 Clauses 8 and 9 read and *agreed to*.  
 Clause 10 read, amended,\* and *agreed to*.  
 Clauses 11, 12, 13, 14, 15, 16 read and *agreed to*.  
 Clause 17 read, amended,\* and *agreed to*.  
 Clause 18 read, amended,\* and *agreed to*.  
 Clauses 19, 20, read and *agreed to*.  
 Clause 21, read, amended,\* and *agreed to*.  
 Clauses 22, 23, 24, 25, 26, read and *agreed to*.  
 Clause 27 read, amended, and *agreed to*.  
 Clauses 28, 29, 30, read and *agreed to*.  
 Clause 31 read, amended,\* and *agreed to*.  
 Clauses 32, 33, 34, read and *agreed to*.  
 Clause 35 read, amended, and *agreed to*.  
 Clause 36 read, amended,\* and *agreed to*.  
 Clause 37 read, amended,\* and *agreed to*.  
 Clause 38 39 read, amended,\* and *agreed to*.  
 Clause 39 40 read, amended,\* and *agreed to*.  
 Clause 40 41 read and *agreed to*.  
 Clause 41 42 read, amended, and *agreed to*.  
 Clause 42 43 read, amended,\* and *agreed to*.  
 Clause 43 45 read and *agreed to*.  
 Clause 44 46 read, and *agreed to*.  
 New clause to stand as clause 38, read and *agreed to*.  
 New clause to stand as clause 44, read and *agreed to*.  
 Schedules read, amended\* and *agreed to*.  
 Title read, amended,\* and *agreed to*.  
 Chairman to report the Bill as amended to the House with an amended Title, and Preamble.

SCHEDULE OF AMENDMENTS.

Page	1, Title.	<i>Omit</i> "and to connect" <i>insert</i> "communicate"

Application of  
112th section of  
Public Works  
Act.

Penalty for not  
carrying out  
work.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

SCOTTISH AUSTRALIAN MINING COMPANY (LIMITED)  
RAILWAY BILL.

WEDNESDAY, 2 NOVEMBER, 1892.

Present:—

Mr. EDDEN, | Mr. KELLY,  
Mr. MELVILLE.

N. MELVILLE, ESQ., IN THE CHAIR.

G. C. Westgarth, Esq. (Westgarth &amp; Co.), appeared as Solicitor for the Bill.

Mr. Harry Wood Kerle, Civil Engineer, sworn and examined:—

1. *Chairman.*] You are a member of the firm of Kenwood & Co., 35, Castlereagh-street, Sydney? Yes. Mr.
2. Are you employed by the Scottish Australian Mining Company in connection with the construction of the railway proposed to be carried out under this Bill? Yes. H. W. Kerle.
3. Did you make the surveys? Yes. 2 Nov., 1892.
4. And prepared the plans? Yes, everything in connection with it.
5. Are you aware what land it is proposed to take the railway through? The names of the persons are mentioned in clause 1, and the land is described in the Schedule.
6. To what extent will any private interests be interfered with by the construction of this railway? I do not think that any will be injuriously affected at all, but that the construction of the line will enhance the value of the properties through which it will pass.
7. Will severance injuriously affect them? I do not think so.
8. You say that the construction of the line will, in your opinion, enhance the value of the properties through which it will pass;—how do you arrive at that conclusion? Because the greater portion of the land through which the line will pass is coal-bearing land, and the probability is that other properties will be opened up on the route, and the line will be used for that purpose also. The land will attain additional value in that way. In addition to that there is a certain amount of fairly good arable land in the vicinity, and any goods required would be carried by the railway, and the cost of carriage would thus be reduced. At the present time there is a haulage from the Belmont Road—a distance of about 4 miles. The Belmont Road runs between Newcastle and Lake Macquarie.
9. *Mr. Westgarth.*] Is not the property through which this railway will pass principally Crown lands; and land belonging to this company itself? Yes; a large portion of it is used for mining purposes. Nearly one-half of it is Crown lands under lease to this company.
10. Is the pit opened upon Crown lands? Yes.
11. In that way, the Crown lands will be improved? Certainly.
12. What royalty is payable by the company to the Crown in respect of coal? I believe 6d. a ton.
13. Has the mine been opened out to any great extent and tested? Yes; a large amount of money has been spent on the mine during the last two years. The main shaft has been sunk to working level, and it has been cased with very heavy cast-iron cylinders. The depth of that shaft is about 400 feet. The air-shaft has been sunk to the working level, and main drives have been made. A large amount of work has been done to prove the coal-field.
- 14.

- Mr. H. W. Kerle. No. 14. Is there at present any means of communication between the mine and the Great Northern Railway?
- 2 Nov., 1892. 15. Is it necessary to construct this line in order to take the coal to port? Yes.
16. *Mr. Kelly.*] How do you get the coal to the main line now? We are not working the mine yet.
17. *Mr. Westgarth.*] What is the distance from the mine to the point on the Great Northern Railway where it is proposed to connect? 5 miles 55 chains.
18. And the nearest shipping port is Newcastle? Yes.
19. A distance of about  $12\frac{1}{2}$  miles? Yes, about  $12\frac{1}{2}$  miles.
20. So that by opening this railway and connecting it with the Great Northern Railway there will be a large amount of additional traffic on the Great Northern line? The traffic will be very considerably increased according to the output of the mine. Taking an approximate output of 130,000 tons a year—and I think Lambton does considerably more than that—the freight payable by the company to the Railway Commissioners would be 10d. per ton on that quantity for haulage over that portion of the Great Northern line. It is within the 7 miles radius, and the rate will therefore be 10d. per ton.
21. *Mr. Edden.*] But you are speaking on the supposition that the Lambton Colliery is worked out, and that all the trade which they have at that mine will be concentrated at the one to which the railway is to go? The Scottish Australian Mining Company have a large business, and they will work this mine in conjunction with the Lambton mine, and the probability is that it will be to their advantage to work more coal from this mine than from the Lambton mine; but, of course, I am not in a position to state positively that they will do so.
22. *Mr. Westgarth.*] Do you think it is desirable that this line should be constructed? Certainly; it will be a very good thing for the district.
23. Can you give us an estimate of the cost of constructing the line? The cost of the line will be about £22,000 for the permanent way.
24. That is the actual cost of the work? Yes.
25. Will a township be likely to follow the construction of this railway in the neighbourhood of the mine? I think it will be necessary to form a township adjoining the mine for the purpose of housing the men employed there.
26. Supposing there were no township, how would they get men to work the mine? They would have to walk at the present time from Charlestown—a distance of about 3 miles. That is the nearest township. There is a small township being formed at Dudley for the convenience of the men employed at the mine lately opened there.
27. Are you aware that the Scottish Australian Mining Company have already provided the plant necessary for the railway? Yes, the waggons are ready for the work, and also a large quantity of rails; the necessary hauling plant for lifting the coal from the mine has been purchased, and the cranes and so on.
28. Is it proposed to construct the railway according to the Government standard? Yes, the drawings and specifications have been prepared with the view of bringing the line up to the standard of the Government lines.
29. The railway when completed will be in conformity with the present gauge and grades of the Government railways? Yes, and it will be subject to the approval of the Railway Commissioners when completed.
30. Have you looked through the draft Bill? Yes.
31. Is it the usual class of railway Bill? Yes.
32. Acting on your instructions as engineer, those who prepared the Bill have provided the usual powers for compensation, for the construction of roads, and the protection of private rights? Yes.
33. And the Bill contains a clause providing for a penalty against the company in the event of their neglecting or refusing to construct the necessary roads? Yes.
34. *Mr. Edden.*] You have stated that the value of the property would be enhanced by the railway going through it, inasmuch as it would be the means of people getting things brought to them from Newcastle? Yes.
35. Is there not a provision in the Bill that they shall not bring anything under 100 tons? I do not think so.
36. In line 25, clause 4, are the words: "no such railway shall run parallel to the said railway";—what is the meaning of that—I take it to mean that no other railway shall be allowed to be constructed near this line? Yes; this will be a branch line, and if a parallel line were constructed, say, within 20 chains of it, the interests of this company would be injuriously affected. The intention is that no line should run so close to this line as to injuriously affect the interests of the company.
37. Am I to understand that you mean affecting the interests of the company in this respect: supposing anyone else wanted to construct a line, you hold that it is not necessary for them to do so, and that they should convey their goods along this company's line and pay a certain amount to this company for carriage? Yes; I should say so—either that or they would have to construct their own line in a different direction. If they constructed their line a mile away, but parallel to this company's line, I should consider that that would not be an infringement on this Bill. But if they constructed the line by way of opposition, it would be different.
38. The Bill does not stipulate how far away? It is for the Committee to insert a clause defining the distance.
39. I know for a fact that there are companies in the north which are heavily handicapped by having to run through other people's land? You are speaking, more particularly, of the Burwood Company, which is about the most heavily handicapped company in the north. They run through private property. But proper provision has been made in clause 3 so that this company cannot be injuriously affected.
40. You hand in a tracing of the whole length of the proposed railway and of the land through which it will pass? Yes.

Mr. Thomas Croudace, General Manager of the Scottish Australian Mining Company, sworn and examined:—

- Mr. T. Croudace. 41. *Chairman.*] Where do you reside? At Lambton.
- 2 Nov., 1892. 42. This surface plan which has been produced before the Committee shows the whole of the land through which your proposed railway will pass to its junction with the Great Northern Railway? Yes.
43. How much of that land, as shown on the plan, is under lease from the Government to the company at the present time? Block 116 is Government land, the coal being permitted to the Dudley Company for working. We pass through that on the surface, then through the whole distance, across the Belmont Road.

Road until we come to O'Brien's 60-acre block, under lease to us. With the exception of Block 116 the whole of the land from the pit to Block 6 is under lease to the Scottish Australian Mining Company. We have a rental of the surface at 2s. per acre, and we shall have to pay a royalty of sixpence per ton.

44. You have it under a mining lease? Yes. I mention that because sometimes the coal is let, but the lessee of the coal has not any right to the surface. But we have the whole surface leased to us at a rental of 2s. per acre per annum.

45. Under the Mining Law? Yes.

46. Your conditions are the usual conditions under the law of the land—there are no special conditions? No; all under the law of the land. From Block 6 we go through a portion of the Waratah Company's land, No. 107. That is Crown land, the minerals being leased to the company by the Government. Block 105, a small portion of Block 107, and a portion of Block 126, are also Crown lands, leased to what is known as the Australasian Coal Company, now B. J. Fink, of Melbourne. Then we go through Block 44, originally bought by Dr. Hill, and recently purchased, I believe, by Mr. Price, taken up under the Free Selection Act. Then we pass into Block 85A, which is also a free selection, originally purchased by Thomas Phillips, and now held by James Edwards. Then we pass into Block 39, which is also private property, it having been bought by the late Vincent Stone, to a junction on the Waratah and Homebush Railway, practically connecting with the Great Northern Railway. D. O'Brien's Block No. 6 is, to the best of my knowledge and belief, unoccupied scrub land.

47. What proportion of the whole area over which the line will pass is private land? As near as I can tell you, there will be 1 mile 45 chains of the line through private property, and all the rest through Government land. Practically speaking, four-fifths is Government land, and the other part is private property.

48. Have the owners of the private land been made aware that you propose to go through it? Yes; to the best of my knowledge, all with the exception of O'Brien, and I do not know to whom Block No. 6 now belongs.

49. Have they lodged with you, either by letter or in any other way, or with your solicitor, any objection to your going through their private land? Not that I am aware of, until within the last week, and I hear that Mr. Price, who bought Block 44 from Dr. Hill, does not raise an objection, but wants to know merely what facilities we are going to give him in passing through what was originally laid out as a township, but is now really scrub land. I told his representative, Mr. Archibald Gardiner, that anything which we could do which was reasonable we would do.

50. Have the proper notices been given through the Press of this company's intention to apply for this Bill? Yes.

51. And no complaints have been received? The first objection that we had in any shape or form was received within the last week or ten days from Mr. Price.

52. If you cannot get permission to construct this railway, are there any other means by which you can develop the mine and get the coal to market? At great cost, there would be.

53. Providing that the Committee are not willing to grant you the right to construct this proposed railway, have you any other means of getting your coal to market? Well, we could make a railway over these ranges, through other people's property.

54. You would still be in the same position as you are now? Yes.

55. If legislative authority is not given for the construction of a railway, can the mine be developed? Well, supposing the Redhead Company, whose line passes our pit, said, "You join our railway, and pay us so and so, and we will carry your coal"; but it would only be at a tremendous disadvantage, compared with what this route would give us, because they would do with us just what they liked.

56. Your company prefer seeking power to expend this money to put a railway down to develop the mine? Yes; and it is the only truly economical way in which we can possibly develop the mine and make it pay.

57. In your opinion, the Waratah Company and the Australasian Company, now B. J. Fink, would derive great assistance from this line in developing their mines? Undoubtedly; very considerable assistance.

58. You have, I presume, read the Bill? Yes.

59. Have you any objection to the reduction of the minimum of 100 tons mentioned in clause 3? Only in this way: We have endeavoured to follow upon the most liberal scale the usual railway Bills in cases similar to ours. This will be a single line of railway, and to have any small out-puts coming in would so materially disadvantage our own working that it would be a heavy drawback to us. I would suggest that clause 3 should apply to the carriage of coal and other minerals, and that clause 41 should apply to the carriage of passengers and general merchandise, the rates under the latter clause to be made subject to the approval of the Railway Commissioners.

60. In the event of the Dudley Company desiring to work for coal under your railway, it will be a matter between the Crown, your company, and the Dudley Company, as to the safety of the railway—the Crown has to see to it? Yes.

61. During Mr Abigail's occupancy of office as Minister for Mines, you, representing this company, received from him the assurance that the Crown would reserve in connection with that land, if it were leased, the right for you to take your railway through it? Yes, he did. In effect he said to me, "All you have to do is to let me know the route, and I will reserve it."

62. To the best of your belief and knowledge, had Mr. Abigail then, or has he now, any interest in this land? None whatever.

63. He has nothing to do with this company? Nothing whatever.

64. Do you, of your own knowledge, know whether the Crown has reserved the coal in that section under the route of this proposed railway? I cannot answer that question. I do not suppose the Crown has.

65. In the event of the Dudley Company requiring to work out that coal, who would be responsible for compensation (if any) to them? Well, in all such cases the owners of the land are responsible, and in this case they would be the Government.

66. Can you give the Committee any idea of the depth of the seam below the surface? You may say 450 feet, and the seam is only 5 feet thick.

67. In the event of that seam being removed, is there any probability of any serious injury to the surface? Not the slightest.

Mr.  
T. Croudace.  
2 Nov., 1892

- Mr. T. Croudace.  
2 Nov., 1892.
68. Under these circumstances there can, in your opinion, be no claim for compensation? No; they could not possibly claim it.
69. You do not think, in the event of the coal being removed, that your company would make any claim for compensation? No; I am perfectly sure that never could affect us.
70. You provide in clause 2 that your company shall be responsible for the fencing in of land that is severed? Yes; we should fence it entirely at the expense of the company.
71. In the event of dispute as to gates or fencing, you provide in clause 2 that it shall be settled by any two Justices of the Peace? Yes.
72. In that case, then, they would have the power to decide as to who is to bear the expense in the erection of such gates? No; we put up all gates and fences; and I assure you that there will be no dispute so far as we are concerned.
73. Then, so far as your company is concerned, the statement now made by you may be quoted at any time from this evidence in a court? Yes; I give you my word that there shall be no landowner put to the least trouble.
74. You speak for the company? Yes; I speak for the company. I am the company, so far as that goes.
75. As representing the company, you are willing that clause 41 shall be amended so that it shall read: "It shall be lawful but not compulsory except upon the request of the Railway Commissioners"? Yes; I am quite willing for that. I may state that we expect that when the mine is in working order our output will reach 250,000 tons a year; and we should have to pay revenue to the Government at the rate of 6d. per ton royalty, amounting to £6,250, and 10d. per ton to the Railway Commissioners for haulage, amounting to rather more than £10,000 per annum. Provided that we get the railway and develop the mine I estimate that over £100,000 a-year will be spent in wages in working the mine. I have two shafts put down through quicksand, and they have cost our company £26,000. We have already spent about £60,000 altogether.
76. *Mr. Kelly.*] Have you any idea what time it will take to construct the railway, provided the Bill be passed? From twelve to fifteen months. If there were really fine weather we could put it there in twelve months.
77. What amount of labour would be absorbed in the construction of the line? I think that at once there would be upwards of 200 men employed.
78. Would that be the limit? No; I do not say that that would be the limit.
79. That would include all classes—labourers and mechanics? Yes; it includes railway navvies, plate-layers, locomotive men running contractors' locomotives, bushmen for fencing, carpenters for bridge-making, &c.
80. Have the company got the material to go on with the work provided the Bill be passed; there would be no unnecessary delay for importations? No; I may tell you that we have 300 tons of rails lying at the Lambton colliery ready for the construction of the railway. I may state further that there will not be in all Australia a colliery equal to this one when it is completed, either as regards its railway or mining operations.

WEDNESDAY, 16 NOVEMBER, 1892.

Present:—

MR. EDDEN,		MR. KELLY,
MR. HAYES,		MR. LEVIEN.

N. MELVILLE, Esq., IN THE CHAIR.

G. C. Westgarth, Esq. (Westgarth and Company), appeared as Solicitor for the Bill.

Mr. Henry Deane, Engineer-in-Chief, Railway Construction Branch, Public Works Department, sworn and examined:—

- Mr. H. Deane.  
16 Nov., 1892.
81. *Chairman.*] You have examined the Bill now before this Committee? Yes.
82. Have you any objections to any of its provisions? I see that no limit of time has been fixed for the construction of the line, and I recommend that it be two years from the passing of the Act. I also recommend that the works before being used, whether for minerals, goods, or passengers, shall require a certificate from the Engineer-in-Chief, Railway Construction Branch, Public Works Department, that the line has been made in a fit and proper manner, and in accordance with the provisions of the Act. That has been the practice for some time past, and I think it is right for me to bring forward that recommendation. I am not quite clear about the land. It would seem that the Crown land required for the railway is to be handed over to the company without payment. I would merely call attention to that, and point out that latterly at any rate it has been the custom to arrange for some charge to be made, or for rent to be paid for the use of the land.
83. We have it in evidence that most of the land through which the line will pass is held under lease from the Crown, a great portion of it by the company itself; but you would suggest that even although the company hold the surface under lease, some charge should be made for the land taken? Yes; you see that clause 2 of the Bill provides:—
- The ground and soil of so much of the site of the railway as passes over the lands of the said owners of lands respectively and over Crown lands, together with such rights of ingress, egress, and regress, upon the adjacent land as may be necessary for the making and repair thereof, shall be vested by virtue of this Act, and without the necessity of any conveyance in the company, for the purposes of the railway.
- There is no special provision in the Bill with regard to compensation being paid to the Government for the land.
84. In your opinion clause 18 should be so amended so as to make it clear that the Government should be entitled to payment for any Crown land taken? Yes; I make that suggestion, although it is not an engineering matter. In all similar Bills introduced for some time past, clauses have been clearly worded, so that there should be no misunderstanding on that point.
85. Is there anything further you wish to say? No.

Hugh

Hugh McLachlan, Esq., Secretary to the Railway Commissioners, sworn and examined :—

86. *Chairman.*] You represent the Railway Commissioners? Yes.

87. Have you examined the Bill before this Committee? I have.

88. Have you any objections to offer to any of its provisions? Well, of course, as a matter of policy the Commissioners have no objection to the Bill.

89. Are there any alterations that you would suggest? Yes; I have altered the Bill, and I will leave it as amended with you. I will now explain the reasons for the alterations which we propose. In the first place, relative to the connection with the main line, we think it would be better if power were given to the company to make the line up to the railway fences, and let the Railway Commissioners come in practically as the constructing authority between the fences and the actual connection with our line. Of course, then we afterwards can contract with the company that they shall make the connection subject to the supervision of our engineers, and that would practically put the power of making the actual connection in our hands. We propose that the connection should be made in accordance with the 112th section of the Public Works Act. Clause 1 provides that the company may take and occupy 5 acres of land or any lesser area at the junction of their railway with the Great Northern line. We think that a limit of time should be fixed within which the company may take the 5 acres of land, and we suggest that it should be within six months after the passing of the Act. Of course, that would not prevent their taking other land afterwards on payment of compensation, but the Bill as it now stands would give them power to resume that land, perhaps, at the end of the next twenty years. Clause 3 provides that the railway shall be open for public use. We suggest the insertion of a provision to the effect that the line when constructed shall be maintained and kept in repair. There is a point in connection with the maintenance and repair, inasmuch as the Bill gives the company power to carry passengers. I may say, with regard to the line being kept in repair, that as a rule, whilst the coal companies' lines are made by the companies, we in almost every instance do the running with our own engines and trucks, and if the line is not kept in good repair we can refuse to run our engines and trucks over it. Therefore, the company will almost, as a matter of necessity, keep the line in good repair. In the same clause it is provided that the company shall have power to levy tolls. We think that the tolls are pretty heavy—2d. per ton per mile, or 1½d. per ton per mile merely for running powers. When we allow a contractor to run ballast over our line we only charge him ½d. per ton per mile for running powers, and we charge the same to a colliery company for running on the Illawarra line. On this line the running for other parties except this company will probably be done by the Railway Commissioners, if there is any at all, and we think that the case will be met by the insertion of the words :—

In case the Railway Commissioners shall make use of the railway hereby authorised or any branch railway, the tolls payable by them shall be one-half of the above rates.

That is in the event of our running over the line for another company. In clause 4 it is provided :—

That it shall be lawful for the owners or occupiers of the lands traversed by the said railway, or for the said company, to lay down upon their own lands any collateral branches of railway.

We propose to add after the word "company," the words "with the sanction of the Governor and Executive Council." Then they could not make an extension without the sanction of the Governor and Executive Council. In giving a company power to make an extension they might make it to a point which would bring it in direct competition with the main line of railway; therefore, we think it right to have that proviso, that any extension should be made with the express sanction of the Governor and Executive Council. In clause 35 we suggest that the By-laws of the company must be first approved by the Governor and Executive Council, and shall be published in the New South Wales *Government Gazette*. The clause as it stands says, that the By-laws shall be subject to the approval of the Attorney-General of the Colony. We propose to let clause 37 stop at the end of the words "or any of the words thereof," in line 4 at the bottom of page 13, and then to make a fresh clause in reference to the junction, to be clause 38, and read as follows :—

For the purpose of effecting communication between the railway authorised by this Act and the Great Northern Railway, the 112th section of the Public Works Act shall apply, and that the Railway Commissioners shall be deemed the constructing authority thereunder.

That is suggested for the reason that I have previously explained. We have verbally altered clauses 39 and 40, to make them a little bit clearer. We propose to insert a new clause to stand as clause 44, as follows :—

Unless the railway hereby authorised shall be completed and brought into use within two years from the passing of this Act, or within such extended time as the Governor and Executive Council may allow, the rights and privileges hereby conferred on the company shall cease.

Then we propose a new clause, which I admit is quite novel, to stand as clause 45, as follows :—

If the railway hereby authorised shall cease to be worked by the company, or its successors, or assigns, and of the use thereof, shall be permanently abandoned for twelve calendar months, the land, site, and permanent-way there shall, on proclamation by the Governor with the advice of the Executive Council, vest in, and become the absolute property of the Crown without making any allowance or compensation, or paying any consideration in respect thereof, to the company, its successors, or assigns.

The reason why we propose that is this: for instance, a coal-field may be worked out or a coal-mine may be abandoned, and in such a case one of these branch railways may simply block the district. I believe the same trouble has been found to exist in England, where branch railways have been made, and I have heard that in one or two cases the land has gone back into the possession of the private persons from whom it was taken. I believe there are several abandoned lines in the Northumberland electorate now, and we think it would be a wise thing to provide in some way in connection with this matter.

90. Have you any further suggestions to make? No; except one or two verbal alterations.

91. *Mr. Kelly.*] Has a similar clause about the abandonment of the line been inserted in any other Bill in connection with the construction of a private line in this Colony? No.

92. This is the first time that such a clause has been suggested by the Railway Commissioners? Yes.

93. I suppose you have no idea why they have proposed such a clause? Simply because one or two instances have occurred in which it has come to our knowledge that private lines have been abandoned in the Newcastle district, and we think it wise to suggest that something should be done to provide for such a case.

94. Does the abandonment of the private lines tend to retard the progress of the main line? It may block the district, but it does not affect the main line so much.

H.  
McLachlan,  
Esq.

16 Nov., 1892.

- H. McLachlan, Esq.  
16 Nov., 1892.
95. *Mr. Levien.*] But suppose the company closed the line for a time for certain reasons—suppose the line was flooded for twelve months? Well, it is not absolute, except the Governor and Executive Council approve.
96. But then the line becomes the property of the Crown? Yes; the property of the country.
97. *Mr. Kelly.*] In the event of this clause being inserted in the Bill by the Committee, and if the line were abandoned, would the Commissioners be prepared to give compensation for the cost of construction? I do not know. A condition in almost every private railway Bill is that the Government may resume the private line by paying compensation. In the Denilquin and Moama Railway Bill there is not that provision, but in the Tarrawingee Bill it appears, and in all the new Bills power is given to the Government to resume the line by paying compensation, but of course that is while the companies are working.
98. Well, in the event of this company not paying, would they, after they had run their line, say, for twelve or fourteen months, be able to make application to the Railway Commissioners with a view to their taking over the private line? Certainly; they could do that. We have bought one private line since the Railway Commissioners have been in office, viz., the Mount Keira, for £7,500, Parliament granting the necessary permission. That was done to afford us communication with the harbour at Wollongong.
99. Have you any further suggestion to offer? No, sir.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## SCOTTISH AUSTRALIAN MINING COMPANY (LIMITED) RAILWAY BILL.

(PETITION FROM NICHOLAS JOHNS, HENRY HARPER, AND GEORGE STONE, AGAINST.)

*Received by the Legislative Assembly, 9 May, 1893.*

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The Petition of Nicholas Johns, Henry Harper, and George Stone,—

RESPECTFULLY SHOWETH:—

That your Petitioners have been informed and believe that application is being made to Parliament by the Scottish Australian Mining Company (Limited) for authority to construct a railway from their Durham Colliery, in the Parish of Kahibah, to connect with the Great Northern Railway; and your Petitioners desire to enter their protest against the said railway, upon the following grounds:—

That the proposed line of railway will traverse the property of your Petitioners

That your Petitioners did not have an opportunity of appearing before the Select Committee of your Honorable House to give evidence in opposition to the Bill.

That your Petitioners Nicholas Johns and Henry Harper have entered into extensive liabilities for working as a coal-mine the property which will be absorbed by the proposed line of railway.

That your Petitioners have already opened out the said mine, and have already expended large sums of money in mining operations upon the property.

Your Petitioners submit that the passing of the Bill proposed will inflict great injury upon them, because of the unevenness of the surface there is no other portion of the estate suitable for connecting with the Great Northern Railway and available for the sinking of a shaft, erection of a pit-head, and the performance of other work necessary for coal-mining purposes.

That your Petitioners, some fourteen months ago, made application to the Commissioners for Railways for permission to connect their line of railway with the Great Northern Railway, and to construct railway sidings on the property that is comprised in the said Bill.

Your Petitioners therefore respectfully pray that your Honorable House reject the said Bill.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 3 signatures.]

---

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.**

---

VOTES No. 33. WEDNESDAY, 16 NOVEMBER, 1892.

2. SIMPSON'S RAILWAY BILL (*Formal Motion*):—Mr. Neild moved, pursuant to Notice,—  
 (1.) That Simpson's Railway Bill be referred to a Select Committee, with power to send for persons and papers, for consideration and report.  
 (2.) That such Committee consist of Mr. Lyne, Mr. Frank Farnell, Mr. Stevenson, Mr. Bavister, Mr. Wright, Mr. Garrard, Mr. Parkes, Mr. J. D. FitzGerald, Mr. McCourt, and the Mover.  
 Question put and passed.
- 

VOTES No. 36. WEDNESDAY, 23 NOVEMBER, 1892.

5. SIMPSON'S RAILWAY BILL:—Mr. Neild (*by consent*) moved, without Notice, That the Select Committee now sitting on "Simpson's Railway Bill" be authorised to make a visit of inspection to, and hold inquiries in, the locality of the proposed railway works, and that the Committee have power to sit during any adjournment of this House, to enable them to make the said visit of inspection.  
 Question put and passed.
- 

VOTES No. 44. TUESDAY, 13 DECEMBER, 1892.

4. SIMPSON'S RAILWAY BILL:—Mr. Neild (*by consent*) moved, without Notice, That the Report from, Minutes of Proceedings of, and Evidence taken before the Select Committee on Simpson's Railway Bill during the Session of 1891-2 be referred to the Select Committee now sitting on the said Bill.  
 Question put and passed.
- 

VOTES No. 48. WEDNESDAY, 21 DECEMBER, 1892.

1. SIMPSON'S RAILWAY BILL:—Mr. Neild, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee for whose consideration and Report this Bill was referred on 16th November, 1892, together with Appendix and a copy of the Bill, as amended and agreed to by the Committee.  
 Ordered to be printed.

**SIMPSON'S RAILWAY BILL.**

---

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on 16th November, 1892, "*Simpson's Railway Bill*," and to whom was granted, on 23rd November, 1892, *leave to make a visit of inspection to, and to hold inquiries in, the locality of the proposed railway works, and power to sit during any adjournment for the purpose of making such visit of inspection*, and to whom was also referred, on 13th December, 1892, "*the Report from, Minutes of Proceedings of, and Evidence taken before the Select Committee on the same Bill during the Session 1891-2*,"—beg to report to your Honorable House:—

That they have examined the witnesses named in the List\* (whose evidence will be found appended hereto), and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the clauses and Schedule of the Bill, in which it was deemed necessary to make certain amendments.

\*See List,  
page G.

Your Committee now beg to lay before your Honorable House the Bill, as amended by them.

JNO. C. NEILD,  
Chairman.

No. 3 Committee Room,  
Sydney, 20th December, 1892.

---

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 17 NOVEMBER, 1892.

MEMBERS PRESENT :—

Mr. Frank Farnell,  
Mr. Neild,

Mr. J. D. FitzGerald,  
Mr. Stevenson.

Mr. Neild called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Bill *referred*, together with original Petition to introduce same before the Committee.

Committee deliberated.

[Adjourned till Wednesday next, at *half-past Ten* o'clock.]

WEDNESDAY, 23 NOVEMBER, 1892.

MEMBERS PRESENT :—

Mr. Neild in the Chair.

Mr. Bavister,  
Mr. Garrard,

Mr. J. D. FitzGerald,  
Mr. Stevenson,

Mr. Wright.

Present:—Mr. G. Ramaciotti (*Conveyancer in the office of Messrs. Johnson, Minter, Simpson & Company, Solicitors for the Bill*).

James Fulford (*Mayor of Dundas*), called in, sworn, and examined.

Witness withdrew.

John Bennett, called in, sworn, and examined.

Witness withdrew.

Room cleared.

Committee deliberated.

*Resolved*,—That the Chairman obtain the leave of the House, for the Committee to make a visit of inspection to, and hold inquiries in the vicinity of the route of the proposed railway. Also, that the Secretary for Railways be summoned to give evidence next meeting.

[Adjourned till To-morrow at *half-past Ten* o'clock, sharp.]

THURSDAY, 24 NOVEMBER, 1892.

MEMBERS PRESENT :—

Mr. Bavister,  
Mr. J. D. FitzGerald,

Mr. McCourt,  
Mr. Stevenson.

In the absence of the Chairman, Mr. McCourt called to the Chair *pro tem*.

Entry from Votes and Proceedings granting leave to the Committee to make a visit of inspection, &c., *read* by the Clerk.

Present:—Mr. G. Ramaciotti (*Conveyancer in the office of Messrs. Johnson, Minter, Simpson, & Company, Solicitors for the Bill*).

Isaac Chapman called in, sworn, and examined.

The Chairman here entered and took the Chair.

Witness withdrew.

[Re-assembling of the Committee to be arranged by the Chairman.]

[Adjourned.]

MONDAY, 12 DECEMBER, 1892.

MEMBERS PRESENT :—

Mr. Neild in the Chair.

Mr. Bavister,  
Mr. J. D. FitzGerald,

Mr. Frank Farnell,  
Mr. Garrard.

Mr. Stevenson.

Present:—Mr. G. Ramaciotti (*Conveyancer in the office of Messrs. Johnson, Minter, Simpson, & Company, Solicitors for the Bill*).

The Committee proceeded to Rydalmere by steamer.

George Hodge sworn and examined.

Witness withdrew.

Benjamin Crispin Simpson, C.E. (*the Promoter*), sworn and examined.

Witness withdrew.

The Committee then proceeded to inspect the route of the proposed railway, and having returned,

[Adjourned till To-morrow, at *Eleven* o'clock.]

TUESDAY,

TUESDAY, 13 DECEMBER, 1892.

MEMBERS PRESENT:—

Mr. Bavister,		Mr. Frank Farnell,
Mr. J. D. FitzGerald,		Mr. Garrard,
		Mr. Stevenson.

In the absence of the Chairman, Mr. Frank Farnell called to the Chair, *pro tem*.

Benjamin Crispin Simpson, C.E. (*the Promoter*), called in and further examined.

Witness handed in copy of a letter which had been addressed to The Honorable Sir George Dibbs by Dr. F. N. Manning, with reference to the route of the proposed railway. [*Appendix A.*]

The Chairman here entered and took the Chair.

Witness withdrew.

Gustave Ramaciotti sworn and examined.

Witness withdrew.

Hugh McLachlan (*Secretary for Railways*) called in, sworn, and examined.

The Chairman having retired, Mr. Frank Farnell called to the Chair, *pro tem*.

Witness withdrew.

[Adjourned till Thursday next, at a *quarter past Ten* o'clock.]

THURSDAY, 15 DECEMBER, 1892.

MEMBERS PRESENT:—

Mr. Neild in the Chair.		
Mr. Bavister,		Mr. Frank Farnell,
Mr. J. D. FitzGerald,		Mr. Garrard,
Mr. M'Court,		Mr. Stevenson,
		Mr. Wright.

Entry from Votes and Proceedings referring the report from the Select Committee of Session 1891-2 to the Committee read by the Clerk.

Printed copies of the Report referred before the Committee.

Present:—Mr. G. Ramaciotti (*Conveyancer in the office of Messrs. Johnson, Minter, Simpson, and Company, Solicitors for the Bill*).

Hugh McLachlan, called in and further examined.

The Chairman having retired, Mr. Frank Farnell called to the Chair, *pro tem*.

Witness withdrew.

Benjamin Crispin Simpson further examined.

Room cleared.

Preamble considered.

Question,—That this Preamble stand part of the Bill,—put and passed.

[Adjourned till Tuesday next, at a *quarter past Ten* o'clock.]

TUESDAY, 20 DECEMBER, 1892.

MEMBERS PRESENT:—

Mr. Neild in the Chair.		
Mr. Bavister,		Mr. J. D. FitzGerald,
Mr. Garrard,		Mr. Stevenson.

Present:—Mr. G. Ramaciotti (*Conveyancer in the office of Messrs. Johnson, Minter, Simpson, & Company, Solicitors for the Bill*).

Clause 1 read, amended,\* and agreed to.

Clause 2, 3 read, and agreed to.

Clause 4 read, amended,\* and agreed to.

Clause 5 read, amended,\* and agreed to.

Clause 6 read, amended,\* and agreed to.

Clauses 7, 8, 9, 10 read, and agreed to.

Clause 11 read, amended,\* and agreed to.

Clause 12 read, amended,\* and agreed to.

Clauses 13, 14, read and agreed to.

Clause 14, 15, read, amended,\* and agreed to.

Clause 15, 16 read, amended,\* and agreed to.

Clauses 16, 17, 17, 18, 18, 19, 19, 20, 20, 21, 21, 22, 22, 23, 23, 24, 24, 25, 25, 26, 26, 27, 27, 28, 28, 29, 29, 30, 30, 31, 31, 32, 32, 33, 33, 34, 34, 35, 35, 36, read, and agreed to.

Clause 36, 37 read, amended,\* and agreed to.

Clause 37, 38 read, amended,\* and agreed to.

Clause 38, 39 read and agreed to.

New clause to stand as clause 13, read and agreed to.

Schedule read, amended\* and agreed to.

Title read and agreed to.

Chairman to report the Bill with amendments to the House.

\* See Schedule of Amendments.

SCHEDULE

## SCHEDULE OF AMENDMENTS.

- Page 2, Clause 1, line 38. After "years" *insert* "and that the whole of the said railway shall be completely constructed and brought into use within five years."
- " 2, " 4, lines 55 and 56. *Omit* "Commissioners for Railways" *insert* "Railway Commissioners."
- " 3, " 5, " 13 and 14. *Omit* "Commissioners for Railways" *insert* "Railway Commissioners."

Simpson, B. C. ....	19

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

SIMPSON'S RAILWAY BILL.

WEDNESDAY, 23 NOVEMBER, 1892.

Present:—

MR. NEILD,  
MR. GARRARD,  
MR. BAVISTER,

MR. WRIGHT,  
MR. J. D. FITZGERALD,  
MR. STEVENSON.

J. C. NEILD, ESQ., IN THE CHAIR.

Mr. Ramaciotti, conveyancer, appeared to represent Messrs. Johnson, Simpson, Minter, & Co.,  
Solicitors for the Bill.

James Fullford sworn and examined:—

1. *Chairman.*] Are you mayor of the municipality of Dundas, through which the proposed railway line is to run? Yes.
2. And you have been a Member of the Legislative Assembly? I was for a few years.
3. And you were an alderman of the borough of Waverley? Yes, and mayor as well.
4. So that in addition to your present public position you have occupied other public positions which have given you a knowledge of public affairs? Yes.
5. As mayor of Dundas, are you in a position to speak on behalf of the Council and ratepayers with reference to the proposed railway? I am.
6. Has the question of the proposed railway been before your Council? It has.
7. With what result? The outcome of the chat in the Council was that several public meetings were held in the district.
8. Did the Council pass any resolution on the subject? No; but they took part in the calling of public meetings.
9. What was the outcome of the public meetings? A general feeling that the railway would be of great benefit to the district, and a deputation was appointed from one or two meetings to wait upon the Colonial Secretary in reference to the matter.
10. Was there a meeting held at Carlingford? Yes, a very enthusiastic meeting.
11. And at that meeting was a resolution passed strongly favouring the construction of the line? Yes.
12. That meeting was held in March last year? I think it was held in March, 1891.
13. Was there not a further meeting held at Granville, at which you were present? I do not think I was present at that meeting. I was present at one or two meetings at Rydalmere.
14. Were the meetings at Rydalmere held about the same time? They were held in the early part of last year.
15. What took place at those meetings? The proposed railway was discussed and approved of, and it was determined that every facility should be afforded to the promoters to carry it out; and I think resolutions were passed stating that assistance would be given, if necessary, as regards the purchase of the land through which the line would pass.
- 16.

Mr.  
J. Fullford.  
23 Nov., 1892.

Mr.  
J. Fullford.  
23 Nov., 1892.

16. Does your district possess facilities for getting to market and for the conveyance of passengers to Parramatta and to the metropolis? They possess very bad facilities.
17. Are the roads good? I am sorry to say that outside the municipality which I represent they are not good.
18. What is the population out of your municipality? About 1,000.
19. Is the land held by a few or by many holders? It is in the hands of many holders. There are very few large holdings.
20. Then the construction of this line would benefit a settled population of comparatively small holdings rather than speculators or syndicates? I do not think there are any syndicates or people holding land for speculative purposes there. The land is owned by people residing upon small holdings. The railway would decidedly benefit the municipality.
21. It would benefit actual residents rather than speculators? It would.
22. How is the land chiefly occupied? It is principally under fruit orchards.
23. Have the fruit-growers any difficulty in getting the produce to market? Very great difficulty at present.
24. What is their mode of getting it to market? Principally by bringing it direct to Sydney in carts. They also take fruit by steamer.
25. They do not take their produce to the existing railways, but bring it in carts direct to the town? Not so much. They take it to the various railway stations, but not to the extent that they take it other ways. They carry their fruit simply by carts, and by steamer on the river.
26. To what station do they cart fruit? To Carlingford. That is the nearest station to our municipality.
27. Are we to understand that there is already a line of railway in your municipality? No; Carlingford is on the eastern boundary of the municipality. There is also Eastwood.
28. Are the roads connecting the greater part of your district with Carlingford Station easy or difficult? They are in such a bad state of repair that it makes it difficult to get to the various stations, the approaches to the stations are so bad; but there has been a slight improvement since I gave evidence here last.
29. Are those roads under your charge, or are they Government roads? I am referring to Government roads.
30. Would the construction of the proposed railway tend to reduce the cost of maintaining the Government roads in the district? Decidedly, as there would not be such a large amount of traffic on the road.
31. I understand from your evidence that if this line is constructed, instead of taking the produce and traffic from the Government line, it would act as a valuable feeder to it, inasmuch as producers would send their produce by this line to the Government railways, rather than cart it into the town, as they do now? They would do that, decidedly.
32. Therefore, in your opinion, the existing State railways would be directly benefited by the construction of this line? Certainly.
33. *Mr. Stevenson.*] What is about the area of your borough? About  $4\frac{1}{2}$  miles, since the severance of the municipality.
34. You stated that there are about 1,000 acres under cultivation in that district? When I gave evidence before I think there were about 1,000 acres under cultivation. The area of the municipality is 2,688 acres altogether, 1,000 acres of which are under orchards. I have no doubt that the remainder would be made use of if we had a railway.
35. Is not the ground in your municipality very high;—would not the place be suitable for a sanatorium? Some portions, as it rises very considerably. At the starting-point of the line the land is about 100 feet above high-water mark, and at the terminal point it rises to something under 700 feet. It is undulating country.
36. Taking the fruit over bad roads to the stations is, of course, to some extent injurious? It has a very injurious effect upon the orchard business. Fruit is allowed to rot in preference to carrying it to market.
37. *Mr. Bavister.*] The evidence which you gave on a former occasion would lead a person to suppose that the land did not reach as high an elevation as 600 feet;—you say that it rises to almost 600 feet? That is at the terminal point.
38. I gather from your answer to a question that it is less than 600 feet, but to-day you say it is more than 700 feet? I could not say positively, but I understand that where the terminus will be the land is something under 700 feet above high-water mark.
39. Your words as to the meetings gave me some doubt as to whether they were all favourable to the railway;—was any adverse feeling expressed? I do not recollect any adverse opinions being expressed, or one individual at any of the meetings speaking against the proposed measure.
40. You could not give any idea of the portion of the land held in large quantities? The holdings are nearly all small ones.
41. In number they may be, but in area they might represent nearly the whole of the land? The holdings vary in size, from about 5 acres upwards. Most of them are not more than 15 acres. There are a few of from 35 to 40 acres.
42. Are there none larger than 40 acres? No; and there are very few of that size—only one or two. The great bulk of the holdings are from 5, 10, or 15 acres each.
43. *Mr. Wright.*] What is the nearest accessible railway in the district now? I think Thornleigh.
44. You said, in answer to a question, that one of the nearest stations is Carlingford? Carlingford is on the eastern boundary of our borough.
45. What distance is Carlingford station from the bulk of the population that this railway would serve? Carlingford would be about  $2\frac{1}{2}$  or 3 miles from the heart of the district, and Eastwood from about  $2\frac{1}{2}$  to 3 miles.
46. Will this railway go through the centre of the district? It will go pretty well through the centre of our borough.
47. Then it will draw traffic from the eastern and western sides of the line? Yes.
48. Will it have the effect of drawing much traffic from the Government railway? I do not think so. The quantity of traffic it will take from the Government railway will be very trifling indeed.
49. The proposed charges on the line would be no more than the charges on the Government railway, so I suppose there would be a considerable saving to the people in freight? Yes.
50. Your principal means of communication are by road and steamer? Yes; there has been an increase in the traffic in that direction since last year.
- 51.

Mr.  
J. Fullford.  
23 Nov., 1892.

51. Is there not a large quantity of valuable timber beyond Dural? I am not acquainted with that district. I understand that there are Crown lands there beyond the terminus. It would tap that land, I should think.
52. *Mr. Garrard.*] I understand that this line for the first 4 miles will run somewhat parallel with the Hornsby line, at a distance of  $2\frac{1}{2}$  to 3 miles from it? Yes; about that distance.
53. Roughly, following the North Road? Yes, after crossing the river.
54. Then, on reaching Thompson's Corner, this line will diverge considerably from the Hornsby line? Yes.
55. Is it a fact that your borough is now becoming a very popular place for suburban residences? I think there is a great demand for land in the borough for residential sites, by reason of there being so many very fine sites, and the land being very fertile.
56. Is the land going out of fruit-growing, and being used more for residential sites? No; it is not going out of use for fruit-growing; there is a great demand for sites with orchards.
57. And the people of your district are fully persuaded that the line would open up their district very materially? They have not the slightest doubt about it.
58. Have there been any public meetings of any kind on the subject since you were last examined before a Select Committee? No; there have been no public meetings against it.
59. When last examined, you were clearly of opinion that the people in the district were in favour of this proposal, and you say there has been no alteration of opinion since? Not the slightest. There is an increased desire to obtain a railway.
60. You are not aware whether the Railway Commissioners are favourable to the line? I have not the remotest idea.
61. Speaking for the people of your district, you have not heard any dissentient voices against this proposal? Not one. On the contrary, every one is anxious to have a railway. They would do anything to bring about the construction of a railway, knowing it would be a very great benefit to them and the people generally, because it will certainly open up a nice suburb for the people of Sydney.
62. You come into contact with people living further on the other side? Occasionally I do.
63. The people of Castle Hill and Dural? Yes; I have had chats with many of them.
64. Then, whilst you are put to inconvenience those people beyond your borough are at a very great disadvantage as regards getting to town? Yes.
65. If the people in your borough are favourable to the construction of the line, the people further off will be still more so? Yes.
66. Have your Council and the people studied the provisions of the Bill, and do they think it as liberal and as fair as it might be, or do they suggest any amendments? They have studied the Bill, and they think it of a very liberal character. They cannot suggest any improvements in it.
67. You are aware that the Bill provides that this railway should be constructed in three sections, the first of which will be 3 miles 28 chains? Yes.
68. And that for the construction of the first section a period of three years is allowed? Yes.
69. Do you know whether there is any provision in the Bill as to the time within which the second and third sections are to be constructed? I do not recollect.
70. You have only taken notice of that portion which more immediately concerned your own portion of the district? We know that the construction of the first section would take three years. I do not know what the provisions are as regards the completion of the line.
71. Do you think it desirable that there should be limitations as regards the first section, and that the time should be limited for the completion of the other sections? We do think so.
72. And that if there is no provision to that effect in the Bill some provision of the kind should be put in? We did not give much attention to that; we thought the Committee would deal with it.
73. There is no other point in the Bill which you do not think so liberal as it might be, but on the whole you think it a very liberal measure? On the whole, I think it is.
74. *Mr. Wright.*] Are you directly or indirectly interested in the construction of the railway? Not by any means. I am not interested beyond the fact that I am the possessor of a few acres of land.
75. You have no direct or indirect interest in it as a shareholder or a promoter? As far as I am concerned, it matters little whether the railway is made or not. I like the little distance I have to travel to the railway for a drive.
76. *Chairman.*] Do you know whether there exist some thousands of acres of Crown land in the Galston and Dural districts? I understand that there are Crown lands there, but I know nothing of them personally.
77. Do you know whether there are any large timber reserves in the same locality? I have heard it said that there are, but I have not been there.
78. You have no doubt in your own mind that ninety-nine out of every hundred people in your district desire this line to be made? I have not the slightest doubt about it; it would develop the fruit-growing industry and promote settlement generally.
79. *Mr. J. D. FitzGerald.*] The length of the first section is 3 miles 28 chains, and the time allowed for its construction is three years;—what is the reason for allowing that length of time? I understand that a long time is required because of the necessity to construct a bridge across the Parramatta River. That bridge will be of such a character that people will be able to use it for ordinary vehicular traffic.
80. There is no such engineering difficulty in the other sections? No.
81. *Mr. Garrard.*] Is it a fact that agitations have taken place from time to time for the purpose of having the Parramatta River bridged somewhere in the locality where the line will cross the river? Yes.
82. Is it a fact that the Minister for Works has expressed his anxiety for it, but awaits the decision of Parliament with reference to this Bill, with a view to arranging to contribute some portion of the cost of the bridge, so that it may be used for ordinary vehicular traffic? I understand that the Minister for Works is favourable to the construction of a bridge over the Parramatta River, but he will not do anything until he sees if the Bill is passed.
83. Did he express the opinion that an arrangement might be made with the company for the Government and the company to jointly build the bridge? He said that if the Bill was passed, he would consult the company with the view of making the bridge available for public use.
84. There is no communication now over the Parramatta River between what is known as the Parramatta Bridge at Drummoyne and the bridge at Parramatta, is there, except the railway bridge? No; if we desire

Mr.  
J. Fullford.  
23 Nov., 1892.

to get to Auburn or Granville we have to make a detour from  $3\frac{1}{2}$  to 4 miles, where we should have to go only 1 mile if there was a bridge.

85. Can you tell, approximately, the distance between the Parramatta River bridge at Drummoyne and the next bridge at Parramatta? I could not.

86. Would it be 12 miles? I really do not know; it is a long distance.

87. There is no means of getting across the river in that distance, whatever it may be? No.

88. The Chairman was asking you as to your knowledge of Crown lands in the Galston district;—do you know whether there are any Crown lands lying just to the west of the borough, between your borough and Castle Hill? Yes; to the west.

89. If this railway was constructed, would it enhance the value of those Crown lands? Decidedly; the line would tap those lands.

90. So that even in the first section there are Crown lands that would be benefited by the construction of the line? Yes.

91. You consider that the three years allowed for the construction of the first section is only a fair time to allow, in view of the magnitude of the bridge that would have to be built? We think three years would be a fair time, considering that the bridge has to be constructed.

92. *Mr. Stevenson.*] Are you aware that the Rydalmere Council have taken action with the Dundas Council with reference to the proposed railway? Yes; several deputations from them have waited on the Minister.

93. Have you any idea as to what the result of those deputations has been;—has any promise been given, or has the proposal been favourably entertained? The Minister gave us distinctly to understand that he was favourably disposed towards the railway himself, and that he would do all in his power to forward it. Then we waited upon him about the construction of the bridge, and he said, "As I am favourably disposed towards the proposed railway, and know that a bridge must be constructed for it, I should like the matter to stand over pending the decision of the House with reference to the railway." If Parliament passed the Bill he would assist in the construction of the bridge, which would cost £10,000 or £12,000.

94. The impression on your mind then was that in the event of the construction of the railway the Minister would recommend that a sum of money should be paid by the Government to make the bridge available for vehicular traffic? Yes; he said that would be a matter of arrangement between the Government and the promoters.

95. *Chairman.*] The carrying out of such an arrangement would afford convenience to the people, and be an absolute saving to the general revenue? Decidedly.

96. Because the ordinary vehicular traffic would be provided for at a comparatively small cost compared with what would have to be spent if the Government constructed the bridge? Yes.

97. Has application been made to the Government to construct a line similar to this in that locality along another route? I understand that there has been a proposal to construct a line *via* Westmead to Dural.

98. That is very much to the west? Yes.

99. Does it pass through a densely-settled locality? I do not think so; it is sparsely populated.

100. Does it pass through as good soil as the line now proposed will pass through? Not by any means; the soil on the other route is not to be compared to that on this route.

101. Would the Westmead route be of any service to your borough? Not the people of our borough; it might serve the people of Dural.

102. *Mr. Wright.*] Would it serve the Pennant Hills people? It would not.

103. *Chairman.*] What is the result of the application to the Government for the construction of a line *via* Westmead;—have the Government held out any prospects of building the line at present? I do think so. My memory does not serve me well as to the result of their application.

104. *Mr. Wright.*] You said, in answer to a question asked by Mr. Garrard, that there were Crown lands adjacent to your borough which the first section would tap;—can you give any idea of the area? I could not.

105. Are there 500 acres? I have not seen a plan of that land.

106. You only know that there are some Crown lands there? Yes; but whether a large quantity or not I could not tell.

107. *Mr. Ramaciotti.*] Do you know what time the fruit-carts start for town? They start about half-past 9 in the evening. The distance from my place to Paddy's Market is 13 or 14 miles, and I understand that it takes till 2 or 3 o'clock in the morning to get there.

108. And when the roads are bad they do not get there until after the market is over? I never heard of them not getting there in time for the market.

109. Have you heard that, owing to the state of the roads, very little traffic indeed goes to Carlingford, and that they prefer to be all night on the road to Sydney? Yes.

110. Do you ever hear of carts sinking down and having to be dug out? At the approach to the Carlingford Station they have been bogged. They have been within half-a-mile of the station, and then unable to get any further.

111. *Chairman.*] Is there any other statement you wish to make? I am quite satisfied that the proposed railway will be of great benefit to the public; that it will have the effect of developing the fruit-growing industry and of promoting settlement. I know many people who desire to settle in the district, because of the salubrity of the climate and the quality of the land, but the means of getting there are such as to deter them.

112. *Mr. Wright.*] Could you ascertain the approximate tonnage inwards and outwards that would be available for the proposed line? It would necessitate a little expense, but I think we could get it by the employment of a man or two for a short time.

John Bennett called in, sworn, and examined:—

Mr.  
J. Bennett.  
23 Nov., 1892.

113. *Chairman.*] You are the original proprietor of a railway from Granville to Parramatta River known as the Rosehill Railway? Yes.

114. And the proposed railway is to be an extension of that line, crossing the Parramatta River, and traversing the districts of Carlingford, Rydalmere, Castle Hill, and terminating at Dural? Yes.

115. Do you know the route and the locality? Yes.

116.

Mr.  
J. Bennett.  
23 Nov., 1892.

116. Have you been present at any public meeting held in the district through which the line was to pass? Yes.
117. Was the opinion of the majority of those present at that meeting in favour of the Bill, or was there an absolutely unanimity of feeling in favour of it? There was not unanimity in all cases. Directly on the route there was unanimity, but on the part of those who wished to go by Westmead there was opposition; that sprung from Parramatta.
118. Westmead is a district considerably to the west? Yes.
119. How many miles? Four or 5 miles.
120. And the opposition to the line was the result of a desire for the construction of a line *via* Westmead? Yes. The route *via* Westmead to Dural would be the more direct route, but on the proposed route a much larger extent of country would be developed.
121. The Westmead line would be shorter, but would not develop the same extent of country? Nothing like it—the country along the proposed route is so settled with small holdings.
122. We have had evidence that this proposed route is through small holdings? Yes.
123. Would the line from Westmead to Dural pass through small or large holdings? Through large holdings. The line if constructed by one route would benefit a great many; if constructed by the other it would benefit a few.
124. Is the country equally good on the two lines of route? Yes; I think it is good on the Westmead route.
125. It is good soil? Yes; I think you may say it is quite as good as the soil on the proposed route.
126. But the land on the Westmead route has not been settled to the same extent? No, nothing like it.
127. Does the fruit and other produce of the district find its way to Parramatta or to the metropolis? To the metropolis.
128. There is no market at Parramatta? No.
129. I suppose Parramatta is supplied with produce from the immediate vicinity of the town? Yes.
130. Therefore, the producers want a line to the metropolis, and not to any local market? Exactly.
131. How do they get their produce to market? They either go to Parramatta or avail themselves of the river. Some drive into Sydney with it.
132. By vehicle? Yes; they leave by spring-carts in the middle of the night.
133. How many hours does it take them to reach the market? Sometimes they are all night on the road.
134. What is the total distance from Castle Hill to the locality of the railway line where the proposed station is to be? Seventeen or 18 miles.
135. Have you any knowledge of the fruit trade? Yes; I am a large grower.
136. Is the carriage of the fruit over the existing roads injurious to the fruit? When the fruit is ripe it suffers very much. If fruit is not carefully handled, even when carried by railway, it suffers.
137. But carriage 18 miles by railway would be much less detrimental to fruit than 18 miles carriage by cart? Undoubtedly. Then the question of expense comes in. The railway charge is a penny a case for fruit.
138. What is the cost by cart? You have to employ a man, a horse, and a cart.
139. Have you ever calculated the difference in the cost? No; I always send by railway or by river.
140. Is the river transit convenient to many persons? No; it is the contrary.
141. It is out of the way for the majority? Yes; and more expensive.
142. Can you tell the Committee whether the present proprietors of the Rosehill racecourse are in any way connected with the promoters of the Bill? They are not.
143. Then, if there has been any idea abroad that the racing authorities now controlling Rosehill racecourse are interested in the Bill, that is an entire error? Yes; they have nothing whatever to do with it.
144. *Mr. Garrard.*] Since you last gave evidence, has there been any public meeting in the district against the proposed line? I am not sure; there may have been one.
145. If so, do you think the feeling is increased in favour of the line, or has there been any antagonism arising against it? No; I think there is a great wish for the line. Those who were opposed to the line are now in the movement, because they can see that it gives them a chance of obtaining better communication.
146. Then, if the railway would be of very great benefit to those living on the first section, it will be a still greater benefit to those living on the second and third sections? Undoubtedly.
147. Three years is allowed for the construction of the first section;—do you think that is rather a long time, or, in view of the construction of the bridge, a reasonable period? I think it is a reasonable time.
148. Are you aware whether the Bill provides for any time during which the second and third sections should be completed? I think it does, but I am not sure.
149. Do you think that if there is not there ought to be a provision fixing the time? Yes, no doubt; but it gets much more difficult of construction after you past Cox's.
150. Yes;—but there is no expensive bridge to construct? No.
151. This line runs fairly parallel to the Northern line till it reaches Thompson's Corner? Yes.
152. Then it goes away from the line in a north-westerly direction? Yes.
153. Although there might possibly be a little conflict between the existing line and this as far as Thompson's Corner—a sort of beneficial rivalry—there can be no rivalry between them after leaving Thompson's Corner? No, none whatever.
154. Have you come into contact with people living in the Dural and Galston districts? Yes.
155. Are they very loud in their complaints about the want of suitable communication with the metropolis? Yes; they have been very badly treated.
156. It is a grand district, but they have been badly treated? It is the grandest district in the Colony.
157. Have you heard anyone out there being against the proposal? I have not. They were when they thought they could take the direct route by Westmead.
158. But, thinking this route most likely to become an accomplished fact, they gave their adherence to it? Exactly.
159. Have you heard complaints on the part of persons there through whose property the line will go as to the provisions for compensation? No. Communication has been opened up with all the holders of land, and I think they have been most liberal.
160. *Mr. Stevenson.*] If a line were constructed, would it not be a great feeder to the present Government line? It would be a very great feeder and a constant source of revenue.

Mr.  
J. Bennett.  
23 Nov., 1892.

161. If there had been a bridge over the Parramatta River at Rydalmere, would there not have been a large traffic at present? We have tested that by watermen's boats, and it was wonderful.
162. Suppose there had been a punt there, would it not have given a favourable return? Taking Cox's as the first terminus, my impression is that it would easily pay 10 per cent.
163. Then, at the same time, it would develop the fruit industry, and open up an area for residential sites? Yes; there are many small orchards year after year giving greater returns.
164. Do you know if there is any State forest there? There is at the terminus at Dural. It is glorious timber country there.
165. *Mr. Wright.*] Do I understand you to say that you are one of the promoters of this scheme? Yes.
166. Have the promoters ever gone into the question of traffic with a view of satisfying themselves as to the prospects? I have explained how this scheme was forced on the proprietors of the Rosehill line. The Government have the proprietors of Bennett's railway so bound down that they cannot make money. First, they say they have the power to take the line over at the then value, no tenure being fixed. We could have sold the railway twice to English capitalists, but there was no tenure—the Government could take it at any time. Then the Government would not allow terminal charges, which makes it part of the main line. We get a penny per ton per mile without terminal charges.
167. *Mr. FitzGerald.*] What is the definition of terminal charges? The first 15 miles come under the terminal charge. Then we have a right under that within 15 miles to make a definite charge, but the Government, by making the line a continuation of their line, exclude us from that.
168. *Chairman.*] That is a definite charge over and above the mileage? Yes.
169. What does that usually amount to per ton? It varies. We should have a large revenue from the Shale and Oil Company. We should be able to charge them 1s. or 6d. per ton to carry the shale; at present they only give us a penny.
170. Therefore, the ownership of the existing line to the river at Rosebill is a question of loss instead of profit? I would not say that, because the passenger traffic is so large, and it is increasing very much. Last year we carried over 60,000 passengers.
171. *Mr. Stevenson.*] What do you get for them? We get a 1½d. each for first-class passengers, and 1d. for second-class passengers.
172. What do the Government get for the passengers? Their return is, I think, 2s. each. They do splendidly. We are left out in the cold, because we cannot make our own charges.
173. *Mr. Bavister.*] Do the Government provide all the rolling-stock? Yes; but we have to keep fettlers always on the line.
174. *Mr. Wright.*] Have the promoters within your knowledge ever compiled any statistics as to the possible tonnage and revenue? We have, but I have not the figures just now.
175. Could you obtain the figures? Yes.
176. I understand that the Government bring shale to the river bank, and that they make a through rate from Joadja Creek? Yes.
177. And make terminal charges? Yes.
178. And only pay you a proportion of the mileage? Yes.
179. And you get no benefit from the terminal charges? No.
180. Is there any traffic between Granville and the river? No; but we could have if we were allowed to cross the Government line. Mr. Brunton would have all his grain carried that way, and there would be a traffic to Hudson Brothers' works, but the Government say, "No, you shall not cross our line."
181. Is there any traffic between Sydney and the river? Nothing to speak of. We had an application for a site on which to build a large wool-store there, so that the wool might be taken direct from the store to the ships.
182. Have you any assurance from the Railway Commissioners that if this extension is carried out they would treat you in a different manner to what they are doing now? We have taken excellent care of that.
183. Have any surveys been made for the bridge across the river? Yes; soundings have been taken, and the Government have offered to subsidise the construction.
184. Has there been any communication between the promoters and the Government with regard to making the proposed bridge available for ordinary vehicles and for pedestrians? Yes.
185. *Mr. FitzGerald.*] The short extension known as the Rosehill railway is a light line? No; it is constructed exactly like the main line.
186. Do you propose that this shall be the same? Exactly.
187. There was a controversy in the district about two rival routes, and one you said was a direct line which would run through large holdings;—what is the character of the population on the large holdings? Those lands are held for speculative purposes.
188. But the route you propose will go through small holdings? Yes.
189. What is the character of the small holdings? They consist of orchards and residential sites.
190. Are there new holdings taken up already that are likely to be turned into orchards if this line is constructed? Yes; it makes a difference between the expense of 1s. a case for fruit and 1d.
191. What do you think would be the cost of the first section of the line? I do not remember what the estimate is.
192. The bridge would be the biggest item? We do not anticipate that the bridge will cost so much, because the Government will assist us to build it.
193. Do you expect an immediate return? We expect the first section to pay hand over fist.
194. Speaking not as a promoter of the railway, but as a resident in the district, do you think it best that the line should be constructed by private enterprise or by the Government? I think it is an excellent speculation as a matter of private enterprise.
195. Do you not think that if the Government constructed the railway, they could put in force the betterment principle? Yes; I think it is a very excellent thing.
196. But private enterprise is handicapped, inasmuch as it is compelled to pay compensation? Well, we get over that difficulty by making arrangements before the thing is started. The people have behaved most liberally.
197. The present line is run at a loss? No; I suppose that by the passenger traffic we very nearly touch 4 per cent., and, handicapped as we are, I consider that very good. It is an unjust thing, and a great hardship that the present line should be trammelled with the conditions to which it is subjected.

198. But those conditions do not exist with regard to this scheme? No.
199. *Mr. Stevenson.*] If the line is constructed, will not the first section pass through two municipalities? Yes.
200. Would the Westmead line pass through any municipalities? I do not know that Westmead is in a municipality.
201. If the Westmead line were constructed it would not pass through any municipality? No.
202. Is the population on the Westmead route anything like the population on the route now proposed? There is no comparison at all. As you know, we have town-halls, churches, and schools.
203. The proposed route is already very thickly populated? Yes.
204. *Chairman.*] Is it a fact that the proprietors of one of the largest and best orangeries in the district had to allow the whole of his crop to rot for want of means to get it to market, owing to the deficient means of transit? Yes.
205. That happened the season before last? Yes.
206. Did anything of that sort happen last year? I do not think so.
207. *Mr. Bavister.*] Is it not also a fact that in years when fruit is plentiful it is allowed to rot in orchards close to the means of communication? I do not know.
208. You do not know to the contrary? The price is sometimes so low that the fruit does not pay for picking.
209. No matter how good the communication may be? No.
210. I understood you to say that the proprietors of the Rosehill line are simply charged with the maintenance of the road and the buildings? Yes.
211. Do the Commissioners go to all the expense for rolling stock and the conveyance of the traffic? Yes.
212. As a matter of fact, you are only charged with the maintenance of the road? Yes.
213. In the event of an accident the liability would in the first case come on the Commissioners? Unless it was caused by anything we ought to have done.
214. If an accident occurred to the traffic at the station the Commissioners would be responsible? Yes; the stations are on the main line. There are none between Clyde and Rosehill.
215. The Rosehill line is provided with servants by the Commissioners for Railways? Yes.
216. You say that the first section of this line would pay at once? Yes.
217. Does that mean that the second and third sections will pay? I think they will create their own settlement and traffic. Look at the enormous number of people who would go to a district like that for an outing.
218. Supposing the paying of the second and third sections to be doubtful, is not that an additional reason why it should be stated in the Bill when those two sections are to be completed? Yes.
219. *Mr. FitzGerald.*] How long, after the passing of the Bill, is it intended to start the making of the line? As soon as practicable. It must be finished within three years.
220. *Mr. Stevenson.*] Would not the promoters construct the earthworks at once, as well as the bridge? Yes.
221. *Mr. Ramaciotti.*] Everything now is in readiness to proceed with the work, is it not? Yes; if the Bill had passed when it was first introduced everything would have been under way at once.
222. *Mr. Stevenson.*] In the event of the Bill passing, would it not give employment to a large amount of labour? Of course, necessarily; and as soon as the construction of the line is arranged for, I know half-a-dozen people who will commence to cultivate.
223. *Mr. Ramaciotti.*] As regards the oranges rotting in the orchard, about which a question was asked, had the railway been constructed, do you think those oranges would have been allowed to rot? Certainly not. You have to look at 9d. per case expenses to the agent, and then the costly mode of transit.
224. *Mr. Stevenson.*] If the line is constructed, there is a proviso in the Bill that the Commissioners may take it over at any time? That we want to knock on the head. It is in Bennett's Bill, but not in this. It is a dreadfully one-sided arrangement. Suppose I want to sell to an English capitalist, he looks at the conditions, and he says, "The Government, after all my trouble in arranging my financial matters, will have power to take the thing over at the then value."
225. *Mr. Bavister.*] Something has been said about the large number of men that would be employed in the construction of the railway—I can understand that there may be a large number for a fortnight, but how many men would be employed during two and a half years out of three years on the first portion? I am not in a position to reply to that.
226. *Chairman.*] Have you any idea of the number of men employed per mile on railway works? We had never less than 500 on the construction of the Rosehill line.
227. What was the mileage? Two and a half miles the first part.
228. Do you recollect how long those men were employed? About nine months.
229. Do you recollect how long after the passing of Bennett's Railway Bill the works were actually commenced? About six weeks after.
230. And men to the number of 700 were employed upon the work within two months of the passing of the Bill? Yes.
231. As far as your knowledge goes, would a similar condition of affairs exist upon the line now before the Committee if this Bill were passed? That would be a question for the contractors, but I should think that a great many more men would be employed, because this is a bigger undertaking altogether.
232. You would anticipate as speedy a commencement of this work as there was of the other line? Yes.
233. *Mr. Ramaciotti.*] The orders for the ironwork would have to be placed at once, would they not? Yes.
234. Would not that give employment? Yes; indirect employment.
235. *Mr. FitzGerald.*] Do you propose to have the ironwork done in the Colony? I would have it done here; I am a Protectionist. I should like to tell Mr. Bavister that the cost of the present line— $2\frac{1}{2}$  miles—was over £50,000.

Mr.  
J. Bennett.  
23 Nov., 1892.

THURSDAY, 24 NOVEMBER, 1892.

Present:—

MR. BAVISTER,  
MR. McCOURT,MR. STEVENSON,  
MR. J. D. FITZGERALD.

J. C. NEILD, ESQ., IN THE CHAIR.

Mr. Ramaciotti, conveyancer, appeared for Messrs. Johnson, Minter, &amp; Co., Solicitors for the Bill.

Isaac Chapman called in, sworn, and examined:—

- Mr. I. Chapman.  
24 Nov., 1892.
236. *Mr. McCourt.*] You have had sole control of all the arrangements in connection with the Rosehill railway? Yes.
237. For how long? Ever since the line was built and opened for traffic.
238. Have you made any efforts to increase the return and afford convenience to the travelling public? Yes, continually. We have made efforts to improve the traffic.
239. In what way? First, we endeavoured to work up the goods traffic over the line, and when the extension we now propose was projected the people on the other side of the river asked us if we could convey them over the Rosehill line, and I endeavoured to meet their wishes by putting on an engine of our own and hired carriages from the Commissioners, but the Parramatta River was unbridged, and the passengers—chiefly ladies and children—did not care to come across in boats. I made every effort to get from different Government departments, and also from others who had such things, means to carry the passengers across, but all our efforts failed, and after carrying the traffic for some time we had to abandon the undertaking, although it was evident that if there had been a bridge there there would have been a very large traffic.
240. If you had a bridge across the river it would be a very great convenience to the people? Undoubtedly.
241. That is one of your difficulties—the want of a bridge? Yes.
242. And one of your objects is to put a bridge over the river? Yes.
243. Would that bring traffic to this line? Yes.
244. Under your present Act the determination of the rates to be paid for the use of your line is determined by the Governor-in-Council? Yes.
245. Has that been found to work well? No; it has worked very badly indeed.
246. In what way? The Act provides that the Railway Commissioners shall use the line on giving certain notice, and the question of rent is left entirely in the hands of the Executive, and up to quite a recent time—indeed up to to-day—the question of what the Rosehill proprietors should receive from the Government for carrying goods over the line has not been settled, although I could exhibit a batch of correspondence on the subject. In spite of all our efforts in the past to get a proportion of what should be paid for the concession, the matter has never been settled until to-day.
247. You never got anything for it? We never got a cent. The Government have been using the line since 1888 for goods traffic, and we have never had a penny from them.
248. What is the arrangement now? The arrangement now is that we shall be paid 2s. 6d. for every truck that runs over the railway. It will not pay handsomely, but that is better than receiving nothing at all.
249. It would be sufficient to keep the line in order? Yes.
250. Which you have done at your own expense? Yes; of course it is different with regard to the passenger traffic to the Rosehill racecourse. The Act provides for certain fixed passenger rates, and those rates have been compromised by the Commissioners.
251. *Chairman.*] Do you maintain fettle to keep the line in order? Yes.
252. Is the line maintained to the satisfaction of the Commissioners? Yes.
253. Can you tell the Committee, knowing, as you do, the force of the local traffic, whether the proposed line would take business to or draw business from the Government railways now existing? I am of opinion that it would increase the revenue of the Government railway. A large traffic will be built up by this railway on the other side of the Parramatta River, and whilst it would give the promoters certain profits, the Commissioners, having to continue the carriage of goods from the Clyde station, would get as much, if not more, out of the traffic as we should.
254. From Clyde to the metropolis? Wherever the traffic went. Some of the goods may go to Bourke.
255. The probabilities are that the bulk of the traffic would come to the metropolis? Yes.
256. There is no probability of this line being merely used to bring produce to the steamers on the Parramatta River? No.
257. In your opinion, the fruit and other produce would be brought direct to Clyde by this line, and on to Sydney by the Government line? Yes.
258. Can you tell the Committee whether the present owners or managers of the Rosehill racecourse have any concern whatever in the promotion of the present Bill? They certainly have not.
259. Absolutely nothing? Certainly not.
260. And if such an impression was abroad in the House when your previous Bill was under consideration it was positively erroneous? Yes.
261. You notice that I am using terms perfectly incapable of evasion? I do. I may say that the same remark was made to me when the Bill was brought forward last Session, and I was very much surprised to hear such statements, because the Rosehill Racecourse Company (Limited) is entirely separate from the owners of this railway.
262. There is no partnership? There is no connection between them whatever.
263. There is no connection whatever existing between the Rosehill Racecourse proprietary and the proprietary of the existing railway at Rosehill, or of the proposed line now under consideration? They are absolutely distinct.
264. *Mr. Stevenson.*] In the event of the bridge being built over the Parramatta River, do you know of your own knowledge whether the Government will be willing to contribute any portion of the cost with the view of making the bridge available for general traffic? They have offered to contribute towards the cost.
265. How many men are employed on the present line keeping it in repair? Three men. 266.

266. Can you state the number of passengers carried annually? The traffic is increasing steadily in spite of depressed times. Last year we carried over 60,000.
267. When you gave evidence before you said 70,000? At that time I had not taken the trouble to ascertain the exact figures.
268. Were these single or return fares? Single fares.
269. If the line were extended, do you think it would add very much to the traffic, a portion of which would go to the Government line? Yes.
270. What would be the proportion that the Government would receive for running over their line? The length of the proposed railway is about 11 miles, and the distance from Clyde to Sydney is about 11 miles, so that the Government would get about the same rate that we should do.
271. If this extension were made, would you provide your own rolling-stock, or let the Railway Commissioners find the rolling-stock? If the line is built we shall probably get our own rolling-stock. The use of the Government engines has not proved satisfactory on the Rosehill line for goods traffic at any rate.
272. Would that necessitate transshipment at the Clyde Station? No; the line would be of the same gauge as the Government line, and there is provision in this Bill for the Government to run over the line.
273. *Mr. Bavister.*] Can you give us any idea what proportion of that traffic for last year was the ordinary business traffic, apart from the traffic to the Rosehill racing-grounds? The passenger traffic is entirely a traffic to the Rosehill racing-ground.
274. It serves nothing at present but the Rosehill racecourse? No; we cannot get the river, and the Commissioners do not feel disposed to put on engines and carriages, although people down the river have petitioned for a service to bring them up to the town. The Commissioners having to contribute half the proceeds to us do not see the force of putting on their engines.
275. You told us that for some time you had a traffic over the river. Then I suppose you were running the traffic entirely under your own control? Yes.
276. How many passengers did you carry then in a week? I really could not tell you; it was not a very large traffic. I do not think that the total would be thirty a day.
277. How many trains a day were you running? Five or six each way.
278. That only gives about two and a half passengers per train? Yes; we had only one carriage. Of course the main business was in the night and in the morning, to catch the train to and from Sydney.
279. You say you think a large amount of revenue would be brought to the Government railways by the extension of your line. As a matter of fact, would not the considerable portion of that traffic be traffic which goes out of your district to Parramatta, and consequently only be a diversion of the traffic, not the creation of new traffic? In a measure it might be, but the people who are to be served by the railway are now very heavily handicapped by big rates, and having to start from their homes in the middle of the night to travel a long distance to reach the market.
280. I was only referring to the increase of the traffic? A large traffic now goes down the river. The Government would get that, and so should we, instead of its going by steamer.
281. Is there a boat for carrying cargo on the river? There are several. From one district alone—Rydalmere—they send something like 500,000 cases of fruit per annum, which now goes down the river. That traffic would go over our railway and the Government line.
282. That may not actually take place. Is there not an idea that fruit gets less knocked about when conveyed by water carriage, and is consequently in a better condition for the market? If you go over the line you will be surprised at what you will see. No one could carry stuff from Castle Hill down to the river in the same condition as the railway could carry it. The roads are very bad.
283. Even when the railway is constructed, will not some of the outlying residents have a considerable distance to go by road, and will they not be just as likely to send their fruit by water, seeing that it gets less knocked about by water carriage than by railway carriage? I think not. The bulk of the fruit goes from Ryde. The railway intersects Ryde, and goes north. All those fruit-growers on the other side are not likely to go over the railway to Ryde, as they do at present.
284. *Mr. FitzGerald.*] What connection have you with this railway scheme? I represent the mortgagees of the Rosehill railway. I am the manager.
285. Have you any interest in the proposed railway? Yes, I have. Mr. Simpson is interested in it with us.
286. Can you give the names of any other gentlemen who are promoting this railway scheme? Only the mortgagees of the Rosehill Company and Mr. Simpson.
287. What are the reasons why the Rosehill Railway Company are endeavouring to get this line extended? The present line is of too short a length for a company to be able to make it pay. It would not pay to run locomotives and rolling-stock over a line 3 miles long, but it will pay if this extension is made, and it will benefit the district. Bennett's Railway Act contains a clause which almost prevents our making the line pay. A clause in that Act provides that we shall only charge the same rates that the Government charge, and you can easily understand that running for 3 miles at a half-penny and a farthing per mile per ton will never pay. It is considered that an extension of the line will convert the Rosehill railway into a paying property, and that at the same time it will benefit the people of the district, who are clamouring for a railway.
288. But this railway, according to the evidence, pays? Yes, it pays; but not up to the ordinary standard of investments.
289. If the Bill is passed, is there any probability of the promoters floating the scheme in London? Assuming that the concessions will be granted, they are arranging matters for its construction.
290. They are arranging to obtain British capital for the purpose of its construction? They are arranging to obtain capital.
291. By the evidence given yesterday we learned that the present railway could have been sold twice to English capitalists, but for the fact that the tenure was not sufficient? That is quite true.
292. Then, in the present Bill, you provide for a more satisfactory tenure? I think so.
293. What are the terms of the tenure? The 36th clause says:—"It shall be lawful for the Governor, with the advice of the Executive Council, at any time after the purchase by the Government of the Rosehill railway, under the powers in that behalf vested in him by Bennett's Railway Act of 1886, by notice in writing addressed to the said Benjamin Crispin Simpson, or upon publication of a notification in terms

Mr.  
I. Chapman.  
24 Nov., 1892.

Mr.  
I. Chapman.  
24 Nov., 1892.

terms of section 20 of the Public Works Act, to require the said Benjamin Crispin Simpson, his heirs, executors, administrators, or assigns, to sell, and thereupon the said Benjamin Crispin Simpson, his heirs, executors, administrators, or assigns shall sell to the Government, as the case may be, the said railway extension upon the terms of paying the then value (inclusive of compensation for compulsory sale not exceeding 10 per centum) of the said railway extension." You will see the difference there. First of all it provides that the Government cannot resume this line until they have resumed the Rosehill line, because the extension would be of no use without that, and, secondly, it provides that there shall be compensation for compulsory sale of an amount not exceeding 10 per cent.

294. You provide, I suppose, for arbitration in the usual way? Yes.

295. Do you know anything of the state of public opinion in regard to the railway in the districts affected? It is very favourable.

296. In what way has that been ascertained? By public meetings and by petitions.

297. Was the expression of opinion in the district in favour of any railway or of this railway? In favour of this railway.

298. Are you sure whether the expression of opinion was in favour of a railway to be constructed by private enterprise, or whether it would not have equally applied to a Government railway? I suppose those people see that there is a better chance of getting a railway constructed by private enterprise, and they do not care who builds it.

299. As a matter of fact they want a railway? Yes; I suppose they would be glad if the Government did it, as long as they got a line.

300. *Chairman.*] Will you look at the Bill which was before the House last year as amended and agreed to by the Select Committee;—the last Committee made a series of alterations in clause 36? Yes.

301. Are those alterations embodied in the present Bill? They are.

302. *Mr. Stevenson.*] I see that clause 1 provides that the first section of the railway shall be completed within three years? Yes.

303. Would the company be in favour of a provision compelling them to complete the other two sections within a given period? The intention is to build the whole of the line.

304. Yes, but would they be likely to go on with it, seeing that the first section goes to the bulk of the population? The second and third sections have capabilities which would warrant the construction of the line.

305. In your opinion, the company would not be likely to stop at the first section;—would the company object to the insertion of a clause compelling them to complete the whole line within a period of three years? I think not.

306. Can you say whether the Railway Commissioners are favourable to the company constructing the line? I think so. I have had several conversations with them unofficially, and I have never heard any objection to it.

307. *Mr. FitzGerald.*] What would be the cost of the whole line? About £150,000.

308. Including the bridge? Yes.

309. *Mr. Bavister.*] I am to understand that it is the proprietors of the railway who are in conjunction with Mr. Simpson in reference to this Bill? Yes.

310. *Mr. Stevenson.*] The racing people have no interest in it? No; many people said it was a job of the racing people to make money out of the railway, as well as making money out of the racecourse. It is simply a legitimate enterprise to give the people on either side of the river railway accommodation.

311. *Chairman.*] You repeat that the parties interested in the ownership and management of the racecourse at Rosehill have had nothing to do with this project? I do.

312. *Mr. Stevenson.*] You said that there were droghers on the river for the conveyance of fruit? Yes.

313. Of course at present they have to cart the fruit to those droghers? Yes.

314. In the event of the line being constructed, would it not go near the principal capitals, and do away with the necessity for carting? Yes; it will be quite close to them. The line would be along the ridge, and all that beautiful district is settled. If you go to the westward you reach the Westmead and Dural route. When the Committee visit the district they will see the difference between the Rosehill line, whether it is to be built by us or by the Government, and the Westmead to Dural line.

315. *Mr. FitzGerald.*] It is proposed to build a line by Westmead? Yes; the Parramatta people are agitating for it.

316. *Mr. Stevenson.*] It is not a fact that a good deal of the opposition on the part of those in favour of the Westmead line has been abandoned on finding that the Government are not likely to make the Westmead line? I have thought so, but to my surprise I find that yesterday the Parramatta Council voted a sum of £20 to be spent in taking measures to defeat this Bill. The agitation against the line is entirely from the Parramatta side. I have gone through the settled district. I have met the settlers and attended public meetings, and during the whole of that investigation I heard only one voice raised against the building of the railway.

317. *Chairman.*] Can you tell us what is the objection on the part of the Parramatta residents to the proposal before the Committee? I believe they think that the traffic which now goes through Parramatta will be diverted to Clyde and Granville.

318. That the fruit traffic that now goes by cart to Parramatta railway station would go by the Rosehill railway and *via* Clyde to Sydney? Yes; those men who cart fruit every day to Parramatta naturally spend money there, but when they simply come from their farms to our railway station no money will be spent in Parramatta.

319. Then the result of your inquiries is that objection is raised against this line less in the interests of the people living in the district through which the railway would pass than in the interests of the Parramatta shopkeepers? Yes.

320. *Mr. Ramaciotti.*] At present the line has been and is used by the Government for storing their trucks? Yes, very largely. At the time of the maritime strike, and subsequently, the railway was used for storing rolling-stock. When the strike terminated there was a great congestion of traffic, and the Commissioners could not handle it at Darling Harbour. They therefore asked me to allow them to use the Rosehill line as a siding. I thought the arrangement was a temporary one, but I believe it goes on to the present day.

321. At the time when you had the punt in use to bring passengers across the river, I think the weather was very bad? Yes; it was in the month of June.
322. Clause 6 says, "The said railway extension shall be open for public use upon the payment of the tolls and charges following, that is to say—for passengers, a sum not exceeding the sum of 2d. per head per mile; for goods, the same rates per mile as are charged on the Government railways";—would that not create a great deal of inconvenience when you wanted to make special arrangements for special goods traffic? Yes.
323. Do you suggest that that part of the clause should read the same as the clause regarding passengers, "for goods a sum not exceeding the same rates per mile," so that you may be able to make the charge as low as you like? Yes.
324. *Chairman.*] You desire to have the clause altered? Yes. My reason for asking that the words "not exceeding the same rates" be put in is that the Railway Commissioners cannot make discounts and allowances to people using the railways. They have to get the Executive Council to approve of the rates. If there had been such a clause in Bennett's Railway Act, I could often have had traffic over the line which under the Commissioners' rates was prohibited. A man carting stuff to Parramatta may come to me and say, "The Government rate is too high for carrying my fruit to Clyde." If the clause is amended as I suggest, I can cut the rate as I like to the advantage of the public.
325. And of the Government railways? Of course. I could not cut it beyond the Clyde station. Provided it does not exceed the Government rate the public are protected. If the amendment is made it will enable me, without having to go through the forms of red tape, to get bylaws approved to allow me, as a merchant would do, to make whatever terms I liked.
326. You wish to be in the same position with respect to goods as regards special rates as you are under the Bill with respect to special rates for passengers? Yes.
327. You want the words "not exceeding" put in? Yes, "not exceeding."
328. *Mr. FitzGerald.*] Under this clause you are able to give special facilities to anyone? We should be.
329. So that a private company such as yours could enter into a combination with any set of fruit-growers to give them differential rates? We could do that.
330. Are there any large fruit-growers interested in the contract? None.
331. *Chairman.*] You desire to be placed, in reference to the goods traffic, in a commercial rather than an official position as regards the fixing of the rates? Yes.
332. *Mr. Ramaciotti.*] Clause 11 says, "It shall be lawful and incumbent on the said Benjamin Crispin Simpson to provide, use, and employ locomotive engines";—and do you want to have the words "incumbent on" struck out of that clause? Yes.
333. That would leave you to make any arrangements you thought necessary with regard to rolling-stock? Yes.

