion thereon. Others again probably think the proper course for the Government to take would be to start Government farms, plantations, and making sericulture a Government enterprise and paying concern, such as the Railways, Telegaphs, &c., &c. I feel that I may be expected to refer to, if not to deal with, these or similar projects as my instructions intend me to make my report as perfect as I am able.

I believe it will be found that all those whose practical experience justifies them in speaking with some degree of authority, that they are opposed to the idea of any interference by the State, in any way, in what should be private enterprise.

Being very much interested in sericulture, some years ago, I attended several meetings presided over by the late T. S. Mort, and it was there that I first heard Mr. Charles Brady, give his views with respect to the industry, answering questions, and giving information, &c. That gentleman expressed himself as being very much opposed to Government interference with private enterprise, and that Government action should be confined

confined to providing sound or useful information to be as practical as possible, or something very much to this effect. At one meeting it was proposed that a joint stock company should be formed to grow silk and appoint Mr. Brady as manager, but he refused to become a servant to a number of gentlemen, not one of whom was sufficiently qualified to give proper instructions, but who were to control everything.

As Mr. Brady is probably one of the best authorities on sericultural matters to be found anywhere, his opinions on the subject must be of considerable value, and they deserve great consideration. When visiting him officially, at Antony, on the Tweed River, on more than one occasion, I took the opportunity to question him as to his opinion, or propose the best way for the Government to assist him to establish a silk industry suitable to the country, and the peculiar condition of the people to be served. Whilst disdaining any idea of Government aid to himself individually, or any favour to him in preference of any other person "beyond fulfilment of promises volunteered to him personally," he strongly approved of the Government causing mulberry plantations being made on Government land either at public or private cost, getting a number of these plantations established, and kept in good order, with suitable mulberry-trees properly trained and cared for, until fit for silk purposes, in as many different localities as possible in the Colony, to be let or leased, the same as other Government properties improved or not, and their appurtenances, such as sheep or cattle runs, wharfs, &c., &c. Mr. Brady also sketched out a more definite plan which has not, so far as I am aware, been touched upon publicly, and this as well as his ideas previously mentioned, he requested me, at the time he explained them to me, to treat as confidential, but Mr. Brady has now given me permission to use them if I think proper, for he says "Times have changed. Want in many quarters presses, and the public mind is more open, or less indifferent and less callous than it has been, to the necessity for the better use of the territorial resources of the Colony natural and accidental."

Mr. Brady thinks that action by the Government might necessitate legislation, but he considered "that it might be quite practicable as a matter of business with private persons of fortune, who, having land available for, and not jealously indisposed, even if they had eventually to part with some of it, would be willing to do so on the probability that any amount of success and presence of additional population on the portion alienated would necessarily advance the value of the remainder, and that an understanding should be arrived at between two parties.

In faith of an understanding, a binding agreement should be made on capitalists side to conditionally sell, a defined portion of land, say, not less than 320 acres, or more than 640 acres. The seller to securely fence the whole on every side, put up a fairly good family dwelling besides other necessary buildings, improvements, &c., and from time to time, say from three to five years, furnish funds to cultivate, plant with mulberry-trees in paddocks specially prepared and so on. The buyer to become at start an inchoate purchaser bound to residence, to care for continuously, to faithfully carry out by his own labour, knowledge, and experience of himself, family, and servants with the assistance of others if needed and desirable. During the progress of these operations, while the mulberries are growing the buyer should, if not already acquainted with proper methods of rearing silkworms, learn and extend his and his family's experience by managing such small quantities of worms as from time to time could be easily attempted by means of food actually at hand on the spot. As soon as production made payments or reimbursement practicable, the buyer should begin to pay off the whole cost by instalments agreeably to understanding. The amount and cost of land, improvements, and all outlay provided by seller with interest, &c., to be computed actuarially and capitalised on the basis of a moderate rate, say,  $4\frac{1}{2}$  or 5 per cent., and not exceeding  $5\frac{1}{2}$  per cent. for the whole time stipulated. The amounts and periods of payments adjusted according to agreement. Calculations to be founded on accounts submitted to a competent recognised actuary. The whole of the payments being accomplished the place and all its belongings would become the absolute property of the quasi-tenant or buyer and unencumbered.

I do not venture to either criticise or recommend Mr. Brady's proposals, but I respectfully submit them for information and consideration. They would seem somewhat to have been suggested by Messrs. Chaffey Brothers' Mildura irrigation scheme in Victoria; but to my certain knowledge they had been formulated long prior to the origination of that scheme.

Mr. Brady's advice was that Government action should mainly be to afford much-needed and desired knowledge and education, and, to some extent, assist to make the knowledge and experience practical. His plan requires that suitable land be chosen, in extent, not merely to allow considerable acreage of mulberry plantation for family, rather than what might be understood by village settlement. Land enough to permit of general farming, dairying, &c., besides silkworm rearing, so that independent of silk-raising, each holding might be permanent and self-sustaining. This he considered an important feature.

At first sight, Mr. Brady thinks, his project will very probably appear extravagant and impracticable, for many reasons, "a narrow-minded land-grabber," as he expressed himself, would demur. No security to the seller, and "undoubtedly a very great difficulty would be the demands on a seller's powers of trust as to the good faith, the reliability of continuous power on part of the buyer and his family to perform his or their share, and these would largely depend on the stamp and disposition of the parties." This difficulty, he considered, would thin out a good deal upon careful consideration, and would not be in any way, and certainly not in every case, very serious. Nor would the practical risks of loss be very great if discreetly dealt with. "Indeed, as a matter of fact, men of the world, level, hard-headed men of business, daily incur much greater

greater real risks, without loss and without inconvenience, more than is easily remedied by either party." Mr. Brady is of opinion that "there may be practical ways or methods by which common-sense persons, exercising their own will and pleasure, public-spirited persons with means, if so disposed, could, without any very serious risk, do a very good and valuable service, whether Government should decide to make, or not to make, Government plantations of mulberries, with intention to let them to approved tenants." His great thought and desire is to enlist, at the very first, in the very beginning, the class which he regards as the most desirable and useful. He informed me that there were, to his own knowledge, quite a large number of well, and often highly-educated and accomplished persons, both male and female, many in the prime of life, without occupation to do, profitable to themselves or to the country. A large proportion of these, with some preliminary information and training, would certainly prove successful silk-growers. At first, and for some time, there would be only small supplies of mulberry leaf available, and consequently but few could be employed. "The time and active energies of these most valuable members of the community produce nothing at present. But little is known of them, so entirely unobtrusive are they, but their desires are known to some who would wish to serve them and serve the country. Employment, something to do they would have, but cannot find." Mr. Brady is warmly in favour of an earnest effort to enlist as many as possible of these into the ranks of learners and beginners.

One important feature in the scheme would be that, "the active parties (the buyer and his family) owing to the uncertainties of health and life, it would be a great safeguard, to assist as far as possible, a risk of rupture or halt, at any rate until the farm or plantation had had time to grow into a condition of profit, that other members of the family interested, being in a position take up the enterprise. Apart from all philanthropic motives, which as a matter of business seldom trouble an investor—the presence of a superior class of persons working on only a single farm in his neighbourhood, with but moderate success, would bring settlement of the best kind, and put a value on all the surrounding properties especially in remote, or not tempting localities. To some minds it would seem ridiculous to think of taking trouble laying out their money and so on, for the benefit of someone else, most probably a stranger, and the whole thing to pass away from them. Undoubtedly my notion would appear chimerical, at any rate to those of shallow or merely superficial reflection, but, even in a country like this, I believe there are many, a good many, who do not regard their fellows in an absolutely selfish view as mere animals to make money by; but who would willingly adopt, or further by their influence and their money, be instrumental in creating practically a practical means to improve the condition of many persons not so happily circumstanced as themselves, whose presence, in a field at present unoccupied, is most desirable to cultivate."

It seems to me to be evident that it will be necessary for the State to take some action and afford some preliminary support to sericulture, before it can become an established industry, and I feel convinced that any efforts and expenditure that may be made by the State will be quite justified by the probability of this industry becoming of very great importance to the Colony, if initiatory steps be well and carefully directed. But, I respectfully submit, that I believe the attempt, will most certainly fail, if matters in connection with it are permitted to drift about without any guidance or proper supervision, in the same manner as the work already begun, with the best possible intentions, has gradually, perhaps accidentally, but undoubtedly, drifted until it has become, pretty well, no one's care and no one's business, and in a fair way to become a failure.

I believe that it will be in the best interests of the Colony that the work of introducing the industry generally be taken up by the Government, and I do not think it will need a very large expenditure of money; and I believe the present time is opportune. Considering that very large sums of money are expended annually for the encouragement of various branches of industry, such as prospecting, dairying, the distribution of seeds and plants to farmers and others, inspection of agriculture, large prizes to agricultural shows, prizes for farms, &c., subsidies to agricultural and kindred societies, schools of arts, on agricultural education, technical education, and so on; I think that sericultural education and encouragement might fairly claim a share.

The evidence I have given in this report, will, I believe, remove all anxiety of a deficiency of suitable labour being likely to occur. Argument to the contrary can only be founded on supposition, because so far as I can possibly ascertain, sericulture in this Colony has never reached a stage where its progress has been stopped or even impeded by a want of suitable labour. I may mention as having a bearing on this matter, that it has been found quite possible to produce butter in the Colonies at a sufficiently low cost to enable vendors to enter into successful competition with it on the London market, against that produced by the cheap European labour of France, Denmark, Holland, &c., notwithstanding the high cost of carriage. And so, too, will our sericultural products be successful in consequence, as with the butter of our most favourable and magnificent climate.

If it be decided that steps shall be taken to aid, foster, or encourage sericulture, I respectfully suggest that it would be advisable as an important factor towards success, that if it is possible the services of Mr Charles Brady be secured to advise, supervise in the field, and instruct on sericultural matters; and it will be of the very greatest importance that arrangements be made with that gentleman for him to give instruction to intelligent persons in his method of artificial hibernation, &c. Or arrangements might be made whereby he could supply graine, or eggs, at periods, as required.

Mr Brady's local experience and his knowledge of sericulture in all its branches being remarkable and in fact unique, I am convinced that, it would not be possible to find anyone else whose advice and assistance in establishing such an important industry

as sericulture may become, could approximate his in any degree. I believe that although he may be opposed to what he may consider "Government interference in the industry," he may be induced to give his services and co-operation in any reasonable plan likely to promote and popularise the industry.

I respectfully suggest also that Mr. Reginald Champ's services be retained to carry on the work at New Italy, and that the Italians should receive the expected assistance they need to complete the work they have begun. That Mr. Champ be paid at the rate of £250 per annum and a house be provided for him at New Italy, on the reserve for sericulture, and also that he be allowed forage for one horse. He should be required to have the 5 acres, already cleared, to be prepared immediately for sowing mulberry seeds, and planting cuttings at the proper time. This work could be done by contract, and arrangements might afterwards be made to keep the plantation in proper order by contract.

I also beg to suggest that it would be most desirable that the large reserve on the Tweed, which was originally set apart for sericulture be retained for the purpose intended and that as soon as possible, plantations of mulberry be made there. And that other reserves in two or three parts of the Colony be secured for the same purpose as this will be necessary to carry out a proper scheme.

The most important work to begin will be the planting, and the encouragement of planting, varieties of the mulberry for food for silkworms, and this should be done as speedily as possible. I believe it will be possible to obtain a large and perhaps sufficient supply of mulberry cuttings of proper sorts, in this Colony, for planting next season. It would be advisable to supply public schools with plants or cuttings of varieties, and when the trees attain a sufficient size, cuttings can be distributed and pupils and persons in the neighbourhood, can become acquainted with the proper varieties, for the several localities, to plant. Cuttings might also be distributed, to any gardens, parks, or other grounds subsidised or under the immediate control of the Government, or public bodies. Many varieties of the mulberry are ornamental and would become useful for shade trees, even if they may not be required for other purposes.

I respectfully submit that if the sericultural work be taken in hand by the Government, it must be done cautiously, but at the same time with spirit and vigour.

In conclusion, I beg to invite particular attention to the various appendices to this report, for these will show more than anything else, being statements of actual facts, how gigantic the silk industry really is in other countries. The more I reflect on the matter of sericulture the more and more I am surprised that some branches of it have never yet become established in Australia, but I really believe this is due in a great measure to a general ignorance of its importance and potentialities, and also a general ignorance of the wonderful suitability of the country for the production of the very best raw silk, which we might and should produce in New South Wales alone to the value of millions of £ sterling annually with comparatively little labour, or labour at present lying dormant, and this may yet be done by a little judicious management and encouragement, and I respectfully submit that New South Wales being the mother colony might well take the lead with advantage and no doubt other colonies would speedily follow.

I have lately been shown some admirable small samples of silk, produced by pupils attending public and private schools in various parts of the Colony, and some of them are really excellent, and serve as an indication of what may be done if proper means are taken to spread proper knowledge on the subject. I am sure the children would become intensely interested, more particularly so if a little profit crowned their exertions. It needs but a qualified head, and a few trained assistants to teach and direct matters for these youngsters to become an important factor in building up an immense industry.

I respectfully invite attention to the appendix showing the expenditure, in shillings and pence, of various countries per head of the population on manufactured silk goods which have been consumed by those countries; and particularly to the table showing Victoria and New South Wales, and the extraordinary difference between the consumption of silk in the two colonies.

I have taken great pains to make everything clear, and as concise as is consistent with the importance of the subject. I am not aware that any report has ever yet been prepared officially in any of the colonies, or one which contains such information respecting the whole silk industry by which a thorough grasp of the whole thing can be obtained.

Although the work of preparing my report has been laborious, it has given me the greatest pleasure to perform, especially as it may possibly assist in establishing an immense industry in, and bring wealth to New South Wales.

I have, &c.,

WALTER SCOTT CAMPBELL, F.L.S.

The Under Secretary for Mines and Agriculture.

## REPORT ON SERICULTURE.

## APPENDIX No. 1.

C. Brady, Esq., to the Colonial Secretary.

Sir,

Curl Curl, Manly, 17 March, 1870.

I desire to call your attention to a subject which, under present circumstances, may become of large and immediate importance to the interests of the Colony.

I believe that some time last year a despatch from Lord Granville made this Government acquainted with the representations of the Silk Supply Association of London, and thereby, both with the urgent necessity in England for a larger import of silk to make up the actual deficiency of raw material for manufacture, and also with the excellent opportunity for colonial producers to enter the market at the present time when not only England, but every continental country, suffers from the extreme scarcity and high price of this article. The scarcity, owing to the continued devastations by disease of silkworms all over Europe, in all probability may last for years, and it appears opportune for me to request your particular consideration of Lord Granville's despatch, and the contents of this present letter, which may largely conduce to the future welfare of the Colony.

My own personal knowledge and experience in the treatment of silkworms in New South Wales and Queensland for several years justify me in expressing my conviction that this part of Australia at any rate is peculiarly well adapted for the production of cocoons. I began the study of the subject in 1862, and have since devoted myself exclusively to this pursuit in all its relations, particularly to experiments and efforts to take advantage of our brilliant atmosphere, and of various food grown in this climate, to introduce and breed superior races of silkworms, and especially to free them from the dire disease which now for so many years has all but destroyed an industry yielding annually more than thirty millions of pounds sterling to the present cultivators of Southern Europe.

My experiences have been most conclusive and satisfactory, and it is proved that the importance of our proceedings here is not unappreciated in England by persons capable of forming an estimate of their value.

I am well aware that the public mind is prepossessed with the idea that the growth of silk in Australia must prove unremunerative on account of the high relative price of labour in the colonies, but I have never met with even one person who had investigated the subject, or qualified himself in any way to form an opinion, who held this idea; in fact, there not only is nothing to prevent silk being raised as cheaply in Australia as in France or Italy, but there is very good reason to believe that, favoured as we are by climate and cheap land, we may be in a position to undersell any country in Europe.

When I first engaged in this enterprise I own I myself entertained some misgiving about the cost of labour. It was this very circumstance which set me to work to contrive means to obviate what might prove a serious obstacle to a commercial success in silk-growing in these colonies, and I devised the plan of multiplying the number of crops obtainable in a single season. In every country besides this the most valuable worms (being annual only) give but one brood or crop a year, and this occurring at the most unsettled and precarious period is attended with great risk, and frequently with serious expenses and casualties, it occurred to me to profit by our long season of clear weather, repeatedly to take advantage of our opportunities for providing sustenance during many months continuously for the worms, and by managing to have worms to consume the food at such times as the many different varieties of mulberry are severally in perfection. This is done by employing cold and moisture as well as warmth in the preservation of the graine, and also by having many varieties of mulberry silkworms adapted by their nature to thrive on the different varieties of food plant.

To thoroughly carry out my plan I imported at great expense mulberry plants of every country, the quality of which at all gave hopes of obtaining useful sorts, and I also, at even much greater cost, and after many and repeated failures, succeeded in introducing and rearing in this Colony and in Queensland all the most celebrated and choicest breeds of silkworms from every silk-growing country. A large number of these have, after years of severe labour and close attention, become thoroughly acclimatised, and many important races, under the influence of careful as well as special treatment, prolonged through several generations, have become freed from the taint of disease and are now healthy.

I believe the Government has long entertained a wish to afford our settlers in the interior—and more particularly the younger portion—instruction, and the means to profit by the same wonderful source of wealth which renders the rural population in silk-growing countries so prosperous; but there have been available neither the special knowledge nor the food plants, and not even one single species or variety of profitable silkworm had been established in the Colony until I had the good fortune to succeed in introducing and naturalising them. Now the case is different to what it was some years ago, and I submit for your consideration the expediency of the Government at once adopting measures to impart information and spread the industry in such districts of the Colony as may offer a fair prospect of doing well.

I would urge upon your attention the financial importance of silk. First, the eggs (graine), small as they are, and prolific as is the animal, it is a well-known fact that Europe in one year paid to Japan alone cash to the amount of £1,250,000, the next year nearly one million and a half. The last season in Japan was a failure, and, notwithstanding the money was there to pay, enough eggs are only found to take the foreigners' money to the extent of half the quantity demanded. In Europe this spring (April and May), it is estimated that to supply the demand in France and Italy alone not less than 7,000,000 ounces of eggs are required, the present money value (an exorbitant one) is nearly £8,000,000, and of these 7,000,000 ounces required but 6,000,000 are forthcoming, so that in this one item there would be a very large opening for a new export from Australia. I ought, however, to say that it would be preposterous for anyone to entertain the idea of supplying such a market without adequate knowledge and the right sort of stock. I may add, as a matter of information, that in every country the production of eggs is distinct from the production of silk, and that the producers of silk, as a rule, do not use eggs from their own stock, but purchase every season graine grown by others than themselves. The production of good seed is a special craft.

Cocoons are silk, and in this primitive condition should form a new staple in our exports. It is usually thought necessary to wind or reel the cocoons to render the produce marketable, but such is not the case; the cocoons thoroughly dried (or, more correctly speaking desiccated) in a proper manner may be packed and pressed with hydraulic pressure. If properly desiccated (the grub inside being pressed into dust), upon unpacking and immersion in water the cocoons resume their original shape uninjured. Cocoons thus treated may be sold to the merchants or to the mills in bulk for proper reeling according to the purpose for which the raw silk is required, but wound or reeled silk, unless so handled or prepared to meet the requirements of the throwster, is merely of value as "waste" and of no value as "raw silk." The markets of Europe are open for illimitable quantities, and the nature of silk being unlike that of any other material there is no danger of a substitute coming into competition, but rather that as civilisation and trade extend so will the demand for silk increase. It is to the production of cocoons that the attention of growers in this Colony should be directed.

There are many districts in the Colony suited to the rearing of out-door silkworms. Among others not yet satisfactorily established I have introduced three different species, the most valuable of their class, now domesticated in the Colony, producing severally one brood, two broods, and three broods in one season—first the "Yama" feeding on common English oak (quercus, of several varieties) furnishes light-green silk of the most superior kind; it is the most valuable of all, but the most difficult to rear; the two latter the "Perny," also feeding on the same kind of oak as the Yama and the

he "Ailant," feeding on *ailantus glandulosa*, find the climate and food singularly congenial and thrive to perfection. The natural increase of such prolific creatures, multiplying two and three times in one Australian season, must necessarily yield, under proper conditions and intelligent management, a prodigious amount of cocoons.

It is manifest that silk-growing in these colonies, once established or fairly set going, would give lucrative employment to large numbers of persons of both sexes, and tend greatly to elevate as well as to enrich them; time was when the peasants of Europe were at least as unimpressible and as difficult to receive new ideas as our own wide and thinly spread population is now supposed to be. Such as our colonists are, we may at least consider that if worthy of being entrusted with political power they are not unworthy, by reason of their want of intelligence, of having such attention bestowed on their welfare as may in some degree make up to them for the disadvantages under which people who live in the bush necessarily labour; in truth, our distant settlers have but few benefits conferred upon them, and any new export raised in any part of the Colony enriches not only the producers but is capital gained to the community.

Nor is the production of silk in these colonies without interest in regard to immigration. I have stated in another quarter my conviction that the exhibition of colonial grown silk and healthy silkworm graine of good quality by authority of our Government at some of the chief seats of this industry in Europe, would have a powerful effect in directing the thoughts of enterprising and energetic people towards these shores. I am sure that authentic information as to our capabilities and reasonable facilities would induce families skilled in many arts and employments, which have yet found no footing here, to come amongst us; not a few would come at their own expense, or at any rate pay part, bringing with them (for silk-growers are generally well to do), besides their experience and labour, their tools and appliances, and some capital. We should implant at very small cost amongst us new industries suited to our soil and climate, while the immigrants, from whatever country they might come, would enjoy the advantages of our liberal institutions and land policy. The first step is to let people know that they may find here fair scope for the particular occupations in which they have been brought up. Silk-growers in all countries are generally the most temperate and intelligent of their class. Manufacturers and capitalists are eager for new sources of supply, and would require no other inducement to turn their attention to this country than the demonstration that certain results are obtained. That we can do as well in a general sense as any country cannot be doubted, and in what has actually been done in eradicating disease and in multiplying the power of production, it is plain we are in advance of every other; the reputation of Australia is already such as to favourably prepossess inquiring minds.

My operations and experiments have all been carried on by myself, unsupported by any extraneous aid; what I have effected alone and single-handed is work that, in every other country where any parallel success has been accomplished, has been done by Governments, with the resources and at the cost of the State. I take no reproach to myself for not having before communicated with you on this subject; and, I think, that the very fact of my having effected what I have done without assistance is valid argument why Governments should be very reticent in taking up every likely scheme for promoting new industries; but now that success is a demonstrated fact, and the opportunity so good, I venture to suggest to you that it may be sound policy not to ignore the experience and knowledge gained. There is no secret or patent in my proceedings or methods. I have been ever ready, and always have shown living stock in every stage of growth at whatever period of the year information has been sought of me; and I have made the mode of operation clear to every inquirer; what I have found out with much labour and difficulty, and by suffering many failures, is plain now, and the way is easy for anyone to follow. It is true I have special qualities, education, training, and opportunities peculiar to myself for the work, but is it social or political wisdom to wait until the masses of untutored minds become spontaneously imbued with craving for knowledge and instruction, and undertake the toil, and incur the anxiety of doing over and over again, each one for himself, that which now once done is done for all?

I, therefore, shall be happy, should you determine to pursue the matter, to afford you, without reserve, any information you may be in need of, and any personal assistance I can render. The Government already possesses several useful varieties of mulberry and other silk-producing plants at the Botanic Gardens, and I would willingly supply other varieties in my possession in which they are deficient. In regard to the silkworms themselves, the case is difficult; besides myself, there is no one in the Colony, as far as I am aware, qualified to judge of their value. It by no means follows that what succeeds with me will do equally well with inexperienced, and perhaps careless or clumsy hands; hence, I am not disposed to risk the liability to reproach, or to be held responsible for the possible failures of others. Should you, therefore, approve of my suggestion, and accept as a free gift from me such stock as may be required, I will on timely notice, furnish any quantity of acclimatised silkworms or silkworm's eggs of any varieties, race, or species I possess, that may be needful to spread the culture throughout the Colony. I say as a free gift, as this would relieve me to some extent from discomfort in case of an unsatisfactory result. If the worms perished or did not turn out well, the loss would be mine; and if, as I think we may reasonably hope, they take a fair hold of the country, I entertain no doubt that a liberal legislature in due time would mark its sense of service rendered by a private individual, and requite my endowment by a grant of land, or in such way as it may deem appropriate.

I have, &c.,

CHARLES BRADY.

#### APPENDIX No. 2.

EXTRACT from the Official Record of the Sydney International Exhibition of 1879, pages 169-170.

Coming to classes 242 to 249, "silk and silk fabrics, &c.," France and Great Britain proved, apart from a few manufactured silks shown by Japan, to be the chief exhibitors of the completed fabric; but, irrespective of the exhibits of cocoons and raw silks in the Japanese Court, New South Wales showed herself well forward in the production of cocoons, and also of raw and reeled silks. Sericulture has so far been experimented upon in New South Wales as to show the Colony is eminently suited for the cultivation of the mulberry and the successful rearing of the silkworm, these being, it is generally understood, two of the necessary conditions for successful silk-culture. The experiments of the largest kind within the Colony of New South Wales, have been conducted, we believe, at the Tweed River, in the northern extremity, and close to the Queensland border, by Mr. Brady; at Corowa, in the south of the Colony, near the border of the Colony of Victoria, the leading proprietrix of the latter place being Mrs. Bladen-Neill (of the Ladies Silk Association of Corowa), who will be found an exhibitor of the products of the enterprise of the Association; and at Albury, in the same district, by Mr. Thomas Affleck, who have all devoted much attention to this enterprise. With the exception of Mr. Brady, who did not show, the results of the silk industry were shown by exhibits. We have mentioned two conditions as being necessary to successful silk-culture. A third and all important condition is pointed out by Mr. Josiah Smale, of Macclesfield, a judge of this class at the Sydney International Exhibition, who, in reply to queries put to him by letter after his return to England, when the Garden Palace had been officially closed (and to which country he had taken with him samples of raw Australian silks of which samples he had been a judge), as to the commercial prospects of sericulture within the Australian Colonies, suggested that cheap labour was one of the essentials to the success of this particular industry. Mr. Smale, whose letter at all events, in its Australian application and as pointing to a more than probable future source of supply of the raw material to the English market, is of considerable value, says:—"Just before leaving Sydney, I had an interview with the Ministers for Lands and Mines of New South Wales, and they told me they would do all in their power to assist sericulture in the

the Colony. They will lease (say) up to 500 acres at a nominal rental for this object, but the use of this land must be almost wholly confined to silk-culture. The labour will be the difficulty. If you could import Chinese who have been used to the work, it might be done. There is a Chinese resident in Lower George-street, Sydney, who is anxious to go into the matter; he wants me to return to the Colony and get the land, and he says that if I do so he will find the labour, &c.; but I cannot well leave here. In reply to your first question as to the reeling of your samples, it is altogether imperfect in the reeling; I enclose sample of what we are buying to-day at 21s. per lb. (of 16 oz.), laid down at Macclesfield. Silks are very cheap now—they have not been cheaper for the last twenty-five years. Good silk is spoilt, and its quality is lost unless properly reeled. Your samples"—(those of Mr. J. C. Johannsen, of North Shore, near Sydney, an exhibitor at the Garden Palace, at whose request the inquiries were preferred from the offices of the Sydney International Exhibition to Mr. Smale—"I am glad to inform you, have the quality, and, if produced in quantity and properly reeled, they would be appreciated by us manufacturers. I enclose you also a sample of Bengal silk which is produced in India. The quality of this is not so good as that of yours; we pay 16s. to 17s. per lb. for it made up into long skeins, and put into bales, each containing from 130 to 160 lb. in weight. Of Chinese silks I also enclose you a sample. This silk is also inferior to Italian or Bengalese; it is always reeled more closely and more unevenly—it is also badly reeled. The price of this silk (China) ranges from 12s. to 16s. per lb. in bales of about 108 or 110 lb. each. The samples you produce will compare nearest to the 21s. quality. The Japanese at the Sydney Exhibition, and the Chinese merchants to whom I have referred, told me that New South Wales was the best place in the world for silk-growing, and if you could get labour it would pay well."

It may here be stated that, apart from the three establishments which we have referred to at the Tweed River, Corowa, and Albury, sericulture is elsewhere undertaken throughout the Colony, but only to a small extent, and rather for purposes of experiments and finding therein an elegant employment for ladies and children of families than for any hope or wish for profit.

### APPENDIX No. 3.

*Sydney Mail*, Saturday, 4 July, 1874, p. 4.