Mr.  
I. Chapman.  
24 Nov., 1892.

MONDAY, 12 DECEMBER, 1892.

Present:—

MR. GARRARD,		MR. BAVISTER,
MR. FARNELL,		MR. STEVENSON,
		MR. J. D. FITZGERALD.

JOHN CASH NEILD, ESQ., IN THE CHAIR.

Mr. Ramaciotti appeared on behalf of Messrs. Johnson, Minter, Simpson, & Co., the Solicitors for the Bill.

Mr. George Hodge called in, sworn, and examined:—

334. *Chairman.*] What is your occupation? I am a property-owner and fruit-grower. I have retired from business, and am growing fruit.
335. How long have you been a resident? I have resided nearly six years on the same property.
336. Have you a knowledge of the route of the proposed railway? I have.
337. Is there any statement which you would like to make to the Committee? My homestead is less than 4 acres, and the line, as surveyed, runs through the centre of what I term the lower orchard, which I planted two years and a half ago with choice fruit-trees? It takes off between 160 and 170 of these young trees, which are now commencing to bear heavily.
338. You are aware that it is proposed to compensate the owners through whose land the line will pass? I am well aware of that provision, but no matter what compensation they gave me it would not pay me to lose my property. I bought the place with the intention of living there. I have made a comfortable homestead and spent a large amount of money there.
339. How much did you pay for the property? I paid at the rate of nearly £160 an acre for it. There is a small cottage on the property, and I have spent lots of money in making improvements. Nobody would know the place now.
340. You have also spent money in improving and planting the ground? Yes; and in clearing the ground.
341. As the line is surveyed, would it sever your property or take off a portion of it? It would take off the lower portion, which is the best part, and which contains the best trees.
342. So that you object to the line, even in view of the proposed compensation? Decidedly, I do.
343. You do not think that any compensation would be a sufficient set-off against the injury to your property? I do not.
344. *Mr. Farnell.*] Is it possible that a deviation could be made where your property is situated? I am not a practical engineer, but I should say it could, without any difficulty whatever, by taking the line lower down, and going through the property right opposite mine. It is nothing but one mass of rocks. The land, comparatively speaking, is worth nothing.
345. What value do you place on your property as it stands? I am not inclined to put a value on it. I do not want to sell. I would not place a value on it, because someone might pick me up.
346. *Mr. Stevenson.*] What area is it? It is less than 4 acres.
347. What did you pay for the whole property? I paid £625 cash five and a half years ago, and I suppose

Mr.  
G. Hodge.  
12 Dec., 1892.

Mr.  
G. Hodge.  
12 Dec., 1892.

suppose I have spent that amount on it since. As far as I can see, there is no difficulty in taking the line lower down.

348. *Mr. Farnell.*] You are not opposed to the railway being constructed? No; I am in favour of the proposal, because I believe it will commercially be a good paying spec. and will do good to the district.

349. *Chairman.*] Your objection is not to the line, but to its interference with your property? That is my only objection.

350. *Mr. Garrard.*] Has any plan been furnished to you showing where the line goes through your property? I once saw a plan, but, being rather near-sighted, I can hardly say that I examined it. I know exactly how it is laid out. It will come across the centre of my orchard. It is proposed to put a platform at the lower end of my orchard. What they require a platform there for I do not know.

351. How much of your land will be separated—will it cut right through the middle? I could hardly say; it will take off about 160 trees; it will take off sixteen and a half panels of fence where it comes through, and twelve panels of fence at the other end. The land to which it could be diverted is what may be called waste land. It is commonly known as Green's bush.

352. Is it much lower than your land? No; it is on the opposite side of the road.

353. *Mr. Farnell.*] Have you received any return from your orchard already? From this part where the line comes through I have had thirty-seven and a half cases of fruit this season. It is only the second year of planting. They are choice trees, too.

354. *Mr. Bavister.*] Would the line leave a portion of your orchard on each side? Not as I am given to understand; they would take the lower part for a platform and for trucking; but it spoils my property entirely. The other part of the ground is very poor. It is only the lower part that is of any value.

355. You would not object to the promoters taking the upper portion and leaving you the lower? They would take my house then.

356. *Mr. FitzGerald.*] Do you think that this railway, apart from your own loss, will benefit this district? I believe the railway will do the district an immense amount of good, and would pay the promoters, but why they should ask people around to give up their land for nothing I cannot imagine.

357. Have the promoters done that? Yes; in some cases I am informed the land has been freely given. I would give land freely if I had lots of it.

358. That is because it will enormously benefit the remainder of their holdings? Yes; my land is too small.

359. The persons through whose land the railway will pass are prepared to give a strip of land for the sake of the benefit they will derive? Those who have many acres will give it.

360. *Chairman.*] Are you aware of any proposal by the Government to construct a line through this portion of the district? No.

361. Has there been any proposal for the construction of a Government line hereabouts? As far as I understand, not nearer than what they term Westmead Road.

362. How far is that? I think it is from 4 to 4½ miles beyond Parramatta station.

363. Further west? Yes.

364. You have a knowledge of the orchards about here? Yes.

365. Have the fruit-growers any difficulty in getting their produce to market? They have very great difficulty.

366. In what way? Owing to the bad roads.

367. Government roads or municipal roads? Most of the roads are municipal roads. Some of them are Government roads.

368. This being a comparatively new municipality, I suppose the municipal revenue is not sufficient to justify the construction of first-class roads? They cannot with the amount of money at their disposal.

369. You are not making any complaint against the municipal authorities? No; but I should like to see better roads.

370. You recognise that it is a question of financial shortness rather than neglect on their part? I recognise that they do all they possibly can with the means at their disposal.

371. How is fruit usually sent from here? Round this district it has to be carted either to Parramatta station or by dray down to Ermington wharf.

372. Is any fruit sent direct by cart to Sydney? A lot of carters go direct to town.

373. How long does it take to go that way? From four to five hours.

374. Does the fruit suffer in its transit over the rough roads? Certainly.

375. Do you think that that damage to the fruit would be obviated by railway carriage? There would be less haulage and less knocking about.

376. And less delay? Yes.

377. I suppose the delay is a question of importance with soft ripe fruits? It is, indeed.

378. What varieties of fruits can be grown profitably? Oranges, lemons, peaches, plums, and apricots.

379. Has any attempt been made to grow strawberries? I do not know so much about that. I only know one person who has a large patch of them. Whether anybody else grows them to any extent, I cannot say.

380. I suppose that the carriage of strawberries over the present road would be positively destructive? They would be all pulp by the time they got to town.

381. *Mr. Farnell.*] Plenty of grapes are grown here? A very large quantity.

382. *Chairman.*] Do grapes suffer by the present method of carriage? Very much, indeed.

383. Is the land about here held in large or small holdings? Small holdings, principally.

384. Therefore there has not been any speculation by syndicates or companies with a view to the construction of this railway? Not that I am aware of.

385. The railway, according to your evidence, would be a great benefit to small struggling settlers and fruit-growers? Yes; it would do them an immense amount of good.

386. Rather than to speculators? Of course they would have to turn in and buy up land afterwards. At the present time there has been no speculator round buying land.

387. The railway would benefit *bonâ-fide* fruit-growers and settlers, rather than speculators? At the present time, yes.

388. You would have no objection to the railway—in fact, you would be glad of its construction, if your own property were avoided? I should be very pleased to see it, and so would every man in the district.

389. There have been public meetings held in the district in reference to the railway? Some time back.
390. What was the nature of the meetings—in favour of the railway? All.
391. Absolute unanimity at the meetings? Entirely so.
392. *Mr. FitzGerald.*] Suppose the Government were to construct a railway here, would you have any objection to giving the same facilities to the Government that you propose to give to this company? I should object to the Government, as well as to this company, going through my property, but I suppose they would take the land from me.
393. The residents are giving up their land to the promoters, and you state if you had a large area you would give them a slice of yours, too? If it would pay me I would.
394. For the sake of the convenience it would give you? If it paid me I would.
395. Are all the holdings round here about the same size as yours? They are larger. Mine is very small. The holdings run from 6 to 15, 20, 35, and 40 acres.
396. All fruit-growers? Yes.
397. *Mr. Stevenson.*] There are not many 40-acre lots? Some of them run between 30 and 40 acres.
398. Are they all occupied and in use? Yes.
399. For orchard purposes? Yes.
400. None absolutely vacant which is held for speculative purposes? None.
401. *Chairman.*] What guides you to the belief that the line passes through your property;—are there any pegs in showing the course? I saw the surveyors go right through my property some time back, and pegs were put down.
402. *Mr. Ramaciotti.*] Can you mention one case in which an owner has promised to give the promoters land free of cost? I cannot say. It is simply a rumour I heard.

Mr.  
G. Hodge.  
12 Dec., 1892.

Mr. Benjamin Crispin Simpson sworn and examined:—

403. *Chairman.*] You are the engineer for and promoter of this Bill? I am.
404. You have heard Mr. Hodge's evidence? I have.
405. Do you endorse his statement with reference to the line running through his orchard and cutting off 160 of his fruit-trees? No. I must correct his evidence in one particular. There are engineering difficulties in taking the line where he suggests it should be taken. He may be quite sure of one thing, that if these engineering difficulties prove to be less than I anticipate we shall certainly try to keep clear of his property. We shall not willingly take the more expensive land in place of less expensive. There are difficulties which may necessitate our taking a corner of his property. We shall make that corner as small as we possibly can. I also wish to correct his remarks with reference to his land being taken for a platform. It is not proposed to make any station or platform there at all. There will be no station between Kissing Point Road and Pennant Hills Road.
406. What is that distance? It would be about 2 miles. It would be very difficult to put a platform there, because it is on a steep grade. It is not at all probable that there will be a platform exactly in that place.
407. Your evidence is to this effect: That you will be anxious to secure a route for the line in the vicinity of Mr. Hodge's property, to avoid his property as much as possible, so as to avoid claims for compensation for undue interference with his orchard? No doubt. Our interests and his interests will be identical. I think we shall make our interference with his property as small as we possibly can.
408. *Mr. Farnell.*] Are there any instances where the land has been given to you for nothing? None that I know of.

Mr. B. C.  
Simpson.  
12 Dec., 1892.

TUESDAY, 13 DECEMBER, 1892.

Present:—

MR. BAVISTER,	MR. GARRARD,
MR. FARNELL,	MR. NEILD,
MR. J. D. FITZGERALD,	MR. STEVENSON.

In the absence of the Chairman, FRANK FARNELL, Esq., called to the Chair  
(*pro tem.*)

Mr. Ramaciotti appeared on behalf of the Solicitors for the Bill.

Mr. Benjamin Crispin Simpson called in and further examined:—

409. *Chairman.*] Do you wish to amend the evidence which you gave before the Select Committee on the previous Bill, or do you wish to give some fresh evidence? I wish to correct one mistake which has been made several times in public references to this Bill. The route reported on by the Public Works Examiners was not this route—which has never been reported on—but an extension of the Rosehill line *via* Parramatta, Baulkham Hills, and Castle Hill, which is, in my opinion, a very inferior route.
410. It did not touch your line at all after you reached the northern side of the river? No.
411. *Mr. Garrard.*] The continuation of the Rosehill line reported on by the Public Works Examiners took your original survey from the Rosehill line, crossing the river, and then turning west, going through Parramatta? I would not say "took my original survey," because that would cause a little confusion. The line reported on by the Public Works Examiners was an extension of the Rosehill line through Parramatta and adjacent to the Windsor Road, through Baulkham Hills. Between 30 chains on our line and 66 chains, it has been deviated to a maximum distance of about 4 chains to the eastward to overcome the objection of the Inspector-General of Asylums for the Insane, that the line originally proposed interfered with the Parramatta Asylum. The route so amended is entirely approved of by Dr. Manning. I hand in a copy of his letter to the Colonial Secretary intimating his concurrence (*vide Appendix A*). With reference to the objection made by Mr. Hodge that the line interferes with his property, I produce a plan which shows that to adopt his suggestion and deviate the line about 3 chains to the westward would involve a loss of head of about 14 feet, which would considerably increase the engineering difficulties in this part of the line. Every effort will be made to minimise the interference with his property as far as practicable. Under the powers of the Bill we shall be able to deviate that line

Mr. B. C.  
Simpson.  
13 Dec., 1892.

Mr. B. C.  
Simpson.  
13 Dec., 1892.

line a little bit. Our interests are identical with his interests. Any deviation which took more of his property would make our line more expensive. I think it is likely that we shall get very nearly out of his grounds. He is satisfied that every effort will be made to avoid any interference with his property.

[*The Chairman entered and took the Chair.*]

412. *Mr. Neild.*] There is a limit of time for the construction of the first section of the line, and there appears to be a desire to fix a limit for the construction of the remainder, but no limit of that sort is provided for in the Bill. I suppose you would consent to an amendment providing a reasonable limitation for the completion of the whole work? I think so. As far as I remember, the limit for the construction of the first section, up to Pennant Hills Road, is three years.

413. If it is the wish of the Committee that some limitation should be provided, are you willing that a limitation of one year each should be fixed for the completion of the second and third sections? Yes.

414. Or would you prefer a limitation of two years for the completion of the two sections? I think I would. That is to say, two years from the expiry of the time for the completion of the first section.

415. *Mr. Garrard.*] Has there been any other deviation in the survey than that close to the river, or is the original survey still adhered to? The original survey is still adhered to.

416. *Mr. Farnell.*] Is there any other new matter which you would like to give? I do not think so.

417. *Mr. Garrard.*] Have you had any direct communication with the Government on the question of their bearing a portion of the cost of constructing the bridge? I have been in communication with the Engineer-in-Chief for Roads, and although no undertaking has been come to by the Roads Department, the negotiations have got so far as a settlement of their share of the cost of a bridge for vehicular traffic.

418. Is there a road leading to where your bridge will be erected, or will land have to be resumed by the Crown? It will have to be resumed by the Crown. The land taken by us is only sufficient for a railway bridge, and the approaches to a bridge for vehicular traffic might possibly require extensive resumptions to be done by the Government.

419. *Mr. Stevenson.*] What length of extension would it be? Not very much. Probably the land taken by us will be sufficient.

420. *Mr. Bavister.*] How many men will be employed during the three years in which the first section of the line is to be constructed? I can only give a guess, and I prefer not to give a guess as evidence. You can arrive at the approximate number from the estimate of the cost. You may take it that about one-half of the £100,000 will be spent in wages.

421. *Mr. Garrard.*] An expenditure of £50,000 over three years or any shorter time in which you do the section? Yes.

422. *Mr. FitzGerald.*] Has any alteration been made in the grade? No. One in 35 is the steepest grade.

423. Has any new survey been made, or have any new plans been prepared? No; the grades will be practically unaltered.

424. *Chairman.*] Is there much of this 1 in 35 grade? No; only 33 chains. There are 60 chains of 1 in 35.5. That is to say, a little over a mile of the two steep grades.

425. *Mr. Garrard.*] That occurs at the end of the first section and at the beginning of the second section? Yes; and it is in favour of the traffic.

426. *Mr. FitzGerald.*] What is the average grade? One in 99.

427. The heavy traffic will be on the down grade? Yes; on the heavier down grade. The maximum grade against the traffic will be 1 in 50.

428. Do you expect to make a large profit on the goods traffic? We do.

429. Do you expect any profit on the passenger traffic? I expect ultimately a very large profit on the passenger traffic. I consider that the neighbourhood is one of the most favourably situated for residences near Sydney, and that ultimately there will be a large residential population there.

430. There is no provision in the Bill, I think, with regard to the rates you are likely to charge? Yes; in clause 6.

431. Have we had any evidence of the probable cost per mile? The estimated cost of the first section is £32,117 19s.

432. Do you propose to let the whole section in one contract? I could not possibly say.

433. Will the promoters have any objection to the insertion of a clause which will prevent subletting? I think it would be a very undesirable clause to put in the Bill. It is usual to insert in every railway contract a clause against subletting. I think it would be better if it is left in that way, because a certain amount of subletting is very often advantageous to the work and advantageous to the men. Trustworthy men are able to take small contracts under a big contractor, which is very often better for them than mere labour.

434. That very often leads to the cutting down of ordinary wages—to what we call sweating? Men who take a sub-contract under a contractor do so because it is preferable to day-working. On almost all works there is daywork to be had if the men like, but they take a subcontract as a matter of preference, because they can make more. You would really be cutting from under the feet of these men the power of making more than their day's wages.

435. Where they take extensive sub-contracts, they, of course, have to reduce the wages of the other men in order to make a profit? They would not get other men unless they paid the wages which were current on the railway. I mean that the bulk of the labour is generally employed directly by the contractor.

436. And will be? Yes. I think that any provision in the Bill in that direction would be very unwise in the interests of the men. It would also tie the hands of the promoters.

437. *Mr. Garrard.*] Would it retard the work? It might retard the work. It takes the power of determining the work out of the hands of the promoters to some extent.

438. *Mr. Bavister.*] Did I understand you to say that the cost of the first section would be £100,000? No; that is the cost of the three sections. The cost of the first section will be £32,117 19s.

439. One-half of that sum would be paid in wages? I think I am within the mark in saying that at least one-half of that sum will be paid in wages. If you take the price of earthworks, which is the chief expense on railways, certainly much more than half of this expense will be for labour. The only other expenses will be for explosives and plant, and these are comparatively small.

440. *Mr. Stevenson.*] Will there not be a good deal of earthwork on this line? There is a great deal of earthwork.

Mr. B. C. Simpson.

441. *Mr. Bavister.*] The cost of-resumption of land will not be great? I do not know; I can hardly say what it will be yet.

13 Dec., 1892.

442. *Mr. J. D. FitzGerald.*] Is there any truth in Mr. Hodge's statement that it was likely that the ground would be given to the promoters? I can only say that I have in no case had an offer to give the ground. I do not believe it is at all probable that anybody would give the ground.

443. In view of the benefits likely to be derived from the railway, do you not think the proprietors of large tracts of land would be justified in giving up the portion through which the line would go? I think that they would be justified in their own interests in promoting the railway.

444. It will enhance the value of their land? Undoubtedly, not only their land, but the land of others which is not touched by the railway, but which is near its course.

445. So that the betterment principle might be advantageously applied if you could only get the consent of the Government? I think so; I think it is a very just principle.

446. *Mr. Ramaciotti.*] Are you aware that in clause 17 we have introduced what is known as the betterment principle;—with that provision, would not the cost of land resumption be greatly diminished? That would reduce the cost of resumption, no doubt, but it is only a partial application of the betterment principle.

Gustave Ramaciotti sworn and examined:—

447. *Chairman.*] You are charged with the legal care of this Bill on behalf of the solicitors? I am.

Mr. G. Ramaciotti.

448. Do you produce any documents? I may state that a copy of the Bill was sent to the Crown Solicitor, the Commissioners for Railways, and the Engineer-in-Chief for Roads, and objections were invited in each case. No acknowledgment has been received from the Crown Solicitor. The following letter has been received from the Engineer-in-Chief for Railways:—

13 Dec., 1892.

Simpson's Railway Bill.

Gentlemen,

Sydney, 3 December, 1892.

I have the honor to acknowledge the receipt of amended copy of the above Bill, and to state that having carefully perused the same, I do not consider that there is anything further to be added.

I have, &c.,

H. DEANE,

Engineer-in-Chief.

Messrs. Johnson, Minter, Simpson, & Co., Norwich Chambers, City.

I may state for the information of the Committee that the Bill contains the whole of the amendments which were suggested by the Crown Solicitor and the Engineer-in-Chief and made by the Select Committee in the last Bill.

449. *Mr. Garrard.*] Have you any objection to insert a limitation for the completion of the second and third sections? I do not think the promoters have.

450. Do you think they have any objection to limit the time for completing the first section to two years? I think so, in view of the fact that a good deal of preliminary work has to be gone through, and that the bridge has to be thought of.

451. You think the negotiations with the Government will take some time with regard to the bridge being so constructed as to carry vehicular traffic as well as railway traffic? With the old Rosehill Railway Act we had an awful lot of trouble with the Government. We experienced a delay, not of months but of years, in settling the preliminaries.

452. *Chairman.*] In the case of a private Bill, you have not a complete staff and complete arrangements such as the Government have? No.

Hugh McLachlan called in, sworn, and examined:—

453. *Chairman.*] You are Secretary to the Railway Commissioners? Yes.

Mr. H. McLachlan.

454. Have you received a copy of Simpson's Railway Bill now under consideration? Yes.

455. Has it been placed before the Commissioners or any officers of your Department? I have consulted the Commissioners on the provisions of the Bill.

13 Dec., 1892.

456. Have you, on their behalf, any objections to raise? I have no objections to raise, but I have several amendments to suggest.

457. Will you kindly indicate your amendments? With regard to the first clause, the time allowed for the completion of the first section is three years. The Commissioners suggest that the whole line should be completed within five years, if three years is a fair time to allow for the completion of the first section.

458. *Mr. J. D. FitzGerald.*] You have no objection to the three years' limit for the first section? We have no objection.

459. *Chairman.*] You heard Mr. Simpson's evidence assenting to a limitation of five years for the completion of the whole work? Yes.

460. That would meet the views of the Railway Commissioners? That is what they were suggesting this morning. Then, in regard to clause 6, we think it wise to draw the attention of the Committee to the fact that this proposal is an extension of an extension, and that as the clause is worded it might be possible for the promoters to charge what we call two minimums. It is provided in the clause that the promoters may charge for goods at the same rates per mile as are charged on the Government railway. Our charges are based on a minimum, and for a distance of from 1 to 10 miles we charge the minimum. If the Bill gives the promoters power to charge the minimum rate from Clyde to Rosehill, and then another terminal charge from Rosehill to the end of the first section, it would make the charges somewhat heavy. The Commissioners suggest the insertion of the words "including the Rosehill line of railway" after the words "the said railway extension," and the omission of the words "and also similar terminal or shunting charges."

461. How would this suggestion affect the question of passenger rates? It would not affect the passenger rates.

462. You have no objection to a charge not exceeding 2d. per head per mile for passengers? No; but in the case of goods they propose to charge the same rates as we charge. If a person sends a ton of goods,

Mr. H.  
McLachlan.  
13 Dec., 1892.

goods on the Government line to Newtown he pays just the same amount as if it were sent to Auburn or Rookwood.

[The Chairman having retired, Mr. Frank Farnell called to the Chair, pro tem.]

463. *Chairman.*] Have you any other suggestions to offer? In clause 12, which provides for the Commissioners having running powers, we wish to insert after the word "assigns," in line 45, the words "not exceeding one moiety of the tolls or charges specified in section 6." In clause 15 perhaps it would be better to substitute the word "by-laws" for the word "regulations." It simply provides that the by-laws shall have our approval. It is usual for the by-laws to be approved of by the Governor and Executive Council. The Bill makes no provision for the safety of the passengers. In the case of the Deepwater and Mount Galena Tramway Bill, I submitted a clause providing that the Commissioners should inspect the line first, so as to ensure that it shall always be maintained in a proper way. I would suggest that after clause 15, section 42, of the Deepwater and Mount Galena Tramway Act, which reads as follows:—

The said Commissioners may from time to time appoint any person to be inspector for the purpose of inspecting the tramway and of making any inquiry with respect to the condition of the works, or into the cause of any accident, provided that no person so appointed shall exercise any powers of interference in the affairs of the said Benjamin Crispin Simpson, his heirs, executors, administrators, or assigns, and every inspector under this Act shall, for the purpose of any inspection or inquiry which he is directed by the Railway Commissioners to make or conduct, have the following powers, that is to say:—

- (i) He may enter and inspect the tramway and all the stations, works, buildings, offices, stock, plant, and machinery belonging thereto.
- (ii) He may, by summons under his hand, require the attendance of any person who is engaged in the management, service, or employment of the company, and whom he thinks fit to call before him and examine for the said purpose, and may require answers or returns to such inquiries for the said purpose as he thinks fit to make.
- (iii) He may require and enforce the production of all books, papers, and documents of the company which he considers important for the said purpose.

Where, in or about the tramway, or any of the works or buildings connected with such tramway, or any building or place, whether open or enclosed, occupied by the company working such tramway, any of the following accidents take place in the course of working, that is to say:—

- (i) Any accident attended with loss of life or personal injury to any person whomsoever.
- (ii) Any collision when one of the trains is a passenger train.
- (iii) Any passenger train, or any part of a passenger train, accidentally leaving the rails.
- (iv) Any accident of a kind not comprised in the foregoing descriptions, but which is of such a kind as to have caused, or to be likely to cause, loss of life or personal injury, and which may be specified in that behalf by any order to be made from time to time by the Railway Commissioners.

The company working such tramway shall send notice of such accident, and of the loss of life or personal injury (if any) occasioned thereby, to the Railway Commissioners.

Such notice shall be in such form and shall contain such particulars as the Railway Commissioners may from time to time direct, and shall be sent by the earliest practicable post after the accident takes place.

The Railway Commissioners may from time to time by order direct that notice of any class of accidents shall be sent to them by telegraph, and may revoke any such order. While such order is in force notice of every accident of the class to which the order relates shall be sent to the Railway Commissioners by telegraph immediately after the accident takes place. Failure to comply with the provisions of this section shall render the company liable for each offence to a penalty not exceeding twenty pounds.

might be inserted, with the following addition:—

Should at any time the railway line fall into disrepair, rendering it unsafe for the conveyance of passengers, the Railway Commissioners may appoint an inspector to report on the same, and shall have power to direct that the said Benjamin Crispin Simpson, his heirs, executors, administrators, or assigns, shall execute the repairs which, in their judgment, may be necessary, and if such repairs are not executed with reasonable despatch the Governor and Executive Council may determine that such railway shall not be used for the carriage of passengers until it is certified by the Railway Commissioners that such repairs have been effected.

I may mention that the Board of Trade is invested with greater powers in respect of all English railways which carry passengers.

THURSDAY, 15 DECEMBER, 1892.

Present:—

MR. BAVISTER,	MR. GARRARD,
MR. FARNELL,	MR. McCOURT,
MR. J. D. FITZGERALD,	MR. STEVENSON,
MR. WRIGHT.	

JOHN CASH NEILD, Esq., IN THE CHAIR.

Mr. Ramaciotti appeared on behalf of the Solicitors for the Bill.

Hugh McLachlan, Esq., Secretary to the Railway Commissioners, recalled and further examined:—

H.  
McLachlan,  
Esq.  
15 Dec., 1892.

464. *Chairman.*] I understand that since the last meeting of the Committee you have conferred with Mr. Simpson in respect of clause 6;—have you arrived at any agreement as to its phraseology? I suggested the following clause, which will, I think, meet the case:—

For goods and merchandise rates not exceeding such rates as are charged on the Government railways, but the total of such charges over the original Rosehill line, and the said extension, must not exceed the rates charged for similar distances on the main line of Government railways.

465. Do you mean that these words will also cover the question of terminal or shunting charges? We have no special terminal charges. Our rates include terminal charges.

466. As a matter of fact, if the words "and also similar terminal or shunting charges" were omitted from the clause, as it stands it would practically mean the same thing? It might mean a very different thing, in this way: that under the Rosehill Act and this Bill—two separate measures—the company may have power to charge two minimums. On the Government railways we charge a minimum from 1 to 10 miles; for third-class goods I think it is 5s. a ton. Perhaps the company could charge one minimum of 5s. under the Rosehill Railway Act, and another minimum of 5s. for 2 or 3 miles under this Bill, making a total charge of 10s. I do not see any objection to the retention of the words "and also similar terminal or shunting charges." I may state that there are arbitrary shunting charges on our lines. If we shunt into a siding off the line which requires us to bring an engine out, we charge half-a-crown a truck.

467.

467. Do you think that your views would be met by this provision:—"For goods, rates and charges not exceeding those charged on the Government railways"? Not altogether, because I am in doubt as to whether the company would not have power to make a minimum charge over the original line, and a second minimum charge over this extension. That is the fear which I wish to put before the Committee.

468. *Mr. Wright.*] Do you know whether terminal charges are charged on the Rosehill line? I know that lately the charge has been put up a bit. They are getting 5s. a truck now, or 10s. a ton.

469. You would not carry the same distance for that? We charge higher than that if we are starting a new service.

470. *Chairman.*] Have the Commissioners ever acknowledged the right of the proprietary of the Rosehill railway to shunting or terminal charges? Yes, to shunting charges.

471. *Mr. Garrard.*] Have the Commissioners any objection to the insertion of a provision that, subject to their approval, the promoter may charge more than the rates put down in the Bill? Under certain circumstances. Personally, I think that that is a fair thing. On a branch line the expenses are always heavy. On some of our lines, particularly new ones, we have branch charges. Our rates on the main line are certainly very low.

[*The Chairman having retired, Mr. Frank Farnell called to the Chair, pro tem.*]

472. *Chairman.*] Really what you require is that the power (if any) should be taken from the proprietors under the original Act or under this Bill to make two minimum charges—you wish to do away with the possibility of making two minimum charges? Yes.

473. *Mr. Ramaciotti.*] It has been sworn in evidence by Mr. John Bennett:—"It pays the Commissioners? Splendidly. But they take it as part of the Government line, depriving us of terminal charges." Are you not aware that under the Rosehill Railway Act it was contended, until very lately, by the Railway Commissioners that we had no power to make terminal charges? I think it was contended by the Traffic Manager in a letter to you. At any rate, we have made a terminal charge.

474. The question arose, and it has not been satisfactorily settled;—I believe it has been a concession on their part? We have made the concession. You are getting a shunting or terminal charge of 2s. 6d. a truck.

475. It was given to us as a concession, and not as a matter of right? I think, as a matter of right, it was given.

476. *Mr. Wright.*] Do you collect that charge, or do the Rosehill railway proprietary collect it? In some cases we collect it, and sometimes I think they collect it.

477. *Mr. Bavister.*] Since the evidence referred to by Mr. Ramaciotti was given, has not a terminal charge been recognised by the Railway Commissioners, and is it not now being collected? It was given about a month ago.

478. As a matter of fact, it is being collected? Yes.

479. *Mr. Wright.*] Has it been recognised that the company have a right to the charge, or is it a matter of favour on the part of the Commissioners? I think it is a right.

480. *Mr. Ramaciotti.*] You are not quite sure? I think it is recognised as a right—it is a matter of business.

481. *Chairman.*] What is the next amendment which the Railway Commissioners suggest in the Bill? In clause 12, line 46, after the word "assigns," we suggest the insertion of these words, "not exceeding one moiety of the tolls specified in clause 6." We should like something fixed, which could go to arbitration.

482. *Mr. Ramaciotti.*] Will you give the Committee a reason for asking for such a reduction as 50 per cent.? You would then get more than we charge ourselves. For running powers we charge a very low rate. Over our lines we charge  $\frac{1}{2}$ d. per ton per mile.

483. *Mr. Garrard.*] Supposing it is proved that one-half does not pay the promoters, with these words in the clause you would be absolutely powerless, although your moral sense might tell you that you ought to give more to the company? The Commissioners suggest that the amendment should be made.

484. It is a most unusual provision to insert. Has it been made in any other Bill? It was suggested to the Select Committee on the Scottish Australian Mining Company's Railway Bill.

485. *Chairman.*] What is the next suggestion that you make? The words "Commissioners for Railways" appear in a number of clauses, and we suggest that the words "Railway Commissioners" should be substituted in their place, so as to harmonise with the term used in Railway Act. We also suggest that the word "by-laws" should be substituted for the word "regulations." I may point out that the by-laws have to be approved by the Railway Commissioners. It has been usual for them to go before the Governor-in-Council.

486. *Mr. Garrard.*] As a matter of fact, are not all by-laws for private railways referred to you in the first instance by the Governor and Executive Council? I think they would be, as far as I know.

487. Do you know any by-laws which have passed the Executive Council which have not been subject to your approval? I do not know.

488. It is only reasonable to suppose that they would? Yes.

489. *Chairman.*] Your next suggestion is with regard to the insertion of a new clause? We suggest, as new clause 16, section 42, of the Deepwater and Mount Galena Tramway Act, with the addition which I read the other day.

490. *Mr. Garrard.*] Had such a clause been inserted in any Bill prior to the Deepwater and Mount Galena Tramway Bill? I do not think so.

491. That was the first Bill in which it was inserted? Yes.

492. Why is it necessary to have this addition to this very lengthy and elaborate clause? Although we have power under section 42 of that Act to inspect the tramway, and perhaps to report a defect, no penal power is given to compel any action to be taken. We may report the line to be totally unsafe for the carriage of passengers, yet no provision is made to give effect to our report.

493. You are claiming the same powers as the Board of Trade in England possess? We do not claim the same powers, but the Railway Commissioners, as a matter of duty, think that it is in the interests of the public safety that this clause should be inserted in the Bill.

494. You are asking to be clothed with the powers as the Board of Trade;—will not this company be common carriers, and be liable to penalties if they negligently carry passengers or do anything of that kind? Still it is a big trust to place in the hands of a private company.

H.  
McLachlan,  
Esq.  
15 Dec., 1892.

H.  
McLachlan,  
Esq.  
15 Dec., 1892.

495. Is it not a fact that the Board of Trade do not run railways themselves, and therefore are in a different position from the Railway Commissioners:—do you not claim that a rival company to some extent shall produce all their books and papers to the Railway Commissioners? No; that is only to be done in case of an accident.

496. *Mr. J. D. FitzGerald.*] Although the power is given to the Railway Commissioners to appoint an inspector, yet he is only to inspect “in and about the tramway” after certain accidents have taken place? Certainly; we do not want to see the books of the company at all.

497. *Mr. Ramaciotti.*] Do I understand you to say that the Railway Commissioners insist on the retention of sub-clause 3—“He may require and enforce the production of all books, papers, and documents of the company which he considers important for the said purpose”? We do not insist, but we merely suggest that this provision should be inserted in the Bill. The reason why we ask for the power to enforce the production of all papers and documents is this: Suppose an accident happens, the inspector may wish to see if any reports had been made to the company which have any bearing on the cause of the accident.

498. If an accident happens on the line, no doubt the company will be sued, and this clause practically means that the company shall be tried before the Railway Commissioners before it is tried before a Court? No; it only provides that the inspector may enter and inspect.

499. Do you not think that the whole of the clause from sub-clause 3 might be omitted? Of course it might mean a good deal of trouble to the company. We make the suggestion simply because the same thing occurs on the Government railways. It is provided for, also, in the Board of Trade regulations. We have to send the same thing in to the Minister.

500. He is the head of the Department to a certain extent? Yes; but the Commissioners have very large powers.

501. He is not running any railways against the Railway Commissioners? I do not think so.

502. You do not press the amendment? The Commissioners submit the clause for the consideration of the Committee. They think that as a matter of duty they should bring this matter before the Committee.

503. Do they expect the Committee to accept their suggestion? They suggest the clause, and they think it ought to be inserted.

504. *Mr. Stevenson.*] Would they be content if the first portion of the clause were inserted? The first two sub-clauses are really the most important.

505. *Mr. Ramaciotti.*] Who is to pay the cost of an inspection? I do not think the Commissioners would object to pay the cost of an inspection.

506. *Mr. J. D. FitzGerald.*] The examination of the company's papers is only contingent on the occurrence of an accident? Yes.

507. You have no desire to obtain any power to search their papers and documents? Not in connection with the financial operations of the company.

508. Not unless an accident has occurred in which an injury to the public has resulted? The inspector might find the road in bad order, and he might want to see if any reports have been made by the company's officers on that subject.

509. What is the policy of the Railway Commissioners with regard to private lines;—do they favour them, or object to them? That is a matter of policy into which they would not care to enter.

510. Have they considered this line at all? Not as a principle.

511. As a matter of policy they would rather not express an opinion as to whether this line should be constructed by private enterprise? That is a matter of policy which they never care to enter into.

512. You would not like the Committee to think that they have expressed an opinion either in favour of a Government railway or against the promoters of the Bill? No.

513. They hold a neutral position? Yes.

514. *Chairman.*] As a matter of fact, did not they report against the Government proposal to construct a railway from Westmead to Dural? I think they did.

515. All you want is the power to see that the line is in proper repair before passengers are carried, and that if an accident occurs a private investigation shall be held into the cause of the accident, with a view to prevent a repetition of it? Yes. That is admitted to some extent by providing that the line shall not be opened until the Engineer-in-Chief gives a certificate that it is well and truly made. In order to ensure that the line shall be properly maintained, we desire the power to inspect and report, and see that the line is kept up to a certain standard of efficiency.

516. *Mr. Ramaciotti.*] Suppose you held an inquiry, what power would you have under this clause to prevent a repetition of an accident? The Commissioners and their officers are experts. An accident may occur through defective regulations, or it may be caused by irregular workmen, and the Commissioners may be able to make a suggestion which will prevent a repetition of the accident.

517. *Mr. Garrard.*] Are not all the regulations to be subject to your approval? The same thing may happen on our own lines. We have perhaps a certain design of trucks going off the road more frequently than other designs. It causes us to look into the matter, and probably we find some defect in the design which we can repair.

518. *Mr. Ramaciotti.*] What power have you to enforce any suggestion which you may make to the promoters of this Bill;—what is the use of having one clause without the other? That is why we suggest the insertion of this clause.

519. *Chairman.*] Do you wish this new clause to apply to the existing line as well as to the proposed extension? We cannot deal with the existing line.

520. Have you any further suggestion to offer? No.

Benjamin Crispin Simpson recalled and further examined:—

Mr. B. C.  
Simpson.  
15 Dec., 1892.

521. *Mr. Ramaciotti.*] You have heard the amendments which have been suggested on behalf of the Railway Commissioners. With reference to the amendment in respect of the rates, you are desirous, I understand, that a short provision shall be inserted leaving it in the discretion of the Commissioners to grant the promoters power to increase the rates should the necessity at any time arise? Yes. I think that the restriction that only similar charges should be made as those made on the Government railways should be capable of expansion by the permission of the Commissioners, should circumstances, in their opinion as well as in ours, render it desirable that such an expansion should be made.

522. With reference to the proposed amendment at the end of clause 6, limiting the total charges over the two railways to the amount charged by the Government over similar distances, what are your views?

My

My views are that the limitation is very clear by that general wording. It would no longer be "similar" if I were to make two terminal charges instead of one. I think it is undesirable to load the Bill with matter which is not necessary, because it all tends to make the meaning of the Bill vague. We are very desirous, as we suffered a great deal of financial hardship from the vagueness of the Rosehill Railway Act, that this measure shall not become vague in that way. I object to the provision simply on the ground that it is not necessary, and tends to make the Bill more vague.

Mr. B. C.  
Simpson.  
15 Dec., 1892.

523. *Mr. Garrard*] You would have no objection to verbal alterations in clause 6 which would meet some of the objections raised by Mr. McLachlan? No. We do not desire to make terminal charges. I was present at all the negotiations over this concession which was made to us. It was made as a concession, and not as a right. The Commissioners allowed us what they before appropriated to themselves, because we were simply unable to work our line. If we had the right we have suffered a wrong at their hands. We are very desirous to avoid any recurrence of that thing under this Bill.

524. *Mr. Ramaciotti*.] With reference to clause 12, the Commissioners wish to limit the rates which they are to pay us when they run trains over the line to an amount not exceeding one moiety of the rates which they can charge to the general public. Have you any remarks to make on that suggestion? I think that such a limitation would be unfair to the promoters, and unwise, because the circumstances referred to about the extension of the charges would certainly raise the payment to the promoters by agreement with the Commissioners to more than a moiety. I think it would be only fair, under these circumstances, considering that the proportion which would be taken by the promoters and the Commissioners must depend very much on outside conditions, that the whole question should be left open to go to arbitration. Arbitration should not be limited at one end and unlimited at the other.

525. With reference to the proposed new clause 16, would you have any objection to the insertion of a clause authorising the Railway Commissioners to make an inspection of the line at such time as they may deem fit, for the purpose of seeing whether it is safe for them to run their rolling-stock over it? Certainly not.

526. You object, however, to an inspector having the power of calling before him and examining your employees, and requiring returns at an enormous cost, and the production of your books? I object to the extreme clause which has been suggested by Mr. McLachlan, on the ground that the Railway Commissioners cannot be to the promoters of this Bill in the same relation as the Board of Trade is to railway companies in England. We must have commercial dealings with the Railway Commissioners, and I do not think it would be right that one side to a commercial treaty should be vested with extreme powers over the other.

527. *Chairman*.] Have you any objection to the insertion of a clause giving the Commissioners power to investigate the cause of an accident to their rolling-stock on your line, with a view to prevent its recurrence? I have already said that I do not object to their going over the line, but they do not want Parliamentary powers to enable them to inspect their own rolling-stock. I think that the insertion of such a clause is unnecessary.

528. *Mr. Garrard*.] Suppose an accident occurs through some fault of yours, and their rolling-stock is considerably damaged, they will not have the power to go over the line and get evidence that it was through your negligence that their property was damaged? I think the best way is to give them the power to inspect the line without saying that it is for any particular purpose; let them always have the power to inspect the line.

529. *Mr. Ramaciotti*.] In view of their position, and the dealings which will exist between the promoters and the Commissioners, do you think it is fair that it should be within the option of the Commissioners to say whether the line is safe or not;—do you not think the liability which the proprietors will be under as common carriers will be sufficient protection to the public;—will you not, for your own protection, see that the lines are kept in repair? I think the liability of common carriers will be sufficient, and in any case I do not think it would be desirable to invest the Commissioners or any other body with a power of trial which would prejudice a legal trial.

530. Is it likely that the promoters, for their own sake, will allow the line to fall out of repair? Certainly not; for they would suffer a financial loss, and would be criminally liable for negligence.

531. If the Commissioners are given this option, is it not possible that they may deem some repairs necessary which are not necessary, and put you to expense and trouble over the matter? Under the proposed clause they would have the power to dictate any repairs they liked.

532. Whether necessary or not? Yes; we might have to keep what would really be a branch line in the first-rate order of an English main line. We might have no power of saying that we could not afford the expense.

533. Might not a clause of that kind have the effect of closing the line altogether? It might, certainly. It would give them the power to close the line at any time which they considered right. I do not consider that these clauses are fair at all.

534. *Chairman*.] Is there anything else which you wish to state to the Committee? No; excepting that I would like to impress on the Committee the extreme desirability, both in the interests of the promoters and in the public interest, of allowing us an extra rate, with the concurrence of the Commissioners, because it might be impossible to run the line on the rates that pay over a large system. If the Commissioners concur in our representation it may be to the public advantage also that we should be allowed to have the extra rates.

## APPENDIX.

### A.

[*To Evidence of B. C. Simpson, 5 December, 1892.*]

My dear Sir,

Branch Hospital for Insane, Rydalmere, near Parramatta, 23 February, 1892.  
I have this morning gone over the ground with Mr. Simpson, with a view of seeing if the proposed new route, marked "A" on the plan A herewith, will obviate the objections I have before expressed as to the railway passing through the ground of this institution. Though there are some grave objections to a railway so near a public institution of this character, the main objection to the scheme—that it would cut up the estate to great disadvantage and occupy ground required for future extensions—have been removed by the new route. If this is adhered to, and precautions taken to protect the railway where it passes through this estate with high and secure walls and fences, I feel that I ought to withdraw any further opposition to the line.

The Hon. G. R. Dibbs, Esq., M.P., &c.

I am, &c.,

F. N. MANNING.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

---

## SIMPSON'S RAILWAY BILL.

(PETITION FROM CERTAIN INHABITANTS OF THE BOROUGH OF PARRAMATTA AND SURROUNDING DISTRICTS, AGAINST.)

---

*Received by the Legislative Assembly, 18 April, 1893.*

---

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the inhabitants of the Borough of Parramatta and surrounding districts,—

SHOWETH :—

(1.) That your Petitioners have been informed and believe that application is being made to Parliament by one Benjamin Crispin Simpson for a Bill to authorise the construction of an extension of the railway communication known as the Rosehill Railway in three sections from near the Rosehill Station Platform, and to traverse the district of Rydalmere, Pennant Hills, Dundas, and Castle Hill, terminating at Dural; and oppose the said Bill upon the grounds hereinafter mentioned, that is to say :—

That the Petitioners believe that the passing of the Bill proposed will inflict great injury to the resident farmers, fruit-growers, and freeholders of land in the town, and the greater part of the districts of Parramatta, extending through Toongabbee, Windsor Road, Seven Hills, Kellyville, Baulkham Hills, Castle Hill, and thence to Dural, because of the remote situation of the proposed line of railway will render it inaccessible and useless to the majority of them.

That for the use and convenience of the people not now within reach of the Hornsby, Thornleigh, Pennant Hills, Carlingford, Eastwood, and Ryde Stations respectively on the Great Northern Railway a line of railway is urgently required, extending from Parramatta or Westmead Stations through Baulkham Hills, thence through Castle Hill, and thence to Dural and Galston.

That most parts of the district to be traversed by the first section of the line set out in the Bill are already within easy distance of communication of the stations on the Great Northern Line, before referred to, or some of them, and have for years past made use of that line for their passenger and goods traffic with Sydney, and thereby contributed largely towards the revenue arising from that line by the establishment within such district of this new private railway parallel with and within 2 or 3 miles of the Government Northern Line, will necessarily divert a large part of such traffic and revenue from the Railway Commissioners to the promoters of the private line without securing any substantial benefits to any other persons.

That your Petitioners believe the establishment of the private railway line proposed must also absorb part of the traffic which would otherwise turn to and help to support the required railway *via* Baulkham Hills before mentioned, thereby tending to further delay the construction thereof.

That the resident business people and property holders, who have been induced to invest their capital in Parramatta as the natural and proper market town of the district, will unfairly and unjustly sustain great injury by the drawing away their legitimate business to other centres of population which the proposed railway will effect.

That though the first section of the Bill requires the first section of the line terminating at Pennant Hills to be completed within three years of the passing of the Bill, and the said first section is the part which would most seriously interfere with the revenue of the Great Northern Line, yet there is no limit to the time for completing the more distant sections, and no provision to compel such completion.

Your Petitioners, therefore, upon the several grounds hereinbefore set forth, respectfully pray your Honorable House to reject the said Bill.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 454 signatures.]

VALE OF CLWYDD COAL-MINING COMPANY'S BILL.  

---

REPORT.  

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 5th October, 1892, the "*Vale of Clwydd Coal-mining Company's Bill*,"—beg to report to your Honorable House,—

That they have examined the witness named in the margin (whose <sup>Wm. Briggs,</sup> evidence will be found appended hereto); and that the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the clauses of the Bill, in which it was not deemed necessary to make any amendment. <sub>Esq.</sub>

Your Committee now beg to lay before your Honorable House the Bill without amendment.

No. 2 Committee Room,  
Sydney, 18 October, 1892.

F. A. WRIGHT,  
Chairman.

---

PROCEEDINGS OF THE COMMITTEE.

---

TUESDAY, 11 OCTOBER, 1892.

MEMBER PRESENT:—

Mr. Wright.

In the absence of a quorum, the meeting called for this day lapsed.

---

THURSDAY, 13 OCTOBER, 1892.

MEMBERS PRESENT:—

Mr. Wright, | Mr. McFarlane.

In the absence of a quorum, the meeting called for this day lapsed.

---

TUESDAY, 18 OCTOBER, 1892.

MEMBERS PRESENT:—

Mr. Barbour, | Mr. Torpy,  
Mr. Wright.

Mr. Wright called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Bill *referred*, together with original Petition, to introduce same, before the Committee.

Present:—William Briggs, Esq. (Chairman of the Vale of Clydd Coal-mining and Copper-smelting Company, Limited).

William Briggs sworn, and examined.

Room cleared.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Clauses 1 to 5 read and agreed to.

Title read and agreed to.

Chairman to report the Bill without amendment to the House.

---

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

VALE OF CLWYDD COAL-MINING COMPANY'S BILL.

TUESDAY, 18 OCTOBER, 1892.

Present:—

MR. BARBOUR,

MR. TORPY.

F. A. WRIGHT, ESQ., IN THE CHAIR.

William Briggs, Esq., sworn, and examined:—

1. *Chairman.*] What are you? A solicitor.
2. I believe you are Chairman of the Vale of Clwydd Coal-mining Company? I am.
3. In the Preamble of the proposed Bill the Company ask for power to alter their deed of settlement? Yes.
4. It is, I understand, a chartered Company under a special Act of Parliament? Yes.
5. And I understand that under that charter the by-laws of the Company are incorporated as an integral portion of the Act? They are referred to in the Act, and made part of the Act.
6. In the first place I understand it is desired to alter the name of the Company? Yes. We wish to omit the words "Copper-smelting." That portion of the name of the Company is quite useless, and is not used. We have never had anything to do with copper-smelting. It was thought, perhaps, when the Company was first formed that copper-smelting might form part of its operations, but that has never been the case.
7. You propose to leave out the words "Copper-smelting," so that the name of the Company shall be "The Vale of Clwydd Coal-mining Company"? Yes.
8. I understand also that the Company's operations are considerably hampered by reason of the existing by-laws requiring that a very large number of shareholders shall be present at a meeting of the Company? Yes. The by-laws require that 10,000 shares shall be represented at a meeting, either in person or by proxy.
9. *Mr. Torpy.*] What is the total number of shares? Thirty thousand.
10. *Chairman.*] Do you find that the provision referred to hampers you considerably? Yes; sometimes we have to abandon our meetings; we cannot manage it at all.
11. Are there any other objects sought by the Company? We wish to effect a change in regard to the managing director. By our deed of settlement the managing director is one of the Board. We had a great deal of trouble with our managing director, and had to prosecute him for fraud, and we have ever since been acting without a managing director.
12. You desire to have power to appoint a manager who shall not be a director? Yes. We would call him "Secretary."
13. To be the servant of the Board instead of a member of the Board? Yes, instead of its master.
14. Do you seek any other concessions? I think those are all.
15. *Mr. Barbour.*] In reference to the reduction of the number of shares to be represented at a meeting of the Company, I presume any action taken will be in compliance with the Act now in existence? We shall have to call a meeting under the present Act.
- 16.

W. Briggs,  
Esq.

18 Oct., 1892.

- W. Briggs, Esq.  
18 Oct., 1892.
16. And who confirms the by-laws? The shareholders. The Bill provides how they shall be altered.
17. Why do you want an alteration of the name;—what harm is there in having the words “Copper-smelting”? There is no harm. We should never have asked for their omission if we had not been asking for other things.
18. Is it not an advantage having once been known under a certain name to continue that name? There is nothing in it one way or the other, except that the present is a long name, and the words “Copper-smelting” are quite useless. The alteration will make the title of the Company more concise.
19. *Chairman.*] As a matter of fact the Company is now known as the Vale of Clwydd Coal-mining Company? Yes. The words “Copper-smelting” are never used in correspondence or advertisements.

1892.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

---

**OXFORD-STREET IMPROVEMENT BILL.**

(PETITION FROM WILLIAM BRERETON, JOSEPH BRERETON, ELIZABETH McANALLY, CHARLOTTE HAMILTON, MARY ANN SHERLOCK, THERESA AGNES MOORE, AND FRANCES BRERETON, PRAYING TO BE HEARD PERSONALLY, OR BY SOLICITOR OR COUNSEL.)

---

*Received by the Legislative Assembly, 23 November, 1892.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of William Brereton, the tenant for life, and of Joseph Brereton, George Richard Brereton, William John Brereton, Elizabeth McAnally, Charlotte Hamilton, Mary Ann Sherlock, Theresa Agnes Moore, Margaret Dorington, and Frances Brereton, entitled in remainder expectant upon the life of the said William Brereton,—

RESPECTFULLY SHOWETH :—

1. That a Bill has been introduced into your Honorable House in pursuance of leave in that behalf given, intituled "A Bill to enable the Council of the Borough of Paddington to close certain portions of Marshall-street, a public street in the said Borough, and a certain right-of-way leading therefrom; and to vest the fee simple of part of the land comprised in the closed portion of the said street and said right-of-way in the Marshall's Paddington Brewery (Limited), a Company duly registered under the Companies' Act, and the remaining part thereof in the trustees of the will of George Brereton, deceased; and to vest in the said Borough for the improvement of Oxford-street, certain pieces and parcels of land owned by the said Marshall's Paddington Brewery (Limited), fronting Oxford-street, and for purposes in furtherance of or consequent on the aforesaid objects."

2. That such Bill has been referred to a Select Committee, appointed by your Honorable House, for consideration and report.

3. That your Petitioners being largely interested in the questions to be considered by such Select Committee, your Petitioners are advised that it is desirable for them to be represented before such Select Committee.

4. Your Petitioners therefore humbly pray that your Honorable House will be pleased to grant them permission to appear before the said Select Committee in person or by Solicitor or Counsel; and if necessary to adduce such evidence, and send for such persons and papers as your Petitioners may be advised, together with power to examine and cross-examine witnesses called before the said Committee.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 7 signatures.]

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

## GOULBURN WATER SUPPLY CHARGES BILL.

(PETITION FROM CERTAIN RATEPAYERS OF THE MUNICIPALITY OF GOULBURN, AGAINST.)

*Received by the Legislative Assembly, 22 September, 1892.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

We the undersigned Ratepayers of the Municipality of Goulburn, being opposed to the measure introduced into the Assembly by Doctor Leslie Hollis, on the twenty-sixth day of November, one thousand eight hundred and ninety-one, entitled a Bill to enable the Borough of Goulburn to recover certain rates and charges due in respect of the water supply within the Municipality of Goulburn.

The humble Petition of the undersigned,—

SHOWETH :—

1. That the Borough Council passed certain By-laws in the year one thousand eight hundred and eighty-seven, containing no provision to claim rates where the water was not supplied; subsequently the Council made a claim, which was contested in a Court of Law in January, one thousand eight hundred and ninety-one, when the Council failed to recover.

2. That the Council now desires your Honorable House to legislate retrospectively, so that they may be enabled to make a claim and recover the same for the years one thousand eight hundred and eighty-eight, one thousand eight hundred and eighty-nine, and one thousand eight hundred and ninety, although the Council had no legal or equitable claim against your Petitioners.

3. Your Petitioners respectfully point out to your Honorable House that if the said Bill became law, great hardship and injustice would be experienced by many of your Petitioners, inasmuch as the present occupiers would, by the sixty-first clause of the Water and Sewerage Act of one thousand eight hundred and eighty, be made responsible in the first instance for all charges made by the Council, although they were not the occupants during the years one thousand eight hundred and eighty-eight, one thousand eight hundred and eighty-nine, and one thousand eight hundred and ninety. Their Honors the Judges in Banco have decided that the Council must exhaust the effects of the occupier before the owner can be made responsible.

And your Petitioners humbly pray that your Honorable House will refuse to pass the said Bill.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 277 signatures.]

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

GOULBURN AND CROOKWELL RAILWAY BILL.

(PETITION FROM CERTAIN INHABITANTS OF THE CITY, TOWN, AND DISTRICT OF GOULBURN, IN FAVOUR OF.)

*Received by the Legislative Assembly, 18 May, 1893.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH:—

That we, the undersigned inhabitants of the city, towns, and district of Goulburn, county of Argyle, having been given to understand that a Bill to construct a railway from Goulburn to Crookwell is now before Parliament, are of opinion that the said railway, if constructed, would be advantageous to the people of this district, and tend very materially to develop its mineral and agricultural resources.

Your Petitioners, therefore, humbly pray that your Honorable House will take such Bill into their favourable consideration, with a view to its becoming law as early as possible.

And your Petitioners, as in duty bound, will ever pray.

*[Here follow 1,352 signatures.]*

1892.

NEW SOUTH WALES.

## DEPARTMENT OF MINES.

(ANNUAL REPORT OF THE STOCK AND BRANDS BRANCH.)

Presented to Parliament by Command.

TO THE HONORABLE T. M. SLATTERY, ESQ., M.P., MINISTER FOR MINES AND  
AGRICULTURE.

Sir,

I have the honor herewith to submit the Report of the Chief Inspector of Stock upon the work of the Stock and Brands Branch for the year 1891.

The record of work done by the officers of the Branch is very satisfactory, and there is every reason to believe that under the Act, 55<sup>o</sup> Vic. No. 17, not only the work but the usefulness of the inspectors will be greatly increased.

Three hundred and three head of cattle were condemned last year at Homebush alone.

The increase in the number of horses, cattle, and sheep, and the general improvement in the breed, is highly gratifying. Already the greater attention directed of late to dairying has had some effect in altering and improving our breed of cattle, and as this movement progresses the effect upon our cattle will yearly become more noticeable. There is apparently no reason why dairying operations within the Colony should not be extended very largely, seeing that we possess all the requirements for the output of a very large quantity of high-class dairy produce; and, so long as we export only first-class or carefully graded produce, there is every reason why we should expect to find an unlimited demand for it in the European markets. With the exception of the export of meat there is no produce so likely to establish a steady and profitable export trade as dairy produce.

It must be very gratifying to the Chief Inspector, after so many years advocacy, to find that his labours are bearing fruit in the establishment of killing and chilling works in various parts of the Colony, and the transport of chilled meat over long distances by railway, with provision at the seaboard for cool storage. With these accessories by way of a start, it will not take long to establish an extensive export trade in meat if the growers will co-operate and will improve the breed for this purpose by judicious crossing. On this head some valuable information is given in Appendix I.

It is gratifying to find that though inoculation for pleuro-pneumonia was tried on 229 holdings it failed only in one case, and that through bad virus. Considerable attention has been given by the staff of this Branch during the year to the various diseases by which our flocks and herds are affected. The result of M. Loir's operations, as given in Appendix J, are most satisfactory.

The clip for the year shows a very satisfactory increase.

In estimating the average weights of the clip from lambs and sheep respectively shorn in the grease, creek-washed, or scoured, account is taken of the fact that where creek-washing is adopted the sheep are smaller and the fleece lighter than in the localities where scouring is resorted to.

The

The following figures show how large a proportion of our clip is shipped from the chief ports of adjoining Colonies :—

ESTIMATE of the proportion of the Wool Clip of this Colony shipped from each of the principal shipping ports of this and the adjoining Colonies.

Year.	Wool.	Sydney.	Melbourne.	Adelaide.	Brisbane.	Total.
		lb.	lb.	lb.	lb.	lb.
1884	Greasy .....	83,054,285	30,042,541	7,216,407	695,690	126,008,923
"	Washed .....	3,281,142	778,338	209,987	59,676	4,329,143
1885	Greasy .....	119,565,541	32,430,779	9,216,164	886,064	162,098,548
"	Washed .....	2,265,685	336,759	299,322	94,935	2,996,701
1886	Greasy .....	115,810,501	35,913,969	13,891,088	150,305	165,765,863
"	Washed .....	2,505,650	1,285,408	671,721	4,829	4,467,608
1887	Greasy .....	125,167,424	45,922,914	16,054,563	330,189	187,475,090
"	Washed .....	2,983,730	1,090,073	.....	18,667	4,092,470
1888	Greasy .....	148,681,473	38,421,221	14,369,559	269,352	201,741,605
"	Washed .....	3,410,500	163,327	.....	15,648	3,589,475
1889	Greasy .....	161,240,577	54,265,699	9,470,909	306,251	225,283,436
"	Washed .....	3,101,814	1,519,199	1,481,528	16,590	6,119,131
1890	Greasy .....	187,400,915	54,046,533	10,219,179	630,324	252,296,961
"	Washed .....	3,701,744	884,208	1,314,847	30,360	5,931,159
1891	Greasy .....	206,430,251	55,981,297	11,004,076	749,461	274,165,085
"	Washed .....	2,727,079	947,590	1,337,933	26,689	5,039,291

While the export of greasy wool has increased during the past eight years by 148,156,162 lb., the export of washed wool during the same period has increased by only 710,148 lb. This is mainly due to the fact that the growers prefer to dispose of their wool in the grease. The proportion of New South Wales wool shipped from Melbourne has increased steadily from 30,820,879 lb. in 1884 to 56,928,887 lb. in 1891. The quantity of New South Wales wool shipped from Adelaide shows greater fluctuations. Thus the quantity which in 1884 was 7,126,374 lb. had in 1887 risen to 16,054,563 lb., and had up to 1891 declined to 12,342,009 lb. These fluctuations are probably due to the state of the Darling River from time to time. The quantity of New South Wales wool shipped from Brisbane in 1884 was 755,366 lb., and in 1891 776,150 lb., but in the interim it had risen to 980,999 lb. and had fallen to 155,134 lb.

Every effort is being made to improve the driftways of the Colony, so as to increase the facilities for moving stock from one part of the Colony to another, thereby increasing the value of pastoral holdings.

The information given in Appendix G will, it is thought, prove most useful in connection with some of the movements now on foot relating to the export of meat.

I have, &c.,

HARRIE WOOD.

Department of Mines and Agriculture,  
Sydney, 11th June, 1892.

## The Chief Inspector of Stock to The Under Secretary for Mines.

Sir,

Department of Mines, Stock Branch, Sydney, 30 April, 1892.  
 On the 3rd February last I submitted a Progress Report for the year ending 31st December, 1891, giving the approximate number of the horses, cattle, and sheep then in the Colony; and I have now the honor to submit for your consideration my complete Report for that year on the working of this Branch, which is as usual based very much upon Inspectors' estimates—owners still showing very little inclination to furnish data. It will be seen that the actual number of cattle and sheep in this Report exceed those in the Progress Report, while the number of horses is slightly less.

I have, &c.,

ALEX. BRUCE,

Chief Inspector of Stock.

### I.—INSPECTORS AND THEIR WORK.

#### 1. *The Inspectors.*

There are now forty-eight inspectors, having charge of sixty-three Sheep Districts.

#### 2. *The Inspections made.*

The inspections made during the year were as follows:—

Of Stock ... ..	24,658
„ Reserves ... ..	4,680
„ Pounds ... ..	458
„ Commons ... ..	144
„ Dogs ... ..	1,428
„ Pigs ... ..	2,419
Under Pastures and Stock Protection Act ... ..	8,316
Under Public Watering-places Act ... ..	1,156
Total ... ..	43,289

This would give an average of 902 inspections made by each of the forty-eight inspectors, and is an increase of 170 inspections on last year.

#### 3. *Horses, Cattle, and Sheep inspected.*

*Horses.*—The number of horses inspected during the year was 144,968 by forty-seven inspectors.

*Cattle.*—The number of cattle inspected during the year was 1,200,333.

*Sheep.*—The number of sheep inspected during the year was 29,168,297. This is an increase on last year's inspections of horses, 46,457; and of sheep, 789,372.

There was a decrease of 99,575 in the number of cattle inspected.

#### 4. *Inspections at Homebush Sale-yards.*

During the year bi-weekly visits to the Homebush yards have been made, with the view to inspecting the stock yarded. The total number of stock submitted to auction was as follows:—Cattle, 122,221 head; sheep, 1,968,569, or a weekly average of 2,350 cattle and 37,857 sheep, being an increase of 554 cattle and 6,428 sheep on the weekly average, as compared with previous year. These inspections are called for not only for the prevention of disease but also to check stock stealing, and with that view the inspector sees that the brands and marks of the stock correspond with those in the permits or travelling statements accompanying the stock, which are collected and filed in this office for future reference, should, as it at times happens, inquiry be made with respect to stock suspected of being stolen.

#### 5. *Distance travelled by Inspectors during the year on duty.*

The total number of miles travelled by forty-eight inspectors was 198,278, or an average of 4,130 each per annum, being an increase of 218 miles for each inspector as compared with the previous year.

#### 6. *Prosecutions and Convictions.*

The prosecutions instituted during the past year were as follows:—

Under Sheep Act ... ..	137
„ Imported Stock Act... ..	...
„ Brands Act ... ..	9
„ Pastures Act... ..	102
„ Public Watering-places Act ... ..	53
„ Impounding Act ... ..	1
„ Slaughtering Act ... ..	...
Total ... ..	302

This shows a slight increase in the number of prosecutions for the year. The decrease was under the Pastures, Impounding, and Slaughtering Acts. There was an increase under the Sheep Brands and Public Watering Places Acts, as compared with those of the previous year.

The number of convictions were:—

Under Sheep Act ... ..	127
„ Imported Stock Act... ..	...
„ Brands Act ... ..	9
„ Pastures Act... ..	92
„ Public Watering-places Act ... ..	48
„ Impounding Act ... ..	1
„ Slaughtering Act ... ..	...
Total ... ..	277

II.—

## II.—HORSES.

1. *The Number.*

The number of horses in the Colony during the thirty-one years previous to and including 1891 was as follows:—

Year.	No.	Year.	No.	Year.	No.
1861 ... ..	251,497	1872 ... ..	304,100	1882 ... ..	328,026
1862 ... ..	233,220	1873 ... ..	328,408	1883 ... ..	326,964
1863 ... ..	273,389	1874 ... ..	334,462	1884 ... ..	337,172
1864 ... ..	262,554	1875 ... ..	357,697	1885 ... ..	344,697
1865 ... ..	284,567	1876 ... ..	366,703	1886 ... ..	361,663
1866 ... ..	282,587	1877 ... ..	328,150	1887 ... ..	390,609
1867 ... ..	278,437	1878 ... ..	336,468	1888 ... ..	411,368
1868 ... ..	280,201	1879 ... ..	360,038	1889 ... ..	430,777
1869 ... ..	280,818	1880 ... ..	395,984	1890 ... ..	444,163
1870 ... ..	280,304	1881 ... ..	398,577	1891 ... ..	459,755
1871 ... ..	337,597				

This shows an increase of 15,592 during the year, and is due principally to an increase in the number of breeders, good season, introduction from other colonies, increased settlement, and to the returns being more complete.

The number of horses in each Sheep District will be found in Appendix A.

2. *The different Breeds.*

*Draught.*—The numbers returned under this head are—Ordinary, 122,984; thoroughbred, 20,463; total, 143,447.

*Light Harness.*—The number returned as ordinary is 103,617; thoroughbred, 16,375; total, 119,992.

*Saddle.*—The number of ordinary is given as 168,144; thoroughbred, 28,172; total, 196,316.

3. *Horses introduced.*

*From other districts.*—The number of stud horses introduced was 188, and stud mares, 322; ordinary mares, 2,244; and horses, 2,112.

*From other Colonies.*—The number introduced by sea was—Stud horses and mares, 166; and ordinary horses and mares, 285.

The number introduced overland was 59 stud mares and 118 stud horses; and ordinary, 3,060 mares and 3,724 horses.

*From England and Foreign Countries.*—The number introduced under this head was 74. For particulars see Appendix B.

4. *Horses fit for sale.*

The numbers returned as being fit for market during the coming year are 23,961 draught; 25,733 light harness; and 36,914 saddle.

Of this number it is estimated that 22,535 are suited for the India and China markets.

The number of horses exported during the year was 1,884.

5. *Improvement.*

In forty-four districts the horses are said to be improving. The principal reasons given are—Introduction of superior stud horses, breeding from good mares, and more attention to the rules of breeding, and in fourteen districts there is no improvement. In five districts they are deteriorating,—the reasons given being too much light blood introduced, breeding from weedy mares for racing purposes.

6. *Diseases in Horses.*

This year has been unusually free from epizootic diseases in horses.

*Anthrax* was reported in one district.

*Australian Stringhalt* occurred in one district.

*Strangles.*—Has during the year been of a mild character, and has been reported in seventeen districts.

*Prurigo.*—Continues to give trouble in five districts. Cleanliness of the horse's body and washing with caustic soda and water— $\frac{1}{2}$  oz. to a pint of water—are said to give good results. A full account of this disease appeared in the report for 1889.

*Influenza.*—This disease, which made its appearance towards the end of 1890, is reported from seven districts, and continued until the end of spring. A brief statement of the symptoms and treatment will be found as Appendix C. The disease will be found fully described, and its treatment given by Mr. Government Veterinarian Stanley under Appendix C of my annual report for 1890.

*Glanders.*—This disease was detected in Messrs. Sells Bros. circus horses which came here from America in November last. For Mr. Stanley's, the Government Veterinarian, report on that outbreak, see Appendix D.

7. *Losses in Horses through Accidents, &c.*

The losses in horses from accidents, as reported, amount to 2,342.

A number are also reported to have died from eating Chinese Melon, they forming into balls in the stomach.

8. *Wild Horses.*

The number of wild horses in the Colony is estimated at 3,815, which shows a decrease on the previous year of 675.

9. *Tax on Entire Horses.*

A large majority of owners consider that all entires should be registered, and are still in favour of a special tax being placed on them.

## III.—CATTLE.

1. *Number.*

The returns of cattle in the Colony during the thirty-one years ending 31st December, 1891, stand as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	2,271,923	1872	2,287,660	1882	1,859,985
1862	2,620,383	1873	3,794,327	1883	1,640,753
1863	2,032,522	1874	2,856,699	1884	1,425,130
1864	1,924,119	1875	3,134,086	1885	1,317,315
1865	1,961,905	1876	3,131,013	1886	1,367,844
1866	1,771,809	1877	2,746,385	1887	1,575,487
1867	1,728,427	1878	2,771,583	1888	1,622,907
1868	1,761,411	1879	2,914,210	1889	1,741,592
1869	1,795,904	1880	2,580,040	1890	1,909,009
1870	2,195,096	1881	2,597,348	1891	2,046,347
1871	2,014,888				

This shows an increase during the year of 137,338, and a decrease as compared with the decennial year 1881 of 551,001.

The number of cattle in the several Sheep Districts will be found in Appendix A.

The number of cattle introduced from the other Colonies was 237,306, and the number exported from this Colony was 137,013.

2. *Different Breeds.*

*Shorthorns.*—The number of pure-bred and stud Shorthorns is estimated at 55,826; and ordinary, 687,119; total, 742,945.

*Hereford.*—Pure and stud, 31,531; ordinary, 217,567; total, 249,098.

*Devon.*—Pure and stud, 12,984; ordinary, 70,530; total, 83,514.

*Black-polled.*—Pure and stud, 1,350; ordinary, 820; total, 2,170.

*Red-polled.*—Pure and stud, 11.

*Ayrshire.*—Pure and stud, 4,419; ordinary, 10,773; total, 15,192.

*Alderneys.*—Pure and stud, 1,912; ordinary, 7,562; total, 9,474.

*Highland.*—Pure and stud, 12.

*Holstein.*—Pure and stud, 15.

*Brittany.*—Pure and stud, 37.

*Crosses.*—First crosses, 8,194; ordinary, 935,685; total, 943,879. The crosses are estimated as follows:—Shorthorn and Hereford, 318,374; Shorthorn and Devon, 116,786; Hereford and Devon, 54,193; Shorthorn and Black-polled, 11,381; Ayrshire and Shorthorn, 25,231; Black-polled and Devon, 79; the balance, 417,839, being unrecognisable.

There is a comparatively large increase in the milking breeds of cattle. This arises through many of our cattle-owners in the coast districts having turned their attention to dairying instead of fattening for market; and it is believed that this change will continue and increase, not only in the coast districts, but also throughout the Colony, as dairying, when properly carried out, is paying well.

3. *Cattle introduced.*

*From other Districts.*—Stud bulls, 363; stud cows, 561; total, 924; ordinary cattle, 95,517.

*From other Colonies by Sea.*—Stud bulls, 216; stud cows, 123; total, 339.

*Overland.*—Stud bulls, 13; stud cows, 46; ordinary cattle, 236,910; total, 236,969.

*From Countries outside the Australian Colonies.*—Bulls, 9; cows, 17; total, 26. Of these 2 were Shorthorn, 6 Devon, 7 Jersey, and 11 Red-polled. For particulars see Appendix E.

4. *Increase and Decrease of Cattle.*

In fifty-two districts the cattle are reported to be increasing, for which the following reasons are given:—(1.) The good season and increased breeding. (2.) Owners holding for better prices. (3.) Introduction of large numbers of store cattle from Queensland. (4.) More owners have taken to breeding cattle, and are stocking-up their runs. In the remaining districts they are decreasing on account of large sales, owners not breeding or stocking-up, and changing for sheep.

5. *The "Cast" of Fat and Store Cattle.*

The estimated "cast" of fat cattle to be sent to market during the coming year is 334,303, and store cattle, 217,262. From fourteen districts the fat cattle are principally sent to Victoria; from two districts they are principally sent to South Australia and Tasmania; and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, Goulburn, Tamworth, and Albury. The principal markets for store cattle are Muswellbrook, Maitland, Goulburn, Wagga Wagga, and Wodonga, in Victoria.

6. *How kept.*

The number of cattle kept wholly in paddocks is returned as 1,613,337; on open runs, 275,140; and the balance, 157,870, are depastured both ways.

7. *Improvement and Deterioration.*

In thirty-eight districts the cattle are said to be improving; in twenty-two districts they are stationary; and in three districts deteriorating. The principal reasons given for the improvement are—introduction of good stud stock; more attention and care in selection and breeding of stock, more particularly those for dairying purposes; also, in culling and keeping in paddocks. The reason given for deterioration is inattention to breeding, many owners breeding from all sorts without respect to breed or quality, using the same blood for years, and introduction of inferior cattle from Queensland.

8. *Their Diseases and Ailments.*

*Pleuro-pneumonia.*—In thirty-one districts, on 213 runs, the cattle were reported as affected with pleuro-pneumonia; and in thirty-two districts the cattle are reported as being free from that disease.

In twenty-four of the infected districts the disease is attributed to introduction of cattle and contact with infected travelling-stock from Queensland, and in the remaining seven infected districts the cause is unknown.

Inoculation was tried on 229 holdings, in thirty-one districts, and in every case except one, owing to bad virus, with satisfactory results. On twenty-four holdings inoculation was performed as a preventive.

The number of owners in favour of inoculation is given as 8,897; against, 807; undecided, 2,564; and 8,814 opinions not known.

The number of owners in favour of compulsory inoculation in the case of infected herds is given as 7,497; against it, 1,915; undecided, 2,648; and 8,886 opinions not known.

Of the opinion expressed, this shows a very large majority of owners in favour of the compulsory inoculation of all herds in which the disease appears; and it is hoped that legislation in this direction will soon be obtained.

*Tuberculosis.*—“The Diseased Animals and Meat Act,” which has just been passed into law, and is now in operation, is a very important measure, and one that will do a great deal towards stopping the sale of animals affected with this disease, as it imposes a penalty on anyone selling, consigning, or exposing for sale, or supplying for rations any diseased animal. The diseases now dealt with under the Act are anthrax, actinomycosis, and cancer; and any other diseases may be brought under its provisions by regulations. During the past year the Stock Inspector, who visits Homebush every sale day, condemned 303 head of cattle, suffering from tuberculosis and other diseases, which were boiled down. All Inspectors of Stock are empowered to act as Inspectors under this Act.

*Actinomycosis.*—During the year Mr. Stanley, the Government Veterinarian, reported on two cases of this disease. He states that, in all probability, the actinomyces, or microbic fungi of the disease, gained access through eating affected herbage. He thinks that the time when the animal becomes affected is during dentition, as at that period, when the teeth are cutting the gums; their sore condition gives the fungi of the disease an opportunity of taking root. When once established, then spores are carried by the blood all over the body, and may take root and grow in any organ, forming nodular masses, varying in size from small shot to cricket balls. As the disease very closely resembles tubercle, it is of great importance to breeders to be able to distinguish between these diseases, because tubercle is hereditary, and actinomycosis is not.

*Cumberland Disease.*—From three districts the number of cattle reported to have died from this form of anthrax is 102, being 491 less than the previous year.

*Symptomatic Anthrax or Blackleg* is reported to have carried off 1,073 head in eight districts, being an increase of 720 on the previous year.

*Cancer.*—Cattle to the number of 3,638 are reported from twenty-six districts to have died of cancer and tubercular swellings in the throat, being an increase of 2,347 on the previous year.

*Red Water.*—From one district 10 deaths are recorded. The disease is prevalent in certain localities in the coast country.

*Ophthalmia* occasionally assumes an epidemic form, and the losses are in some cases considerable. From five districts 99 deaths are recorded from this cause. For description and treatment, see Mr. Stanley, the Government Veterinarian's report, given as Appendix F.

*Blaine* has not been reported this year.

In regard to the disposal and utilising diseased stock, it would pay their owners better to either kill and boil them down at their own stations, or dispose of them to some one at the nearest railway station who would do so; for, of course, it costs far less to send the skin, tallow, and bones to Sydney than the live animals, and the cash returns for them would also be greater. Owners should therefore deal with their diseased stock in either of those ways, and not send them on alive, as not only would the diseased stock be liable to be seized and destroyed without compensation, but the owner would also be liable to be prosecuted.

## IV.—SHEEP.

1. *The number.*

The number of sheep in the Colony during the thirty-one years, ending 31st December, 1891, stands as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	6,119,169	1872	17,873,696	1882	36,114,814
1862	6,558,896	1873	18,990,595	1883	37,915,510
1863	7,169,126	1874	22,797,416	1884	31,660,321
1864	9,082,463	1875	25,353,924	1885	37,820,906
1865	9,650,106	1876	25,269,755	1886	39,169,304
1866	11,644,593	1877	21,521,662	1887	46,965,152
1867	15,066,377	1878	25,479,484	1888	46,503,469
1868	16,000,090	1879	30,062,910	1889	50,106,768
1869	16,848,217	1880	35,398,121	1890	55,986,431
1870	16,218,825	1881	36,591,946	1891	61,831,416
1871	16,766,012				

The number of sheep in the several Sheep Districts will be found in Appendix A.

A statement has been prepared, and will be found as Appendix G, giving the number of owners in each district with sheep from 1 to 500, 501 to 1,000, 1,001 to 2,000, 2,001 to 5,000, 5,001 to 10,000, 10,001 to 20,000, 20,001 to 50,000, 50,001 to 100,000, 100,001 and upwards, together with the number of sheep respectively owned by each class of owners in the several districts.

*Increase and Decrease.*

This shows an increase for the whole Colony of 5,844,985. The increase may be described as large, and only equalled by the last and two previous years. It was, with the exception of Monaro and Middle Darling, general all over the Colony. The small increase in Middle Darling was due to the prevalence of rabbits, and in the Monaro to cold weather during lambing, and while lambs were young.

The number of sheep imported during the year was 658,300 and the number exported was 1,714,921, being an increase in the exports over the imports of 1,056,621 sheep.

2. *The different Breeds.*(1.) *Merino.*

3. *Sheep introduced and imported.*

## (1.) Australian.

- (1.) From other districts in this Colony—Stud, 8,359; ordinary, 3,285,154; total, 3,293,513.  
 (2.) Overland from other Colonies—Stud, 9,724; ordinary, 1,700,895; total, 1,710,619.  
 (3.) By sea from other Australian Colonies—During the year 4,302 stud sheep have been introduced from the other Australian Colonies by sea; of these 4,295 arrived by special ship, and in charge of the owner, and were, under the Regulations of 31st July, 1890, admitted without quarantine or dressing, while 7 which did not arrive by special steamer, nor in charge of the owner or his servants, received one dipping.

The prohibition still exists against the importation of sheep from Western Australia and New Zealand, as neither of these Colonies can yet be declared free from scab; but it is expected that New Zealand will soon be so.

## (2.) Foreign.

(4.) From England and Countries and Colonies other than Australian—432 stud sheep have been introduced, subject to a quarantine of 90 days and three dressings. It was recommended at a meeting of Chief Inspectors of Stock, held in Sydney in June last, that the term be reduced to 60 days, but nothing as yet has been done, as the Colonies of Victoria and South Australia have declined to alter the period as fixed at last Intercolonial Stock Conference.

All these sheep, both Australian and Foreign, after being taken inland, were examined by the inspectors for the districts into which they went, and reported to be in good health and free from infection.

For the particulars as to description of sheep introduced and imported, and their breeders or importers, see Appendix H.

3. *Long-woolled and cross-bred Sheep.*

The number of these sheep is far below what it ought to be, for there are large tracts of country in the Colony well adapted for long-woolled and cross-bred sheep, and there is no doubt but that where the land will carry them they pay much better under proper management than the ordinary merino, while now, with the prospect of a large surplus of fat sheep and heavy shipments of frozen mutton, there is every inducement to owners with suitable country to put their older ewes to long-woolled rams.

The wool of the cross brings as good a price as the merino per lb., is very saleable, and our own butchers prefer the cross-bred sheep, which are, of course, heavier, and bring more money, while cross-bred frozen mutton is worth about 1d. per lb more in the London market than merino.

Mr. W. A. Benn, manager of the Australian Chilling and Freezing Company, Aberdeen, in this Colony, and Mr. J. P. Ritchie, Chief Inspector of Stock, Wellington, New Zealand, have kindly furnished valuable information on the value of the different breeds of long-woolled sheep for crossing with the merino, which will be found tabulated in Appendix I; and from which it would seem that crossed with the merino the Lincoln, taking both mutton and wool into consideration, gives the highest return, the Border Leicester the next, the Romney Marsh the next, the Hampshire Downs the next, and the Leicester the next. I understand from other sources that the English Leicester, and the Shropshire Downs also give good returns.

When New Zealand is declared free from scab (which it is believed it will soon be), and the prohibition against the introduction of sheep from that colony is removed, our breeders will be able to obtain long-woolled rams from there. There are very few breeders of long-woolled sheep in this colony, and they almost all breed Lincolns. Among them may be mentioned Mr. R. G. Higgins, of Kickerbil; Mr. Wills Allen, Gunnedah; and Mr. S. Wiseman, of Cliff Dale, Wingen, who two and a half years back imported three rams and twenty-three ewes from England.

4. *The "Cast" of Fat and Store Sheep.*

The annual "cast" of fat sheep for the ensuing season is estimated at 7,240,174, and store sheep 11,645,440.

5. *How Sheep are kept.*

Paddocked	...	...	...	...	...	...	...	60,127,284
Shepherded	...	...	...	...	...	...	...	917,321
Both ways	...	..	...	...	...	...	...	786,811
								61,831,416

6. *Condition of the Flocks.*

In forty-nine districts the sheep are said to be improving, the principal reasons given being—more attention to breeding, paddocking, introduction of high-class rams and ewes, more careful classing and culling, better management, and good seasons.

In nine districts they are said to be stationary, and in five districts they are deteriorating. The reasons given are—Effects of bad seasons, breeding from inferior ewes, bad management, bad selection of rams, and purchase of stores.

7. *Lambing.*

The general average for the whole of the Colony of the paddocked sheep is returned by inspectors at 69 per cent., and shepherded sheep at 63 per cent. In twenty districts the lambing was high, in thirty-one districts medium to fair, and in twelve districts low to very low. The reason given for the high percentage is the favourable season and good condition of ewes, runs not overstocked, while the fair and low percentages are attributable to wet and cold seasons during lambing, poverty of ewes, want of feed and water, worms, numbers of lambs having perished through heavy rains and floods, destruction of pasture by grasshoppers, and flocks harassed by dogs.

From returns received it appears that the lambing takes place in twenty-two districts during autumn, in five districts during winter, in eleven districts during spring, in five districts during autumn and spring, in two districts during winter and spring, and in six districts during autumn and winter.

The paddocked sheep show a higher percentage than the shepherded sheep by 6 per cent.

8. *The Clip.*

## Average per Sheep.

*Lambs.*—The number of lambs shorn in the grease was 10,531,106; the number washed, 31,542; total lambs shorn, 10,562,648.

*Sheep.*—The number of sheep shorn in the grease was 45,619,967; creek-washed, 426,201; and scoured, 1,093,886.

The average weights of the clip are estimated as follows:—

	<i>Lambs.</i>		<i>Sheep.</i>	
	lb.	oz.	lb.	oz.
Grease ... ..	1	15	5	9
Creek-washed ... ..	1	4½	2	14½
Scoured ... ..	.....		3	7

## Total Clip.

The total clip in the Colony for the year 1891, according to the number of sheep, would be 45,619,967 shorn in the grease, average clip, 5 lb. 9 oz. per sheep = 253,761,066 lb.; 426,201 sheep, creek-washed, average clip, 2 lb. 14½ oz. per sheep = 1,238,646 lb.; 1,093,886 sheep scoured, average clip 3 lb. 7 oz. = 3,760,233 lb. Lambs—10,531,106 lambs shorn in the grease, average clip, 1 lb. 15 oz. per lamb = 20,404,018 lb.; 31,542 lambs washed, average clip per lamb, 1 lb. 4½ oz. = 40,413 lb.; total clip, 279,204,376 lb., or an increase of 20,976,256 lb. on last year's clip, and is accounted for by the increased number of sheep in the Colony. It will be noticed that the weight is slightly lower than last year's. This is accounted for by the excessive rains which robbed the wool of the yolk.