**SILK Industry.**—An adjourned meeting of the Silk Committee, held at the rooms of the Agricultural Society, on Saturday morning. Present: The Rev. L. B. Pacilis, Mr. James Manning, Mr. Brady, and others. Mr. Howard Reed, in the Chair. After some observations from the Chairman relative to the desire of the Government for more precise information to guide them when placing the proposal for assistance before Parliament, the Rev. L. B. Pacilis moved, "That a sub-committee be appointed for the purpose—1st, of preparing all the information required by the Hon. Colonial Secretary, at the last interview with the deputation; 2nd, of devising a practical scheme in accordance with the ideas expressed by the said Colonial Secretary, such scheme to be submitted to the Government at the next interview; 3rd, of assisting Mr. Brady in the compilation of a pamphlet, to contain full and detailed information about silk culture. That this Committee be formed of Messrs. Mort, Dangar, Reed, Prince, Manning, and the mover."

This resolution being seconded by Mr. Manning, it was carried. The work of the sub-committee appointed will be submitted to all members at a general meeting. Mr. Brady undertook to compile the information required in readiness for the sub-committee by Thursday morning. The following suggestion was received from Mr. James Manning, and favourably entertained. The Chairman considered that in the furtherance of this work the co-operation of the ladies on the committee was desirable. Mr. Manning said: I feel I should be neglecting the opportunity of giving expression to reflections in connection with this very interesting subject of sericulture, should I fail in giving utterance to suggestions that might be considered worthy of adoption. Not only for the sake of the grand commercial results that would accrue to the Australian Colonies generally, by the extensive culture of the silkworm, but also from a social point, I believe that much good might follow. My ideas on the subject are of a practical and social nature, and are based on a very long experience of a life in the bush of Australia. I know intimately what are the capabilities of a bush life, and what are the deficiencies and wants of the same, and I therefore think it can be easily shown how the interests of the silkworm growth might go hand in hand with the furtherance of the social position of our lives in the bush. By way of introduction to the important facilities afforded to the connected Australian Colonies for the production of silkworm graine for Europe, I wish to remark that nature has done more for us here than most gentlemen who are present may probably be aware of; our Australian Alps, and in the vicinity of Kiandra, offer the best possible position for the artificial hybernation of that silkworm graine which could come from the summer production of every part of New South Wales, Victoria, and Queensland. At a high region beyond Kiandra, the great receiving-house could be built, and the graine be stored there that would be intended for exportation, and for our Colonial distribution for reproduction. There in the region of heavy constant snows, the manager of such central receiving establishment could receive eggs from the various so-called "grainers" from the interior, and, by the adoption of a proper method, the controlling of the maturing of the graine could be insured to any required and given time.

The origination of this idea of artificial hybernation for the purpose of controlling the hatching of the silkworm eggs, is claimed by Mr. Brady since 1864, but Monsieur Duclaux and Monsieur Pasteur speak of it as their own discovery in 1868-69, and Monsieur Roland, in Switzerland, owes his success in silkworm breeding to a rigid system of natural or open-air rearing and hybernation adopted by him on the Jura mountains, near Neufchatel. This all important retardation could with certainty be obtained by having a suitable building that should be so constructed as to protect its interior in the spring months against the infiltration of heat from the sun, and the temperature could be lowered to any required degree, in perfectly light rooms, by utilising the snows at hand, by converting them into ice in some approved form. Such ice could then be stored inside the building, where the graine could be kept, and both the graine and ice could go away together to Goulburn and Sydney, and to Albury and Melbourne for exportation anywhere under fresh refrigerating arrangements from those places, or be distributed anywhere over the inland parts of the contiguous colonies; and the removal of the graine from Kiandra could be so arranged that it would arrive at all destinations (whether to France or Italy or to our own colonies) exactly in proper time to suit requirements, with such natural facilities for the prolonged and healthy hybernation of the eggs or graine, it would seem to be palpable that all these colonies should avail themselves (confederately or separately) of the advantages afforded them of supplying Europe with healthy graine to any extent that may be required, and of our extending the operation to the production of raw silk; and thus we could successfully compete with Japan, which wonderful country already exports to Europe annually £1,250,000 worth of silkworm eggs only, for reproduction in Italy and in France, where they have ceased to use their own graine for silkworm rearing, because of established diseases in all graine reared in Europe. One mail steamer alone took last year from Japan silkworm eggs to the value of half a million. So far, perhaps, so good, but you may say, how are we to set to work to grow mulberry-trees, have the suitable buildings, and adopt proper labour, under skilled instructors, all over the interior of our respective colonies to avail ourselves of such a promising industry? My answer is this: Let every sheep proprietor grow mulberry-trees enough, and close to his woolshed, and in quantity proportioned to the size of such shed. After a few years growth and the annual shearing of the sheep being over, let the battened floors and the yards of the sheds be cleansed and free from ammoniacal effluvia, and the further and light arrangements for feeding silkworms and for cocooning the grown worms, being done under instructions, the graine from Kiandra, should arrive on the station, ready to burst into life there when the mulberry-trees there would be in their fullest vigour. But here again you will ask who is to attend to the industry and work out

its details from the hatching of the eggs to the cocooning season, two months later? My reply to this is:—Let every sheep proprietor, where the mulberry trees are developed, hand over the use of the empty station shed to his wife, sisters, and lady friends, for the purposes of sericulture to be carried on in the same form as Mrs. Colonel Neil has done in Victoria. Then I would propose that the ladies should keep the profits of their own labour. This arrangement being conceded, I have little hesitation in saying that this plan, if judiciously carried out, would meet with general favour; and if such views were carried into effect, I would warrant that the silkworm season would be looked forward to in the bush with much more interest than the shearing time. It would become the season for friends from Sydney, Melbourne, and Brisbane to congregate at the cheerful and busy homes of their lady friends in the bush. For the two months all would be life and activity among the ladies and their servants, with the daily occupation at the silk-shed; and even the gentlemen of the station and of the neighbourhood would, I doubt not, render assistance to the busy work. If the sheep proprietors would adopt this idea, and begin to plant mulberry trees, their example would soon be followed by free selectors, boundary-riders, and hut-keepers, throughout all the accessible parts of the interior, and thus, I think, that by the adoption of such a plan, the important silkworm interest would receive the greatest possible stimulus at the least possible expense, at the same time that the social condition of the interior of the country would become enhanced in a high degree.

*Sydney Mail*, Saturday, 11 July, 1874, p. 37.

We are glad to perceive that the interest in the silk industry is not narrowed down to the question of providing Mr. Brady with £1,500. That object seems to be dropped, and the attention of the Silk Committee—if that body continues to exist—is to be given to spreading information, and promoting the growth of the mulberry. Inasmuch as this committee is without funds, and no proposition is yet made to raise any, we expect that these two objects are likely to be carried out rather by the Agricultural Society. It will be seen by the letter addressed by Mr. Brady to Mr. Mort, as chairman of the committee, that he is quite content to go on quietly by himself, continuing to give information to any persons who may desire to associate themselves with him in sericulture. Obviously the first thing to be done is to show people that there is money to be made, and then how they are to proceed to make it. We hoped that Mr. Brady, acting on the invitation of the committee, would have done the first, and the second also, but apparently he prefers addressing himself separately to individuals than to the public generally. The following is a letter addressed to the chairman of the Silk Committee by Mr. Brady, and omitted from our late report:—"I wish you will be good enough to explain to the meeting that on no terms whatever will I accept any money contributions from the public. An idea seems to prevail that I cannot get on without the public, and that the industry about which my name is so unfortunately identified, must languish for want of means to maintain it in its infancy. The idea is fallacious, our days of infancy are over, it is true we are young, and have not yet gained a full growth, but young as we are, we are productive, and every season does and must see us not only increasing in strength and stature, but in a geometrically increasing ratio in beneficial results from the growth already established. We want to expand, and although you seem to think that this expansion or success, as you phrase it, may be most economically supported or provided for by friends assisting me individually to extend my own operations, I yet venture to express my difference of opinion. To provide an export of consideration it is manifest numbers are required—numbers of workers, and numbers of plantations—though I and my friends, the owners now of other young plantations, are able to provide for our small beginnings, to be content (and with reason very content) with the small returns past and present, the uttermost we could do for a long time, will not make a produce of a magnitude to induce or divert a trade like that, which in so short a time has sprung up in Japan. Japan had, when the demand for grain began, plenty of mulberries; her people had the wit to see their opportunity and bled the Europeans for 'graine' above a few good millions of pounds sterling in hard coin, a large amount indeed, for their import of money annually looks respectable alongside our New South Wales export of gold. Now our New South Wales mulberry plantations are very few and very far between, and I think it would be a very good exercise of the functions of the Silk Committee to stimulate the formation of mulberry plantations in all suitable localities. The cost of production and net returns for silk culture have been so often stated in print, I am surprised the subject has not gained more attention. I can but reiterate what I have repeatedly pointed out, namely, that it is not so much indifference to the advantages as diffidence in the people who are prompted to engage in an entirely new occupation—people who have no knowledge about silkworms are naturally and rightly reluctant to venture without proper and reliable counsel and assistance. Herein again I say there is scope for the influence of a Silk Committee. It is idle to point to the success of a few individuals who have sacrificed heavily to gain the experience which has caused their success. To make the knowledge and experience of the few beneficial to the many is a special matter in which I would invoke the action of the committee." The plan of operation proposed by Mr. James Manning is novel, and perhaps for that reason is likely to take. We should scarcely have ventured to suppose that men given to sheep and bullocks would have condescended to silkworms, but he speaks from the raised platform, and with knowledge of the feelings of squatters. If he thinks the silk industry would find favour with them, perhaps it would, and could they only be brought to see a good deal of profit with little trouble attended it, probably prejudices would be overcome. Besides he attacks the squatters on the weak side—he makes it a wife's question.

We accord, however, with the opinion expressed in the following information respecting silk culture in China, which has been forwarded to us by Mr. George Peell, namely, that the chief dependence must be on the small farmers and horticulturists. To secure the growth of the mulberry by them is the great point to be looked to. Having resided in Ningpo and Shanghai for some years, and having occasionally to make journeys into the interior on business of a mercantile nature, I had opportunities of seeing a little of both of the cultivation of the mulberry and also of the production of silk, but not being peculiarly interested in that branch of business I did not devote to it the attention I otherwise might have done. I was several times on the borders of the great silk district, and stayed for a time with the Imperial forces then investing Hanchow which was held by the Taiping rebels. One thing that struck me much was the evidence of former wealth and prosperity that were everywhere visible in strong contrast to the then present ruin, devastation, and misery, and which was nothing to what was to follow. Hanchow was one of the great centres of the silk trade, and was a place of enormous wealth. This, however, cannot be laid to the account of the silk industry alone, though that undoubtedly contributed more than anything else to it. The population had evidently been very great, and was so still, where the contending armies had not passed. The country seemed to be subdivided into very small plots, and nearly all the houses or clusters of habitations contained several families—commonly, the old grandfather, and all his descendants. The soil where the mulberry seemed to flourish best was a strong loam of yellow or red colour, and trees were almost invariably planted along the sides of the canals or on small rises, the intervening spaces being devoted to crops apparently requiring more moisture. The kind of mulberry was a strong vigorous tree with broad, glossy, dark leaves. It is no doubt peculiarly suited to the soil, position, and climate. The climate is different to anything we experience in this Colony, it being very cold in winter and excessively hot and moist in summer. The country is a dead level plain, but a few feet above high-water mark, broken and occasionally very high, rough hills of rough granite mingled with quartz.

I have travelled for as many as 20 miles at once, seeing almost nothing but mulberry trees; I say almost, because although the population depended on the silk as their chief production and mainstay, yet being all small proprietors or tenants, they have to cultivate many other things to give them occupation.

occupation at other seasons, besides which the Chinese peasants, like some of our farmers, grow everything they can for their own consumption, and a little more. The selling or interchange of leaves and grain seemed to be prevalent, those having too much of either for their own use easily finding purchasers for their surplus. It is interesting and amusing to see the people, mostly women and old men, bringing their silk for sale, some with but a very few ounces, others far more. I witnessed it for some days in a small village where the European agent of a large firm had taken up his quarters, he had a staff of Chinese, some to value the silk according to quality, the schroffs or cashiers to pay for it, and the compradores, or head clerks, to manage affairs generally. There were portions of this district soon afterwards entirely depopulated, no human being to be seen for spaces of 40 or 50 miles, except some small parties of soldiers, and not a tree of any description remaining. The rebels threatened to cut down the mulberry trees if the Europeans assisted the Imperialists, but it remained for the latter to do it, cutting down and destroying everything for fuel, or in mere wantonness. The authorities afterwards commenced bringing people from other parts of the Empire to resettle the country, the original population having vanished off the face of the earth. It seems to me that silk-producing can be made a success in this country in time, but it must be in or near centres of population, and be looked to as an auxiliary, and not as a primary means of support. We must look to the farmers, fruit-growers, market gardeners, and others in a small way, for the principal producers, and the first thing will be to show them that it will pay, and then show them how to go to work. From what I have seen, the mulberry could be planted in any good garden ground, like peach or plum trees, and the intervening spaces cultivated. The value of sericulture can hardly, I think, be overestimated.

Nothing could exceed the opulence and luxury formerly enjoyed by the better classes in the silk districts of China; while, for a purely peasant class, the labourers were, I believe, in their own way, better off than any others in the world. No other product but silk could, I think, have produced similar results, and I see no reason why, in course of time, it should not be the means of giving healthy employment and large returns to numbers of our growing population.

##### SERICULTURE AT LYONS AND SMYRNA.

THE following particulars are obtained from three official Consular Reports to the American Government on continental silk culture, which appear in the Washington Blue-book for August, 1882. Consul Peixotto, of Lyons, on the 29th June, last, says that febrine, which for twenty years has sterilised the French silk crop, has almost completely disappeared. Recent experience shows that the worms are now as healthy as at any previous epoch, although the supply of food has proved inadequate. This has been owing to the fact that some years ago when sericulture was plunged in gloom on account of disease thousands of mulberry trees were uprooted, and other shrubs, notably the vine, planted in their place. Phylloxera has in turn so materially interfered with viticulture that, encouraged by the decrease in the virulence and prevalence of the various silkworm maladies, the peasantry are once more turning their attention to the mulberry, and a revival in sericulture on a large scale in France is confidently anticipated soon. "There are few industries," Mr. Peixotto continues, "that present so much attraction to those engaged in it as that of silk. Youth is scarcely ever too young, old age too feeble, but what work, and pleasant work, may be found in this branch of agriculture and commerce."