## Condition of Clip.

In seven districts the clip is reported as sound and containing a plentiful supply of yolk; in twenty-eight districts sound, although deficient in yolk; and in remaining districts weak, owing to absence of yolk. On the whole the clip was clean, but in a few districts the value of the wool was affected by grass-seed and burrs.

## Time of Shearing.

Some of the owners in the Cobar district have shorn in the autumn, and are so well satisfied with the result that they intend to commence shearing in future at that season of the year.

## Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped principally to England, America, France, and Germany, and considerable portions of it is so from the ports of the three neighbouring Colonies, as well as from Sydney and Newcastle. The portions of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies, more particularly for that of Victoria and South Australia.

The following is an estimate of the clip sent to Sydney, and also the proportion sent across the Borders and to Melbourne, Adelaide, and Brisbane for the years 1890 and 1891:—

Port of Shipment.	1890.			1891.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb.	lb.	lb.
Sydney .....	187,400,915	3,701,744	191,102,659	206,430,251	2,727,079	209,157,330
Melbourne .....	54,046,533	884,208	54,930,741	55,981,297	947,590	56,928,887
Adelaide .....	10,219,179	1,314,847	11,534,026	11,004,076	1,337,933	12,342,009
Brisbane .....	630,334	30,360	660,694	749,461	26,689	776,150
	252,296,961	5,931,159	258,228,120	274,165,085	5,039,291	279,204,376

This shows an increase in the quantity of wool shipped during the year from the Ports of Sydney and Newcastle of 20,976,256 lb., as compared with that shipped in 1890.

## Classing of Clip.

In thirty-six districts the clip is reported as having been well classed. In the other districts it is not considered to have been so, the reasons given being, owners do not think it pays, want of convenience sheds not large enough to warrant expense, and the difficulty of obtaining competent wool-sorters.

## Wool-presses.

A great number of different kinds of presses are used; those most in favour are Ferrier's Patent and Williams' and Robinson's; rack screw and pinion presses are used. There is still room for improvement in the mode of pressing, especially by the owners of small clips.

## Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 ft. 6 in. x 2 ft. 2 in. to 5 ft. 3 in., and the weight from 10 to 12 lb.

On fifty-four stations the wool is dumped before leaving.

9. *Sheep-brands and Marks.*

During the year 1891 the number of Sheep Brands and Ear-marks recorded, transferred, and cancelled were as follows:—

Recorded.										
Fire Brands	...	...	...	...	...	...	...	...	...	286
Tar do	...	...	...	...	...	...	...	...	...	1,685
Ear-marks	...	...	...	...	...	...	...	...	...	1,017
Total										2,988
Transfers.										
Fire Brands	...	...	...	...	...	...	...	...	...	77
Tar do	...	...	...	...	...	...	...	...	...	143
Ear-marks	...	...	...	...	...	...	...	...	...	135
Total										355
Cancelled.										
Fire Brands	...	...	...	...	...	...	...	...	...	633
Tar do	...	...	...	...	...	...	...	...	...	2,411
Ear-marks	...	...	...	...	...	...	...	...	...	1,000
Total										4,044

The large increase in the number of cancellations arises from the revision which has been carried out of the Sheep Brands and Marks Record, and the cancellation of all Brands and Marks of owners who have died, or who have parted with the holdings for which the Brands and Marks were recorded.

*Sheep Brands or Sheep Brands and Marks to be prima facie evidence of Ownership.*

As there are only a comparatively small number of Brands and Marks which can be used in branding and marking sheep, a good brand or mark, which is dissimilar to every other brand or mark in the Colony, cannot—as in the case of horse and cattle brands—be allotted to every sheepowner; and the same sheep brands and marks are, therefore, registered in most of the Districts.

This being so, when a case is brought into Court for sheepstealing, or for any breach of the branding or marking provisions of the Sheep Act, the fact here noticed is urged in defence of the person prosecuted, in order to raise a doubt as to the ownership of the sheep, and the offender frequently thus escapes.

There is, too, now a great uncertainty as to the ownership of sheep; and if they stray, or are dropped while travelling, they are seldom or never recovered; whereas, if the sheep brands and marks were put on the same footing as the Horse and Cattle Brands, this uncertainty would be removed, and owners would receive notice when their sheep strayed or were dropped; and be able to recover them.

To bring this about the Department decided, in terms of section 36 of the Sheep Act of 1878, to call upon those owners whose brands or marks or brands and marks were similar, to accept such alterations as would render them dissimilar to any other brands or marks or brands and marks in the Colony.

Steps have accordingly been taken to find what brands and marks were similar, and where they were so the owners have been offered modifications, which have, to a large extent, been accepted; and where the owners decline to take these modifications or to register ear-marks in addition to their brands to make the necessary dissimilarity, the powers conferred by the Act on the Chief Inspector will be exercised, and the modifications offered owners will be registered as their brands.

When the work is completed, which it will now soon be, there will be no owner who will not be able to say in court or elsewhere, that no one in the Colony has the same registered sheep brand or brand and mark as he has; and his brand or brand and mark will then be *prima facie* evidence of ownership.

Ear-marking.

In most districts the system of ear-marking sheep is properly carried out, and may now be said to be approved by all the Boards.

Tattoo-marking.

This system of marking is mostly used by owners of stud-sheep, not as yet to any great extent in the case of ordinary flock sheep, but where tried it has been found to be a good preventive to sheep-stealing.

V.—DISEASES IN SHEEP.

1. *Scab.*

The flocks in this Colony and in the Colonies of Queensland, Victoria, South Australia, and Tasmania are free from scab. It exists, but to a very slight extent, in Western Australia; New Zealand is believed to be clean, but has not yet been officially reported to be so. It is hoped that both Colonies will soon be declared clean. The importation of sheep from the last-named Colonies into this Colony is still prohibited.

2. *Ticks.*

Although most of the owners in the cold and temperate portions of the Colony where ticks infest the sheep are now careful to dip their flocks, there is still a considerable minority who neglect this very necessary practice, and the result is that the condition of their sheep is lowered, and the value of their clip seriously depreciated, while they help to spread the tick to other owners' sheep. Dipping for ticks is compulsory in some of the other Colonies, and should be made so in this. The expense is comparatively light, and the trouble not much, especially when the dipping is done as the sheep are shorn.

3. *Anthrax.*

Anthrax has been less virulent this year. M. Loir (Pasteur's representative) continued his protective inoculation in infected districts with very satisfactory results, which are given in Appendix J. During the year experimental inoculations with anthrax were carried out at Rodd Island by M. Loir and Mr. Stanley, the Government Veterinarian, and it has been proved that kangaroos are, as was supposed, susceptible to this disease by inoculation. A full report of these experiments will be found in the April number of the *Agricultural Gazette* of New South Wales, in which is also given a detailed table showing the susceptibility of animals to this disease, which is here reprinted as Appendix K.

4. *Foot-rot.*

In thirty-seven districts the sheep have been more or less affected with foot-rot during the year, the reasons given being wet season, running on low rich pasture, and contagion. The principal remedies tried were with careful paring, butyr of antimony and bluestone, bluestone and kerosene, arsenic, arsenic and lime, blue vitriol, sulphate of copper, carbolic acid, and nitric acid—with satisfactory results. Of these, bluestone and butyr of antimony have been most effective for hand-dressing, and arsenic and bluestone in troughs. For the dressings recommended by the Government Veterinarian, see Appendix L.

5. *Fluke.*

In twenty-three districts the sheep were affected with fluke, through wet seasons, depasturing on low swampy ground, unsound country, and rank pasture. The preventives used were salt, tar, and turps, sulphate of iron, and Liverpool salt and sulphur, with good results; but the best course where it can be followed is to remove the sheep to salt-bush country, and where that cannot be done, to keep the country free from surface water by means of drains run with a plough and helped with a spade, and burn the grass when opportunity offers, besides giving the licks mentioned.

6. *Parasitic Worms.*

In thirty-four districts the sheep are reported as having been infested with worms to an extent of (say) 16 per cent. The prevalence of the worms is attributable to the frequent summer rains following upon a wet winter, which lessened the nutrition in the pasture, and lowered the stamina of the sheep, while at the same time the moisture and heat tended to a large development and increase of the worms. A brief statement of the worms with which the sheep were infested and the remedies used, and the result will be found in Appendix M.

Sheep-owners will be glad to learn that under instructions from the Honorable the Minister for Mines and Agriculture, Mr. Slattery, Dr. Cobb, Vegetable Pathologist for the Department, is about to enter upon the study of the life history of the worms which cause the chief losses in our flocks, with the view to find a remedy for them, or at least to ascertain when, where, and how they can best be attacked.

## VI.—PIGS.

The number of pigs in the Colony, as returned at 31st December, 1891, is 253,358, being a decrease of 30,865, as compared with the returns for the previous year.

From the other Colonies 658 have been introduced by sea.

Foreign pigs are prohibited.

The number of pigs exported from Port of Sydney was 197.

*Diseases in Pigs.*

No disease whatever has been reported amongst pigs.

According to latest reports swine fever still exists in Great Britain.

## VII.—DOGS.

Thirty-one foreign dogs, *i.e.*, dogs from England, America, France, Germany, and other places outside the Australasian Colonies were quarantined during the year, and 665 Colonial dogs were introduced at the port of Sydney.

One hundred and eighty-two dogs were inspected prior to exportation.

*Diseases in Dogs.*

*Rabies* is still reported as prevalent in Europe, and in London, and in some other parts of England the regulations requiring dogs to be muzzled were, during the dangerous months of the year, strictly enforced, with most satisfactory results.

Rigorous quarantine regulations are absolutely necessary to prevent the introduction of this disease into these Colonies, and it is to be regretted exceedingly that Victoria and South Australia still adhere to the practice of keeping Foreign dogs in private quarantines, a practice which must be attended with considerable risk of introducing Hydrophobia, the most terrible of all diseases which affect men or animals.

## VIII.—TRAVELLING STOCK.

1. *Trespass on Reserves.*

In twenty-nine districts the driftways and reserves for travelling stock are reported as having been trespassed upon more or less, by neighbouring lessees' and selectors' stock. In ten districts stripping of the reserves of pasture arises through their being leased to the owners of the run through which they pass. In twenty-four districts they are reported as being entirely free from trespass. Inspectors suggest, in order to enable them to exercise proper supervision over these reserves, that the boundaries should be properly marked, and I am glad to be able to state that is now being carried out.

### 2. *Grass on Reserves and Driftways.*

In one district the inspector reports that there is not sufficient grass on the reserves and driftways in his district to enable fat stock to reach market in good condition, through reserves being included in run-holder's lease; in two districts there is not sufficient on all the reserves even in good seasons; and in the remaining districts that, as a rule there is, except in times of drought, sufficient grass on these reservations.

From thirteen districts it is reported that sheep to the number of 828,525 have passed through during the year in search of grass and water. From eight districts the number of loafing sheep is given at 113,880.

### 3. *New Roads for Travelling Stock.*

In thirteen districts new roads are required for travelling stock, and in fifty districts no new droving roads are recommended.

### 4. *New Reserves for Travelling Stock.*

In seventeen districts new reserves and alterations of existing ones for travelling stock are required. In forty-six districts there are sufficient reserves; but in a good many cases these reserves are now being curtailed in a way that will, I fear, be injurious to the stock traffic.

### 5. *New Wells, Tanks, or Dams.*

In twenty-five districts the inspectors report that new wells, tanks, or dams should be constructed by the Government at places which they indicate.

### 6. *Travelling charges for Stock.*

In eighteen districts cash and bonds have been given for travelling charges on stock, the total amounting to £4,685.4s. 4d., most of which has been refunded to date on appeal to the Boards.

### 7. *Laws relating to Travelling.*

In all the districts the inspectors report that the provisions of the amended Sheep Acts relating to travelling stock are working fairly well, but are at times evaded, and should be amended.

## IX.—REGISTRATION OF HORSE AND CATTLE BRANDS.

### 1. *Brands registered.*

The number of horse and cattle brands registered up to 31st December, 1891, was 67,023. The number of brands registered during the year 1891 was—Horse brands (alone), 421; cattle brands (alone), 322; and horse and cattle brands, 1,989; making a total of 2,732.

This shows an increase of 231 in the total number of brands registered during the year as compared with 1890, and is accounted for by increased settlement. There is an increase in the number of brands transferred, while there is a large decrease in the number of brands cancelled, and addresses changed.

### 2. *Brands transferred.*

The brands recorded during the year 1891 as transferred were—Horse brands, 12; cattle brands, 16; horse and cattle brands, 95; total, 123.

### 3. *Brands cancelled.*

The brands cancelled (horse and cattle) in 1891, were 213.

### 4. *Addresses changed.*

The number of addresses of owners changed in 1891 was 112.

### 5. *Compliance with the Act.*

In all the districts the provisions relating to registration and the other requirements of the Act are reported as being fairly carried out.

### 6. *Benefits of the Act.*

The inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock-stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stock-owners.

## X.—POUNDS.

### 1. *Number and Inspection.*

There are 422 pounds in the Colony, some of which are at present closed for want of poundkeepers. The whole of the pounds are inspected periodically by the various inspectors of stock.

### 2. *State of Yards.*

Twenty-five of the pound-yards are reported to be old; and require renewing, being unfit for the safe custody of stock; and the remainder are said to be in a fair and good condition.

### 3. *Keeping and Depasturing Pound Stock.*

The provision made for the proper sustenance of impounded stock, according to the reports received, is satisfactory. As a rule, poundkeepers have now paddocks for the stock.

### 4. *Management of Pounds.*

The poundkeepers are reported to be performing their duties, upon the whole, in a satisfactory manner, and the appointment of inspectors of stock as inspectors of pounds has had a very beneficial effect.

## XI.—NOXIOUS ANIMALS.

### 1. *The Districts in which the Pastures and Stock Protection Act is in force.*

The Act has been brought into operation in all the districts, and during the year work has been done to the extent shown in Appendices N and O.

### 2. *Receipts and Expenditure under the Act.*

The amount of assessment paid by stock-owners during the year 1890 was £33,649 0s. 11d., and the amount expended £39,663 11s. 6d. The amount of assessment paid by stock-owners in 1891 was £31,664 8s. 9d.; and the amount expended £46,794 10s. 9d., the difference being accounted for by the subsidy granted by the Government to the Boards, and large amount to credit of some of the Boards at commencement of the year. Four districts are reported to be in debt to the amount of £511 0s. 1d.

In nine districts full rates were levied, in forty-two districts less than full rates, while in twelve districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows:—For kangaroos, from 1d. to 1s.; kangaroo rats, 2d. to 6d.; wallaroo, 4d.; wallaby, from 2d. to 6d.; rock wallaby, 3d.; paddymelon, from 2d. to 6d.; bandicoot, 3d.; hares, from 2d. to 9d.; native dogs from 10s. to 60s.; pups, 2s. 6d. to 10s.; bilbees, 2s. 6d.; opossum, 1d.; wild pigs, 9d. and 1s.; eagle-hawks, 6s. to 7s. 6d.; emus, 3d. to 6d.; and crows, 1d. and 6d.

### 3. *Estimated Number of Noxious Animals.*

The aggregate of the returns by inspectors of the estimated number of noxious animals in their districts shows that there are supposed to be 921,514 kangaroos, 3,620,393 wallabies, 28,737 native dogs, 3,309,702 hares, and 10,612 wild pigs in the Colony.

### 4. *Increase and decrease.*

Kangaroos are reported to be increasing in twelve districts, wallabies in thirteen districts, native dogs in ten districts, hares in twenty-six districts, and wild pigs in five districts. In thirty districts kangaroos are reported to be decreasing, wallabies in nineteen districts, and native dogs in twenty-four districts, hares in four districts, and wild pigs in four districts.

### 5. *Number destroyed.*

The number of kangaroos destroyed during the past year was 271,172; of kangaroo rats, 130,881; of wallabies, 704,671; of wallaroos, 839; of wombats, 75; of bandicoots, 997; of paddymelons, 19,008; of wild pigs, 20,262; of hares, 649,131; of native dogs, 11,530; of opossums, 13,319; of eagle-hawks, 3,502; of crows, 21,929; and of emus, 871.

### 6. *Steps taken for their destruction.*

In the majority of the districts hunting with dogs, drives, shooting, trapping, and poisoned water have been adopted with satisfactory results. In thirty-nine districts poison has been used, mostly for dogs, with fair to best results, and from eight districts it is reported that the results have not been satisfactory, the dogs being too cunning to take baits.

### 7. *Amendments suggested in the Act.*

Owners are desirous that the Amended Stock and Pastures Bill speedily become law; and they suggest that all owners of stock, irrespective of number, should be liable to an assessment, as also owners of 5 acres of land and over; that farmers and owners of orchards and vineyards should pay to the fund; that hares be included in the list of noxious animals; that the Boards be empowered to cope with the rabbit nuisance; that the Government should grant larger subsidy; that uniform rates be levied; that the rate of bonus be the same throughout the Colony; that all returns of stock be made on the same day; that adjoining Boards assimilate bonuses; and that the provisions of the Act *re* defaulting Boards be strictly enforced.

### 8. *Losses from Tame and Native Dogs.*

The losses in stock for the past year from the ravages of native dogs are estimated at 85,408 sheep, valued at £28,189, and from tame dogs, 45,824 sheep, valued at £16,118, making the loss from tame and native dogs together, £44,307.

## XII.—COMMONS.

### 1. *Number and extent.*

The number of Commons in the Colony is 280, with an average extent of about 4,160 acres each.

### 2. *Number of Commoners, Stock, &c.*

The average number of Commoners to each Common is estimated at 105, and the average number of stock kept on each Common at 185.

In sixteen districts some of the Commons are reported to be used for other purposes than that of grazing Commoners' stock.

## XIII.—MISCELLANEOUS.

### 1. *Artificial Grasses.*

In twenty-two districts artificial grasses have been sown for pasture during the year to a small extent, in eight districts to a large extent, and in remaining districts none; the most successful being lucerne, prairie, and rye.

### 2. *Number and Division of Runs.*

The number open or unenclosed runs in the Colony is 5,454; the number enclosed is 36,146; the number partially subdivided is 12,144; and the number properly subdivided is 20,330.

### 3. *Improvements, Fencing, Dams, Tanks, and Wells.*

The number of miles of fencing throughout the Colony is estimated at 1,689,549, at an average cost of (say) £41 16s. per mile.

The

The number of dams used for stock purposes is estimated at 31,933, at an average cost of (say) £82 11s. 6d.; number of tanks, 32,784; average cost of each, £192 19s.; and the number of wells used is estimated at 3,744, at an average cost of £229 3s. each.

Cost of fencing, £70,608,999; cost of dams, £2,636,897; cost of tanks, £6,325,096; cost of wells, £857,976; making a total of £80,428,968, as representing the amount expended by way of improvements, &c.

#### 4. *Plants and Weeds.*

##### (1.) Prevalence.

In fifteen districts *trefoil burr* grows to a considerable extent; in twenty districts, to a very large extent; in eleven districts, to a slight extent; and in seventeen districts there is none reported.

In twenty-three districts *variegated thistle* is reported to a slight extent; in twelve, to a very large extent; in sixteen, to a considerable extent; and twelve districts are reported as free from it.

In eighteen districts *black thistle* is reported to a slight extent; in seventeen, to a very great extent; in seventeen, to a considerable extent; and eleven districts are reported to be free from it.

In fourteen districts the land is reported as being infested to a very large extent with *Bathurst burr*; in sixteen districts, to a considerable extent; in twenty-one districts, to a slight extent; and in twelve districts the land is not infested.

In twenty-one districts other noxious weeds grow to a slight extent; in eighteen districts, to a very large extent; in fourteen districts, to a considerable extent; and in ten districts there is none reported.

*Darling-pea* and *Roley-poley* are reported to be growing in a few districts.

##### (2.) Legislation for Noxious Weeds.

Legislation is urgently required for dealing with noxious weeds and plants, more especially the Bathurst burr, the prevalence of which is inflicting very serious loss on travelling stock.

##### (3.) Cost of clearing Commons, Reserves, &c., of Weeds.

The cost of clearing the Commons of noxious weeds throughout the Colony is estimated by inspectors at £306,080; the police paddocks, £2,797; the travelling stock reserves, and droving roads at £192,695; amounting in all to (say) £501,572.

#### 5. *Examination of intending Applicants for appointment of Inspector.*

During the past year two examinations were held by the Stock Board of Examiners. The following table shows the result:—

Date of Examination.	Number of Candidates.	Names of Successful Candidates.	Nature of Certificate issued.
1891.			
23 February .....	4	James Cotton .....	2nd class.
13 July .....	5	Blakeney Broughton .....	;;
		C. J. Crocker .....	;;

It will be seen that nine candidates presented themselves for examination, and that three were successful in obtaining second-class certificates.

#### 6. *The Stock and Pastures Bill.*

It is hoped that the state of the Government business will, in the coming Session of Parliament, admit of this measure, which is so urgently required, being passed to enable inspectors to deal with diseased stock, which are now, through the want of the legislation so frequently asked for, allowed to travel throughout the Colony spreading the infection as they go. This is especially the case with Queensland cattle infected with pleuro-pneumonia, which frequently introduce the disease in our herds.

#### 7. *Fresh Meat Trade.*

Owners will be very glad to gather from the particulars given in Appendix P, that at last the establishment of a Fresh Meat Trade is an accomplished fact, and that its expansion into full volume is a question of only a very short time; for not only in this but also in all the other Colonies owners are coming to see the very important advantages which will accrue from its establishment, and that it is to this trade (including of course Freezing for Export) that they are mainly to look for relief from the difficulties under which they now labour, with glutted markets and low prices for their stock.

#### 8. *Meeting of Chief Inspectors of Stock.*

In the month of May last the Chief Inspectors of Stock for the Australasian Colonies were, at the instance of Sir Samuel Griffith, the Premier of Queensland, invited to meet in Sydney on the 15th June with the view to give effect to the resolutions passed at the last Intercolonial Stock Conference, held in Melbourne in 1889, recommending the adoption of a uniform code of stock regulations for the Colonies, and the establishment of an Australasian Stock Institute.

At the meeting in Sydney at which, however, only the Chief Inspectors for Queensland, Tasmania, and New South Wales attended, a uniform code of regulations was agreed to; and resolutions were passed recommending the adoption of the code by all the Colonies, and the establishment of an Australasian Stock Institute on a temporary footing at Rodd Island.

Several other resolutions were also passed suggesting alterations in those passed at the Intercolonial Conference, held in Melbourne, the most important of which was the reduction of the quarantine for foreign sheep from ninety to sixty days; and copies of the report and proceedings of the meeting were forwarded to all the Colonies, including those not represented at the meeting in Sydney, and they were invited to give their assent to the resolutions passed at that meeting. As, however, the Colonies of Victoria and South Australia declined to take any action in regard to the matters dealt with by the meeting, although they are of the greatest importance to stock-owners in all the Colonies, and urgently required for the protection of their flocks and herds from infectious and contagious diseases not now known in Australia,—they must for the present be allowed to remain in the unsatisfactory state they now are.

APPENDIX A.  
RETURN of Stock in the several Sheep Districts.

Districts.	Year 1890.					Year 1891.				
	Acreage.	Horses.	Cattle.	Sheep.	Pigs.	Acreage.	Horses.	Cattle.	Sheep.	Pigs.

\* Owing to the outbreak of glanders in these horses, they were quarantined until arrangements were made for their re-shipment to America.

## APPENDIX C.

## INFLUENZA IN HORSES.

*Symptoms.*—In the onset there may be all or any of the following:—Loss of appetite, drowsy, headache, pain in the limbs, general weakness, eyelids swollen, tears trickling down the face, discharge from the nostrils, coughing, the eye scarlet and orange colour, the tongue furred, breath offensive, the heart beating feebly but quick, the pulse small and weak, the dung soft.

The subsequent symptoms will depend on the virulence and localisation of the attack.

*Treatment.*—The animals should have rest, pure air, and sheltered from the sun, rain, or wind. The diet should consist of bran mashes and cut green food and drachm doses of chlorate of potash, carbonate of ammonia, or nitrate of potash given in the drinking water. If the ailment is taken in hand at the outset, and the surroundings are good, recovery will take place in a few days. ;

It is most essential that the horse, immediately the first symptoms of the ailment are observed, should have absolute rest and proper care, for if he be worked at the commencement of the illness, he will present a variety of bad symptoms, owing to the mischief being located in individual organs, such as the lungs, bowels, liver, spleen, lymphatic glands, or cerebro spinal system. The location can only be diagnosed by the educated veterinarian, and if one cannot be obtained, see the animal has pure air, careful attention, cleanliness, rest, and comfort, which are necessary to aid recovery.

## APPENDIX D.

## GLANDERS IN HORSES.

THIS disease was introduced from America by Messrs. Sells Brothers' circus horses. Mr. Stanley, the Government Veterinarian, found a pony developing glanders, and a horse having the symptoms of farcy.

Glanders is located in the lungs, and is accompanied by a discharge from one nostril, with ulcerations inside the nose, and a swelling of the glands under the jaw similar to strangles.

The diagnosis of the disease was confirmed by inoculating small animals and by microscopical examination. The bacillus of the disease was demonstrated.

Farcy is the external or cutaneous form of the disease, shown by swollen glands, and ulcerations along the lymphatic vessels.

The horses affected were killed, the ground on which they had been was disinfected by burning and disinfectants, and all the other horses quarantined on Shark Island. The conveyances and every article with which these horses could have come in contact were also thoroughly disinfected.

Subsequently the disease broke out at various uncertain intervals amongst the horses while in quarantine, and four more had to be destroyed. The balance (thirty-seven) were reshipped to San Francisco.

## APPENDIX F.

## OPHTHALMIA.

To the Chief Inspector of Stock.

Department of Mines and Agriculture, Stock Branch,  
Sydney, 27 July, 1891.

MEMO.—Ophthalmia in stock has frequently been reported to this office by Inspectors of Stock, and acting on your instructions to prepare a short circular giving methods of treatment, I have the honor of submitting the following notes:—

*Epizootic Ophthalmia.*

This affection is usually seen in several cattle or sheep about the same time in various paddocks in the same district. However, as the majority recover, little notice is taken of the disease in the early stages; but that is just the time when proper treatment (if it were possible to apply it) would be of the greatest benefit.

It

It is in the acute stage, when the inflammation is severe, the animal being almost blind, that treatment is attempted. Now, at this particular stage, much harm is done by injudicious treatment. Even yarding animals, unless done very carefully, will do more harm than good.

The eye is a very delicate, sensitive organ to deal with; therefore, nature is frequently the best restorer. She can be assisted by attending to the animals' comfort, having food and water accessible to the nearly blind animals, keeping them perfectly undisturbed and in shady places.

It may happen that the animal becomes nearly blind in one eye, the other recovering. In such cases the disease becomes chronic, the cornea covering the eye remains a milky-white colour. Proper treatment in this form is sometimes beneficial in clearing the eye.

For animals that can be handled, the following applications are recommended for the eyes:—

For the first stage of the disease, 1 oz. of tincture of opium, 1 pint of water; or 1 oz. of liquor plumbi subacetate, 1 oz. tincture of opium, 2 pints of water. These may be applied two or three times daily.

For the second stage, after the acute inflammation has subsided, 1 part of boracic acid, 60 parts of water; or 40 grains of nitrate of silver, 1 pint of water. These may be applied two or three times a week.

In the chronic stages, finely powdered burnt alum may be blown on the eye once a week.

EDWARD STANLEY,  
Government Veterinarian.

	8,311*	"	2nd	"	"	340	Not stated	340	"
Total.....	98,261			10	15	340		340	

\*These sheep were vaccinated twice in 1890.

As shown by the above statement, 98,261 sheep were during the year vaccinated with Pasteur's Vaccine of Anthrax in different parts of the Colony. Of this number, 67,950 received two vaccinations, while 33,311, which were vaccinated twice in 1890, received a third vaccination. The result of the vaccination is, on the whole, very satisfactory, as a failure, and it was not a great one, occurred on only one station, and taking the whole number of sheep vaccinated, the loss through the operation, and from disease afterwards, was less than ½ per cent.

APPENDIX K.

SUSCEPTIBILITY OF ANIMALS TO ANTHRAX.

EXPERIMENTS have given the following results as to the liability of animals to anthrax:—

Sheep are the animals most susceptible, whether the microbes are introduced by inoculation or ingestion.

Goats have about the same susceptibility.

Mice, guinea-pigs, and rabbits are very easily killed by inoculation, but are most difficult to kill by ingestion.

Rats are very difficult to kill by either method.

Cattle

Cattle take the disease easily by ingestion, as we see in epidemic outbreaks, but they are not so easily killed by inoculation.

Deer take the disease easily by inoculation, and occasionally epizootics occur which indicate ingestion also.

Horses take the disease both ways.

Pigs resist the disease by both methods, and very rarely become affected.

Dogs seldom or never take the disease.

Foxes resist the disease by both methods.

Cats are more susceptible than dogs, but resist the disease by inoculation.

Bears are liable to have the disease.

It is almost impossible to give the disease to birds; frogs and fishes will not take it.

## APPENDIX L.

### FOOT ROT.

DRESSINGS recommended by Mr. Stanley, the Government Veterinarian. (For further details see *Agricultural Gazette*, July, 1891):—

#### 1. Arsenic Dressing.

Arsenic, from 1 to 2 oz.

Potash, „ 2 to 4 „

Water, 1 gallon.

To be used in troughs for the sheep to walk through. The mixture to be boiled slowly for half-an-hour at least, till the arsenic is thoroughly dissolved.

#### 2. Sulphate of Copper (Bluestone) Dressing.

Sulphate of copper, from  $\frac{1}{2}$  lb. to 1 lb., dissolved in a gallon of water, may be used instead of arsenic. The following healing dressings may be used by hand after the above caustic applications:—

#### 3. Tar Dressings.

Stockholm tar, 20 parts; carbolic acid, 1 part.

Or,

Stockholm tar, 8 parts; bluestone in powder, 1 part.

Or,

Oil of tar, 10 parts; carbolic acid, 1 part; olive oil, 1 part.

#### Lime Dressing.

Quick lime, sprinkled on a dry surface, and the sheep walked through it frequently, will be found very beneficial. Before any dressings are used, the whole of the loose horn should be pared carefully from the diseased feet. It is of the greatest importance that the sheep's feet should, on the dressing being applied, be kept thoroughly clean and dry for at least three hours afterwards. They should, therefore, on leaving the troughs, or being dressed, be passed directly on to a battened or wooden floor, if it can be got, and where neither of these is obtainable, they should be passed into a dry yard, in which there is a good coating of straw, cut grass, or dry bark, taken from trees which have been rung, or, in fact, any other thing which will keep their feet clean and dry.

## APPENDIX M.

FROM Inspectors' Reports the following results have been gathered regarding the efficacy of the various Drenches and Licks used for Sheep for Worms:—

### Drenches.

*Arsenic*.—For the Stomach and Tape Worms the Arsenic and Soda Drench is still reported as the most effective, and has been by far the most generally used. It has, however, been recommended that Potash, as being less severe on the lining of the Stomach, should be substituted for Soda in its preparation. The Arsenic and Soda Drench is reported by several of the Inspectors as having been also efficacious for Lung-worms. No authenticated information has been received of this drench affecting the health of the Sheep or injuring the Wool.

*Turpentine*.—Turpentine, with various mediums, has been very generally given for Stomach, Tape, and Lung Worms, with good results, when repeated.

*Fumigation with Sulphur* is reported to have been tried in one case for Lung-worms with the best results.

*Sulphate of Iron, Horehound, Sulphur, Salt and Iron* are reported to have been given, but not with satisfactory results.

*Hayward's Specific* has given very good results for Lung-worms; but the reports as regards Stomach and Tape are conflicting.

*Pottier's and Weaver's Drenches* are reported to have been used in several districts with fairly satisfactory results.

While it can be said that a decided improvement follows the administration of most of the drenches generally used, it is a fact that even in the case of the most effective the *post mortem* examinations disclose that generally where the sheep are at all badly infested some worms are still alive; and this again, it is believed, arises from the owners delaying too long in drenching, and allowing the worms to have too great a hold on the sheep before they are drenched. The consequence is, that some worms are left, which keep the sheep from thriving, and, with the introduction of fresh eggs from the water and pasture—if the weather is at all favourable for the development of the worms—in the course of a few months make the sheep as bad as they were before they were drenched. To make the cure effective,

effective, therefore, sheep which have been badly infested should, on receiving one drench, be kept as near the drenching yards as possible, and receive a second drench in the course of twelve or fourteen days after the first.

But, while licks and drenches should be provided and given at as early a date and as often as required, owners should give their earnest attention to the removal of what may be termed the Contributing Causes of the pest by avoiding overstocking, attending to the proper nourishment of the lambs and weaners, burning off old pasture, and getting rid by draining of surface and stagnant water, as suggested in Vol. II, Part 2 of the *Agricultural Gazette*.

#### Licks.

It is reported that the following licks have been used with good results:—

Salt and sulphur.	Salt, sulphate of iron, and Hayward's specific.
Salt and sulphate of iron.	Salt, tar, and turpentine.
Salt and turpentine.	Pottier's Preventive Lick.
Salt, sulphate of iron, and turpentine.	Salt and lime.
Salt, sulphur, and sulphate of iron.	

It is scarcely necessary to point out that a lick, if it is efficacious in warding off an attack of worms, is far preferable to a drench; and as owners in all but the purely saltbush country are now aware that it pays them well to give their sheep a liberal supply of salt, it would add very little to the trouble or expense to give once a month with the salt some of the other ingredients here mentioned which they found from experience was to any extent effective in protecting their sheep from the worm pest.

Mr. Inspector Dowling, of Forbes, attributes the losses from worms (and it is believed he is right in doing so) to a considerable extent from unmothering lambs at marking.

He suggests that special care should be bestowed to avoid this, and that all unmothered or ill-doing lambs should be drafted out and put on the best pasture. He, like Mr. Government Veterinarian Stanley, considers, too, that breeding from 2-tooth ewes makes weakly lambs, and weakly lambs are, of course, especially subject to worms.

#### APPENDIX N.

\*N.B.—The whole of the accounts of expenditure for 1891 are not yet to hand.

## APPENDIX P.

## THE FRESH MEAT TRADE.

*Its Establishment and Progress.*

I WAS glad to announce in my last report the practical initiation of the carriage of fresh meat for long distances by railway.

For some time past a traffic has been carried for a short distance from the Meat Works of Messrs. Richards & Co., Riverstone, to Sydney, 28 miles; but as the distance is limited, it has allowed of the meat being carried at night without chilling, the meat being placed, if required for export or for keeping over a day to meet local requirements, in cool rooms on arrival in Sydney. This trade is somewhat extensive, Messrs. Richards & Co. sending (taking the month of March as an instance) 1,403 carcasses of beef and 34,898 carcasses of mutton, or in all 1,319 tons, from Riverstone to Sydney.

The carriage of chilled meat for long distances by railway has, however, only been successfully carried out to any large extent during the past year, and from the results so far I am sanguine that a solid and sure foundation has been laid for the future of this trade, that each year its growth will be continuous, and that it will rank as one of the most important items of export in the trade of the Colony, while making meat in a healthier and better condition available for local consumption.

To meet the present requirements of the trade the Railway Commissioners have now suitable for running a total of 22 refrigerating cars, of a superior design and large carrying capacity. These vans are 32 feet in length and are perfectly insulated. Their carrying capacity is 32 bodies of beef or 480 of mutton. That is to say, supposing the vans were reduced to 18 feet, the length of the ordinary cattle and sheep trucks, which carry 9 or 10 fat cattle and an average of (say) 90 fat sheep, by adopting the fresh meat system the same sized truck will carry 18 bodies of beef or 270 sheep, *i.e.*, about twice as many bodies of beef and three times as many sheep, an advantage which of itself alone, and leaving all the other most important advantages out of view, is amply sufficient to call for a change from the live stock to a fresh meat trade. To keep the meat in a chilled condition a small consumption of ice suffices for the long journey by rail of 483 miles from Tenterfield to Sydney.

It is mainly through the untiring and energetic efforts of Mr. Robert Hudson, of Messrs. Hudson Brothers, aided in the one case by Mr. W. H. Walker, of Tenterfield, and in the other by Mr. Manning, of Narrandera, chilling works controlled by two companies are now in operation, the one 483 miles from Sydney, at Tenterfield, and the other at Narrandera, 347 miles, one of which, that at Tenterfield, is weekly placing regular supplies on the Sydney market; but so far nothing has been attempted beyond catering for the supply of the metropolitan market, and the operations are to some extent tentative, as time and experience, as well as money, are required to mature the operations of a new trade. I feel convinced, however, that as in other parts of the world the public will learn to appreciate the value of having the meat killed practically on the pasture lands, and brought in the shape of fresh meat to Sydney, as against the practice of the animals being brought alive long journeys by rail, bruised and knocked about by each other in the trucks, starved on the train, in the yards, in the waiting paddocks, and at the abattoirs, and then killed at the metropolis, to be supplied in the summer time badly bled, with the animal heat still in it, and the meat tough and innutritious.

## TENTERFIELD WORKS.

These works are capable of treating thirty-two bullocks and 200 sheep per day, and at present they turn out that quantity. The fat is treated in digesters and made into tallow, the offal and blood will also be treated and made into portable manure, the feet into oil. The hides are salted, and the sheepskins are properly dried and forwarded to Sydney, where they bring top prices owing to extra care and cleanliness in taking them off.

The ice required for the cars is made at the works, and the chill-room is kept at the desired temperature by an ammonia machine cooling brine. The works are proving a success, and their duplication is under the consideration of the directors. This company do not as yet lay themselves out for freezing. Their business is to kill, chill, and supply the Sydney market with prime beef and mutton such as hitherto

was

was only to be got on the station on which the stock are fattened; but, when a surplus occurs, the chilled meat will be run into the freezing chambers (which are to be provided very shortly), at the meat market Darling Harbour, and there frozen and prepared for shipment, whence it will be run down in refrigerating cars, without loss of cold, to the Pyrmont wharf, and put on board the ocean-going steamers for London.

#### NARRANDERA WORKS.

It is expected that these works will be in full operation in a very short time again. Unfortunately, the best part of the season was lost, and the supplies of fat stock available in the early part of the year were diverted to Victoria through the delay in completing the works, caused by the floods, and since then the district has suffered from drought.

The capacity of Narrandera works is 600 sheep per day, and twenty bullocks, while the chill-rooms will cool and store more than that number of stock. Here, as at Tenterfield, a full supply of ice is made for the cars, and there is ample provision for dealing with the fat, skins, blood, and offal, and for turning everything to the best account.

#### THE AUSTRALIAN CHILLING AND FREEZING WORKS, ABERDEEN.

The most extensive undertaking, however, in the fresh meat trade during the year, has been the completion and opening of the works of the Australian Chilling and Freezing Company, on the Great Northern Railway, at Aberdeen, 83 miles from Newcastle, and 185 from Sydney. These works, which are of most substantial character, and supplied with all the latest and most improved machinery and appliances, have a capacity for freezing 850, and of chilling 1,500 sheep a day. Up to date, no chilling has been done at these works. They have been fully employed in freezing sheep purchased by the company for export, of which two shipments amounting to 30,000 have been dispatched, the vessels being loaded at Newcastle. The railway transit arrangements between the works and the port of shipment are very convenient, the mutton being run down by special trains in about five hours, and as many as 6,000 sheep have been loaded in one day. No doubt is felt as to the success of the shipments, and a growing export trade is confidently looked forward to from the works at Aberdeen.

#### GOVERNMENT MEAT MARKET, DARLING HARBOUR.

##### (1.) *The Sales.*

This market, at which every morning a supply of country killed meat is sold by auction, now bids fair to become the Islington of New South Wales; for the superior quality of the meat is getting to be known, and the supply is not equal to the demand, although the consignments some days amount to sixty bodies of beef, 400 sheep, and thirty pigs, besides calves and lambs.

##### (2.) *Chill Rooms.*

There are twenty-one of these rooms attached to the market, and Mr. Hudson has fitted up four of them for the protection of the meat sent for sale, and the accommodation of the butchers, in which he can keep 150 bullocks and 1,000 sheep chilled. The others are being prepared, and will be ready for the coming summer.

##### (3.) *Freezing Chambers.*

Under the top floor, or street level, is the basement of this building, thoroughly connected with the main railway lines of the Colony, and it is here that the spacious freezing and storage rooms will be fitted up with the most modern and improved machinery. This basement is 200 ft. x 280 ft. x 16 ft. high, with three sets of rails laid through it.

As, however, this will be a very large and expensive undertaking, Mr. Hudson will have to wait until he can form (he is endeavouring to do so) an Export and Freezing Company, which, now that the system of killing and chilling the stock near their pastures has been successfully initiated, is all that is required to solve the problem of how to get rid of our surplus stock; and it is hoped that he will receive that assistance and support in forging this last and most important link in the chain of the export trade, which his energy and determination have done so much to put on a proper footing. For the export trade in meat will never be a satisfactory one to the stockowner until our meat—with all its sweetness and flavour fully preserved—can be offered to the home consumer, and that, again, cannot be done until the stock are killed, as they have now begun to be, near their own pastures. Mr. Hudson has initiated that system, and there is every prospect of its soon being generally adopted in this and the other colonies; for announcements are frequently appearing in the press of meetings of owners being held with a view to the establishment of killing and chilling depots, and in several instances companies have been formed, and even tenders called for the erection of the works, besides those already completed.

#### FRESH FOOD AND ICE COMPANY, DARLING HARBOUR.

From 1st January, 1890, to 31st December, 1891, the company froze 371,475 sheep, besides a large quantity of beef, for shipment to London.

During that time they have erected entirely new freezing rooms, and imported a De La Vergne machine, at a total cost for the rooms and machine of between £30,000 and £40,000.

They are now having built a new machine, which will give a total freezing capacity of between 3,000 and 4,000 sheep daily, making, they claim, the most complete plant in the southern hemisphere.

#### SOUTH COAST AND WEST CAMDEN CO-OPERATIVE COMPANY (LIMITED).

This company has two of Haslem's patent dry-air refrigerating machines, capable of delivering 130,000 feet (cubic) of cold air per hour, and they can freeze and store 5,000 carcasses of mutton per week, in addition to providing cool space for local butchers and bacon curers.

#### J. H. GEDDES & Co., THE PASTORAL FINANCE ASSOCIATION (LIMITED).

##### Refrigerating Establishment at North Sydney.

This establishment will be in conjunction with the wool stores opened at Kirribilli Point, North Sydney, last season, and which, when the North Sydney Railway is completed down to the waters of Port Jackson, it is anticipated that a great impetus will be given to the frozen meat export, in anticipation of which

which the above company are now erecting a portion of their works only. This portion will, however, be capable of freezing 800 sheep per day and storing 15,000. There will be four large freezing rooms, one of which will be emptied and one filled every day. These are situated on the ground floor. The mutton or beef will be received by lighter or cart, lifted on to rails by hydraulic cranes, whence it will gravitate into freezing room as required. When thoroughly frozen it will be hoisted up to first floor by a cyclic hoist, where it will be stored. Steamers are intended to go alongside the company's wharf for the receipt of frozen meat, and loading operations will take place direct from the store-rooms to ships' holds by means of an endless belt arrangement, on which the carcasses will be placed and carried thus on to ship's hatches, so that handling will be limited to a minimum.

The machinery to be employed in the freezing operations is of the latest and most approved description for the work to be done. The Linde British Refrigeration Company are the patentees and makers, the system being the compression and evaporation of anhydrous ammonia in the usual way; but in place of carrying brine pipes through the several rooms as in other systems, the air is drawn from the rooms by powerful fans through passages specially prepared, and is then passed over a series of evolving discs which dip half into chilled brine. The heat or moisture drawn from the rooms is thus deposited on the discs, and the air, purified and reduced in temperature, is again passed into the rooms. It is claimed by this system that the meat is better preserved, being gradually frozen and not suddenly as would be expected from the compressed air system.

In connection with the foregoing establishment it is proposed to erect chilling establishments throughout the Colony, for which companies in Gunnedah, Young and Dubbo have already been formed, from whence the carcasses will be brought by rail, both for local consumption and export. When the whole ramifications are complete, machinery will be erected to freeze 2,000 sheep per day and store 40,000. A 30-ton ice-making tank for the supply of ice to railway trucks and shipping will also be erected. Messrs. Wildridge & Sinclair, Consulting Engineers, who have these works in hand, anticipate that they will be in operation by the end of October, and meat shipped during November.

1892-3.

## NEW SOUTH WALES.

## DEPARTMENT OF MINES AND AGRICULTURE.

(ANNUAL REPORT OF THE STOCK AND BRANDS BRANCH.)

Presented to Parliament by Command.

TO THE HONORABLE T. M. SLATTERY, M.P., MINISTER FOR MINES AND  
AGRICULTURE.

Sir,

In presenting the Report of the Chief Inspector of Stock for the year 1892, I have the honor to invite attention to the fact that while there was a satisfactory increase in the number of horses and cattle, there was not only no increase but a considerable decrease in the number of sheep, due probably to the number of sheep boiled down, the number exported, and the fact, owing to the bad season, that there was no breeding up in the north-west portion of the Colony.

It is satisfactory to find that some of our stock-owners have lost no time in taking advantage of the removal of the prohibition against the introduction of sheep from New Zealand, and we may expect an improvement in our flocks in those portions of the Colony which are suitable for long-woolled and cross-bred sheep. In view of the fact that cross-bred mutton is preferred in the London market, that cross-bred wool brings as good a price as merino, and that the export of frozen meat appears likely in the near future to exercise such an important influence on the prosperity of this Colony, it is matter for congratulation that New Zealand has been declared free of scab, and that large consignments of the fine long-woolled sheep of that Colony are likely to be offered at the next annual sheep sales.

According to the Report of the Board of Trade the value of meat imported into England in 1890 was between twenty-nine and thirty millions sterling. In 1891 the value of dead meat, other than bacon, hams, &c., was £10,393,735. According to Professor Lang, the value of meat consumed in England per annum is £100,000,000, of which one-third is imported. With such a market, to say nothing of others which may be opened up, this Colony ought within a few years to be in receipt of several millions per annum from the sale of meat alone. Such a trade should go far towards neutralising the effects of the stoppage of expenditure under Loan Votes, and may in time materially help on the raising of necessary loans within the Colony. Assuming that the wool, skin, &c., &c., of each sheep is worth 3s., it is estimated that we should be able to sell our mutton at 1d. per lb., which, the cost of transit, &c., added, should place it on the English market at such a price as will compete successfully with meat of similar quality from any part of the world.

With

With regard to the export of our wool, it is noticeable that the quantity shipped at Melbourne and Brisbane was considerably less during 1892 than the previous year, while the quantity shipped at Adelaide in 1892 exceeds that of the previous year. The total clip of 1892 is less by 8,831,132 lb. than that of 1891, but the shipments from Sydney and Newcastle in 1892 exceed those of 1891 by 9,770 lb.

The work of the Department was conducted satisfactorily during the year, and the information collected by the Chief Inspector in New Zealand should have a beneficial effect in urging on the export of meat.

Before the end of this year we may reasonably expect from the pen of Mr. Bruce some valuable information concerning the export of meat from America and Canada, and also the meat trade in England.

I have, &c.,

HARRIE WOOD,  
Under Secretary for Mines and Agriculture.

Department of Mines and Agriculture,  
Sydney, 27th May, 1893.

---

## The Acting Chief Inspector of Stock to The Under Secretary for Mines.

Sir, Department of Mines and Agriculture, Stock Branch, Sydney, 1 May, 1893.

On the 31st January last the Chief Inspector of Stock submitted to you a Progress Return for the year ending 31st December, 1892, giving the approximate number of horses, cattle, and sheep then in the Colony, which was made up from returns actually received from owners and inspectors' estimates of those then outstanding. The number of horses is in excess of those in the Progress Return, while the cattle and sheep are less. Taking the numbers of stock as compared with the previous year, there is an increase of 21,661 horses and 100,727 cattle, and a decrease of 3,751,302 sheep, the latter owing to boiling down, bad seasons in some districts, and large numbers exported.

The year 1892 was unusually free from disease, except those of a parasitic character, such as worms and fluke in sheep. Horses and cattle have been particularly free from epidemic diseases.

I have, &c.,

RICH. D. JONES,  
Acting Chief Inspector of Stock.

### I.—INSPECTORS AND THEIR WORK.

#### 1. *The Inspectors.*

There are now forty-eight inspectors, having charge of sixty-four Sheep Districts.

#### 2. *The Inspections made.*

The inspections made during the year were as follows:—

Of Stock ... ..	21,074
„ Reserves ... ..	4,138
„ Pounds ... ..	374
„ Commons ... ..	569
„ Dogs ... ..	1,572
„ Pigs ... ..	2,281
Under Pastures and Stock Protection Act ... ..	6,635
Under Public Watering-places Act ... ..	1,399
Total ... ..	38,042

This would give an average of 793 inspections made by each of the forty-eight inspectors.

#### 3. *Horses, Cattle, and Sheep inspected.*

*Horses.*—The number of horses inspected during the year was 136,353 by forty-eight inspectors.

*Cattle.*—The number of cattle inspected during the year was 1,076,459.

*Sheep.*—The number of sheep inspected during the year was 28,533,858. This is a decrease on last year's inspections of horses, 8,615; of cattle, 123,874; and of sheep, 634,439.

#### 4. *Inspections at Homebush Sale-yards.*

During the year bi-weekly visits to the Homebush yards have been made, with the view to inspecting the stock yarded. The total number of stock submitted to auction was as follows:—Cattle, 115,660 head; sheep, 2,506,810, or a weekly average of 2,224 cattle and 48,408 sheep, being a decrease of 126 cattle and an increase of 10,551 sheep on the weekly average, as compared with previous year. These inspections are called for not only for the prevention of disease but also to check stock stealing, and with that view the inspector sees that the brands and marks of the stock correspond with those in the permits or travelling statements accompanying the stock, which are collected and filed in this office for future reference, should, as it at times happens, inquiry be made with respect to stock suspected of being stolen.

#### 5. *Distance travelled by Inspectors during the year on duty.*

The total number of miles travelled by forty-eight inspectors was 184,358, or an average of 3,841 each per annum, being a decrease of 289 miles for each inspector as compared with the previous year.

#### 6. *Prosecutions and Convictions.*

The prosecutions instituted during the past year were as follows:—

Under Sheep Act ... ..	105
„ Imported Stock Act... ..	2
„ Brands Act ... ..	11
„ Pastures Act... ..	147
„ Public Watering-places Act ... ..	49
„ Impounding Act ... ..	17
„ Diseased Animals and Meat Act ... ..	7
Total ... ..	338

This shows a slight increase in the number of prosecutions for the year.

The number of convictions were :—

Under Sheep Act ... ..	95
„ Imported Stock Act... ..	2
„ Brands Act ... ..	9
„ Pastures Act... ..	138
„ Public Watering-places Act	41
„ Impounding Act ... ..	17
„ Diseased Animals and Meat Act ... ..	6
Total ... ..	308

## II.—HORSES.

### 1. *The Number.*

The number of horses in the Colony during the thirty-two years previous to and including 1892 was as follows :—

Year.	No.	Year.	No.	Year.	No.
1861 ... ..	251,497	1872 ... ..	304,100	1883 ... ..	326,964
1862 ... ..	233,220	1873 ... ..	328,408	1884 ... ..	337,172
1863 ... ..	273,389	1874 ... ..	334,462	1885 ... ..	344,697
1864 ... ..	262,554	1875 ... ..	357,697	1886 ... ..	361,663
1865 ... ..	284,567	1876 ... ..	366,703	1887 ... ..	390,609
1866 ... ..	282,587	1877 ... ..	328,150	1888 ... ..	411,368
1867 ... ..	278,437	1878 ... ..	336,468	1889 ... ..	430,777
1868 ... ..	280,201	1879 ... ..	360,038	1890 ... ..	444,163
1869 ... ..	280,818	1880 ... ..	395,984	1891 ... ..	459,755
1870 ... ..	280,304	1881 ... ..	398,577	1892 ... ..	481,416
1871 ... ..	337,597	1882 ... ..	328,026		

This shows an increase of 21,661 during the year, and is due principally to an increase in the number of breeders, good season, introduction from other colonies, increased settlement, and to the returns being more complete.

The number of horses in each Sheep District will be found in Appendix A.

### 2. *The different Breeds.*

*Draught.*—The numbers returned under this head are—Ordinary, 127,246 ; thoroughbred, 22,466 ; total, 149,712.

*Light Harness.*—The number returned as ordinary is 111,413 ; thoroughbred, 16,556 ; total, 127,969.

*Saddle.*—The number of ordinary is given as 174,639 ; thoroughbred, 29,096 ; total, 203,735.

### 3. *Horses introduced.*

*From other districts.*—The number of stud horses introduced was 560, and stud mares, 437 ; ordinary mares, 2,949 ; and horses, 3,533.

*From other Colonies.*—The number introduced by sea was—Stud horses and mares, 120 ; and ordinary horses and mares, 854.

The number introduced overland was 14 stud mares and 17 stud horses ; and ordinary, 920 mares and 984 horses.

*From England and Foreign Countries.*—The number introduced under this head was 29. For particulars see Appendix B.

### 4. *Horses fit for sale.*

The numbers returned as being fit for market during the coming year are 25,339 draught ; 25,749 light harness ; and 36,813 saddle.

Of this number it is estimated that 21,849 are suited for the India and China markets.

The number of horses exported during the year was 1,810.

### 5. *Improvement.*

In forty-five districts the horses are said to be improving. The principal reasons given are—Introduction of superior stud horses, breeding from good mares, and more attention to the rules of breeding, and in fourteen districts there is no improvement. In five districts they are deteriorating,—the reasons given being too much light blood introduced, breeding from weedy mares for racing purposes.

### 6. *Diseases in Horses.*

This year has been unusually free from epizootic diseases in horses.

*Anthrax* was reported in one district.

*Australian Stringhalt* occurred in four districts.

*Strangles.*—Has during the year been of a mild character, and has been reported in nineteen districts.

*Prurigo.*—Continues to give trouble in the coastal districts. Cleanliness of the horse's body and washing with caustic soda and water— $\frac{1}{2}$  oz. to a pint of water—are said to give good results. A full account of this disease appeared in the report for 1889.

### 7. Losses in Horses through Accidents, &c.

The losses in horses from accidents, disease, and other causes, amount to 6,958.

*Influenza*.—Only three districts reported this disease (sometimes known as "Pink eye") as having made its appearance during the past year. As it breaks out periodically, a copy of a paper prepared by the Government Veterinarian in January, 1891, giving the character, cause, symptoms, and mode of treatment, will probably be of interest, and will be found as Appendix C hereto.

*Glanders*.—There has, I am glad to say, been no appearance of this disease since the outbreak among Messrs. Sells Brothers' Circus horses in November, 1891, and therefore it may safely be considered that the steps taken to stamp out the disease were successful. The quarantine proclaimed at that time has been withdrawn.

### 8. Wild Horses.

Wild horses are still to be found in some parts of the Colony, and the number last year is estimated at 3,151, being a decrease on the previous year's return of 664.

### 9. Tax on Entire Horses.

The registration and placing a tax on entire horses is still advocated by a large number of owners in the Colony, and the necessity for doing so is more apparent than ever, in view of the number of weeds now bred for pony and galloway racing.

## III.—CATTLE.

### 1. Number.

The returns of cattle in the Colony during the thirty-two years ending 31st December, 1892, stand as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	2,271,923	1872	2,287,660	1883	1,640,753
1862	2,620,383	1873	3,794,327	1884	1,425,130
1863	2,032,522	1874	2,856,699	1885	1,317,315
1864	1,924,119	1875	3,134,086	1886	1,367,844
1865	1,961,905	1876	3,131,013	1887	1,575,487
1866	1,771,809	1877	2,746,385	1888	1,622,907
1867	1,728,427	1878	2,771,583	1889	1,741,592
1868	1,761,411	1879	2,914,210	1890	1,909,009
1869	1,795,904	1880	2,580,040	1891	2,046,347
1870	2,195,096	1881	2,597,348	1892	2,147,074
1871	2,014,888	1882	1,859,985		

This shows an increase during the year of 100,727, and an increase as compared with the decennial year 1882 of 287,089.

The number of cattle in the several Sheep Districts will be found in Appendix A.

The number of cattle introduced from the other Colonies was 148,609, and the number exported from this Colony was 68,757.

### 2. Different Breeds.

*Shorthorns*.—The number of pure-bred and stud Shorthorns is estimated at 60,361; and ordinary 697,744; total, 758,105.

*Hereford*.—Pure and stud, 32,187; ordinary, 224,733; total, 256,920.

*Devon*.—Pure and stud, 12,075; ordinary, 73,746; total, 85,821.

*Black-polled*.—Pure and stud, 1,897; ordinary, 1,407; total, 3,304.

*Red-polled*.—Pure and stud, 9; ordinary 1; total, 10.

*Ayrshire*.—Pure and stud, 5,539; ordinary, 13,683; total, 19,222.

*Alderneys*.—Pure and stud, 1,228; ordinary, 2,048; total, 3,276.

*Highland*.—Pure and stud, 10.

*Holstein*.—Pure and stud, 146; ordinary, 175; total, 321.

*Jersey*.—Pure and stud, 967; ordinary, 2,635; total, 3,602.

*Crosses*.—First crosses, 7,255; ordinary, 1,009,228; total, 1,016,483. The crosses are estimated as follows:—Shorthorn and Hereford, 330,195; Shorthorn and Devon, 120,803; Hereford and Devon, 60,776; Shorthorn and Black-polled, 12,365; Ayrshire and Shorthorn, 32,980; Alderney and Shorthorn, 1,573; the balance, 457,791, being unrecognisable.

### 3. Cattle introduced.

*From other Districts*.—Stud bulls, 518; stud cows, 585; total, 1,103; ordinary cattle, 95,694.

*From other Colonies by Sea*.—Stud bulls, 62; stud cows, 110; ordinary, 258; total, 430.

*Overland*.—Stud bulls, 52; stud cows, 11; ordinary cattle, 148,609; total, 148,672.

*From Countries outside the Australian Colonies*.—Bulls, 7. Of these 4 were Shorthorn, and 3 Devon. For particulars see Appendix D.

### 4. Increase and Decrease of Cattle.

In forty districts the cattle are reported to be increasing, for which the following reasons are given:—(1.) The good season and increased breeding. (2.) Owners holding for better prices. (3.) Introduction of large numbers of store cattle from Queensland. (4.) More owners have taken to breeding cattle, and are stocking-up their runs. In the remaining districts they are decreasing on account of large sales, owners not breeding or stocking-up, and changing for sheep.

### 5. The "Cast" of Fat and Store Cattle.

The estimated "cast" of fat cattle to be sent to market during the coming year is 340,048, and store cattle, 261,524. From fourteen districts the fat cattle are principally sent to Victoria; from two districts they are principally sent to South Australia and Tasmania; and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, Goulburn, Tamworth, and Albury. The principal markets for store cattle are Muswellbrook, Maitland, Goulburn, Wagga Wagga, and Wodonga, in Victoria.

### 6. How kept.

The number of cattle kept wholly in paddocks is returned as 1,696,483; on open runs, 282,406; and the balance, 168,185, are depastured both ways.

### 7. Improvement and Deterioration.

In thirty-seven districts the cattle are said to be improving; in twenty-two districts they are stationary; and in five districts deteriorating. The principal reasons given for the improvement are—introduction of good stud stock; more attention and care in selection and breeding of stock, more particularly those for dairying purposes; also, in culling and keeping in paddocks. The reason given for deterioration is inattention to breeding, many owners breeding from all sorts without respect to breed or quality, and using the same blood for years.

### 8. Their Diseases and Ailments.

*Pleuro-pneumonia*.—Inspectors' reports show that this disease existed in twenty-two districts, and that the cattle on 162 runs were affected; while the other districts are reported to be free from the disease.

Eighteen districts attribute the disease to the introduction of cattle, and contact with infected travelling cattle from Queensland, while four districts are unable to account for its appearance.

In twenty-two districts inoculation was resorted to on 170 holdings, and in all cases with satisfactory results.

The number of owners who favour inoculation is still on the increase, there being 9,352 for, 690 against, undecided 2,730, while the opinion of 10,911 owners are not known.

7,595 owners report themselves as in favour of compulsory inoculation in the case of infected herds, while 1,899 are against, 2,683 undecided, and in 10,575 cases the opinions of owners are not known.

As so large a number are in favour of compulsory inoculation, any legislation tending towards that end will soon be the means of lessening the number of outbreaks of the disease, and eventually, if power is given to kill all animals actually affected, the disease may soon be stamped out, as it has practically been in England, by the slaughter of all diseased animals, as well as those exposed to infection.

*Cumberland Disease*.—From seven districts the number of cattle reported to have died from this form of anthrax is 706.

*Symptomatic Anthrax or Blackleg* is reported to have carried off 827 head in eight districts.

*Tuberculosis*.—Cattle to the number of 4,099 are reported from twenty-eight districts to have died of cancer and tubercular swellings in the throat.

*Red Water*.—From one district 20 deaths are recorded. The disease is prevalent in certain localities in the coast country at particular seasons, more so in spring.

*Ophthalmia* occasionally assumes an epidemic form, and the numbers attacked are in some cases considerable, causing much temporary inconvenience to stock from blindness. Outbreaks have been reported from seven districts.

## IV.—SHEEP.

### 1. The number.

The number of sheep in the Colony during the thirty-two years ending 31st December, 1892, stands as follows:—

Year.	No.	Year.	No.	Year	No.
1861	6,119,169	1872	17,873,696	1883	37,915,510
1862	6,558,896	1873	18,990,595	1884	31,660,321
1863	7,169,126	1874	22,797,416	1885	37,820,906
1864	9,082,463	1875	25,353,924	1886	39,169,304
1865	9,650,106	1876	25,269,755	1887	46,965,152
1866	11,644,593	1877	21,521,662	1888	46,503,469
1867	15,066,377	1878	25,479,484	1889	50,106,768
1868	16,000,090	1879	30,062,910	1890	55,986,431
1869	16,848,217	1880	35,398,121	1891	61,831,416
1870	16,218,825	1881	36,591,946	1892	58,080,114
1871	16,766,012	1882	36,114,814		

The number of sheep in the several Sheep Districts will be found in Appendix A.

A statement has been prepared, and will be found as Appendix E, giving the number of owners in each district with sheep from 1 to 500, 501 to 1,000, 1,001 to 2,000, 2,001 to 5,000, 5,001 to 10,000, 10,001, to 20,000, 20,001 to 50,000, 50,001 to 100,000, 100,001 and upwards, together with the number of sheep respectively owned by each class of owners in the several districts.

### 2. Increase and Decrease.

This shows a decrease for the whole Colony of 3,751,302.

The number of sheep imported during the year was 680,530, and the number exported was 1,253,119, being an increase in the exports over the imports of 572,589 sheep.

3. *The different Breeds.*(1.) *Merino.*

	Combing.				Total.

## (1.) Australian.

(1.) From other districts in this Colony—stud, 3,135; ordinary, 1,692,213; total, 1,695,348.

(2.) Overland from other Colonies—stud, 9,528; ordinary, 361,665; total, 371,193.

(3.) By sea from other Australian Colonies during the year—3,290 stud sheep have been introduced from the other Australian Colonies by sea; of these, 3,278 arrived by special ship, and in charge of the owner, and were, under the Regulations of 31st July, 1890, admitted without quarantine or dressing, while 12 which did not arrive by special steamer, nor in charge of the owner or his servants, received one dipping.

The prohibition still exists against the importation of sheep from Western Australia, but in the case of New Zealand, sheep are now admitted on the same conditions as those from other clean Colonies.

## (2.) Foreign.

(4.) From England and Countries and Colonies other than Australian—229 stud sheep have been introduced, subject to a quarantine of 90 days and three dressings.

All these sheep, both Australian and foreign, after being taken inland, were examined by the Inspectors for the districts into which they went, and reported to be in good health and free from infection.

For the particulars as to the description of sheep introduced and imported, and their breeders or importers, see Appendix F.

At the Australasian Stock Conference held at Wellington, New Zealand, in October last, it was decided to recommend that the quarantine on foreign sheep should be reduced to 60 days, and this has since been adopted in this Colony.

5. *Long-woolled and Cross-bred Sheep.*

Until January last owners in this Colony have not had an opportunity to avail themselves of the very fine long-woolled sheep to be obtained in New Zealand, as in consequence of that Colony not having been declared free from scab, a prohibition existed against the introduction of any sheep from that Colony. Now that this has been removed there will in all probability be a large trade opened up, and already two consignments have reached here; 20 Lincoln rams going to Walhallow estate, Quirindi, while Mr. C. Featherstonhaugh, of Goorianawa, Gilgandra, has introduced 102 Leicester rams, 60 Leicester ewes, and 10 Romney rams; and it is reported that a very large consignment are booked to arrive in time to be offered at the Annual Sheep Sales to be held in July next.

There are large tracts of country in this Colony well adapted for long-woolled and cross-bred sheep, and there is no doubt that where the land will carry them they pay much better under proper management than the ordinary Merino, while now with the prospect of heavy shipments of frozen mutton, there is every inducement to owners with suitable country to put their older ewes to long-woolled rams.

The wool of the cross brings as good a price as the Merino per lb., is very saleable, and our own butchers prefer the cross-bred sheep, which are, of course, heavier, and bring more money, while cross-bred frozen mutton is worth about 1d. per lb. more in the London market than Merino.

6. *The "Cast" of Fat and Store Sheep.*

The annual "cast" of fat sheep for the ensuing season is estimated at 6,102,691, and store sheep, 7,494,417.

7. *How Sheep are kept.*

Paddocked ...	...	...	...	...	...	...	...	55,900,965
Shepherded ...	...	...	...	...	...	...	...	1,361,472
Both ways ...	...	...	...	...	...	...	...	817,677
								58,080,114

8. *Condition of the Flocks.*

In fifty districts the sheep are said to be improving, the principal reasons given being more attention to breeding, paddocking, introduction of high-class rams and ewes, more careful classing and culling, better management, and good seasons.

In ten districts they are said to be stationary, and in four districts they are deteriorating. The reasons given are effects of bad seasons, breeding from inferior ewes, bad management, bad selection of rams, and purchase of stores.

9. *Lambing.*

From a return of the autumn, winter, and spring lambings obtained from the Inspector for each Sheep District, the average percentage of lambing for the whole Colony is estimated at 53 per cent, *i.e.*, calculating the number of lambs marked on the number of ewes put to the rams. The spring lambing was the highest, averaging 69 $\frac{3}{4}$  per cent., while the autumn and winter lambings averaged 52 $\frac{3}{4}$  and 49 per cent. respectively.

10. *The Clip.*

## Average per Sheep.

*Lambs.*—The number of lambs shorn in the grease was 7,105,210; the number washed, 153,859; total lambs shorn, 7,259,069.

*Sheep.*—The number of sheep shorn in the grease was 46,947,809; creek-washed, 154,503; and scoured, 1,262,163; total sheep shorn, 48,185,475.

The average weights of the clip are estimated as follows:—

	<i>Lambs.</i>		<i>Sheep.</i>	
	lb.	oz.	lb.	oz.
Grease ...	1	14 $\frac{3}{4}$	5	6
Creek-washed ...	0	14 $\frac{1}{2}$	3	5
Scoured ...	.....	.....	3	2

Total

## Total Clip.

The total clip in the Colony for the year 1892, according to the number of sheep, would be 46,947,809 shorn in the grease; average clip, 5 lb. 6 oz. per sheep = 252,344,473 lb.; 154,503 sheep, creek-washed, average clip, 3 lb. 5 oz. per sheep = 511,791 lb.; 1,262,163 sheep scoured, average clip, 3 lb. 2 oz. = 3,944,259 lb. Lambs—7,105,210 lambs shorn in the grease, average clip, 1 lb. 14½ oz. per lamb = 13,433,287 lb.; 132,503 lambs washed, average clip per lamb, 14½ oz. = 139,434 lb.; total clip, 270,373,244 lb., or a decrease of 8,831,132 lb. on last year's clip, owing to decrease in the number of sheep in the Colony. It will be noticed that the weight is slightly lower than last year's. This is accounted for by the excessive rains in some parts of the Colony, which robbed the wool of the yolk.

## Condition of Clip.

In seven districts the clip is reported as sound and containing a good supply of yolk; in fifteen districts sound, although deficient in yolk; and in remaining districts weak, owing to absence of yolk. On the whole the clip was clean, but in a few districts the value of the wool was affected by grass-seed and burrs.

## Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped principally to England, America, France, and Germany, and considerable portions of it is so from the ports of the three neighbouring Colonies, as well as from Sydney and Newcastle. The portions of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies, more particularly for that of Victoria and South Australia.

The following is an estimate of the clip sent to Sydney, and also the proportion sent across the Borders and to Melbourne, Adelaide, and Brisbane for the years 1891 and 1892:—

Port of Shipment.	1891.			1892.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb.	lb.	lb.
Sydney .....	206,430,251	2,727,079	209,157,330	205,870,638	3,296,462	209,167,100
Melbourne .....	55,981,297	947,590	56,928,887	46,884,104	615,782	47,499,886
Adelaide .....	11,004,076	1,337,933	12,342,009	12,756,674	683,240	13,439,914
Brisbane .....	749,461	26,689	776,150	266,344	.....	266,344
	274,165,085	5,039,291	279,204,376	265,777,760	4,595,484	270,373,244

This shows an increase in the quantity of wool shipped during the year from the Ports of Sydney and Newcastle of 9,770 lb., as compared with that shipped in 1891.

## Classing of Clip.

In thirty-seven districts the clip is reported as having been well classed. In the other districts it is not considered to have been so, the reasons given being, owners consider it does not pay, that prices obtained are no better, also want of convenience, sheds not large enough to warrant expense, and the difficulty of obtaining competent wool-sorters.

## Wool-presses.

A great number of different kinds of presses are used; those most in favour are Ferrier's Patent and Williams' and Robinson's; rack screw and pinion presses are used. There is still room for improvement in the mode of pressing, especially by the owners of small clips.

## Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 ft. 6 in. x 2 ft. 2 in. to 5 ft. 3 in., and the weight from 10 to 12 lb.

On sixty-three holdings the wool is dumped before leaving.

## 11. Sheep-brands and Marks.

During the year 1892 the number of Sheep Brands and Ear-marks recorded, transferred, and cancelled were as follows:—

										Recorded.	
Fire Brands	...	...	...	...	...	...	...	...	...	...	258
Tar do	...	...	...	...	...	...	...	...	...	...	1,540
Ear-marks	...	...	...	...	...	...	...	...	...	...	920
										Total	2,718
										Transfers.	
Fire Brands	...	...	...	...	...	...	...	...	...	...	76
Tar do	...	...	...	...	...	...	...	...	...	...	148
Ear-marks	...	...	...	...	...	...	...	...	...	...	117
										Total	341

Cancelled.										
Fire Brands	...	...	...	...	...	...	...	...	...	128
Tar do	...	...	...	...	...	...	...	...	...	1,729
Ear-marks	...	...	...	...	...	...	...	...	...	145
Total										2,002

The large increase in the number of cancellations arises from the revision which has been carried out of the Sheep Brands and Marks Directory, and the cancellation of all Brands and Marks of owners who have died, or who have parted with the holdings for which the Brands and Marks were recorded. This work has now been completed and will it is believed render the identification of ownership of sheep a much easier matter than hitherto.

#### Ear-marking.

In all districts the system of ear-marking sheep is now generally carried out.

#### Tattoo-marking.

This system of marking is mostly used by owners of stud-sheep, not as yet to any great extent in the case of ordinary flock sheep, but where tried it has been found to be a good preventive to sheep-stealing.

### V.—DISEASES IN SHEEP.

#### 1. *Scab.*

The flocks in this Colony and in the Colonies of Queensland, Victoria, South Australia, New Zealand, and Tasmania are free from scab. It exists, but to a very slight extent, in Western Australia, but it is hoped that Colony will soon be declared clean. The importation of sheep from Western Australia into this Colony is still prohibited.

#### 2. *Anthrax.*

Anthrax has been less virulent this year. M. Loir (Pasteur's representative) continued his protective inoculation in infected districts with very satisfactory results, which are given in Appendix G.

#### 3. *Foot-rot.*

In thirty-five districts the sheep have been more or less affected with foot-rot during the year, the reasons given being wet season, running on low rich pasture, and contagion. The principal remedies tried, with careful paring, were butyr of antimony and bluestone, bluestone and kerosene, arsenic, arsenic and lime, blue vitriol, sulphate of copper, carbolic acid, and nitric acid—with satisfactory results. Of these, bluestone and butyr of antimony have been most effective for hand-dressing, and arsenic and bluestone in troughs. For the dressings recommended by the Government Veterinarian, see Appendix H.

#### 4. *Fluke.*

In twenty-seven districts the sheep were affected with fluke, through wet seasons, depasturing on low swampy ground, unsound country, and rank pasture. The preventives used were salt, tar, and turps, sulphate of iron, and Liverpool salt and sulphur, with good results; but the best course, where it can be followed, is to remove the sheep to salt-bush country, and, where that cannot be done, to keep the country free from surface-water by means of drains run with a plough and helped with a spade, and burn the grass when opportunity offers, besides giving the licks mentioned.

#### 5. *Parasitic Worms.*

In thirty districts the sheep are reported as having been infested with worms to an extent of (say) 12½ per cent. In eighteen districts the sheep are reported as having been infested with stomach, lung, and tape worms; in two districts with stomach and tape worms; in nine districts with stomach worms; and in one district with lung-worms. The prevalence of the worms is attributable to the frequent summer rains following upon a wet winter, which lessened the nutrition in the pasture and lowered the stamina of the sheep, while at the same time the moisture and heat tended to a large development and increase of the worms. A brief statement of the remedies used, and the result, will be found in Appendix I.

Dr. Cobb, Vegetable Pathologist for the Department, is now engaged upon the study of the life history of the worms which cause the chief losses in our flocks, with the view to find a remedy for them, or at least to ascertain when, where, and how they can best be attacked.

### VI.—PIGS.

The number of pigs in the Colony, as returned at 31st December, 1892, is 249,512, being a decrease of 3,846, as compared with the returns for the previous year.

From the other colonies 980 have been introduced by sea.

The prohibition which has existed for some years against the introduction of pigs from foreign countries has now been removed, and they are admitted on undergoing a quarantine of sixty days.

The number of pigs exported from port of Sydney was 1,771.

#### *Diseases in Pigs.*

The pigs are occasionally found to be affected with tuberculosis, cancer, and contagious catarrhal pneumonia.

According to latest reports swine fever still exists in Great Britain, and there have been considerable losses, although vigorous repressive measures are being taken.

### VII.—

## VII.—DOGS.

Forty-three dogs were imported last year from England and other places outside the Australasian Colonies, and were subjected to the prescribed quarantine of six months before being admitted into the Colony, while 720 colonial dogs were introduced at the Port of Sydney from the other colonies.

One hundred and fifty-two dogs were inspected prior to exportation, as also seventy-six "ships' dogs."

All "ships' dogs," and other stock on board foreign vessels for the use of the passengers and crew, are now quarantined during the stay of the vessel to which they belong in port.

*Diseases in Dogs.*

Rabies is still prevalent in England and on the Continent. It is also reported from the Mauritius, India, and the Straits Settlement. The proximity of the Straits Settlement to these colonies shows the absolute necessity for every possible precaution being taken to prevent the introduction of hydrophobia into this and the other colonies, and a continuance of the present term of quarantine.

## VIII.—TRAVELLING STOCK.

1. *Trespass on Reserves.*

In thirty-four districts the travelling stock and camping reserves are reported as having been trespassed upon. In thirty districts they are reported as being free from trespass.

With the view to a better protection of these reserves, and in order that they may be easily followed, they are being marked with large conspicuous posts, upon which the width of the reserve is shown.

The roads which are being marked are,—(1) Moree to Sydney, (2) Boggabilla to Breeza, (3) Boggabri to Rylstone, and (4) Walgett to Uarby.

The first three are very near complete, and will be so by the end of the present month.

Besides the above-mentioned roads, that from Moree to Cobbadah, *via* Gurley and Terry-hie-hie Holdings, has been marked.

2. *Grass on Reserves and Driftways.*

The Inspectors report that in all the districts in good seasons there is sufficient grass on all the reserves and driftways to enable fat stock to reach market in good condition. In thirteen districts there is not sufficient in ordinary seasons.

From sixteen districts it is reported that sheep to the number of 516,829 have passed through during the year in search of grass and water. From five districts the number of loafing sheep is given at 55,993.

3. *New Roads for Travelling Stock.*

In five districts new roads are required for travelling stock, and in fifty-nine districts no new droving roads are recommended.

4. *New Reserves for Travelling Stock.*

In six districts new reserves and alterations of existing ones for travelling stock are required. In fifty-eight districts there are sufficient reserves; but in a great many cases the reserves are leased under annual lease, and are therefore kept very bare of feed.

5. *New Wells, Tanks, or Dams.*

In twenty-two districts the inspectors report that new wells, tanks, or dams should be constructed by the Government at places which they indicate.

6. *Laws relating to Travelling.*

In all the districts the inspectors report that the provisions of the amended Sheep Acts relating to travelling stock are working well.

## IX.—REGISTRATION OF HORSE AND CATTLE BRANDS.

1. *Brands registered.*

The number of horse and cattle brands registered up to 31st December, 1892, was 69,601. The number of brands registered during the year 1892 was—Horse brands (alone), 330; cattle brands (alone), 470; and horse and cattle brands, 1,776; making a total of 2,576.

This shows a decrease of 156 in the total number of brands registered during the year as compared with 1891. There is an increase in the number of brands transferred and cancelled.

2. *Brands transferred.*

The brands recorded during the year 1892 as transferred were—Horse brands, 24; cattle brands, 36; horse and cattle brands, 73; total, 133.

3. *Brands cancelled.*

The brands cancelled (horse and cattle) in 1892 were 241.

4. *Addresses changed.*

The number of addresses of owners changed in 1892 was 86.

### 5. *Compliance with the Act.*

In all the districts the provisions relating to registration and the other requirements of the Act are reported as being fairly carried out.

### 6. *Benefits of the Act.*

The inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock-stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stock-owners.

## X.—POUNDS.

### 1. *Number and Inspection.*

There are 452 pounds in the Colony, some of which are at present closed for want of poundkeepers. The whole of the pounds are inspected periodically by the various inspectors of stock.

### 2. *State of Yards.*

Thirty-seven of the pound-yards are reported to be old; some require renewing, being unfit for the safe custody of stock; while others need repairs. The remainder are said to be in a fair and good condition.

### 3. *Keeping and Depasturing Pound Stock.*

The provision made for the proper sustenance of impounded stock, according to the reports received, is satisfactory. As a rule, poundkeepers have now paddocks for the stock.

### 4. *Management of Pounds.*

The poundkeepers are reported to be performing their duties, upon the whole, in a satisfactory manner, and the appointment of inspectors of stock as inspectors of pounds has had a very beneficial effect.

## XI.—NOXIOUS ANIMALS.

### 1. *The Districts in which the Pastures and Stock Protection Act is in force.*

The Act has been brought into operation in all the districts except Milparinka, which has only recently been formed, and during the year work has been done to the extent shown in Appendices J and K.

### 2. *Receipts and Expenditure under the Act.*

The amount of assessment paid by stock-owners in 1892 was £37,733 19s. 8d.; and the amount expended £49,987 4s. 5d., the difference being accounted for by the subsidy granted by the Government to the Boards, and large amount to credit of some of the Boards at commencement of the year. Five districts are reported to be in debt to the amount of £931.

In eight districts full rates were levied, in forty-five districts less than full rates, while in eleven districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows:—For kangaroos, from 1d. to 1s.; kangaroo rats, 1d. to 1s.; wallaroo, 2d. and 3d.; wallaby, from 1d. to 6d.; paddymelon, from 1d. to 6d.; bandicoot, 3d.; hares, from 2d. to 8d.; native dogs, from 10s. to 63s.; pups, 2s. 6d. to 10s.; bilbees, 2s. 6d.; opossums, 1d. and 2d.; wild pigs, 6d. and 1s.; eagle-hawks, 6d. to 5s.; emus, 6d. to 1s.; and crows, 1d. and 6d.

### 3. *Increase and decrease.*

Kangaroos are reported to be increasing in six districts, wallabies in fourteen districts, native dogs in fourteen districts, hares in thirty districts, and wild pigs in five districts. In thirty-three districts kangaroos are reported to be decreasing, wallabies in eighteen districts, and native dogs in eighteen districts, hares in four districts, and wild pigs in three districts. As hares are increasing to a large extent in many districts, and doing much damage, an interesting paper prepared by the Chief Inspector of Stock is published as Appendix L.

### 4. *Number destroyed.*

The number of kangaroos destroyed during the past year was 144,712; of kangaroo rats, 288,866; of wallabies, 655,598; of wombats, 33; of bandicoots, 3,015; of paddymelons, 43,931; of wild pigs, 43,219; of hares, 786,177; of bilbees, 21; of native dogs, 11,345; of opossums, 3,975; of eagle-hawks, 4,443; of crows, 35,359; and of emus, 6,167.

### 5. *Steps taken for their destruction.*

In the majority of the districts hunting with dogs, drives, shooting, trapping, and poisoned water have been adopted with satisfactory results. In fifty districts poison has been used, mostly for dogs, with fair to best results, and from four districts it is reported that the results have not been satisfactory, the dogs being too cunning to take baits.

### 6. *Amendments suggested in the Act.*

Owners are desirous that the Amended Stock and Pastures Bill speedily become law; and they suggest that all owners of stock, irrespective of number, should be liable to an assessment, as also owners of 5 acres of land and over; that farmers and owners of orchards and vineyards should pay to the fund; that hares be included in the list of noxious animals; that the Boards be empowered to cope with the rabbit nuisance; that the Government should grant larger subsidy; that uniform rates be levied; that the rate of bonus be the same throughout the Colony; that all returns of stock be made on the same day; that adjoining Boards assimilate bonuses; and that the provisions of the Act *re* defaulting Boards be strictly enforced.

### 7. Losses from Tame and Native Dogs.

The losses in stock for the past year from the ravages of native dogs are estimated at 104,141 sheep, valued at £21,770, and from tame dogs, 58,624 sheep, valued at £12,424, making the loss from tame and native dogs together, £34,394.

## XII.—COMMONS.

### 1. Number and extent.

The number of Commons in the Colony is 280, with an average extent of about 4,160 acres each.

### 2. Number of Commoners, Stock, &c.

The average number of Commoners to each Common is estimated at 93, and the average number of stock kept on each Common at 228.

In three districts some of the Commons are reported to be used for other purposes than that of grazing Commoners' stock. Many of the Commons are unfenced, consequently are trespassed upon by travelling stock, &c.

## XIII.—MISCELLANEOUS.

### 1. Artificial Grasses.

In twenty-one districts artificial grasses have been sown for pasture during the year to a small extent, in nine districts to a large extent, and in remaining districts none; the most successful being lucerne, prairie, and rye.

### 2. Number and Division of Runs.

The number open or unenclosed runs in the Colony is 6,968; the number enclosed is 38,078; the number partially sub-divided is 13,764; and the number properly sub-divided is 21,397.

### 3. Improvements, Fencing, Dams, Tanks, and Wells.

The number of miles of fencing throughout the Colony is estimated as follows:—1,636,437 miles without wire netting, at an average cost of (say) £40 per mile, amounting to £65,457,480, and 53,704 miles with wire netting, average cost at (say) £71 15s. 6d. per mile, amounting to (say) £3,854,605.

The number of dams used for stock purposes is estimated at 31,750, at an average cost of (say) £82 10s.; number of tanks, 34,085; average cost of each, £190; and the number of wells used is estimated at 3,642, at an average cost of £204 18s. each.

Cost of fencing, £69,312,085; cost of dams, £2,619,375; cost of tanks, £6,362,150; cost of wells, £746,185; making a total of £79,153,795, as representing the amount expended by way of improvements, &c.

### 4. Plants and Weeds.

#### (1.) Prevalence.

In fifteen districts *trefoil burr* grows to a very large extent; in twelve districts, to a considerable extent; in seventeen districts, to a slight extent; and in twenty districts there is none reported.

In thirty districts *variegated thistle* is reported to a slight extent; in seven, to a considerable extent; in thirteen, to a very large extent; and fourteen districts are reported as free from it.

In twenty-four districts *black thistle* is reported to slight extent; in nine, to a considerable extent; in sixteen, to a very large extent; and fifteen districts are reported to be free from it.

In eight districts the land is reported as being infested to a considerable extent with *Bathurst burr*; in thirteen districts, to a very large extent; in thirty districts, to a slight extent; and in thirteen districts the land is not infested.

In twenty-four districts, other noxious weeds grow to a slight extent; in eleven districts, to a considerable extent; in sixteen districts, to a very large extent; and in thirteen districts there is none reported.

#### (2.) Legislation for Noxious Weeds.

Legislation is urgently required for dealing with noxious weeds and plants, more especially the *Bathurst burr*, the prevalence of which is inflicting very serious loss on travelling stock.

#### (3.) Cost of clearing Commons, Reserves, &c., of Weeds.

The cost of clearing the Commons of noxious weeds throughout the Colony is estimated by inspectors at £79,697; the police paddocks, £3,512; the travelling stock reserves and droving roads at £315,149; amounting in all to (say) £398,358.

### 5. Examination of intending Applicants for appointment of Inspector.

During the past year two examinations were held by the Stock Board of Examiners. The following table shows the result:—

Date of Examination.	Number of Candidates.	Names of Successful Candidates.	Nature of Certificate issued.
1892.			
21 March .....	5	Romer Meadows..... E. V. Ffrench.....	2nd class. 1st class.
18 July .....	5	Walter Dargin .....	2nd class.

It will be seen that ten candidates presented themselves for examination, and that three were successful, one obtaining a first-class certificate and the others second-class certificates, 6.

## 6. The Stock and Pastures Bill.

It is hoped that the state of the Government business will, in the coming Session of Parliament, admit of this measure, which is so urgently required, being passed to enable inspectors to deal with diseased stock, which are now, through the want of the legislation so frequently asked for, allowed to travel throughout the Colony, spreading the infection as they go. This is especially the case with Queensland cattle infected with pleuro-pneumonia, which frequently introduce the disease in our herds.

## APPENDIX A.

## RETURN of Stock in the several Sheep Districts.

Districts.	Year 1891.					Year 1892.				
	Acreage.	Horses.	Cattle.	Sheep.	Pigs.	Acreage.	Horses.	Cattle.	Sheep.	Pigs.
Albury .....	873,483	7,019	18,529	862,650	.....	879,637	7,093	16,436	856,519	.....
Armidale.....	3,014,387	11,131	72,174	1,655,663	.....	3,055,213	12,067	80,435	1,785,573	.....
Balranald .....	3,140,308	1,612	2,570	510,093	.....	3,202,995	1,873	2,701	467,263	.....
Bathurst .....	1,489,515	14,666	45,515	773,952	.....	1,590,835	16,019	48,078	750,625	.....

\* These horses passed through the prescribed quarantine.

## APPENDIX C.

## INFLUENZA IN HORSES.

*Character.*—It is a contagious equine fever due to germinal matter invading the system, producing disastrous changes in the blood, which interfere with nutrition, excite congestion, and occasionally inflammation of important organs or tissues.

*Cause.*—The germs of this disease are always lurking about, and epidemics are due to exceptional climatic changes that have a lowering effect on the health of horses, and at the same time favour the vitality of the disease germs.

The worst cases are amongst hard-working horses in overcrowded sheds, with bad sanitary surroundings; next come fat horses, and the least susceptible are horses that are in good working condition, cleanly kept, and well cared for; if such have the disease at all it is in a mild form, and they speedily recover.

*Symptoms.*—In the onset loss of appetite, drowsy headache, pain in the limbs, general weakness; in many cases the eyelids are swollen, tears trickle down the face; there may be discharge from the nostrils, and occasionally coughing; the eye will be found scarlet and orange colour, the tongue furred, breath offensive, the heart beats feebly but quick, the pulse is small and weak, the dung is soft, and the urine high-coloured; there is a general rise of the bodily temperature.

As the disease progresses the symptoms will depend on its course, which is very variable, as the numerous names given to the disease indicate. The vital forces in many cases overcome the toxic effects and excrete the poison from the system; it is to assist this process that we have recourse to treatment.

*The Treatment.*—This should consist of rest, pure air, shelter from sun, rain, or wind, bran mashes, and cut green food with drachm doses of chlorate of potash, carbonate of ammonia, or nitrate of potash given in the drinking water; if the case has been taken early enough, and the surroundings are good, the fever will abate, and recovery be complete in a very few days.

Unfortunately many horses are worked at the commencement of the illness; then they are completely knocked up, and they present a variety of bad symptoms, owing to the mischief being located in individual organs, such as those of respiration, or the bowels, liver, spleen, lymphatic glands, or cerebro-spinal system. The location can only be diagnosed by the educated veterinarian, and every case should be treated to suit the nature and stage of the illness; dropsical swellings are a favourable indication, but time and patience must be allowed for recovery. No case is cured until the horse is playful at exercise.

I would caution owners to beware of amateur veterinary advice, as far more harm is done by ignorant treatment than by the disease. To illustrate my meaning, a horse with this sickness often has an anxious countenance, dilated nostrils, rapidly panting flanks due to acute pain, which may be owing to congested liver, laminitis, or other obscure complication, but the charlatan says he has got it on the lungs, and proceeds to torture the poor brute by blistering his sides, bleeding, setoning, &c. Such treatment as bleeding, blistering, or purging is very antiquated and erroneous.

My advice is to employ the best qualified veterinary surgeon available, and to see the poor animal has a good nurse, with pure air, cleanliness, rest, and comfort. It is cruel to turn sick horses out to shift for themselves.

## APPENDIX H.

## FOOT-ROT.

DRESSINGS recommended by Mr. Stanley, the Government Veterinarian. (For further details see *Agricultural Gazette*, July, 1891):—

1. *Arsenic Dressing.*

Arsenic, from 1 to 2 oz.

Potash, „ 2 to 4 „

Water, 1 gallon.

To be used in troughs for the sheep to walk through. The mixture to be boiled slowly for half-an-hour at least, till the arsenic is thoroughly dissolved.

2. *Sulphate of Copper (Bluestone) Dressing.*

Sulphate of copper, from  $\frac{1}{2}$  lb. to 1 lb., dissolved in a gallon of water, may be used instead of arsenic. The following healing dressings may be used by hand after the above caustic applications:—

3. *Tar Dressings.*

Stockholm tar, 20 parts; carbolic acid, 1 part.

Or,

Stockholm tar, 8 parts; bluestone in powder, 1 part.

Or,

Oil of tar, 10 parts; carbolic acid, 1 part; olive oil, 1 part.

*Lime Dressing.*

Quick-lime, sprinkled on a dry surface, and the sheep walked through it frequently, will be found very beneficial. Before any dressings are used, the whole of the loose horn should be pared carefully from the diseased feet. It is of the greatest importance that the sheep's feet should, on the dressing being applied, be kept thoroughly clean and dry for at least three hours afterwards. They should, therefore, on leaving the troughs, or being dressed, be passed directly on to a battened or wooden floor, if it can be got, and, where neither of these is obtainable, they should be passed into a dry yard, in which there is a good coating of straw, cut grass, or dry bark, taken from trees which have been rung, or, in fact, any other thing which will keep their feet clean and dry.

## APPENDIX I.

From Inspectors' Reports the following results have been gathered regarding the efficacy of the various Drenches and Licks used for Sheep for Worms:—

*Drenches.*

*Arsenic.*—For the stomach and tape worms the arsenic and soda drench is still reported as the most effective, and has been by far the most generally used. It has, however, been recommended that potash, as being less severe on the lining of the stomach, should be substituted for soda in its preparation. The arsenic and soda drench is reported by several of the Inspectors as having been also efficacious for lung-worms. No authenticated information has been received of this drench affecting the health of the sheep or injuring the wool.

*Turpentine.*—Turpentine, with various mediums, has been very generally given for stomach, tape, and lung worms, with good results, when repeated.

*Fumigation with Sulphur* is reported to have been tried in one case for lung-worms with the best results.

*Sulphate of Iron, Horehound, Sulphur, Salt and Iron* are reported to have been given, but not with satisfactory results.

*Hayward's Specific* has given very good results for lung-worms; but the reports as regards stomach and tape are conflicting.

*Pottie's and Weaver's Drenches* are reported to have been used in several districts with fairly satisfactory results.

While it can be said that a decided improvement follows the administration of most of the drenches generally used, it is a fact that even in the case of the most effective the *post-mortem* examinations disclose that generally where the sheep are at all badly infested some worms are still alive; and this again, it is believed, arises from the owners delaying too long in drenching, and allowing the worms to have too great a hold on the sheep before they are drenched. The consequence is that some worms are left, which keep the sheep from thriving, and, with the introduction of fresh eggs from the water and pasture—if the weather is at all favourable for the development of the worms—in the course of a few months make the sheep as bad as they were before they were drenched. To make the cure effective, therefore, sheep which have been badly infested should, on receiving one drench, be kept as near the drenching yards as possible, and receive a second drench in the course of twelve or fourteen days after the first.

But, while licks and drenches should be provided and given at as early a date and as often as required, owners should give their earnest attention to the removal of what may be termed the Contributing Causes of the pest by avoiding overstocking, attending to the proper nourishment of the lambs and weaners, burning off old pasture, and getting rid by draining of surface and stagnant water, as suggested in Vol. II, Part 2, of the *Agricultural Gazette*.

*Licks.*

It is reported that the following licks have been used with good results:—

Salt and sulphur.	Salt, sulphate of iron, and Hayward's specific.
Salt and sulphate of iron.	Salt, tar, and turpentine.
Salt and turpentine.	Pottie's Preventive Lick.
Salt, sulphate of iron, and turpentine.	Salt and lime.
Salt, sulphur, and sulphate of iron.	

It is scarcely necessary to point out that a lick, if it is efficacious in warding off an attack of worms, is far preferable to a drench; and as owners in all but the purely saltbush country are now aware that it pays them well to give their sheep a liberal supply of salt, it would add very little to the trouble or expense to give once a month with the salt some of the other ingredients here mentioned which they found from experience was to any extent effective in protecting their sheep from the worm pest.

## APPENDIX L.

## THE HARE PEST.

(By A. Bruce, Chief Inspector of Stock.)

THERE can be no question as to the seriousness of the loss and injury which are now being sustained through the prevalence and continued spread of the hare pest, to which the deputation that waited on the Honorable the Minister in September last so forcibly called attention.

The attention of the Boards has been called to the danger arising from the hare pest.

It is now some years since the necessity for the adoption of prompt measures for dealing with the hare pest was seen by the Department, and the Pastures Boards were more than once urged to take the matter up on the very first appearance of hares in their districts, as it is only by taking a plague like the rabbit or hare pest at the beginning, and persistently following up and killing them as they come, and thus preventing their breeding and increasing, that really effective work can be done. But scarcely in any case was this pest dealt with as it ought to have been, and even those Boards which have taken action in this matter, have, as a rule, only declared hares noxious animals, and offered bonuses, when they had increased and multiplied till owners became alarmed, and then, of course, the pest had got practically beyond control. At any rate it could not be so inexpensively or effectually controlled as when there were only a few hares in the district to deal with.

As the matter now stands out of sixty-four districts there are only twenty-seven in which hares are declared noxious animals, and bonuses offered for their destruction, while there are at least seventeen or eighteen others in which it is believed there are hares, and where they are likely to increase, in which no action has been taken with respect to them. In the other districts it is not known that there are as yet any hares, and a good deal of the country is salt bush, where it is not thought they will ever do much damage.

It has been decided in the case of some of the other noxious animals that a minimum general bonus should be provided for in the Stock and Pastures Bill, and it would be well if provision were also made in that measure for a minimum general bonus of (say) 3d. per hare.

One of the principal reasons for delay on the part of the Boards in dealing with the hare pest was no doubt the fact that although hares eat a good deal of grass (it is believed that three or four hares will consume as much as one sheep), still the loss of grass is not so noticeable as the destruction of crops, nor the money loss nearly so much, and that as the Directors are more interested in stock than crops, and the stock-owners are by far the largest contributors to the funds, they have not until comparatively recently felt called upon, although they were giving bonuses for marsupials and native dogs, to offer bonuses for hares, much less to enforce the provisions of the Pastures Acts, under which owners are required to destroy all noxious animals on their land.

*Why the Pastures Acts shall not prove as effectual for the destruction of hares as of marsupials and dogs.*

Although the cost of administering the law and destroying the noxious animals has thus, through the failure to enforce its provisions, been a very great deal more than it ought to have been, yet as the prices obtained for the skins of the marsupials, and the rates of bonuses for the scalps of native dogs have been comparatively high, their destruction has to a large extent been effected, but the hare pest, like the rabbit, differs in two very important respects from the marsupials.

In the first place hares, like rabbits, increase very much faster than marsupials, and in the second place, their skins are of much less value than the kangaroo or wallaby. While, again, marsupials have only one at a litter, hares, it is believed, have sometimes as many as four, although in Great Britain they have seldom or never more than two, and sometimes only one, and seldom breed oftener than once, but here they are said to breed twice a year. Then, while kangaroo skins have been bringing from (say) 1s. to 12s., and wallaby from 2d. to 2s. each, hare skins have only been making from 1d. to 3d. each.

No doubt when killed near the railway line, and within (say) 200 miles from Sydney, a limited number of hares have for some years been sent to the market and brought from 1s. to 1s. 6d. a pair, but only comparatively few have been turned to account in this way; and, away from the railway line, the only return besides the bonus from the hares has been the price realised from the sale of the skins.

*A better prospect of a market for hares for exportation.*

More recently, however, hares have been purchased by the Fresh Food and Ice Company and by Mr. Robert Hudson for freezing and export, and prices as high as 1s. 3d. per pair delivered in Sydney have been paid by the Fresh Food and Ice Company. This company does not, however, purchase when the weather becomes warm on account of risk of taint; but supposing that the hares are killed in the winter season, and that under proper arrangements they are sold at (say) 1s. a pair, that, with a bonus of (say), 3d. a scalp—or rather per hare, as they would not be scalped—would make 9d. per hare, a price which would, I think, be sufficient to induce shooters to kill them, as it is believed that 3d. each would more than cover the cost of collecting the hares when shot, and of conveying them to the nearest railway-station, and from there to Sydney; for it would leave the shooter (say) 6d. per hare for his trouble. The Railway Commissioners are giving every encouragement for the extension of this trade in hares, the charge for hares by the ton being only about 5s. 8d. from Orange to Sydney (192 miles), and proportionate rates for other distances.

Notes on some of the remarks made by the deputation:—

*The rate of bonus should be increased.*

This may be necessary in some cases, but in the greater part of those districts where bonuses are paid they are now reasonably high; and if the killing of the hares were carried out principally in the winter season, in a proper manner, and suitable arrangements made for their conveyance to market (with respect to which some suggestions are afterwards offered) it is not thought that any increase of the average rate of bonus now paid need be made, or, indeed, could be so, unless the amount of subsidy granted to the Boards were increased, as many of them are now levying full rates.

*Provision*

*Provision should be made to allow hunters to go on land where the owner is neglecting to destroy.*

It would not, as pointed out, do to allow indiscriminate entry on holdings in pursuit of hares or other vermin against the wish of the occupant of the land. But the question might be remitted to the Boards for report whether it would be practicable for a Board to allow capable and trustworthy men, holding licenses framed with a view to the protection of the stock, to enter, after notice to the owner, on infested holdings for the purpose of killing hares and other noxious animals.

In any case the Boards should keep a strict watch, and see that the work of destroying the hares is actively followed up on all holdings in their districts, or should arrange with the owners of the land on which the pest exists for drives at such intervals during the right season as may be necessary; and if any owner refuses to prepare for these drives, by removing the stock and making ready in other ways, then the Boards should exercise the power given them under section 5 of the Amending Pastures Act of 1881, and put men on to do the work at the owner's expense, by arranging for and carrying out drives, or taking such other steps as they think necessary to get the work done, or they might prosecute the owner in default.

If, again, an owner is neglecting to destroy the hares on his holding, and the Pastures Board for the district declines to deal with the defaulter in either of the ways suggested, the Minister could, under section 9 of the Pastures Act of 1881, direct the inspector for the district to serve the defaulter with notice to destroy, and, if he failed, proceedings could be instituted against him for neglect, for which, if proven, a penalty not exceeding £50 is provided.

Besides, by proceeding by means of drives to deal with a defaulting owner, the Board might, if they thought well, and the opportunity offered of doing the work without injury to the defaulter's stock, after, of course, due notice to him, put one or more reliable men on to destroy hares at his expense.

It has, however, to be borne in mind that it is a very arbitrary proceeding to enter upon a man's land contrary to his wishes, and that even if the powers alluded to can safely be exercised under the precautions here suggested, it is only in extreme cases that they should be so, and after every other mode of carrying out the Act has failed.

*Bonuses for marsupials should cease to be paid.*

So far, as regards the greater number of the districts, this course might be adopted; but there are some few districts in which the wallaby and smaller marsupials are very numerous; and, as comparatively little is obtained for their skins, it is necessary in their case that some bonus should still continue to be paid.

*Government should make advances for wire netting and ammunition.*

There is no doubt but fencing would be the most effectual mode of dealing with the hare pest, and if the rabbits are allowed to infest the eastern side of the Colony, it would certainly be an advantage, where the work is heavy and difficult, to erect rabbit and hare proof fences. In any case where the pest is at all prevalent owners should enclose their orchards with netting. The loss of crops is very heavy and vexatious, but the destruction of fruit trees (and the hares are notoriously given to barking and killing them) is ruinous to the orchard-owner. A few hares will do £5 or £10 damage in an orchard in a single night. Still, speaking generally, perhaps, the question of fencing for hares should be deferred until it is seen what a fairly strict enforcement of the existing law will do, coupled with a better mode of killing and disposing of the hares. As subsidy is already granted, the suggestion that ammunition should be supplied by the Government cannot be recommended.

*The best means of destroying hares is by means of drives.*

It is believed that driving and shooting combined are not only the best mode of killing hares, but also the way in which they are most likely to be turned to account, and that, in both respects, considerable improvement might be made if the arrangement and conduct of drives were taken up and fully discussed by the Pasture Boards.

For instance, it might, it is thought, be possible with a comparatively slight outlay to make existing fences for some distance from the station usually taken up by the shooters so far hare-proof as would prevent them from breaking away, as they now at times do before they come within shot. Then, again, as hares are generally killed at these drives in considerable numbers, say, from 200 to 400 at a drive, it makes it worth the while of those who require hares for Sydney trade, or for exportation, to purchase them at a fair price; and if the Board in those districts through which the railway passes, would, as it has on several occasions been suggested to them, arrange to have as many drives as possible at different points along the line on the same day, and to send them on to the nearest railway station on that day, the purchaser would give a better price for them than he would by getting them in little lots at a time. In any case this would be much the better plan, and it should be adopted, and it is absolutely necessary that it should be so if the weather were such as to call for the use of a refrigerating car.

*The best season of the year to destroy.*

The best season of the year for destroying hares is the winter—

- (1) Because the carrying out of the drives then would interfere but little with the ordinary work.
- (2) Because both the hares and their skins then bring a much better price than when the hares are killed in warm weather.
- (3) Because hares can at that time of year, with fair despatch, be forwarded in ordinary cars in good condition to town, and either sold to the local trade or frozen for shipment.

If the destruction is carried out during the early winter months in an effective manner the pest would do little damage the rest of the year, and if followed up year by year in the same way at that season, the hares would, in the course of a few years, be reduced to a minimum, and perhaps ultimately eradicated.

It is believed that next to drives there would be no more effectual, less expensive, nor less troublesome mode of killing hares than by enclosing small paddocks of (say) 4 or 5 acres with hare-proof wire-netting, and laying down in them a crop of which hares are fond, (say) barley, sorghum, or lucerne, at such a time

of the year as would bring it well up in the autumn ; and when it is in that state, and the pastures scarce and dry, two easily working gates could be left open, one on each side of the paddock, for a few nights till the hares had in large numbers found out the gates and were going into the crops, when they could be quietly shut after midnight and the hares destroyed in the morning, or the gates could be kept closed and self-working opening could be made in the fence into traps, where the hares would be secured ; or, again, supposing there were, as there frequently is, a paddock enclosed with an ordinary but not a hare-proof fence, in which lucerne or some other cultivated grass had been laid down, and which was being pastured by stock, a few acres of it could be enclosed with a stock and hare-proof fence till the grass has attained a tempting height, when this little hare-proof paddock could be trapped as already described, and there is no doubt with very great success, for hares will come in large numbers, and from considerable distances, to feed on such pasture.

Such a mode of killing hares as this is in a great measure a self-acting one, and very effective, and at the same time comparatively inexpensive, for while the crops are thus employed to entice the hares into traps, they could also, of course, to a large extent, be made use of in the shape of food for the stock, and if there were sufficient numbers of these trap paddocks on large holdings, and the crop in them well up in the autumn when the grass is, as a rule, very bare and burnt up, they would, at any rate, keep the pest down till the winter drives could be carried out.

Snares in the old country, handled by men properly acquainted with their use, are very effective in killing hares. A good shot, with a well-trained dog, can also kill a good many hares in a day, while in Australia poison has been used with good effect for hares, more especially with such vehicles as apples and carrots.

*Government should increase the subsidy now granted.*

It is a question if this would be necessary if the modes of destroying the hares were systematically adopted, and carried out as suggested, and the hares turned to best account.

*Farmers and orchard-owners should be fully represented on the Boards.*

With regard to this suggestion, pastoralists point out that while they have little or no interest in the destruction of hares, they contribute by far the greater portion of the funds for the payment of bonuses, and they urge that farmers, and especially owners of orchards (who, now as the assessment is wholly on stock, practically contribute nothing towards the bonuses, although they are far more interested than the pastoralists, and more so than even the farmers), should be required to pay in proportion to the benefit they receive. If they were to do so they would, of course, be entitled to increased representation.

While it is desirable that the effect of more thorough and general measures for killing, and improved modes of collecting and forwarding the hares to market should be tried (before the heavy expense which the erection of hare-proof wire-netting would entail should be incurred), the proposal submitted, that the Government should supply wire-netting to the farmers, the cost to be repaid with interest in, say, ten years, is dealt with hereunder, as hare-proof fences may yet be called for, and the same scheme, if found practicable in the case of hares, might be adopted for rabbits and other noxious animals.

**PROPOSAL THAT THE GOVERNMENT SHOULD SUPPLY FARMERS WITH WIRE-NETTING TO PROTECT THEIR CROPS FROM HARES, THE COST, WITH INTEREST, TO BE PAID BY INSTALMENTS.**

The proposal that the Government should supply the farmers in the hare-infested country with wire-netting for the purpose of enclosing their cultivated paddocks and protecting their crops from the pest, and that the cost of the wire-netting should be repaid by yearly instalments, at the rate of  $\frac{1}{3}$ d. to  $\frac{3}{4}$ d. per yard, so much being for interest and so much to repay the principal, until the whole is repaid, is dealt with under the following heads :—

- (1) What amount would be required to carry out such a scheme ?
- (2) Is the proposal one which the Government can entertain, and if so, on what terms ?
- (3) Would it be advantageous to the farmer to obtain the netting and repay the cost with interest, at, say, 5 per cent., by instalments in ten years ?

*The amount required to purchase the netting.*

To arrive at some estimate as to the amount which would be required for the purchase of the wire-netting to carry out this proposal, the following statement is prepared from information kindly given by Mr. Coghlan, Government Statistician, as to the extent of the fencing erected around the tilled lands of the Colony :—

	miles.
Total fencing of cultivated lands	32,000
Deduct for portion of the Colony where there are no hares, nor likely to be	8,000
Also for portions where there are only a few hares, and where from the nature of the country and close settlements, there never will be many, and, therefore, no necessity for netting	12,000
	20,000
Leaving fencing in country, where, from its nature and the surrounding country, <i>i.e.</i> , hilly, mountainous, and scrubby, and the prevalence of the pest, netting might be necessary	12,000
Then, taking the netting at (say) 3 feet 6 inches wide, 17 gauge, and $1\frac{1}{2}$ in. mesh at (say) £40 per mile, delivered at the holding, that would make the amount which would be required (say)	£480,000

That is to say, £500,000, but the whole of that amount would not be required at once ; for suppose wire-netting were to become general on the eastern side of the Colony it would likely take six or eight years before all that amount was expended for netting ; while, as soon as the netting is supplied so soon do the special rates begin to be paid, and considerable sums would be received in that way to the credit of the special account at the Treasury, from which the cost of the wire-netting is paid.

Is the proposal one which the Government can entertain ; and, if so, how should it be carried out ?

If

If such a proposal were entertained on the understanding that satisfactory arrangements could be made for the payment within a reasonable time of the cost of the netting with interest, and for sufficient guarantee being given that these arrangements would be punctually carried out, in that case it is submitted for consideration how far an amendment of the Pastures and Stock Protection Acts containing, among other things, the following provisions would enable the proposal made to be acted on:—

- (1.) The Minister be empowered, on the recommendation of the Pastures Board for a district in which the hares are numerous and destructive, to supply farmers with wire-netting to enclose their tilled land, and the Board to levy a special rate of not less than 1s. nor more than 2s. per acre on the land so enclosed to pay the cost of the netting, with interest thereon, till the whole principal and interest are paid.
- (2.) Such special rate to be levied and collected by the Board in the same manner as an ordinary rate under the Pastures Acts, but the special rate as collected to be paid into a separate bank account and remitted monthly to the Treasury.
- (3.) The Colonial Treasurer to be empowered, on the failure of the person supplied with the netting to pay the special rate for which he is assessed, to issue a warrant for the amount, together with an addition of one-fifth the amount, by way of penalty.
- (4.) An annual vote to be taken by the Department to pay for the wire-netting.

*Would the proposal be advantageous to the farmer?*

To see how this is, it is supposed—

- (1.) That the cost of the wire-netting is to be repaid, with interest at 5 per cent., in ten years—a very liberal length of credit.
- (2.) That a wheat paddock of, say, 50 acres is to be made hare-proof, and that it takes, say, 1,966 yards, or, say,  $1\frac{1}{2}$  miles of netting to do so.
- (3.) That the netting, say, 3 feet 6 inches, 17 gauge, and  $1\frac{1}{2}$  inch mesh, delivered at the paddock, will cost, say, £40 per mile, or a trifle less than  $5\frac{1}{2}$ d. per yard.
- (4.) That to repay this in ten years, with interest at 5 per cent., would take an annual payment of £5 16s., while this is the case, the amount at the higher rate proposed to be repaid annually,  $\frac{3}{4}$ d. per yard, would make an annual instalment of £6 2s.  $10\frac{1}{2}$ d., and if adopted would make the payments terminate in, say, nine and a third years instead of ten years.
- (5.) That neither instalment would press very heavy on the farmer, and it would be far better for him to pay that amount than allow the crop to be destroyed by hares. Assuming that the amount is to be repaid, with the interest stated, in ten years, the instalments would make an annual charge of less than 2s. 4d. per acre, and on the crop, taking it at 20 bushels per acre, it would amount to, say,  $1\frac{2}{3}$ d. per bushel.

This is looking at the question entirely from the one point of view—the protection of crops and cultivated grasses from hares; but not only would the wire-netting effect this, but it would also, where wallaby and other marsupials are numerous, protect the crops from them, and, what is of still greater importance, from the rabbits, which are fast making their way to the eastern and farming portion of the Colony. Appended is a statement giving similar information with respect to the expense of making cultivation paddocks, containing respectively 25, 100, and 200 acres, hare-proof.

*Twenty-five acres.*

Twenty-five acres = 63 chains 24 links = 1,392 yards, at £40 per mile = £31 12s. 9d., repayable in ten yearly instalments, at 5 per cent. = £4 2s. per annum.

By yearly payment of  $\frac{3}{4}$ d. per yard on 1,392 yards = £4 7s., it would take about nine and a third years.

Twenty-five acres, yielding about 20 bushels per acre = 500 bushels, at £4 2s., would give annual charge of about 2d. per bushel, and by the acre at the rate of 3s.  $3\frac{3}{4}$ d. per annum.

*One hundred acres.*

One hundred acres = 126 chains 50 links = 2,783 yards, at £40 per mile = £63 5s., repayable in ten yearly instalments, at 5 per cent. = £8 4s. per annum.

By yearly payments of  $\frac{3}{4}$ d. per yard on 2,783 yards = £8 13s.  $11\frac{1}{4}$ d., would take about nine and a third years.

One hundred acres yielding 20 bushels per acre = 2,000 bushels, at £8 4s., would give an annual charge of 1d. per bushel, and by the acre at the rate of 1s.  $7\frac{3}{4}$ d.

*Two hundred acres.*

Two hundred acres = 178 chains 90 links = 3,936 yards, at £40 per mile = £89 10s., repayable in ten yearly instalments, at 5 per cent. = £11 12s. per annum.

By yearly payments of  $\frac{3}{4}$ d. per yard on 3,936 yards = £12 6s., would take about nine and a third years.

Two hundred acres, yielding 20 bushels per acre = 4,000 bushels, at £11 12s., would give annual charge of about  $\frac{7}{8}$ d. per bushel, and by the acre at the rate of 1s.  $1\frac{2}{3}\frac{3}{4}$ d.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**STOCK.**

(REPORT BY THE CHIEF INSPECTOR OF, ON STOCK BREEDING AND FATTENING IN NEW ZEALAND.)

*Ordered by the Legislative Assembly to be printed, 1 March, 1893.*

The Chief Inspector of Stock to The Under Secretary for Mines and Agriculture.

Department of Mines, Stock Branch, Sydney, 1 February, 1893.

Minute Paper.

*Subject* :— Stock Breeding and Fattening in New Zealand.

I. Scope and objects of the Report.

In reporting on these subjects I will, in the first place, notice as briefly as possible the extent and area of the colony—its physical aspects and natural divisions, its rivers and lakes, and its soil and climate. I will next describe how the pastoralists and farmers there are turning to account the great natural advantages which they possess. In doing this I will confine myself to the North and Middle Islands as the stock on the other islands are too few to call for notice.

II. Extent and area of the Colony.

*The North Island*

which is nearly the same latitude as Victoria, extends from north to south some 448 miles, and has an average width, calculated roughly, of about 100 miles, with an area of (say) 44,468 square miles, or 28,459,000 acres.

*The Middle Island,*

the northern portion of which is farther to the north than the most northern part of Tasmania, and the southern portion considerably farther south than the most southern part of that island, is about 450 miles in length, and its width varies from 100 miles in the northern and middle portions to 160 in the southern. It has an area of (say) 58,525 square miles or 37,456,000 acres.

The area of the two islands is thus (say)—102,993 square miles, or 65,915,000 acres—that is somewhat less than one-third of that of New South Wales.

III. The Physical features of the Colony.

*The North Island*

is hilly and mountainous, with considerable tracts of undulating and level country and valleys intervening. The mountains, which are said to occupy about one-tenth of the whole, are numerous, but do not, with a few exceptions, attain a height over 4,000 to 5,000 feet. The highest mountain in the North Island is 9,100 feet.

The most remarkable feature in the North Island is the numerous hot springs in its central districts. The greatest part of these springs are in the country still held by the Maoris, which is of considerable extent.

The water supply is abundant throughout for local requirements. The rivers are numerous, and some of them, such as the Waikato and Thames, large, and carry heavy volumes of water to the sea. In the centre of the island, again, there are several lakes, one of which, Lake Taupo, is of considerable size.

*The Middle Island.*

The leading physical feature in this is the Great Dividing Range, known as the Southern Alps. It runs through the island from north to south with numerous lofty peaks, the highest of which—Mount Cook—is said to be over 12,300 feet high. The scenery of some of the portions of this great range is grand in the extreme—the glaciers on both sides of the range descending to within 700 feet of the sea-level.

With the exception of the north-west corner of this island and a small extent of country at its southern end, the main coast range for the greater part of its course runs within a short distance of the sea, and the formation and nature of the country lying between the top of the range and the sea is such as to render it unsuitable for even grazing, being both very steep and rugged, as well as barren.

*In the northern portion of the Middle Island,*

the districts of Nelson and Marlborough, the country is hilly and mountainous, but nearly all adapted for grazing, with valleys here and there between the hills in both districts, suitable for farming.

This portion of the island, as might be expected from mountainous character, has numerous rivers and is thoroughly well watered.

*The middle portion of the Middle Island.*

The far-famed Canterbury district: so far as it is to the east of the main range, the northern part of this district is hilly and undulating. Then, going southwards, there is a long stretch of comparatively level land between the main range and the sea, with here and there undulating country, gradually rising and becoming hilly, till it meets the dividing range on the west and the hilly country of Otago on the south.

The land in the Canterbury district, east of the main range, is all adapted for grazing, and the greater part also for tillage and easily worked. While the soil throughout a good deal of this district is light, it is very fertile. It is reckoned that the great Canterbury Plain contains about 3,000,000 acres, the greater part of which is well adapted for agriculture.

*The southern portion of the Middle Island, i.e., the District of Otago.*

This district, to the east of the main range, is hilly and mountainous, with many fine plains, a good deal of undulating country, and valleys suitable for agriculture, a great deal of the land being of very high quality, and some of it of the very highest. The mountains and hills are, as a rule, bare of timber, but are suitable for grazing.

In the Otago district there are numerous rivers and streams and several large lakes in the mountains. One of the rivers—the Clutha or Molyneux—is the largest in the colony and the district suffers oftener from wet than drought.

#### IV. The Climate and Rainfall.

##### 1. TEMPERATURE.

*The North Island.*

In its northern portion the mean summer temperature is 65 and 70 degrees (Fahr.), and mean winter, 50 and 55 degrees (Fahr.); while the mean summer temperature of the southern portion of this island is 60 and 65 degrees (Fahr.); and the winter, 45 and 50 degrees (Fahr.)

*The Middle Island*

again, in its northern portion, has a mean summer temperature of 60 and 65 degrees (Fahr.), and mean winter of 45 and 50 degrees (Fahr.), while in the southern portion of Middle Island the mean summer temperature is 55 and 60 degrees (Fahr.), and the winter 40 and 45 degrees (Fahr.)

The mean annual temperature for the whole colony is:—Spring, 55 degrees; summer, 63 degrees; autumn, 57 degrees; winter, 48 degrees.

This resembles the climate of the middle southern portions of Great Britain, but more equable, and the variations less.

##### 2. RAINFALL.

The following is the average annual rainfall at the four principal stations in New Zealand for ten years, ending August, 1891:—

	North.			Middle.		
Auckland...	...	...	39·131	Lincoln ...	...	26·691
Wellington	...	...	48·600	Dunedin...	...	35·655

Periods of droughts are almost unknown in New Zealand, and only in two instances do the records show a whole month at any one time without rain.

#### V. The land in New Zealand, and its suitability for tillage and grazing.

In the North Island there are said to be some 13,000,000 or 14,000,000 acres, or about one-half of the whole area, including the Maoris country, suitable for farming; but this includes standing forests, swamps, areas of clay marl, and partially covered with pumice, as well as improvable land, on which the ti-tri scrub grows.

In that island the best agricultural and pastoral land is in the southern and south-eastern portions of the island, the cream of it being in the Napier, Gisborne, and Wairarapa Districts on the east coast, and Palmerston, Wanganui, Hawera, and Taranaki, on the west—the very best of the land, when properly laid down in cultivated grasses, carrying and fattening up to six, and even in some cases seven and eight sheep per acre. There is, of course, a greater breadth of land which, properly treated, will carry and fatten five and six sheep and more that will carry and fatten three and four.

There is also some very good country of a limited extent on the Waikato, in the Hamilton and Cambridge districts, but its carrying capacity is not equal to the best land in the southern portions of the island, and in the northern portion generally, the soil, though kindly, is light; while in the south it is in a great many cases deep and strong. This remark, however, applies less to the land on the east than the west coast, but the land on the east has the advantage of being on a limestone formation.

In the middle part of the North Island, which is still in the hands of the Maoris, there are considerable stretches of good land, but large portions of their country are covered so thickly with pumice as to render them valueless for tillage or grazing. Where the land is not in this state, a good deal of it is well adapted, if improved, for sheep; but little or nothing has been done in that way by the natives.

In

In the Middle Island, it is estimated that there are 15,000,000 acres available for tillage, and 13,000,000 acres of native grasses suitable for merino sheep, which leaves about 9,000,000 barren, snow covered, and inaccessible mountain tops. A considerable portion of the land suitable for tillage is of a very fertile description. This is especially the case as regards some of the land in the Nelson, Blenheim, Christchurch, Timaru, Oamaru, Dunedin, and South Land districts. On some of the holdings in the districts named they have grown 50 and 60 bushels of wheat to the acre, as high as 100 bushels of oats, and from 30 to 40 tons of turnips; while, with English grasses carefully laid down, the land will carry and fatten in some cases up to seven and eight sheep to the acre—in more instances, five and six, in more still three and four sheep, and it is considered but very ordinary land which, with cultivated grasses, will only keep and fatten two sheep to the acre.

On the country again on which the great bulk of the merino sheep are kept, very little cultivated grasses grow, and these as a rule are self-sown. The land on which they run is almost all unimproved and thickly covered with "tussocks," but at the same time with spaces between them with better sorts of grasses—generally the native fescue. The pasture in which the small tussock grows is the best, and tussocks of that description, when young, are freely eaten by the sheep.

The land available for agriculture, tillage, and grazing in both islands may be stated as follows:—

						acres.
In the North Island (say)	...	...	...	...	...	14,000,000
In the South Islands (say)	..	...	...	...	...	15,000,000
						<hr/> 29,000,000
Under native grasses	...	...	...	...	...	13,000,000
Total area available for tillage and grazing	...	...	...	...	...	<hr/> 42,000,000

### VI. Fencing in New Zealand.

As good lasting timber for fencing is scarce in most parts of New Zealand, more especially in the middle portion of the Middle Island, gorse "whin" hedges are very generally used as fences in both islands. A low sod or turf fence is built about 2 feet high, on the top of which the gorse seed is sown, and a temporary wire fence is erected to protect it for two or three years until the gorse has attained a sufficient height, strength, and closeness to keep the sheep. When properly cared for and regularly cropped, the gorse hedge makes a good fence, and is of service also for shelter in winter to the stock which in many cases have no other protection from the cold winds so common at that season of the year all over the colony; but, of course, much more so in the southern portion of the Middle Island.

These hedges, however, call for a great deal of care and attention, and their maintenance is attended with considerable expense. They are also liable to be burned, and the gorse, if neglected, spreads over the land. What is still worse, in the rabbit-infested country, they are great harbours for that pest. The outcome is that owners have in those parts of the colony began to replace the gorse hedges with wire fences, and even in the portions of the colony where the rabbits have not as yet put in appearance, the same course is being taken, as the hedges are not so secure, and the expense of maintaining them comes to a considerable sum annually, while they harbour other pests, such as the sparrows.

The most approved fence in New Zealand for cross-bred sheep is one of eight wires with the posts 80 ft. apart, and a wooden and iron batten, through which the wires are run, between every two posts. Some, but they were in the minority, considered that seven wires kept close together and making the height less, were sufficient, if the batten between the posts were put on.

### VII. Agricultural seasons in New Zealand.

In May, June, and July oats and wheat are sown. The farther south the earlier. For wheat,  $1\frac{1}{4}$  to 2 bushels. For oats 2 to  $2\frac{1}{2}$  bushels.

In August—Oats are sown in the southern half of the Middle Island.

In September—Spring wheat is sown and oats may be still put in. English grasses, mangolds, and potatoes are put in during this month.

In October—Sow barley with grass seeds. Break up new ground and sow with turnips and rape.

In November—Break up new land.

In December—At beginning, breaking new ground; hay-making and turnip sowing.

In January—Fallow land to be worked; and that and barley crop to be attended to.

In February—Harvest month.

In March and April—Sow grass, with rape or turnips. Thresh grain, break up grass land for wheat, and cross-plough fallow land on to May and June.

### VIII. Rotation of Crops.

A GREAT deal of the land in New Zealand is suitable for rotation of crops, and the majority of the holders have adopted that system in some form or other.

It has only been by carrying on a proper rotation and by systematic farming that that colony has been able to keep up the heavy export of first-class sheep she has sent away, and maintain the fertility of the land.

On land which has been under cultivation, the usual rotation, followed in the best portions of the North Island and in the Middle Island, has been something like the following:—Land which has been (say) five or six years under pasture, and on which the cultivated grasses have been pretty well eaten or have died out, is broken up after lying fallow for perhaps three months is cross-ploughed, harrowed with disc, and ordinary harrow, and sown with wheat, oats, or barley.

As soon as that crop is reaped and threshed, and the straw is stacked on the ground to be eaten by the sheep with the turnips, the land is ploughed, and afterwards, at the proper season again, worked, cleaned, and thoroughly tilled, and prepared for the turnip crop which is put in as afterwards described during November or December.

If

If the land is not very rich or nearly virgin soil it gets from 1 to 1½ cwt. of super-phosphates, or (say) 2 cwt. of bone-dust to the acre, which gives the turnips a start and insures a good crop. The turnips are eaten off with sheep in the end of autumn or in the winter; and, while the sheep are on the turnips, they are supplied with wheaten, or oaten straw, or chaff which they readily eat, and this, of course, is another advantage which a system of rotation secures, adding as it does to the weight and improving the quality of the mutton of the sheep if they are to be fattened, and increasing the carrying capabilities of the land if the sheep are only stores or breeding ewes. When the turnips are eaten off, the land is ploughed, and when sufficiently tilled and a good seed-bed formed for the grass seeds, it is sown with oats, barley, or wheat, and afterwards with the proper mixture of cultivated grasses and clovers for what is termed permanent pasture. If, however, the land is light, the second grain crop is omitted; and if very light, both grain crops are so, the land being prepared when the turnips are eaten off, and the grass seeds sown with the addition of a small quantity of rape or turnip seed.

The land, as thus laid down in grass, is allowed to be in pasture until the cultivated grasses again become too thin and require to be renewed, when the same course is followed; and where the land is fairly good the return from the grain crop alone goes a long way to repay the expense of the rotation, and that from the turnips and cultivated grasses leave a considerable profit; while the growth of the leguminous plants (the clovers) supplies nitrogen to the soil, and this and the artificial manure put in with the turnips, together with that left by the sheep when eating them off, enables the fertility of the land to be well maintained.

### IX. Cultivation of the Land by Contract.

ON the larger properties in New Zealand the greater part of the cultivation of the land is done by contract, but, in a few instances, the owners of even large properties keep a strong staff of men, and have a large number of teams of heavy draught (generally Clydesdale) horses, with four in a team.

In those portions of the North and Middle Islands where the land is light, these four-horse teams work three-furrow ploughs; but on the heavier land, especially in the southern and eastern portions of the North Island and the southern portion of the Middle Island, they work only the double-furrow plough.

The following are the rates ordinarily charged for some of the work:—

Ploughing 4 or 5 inches deep, at per acre	...	...	...	...	5s.
Disc-harrowing, each time...	...	...	...	...	1s.
Ordinary harrowing, each time	...	...	...	...	1s.
Sowing, including rolling and covering	...	...	...	...	9d.

### X. Capabilities of the Land under Rotation.

WHERE the land is exceptionally good, the owner, following such a rotation as this, on breaking up the grass, gets, if the crop is wheat, from 33 to 45 bushels to the acre; and if it be oats his return will be from 60 to 70 bushels.

Next season, on land of that description, if it be at all a favourable one, and due care has been exercised in preparing the land, the turnips, with the usual allowance of chaffed hay or straw, will fatten from fifteen to twenty sheep to the acre.

The next season's crop of cereals (it is usually oats or barley) should be as good as the first grain crop, and with it the grass and clover seeds are sown. They are, of course, cut with the grain crop, but if the autumn is favourable they come again sufficiently to afford, with the stubble, a good deal of pasture for sheep.

The next season, if the grass and clover have been properly put in, there is a strong, close growth of all the varieties sown, and the crop is either saved for hay or pastured with sheep, as the owner may decide. It is generally pastured, and land of the description alluded to should keep and fatten annually, for two years, six or seven sheep to the acre, where it is very good, but not exceptionally so, its carrying and fattening capabilities might be put at four or five sheep to the acre, and where only fairly good from two to three sheep, while taking the average capabilities of the whole colony it is estimated that where the land has been fairly laid down in cultivated grasses, which are renewed every five or six years, they are carrying and fattening from two to three sheep to the acre.

### XI. Grasses and Clovers.

NEARLY all the English cultivated grasses and clovers grow well in New Zealand, especially on the moister land, where they retain their hold better and are green and succulent right through the summer, but, though moist, the land where grasses are sown should be properly drained—not at all water-logged. Where the land is at all good these grasses have excellent feeding properties. Even on comparatively thin soil, under proper tillage, and aided with small quantities of manure, they grow well and give good returns.

For some time the most of the grass, as well as the turnip seeds, were imported from England or Scotland, but now the greater part of them are saved in the colony. So favourable is New Zealand for the growth and saving of these seeds that considerable quantities of some of the kinds are now exported to Europe, and it is believed that New Zealand is one of the principal sources from which Great Britain and Ireland now draw their supplies of Cocksfoot seed.

### XII. The usual Mixture of Grass and Clover Seeds sown, and the Quantity per acre.

IN New Zealand the following is the mixture of grasses generally sown, and the quantities of each, when laid down with cereals:—

Perennial rye-grass...	...	...	25 lb.	Red clover	...	...	...	2 lb.
Cocksfoot	...	...	5 lb.	Cow-grass	...	...	...	2 lb.
Timothy or Crested dog's tail	...	...	2 lb.	Alsike	...	...	...	2 lb.
White clover	...	...	2 lb.					Where

Where the land is dry-crested dog'stail might be substituted for the Timothy, as it will not thrive in dry ground, or, instead of taking the crested dog'stail, the cocksfoot and cow-grass might each be increased 1 lb.

When sown without cereals, it is customary to add from  $\frac{1}{2}$  lb. to 1 lb. of rape or turnip seed to the mixture. These grow more quickly than the grasses and clover, and not only shelter them on coming through the ground, but supply the sheep with a full bite of early succulent and nutritious food. Of the two the rape grows the more quickly than the turnips. Indeed, it is thought by some owners, too much so, to be made the full use of, and the turnips are now frequently preferred to the rape for this purpose.

### XIII. Grasses sown in New Zealand.

#### 1. PERENNIAL RYE-GRASS.

Of all the varieties of cultivated grasses this is not only the most generally grown, but also that which forms the principal grass in the mixtures of seeds sown throughout New Zealand. Out of some 40 lb. of seeds, usually sown to the acre there are generally as much as 25 lb. of rye. This grass, with a fair amount of moisture and temperate climate, grows on almost all descriptions of soil, even on stiff cold clay land and light stony soil deficient in lime, and on land where no other grass of value will grow; but the richer the land, if the drainage is good, the better and more permanent the rye-grass will be. It perpetuates itself in these cases both by seeds and rootlets. Indeed, on such land it may be said to be really perennial, but on soils of medium and poor quality it requires to be renewed from time to time (say) every four or five years.

There are none of the grasses so nutritious as the rye except the foxtail; and it is noted for the excellency of its herbage, the great weight of produce to the acre, its early and late growth, and the manner in which it stands the trampling of the stock. It is also especially valuable for the amount of food it yields during winter; and so well has it done in New Zealand that there is now a variety peculiar to the colony called the "Poverty Bay," which is found to be superior to any imported seed in standing and feeding qualities.

In 1891-2 no less than 864,511 bushels of rye-grass seed were grown in New Zealand. It is usually harvested by stripping, and the average yield on good land is from 15 to 20 bushels per acre.

In taking the seed the paddock is grazed till midsummer, when the stock are taken off for a few weeks and paddock shut up.

The price per bushel ranges from 3s. 6d. to 4s.

#### 2. COCKSFOOT.

This, with the exception of the rye-grass, is the most generally sown of all the cultivated grasses in New Zealand. It is a strong hardy grass, and more than holds its own with other grasses and clovers. Indeed, it sees the most of them except rye-grass out—in some soils even that grass; and so much is this the case that, where the land is very good, considerably less than the proportion of cocksfoot given (one-eighth of the whole mixture) is put in, lest that grass should monopolise the land. It grows well on hill-sides, where it is not so liable to run into tufts as on the flat land, and it shoots with every shower of rain. Where the soil is good, cocksfoot, when kept closely eaten down, is a good fattening grass, but if allowed to shoot up and ripen it becomes hard and comparatively innutritious, inclined to become bunchy or tussocky, and the stock, especially sheep, will not eat it unless actually obliged. In no part of the world does the cocksfoot do better than in New Zealand. It frequently goes 20 lb. to the measured bushel, while the standard is only 12 lb. Large quantities of this seed are now, as has been said, annually exported to Europe. It sells in New Zealand at from 3d. to 4d. per lb., and as much as 572,425 bushels were grown there in 1891-2.

#### 3. TIMOTHY.

Where the land is fairly good, the soil damp, and the climate at all moist, this grass, which makes very good sheep-feed, does well, and should in such cases always be in the mixture sown; but it should not be sown in dry country; but it flourishes in clay and moist soils, and is unsurpassed in peat. No grass will better bear extremes of heat and cold. It produces a heavy hay crop, and is exceedingly nutritious when young, and more so when old and seeded.

#### 4. CRESTED DOGSTAIL.

This is one of the chief British sheep-grasses, especially in upland districts, and is supposed to have a beneficial influence in preventing foot-rot. The sheep are very fond of the leaves, but, like the cocksfoot, it should be kept well eaten down, as the seed-stems become hard and the sheep leave them.

It thrives well in compact soil, and is very hardy. The roots are hard, and the plants are adapted to dry soils and will withstand droughts.

It also does well in tenacious clay. There is hardly any soil it will not thrive in.

It is not much grown in New Zealand, and it is only suggested as a constituent part of the mixture where the Timothy has to be omitted.

#### 5. MEADOW FESCUE.

This grass is considered by some authorities a very valuable one for permanent pasture on good land, but is not as yet very generally grown in New Zealand, and this may be accounted for through being liable to be affected with ergot, if it is let run into seed, and ergot acts as a poison on the stock.

### XIV. The Clovers sown in New Zealand.

#### 1. PERENNIAL WHITE CLOVER.

Has both fibrous and tap roots, which enables it to maintain itself in different soils. It grows best in mellow land containing lime, and on all clay soils rich in humus or gravelly clay. It forms an essential constituent in every good pasture, but is better for flesh than milk, and is of special service in fattening sheep. The white clover flourishes in New Zealand and keeps the hold of the ground very well—long into the summer—especially in the country where they have the limestone formation. Indeed, at times its growth is excessive, for it takes possession of the space which could be better occupied with other clovers or grasses.

## 2. RED CLOVER.

Is a strong plant, will grow on almost any soil, and contains a great deal of moisture. Winter and spring frosts are injurious to it. It is not very well suited for permanent pastures, but should form a proportion of an alternate mixture. Its great root growth during the two years of its existence is favourable to succeeding crops, carrying as they do nitrogen into the soil. It grows well in New Zealand, and now that the Humble bee has been introduced it has been fertilised and the seed saved.

In New Zealand it is generally sown with a spring cereal crop, mostly oats and barley, lightly grazed in autumn, and next year cut in November as hay, giving from 2 to 3 tons to the acre.

The after growth is allowed to seed and ripens in March, when it is cut and threshed, giving from 200 to 300 lb. per acre, which sells at 5d. to 6d. per lb., or £10 to £11 per acre.

## 3. COW-GRASS.

Is what is more properly termed the perennial red clover. It grows very well in New Zealand. It is an invaluable plant, and should be included in every mixture for permanent grass. Its roots reach well down into the subsoil, which enables it to obtain moisture in the hottest weather. Even in rather poor soil it produces a good quantity of succulent food. It stands the frosts well, better than the broad-leaved red clover. The principal difference between the two clovers is that the cow-grass has a somewhat taller, smoother, and, except in its very young state, a less hairy stem, and has a stronger, less fibrous, and more penetrating root. It carries its flowers above its foliage, and surpasses the broad clover in succulence. Its stalks are generally solid, while those of the broad clover are hollow, and it produces less seed.

## 4. ALSIKE.

Is peculiarly adapted for damp soils, endures heat and cold well, will succeed in undrained clays better than any other clover, and is the only clover which will stand irrigation. For hay, alsike is superior to white clover, and for pasture produces more, and is eaten more readily; while it is more leafy and less pithy than red clover. Its nutrition is greatest at the flowering stage; and its value for pasture is very great. It flourishes in the same deep soil as Timothy, and does well with the other grasses mentioned in the mixture.

## 5. LUCERNE.

The good qualities of this plant are too well known in New South Wales to require anything to be said here with respect to them, or to recommend owners whose land is adapted for its cultivation to sow it. In New Zealand, the grasses already mentioned have done so well and have so well suited the system of farming generally adopted in that colony that comparatively little lucerne has been sown there; but where it has been tried it has answered quite as well in that colony as in this, and owners in the warmer portions of the colony are—now that wheat is not paying so well—turning their attention to lucerne, and a good deal more will now be grown there.

## XV. Laying Down Fern, Bush, and Scrub Land in Pasture in New Zealand.

## 1. FERN LAND.

In dealing with this description of land the ferns are burnt off in the first three months of the year, and a mixture of grass seeds of the kinds, and in proportion already mentioned according to the nature of the land, the climate, and other circumstances, is sown in the ashes, and, as there is not so much of them as in Bush land,  $2\frac{1}{2}$  instead of 2 bushels require to be sown. The seeds spring with the first rain, but with them a strong growth of young ferns comes up, and to keep the ferns down and kill them out the land is heavily stocked with sheep and sometimes with cattle. When young and just through the ground the fern is eaten, but not very readily, by stock, the one set of stock not being kept on too long for that purpose, as they would fall away in condition. Fresh sets have therefore to be put on, and this course has to be followed for two or three years, otherwise the fern would again overrun the land. By that time, however, if kept properly down, they cease to grow, and they have of course done so to a less extent every year.

The cost of burning off and seeding fern land is about 15s. per acre, and fern land will keep from one to three sheep to the acre, according to the quality of the land and the success of the burning off and seeding.

## 2. BUSH FOREST LAND.

The expense again of laying down the bush forest land, which is, as a rule, heavier and better than the fern land, is much greater, as it is usually covered with trees, saplings, creepers, vines, scrub, and under-growth. In preparing the land (the felling and scrubbing is generally done in the winter season) the creepers, scrub, and under-growth have to be cut near the surface and overhead with a slash hook. After that the saplings and trees are felled, and when the whole is withered and dry, at the end of summer, or early in the autumn, the whole is set on fire, the aim, of course, being to make the burning as complete as possible; for, with a good burning, the grass seeds which are sown in the ashes in the autumn come up close and strong, but it is otherwise, if the burning is badly done, as the rubbish covers the ground and allow the weeds to keep possession of the ground, thereby preventing the grass-seeds from obtaining a proper footing.

If the soil is good, and the burning successful, bush land treated in this way will keep three to four sheep to the acre, notwithstanding that it may for years remain thickly covered with the felled trees. In the course of five or six years, when the timber has become rotten, it is usual to "log up" and burn it off, principally with the view to cultivation, but sometimes merely for the sake of the pasture.

The felling, burning-off, seeding, and sowing an acre of bush forest land costs about 32s. 6d. per acre, the work being all done by contract.

There is no part of this Colony, except perhaps the rich scrub lands of our north-eastern coast country, where exactly the same system as here described could be followed by us; but I think that the same end would be attained at a comparatively small expense on the best portions of country, like that in the neighbourhood of Armidale, Guyra, and Glen Innes, by adopting some such course as the following:—To ring and kill the large trees, to grub out all the smaller ones, and having thus cleared the land sufficiently to admit of its being cultivated, to plough and work it till it is brought to a fine tilth, and then sow with some such mixture of grass and clover seeds as that given in this paper. In this way the seed would

would be put in as it ought to be, every grain would have a chance to germinate, and, if the season is at all favourable, a good growth of cultivated grasses would result at a comparatively small cost, which would last for at any rate five or six years, keeping from three to four sheep per acre; and when the larger trees and their roots had become rotten they could be taken down and burned, and the land cleared for fresh tillage.

### 3. MANUKA OR TI-TRI SCRUB LAND.

This scrub, which in some places, more particularly in the northern portion of the North Island, covers extensive stretches of the flat country, and grows to a considerable height, is cut down close by the ground, and generally allowed to lie until a second growth of young scrub comes up through the old when the whole is burned off, and the grass and clover seeds are sown in the ashes, the scrub seldom growing again.

Ti-tri land is generally light and its carrying capacity is comparatively small.

The cost in this case should be about 20s. an acre.

I am not aware whether scrub has ever been treated in this way in Australia. If it has not it would be well worth giving the New Zealand practice a trial, for there is plenty of scrub in this Colony, which, when cut, as it usually is, and burned off when dry, regularly grows again.

## XVI. Laying-down land, which has been previously cultivated, with Grass-seeds.

### 1. PREPARATION OF THE LAND.

WHETHER the cultivated grasses are to be sown with cereals or without on land which has been cleared and tilled, those who grow them to the best advantage work the land on which they are to be grown in a thorough manner, so that there is not only a fine mould and good seed-bed on the surface, but they are careful that the soil, to a fair depth, is also well stirred by ploughing, cross-ploughing, disc and ordinary harrowing, and rolling, the cost of which, at contract price, would be something like the following per acre:—

	s.	d.
Ploughing (say) 5 inches deep ... ..	5	0
Cross-ploughing (say) 5 inches deep ... ..	3	0
Disc-harrowing (say) 5 inches deep ... ..	1	0
Ordinary harrowing ... ..	1	0
Seed, sowing cereals and grasses, and covering ... ..	2	6
<b>Total ... ..</b>	<b>12</b>	<b>6</b>

### 2. TIME WHEN GRASSES ARE SOWN ON LAND PREVIOUSLY TILLED.

In the North Island and the northern part of the Middle Island the greater part of the grass-seeds are sown in the month of September, and some in the month of October. In the southern portion of the Middle Island they are put in from October to March.

Where the land is very cold, wet, and heavy, the later the sowing the better, and where the soil is light and warm the earlier the better; but of course the time of sowing must be regulated by the rainfall.

### 3. HOW GRASS-SEEDS ARE SOWN.

Where the land is rich, or has recently been manured, grass-seeds are laid down with barley, oats, or other cereal after a crop of turnips, which has been eaten off by sheep; and in other cases, which are perhaps the more numerous in the northern portions of the North Island, the sowing of the cultivated grasses follows directly on the turnip crop without any cereal.

## XVII. Root and Green Crops.

### 1. TURNIPS.

The turnip crop in New Zealand is a very important one. In 1892, according to the Statistical Register for the colony, there were 422,354 acres under that crop.

#### (1.) Turnips on Tussock Land.

In breaking up tussock (new) land for turnips after the tussocks are hoed up and burned, the seed is generally sown in November or December broadcast, to prepare it for future crops; and if well laid down, and in a fairly favourable season, the yield is good, nothing suiting the turnips better than virgin soil; and after the turnips are eaten off by sheep the land is properly tilled and a grain crop taken.

#### (2.) Turnips on Cultivated Land.

Supposing it was intended to crop land from which wheat had been taken with turnips, and that the land had been broken up in April and allowed to lie fallow till the end of the following August or September, it would then be cross-ploughed and worked, cleaned, and prepared for turnips, which are sown in the months of November or December.

The following statement of the work done in laying down turnips is moderately heavy, and the cost at present contract prices per acre are here given:—

	s.	d.
Ploughing and cross-ploughing ... ..	6	6
Disc-harrowing one or two times each, at 1s. ... ..	2	0
Harrowing with ordinary harrows ... ..	1	0
Seed and sowing, including rolling and covering in one operation ... ..	1	6
<b>Total ... ..</b>	<b>11</b>	<b>0</b>

In former years turnips were sown broadcast with cannister machines, and where they came too thick the harrows were run through them. They are now sown principally in drills with machines which sow the seed and at the same time apply (in front of the seed) about 1 or 1½ cwt. of bone-dust or other fine

fine manure to the acre. This system brings on the young plants much more quickly, and thus protects them from the fly; and still another improvement is for the drill to water (which some machines do) the land into which the seed is dropped.

If the sowing is well managed no thinning nor hoeing is necessary, but if they require it a scuffler or grubber is drawn across the drills to thin out some of the plants, when the turnips grow in bunches of three and four.

While the cost per acre in this way is a moderate one, fair to very good crops are got. They run from 15 to 30 tons per acre, on which, with the addition of some chaff, from ten to twenty sheep per acre are fattened, and double that number of growing or store sheep or of ewes can, with what grass they can get, be wintered and kept in good condition for those classes of sheep.

Instead of nets, as used in England, temporary wire fences are put up in the field to portion the turnips off to small lots of the sheep, and make them eat the roots up clean as they go.

The turnips-seed sown are generally (1) A small quantity of Devonshire grey stone (a soft quick-growing white turnip) for the sheep to commence with; (2) Aberdeen yellows, both purple and green-topped, which form the principal portion of the crop; (3) A few acres of Swedes are occasionally put in, but Swedes, though very fattening and good keeping turnips, are too liable to be attacked by the fly to be grown in any great breadth. They have to be sown in prepared drills, and cleaned, and hoed as in England, which entails more expense than owners generally care to incur.

The object for which the turnips are grown is of course to fatten sheep, and they answer the purpose admirably, especially as they are now usually helped with oaten or wheaten chaff. This is supplied in large portable water-tight feed boxes set on wheels. As much as twenty or more sacks of chaff can be put at a time into one of these boxes, from which the chaff falls through a narrow opening at the bottom as required into the feed troughs fixed under the boxes, the roof of which extends over and protects them from wet. In this way the sheep have a continuous supply of fresh chaff, and they are at the same time provided with rock salt.

Spring wheat, oats, or barley, usually follows turnips, and the grass and clover seeds are sown with these cereals. When a grain crop is not taken after the turnips, the grass and clover seeds are, as already stated, sown with a small quantity of turnip or rape seed.

### (3.) *Catch Crop of Turnip.*

It suits very well at times when land is in good heart to put the scarifier through a stubble field in the end of February, or part of March, and sow it with turnips, to put the lambs on in the end of autumn or beginning of winter. When a crop can be got in this way it is a very great help to them.

## 2. MANGELS.

Considerable breadths of mangels are grown in some districts. They are a more costly crop than turnips, as they must be sown in prepared drilled land and hoed; and they are not so suitable for cleaning the land as turnips as sowing does not commence till November, which gives ample time to destroy the weeds. This is lost with mangels, which must be sown in October.

The great advantage in mangels is their keeping property. They have only reached the prime condition when the turnips are exhausted; and they, besides, contain a greater amount of nutrition. They are invaluable for stud sheep. Mangels are only sown in rich land, and heavy crops are got with proper cultivation. From 30 to 60 tons per acre are not uncommon.

## XVIII. Green Crops.

### 1. RAPE.

THIS is the principal green crop in New Zealand, and fattens well in certain seasons. Although it is somewhat subject to blight, it forms a very valuable change of food for the sheep, and is, of course, of special value for lambs, coming as it does in the end of autumn and periods of the year when the pasture as a rule is dry and scanty. It is sometimes sown on a first furrow as a chance crop, when, if it succeeds, the benefit is great, and if it fails it is not a matter of much moment, as the outlay is small, for 10 lb. of seed will sow an acre, and the price is only about 3d. per lb.

When sown as a catch crop, as it generally is (say) after wheat or some other cereal, the scarifier is put through the land immediately the crop is harvested, and before the surface soil is hardened by the action of the sun. The land is then well harrowed and brought to a fine tilth, and the seed can be sown with a seed barrow the same as lucerne. Instead of using the scarifier some use the skim plough. The seed should simply be rolled in, and not covered too deeply.

The rape is also sown early in spring, and coming well up as it does before the grass, it is a great help in districts where the winters are rather severe and long.

In light land spring sowings of rape answer best, and on heavy land autumn sowings do so.

Rape, as already mentioned, is also largely sown with cultivated grasses as it adds very much to the amount of food grown, and, while being eaten off by the sheep the young grass plants get safely trodden into firm ground, and the manure left by the sheep greatly benefits the pasture.

### 2. OATS.

More particularly the Dunn oats are sown as a green crop, and after they have attained a height of 4 or 5 inches are eaten down twice, and if the land be very good even three times before they are shut up for the grain crop.

This is done in two ways:—

- (1.) The land is ploughed (say) in July or August, allowed to be fallow until the following February, and then cross-ploughed, or scarified, harrowed, and sown; or
- (2.) As soon as the grain crop has been taken off (say) in the month of February, the land is ploughed or scarified and harrowed, and the oats sown.

### 3. RYE.

Is also sometimes grown as a green crop.

## 4. WHEAT.

Wheat put in early is frequently dealt with in the same way and eaten down once, and sometimes twice, if the land is good, and the season a fairly favourable one, the yields of grain is increased, and a considerable amount of succulent food is obtained for the lambs, which helps them to stand the winter better.

## 5. CAPE BARLEY

Is sown to some extent for sheep, but more for dairy cows and horses. It is extremely hardy, and comes early to maturity. Sown in March it is ready in May, and it may be pastured twice at least till the beginning of October, when it is shut up and a crop of 40 or 50 bushels of barley reaped.

## XIX. The number, breed, and distribution of the Sheep in New Zealand.

## 1. NUMBER OF SHEEP IN THE COLONY.

THE number of sheep in New Zealand at 1st January last is given at 18,000,000, of which 8,000,000 are in the North Island, and 10,000,000 in the South.

## 2. THE BREEDS REPRESENTED, AND THEIR ESTIMATED NUMBER.

Of these, again, it is estimated that something more than one-third, say 6,000,000, are Merinos; something less one-third, say 5,750,000, Lincoln and crosses, in which the Lincoln blood predominates; considerably more than one-sixth Border Leicester and English Leicester and crosses, the Border Leicester largely predominating, say 3,600,000; considerably less than one-twelfth, say 1,150,000, Romney Marsh and its crosses; and one-twelfth, say 1,500,000, Shropshire South or other downs and their crosses.

## 3. DISTRIBUTION OF THE SHEEP IN NEW ZEALAND.

*In the North Island.*

There are about four-ninths of the whole of the sheep in the colony (say) 8,000,000, and they are increasing fast with the large extent of bush land now being brought under cultivation there. The sheep in this island consist almost entirely of cross-breds, the greater part of them having a large share of Lincoln blood.

In a good many cases, especially where the land is wet, Romney Marsh rams are used, and Border Leicesters are now being introduced from the Middle Island in considerable numbers. The Shropshire and Southdowns have also representatives in this island, but their number is not large. There are only a few Merinos in the North Island—in the high country to the west of Napier.

*In the Middle Island.*

In the better portions of the northern part of this island—in the Nelson and Blenheim Districts—longwools, downs, and cross-breds are kept and fattened, with Merinos in the hilly and mountainous portions. Then in a stretch of country along the eastern coast, some 50 miles wide and 300 long, where more or less of the land is cultivated, longwools, downs, and cross-breds are kept and fattened; and in a tract of hilly and mountainous country, between that just described and the snow line, Merinos are kept.

To put the matter roughly, so far as regards the Middle Island, it may be said that one-third of the Middle Island is stocked with long-woolled downs and cross-bred sheep, one-third with Merinos, and the other third is the country carrying horses and cattle, and the rugged barren and snow-covered mountains, principally, of course, on the West Coast.

## XX. Description of the breeds of English Sheep.

## 1. THE LINCOLN

Is a large strong-boned sheep. It has a somewhat large head, and it is a characteristic of the breed to have a tuft of wool on the forehead. Its form and shape as a mutton sheep are good, and it has the shoulder and back well covered. It fattens very readily on rich pasture, but the mutton of the pure breed is coarse if the sheep are allowed to reach anything like maturity. The fleece, as regards length of staple, lustre, and weight ranks very high; good pure-bred stud rams clipping from 14 to 17 lb., and some high-class sheep as high as 20 lb., and pure-bred ewes from 10 to 12 lb., of soft lustrous wool.

Among the recommendations of the Lincoln crosses may be mentioned:—

- (1.) Where land is good, the country sound, and the grass plentiful and nutritious, or where they have sufficient cultivated grasses and turnips the Lincoln crosses do remarkably well.
- (2.) They come earlier to maturity, and are heavier weights at 12, 18, and 24 months than any other breed, while the mutton—when the sheep are prime and killed they weigh from 55 lb. to 60 lb.—is good both in appearance and quality.
- (3.) The Lincoln crosses have heavier fleeces, and, as a rule, their wool brings a better price per lb., on account of its length and lustre, than that of any other cross, except perhaps the Border Leicester.

Among the objections brought to this cross, the following may be mentioned:—

- (1.) They do not thrive well on middling or inferior country, nor where the feed is scanty or of inferior quality, nor where they have far to travel to water.
- (2.) Their constitution is not so robust as those of the other crosses, and where the circumstances are such as to induce lung or other worms, or indeed any other ailment, they are more likely to be affected than other crosses. They cannot stand much wet without suffering.
- (3.) The percentage of lambs is somewhat less, and the loss of lambs in lambing is said to be greater than in the case of other crosses, on account of the comparatively large head and strong bone of the Lincoln rams.

## 2. THE BORDER LEICESTER.

In the pure sheep, the head, though rather wide between the eyes, is comparatively small and light behind the ears. The face, which has no tuft, is white, and the head is bare well back behind the ears. This sheep stands rather high on the leg and is light in the belly, but has a wide chest, well-sprung rib, long body, broad back, and good depth of flesh; and with its good form and shape and small bone the Border Leicester is an excellent butcher's sheep. The

The wool is fairly long and soft, in little locks, and not very open, but rather scanty on the belly and legs. The pure bred stud rams clip  $9\frac{1}{2}$  lb. to  $10\frac{1}{2}$  lb., and exceptionally good rams 12 to 13 lb.

The good qualities of the breed for crossing with the Merino are said to be :—

- (1.) It is a vigorous robust sheep with good feet, and the crosses do well on anything like good country, and come to maturity early, sheep which have been well kept weighing 65 lb. at twenty-two months old.
- (2.) The fleece is a good profitable one, though not so heavy as that of the Lincoln cross.
- (3.) The head being small and bare and the bone fine, the losses in lambing when the Border ram is used with the Merino ewe are said to be less than in the case of the Lincoln.
- (4.) The adaptability of the Border Leicester to the circumstances.
- (5.) Its high position, both as regards the appearance and quality of the mutton. It is believed that the high price of the Canterbury mutton is largely owing to a large proportion of the sheep being of the Border Leicester cross.

The objections taken to the Border Leicester are :—

- (1.) It stands too high on the leg.
- (2.) The fleece is light compared with the Lincoln, and when the Border Leicester rams are used beyond the one cross there is a very large falling off in the weight of the fleece and length of the staple.
- (3.) Although the head of the Border Leicester is not so large, the width of the chest and largeness of the shoulders of this breed are said to cause a good many losses in lambing.

### 3. ENGLISH LEICESTER.

The English Leicester is the smallest of all the Leicesters, and has been the most improved (by Bakewell) of any of the long-woolled breeds, so much is this the case that it has been used to bring a good many of the other English breeds of sheep to the advanced position as regards aptitude to fatten and early maturity, which they now occupy. In the pure sheep of the English Leicester breed, the head is smaller than that of the Border Leicester, the face is white with a blue tinge, the bone is very fine, the hind-quarters are often rather small, the temper is mild, the aptitude to fatten great, and the maturity early. The mutton, if the sheep are killed between twelve and eighteen months, is fairly good, older than that it is greasy and inferior. This breed carries a fairly heavy useful fleece.

The crosses of this breed have to recommend them :—

- (1.) Their compact well-shaped carcass.
- (2.) Their small bone.
- (3.) Their aptitude to fatten.
- (4.) The comparatively heavy fleece for their size.
- (5.) The less risk of death in lambing, through the smaller size of English Leicester rams.
- (6.) The suitability of the cross to middling and even inferior country.

The objections to this cross are :—

- (1.) They do not come to the same weight at the same age as the Lincoln, and Border Leicester, and Romney Marsh crosses.
- (2.) The mutton is not so good even as the Lincoln, through being inclined to be too fat and gross, and its lack of red flesh.

### 4. THE ROMNEY MARSH OR KENT SHEEP.

“Professor Wallace” describes the Romney Marsh as a hardy, good-milking, active sheep, well suited for hilly pasture. Its face is white, and it resembles the Cheviot in general appearance. Like a good many of the other English breeds, he says the Romney has been improved by the introduction of English Leicesters. Its forehead is broad, and it usually, though not always, carries a forelock. It is especially distinguished for compactness of form and strength of bone. It crosses well with other breeds, and its mutton is of the kind in demand in the British markets.

He describes the wool of this breed as being of good quality, and the fleece the densest of all the longwools. “Mr. Roberts” again, has not a high opinion of the wool of the pure-bred Romney, which he says runs off very much in quality in the breech.

The qualities which recommend the use of rams of this breed for crossing purposes are :—

- (1.) Its hardiness, and the power of resisting to a great extent the attack of worms, fluke, and foot-rot.
- (2.) The weight and density of the fleece.
- (3.) The weight and quality of the mutton of the cross.
- (4.) The suitability of the Romney ewes, through being good milkers, for breeding fat lambs for market.

The objections which have been raised to the use of this breed for crossing are :—

- (1.) It is rather low in early maturity.
- (2.) The want of sufficient covering of flesh and fat on the loin and back, but especially on the top of the shoulder, which even in good specimens of this breed is higher than the back.

### 5. THE SOUTHDOWN OR SUSSEX.

This is the breed through which all the other downs have been improved. The head is small, and closely woolled on and up to the ears (naked ears are objectionable) and on the forehead. The face and legs are of a grey-brown colour.

The Southdown is very short on the leg, broad in the chest, round in the barrel, particularly good in the hind-quarters, and altogether very compact and symmetrical in form and shape, deeply fleshed, and well covered all over, especially on the back and rump. The mutton is excellent and brings top price, but the fleece is short and light, ewes only clipping from 3 to 4 lb., and crossed with the Merino the return of the wool is so low, both in quality and quantity, as to lead owners to be very shy of using rams of this breed for crossing, although the mutton, both in appearance and quality, is the very best. The Southdown rams and Merino ewes make excellent fat lambs, but even for fat lambs some of the other downs, if downs are to be used (the Shropshire, for instance), answer about as well, and, if any of the drop are to be put again to the ram, much better.

### 6. THE SHROPSHIRE DOWNS.

This breed was established by crossing the local breed with the Southdown for quality, and then introducing the Leicester for size and length of staple.

The face is longer and larger than the Southdown, the nose is slightly Roman, and the ears larger and more lively. The face and legs are of a blackish-brown, more inclined to black, and usually tinged with grey round the nose, eyes, and jaw. White on the face or legs, or black spots in the fleece, are objectionable.

The Shropshire, like the Southdown, is excellent in form and shape, and somewhat heavier, and the crosses of this breed with other English breeds, or even with the Merino, when sold as fat lambs pay well, but kept till they are older the return is not so good, either in weight of mutton or wool, as the Leicester cross; but the quality of the mutton, especially in the Shropshire and Merino cross, is excellent both in appearance, shape, and flavour.

The fleece of fairly pure-bred Shropshire ewes should average from 7 to 8 lb.

The Shropshires stand very high as regards percentage of lambs.

### 7. THE HAMPSHIRE DOWNS.

This breed has a strong resemblance to the Shropshire, except in the matter of the fleece and wool, which in the Hampshire is not nearly so saleable as the Shropshire, and, besides, is only about half the weight. For this reason alone the Hampshire is not a desirable breed to introduce into this Colony.

## XXI. The Views of the New Zealand Breeders as to which is the best English Sheep for Crossing with the Merino.

### 1. THE LINCOLN AND MERINO CROSSES.

THE opinion in New Zealand is that on rich, sound, well-watered pasture, where the feed is abundant and nutritious, the Lincoln is the most suitable English breed for crossing with the Merino, for in such a case these crosses give the best return, taking into account both wool and mutton. But to do this they have to be kept going on good feed and plenty of water from the time they are dropped till they are fit to slaughter. Then, again, the increase of the Lincoln cross is more affected than most of the other crosses by too much wet, by middling or inferior pasture, but especially by deaths in lambing.

As sheep to breed from, the ewes of the Lincoln and Merino crosses, through their good frames and excellent fleeces, are superior for that purpose to any other, provided they have been reared in sound country and are free from worms.

### 2. THE BORDER LEICESTER AND MERINO CROSSES.

On rich pasture or other nutritious food give nearly as large a return in weight of mutton as the Lincoln cross, and of a better quality and form.

The Border Leicester crosses, while standing well as regards early maturity, are hardier than the Lincoln, and will thrive on even middling country. They generally, too, adapt themselves better to the circumstances in which they are placed than the Lincoln, or perhaps almost any of the other crosses.

Then again the well-bred Border Leicester ram gives his progeny width of chest, rotundity of frame, and depth of flesh, and they handle particularly well on the rump, loins, back, and shoulder, while the mutton is excellent.

The weak point in the Border Leicester is the comparative lightness of the fleece and lack of covering, especially on the belly and legs. It is said that these crosses cut  $1\frac{1}{2}$  lb. less than the Lincoln; but it brings a fully higher price. Unless, therefore, the breeder can put Lincoln rams to the ewes of the Border Leicester cross, it is not deemed good management to breed from them, as it is certain that a considerable loss in weight of wool would follow the use of the Border Leicester rams a second time.

### 3. THE ENGLISH LEICESTER AND MERINO CROSSES.

Sired as they are by sheep which stand fully as high as any breed in aptitude to fatten and early maturity, these crosses on real good pasture make, perhaps, better progress than those of any other cross, and they do fairly well on middling and even poor country, though as lambs and weaners the sheep of this cross are less hardy, and the animal increase from the cross is less than in the case of some of the crosses. On the other hand, through the fineness of the bone and the smallness of the head of the English Leicester ram, the losses in lambing in this is very low, and makes the annual increase quite an average one.

Although rather light in the hind-quarter, these crosses are like their sire, short on the leg, and so far as form is concerned, make very shapely carcasses; but the mutton even when young is not first quality, and brings a second-rate price; and when the sheep are thoroughly well done to, and kept for over twelve months, the mutton is apt to be gross and greasy.

The fleece of the cross is heavy for the size of the sheep, and of fair quality.

This cross is not in much favour in New Zealand. It is not high in stamina, but it is believed that the principal cause is that it is not liked by the freezing companies.

### 4. THE ROMNEY MARSH AND MERINO CROSS.

On rich land these crosses do nearly as well as the Lincoln, and quite as well as the Border Leicester so far as increase of weight is concerned, and although the carcass is not so well shaped as the Border Leicester, the mutton is nearly as good, and somewhat better than the Lincoln cross. Like its sire, the Romney Marsh cross is much less liable than some of the other crosses to foot-rot, and fluke, in wet country, but it does not thrive so well unless the pasture is both nutritious and plentiful.

While the mating of the Romney Marsh ram with the Merino ewe is fairly successful as regards the mutton, the cross is even more so in the fleece—the wool of the cross being comparatively dense, and of good quality.

The percentage of increase in this cross is high; this arises from the fecundity of the Romney Marsh, and also from the large supply of milk which the cross ewe gives—a characteristic of that breed.

The ewes of this cross are good mothers, and can be put either to the Lincoln or Border Leicester rams with fair prospect of success.

## 5. THE SOUTHDOWN AND MERINO CROSSES.

The objection to the Shropshire crosses apply with still greater force to the Southdown as a sire, as the wool in that cross is lighter and more inferior, and the carcass also weighs less, but at the same time the quality and flavour of mutton is very high.

## 6. THE SHROPSHIRE DOWN AND THE MERINO CROSS.

This makes an excellent butcher's sheep, as the carcass is short, compact, broad on the back and loin, round on the shoulder, and deep fleshed, while the mutton is of prime quality and flavour.

On good pastures these crosses do well, although in aptitude to fatten and early maturity—except while lambs,—they do not quite come up to the Lincoln or Leicester crosses; but the high character of the mutton makes up to a great extent for any shortcomings in these respects.

It is in the wool that this cross, like all the other down crosses, fails, although in a less degree than the others; and the deficiency in the weight and quality of the wool is so marked as to lead breeders to refrain from putting Shropshire rams to the Merino, except in special cases, or for a particular object, such as breeding for fat lambs for market, for which the Shropshire is peculiarly well adapted, the lambs of this cross coming early to maturity, being fair weights, and superior both as regards appearance and quality.

## 7. THE HAMPSHIRE DOWNS AND MERINO CROSSES.

These crosses have the advantage of large size, shapely carcass, and good mutton, but the fleece is very poor, both as regards quality and weight.

It is only right to notice that all the down breeds are noted for large percentage of lambs.

## 8. CHANGES OF BREEDING ACCORDING AS THE STANDARD OF MUTTON OR WOOL REQUIRES TO BE RAISED.

Although in New Zealand owners as a rule use the different breeds of English sheep according to the class of country on which the sheep are kept, and according to the rules here mentioned, there frequently comes a time when they require to raise the standard of their flocks, either as regards their wool or mutton; and in such a case if it is the weight of the fleece that calls for increase, and the country on which the sheep are running is sound and good, the owner would, as a rule—whether his flocks are Border Leicester, Romney Marsh, or English Leicester, or any of the downs—most probably put Lincoln rams to his ewes; while, if it be the carcass which requires improving, it would, no doubt, be the Border Leicester ram which would be used. For instance, if in the first cross with the Merino ewe the Border Leicester were used, the progeny would be comparatively light in the fleece, and if the whole of them, both ewes and wethers, are not to be fattened and killed, but some of the ewes kept to breed from, then the owner would put a Lincoln ram to these ewes once or twice, according to the nature of his country; and afterwards, perhaps, return to the Border Leicester or some other mutton sheep to maintain the character of his sheep for freezing and export.

With respect to the sheep which makes the most saleable mutton in the home market, it is believed that the first cross out of the Merino ewe by a ram of one of the English breeds (say), the Border Leicester, or the Shropshire or Southdown, would, both here and at home, sell the most readily and bring the best price. As to the most saleable weight again, that has altered very much, and in a direction which gives us greater hopes of an improvement in the price of our Merino mutton in England; for while the sheep sold in London in 1882, which realised 6½d. per lb., averaged 80 lb., the most saleable weights have from that time gradually fallen till they now range from 55 lb. to 60 lb. This is a state of things which will suit our breeders well, as first crosses out of Merino ewes by English rams will, if fairly well cared for, reach the required weight at a much earlier age than the Merino now does.

The fact of the first cross being so saleable in the London market will suit our sheep-breeders, who are thinking of taking to cross-breeding in another important respect, as it will enable them to put that system to the test in such a way as they will not run the risk of upsetting that which as breeders of Merinos they are now following, until they can see how the cross-breeding will answer. For they can for a few seasons put the English rams only to their old ewes, take the last crop of lambs as cross-breds, and if they think fit fatten off the whole of the progeny, or sell them as stores, or breed from them, according to the result.

This will answer well in yet another important respect. The English rams should be put to old and not to young ewes, as the losses in lambing with the English rams are much heavier when young, especially when maiden ewes are put to these rams.

## XXII. Should Cross-breeding be adopted in this Colony; if so, where, and to what extent?

## 1. IT SHOULD BE ADOPTED.

As it is imperative that a remunerative outlet should be obtained for our surplus mutton, and as our sheep are almost all of the Merino breed, and that breed is not so suitable as cross-breds for the export trade, it is most essential that cross-breeding should be adopted in those portions of the colony where the climate, soil, and other surroundings are such as would—looking at the experience of New Zealand, and what has already been done in that way in this Colony—show a fair prospect of success. Besides this, the cross-bred wool is as a rule more saleable, and brings fully better prices than the Merino, so that it may be said both the cross-bred mutton and wool pay better than the Merino.

## 2. WHERE SHOULD IT BE ADOPTED?

(1.) *It should be so in portions of Colony similar to New Zealand in climate and soil.*

I will briefly indicate the portions of the colony where it is believed that cross-breeding can be successfully adopted. Taking it for granted, as I think I have a right to do, that where the soil is good, and the temperature and rainfall similar, which it really is, to that of New Zealand, it only requires the adoption of the New Zealand system of farming and sheep-breeding to make cross-breeding and fattening as successful in this Colony as in that.

(a)

(a) *Comparison of the climate in this Colony with that in New Zealand.*

The portions of this Colony to which I refer are New England (including the country from Uralla to Tenterfield), the higher portions of the Orange and Goulburn districts, and the Monaro and Tumut districts; and the following tabulated statement, which gives the temperature and rainfall of the places referred to in this Colony, and those of some of the principal districts in New Zealand, kindly furnished by Mr. H. C. Russell, the Government Astronomer, shows that this similarity actually exists.