Again writing to his Government on the 5th July, the same gentleman, after a survey of the mutations of the French silk industry up to a recent date, alludes to the success achieved by M. Pasteur in combatting the various silkworm diseases by the aid of the microscope. It appears that Pasteur's method of examination made way but slowly among the silk farmers of France and elsewhere. During the silk season of 1880 and 1881, however, his system has been thoroughly tested with the result that the appetites of the immense mob of hungry, healthy, ravenous silkworms produced could scarcely be satisfied by the diminished harvest of mulberry leaves available. Since then the lessons taught by the distinguished savant have been still further acquired to such purpose that in 1882, with a purposely limited, but entirely healthy brood of worms, enough food was forthcoming, and the hitherto dreaded pebrine and flacherie are quickly subsiding into phantoms of the past; but the reeling difficulty remains and is likely to prove a source of anxiety for some time to come, unless some marked improvements in the mechanical treatment of cocoons be effected. Whilst sericulture continued moderately prosperous before the rapid spread of the various silkworm maladies unhinged the industry, the filature resources of France were ample. Latterly, however, many of the silk mills were diverted to other purposes, so that the present reeling and spinning plant is said to be short by at least 30 per cent. Nor is this the worst; the mere augmentation of machinery and buildings might easily be accomplished, but as the former workers are scattered or have attached themselves to other employments, skilled labour, which require several years to train, is scarcely to be obtained. Hence, as Mr. Peixotto justly argues, the necessity for automatic machinery, the invention and perfecting of which he presses on the notice of American engineers.

On the same date Vice-Consul Griffitt, of Smyrna, contributes a report, in which he relates the results of his own experiments and experiences in his struggles with silkworm disease in Asia Minor. The loss sustained by Turkey, he says, since 1857, is incalculable. I remember the time when the wife of every gardener in the vicinity of Smyrna obtained from her crop of cocoons a sufficient return to enable her to pay for the clothing of her family for the entire year. This fatal disease (pebrine) swept away our beautiful indigenous races, and this branch of industry was almost abandoned. Mr. Griffitt then refers to the mediocrity of the Japanese silkworms, which were subsequently introduced to fill the gap, and informs us that "it requires 250 fresh cocoons of the indigenous race to weigh 1 lb., but 500 of the Japanese, and the quality of the silk is much inferior. I obtained, some years ago, a quantity of indigenous graine of a very fine race, but very much diseased. I raised the worms from the moment of hatching in separate cells, in order that the diseased ones might not infect the healthy, and from the few healthy ones I obtained my present race. From 1 ounce of thirty grains I obtain invariably from 150 to 155 of fresh cocoons, twelve of which yield over 1 lb. of silk of the best and finest quality. Another great advantage of this improved race is that it yields only from 4 to 6 per cent. of double cocoons, while other races have from 15 to 30 per cent."

After paying a high compliment to M. Pasteur, whose system of egg examination he follows, Mr. Griffitt describes the process of microscopic inspection and the silk-rearing industry generally, concluding by assuring his readers that, by hatching silkworms from healthy eggs, and feeding under proper precautions, a good crop of cocoons must be obtained. Upon the particulars of this department of the subject it may be unnecessary to dwell, as it is understood that a manual for sericulturists will soon be published by that gentleman.

*Journal, Society of Arts, London, 7th September, 1883, p. 933.*

##### TURKISH SILK FARMING.

A LATE number of the *British Trade Journal* contains an article entitled "A Glance at a Turkish Industry," from which the following particulars are extracted:—Mr. Griffitt has for many years been more or less engaged in the double task of combating the various diseases to which the silkworm is liable, and in trying to teach the peasantry how to regain something of the remunerative silk harvests which preceded the unfortunate year 1837. The loss suffered by Turkey when the various silkworm maladies spread so violently is, he says, incalculable. He remembers the time when the wife of every gardener in the vicinity of Smyrna obtained from her crop of cocoons a sufficient return to enable her to pay for the clothing of her family for the whole year. In those days there were in the

the neighbourhood of Smyrna three large steam silk reeling factories, where hundreds of women were employed; but when disease became general this industry had to be abandoned from lack of cocoons. Flacherie and pebrine swept away the valuable indigenous races, large areas of mulberry trees were uprooted as being no longer required, and silk-farming came to be almost entirely relinquished. It is true that attempts were made to stem the tide of misfortune by the introduction of foreign eggs; but the peasantry, accustomed to handle their own large and beautiful cocoons, numbering 250 to the pound weight, became disheartened when they had to deal with the far inferior Japanese product of only half the size and weight. About this juncture Mr. Griffitt obtained possession of a quantity of native graine representing a peculiarly fine race of silkworms, but which were very much diseased. Being aware from experience, that no batch of eggs is ever entirely contaminated by disease, and being a firm believer in the system of regeneration by isolation introduced some time before by the French physicist, M. Pasteur, Mr. Griffitt carried it into practice, hatching his worms in separate cells and jealously following with the microscope every subsequent stage of their development. With an expenditure of infinite patience and trouble, he at length succeeded in rearing his present entirely healthy and vigorous brood, the eggs from which yield about 150 of cocoons for every ounce hatched; 12 lb. of the cocoons, as taken fresh from the brushes, yielding 1 lb. of silk of the finest quality. Having thus accomplished his first and principal self-imposed task, Mr. Griffitt set himself with equal ardour and determination to grapple with the second. It was not enough to be able to show the peasantry of Bournabat, near Smyrna, where his chief magnaneries are situated, of Nympio, and of the island of Mytelene, that he had mastered the dreaded pebrine and flacherie; but determined to leave no opening for misunderstanding or carelessness, he went among the people personally with supplies of healthy eggs. In this manner he taught the farmers and peasantry the precautions they should observe and secured their self-interested co-operation by making them partners in the season's venture. Even then he was constantly baffled to some extent by the appearance of diseased moths bred from absolutely healthy graine, the result of infection caught from diseased worms still in the neighbourhood. Frustrated for the moment only, he still persevered, and now, after years of unremitting struggles with the enemy, he has restored to that district of Turkey some of the prosperity in silk-raising which it enjoyed thirty years ago. During the past season, Mr. Griffitt has scarcely lost a single worm through disease, and his peasant friends have been almost equally fortunate, though others in the same localities using French eggs, but without the advantage of a paternal director, have again lost heavily through the ravages of pebrine. Accordingly, the most convincing proof that could be offered of the happy effects of Mr. Griffitt's labours among the Turkish peasantry in the place alluded to appears in the following specimen cases of this year. A few instances out of many where educations of silkworms on the Pasteur cellular system have been attained without loss from eggs previously passed under the microscope; Elleni raised 247½ lb. of cocoons, which sold at 1s. 2d. per lb., £14 8s. 9d.; she expended for mulberry leaves and a girl's help, £2 7s., leaving a net profit of £12 1s. 9d. This peasant woman attended to the worms without aid during the first three ages, and was assisted by a girl throughout the last two. Adriana's crop consisted of 151½ lb. of cocoons, from which she reeled 15 lb. of raw silk, selling the same at 15s. per lb., £11 5s., the cost of reeling, &c., was £1 2s., leaving a net profit of £10 3s. Possessing her own mulberry bushes, and having two young daughters, who assisted her during the last age, her outlay was small. Dhepinon and Costoula had a crop of 418 of cocoons, which produced 44 of raw silk, and sold at 15s. per lb., £33. The cost of reeling, &c., was £3 5s., leaving a net profit of £29 15s. These two sisters were also the owners of a small mulberry garden, and were assisted during the last age by two daughters and a son. Here, as Mr. Griffitt points out, "are poor Turkish peasant women who have acquired by" a few days' labour what would have taken their husbands three months to earn.

APPENDIX No. 5.

Statistics.

From *Encyclopædia Britannica*, Vol. 9, page 520, edition 1876. (*G. Saintsbury, writer.*)

Produce of Rearings of Silkworms in France.

Cocoons.—A century of average annual quantities and values during the periods named.

	Produce, cocoons, in kilogrammes.	Average value, in francs.	English equivalents in lb. at 2½ lb. = 1 kilo.	English value in sterling, 1 fr. = 10d.	Per lb.	
	1780 .....	6,600,000	15,500,000	14,529,194	£ 620,000	About— 10 pence.
	1781-1788 ..	6,200,000	18,600,000	13,640,000	775,000	13½ "
Time of Revolution and war.	1789-1800 ...	3,000,000	9,800,000	6,600,000	409,000	15 "
	1801-1807 ...	4,200,000	13,600,000	9,240,000	568,000	14½ "
	1808-1812 ...	5,147,800	17,502,550	11,325,160	731,000	15½ "

	1821-1830 ...	10,800,000	44,080,000	23,760,000	1,837,000	18½ "
Frequent political disturbances at home, but no great foreign war.	1831-1840 ...	11,537,000	42,840,000	25,381,400	1,785,000	16½ "
	1841-1845 ...	17,500,000	66,500,000	38,500,000	2,772,000	17¼ "
	1846-1852 ...	24,254,000	91,816,000	53,388,800	3,835,000	17¼ "
	1853 .....	26,000,000	117,000,000	57,200,000	4,875,000	20¾ "
	1863 .....	9,578,804	51,916,837	21,073,369	2,162,000	24½ "
Foreign graine imported in quantities.	1867 .....	14,082,945	98,580,515	30,982,480	4,107,000	31¾ "
	1869 .....	8,076,545	60,170,260	17,768,400	2,507,000	33¾ "
	1872 .....	* 9,871,116	60,707,363	21,716,455	2,530,000	28 "

\* These 9,871,116 kilos of cocoons are said to have given 636,800 kilos (= 12,547 cwt. English) of raw silk, or a yield in that year in France from French growth of 1 lb. raw silk to 15½ lb. of cocoons. This home production = 21,716,000 lb. English, was good to the French agriculturist, farmer, or rearer, at the then (1872) price, 2s. 4d., for £2,530,000. This

This native agricultural product, together with foreign grown imported, was substantially the foundation of the great silk manufacturing industry for which France has been and is so famous—it has added greatly to the well-doing of an immense number of artizans and other labourers, and to employment of capital. A chief portion of both native and imported material was used at Lyons, where it was woven by 120,000 looms belonging to about 400 firms, who gave employment to nearly £00,000 workers, who every year produce silk goods to a value of about 460,000,000 francs (four hundred and sixty millions of francs), say about £18,400,000 sterling.

An important portion of this was taken by demands for export, much to the relief and support of the home market and ease to manufacturers by the high values affected by foreigners.

Mulhall.—*Dictionary of Statistics*. Edition 1892, page 538.

THE Balance-sheet (France) of the silk industry since 1830 was approximately as follows :—

Period.	Raw Silk.	Manufacture.	Net Result.
	£	£	£
1831-40	48,000,000	80,000,000	32,000,000
1841-50	86,000,000	140,000,000	54,000,000
1851-60	120,000,000	200,000,000	80,000,000
1861-70	166,000,000	298,000,000	132,000,000
1871-80	125,000,000	288,000,000	163,000,000
1881-87	72,000,000	206,000,000	134,000,000
57 years.	£617,000,000	£1,212,000,000	£595,000,000

In the 18th century, Lyons counted 15,000 silk factories, but the industry suffered so much during the Revolution that in 1800 there were only 3,500 left. It revived in later years, Lyons consuming one-sixth of the silk crop of the world, or 50,000 tons of cocoons, one-half of which was imported from Italy until the recent rupture of commercial relations. In 1840 the silk factories had 1,790 steam engines of 36,000 aggregate horse-power. In 1866 France had 1,172 mills, with 110,000 operatives, 1,080,000 spindles, and 50,000 power looms, turning out silks to the value of £29,000,000 sterling.

Memo. :—The decline of the millions in the seventies and eighties was because of the competition which after 1873 sprung up in Russia, Germany, and other countries formerly supplied from France.

##### Silk.

Annual world production of cocoons estimated at 300,000 tons.

##### France.

About the year 1620 the mulberry tree was first cultivated for the rearing of silkworms.

In 1780 the cocoons weighed 6,600 tons, valued at £660,000 sterling. The farmers have recently been cutting down the mulberry trees for fuel. In 1820 the number of mulberry trees was 9,632,000; in 1835 the number of mulberry trees was 14,880,000; in 1884 the number of mulberry trees was 6,100,000.

The price of cocoons was 1s. per lb. in the 18th century, and rose to 2s. about 1850. A few years later a disease carried off two-thirds of the silkworms, which were badly housed and overcrowded, causing the cocoons to rise to 4s., but the price fell owing to large importations, and is now hardly remunerative.

In 1884 the total yield of cocoons sold for £1,500,000, and was divided among 141,400 cultivators, giving a little of £10 each.

Mulhall.—*Progress of the World*. Edition 1880, p.p. 240-245.

##### France.

THE medium price of land (period not stated) for purchase or renting is as follows :—

	Purchase.	Rent per year.	Interest on Capital.
Tillage.....	£88 per acre.	56s. per acre.	3½ per cent.
Meadow .....	135 "	88s. "	3½ "
Vineyards .....	106 "	82s. "	4 "

It would appear that the price of land is much above its fair value, if we are to judge by the fact that the Government valuation on 77,000,000 acres under cultivation is only £1,860,000,000, or £24 per acre.

*Italy.—Mulhall, Dictionary of Statistics. Edition, 1892.*

THERE are factories for throwing silk at Milan, and Turin, and some of the fibre is consumed at home for velvets and damasks, but the greatest part is usually exported to France for the Lyons factories. The production and export of silk approximated yearly as follows :—

Period.	Production.	Export, lbs.	Home use, lbs.
1861-1870	5,600,000	4,600,000	1,000,000
1871-1880	7,400,000	6,600,000	800,000
1881-1887	10,600,000	9,800,000	800,000

The import and export of manufactured silks was as follows :—

Period.	Import.	Export.	Surplus imports. (all yearly averages.)
1861-1870	£400,000	£220,000	£180,000
1871-1880	800,000	600,000	280,000
1881-1887	960,000	600,000	360,000

The consumption of silk manufacturers was as follows :—

Period.	Italian.	Imported Yearly averages.	Total.	Pence per inhabitant.
1861-1870	£2,000,000	£150,000	£2,180,000	23
1871-1880	1,600,000	280,000	1,880,000	20
1881-1887	1,600,000	360,000	1,960,000	18

The value of the silk industry to Italy may be summed up thus, in £1 sterling millions :—

Period.	Cost of Japanese eggs.	Silk exported.	Manufacturers.	Total product.	Deduct eggs.	Net product.
1861-1870	£10	£84	£20	£104	£10	£94
1871-1880	8	122	16	138	8	130
1881-1887	2	80	11	91	2	89
27 years.	20	286	47	333	20	313

In 1878, Italy had 230 silk factories with 2,100,000 spindles giving employment to 16,000 men, there were also 120,000 women, and 76,000 children engaged in attending to the silkworms.

In 1840, the Kingdom of Sardinia had several silk factories with an aggregate of 14,900 operatives. The cocoon crop of Italy for the years 1881-88 averaged 86 million pounds.

## APPENDIX No. 6.

Foreign Office.—Board of Trade Reports, 1891. No. 195, Italy, page 16.