THE Mean Temperature and Mean Rainfall in portions of New Zealand and in portions of New South Wales.

Colony, and portions of Colony.	Temperature.	Rainfall.
NEW ZEALAND.		
Auckland (North Island).....	59.5	41.799
Wellington do .....	55.6	50.117
Lincoln (Middle Island).....	52.9	26.691
Dunedin do .....	50.7	35.246
NEW SOUTH WALES.		
Uralla .....	58.2	35.800
Glen Innes.....	58.4	35.600
Orange .....	54.8	38.950
Goulburn .....	56.3	26.750
Tumut.....	58.5	37.730
Cooma.....	53.7	19.800

From this statement it will be seen that there is very little difference, if any, in the temperature and rainfall of the portions of the two colonies mentioned; and I have Mr. Russell's opinion that it may be safely said that the climate of these places is similar for agricultural purposes.

(b) *Comparison of the land in New Zealand with that in the more temperate portions of New South Wales.*

While in the alluvial flats of the Hawkesbury, the Clarence, the Richmond, the Tweed, and other rivers, and in the very deep rich deposits of black soil on Liverpool Plains, and other parts of the colony, we have as good land in New South Wales as in New Zealand, or for that matter, perhaps, as any in the world, it may be that in the portions of this Colony in which the temperature and rainfall are best adapted for the growth of roots and cultivated grasses, we have very little, if any, country possessing the fertility of soil which characterises the very best portions of both the North and Middle Islands, where the system is followed; but while this is the case, there are considerable tracts of country in the districts named, with suitable temperature and rainfall in which the soil is of a superior character, yielding in many instances 30 to 40 bushels of wheat to the acre, which even in New Zealand would be considered first-class; and we have again in the portions of the colony alluded to, at least two, and perhaps three other grades of soils which would compare favourably with the second and third rate soils in New Zealand, on which a rotation of grain and root crops and cultivated grasses is now successfully followed. For instance, taking New England we have—

- (1.) The black volcanic soil with a strong tinge of red in it, giving, in favourable seasons, returns quite up to those stated, and frequently higher.
- (2.) The less friable, but strong, somewhat black sod.
- (3.) A sandy loam of a lighter or darker grey colour according to its fertility.

And it is believed that with proper tillage, and a little manure where required, or perhaps in some cases only lime, the least fertile of the classes of land mentioned, will when properly worked pay well under a rotation similar to that adopted in New Zealand.

Besides the portions of this Colony indicated as adapted for such a rotation as that followed in New Zealand, there are no doubt many other districts in which it will no doubt be adopted before many years are over.

(c) *The suitability of New Zealand system proved by actual experience.*

Having shown that there is in this Colony a large extent of country possessing similar climate and soil to those portions of New Zealand, where, under a proper rotation of crops, the owners are so successfully carrying on the breeding and fattening of cross-bred sheep—it is submitted that as this similarity exists, the same course can be followed in this Colony in the districts indicated; and on these grounds alone owners in these districts should have every confidence in giving the system a trial; but after all it is not necessary that they should rely solely on the New Zealand experience; for although a proper rotation of grain, root crops, and cultivated grasses has never been systematically tried in this Colony, sufficient has been done in growing turnips and grasses, more especially rye-grass and clover, to prove beyond all doubt that a rotation similar to that followed in New Zealand can be successfully adopted in the colder and more temperate portions of this Colony; and I make this statement not only on reliable information, which I have from time to time received, but also, so far as the growth of cultivated grasses are concerned, from what I actually saw last month in several parts of New England.

## 3. CROSS-BREEDING SHOULD BE ADOPTED ON SOME OF OUR NATURAL PASTURES.

Although the return from cross-bred sheep kept on the natural pastures would neither be so large nor so early as under a system of root crops and cultivated grasses (while sheep that are kept under that system are sold as fat at twenty-two months, those depastured on natural grasses would have to be kept for, perhaps, six or eight months longer), there is no doubt but that cross-breeding can be successfully followed in the best portions of that part of the colony known as the Western Slopes—including the lower-lying, hilly, and undulating thickly-grassed country on the west side of the Main Coast Range, commencing at the line where the New Zealand system of sheep-farming and tillage cannot be successfully adopted in this Colony, and extending westward from the mountains to the plains. But the country in which cross-breds will thrive has a wider area than that. This has been proved by the fact that a good many

many owners have of late years been breeding and fattening cross-breds successfully on the natural grasses in portions of the colony where the climate is warm, the rainfall light, and where it was considered cross-breds would not answer.

The country I allude to is such as that extending from (say) Inverell to Moree, from Liverpool Plains to Wee Waa, from Dubbo to Warren, from Cowra to Forbes, from Wagga Wagga to Groongal, and from Corowa to Moama. The fact is, that if the land is good, the pasture plentiful and nutritious, the water supply sufficient, and the breeder knows his business, cross-breds do well in even comparatively warm country.

All these conditions are called for in the case of any kind of sheep, if they are to give good returns, but especially so as regards cross-breds; and although it may not appear a matter of very great moment, the water supply is with them of special importance; for even in the temperate and colder portions of the colony cross-breds require a great deal of water, and not only so, but they must not be made to travel far for it if they are to lay on condition as fast as they ought to do; while, however, this is the case, with plenty of water they can come through a drought nearly as well as the Merino, and with the return of good seasons and sufficient grass, if the land is good, they lay on condition faster than the Merino. At the same time the safer course would be to only breed cross-breds in the more temperate and colder portions of the colony.

Then again, the fencing ought to be thoroughly secure. It should be cross-bred proof from the commencement. If cross-breds are once allowed to get through a fence it will be next to impossible afterwards to keep them within bounds.

As already said, nothing less than an eight-wire fence with one batten between, if the posts be no more than 8 ft. apart; and with two if they are 12 ft. or even 10 ft. apart.

Of course in the portions of the colony here indicated, although root crops and cultivated grasses usually sown in New Zealand cannot be grown, lucerne can be so where the soil is suitable (and it is so in a great deal of the country here indicated), to great advantage, and would in that case to a large extent supply the place of the root crops and cultivated grasses and clover grown in New Zealand; for not only does lucerne in suitable soil produce as much, if not more, hay of excellent quality than rye-grass and clover per acre, but it can with ordinary care be successfully pastured with sheep; and if the land is really good and the crop an average one, the owner, by dividing the sheep into small flocks—making the paddocks small—and regularly shifting the sheep before the lucerne is too much eaten down, as many as eight, ten, and even twelve sheep can be fattened to the acre. This is very encouraging, and is still more so when it is considered that the area within which lucerne can be successfully grown has recently been proved by actual experience to be much more extensive than was supposed.

Many owners are now growing lucerne successfully on land which has little of the character of alluvial about it.

#### 4. UNDER WHAT CIRCUMSTANCES SHOULD CROSS-BREEDING BE ADOPTED?

As both the cross-bred mutton and cross-bred wool bring better prices than the Merino, the answer to this question, I think, is that those owners who are in the position to do so should introduce English sheep into their flocks; but before deciding on making this change they should fully satisfy themselves that they are in every respect in that position by ascertaining:—

- (a) Whether the climate, *i.e.*, the temperature and rainfall of the locality in which their land is situated are suitable for the breeding of cross-breds.

The great importance of this question is so palpable as to need nothing to be said in urging owners to give it full and careful consideration, whether the question be raised as regards land which it is proposed to prepare for cultivation for the keeping, breeding, and fattening of cross-bred sheep, or as regards country on which it is intended to keep that description of sheep on the natural grasses.

- (b) Whether their land, if intended to be cultivated, is so situated and of such quality as that it will grow root crops and cultivated grasses sufficiently well to carry and fatten the larger-framed cross-bred, and whether they have both the means and the practical knowledge which will enable them to cultivate the land properly.

These questions call for careful consideration, for if the land is not good or otherwise unsuitable for the crop which is to be grown, or those attempting to lay it down have not the necessary practical knowledge, the result will be a failure and the labour and expense will be lost.

- (c) If owners are thinking of taking to cross-breeding on the natural pastures, they should consider whether their land is such as will enable them to rely upon having a full supply of nutritious grass such as the larger sheep require, to give a satisfactory increase and a paying cast of fat sheep.

In deciding this question owners should bear in mind that the sheep they are thinking of introducing are larger framed and much less inclined to travel far for their food than the Merino, and that they need a full and nutritious bite if they are to be kept improving and come early to market.

- (d) Whether their holdings are sufficiently well watered for cross-bred sheep.

As already pointed out, a great deal of the success with cross-breds depends upon the water supply being full and convenient, and where this cannot be insured owners should be cautious in taking to cross-breeding, especially where the climate is hot and the feed frequently dry.

- (e) Whether their fences are such as will be certain to keep the cross-breds in their proper paddocks. Although it may not appear a very important matter, this decidedly is so. Unless the fences are thoroughly cross-bred proof the introduction of the English sheep will not prove a success, for not only will the sheep go all over the owner's own holding and in the crops, and their proper management will be next to impossible, but they will be constantly trespassing on his neighbour's land and in their crops.

This was the result of bad fences some ten or twelve years ago when there were a good many cross-breds in the colony, and the consequence was that, as owners could not keep these sheep in the paddocks in which they were placed, the cross-breds were got rid of and Merinos purchased in their place.

Then

Then there is still another matter for consideration. Owners in South America have for some years been and still are introducing large numbers of English sheep, and the result already is that a great deal of mutton was sent from that country to the home markets, and during the greater part of last year brought higher prices than the Australian, from the fact that a large portion of the mutton was cross-bred. There is little doubt, too, considering the style of management by South American sheep-breeders, and the heavy carrying capacity of the pasture there, that they give more attention to mutton than wool, and that they will continue to introduce English sheep, so that we may expect a heavy increase both in cross-bred mutton and cross-bred wool from South America.

There is another matter which those owners who are thinking of trying cross-breeding should consider. It is the effect which the change from the Merino to cross-breds will, if it be as largely adopted as may fairly be expected, have on the price of cross-bred wool and mutton, for it is scarcely to be expected that if (say) double the quantity of that description of wool were put on the market—large and general though the demand for it may be—the price for it would be maintained, whatever effect the increased production might have on that of the mutton.

### XXIII.—Which of the Breeds of English Sheep Should Owners in this Colony use for Crossing?

The information already given as regards what breeders are doing in New Zealand, and the extent to which the different crosses have proved successful there, and the circumstances under which they have done so, will enable those owners in this Colony who are thinking of trying cross-breeding to obtain a fairly correct idea of the value of the different English breeds, and the description of country and its surroundings on which the different breeds should be used. It is, however, I believe, possible to put the information in a still clearer and more concise shape, by estimating the relative values of the points which the best breeds possess, setting these out in a tabulated form, and testing the several crosses accordingly, on these points, for although the points and their values may not be quite correctly given, the form would assist owners in arriving at a decision as to which English rams they should try more readily and satisfactorily than they could from the information furnished in the usual way.

The tabulated statement given below is therefore submitted for consideration on the understanding that both the points and the relative values assigned to them are put forward only as tentative, and solely for the object stated.

It is to be understood, also, that the pasture on which the crosses are kept when making the marks appearing in the statement is good, but not of the very best quality. If it were of the very best quality then all the crosses would stand better than they appear to do in the statement, but the Lincoln would in that case come closer to, if it did not take the lead; while, again, if the land was only middling, that cross would show less favourably than it now does, and the Border Leicester and English Leicester, with the Southdown, proportionately better; and if the land is wet the relative position of the Romney Marsh would be a good deal better than that of any of the other crosses.

The following is the tabulated statement referred to:—

STATEMENT showing the views of Breeders in New Zealand as to the relative values of the different English sheep for crossing.

The Breed of sheep.	Aptitude to fatten.	Hardiness and soundness.		Lambing and Increase.	Form and Shapes.	The Mutton.			The Fleece.		Suitability for crossing	Total.

ALEX. BRUCE,

Chief Inspector of Stock.

#### SYNOPSIS OF PAPER ON STOCK BREEDING AND FATTENING IN NEW ZEALAND.

- I.—Scope and object of the report.
- II.—Extent and area of the colony:—The North Island, the Middle Island.
- III.—The Physical features of the colony:—The North Island, the Middle Island—its Northern portion, its Middle portion, its Southern portion.
- IV.—The climate and rainfall of New Zealand:—The North Island, the Middle Island.
- V.—The land in New Zealand and its suitability for tillage and grazing:—The North Island, the Middle Island; total area available for tillage and grazing.
- VI.—Fencing in New Zealand.
- VII.—Agricultural seasons.
- VIII.—Rotation of crops.
- IX.—Cultivation of the land by contract.
- X.—Capability of the land under rotation.
- XI.—Grasses and clovers.
- XII.—The mixtures of grasses and clovers usually sown.
- XIII.—The grasses sown in New Zealand:—1, perennial rye-grass; 2, cocksfoot; 3, Timothy; 4, crested dogstail; 5, meadow fescue.
- XIV.—The clovers sown in New Zealand:—1, perennial white clover; 2, red clover; 3, cow-grass, or perennial red clover; 4, alsike; 5, lucerne.
- XV.—Laying down grass and clover seeds in New Zealand:—1, on fern land; 2, on bush; 3, on ti-ti.

XVI.—

- XVI.—Laying down land which has been cultivated, with grass and clover seeds :—1, preparation of the land ; 2, when the seeds are sown ; 3, how they are sown.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

## AUSTRALASIAN STOCK INSTITUTE AT RODD ISLAND.

(CORRESPONDENCE RESPECTING ESTABLISHMENT OF AN.)

*Ordered by the Legislative Assembly to be printed, 9 March, 1893.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 26th October, 1892, That there be laid upon the Table of this house,—

“Copies of all letters, correspondence, reports, minutes, and other documents having reference to the establishment of an Australasian Stock Institute, at Rodd Island, for the purpose (it is alleged) of preparing the vaccine or virus of diseases—such as Cumberland disease, black-leg, pleuro-pneumonia, tuberculosis, &c., to be used for inoculation purposes.”

(*Dr. Ross.*)

### SCHEDULE.

NO.	PAGE.
1. The Hon. the Premier of Victoria to the Hon. the Colonial Secretary of New South Wales forwarding copy of Resolutions passed by Australasian Stock Conference held in Melbourne in November, 1889. Enclosure. 5 March, 1890 .....	2
2. Delegates from New South Wales who attended above Conference to the Under Secretary for Mines, further report on same. Enclosure. 15 August, 1890 .....	4
3. Extract from letter of Colonial Secretary of New South Wales to the Hon. the Chief Secretary of Queensland, inviting their Chief Inspector of Stock to attend a meeting to be held in Sydney on 15 June, with a view to giving effect to Resolution adopted at above Conference, <i>re</i> the establishment of an Australasian Stock Institute. 13 May, 1891. ....	5
4. Extract from letter of the Hon. the Chief Secretary of Queensland to the Hon. the Colonial Secretary of New South Wales, reply to above. 22 May, 1891.....	5
5. Chief Inspector of Stock, Sydney, to the Under Secretary for Mines acceptances for Conference as yet received from Queensland and Tasmania only, and suggesting that telegrams be sent to the other colonies. 8 June, 1891.....	6
6. Telegram from the Colonial Secretary of New South Wales to the Hon. the Prime Minister of Victoria, asking if their Chief Inspector will be able to attend Conference. 8 June, 1891.....	6
7. Telegram from the Hon. the Premier of Victoria to the Hon. the Colonial Secretary of New South Wales, reply to above. 11 June, 1891.....	6
8. Extract from letter of the Hon. the Premier of Victoria to the Hon. the Colonial Secretary of New South Wales “It is the opinion of their Government that first preliminary should be to ascertain what expenses are likely to be incurred <i>re</i> Stock Institute.” 12 June, 1891.....	6
9. The Colonial Secretary of New South Wales to the Hon. the Prime Minister of Victoria, acknowledging receipt of above. 15 June, 1891 .....	6
10. Chief Inspector of Stock, Sydney, to the Under Secretary for Mines. “That Report and Proceedings of Meeting of Chief Inspectors of Stock be forwarded to other colonies for their consideration.” Minutes. 22 July, 1891.	6
11. The Hon. the Colonial Secretary of New South Wales to the Hon. the Prime Minister of New Zealand, forwarding Report and Proceedings of Stock Conference. 12 August, 1891.....	7
12. The Hon. the Premier of Victoria to the Hon. the Colonial Secretary of New South Wales, acknowledging receipt of Report and Proceedings of Stock Conference. 20 August, 1891 .....	7
13. The Hon. the Premier of Tasmania to the Hon. the Colonial Secretary of New South Wales, acknowledging receipt of Report and Proceedings of Stock Conference. 21 August, 1891 .....	7
14. The Hon. the Chief Secretary of South Australia to the Hon. the Colonial Secretary of New South Wales, <i>re</i> Resolutions agreed to at Stock Conference. Enclosure. 3 November, 1891.....	7
15. Extract from replies to remarks made by the Chief Inspector of Stock, Victoria, on the Reports of Stock Conference, held in Sydney in June last. 5 November, 1891.....	8
16. The Hon. the Premier of Tasmania to the Hon. the Colonial Secretary of New South Wales—that his Government fully recognises the desirableness of giving effect to Resolution, <i>re</i> Stock Institute. 1 December, 1891.	8
17. Chief Inspector of Stock, Sydney, to the Under Secretary for Mines, <i>re</i> Australasian Stock Institute. Minute. 1 December, 1891 .....	8

### No. 1.

#### The Premier of Victoria to The Colonial Secretary of New South Wales.

Sir, Premier's Office, Melbourne, 5 March, 1890.  
 I have the honor to transmit to you, for the consideration of your Government, the accompanying copy of the resolutions passed by the Australasian Stock Conference held in Melbourne in November last, together with a proposed code of regulations which has been prepared in conformity with the provisions of the Resolution No. 50.

I have, &c.,  
 D. GILLIES,  
 Premier.

#### RESOLUTION No. 50.

50. That a uniform code of regulations, embodying the resolutions passed by this Conference, be adopted by all the Colonies, and that the framing of such regulations be placed in the hands of the Victorian Government.

The Under Secretary for Mines, B.C., 21/3/90.—C.W.

#### [Enclosure.]

*[Extracts from Report of Minutes of Proceedings, Resolutions, &c., of the Australasian Stock Conference held in Melbourne in November, 1889.]*

#### AUSTRALASIAN STOCK CONFERENCE.—CONFERENCE OF CHIEF INSPECTORS OF STOCK, VETERINARY SURGEONS, AND STOCK BREEDERS OF THE AUSTRALASIAN COLONIES, HELD IN MELBOURNE IN NOVEMBER, 1889.

##### REPORT.

The Conference commenced its sittings on the 1st November, and concluded its labours on the 14th November.

It was called together at Melbourne by the Honorable the Premier of Tasmania, with the concurrence of the Victorian Government, with the view of assimilating the regulations in force in the Colonies for the prevention of diseases in stock.

The following were the representatives of the several Colonies:—

<i>New South Wales</i>	{	Mr. J. DE V. LAMB, Stock Breeder.
		Mr. A. BRUCE, Chief Inspector of Stock.
		Mr. E. STANLEY, F.R.C.V.S., Government Veterinarian.
<i>Victoria</i> ...	{	Mr. C. M. OFFICER, M.L.A., Stock Breeder.
		Hon. J. BUCHANAN, M.L.C., Stock Breeder.
		Mr. R. STIRLING, Chief Inspector of Stock.
<i>Queensland</i> ...		Mr. J. TOLSON, Stock Breeder.
<i>Tasmania</i> ...	{	Mr. W. H. BENNETT, M.H.A., Stock Breeder.
		Mr. T. A. TABART, Chief Inspector of Stock.
		Mr. A. PARK, M.R.C.V.S., Government Veterinarian.
<i>New Zealand</i> ...	{	Mr. C. COWAN, M.H.R., Stock Breeder.
		Mr. R. C. PASLEY, Inspector of Sheep.
<i>South Australia</i> ...	{	Mr. A. D. HANDYSIDE, M.P., Stock Breeder.
		Mr. C. J. VALENTINE, Chief Inspector of Sheep.

Western Australia was unrepresented, but a letter was handed in by Mr. Valentine, which had been received by the Government of South Australia from the Government of Western Australia, saying that they would adopt any additional regulations suggested by the Conference.

The following is a copy of the circular letter, dated 3rd August, 1889, by which the Conference was called together:—  
 "Sir, Premier's Office, Hobart, 3rd August, 1889.

"I have the honor to transmit herewith, for the consideration of your Government, copy of a letter addressed to me by the Chief Inspector of Stock in this Colony, suggesting that, in accordance with the terms of a resolution passed at the Australasian Stock Conference, held at Sydney in September and October, 1886, recommending triennial conferences, steps be now taken to arrange a meeting of delegates, to comprise Chief Inspectors of Stock, Government Veterinary Surgeons, and representatives of flock-owners, in Melbourne, at an early date.

"I shall be glad to learn that your Government acquiesce in the proposed arrangement.

"I have, &c.  
 "P. O. FYSH."  
 Establishment

*Establishment of Stock Institute*

Mr. Tolson read the following paper on the desirability of establishing a Laboratory or Institution for investigating and experimenting upon Diseases in Stock:—  
Mr. Chairman and Gentlemen,

I should like to call your attention for a few moments to the immense and continually increasing importance of the subject which lies at the root of the matter now before you, viz., the loss and injury we are sustaining and may sustain by the unchecked ravages of disease amongst our live stock, and from the serious consideration of which springs that motive force which animates all I am now going to say, and which I hope to be able to show is of such a powerful character and so worthy of serious consideration that its effect will not be limited to the delivery of addresses only, but will result in decisive action being taken, followed, it is to be hoped, by permanent results in the direction as indicated by the motion I have just brought forward.

The question of the diseases of stock, and the dealing with, mitigation or eradication of, such diseases, is, I venture to say, of the utmost importance, directly or indirectly to every inhabitant of Australasia, seeing to what a great and ever increasing extent we are dependent upon the healthiness and satisfactory increase of our flocks and herds, not only for the animal food required for our large and rapidly increasing population, not only as it affects the volume and value of our exports of wool, hides, and tallow, but also as it will affect an item of export, the commencement of which, so far as Australia is concerned, is now only just fairly discernible, but which, in my opinion, is destined before long to be of very great importance, not only to us as growers and exporters, but also to the densely populated countries of Europe and elsewhere, who, from many causes, the discussion of which would here be out of place, are becoming more and more dependent upon an external supply of food. I need scarcely say that I allude to the export of fresh and preserved meat. Of all the conditions necessary to a permanent and successful trade in meat, not one I am sure approaches in importance that of the healthiness of the animal itself, not only at the moment of slaughtering, but also of its freedom from disease from the very time of its birth, and even before, to the day of its death. There are diseases, such as tuberculosis, we well know to be hereditary, the taint of which is communicated from generation to generation, and the eradication or controlling of such diseases is absolutely necessary if we are to take the premier position as meat producers, a position which I for one firmly believe lies well within our reach if we choose to exert ourselves in good time and in the right direction. The conditions of climate and geographical situation must always, I think, make this country more pastoral than agricultural and consequently the proportion of inhabitants to the stock depasturing within its limits a small one. This I need scarcely remind you involves us in difficulties of management greatly in excess of what obtains in the more densely populated countries of the old world, and any outbreak of disease, particularly that of a contagious or infectious character, is, and will be, far more dangerous and difficult to deal with than in the countries before mentioned, for the reasons that our flocks and herds congregate in much larger numbers and roam over vastly larger areas, and are managed by far fewer attendants. This being the case, with every probability of its remaining so, it will be well to take a general view of the situation in which we stand to-day, not only turning our glance on the past and noting the enormous advance that has taken and is taking place in all things connected with industrial pursuits in general, but also to endeavour to look forward towards the future, and to put ourselves and the particular branches of industry in which we may be engaged in line with that scientific movement which is daily becoming more marked, and which, if we are to keep our places in the van of progress hitherto held by the Anglo-Saxon race, becomes more than ever a necessity. We have to consider, also, not only how we stand in reference to the supposed security of our insular position with regard to those diseases existing in Europe, but, fortunately for us, not yet imported into Australasia, but which may, like pleuro-pneumonia, be introduced any time, but also with regard to those diseases with which we are but too well acquainted, and towards the mitigation and, if possible, the eradication of which the establishment of the institution I am now advocating will, it is to be hoped, be largely conducive.

Let me also direct your attention to the state of the pastoral industries, so far as any provision has been made for the protection of our flocks and herds against these diseases, mostly of germ origin, which science tells us in authoritative language can be mitigated, and if we choose, entirely eradicated. How many millions in value do the sheep, cattle, and horses of Australasia represent? What is and may become the annual value of the exports derived directly from our live stock? How many persons do these industries directly and indirectly support? What proportion of the revenue of the Colonies is derived from them, or from the rent obtained from the land on which they graze? All these, gentlemen, are momentous questions, and, I venture to say, that large as are the figures represented—it would form but a portion of what it might, nay, what it is certain to become within the next twenty years. Now what has been done to protect this vast industry from one of its greatest dangers, it may almost be said the greatest of all the dangers, to which it is liable, that is, the spread of the disease, or, what means have we of controlling and mitigating many of the diseases already rampant? With the exception of feeble and individual efforts at inoculation for pleuro-pneumonia, and the stamping out of scab in Australia, very little indeed. Take scab as an instance of the vital necessity for united action, and also of the success of such united action when firmly and stringently carried out. Until the various Governments legislated upon the matter, individual action was as powerless in regard to the stamping out scab as any individual action now is in regard to anthrax or pleuro-pneumonia. We stand in the position in regard to our live stock as a merchant would do who neglected to insure his goods against fire, or a shipper against losses at sea. Now I maintain that our pastoral industries are quite as much entitled to be insured against preventable loss as any other industry, and the consequences of non-insurance, if I may so put it, just as serious in our case as in that of a merchant or shipper; and I look upon the proposal to establish this laboratory as a commencement of a vast national insurance fund—a fund that can be provided at a tithe of the cost necessary to insure the same value in merchandise as is represented by the value of the flocks and herds of Australasia. There is, however, one very great and serious difference between insuring merchandise and the protection of live stock by the successful establishment, say, of an abundant supply of inoculating lymph for pleuro-pneumonia or anthrax; it is this:—If a merchant neglects his insurance, the risk and loss fall upon himself, and himself only; but if a pastoralist, who having the opportunity of inoculating and protecting his herds, say, against pleuro or anthrax, neglects so to do, not only does he injure himself, but he also sets up a centre of infection from which the disease may spread to a whole district, or it might be even to the whole continent. Look at the matter from whatever point of view you like, so far as this particular phase of it is concerned, there can be no doubt whatever that, as a matter of ordinary prudence, as a matter of business, and still further as a matter affecting the rights and welfare of others, we ought to take advantage of the resources now placed at our disposal by the latest scientific discoveries, and secure ourselves as far as possible from such diseases as may be capable of control or mitigation. Sir Henry Parkes recently issued a State paper showing the necessity for federation in case of war, and argued that unless this were done we should or might be attacked in detail with consequences most disastrous to the nation. Now, gentlemen, we are, so far as our flocks and herds are concerned, at war now—deadly, unceasing war—none the less destructive because the foe is unseen. If ever there was a good and valid reason for federation we have it in this fact, and I think without federation we are in the position of being attacked in detail, and that only by combination and united action can the foe be met and successfully checked. How vastly different is the position to-day in respect to the knowledge of the origin and cause of many diseases compared with, say, ten or twenty years ago, and how very different we must go to work to what our fathers did, or, I may with truth say, even as we ourselves did only a very few years ago. But, with increased knowledge must come increased capability, more energy, and a greater and wider grasp of the subject. If these are not attained we are no better off than before; in fact, we are in a worse position, as the intensity of cultivation and growth to which both animals and plants are subjected seems to bring with it also an aggravated power of attack on the part of those minute organisms that are ceaselessly preying upon all animated beings, or, what comes to the same thing, a diminished power of resistance, due, no doubt, in great measure to the want of that perpetual weeding out of the more weakly and delicate organisms, which in the ordinary state of nature all organic bodies are subjected to, well designated by Darwin as the “struggle for existence.” It is to scientific research and patient investigation, aided by all the accumulated knowledge of late years, that we must look for help; and how great a matter for congratulation it is, gentlemen, that science is of no nationality, and that she knows no distinction of race. Working for the common good and advancement of all mankind, independent of language or nationality, she welcomes and is welcomed by all the highest intellects of whatever race. In no country, for example, are the labours of Louis Pasteur more appreciated than in Great Britain, and I venture to say that the name of Darwin is equally venerated among all the continental nations. Continental nations are also largely subscribing to the Pasteur Institute, and private generosity from all parts of the world is supporting it; and when the barriers of nations are thus thrown down how ill it would become us, colonists by present name only, members of the future great Australian empire that is soon to be, speaking the same tongue, descendants of the same race,  
divided

divided but by an imaginary line on a map—how poor a reason we shall have to give if intercolonial jealousy were the only barrier between us and federation for so good and worthy a purpose. I have, therefore, I am sure, only to bring this matter plainly before you to ensure its discussion, and I do so with the firm belief that this Conference of 1889 will not be dissolved without some action being taken in the direction of united effort, with a result that will be of lasting benefit to all pastoralists.

JAMES TOLSON.

DISEASES IN STOCK.

*Establishment of Stock Institute.*

*The Chairman.*—Mr. Tolson moves, “That this Conference affirms—(a) The desirability of establishing a laboratory or institution for the purpose of investigating and experimenting upon any diseases to which stock are or may become liable, particularly, in the first instances, pleuro-pneumonia, anthrax, and tuberculosis; (b) That the institution be a permanent one, to be supported by the respective colonies becoming parties to the arrangement *pro rata*, according to the number of stock, sheep, cattle, and horses returned for the year preceding the assessment; (c) That a permanent board of direction be formed, to be composed of members to be appointed by the Government of each contributing colony; (d) That a competent European scientist be engaged as director, who shall deliver an annual course of lectures to students, and who shall be allowed to charge fees for so doing; (e) That the laboratory or institution shall be called the Australasian Stock Institute, and that it be located in the colony of ”

*Mr. Tolson* thought that as his paper was not yet printed it would be as well to postpone this motion. Agreed to.

No. 2.

J. de V. Lamb, Esq., The Chief Inspector of Stock, and The Government Veterinarian, Sydney, to The Under Secretary for Mines.

The establishment of an Australasian Stock Institute, further reports on the subject by the delegates from this Colony who attended the Intercolonial Stock Conference held in Melbourne in November last, 1889.

Sydney, 15 August, 1890.

A COMPLETE copy of the Report and Proceedings of the Intercolonial Stock Conference held in Melbourne in November last, having now been received, we have the honor to bring under the notice of the Hon. the Minister, with the view to action being taken in regard to them, the recommendations contained in Resolution No. 41, which was passed unanimously at that meeting, and to which we alluded in our previous report of the 14th January last. [See *Enclosure.*] These resolutions were to the following effect:—

“That this Conference affirms—(a) The desirability of establishing a laboratory or institution for the purpose of investigating and experimenting upon any diseases to which stock are or may become liable, particularly, in the first instances, pleuro-pneumonia, anthrax, and tuberculosis; (b) That the institution be a permanent one, to be supported by the respective colonies becoming parties to the arrangement *pro rata*, according to the number of stock, sheep, cattle, and horses returned for the year preceding the assessment; (c) That a permanent board of direction be formed, to be composed of members to be appointed by the Government of each contributing colony; (d) That a competent European scientist be engaged as director, who shall deliver an annual course of lectures to students, and who shall be allowed to charge fees for so doing; (e) That the laboratory or institution shall be called the Australasian Stock Institute, and that it be located in the Colony of New South Wales.”

We understand that the work in The Pasteur's Institute in France, of which M. Pasteur is the Director-General, is divided in five parts.

- 1st. The rabies treatment, where people come every morning to be inoculated, at the head of which is Dr. Grancher.
- 2nd. The Technic Microbiologic, where students come for some weeks, to become acquainted with Microbiology; M. Roux is in charge. The majority of the students belong to, or are studying for, the medical or veterinary professions, with a fair number who are following up some branch of science. The course of study includes, among other subjects, the following:—
  - (1.) The description and nature of microbes.
  - (2.) The preparation of the broth and other Media in which they are grown.
  - (3.) Typhoid fever.
  - (4.) Cholera.
  - (5.) Intermittent fever.
  - (6.) Septicæmia.
  - (7.) Anthrax.
  - (8.) Chicken cholera.
  - (9.) Tuberculosis.
  - (10.) Swine plague.
  - (11.) Actinomycosis.
  - (12.) Glanders.
  - (13.) Hydrophobia.
  - (14.) Yeast, and some twelve or fourteen other subjects.
- 3rd. A laboratory where students, after becoming acquainted with microbiology, may stay and make personal researches in regard to subjects which have not been fully investigated under the direction of M. Metchnikof. These laboratories are also open at a charge of £4 or £5 a month to scientists from any part of the world, who may wish to work in the institute, under the directors.
- 4th. A laboratory, at the head of which is M. Duclaux, for the study of beer and cider, and of fermentation generally, including that of wine; and also the making of cheese, and the preservation of milk.
- 5th. A laboratory in which M. Chamberland has to prepare the vaccine for anthrax and swine fever, and in which he has to make analysis of pathologic products of diseases, the nature of which veterinary surgeons cannot exactly determine, clinically or by post-mortem, and which they wish to have settled by microscopical examination. The income of the institute is derived—
  - (1st.) From the interest of the public and international subscriptions which, after paying building and everything, left an amount of £42,000 capital.
  - (2nd.) From the sale in France of the vaccine for anthrax and swine fever, which produced about £1,500.
  - (3rd.) From a subsidy from the Ministry of Public Instruction of about £2,000.
  - (4th.) From a subsidy from the Ministry of Agriculture of £2,000.

It is work like that done by M. Chamberland which we consider is required in Australia where our live stock are so numerous, and the pastoral interest so very important.

If, therefore, an institute such as that contemplated were established, a fully qualified trained European scientist like M. Chamberland placed at its head, and the work of the institute carried out under the direction of a Board of members to be appointed by each of the contributing colonies, highly important results would soon follow; for not only would the cultivation of the vaccine and virus of diseases and the investigation as to the nature and cause of diseases be undertaken, but classes would be formed and instruction given in microbiology at the institute. We

We would heartily support the recommendation of the Conference that the institute should be established in Sydney, and we have the honor to submit the accompanying rough sketch\* (copied from Pasteur's Institute, Paris), showing the accommodation which would be required and the mode in which it should be arranged. The description of building could be left to the decision of the proposed Board, but we think it should be erected on the University Reserve. \*See enclosure attached to No. 21.

As, however, the scheme shadowed forth by the Conference, in regard to an Australasian Stock Institute, must take a considerable time to carry out, while the necessity for the employment of a scientist for the investigation of diseases in stock and their treatment is urgently required, and as M. Loir (who is willing to assist the Government in the matter, and it is understood is willing to enter into a temporary arrangement for carrying on the work) is here, it is suggested for consideration whether a commencement could not be made at Rodd Island where the work could be done, the Board meeting there or in Sydney as most convenient.

We understand that M. Loir has been asked by the Queensland Government to again take up the search for the microbe of pleuro-pneumonia, and this as well as other work, he could very well do while preparing the vaccine for anthrax.

If this be approved, the other colonies might perhaps be invited to join in some such temporary arrangement, and if they are willing to do so, each Colony might be asked to send a delegate to Sydney sometime during next month to confer as to the manner in which the work should be carried out under such an arrangement, and also as to the erection of the permanent building, the staff which should be employed, and the work which should be taken up.

J. DE V. LAMB,  
ALEX. BRUCE,  
EDWARD STANLEY.

Submitted.—G.E.H., Asst. U.S., 18/8/90.

[Enclosure.]

EXTRACT from report of J. de V. Lamb, Esq., The Chief Inspector of Stock, and The Government Veterinarian of 14th January, 1890.

RESOLUTION 41.

UNDER this Resolution the Conference affirms the necessity for the establishment in Sydney of an experimental and treating station for all the Australasian Colonies, to be called the Australasian Stock Institute, and the engagement as director of a competent European scientist; and we very heartily indorse the proposal, as the well-being and progress of the colonies is to a very large extent dependent upon the prosperity of the pastoral interest, and that again depends on the health of the stock.

The Under Secretary for Mines, Sydney.

J. DE V. LAMB,  
ALEX. BRUCE,  
EDWARD STANLEY.

No. 3.

Extract from letter of the Colonial Secretary of New South Wales to The Chief Secretary of Queensland.

Sir,

Colonial Secretary's Office, Sydney, 13 May, 1891.

"The Secretary for Mines and Agriculture thinks, however, that instead of only calling the Chief Inspectors of Stock for Queensland, New South Wales, and Victoria together, the Chief Inspectors for all the Colonies should be asked to meet, and as he considers that effect should be given to the Resolution adopted at the meeting of Inspectors and other representatives in 1889, which recommended the establishment of an Intercolonial Stock Institute in Sydney. Mr. Smith is desirous that this matter also should be discussed at the proposed meeting.

I therefore, enclose with this a copy of his minute\* on these subjects, together with copies of the various papers alluded to in that minute as the list of papers herewith for your consideration, and at the same time invite you to allow your Chief Inspector of Stock to attend a meeting to be held in Sydney, on the 15th June next, with the view to the framing of a uniform code of Stock Regulations for all the Colonies, and the preparation of a report on the proposed institute." \*See enclosure to No. 21.

I have, &c.,  
HENRY PARKES.

[Similar letters to the preceding, dated 13th May, 1891, have been sent to The Honorable the Prime Minister of New Zealand; The Honorable the Chief Secretary of Tasmania; The Honorable the Prime Minister of Victoria; The Honorable the Prime Minister of Western Australia; The Honorable the Chief Secretary of South Australia.]

No. 4.

Extract from letter of the Chief Secretary of Queensland to The Colonial Secretary of New South Wales.

Sir.

Chief Secretary's Office, Brisbane, 22 May, 1891.

"You suggest at the instance of your colleague the Secretary for Mines and Agriculture, that instead of calling only the Chief Inspectors of New South Wales, Victoria, and Queensland together, a meeting of the Chief Inspectors of all the Colonies should be arranged at which the establishment of an Intercolonial Stock Institute as recommended by the Stock Conference held in Melbourne in 1889, could also be discussed.

I have the honor to inform you that this Government will be glad to instruct the Chief Inspector of Stock of Queensland to attend the proposed Conference."

I have, &c.,  
S. W. GRIFFITH.

## The Chief Inspector of Stock to The Under Secretary for Mines.

Minute Paper.—Conference of Chief Inspectors of Stock.

Department of Mines, Stock Branch, Sydney, 8 June, 1891.

I FIND that as yet acceptances for the Conference of Chief Inspectors of Stock on the 15th instant have only been received from Queensland and Tasmania, and I would suggest that the following telegram be sent to the other Colonies from whom no answer has been received.

“Acceptances for Conference of Chief Inspectors of Stock to be held here on the 15th instant have been received from Queensland and Tasmania. I hope your Chief Inspector will be able to attend. If not you will oblige by returning in time for the Conference the draft code sent you with your remarks on the regulations, and say what your views are *re* Intercolonial Stock Institute.”

ALEX. BRUCE,

Chief Inspector of Stock.

## Extract from letter of the Premier of Victoria to The Colonial Secretary of New South Wales.

Premier's Office, Melbourne, 12 June, 1891.

As regards the establishment of an institute for the investigation of animal diseases, it is thought by this Government that the first preliminary should be to ascertain what expenses in connection therewith are likely to be incurred, and, then, whether the several colonies would be willing to share those expenses.

Until a preliminary understanding on these points is come to, the discussion of details seems to be premature.

Minute Paper.—That Report and Proceedings of meeting of Chief Inspectors of Stock be forwarded to the other Colonies.

Department of Mines, Stock Branch, Sydney, 22 July, 1891.

THE report and proceedings of the meeting of the Chief Inspectors of Stock, held in Sydney in June last, now received from the Government Printer is submitted herewith, and I would recommend that copies be forwarded to the other colonies for their consideration and that they be invited to express an opinion how far they are prepared to give effect to the resolutions agreed to at that meeting, more particularly as regards those proposing the adoption of a uniform code of stock resolutions and the establishment of an Australasian Stock Institute.

Should

7

Should they be inclined to act on the resolutions they would of course revise the regulations contained in the draft code, and the sketch of the proposed institute submitted with the report and proceedings: And in order to facilitate this revision copies of the resolutions, which have been bound up separately with blank leaves to admit of the necessary alterations and notes being made opposite the regulations and subjects to which they refer, might perhaps also be forwarded, with a request that they be dealt with in that way, and that one of the copies be returned to this Colony showing the alterations they propose and giving where necessary the reasons for their alterations.

ALEX. BRUCE,  
Chief Inspector of Stock.

Submitted.—H.W., 22/7/91. Approved.—S. SMITH, 24/7/91. The Principal Under Secretary, B.C., 25/7/91.—H.W.

Copies of this report may perhaps be forwarded for the consideration of the Governments of the various colonies.—C.W., 28/7/91. Approved.—H.P., 28/7/91.

## Extract.

EXTRACT from replies to the remarks made by the Chief Inspector of Stock, Victoria, on the reports of the meeting of the Chief Inspectors of Stock, held at Sydney in June last.

Australasian Stock Institute.

Department of Mines, Stock Branch, Sydney, 5 November, 1891.

MR. STIRLING says on this subject:—"With reference to the establishment of an Australasian Stock Institute, further than affirming its desirability, in my opinion is beyond the province of the Colonial Chief Inspectors of Stock. It is a matter that should be entirely in the hands of a committee consisting of trained scientists."

I think it here necessary to call attention to the fact that all through Mr. Stirling's remarks on the report of the meeting of the Chief Inspectors of Stock, but particularly in those under this head, there seems to be a forgetfulness on his part of the fact that he is bound, or at least ought to be bound, by the resolutions passed by the Intercolonial Conference of 1889, at any rate in those cases in which he concurred in these resolutions, keeping that principle in view, and the fact that resolution 41 (c) provides that a permanent Board of Directors be formed, to be composed of members appointed by the Government of each contributing Colony, it was I think plainly his duty, in dealing with this question, to have reported to his Minister as to the constitution of this Board so far as the appointments by Victoria were concerned; and there was nothing to prevent him from recommending to his Minister that scientists should be appointed by that Colony on the Board, if he considered them best qualified to fill the office of Directors.

His duties as regards this establishment of this institute would then have been at an end, as it seems he does not consider himself qualified to be on the Board, and it would of course be for the Board when constituted to call for applications for a scientist—select a site for the Building—Settle on a plan, &c., &c., &c.

As, however, the question of a permanent institute was postponed and a temporary arrangement with M. Loir (Pasteur's representative in the Colonies), recommended by the Chief Inspectors of Stock, it is submitted that that was the subject upon which Mr. Stirling should have reported, but upon which he makes no remark whatever, and this is the more surprising when we consider the urgent necessity there is for such an appointment; the high qualifications possessed by M. Loir as a scientist—the liberal offer made by the Government of this Colony of the use of the laboratory at Rodd Island, and the comparatively trifling expense which the appointment would entail on the contributing Colonies.

ALEX. BRUCE,  
Chief Inspector of Stock.

The Under Secretary for Mines.

The Assistant Under Secretary for Mines to The Under Secretary for Lands.

Sir,

Department of Mines and Agriculture, Sydney, 11 December, 1891.

As the experiments being carried out at Rodd Island are not yet concluded, I am directed by the Minister for Mines and Agriculture to request that the use of the establishment at the island may be granted to this department for a further period of six months from the 8th instant.

I have, &c.,

GERARD E. HERRING,  
Assistant Under Secretary.

No. 21.

The Chief Inspector of Stock to The Under Secretary for Mines and Agriculture.

Minute Paper.—Australasian Stock Institute.

Department of Mines and Agriculture, Stock Branch, Sydney, 5 February, 1892.

At the Intercolonial Stock Conference held in November, 1889, a resolution was passed (see No. 41 of copy of report of proceedings herewith), affirming the desirability of establishing an Australasian Stock Institute, and that it should be erected in Sydney; but no decided action was taken in the matter until the 22nd April last, when the then Secretary for Mines and Agriculture (The Hon. S. Smith) wrote a Minute (91-3,370), stating he was of opinion that effect should be given to the recommendation of the Conference, and concurring in a proposal of the Premier of Queensland (see page 1 of accompanying report), that the Chief Inspectors of Stock should meet in Sydney, to discuss this and the question of a uniform code of Stock Regulations for all the colonies.

A meeting was accordingly convened in June last, when the Chief Inspectors for Queensland and Tasmania attended; the reasons for the non-attendance of the others are given at pages 6 and 7 of the report of the meeting.

With a view to a full discussion of the resolution of the Conference having reference to the proposed Institute, I, at that meeting, submitted my views on the work to be done by the Institute, cost of site and buildings, and distribution of expense between the colonies, which were on the whole approved; but as the matter is urgent, and as the services of Mons. Loir, Pasteur's representative in the colonies could be obtained, I suggested that they should be so on a temporary engagement, and that a commencement should be at once made on Rodd Island, where there was a suitable laboratory and accommodation for a few pupils. (See pages 36 and 37 of report.)

In making this new proposal, I had in view the double advantage of supplying an urgent want, and of entering on the undertaking in a gradual way; and my proposal met with the approval of the Chief Inspectors for Queensland and Tasmania.

Copies of the report of this meeting were forwarded to the other colonies asking how far they agreed to the proposed temporary arrangement, and if they were willing to contribute to the expense *pro rata* according to the number of their stock.

Official intimation has been received from Tasmania, that they are prepared to contribute; and it is presumed, from the communications which have passed between this Colony and Queensland, that they will also contribute. Victoria affirms the desirability of establishing an Institute, but beyond that expresses no opinion. The reply from South Australia is in similar terms. From Western Australia no reply has been received as yet.

As, however, the matter is urgent, and as the principal part of the stock in Australia is owned by this Colony, Queensland, and Tasmania (there are 75,612,921 sheep and 7,629,713 cattle in these colonies, out of 97,878,619 sheep, and 9,906,599 cattle in the whole of Australia), and as the amount which the other colonies, Victoria, South Australia, and Western Australia, would have to contribute, is comparatively small, I would suggest that an offer should, with the concurrence of Queensland (that of Tasmania has already been received) be made to Mons. Loir of this temporary appointment at a salary of say £800 a year, and that, if he accept, a commencement be made at Rodd Island immediately on his return from Europe where he has gone on a visit.

If

If this be approved I would suggest farther, that the proposed arrangement be communicated to the other colonies, and that they be invited to say whether they will join in carrying it out, preparatory of course to the erection of a suitable building for the Institute, on a site to be approved of by all the contributing colonies, the appointment of an efficient staff, and otherwise to full effect being given to resolution 41 of the Intercolonial Conference of 1889.

ALEX. BRUCE,  
Chief Inspector of Stock.

Submitted, H.W., 5/2/92. Approved, T.M.S., 6/2/92. The Principal Under Secretary, B.C. 9/2/92.—H.W. For Cabinet.—T.M.S., 3/5/92. Keep with Cabinet papers, 3/5/92.—C.W.

[Enclosure.]

[Extracts from Report of Minutes of Proceedings, Resolutions, &c., of the Meeting of Chief Inspectors of Stock, held in Sydney, in June, 1891.]

REPORT.

WE met on Monday, 15 June, and concluded our labours on the 19th June, and were called together at the instance of the Government of New South Wales with a view to the adoption of a uniform code of regulations for the prevention of the introduction of diseases in stock in the Australian colonies, and to the establishment of an Australasian Stock Institute.

Delegates Present :—

Queensland—MR. P. R. GORDON. Tasmania—MR. T. A. TABART. New South Wales—MR. ALEXANDER BRUCE. The following is a copy of a circular letter, dated 13th May, 1891, addressed to the Governments of the Australasian colonies, by which this meeting was convened :—

Sir, New South Wales, Colonial Secretary's Office, Sydney, 13 May, 1891.

"I have the honor to inform you that on the 25th March last I received a communication from the Premier of Queensland, suggesting that the Chief Inspectors of Stock of New South Wales, Victoria, and Queensland, should meet in Sydney for the purpose of discussing some matters of detail which need to be settled before a uniform code of stock regulations can be agreed upon by the Australian colonies. This communication was referred by me to the Secretary for Mines and Agriculture, who has recently had the subject under consideration; and as it appears from the accompanying paper, marked D, prepared by the Chief Inspector of Stock for this colony, that there is very little difference between the regulations now in force in all the Australian colonies except Western Australia, he, as well as Sir Samuel Griffiths, is of opinion that the adoption of a uniform code is quite practicable as well as highly desirable.

"He thinks, however, that instead of only calling the Chief Inspectors of Stock for Queensland, New South Wales and Victoria together, the chief inspectors for all the colonies should be asked to meet; and as he considers that effect should be given to the resolution adopted at the meeting of inspectors and other representatives in 1889, which recommended the establishment of an intercolonial stock institute in Sydney, Mr. Smith is desirous that this matter also should be discussed at the proposed meeting.

"I therefore enclose with this a copy of his minute on these subjects, together with copies of the various papers alluded to in that minute, as per list of papers herewith for your consideration, and would, at the same time invite you to allow your Chief Inspector of Stock to attend a meeting to be held in Sydney on 15th June next, with the view to the framing of a uniform code of stock regulations for all the colonies, and the preparation of a report on the proposed institute."

I have, &c.,

HENRY PARKES.

[Copy.]

D.

22 April, 1891.

I AM of opinion that the adoption of a uniform code of regulations providing for the interchange of stock between the Australasian colonies, and between these colonies and other parts of the world, is highly desirable; for such an assimilation of the regulations now in force in the different colonies would not only tend to the convenience of owners, and facilitate the introduction of stock from one colony into another, but it would, to a large extent guarantee that the malignant diseases in stock which exist in other parts of the world, but which are happily unknown in these colonies, would not be introduced, inasmuch as the same well-considered and effective regulations would then be in force in all the Australasian colonies.

I am also of opinion that effect should be given to the recommendation of the Intercolonial Stock Conference, held in Melbourne, in November, 1889, that a permanent Australasian Stock Institute should be established in Sydney for the purpose of investigating and experimenting on infectious diseases in stock, and for the study of microbiology, and the means of preventing or curing these diseases which are now attracting so much attention since Pasteur and Koch brought them so prominently under notice; and I consider the proposal that the colonies should contribute *pro rata*, according to the number of stock they own, to the support of the institute a fair and reasonable one.

If a commodious and conveniently arranged building, on something of the model and furnished like the Pasteur Institute in Paris, were erected on the best and most convenient site for carrying out these investigations, and imparting the necessary teaching to the students, and if a thoroughly competent scientist were engaged as director, there cannot be a doubt but work would be done which would be of the greatest possible benefit, not only to the owners of stock, but also to the people generally throughout the Australasian colonies.

With the view, therefore, of obtaining the concurrence of the other colonies to the opinions which I have here expressed, the necessary copies of my minute, and of the other papers may be forwarded to the Hon. the Premier, with a request that he will cause them to be transmitted to the other colonies for their consideration, and that he will at the same time invite them to allow their chief inspectors of stock to attend a meeting to be held in Sydney at an early date, say, on the 15th June next, to prepare such a uniform code of Intercolonial and Foreign Stock Regulations as shall be approved by all the colonies, and to furnish a report on the proposed institute.

S. SMITH.

DRAFT CODE OF INTERCOLONIAL STOCK REGULATIONS.

Department of Mines, Stock Branch, Sydney, 10 March, 1891.

At the Intercolonial Stock Conference held in Melbourne, in November, 1889, a resolution was passed to the following effect :—"50. That a uniform code of regulations, embodying the resolutions passed by this Conference, be adopted by all the Colonies, and that the framing of such Regulation be left in the hands of the Victorian Government."

In terms of that resolution a draft code of regulations was in March following forwarded by the Chief Secretary, Melbourne, to the other colonies (see Draft marked B herewith), but although this and some of the other colonies (Victoria and South Australia) have since the conference issued amended regulations embodying several of the resolutions of the conference, nothing further has been done towards the completion of such an intercolonial code as contemplated by the Conference.

With the view, therefore, to assist in framing as complete a code as possible, I have prepared another and fuller draft than that forwarded by Victoria, arranged somewhat differently, and it is thought in a preferable order, inasmuch as the regulations in this draft follow in the natural order of the action which will require to be taken under the regulations in both the foreign and intercolonial codes.

In order, again, to see where the regulations now in force in the several colonies differ, I have cut out the relative regulations and portions of regulations, and arranged them in the same order as that in which the draft code now prepared by me is framed, giving a page to each regulation, and thus keeping all the regulations on the same subject on the same page.

This, of course, admits of a thorough comparison being made, and the difference where it exists is clearly seen, while I have noted underneath what I consider that difference amounts to.

Then,

Then, as the numbers of the different regulations in which the provisions corresponding to those in this draft stand are entered on the margin, it will be easy for the correctness of my conclusions to be tested; and if it is, it will, I think, be seen that there is so very little difference between the requirements of the regulations now in force in the different colonies, that if a complete agreement cannot be arrived at by correspondence, it would, I believe, readily be so at a meeting of the chief inspectors; for the principal difference now lies in the order and arrangement of the regulations, not in the provisions of the regulations themselves.

As this is the case, it is to be hoped that no time will be lost in framing a complete and effective Intercolonial Code of Regulations which will be *verbatim et literatim* the same in all the colonies, dealing with the interchange of all kinds of stock between the different Australasian colonies as well as between these colonies and all other parts of the world, and which, while it permits of the necessary importation of pure-bred foreign stock, will effectually prevent the introduction of disease.

Besides the resolution recommending a common code of intercolonial regulations, there were several other important resolutions passed by the Conference, the adoption of which would be very advantageous to all the colonies.

Among these, perhaps, the most important is resolution 38, which calls for the appointment and maintenance of an efficient and competent staff of Inspectors of Stock in every colony, not only in the interest of the colonies employing such a staff, but also in that of the neighbouring colonies; for if infectious and contagious disease is allowed to obtain a footing among the stock in any of the colonies on the mainland, it is only a question of time when it will spread to them all, unless, indeed, there is a complete stoppage of stock traffic between the colonies.

For these reasons it is most essential that each of the colonies should employ a sufficient staff of competent inspectors; and it is so especially in the face of the fact that all the colonies are now asking that their stock should be admitted into the other colonies with no, or little or no, restrictions.

If stock, therefore, are to be admitted in this way it is necessary that the colony which is asked to admit them on the certificate issued in another colony should have full confidence in the statements contained in the certificate, and that it cannot have, if, as is now the case in some of the colonies, the staff is so defective as to render it impossible for the officer granting the certificate to examine the stock and say from his own personal knowledge that they are, as he certifies, free from infection.

There is another matter connected with the intercolonial code with respect to which it is necessary that an understanding should be come to by all the colonies.

Stock will, no doubt, still continue to be brought by sea, as they have hitherto at times been for introduction, with respect to which all the requirements of the regulations have not been complied with, and it would be well to come to an understanding as to whether such stock are to be refused admission or admitted on certain terms; and, if so, what these terms should be.

In the draft which I prepared I have in two or three regulations inserted a provision to the effect that when the omission is not a material one, the colony to which the stock are brought may, with the sanction of the others, allow the stock to land if it is considered that they can be admitted without risk, but subject to certain additional precautions, which would, to some extent at least, make up for the requirements which the importer of the stock had failed to comply with, and which would entail so much additional expense on him as would prevent such a thing occurring, except through an oversight.

Another very important resolution passed by the Conference is No. 41, which recommends the establishment of an Intercolonial Stock Institute—a matter which calls for prompt action; for the losses of stock throughout the colonies from diseases and ailments, the nature and character of which are but imperfectly known, and are exceedingly heavy; and with the success which has in other parts of the world followed investigations and experiments of a similar nature to those which would be prosecuted at the proposed institute, there is every reason to believe that its establishment would be attended with the greatest possible benefit to stock-owners in all the colonies, as well as to the general public.

In summing up the result of the comparison of the regulations now in force in the other colonies with those in draft code framed by me, I have entered Queensland as the same as New South Wales on the ground that Mr. P. R. Gordon, the Chief Inspector for that colony, when recently in Sydney, went carefully through the whole of the regulations which I have framed, and is prepared to recommend their adoption by the Queensland Government.

With the view of showing still more shortly the difference between the regulations now in force in the several colonies and those in the proposed code, I have prepared comparative statements, which are submitted herewith, and marked B, C, D, and E, contrasting the latter with the existing regulations in Victoria, South Australia, Tasmania, and New Zealand, in which every difference of any importance whatever is clearly set out.

As the law stands in this Colony, there are several of the regulations in the proposed code which the law does not empower the Government in the meantime to notify, and their issue will have to be delayed until the Stock and Pastures Bill, which has been prepared, is passed.

ALEX. BRUCE,  
Chief Inspector of Stock.

The statement showing the difference between the regulations now in force, and those in the proposed code, may be printed and forwarded to the several Governments, with a request that early consideration be given to the proposed alterations, with a view to the adoption of a uniform code in accordance with the decision of the Conference.

S. SMITH, 17-3-91.

Mr. T. A. Tabart, of Tasmania, was elected Chairman.

*Preliminary.*

In consequence of all the colonies not being represented, it was agreed that, in revising the draft regulations, we should be guided by the opinions expressed by the Australasian Stock Conference of 1889, and that any matter brought forward and not embraced by the resolutions passed by that Conference should be adopted only as a recommendation to be hereafter submitted for acceptance by the colonies not represented.

*The framing of a uniform code of regulations.*

The principal business for which the present meeting was convened—the framing of a uniform code of intercolonial regulations dealing with the interchange of stock between the Australasian colonies and places outside these colonies in terms of resolution 50 of the Intercolonial Stock Conference held in Melbourne in November, 1889—was then entered upon, and the code prepared by Victoria in accordance with that resolution, and the draft subsequently framed by New South Wales having been considered, it was decided to take that framed by New South Wales for discussion, as the order of arrangement of the regulations was better and the code more complete, while the regulations in force in all the colonies were collated and contrasted in that draft.

After a full and careful consideration of these regulations in detail we unanimously agree to the draft code submitted herewith, embodying the resolutions of the Conference of 1889, together with some alterations and additions which we consider desirable, and which are set out in Appendix A hereto; and we recommend that the draft now agreed to by us be printed and submitted to the several colonies for adoption, in as far as the same is adapted to the circumstances of each colony, according to its geographical position.

*Australasian Stock Institute.*

The paper contributed by Mr. Bruce (see Appendix B hereto) on the proposed Australasian Stock Institute sets forth so clearly and concisely the necessity for such an institution; and the cost of its establishment and annual expense of maintenance, compared with the benefits which it would confer on the pastoral interest of Australasia, are so self-evident as to appear to us to be beyond the range of contention. As, however, the construction and equipment of a new laboratory would occupy a considerable space of time, which could in the interim be profitably employed in inquiring into several matters of urgency in connection with animal diseases, we strongly recommend the adoption of that portion of the paper which suggests the use of the Rodd Island laboratory, if it can be obtained, and securing the services of Mons. Loir as director for the present, until arrangements are matured for an institute on a permanent and more extensive scale.

We find that the annual outlay required to maintain this temporary institute, including salary of director and his assistants, would not exceed £1,000 or £1,200.

Taking

Taking the lowest estimate, that sum divided *pro rata* among the colonies in proportion to the live stock of each at 31st December, 1889, would be as follows:—New South Wales, £337; Victoria, £131; Queensland, £313; South Australia, £52; Western Australia, £19; Tasmania, £16; New Zealand, £132; total, £1,000.

If we except New South Wales and Queensland, the amount to be contributed by each colony is so very insignificant that we cannot imagine a reason for refusal on the part of the other colonies to contribute their quota.

*An Efficient and Competent Staff of Inspectors.*

We desire to call attention to the resolution by which we indorse the recommendation of the Australasian Stock Conference of 1889 with regard to the appointment and maintenance of a full staff of inspectors, and the necessity for the issue of certificates of health by the officers of the exporting colony.

*Introduction of Samples of Wool from Europe.*

We also desire to call attention to the important resolution in regard to the practice of wool brokers receiving samples of wool from Europe, and to the risk of infection being introduced by this means.

*The Viewing of Stock while in Quarantine.*

In our opinion, the admission of persons to view stock while in quarantine should be limited as far as possible, and that no persons should be so admitted except the owner or agent for the stock, and then only in company with an inspector.

*Colonies not Represented.*

We deem it our duty to express our great regret at the absence of the Chief Inspectors of the other colonies, but more particularly of those within easy reach of Sydney; for there is every reason to suppose that, had they been present, a code of regulations to which all the colonies would have agreed could have been framed. And we are the more inclined to take this view from the fact that where a difference existed between us at this meeting, in regard to any of the regulations which have been adopted it was speedily removed on the subject being discussed. We have, however, as regards Western Australia, good grounds for believing, from the tenor of the telegram received on the 12th instant from the Prime Minister of that colony [Appendix C 1], that they will agree to the code framed at this meeting. We expect, also, from the terms of the telegram of the 9th instant from the Honorable the Minister for Lands, Wellington, that New Zealand [Appendix C 2] will also agree to adopt a uniform code, so far as it is applicable to the circumstances of that colony. With regard, again, to the colonies of Victoria [Appendix C 3] and South Australia [Appendix C 4] it was to be expected, from what transpired at the Conference in 1889 and subsequently, that the Chief Inspectors for both these colonies would be present at this meeting to assist in the revision and completion of the uniform code of regulations prepared by Victoria, and forwarded to the other colonies in April, 1890, as neither the Chief Inspector for Victoria nor South Australia dissented from the resolution passed at the Conference that such a code should be framed and adopted by all the colonies; and, not only so, but, speaking more particularly as regards Victoria, Mr. Dow, the then Minister for Lands for that Colony, in addressing the members of the Conference, said, "It would give him great pleasure to further their views, and he hoped that the result of the Conference would be the adoption of a uniform measure by all the colonies in matters affecting stock," and what is still more confirmatory of the view that the code was to be verbatim the same in all the colonies, is that Victoria, to give effect to resolution 50, framed and forwarded to the other colonies, the draft code already referred to.

There can be no question, therefore, what the term "uniform code" meant, as used by the Conference. If not intended that the regulation should—except as regards the reference to and the powers under the Acts under which the regulations were issued—be verbatim, such a draft would not have been made nor circulated; for, if anything else had been intended, the bare resolutions passed by the Conference would have been a sufficient guide to the colonies in framing their regulations. The remarks made by the mover of resolution 50 in bringing it forward also thoroughly confirm this. We trust, therefore, that the colonies of Victoria and South Australia will yet come to an understanding in regard to the proposed code, and give full effect to resolution 50, and that they will, with that view, go carefully over the regulations in the draft codes about to be forwarded to them, and return these drafts with the remarks they may have to make on the regulations to the Chief Inspector of Stock, Sydney, who will communicate with the Chief Inspectors in the other colonies; and in this way we believe a uniform code can soon be agreed to by correspondence, and without another meeting.

Since the foregoing portion of this report was agreed to, a letter has been received from the Premier of Victoria with respect to the subjects discussed at this meeting, and in reference to which we think it necessary that we should offer some remarks. It is true, as stated in the fourth paragraph of that letter, that it was left optional with each colony to adopt or reject the whole, or any part of the regulations contained in the code framed by Victoria, or even the whole of the resolutions of the Conference. But seeing that the colony of Victoria not only joined in passing the resolution for the adoption of a uniform code, but framed and forwarded to the other colonies a draft code for the that purpose, we submit, with due deference, that there cannot be any doubt but that the code contemplated was one which would, with the exceptions mentioned, be verbatim the same in all the colonies, and would, in fact, form a portion of the great work of the federation of the colonies; for there can be no question but the interchange and introduction of stock are federal matters.

With regard to the doubt expressed in the fifth paragraph as to whether anything would be gained by uniformity in procedure and phraseology, we desire to point out that the true safeguards against the introduction and spread of disease in stock in Australia is to have a complete and effective set of regulations, and to enforce them with thorough strictness in all the colonies, however great the pressure to relax them may be; and we think that the adoption of a uniform code, with the arrangement and phraseology the same in all the colonies, would not only be more complete and effective, but, what is of the greatest moment, the regulations could not then—as they now can, while differently arranged and differently expressed in all the colonies—be read in such a way as that they can, in some very important respects, admit of entirely different action being taken by one colony from that adopted in another.

To show to what we refer we will give a few instances in regard to the action taken under the Victorian and South Australian regulations:—1. While the Conference decided by a large majority, and after a lengthy discussion, that all foreign dogs should be sent to a Government quarantine, both Victoria and South Australia allow these dogs to be quarantined on their owners' premises, an utterly useless and dangerous proceeding. 2. While inspectors of stock in the other colonies do not grant certificates as to the health of stock about to be shipped to the other colonies without seeing the stock and examining them, the Victorian inspectors are in the habit of certifying that they "have no reason to doubt the owners' declaration in any particular"—*i.e.*, that the stock are sound, but they do not, we understand, examine them. 3. While the Victorian code includes the greater part of the regulations contained in the draft now adopted at this meeting, that code confers a power on the Chief Inspector of Stock which would completely destroy the uniformity and safety of these regulations. We allude to the power given to the Chief Inspector (not even to the Minister, which we consider would also be unwise) to dispense with requirements in regard to the admission of foreign stock, which would be very dangerous, and which ought not to be left at the option of any single Colony.

Besides these cases, there are at least some ten or twelve other requirements of considerable importance, though not all set out in the resolutions of the Conference of 1889, in the code now adopted by us, which are not to be found in the Victorian code, but which we think it should contain.

With respect to the statement in paragraph 5 that New South Wales was not in a position to carry out the whole of the regulations as framed without further legislation, we find on reference to the regulations now in force in that colony that the defect here alluded to in regard to its legislation is comparatively immaterial, and that a Bill has for some time been prepared to remedy this and other defects, and will be brought before Parliament at an early date.

With respect to the statements made in paragraphs 6 and 7, it is allowed that if the requirements there alluded to were faithfully carried out in all their details there would be no cause for asking for any alteration; but we have, we think, already clearly demonstrated that this is not the case, and that the proper remedy is the adoption by all the colonies of a full uniform (verbatim) code of regulations.

We are quite in accord with the opinion expressed in paragraph 8, that the question of the number and qualifications of the staff of inspectors in the several colonies is a matter for each colony; but at the same time when a colony fails, as not infrequently happens, to inspect and certify to the soundness of stock about to be introduced into another colony, and pleads shortness of its staff as an excuse for the omission, we are of opinion that the Colony into which it is intended to send the stock is justified in calling attention to the state of the staff in the Colony from which the stock are to come.

Of all the resolutions of the last Intercolonial Conference, there are none of greater importance, or more urgent, than that relating to the establishment of the Australasian Stock Institute, and we consider that the Minister for Mines and Agriculture for New South Wales is deserving of the thanks of the owners of stock throughout Australasia for bringing this matter prominently forward in a manner which in our opinion carries out to the fullest extent the views expressed in paragraph 9 of the letter of the Premier of Victoria. This will be seen by reference to our report on the subject, and Mr. Bruce's paper on the establishment of the institute.

THOMAS A. TABART, Chairman.  
P. R. GORDON.  
ALEX. BRUCE.

FOURTH DAY, THURSDAY, 18 JUNE, 1891.

*Australasian Stock Institute.*

Mr. Bruce submitted a paper on the subject of the proposed Australasian Stock Institute.

*Resolved* :—That the paper be printed as part of the proceedings, and that the suggestion contained therein as to obtaining the use of Rodd Island and temporary employment of Mons. Loir, pending erection of institute and appointment of a full staff is strongly recommended, and we do not anticipate the expense of this will exceed £1,000 to £1,200 per annum.

A letter from the Premier, Victoria, to the Hon. Colonial Secretary, New South Wales, dated 12th June [see *Appendix C*], was submitted, stating that the Government of Victoria does not see any necessity for another conference, and fully explaining as to regulations and Stock Institute.

The meeting adjourned at 5 p.m. until 10 o'clock on Friday.

C. 1.

Copy of telegram from The Prime Minister of Western Australia to The Prime Minister, New South Wales, 12 June, 1891. RESPECTING Inspectors of Stock meeting, our inspector cannot attend, but I shall be glad as far as I can, to make our regulations agree with those of your colonies. JNO. FORREST.

C. 2.

Copy of telegram from the Minister for Lands, Wellington, New Zealand, to the Chief Inspector of Stock, Sydney. 9 June, 1891. REGRET cannot send Chief Inspector of Stock to Conference. Parliament just about to open. Moreover, total reorganisation of Stock Department just now taking place. Will return draft copy and our Regulations as you request. Letter by post. JOHN MCKENZIE.

C. 3.

The Premier of Victoria to the Honorable the Colonial Secretary, Sydney.

Sir,

Premier's Office, Melbourne, 12 June, 1891.

I have the honor to acknowledge the receipt of your letter of the 13th ultimo, asking that the Chief Inspector of Stock might be allowed to attend a meeting of inspectors from the various colonies, to be held in Sydney on the 15th instant, for the purpose of framing a uniform code of Stock Regulations for all the colonies, and for the preparation of a report on the proposed Intercolonial Stock Institute.

2. The copies of the various papers which accompanied your letter, together with the draft code of Regulations prepared by Mr. Bruce, the Chief Inspector of Stock for New South Wales, having been very carefully considered by the Honorable the Minister for Agriculture.

3. I regret to inform you that this Government does not see any necessity at the present time for the holding of another Conference of Stock Inspectors.

4. At the Conference held in Melbourne in November, 1889, it was agreed that a uniform code of regulations embodying the resolutions passed by that Conference, should be adopted by all the colonies, and that the framing of such Regulations should be left in the hands of this Government. Regulations were framed accordingly, a copy being forwarded to you on the 5th of March, 1890, and it was left optional with each colony to adopt or reject the whole or any part of such Regulations.

5. It is not clear that there is anything to be gained by such a uniformity in procedure and phraseology as it is one of the objects of the proposed Conference to establish, and it is questionable if such uniformity could be adopted by the various colonies, seeing that each has to be guided by its own laws. Mr. Bruce states indeed, that, as the law stands in New South Wales, some of the Regulations which he proposes could not be carried out; it seems, therefore, premature to adopt such Regulations.

6. If, however, the same provisions as to importation, prohibition, period of quarantine, and intercolonial exchange be established, all that is necessary will, it is thought, be accomplished.

7. Mr. Bruce admits that there is very little difference between the requirements of the Regulations in force in the several colonies, and under the circumstances, the Minister for Agriculture of this Colony is of opinion that each colony may well be allowed to settle such small differences.

8. One of the objects of the proposed conference appears to me to discuss the question of the number and qualifications of the staff of inspectors to be maintained in each colony. This, however, is a matter with regard to which each colony is probably the best judge as to its requirements.

9. As regards the establishment of an institution for the investigation of animal diseases, it is thought by this Government that the first preliminary should be to ascertain what expenses in connection therewith are likely to be incurred, and then whether the several colonies would be willing to share those expenses. Until a preliminary understanding on these points is to come to, the discussion of details seems to be premature.

10. I trust it will be apparent that there are substantial reasons for the conclusion of this Government not to be represented at the proposed Conference.

11. As requested in your telegram of the 9th instant, I beg to return herewith the draft code of Regulations forwarded with your letter of the 13th ultimo.

I have, &c.,  
JAMES MUNRO.

C. 4.

Copy of telegram from The Prime Minister of South Australia to the Prime Minister, New South Wales.

12 June, 1891.

We have decided not to send representative to Stock Conference suggested in your letter, 13th May, and consider establishment Australasian Stock Institute could be better dealt with by a Federal Parliament. T. PLAYFORD.

C. 5.

Messrs. Brunker and Wolfe to The Chief Inspector of Stock, Sydney.

Sir,

9, Castlereagh-street, Sydney, 16 June, 1891.

For some weeks past sheepskins have been prevented from being landed from foreign vessels trading from this port to New Caledonia, Fiji, and to the northward.

Hitherto it has been the custom to supply the steamers or vessels with sheep for the round voyage, and the skins of the sheep are saved and sold generally to fellmongers on the return of vessel to port.

We beg to bring this matter under your notice with a view of its being dealt with in such manner as will enable the skins to be landed in future, and prevent loss to parties concerned.

Yours, &c.,  
BRUNKER AND WOLFE.

[Enclosure 2.]

[Enclosure 2.]  
[APPENDIX B.]

THE ESTABLISHMENT OF AN AUSTRALASIAN STOCK INSTITUTE.

At the Intercolonial Stock Conference held in Melbourne in November, 1889, a resolution was unanimously passed to the following effect:—

41. That this Conference affirms—(a.) The desirability of establishing a laboratory or institute for the purpose of investigating and experimenting upon any disease to which stock are or may become liable, particularly, in the first instances, pleuro-pneumonia, anthrax, and tuberculosis. (b.) That the institution be a permanent one, and to be supported by the respective colonies becoming parties to the arrangement *pro rata*, according to the number of stock, sheep, cattle, and horses returned for the year preceding the assessment. (c.) That a permanent Board of Direction be formed, to be composed of members to be appointed by the Government of each contributing Colony. (d.) That a competent European scientist be engaged as Director, who shall deliver an annual course of lectures to students, and who shall be allowed to charge fees for so doing. (e.) That the laboratory or institution shall be called the Australasian Stock Institute, and that it be located in the Colony of New South Wales.

As this resolution was quite in accord with the views held by my Minister, the Honorable Sydney Smith, Secretary for Mines and Agriculture, he was prepared, on the receipt of a copy of the Report and Proceedings of the Conference in June last, to take the necessary action to give effect to it, so far as this Colony was concerned; but he delayed doing so pending receipt of the usual letter from Victoria, the Colony in which the Conference was held, asking how far this and the other Colonies were prepared to carry out the resolutions of the Conference.

As, however, several of the other resolutions of the Conference are also very urgent, as well as very important, and as up to April last no communication of the nature indicated had been received from Victoria, my Minister then decided to invite the other Colonies to take action in regard to this and the other resolutions referred to, and hence the present meeting.

I will now proceed, as briefly as I can, to lay before you such particulars as I think will enable you to enter on the discussion of this most important matter, and will help in some degree at least to assist in arriving at a decision with respect to the recommendations which we will submit to our respective Governments in regard to it.

In carrying out this course, I will notice very briefly—

- I. The importance of the interest which this institution is proposed to serve.
- II. The work done in the Pasteur's Institute in Paris.
- III. The site on which the institute should be erected.
- IV. The kind of building which will be required.
- V. The work which should be done at the institute.
- VI. The subjects which should be taught.
- VII. The cost to each Colony.
- VIII. The Board of management, and—
  1. Its constitution.
  2. The meetings of the Board.
  3. The election of a chairman and appointment of a secretary.
  4. The site of the institute, and plan of the building.
  5. The appointment of a scientist.
  6. The regular work to be done at the institute.
  7. Urgent work called for.
  8. Visits of scientist to the country when necessary.
  9. The number of pupils, course of training, and fees.
  10. Apparatus and appliances for the institute.

*I. The importance of the Animal Industry of the Australasian Colonies.*

The accompanying statement, marked "A," copied from Mr. Coghlan's statistical account of the seven Colonies of Australasia, shows that in the beginning of 1890—

The capital invested in pastoral properties in Australasia amounted to .....	£417,000,000
Of this sum the value of the live stock alone amounted to .....	£75,000,000
And that the annual return for the pastoral industry amounted to .....	£34,745,300

The figures speak for themselves, and since then there has been a considerable increase in stock in all the Colonies. In New South Wales alone there has been an increase of 13,386 horses, 167,417 cattle, and 5,000,000 sheep.

*II. The work done in Pasteur's Institute, Paris.*

I understand that the work in the Pasteur's Institute, of which M. Pasteur is the Director-General, is divided into five parts.

1. The rabies treatment, at the head of which is Doctor Grancher.
2. Technic microbiology, which is taught by M. Roux. The majority of the students belong to or are studying for the medical or veterinary professions, with a fair number who are following up some branch of science. The course of study includes, among other subjects, the following:—

(I) The description and nature of microbes. (II) The preparation of the broth and other media in which they are grown. (III) Typhoid fever. (IV) Cholera. (V) Intermittent fever. (VI) Septicæmia. (VII) Anthrax. (VIII) Chicken cholera. (IX) Tuberculosis. (X) Swine fever. (XI) Actinomycosis. (XII) Glanders. (XIII) Hydrophobia. (XIV) Yeast; and some twelve or fourteen other subjects.

3. A set of laboratories, where students, after becoming acquainted with microbiology, may stay and make personal researches under the direction of M. Mitchincof in regard to subjects which have not been fully investigated. These laboratories are also open, at a charge of £4 or £5 pound a month to scientists from any part of the world who may wish to work in the Institute under the directors.

4. A laboratory, at the head of which is M. Duclaux, for the study of beer and cider and of fermentation generally, including that of wine, and also the making of cheese and the preservation of milk.

5. A laboratory, in which M. Chamberland has to prepare the vaccine of anthrax and swine fever, and in which he has to make analyses of pathologic products of diseases, the nature of which veterinary surgeons cannot exactly determine clinically or by *post mortem*, and which they wish to have settled by microscopical examination.

*III. The Site of the Institute.*

As the Institute is to be an Intercolonial Institution, it should, I think be in or near Sydney, the metropolis of the Colony. Indeed, the best site in my opinion is the University Reserve, as there is no doubt the Institute would be largely availed of by the medical students, while in other respects, both as regards this and the other colonies, no more convenient or accessible site could be found.

*IV. Building to be erected.*

I submit the accompanying rough sketch marked "B" (on the model of a portion of the Pasteur Institute, Paris), showing the accommodation which I think would be required, and the mode in which it should be arranged.

The proposed Board would decide as to this, as well as to the description of building which should be erected.

*V. The work to be done at the Institute.*

The work to be done by the scientist would principally be like that done by M. Chamberland, and he would among other things make analyses of pathological products of diseases, the nature of which medical men and veterinary surgeons could not exactly determine clinically nor by *post mortem* examination. He would prepare the vaccine of diseases; such as Cumberland disease, black-leg, pleuro-pneumonia, tuberculosis, &c., and prosecute researches in regard to diseases and subjects which require investigation.

VI.

VI. *The subjects which should be taught at the Institute.*

The principal subjects taught would be technic microbiology, and the course of study would include among other subjects the following —

- (1) The description and nature of microbes
- (2) The preparation of the broth and other media in which they are grown
- (3) Septicæmia.
- (4) Anthrax
- (5) Chicken cholera
- (6) Tuberculosis.
- (7) Swine fever.
- (8) Actinomycosis
- (9) Glanders
- (10) Hydrophobia.
- (11) Yeast

VII. *Estimated cost of the Building, Furniture, and Appliances, and of the Annual Expense of the Institute.*

It will be seen on reference to statement "C" herewith that the cost of the building, which need not at first be a very large one, nor very ornamental, is put at £4,000, and the furniture and appliances at £1,300, while the annual outlay for salaries and other expenses is estimated at £1,700

This would make the outlay for the first year £7,000, and for the second and subsequent years say £1,700.

Statement "C" also gives the proportions of this outlay payable by each of the colonies, as proposed by the Conference, *pro rata* according to the number of stock severally owned by them

VIII *The Board of Management*

1 Its Constitution

I would suggest that the Board of Management should consist of two members from each colony, say a stock owner chosen by his fellow owners and the Chief Inspector of Stock for the colony

2 Meetings of Board and Quorum

The meetings of the Board, which should at first at least be held quarterly, would be conducted under the usual rules for the guidance of such bodies Three members to form a quorum

3 The election of Chairman, and appointment of Secretary

The Board would, at its first meeting, elect its own Chairman, and appoint a consulting veterinary surgeon; and there would, of course, be a Secretary appointed for the Board

4 Site of Institute, and ground plan of building.

The Board would, at its first meeting, take into consideration and report upon the best site for the Institute, and decide upon and submit a plan of the building, and showing how the Board think the accommodation should be arranged.

5 Appointment of Scientist

The Board would, at an early meeting, make arrangements for the appointment of a Scientist, in terms of the resolution of the Conference. The Scientist to be the Director of the Institute

6 The regular work to be done

At the first business meeting after the opening of the Institute, the Chairman would submit a statement of the regular work to be undertaken at the Institute for settlement by the Board, and at the following meeting he would bring up a report by the Scientist of the work done by him in the interval, and a statement of new work which he proposed should be taken up by the Scientist; but nothing to be given to the public until the inquiry with respect to it is fully completed.

7 Urgent work

The Scientist would, as a rule, be occupied at the work laid out by the Board, but it should be understood that he would, with the concurrence of a majority of its members, take up any urgent work asked for by any of the contributing colonies.

8 Scientist at times to visit country

The Scientist, with the like consent, should also be allowed to visit any place in any of the colonies for the purpose of making necessary investigations on the spot.

9 Pupils at the Institute

The Board would decide as to the number of pupils to be received at the Institute, the course of study, and the fees to be paid by the pupils to the Director.

10 Apparatus and appliances

Apparatus, appliances, chemicals, and animals for experiment would be obtained on the requisition of the Scientist, and approval of the Board

ALEX BRUCE.

OBTAINING the use of Rodd Island and temporary engagement of Mons Loir, pending erection of Institute and appointment of a full staff —

WHILE I have endeavoured to pave the way to a full discussion on Resolution No 41 of the last Intercolonial Stock Conference, with regard to the establishment of an Intercolonial Stock Institute in Sydney, which, I trust, will result in the preparation of such a report as will lead to the resolution being acted on by all the colonies, it should be borne in mind that considerable time must elapse before the necessary buildings can be erected and are ready for occupation, and as there is a great deal of work of a character which can only be undertaken by such an Institute, urgently requiring to be done, I would submit, for the consideration of the meeting, whether in the event of the use of the laboratory on Rodd Island being obtained, a temporary arrangement might not be made with Mons Loir, under which a commencement might be at once made with the work of the nature contemplated by the resolution

Mons Loir is now engaged on Rodd Island experimenting for the Queensland Government, as to the best means of procuring and preserving the virus of pleuro pneumonia, and searching for the microbe of that disease

There is no question as to Mons Loir's qualification as a scientist, and this proposal, if acted on, would have the double advantage of at once meeting the urgent necessity for the appointment of a scientist, and of entering on the undertaking in respect of the Institute in a gradual way, while Mons Loir would be prepared at once to receive pupils from the contributing colonies on reasonable terms

ALEX BRUCE

A

It is estimated that the capital invested in pastoral properties throughout Australasia amounts to £417,000,000, and of this sum the value of stock alone represents £75,000,000 The annual return from pastoral pursuits, including dairy farming, is £34,745,300, the share of each Colony in the production being —

New South Wales	£14,725,300
Victoria	4,920,500
Queensland	5,678,900
South Australia	2,054,600
Western Australia	585,800
Tasmania	561,400
New Zealand	6,218,800
Australasia	£34,745,300

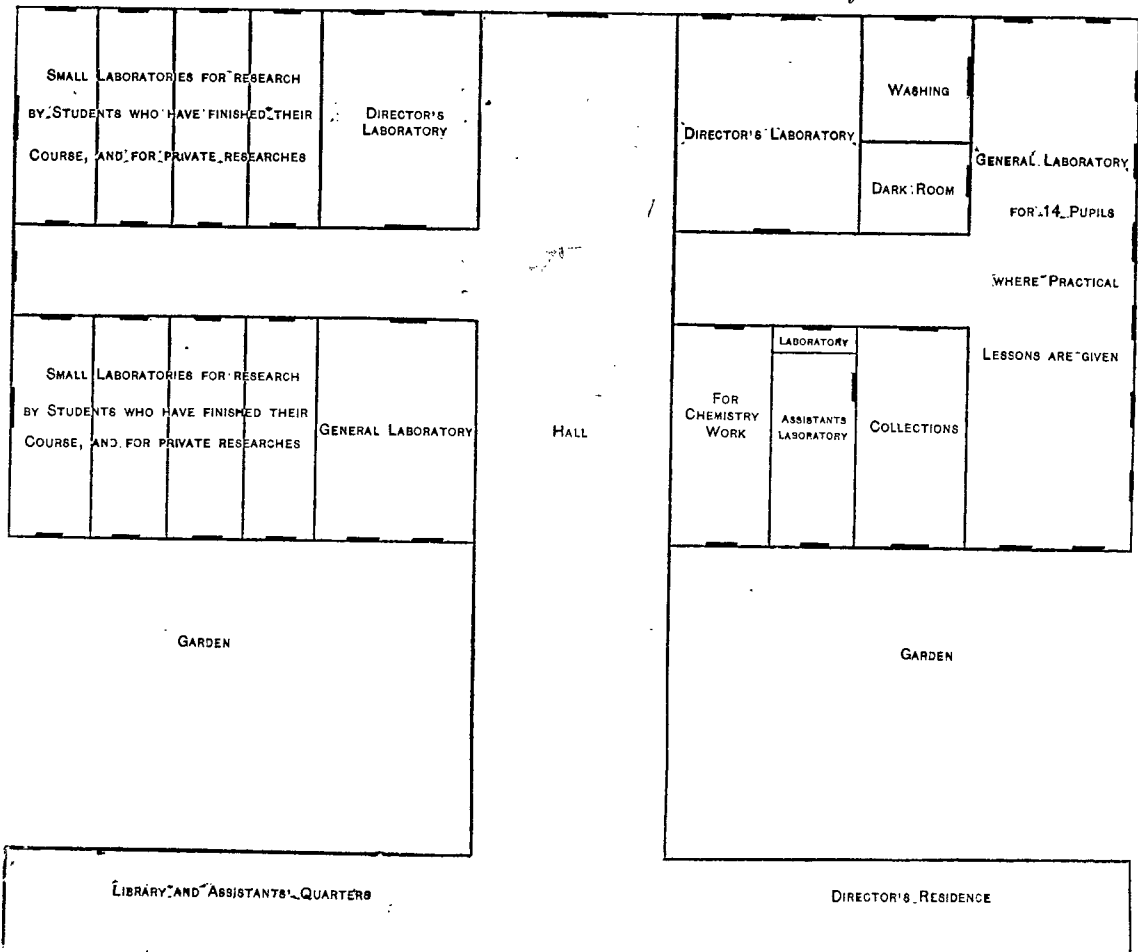

It is to be understood that the products of dairy cattle and swine are not included in the above statement, and that the value of agricultural produce consumed on dairy-farms, and for fattening stock, has also been deducted from the totals.