THE produce of cocoons in 1880 was 41,500,000 kilos; in 1888, 44,000,000; and in 1889, 34,000,000; and was just superior to the poor yields of 1882 and 1885.

Page 17.—The average value of cocoons, 1879–1883, was 151,000,000 lb. = £6,040,000.

Page 24.—Whilst Italy holds a commanding place in Europe for the production of cocoons and raw silk, the same cannot be said of its position as a manufacturer of silk goods.

In 1888, the breeding of silkworms was carried on in 5,195 communes by 559,155 breeders, who each placed for incubation an average of 2.39 ounces of seed (27 grammes to the ounce.)

They obtained 43,899,443 kilos of cocoons, equal to 96,578,774 lb. English, a figure never reached since 1875. The raw silk obtained in that year was equivalent to 3,566,000 kilos, equal to 7,853,200 lb. English, a figure never attained since 1862. The export of silk goods from Italy exceeded in 1888 the import by 93,200,000 lb., equal to £334,000, and in 1889 by 96,000,000 lb. equal to £400,000.

The persons employed in the silk factories number 150,000, nine-tenths of whom are women and girls. NOTE.—The yield in 1888, 96,578,774 lb., about 43,115 ton, at the average of the period, net Is. 2d. = £5,133,761 or about £9 to each breeder; the actual value of the year, however, Is. 6d. or £7,243,400 equal to nearly £12 in 1888 to each breeder to pay for about eight weeks work, and the indispensable mulberry leaf. In this good year, 1888, about 11 lb. cocoons gave 1 lb. raw silk, the best yield since 1875.

## APPENDIX No. 8.

## SILK-RAISING IN ITALY.

Mullhall—Progress of the World.—Edn. 1880, p. 414.

SILK.—This is the most valuable of Italian products, the annual exportation of silk averaging £10,000,000 sterling. Lombardy is the chief seat of this industry, the silk grown being almost wholly 96 per cent. of Japanese seed. The eggs or seed are imported from Japan on cards, at a cost of £12,000 sterling per ton (say 7s. per oz.), the average importation being from 70 to 80 tons per annum. The eggs were formerly more prolific (gave more silk in cocoon, but not more eggs for succession) and yielded 50 lb. of cocoons per oz., but at present an oz. of eggs gives only 35 lb., worth about 50s., or seven times the cost of the eggs (?) (about 17d. per lb. green cocoons).

The single province of Lombardy raises an annual crop of 11,000 tons cocoons, worth £200 per ton (£2,200,000). For a period of thirteen years, down to 1878, the silk trade of Italy may be summed up thus:—

Paid for Japanese eggs .....	£13,200,000
Exported Raw silk (for the whole thirteen years) .....	127,600,000
Profit.....	£114,400,000
the production at present averages 50 per cent. more than it did ten years ago.	
1865–1868—	1,940 tons, value £7,300,000
1869–1873—	2,880 ,, ,, 11,570,000
1874–1877—	3,110 ,, ,, 10,160,000

Italy produces one-third of the silk of the world.

## APPENDIX No. 8.

## FRANCE AND THE SILKWORM DISEASE.

THIS table shows what happened during “the disease” up to the beginning of partial recovery, about 1872, from the panic caused by it, and progress towards again obtaining supplies for manufacture, the recovery being largely due to the investigations of M. Pasteur during 1865 to 1870.

I will take the opportunity of inviting attention to the essential difference between the French and Australian ideas of dealing with, or “combating the disease,” and also to the peculiarity, or what seems something more than peculiarity, in the language of Monsieur Pasteur, and also, strangely enough, of Professor Tyndall. M. Pasteur styles his invaluable book “Études sur la Maladie des vers à soie,” while his whole work and descriptions show that his investigations comprised several distinctly different diseases, or as he terms them, developments, of each one of which, that remarkable and accomplished scientist found a material difference, attributable, he pronounced, whether it existed in the form known as pébrine, muscadine, glacherie, or any other, to one and the same spore or corpuscle, the effect of which is contagious or not contagious, or hereditary or not hereditary, &c., or otherwise, as the accident of other circumstances in the physical condition of the individual subject might cause it to develop or naturally evolve. Professor Tyndall uses the term “Pébrine” for the whole, much as anyone might use the word “fever,” for any sort of fever. So it will be found that M. Pasteur’s remedy or “cure” (which both employ) to “combat the disease” resolves itself into first,—a very careful selection from apparently healthy worms, moths, and eggs, and a most careful examination and search by aid of the microscope in each and every one, for germ or sign of disease in it. This rigorous and most laborious method of obtaining healthy graine, which may be most properly termed the destruction of all infected subjects that can be discovered, as well as a quarantining of the rest, was attended by excellent results. French rearers, as well as those of other countries, took fresh heart and accomplished a great deal more, than, but a short time before, was thought possible. It is objected that if the French process, admirable as it unquestionably is, or its salutary effects undeniable, has not “cured,” nor has it yet saved a single pure race from absolute destruction. It is true that some excellent breeds do now exist, but almost all, if not quite every one of the fine old races are nowhere to be found. In Europe the expensive scrutiny and the quarantining are still necessary, but this is not the case in Australia. M. Pasteur began his labours on 8th June, 1865, and from the beginning his method was to find by extremely rigorous selection, if possible, original healthy sources or parents reproducing healthy eggs. In the same month Cornalia, a no less famous expert, said to him, “Your efforts will be in vain, your selected eggs will produce healthy worms, but these worms will become sickly through the influence of the epidemic demon which reigns everywhere.” I would here most respectfully invite reference to my remarks and extracts from the United States authorities in my report, dated 29th March, 1889, to the Honorable The Minister for Mines, and also to what I have stated elsewhere in my report to which this is an appendix.

The disease made its appearance in France in 1849. It became fully developed in 1850, 1851, and 1852, and it spread devastation also in every other silkworm-growing country.

The French Minister for Agriculture agreed to pay F. 500,000 or £20,000, English, for an efficient remedy.

The well known Dumas, about 1865, proposed a committee of investigation. M. Pasteur was appointed to make inquiry and was allowed unlimited means, and authority to use any resources of the state or assistance he might require in following up his investigations.

A perusal of the tables will show the condition of this important industry before the disease, during that malady, while M. Pasteur was studying it, and subsequently.

In contrast with the French method I beg to invite attention to what was being carried out in Australia. Mr. Brady in 1862 began to look seriously into the matter and make preparation by importing mulberry trees, and many varieties of silkworms, no good kind having been previously known in the Colony (see his Petition to Legislative Assembly of New South Wales, 18 May, 1876) and set

set to work in 1863 with already diseased silkworms he had imported. So very much diseased, in fact, that frequently in whole lots of eggs of not less than an ounce of eggs, which really did hatch nearly 40,000 worms, he seldom got more than a few or less than ten cocoons in any lot, and frequently not even one cocoon to produce a moth; and this is what he had to start with. His object was to cure and save. Some results or progress in improvement was seen by a number of gentlemen who watched with great interest the strange doings and experiments of Mr. Brady, in his efforts to master the difficult problem, till in 1869 or 1870, after seven or eight years of persistent effort, he was able to show results so satisfactory as to challenge admiration, that so much had been accomplished in the Colony from such a beginning, and with none but private resources.

Notwithstanding the great success achieved by M. Pasteur and his followers, from what I can gather, every pure race of silkworms seems to have died out. The chief bulk of cocoons produced in France and in Italy, was from foreign eggs imported. Here, in New South Wales, though I believe Mr. Brady failed to save all he endeavoured to save, a considerable number of the identical races lost in Europe were restored to their original health and vigour, and were available had there been any encouragement to use them.

From the very first of his experience he appears to have recognised the probability, or rather regarded it as a certainty, and dealt with it accordingly, that the disease, whatever it was, was communicable not only by contact but by floating spores or germs, whether by falling within the rearing place, on the worms themselves, or on their food, or very possibly floating in the open air, and settling on the mulberry leaf, while growing on the tree. His theory, as he explained it, "the curative agency," was in any case attributable to an atmosphere in many places where there is a perceptible presence in the air of essential odours, peculiar to the eucalyptus, but yet more to the fumigation of the living silkworms in all stages, particularly while feeding, by means of a dense smoke by burning in the apartment fresh branches of eucalyptus in full growth, with all possible leaf.

This use of eucalyptus, together with the best food grown on virgin soil, our splendid climate, with extreme cleanliness and personal attention, Mr. Brady regards as the causes of his success.

I understand it was to isolate alike plantations of different kinds of mulberry, and the nurseries for his different races of silkworms, sufficiently apart, that Mr. Brady selected the 1,300 acres at the Tweed (I have referred to before in my report), which was set apart for sericulture, and which he states he was led to believe would be granted to him; but as this has not been done, it has, it appears, determined Mr. Brady to abandon his enterprise in this Colony.

The effect of the silkworm (or rather the special) disease which began in France 1849-1850 and the chance it offered to Australia may be easily understood by the following table:—

Years 1846 to 1852—Annual production of cocoons in France alone, about 46,200,000 lb., English							
Average value 2/4 per lb = £6,200,000	} 1853—	do	do	57,200,000	do		
		1854—	do	do	47,300,000	do	
		1855—	do	do	39,600,000	do	
		1856—	do	do	15,500,000	do	
		and down- wards till	} 1863—	do	do	14,300,000	do
				1864—	do	do	13,200,000
1865—	do			do	8,800,000	do	

Afterwards the total production of cocoons for the whole of Europe (exclusive of imported and inferior substitutes) from the old European races dwindled to about in the—

Year 1874—when total production for all Europe was only 8,140,000 lb., English					
	1875—	do	do	7,700,000	do
	1876—	do	do	2,750,000	do
	1877—	do	do	5,280,000	do
	1878—	do	do	7,480,000	do
	1879—	do	do	2,618,000	do

By way of illustration, it might be imagined, in view of these figures what would be the condition of capital, labour, and of trade, the probable state of all the Australian colonies if the ordinary yield of wool, their one great staple, should suddenly be reduced by disease in the sheep or by any other unforeseen and unavoidable calamity to a one-twentieth, or a one-twenty-fifth, or even less of the usual crop, say from an aggregate value of about £20,449,351 (in 1890, quantity of wool in grease, Coghlan's Wealth and Progress of New South Wales, 1890-1, page 250. All Australia, 573,533,576 lb., value £20,449,351 equal to about 3<sup>1</sup>/<sub>2</sub>d. per pound, less cost of carriage to port) down to about £1,000,000 worth only, or even less, for all Australia; then even the lowest or the humblest intelligence could hardly fail to feel and know by practical experience what such facts, as given above, really mean.

The extraordinary calamity in regard to silk which fell upon the silk producing countries was the opportunity which Mr. Brady affirmed in his petition, 1876, he endeavoured to seize for some years previous to that period, not only for the benefit of the Colony but of Europe, and to this he seems to have devoted and applied his mind and his resources, his life, his skill, experience, and enterprise (*vide* Mr. Brady's letter to the Colonial Secretary, 17th March, 1870, page 16, Parliamentary paper, 1870; also a letter in same papers from Dr. George Bennett, dated 7th June, 1870, copies of which I have appended to my report.)

As Mr. Brady was thoroughly well acquainted with the gradual ruin caused by the spread of the diseases in Europe, from his private correspondence, he became convinced that a splendid opportunity presented itself "to create a silkworm graine production in Australia" in fact, to take up from Europe, and improve and perfect in Australia the growth of the remarkable substance which furnishes the real foundation of great manufacturing industries, employing vast populations in many of the most prosperous cities of Europe.

This peculiar substance by its simple growth from mulberry leaves had already yielded at first hand to agriculture, not less, in the aggregate than £30,000,000 (thirty millions sterling).

The great gain to agriculture in Europe by the growth of cocoons, and the entire failure of home supplies of the necessary "graine," or seed, or eggs, gave rise to an extraordinary trade in foreign silkworms' eggs which sprang up, a direct consequence of the disease. Nothing in ordinary commerce is so surprising as the enormous sum in value made up of the minute silkworm egg. Even in bulk this apparently insignificant article acquired wonderful proportions, for the demand became enormous. On one occasion it was found profitable to charter one of the finest steamers of the P. & O. Company, the "Delhi," to load with a full cargo of only silkworms' eggs for conveyance from Japan to Europe, the insured value of which was over half a million pounds sterling. That trade for years average over £1,250,000 annually, which Japan received in cash from Europe in exchange for this one "small item." The Japan import of ready money from this single source exceeded the average annual value (£942,230) of the gold won in New South Wales during the last forty-one years. In a few years Japan received no less than £17,000,000 in cash for silkworm eggs alone, without reckoning its export at same time of raw silk. A great deal of this trade, and probably longer continued, might have been secured to Australia, had sericulture become established here at the time.

#### APPENDIX No. 9.

*Extract from the Sydney Mail, 23 July, 1870.*

DR. BENNETT has obliged us with a letter written to him in his capacity of President of The Acclimatization Society, by Mr. Brady, from which we make a few extracts. Mr. Brady gives an account of his twelve months transactions at Curl Curl, where he is nursing what he supposes to be the germ from which the silk industry of New South Wales is to spring. He says:—"I have now closed up active

active operations for the season with all living silkworms (except the moths, a few of which remain), and as you desire to know the result, as far as concerns the importations of the Acclimatization Society, I have the pleasure of confirming my first report, and informing you that the mulberry worms from India continued to the last to do well. Of course the yield of silk is much inferior in quantity to that from the principal European races, but the quality and lustre are excellent. For my own part, I think the out-turn of these small yielding worms, double, treble, or many brooded in the season—taking into account the cost of labour, food, and management, &c., as well as the safety of a profitable result if worked in a proper manner—bears a very favourable comparison with the out-turn from the more valuable but much more difficult to rear and precarious—lived single-brooded worms (annuals) of Europe or Japan. In the first case, operations continue for months at any time—spring, summer, or autumn, or for as long, or for as short a time as mulberry leaf is available; in the latter only for a few weeks in spring, subject to all the vicissitudes and chances of the most uncertain period of the year, unless indeed the grower adopts my system of bringing the annuals into period by cold and moisture as well as warmth whenever they are wanted. If there was any attention given to this subject in the Colony or it could be made worth while, I could easily manage to supply not eggs unhatched or uncertain, but young living silkworms, of fine kinds, which other persons growing or possessing the food could at any time procure from me, and rear through the rest of their natural course, and thus avoiding expensive preparations, requiring a good deal of skill and management, reap a certain profit from a very small outlay."