B.

## AUSTRALASIAN STOCK INSTITUTE.

Laboratory referred to as No. 3.

Laboratory referred to as No. 2.

NOTE.—Building about 170 feet x 80 feet.

## C.

ESTIMATE of cost of building for Intercolonial Stock Institute, and of probable annual working expenses.

First Year.		
Cost of building as per plan with only ground floor, say.....	£4,000	
Cost of furniture and apparatus .....	1,300	
		£5,300
Professor of Microbiology .....	£800	
(Besides this the Professor would receive fees from students, say, £100, and for outside work, say, £50=£150, making his salary, say, £950.)		
Subjects and travelling expenses, chemicals, &c.....	400	
Wages and incidental expenses.....	500	1,700
		£7,000

Taking the above sum, £7,000, as approximately correct, the amount to be contributed by the several colonies *pro rata* according to the number of stock, would be as follows, namely:—

Cost of building and first year's expenses.

Colony.	Sheep— Millions.	Percentage.	Contribution.	
			First Year.	Second and subsequent Year.
New South Wales .....	68	34	£ 2,404	£ 584
Victoria .....	25	12½	884	215
Queensland .....	63	32	2,227	541
South Australia .....	10	5	354	85
Tasmania .....	3	1½	106	26
Western Australia .....	4	2	141	34
New Zealand .....	25	12½	884	215
	*198	100	7,000	1,700

\* This includes cattle calculated at 1 head of cattle equal to 10 sheep.

This is equal to 8½d. per 1,000 sheep for the first year.

Second and subsequent years.

Directors' salary .....	£800
Travelling expenses, chemicals, &c.....	400
Wages and incidental expenses .....	500

This is equal to, say, 2½d. per 1,000 sheep for the second year.

£1,700

17

## No. 22.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

Sir, Department of Lands, Sydney, 21 May, 1892.  
 Application having been made by Mr. E. Darnley, M.P., for the dedication of Rodd Island, Long Cove, as an aquatic reserve; I am directed by the Secretary for Lands to inquire whether the island referred to is required for experimental purposes in connection with the Rabbit Pest, Diseases of Stock, &c., or otherwise.

I have, &c.,  
 WM. HOUSTON,  
 Under Secretary.

## No. 23.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir, Stock Branch, Department of Mines and Agriculture, Sydney, 3 June, 1892.  
 I have the honor by direction of the Minister for Mines and Agriculture, to inform you in reply to your letter of the 21st ultimo, that it is contemplated to renew experiments on Rodd Island, and to therefore request that you will be good enough to retain the Island for that purpose. I may state that it is especially desirable that this should be done in view of the possible establishment of an Intercolonial Stock Institute in Sydney.

I have, &c.,  
 HARRIE WOOD,  
 Under Secretary.

## No. 24.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

Sir, Department of Lands, Sydney, 24 June, 1892.  
 Referring to your letter of the 11th December last, requesting that the use of the establishment at Rodd Island may be granted to your Department for a further period of six months from the 8th idem; as the experiments then being carried out were not concluded, I have the honor by direction of the Secretary for Lands to ask that steps may be taken to hand the Island back to this Department if the experiments for which the use of it was obtained have ceased.

I have, &c.,  
 WM. HOUSTON,  
 Under Secretary.

## No. 25.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir, Department of Mines and Agriculture, Stock Branch, Sydney, 4 July, 1892.  
 With reference to your communication of the 24th ultimo, asking that steps may be taken to hand Rodd Island back to your Department if no longer required for experimental purposes, I am directed to invite your attention to my letter of the 3rd ultimo on this subject.

I have, &c.,  
 HARRIE WOOD,  
 Under Secretary.

## No. 26.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

Sir, Department of Lands, Sydney, 19 July, 1892.  
 With reference to your letters of the 3rd ultimo and 4th instant, stating that it is contemplated to renew experiments on Rodd Island, I have the honor, by direction of the Secretary for Lands, to inform you that, if the experiments have ceased, the Island should be handed back to this Department, but whether such is the case or not, and before the use of it can be granted for a further term, it will be necessary for you to state definitely what experiments are to be renewed, and when they are to be commenced.

In addition, it will also be necessary for this Department to be informed for what further period the occupancy of the Island may be required.

I have, &c.,  
 WM. HOUSTON,  
 Under Secretary.

## No. 27.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir, Department of Mines and Agriculture, Sydney, 8 August, 1892.  
 In reply to your letter of the 19th ultimo, asking what experiments are to be renewed at Rodd Island, and when they are to be commenced, I am directed by the Secretary for Mines and Agriculture to state that Dr. Loir arrived by the s.s. "Australien," on Saturday, and he is to resume work immediately at Rodd Island in the preparation of Pasteur's vaccine of anthrax.

It is also proposed to use the Island in connection with the establishment of an Intercolonial Stock Institute; but, for how long, cannot at present be determined at.

I have, &c.,  
 HARRIE WOOD,  
 Under Secretary.

## No. 28.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir, Department of Mines and Agriculture, Sydney, 26 August, 1892.

Referring to previous correspondence in regard to the use of Rodd Island, and more particularly to my letter of the 8th instant, and the subject therein referred to in regard to the use of the Island for the establishment of an Australasian Stock Institute, I am now directed by the Secretary for Mines and Agriculture to request that you will be good enough to ask the Secretary for Lands to place Rodd Island under the control of this Department, so that Dr. Loir may have the use of it for conducting his important investigations and the preparation of Pasteur's Vaccine of Anthrax and other work.

I have, &c.,

HARRIE WOOD,  
Under Secretary.

## No. 29.

Telegram from The Premier of Queensland to The Colonial Secretary of New South Wales.

Colonial Secretary's Office, Brisbane, 23 September, 1892.

Has anything further been done with respect to the Stock Institute since your telegram of 11th December. It appears desirable to make definite arrangements as soon as possible, while Dr. Loir is in Australia; we agree to the location on Rodd Island.

S. W. GRIFFITH.

The Secretary for Mines and Agriculture.—G.R.D., 23/9/92.

The Under Secretary for Mines and Agriculture. B.C., 23/9/92.

## No. 30.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir, Department of Mines and Agriculture, Sydney, 7 October, 1892.

Referring to previous correspondence upon the subject of the transfer to this Department of the laboratory on Rodd Island for the purpose of carrying on experiments for the prevention of diseases in stock, I have the honor to request that I may be favoured with a reply to my communication of the 26th August last on that subject, in order that a reply may be given to the letter from Sir Samuel Griffith, the Premier of Queensland, to Sir George R. Dibbs of the 24th ultimo, copy of which I append hereto.

I have, &c.,

HARRIE WOOD,  
Under Secretary.

[Enclosure.]

Sir,

Referring to previous correspondence on the subject of the permission granted by the New South Wales Government to Dr. Loir to make use of the laboratory and appliances at Rodd Island for the purpose of carrying out, on behalf of this Government, a course of experimental investigation into the mode of preserving the virus of pleuro-pneumonia, I have the honor to inquire whether the Government of New South Wales will renew their permission to carry on the experiments at the expense of this Colony at Rodd Island.

I have, &c.,

S. W. GRIFFITH.

The Honorable Sir George R. Dibbs, K.C.M.G., Sydney.

## No. 31.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

Sir, Department of Lands, Sydney, 17 October, 1892.

With reference to your letter of the 7th instant, and previous correspondence, No. 92-4597 relative to the transfer to your department of the laboratory on Rodd Island for the purpose of carrying on experiments for prevention of diseases in stock, I am directed by the Secretary for Lands to return herewith Mines papers No. 92-10462 and to inform you that pending the voting of Parliament of a sum of money for the establishment of an Intercolonial Stock Institute, and of the appropriation of a site for the use of the Board of Health to make researches into diseases of men and animals, Rodd Island, may be used for scientific purposes for the present.

I am, however, to point out that it is anticipated that there will be only a temporary delay in applying the land in question to public recreation as dedicated.

I have, &c.,

WM. HOUSTON,  
Under Secretary.

This may I presume, be understood to hand over Rodd Island to this Department for the purposes of the proposed institute till another site and buildings be provided for the purpose. The Chief Inspector may now submit a proposal as to the conditions under which the work will be carried on.—H.W., 18/10/92. Submitted, Approved.—T.M.S., 20/10/92.

1892.

NEW SOUTH WALES.

DISEASES IN SHEEP ACTS OF 1866, 1878, AND 1882.  
(ADDITIONAL REGULATIONS UNDER THE.)

Presented to Parliament pursuant to Act 30 Vic. No. 16.

Department of Mines and Agriculture, Stock Branch,  
Sydney, 10 May, 1892.

DISEASES IN SHEEP ACT OF 1866, AND THE DISEASES IN SHEEP ACTS AMENDMENT  
ACTS OF 1878 AND 1882.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulations for carrying into effect the abovenamed Acts, which are hereby published for general information :—

TRAVELLING STATEMENTS, DELIVERY NOTES, PERMITS OR RENEWED PERMITS.

1. Every drover in charge of travelling stock shall, when delivering such stock to any other drover, or to any other person whosoever, deliver to such other drover or person the document under which such stock are or have been travelling, whether it be a Delivery Note, Travelling Statement, Permit, Renewed Permit, or Certificate; and such drover or other person shall, when required, produce such documents to any Inspector of Stock, Police Constable, or Justice of the Peace, or to the occupier of any run through or along which such stock may be travelling.

2. If the drover in charge of any travelling stock make an application to an Inspector of Stock for a Renewed Permit, he shall with such application deliver to the Inspector the Permit under which such stock are then travelling.

T. M. SLATTERY.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

DISEASES OF STOCK AND SHEEP.

(REPORT BY M. LOIR, M.D., ON.)

*Ordered by the Legislative Assembly to be printed, 7 September, 1892.*

[Laid upon the Table of the House in answer to Question No. 18 of 6 September, 1892.]

Question.

(18.) REPORT OF M. LOIR, OF THE PASTEUR'S INSTITUTE, ON DISEASES OF STOCK AND SHEEP:—DR. ROSS asked THE SECRETARY FOR MINES,—

- (1.) Is it true that M. Loir, of the Pasteur's Institute, has lately sent in a report to him on diseases of stock and sheep, offering to supply stock-owners with a certain specific in the shape of vaccine or virus, for blackleg, pleuro, anthrax, tuberculosis; also a lymph called maleine for the detection of glanders in horses; if so, will he have any objection to lay a copy of the report upon the Table of this House?
- (2.) Has the Government given M. Loir authority to manufacture his tuberculine on a large scale on Rodd Island, and to make experiments with his alleged specifics?
- (3.) In view of the prevalence of cancer tuberculosis amongst stock, will he see that such experiments are not calculated to aggravate in place of reducing the evil, and that the experiments are conducted under the supervision of some competent board of scientific experts, so that public health may be secured against any danger?

Answer.

MR. SLATTERY answered,—

- (1.) Yes. I will lay a copy of the report upon the Table.
- (2.) No; the Government has not given Dr. Loir the authority to manufacture Dr. Kock's tuberculine on a large scale on Rodd Island. Dr. Loir has proposed to give a demonstration of the efficacy of the tuberculine in detecting tuberculosis at a very early stage of the disease; and the Government have under consideration the expediency of giving Dr. Loir an opportunity of giving this demonstration, because if the efficacy of tuberculine as a test be demonstrated, its use as proposed will be of the greatest possible benefit in preventing the heavy losses now sustained by stock owners from tuberculosis, and the risk arising from the use of the meat and milk of cattle suffering from that disease.
- (3.) The tuberculine is now used all over Europe, and if it be decided to use it here, due care will be exercised both in its preparation and use.

Pasteur's Institute of Australia, Rodd Island,  
Box 1389, G.P.O., Sydney, 20 August, 1892.

Harrie Wood, Esq., Under Secretary for Mines and Agriculture,—  
Sir,

You asked me before my departure for Europe, six months ago, to inquire about the latest work on bacteriology which would be of interest to this Colony.

I had, in the six months during which I remained in Europe, the opportunity of seeing at the Veterinary School at Alfort, and at the Veterinary School at Lyons, and at the Pasteur's Institute in Paris, the result of experiments from which I think your Colony will derive benefit.

Blackleg.

M. Arloing, Director of the Veterinary School at Lyons, was good enough to furnish me with a considerable quantity of the vaccine of symptomatic anthrax (blackleg), and I am prepared to supply it to stockowners inhabiting the districts ravaged by the disease, if they request me to do so.

### Pleuro-pneumonia.

I have had several interviews with M. Arloing on the subject of pleuro-pneumonia and the discovery of its microbe. M. Arloing's experiments do not, so far, give any result from a practical point of view, but they are steps in the right direction, and thanks to the good advice given by M. Arloing, who is so competent to deal with this disease, I have brought with me a programme of experiments which will be easy to make in Australia, and which will, I hope, give a simple and easy solution of the problem which has so much interest for your Colony, that is to say, the preservation of the virus of pleuro-pneumonia for a long period.

### Cumberland Disease.

I have secured an important reduction in the price charged for anthrax vaccine, which I am now ready to distribute to stock-owners who desire to vaccinate their flocks at the rate of 2d. per sheep, instead of 3d., as charged last year, and 4d. per head of cattle, instead of 6d. per head.

### Tuberculosis.

I have ascertained, in connection with tuberculosis, facts which are of the greatest importance from the points of view of general hygiene and of the breeding of cattle. These relate to an easy method of diagnosis for bovine tuberculosis by the use of *Tuberculinum Kochii*, which we are ready to prepare at Rodd Island.

You will find in Appendix A of this report the history of this discovery, of which so much has been said, and of the results which are obtained by the use of this lymph, prepared at the Institute Pasteur, in Paris, for the diagnosis of tuberculosis. This very valuable diagnostic would present the great advantage of permitting the consumption of uncontaminated milk in towns, and moreover, in stock-raising country would permit the use of none but animals exempt from the disease for breeding purposes, which would soon bring about the extinction of tuberculosis in cattle.

### Glanders:

You will see from Appendix B that I have also brought with me a supply of maleine, a lymph which cannot give the disease, but will enable the immediate detection of glanders in horses, a matter which may be of great interest to the colonies in which the disease is unknown, and in which it may be useful to make a rapid diagnosis of the disease in order that the necessary means of disinfection may be adopted to prevent the introduction of the scourge.

I may be permitted to add, sir, that I have returned accompanied by Dr. L. Momont, a distinguished bacteriologist, who has been for four years attached to the Institute Pasteur, in Paris. We are both at the disposal of your Colony if we can be of any service to you in bacteriologist questions.

Please accept, sir, the homage of my profound respect.

A. LOIR, M.D., Paris.

## APPENDIX A.

### TUBERCULINE.

AFTER Dr. Koch's discovery of tuberculine its action as a means for detecting tuberculosis was in some small measure experimented upon everywhere, and its value was much questioned. Nevertheless, as an agent for revealing the existence of tuberculosis in cattle, it is destined to render very great service. At first some persons denied its value as a diagnostic, while others brought forward personal experiences in which the results were said to have been favourable.

In 1891, M. Nocard published the results of a trial made on a large scale. Fifty-seven adult cattle, intended for slaughter as butcher's meat, were made to undergo an injection of the tuberculine prepared by M. Roux at the Institute Pasteur in Paris. Out of nineteen animals which showed a rise of temperature, eighteen were affected with tuberculosis. Among the thirty-seven which had not shown any rise of temperature, one only was affected with tuberculosis, but it was in the last stage of the disease, and it has been proved by previous experiment that animals suffering from tuberculosis in its last stage may manifest no reaction.

Since then a large number of veterinary surgeons in Europe have published experiments which prove more conclusively the diagnostic value of this lymph.

If cattle affected with tuberculosis are inoculated with tuberculine a specific action results, which is manifested by a considerable elevation of the temperature. The injection of a strong dose of 30 to 40 cubic centimetres (*i.e.*, 720 to 960 drops), according to the size of the subject, produces in diseased animals a rise in temperature of from 1° to 3°. The same dose injected into healthy animals produces no appreciable febrile reaction.

The duration and intensity of the reaction do not in any way depend upon the number and gravity of the lesions. It would now appear as though the reaction were more clearly defined in cases in which, the lesion being still of a very limited extent, the animal has preserved the appearance of perfect health. In subjects very gravely affected—consumptive, in the proper sense of the word—and more especially in those with feverish symptoms, the reaction may be very slightly pronounced, or even absolutely non-existent.

Tuberculine, if injected into cows in dairies supplying milk to large towns, would therefore render great service by enabling milk derived from animals affected with tuberculosis to be withdrawn from circulation. The question of tuberculosis in cattle is, in effect, of importance not only to the breeder as regards reproduction, but also from a sanitary and hygienic standpoint, more especially as affecting children who in towns consume unboiled milk; and it often happens that the most capable clinic is powerless to diagnose tuberculosis. Here is a typical example, mentioned by M. Nocard:—Among a number of cows, selected haphazard from a herd for experimental purposes, was one animal which had been in the stable for more than a year. It was in perfect condition, having never been ill and never having coughed. The reaction after the injection of tuberculine was so well defined that the owner did not hesitate to have it killed. The cow was suffering from tuberculosis, but so slightly that a clinic could not have detected the fact. There was only one small cavity the size of a walnut in the right lung.

Two objections have been made to tuberculine—its effect upon lactation and upon gestation. It has been proved by numerous experiments that in the case of cows undergoing experiment their quantity of milk remains the same, and that gestation follows its course without accident.

To sum up, if the numerous experiments made for more than a year past are borne in mind, it can be concluded that tuberculine presents no dangers for healthy animals, while it constitutes a reactive agent of the greatest diagnostic value, even for lesions of recent origin and of the most limited extent.

If it were possible to only breed from animals which have not manifested the characteristic reaction after the injection of tuberculine, the result might be the rapid disappearance of tuberculosis from herds in which it has made the most ravages.

We are ready to prepare this tuberculine on a large scale at Rodd Island, to supply it to the Government if desired, and, if necessary, to demonstrate the efficacy of the method. The experiments which we should be able to make would be nothing more than a repetition, for the benefit of Australian stock-owners, of the experiments which we have followed in Europe during the last six months.

---

#### APPENDIX B.

##### · MALEINE.

As soon as tuberculine was recognised as a revealing agent of tuberculosis, a large number of bacteriologists began to seek a similar substance which could serve as a reactive agent for glanders. This was discovered at Dorpat (in 1891), and received the name of "maleine." Injected beneath the skin of an animal affected with glanders, it produces, a few hours after its injection, a rise in temperature; in a healthy animal it causes no reaction.

In these colonies, where glanders does not exist, this maleine, which we have brought with us from Europe, and which we place at the disposal of the Government, may facilitate measures for sanitary protection and prevent the introduction of glanders into the colonies.

A. LOIR, M.D.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

CAMPING AND WATER RESERVES IN THE NAMOI ELECTORATE.  
(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 10 November, 1892.*

[Laid upon the Table of the House in answer to Question No. 21, of 31 August, 1892.]

Question.

(21.) CAMPING AND WATER RESERVES IN NAMOI ELECTORATE:—MR. SHELDON asked THE SECRETARY FOR MINES,— Will he furnish the numbers and nature of all camping and water reserves not withdrawn from lease in the Namoi Electorate?

Answer.

SCHEDULE of Camping Reserves which are not withdrawn from Lease or License in the Electoral District of the Namoi, Central Division.

No. of Reserve	Purpose for which notified.	Date of Notification.	Area.	Parish.	County.	Holding.	No	Leasehold or Resumed Area.
1,860	Reserved from sale for water supply and camping	5 Mar., 1883	640	Calo...	Baradine	Thinawindie	427	Resumed area.
1,247	Do do	12 Aug., 1878	356	Gooreanawa	do	Ulmambri	79	do
12,016	Reserved from sale for travelling stock and camping	12 July, 1890	340	Mcimbene	do	Goorianawa	208	Leasehold area.
1,857	Reserved from sale for water supply and camping	5 Mar., 1883	640	Parsons	do	Wangen	370	Leasehold and resumed area.
1,858	Do do	5 Mar., 1883	1,280	do	do	Goorianawa	208	Resumed area.
1,934	Reserved from sale for camping	21 Jan., 1884	840	Dangar	Benarba	Oreel	251	Resumed area.
1,865	Do do	8 Sept., 1884	394	Gunathea	do	do	251	do

**PASTURES AND STOCK PROTECTION ACT.**  
(PETITION FROM CERTAIN FARMERS AND STOCK-OWNERS, IN THE DISTRICT OF TENTERFIELD,  
IN FAVOUR OF AN AMENDMENT OF.)

*Received by the Legislative Assembly, 16 November, 1892.*

---

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Farmers and Stock-owners in the District of Tenterfield,—

RESPECTFULLY SHOWETH:—

1. That your Petitioners are assessed under the provisions of the "Pastures and Stock Protection Act."
2. That they find the payment of such assessment a burdensome and unnecessary tax, as the increased demand and high prices obtained for marsupial skins are sufficient inducement for their destruction, and your Petitioners receive no benefit whatsoever from the working of the Act.
3. That many Pastoralists at present protect marsupials by not allowing shooters to go upon their runs to destroy them without paying a royalty in the shape of a percentage on the skins obtained.
4. Your Petitioners would therefore pray that the said Act may be repealed, or amended in such a way that only such districts as may petition for the continuation of the working of the Act may be assessed.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 258 signatures.]

---

1892-3.

## NEW SOUTH WALES.

**IMPORTED STOCK ACT OF 1871, AND THE IMPORTED  
STOCK ACT AMENDMENT ACT OF 1884.**  
(AMENDED REGULATIONS UNDER.)

Presented to Parliament, pursuant to Act 35 Vic. No. 6, and 48 Vic. No. 12.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
of Her Majesty's Most Honourable  
(L.S.) Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS by section ten of the "Imported Stock Act of 1871," the Governor is empowered by Proclamation in the Government Gazette, to restrict or absolutely prohibit for any specified time the importation or introduction of any stock, fodder, or fittings from any other Colony or country in which there is reason to believe any infectious or contagious disease in stock exists: And whereas there is reason to believe that certain infectious and contagious diseases exist in some of the countries in Europe, Asia, Africa, America, and in colonies other than the Australian Colonies: Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, the Governor aforesaid, do, by this my Proclamation, hereby absolutely prohibit, for a period of two years from the date hereof the importation or introduction into this Colony of the stock, articles, or things mentioned in Schedule A hereto, from the countries and colonies therein named, and under the conditions therein specified, and subject to the Regulations issued under the abovenamed Act, and the "Imported Stock Act Amendment Act of 1884."

## SCHEDULE A.

**IMPORTED STOCK ACT OF 1871 AND THE IMPORTED  
STOCK ACT AMENDMENT ACT OF 1884.**

*Foreign Stock and Things Prohibited from being Imported or  
Introduced.*

Stock.	From what colony or country.
Cattle and Sheep .....	From all foreign countries and colonies, except from Great Britain and Ireland, unless such cattle or sheep shall have been 14 days in Great Britain or Ireland.

605—A

Stock.	From what colony or country.
Goats and Deer, Antelopes, Llamas, Buffaloes, and other Ruminants.	From all foreign colonies and countries, unless they are imported for a Zoological Society, when they may be landed and quarantined as provided by regulation.
Fodder and Litter .....	From any foreign colony or country, or from any foreign vessel, with which foreign animals have been in contact.

Given under my Hand and Seal, at Government House, Sydney, this tenth day of January, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,  
T. M. SLATTERY.  
GOD SAVE THE QUEEN!

NOTE.—The foreign stock undermentioned are not within the terms of the above prohibition.

*Foreign Stock not Prohibited.*

Stock.	From what colony or country.
Horses .....	Any colony or country.
Camels .....	Any colony or country.
Cattle .....	From Great Britain and Ireland, or which have been 14 days therein.
Sheep .....	From Great Britain and Ireland, or which have been 14 days therein.
Swine .....	From Great Britain or Ireland, or which have been 14 days therein.
Goats and Deer, Antelopes, Llamas, Buffaloes, and other Ruminants.	From any colony or country, if they are intended for a Zoological Society; otherwise they are inadmissible.
Dogs .....	From any colony or country.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
of Her Majesty's Most Honourable  
(L.S.) Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS by section three of an Act passed in the forty-eighth year of the reign of Her present Majesty, intitled the "Imported Stock Act Amendment Act of 1884," it is enacted that the term "Stock" shall, in addition to cattle and sheep, include goats, swine, dogs, and such other animals as the Governor may, by Proclamation published in the Government Gazette, declare to be subject to the provisions of the said Act: And whereas horses suffer from the diseases known as Glanders and Farcy, and camels, deer, antelopes, llamas, and buffaloes suffer from the diseases known as Foot and Mouth Disease and Rinderpest: And it is therefore desirable that their importation into the Colony should be made subject to the provisions of the abovenamed Act and of the "Imported Stock Act of 1871": Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, hereby declare that horses, camels, deer, antelopes, llamas, and buffaloes shall be included in the term "Stock," and shall be subject to the provisions of the "Imported Stock Act of 1871" and the "Imported Stock Act Amendment Act of 1884"

Given under my Hand and Seal, at Government House, Sydney, this tenth day of January, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

T. M. SLATTERY.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
of Her Majesty's Most Honourable  
(L.S.) Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS by section one of an Act passed in the thirty-fifth year of the reign of Her present Majesty, intitled the "Imported Stock Act of 1871," the Governor, with the advice of the Executive Council, is empowered to declare, by Proclamation in the Gazette, diseases, other than Cattle Plague, Foot and Mouth Disease, and Sheep-pox, to be infectious or contagious diseases for the purposes of the said Act: Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, hereby declare the diseases known as Scab, Catarrh, Rabies, Pleuro-Pneumonia, Tuberculosis, Glanders, Farcy, Swine-fever, Hog Cholera, Warbles, Actinomycosis, Cancer, Anthrax, Influenza, and Mange in horses, Ticks and Lice in sheep, and Trichinosis in swine, to be infectious or contagious diseases within the meaning and for the purposes of the said Act and of the "Imported Stock Act Amendment Act of 1884."

Given under my Hand and Seal, at Government House, Sydney, this tenth day of January, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

T. M. SLATTERY.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
of Her Majesty's Most Honourable  
(L.S.) Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS by section ten of the "Imported Stock Act of 1871," the Governor is empowered by Proclamation in the Government Gazette, to restrict or absolutely prohibit for any specified time the importation or introduction of any stock, fodder, or fittings from any other Colony or country in which there is reason to believe any infectious or contagious disease in stock exists: And whereas by a Proclamation under

the hand of His Excellency the Governor, published in the Government Gazette of this date, pursuant to the provisions of the "Imported Stock Act of 1871," amongst other things Scab in Sheep was declared to be an infectious or contagious disease: And whereas there is reason to believe that Scab in sheep exists at the present time in the Colony of Western Australia, and that foreign stock are admitted into that Colony without the necessary disinfection and quarantine: Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, absolutely prohibit, for a period of twelve months from this date, the importation or introduction of any stock, or any fodder or fittings put on board any vessel with, or for the use of, any stock from the Colony of Western Australia.

Given under my Hand and Seal, at Government House, Sydney, this tenth day of January, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

T. M. SLATTERY.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
of Her Majesty's Most Honourable  
(L.S.) Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS by the third section of an Act passed in the forty-eighth year of the reign of Her present Majesty, intitled the "Imported Stock Act Amendment Act of 1884," the Governor is empowered by Proclamation to suspend the provisions of any one or more of the sections of that Act, or of the "Imported Stock Act of 1871," for any period not exceeding six months, in respect to any stock introduced or proposed to be introduced from any of the Australian Colonies: And whereas it is desirable to suspend the operation of the provisions of the said Acts and of any regulation made thereunder relating to the quarantining of Australian stock other than sheep imported from any of the Australian Colonies, for a period of six months: Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, the Governor aforesaid, with the advice of the Executive Council, do hereby suspend, for a period of six months from this date, the provisions of section 7 of the "Imported Stock Act of 1871," and of section 4 of the "Imported Stock Act Amendment Act of 1884," and of any such regulation as aforesaid, so far as the same relate to the quarantining of stock other than sheep from any of the Australian Colonies, except in so far as relates to stock from Western Australia, the importation or introduction of which is hereby prohibited.

Given under my Hand and Seal, at Government House, Sydney, this tenth day of January, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

T. M. SLATTERY.

GOD SAVE THE QUEEN!

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
of Her Majesty's Most Honourable  
(L.S.) Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS by section ten of the "Imported Stock Act of 1871," the Governor is empowered by Proclamation in the Government Gazette, to restrict or absolutely prohibit for any specified time the importation or introduction of any stock, fodder, or fittings from any other Colony or country in which there is reason to believe any infectious or contagious disease in stock exists: And whereas by a Proclamation under the hand of His Excellency the Governor, published in the Government Gazette of this date, pursuant to the provisions of the "Imported Stock Act of 1871," amongst other things Scab in Sheep was declared to be an infectious or contagious disease: And whereas there is reason to believe that Scab does not now exist in sheep in the Colony of New Zealand: Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, hereby withdraw the Proclamation

of the 18th December last (1892), which prohibits the importation or introduction of any sheep, or any fodder or fittings put on board any vessel with, or for the use of, any sheep from the Colony of New Zealand.

Given under my Hand and Seal, at Government House, Sydney, this tenth day of January, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

T. M. SLATTERY.

GOD SAVE THE QUEEN!

Department of Mines and Agriculture,  
Stock Branch,  
Sydney, 10th January, 1893.

**IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.**

The following Regulations, which have been made by His Excellency the Governor, with the advice of the Executive Council, for carrying into effect the provisions of the abovenamed Acts relating to the importation and introduction of stock by sea into this Colony, are hereby published for general information.

T. M. SLATTERY.

1. These Regulations shall be divided into the following parts:—

- PART A.—INTRODUCTORY AND GENERAL.
- PART B.—INTRODUCTION OF AUSTRALIAN STOCK BY SEA.
- PART C.—INTRODUCTION OF FOREIGN STOCK.
- PART D.—PENALTIES AND CONFISCATIONS.

**PART A.—INTRODUCTORY.**

**I.—GENERAL RE ALL STOCK.**

Rescission of previous Regulations.

2. The Regulations of the Governor in Council, expressed to be made under the powers conferred by the above-recited Acts, and of other powers enabling him in that behalf of the date mentioned in Form A hereto shall be, and the same are hereby rescinded from and after the date of these Regulations, except as to acts, matters, and things done or commenced thereunder: Provided that stock now in quarantine may be released on the expiration of the periods prescribed by these Regulations.

Stock to which these Regulations shall apply.

3. All the provisions of the said recited Acts shall extend to all stock of the kinds mentioned in Form B hereto, and to any other stock to which the provisions of the said Acts may hereafter be extended.

What are to be deemed infectious or contagious diseases, and what infected stock.

4. The diseases mentioned in Form C hereto are hereby declared to be infectious or contagious diseases.

All imported stock to be quarantined in a proclaimed quarantine.

5. All imported stock admissible into this Colony under the provisions of the abovenamed Acts, and the Proclamations and Regulations made and issued thereunder, shall be taken to and detained in the quarantines proclaimed for that class of stock, and dealt with and released as prescribed by these Regulations.

Interpretation.

6. In these Regulations, the following words and terms shall have the meanings which they bear in section 1 of the Imported Stock Act of 1871, namely:—

"Attendant on Stock," "Australian Colonies," "Cattle," "Destroy," "Fittings," "Fodder," "Governor," "Inspector," "Infected Stock," "Master," "Minister," "Owner," and "Sheep"; and the following other words and terms shall, in these Regulation, unless the context otherwise indicate, have the meanings set against them respectively, namely:—

"Dog."—Any dog, slut, or whelp of any breed or age.  
"Foreign."—As regards places, stock, things, or vessels—any place, port, stock, thing, or vessel other than any Australian place, port, stock, thing, or vessel.

"Horses."—Any one or more horses, mares, colts, fillies, foals, asses, or mules.

"Imported stock."—Any stock arriving in this Colony by sea; and the carcass, skin, hair, wool, horns, and hoofs, or any portion of any such stock.

"Infectious or contagious disease."—Any of the infectious or contagious diseases in stock specified in Schedule C hereto.

"Litter."—Any straw, or other bedding or litter, or any manure or other excreta with which stock shall have been in direct or indirect contact.

"Prescribed" means prescribed by any Regulations.

"Quarantine."—The Government Quarantine set apart for stock, including dogs.

"Stock."—Any one or more of the animals mentioned in Schedule B hereto.

"Ships stock."—Any stock, not intended to be introduced, on board ship for the use of the passengers or crew and stock (including dogs) not intended to be introduced nor transhipped.

"Swine."—Any one or more boars, sows, farrows, or pigs of any breed or age.

"Vessel."—Any steamer, ship, lighter, launch, boat, punt, or ferryboat.

Introduction of infected stock, &c., prohibited.

7. The introduction into this Colony by sea or land of any stock, articles, or things infected or likely to be infected with any disease is hereby prohibited.

Veterinary surgeons not to act under Regulations and for the owner.

8. No veterinary surgeon shall perform any duties as such under these Regulations with respect to any stock which are or have been under his professional treatment on behalf of the owner or consignee thereof.

Owner to give notice of arrival of stock.

9. If any stock are brought by sea to a port or place in this Colony, the owner thereof shall, within twenty-four hours of their arrival, give the inspector at or near such port or place notice to the effect of Form D hereto: Provided that the notice hereby required may be dispensed with if the master of the vessel by which such stock are brought make and deliver to the Custom's Officer first boarding his vessel a declaration to the effect of Form G or L hereto, according as such stock are Australian or Foreign stock.

The whole expense re stock to be borne by owner.

10. The owner of the stock shall pay all charges and expenses connected with the inspection, transporting, quarantining, housing, sustenance, disinfecting, dipping, dressing, or veterinary, or other treatment of any stock from the time of their arrival in the waters of this Colony until they are, as the case may be, released from detention or quarantine, transhipped, or destroyed; and, if destroyed, the owner shall also be at the expense of the destruction of such stock, and of the removal and disposal of the carcasses of any which may die or be destroyed; and the charges and expenses shall be at the rates set forth in Form O hereto, and shall be payable on demand; and the charges and expenses for transit, inspection, and dipping shall be calculated on the whole number of stock, and where there are more owners than one, each owner shall pay a proportionate share thereof.

All risk and loss to be borne by the owner.

11. All loss sustained with respect to any imported stock while being conveyed to or from, or whilst in quarantine, whether by accident or by sickness arising from natural causes, or contracted from other stock, or by the destruction, or detention, or quarantine, or dipping, or dressing of such stock, to prevent the spread of disease—shall be borne by the owner of such stock, and he shall have no claim whatever for compensation for any such loss.

No stock to be landed but on Inspector's permit.

12. No person shall land nor attempt to land, nor permit to be landed, any imported stock, nor any fodder or fittings with which such stock have been in contact, or likely to have been in contact—although their introduction may not be prohibited—without the written permission of an inspector, to the effect of Form E hereto, except Australian horses and dogs, as provided by No. 26 hereof: And any Inspector of Stock, Officer of Customs, or member of the police force, may prevent the landing of stock about to be introduced, or detain any such stock which may have been newly introduced by sea into this Colony until these Regulations have been complied with.

If inspector is doubtful he may detain stock

13. If, on the examination of any imported stock, the inspector has reason to doubt their entire freedom from infection, he may either temporarily detain the same on board the vessel by which they were brought, or temporarily isolate them on some other vessel, or in some safe and convenient place, until they are examined by a veterinary surgeon and found free from infection: And the owner of the stock shall bear the expense of such detention, isolation, and examination.

Owner to receive notice when stock are ailing or when to be destroyed.

14. When any stock are ailing, or about to be destroyed under the abovenamed Acts or Regulations thereunder, notice thereof shall be given to the owner of such stock to the effect of Form F hereto.

How notices are to be given.

15. Notices under these Regulations may be either served personally on the person to whom such notice is required to be given, or left at his last-known residence or place of business, or sent to him by registered letter through the post.

Inspector's directions to be carried out.

16. Any person receiving a requisition or direction from an inspector under these Regulations, shall, with due despatch, give effect to and carry out the same; and if there be any information or document in the possession or power of any

person which is required by an inspector under these Regulations, and asked for by him, the same shall be given by such person; and the requisition so made, or any directions so given by an inspector, may, if not carried out by the owner, be so by the inspector at the owner's expense, and the expenses incurred may be recovered in any competent Court.

## PART B.—INTRODUCTION OF AUSTRALIAN STOCK.

### II.—GENERAL RE AUSTRALIAN IMPORTED STOCK.

What shall be deemed a clean Colony.

17. Any Australian Colony shall, as regards any particular kind of stock, be deemed a clean Colony if the introduction of that kind of stock, or of stock of a different kind, but liable to be infected with the same disease, is not prohibited from being introduced from such Colony in terms of these Regulations; and no stock shall be introduced into this Colony but from a clean Colony, except in the case of stock introduced in accordance with No. 25 of these Regulations.

What shall be deemed a clean vessel.

18. When the question is raised with respect to any particular kind of stock, whether or not the vessel by which such stock are intended to be conveyed, or have been conveyed, is a clean Australian vessel, then it shall be held and deemed, except as regards vessels carrying stock imported, in accordance with No. 25 of these Regulations, that such vessel is not a clean vessel,—

- (I) If any such stock have been put on board such vessel at any port or place not being a port or place in a clean Australian Colony.
- (II) If within the next preceding three months such vessel shall have traded to or called at any port or place not in a clean Australian Colony.
- (III) If such vessel shall during that time have had on board any infected stock of the same kind, or stock of another kind, but liable to be infected with the same disease or diseases as such first-mentioned stock.
- (IV) If such vessel shall during that time have carried any stock, or the carcass, or skin, or any other portion of the carcass of any stock from any place not in a clean Australian Colony, or,—
- (V) If such vessel shall have received on board any stock or skins, or any fodder or fittings from a vessel which is not a clean Australian vessel.

And the exporter of stock shall, in every case, produce to the inspector examining the same a declaration to the effect of Form G hereto by the master or agent of the vessel by which such stock are to be shipped, that such vessel is a clean Australian vessel in the terms of this Regulation. And no Australian stock shall be introduced by sea but by a clean vessel, except as hereinbefore prescribed.

Master of Australian vessel to make declaration on arrival.

19. Upon the arrival, or within twelve hours thereafter, of any Australian vessel, the master thereof shall deliver to the officer of Customs first boarding his vessel, the declaration to be made by him or by the agent of his vessel, as hereinbefore prescribed to the effect of Form G hereto; and if there are any stock on board any such vessel with respect to which the master shall have failed to make the required declaration, then such stock shall be detained and dealt with as the Minister shall direct.

Declaration and certificate to be produced to inspector examining stock.

20. If an owner intends to import any Australian stock into this Colony, he shall deliver to the inspector examining the same a declaration duly certified by the inspector of the port from which such stock were shipped to the effect of Form H hereto.

Infected Australian stock, how to be disposed of.

21. If any Australian stock, fodder, or fittings shall be found on arrival, or on being landed, to be actually affected with any of the diseases mentioned in Form C hereto, except horses affected with influenza, and sheep affected with ticks or lice, such stock shall be destroyed, and stock infected, but not actually affected, shall, together with any fodder or fittings which may have been in contact with such infected stock, be destroyed or otherwise disposed of, as the Minister shall direct, and no compensation shall be paid to the owner of any stock so destroyed.

If found free from infection, &c., imported stock to be allowed to land.

22. Australian imported stock arriving from a clean Australian Colony by a clean Australian vessel may be admitted into this Colony if found free from infection, on the production to the inspector examining them of a declaration to the effect of Form G hereto by the master or agent of the vessel, as prescribed by No. 18 of these Regulations, and of a declaration by the owner of the stock, and a certificate by the inspector of the port from which the stock were shipped, to the effect of Form H hereto.

Stock unaccompanied by a declaration or certificate to pay fees.

23. If the declaration or certificate, in terms of Schedule H hereto, be not, as hereinbefore prescribed, produced to the inspector examining such stock, then the owner thereof shall make the prescribed declaration, and shall pay the inspector, according to the kind of such stock, the following fees, namely:—

- If such stock be horses, swine, cattle, or other ruminants, a fee of ..... 5s. each.
- If such stock be sheep, a fee of ..... 2s. 6d. each.
- If such stock be dogs, a fee of ..... 5s. each.

Sheep unaccompanied by certificate of inspector at port of shipment to be detained.—Sheep to be landed at Sydney.

24. If the stock for which the required certificate is not produced "be sheep" they shall not be landed until their owner shall satisfy the inspector that they have been duly examined by an inspector at the port at which they were shipped, and certified by him to be free from infection. No imported Australian sheep shall be landed except at the port of Sydney.

Australian stock landed for slaughter at port of debarkation.

25. Australian stock, although they may be imported from an Australian Colony which is not a clean Colony, or by an Australian vessel which is not a clean vessel as regards the particular kind of stock so imported, may be landed for immediate slaughter in a quarantine specially set apart for that purpose, at the port of debarkation, and killed and dealt with as the Minister shall direct.

### III.—IMPORTED AUSTRALIAN HORSES AND DOGS.

Australian horses and dogs accompanied by declaration and certificate may be landed on permit of Customs officer.

26. All Australian horses and dogs imported into this Colony, if they are found on arrival to be free from infection, and are accompanied by a declaration duly certified by the inspector for the port from which they were shipped, to the effect of Form J hereto, may be landed on the permit in writing of the officer of Customs put in charge of the vessel by which such horses or dogs are so imported.

### IV.—MISCELLANEOUS RE AUSTRALIAN IMPORTED STOCK.

Australian stock not to be transhipped without the written permission of an inspector.

27. No one shall, in any river, port, or harbour, or elsewhere in any of the waters of this Colony, transfer any Australian stock, except horses and dogs referred to in No. 26 of these Regulations from any vessel to any other vessel, without the written authority of an inspector, and in accordance with such authority neither shall the master of any vessel allow any stock to stray from his vessel, or to be removed therefrom, without the written authority of an inspector.

Foreign stock on board an Australian vessel.

28. If any foreign stock shall be brought by sea by an Australian vessel and shall not have performed the prescribed quarantine and been duly certified to be free from infection, then such stock shall, for the purpose of these Regulations, be deemed to have been shipped at the place whence the same were originally brought, and such vessel shall for three months thereafter be held and deemed to be a foreign vessel.

## PART C.—INTRODUCTION OF FOREIGN STOCK AND THINGS.

### V.—FOREIGN STOCK AND THINGS PROHIBITED.

What foreign stock and things are not admissible.

29. The introduction of the following foreign stock and things by sea or land are prohibited by proclamation of the same date as these Regulations:—

- (1.) Cattle and sheep from all foreign countries and colonies, other than Great Britain and Ireland, unless they shall have been landed and remained for not less than fourteen days in Great Britain or Ireland.
- (2.) Goats, deer, antelopes, llamas, buffaloes, and any other ruminants except cattle and sheep, from all foreign countries and Colonies, unless for a Zoological Society.
- (3.) All fodder and litter from all foreign countries and colonies or from any foreign vessel or any fodder or litter with which foreign stock shall have been in contact.

### VI.—FOREIGN STOCK PERMITTED TO BE INTRODUCED.

What foreign stock are admissible.

30. The following foreign stock may be admitted subject to the Regulations hereby prescribed, namely:—

- (1.) Horses, from any colony or country.
- (2.) Camels, from any colony or country.
- (3.) Cattle, sheep, or swine from Great Britain or Ireland, or which have been fourteen days therein.
- (4.) Goats, deer, llamas, antelopes, buffaloes, and other ruminants, intended for a Zoological Society, from any colony or country.
- (5.) Dogs, from any colony or country.

Port at which foreign stock can be landed.

31. Foreign stock shall only be landed at the Port of Sydney.

## VII.—FOREIGN STOCK PRIOR TO STARTING AND AT PORT OF SHIPMENT.

Notice to Chief Inspector of intention to import foreign stock.

32. Any person intending to introduce foreign horses, cattle, sheep, or swine into this Colony shall give the Chief Inspector of Stock not less than fourteen days' notice in writing of his intention to the effect of Form I hereto.

Declaration by owners, and certificate by District Inspector prior to starting foreign stock for port of shipment.

33. The exporter of any foreign stock intended to be introduced into this Colony shall take the following steps :—

- (1.) He shall make a declaration before a Justice of the Peace to the effect of Form J hereto.
- (2.) He shall upon the declaration so made obtain the endorsement of a certificate by the Inspector of Stock, or of a duly qualified veterinary surgeon in the district in which such stock are when sold for exportation or from which they start for the port of shipment, to the effect of the certificate in the said Form J.
- (3.) He shall deliver such declaration and certificate, as hereinafter provided, to the veterinary surgeon inspecting such stock at the port of shipment. If any foreign stock intended to be landed arrive, unaccompanied by a declaration and certificate, or either of them, as required by this Regulation, they shall not be admitted to quarantine unless to undergo such additional quarantine as the Minister shall decide.

Foreign cattle, sheep, and swine to be shipped from London or Glasgow.

34. No foreign cattle, sheep, or swine intended to be imported into this Colony, shall be allowed to be landed in this Colony unless they shall have been shipped at the port of London or Glasgow, and shall have been fourteen days at least in Great Britain or Ireland.

Stud stock and stock for ship's use to be examined at port of shipment by approved veterinary surgeon.

35. All stock, prior to their being put on board any vessel to be shipped for this Colony, as well as all stock put or to be put on board the same vessel for the use of the passengers or crew, shall be carefully inspected at the owner's expense, by a duly qualified veterinary surgeon, approved of by the Governor in that behalf; and the owner of such first-mentioned stock shall deliver to the veterinary surgeon making such inspection the declaration and certificate to the effect of Form J hereto.

The veterinary surgeon inspecting stock to obtain declaration, &c., and examine stock, and certify to health or otherwise, of stock.

36. If the veterinary surgeon aforesaid shall have obtained the declaration and certificate hereinbefore mentioned, and shall be satisfied that the whole of the stock put on board, or to be put on board, such vessel are free from infection, and that all the other requirements of the Regulations in force have up to that time been duly complied with, he shall, but not otherwise, make and deliver a declaration to the effect of Form K hereto, to the master of the vessel, together with the declaration and certificate hereinbefore mentioned, without which no master shall receive on board his vessel any foreign stock intended to be landed in this Colony.

## VIII.—FOREIGN STOCK AT SEA AND WHILE IN NEW SOUTH WALES WATERS.

Duty of master of vessel while in New South Wales waters re foreign stock and their treatment by inspector.

37. It shall be the duty of the master of the vessel on board of which there are any foreign stock as well as the actual owner thereof :—

- (1.) To cause all such stock to be kept securely confined, penned, chained, or fastened up, as soon as such vessel is in the waters of this Colony, and so long as such vessel remains therein and the stock are on such vessel.
- (2.) To prevent any person except the attendant on such stock touching or handling the same without the permission of an inspector.
- (3.) To see that all such stock are cleansed, disinfected, and treated as the inspector shall direct, and that the stock are kept so as that they shall not be able to stray or leave the vessel, nor to come in contact with any person other than their attendant; nor, if the stock be dogs, shall allow any Australian dogs to come on board such vessel.

The master and attendant on arrival to make declarations to Customs' Officer first boarding vessel.

38. The master of the vessel on which there are any foreign stock and the attendant on such stock during the voyage, shall on arrival in this Colony make a statutory declaration to the effect of Form L hereto, and the master shall forthwith deliver such declaration, together with the declaration and certificate to the effect of Form J hereto, and that to the effect of Form K hereto, at the office of the Chief Inspector of Stock.

## IX.—HOW FOREIGN STOCK ON ARRIVAL ARE TO BE DEALT WITH.

Stock on board a foreign vessel to be examined by an inspector and veterinary surgeon.

39. All stock on board any foreign vessel, whether intended to be landed in this Colony or not, shall, on arrival in this Colony, be forthwith examined by an inspector and veterinary surgeon in company, who shall ascertain whether or not such stock are infected with any disease whether mentioned in Form C or not, and shall make and forward their joint report to the Chief Inspector to the effect of Form M hereto.

How foreign stock found to be infected are to be dealt with.

40. If any foreign stock on board ship, whether they are intended to be landed or not, are found to be infected, they shall be dealt with as follows :—

- (1.) If the stock be dogs, and they are infected with rabies, they shall be at once destroyed on the order of an inspector or veterinary surgeon examining them.
- (2.) If the stock be camels, deer, goats, or antelopes, and they are infected with scab, scabies, or lice, and not with any other infectious or contagious disease, then, instead of being destroyed, they shall be dressed as the Chief Inspector shall direct.
- (3.) All other foreign stock found to be infected shall be destroyed or otherwise disposed of as the Minister shall direct.

All foreign stock, including ship's stock, to be sent to quarantine.

41. All foreign stock, if found on inspection as hereinbefore prescribed to be not infected, shall within forty-eight hours thereafter be either removed to quarantine or killed, or otherwise disposed of as the Minister shall direct: Provided that the carcasses of any cattle, sheep, or swine so killed, if found free from infection, may, under the supervision of the inspector, be delivered ashore.

Payment of charges on foreign stock.

42. If foreign stock are not prohibited from being landed, and are reported to be free from infection, and if the Chief Inspector is satisfied that they are not infected, and that all the requirements of these Regulations have been fully complied with, he shall take either of the following courses :—

- (1.) He will either take a bond and guarantee to the effect of Form N hereto, duly executed by the owner or consignee of such stock, and two approved sureties that such owner or consignee will, as regards such stock, faithfully carry out the conditions contained in these Regulations, and pay all the charges and expenses specified in Form O hereto, in so far as they may be incurred with respect to such stock as well as any other charges and expenses payable by him under these Regulations.
- (2.) Or if such a course be deemed necessary, the owner or consignee of such stock may be required by the Inspector to deposit with him such sum of money as he shall deem sufficient to defray all such charges and expenses, besides granting such bond and guarantee.

And upon such bond and guarantee being obtained, or as the case may be, such sum of money and bond being deposited, the Chief Inspector may grant an order to the owner for the removal of such stock to quarantine, and to the quarantine keeper to receive them, to the effect of Form P hereto, without which no such stock shall leave the vessel.

## X.—QUARANTINE OF FOREIGN STOCK.

Stock to be taken by water to quarantine, and kept at owner's risk and expense.

43. All such foreign stock, including dogs, found, on inspection, to be free from infection, shall, when necessary, before leaving the vessel be washed and disinfected as the Chief Inspector shall direct, and shall within the time hereinbefore specified be conveyed by water in a vessel which the Chief Inspector shall provide, at the owner's risk and expense, to quarantine, and shall remain in quarantine for the terms respectively prescribed in the next succeeding Regulation for the different kinds of such stock, during which they shall be kept at their owner's risk and expense, and shall be washed, dipped, and disinfected as prescribed by these Regulations and as the Chief Inspector of Stock shall direct.

Duration of quarantine for foreign stock.

44. The several kinds of foreign stock herein mentioned admitted to quarantine, shall remain for the respective periods herein specified, dating from the day of removal from the vessel,—namely: Horses, 14 days; cattle, including buffaloes, 60 days; sheep, 60 days; camels, 90 days; goats deer, antelopes, llamas, and other ruminants, 60 days; swine, 60 days; dogs, 6 months.

**Foreign sheep to be dressed in quarantine**

45. All foreign sheep whilst in quarantine shall forthwith receive two or more dressings with tobacco and sulphur, or with lime and sulphur, as the Chief Inspector shall direct.

**How foreign stock are to be released from quarantine.**

46. After the expiration of the period of quarantine hereinbefore prescribed for the several kinds of foreign stock, they shall be examined by a qualified veterinary surgeon and an inspector who shall ascertain whether all the requirements of these Regulations in respect to such stock have been fully complied with, and whether such stock are free from infection; and if satisfied in these respects they shall sign and forward to the Chief Inspector of Stock a certificate to the effect in Form Q hereto; and if he is satisfied that they are free from infection and the charges and expenses due on such stock have been paid, they may, but not otherwise, be released on the order in writing of the Chief Inspector of Stock to the effect of Form R hereto.

If owner refuse or fail to take delivery stock may be sold.

47. In the event of any owner refusing or failing to remove any stock from quarantine on the expiry thereof, or refusing or neglecting to pay any charges or expenses incurred with respect to such stock, proceedings may be taken against the owner for the recovery of the amount of such charges and expenses.

**Restrictions on removal of stock or articles from quarantine.**

48. No stock while alive or dead, nor any portion of the carcass thereof, nor any article of clothing used at any quarantine by any person in charge of, or attending on, any foreign stock, and no covering of any such stock, nor any fodder, fittings, or other articles or things which may have come in contact with, or been in use about such stock, shall be removed from the quarantine without the written authority of an inspector, and until where necessary such articles or things shall have been properly disinfected; and no person shall have in his possession or charge any stock, fodder, fittings, articles, or things which have been illegally removed from quarantine.

No person to enter quarantine ground without permission, and persons entering to disinfect clothes, &c.

49. No person shall enter or leave the quarantine without the permission of an inspector; and every person who shall enter a quarantine ground shall clothe himself in such manner as shall be directed by an inspector, and shall, before leaving the quarantine, disinfect himself and his clothes in such manner as the inspector shall direct.

**Post mortem of stock dying in quarantine.**

50. When any stock die or are slaughtered while in quarantine, a post mortem examination thereof shall be made by a veterinary surgeon, as the Chief Inspector shall direct; and the remains shall be destroyed by fire at the expense of the owner of the stock.

Australian stock not to be taken nor allowed to stray on to a quarantine for foreign stock.

51. No owner shall take any stock on to a quarantine for foreign stock without the order in writing of an inspector, nor shall any Australian stock be allowed to stray on to such quarantine; and all stock so taken or straying on to any such quarantine shall be kept, treated, and quarantined as if they were foreign stock, and their owner shall pay to the Chief Inspector of Stock the charges and expenses owing for such first-mentioned stock fixed by these Regulations for the inspection, keeping, quarantining, and treating of foreign stock.

**XI.—MISCELLANEOUS RE FOREIGN STOCK.**

Foreign stock landed without passing through quarantine to be disposed of as the Minister directs.

52. All foreign stock which have been landed without having passed through quarantine and without having been released in accordance with these Regulations shall be destroyed, or otherwise disposed of, as the Minister shall direct.

Australian stock coming into contact with foreign stock to be held to be foreign.

53. Australian stock coming into direct or indirect contact with foreign stock shall be held and deemed to be foreign stock, and shall be treated and dealt with as such.

No one but the attendant or person authorised to touch foreign stock.

54. No person except the attendant shall, without the permission of an inspector, touch, handle, or come in contact with any foreign stock; and if any person touch, handle, or come in contact with any such stock contrary to these Regulations, he shall disinfect himself and his clothes as an inspector shall direct.

No foreign stock shall be transhipped without an inspector's authority in writing.

55. No one shall, in any river, port, or harbour, or elsewhere, in the waters of this Colony, transfer any foreign stock, whether alive or dead, nor any portion of such stock, nor any foreign fodder or fittings from any one vessel to any other

vessel, without the written authority of an inspector and under the supervision of an inspector, or someone acting for him; and no foreign stock shall be transferred to an Australian vessel, unless such stock shall have been quarantined, disinfected, and dressed, and declared to be free from infection, as prescribed by these Regulations.

No carcass, nor any fodder, fittings, nor litter to be allowed to fall or be put overboard.

56. No carcass, nor any portion of the carcass, of any stock, nor any fodder, fittings, nor litter shall be allowed to fall or be thrown overboard from any vessel in any river, port, or harbour, or in any of the other waters of this Colony.

Foreign stock, fittings, &c., to be disinfected while in the waters of this Colony.

57. All foreign stock together with the clothes and other effects of their attendant, shall, when necessary while the same are within the waters of this Colony, be disinfected as the Chief Inspector may direct; and all foreign fittings shall either be burned or sent to quarantine and disinfected as the Chief Inspector shall direct.

No foreign fodder or other food for stock nor litter to be landed.

58. No foreign fodder, nor any oilcake, bran, barley, oats, beans, peas, or other food for stock, nor any straw or litter with which foreign stock shall have been in contact, or likely to have been in contact, shall be landed, except for the purpose of being burned; and any fodder, or other food for stock with which foreign stock shall have been in contact, landed without the authority of an inspector, may be seized and disposed of as the Minister shall direct, and all litter shall be burned or otherwise disposed of as the Chief Inspector shall direct.

**PART D.—PENALTIES, CONFISCATIONS, &c.**

**XII.—PENALTIES.**

*Miscellaneous Offences.*

Penalties not exceeding £20 for breaches of Regulations.

59. If any person does any of the following things he shall be guilty of an offence against these Regulations, and shall, on conviction for every such offence, be liable to a penalty not exceeding £20.

For not giving inspector notice of arrival of stock.

(1.) If being the owner of the stock, or the master of the vessel on which any imported stock are, he fails or neglects to forward to the inspector notice of the arrival of any imported stock, as required by these Regulations.

For refusing to carry out inspector's directions.

(2.) If he shall refuse or neglect forthwith to carry out any requisition made or direction issued under these Regulations by any inspector,

General Penalties.

(3.) If he commits any other breach of these Regulations for which a penalty is not specially provided.

*Offences relating to quarantine.*

Penalties not exceeding £20 for offences re quarantine.

60. If any person does any of the following things he shall be guilty of an offence against these Regulations, and shall, on conviction for every such offence, be liable to a penalty not exceeding £20.

For allowing stock to stray on to quarantine.

(1.) If he allows any stock of which he is the owner to stray on to any quarantine for foreign stock.

For trespass on quarantine.

(2.) If he shall enter upon, or leave any quarantine without the written permission of an inspector.

For interfering with stock in quarantine.

(3.) If he shall touch, handle, loose, approach, or in any way interfere with any stock in quarantine, without the permission of an inspector.

*Offences by masters of vessels and attendants.*

Penalties for offences by masters or attendants.

61. Every master of a vessel with any stock on board, or the attendant on such stock, who does any of the following things, shall be guilty of an offence against these Regulations, and shall on conviction for every such offence be liable to a penalty not exceeding £20.

For not giving declaration, &c., to inspector.

(1.) If the master or agent of any vessel, or the attendant on any stock, fail or neglect to make the declarations called for by Nos. 18 and 38 of these Regulations to the effect of Schedules G or L hereto, or to deliver the same to the Customs' Officer.

For allowing stock to stray off vessel, or to be transhipped without inspector's order.

- (2.) If he shall, without the written permission of an inspector, land or permit, or suffer any foreign stock, fodder, fittings, or effects to be landed, or any such stock to stray or go ashore from his vessel, or to be transhipped or moved to or from any other vessel while such first-mentioned vessel is in the waters of this Colony.

For failing to secure animal as inspector directs.

- (3.) If he shall fail, or neglect to cause any foreign stock on board his vessel to be securely confined or otherwise secured as the inspector shall direct, or shall allow any person to touch or handle such stock.

For allowing stock to stray on to vessel.

- (4.) If the master, mate, or other member of the crew of any foreign vessel, shall permit or suffer any stock to be put, or to go on board such vessel while there are any foreign stock thereon.

For allowing carcasses to be taken ashore without inspector's permit.

- (5.) If he allows the carcasses of stock which have been slaughtered on board his vessel, or any portion of such stock to be removed from his vessel without the permit of an inspector.

**XIII.—DESTRUCTION OR CONFISCATION OF STOCK AND THINGS.—WHEN STOCK AND THINGS MAY BE DISPOSED OF BY MINISTER.**

62. Stock, fodder, or fittings, as the case may be, may under all or any of the following circumstances be destroyed or otherwise disposed of, as the Minister shall direct:—

- (1.) If stock are infected with any infectious or contagious disease, whether they be on land, or on board any vessel within the territorial limits of this Colony.
- (2.) If foreign stock, fodder, fittings, or effects are landed in contravention of these Regulations.
- (3.) If any stock, articles, or things which are prohibited are landed.

Notice of arrival of stock in port

To Inspector of Stock,—

Take notice that the \_\_\_\_\_ belonging to \_\_\_\_\_ of more particularly described in the Schedule below, are expected to arrive by the vessel named at or about the time therein stated (or have arrived).

Owner, or his Agent.

**SCHEDULE.**

No.	Description of Stock.	Where shipped from.	By what vessel, and where lying.	When expected.		For what purpose.	Consignee.
				Date.	Time.		

N.B.—A separate notice must be given for each owner's stock.

**Form E.—(Regulation 12.)**

**IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.**

Permit to land imported stock.

To the Landing Waiter at \_\_\_\_\_ wharf.

Please allow \_\_\_\_\_, which has arrived by the \_\_\_\_\_ 189 .  
from \_\_\_\_\_ to be landed.  
Inspector of Stock.

**Form F.—(Regulation 14.)**

**IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.**

Notice of sickness of stock or of stock about to be destroyed.

To Mr.

Take notice that the \_\_\_\_\_ belonging to \_\_\_\_\_ more particularly described in the schedule below are [*here state subject of the notice.*]

**SCHEDULE REFERRED TO.**

No.	Description.	Sex.	Brands &c.	By what ship.	Name and address of owner or consignee.	Where stock are.

Dated at \_\_\_\_\_ this \_\_\_\_\_ day of \_\_\_\_\_, 189 .  
Inspector of Stock.

**Form G.—(Regulation 18.)**

**IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK AMENDMENT ACT OF 1884.**

Form of Declaration by Master or Agent of Australian Vessel

No. of stock shipped	Description.	Sex.	Breed, colour, brands, and marks.	Where from.	Name and address of owner or agent or consignee.	State of health of stock, i.e., infected or not infected.

I, \_\_\_\_\_, Master (or Agent), do hereby solemnly declare that the above statement is true with regard to the stock shipped on board the \_\_\_\_\_, which is now lying at \_\_\_\_\_, and for which \_\_\_\_\_ are agents, and further solemnly declare that none of the stock on board such vessel has been shipped from any port or place not in a clean Australian Colony, and that such vessel has not within the next preceding three months had—

- (1.) Any infected stock, fodder, fittings, or effects on board.
- (2.) Nor any foreign stock, fodder, fittings, or effects on board.
- (3.) Nor any stock from an Australian Colony or part of an Australian Colony in which disease has existed within the next preceding three months, nor any stock, article, or thing from any foreign vessel.

And further, that such vessel has not, during the next preceding three months, been at or traded with any foreign port or place, nor with any foreign vessel, nor with that portion of any Australian Colony in which disease exists or has existed within the next preceding three months.

Dated this \_\_\_\_\_ day of \_\_\_\_\_, 189 \_\_\_\_.  
(Signed) \_\_\_\_\_

**Form H.—(Regulation 20.)**

**IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.**

Declaration by owner, and certificate of health by inspector.

I, [name and address,] do solemnly and sincerely declare that the undermentioned stock are, to the best of my knowledge and belief, free from all infectious and contagious diseases; that they have not, within the next preceding six months, been in direct or indirect contact with stock infected with any such diseases; and that they are the produce of \_\_\_\_\_, and have, during the whole of the next preceding \_\_\_\_\_ months been in a clean Australian Colony. And I further declare that the vessel by which the stock are to be shipped is a clean Australian vessel.

Particulars of Stock.

No.	Description.	Sex.	Brands and marks.	Name and address of owner and person in charge.	Vessel, and where from or to.	Consignee.

And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

(Signed) \_\_\_\_\_

Made and signed before me, at \_\_\_\_\_ this \_\_\_\_\_ day of \_\_\_\_\_, 189 \_\_\_\_.  
J.P.

I have examined the stock referred to, and have no reason to doubt the correctness of this declaration in any particular [and I do hereby certify\* that the part of the vessel on which they are to be penned has been specially cleansed, as required by me].

U.S., or Inspector of Stock.

\* This is only necessary where the stock are sheep.

1892.

## NEW SOUTH WALES.

## DEPARTMENT OF AGRICULTURE.

(REPORT FOR THE YEAR 1891.)

Presented to Parliament by Command.

The Honorable T. M. Slattery, M.P., Minister for Mines and Agriculture.

Sir,

Department of Mines and Agriculture, 18 June, 1892.

In submitting the reports of the several officers of the Department of Agriculture for the year 1891, I do myself the honor, as this is the first report, to place before you a few facts relating to but preceding the establishment of the Department.

For some years past the question of forming a Department of Agriculture in connection with the Department of Mines has from time to time engaged the attention of your predecessors. As far back as 1874 Mr. A. Bruce, the Chief Inspector of Stock, submitted the draft of a Bill to provide for the creation of such a Department and the establishment of a College School, and other agencies for imparting instruction in, and disseminating information relating to, agriculture; but from some cause or other the matter was then allowed to drop out of notice for a time. But later on opportunities were offered Mr. Bruce to give evidence of his readiness and ability to assist in the work. In 1886 the services of Mr. Walter Scott Campbell, chief draftsman in the Department of Mines, were enlisted in the work of inspecting and reporting upon suitable areas for experimental or demonstrating farms in various parts of the Colony.

The results of Mr. Campbell's labours up to that date were in August, 1888, published in pamphlet form, by direction of the Minister, the Honorable Francis Abigail, Esq. Mr. Campbell continued from time to time up to 1890 to report upon matters referred to him, and both he and Mr. Bruce, by reason of their great practical experience, were able to render most valuable service. At the instance of the same Minister, I inquired into the work done in Victoria in regard to the formation of a Department of Agriculture and the establishment of Agricultural Colleges; and had the honor of submitting a report thereon early in September, 1888. In November, 1889, the late Minister, the Honorable Sydney Smith, Esq., M.P., secured the services of Mr. Robert L. Pudney, M.R.A.C., F.H.A.S., &c., formerly Principal of the Dookie and afterwards of the Longerenong Agricultural Colleges in Victoria, who had acquired considerable experience in organizing such institutions for the purpose of advising upon the best mode of establishing agricultural schools and experimental farms, the necessary building appliances and other requirements, and the annual cost of maintaining the same. On the 25th November, 1889, Mr. Pudney and Mr. Campbell reported upon the relative merits of the Rookwood Reformatory Reserve and Ham Common, and both recommended Ham Common as the more suitable site for the college and farm. Mr. Pudney also later on reported upon the Wilberforce Common.

In the estimates of the Department of Mines for 1890, prepared in December, 1889, provision was first made to meet the expenses incidental to the formation of a Department of Agriculture. Early in the year 1890, in view of the fact that such provision had been made, and that so much had been done by way of preliminary investigation, the late Minister decided to appoint a staff, and to enter, without unnecessary delay, upon active operations. In the first instance it was necessary to appoint an

officer to take the immediate supervision of the staff, and to fix the designation of his office. At my suggestion the title of Director was adopted by the late Minister. For this position several gentlemen were candidates, but the choice of the late Minister fell upon Mr. H. C. L. Anderson, M.A., who was appointed to the position on the 10th February, 1890. This gentleman has performed the duties of his office with commendable zeal and energy. On the 28th February, 1890, the Honorable Sydney Smith, M.P., then Minister for Mines, was appointed also Secretary for Agriculture.

To avoid recapitulation, I do myself the honor to invite your attention to the reports hereto appended of the several officers of the department, indicating the work done since the appointment of the staff. I may, however, remark upon the suggestion regarding the acquisition and utilisation of part of the Rookwood reserve for the purposes of experiments and investigations by the scientific staff, that it may be worthy of consideration before that suggestion is acted upon, whether, in the interest of agricultural education and economy, it might not be more advantageous to set apart for such purposes a small portion of the land at Richmond, so that the students at the college may have the benefit of watching and profiting by such operations without the loss of time and the expense which would be involved in their visiting Rookwood.

For the reasons given in the first paragraph of this report, I shall, I trust, be pardoned for as briefly as possible bringing the information touching the principal operations of the department up to date. In addition to the Inspector of Agriculture, previously appointed, four inspectors of agriculture were temporarily appointed in January last to deal with the following branches :—

- One, sub-tropical products ;
- One, dairying, pigs, and cattle ;
- One, English cereals, roots, and hardy fruits, &c. ;
- One, wheat, and dry-climate products.

An Inspector of Agricultural Shows was also temporarily appointed.

Preliminary steps have been taken towards encouraging the establishment of scent farms and the growing of medicinal herbs, with a view to the manufacture of perfumes, oils, &c., &c. The importance of grading dairy produce, intended for exportation, has engaged the attention of the department, and inquiries have been instituted with the object of ascertaining what can be done in the matter in the absence of legislation. Similar action has been taken in regard to the inspection of imported fruit, with the object mainly of preventing the introduction of pests. Having regard to the extent to which our orchards are suffering from the ravages of the codlin moth, inspectors have been recently temporarily appointed to visit the localities where the orchards are most affected, and to indicate to the owners the best known modes of destroying the pest, and to urge upon them the expediency of putting the same into practice at once. In America, I understand, they have no legislation on the subject, yet they have there no difficulty in getting owners of orchards to adopt the most stringent measures to eradicate pests, and there should be no difficulty in getting the orchardists here to apply the remedies wherever the pest is found.

Recently a fruit expert has been appointed, and it is hoped his extensive experience will enable him to render valuable service to the Colony.

I am happy to say I have been able recently to make such departmental arrangements as will admit of the whole of the staff being accommodated in one set of offices.

The following is a brief report of the work performed by the Vine Diseases Board during the year 1891 :—

To The Under Secretary for Mines and Agriculture,—

As it was found requisite at the end of the year 1890 to continue the Vine Diseases Act for a further period of one year, from the 31st December, 1890, a short Bill, embodying the necessary provisions, was introduced to the Legislative Assembly, and became law under the title of "An Act to continue the Vine Diseases Act of 1886, &c." In January, 1891, the Vine Diseases Board had not concluded negotiations with some vine-growers with regard to compensation, &c., and although threats of a litigious character were held out, the Board maintained a firm attitude, with the result that their terms were accepted, and the disaffected vigneron signified their acquiescence in the amount awarded.

The Board having been informed that a few vines had been seen growing on trenched infected ground, the inspector and overseer Sanderson were directed to visit these places and report on same at once. The result was that a few seedling vines were found of very young growth, sprouting from seeds evidently dropped by birds. These were immediately destroyed and burnt. In February the inspector and Mr. Sanderson were then directed to make a most careful and minute examination of the vines round about Appin, Emu Plains, and Penrith, and also to go carefully over the Camden district in the vicinity of the trenched areas.

At about this time, Mr. Bosisto, Chairman of the Vine Diseases Board of Victoria, accompanied by two other gentlemen, arrived in Sydney and called on the Secretary of the Board of New South Wales. They asked to be allowed to visit the infected districts. Every facility was afforded them, and they were first taken to Camden, where, after an exhaustive search of two days, they failed to even find a live root on the infected trenched ground, and, of course, no sign of phylloxera. Mr. Bosisto expressed his satisfaction, and pronounced Camden district to be quite clean.

The

The gentlemen referred to subsequently visited Seven Hills and found five phylloxera on two pieces of root, each 3 inches long in one vineyard. It was stated that as the pieces of root were nearly dead the insects could not possibly live long on them. However they were at once cast into the fire, and subsequently the vineyard was re-examined, but no more could be found.

Early in March Mr. Ferguson, a member of the Board, accompanied by the Secretary's inspector and overseer Sanderson, made visits of inspection in the Seven Hills district and discovered the existence of phylloxera in Mr. S. B. Watkins' vineyard at Toongabbie, situated about 200 yards from the infected ground of Mr. Bohringer, which had been previously dealt with by the Board.

It was decided to cut down and burn the vines, to apply specifics, and to take out and burn the roots and trench the ground. This labour was begun as soon as possible, and although the progress of the trenching was much retarded by the wet weather the work was thoroughly well done. In the meantime the inspector reported that he had found phylloxera in the vineyard belonging to Messrs. Howard and Davis respectively at Seven Hills, and the Board at once proceeded to inspect these places.

They issued directions similar to those given in Watkins' case, and gangs of men were put on the vineyards to perform the necessary work. The vigneron named was invited to meet the Board and state their views as to the amount of compensation to be awarded, and their reasons for making their claims. The Board eventually informed them of their decisions.

At this time stringent instructions were given to all the officers of the Board with regard to the work, and great precautions were taken to prevent the spread of the disease.

At the Honorable the Minister's wish an assistant inspector was appointed, Mr. Sanderson being promoted to that position, and he was at once despatched to make a careful inspection in and around the infected centres.

Shortly afterwards the inspector reported the disease in Mr. E. Pearce's vineyard at Seven Hills, and also at Mr. Wallis' of the same place. After the usual visit for purposes of verification, &c., the vines were ordered to be dealt with in the usual manner, and the labourers were, as soon as possible, sent to trench the ground. A surveyor was sent to determine the condemned areas, and each of the five vinegrowers named accepted the terms offered by the Board, which varied from £25 to £75 per acre.

Some members of the Board and the Secretary, at the invitation of the Phylloxera Board of Victoria, paid a visit to Geelong and other vine-growing districts in that Colony, and, after an exhaustive examination, it was decided that no phylloxera disease now existed in Victoria.

The number of inspections made during the year was nearly 900, chiefly in the county of Cumberland, the whole of which, with the exception hereinbefore set down, are free from phylloxera.

GEO. J. MARTIN,  
Secretary, Vine Diseases Board.

During the last Session of Parliament an Act was passed to further extend the Vine Diseases Act of 1886 to the end of 1892. The necessity of an alteration of the law, giving the Board extended powers, was recognised, but the state of public business did not admit of the introduction of a comprehensive measure. The Board has, however, continued to maintain a vigilant supervision over the vineyards, and to give full effect to the powers with which it is clothed, and the Board confidently hopes shortly to be in a position to state that the Colony is free from phylloxera. In the meantime steps are being taken to proclaim an "infested district," embracing all the areas that have been dealt with under the Act.

In conclusion I may be permitted to refer to the excellent work done (considering all the disadvantages, such as unsuitable buildings, &c.) at the Hawkesbury College and Farm, under the able supervision of the Principal. I desire also to submit that the officers generally of the Department have performed their respective duties with praiseworthy zeal.

I have, &c.,  
HARRIE WOOD,  
Under Secretary for Mines and Agriculture.

## The Director of Agriculture to The Under Secretary for Mines and Agriculture.

Department of Agriculture, Sydney, 5 May, 1892.

### First Annual Report on the operations of the Department of Agriculture.

I HAVE the honor to submit for the Minister's information my first annual report on the operations of the Department of Agriculture.

Formation of  
Department.

The department may be said to have been actually formed in the month of February, 1890, when the Hon. Sydney Smith was appointed the first Minister for Agriculture, and I had the honor of being appointed at the same time Director of the new department. During the remainder of that year all the preliminary works in connection with laying the foundations of the department were carried out, and the several agencies were so far in working order by the end of the year as to justify me in saying that the general operations of the department commenced with the beginning of 1891.

Objects of  
Department.

It will not, I hope, be considered out of place for me here to record the objects of the department as defined in February, 1890, and approved by the Minister as the first basis of operations. Continuous progress on these lines was made during 1891, and I can now report that most of the schemes then foreshadowed have been successfully initiated, and are progressing in a manner satisfactory to the agricultural community and the officers immediately concerned.

The objects were stated as follows:—

- To obtain data necessary to complete the history of agriculture in New South Wales.
- To collect, arrange, publish, and disseminate for the benefit of the agriculturists of the Colony all useful information in regard to agriculture in its many branches.
- To recommend, by gathering together the highest agricultural experience of other lands, the best methods of culture, the choicest grasses, cereals, plants, vegetables, fruit, and other suitable crops, the most improved implements of husbandry, and all other improvements of interest to the farming community.
- To introduce and distribute new seeds, cereals, plants, and cuttings from other lands with climatic conditions similar to our own.
- To answer questions submitted by those striving after better methods and more advanced ideas in agriculture; to stimulate inquiry and to invite discussion from agriculturists of all classes; to test, by experiments in different parts of the Colony, seeds, trees, implements, improved methods, new crops, manures, and everything else of local interest to the farmers of the surrounding district; to analyse typical soils of the Colony, commercial manures, indigenous fruits, ashes of plants of all kinds, Australian wines, medicinal products of the native vegetation, as well as testing supposed poisonous plants to discover the nature of their injurious qualities; to record and describe the botany of the Colony.
- To investigate the insect life of economic interest to our farmers and fruit-growers, distinguishing between friends and foes; and convey the information thus gained in the clearest possible way for the information of those directly interested.
- To form a museum, which will contain specimens of all products of economic importance grown in the Colony; collections of insects; named fruit-models; typical soils, with their analyses; samples of manures available for farmers' use; models of implements and machines; and any other objects that will be of educational value to the farming classes.
- To get together an Agricultural Library which will contain the wisdom of all countries upon the different subjects connected with agriculture, from which appropriate advice can be always obtained to supplement the practical experience of the experts of the department.
- To educate adult farmers by means of lectures, practical demonstrations, and by experimental farms, and to stimulate them to healthy rivalry by means of National prizes; to educate the youth of the Colony in the best science and practice of agriculture and its many allied subjects by means of a system of education graduated from the primary schools up to the University, and having for its sole object the study of both the practice and science of agriculture.
- To disseminate useful knowledge gained at home and from abroad, and thus cause a rational system of agriculture to be established in New South Wales.
- To indicate improved methods by which to learn how to turn the land to better account and to get the greatest possible return from any given area, and to grow the most suitable crops at a minimum of cost and maximum profit.
- To make the farmers' condition more stable, and thus raise the status of the settlers, who will found a generation of farmers, instead of dummies, to make agriculture the mainstay of the country.
- To assist in extending our markets for the disposal of the surplus of such crops as fruit, maize, wine, &c.; to enlarge our productive capacity, so as to completely supply our own wants in such crops as malting barley, sugar, wheat, &c., where we now only partially do so, and to gradually substitute home-grown for imported products in all cases where climatic and labor conditions will permit.

Above

Above all, to bring the agriculturists of the colony into such close and cordial relations with the department as will make them acquainted with its work and inspire them with confidence in its ability to serve them, and at the same time make the officers of the department informed of the difficulties and needs of the tillers of the soil.

These objects are undoubtedly wide in their scope and will provide occupation for a large and able staff for many years to come, and although no young department can hope to have achieved more than a small portion of this work within the first few years of its history, I have felt that these objects, with the Minister's approval, would furnish a well determined plan on which to gradually build a worthy superstructure; and in default of any legislation defining the work of the Agricultural Department, such as has generally preceded the formation of a department in other countries, I have taken this summary of its objects as a basis of operations for the department.

It would be here interesting to note the condition of agriculture in this Colony in the year of the formation of the department and contrast it as far as possible with the state of agriculture ten years before, at the same time expressing the hope that a similar comparison, if made ten years hence, will show that the department has done something towards advancing agriculture and towards achieving the objects herein defined.

The history of New South Wales is one continuous record of earnest efforts of successive Governments to settle people on the soil, and the department may now be fairly expected to do its share in keeping the people on it.

Herewith I submit a few statistics [*Appendix A*] to show the great amount of agricultural produce still imported, and the relatively small amount exported; the exports and imports of our chief products for 1880 and for 1890; the average production per acre of these two years—shown in contrast; the average annual yield per acre of wheat, maize, and oats for the past ten years, showing a fairly steady decline in the first and second; the number of freehold and leasehold farmers respectively; the number of persons engaged in agricultural pursuits in the chief farming districts; the total area under crop, with the principal products for 1880, and again the same, after an interval of ten years, showing a noteworthy increase in wheat, maize, sugar-cane, hay, vines, orchards, orangeries, and the grand total, but a significant decrease in barley, oats, rye, tobacco, and green food. Contrasted with our own yields are those of England and Scotland, where agriculture is pursued as a scientific calling.

Condition of  
Agriculture.

In considering these, the variable climate of New South Wales must be weighed against the exhausted soils of Great Britain, impoverished by centuries of heavy cropping.

It is especially interesting to note that in 1890 we exported 6,711 tons of bone-dust and other manures chiefly to Mauritius and New Zealand, and brought them back partly, in the form of oats, potatoes, and sugar. I venture to predict that the time is not far distant when we shall keep our manures at home, and elaborate them into crops to supply our own needs.

Every man who has travelled throughout the agricultural districts of this Colony, and has noted with intelligent eyes the progress of agriculture both as an art and a science, must have satisfied himself that there has been a steady though perhaps slow progress in most of the branches of this great subject. He notes improved agricultural implements being largely used, better homes, brighter gardens, more extensive vegetable plots, more convenient barns, better fences, more drainage, more skilful use of the subsidiary aids on the farm, more economical conservation and application of water, and more co-operation in matters of mutual interest; more markets have been opened up, and better access to those markets has been provided. In short, since by beneficial legislation men were encouraged to select portions of land suitable for agriculture, and entered upon its possession with brave hearts and strong arms, their positions have generally improved in every material direction till they have in many cases become independent freeholders, enjoying most of the comforts and simple luxuries of the old civilised countries, forming the sinews of this young country, and supplying its greatest source of strength in peace and in war,—an internal food supply.

It may not be out of place to inquire what are the conditions essential to a still grander progress and prosperity:

These, I think, might be defined almost on the same lines as those laid down by Mr. Isaac Newton in his first Report as Commissioner of Agriculture for the United States of America—

- (1.) Good government which will continue to provide wise land laws, and favour in every way possible those who form the great source of wealth to this as to every other country.
- (2.) To increase the demand for agricultural produce at home and abroad, and to utilise in more ways our home products.
- (3.) To increase the respect paid to honest labour.
- (4.) To improve the condition of reproductive labour.
- (5.) To impart a better knowledge of the science and practice of agriculture by providing farmers, and more especially their children, with a better education in all the branches of agriculture and its allied subjects.

Essentials for  
further progress.

It would be highly instructive to discuss the influence of agriculture as taught by the philosophy of history from the examples of the greatest nations of antiquity. Perhaps no lesson is more clearly taught by the great historian of Rome, than that "the primary causes of her decline, after a splendid career of prosperity filling the world with her fame, were the laws affecting real estate, and the condition, skill, and products of labour."

While, with her, cultivation of the soil was not only deemed honorable but was regulated by law in order that agriculture might yield the largest return to labour, Rome remained a great power. No citizen was allowed more than 6 acres; therefore the land was cultivated so as to give the greatest possible yield for the labour expended.

The great historian, Schlegel, informs us "that the subdivision of estates, the limitation of their extent, and the personal attention of the middle classes to farming as a profession made Romans a thoroughly

thoroughly agricultural people, and furnished the best conditions for success. When a few proprietors got possession of the whole of the land they practically owned the labour. The power slipped from the hands of the great middle classes, labour became disreputable, the soil was a monopoly, and the common people became reckless, devoid of patriotism, and slavish. Men losing all personal interest in the land lost their pride in it. All intelligent, interested, and really productive agriculture ceased. Old and exhausted lands were abandoned without any attempt to renew their fertility, and Rome sank from being the "Arbiter of the World" to being a dependent nation."

There is no lesson proclaimed more loudly by history to its philosophic students than the fact that to have successful agriculture and national prosperity we must have the land in the hands of as many free labourers as possible—labourers with a present and prospective interest in the soil they till, thus ensuring economy, patriotism, and progress.