Private letters contain information relative to the reception of a packet of silkworm eggs, by the highest silk authorities in Europe, from Mr. Brady's stock, raised at Manly. In Italy they were received with great favour. "They were everywhere pronounced to be splendid fertile eggs, which is a point of great importance in France and Italy, as their own native races are so diseased as to be useless for mercantile purposes," says one correspondent. Cocoons of the same race (Milanese) possessed by Mr. Brady, pleased them exceedingly, and the writer informs his correspondent that "eggs of that species would find a good market in France and Italy." One of the best authorities in France on silkworms pronounced the samples in fine condition, and greatly admired the system in transporting them. Other distinguished and practical men expressed the same opinion, and stated that "You may at once calculate on my being able to place for you a large amount of eggs." Another letter says:—"The eggs were found in excellent order—not a single egg was hatched, and not one was crushed." This, then, is the information we get concerning Australian "graine" (the technical term by which eggs are now known). Mr. Brady's observations on these facts, in the letter alluded to, is this:—"The result of the first shipment also bears out what I have so often told you and others of the practicability of supplying from here the markets of Europe with better and more reliable graine than can be obtained in any other part of the world."

It thus appears that Mr. Brady's experiments have put us in possession of knowledge with relation to our advantages over the rest of the world as silkworm egg producers, for which we have reason to be very thankful. Our advantages are twofold. In the first place, in our climate the Italian, French, and Japan worms have been produced without any trace of the disease which ravages them at home; and in the second, we are in a position to supply newer seed to the European sericulturalists than can be done from any other part, seeing that the "graine" season here is December, January, and February, which allows of the seed or graine arriving in the bold season, and having no tendency to hatch before the food is ready for it. In Japan and California the graine season is the same as in Europe, and consequently time is lost, and the seed is comparatively old when hatched.

Something should be done in this matter. We can produce cocoons with the assurance of obtaining an active market for them, which never has been the case before; and should Mr. Brady's expectations be confirmed, the climate of New South Wales will enable several crops to be produced in the year. And then, further, for the more skilful we have accorded to us, apparently by geographical position, the speciality of producing eggs for exportation of great superiority.

#### APPENDIX No. 10.

##### REELING.

REFERRING to the questions as to whether it would be preferable to sell cocoons while fresh, or dried, or to reel the silk, I took an opportunity to obtain Mr. Brady's opinion, as I know he is opposed to the rearing and reeling to be done by the same person.

He said that "as you know something about reeling, you are aware that the word is not synonymous nor equivalent to 'winding off,' and that the silk of every cocoon tapers finer and finer continuously from the first trailed out by the caterpillar, even then double though the twins unite immediately before the liquid stuff has time to set or harden, becomes one fibre. This first trailed out silk is best and strongest, and the tapering continues until the fibre at last becomes so small and weak as to be practically of little or no use. You also already know that in reeling a number (varying from four to five and more up to fifteen or twenty and upwards, according to size and so on in requisition by trade or manufacture) are brought together in such a way that the thicker and stronger portions of individual fibres shall not be all at one part of the united threads, but the bulk so managed that as the machine turns and uses up the stouter and proceeds with the continuously lessening, the attendant adds, at the right moment, fresh ends as necessary to maintain the best possible even-sized uniform thread or 'single' without discoverable burrs or joints, breaks, or inequalities anywhere, all along."

"I think I sometime told you that the silk itself of cocoons varies in size and in length in different races and breeds, and in other qualities besides, and consequently in taper, from 200 to 300 yards to fully an English mile (in the best, formally grown) without a flaw or break, or more or less serious weakness in parts caused by irregular feeding or by change of food leaf. The qualities, lustre, strength, elasticity, and so on, are due principally to breed and proper feeding, regular nourishment, with suitable food, in wholesome condition."

"Now, I may say, in the first place experience pretty uniformly indicates that, when reeling, the fibres of any number of cocoons, they should be joined, connected together, at the first wetting or softening of the gum or glue which exists naturally, more or less, on each fibre. On attempting a second wetting, before making a 'single,' joining is imperfect and faulty. Secondly, I believe it is not generally known or suspected, the straighter and more evenly (with as little twist as possible), the individual fibres are laid alongside and together, the brighter the lustre of each one and more brilliant the united sheen of the whole.

"Among many delicate machines devised by knowing fellows, experts, for use in their several functions or offices, co-ordinating towards production of a perfected article, silk, in whatever form it may eventually arrive at, for trade, manufacture, or whatever the requirement may be, there is a machine, the invention of a clever Frenchman, I believe, modestly but very appropriately called a 'Serrell.' A few words what this elegant contrivance is, will at once explain and illustrate what I have endeavoured to present to your minds eye. Not to go into details, the Serrell consists essentially of two small drums placed at a moderate distance apart but held together firmly, moved simultaneously and equally by the same movement that puts both in action. The silk is first wound with care round one drum, and then taking up the slack not too tightly, an equal number of turns round the other drum. I must tell you the second drum is a little larger than the other, so as the machine moves the larger drum exercises a strain as it winds off from the smaller. This tests the elasticity, and does something more, it records. To complete—an essential portion of the machine, which is automatic, you must imagine a delicate, free swinging pendulum suspended over the silk, with a fine point reaching to a drum, over which a tape travels—this fine point swayed hither or thither, one way or other, according as the inequalities of the thread in touch with the pendulum causes it to make corresponding irregular marks on the tape. The result seen is a revelation, so enlarged as to make  
plainly

plainly visible every fault or irregularity, and when, if a break occurs, the machine stops of its own accord, and the why, or what, the flaw or weakness, was exposed to view. The Serrell is one of many methods of scrutiny and precision practically employed to test, determine, and classify the sizes, qualities, &c., of raw silks used in the manufacture of endless varieties of fabrics."

"Even granted that a competent 'reeler' (and there are many such) may realise something more than the value of the fresh cocoon, where a coarse material of unknown and uncertain quality or where nothing better is known, may find a market, or some use for it when reeled by the grower. It is however self evident this profit cannot be but on a very limited scale. Surely to others than already competent reelers who probably have spent years in learning and practice in acquiring this expertness, our Australian plan for raising continuous crops of cocoons should be more attractive, as it certainly would be more profitable to inexperts, than abortive efforts at 'reeling.' My intercourse with people has not yet introduced me to acquaintance with one single individual would-be reeler who knew what raw silk is."

"The first thing to be done is to grow the food—there are millions of acres of land here as admirable as any that can be found in the world for plantations of mulberry—then to rear the silkworms, produce and sell the cocoons. We know, by long neglected experience, for certain there is no better, perhaps not so good a climate for both food and worms anywhere. Afterwards, will be time enough to talk about 'reeling.' Do not encourage people to toy with living creatures—all too often do grown people permit, even encourage, what is most frequently cruel pastime. Let it be money-making business not play—keeping silkworms."

#### APPENDIX No. 11.

*Vol. 21, page 484, Journal Society of Arts, London, 9th May, 1873.*

##### YIELD OF COCOONS IN ITALY.

THE yield of cocoons in Italy in 1871, is considered to be superior in quantity, as it was in quality, to that of the previous year. The greater portion was formed of the imported eggs of the Japanese breeds, both green and white, the green sorts predominating. The total quantity of silkworms' eggs imported into Italy for the season, deducting the exports, amounted to 92,155 kilog. (equal to 3,240,856 ounces English, about), of an estimated value of 22,117,200 Italian lire (equal to £921,500, or about 5s. 8d. per oz.) This estimate, however, is below the selling value of the eggs, which, in Lombardy and Piedmont, is stated to have averaged 28 lire (equal to £1 3s. 4d.) per card of 28 grammes for Japanese eggs, of good quality. The high price, if maintained, cannot but be a serious obstacle to the further development of the silk industry of Italy, so long as the bulk of crops is based on the Japanese eggs.

Mr. Consul Colaaghi remarks upon the discrepancies contained in the estimates of the yields of cocoons for the whole of Italy, but attaches importance to the more positive facts obtainable with reference to the yield of cocoons in Piedmont and Lombardy alone, which regions, with Venetia, form the most important silk-growing districts of Italy. The yield in Piedmont in 1871 was above mediocrity, and showed signs of considerable progress over the results of previous years.

From the returns published by the Chamber of Commerce of Turin some idea of the present condition of the silk husbandry may be obtained.

In 1871, in Piedmont, including that portion of the province of Pavia, which formed part of the Kingdom of Sardinia, public markets for the sale of cocoons were held in thirty towns between 30 May and 11 July. The total number of market days was 712, and the number of markets held at each town varied from eleven to thirty, according to the importance of the locality. The total quantity of cocoons sold and weighed in these markets amounted to 602,156 myriagrammes, of a value of 23,820,831 lire, to which must be added 211,958 myriagrammes brought to the markets, but not publicly weighed, and sold by private contract.

The registered sale of cocoons in the public markets during the last ten years, give an average of 329,818 myriagrammes, being 872,338 less than in the year 1871, which also surpassed the most abundant yield of any of the series. The results have been obtained most entirely, however, by means of importations of Japanese eggs. The persevering and intelligent attempts to overcome the silkworm disease and rear healthy worms in Italy, though giving fair hopes of ultimate success, have not yet made this country independent of foreign supplies. In Lombardy, the yield of cocoons in 1871, was somewhat greater than in 1870, and amounted to 1,820,000 myriagrammes. The quality was decidedly better, 14 kilog. of cocoons giving 1 kilog. of silk, whereas, in 1870, 15 kilog. were required to produce the same quantity. The production of cocoons in Lombardy may be calculated at about one-half the entire crop of the whole of Italy. Hopes are, however, entertained based on the more healthy condition observed to exist in the reproductiveness of the Japanese breed that the silkworm disease is on the decrease. During the first years of the disease, which deprived that region of nearly one-half the usual produce, dealers imported large quantities of Asiatic raw silk to enable them to work the importations of raw silk into Italy, in 1864, was about 1,000,000 kilog., the greater part of which came from French ports, England importing direct only 13,717 kilog. As the production of silk gradually increased in Italy there was a corresponding decrease in the imports of raw silk, which, in 1870, had fallen to 844,429 kilog., of which 12,676 kilog. were received from England. This increase of the production of Italian silk will, in all probability, continue until the produce of the country reaches the original state. Such at least is the hope generally entertained, and there seems no reason to doubt its fulfilment.

##### MEMORANDUM.

1 gramme = 15.4325 grains, English.

1 myriagramme (10,000) = 22.0485 lb., English.

1,820,000 myriagrammes × 22.0485 lb., English, = 40,128,270 lb., English, for half Italy,  
× 2 = 80,256,540 lb., English, for all Italy in 1871.

At 1s. 6d. per lb. about £6,000,000, probably more, as usually when the crop is large the quality is good, hence the bigger the quantity in equal ratio or even more the selling price is bigger. Quality in almost every commodity always fetches a superior price. Silk not being a perishable article is easily kept in store. A high quality of silk, if put upon the market, is always seized whenever obtainable for the best use and purposes where mere prices is quite a secondary consideration.

#### APPENDIX No. 12.

WHEN cotton was introduced from India "at the beginning of the Yuan dynasty, A.D. 1260," it appears to have, owing to its cheapness, usurped the place of silk, which industry had been in a flourishing condition for more than 4,000 years. The production of silk consequently decreased until from the date mentioned above until the present dynasty (A.D. 1644), it was nearly abandoned, only sufficient looms being left to supply the Government requirements, and those of local consumption, which, after what has already been said, it can easily be surmised could not have been great.

However much the narrow-minded pure native may despise western assistance, and however much the self-sufficient Chinese, who has received a slight veneer of western civilisation, may sneer at the advantages and blessings brought in the train of European intercourse with China, it is an indubitable fact, but probably ignored by Chinese and little known by foreigners, that the arrival of the latter, and their continued intercourse, created a demand for silk goods and spurred on the natives to resuscitate their dying industry of silk culture, and, with "the ever-increasing demand for silk for exportation abroad," the industry has revived, and not only has the demand for exportation been met, but its increased manufacture has brought more wealth to the people, and, with the foreign silver, they themselves have been able once more to provide themselves with their own costly silks and satins.

"Silk is now produced in every province in China, particularly in Che-kiang, Kwang-tung, Sz-chuen, Ho-nan, Kiang-su, and Kwai-chaw. The best silk comes from the province of Che-kiang, especially its north-west corner, though this does not equal Italian or Cevennes silk."

The Chinese name for silk is sz (pronounced by placing the tip of the tongue on the gum, a little above the front teeth, and hissing s-z quickly), and our word silk, as well as the other words in the different languages of Europe, are derived from it, through the Greek name *σῆψ*. The word satin is even supposed to be derived from the Chinese word sz-tün.

As the mulberry-leaf is the chief food of the silkworm, much labour and the greatest care is expended on the cultivation of the mulberry-tree for the purpose. In the neighbourhood of Chin-kiang there are two kinds of mulberries—a wild and a domestic—the domestic is grafted on the wild. The young mulberry-trees are transplanted in December, and are placed at regular distances of 5 or 6 feet from one another; they are then cut down to 1 foot 6 inches in height, and two shoots are allowed to grow; with the systematic pruning carried on each year, after five or six years there are only sixteen branches left; the continual cutting off of all but two fresh twigs on each branch produces a knobbed appearance of the tree; and finally, from these knobbed-like fists, about fifty to eighty branches are preserved. The trees live more than fifty years, but are not allowed to grow higher than 5 or 6 feet. The wild mulberry, which grows to a height of 50 or 60 feet, is also used, and there is a smaller kind as well.

There are ten rules laid down for breeding silkworms; "the eggs when on paper must be kept cool; after having been hatched they require to be kept warm; during their period of moulting they must be kept hungry; the intervals between their sleeps they must be well supplied with food; they should not be placed too close together, nor too far apart; during their sleeps they should be kept dark and warm; after they have cast their skins, cool, and allowed plenty of light; for a little time after moulting they should be sparsely fed; and when they are full grown ought never to be without food; their eggs should be laid close together, but not heaped upon each other." Wet, withered, or dusty leaves are not given to them. Rather less than 2 oz. in weight of young worms will eat 1 ton and 420 lb. weight of leaves.

Silk from wild worms of different species is also used in some of the provinces.

"From two catties of good cocoons nine catties of silk are reeled off. A quick hand with a double reeling-machine, reels about  $1\frac{1}{2}$  catties of silk per day; thus, 100 catties of cocoons are about six days' work." A certain number of cocoons are kept for breeding purposes. The female moths die in five days after laying their eggs, which they do within a day or so of coming out.

In the Canton province, the two principal qualities of silk are Tai-tsam and Lum-yut; the eggs of the former are hatched once or twice a year, the latter seven times.

Wild silkworms in the north of China are fed on different kinds of oak, and they supply two crops of cocoons annually. The natives hatch them, and after feeding them themselves, place them on the branches when the leaves of the trees are fully out, and transfer them to other trees as they eat the leaves of one. They spin their cocoons on the trees from whence they are gathered. After the female moths have come out and are ready to lay their eggs, the natives tie them by one leg with fine threads to the branches of the tree, when they lay their eggs on the leaves. These wild silkworms are "smaller than the domestic ones, and of a grayish black colour." The silk filaments of the domestic silkworm cocoons are wound into thread by the aid of a primitive reeling-machine.

For reeling the silk filament off the cocoons they are placed in hot water to loosen the ends of the silk, the rough parts are cleared away, and the clean filament taken with the hand, and then passed over or through the different parts of the reeling-machine. As soon as the cocoon gets thin and the chrysalis is visible, a new filament is taken in its place. The best threads are made with six or seven cocoons, ranging from this number to twenty or more for the coarsest. "A quick hand can reel in one day about 20 taels weight fine, or 30 taels coarse silk." The wild worm cocoons are treated in a different manner.

The space of our article will not allow us to go into a detailed statement of the numbers of looms and their output, nor are statistics available for a full statement; but, as an example of what is done, we may say that in 1880 there were in Chin-kiang 1,000 looms, employing 4,000 labourers, three men being at one loom; in one day three men can turn out about 12 feet to 16 feet of silk; for plain goods, two men only are required at each loom; and only one man for weaving gauze, there being 200 looms for this with 300 men at work, of which 14,000 to 15,000 pieces are annually produced for local consumption within the province, that of Kiang-su. Besides this there are fifty or sixty looms engaged in weaving silk ribbons, each attended to by one man; a second is required only in weaving the broader kinds. On an average, one man can weave about 40 feet per day. There are about 100 men engaged in this branch of the business, and there are about thirty or forty looms for weaving red plain satin.

For making sewing silk, "two filaments are twisted together into threads." For crape manufacture there are about 200 looms and 800 men employed.

The greatest silk producing province in China is "Che-kiang, and Kiang-su comes second," while "Hu-chow holds the first place among the departments of the whole empire of China for the production of silk." It may, therefore, be interesting to note the production of this one department. The production, then, for 1878 was 2,925,232 catties (1,755,139 kilos), and for 1879, 3,304,196 catties (1,982,517 kilos). There are 4,000 looms, each loom producing about 100 pieces a year.

Hang-chin produces the best kinds of silk piece goods.

There are several silk filature establishments in China, where foreign machinery is employed in reeling and weaving the silk. There are three in Macao, one with 54 steam looms. There is room for several more as the silk is on the spot, there is cheap labour available and a market.

Enormous quantities of silk are not only sent abroad, but even larger quantities are used by the Chinese themselves. Silk is a common article of attire and is not confined to the gentler sex, who delight to array themselves in bright and soft fabrics in the West; in the gorgeous East men are clothed in as brilliant robes as women. It is utterly impossible to say how much silk is used in China; but the Chinese consider that their consumption is more than double the amount exported to foreign countries. In 1890, the amount, in piculs, exported was 158,427 (or 21,123,600 lb.); in the previous year, 1889, it was 182,939 (or 24,391,867 lb.) piculs, doubling these sums would give 316,854 (42,247,200 lb.) piculs, and 365,878 (28,783,734 lb.) piculs, respectively, and no one who has seen the quantity of silk used by Chinese would doubt that these amounts must be well within the mark of their actual consumption of that useful commodity.

#### APPENDIX No. 13.

Memorandum having reference to differences in quantities, &c.

I HAVE in several instances found it very difficult to understand and reconcile the occasionally differing figures in official statistics for the same items. I believe that the difference now and then in reference to stated quantities of cocoons may be caused by the figures in some cases recording partially or wholly dried cocoons as equivalent in weight only to fresh cocoons.

These, and some other discrepancies do not, however, disparage the conclusions to be deduced or inferred from the whole estimates and values.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

STATUES PROPOSED TO BE PUT IN MARTIN-PLACE.  
(CORRESPONDENCE RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 25 October, 1892.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6th October, 1892, That there be laid upon the Table of this House,—

“Copies of all correspondence between Sir Henry Parkes and Sir G. R. Dibbs in regard to the statues of William Charles Wentworth, Sir James Martin, and Sir Charles Cowper, proposed to be placed in Martin-place.”

(*Mr. Fuller.*)

The Colonial Secretary to T. Woolner, Esq., R.A., London.

Sir,

Colonial Secretary's Office, Sydney, 15 October, 1891.

Referring to my letter on the subject of statues of William Charles Wentworth, Sir James Martin, and Sir Charles Cowper, K.C.M.G., to be erected in Martin-place, opposite the General Post Office, Sydney, I now commission you to execute these statues on behalf of the Government of this Colony, at an estimated cost of 3,000 guineas each.

You have been selected for this service, not only on account of your eminence as a sculptor but because you personally knew all the men while they were living. I believe you executed medallions of all three when you were in Sydney some years ago. You will be furnished with photographs or pictures to assist you; but before anything is done you will be good enough to submit designs of the several works of art, with the dimensions in each case, to such Board as this Government may appoint to examine and decide upon them. All the statues are to be mounted on pedestals in erect attitude.

I have, &c.,

HENRY PARKES.

Cablegram from The Colonial Secretary to The Agent-General.

Sydney, 27 November, 1891.

ORDER for statues of Wentworth, Martin, and Cowper, given to Woolner; letter of fifteenth ultimo countermanded.

Cablegram from The Agent-General to The Colonial Secretary.

London, 7 December, 1891.

REFERRING to your telegram of 27th November, have given notice to Woolner that statues contract cancelled.

**“TRUTH” NEWSPAPER.**

(AMOUNT PAID TO THE PROPRIETORS OF, FOR GOVERNMENT ADVERTISEMENTS IN.)

---

*Ordered by the Legislative Assembly to be printed, 29 November, 1892.*

---

[*Laid upon the Table of the House in answer to Question No. 17, of 11 October, 1892.*]

---

Question.

17. AMOUNT PAID TO PROPRIETORS OF NEWSPAPER CALLED “TRUTH”:—MR. McCOURT *asked* THE COLONIAL SECRETARY,—What is the total amount of money paid to or owing to the proprietors of a newspaper called *Truth* for advertising on account of the Public Service from the accession to office of the present Government up to date?

Answer.

Payments to the extent of £236 have been made to the proprietors of *Truth* newspaper from the accession of the present Government to office (to 23rd. November, 1892).

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

VICE SUPPRESSION BILL.

(PETITION FROM THE CHAIRMAN OF THE SYDNEY WESLEYAN MINISTERS' MEETING, IN FAVOUR OF.)

*Received by the Legislative Assembly, 12 October, 1892.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Sydney Wesleyan Ministers' meeting,—

RESPECTFULLY SHOWETH:—

That in the opinion of your Petitioner the laws in this Colony for the protection of girls and young women, and for the suppression of open immorality, are totally inadequate for these purposes, and that consequently there is a deplorable amount of defilement of young females, and undue opportunity for indulgence in vice by the youth of both sexes.

Your Petitioner, therefore, humbly prays that the measure lately laid before your Honorable House, and known as the Vice Suppression Bill, shall receive your favourable consideration, and that the same may be passed into law.

And your Petitioner will ever pray.

CHARLES STEAD,  
Chairman.

NEW SOUTH WALES.

VICE SUPPRESSION BILL.

(PETITION FROM THE MINISTER OF THE CHURCH, AS CHAIRMAN OF THE QUARTERLY MEETING OF OFFICERS OF THE CLEVELAND STREET WESLEYAN CHURCH, SURRY HILLS, IN FAVOUR OF.)

*Received by the Legislative Assembly, 18 October, 1892.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Quarterly Meeting of Officers of the Cleveland-street Wesleyan Church, Surry Hills,—

RESPECTFULLY SHOWETH:—

That, in the opinion of your Petitioner, the laws in this Colony for the protection of girls and young women, and for the suppression of open immorality, are totally inadequate for these purposes, and that consequently there is a deplorable amount of defilement of young females, and undue opportunity for the indulgence in vice by the youth of both sexes.

Your Petitioner, therefore, humbly prays that the measure lately laid before your Honorable House, and known as the Vice Suppression Bill, shall receive your favourable consideration, and that the same may be passed into law.

And your Petitioner will, as in duty bound, ever pray.

FRANK DUESBURY.

**VICE SUPPRESSION BILL.**

PETITION FROM RICHARD BENNETTS, CHAIRMAN OF A MEETING OF THE SYDNEY CITY MISSION,  
(IN FAVOUR OF.)

*Received by the Legislative Assembly, 25 October, 1892.*

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Committee of the Sydney City Mission, in meeting assembled, October 13th, 1892,—

RESPECTFULLY SHOWETH :—

That, in the opinion of your Petitioners, the laws in this Colony for the protection of girls and young women, and for the suppression of open immorality, are totally inadequate for these purposes.

We have eleven city missionaries, whose work lies among the poorest, and they can furnish abundant proof that it is as above stated.

Your Petitioners therefore humbly pray that the "Vice Suppression Bill" may become law, and that there may be added thereto clauses dealing with the publication, sale, or exposure of indecent literature, prints, photographs, and advertisements, as to your Honorable House may seem fit.

And your Petitioners, as in duty bound, will ever pray.

R. BENNETTS,  
Chairman.

Similar Petitions were received,—

On 25th October, 1892, from the Baptists' Union of New South Wales, in Annual Session assembled ;  
3 signatures.

„ „ from the Most Reverend the Primate, Chairman of the Social Reform  
Committee, appointed by the Synod of the Diocese of Sydney ; 1  
signature.

On 26th October, 1892, from the Chairman of a Committee of the Sydney Female Refuge ; 1  
signature.

**VICE SUPPRESSION BILL.**

(PETITION FROM THE WOMEN'S CHRISTIAN TEMPERANCE UNION, IN FAVOUR OF.)

*Received by the Legislative Assembly, 25 October, 1892.*

---

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the members of the Women's Christian Temperance Union,—

SHOWETH:—

That your Petitioners, believing that the age provided by the present law of the Colony at which a girl may consent to her seduction is too low, humbly pray your Honorable House to pass into law, during the present Session, the Bill introduced by Mr. J. C. Neild, M.L.A., entitled "A Bill for the Better Suppression of Vice."

And your Petitioners, as in duty bound, will ever pray.

[Here follow 3 signatures.]

---

**VICE SUPPRESSION BILL.**

(PETITION FROM LOYAL ALBERT DIVISION OF THE SONS AND DAUGHTERS OF TEMPERANCE,  
BATHURST, IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 1 November, 1892.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Loyal Albert Division of the Sons and Daughters of Temperance, in Session  
met at Bathurst,—

RESPECTFULLY SHOWETH :—

That your Petitioners have learned with pleasure that a Bill is now before your Honorable House, entitled "Bill for the Suppression of Vice." That they very heartily approve of the aims of the said Bill, believing that morality and society demand further and stern legislation in these directions. And further, your Petitioners strongly urge that clauses be inserted in the said Bill for the suppression of the circulation by post and otherwise of immoral literature, and the exposing to view of indecent pictures.

Your Petitioners therefore pray your Honorable House to as speedily as possible pass this Bill, with needed amendments, into law.

And your Petitioners will ever pray.

## NEW SOUTH WALES.

**TREATY OF FRIENDSHIP, COMMERCE, AND NAVIGATION  
BETWEEN GREAT BRITAIN AND MUSKAT.**  
(DESPATCH RESPECTING.)

Presented to Parliament by Command.

The Treasury, New South Wales,  
5th September, 1892.

**TREATY OF FRIENDSHIP, COMMERCE, AND NAVIGATION BETWEEN GREAT BRITAIN AND MUSKAT.**

His Excellency the Governor directs the publication, for the information of officials and persons concerned, of the following Circular Despatch from the Secretary of State for the Colonies, enclosing copy of a Treaty of Friendship, Commerce, and Navigation, entered into between Great Britain and Muskat (Persian Gulf).

JOHN SEE.

Circular (1).  
Sir,

Downing-street,  
31st May, 1892.

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of a Treaty of Friendship, Commerce, and Navigation between Great Britain and Muskat, signed at Muskat on the 19th of March, 1891, the ratifications of which were exchanged at Muskat on the 20th of February last.

I have to call your attention to Article XXI of the Treaty, from which you will observe that, if it is desired that the Colony under your Government should come within the operation of the Treaty, notice to that effect must be given to His Highness the Sultan of Muskat within two years from the 20th February, 1892, the date of the exchange of the ratifications.

I have therefore to request that you will be good enough to acquaint me as soon as possible of the wishes of your Government in the matter.

I have, &c.,  
KNUTSFORD.

The Officer Administering the  
Government of New South Wales.

**TREATY OF FRIENDSHIP, COMMERCE, AND NAVIGATION  
BETWEEN GREAT BRITAIN AND MUSKAT.**

Signed at Muskat, 19th March, 1891.

Ratifications exchanged at Muskat, 20th February, 1892.

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and His Highness the Seyyid Feysal-bin-Turki-bin-Saeed, Sultan of Muskat and Oman, being desirous to confirm and strengthen the friendly relations which now subsist between the two countries, and to promote and extend their commercial relations, have named as their Plenipotentiaries to conclude a Treaty for this purpose, that is to say:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, Colonel Edward Charles Ross, Companion of the Star of India, Her Britannic Majesty's Political Resident in the Persian Gulf;

And His Highness the Sultan of Muskat, in person;  
Who have agreed upon and concluded the following Articles:—

ARTICLE I.

The Treaty concluded between the British Government and Sultan Seyyid Saeed-bin-Sultan of Muscat and Oman on the 31st May, 1839 (17 Rabia 1st, 1255) is hereby cancelled and declared void, and the present Treaty, when ratified, shall be substituted for it.

ARTICLE II.

Subjects of Her Britannic Majesty shall, for the purposes of this Treaty, include subjects of native States in India in alliance with Her Majesty. Such subjects shall enjoy, immediately and unconditionally, throughout the dominions of His Highness the Sultan of Muskat, with respect to commerce, shipping, and the exercise of trade, as in every other respect, all the rights, privileges, immunities, advantages, and protection of whatsoever nature, which are, or hereafter may be, enjoyed by, or accorded to, the subjects or citizens of the most favoured nation.

They shall more especially not be liable to other or more onerous duties, imposts, restrictions, or obligations of whatever description, than those to which subjects or citizens of the most favoured nation now are, or hereafter may be, subjected.

ARTICLE III.