Every Government that has existed in this fair land has striven to settle the people on the soil, has wisely protected labour and capital, and has encouraged the subdivision and intense cultivation of the soil.

As in America, so also in New South Wales we find that the most wealthy, most densely populated, and most prosperous parts of the Colony are those in which are found farms of fair size, well cultivated, and bound together by a community of interests. They have gradually raised themselves from the condition of importers to that of exporters of their various products. Districts which not many years ago imported various kinds of agricultural produce for their own consumption are now exporting large quantities of the same to the markets of the Old World. Other districts which had to depend upon the markets of the metropolis for supplies are now self-supporting, and will in a short while swell the growing list of exports from this Colony. Others, which have hitherto been considered fit for nothing but sheep-runs are trying experiments with small areas of cultivation, and surely paving the way to future agricultural success.

We now stand in the position of exporters of dairy produce, green fruit, and wines; but have to submit to the humiliation of depending upon other countries for large amounts of our bread, eggs, preserved fruit, maize, oats, chaff, honey, hops, malt, condensed milk, onions, potatoes, tobacco, vegetables and fibres, and many of the small necessaries of life, which we can by reason of our climatic conditions most readily and profitably produce for ourselves.

With regard to such articles as sugar, coffee, rice, &c., which we largely import, further experience is needed before deciding whether cultivation in New South Wales will be expedient and profitable.

It may be safely asserted that no country is safe that cannot provide its own food. Corn has been called the "conservator of peace" between nations, and while the want of breadstuffs sufficient to supply our own needs might incline us to preserve peace for fear of starvation, it would not tend to a greater feeling of security were we involved in war through alliance with our mother country. At the same time it is well to note that if we consider ourselves as Australians, instead of New South Welshmen only, we find Federal Australia independent of the world for its main food-supply.

With regard to the respect paid to labor, it is pleasing to notice in many districts in this Colony how naturally the sons follow in the fathers' footsteps in the cultivation of the soil and all the labor connected with this calling. The happiest and most prosperous districts in the Colony are those in which the families all pull together on the paternal farm, make it a freehold and a comfortable home for their parents in their advanced years, and then start out to make similar homes for themselves with the same course of manly toil and intelligent industry.

But the reverse of the picture is to be seen in some districts where the farming is generally poor, and where the ambition of the farmer's son is not to become one of the wealth-producers, but to get a "Government billet," get into the police, become a small country schoolmaster, or get some light work in the large towns of the Colony.

It is therefore no small problem connected with the improvement of agriculture for those who legislate for the good of the country to devise some means by which rural pursuits can be made more attractive, social life in our country districts more alluring, and the position of manual labourers on our farms, vineyards, and orchards more honourable and more stable.

What class of men, it may be asked, are so independent, so healthy, so strong in the political power of a country, as those who are elaborating its wealth from its soil?

"Labour" says one who was an honourable worker himself, "has been made by Providence the law of man's condition. It is the price at which whatever is valued in life must be earned. Whatever therefore degrades labour as the business of life, or renders it distasteful or dishonorable, does violence to our social laws, no less than to a wise economy. The nation that can furnish food and raiment as universal commodities can have her ships welcomed at a thousand ports, or sit at home and receive her tribute of foreign countries, or receive their arts, or treasure up their gold."

The class of men which constitutes the bone and sinew of England, Ireland, and Scotland—men attached to their districts by all the most sacred ties of humanity, men who have become skilful by the inherited traditions of their forefathers—such a class is almost entirely absent from this Colony, and hundreds of our farmers can testify that the most serious drawback in their farming operations is the absence of skilled labour.

Other classes of labour may not be anxious to see the stream of immigrants coming in to upset the present condition of the labour market in their respective spheres, but every farmer is keenly alive to the necessity for a steady flow of agricultural immigrants into this extensive territory, which we have only commenced to subdue.

"Every acre of our virgin soil," says a great political economist, "is a mine which only awaits the contact of labour to yield its treasures, and every acre is opened to that fruitful contact by wise legislation. Every working man who comes, betters the condition of the country as well as his own. He adds in many ways, seen and unseen, to its wealth, its intelligence, and its power."

It is hard to calculate the value to this young country of the skilled and industrious men who were attracted hither from France, Germany, and Italy, and have aided so materially in developing the vine-growing and wine-making industries which are to do so much for us in developing our resources, and improving the material and social condition of our small rural communities.

Whatever may be said of other avenues of labour, there can be no doubt that New South Wales has room and to spare for many more thousands of the teeming agricultural population of the old country which we yet call Home, as well as for the law-abiding and industrious emigrants from other countries whose industries can be profitably acclimatised here.

But

But above all, the conditions which are necessary for a steady progress in the future are a more thorough knowledge and practice of agriculture as a science and an art. When we consider how the much despised Chinese have made their land yield continuously good crops for thousands of years by a most minute and careful hand—husbandry, by scientific rotation of crops, and by utilising every possible source of manure, and read that the Emperor himself goes through the annual ceremony of turning the first spring furrow, we can realise how much the nations who consider themselves more highly civilized have yet to learn in the art of “making two blades of grass grow where one grew before,” and in paying national honour to rural labour.

We have here still a large amount of what may be called routine farming; the same crops are grown year after year without any system of rotation or any effort to maintain the fertility of the soil by judicious treatment. This system is natural, unfortunately, in districts where the farmers are small tenants, and in such districts the very worst farming is to be found in New South Wales. But where men are cultivating their own small holdings, and have to get the greatest possible yield from a limited area, it is incredible that they can go on persisting in the same crops, the same seed deteriorating year by year, the same methods of cultivation, the same breeds of stock, the same old-fashioned implements of husbandry, the same disregard for the profitable minor industries of well-managed farms. Such men are merely denying the aggregate experience of the best agriculturists of the world, and are trying to ignore the progressive age in which we live. They are content to do as their fathers did, instead of trying, as might naturally be expected from their immensely improved conditions, to do better than their fathers.

But the greatest hope for the certain progress and prosperity of the future lies in the better education of our farmers' boys and girls. Every agricultural student knows the immense strides that have taken place in the practice and science of agriculture in Great Britain during the last century, a progress that has not been the result of mere routine farming but of science practically applied.

As a young community still learning the rudiments of this great art and science, and having received from Great Britain the heritage of centuries of experience and practical knowledge, the least we can do is to record with gratitude the debt of obligation we owe to such men as Lord Bacon, who by his inductive philosophy first taught our great thinkers to experiment, to question and to test Nature, and argue from cause to effect—a system of philosophy that has affected agriculture perhaps more than any other science. We should recall with gratitude the names in the last century of such men as Jethro Tull and Arthur Young, to whom farmers are indebted for much light and learning on agriculture as well as for improved implements for farm use. Lord Kames and Sir John Sinclair did for Scottish agriculture what these men did for England. Sir Humphrey Davy, the chemist, was one of the first to give form and substance to the enticing study of agricultural chemistry. Mechi, the razor-maker of London, showed the English farmer how a barren heath could be made to yield rich crops, and gave an impetus to experimental work that made his name worthy of the respect of succeeding generations. Men like these, in the course of a little more than a century, turned one quarter of England, practically a wilderness, into a garden.

But we, in New South Wales, have received not only the free gift of the experience and science of our own mother country but also from Germany, France, and America, where in modern times Wagner, Ville, Boussingault, Wolff, Knop, Hellriegel, and others have shown themselves worthy to rank beside our own countrymen, Sir J. B. Lawes, Dr. Voelckers, and Dr. Gilbert, men who have devoted their lives and their wealth to scientific problems, whose solution is as valuable to us as to themselves.

In our own country the names of Sir William Macarthur, Mr. T. S. Mort, and Mr. Busby should be respected as pioneers of the highest order in their respective spheres.

The great agencies by which such knowledge has hitherto been widely diffused in this Colony have been the agricultural columns of the newspapers and the agricultural societies. Though New South Wales does not boast such a proportion of papers devoted entirely to the farmers' interests and published exclusively for his and his family's use as the United States can do, yet a fair proportion of the papers devote a considerable amount of their space to matters of agricultural interest, and the two chief weekly journals of the Colony, as well as several monthly ones, have thus done much valuable educational work. So long as a very thrilling murder or other sensational matter does not encroach too much upon the space devoted to agricultural topics by the average country paper, the farmers get a very fair amount of valuable matter, culled from the best sources available; but there is still room for a farmer's paper, like the *American Agriculturist*, which should be exclusively his from cover to cover.

The agricultural societies have undoubtedly done excellent work in stimulating rivalry between the farmers in their respective districts, encouraging the breeding of superior classes of cattle, horses, sheep, and pigs, and in bringing together for co-operative purposes those whose interests are identical.

It is gratifying to find that both of these agencies have availed themselves to a large extent of the co-operation of this department, and are working heartily with us in trying to awaken in our farmers a genuine enthusiasm and desire for the most complete information available, and for experiments with the many improvements now suggested as to methods of farming, use of artificial manures, improved methods of culture, and employment of new implements and machinery.

Agricultural education has not hitherto occupied a very prominent position in our national scheme of general instruction. Since 1872 a gold medal has been annually awarded in our University for the encouragement of agricultural chemistry—practical and theoretical; and many of the University men have had their attention turned in this useful direction by the timely benefaction of the Earl of Belmore.

Under the late Board of Technical Education and the present Technical Branch of the Public Instruction Department much interest has been awakened and distinct progress made by means of the classes in the principles of agriculture taught by Mr. Angus Mackay, F.C.S., whose useful text-books on Australian agriculture have also helped to supply a distinct want.

The system of agricultural education now being initiated by this department has been based upon the best points to be followed in those of Germany, France, Great Britain, and the United States of America. To each of these we are indebted for most valuable suggestions. We have been favoured with the hearty sympathy of kindred departments and institutions in all these and many other civilised countries; we have received freely and heartily all their publications and the records of their experiments, both as to successes and failures, and the hope may be expressed that before long we may be able to make some slight return for the vast benefit we have received from them in the past.

While

While we hope shortly to be able to take the boys, and in some subjects the girls, after their primary education and teach them the practical operations of farming, and the "whys" and "wherefores" of each of these operations, leading some of them on to the higher branches connected with this wide subject until they are fitted to become themselves teachers and experts in the respective lines of learning, we have yet to devise a scheme by which we can co-operate with and assist our Public Instruction Department in imparting to the children while still in the primary schools some elementary knowledge of agriculture. The most intelligent man is always the best farmer, and it cannot be doubted that the earlier the children of our rural districts begin to study the practise and theory of this many-sided subject the more enamoured they will become with it, and the more ready will they be for their duties in after life.

Sir Humphrey Davy uttered prophetic words when he said, "Nothing is impossible to labour aided by science. The objects of the skilled agriculturist are like those of the thoughtful patriot. Men value most what they have gained with effort, and a just confidence in their powers results from success. They love their country better because they have seen it improved by their own talents and industry, and they identify with their own interests the existence of those institutions and pursuits which have afforded them security and independence, and multiplied the enjoyments of civilised life."

How powerfully will such noble words from the father of agricultural chemistry appeal to the intelligence and honour of every farmer who is determined to excel in his calling.

There are scores of agriculturists in New South Wales to day who are educated men in the highest sense of the word, who magnify their occupation, and who, after receiving the best training in schools and from books, have gladly turned away from the allurements of city life to the pleasures, consolations, and quietude of rural pursuits.

Many who have secured a fair share of this world's goods in other callings naturally turn to this the most pleasant of avocations, in the decline of their lives, in which they are emulating some of the greatest of the world's heroes from the time of Cincinnatus to George Washington, who have gladly returned to the repose and happiness of their country homes after the course of worries and trials of public life. Such men exalt the status of agricultural labour, and help to check the unhealthy tendency of modern times to forsake the country for city life.

I have ventured thus to indicate my views of the aims and scope of a Public Department of Agriculture in the hope that they will receive the approval of the Minister, and I shall thus feel emboldened to proceed on the lines I have herein endeavoured to lay down. If after fair trial the department shall be deemed to have advanced the cause of agriculture in a fair number of the directions I have indicated it will deserve the approval of the public.

New South Wales must become an agricultural community. It must not only supply itself with food, but supply other countries. With the progress and prosperity of its agriculture all other interests will prosper. When the farmers have a surplus after they have paid their debts, they will accumulate wealth, and the nation will become wealthy in the same ratio.

If every officer in this department is fully imbued with the idea that our aims and objects are to increase this individual and national surplus, and thus develop the vast resources of our soil and increase our national capital, our department is bound to achieve some of its aims. I venture to hope that in this we shall have the sympathy of the community for whom we are labouring, and that the educational agencies to which I have before referred will welcome us as fellow workers in the same field and co-operate towards the same ends.

Having thus placed fully before the Minister my views as to the aims of the department and the directions in which it should conduct its operations, I would briefly sketch the work that has been done during the past year.

Conferences.

One of the first things done was to invite the leading sections of agriculturists to meet the department in conference in order that we might thoroughly understand the wants and difficulties of the leading branches of the agricultural community. Delegates from the Agricultural Societies, representative fruit-growers, vine-growers, wine-makers and bee-keepers have thus met the department, and the result has, I am sure, been mutually beneficial. The chief appointments of scientists, practical agriculturists, and other experts have been the outcome of the representations made at those conferences.

The next important step in the history of the department was to inaugurate a journal or Gazette, through whose pages the farmers of New South Wales could be informed of all the greatest improvements of modern times from other countries, and of the practical experiments carried out in our own. I cannot do better than quote here the introduction of the late Minister, the Hon. Sydney Smith, M.P., in the first number of the *Agricultural Gazette of New South Wales*, the official journal of the Department:

PREFACE by the Minister for Mines and Agriculture.

Minister's  
Preface to  
Gazette.

It seems to me a fitting opportunity, on the occasion of the introduction of the *Gazette*, or official organ of this department, to say a few words on the aims, scope, and organization of the newly-established department.

The welfare of this country being intimately bound up with the prosperity of agriculture, it is of paramount importance that the Government should be well informed and advised as to all matters affecting the general interests of the community, so as to be prepared to take action necessary for the national welfare in matters relating to pests—animal, insect, or fungoid—which affect cereals, fruit, vines, and other crops, diseases which decimate the stock of the country, and all cognate subjects such as irrigation or forestry, which may vitally concern the public weal.

For the present the new department will give its attention to matters essential to agriculture, keeping in view the necessity for utilising all existing agencies, and harmonising its operations as far as practicable therewith.

Steps will be taken to lay the best procurable advice before the farming community—advice dictated by scientific investigation combined with practical experiments, as to causes of failure in crops, improved methods of working the soil, means of combating pests, effects of manures, drainage, and irrigation, introduction of new plants, uses of new implements, utilising surplus products, and facilitating the transport of produce to the best markets.

With a view of ascertaining what is actually being done in regard to agriculture proper, of learning what improvements can be effected with the present machinery, and of devising some equitable scheme of making State subsidies to Agricultural Societies as effective as possible, I have convened a conference of delegates, one from each of the Agricultural Societies of the Colony, by which means the Government hope to become thoroughly acquainted with the needs of the different districts, and also perhaps consolidate some small local societies into large district associations, and thus increase their educational value to their respective districts.

Recognising the many claims of the orchardists and vigneron on the consideration of the Government of the Colony, and the great interests involved in their great and growing industry, I have taken the first opportunity of inviting delegates from all the fruit-growing centres of the Colony to meet me in conference. The response has been most gratifying and

and the results have far exceeded my expectations. One hundred practical fruit-growers and wine-makers assembled from Tenterfield on the north to Albury and Corowa on the south. Excellent papers were contributed, and valuable discussion followed each. The conference may be said to have been international, for, in addition to our own intelligent growers, we had the great advantage of the experience of gentlemen who had received their early training in the greatest wine-producing countries of Europe—France, Italy, Germany, and Switzerland.

The minutes of the proceedings will be published and issued to those interested, and will form, I believe, a valuable work of reference to many a young beginner.

The greatest hope for the future must however rest in the systematic education of the lads who are to settle on the soil. There must be instituted a scheme of education that will fit our boys for the intelligent occupation of the soil, they should receive the best possible scientific and practical training, to enable them to hold their own in the march of progress and to add to the material wealth of the Colony.

With this end in view due provision has been made for the following agencies:—An administrative staff, a scientific staff and practical experts in the different branches, and a comprehensive scheme of agricultural education.

The Government have appointed Mr. H. C. L. Anderson, M.A. (Belmore Gold Medallist, Sydney University), as Director of the new department. Mr. Anderson's previous career and educational qualifications give promise of intelligent zeal and success in this important office.

The scientific staff consists of trained experts who will supply reliable information on all subjects of scientific interest, instruct the agriculturists of the Colony how to invoke science to their aid in warding off the attacks of their natural enemies, in restoring fertility to their soil, turning unhealthy swamps into productive fields, storing and utilising surplus water for irrigation, and, in short, making agriculture the practical science it now is in many countries.

They will be able to prepare suitable Australian text-books on agricultural subjects for the different classes of schools, which will lay a good foundation for later training. They will examine soils, vegetable products, manures, diseases, and give descriptions suitable for distribution amongst farmers. They will undertake the instruction of the students at the College, give lectures of present importance whenever practicable, and generally give their whole attention to the scientific interests of the department.

In the United States, France, and Germany this branch of agricultural work has been greatly developed, and admittedly to the benefit of those most concerned.

Dr. Helms, late Demonstrator in Chemistry at the Sydney University, is acting as consulting chemist, and has already made a number of analyses of soils, and given advice in accordance therewith to those who have sought his advice.

Dr. N. A. Cobb, who has had the best scientific training in America and Germany, has control of the Pathological Branch. The valuable work already done by him has shown the necessity of having the best scientific advice available.

Mr. A. S. Olliff, F.E.S., entomologist to the Museum, has been appointed in charge of the Entomological Branch, and the experience of the late fruit-growers' conference has shown me the urgent necessity of having such an officer to give advice on insect pests to those who need it.

Mr. F. Turner, F.R.H.S., has been appointed consulting botanist, and will furnish a series of articles on new crops to be introduced to the various parts of the Colony, native grasses and fodder plants, and any other points of interest to those practically interested.

A scientific library is being got together, consisting of all works of reference to agriculture and reports of kindred departments in all civilized countries.

A Museum is being instituted for the purpose of exhibiting to all those interested the vegetable productions of the country, its soils, specimens of insects, friendly and hurtful to vegetation, and anything else calculated to educate the eye.

To keep the present occupiers of the soil informed as to all that is going on in other countries with regard to agriculture, and to give them all the assistance that prompt information and scientific research can afford, this *Gazette* will be issued, as occasion demands, to all educational institutions, Agricultural Societies, and other bodies that can utilise its contents.

It will contain the latest news as to crops, pastures, weather, rainfall, pests, and diseases, prospects of agriculture, extent under different crops, condition of stock, prospects of lambing and clip, reports of experiments made and investigations conducted by the department, special reports on matters of present importance to any section of the agricultural community, papers of peculiar value from kindred publications, and those written by the scientific staff.

One of the chief means of instructing the farmers in America, Germany, and France, has been found to be by means of experimental farms. At these the agriculturist, who is invariably practical above all things, and demands actual demonstration, can see exhibited the results of experiments in feeding cattle and sheep, testing varieties of cereals, trees, and grasses, improved methods of cultivation, wine-making, new crops, testing value of new plants and seeds, uses of ensilage, trial of new implements and machinery, effects of drainage, analysis of manures and soil, introduction of fresh strains of blood in cattle, sheep, and horses, testing the value of specifics for pests and diseases, bee-keeping, fruit-growing and preserving, and many other minor industries.

There will be at least one experimental station in each part of the Colony distinct from others by conditions of climate, soil, and natural production, where the investigations indicated above will be conducted by competent authorities.

With this end in view the Government purpose utilising reserves where suitable and available, instead of buying private estates, and I have now before me reports from Mr. R. L. Pudney, late Principal of the Dookie College, dealing with reserves in twenty centres of agricultural activity.

For the present it will be sufficient to choose a few places typical of large and important districts with widely differing conditions of climate and soil. The Government have chosen the site of the Central Agricultural College at Ham Common, near Richmond, where, after making due provision for the adjoining towns, 4,000 acres will be available for the experimental farm, embracing many varieties of soil, good and poor, and presenting facilities for the most important operations of a large farm.

To advance the best interest of fruit-growers a first-class pomologist or authority on fruit will be appointed, who will get together models of all recognised standards, will rear and cultivate any excellent varieties of seedlings raised in this Colony, lecture as often as practicable, and conduct such experiments in fruit culture as will make his advice valued by all fruit-growers.

Analyses of soils and of the ashes of plants will be undertaken on behalf of farmers, who are now in the dark as to the needs of their crops, the deficiencies of their soils, and the relative values of manures offered to them; microscopic research also will be instituted by the entomologist as to insect pests, and appropriate advice given; and by the pathologist as to rusts, smuts, and other fungoid diseases.

The farmers are now invited to submit samples of soil and ashes of plants to such scientific investigation, for experience has shown in older countries what science can do in increasing the natural resources and diminishing the losses. It is intended to appoint experts as inspectors, whose duty it will be to visit all centres of agricultural activity, and report on all matters of interest in their special domain. For instance, an expert in viticulture will inspect all vineyards in the Colony, report on the defective methods of cultivation, signs of disease, and any faults that may concern the general welfare, and advise accordingly. Such an officer will have special facilities for compiling all statistics as to vine-growing and wine-making, and will be invaluable as a lecturer and demonstrator to the college and experimental farms. Other specialists will in course of time be appointed in the interests of other sections of the farming community, such as wheat-growers, orchardists, and dairy-farmers, which experts will confer with the farmers in chief centres, and act as District Inspectors of Agriculture.

To incite the farming community to a healthy rivalry the Government propose offering national prizes for the best managed farms, orchards, dairies, and vineyards, and stacks of ensilage, in the respective districts adapted to these special branches of agriculture. To enlist the general sympathy of all existing organisations for the improvement of agriculture, I propose to ask the Agricultural Societies to appoint Local Committees or Boards of Advice in the different districts, who could advise the manager of the experimental farm in their district, report to the department on any matters submitted to them, suggest the cultivation of new economic crops, and in many other ways advance the interests of agriculture, and strengthen the department's hands. However much good may be done by affording every facility for instructing the adult farmer the great aims of the department must be centered in the education of its youth.

Our lads must be imbued with the love of agriculture, and be led to see its advantages as a calling. With this end in view it will be the duty of the scientific and practical staff to compile elementary text-books, suitable for the different classes of students, and adapted to the requirements and conditions of New South Wales. After a lad, who chooses agriculture for his calling, has reached a fair standard of education and has attained an age suited for practical agricultural work, he must be taken in hand and trained in the science and practice of agriculture in all its branches. In connection with each experimental or regional farm there will be a farm school. Here the students will study on alternate days such subjects

subjects of general education as reading, arithmetic, mensuration, principles of agriculture, elements of chemistry, geometry, natural history, and farm book-keeping; on the other days they will be engaged on practical work on the farm, learning all the operations of mixed farming, fruit-growing, and dairying, with the minor industries of bee-keeping, floriculture, and any other peculiar to the district.

The cost of such a course of education will be made as reasonable as possible, and naturally the system of bursaries will be extended to this class of schools—the most deserving students, whose circumstances demand the concession, being educated at the cost of the State. It is hoped that after a suitable course here the student will be so well equipped in the science and practice of agriculture as to be competent to manage a farm for himself or an employer.

In order to give every assistance and encouragement to those who wish to break new ground, the Department of Agriculture will make accurate investigations as to the crops and industries suitable for each district in the Colony, so that while the Department of Lands will show where land is available, this department may indicate the exact agricultural value of such land by means of descriptions and maps.

In short, the aims of the department are to help those now on the soil, to educate their sons and daughters who will succeed them, and to offer every facility and encouragement to wider and more intelligent occupation of the still unsettled tracts of this great Colony.

Department of Agriculture, Sydney, 1st July, 1890.

SYDNEY SMITH.

It will be found on recording the past year's history that most of the schemes herein sketched have been initiated and are progressing in a steady and satisfactory manner.

The *Gazette* has brought the department into touch with thousands of the most intelligent and progressive of our agriculturists. It has conveyed to them the original work of the officers of the department, and given seasonable advice and useful information in the most convenient possible way. It has aimed at giving something useful to every class of the farming community, and, while all the matter contained in it has not been specially interesting to the ordinary farmer, each article has had its special value in other directions no less important.

No one knows better than the farmer himself that the greatest inventions, the most valuable discoveries, and the most useful ideas which have proved of benefit in his calling, have come from men who have combined science with practice, from men who have been able to give leisure to thinking out problems, investigating the connections between cause and effect, and trying experiments for which the ordinary practical farmer has neither leisure nor taste. Before a scientist can prescribe a remedy for a disease he must thoroughly diagnose it, which cannot be done by conjecture or vain imaginings or aimless experiments, but must be the result of careful and minute inquiry. This can be done only by trained observers, and generally with the aid of the microscope. It is easy for a doctor to prescribe medicine for a disease which has been investigated by the life-long labours of some one specialist, who has thus made all the medical profession his debtors; and it is as easy for a farmer to apply an appropriate manure for a certain crop, to use a certain remedy for insects or fungoid pests, or to grow an improved variety of seed, after the information necessary to do this has been imparted by the man of science, who has perhaps taken years to work out the problem. Very few people consider how long it took the large band of scientific observers throughout the world to work out the life-history of the *phylloxera devastatrix*, without which knowledge it would be impossible to identify the insect in its many forms, or to suggest remedies for its destructive action. Fruit-growers are told in a few words how to destroy the scales or aphides or mites that are causing so much damage, but, perhaps, little think how many years of patient research and constant investigation have been spent by scientific observers to arrive at these simple truths. Farmers will therefore, I am sure, make allowance for the purely scientific work of the department, which may be to them uninteresting and perhaps unintelligible, but which supplies the workers in the same departments of science in other parts of the world with information calculated to guide them in their researches, and to enable them to co-operate heartily with us in our inquiries, and the least we can do, as a Government department, in return for the immense heritage of wisdom and experience that we have gained from other countries, is to do our best in helping on the scientific research and original work so necessary as a groundwork for all truly rational operations.

The department has received most gratifying letters to the number of several thousands from various classes of farmers, recognising the good practical work done by the *Gazette*. Some have testified that the information that they have received on different topics such as ensilage, bacon-curing, butter-making, cheese-making, manures, &c., has enabled them to improve their methods, or to commence new operations in a manner entirely successful. It need hardly be pointed out that as our own experimental farms come into full working order, and the results of their experiments are made available for the use of New South Wales farmers, the *Gazette* will become more and more useful to those for whom it is intended. Mr. Gray has loyally helped me in the work of editing.

The *Gazette* is now published every month, and is issued as regularly by the Government Printer as his many other pressing duties will allow. The department is under a great debt of gratitude to the Government Printer and his staff for the excellent work they have done for the department, more especially in the photo-lithographic reproductions of the artist's fine drawings and plates.

Among the different branches which have been started, and are now doing satisfactory work, I would enumerate the following:—

In the scheme of agricultural education adopted by the Minister provision is made for several agricultural schools in different parts of the Colony, with a college as the highest seat of agricultural learning, until a chair of agriculture shall have been provided in our University.

It is somewhat anomalous, though unavoidable, that we should have started with the college instead of with the schools, but the large number of lads from 17 to 25 years of age who were craving for a higher agricultural education induced the Minister to start the college to provide for these young men, who should, in due course, become centres of agricultural light and learning in their respective districts.

The college may be said to be now in full working order, with a fairly large staff competent to teach the ordinary subjects of an agricultural education. Already crops have been got from the very poor soil of Ham Common, which have borne ample testimony to the advantages of scientific manuring and good cultivation as ably demonstrated by Mr. J. L. Thompson, the Principal, who had formerly been in charge of the Dookie College and Farm in Victoria.

The difficulties in connection with the transfer of the land owing to its being an old Imperial grant are in a fair way to being overcome, and it is hoped that the necessary farm buildings and college premises may be soon commenced.

The Principal has furnished a very full report [*Appendix B*] on the whole of the operations of the college and experimental farm for the past year, and it gives me great pleasure to add my testimony to the general behaviour of the students, who are good representatives of the middle classes of the Colony, who are determined to aim at something other than the usual City billet, and to forsake the towns in order to woo nature in her own domains.

It

Utility of  
*Gazette.*

College Report.

It is a matter for some congratulation that our college, though the youngest in Australasia, is the largest in point of numbers, and has a class of students of more advanced years, and consequently better educated and better fitted for the study of the higher branches of their profession.

With a view to establishing farm schools, application has been made to the Lands Department for the dedication of reserves at Uralla (on the Northern Tableland), North Wagga Wagga (in the Southern District), and Ballina and Lismore (in the North Coast), for the purposes of this department. The Cabinet approved of these sites for agricultural schools and experimental farms, and, when the necessary transfers have been effected, the Parliament having generously voted the necessary funds, there will be nothing to prevent operations being immediately started towards the desired end.

Sites for Farm Schools.

There is a great demand for agricultural education for boys of from 14 to 17 years of age, who will be provided for in these schools, and who will be able after a thoroughly practical training in the operations of farming and a good elementary grounding in the sciences connected with agriculture, to proceed to a higher course of study at the Hawkesbury Agricultural College.

With such a system of education, based upon the best points of the German and French modes, it is hoped that a lad of 14 to 15 years of age can after five years' work equally divided between the class-room and the farm, leave the college as a well-trained, all-round agriculturist, able to perform any of the ordinary operations of farm and orchard work, and, above all, to understand and explain to others the reason for each of his operations.

I would here point out that another branch of our operations might take the form of small experimental stations, to be established in every distinct climatic region of the colony. In America there are 58 of these stations, one in each State and Territory, employing 450 persons, and corresponding with 350,000 farmers and others. Such stations need not be large nor expensive, but could do immense good by trying new crops, determining the comparative values of different kinds of fruits, experimenting with manures, and distributing seeds and scions after trial and approval.

Proposed Experimental Stations.

The Pathological Branch of the department, under the able guidance of Dr. Cobb, has done excellent original work, and afforded valuable advice to many hundreds of inquirers. The *Gazette* bears testimony to the indefatigable labours of the pathologist, more especially with regard to the working out of the history of rust in wheat in Australia. The series of articles upon rust, illustrated as they have been by the excellent drawings made by Dr. Cobb himself, and assisted by the departmental artist (Mr. Grosse), have enlightened our farmers as to the true nature of rust, and convinced them of many of their errors of treatment in the past.

Pathologist's Report.

The department does not profess to offer any single remedy for this fungus pest, which has been the cause of so much damage in the most civilised countries for centuries past; but it hopes that the fruits of the experiments, guided by the investigations of the scientific experts, will suggest such a method of cultivation and such preventive measures as will enable the farmer to avoid the worst consequences of this great pest. With this object in view the department has done its best to introduce new varieties of wheat noted for their rust-resistant properties, and has already experienced a large measure of success in finding some kinds particularly valuable in this direction. It is confidently expected that several varieties will be ultimately found which will have a special value in resisting the attacks of rust either from one cause or a combination of causes.

The pathologist has also given much time to the investigation of other fungus diseases affecting maize, grape-vines, strawberry and other plants, and has indicated the result of his investigations through the pages of the *Gazette*.

I feel glad to bear my testimony to the high value of Dr. Cobb's investigations, not only to the department of this Colony but to those of all the other Colonies, who have frequently availed themselves of his scientific acquirements, and have acknowledged the value of the advice received. Herewith a report on the work of this Branch. [Appendix C.]

The Entomological Branch has done a considerable amount of original work with regard to the different pests which have not yet been investigated in this or in any other country. With an immense field of original work still open to this branch of scientific inquiry it may be safely said that the entomologist (Mr. A. S. Olliff) has plenty of work in hand for many years to come.

Entomologist's Report.

A very valuable series of articles has been commenced in the *Gazette*, dealing with the friendly insects or those that prey upon the injurious ones; and another series dealing with the different insects that are found to be so injurious to the fruit-grower and farmer.

In this particular branch of inquiry we owe a deep debt of gratitude to the United States Department of Agriculture, which with its large staff of able entomologists has done much to enlighten the world as to insect life in all its phases. Their investigations have supplied remedies fully adapted to our own requirements, and applicable to our own circumstances. We find no need to conduct original researches into the life history of the phylloxera, the codling moth, the orange mite, or the American blight, which have been fully determined by the labours of the distinguished scientists in America and Europe. We have been enabled to suggest on the shortest possible notice excellent remedies for many insect enemies which we have gleaned from the splendid publications received by us from America, whereas without such work ready done to our hands we would probably have had to go through the same years of patient research and experiment that have been done in older countries for our benefit equally as well as for their own.

In the matter of spraying machines by means of which to destroy these insect pests, we are just as much indebted to our American cousins, for we can now recommend to our fruit-growers the most efficient and economical machines, both from France and America, entirely adapted to their requirements.

Mr. Olliff, whose duties have kept him very strictly confined to his office and laboratory, will receive much assistance from the practical experiments and observations at our college farm and other experimental farms as they are started; but, more or less distant as these will all be, he badly needs some small station near the city, in which practical experiments could be carried on that are so necessary to give definite value to his scientific inquiries.

The same need is urgently felt by the other original workers in the department, who all require a suitable piece of ground where plant diseases can be investigated, remedies tried, and other cognate branches of inquiry carried on. Mr. Olliff's interesting report is submitted herewith. [Appendix D.]

In the Botanical Branch very good work has been done on new lines.

Mr.

Botanist's  
Report.

Mr. Turner has been most indefatigable in writing a series of articles on the grasses of New South Wales, the weeds most injurious to our agriculturists, new economic crops suitable for trial in this Colony, and on supposed poisonous plants. These have been all excellently illustrated, and have had, to my knowledge, a valuable educational influence on many of our young farmers and other agricultural students. Mr. Turner has named several thousands of specimens submitted to him for identification during the year, and has, in addition to his purely botanical work, taken a deep interest in forming the nucleus of a small museum, which will be of great value to the department in future years.

He has made a very complete herbarium of the indigenous grasses and other forage plants of Australia, and is thus able, by means of the specimens at his disposal, to illustrate anything of general economic importance for the public good. His report for 1891 is attached hereto. [*Appendix E.*]

Artist's Report.

The artist, Mr. E. M. Grosse, has done a great deal of work that has specially appealed to the sympathies of the readers of the *Gazette* and many who have come to the department for information.

His black and white illustrations of the grasses, economic crops, weeds, and many different kinds of insects, as well as drawings of microscopic fungi and coloured drawings of the more important insect and fungoid diseases, have won the highest praise from all competent authorities, and, it may be safely asserted, are such as not to be excelled in any similar publication in the world.

I venture to assert that when a complete list of the insect pests and fungus diseases of the Colony has been fully described by the scientists and illustrated by Mr. Grosse, and appropriate remedies suggested, the hand-book thus compiled will be of the greatest possible value to all those interested.

A detailed account is given herewith as to the work done by the artist during the past year. [*Appendix F.*]

Library.

Since the formation of the department every effort has been made to form a library which will be alike valuable to its own officers and to the large circle of persons who are constantly asking the advice of the department about a great number of questions of agricultural interest.

It may be said to embrace at the present time the majority of the standard works on agriculture proper, and a fair proportion of the best works of reference on the sciences allied to agriculture. Through the generosity of the Minister provision has been made for making the works of reference relating to pathology, entomology, botany, and chemistry very complete, and it is expected that when a further large consignment of works of reference on these subjects shall have been received from Europe we shall have a library in every way worthy of the department and its scheme of operations.

Perhaps the most valuable part of the library as existing at present is that which has come to us as a free gift from other countries. The annual reports, bulletins, and special reports of the United States Department of Agriculture are deserving of particular mention, and I would acknowledge with best thanks the courtesy that has prompted the Commissioner for Agriculture in the United States to furnish us with the valuable mass of literature issued from his department. The circumstances of climate, soil, and natural productions of that country are so similar to our own that we can gain an immense deal of information from these reports, which is applicable to the conditions of our own agriculturists.

Inspector's  
Report.

The only inspector of the department yet permanently appointed, Mr. J. A. Despeissis, M.R.A.C., has been doing useful work, as will be seen by his report appended hereto.

Mr. Despeissis, having received the best available education in agriculture in Great Britain, and having had subsequent experience in the vine-growing districts of France and in the laboratory of Mons. Pasteur, came to this Colony equipped in such a way as fits him well for the work of educating our vine-growers and farmers generally. His experience in his birthplace—Mauritius—has qualified him to give valuable advice to the sugar-growers of our northern rivers, and the articles and reports which he has written on this industry have been productive of good.

The principal wine-growing districts of the Colony have gladly welcomed his lectures on the scientific principles underlying the making of wine, and his articles in the *Gazette* on the different aspects of this subject have awakened great interest in the districts most concerned.

Crop Reports.

The experience gained during the past year by him in travelling over almost the whole area of the Colony will be very valuable in enabling the department to prepare a comprehensive summary of the state of agriculture in the Colony, and in finding data for the agricultural map which it is proposed to issue. His report herewith. [*Appendix G.*]

In connection with this subject, I may state that we have taken a lesson from the experience of the United States in proposing a scheme of crop reports, which the Minister has approved. It will take some time to find the requisite number of intelligent enthusiasts who will be willing to furnish these reports on the state of the crops in their respective sub-districts every month; but, when this has been done, I confidently expect that we shall be able to furnish the commercial men as well as the farmers with such information as will prove of value to them, in their respective avocations. Possessing, as we do, districts with such varied climates, some being later than others by as much as six weeks, and some enjoying excellent seasons, while others in the same year are suffering from excessive wet or drought, it is a matter of the greatest importance that each district of the Colony should be kept informed, as promptly and accurately as possible, of the prospects of the different crops in all the other districts of the Colony.

It is hoped also by this scheme of reporting to assist in some degree Mr. Coghlan, the Government Statistician, in providing a useful check for his admirable statistical reports in connection with agriculture, which have been of such service to this department.

Agricultural  
Map.

It is hoped also that the information thus gathered, aided by the reports of the officers of the department on the respective districts visited by them, will, in course of time, give us the information as to the geology, soils, climatic condition, present state of agriculture, future prospects, relative value for different crops, and other points of interest which will enable the department to compile an agricultural map similar in its scope and value to those compiled by similar departments in France and America. Mr. Jensen the officer entrusted with this work is gradually perfecting a system suited to our conditions.

Travelling  
Dairy.

The travelling dairy, under the management of Mr. Neil Harper for a few weeks, and afterwards of Mr. Frank M'Caffrey, has been a valuable educational agency in the work of the department. It has visited the different districts of the Colony in the vicinity of the main railway lines.

The result has been to make many districts acquainted with their great dairying resources which had not before been thoroughly appreciated. Several factories have been established throughout the Colony in districts which have been visited by the dairy, and we have evidence to show that this has been due in a great measure to the interest awakened by the successful expositions of butter-making and cheese-making as conducted by Mr. M'Caffrey.

It

It may safely be said that a very large proportion of the settled districts of the Colony need only to adopt some rational method of preserving green fodder for winter use, and proper shelter for the cattle, to enable them to supply themselves with dairy products, and even to take part in the general export of these commodities during the summer months. Mr. M'Caffrey's Report. [Appendix H.]

During the past year the analytical work most urgently required for the purposes of the department has been done by Dr. Helms, the consulting chemist of the Department. Analytical Work.

He has analysed eighty-seven soils for agriculturists in different parts of the Colony, who have been experiencing the evils of exhausting the soil or of natural poverty. Every effort has been made to choose soils as typical as possible, so that a large number of farmers and others might be benefited by each analysis. It has been impossible to analyse all the samples submitted, but by judicious selection it is hoped that a large amount of useful information has been conveyed to the persons directly interested and to many others similarly situated.

In addition to the soil analyses, Dr. Helms has furnished analyses of the principal manures offered for sale throughout the Colony, and I have adopted a scale of values for the different manurial elements, which enables the department to publish a list of all the commercial fertilisers available in the Colony, showing their exact chemical composition, their comparative values, and price charged. By this means we are enabled to recommend to the farmer and fruitgrower the most economical manure to employ, and also the most suitable one for his conditions of crop and soil. The practical value of our labours in this direction is indicated by a reference to the tabulated list of manures which is now being summarised. It is found that some imported manures, which are sold at very high prices, are inferior in manurial value to local ones, which can be sold, on account of the small demand, at comparatively low rates.

The outcome of the department's investigations will be that all manure manufacturers will furnish certificates of the manurial contents of the goods they offer; and the farmer, when dealing with honest firms, will know the value he is getting for his money.

The chemist has also examined some of the ashes of our forest trees, and I have been enabled to determine their value as manures.

Several samples of water intended to be used for irrigation purposes have also been examined, and definite advice given on such analyses.

Not much original work in the way of determining the injurious properties of some of our supposed poisonous plants has been attempted in face of the large amount of routine work that had first to be attended to. Now, however, that a permanent chemist has been appointed in the person of Mr. F. B. Guthrie, it may confidently be expected that such original investigations will be taken in hand, and in course of time some definite and valuable advice will be published.

The scheme of national prizes approved by the Minister in 1890 has undoubtedly done good in stimulating our farmers and orchardists, vinegrowers, apiarists, and poultry-farmers to a healthy rivalry.

The scheme of prizes as published in 1890 drew out 120 competitors, while that of 1891 drew 175. National Prizes

The system of judging these entries by scales of points, carefully drawn up and published to all interested before the date of judging, had a valuable educational influence, and has furnished our most progressive and intelligent farmers and others with a standard of excellence at which to aim. It has also been the means, as I have myself seen in my trips to the country, of inciting the competitors to give greater attention to many matters of detail, such as drainage, farm buildings, cover for cattle and implements, treatment of diseases and pests, and other details that have escaped attention amongst matters of greater importance in the first years of hard struggle. There is reason to believe that the prizes offered for the different classes of agriculture, specified in the list of national prizes, will do a great deal in advancing the state of agriculture throughout the Colony, and in raising the standard in the different districts.

Amongst the many difficulties that the fruit-growers of this Colony have to contend with is the one of incorrect nomenclature.

Our orchardists are learning, by degrees, which are the best varieties of fruit to grow for export Fruit Models purposes, and which for the home markets, but they are not able to recognise these fruits by their names when they see them, nor are they sure of getting them from the nurserymen when ordered.

Of apples alone it is estimated that there are over 600 varieties in New South Wales, a large number of which are Colonial seedlings of great merit. It may be safely asserted that there is no one man in New South Wales who could recognise more than one-third of this number.

The same may be said in a smaller degree of our pears and plums.

In order to meet this difficulty to some extent, the Minister has authorised the formation of a collection of models of the varieties of fruit cultivated in the Colony, and so as to make this collection as complete as possible the fruit-growers of the different districts have been asked to supply samples of fruit with the names and details as to their most striking characteristics.

The fruit-growers have responded heartily in this matter, and the result has been that we have been enabled to have models of over 600 of the best fruits of the Colony made in *papier-maché*, and coloured in such a way as to represent very closely the original.

The greatest difficulty, however, is yet to be overcome, viz., to have the whole of these correctly named, described, and catalogued, so as to give it the greatest possible educational value for the fruit-growers themselves. As a great part of this work has hitherto fallen upon myself, I shall feel very much relieved when a competent fruit-expert shall have been appointed to the department. Such a man, if he have the necessary experience and enthusiasm, will soon be able to make himself acquainted with the fruits of our various districts, and to make our collection of models as complete in numbers and descriptive details as it should be. In order to assist him in this national work, which cannot be satisfactorily done by one man alone, I would suggest that a pomological committee be appointed, consisting of one fruit-grower of acknowledged ability from ten principal fruit-growing districts of the Colony, which should meet in conference with the fruit expert at least twice a year, in order to assist him in describing the present well-known varieties, and any seedlings submitted for their judgment. Such a committee could, in the course of a few years, weed out the rubbish from amongst our varieties of fruit, and give certificates of excellence to new varieties of approved value.

The cost to the country need be but small, as I am sure that ten excellent men can be found to do this work, if they be paid their actual travelling expenses when visiting the metropolis to confer with the department. Pomological Committee.

I hope to submit a detailed scheme with this object in view before the next fruit season commences. Another

Another subject of great importance to our fruit-growers has been how to deal with the many insect pests, indigenous and exotic, that are now troubling our fruit-growers.

Trial of Spray  
Pumps.

The recognised method of treating many of these pests is by means of emulsions and solutions applied in the form of fine sprays. In order to find out the best method of applying these, the department had a competition of spray pumps and sprays, which was watched with much interest by those immediately concerned. Certificates were given to the pumps and sprays found most effective by the committee, which consisted of the pathologist and the entomologist of the department, Dr. Fiaschi, Mr. C. Gambling, and Mr. R. Scobie, M.P.

In consequence of further investigations in France and America we are now enabled to show the fruit-growers some great improvements on the machines then exhibited, and can confidently recommend a form of pump and nozzle that will be twice as economical and thoroughly effective. These matters have been regularly discussed in the different monthly parts of the *Gazette*.

New Seeds and  
Plants.

Provision has been made during the past year for introducing to our farmers' notice seeds of new plants and crops of different varieties to those hitherto cultivated. The department has issued packets of six varieties of wheat which have earned a reputation in other countries as rust-resistant. As far as the experience of one year will allow us to speak, it may be said that there is good reason to believe that much benefit will result from the introduction of a few of these varieties, and it may confidently be expected that we shall find, in course of time, different varieties suitable for the different districts of this Colony, which will be permanently valuable in resisting the inroads of this fungoid disease.

Other seeds of different kinds, to the number of 4,617, were despatched in small experimental packets to 2,042 experimenters. These consisted of six varieties of sugar-beet, Indian gram, chick-pea, mountain rice, teosinte, and others which were considered worthy of introduction and suitable for cultivation in this Colony. 219 roots of ginger, sweet potatoes, tapioca, and cassava have been distributed.

6,656 cuttings of raisin vines and currant vines, osiers, and other plants have been distributed. These have all been of economic value, and were not obtainable from seedsmen in Sydney. The reports received thereon have been very encouraging, and will be published from time to time in the *Gazette*. It is sufficient to say that the results, if not immediately apparent in introducing new crops on a large scale, have furnished us with such data as to the capabilities of the different districts of the Colony for certain new economic products as will be of great value to the Colony, when the question of introducing these crops becomes a more pressing one.

Experimental  
Farms.

The question of determining the economic value of many new crops, and of many other points of interest, can only be settled after several years' careful experiments at properly organised experimental farms. The sites for four of these have been already fixed upon by the Government—one for sub-tropical products, at the Richmond River, which will embrace two different Government reserves, comprising very different kinds of soil, at which it is hoped many valuable experiments will soon be conducted, to indicate to the surrounding settlers the possibilities of that most fertile district.

Operations have been commenced at each of the sites near Lismore and Ballina, with the clearing of 50 acres of land, and making preparations to get it into a fit state for advanced operations.

A site suitable for English farming has been chosen, near Uralla, but as the necessary formalities have not yet been concluded by the Lands Department operations have not been commenced on this site.

The third one chosen is on the North Wagga Wagga Common, where it is expected that valuable experimental work will be done with regard to wheat and vine cultivation and other products of a moderately dry climate.

A fourth site—the Kenmore Estate, near Goulburn—has also been approved by the Government, but pending the choice of a suitable position for a Lunatic Asylum, for which this site was originally intended, nothing further has been done towards making use of this piece of land for the purposes of this department.

Forage Plants.

During the year a valuable work on the "Forage Plants of Australia" has been prepared by the botanist, and issued by the authority of the Minister. This work describes the chief fodder plants indigenous to Australia such as the salt bushes and others, not including grasses, which have had such a beneficial influence on the character of our wool. As each plant described has been very carefully illustrated it is hoped that this work will prove of value to our pastoralists and others vitally interested in this question.

The wine industry which promises to assume great proportions in this Colony has made steady advances during the past year.

Vine Diseases.

Much anxiety has been caused to those interested in it by the spread within small limits of the much dreaded *Phylloxera devastatrix*. As, however, this pest is dealt with by the Vine Diseases Board, specially appointed for the purpose, who report to the Minister the scope of their operations, I need not further refer to this matter at present.

It is felt on all hands that the Act which deals with this serious pest is defective in many particulars, and the vine-growers of New South Wales are deeply concerned at the serious results that would ensue if the disease were to spread further than the present infected area. It would probably stifle in its infancy one of our most promising industries. The hope may, therefore, be expressed that it will be found possible to introduce at an early date a bill which will give the vine-growers the power of dealing for themselves with this injurious insect, and of levying a tax on all the vine-growers in the Colony to meet a fair proportion of the expense incurred in connection with the provisions of such an Act.

Experimental  
Wine Station.

I trust that when the Wagga Wagga experimental farm has been started ample provision will be made for an experimental vineyard and wine-cellars in connection therewith.

While immense progress has been made with regard to the methods of wine-making in this Colony (and some of our wine-makers stand second to none throughout Australia), it cannot be denied that there is much need for education in the case of many small growers who are still learning the rudiments of their calling.

There is still much need for experimenting in such matters as fermentation and blending, subjects which cannot well be taken up by private enterprise, but which can be best treated in Government departments, from which the results can be published free to all alike.

The system of national prizes for wines, which occupy a leading position in the schedules submitted for the different district shows, has already tended to cause keen competition, and will doubtless do much good in raising the standard of the wines of some of our principal districts:

Perhaps

Perhaps the greatest possible good to this young industry would be caused by the popularising of our Colonial wines, as they are called, and by convincing our middle classes of the superiority of pure, well-matured Australian wines over the great proportion of foreign wines, so called, which are introduced into this country. When our upper classes will have ceased to consider it *infra dig.* to place Colonial wines on the table, and our lower classes will have learned to appreciate the light wines of this Colony as the natural drink of the country, we shall be able to provide a home consumption for our own produce instead of sending it to England and France to be manipulated and returned to ourselves as Spanish port, German hock, and French clarets.

The administrative work of the department has naturally grown during the past year in exact proportion to its extension in its different branches of usefulness. I find that as officers are appointed to go out into the different districts, and come in contact with agriculturists of all kinds, so the department comes into communication with many farmers and others, and the correspondence becomes proportionately heavy. Clerical work.

Visits of intelligent officers to certain districts have been invariably followed by applications for advice, for new seeds, for our different publications, and letters on many other matters of interest.

During the ten months of 1890 in which the department was carrying on its operations, letters to the number of 4,982 were received and registered. During 1891 the number rose to 8,171.

During the former year 300 letters were received, applying for publications and other routine matter connected with the department, while in 1891 more than 8,000 papers have been received relating to seeds, publications, and subjects previously dealt with in registered letters.

The number of letters written to the public during 1890 was 3,446; during 1891, 9,754.

During 1890, 55 type-written circulars were issued, to the number of 3,306; during last year 116 of such circulars were issued, to the number of 12,449.

Forty-five printed circulars, representing an issue of 23,184, were sent out in 1890, while 74 such circulars, representing 41,380, were distributed in the last year.

Eleven publications, to the number of 17,900, were despatched during 1890, while 27 were issued during last year, with a total of 40,450.

The figures for the other correspondence work, consisting of minutes, telegrams, orders, and vouchers, amounted to 1,403 for 1890, to 4,122 in 1891, during which year also 6,400 post-card acknowledgments have been sent out.

I need hardly say that such a large amount of clerical work has been achieved only by the intelligent and enthusiastic assistance of the whole of the clerical staff, under the control of Mr. Price, chief clerk, who has had charge of the general correspondence, and of Mr. Reynolds, first clerk, who has had similar control with regard to the scientific branches of the department.

I would gratefully place on record my opinion that the department has been fortunate in securing the services of intelligent and enthusiastic young men, who have spared themselves in no way whatever to advance the department's interests, and have worked zealously and cheerfully long after the usual Civil Service hours, in order to assist in commencing the various agencies of this young department. Without the intelligent zeal and steady enthusiasm which has animated the very small staff that has done this work it would have been impossible to carry out many of the schemes which have been approved by the Minister, and are now working smoothly and regularly.

I would now venture respectfully to indicate to the Minister what seem to me the pressing requirements of this department which are deserving of attention during the coming year, as well as some important lines of investigation which might be taken up as the facilities are provided. Requirements of Department.

I find that our *Agricultural Gazette* and *Bulletins*, conveying, as they undoubtedly do, much valuable information fully appreciated by the farmers, do not quite meet the demand which exists for frequent and intimate personal intercourse between the farmers and the department. However explicit and simple our printed documents may be, they can never take the place of verbal instruction and personal conference.

To meet this demand it seems necessary that we should have intelligent well-trained officers whose duty it would be to visit the different centres of agricultural activity, in order to meet the various classes of the agricultural community in conference.

The farmers are undoubtedly beginning to realise the value of the efforts made by this department to instruct and assist them. They welcome competent officers, as I can personally testify, in the most generous and hospitable way; and if the department can supply experts in the cultivation of cereals, fruit, vines, dairy products, and sub-tropical productions, they will be kept constantly busy in visiting the districts devoted to their respective subjects; in visiting the individual farmers and thus collecting data for the statistical record of the agriculture of the Colony; in meeting farmers' unions, agricultural societies, and any other associations formed for the advancement of agriculture. It would be essential that these men should be practical above all things, and able to explain the science, and if necessary illustrate the practice of the branches of agriculture they are proficient in. Provided such officers confine themselves strictly to the subjects in which they are expert, and refer all others to the proper officers of the department, such men will be welcomed by the farmers, and will do good which cannot be measured by the cost of their salaries. Agricultural Inspectors.

With such officers out in the field and the present scientific staff of the department in their laboratories, I feel assured that the agriculturists of New South Wales would soon recognise the department as a board of advice, which could be confidently consulted on every matter of scientific or practical interest to them in their calling.

The experimental farms which it is proposed to start will be of infinite value in educating our adult farmers and in providing suitable training for the next generation of agriculturists. It would therefore, I think, be a work worthy of the coming year for the Minister to initiate such a comprehensive scheme of experimental stations as would provide for all the distinct climatic regions of the Colony, and would suffice for some time to come to give instruction in the different industries connected with agriculture.

Another urgent want of the fruit-growing section of our agriculturists is legal authority to inspect fruit imported into this Colony with a view to excluding diseases which are thus often introduced into our orchards. Insect Pests Bill.

The same Bill would provide machinery for inspecting the orchards throughout the Colony with a view to making owners realise their responsibility to their neighbours in doing their share towards ridding the country of the many insect pests which already do so much harm to the fruit-growing industry.

However

However carefully our more intelligent, and more patriotic fruit-growers may endeavour to keep their orchards clean and subjugate insect pests, their efforts cannot be entirely successful unless the indolent and careless are compelled to do the same. The stringent Acts passed by the State of California and administered by its Board of Horticulture have done much to cleanse their own orchards and to protect them from the introduction of foreign pests.

Much good may also, I think, be done by devoting increased attention to the question of discovering and encouraging the parasites which destroy some of the insect pests. America has set a brilliant example in this line of investigation. It has introduced from Europe parasites of the Hessian fly and the cabbage worm, and from Australia parasites and predaceous enemies of the cottony cushion scale, of various scales affecting orange-trees and of the American blight.

Friendly insects.

It is gratifying to note that the investigations of this department, as recorded in its official journal, have renewed the interest in this question in the United States of America, an interest which has been shown by the despatch from that country of one of the field agents of the entomological division of the United States Department of Agriculture at the expense of the Californian State Board of Horticulture, and under the auspices of the department. Mr. Koebele was sent to this country a few years ago to get a quantity of flies parasitic on the cottony cushion scale, "*Icerya purchasi*," as recorded by Mr. Fraser Crawford, of Adelaide. He found a predaceous enemy of that scale even more efficacious, and the result is that the Australian ladybird ("*Vedalia cardinalis*") has cleared the Californian orange orchards of their most deadly enemy.

Mr. Koebele is now in Australia again, specially commissioned to send from this Colony the insect enemies of some of the other injurious scales and aphides which are so troublesome to the American fruit-growers, more especially the friendly lady-birds described by the Entomologist and depicted by the Artist in the February *Gazette* of 1891.

Mr. Koebele, it may be confidently asserted, will discover other predaceous insects and parasites, besides those already recorded by the few entomological workers of Australia, and his investigations will thus be ultimately as beneficial to ourselves as to his own department.

Much good can be done, I believe, by pursuing this line of investigation, and devising means of enabling one class of insects to keep another in check. But it can be only achieved by the continuous investigations of a field agent with a competent knowledge of entomology and a special training for this kind of work.

Mr. Richard Helms, who was for a short time in the service of the department as collector, but left it to accompany the Sir John Elder Expedition as zoologist and botanist, would be a suitable man for such work; and I hope the Minister may secure his or some equally suitable man's services for this peculiar line of investigation during the coming year.

Agricultural Societies.

Another urgent need of the department is to secure the cordial co-operation of the whole of the Agricultural Societies throughout the Colony. While it may be freely admitted that some of these are doing excellent work in advancing agriculture in their respective districts, it cannot be denied that others show little desire to do anything except hold a medley show once a year—a show which often has little of agricultural interest to recommend it.

In view of the large amount of money (£20,000) that is spent in subsidising these societies, in addition to the large special grants that are being continually voted for the purpose of erecting buildings and in other ways helping the societies, it does not seem too much to expect that the different Agricultural Societies should form so many branches of the department scattered throughout the length and breadth of the Colony.

The subsidy is at present distributed by the Colonial Secretary's Department, but it would seem advisable in the interests of this department to have the grant administered by the Minister for Agriculture. If that were done, judicious regulations might be framed for the guidance of these societies, which would provide for the distribution of the grant in proportion to the value of the work done. I shall be glad to see the Minister insist upon each society which receives Government aid having meetings of its members at least once a month for the discussion of questions of mutual interest. By this means I believe greater interest would be aroused in the work of the societies, and farmers themselves would receive immense benefit from the interchange of ideas, the discussion of suitable questions, and the exhibition of matters of seasonable interest.

Monthly meeting of Societies.

If, also, the Minister determined to distribute the Government subsidy in proportion to the amount of money awarded in prizes for classes approved by the Minister, it is possible that the prize lists might be more agricultural in their character, and the largest prizes would be offered for more important objects than jumping contests.

Gambling at Shows.

I should also like to see the Minister insist upon the suppression of gambling and games of chance at our Agricultural Shows. Every regular attendant at these shows will have noticed the familiar faces of sharpers who evidently make a comfortable living by travelling round the country to these successive shows and imposing on the ignorance of our country youths. Some of our societies put down this evil with a strong hand, and I believe that it needs only to be pointed out to the majority to have the same done throughout the whole Colony.

Home for Department.

Another necessity in the department in its present stage is a suitable home and field of operations. At the present time the Scientific Staff are situated in Macquarie-street and the Administrative Staff in the head office of the Mines Department, while the chemist is working in the laboratory of the University by courtesy of the Senate.

I need hardly point out how much inconvenience, loss of time, and waste of energy is caused by this separation of the different parts of the department. Moreover, some of the officers have actually no office accommodation for their clerical work.

When the whole of the staff of the Department of Agriculture can be accommodated in one building, immense trouble will be saved in administering the department, and immense gain will be insured in the discipline, organisation, and final results.

Experimental plots for Scientific Staff.

But the work of the scientific experts of the department cannot begin and end in the City of Sydney. Besides the college and experimental farms we need a piece of ground devoted exclusively to experiments by the scientific staff, which must necessarily be convenient to the head office. Experiments on fungus diseases and insect pests, the breeding of insects from their larvæ, testing of remedies for different forms of diseases, and such matters, cannot be satisfactorily dealt with in small rooms or city back-yards.

I would, therefore, express the earnest hope that the Minister may be able to secure for the use of this department a portion of the Rookwood Reserve—say 30 acres—which would be eminently adapted for the laboratory investigations of the scientific staff of the department.

Such an area would also suffice for an experimental fruit station, similar to that which the Victorian Fruit Station! Department of Agriculture has in the Royal Horticultural Gardens at Richmond. Here every kind of fruit tree now grown in the Colony could be tested as to its relative values for different purposes, and its fitness for further cultivation demonstrated. All foreign varieties or seedlings hereafter introduced could be tried and proved. Scions of the varieties found worthy of cultivation could be distributed to the districts for which they are most suitable, and a general standard afforded by which to determine the fruits of the Colony. An immense deal of practical experimenting might be carried out, which can never be properly attained by private enterprise.

Such a place would also form an admirable school of horticulture in which to train scientific School of Horticulture. gardeners who would be expert in all kinds of horticulture, a class of young men, I may remark, which it is almost impossible to get at present in New South Wales from our own native-born youth.

The most urgent necessity however in my opinion in the interests of this department is for some definition of its duties and the scope of its work.

It has been the custom in every other country to usher in the Department of Agriculture by an Bill to define duties of the Department. Act of Parliament defining its several duties and the various subjects over which it should have control. Such an Act in New South Wales would bestow disciplinary powers upon the Agricultural College now started, and the Agricultural Schools which are to be established. It would furnish the department with some definite line of operations, and bring together the different organisations throughout the Government Service which are working on lines closely allied to agriculture, but under different administrations. It has only been by care and forbearance that clashing and interference with other departments have been avoided. However careful the different officers concerned may have been, there has been undoubtedly overlapping of duties and duplication of work, which will be wholly avoided only when the whole of the agencies relating to agriculture have been brought together and organized under one harmonious whole.

I have, &c.,

HENRY C. L. ANDERSON,

Director of Agriculture.

APPENDICES.

## APPENDIX B.

The Principal of the Hawkesbury Agricultural College to the Under Secretary for Agriculture.

2 January, 1892.

I do myself the honor to submit for your consideration my report upon the inauguration and first year's proceedings of the Hawkesbury Agricultural College.

I have, &c.,

J. L. THOMPSON,  
Principal.

I entered upon the duties of my office as Principal on the 2nd March, 1891, and found it somewhat difficult to launch at once into the duties of my position owing to the many hindrances which beset my path.

In my communications and interviews with the Minister I always strongly protested against the admission of students until proper quarters for their education and comfort were provided on the common.

Seeing, however, that the premier Colony of the Australian group was much behind the other colonies in the matter of Agricultural Colleges, the Minister was most anxious that a start should be made, and twenty-five students were admitted on the 10th of March, accommodation being provided for their reception in temporary quarters in the town of Richmond.

The official opening took place on Monday, 16th March, and I beg to suggest that the report of proceedings, as given in the *Sydney Morning Herald* of the following day, be reproduced in this report:—

## “HAWKESBURY AGRICULTURAL COLLEGE.

## “FORMAL OPENING BY MR. SYDNEY SMITH.

“THE ceremony of formally opening the newly-established Agricultural College at Richmond was performed yesterday by the Minister for Mines and Agriculture (Mr. Sydney Smith) in the presence of Mr. Bowman, representative of the Hawkesbury district in the Legislative Assembly, Mr. Sydney Burdekin, M.L.A., the Hon. W. Walker, M.L.C., Mr. J. E. Onus (Mayor of Richmond), Mr. W. Gosper (Mayor of Windsor), Mr. T. H. F. Griffin, members of the borough council, and a large gathering of the residents of Richmond. The site chosen for the College, formerly known as Ham Common, comprises an area of about 4,000 acres of virgin soil, the greater part of which is cleared and grubbed, and is of a loamy nature, with a subsoil of clay. An area of about 50 acres will be set apart for conversion into an orchard, but the remaining portion will be put to every kind of use that will prove of advantage to the students. So far, 26 students have been enrolled, and these are temporarily accommodated in a substantial brick house, built some years back by Mr. Wm. Bowman, and altered by the Government so as to meet present requirements. Nothing has yet been done in the direction of erecting the college building proper, Mr. Sydney Smith having elected to await the arrival of Mr. J. L. Thompson, the Principal, ere getting the plans prepared. It is expected, however, that in about twelve months' time the building will have been completed, when it will be possible to accommodate upwards of 70 students. The college site has been chosen on a ridge to the west of the Penrith road, and distant three-quarters of a mile from the Richmond Railway Station. The first purchases have been made, such as horses, ploughs, harrows, scarifiers, and so forth, and the students have commenced in earnest the task of preparing the soil for seed.

“On arriving at Richmond Mr. Sydney Smith was conducted to the temporary college building, and had the students introduced to him by Mr. Principal Thompson. This ceremony completed, Student Farnell read an address of welcome, couched in the following terms:—

“To the Honorable Sydney Smith, M.L.A., Minister of Mines and Agriculture.

“Sir,—On this the occasion of your first visit to the Hawkesbury Agricultural College, New South Wales, the first college of the kind started in this Colony, we, the first session of students admitted by you to the privileges of such an institution, think it becoming to offer to you, the first Minister of Agriculture in New South Wales, a tribute of our respect and sincere congratulations. We feel that we have cause to congratulate ourselves—first, because the duties of this important office have fallen to such an enthusiastic friend of agriculture and such an able administrator as yourself; second, because you have made such a happy choice in the Principal and staff who are to direct our studies; and, third, because we have been chosen as the first to enjoy the benefits of the complete system of agricultural education as planned by you. On the other hand, we feel confident that it is a source of gratification to you that you have had the privilege of guiding the early destinies of this young department, and of initiating this college and its many other useful agencies. We would express our sincere prayer that you may long be spared to administer the affairs of this useful department, that your satisfaction

satisfaction with the results of your work may be strengthened year by year, and that you will never see cause to regret the splendid efforts you are now making to give the young men of New South Wales a complete, practical, and scientific agricultural education

“ We have the honor to remain, sir, your respectful students,

“ A. C. Thompson, D. F. Reid, F. J. J. Dawson, Mark H. Reynolds, L. R. Barker, A. Moore, W. M. M'Kee, K. W. Spark, Septimus Morton, P. R. Drummond, Otto H. Baass, O. Z. Throsby, G. S. Stening, G. Wright, Hilton Farnell, H. C. Quodling, E. A. C. Corlette, Walter T. Bridges, B. L. Thomson, Leslie Drinan, Arthur Mote, Mackey Gray, E. J. Rien, T. Thompson, Henry P. Welsh, Herbert J. Dark.”

“ Mr. Smith, in reply, said :—Gentlemen,—Permit me to thank you for the address you have presented to me, and which I highly appreciate. I think it will be prudent if I take this opportunity of stating what has been done in connection with the college, and what it is intended to do. I can assure you, it gives me very great pleasure to be here to-day for the purpose of declaring the temporary buildings open for the admission of students. I feel that I can heartily congratulate the Principal on the excellent class of pupils we have given him, and he is, I believe, well satisfied with them. They are stalwart, strong, active young fellows, who have evidently taken to agriculture for the love of it, and who are determined to follow it in after-life as a profession, and make it a success by dint of intelligence and hard work. (Cheers.) I can congratulate the Principal on the admirable lady—Miss P. J. Oliver—he has secured to preside over the college household and act as an honored matron to these young lads. I can congratulate him on his science master—Mr. E. C. Wood—one of our young men who has graduated honorably in our own University in arts, in science, and in engineering, and who has fortunately chosen the very lines of study which will make him a very useful member of the staff of this college. I consider also that Mr. Thompson may be congratulated on his farm overseer, orchard manager, and the other members of the staff now appointed; but, above all, I feel that I can congratulate you young students on having a gentleman of Mr. Thompson's proved value and practical worth to preside over this college as its first Principal. We have no novice in this important office, but a gentleman who comes to us with a splendid reputation, and who will, if anyone can, make this institution the success we all hope for. I notice, in scanning the names of the students, one encouraging fact—that the prospects and charms of our system of agricultural education have drawn out a number of young fellows from the city and towns who have determined to adopt the calling which above all others must in the future make this country truly great. We have had no regard to social position, nor to creed, nor to any qualification whatsoever, except that of a fair English education to enable the students to benefit by their future instruction, and of age and physical strength to guarantee their ability for the manual labour that will be expected of them. (Cheers.) I said in my opening remarks in the first *Gazette*, in introducing the department to the farmers of New South Wales, that the greatest hope for the future must rest in the systematic education of lads who would settle on the soil. There must be instituted a scheme of education that will fit our boys for the intelligent occupation of the land. They should receive the best possible scientific and practical training to enable them to hold their own in the march of progress, and to add to the material wealth of the Colony. Your parents have agreed with me as to the value of this kind of education. You labour under the disadvantage of having a temporary building, of being cramped for room, of having a wild waste of land to subdue without any attractive surroundings, such as you would have in an old-established college and farm; but, on the other hand, you have what I deem the immense advantage of being the pioneers in the national undertaking of starting this large college farm; of laying out your own paddocks, preparing the ground for the first crop, laying the foundation-stone for the college itself, of helping to put up the farm buildings, and seeing all the practical operations connected therewith; in short, of having the identical experience that most of you will find so valuable when, in after years, you undertake to start operations on a new farm of your own, or for your employers. I feel strongly that you young men have a true mission in life. You will here get such an education as will fit you, I hope, for any position of trust on any large estate or any farm you may be called upon to manage in after years. (Cheers.) I trust that each of you now starting on your college course will carry it through, and leave with a diploma as M.H.A.C. (Member of the Hawkesbury Agricultural College), of which you may be as proud, and which you will find as valuable a passport in the world as a University man does in his B.A., or the English student in his M.R.A.C. (Member of the Royal Agricultural College.) (Cheers.) I trust that you will imbibe far more than a knowledge of agricultural science and agricultural practice; that you will acquire a true respect for all constituted authority; that you will exhibit towards the lady who will preside over your household such a chivalrous and manly spirit as you would towards your own mother and sisters. (Cheers.) This will make you, as your daily occupation should do, straightforward, honorable, manly young fellows, who will go forth to be centres of light and agricultural activity each in your respective districts. (Cheers.) Show me the man or boy who is loved and honored in his own home and I will show you the man who will be respected and trusted by those of his own immediate world, be it little or great. While you will doubtless have to work hard on the farm and in the class-room, I trust there will be a fair amount of play. I hope to see a cricket club, a football club, and a cadet corps in due time established in connection with the college, and I have no doubt that all these agencies will develop a proper spirit, and that the same facilities which will make you good farmers and intelligent men will make you hearty cricketers and footballers, and well-trained, well-disciplined young soldiers, who may be afterwards available for the defence of your country should the occasion ever arise. You will to-day, under the direction of your Principal and his staff, commence, in a humble way, as all great undertakings must be commenced, a course of education which will embrace all the operations of modern farming, dairying, fruit-growing, vine-cultivation, the uses of ensilage; methods of irrigation, with constant and systematic experiments in the feeding of cattle and sheep; testing the varieties of cereals, trees, and grasses; improved methods of cultivation; theory and practice of wine-making; introduction of new crops; trial of new implements and machinery; the uses and methods of drainage; the specific value of different manures as applied to different kinds of soil; the relative value of different breeds of cattle, sheep, and horses; testing the value of specifics for different pests and diseases; together with the minor but valuable industries of bee-keeping, gardening, and conserving the products of the farm and orchard. You cannot in the first year have a well-formed laboratory for chemical research, but you will, I am sure, under the tuition of Mr. Wood, acquire a fair knowledge of the elements of chemistry, and be able to illustrate that knowledge by means of simple test experiments. You will learn to deal with the fungus diseases of plants, and get such a knowledge of botany as will make you acquainted with the particular objects of your cultivation in the farm, orchard, and garden. By means of entomology you will learn to distinguish between the different classes of insects, to recognise friends from foes, and to deal intelligently with this important factor in modern farming. You will learn sufficient mathematics in the way of arithmetic, mensuration, and other branches to enable you to make your own calculations, to plot out your paddocks, as well as to use the theodolite, levels, and other instruments, which will be useful in the practical operations of your farm. In short, I expect to see this college the chief centre of the agricultural activity of the Colony, and I believe that you will soon be able to communicate to the expectant farmers the results of many interesting experiments in the different lines I have indicated. As we have limited the range of students here to certain ages, it becomes a necessity that we should provide for younger lads who have just finished their early school education and wish to take up the practical working of farm life. For them farm schools will, at an early date, be established in connection with experimental farms in different regions of the Colony, where boys, the children of the farmers of the district, may learn everything appertaining to crops more especially suited to their respective districts. (Cheers.) It will probably be necessary to have special experimental stations for such very important industries as fruit-growing and wine-making, where students can pay that special attention to the minutest details of either occupation which their national importance demands. The small area at present under crop—about 947,000 acres—and the large area, 200 times as much, available for various kinds of occupation, 193,848,000 acres—a large proportion of which is, however, unsuited for agriculture—is suggestive of the great opening that still exists for the agriculturists of the Colony if the institution is to prepare young men for immediately entering upon agricultural pursuits as a sure and honorable means of livelihood. Contrasted with many other educational subjects, that of agriculture not only provides its followers with knowledge which will, if properly directed, fit them for at once entering upon the practical duties of their vocation; but while the tendency of other systems is to suit men for artificial town life only, this will fit its students for scientifically subduing the wild places of our land, developing its greatest resources, and adding to its material wealth in the surest possible way. While many other educational systems tend to congest all the intelligence in a few centres, that which you are going to pursue spreads it through the length and breadth of the land; and if intelligence is needed in the ordinary daily intercourse between man and man, how much more is it necessary in profitably working from nature the produce she will so freely give when properly approached. A life spent in agriculture is a natural one, and, to the healthy mind, a pleasant one. If the ordinary farmer and orchardist find delight in their work, how much more pleasure will he have who

who has learned by systematic tuition how to grapple with every problem which may arise, how to combine practice and theory, and what to expect from every treatment given to his crops, his stock, and his trees. (Cheers.) When one compares, in these days of advanced education and keen foreign competition, the relative measure of success attained by the untrained farmer and that gained by one who has enjoyed a complete course of agricultural education, I think there can be no doubt that, other things being equal, the latter has the advantage.

"Probably one of the greatest drawbacks to the success of farmers whose own experience has been their sole guide is that they are as a rule frightened to strike out fresh paths, and are unable to keep in touch with modern improvements and ideas of which they have never had any practical experience. After a full course at such an institution as this, you will not be so restricted, for your education ought to make you ready to grasp new ideas, and to put them to the rigorous test of practice whereby to discover their value. On the other hand, you will not receive an education which will make you rash theorists. The aim of all the instruction imparted will be to give you broad ideas of theory, and to show you how far they can at present be carried out, and how best to proceed in order to solve economic problems in agriculture. In fact, the aim of such an institution as this will be to turn out intelligent men fit to enter upon the commercial and economic raising of crops, the breeding of cattle, and the thousand and one other avenues of success in agriculture. Your future, if those of other institutions are any guide, will be of great promise to yourselves as well as of benefit to your immediate district and to your country. From the Dookie Agricultural College I understand Mr. Thompson has turned out very useful men. For example, one, who was only 18 years of age when leaving the college after receiving his diploma there, took over the sole management of his father's large farm. Another young fellow, six months after taking his diploma, made a large silo, superintended the construction of a first-class dairy, and laid the foundation by judicious and successful purchases, of an excellent dairy herd; another of these students is now Assistant Government Entomologist in Victoria. Some of them, on the recommendation of the Principal, have obtained honourable positions as overseers and managers of estates and farms, and the great majority of those who have passed through that college have taken to farming as their life work. Many parents in Victoria who had estates which required for their management such a general knowledge as they themselves did not possess, have sent their sons to the college to get this knowledge. Two of the earliest students are now successful station-holders in Queensland, and on the whole it is most gratifying to find that these institutions turn out men who keep to agricultural pursuits, and are afterwards able to successfully work their own or other people's properties, and that they invariably become, in whatever district they establish themselves, authorities in agricultural matters, and the centres of rational and intelligent progress in the science. They may fitly be termed well-disciplined "ambassadors of agriculture," of whom we hope in future to send out a yearly supply to disseminate their valuable influence throughout the length and breadth of the land. The scope of the work at the college has been so drawn up that three days in each week will be spent in farm work, and the other three days in the class-room, so that theory and practice will go literally hand in hand. The day inside will follow the day outside, and so the work will be kept fresh and interesting, whilst the theoretical instruction of the class-room will deal with matters which were practically dealt with on the previous day. For instance, a student will find that a certain soil will not grow a certain crop with profit, and by subsequent analysis in the laboratory he will, I trust, be able to discover that the soil is deficient in a certain constituent which is essential to that crop. I am aware that there are authorities—and eminent authorities—on the subject, who differ with the methods we have adopted. They would separate the theoretical entirely from the practical. They would educate a young man first either in the practice or theory of his profession, and afterwards send him to the University or experimental farm for the remaining portion of his education. I cannot help feeling convinced, however, that for our circumstances, for our young country, for our eminently practical people we must combine the two, and we must turn out at the end of the course young men who not only understand the theory and higher principles of their profession, but will be able either to do every operation on the farm for themselves, or see that others do it properly for them. I am glad to note the sympathy and hearty co-operation which the people of Victoria have extended towards their two colleges. Their value has been recognised, and many gentlemen have shown their active sympathy and goodwill by giving prizes, medals, and scholarships, to be awarded to students taking first places in the different branches of agriculture. (Cheers.) I feel that such inducements to competition, such college honours, and such inducements to healthy rivalry should be left to the generosity and public spirit of our farming and pastoral community. May I venture to express the hope that the Colony which has so magnificently endowed its University with scholarships, bursaries, prizes and medals from citizens who have had sympathy with its aims, will exhibit no less public spirit in the direction of the practical education which we are to-day taking up. (Cheers.) I hope yet to see many a poor farmer's son sent here with a scholarship endowed by the Agricultural Society or by some wealthy individual in the district of which he is a native. (Cheers.) I hope to see medals and prizes offered by public spirited companies, firms, and individuals, for the best student in each line of study the college will take up, and I feel confident there are many throughout our country districts who will be glad to thus encourage our students, and show their appreciation of the efforts of the Government in this direction. (Cheers.) It is my intention to give a gold medal to the best student in practical agriculture. This, I should mention, will be a gift from myself and not from the Government. (Cheers.) In conclusion, I trust that with the next batch of students a year hence we shall be entering upon our new premises, fitted up with every convenience for your home comfort and every possible aid to your scientific studies in the way of laboratories, museum, class-rooms, &c. May the work you are now engaged in cultivate in you, one and all, a truly healthful and beautiful nature. May your investigations expand your minds, give you that true humility which increasing knowledge always brings, and teach you by gradual steps to trace out the great mysteries of nature and "look from nature up to nature's God." (Cheers.)

"Mr. Sydney Burdekin said he had accepted with very great pleasure the invitation to attend the opening ceremony. Intimately mixed up as he had been from his youth, with agricultural pursuits, and as occupying the honorable position of President of the Metropolitan Agricultural Society, he felt that in attending the opening of the Hawkesbury College, he was discharging a duty than which few could be more to his liking. What the Minister of Education had done in the direction of primary and technical education, Mr. Sydney Smith was doing in the interests of agriculture, about the most important factor in the well-being of this country (Cheers), and he felt very confident that the young men of this country would not be slow to avail themselves of the great and inestimable advantages which Mr. Sydney Smith was placing within their reach, and to thank that gentleman for the valuable and interesting address which he had delivered. The work that day inaugurated was a grand one, and Richmond was possessed of such peculiar advantages that it was perhaps the site above all others, where an agricultural college should best succeed. (Cheers.) With so experienced, and so practical a Principal as Mr. Thompson to direct the work of the college, he anticipated the very happiest results. (Cheers.)

"Mr. Bowman said that, after the elaborate address delivered by the Minister, there was really very little of value that he could say. He trusted that what Mr. Smith had said would be taken to heart, not merely by the students whom he directly addressed, but by young men, and old men too for that matter, throughout the length and breadth of the country. A training college for students in agriculture was one of those things which the Colony had for so long a time stood in need of, that one could not but feel surprised that the supplying of the want had been so long delayed, but now that Mr. Sydney Smith had supplied that need, and had, too, selected perhaps the most suitable site in the whole Colony, he saw nothing but complete success in store for the agricultural interests of New South Wales. (Cheers.)

"Mr. J. L. Thompson said he wished to return his warmest thanks for the kindly reference made to him, and for the valuable address of the Minister, and to give an assurance that he was pleased with the prospects of the new college, and intended to do his utmost for it. When he commenced operations with the Dookie College, Victoria, in 1878, he had 5,000 acres of forest land to operate with, without the advantages of fencing, water, or house accommodation. He had to pitch his tent as a starting point, and from that the Dookie College had grown up to its present proportions, and had turned out lads whose almost immediate success proved the thoroughness of their training. He fully recognised the fact that there was uphill work before him, but he was confident of success, and confident too, of winning the approval and support of the people of New South Wales for the college. It would take a large amount of capital to get the place in working order, and to make it educationally profitable, but the mother Colony, he felt assured, would be prepared to spend the sum necessary to secure the agricultural education of her sons. (Cheers.) Given five years trial, and only one opinion could be expressed as to the success and utility of the Hawkesbury Agricultural College. (Cheers.) The Minister, in addition to his able address, had promised a gold medal as a prize to the best practical student. It was his intention, as Principal, to give a gold medal for excellence in that branch of work, but as the Minister had been so kind he (Mr. Thompson) would offer his medal to the student who excelled most in some other branch. One of the residents of Richmond had promised a gold medal to the student who excelled in stock-raising. The Director of Agriculture offered a gold medal on conditions to be hereafter decided. The Entomologist offered a prize in books or instruments, to the value of two guineas, for the best classified collection of insects injurious to food-crops and fruit-crops, and for general proficiency in recognising beneficial and

and destructive insects, and a knowledge of the best means of dealing with them. The Botanist had offered a prize for the best arranged collection of indigenous plants, both phanerogamous and cryptogamous, the prize to be Dr. Lindley's 'Treasury of Botany,' and the Pathologist offered a microscope as a prize for the best classified collection of the diseases of cultivated plants, and for proficiency in recognising the diseases and for knowledge concerning the best methods of treating them. (Cheers.) These were generous offers, and he had no doubt that gentlemen interested in agriculture would supplement them. (Cheers.)

"After several other speeches of a congratulatory and complimentary nature, an adjournment was made to the local hotel, where lunch was served. Several toasts were proposed, including "The Department of Mines and Agriculture," in responding to which Mr. Sydney Smith said he considered himself fortunate in his officers. Each one combined intelligence with zeal, and took a warm and most commendable interest in the work and reputation of the Department. It had been his invariable rule, when making appointments, to consider personal qualifications only, and the result was that he had surrounded himself with men of whom he was proud, and in whom he had the utmost confidence. (Cheers.)

"Luncheon over, the party paid a visit of inspection to the college grounds. One of Mellor's (Meadow Bank Implement Manufacturing Company) patent hydraulic stump-extractors was at work, and drew out tree stumps in a way that elicited commendation. The machine stands on a tripod, is very portable, and can raise a weight of 70 tons. With two men to work the machine from thirty to forty stumps can be extracted per day. The party next moved on to the site of the proposed college building, where Mr. Smith, amid cheers, drove in a marking peg, and this done the Minister prepared to turn a furrow. Not a few of the spectators were filled with an amused curiosity as to how the Minister would acquit himself, but there was not much room for mirth, for Mr. Smith, seizing the plough quickly had a couple of hundred yards of soil turned up, and in a straight line too. The member for the district was next challenged. Mr. Bowman accepted the test, threw off his coat, sent the plough ahead, and acquitted himself with honor. Mr. Sydney Burdekin was also invited to try his hand, but excused himself. This concluded the day's proceedings, and the Parliamentary party returned to the metropolis by the afternoon train."

During the time we have been open, so numerous and urgent have been the applications for admission to the institution, that provision was made for the reception of more students, and on 5th October 22 were enrolled, making a present total of 53—a larger number than is attending any similar institution in the southern hemisphere. Their ages range from 16 to 25 years. With a few exceptions, they are fine, stalwart young men, and such as are likely to give a good account of themselves in after life.

Considering the many difficulties we have had to contend with, the first year's work has been fairly successful. Herewith is a full report of the work done.

[From the *Windsor and Richmond Gazette*, Saturday, August 8, 1891.]

#### HAWKESBURY AGRICULTURAL COLLEGE—CLOSE OF THE FIRST SESSION.

THE first session of the above institution was brought to a close on Friday, July 31st, 1891, when a very large number of visitors and parents, from Sydney and elsewhere, were present in the Richmond School of Arts. Amongst those present, we noticed Rev. Dr. Corlette, Messrs. Thompson, Anderson (father of the Director of Agriculture), Stening, Reynolds, Baass, Hodgkinson, Quodling, Dawson, and Rien; whilst the most prominent Hawkesbury residents were Mr. W. Gosper (Mayor of Windsor), Ald. Primrose, Holland, and Davies (Windsor), Mitchell, Kelly, and Crisford (Richmond), Revs. J. Kinghorn, E. Hargrave, and Father Grace, Drs. Helsham and Gibson, and others.