The two High Contracting Parties acknowledge reciprocally to each other the right of appointing Consuls to reside in each other's dominions wherever the interests of commerce may require the presence of such officers; and such Consuls shall at all times be placed, in the country in which they reside, on the footing of the Consuls of the most favoured nations. Each of the High Contracting Parties further agree to permit his own subjects to be appointed to Consular offices by the other Contracting Party, provided always that the persons so appointed shall not begin to act without the previous approbation of the

Sovereign whose subjects they may be. The public functionaries of either Government residing in the dominions of the other, shall enjoy the same privileges, immunities, and exemptions which are enjoyed within the same dominions by similar public functionaries of other countries.

#### ARTICLE IV.

There shall be perfect freedom of commerce and navigation between the High Contracting Parties; each shall allow the subjects of the other to enter all ports, creeks, and rivers with their vessels and cargoes, also to travel, reside, pursue commerce and trade, whether wholesale or retail, in each other's dominions, and therein to hire, purchase, and possess houses, warehouses, shops, stores, and lands. British subjects shall everywhere be freely permitted, whether personally or by agent, to bargain for, buy, barter, and sell all kinds of goods, articles of import, or native production, whether intended for sale within the dominions of His Highness or for export, and to arrange with the owner or his agent regarding the price of all such goods and produce without interference of any sort on the part of the authorities of His Highness.

His Highness the Sultan of Muskat binds himself not to allow or recognize the establishment of any kind of monopoly or exclusive privilege of trade within his dominions to any Government, Association, or individual.

#### ARTICLE V.

Subjects of Her Britannic Majesty shall be permitted, throughout the dominions of His Highness the Sultan to acquire by gift, purchase, intestate succession, or under will, or any other legal manner, land, houses, and property of every description, whether movable or immovable, to possess the same; and freely to dispose thereof by sale, barter, donation, or otherwise.

#### ARTICLE VI.

His Highness the Sultan shall be permitted to levy a duty of entry not exceeding 5 per cent. on the value of all goods and merchandise, of whatever description, imported by sea from foreign countries into His Highness' dominions. This duty shall be paid at that port in His Highness' dominions where the goods are first landed, and, on payment thereof, such goods shall thereafter be exempt, within the Sultan's dominions, from all other customs duties or taxes, levied by, or on behalf of, the Government of His Highness the Sultan, by whatever names these may be designated, and no higher import duty shall be claimed from British subjects than that which is paid by subjects or citizens of the most favoured nation.

This duty, once paid, shall cover, from all other charges on the part of His Highness the Sultan, goods of whatever description coming from foreign countries by sea, whether these are intended for local consumption or for transmission elsewhere in bulk or otherwise, and whether they remain in the state in which they are imported or have been manufactured.

There shall, however, be exempted from payment of all duty the following, namely:—

1. All goods and merchandise which, being destined for a foreign port, are transhipped from one vessel to another in any of the ports of His Highness the Sultan of Muskat, or which have been for this purpose provisionally landed and deposited in any of the Sultan's custom-houses to wait the arrival of a vessel in which to be reshipped aboard. But goods and merchandise so landed shall be exempted only, provided that the consignee or his agent shall have, on the arrival of the ship, handed over the said goods to be kept under Customs seal, and declared them as landed for transshipment, designating at the same time the foreign port of destination, and also provided that the said goods are actually shipped for the said foreign port as originally declared, within a period not exceeding six months after their first landing, and without having, in the interval, changed owners.

2. All goods and merchandise which, not been consigned to a port within the dominions of the Sultan, have been inadvertently landed, provided that such goods are reshipped within a month of being so landed and transported abroad. Should, however, such goods or merchandise, here spoken of, be opened or removed from the custody of the Customs authorities, the full duty shall then be payable on the same.

3. Coals, naval provisions, stores, and fittings, the property of Her Majesty's Government, landed in the dominions of His Highness for the use of the ships of Her Majesty's navy.

4. All goods and merchandise transhipped or landed for the repair of damage caused by stress of weather or other disaster at sea, provided the cargo so discharged shall be reshipped and taken away on board the same vessel, or if the latter shall have been condemned, or her departure delayed, in any other manner.

#### ARTICLE VII.

No article whatever shall be prohibited from being imported into or exported from the territories of His Highness the Sultan of Muskat, and no export duties are to be levied on goods exported from those territories except with the consent of the Government of Her Britannic Majesty, such consent being subject to the conditions that may be laid down in the notifications intimating the same.

#### ARTICLE VIII.

It is agreed and understood by the High Contracting Parties that, in the event of an arrangement being entered into hereafter between His Highness and the Powers having Treaty relations with Muskat, and to which Great Britain shall be a consenting party, whereby vessels entering the port of Muskat shall be charged with shipping, tonnage, or harbour dues, such dues to be administered under the control of a special Board for the improvement of the harbour and construction and maintenance of lighthouses, &c.; nothing in the aforementioned provisions shall be construed so as to exempt British vessels from payment of such shipping, harbour, or tonnage dues as may hereafter be agreed upon.

#### ARTICLE IX.

It shall be at the option of the British subject in each case to pay the percentage duties stipulated in Article VI, either in cash, or, if the nature of the goods allows of it, in kind, by giving up an equivalent amount of the goods or produce.

In the event of payment being made in cash, the value of the merchandise, goods, or produce on which duty is to be levied, shall be fixed according to the ready-money market price ruling at the time when the duty is levied. In the case of foreign imports, the value shall be fixed according to the market price at Muskat, and in that of native goods and produce by the market price at the place where the merchant shall choose to pay the duty.

In the event of any dispute arising between a British subject and the Custom-house authorities regarding the value of such goods, this shall be determined by reference to two experts, each party nominating one, and the value so ascertained shall be decisive. Should, however, these experts not be able to agree, they shall choose an umpire, whose decision is to be considered final.

#### ARTICLE X.

His Highness the Sultan of Muskat engages by the present Treaty to provide and give orders to his officials that the movement of goods in transit shall not be obstructed or delayed in a vexatious manner by unnecessary Customs formalities and Regulations, and that every facility will be given for their transport.

#### ARTICLE XI.

British vessels entering a port in the dominions of His Highness the Sultan of Muskat, in distress, shall receive from the local authorities all necessary aid to enable them to revictual and refit so as to proceed on their voyage.

Should a British vessel be wrecked off the coast of His Highness' dominions, the authorities of His Highness shall render all assistance in their power to the distressed vessel, in order to save the ship, her cargo, and those on board; they shall also give aid and protection to persons saved, and shall assist them in reaching the nearest British Consulate; they shall further take every possible care that the goods so recovered are safely stored, and kept for the purpose of being handed over to the owner, captain, agent of the ship, or British Consul, subject always to rights of salvage.

His Highness' authorities shall further see that the British Consulate is at once informed of such disaster having occurred.

Should a British vessel, wrecked on the coast of His Highness' dominions, be plundered, the authorities of His Highness shall, as soon as they come to know thereof, render prompt assistance and take measures to pursue and punish the robbers, and recover the stolen property. Likewise, should a vessel of His Highness the Sultan of Muskat, or of one of his subjects, enter a British port in distress, or be wrecked off the coast of Her Majesty's dominions, the like help and assistance shall be rendered by the British authorities.

#### ARTICLE XII.

Should sailors or others belonging to a British ship of war or merchant-vessel, desert and take refuge on shore or on board of any of His Highness' ships, the authorities of His Highness the Sultan of Muskat shall, upon request of a Consular official, or, in his absence, of the captain of the ship, take the necessary steps in order to have them arrested and delivered over to the Consular official or to the Captain.

In this, however, the Consular officer and captain shall render every assistance.

#### ARTICLE XIII.

Subjects of Her Britannic Majesty shall, as regards their person and property, enjoy within the dominions of His Highness the Sultan of Muskat the rights of exterritoriality.

The authorities of His Highness the Sultan have no right to interfere in disputes with subjects of Her Britannic Majesty amongst themselves, or between them and members of other Christian nations; such questions, whether of a civil or criminal nature, shall be decided by the competent Consular authorities. The trial and also the punishment of all offences and crimes of which British subjects may be accused within the dominions of His Highness the Sultan, also the hearing and settlement of all civil questions, claims, or disputes in which they are the defendants, is expressly reserved to the British Consular authorities and Courts, and removed from the jurisdiction of His Highness the Sultan.

Should disputes arise between subjects of His Highness the Sultan or other non-Christian Power, not represented by Consuls at Muskat, and a subject of Her Britannic Majesty, in which the British subject is the plaintiff or complainant, the matter shall be brought before and decided by the highest authority of the Sultan, or some person specially delegated by him for this purpose. The proceedings and final decision in such a case shall not, however, be considered legal unless notice has been given and an opportunity afforded for the British Consul or his substitute to attend at the hearing and final decision.

**ARTICLE XIV.**

Subjects of His Highness the Sultan, or any non-Christian nation, not represented by Consuls at Muskat, who are in the regular service of British subjects within the dominions of His Highness the Sultan of Muskat, shall enjoy the same protection as British subjects themselves.

Should they be charged with having committed a crime or serious offence punishable by law, they shall, on sufficient evidence being shown to justify further proceedings, be handed over by British employers, or by order of the British Consul, to the authorities of His Highness the Sultan for trial and punishment.

**ARTICLE XV.**

Should a subject of Her Majesty residing in the dominions of His Highness the Sultan of Muskat be adjudicated bankrupt, the British Consul shall take possession of, recover, and realize all available property and assets of such bankrupt, to be dealt with and distributed according to the provisions of English Bankruptcy Law.

**ARTICLE XVI.**

Should a subject of His Highness the Sultan of Muskat resist or evade payment of the just and rightful claims of a British subject, the authorities of His Highness the Sultan shall afford to the British creditor every aid and facility in recovering the amount due to him. In like manner the British Consul shall afford every aid and facility to subjects of His Highness the Sultan of Muskat, in recovering debts justly due to them from a British subject.

**ARTICLE XVII.**

Should a British subject die within the dominions of His Highness the Sultan of Muskat, or dying elsewhere leave property therein, movable or immovable, the British Consul shall be authorised to collect, realize, and take possession of the estate of the said deceased, to be disposed of according to the provisions of English law.

**ARTICLE XVIII.**

The houses, dwellings, warehouses, and other premises of British subjects, or of persons actually in their regular service within the dominions of His Highness the Sultan of Muskat, shall not be entered, or searched under any pretext, by the officials of His Highness without the consent of the occupier, unless with the cognizance and assistance of the British Consul or his substitute.

**ARTICLE XIX.**

It is hereby agreed between the two High Contracting Parties that, in the event of an agreement being hereafter arrived at between His Highness the Sultan of Muskat and the various Powers with which His Highness shall be in Treaty relations, including Great Britain, which must be a consenting party, whereby the residents of a district or town shall, without distinction of nationality, be made subject to the payment of local taxes, for municipal and sanitary purposes, the same to be fixed and administered by or under the control of a special Board, nothing contained in this Treaty shall be understood so as to exempt British residents from the payment of such taxes.

**ARTICLE XX.**

Subjects of the two High Contracting Parties shall, within the dominions of each other, enjoy freedom of conscience and religious toleration, the free and public exercise of all forms of religion, and the right to build edifices for religious worship.

**ARTICLE XXI.**

The stipulations of the present Treaty shall be applicable to all the Colonies and foreign possessions of Her Britannic Majesty so far as the laws permit, excepting to those hereinafter named, that is to say, except to—

The Dominion of Canada.  
Newfoundland.  
The Cape of Good Hope.  
Natal.  
New South Wales.  
Victoria.  
Queensland.  
Tasmania.  
South Australia.  
Western Australia.  
New Zealand.

Provided always that the stipulations of the present Treaty shall be made applicable to any of the abovenamed Colonies or foreign possessions, on whose behalf notice to that effect shall have been given to Her Britannic Majesty's Representative in Muskat to His Highness the Sultan within two years from the date of exchange of the ratifications of the present Treaty.

**ARTICLE XXII.**

The present Treaty has been executed in quadruplicate, two copies being written in English and two in Arabic. These are understood to be of similar import and signification; in the event, however, of doubt hereafter arising as to the proper interpretation of the English or Arabic text of one or other of the Treaty stipulations, the English text shall be considered decisive. The Treaty shall come into operation within one month after the date when the ratifications may take place.

**ARTICLE XXIII.**

After the lapse of twelve years from the date on which this Treaty shall come into force, and on twelve months' notice given by either party, this Treaty shall be subject to revision by Plenipotentiaries appointed on both sides for this purpose, who shall be empowered to decide on and adopt such amendments as experience shall prove to be desirable.

In witness whereof Colonel Edward Charles Ross, C.S.I., on behalf of Her Majesty the Queen of Great Britain and Ireland, and Empress of India, and His Highness Seyyed Feysal-bin-Turki, Sultan of Muskat, on his own behalf, have signed the same and affixed thereto their respective seals.

Done at Muskat, this 19th day of March, 1891, corresponding to the 8th Shaaban of the year 1308 Hijreea.

(Signed) EDWARD CHARLES ROSS, Colonel,  
Political Resident in the Persian Gulf.  
Signature in Arabic of His Highness the  
Sultan of Muskat.

**PROTOCOL.**

The undersigned in proceeding to the exchange of ratifications of the Treaty signed at Muskat on the 19th March, 1891, between Her Majesty the Queen of Great Britain and Ireland, Empress of India, and His Highness Seyyid Feysal-bin-Turki, Sultan of Muskat, have agreed to the present Protocol, which shall have the same force and validity as if it had been inserted in the body of the Treaty itself.

It is agreed that under Article XXIII of the said Treaty either of the High Contracting Parties shall be at Liberty, after the expiration of twelve years from the date on which the Treaty has come into force, to terminate the said Treaty at any time on giving twelve months' notice.

In witness whereof the undersigned, duly authorized for the purpose, have signed the present Protocol, in quadruplicate, and have affixed thereto their seals.

Done at Muskat, on the 20th day of February, 1892.

(Signed) A. C. TALBOT, Lieutenant-Colonel,  
Political Resident, Persian Gulf.

## NEW SOUTH WALES.

## WENTWORTH IRRIGATION TRUST.

(STATEMENT OF EXPENDITURE OF, TO 31st DECEMBER, 1892.)

Presented to Parliament pursuant to Wentworth Irrigation Act of 1890.

I, FREDERICK WILLIAM WILKES, of Wentworth, Secretary to the Wentworth Irrigation Trust, do solemnly and sincerely declare that the annexed Statement of Expenditure, marked with the letter A, is a correct statement of the expenditure of the Wentworth Irrigation Trust, out of an advance from the A.J.S. Bank, Wentworth, from which Bank His Excellency the Governor, by proclamation, gave permission to the Trust to borrow £1,000: And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Made and signed before me, at Wentworth, }  
this 3rd day of February, 1893.—

F. W. WILKES.

DAVID A. MORGAN, J.P.