Mr. Thompson, Principal of the College, asked Mr. Anderson, the Director, to take the chair, in the absence of the Minister for Agriculture, who was unable to be present, but who sent the following letter of apology:—

"Dear Mr. Thompson,

July 30, 1891.

"I very much regret that owing to the fact that a Cabinet meeting has been summoned for to-morrow morning at 11 o'clock, I shall be unable to be with you as I had hoped at the closing of the first session of the Hawkesbury Agricultural College. I had looked forward with pleasure to receiving your report on the conduct and progress of the first batch of students placed under your charge, and after the very pleasant tour of inspection I made a few weeks ago, when I saw how eagerly the students were pursuing the practical parts of their studies, with what thoroughness they were learning the minutest details, I was prepared to hear an equally good report of their progress on the scientific side. It is needless for me to remind the students that knowledge is power in agriculture as in everything else, and the man who brings science—that is, the abstract principles of all true knowledge—to bear upon his practical work is the man who will outstrip all others in the race for success. The aim of our college will be to turn out men equally good in practice and in theory, and I hope to find from your report that neither has been cultivated entirely at the expense of the other. What we want in our students is the spirit of inquiry, guided by well-directed scientific instruction, which should make every student turned out from our college the best farmer in his district in after life—the man whose place will be a model for others to copy, and who will at the same time be an authority upon all matters appertaining to the highest branches of his profession. Your good reports on their conduct have always been particularly welcome to me, as I ever feel that intellect without morals is of but little value in making a good citizen. However poorly a student may have progressed in his class-room or his farm-work, if his conduct has been manly, truthful, courteous, and honorable, he may return to his parents with a light heart and feeling sure of their sympathy and favour. Kindly wish the students upon my behalf very happy holidays, and while congratulating those who stand at the head of their class in the different subjects, urge the others to renewed efforts and greater zeal and energy next session.

"I am, &c.,

"SYDNEY SMITH."

#### REPORT OF THE PRINCIPAL AT END OF FIRST SESSION'S WORK.

THE Principal, in presenting his report, said:—We have met to-day to formally close the first session of the Hawkesbury Agricultural College. I am pleased to see so many friends present, seeing that the proceedings this time are not of so much importance as they will be at the Christmas vacation, when numerous valuable prizes will be awarded. I am especially glad to see ladies present, and I hope they will continue to take an interest in the proceedings and progress of this institution. I am also pleased to observe members of the Press present. To one and all, on behalf of the college, I tender a hearty welcome. It is a matter for extreme regret that the Minister is not present to-day.

The number of students on the roll, all told, is thirty, but, owing to sickness and other causes, only twenty-five came up for examination—a little hand certainly, but you are aware that many great institutions have developed from small beginnings, and there is little doubt but it will also be the case with regard to the advancement of agricultural education in this Colony. It is rather a slur on the people of New South Wales, the premier Colony of the Australian group, that a system of agricultural education by actual demonstration in class-room and field combined was not inaugurated many years ago. Whatever vicissitudes overtake this institution in the future, it will always redound to the credit of the present Minister for Agriculture, the Hon. Sydney Smith, M.P., for establishing a system which bids fair to eclipse in comprehensiveness that of all the other Australian Colonies. It must be apparent to all that the time was fully ripe for taking this wise step. It is absurd to suppose that anyone without a systematic training can undertake advanced farm management. For such work it is necessary to obtain a knowledge of the classification and proper methods of cultivating the soil, the tillage implements of the farm, the use of modern machinery and appliances tending to save labour, the management of live stock, the care and management of trees and other plants, and many other things in connection with farming pursuits and new industries. An apprenticeship is required and demanded with regard to all artisans. Now it is just as difficult to build a proper hay-stack as a brick wall, or to work a reaper and binder as a printing machine. Many other such instances might be given to illustrate my meaning. It is a noted fact that the successful farmers

farmers of the present day, in the Australian Colonies as elsewhere, are men who have obtained a thorough early training in all that pertains to rural life; whilst on the other hand those who have commenced farming late in life, without any previous training, find it very hard to make both ends meet, and not unfrequently have to face the Insolvent Court. The reason for this is that they cannot utilise to the full the heritage nature has given them, viz., the land of these great Colonies. I am sorry to notice that a number of what should really be our best students, not only here, but in Victoria also, have a great desire to drop what is termed the "science part" of their educational course. Now, although my sympathies are with the thoroughly practical man, believing that proficiency can only be obtained by constant practice, and that the farmer must be made by a thorough training in farm work, I do not undervalue scientific knowledge, and it must be apparent to all that the student who is conversant with the names of plants and animals, and the tools requisite for his work, has a much better chance of success than those who have no such knowledge. The more important scientific subjects, and those which our students will have an opportunity of studying before the completion of their course, are as follows:—Geology, which treats of the structure and mineral constituents of the earth's crust. Botany, which investigates plants, their structure, life-history, diseases, &c. Zoology deals with all matters pertaining to the structure and classification of animals; under the same head may be mentioned entomology, the study of insect life, with the best means for eradicating insect pests. Chemistry, or that science by the aid of which we gain a knowledge of the composition of soils, feeding stuffs, manures, plants, &c. Surveying and levelling is also an important subject, more especially in a country like our own, where irrigation is likely to be extensively used, and much land must undoubtedly be converted to the use of agriculture. A knowledge of how to survey and take levels would be invaluable to any Australian farmer. A proper method of book-keeping is of the utmost importance. As a rule, farmers are deficient in this matter; they go on, year after year, without knowing the true state of their affairs. This may bring about disastrous results, whereas, if they kept a set of books, they could see at any time how things stood. By means of the system of double-entry, and a periodical stock-taking, the farmer may demonstrate the real state of his position. If he is losing money on any particular line he can do away with it and strike out for something fresh, or extend his operations in those lines that really are paying a good return.

The difficulty is to be able to give the science which is needed for the comprehension of the processes of agriculture in a form easily assimilable by the youthful students. The Professor of Agriculture in the leading Agricultural College of the United States says:—"We have no use for a professor who is not able and willing to teach the agricultural features of his science; and in each of the several departments of this institution, agricultural instruction is not merely secondary and incidental, but it is the culminating feature, the objective point of all instruction in that Department. We have not a department but is thoroughly loyal to agriculture. The student cannot get away from it; he gets the flavour of it in everything. No agricultural college may ever hope to succeed until agriculture is thus taught, directly or indirectly within its walls—until the spirit of industry, of manual labour if you please, becomes the atmosphere of the institution, to be taken in with the breath of every student."

We do not desire to turn out scientists at the Hawkesbury Agricultural College, but men so versed in science that they may be the better able to cope with difficulties that may overtake them whilst cultivating the soil, or in managing their live stock.

The word or term "science" is often confounded by agriculturists with the term "theory." Now, Webster is very clear on this point: The term "science" means knowledge of principles and causes—ascertained facts. Science is literally knowledge: Scientific principles are involved in every process that a man in his daily work performs. Science, therefore, is closely associated with practice, while the terms theory and theoretical are properly used in opposition to the terms practice and practical.

The operations on the Common, notwithstanding the many difficulties we have had to contend with, have progressed fairly well. Fencing, clearing, ploughing, &c. are now being vigorously pushed forward. We intend, during August and September, to plant, experimentally and otherwise, a good breadth of potatoes and about 50 acres of maize, sorghums, millets, broom corn, &c., &c.

I have submitted to the Minister for his approval rough plans for the necessary farm buildings, viz.: Stables, cow-sheds, piggeries, fowl-houses, wool-shed, barn, silos, cart-sheds, dairy, apiary, and also particulars of the stock required for the proper equipment of the Institution from an educational standpoint. The latter comprises Shorthorns, Herefords, Polled Angus, and Devon cattle, which may be termed the representative beef-producing breeds; with Ayrshire, Jersey, Britanny, Holstein, and Kiama stock as representing dairy breeds.

In sheep, I propose having the following representative breeds:—Merinos, Lincolns, Leicesters, Cotswold, South-downs, Shropshire Downs, and Romney Marsh.

The pig has not been forgotten. I propose having Berkshire, Poland China, and White Yorkshire breeds, and will see what can be done by judicious crossing to produce a good butcher's pig.

All breeds of poultry will be represented.

In fact when a student leaves this institution he should be thoroughly conversant with the characteristics, points, and management of all kinds of live stock, and should, at the same time, be well up in the management and growth of all varieties of farm crops, fruits, and, indeed, in plant life generally from an agricultural standpoint.

I know I have an up-hill fight before me, to get the place into thorough working order, and properly equipped, so that it may be in some measure worthy of this great Colony. But I do not despair of success, and I sincerely trust that the value of the institution, both to the country at large and to the district around, will not be crippled for want of funds.

A commencement has been made with the gathering together of objects to be placed in the College Museum. Numerous specimens illustrating the animal and plant life of our district have been stored away. They comprise—Mammals, mollusca, frogs, lizards, grasshoppers, spiders, centipedes, and other insects, snakes, plants, seeds, &c., &c. It is intended that the museum shall contain as complete a collection as it is possible to obtain of objects illustrating agriculture and farm life generally, together with the natural history of the district. It will, without doubt, be of great use for teaching purposes when fully established.

Our Library now contains upwards of 250 books, together with numerous pamphlets treating of Agriculture and its kindred sciences. It is being added to almost daily, partly by purchase and partly by donations from similar institutions in various parts of the world. We hope to add in time a good selection of books for general reading, in history, travel, and biography, whilst some good novels will not be omitted.

I am well pleased with the class of students who have presented themselves for the first session; the majority of them are of the right age to benefit from a course of instruction at an institution of this kind. The progress made, considering the difficulties we have had in the inauguration of the college and farm, has been satisfactory. Most of the young men have come here with a sincere desire to benefit from the instruction the institution can offer, and will no doubt turn out first-class men, capable of taking their place among the leading agriculturists of the Colony. There are a few, however, on the other hand, who seem to have come here to fill up a portion of their lives, without any apparent aim at advancement in the calling they have chosen.

A young man, with the assistance of his parents or guardians, should first of all decide what occupation he is to follow through life. His own natural inclinations should be encouraged as far as possible, but once he has commenced to climb the ladder there should be no looking back. Forward, onward, excelsior! should be his motto. A man that sticks to one ladder with perseverance will some day reach the top, but he who starts on many ladders, and after a few steps becomes dissatisfied and desires a change, thinking he can do much better at something else, will fritter his life away, and succeed at nothing.

The general conduct of the students has been fairly satisfactory, taking into consideration the fact that the temporary college is not well arranged for discipline and supervision, and is in the centre of a town.

I feel my responsibility with the young men, under our present circumstances, very keenly, and I shall be very glad to have them comfortably housed on the college farm, away from town influences. If a young man has decided on a rural life, the sooner he is weaned from town attractions the better. There is much more enjoyment, to my mind, in studying the works of nature on a farm than in living in a town. Farm life can be made pleasant, comfortable, and attractive. The rural home can be beautified by planting a garden and establishing clumps of trees about the place, whilst a great variety of crops can be grown, giving change of employment to all hands, and causing a certain amount of variety in the work. To those fond of live stock, a life in town would be intolerable. To my mind a country life is infinitely better in every way than is that of a town, and if I had my days to commence over again, I would, without hesitation, choose life on a farm in preference to any other vocation under the sun. In times gone by, it was the dunce of the family that was usually relegated to a farming life, but competition has now become so keen that we want the best brains, the best intellects,

intellects, and the best all-round men to cope successfully with the many difficulties we have now to contend with. One thing, however, is assured, that land has given, and always will give, a bountiful return to the intelligent cultivator, and seeing that our professions and vocations in town are already over-manned, every encouragement should be given to young men to settle on the soil.

I am under great obligations to the people of Richmond for the great interest they have taken in the students; it is very gratifying to me to see that such is the case.

Although we have not as yet been able to enter into the more important work of an educational training farm, I am happy to say that the students have performed the work allotted to them in a highly satisfactory manner.

Our work has comprised the clearing of land, filling in stump-holes, fencing, carpentering, carting, ploughing, gardening, milking, and attending to stock. It may be termed pioneering work, and I am glad the students have recognised the dignity of labour. Work is one of the best practical educators of character; it evokes discipline and obedience, self-control, attention, application, and perseverance; it is the law of our being, the living principle that carries men and nations forward. Labour may sometimes be a burden and a chastisement, but it is also an honor and a glory. All that is great in man comes through work, and civilisation is its product. Idleness is the curse of man, not labour.

#### Marks allotted for Practical work.

In Principles of Agriculture the subjects treated in class-room and outside, have been the various breeds of horses, the tillage implements of the farm, soils, &c. Two papers were set for the examination, and the results are recorded elsewhere. An epitome of the papers will give an idea of the subjects dealt with.

No. 1 Paper.—Origin, history, characteristics, points, &c., of the Clydesdale, Suffolk Punch, Shire-horse, Percheron, Cleveland Bay, the racer, trotter, hackney, cob, lady's horse, Indian remounts, and the various breeds of ponies; the management of breeding mares; breaking in horses; selection of horses for farm purposes; ration for draught horse, &c., &c.

No. 2 Paper.—The tillage implements of the farm, origin and improvement of same, and approximate cost, viz., ploughs (various kinds, including subsoilers, digging, stump jumpers, &c.), scarifiers, harrows, disc-harrows, steam cultivation, seed drills; the composition of soils, and how formed; the advantages and disadvantages of certain soils from an agricultural standpoint; cultivation necessary for various crops, &c.

The papers sent in by students on Principles of Agriculture have surprised me. The majority have exceeded my expectations by far. Of the larger number it might be said that they would do credit to any such institution, and they might be published and seen by anyone. I really had not imagined that the students had grasped the subjects in the way they have done.

The paper on live-stock, this session, dealt with the horse and its common diseases. The heads are as under:—Dentition of the horse; exterior parts of a horse, showing what parts are most liable to malformation and disease; the cause, symptoms, and treatment of pink-eye, lampas, fistula, splints, capped hock, wind-galls, grease, ring-bone and side-bone, colic, inflammation of the bowels, feet-founder; also bleeding, firing, blistering, drenching, and giving a horse a ball; the uses of a seton and enema; homœopathic and allopathic treatment.

Very excellent answers have been sent in by the majority of the students, and the following are the marks allotted:—

Instruction on the preparation of land for tree-planting has not been neglected, and a paper dealing with this subject, set and examined by myself and Mr. Stieme, has shown that the students fully appreciate the importance of this subject. An epitome of the paper is as follows:—Preparation of the land; protection; systems of planting; the effect trees have on the climatic changes of a country; mulching trees; the eucalyptus family, and the various uses to which the timber can be applied; the exotic trees in Richmond Park; the importance of knowing the botanical names of trees and plants; the necessity for pruning; different systems of pruning; advantages and disadvantages of allowing fruit trees long or short stems; result of practical demonstration in pruning as shown by Mr. Stieme, dealing with the peach, apple, and other fruits.

Marks awarded are as follows:—

Baass .....	97	Thompson, A. C. .	90	Drummond .....	79	M'Kee .....	73
Quodling .....	97	Farnell.....	88	Throsby .....	79	Andrews .....	69

In conclusion, I have to acknowledge the cordial support I have at all times received from the Director (Mr. Anderson) and his officers in connection with the work of the Institution, and also take this opportunity of publicly acknowledging the loyal co-operation and able assistance I have at all times received from the officers associated with me in the management and working of the college and farm. There has been perfect unanimity of feeling and purpose, and all has gone on harmoniously and well. I can assure you one and all are anxious to give their very best services for the advancement of the Institution, and the Minister is to be congratulated on his selection of officers. I wish the students a pleasant holiday, and hope they will all report themselves on Monday, the 17th of August, in good health and vigour, prepared to follow up the course of instruction.

## THE SCIENCE MASTER'S REPORT.

Sir,

I have the honour herein to submit my report upon the work done by the students in the Department of Science, during the last session, closing this day.

In the principal subject, viz., chemistry, the students have been just through a course of theoretical lectures, comprising an introduction to the science in general; the relation of chemistry to other sciences; its importance to every branch of agriculture; a short treatment of such elementary physics as would be necessary for a comprehension of specific gravity, &c.; the properties of some of the common elements and compounds, with an outline of chemical nomenclature. The practical exercise of the students in the laboratory was commenced when the students had sufficiently advanced in class work, and included, as far as circumstances would permit, a revision and demonstration of the lecture course by exercising the students themselves. The geology has been the ordinary systematic course, with field excursions, and bearing towards the end of the session, somewhat upon soils.

The surveying has been almost entirely out door, and the students have been afforded good opportunities in practice, by taking levels for draining, construction of dams and designing and laying out boundaries for the permanent college and farm buildings on Ham Common.

The results of the examinations are as follows:—

<i>Chemistry.</i>	
Class average .....	48·7.
<i>Geology.</i>	
Class average .....	56.
<i>Surveying.</i>	
Class average .....	58·5.

These results agree well with those of the fortnightly examinations held during term, showing that the students have maintained a steady stroke throughout—a most desirable condition for success in such a college as this, where students must necessarily master the scientific side progressively, in order to apply their theoretical knowledge with advantage, and continue it with practice during the currency of their two years' course. It may be mentioned also that these examinations have come almost immediately at the close of the lecture courses—no vacation intervening,—and that owing to the loss of several weeks at the commencement of the session, and slight disadvantages which usually have to be overcome at the inauguration of a new institution, the account may be considered very satisfactory.

It is very evident to me that a large proportion of the students have never felt the urgency for individual effort in their studies, but are dependent upon what they can accomplish during the precise hours of lectures and evening revision. There being many, on the other hand, who fully understand the necessity for preparing themselves for the practical usefulness of their studies for their success after leaving college. However, it is very satisfactory to note a willingness and good disposition towards the curriculum as a whole, and after the less proficient students have been trained into the method of study, very good results may be expected, but a matriculation examination seems very desirable. A considerable number of the students, too, had arrived some time after the commencement of the lecture courses, which has been disadvantageous both to themselves and to their instructor. There is moreover, no doubt, that some few have, up to the present, been receiving lectures, pending their decision whether to undertake the full course, or to fall back as practical or farm students only. The early part of any educational course will show vacillations of this nature, and such a condition is derogatory to good results. Several of the very successful farm students show a lack of interest in the scientific work, probably not being adapted for it. It is of some importance to state that upon classifying the students in the first instance I found that, with three exceptions, none of the students had previously received any instruction in any branch of natural science. Generally they had done enough mathematics to profit by attending the college lecture courses, though for surveying, it cannot be said that any of them had a knowledge of mensuration—not to mention trigonometry.

From my experience of the work of the students in this, the first session, I am strongly of opinion that in the best interests of an Agricultural College, founded on good lines such as this, it would be advantageous to have a greater number of students, their abilities vary so greatly, that in order to afford the fullest advantages to the several divisions, they should be classified into more sections than with the present very limited number is desirable. The facility for instructing a class being by no means diminished by increasing its numbers, whilst it is greatly diminished by diversity in the abilities and proficiencies of its members. Thanking you for the facilities you have afforded me in my work.

I have, &amp;c.,

E. CLARENCE WOOD,  
Science Master.

To J. L. Thompson, Esq., Principal.

## REPORT OF THE LECTURER ON BOTANY.

Sir,

I have the honor to hand in my report on the work done by students under my charge in the subject of "Botany," during the first session, ending July 31, 1891. Twenty-nine students have attended lectures, being divided for convenience of working into two classes, A and B. Fortnightly progress examinations have been held for each class during the past session, whilst excursions took place on Wednesdays, whenever the weather permitted, for the purpose of encouraging students in the study of plants, and affording opportunities of making acquaintance with the flora of our district, a particularly rich one in so-called "weeds." The wet weather of winter has, however, prevented these excursions from being so fruitful in results as should be the case during the summer session. In all, forty-nine lectures, examinations, and excursions have been held for each class.

The lectures have dealt with elementary botany in a way that should prove eminently useful to agricultural students. It has been my endeavour to impart the instruction in such a manner as would enable the student who really follows the subject with interest to know what plants are and what they do, and to attain a fair grasp of the principles that underlie the study. The more important points considered were as follows:—

*External characters of plants.*—Roots, stems, leaves, flowers, fruits: their typical structure, peculiarities, variations, and functions explained.

*Internal characters.*—The vegetable cell: its structure and functions, vessels, how wood is formed, chemistry of botany, carbon compounds, importance of nitrogen, &c. Facts relating to plant nutrition; necessity for the use of manures and rotation of crops; methods for the dispersion of seeds; origin of cultivated plants; influence of climate on plants; classification, with the characteristics of some of the natural orders of greatest importance to man; use of the microscope and microtome.

The text-book now adopted is "Elementary Botany," by Edmonds (Longmans, Green, & Co.)

Although vegetable pathology has not been studied this session, we have been enabled to examine roughly a number of plant diseases, such as maize rust and smut, barley smut, peach-leaf rust, hollyhock disease, &c., whilst a few native plants have been found to be infested with various forms of microscopic fungi.

During the second session, in continuing the botanical course, it is proposed to give special attention to economic botany, dealing with food plants, fibres, tanning plants, oil and gum producing plants, &c., &c.

The work of the session, as indicated by the periodical examinations, shows a class average of 53 out of 100 marks obtainable by twenty-seven students.

For

For the first sessional examination, held on July 27, twenty-five students came up, with the result that nineteen obtained the number of marks entitling them to a pass, the whole of the papers giving a class average of 56.

Considering the fact that the subject was new to all the students, I consider the progress made has been satisfactory. It should be noted that three of the students have only been in residence half the session.

To the Principal, Hawkesbury Agricultural College.

I have, &c.,

CHAS. T. MUSSON.

#### REPORT ON FARM DIARIES.

Sir,

I beg herewith to submit to you my report on the Farm Diaries, written by the students of the Hawkesbury Agricultural College, during the session ending 31st July, 1891.

As instructed by you, I have carefully examined the diaries and tested the accuracy of the information contained in them, by comparing as many as possible of the dates, &c., with entries in my farm-diary and order-book, &c.

I find that the information given is, broadly speaking, correct, but far too scanty. The diaries of students Quodling, Reynolds, Dark, and Stening contain very full and accurate information *re* farm-horses, cattle, implements, machinery, buildings, and work done on the college farm during the session. Some of the students commenced well, but did not finish their diaries up to date. This accounts for the very low number of marks which some of them have been awarded.

I have, &c.,

BRUCE FERGUSON,  
Farm Overseer.

The Principal then came forward and announced the following as the aggregate number of marks obtained by each student out of a possible 1,100 :—

Moore ( <i>dux</i> ).....	951	Welsh.....	869	McKee.....	749	Farnell.....	599
Rien.....	950	Thompson, A. C..	863	Corlette.....	739	Gray.....	594
Reynolds, M.....	943	Wright.....	861	Drummond.....	739	Morton.....	564
Baass.....	924	Spark.....	843	Thompson, T.....	729	Drinan, L.....	516
Dark.....	923	Dawson.....	825	Drinan, B.....	717	Thomson, B. L..	442
Stening.....	895	Throsby.....	800	Andrews.....	641	Hodgkinson.....	409
Quodling.....	883						

He said the honorable position of *dux* had been secured by Moore with 951 marks, Rien securing second position.

The Chairman then delivered the following address, which was eagerly listened to throughout and warmly applauded :—I am sure you will regret with me the absence of the Minister for Agriculture, Mr. Sydney Smith, who has taken such a keen personal interest in every detail connected with the initiation of our national system of agricultural education. I will, in his absence, take the key note for the few remarks I have to make from the letter he has sent to the Principal. To the parents of our students I need only say that they are welcome guests to-day, for their sympathy and co-operation are highly valued and cordially invited. I would thank the townspeople for the courtesy and indulgence they have extended to the Department in its preliminary operations, and would express the hope that every succeeding month will give them further reason to be glad that the Minister has chosen their much-valued common for the site of the first Agricultural College and Experimental Farm in New South Wales, and that the ancient and beautiful town of Richmond may yet be proud of its college and college boys. Of the Principal and his staff I need say nothing. After noting the admirable tone and sterling common sense of Mr. Thompson's address you will, doubtless, consider that the right man is in the right place. A growing acquaintance with the daily work and conduct of the College Staff will, I hope, convince you that the Minister has been very happy in his choice of those who are to rule the early destinies of our college. But to you who remind me so strongly of my own happy college days I would say a few words, feeling that I am old enough to be permitted a few words of counsel and young enough to feel every nerve throb with sympathy with you in your ambitions, your pleasures, your sorrows, and your temptations. If I were worthy to occupy the exalted platform of the reverend gentleman I see before me, I should choose for my text the words "Whatsoever thy hand findeth to do, do it with all thy might"; but, speaking as a plain blunt man, I shall content myself by asking you to consider the sacred meaning of that grand little word duty—that which is due or owing. Of that which is due from you to your God I shall leave your reverend teachers to speak. What is due to your country you will doubtless recognise with advancing years, and gladly repay as useful, intelligent, and unselfish citizens; but I may perhaps remind you that the splendid exertions now being made on your behalf demand a generous response from you. Of what you owe to your families I shall leave your fathers to speak. Suffice it to say that the inheritance of an honored name and stainless family record entails no light responsibilities, and that each of you has in this respect a rich inheritance that should at least be kept intact. But of your duty to your college, to its Principal, its staff, its regulations, its objects, and its reputation, I feel all the instincts of an old schoolmaster to speak to you. I now warn you with all the earnestness of my nature that on you depends the future repute and usefulness of this college as much as on the Minister, the Principal, and his staff. On you, the first batch of students, will depend the tone, the future reputation, and status of the Hawkesbury Agricultural College. By showing a lofty contempt for all the sciences connected with agriculture, and pursuing only the mechanical parts of your profession, you will come out as a fine batch of ploughmen, knowing nothing and caring nothing for the essential principles of your work and the scientific reasons which underlie your every operation; but your college must be henceforth reduced to the status of a mere farm school destined to turn out merely good farm labourers worth 20s. a week and their tucker. But when I look over the class lists before me, and note the excellent percentages of many of the students in chemistry, geology, botany, and surveying, all fears are dispelled from my mind, and I can feel deep gratitude to that large majority of the students who have by their industry and attention to duty given the college an intellectual and scientific tone that will inspire confidence in parents, reward the exertions of those who are labouring in your interests, and establish an honorable name for your college. "What is our duty here? To tend from good to better, thence to best." To the few students who have got low marks in the class-room studies, and who, probably, had previously enjoyed fewer advantages than some of those higher up on the lists, I would earnestly say, "Tend from good to better, thence to best." Remember that science, as the Principal happily remarked, is not opposed to practice, but is its faithful handmaiden. Do not confuse science with theory—the idle vision of dreamers—for science is knowledge, the whole mass of ascertained truth; and every fact you prove is another addition to the sum total of science. No farmer, however skilful, can learn by intuition the relative values of manures, the needs of his soil, the principles of drainage, or the best methods of utilising the mechanical power on his farm. When he wants information on any of the hundred problems that will in turn present themselves, to whom does he turn? Not to his neighbour, who has had no better education and no wider experience than himself, but to the man of science, whose patient researches—perhaps on the farm, perhaps in the laboratory—have enabled him to add to the store of human knowledge. The Minister has truly remarked that the moral tone of our college is to be valued above even the intellectual or scientific status. What would it benefit the country to turn out fifty scientific farmers every year, if they were ill-disciplined larrikins or vulgar cads. The excellent character gained by one and all of you is very gratifying to the friends of the college. It is hardly possible that lads who choose to go out into the fields to woo nature, and thence "look from nature up

to

to nature's God," can be anything but manly, genial, and honourable fellows. Rest assured that however badly you may do at your chemistry or botany—and you cannot all hope to attain equal excellence in these subjects—so long as you return home with the character of being straightforward, well-disciplined, courteous, and manly, respected alike by the masters and housekeeper, you will never cause a pang to a loving mother's heart, nor add another grey hair to an anxious father, May I suggest a watchword to guide your conduct, with Dr. Norman M'Leod I would sum it up :

Trust no party, sect, nor faction,  
Trust no leader in the fight ;  
But in every word and action  
Trust in God and do the right.

The ploughman poet, Robert Burns, who died 95 years ago this month, and who should possess a peculiar attraction for you as fellow-agriculturists, wrote as follows to a young friend :—

The fear of hell's a hangman's whip,  
To haud the wretch in order ;  
But where ye feel your honour grip,  
Let that aye be your border.  
Its slightest touches, instant pause,  
Debar all side pretences,  
And resolutely keep its laws  
Uncaring consequences.

We use no fear in the government of this college. You are treated as young men. We trust to your sense of honor And I, for my part, have perfect confidence in the happy results.

HAWKESBURY AGRICULTURAL COLLEGE, FIRST SESSION, ENDING 31ST JULY, 1891.

*Principles of Agriculture, &c.*

Examiner : J. L. Thompson.

Marks.

Time allowed—Three hours.

- 20 1. Give a full list of the tillage implements of the farm, their approximate cost, and their various uses. What name is applied to a plough without wheels? What are the advantages attaching to wheel ploughs? What advantages are gained by using digging ploughs, and by using double-furrow instead of single-furrow ploughs? About how far will a team have to travel in ploughing an acre with a double-furrow plough, turning 9 inches each furrow?
- 15 2. Describe a subsoil plough. How can subsoiling be best performed? What crops and plants benefit most from land that has been prepared by subsoiling? What is meant by a stump-jumping plough? Give the names of some British and Colonial farm-implement manufacturers.
- 15 3. Describe some systems of steam cultivation. What advantages are gained by steam cultivation over horse-power? Give names of manufacturers of steam cultivation plants and approximate cost of same.
- 10 4. What advantages are gained by drilling cereals (especially wheat) over the usual broad-cast system? What are the advantages of the water drill, and what is it generally used for?
- 20 5. What does the word agriculture imply in its most comprehensive meaning? How have all soils been formed? What is meant by (a) a sandy soil, (b) a clay soil, (c) a calcareous soil, and (d) an alluvial soil? What are the advantages and disadvantages of the two first named, from an agricultural standpoint? How is it that alluvial soils are generally so rich in plant food?
- 10 6. Give the composition of what you would term a perfect agricultural soil. How is humus formed, and up to what percentage in soils is it valuable for plant food? If it exceeds 25 per cent., what would it then be termed?
- 10 7. What is meant by "soil," and what is meant by "subsoil"? What does a farmer mean when he speaks of a fine light sandy soil, and a heavy clay soil, seeing that a cubic foot of sand weighs 110 lb., and a cubic foot of clay only about 75 lb.
- 100 Pass number, 50; with credit, 75.

HAWKESBURY AGRICULTURAL COLLEGE—FIRST SESSION, ENDING 31ST JULY, 1891.

*Principles of Agriculture and allied subjects.*

Examiner : J. L. Thompson.

Time allowed—Three hours.

Marks.

- 15 1. Give a brief history of three recognised breeds of draught horses of Great Britain, viz. :—Origin, history characteristics, points, colour, &c.
- 7 2. Write all you know of the Percheron breed of horses.
- 10 3. Give the history, characteristics, points, colour, &c., of the Cleveland breed of horses. What are they mostly used for? Are there any in the Colony? If so, where?
- 12 4. Describe briefly the race-horse or thoroughbred, the hunter, trotter, and hackney, giving characteristics and points.
- 8 5. Describe what is known as the cob and the lady's horse. What are the chief qualifications of the latter?
- 8 6. Name and describe four distinct breeds of ponies.
- 12 7. Describe what you believe to be the most suitable horse for remount purposes in India. How can such a horse be most economically bred? Do you think it would pay the Australian grazier to breed them at the price offered? Give your reasons.
- 8 8. Can the Clydesdales be bred, combining all their best qualities, in all parts of Australia? What is meant by feather in speaking of these horses? Give the names of some breeders in the Colonies.
- 10 9. What would guide you in the selection of good, useful horses for farm purposes? What is a good daily ration for a draught horse? Mention what you consider the judicious management of working and breeding mares for one year. What is the period of gestation in the mare? What is the natural presentation of a foal at parturition?
- 10 10. Give the treatment of a horse from the hour of his birth until he is broken in to all kinds of farm work. Would your method differ in the treatment of a light horse for saddle or buggy use? Define Rarey's system of horse-breaking. What are its advantages and disadvantages?
- 100 Maximum. Pass number, 50; with credit, 75.

## HAWKESBURY AGRICULTURAL COLLEGE, FIRST SESSION, ENDING 31ST JULY, 1891.

*Live Stock.*

Examiner: J. L. Thompson.

Time allowed—Three hours.

arks.

- 18 1. How many teeth has a full-grown horse? Describe them; also describe the horse's mouth, at birth, and each year up to seven years of age. Up to what year can you definitely tell the age of a horse, and what guide is there afterwards? When does the name change from colt to horse and from filly to mare? What peculiarity is supposed to obtain in mares that grow tushes?
- 16 2. What is the disease known as "Pinkeye"? Describe it; and give treatment for same. "What is lampas?" Give modern treatment for it. What is a "fistula?" Where is it generally situated? How would you deal with it? What is meant by a "Seton"? How and when is it applied in veterinary practice; and for what purpose? What causes "Splints" on horses? What are they? And where generally situated? What remedies are usually employed?
- 16 3. What is meant by "Capped hocks": what causes it? Give the usual remedies. What are "wind galls"? Give the usual treatment for same. What is grease; what causes it; where does it generally develop itself? What horses are most subject to it; what treatment would you recommend? What is "ringbone," and what is the difference between it and "sidebone"? Give the usual remedies as to firing, blistering, &c.
- 16 4. Describe the difference between a horse suffering from ordinary colic, and inflammation of the bowels; give the usual treatment in both cases. In what disorders can the enema be successfully used? How is it used? What is the chief cause of "founder" in the horse? Describe the disease, and give the usual remedies?
- 18 5. State how you would drench a horse and give him a ball. Is bleeding much resorted to in veterinary practice now? Describe how you saw this done. What would guide you as to the quantity of blood you would draw from a horse? What are the usual pulsations of the horse in health and disease? Where is the most convenient place to feel the pulse? Have good results accrued from the use of homœopathic medicine in the treatment of horses? How does this differ from the allopathic treatment?
- 16 6. Name the principal exterior parts of a horse, and state what portions are most liable to malformation and disease? What stock have died during the session? What was the nature of the disorder, and how might death have been prevented.

100 Maximum. Pass number, 50; with credit, 75.

## HAWKESBURY AGRICULTURAL COLLEGE.—FIRST SESSION, ENDING 31ST JULY, 1891.

*Arboriculture, &c.*

Examiners: J. L. Thompson and W. Stieme.

Time allowed—Three hours.

Marks.

- 25 1. Give full details as to the preparation of land for tree-planting, viz.: Protection from the intrusion of stock, hares, &c.; getting the land ready, either by subsoiling or digging holes; system of planting; treatment during the first two seasons to ensure success. What advantages are gained in planting on the septuple over the square system? Give illustrations.
- 25 2. What effect have forests on the climatic changes of a country? What is meant by "mulching" trees? What are its advantages; when should it be applied? Name a few of the most valuable species of the Eucalyptus family, and the various uses the timber can be applied to. Name some of the trees growing in the Richmond Park: mention their usefulness for various purposes. What is the advantage of knowing the botanical names of plants?
- 25 3. Why do cultivated trees require pruning? What regulates, to some extent, the amount of pruning required? If young trees are allowed to mature too much wood, what will be the result? What are the advantages and disadvantages of having long stems to fruit-trees in this climate? Why should trees be formed with short stems in this Colony? What two systems are generally adopted in pruning trees? What system is usually applied to "drupes" and to "pomes" respectively.
- 25 4. What two essentials should be kept in view in pruning the olive? Give the result of the practical demonstration in pruning, as given to you by the Orchardist, dealing with the peach, apple, and other fruit trees.

100 Maximum. Pass number, 50; with credit, 75.

## HAWKESBURY AGRICULTURAL COLLEGE.—FIRST SESSION, ENDING 31ST JULY, 1891.

*Surveying.*

Examiner: E. Clarence Wood, M.A., B.Sc., B.E.

Time allowed—Three hours.

Marks.

- 10 1. Describe the old and modern forms of surveyor's chains, and the ordinary box-tape.
- 12 2. Explain the practical methods of chaining on plain and hill, and show with diagram the principle of chain-surveying. How would you set off a right angle with the chain?
- 12 3. Draw a diagram, and explain what is meant by *traversing*. What are *offsets*? When is it advantageous to take them, and how are they taken?
- 15 4. The following readings were taken with the dumpy-level at chain distances apart:—Backsight, 4.54; intermediate sights, 3.42, 3.35, 3.25, 2.25, 2.95, 3.86, 4.72; foresight, 5.36; backsight, 2.31; intermediate, 2.57, 3.83; foresight (which is a bench mark), 7.19 at foot of tree. Rule out a form as on the pages of a level-book, fill in all the columns, enter a few remarks on supposed features, and show the method of checking the calculations.
- 14 5. Make a freehand drawing, to show how you would plot the above section, showing the datum, and how the heights, distances, and remarks are put on.
- 15 6. How could you accurately compare the levels at two places several chains apart when the bubble of the dumpy is out of adjustment with the line of sight of the telescope? Explain also, with diagram, how to adjust the instrument.
- 12 7. Sketch the design of the scale of the levelling-staff used at the College, and explain the advantages of that arrangement. Show, with diagram, how the staff should be held.
- 10 8. How many acres are there in a circular recreation-ground twenty-two (22) chains diameter? Also in a triangular paddock with sides of six (6), eight (8), and ten (10) chains respectively?

100 Maximum. Pass number, 50; with credit, 75.

## HAWKESBURY AGRICULTURE COLLEGE.—FIRST SESSION, ENDING 31ST JULY, 1891.

*Geology.*

Examiner: E. Clarence Wood, M.A., B.Sc., B.E.

Time allowed—Three hours.

Marks.

- 10 1. What do you understand by the terms *rock, conglomerate, sedimentary, igneous, stratified, talus, concretion*?
- 10 2. Describe with diagrams *dip, strike, joints, and faults*.
- 10 3. Give examples of *aqueous, aerially formed, volcanic, plutonic, and metamorphic* rock. Under what conditions has each been formed?
- 10 4. What are *clay, marl, loam, kaolin*? What test would you make to distinguish a limestone from a clayslate?
- 10 5. How have *travertin, stalactite, and stalagmite* been formed? Explain how aqueous rocks harden and solidify.
- 10 6. How would you account for a geological formation as follows:—Inclined beds of *slate* over which lies a *drift*, and over the drift a *basalt* with vertical joints?
- 10 7. Describe a glacier, and how *glacial drift* is formed.
- 10 8. What are *coprolites*? How do they occur, and of what importance are they to agriculture? Explain how soil is formed.
- 10 9. Describe the nature of the soils formed from clay, limestone, sandstone, slate, and marl respectively, and suggest how such soils may be improved. What kind of soil would you expect to find on the Coal-measures, New Red Sandstone, and Mountain Limestone?
- 10 10. Explain with diagram why soils differ in various localities, and how a geological knowledge is beneficial to the agriculturist.
- 100 Maximum. Pass number, 50; with credit, 75.

## HAWKESBURY AGRICULTURAL COLLEGE, FIRST SESSION, ENDING 31ST JULY, 1891.

*Chemistry.*

Examiner: E. Clarence Wood, M.A., B.Sc., B.E.

Time allowed—Three hours.

Marks.

Give examples and diagrams when useful.

- 6 1. What is meant by *element, compound, atom, molecule, the nascent state*?
- 8 2. Describe different ways in which chemical action may take place, with examples of the several cases.
- 10 3. What is a chemical equation? Write one out and show what advantages may be gained by its use.
- 10 4. Draw a diagram of the Bunsen flame. Describe the general methods for dry tests.
- 10 5. How does Chemistry relate to Agriculture? Distinguish between *organic* and *inorganic* substances. About what percentage of inorganic ash is there in wood, grain, and straw? To what chemical substance does bone-dust principally owe its fertilising property?
- 10 6. What is meant by *specific gravity*? How would you find the specific gravity of a piece of granite? also of gasolene?
- 12 7. What are the leading properties of O, H, N, Cl, Br, N<sub>2</sub>O, NO and HNO<sub>3</sub>?
- 12 8. Write a short essay on Ammonia with an equation for its preparation, and a sketch of the apparatus you would use.
- 12 9. Describe Carbon Dioxide—its properties, preparation, &c., and compare the effects of animal and plant life upon the atmosphere.
- 10 10. How would you test water as to its suitability for domestic use
- 100 Maximum. Pass number, 50; with credit, 75.

## HAWKESBURY AGRICULTURAL COLLEGE, FIRST SESSION, ENDING 31ST JULY, 1891.

*Botany.*

Examiner: Chas. T. Musson, F.L.S. (London).

Time allowed—Three hours.

Marks.

- 15 1. Explain what is meant by plant food: how is it taken in? What are the chief elements? Indicate those that are essential, and why they are so. In what ways do roots differ from stems?
2. Describe carefully the structure of a leaf, naming the different parts: explain their functions. In what ways may leaves be specially modified?
3. What is a flower? Describe its various parts fully, and state the functions of each. How are seeds dispersed?
- 12 4. Explain the structure of the following fruits:—Apple, plum, strawberry, grape, caryopsis, orange. Give some account as to how and when cultivation of plants originated.
- 10 5. Describe the structure of a typical living vegetable cell. Enumerate and briefly describe the more important substances found therein. How does starch differ from cellulose? How is wood formed?
6. What are the chief differences between Dicotyledons, Monocotyledons, and Acotyledons? To which of these classes do we refer Exogens and Endogens respectively? Explain the two latter terms. Refer to their respective classes—Palm, oak, garden pea, grass, bamboo, cabbage, onion, fungus.
- 12 7. In what ways are plants useful to man? Illustrate your answer by referring frequently to examples. How does climate influence the distribution and growth of plants?
8. 8. Define the following terms:—Tap-root, parasite, evergreen, pollen, spike, carpel, deciduous, ovary, perennial, cone, fertilisation, respiration, transpiration, bract, hair, spine, prickle, tuber, root crop, cambium.
- 10 9. Give the general characteristics and useful properties of the Cruciferae and Gramineae respectively. Name any six grasses useful for fodder.
- 10 10. Write a full description of the plant provided for you, taking the organs in regular order, commencing with the root.

100 Maximum. To Pass number, 50; with credit, 75.

## CLOSE OF THE SECOND SESSION, 23 DECEMBER, 1891.

THE chair having been taken by the Minister for Agriculture, who was accompanied by His Excellency the Earl of Jersey, the Principal read the following report:—We meet to-day to formally close the second session at the end of the first year's work of the Hawkesbury Agricultural College. It is a great honor to be favoured with the presence of His Excellency the Earl of Jersey, Governor of the Colony, himself an English farmer, who has that great industry, as well as all others that pertain to the welfare and happiness of the people of this Colony, thoroughly at heart. Also the Hon. T. M. Slattery, Minister for Mines and Agriculture, who has the institution under his immediate control; and Mr. Harrie Wood, the Under-Secretary for Mines and Agriculture. We are also pleased to see Mr. Anderson, the Director of Agriculture, who has worked so hard for the advancement of the institution, with so many other interested friends, including many of the parents and guardians of students. To one and all, on behalf of the institution, I offer a hearty welcome. The more I see and know the parents of students the better I am pleased. I feel I have their true sympathy and support in the rather difficult task I have in administering the affairs of this young institution. We have not to deal with fifty-three children but with fifty-three young men, who are at the most critical period of their lives, when their characters are being formed either for good or evil. Away from all home influences, and situated as we are in the centre of the town of Richmond, it is not to be wondered at that slight troubles arise at times. Among the greatest drawbacks to students engaging themselves in practical farm work are the proximity and attractions of a town; and although I have had occasion to deal somewhat severely with several students, my actions have been at all times actuated by a conscientious and sincere desire to do my duty, and for the ultimate good of those placed under my charge. The conduct of the students, I may say, has on the whole been fairly satisfactory, taking into consideration the difficulties in many ways that masters and students have had to contend with. The general average of conduct marks is slightly over 84 per cent. The marks have been lost in most cases for violating the rules and regulations of the institution, and not for any serious vice. Indeed, it is not drink or other faults that we as parents have to fear from the Australian youth so much as a minor fault—the inordinate use of tobacco. Out of our fifty-three students no less than forty-three use tobacco in some form, some of them to an excess incapacitating them for study or hard work. There is no doubt in my mind as to its evil effects on the young men of this country, both mentally and physically. In connection with this subject, Mr. James Mills, M.A., President of the Ontario Agricultural College, Canada, speaking in his annual report for 1887, says:—"It is true now, as it was three years ago, that our best students are nearly all non-smokers." The first-year students of 1887 won 131 first-class honours; of these 19 were taken by smokers, 112 by non-smokers. The second-year students won 114, 4 going to smokers and 110 to non-smokers. Of the 15 first-class men in 1887, 2 were smokers and 13 non-smokers. Of the 20 medallists from 1877 to 1887, 3 were smokers and 17 non-smokers." It is not from example of their masters that this habit is acquired. We do all we can to discourage it, whilst it may be added that neither myself nor any of the officers make use of tobacco.

Out of our fifty-three students, only eight are the sons of farmers or owners of pastoral or agricultural land. It has been said that as our students are not all or nearly all farmers' sons the institution is not carrying out its proper functions. Now, I beg to take an altogether different view of the case. Why should a youth who has by accident been born in a city be debarred from qualifying himself for entering into agricultural or pastoral pursuits, more especially when his inclinations all lean towards an outdoor country life, breathing the free air of heaven.

I contend that we are doing good and noble work if we can draw students from the congested city, give them a taste for rural life, and enable them to turn the many thousands of acres in this fair Colony now almost lying waste into fertile fields and smiling orchards.

That town-bred youths turn out as good farmers, if not better, than country youths, I have, from the experience of the last twenty years, abundant proof. Moreover, the farmer's son has ample opportunities of practising his art at home, a circumstance denied to the town youth.

The most successful practical and scientific farmer England ever had (the late J. J. Mechi, of Tiptree Hall,) was a cutler in London until middle age.

But the question may be asked, How is the present race of farmers to benefit by this institution? Well, first, they can certainly send their sons here, and we shall be glad to receive them; some of the diploma students at Dookie when they returned to their fathers' farms took complete control of all operations. One lad, within six months of his returning from college, constructed a first-class dairy, piggeries, and silo, and laid the foundation of a dairy herd, besides laying down a large area of land under lucerne.

Then we earnestly hope that the farmers will visit our college and farm and see for themselves our methods of work, with any improvements that may be introduced in the way of irrigation, drainage, manures, new implements and appliances, new crops, &c., suitable to our soil and climate, and the introduction of improved breeds of domestic stock.

The implements and appliances for the cultivation of the soil, and the harvesting of crops, especially cereals, in this district, are at least twenty years behind the times. I have seen crops of wheat cut down with the scythe or mowing machine and then raked into sheaves and tied by hand. This exposes the fodder to the weather, and, as a rule, the hay is of an inferior quality. In such a climate as ours, this system is laborious in the extreme, and in advanced agricultural districts has been altogether superseded by the advent of the "reaper and binder," which may be considered a triumph of mechanical skill and ingenuity.

I used the first of these machines introduced into Australia in 1875, and for the last fourteen years have used no other machines for the harvesting of cereal crops. One man with a team of three horses will cut and thoroughly bind 10 acres per day better than it is possible to do the work by any other system. It must be apparent to all practical men how great a boon such a machine is to farmers. I hope to have at least two of these machines at work on the college farm next harvest. This is only one of many instances where farming interests may be improved by the introduction of new implements and labour-saving appliances.

In connection with these remarks I may say that only in last week's issue of the *Windsor and Richmond Gazette* I noticed the following paragraph:—"Many of the local farmers have been working from 4 in the morning till 11 and 12 at night this week, getting their straw-crops ready for transmission to Sydney market. Some of them have worked in the field until 10 and 11 at night, owing to their inability to obtain farm labourers." Now, with the reaper and binder and other advanced harvesting machinery, the farmer would be to a great extent independent of hired labour.

It is, however, a most difficult task to instruct the present occupants of the land in improved systems of farm management. It is always a ticklish office that of instructing men whose mode of thought is already established, and it is difficult to lecture to farmers as to the improvement of their position without casting a slur upon their present system of management, and thereby losing their confidence.

I have much faith in the distribution of carefully-compiled information, such as is being supplied through the medium of the *Agricultural Gazette*.

The distribution of plants and seeds as a means of instructing and assisting adult farmers will also do much good, whilst the offering of prizes for the best-managed, special, and mixed farms, orchards, vineyards, &c., is likely to encourage a healthy rivalry in farm management, and must cause improvement all round. Farmers require absolute facts to be placed before them, and the more directly and favourably these can be made to bear upon their pecuniary interests the more conducive will they be to good.

I have seen a considerable portion of New South Wales, and am surprised at the large extent of good agricultural land we have. The country is capable of yielding abundantly in the three great products of our commercial wealth—agricultural, pastoral, and mineral. And it may be said that our Colony, with its great capabilities in these three directions, has, under wise legislation, nothing to fear in competition with the great nations of the world.

This is not the time, nor is it the place, to quote dry statistics, but I trust you will pardon me if I give you a few figures from the admirable Statistical Record just issued by Mr. Coghlan, selecting those, of course, bearing upon agriculture.

	acres.	acres.
Total available area in New South Wales .....	.....	195,882,150
Land sold, granted, or in process of alienation .....	42,383,149	
Land leased to pastoral tenants and others .....	139,500,800	
Estimated area absolutely unfit for cultivation .....	5,000,000	
Amount of land still unoccupied, presumably not the best of land...	8,998,201	
Acres .....	195,882,150	195,882,150

And

And yet with this extraordinary area of land we are not growing sufficient for our own needs. Concerning the land, Coghlan says:—"That, with the exception of the 5,000,000 acres absolutely unfit, the greater part of the area adapted for settlement is in some form or another capable of being cultivated. The irregular rainfall and want of uniformity in seasons, characteristic of the climate of a large part of the interior, is, however, a great drawback to agriculture."

But, with a national system of irrigation, it is astonishing what might be produced even in the driest portions of New South Wales.

A brief reference to the imports and exports of New South Wales in agricultural produce will show the extent of trade done, and the directions in which our production might be extended with great advantage to ourselves.

STATISTICS AS TO NEW SOUTH WALES FOR 1890, FROM COGHLAN.

Imports.		Exports.	
	£	£	£
Dairy Produce—			
Milk (Condensed and Preserved) ...	62,393		5,106

"    barley ..	2,160	"    permanent grasses .....	388,715
		Total area of crops. . . . . acres	947,072

During 1891, there was a decrease in many of the above.

A perusal of Mr. Coghlan's excellent Statistical Register for 1890, from which the figures I have just quoted are taken, shows that our imports over exports for products that I am certain can be most successfully grown in the Colony are enormous—£2,292,207. In order that this shall be done, we require more and better agriculturists, and more thorough farming, to utilise the soil of this grand Colony. It is really deplorable to notice the large amount of money sent out of the Colony annually for supplies that we might easily produce ourselves.

If anything is likely to alter the present state of things, it is the existence of our Department of Agriculture, and the establishment of a college such as our own, for the purpose of giving the people that agricultural education so much needed at the present time.

Here not only may the operations performed on a farm be observed and learnt, but instruction is given in the principles underlying the whole subject, with the idea of turning out not mere labourers but thinking men, inoculated with a desire to farm thoroughly, and to farm well ; endowed with sufficient actual knowledge as to the laws and processes underlying plant and animal life, and their surroundings on the farm, to begin work on their own account, with the hope that they will pursue their ends perseveringly, not in the old-fashioned groove of few ideas, but in the light of modern science.

The establishment of our Department of Agriculture by the wise action of the Government of this Colony, has marked a distinct step in the advance of agricultural education, and I rejoice to think that the present Ministry intend to aid in every possible way this most important national industry ; for agriculture is the foundation on which all civilization rests, and is receiving state aid from all the most advanced nations of the world.

The work of the farm has now commenced in real earnest. Grubbing, clearing, fencing, draining, trenching, ploughing, planting, &c , have been going on apace.

The students have done their share of the work in all these operations cheerfully and well. I must here give a word of praise to the large number of new students who, arriving about the middle of the session, chose practical work on the farm every day. Considering that the majority of them were entirely unaccustomed to work of any kind, they are to be complimented on their perseverance and anxiety to do their very best under adverse circumstances ; this in itself forbodes good for their future career at the institution. When they return in February and enter into the regular class work they will find the course more interesting.

To return to the farm. On land that less than eight months ago was virgin forest we have now growing a large quantity of farm crops and nursery stock, such as maize, vines, apples, pears, plums, walnuts, &c., &c., which, owing to the favourable season, have done remarkably well under their new conditions and the careful attention of Mr. Stieme, who has proved the right man in the right place, and has been of the greatest usefulness to me in many ways.

Although Wednesday last, 16th instant, was by far the worst day of the season for its severity on succulent vegetation, the wind being N.W. and so powerful as to uproot trees, unroof houses, and actually overturn our engine shed, the temperature also being high, thermometer registering fully 95° Fahr.—the crops are looking well, and I have good hopes that by means of a judicious system of drainage, the application of good manures, and thorough cultivation, portions of the land will give fair returns.

We have already in the ground—

Maize, 6 kinds ; 57 acres.  
Sorghums, 6 kinds ; 6½ acres.  
Pearl millet.  
Mountain rice, 14 varieties.  
Melons and pumpkins, 8 kinds.  
Carrots, 2 kinds.  
Mangold, 4 kinds.  
Sugar beets, 6 kinds.  
Potatoes, 103 kinds.  
Vines, 10,978 cuttings in 53 kinds.  
Vine seeds, phylloxera proof, from America, 8 kinds.  
Pears, 116 in 28 kinds and 300 stocks.  
Quince, 300 stocks.

Apples, 1,000 Northern spy stocks.  
Peaches, 19 in 9 kinds.  
Plums, 84 in 26 kinds.  
Olives, in several prominent varieties.  
Willows, 8 species; a large number of trees.  
Walnuts, 75 trees.  
Persimmon, 8 in 4 kinds.  
Apricots, 2.  
Nectarine, 1.  
With Ginger, Turmeric, Sweet potato, Cassava, Teocinte  
Tagosaste, Serradella, Singhara nuts, Salt bushes,  
Ground almond.

Of the college it may be said that the class work has continued without any cessation. All the lectures arranged for have been delivered, including courses on principles of agriculture, chemistry, geology, surveying, and botany, accompanied by the usual fortnightly examination in each subject.

About the middle of the session our numbers were nearly doubled, accommodation being found for the new students at a house formerly occupied by the late Mr. Town. Here our lectures took place, whilst we have been enabled to set apart a larger and better room for students' recreation purposes.

We have fortunately been free from any serious sickness. Influenza in a mild form laid up several of the students for a few days, whilst the most serious accident we had was in the case of a student falling from a tree whilst bird nesting, fortunately, however, without any more serious consequences than were put right by a few days' nursing and ten days' rest.

The library, which has been considerably added to during the session, now contains upwards of 400 volumes and pamphlets, dealing with all the subjects in our college syllabus. It has been put to use frequently, over 200 volumes have been issued during the two sessions, and the use of it has been highly appreciated.

Specimens for our museum are accumulating gradually. Amongst other things obtained during the session may be mentioned a collection of about 140 varieties of seeds.

The college has also obtained by purchase a first-class bi-unial lantern, with all necessary apparatus. It is to be used for evening lectures, and was tried on Saturday, December 18, for the first time. It will no doubt prove of great educational value.

This is the first time in the history of Agricultural Colleges in "Australasia" that outside examiners have been appointed. At first I was somewhat opposed to the system and rather favoured co-examiners. The present arrangement has, however, saved us a good deal of anxiety and hard work. There is nothing more trying than to award marks for examination papers, especially when competition is very close, and the examiner is actuated with a strong desire to do justice to all.

With outside examiners the number of marks awarded is not so high as would be the case if the lecturer set the paper and awarded the marks himself.

It is the all-round well-informed student that generally comes off best, and this is, of course, the most satisfactory thing after all.

The examiners were—Principles of Agriculture and Practical Agriculture, J. A. Despeissis, M.R.A.C. ; Geology and Chemistry, The Director of Agriculture ; Surveying, Mr. G. H. Knibbs ; Botany, Mr. Fred. Turner, and although the marks awarded are in many instances not high, I am quite sure that the greatest pains have been taken to do the fullest justice to all.

CLASS PRIZES, First Years' Examination, December, 1891.

Donor.	Prize.	Subject.	Recipient.
The Minister, Hon. S. Smith, M.P.	Gold medal .....	First practical agriculture .....	H. C. Quodling.
Mr. W. H. Quodling .....	Silver medal .....	Second do .....	H. Shute.
The Director, H. C. L. Anderson, M.A.	Gold medal .....	Chemistry .....	F. L. Nott.
The Principal, J. L. Thompson.....	do .....	Highest aggregate of marks in all subjects*— <i>Dux</i> of College.	H. Shute.
His Excellency the Earl of Jersey..	Books .....	Second in aggregate of marks .....	A. Moore.
The Botanist, Mr. Turner .....	Books .....	Best collection of indigenous plants .....	M. H. Reynolds.
The Science Master, Mr. E. C. Wood	Prize, box of mathematical instruments	Geology .....	M. H. Reynolds.
The Botanical Lecturer, Mr. Musson	Prize (books) .....	Economic botany .....	H. Shute.
Do do .....	Set of entomological collecting apparatus	Second economic botany .....	G. S. Stening.
Mr. T. H. F. Griffin.....	Gold medal .....	Best horseman (general attention to horses)	H. C. Quodling.
Farm Foreman, Mr. Cobb .....	Prize (silver medal)..	Second best horseman (general attention to horses).	O. Z. Throsby.
Mr. S. Burdekin, M.P. ....	Gold medal .....	Proficiency in garden and orchard work ..	H. Shute.
Orchardist, Mr. Stieme .....	Prize (silver medal)..	do do .....	H. C. Quodling.
Mr. Burdekin, M.P. ....	Gold medal .....	Best paper on principles of agriculture.....	H. Shute.
Mr. W. H. Quodling .....	Silver medal .....	Second best paper on principles of agriculture.	H. J. Dark.
Mr. Burdekin, M.P. ....	Gold medal .....	Student giving greatest satisfaction in management of dairy and other stock, pigs, &c.	H. P. Welsh.
Mr. W. H. Quodling .....	Prize (book) .....	Best kept farm diary .....	H. Shute.
Do .....	do .....	Second best kept farm diary .....	H. P. Welsh.
Do .....	Prize (books) .....	Best student in carpentry .....	G. S. Stening.
Foreman Carpenter, Mr. Brooks ...	Prize (silver medal)..	Second best student in carpentry .....	M. H. Reynolds.
Mr. Charley .....	Gold medal .....	Surveying and levelling .....	Not awarded.
Farm Overseer, Mr. Ferguson .....	do .....	General good conduct during session (students to judge same).	F. L. Nott.
Mr. Stead, Foreman Fencer .....	Silver medal .....	Best all round fencer.. .....	H. Shute.

\* At the closing ceremony, His Excellency the Earl of Jersey gave a Special Prize to Student A. Moore for second aggregate.

## Prizes awarded for Collections

In Plant Diseases.—1 entry. No first prize is awarded. The subject of vegetable pathology was not dealt with this session, and students could not, therefore, comply with terms on which original prize (a seven-guinea microscope) was offered. A book, however, was given by Dr. Cobb for the exhibit, to student Morton.

Indigenous Plants.—4 entries. First prize, given by Mr. F. Turner, M. H. Reynolds (197 species). Highly commended, E. J. Rien, T. F. Thompson.

Fodder Plants—3 entries. First prize, gold medal, given by Mr. Charley, H. Shute. Second prize, silver medal, given by Mr. Quodling, Baass. Highly commended, Stening.

The judge, Mr. F. Turner, says, the collections of plants are very nice, displaying both taste and neatness in mounting, and a fair variety of plants are represented.

Insects destructive to Crops—2 entries. As the terms were not complied with, no first prize was awarded. But Mr. Olhff gives a book to student Wicken for the collection sent in.

Pollock's collection is highly commended.

## RESULTS of EXAMINATIONS.—Second Session, H.A.C., December, 1891.

The following students, per Regulation 11, are entitled to first year college certificates, having obtained an aggregate number of marks in examination, of 50 per cent. of the maximum obtainable. The subjects of study having been Practical Work, Principles of Agriculture, Practical Agriculture, Farm Diaries, Chemistry, Geology, Surveying and Botany. Conduct also being taken into consideration.—

	Out of a possible 1,000		Out of a possible 1,000		Out of a possible 1,000

Walter Bridges, as a farm student, having satisfied the standard in practical agriculture, is entitled to a farm certificate, as per Regulation 11.

## MINUTE PAPER.

*Subject*:—Class lists showing marks gained by the different students at the first yearly examination, Hawkesbury Agricultural College.

Department of Agriculture, Sydney, 22 December, 1891.

HEREWITH I beg to submit class lists showing the marks gained by each student in the subjects for examination for this year at the Hawkesbury Agricultural College, giving full details of the marks for each question, order of merit, and class averages.

It has been a source of gratification to Messrs. Knibbs, Turner, Despoissis, and myself to note the abundant signs of earnest work and intelligent interest exhibited in the answers to the questions submitted to us. The large majority of students have made satisfactory progress, and have grasped the relative import and inter-dependence of the many scientific subjects allied to agriculture. At the same time there are a few students who have evidently not made any proper effort to master the scientific side of their studies, and it is a question whether such young men should be allowed to stay at the college to the exclusion of better students, of whom scores are now applying for admission. Students who are persistently idle and nonprogressive should no more be allowed to occupy the limited accommodation in this practical college than useless weeds should be allowed to encumber the ground which is intended for the highest purposes of man.

In setting the papers to test the students' progress, we have had two objects in view—First: While adhering to the respective programmes of study submitted by the teachers, to indicate how those different subjects should have been treated, and to what aspects of the subjects most attention should have been devoted. Second: To test the industry and progress of the students in the respective branches of study.

Keeping these objects in view, we note that the "Principles of Agriculture," the main subject of the college course, has evidently received the students' best attention. They have pursued the subject with keen and intelligent interest, as evidenced by the high class average of 72 per cent. In one of the papers no less than twenty-three students got 75 per cent. and over. The papers of Students Shute, Dark, Baass, Reynolds, Stening, and Wicken are deserving of the highest commendation.

Botany comes next in order of excellence of results, which show good even teaching, twenty out of twenty-nine students getting from 50 to 80 per cent. of the possible marks. The class average is 54 per cent., students Shute and Stening, winning honours.

In geology the results are not so satisfactory, the very poor marks of six students lowering the class average to 38. The students do not seem to have taken the same deep interest in this subject, and in order to stimulate them I would recommend more practical instruction by means of frequent geological excursions to places in the neighbourhood. I cannot recommend any students for honours in this subject.

In chemistry the results are uneven, for while the papers of Students Nott and Corlette are very satisfactory, those of twelve others are the reverse. I am disappointed to find that there is not keener interest taken in this subject, which is one of such peculiar value to advanced agriculturists.

Every young man who intends to engage in farming should be able to tell the nature of his soil, the main factor in his business, and the relative values of manures for different crops or different soils; in short, he should know the main principles that underlie almost every operation on the farm, orchard, or vineyard. No such young man can afford to neglect chemistry. The course of two years study now prescribed is all too short for the purposes of getting even a tolerable insight into the mysteries of organic and inorganic chemistry as applied to the many-sided subject of agriculture. I would suggest that only the main principles of chemistry should be studied from the present textbook by Roscoe, and that it should be very largely supplemented in the second year course by textbooks on agricultural chemistry such as "Warrington's Chemistry of the farm" and "Johnston and Cameron's Agricultural chemistry and geology."

In surveying the results are suggestive of bad mathematical preparation before entering the college, and of languid interest in a subject which is of so much practical importance, especially to the young farmer who is going to lay out his own farm, construct drains, divide his paddocks, and do the many other initial operations necessary on a new farm. No honours can be awarded in this subject. The class average of 31½ per cent. is far too low; a result chiefly due to the low marks of a few students who consistently occupy the same undignified position at the end of almost every class list. Seven of them, Nos. 1, 11, 9, 15, 25, 7, and 12, must, I fear, be treated as the orchard manager would deal with non-fruitful trees, or the principal with any stray unwelcome couch grass or sorrel he may find amongst his maize and potatoes.

Taking into consideration the many difficulties incidental to the first year of such an institution as this, or indeed I may say of the inception of the national system of agricultural education, and recognising the striking advantages possessed by those students who had received a sound general education before entering the College, I recommend,

1. That all the first year students, numbering 22 out of 29, who have gained 50 per cent. of the aggregate of marks shall receive a pass certificate to enter the 2nd year for the diploma;
2. That it be understood that only those individual subjects in which a pass has been gained will appear on the yearly certificate or diploma;
3. That all future candidates for admission to the college be submitted to a proper entrance examination to guarantee a certain fixed standard of education.

I would venture to express my opinion that the percentage of passes—22 out of 29—is highly satisfactory, more especially in view of all the circumstances of the selection of the first batch of students who were chosen more by priority of application than by their educational qualifications.

The percentage of the aggregates, ranging from 79 down to 71, gained by students Shute, Moore, Reynolds, Baass, Spark, Rien, and Dark, are exceedingly creditable to them and to their college.

HENRY C. L. ANDERSON,  
Director of Agriculture.

## REPORT OF THE BOTANIST.

Sir,

Department of Agriculture, Sydney, 19 December, 1891.

As examiner of the student's work in botany, during the present session at the Hawkesbury Agricultural College, I have the honor to submit the following report and analysis of answers to questions, with the number of marks each student has obtained. According to the standard I fixed upon, twenty students have passed (one of them with honors) which is a little over 68 per cent. Taking into consideration that the students have only received nine months tuition at the college, I think that the work done in economic botany is very creditable.

Whilst I congratulate both the lecturer and the students on the good work accomplished in this direction—which I admit will be the most useful to the latter in after life—I would advise that a little more time be devoted to structural and systematic botany. It will be seen that the answers to these questions set down in the examination paper show a marked contrast with those on economic botany.

For future guidance I would also advise that the answers to questions in the examination paper be given in consecutive order. It would not only facilitate examination, but will appear more business like.

The number of the question that is being answered should be written on the margin in large figures, preferably in red ink, and no two answers should be written upon the same sheet of paper.

The student's number in large figures, and also the date of examination, should be written at the top of each sheet of paper.

I have, &c.,  
FRED. TURNER,  
Botanist.

H. C. L. Anderson, Esq., M.A., Director of Agriculture, New South Wales.

TABLE

TABLE to show Results of College Work during the Year 1891, as seen in the Fortnightly Examinations.

Maximum marks, 100.

\* Students left college during first session.

\*\* Student left college during second session.

† Bridges is a farm student.

Regarding the recommendations of the Director, as the result of the recent examinations, "that twenty-two students who have obtained 50 per cent. of the aggregate of marks obtainable shall receive a pass-certificate to enter their second year's work for a diploma." This, in my opinion, is a most liberal interpretation of our regulations, but one which, under the circumstances, I fully approve.

I also fully indorse the proposal "that only those subjects in which a 'pass' has been obtained will appear on the yearly certificate." For the purpose of obtaining a diploma, however, I am decidedly of opinion that students should pass the compulsory subjects as per college regulations. If such were obtainable on the basis of 50 per cent. on the aggregate of marks, it would tend to detract from the value of the diploma of so important an institution. It must not be forgotten that if a student fails to obtain his diploma at the end of his second year he has the option of remaining another year to enable him to do so. I think diplomas would be too cheap altogether on a 50 per cent. aggregate, and many of the subjects taught would be a dead letter. The true remedy lies in recommendation 3:—"That all future candidates for admission to the college be submitted to a proper entrance examination." No student should be admitted unless he be well grounded in the rudiments of the ordinary subjects taught in the State schools.

With regard to the seven students who have failed to obtain a pass certificate this year on such liberal terms as 50 per cent. of the aggregate marks obtainable—although they are no doubt taking up the room of more deserving young men—I am not inclined to send them away from the institution without another trial. Some of them have been sadly handicapped by defective elementary education, but as no entrance examination was insisted on when they were admitted, such can hardly be urged against them. Being our first year, and taking all the circumstances of the case into consideration, I beg to recommend that those desirous of returning be allowed to do so, with the distinct understanding, that if a decided improvement in their work is not apparent, on no consideration will they be permitted to return after their second year.

Attached are the reports of the officers under my control in the working of the institution, about which I desire to say a few words:—

Mr. E. C. Wood.—The science master deals with the subjects entrusted to him, viz., chemistry, geology, and surveying. The latter subject has been fully utilised in the practical working of the farm; in taking levels for drainage—measuring fencing contracts, stacks of firewood, areas of land, &c. I deplore the low marks obtained in Mr. Woods' subjects, and sincerely trust that a decided improvement will be apparent next year.

Mr. C. T. Musson.—The botanist deals exhaustively with his subject, and the recommendations he suggests I heartily approve of; so far as I am able to have it done, every plant capable of being grown on our soil, and under our climate, will in time be procured for experimental and educational purposes.

Mr. B. Ferguson, the farm overseer, speaks about the willing obedience and cheerful manner in which the students performed the duties allotted to them, although sometimes working up to their knees in water. I can myself fully bear this out. I believe nearly every student has done his best at the practical work. Particulars as to the work done and its value will be found attached to Mr. Ferguson's report.

Although Mr. Stieme, the orchard manager, was made acquainted early in the year that an annual report would be required from him, I am disappointed with that sent in. Considering the very great importance of his branch to the institution and to the Colony it might have been more educational. Mr. Stieme, however, has been busily engaged in superintending trenching, planting, draining, laying of pipes, and many other important operations (he is still in the middle of the draining work), and promises a much fuller report dealing with all the operations of his branch next year.

Mr. Brooks, foreman carpenter's report is satisfactory. The work done by students in this branch is highly creditable to them and to himself. I am glad to find that he has always found the students willing, obedient, and interested in their work. I consider this branch of the students' practical education of the utmost value. As pioneers in the back country it is of great importance to be able to use carpenter's tools. The value of work done (£177) is satisfactory.

Mr. G. Cobb, farm foreman's report.—It has been very pleasing to me to note the great interest taken by all the students in ploughing and other horse work in connection with the farm. Young men who choose an agricultural life are, as a rule, passionately fond of horses and other live stock of the farm; this is as it should be. The students have shown the greatest possible interest in our horses, cows, and pigs. Only on one occasion during the year have I had to reprimand a student for abusing a horse, and this case was, I am sure, the result of mere thoughtlessness, and not cruelty. It is a pleasure

pleasure to observe the good horsemanship of many of the students, and the care and attention paid to the horses generally. The rising at 4 o'clock to get horses in and fed was carried out without a murmur; also the feeding and cleaning of them at 5-30 all through the winter.

Mr. T. H. Mathews, blacksmith's report.—Little has yet been done in this department. Mr. Mathews has, however, a fully equipped shop, and I anticipate useful work in this important branch during next session.

Mr. Stead, foreman fencer's report.—It is very gratifying to find that the students take so much interest in this branch of work. It is of great importance that a man following a country life, pastoral or agricultural, should be able to take a mortising axe or adze into his hands and use the tool skilfully when necessity demands it. Some of the fencing put up by the students I am really proud of.

I owe my obligations to Messrs. Ferguson, Stieme, Brooks, Cobb, Stead, and the other men employed on the farm for their best efforts to explain and demonstrate to the students the various operations under their control, and for the ready and earnest co-operation I have at all times received from them.

Dr. Helsham, the medical officer, reports as to the health of the students, which has been satisfactory. The suggestion as to an isolated room to be set apart for cases of sickness has been carried out so far as we were able. Considering our very limited accommodation, we should find a difficulty present itself did any infectious disease break out.

HAWKESBURY AGRICULTURAL COLLEGE, DECEMBER, 1891.

*Practical Agriculture.*

Examiner: J. A. Despeissis, M.R.A.C.

Marks. Time allowed—Three hours.—Only eight questions to be attempted.

- 10 I.—Name four varieties of clover.  
Define the place of clover in a system of rotation of crops.  
How is it that a clover crop enriches the soil even when that crop has been removed from the field?  
Is the Humble Bee (*Bombus terrestris*) the farmer's enemy or friend in a clover field? Give your reason.
- 15 II.—What do you mean by the words "silo," "silage," "ensilage?"  
Which do you consider more economical, a "pit" or a "stack" silo?  
What is the fundamental principle of making ensilage?  
What do the words "sweet" and "sour" silage convey to your mind, and by what would you be guided in the making of both these forms of preserved fodder, supposing green-stuff from the same field was used?  
When would you cut a crop especially grown for ensilage?
- 10 III.—Make out a table showing the average quantity of seed of wheat, barley, oats, maize, sorghum, pea, and beans, sown per acre, a fair yield per acre, and the average weight per bushel of each of these.
- 10 IV.—Which of these three cereal crops would give the best results in a soil moderately rich in organic matter, viz., wheat, barley, or oats?  
How would you recognise in a field, by the look of the panicles, common oat (*Avena sativa*) from Tartarian oat (*A. orientalis*)?  
What is the effect of rich alluvial soil on the oat crop. Would it be better on such land to grow oats for hay or oats for grain; and in that case which would you consider more advisable, viz., thick or thin sowing, and why?
- 10 V.—What are the two great divisions of *Triticum sativum*, or common wheat? Name and describe one variety of each, and contrast them together.  
State what you know about Steinwedel wheat.  
What do you mean by "pickling" the seed, and describe briefly how you would proceed to do it?
- 15 VI.—Write a concise paper on the cultivation of maize from the time of sowing to the time of harvesting.  
What is the proportion of seed to corn?  
To what class of animals is it most profitable to feed maize?
- 15 VII.—How are sugar-canes propagated?  
Which is the part of New South Wales most suitable for the cultivation of the cane?  
What do you mean by such words as "plant-canes," "ratoons," "megass," "molasses"?  
What is a fair yield in tons per acre of a crop of 12-months old canes, and of a crop of 20-months old canes?  
What is in degrees Baumé the average density of sugar-cane juice?  
Suppose a sample of canes brought to the chemist shows on analysis 16 per cent. of crystallisable sugar, and by means of good and careful manufacture 10 per cent. of that sugar is extracted and boiled down; how many tons of canes would produce one ton of sugar?
- 10 VIII.—By what considerations would you be guided in making a selection of a piece of land for the purpose of establishing a lucerne farm for hay?  
Describe the management of a large lucerne field. How would you stock it, and when and how often—under favourable circumstances—would you mow it?
- 15 IX.—What place in a rotation should the potato crop occupy?  
Describe the respective value of a light loamy soil, a heavy loam, and peat-land previously sweetened by means of drainage and liming, as regards yield and soundness of a potato crop.  
How would you store potatoes?  
State shortly the means which may be adopted to lessen the risk of "potato disease" (*Peronospora infestans*).
- 6 X.—What is your idea about the feeding value of "gram" (*Dolichos biflorus*), and "chick pea" (*Cicer arietinum*), and their uses for farm stock?

100 Maximum. Pass, 50 per cent.; Honors, 75 per cent.

HAWKESBURY AGRICULTURAL COLLEGE—DECEMBER, 1891.

*Principles of Agriculture.*

Examiner: J. A. Despeissis, M.R.A.C.

Marks. Time allowed—Three hours.—Only eight questions to be attempted.

- 12 I.—What natural order do vetches or tares belong to?  
At what time would you plant vetches?  
Would you plant vetches by themselves or together with other seeds in a mixture?—For what reason?  
At what time would you expect to feed off or cut the crop, and what would you do with the land afterwards?
- 10 II.—Do you consider sainfoin (*Onobrychis sativa*) a valuable plant?  
In what part of New South Wales is it most likely to be of value?  
Contrast it with lucerne (*Medicago sativa*).  
When would a sainfoin field begin to yield heavy cuttings of green-stuff, and about how long would you leave it down?  
What crops would you take after it?
- 10 III.—State what you know about "prairie grass," "cocksfoot," "timothy."
- 12 IV.—Compare Italian rye-grass (*Lolium italicum*) with perennial rye-grass (*L. perenne*).  
Which of the two would you choose for growing as a "seed-crop," and which on a sewage farm, for feeding milk cows?

Marks.

Marks.

- 12 V.—Suppose you want to turn scrub-land in the coastal region of New South Wales into pastures for stock-raising or dairying, describe how you would proceed, and give a formula for a mixture of grasses and clovers, and quantity of each in the mixture, time to sow, &c.
- 10 VI.—What conclusion would you come to if you saw rushes, reeds, sedges, docks, together with mosses, growing on a certain kind of land; and state how you would propose to reclaim such land, and make it fit for agricultural purposes?
- 15 VII.—Describe the systems of drainage carried on at the Agricultural College grounds at Richmond. What is "surface drainage," "sink-hole draining," "arterial drainage"?
- 15 VIII.—State what you understand by nitrogenous, phosphatic, and potassic manures, and also by a "complete" manure, "artificial" and "special" manures. Give examples of each.
- 12 IX.—It requires powerful machinery to grind bones, and you can obtain a large supply of bones at a low price. Describe a good plan for hastening their manurial action on the farm.
- 12 X.—What is your idea about "green manuring"; and what plants would recommend themselves to you for the purpose you have in view?

100 Maximum Pass, 50 per cent.; Honors, 75 per cent.

HAWKESBURY AGRICULTURAL COLLEGE, DECEMBER, 1891.

*Chemistry.*

Examiner: The Director of Agriculture.

Marks.

Time allowed—Three hours—Only seven questions to be answered.

- 10 I.—Define the terms specific gravity, chemical compound, molecule, salt, latent heat, acid, specific heat, alkali.
- 10 II.—How is a Fahrenheit thermometer made? Express 10° C., 40° C., —10° C. in equivalent Fahrenheit degrees; 10° F., 40° F., —10° F. in equivalent Centigrade degrees.
- 15 III.—Express fully the meaning of each of the following equations, giving the combining weights:—  

$$\text{Zn} + \text{H}_2 \text{SO}_4 = \text{H}_2 + \text{ZnSO}_4$$

$$\text{H}_2 \text{CO}_3 + \text{CaO} = \text{CaCO}_3 + \text{H}_2 \text{O}$$

$$\text{KNO}_3 + \text{H}_2 \text{SO}_4 = \text{HNO}_3 + \text{HKSO}_4$$
- 20 IV.—Describe the chemical constituents of the air, noting the specific functions of each constituent.
- 15 V.—Describe nitrogen. How would you make a jar of it? How does it occur in nature? Indicate fully its importance from an agricultural point of view.
- 15 VI.—How much pure material should you use in order to get 220 grammes of carbonic acid gas? How would you identify the gas? Give its common names, and describe fully how it occurs in nature.
- 20 VII.—How would you distinguish nitric acid from hydrochloric acid? How does the former occur in nature? Describe fully how you make it in the laboratory. What do you know of nitrification, and the conditions essential to its development?
- 10 VIII.—What has chemistry taught you about the composition, uses and special value of any manure you have been using on the farm?
- 10 IX.—Name the alkaline metals; describe one of them. Give the names and the chemical formulæ of a number of its compounds, and describe their agricultural value.

100 Maximum. Pass, 50 per cent.; Honors, 75 per cent.

HAWKESBURY AGRICULTURAL COLLEGE, DECEMBER, 1891.

*Geology.*

Examiner: The Director of Agriculture.

Marks.

Time allowed—Three hours.—Only seven questions to be answered.

- 15 I.—Describe fully the action of the atmosphere in making soils.
- 15 II.—Name the principal elements and minerals forming the earth's crust from an agricultural point of view, and give their chemical composition and value.
- 10 III.—Describe the chief sources of our lime supply, noticing how each has probably been formed.
- 10 IV.—Describe what you would consider a good soil, judging by its physical and chemical properties.
- 10 V.—What traces have been left in geological history by lakes?
- 15 VI.—Give a full account of your observations on the geology of the College Farm, noting particularly the different classes of soil found thereon, and indicating probable causes of such striking differences.
- 15 VII.—Define the terms unconformability, fault, metamorphism, fossil, dip, outcrop, and give an illustration of each.
- 15 VIII.—Explain fully how fossils indicate geological chronology.
- 15 IX.—Give a concise sketch of the chief geological formations of New South Wales, and the agricultural characteristics of the soils resulting from each.

100 Maximum. Pass, 50 per cent.; Honors, 75 per cent.

HAWKESBURY AGRICULTURAL COLLEGE, DECEMBER, 1891.

*Surveying.*

Examiner: Mr. G. H. Knibbs.

Marks.

Time allowed—Three hours.—Only six questions to be answered, in which 1, 2, and 3 must be included.

- 20 I.—Describe the use and the adjustments of the theodolite and level.
- 15 II.—Explain in detail the various methods of chaining.
- 15 III.—The sides of a quadrilateral field are, in links, AB=980, BC=750, CD=700, and DA=860, the tie-line BD being 730 links. What is its area expressed in acres, roods, and perches?
- 10 IV.—Give examples of two systems of keeping field notes of the survey of a field such as is indicated above, introducing the mode of noting offsets to irregular boundaries.
- 10 V.—Find the area of a segment of a circle having a radius of 200 feet, the chord of the segment being also 200 feet.
- 15 VI.—The slope of the sides of a rectangular tank, the top of which measures 33 feet by 25 feet, is 1½ horizontal to 1 perpendicular. What is its cubic measurement in yards, the depth of the tank being 5 feet?
- 15 VII.—What would be the discharge in gallons per second of a long smooth pipe 6 inches in diameter having a slope of 1 in 225?
- 15 VIII.—Illustrate by diagrams and by explanatory notes the system of grading for drains.
- 20 IX.—Describe generally the methods of plotting surveys and level sections.

100 Maximum. Pass, 50 per cent.; Honors, 75 per cent.

## HAWKESBURY AGRICULTURAL COLLEGE—DECEMBER, 1891.

Botany.

Examiner: Mr. Fred Turner.

- Marks. Time allowed—Three hours.—Only eight questions to be answered.
- 10 I.—Describe the structure of the seed, stem, and venation of the leaf of (A) a Dicotyledonous plant; (B) a Monocotyledonous plant. Describe the organs of fructification and other principal characters in Acotyledonous plants. How would you distinguish an Exogen from an Endogen? Name some well-known examples.
- 9 II.—What is the difference between a Monochlamydeous flower and a Dichlamydeous one? What are the meanings of Dioecious, Monoecious and Polygamous, as applied to plants? Name some well-known examples.
- 12 III.—Describe fully the various parts of a flower. Take the three following as examples:—"Native Rose," "Gigantic Lily," and "Couch Grass." Give each one its botanical name, the natural order to which each one belongs, and refer each one to its respective class in the Vegetable Kingdom.
- 8 IV.—What is the difference between a parasitical plant and an epiphytal one? Name some well-known examples. What is the botanical name of a parasitical plant that is a great pest to farmers?
- 8 V.—Give the principal distinguishing characters between the natural orders Gramineæ, Cyperaceæ, and Juncaceæ. Name some well-known examples.
- 14 VI.—Show clearly how to distinguish Couch Grass (*Cynodon dactylon*) from the Star or Windmill Grass (*Chloris truncata*), and the Prairie Grass (*Ceratochloa unioides*) from Perennial Rye (*Lolium perenne*). Give the botanical and common names of six indigenous grasses, and six exotic; rasses. Write a description of each species, giving full information as to their value for pasture, hay, or silage.
- 15 VII.—Give the names of six well-known fibre yielding plants. What is Jute? Give its scientific name. Where is it a native of? How is it prepared? For what purpose is it used? What part of the cotton plant yields cotton? In what country is it extensively cultivated? What other economic property is the plant famous for.
- 15 VIII.—Name six well-known commercial vegetable oils: From what part of the plant is linseed oil obtained? How is it obtained? Why is it particularly suitable for painting purposes? Describe the Castor-oil plant. From what part of the plant is the oil obtained? How is it extracted? For what purpose is it used?
- 15 IX.—Give the names of six well-known tuberous rooted plants of agricultural importance. Name the chief starches used for food. Whence does arrowroot come? From what part of the plant is the starch obtained? How is it prepared? From what plant is tapioca obtained? In what countries is it extensively cultivated? What does its root resemble in shape? What is remarkable about the sap of this root?
- 10 X.—Give the names of six sub-tropical fruit-bearing trees, and write a short description of each one of them. Give the names of six stone-fruit trees, and write a short description of each one of them. Give the names of six fruit trees, suitable for cultivation in the colder parts of the Colony, and write a short description of each one of them.

## REPORT OF THE SCIENCE MASTER.

Sir,

Hawkesbury Agricultural College, Richmond, 23 December, 1891.

I have the honor herewith to furnish my report for the session ending 23rd December, and it is satisfactory to note that the students have profited by experience gained in their first term, as they have shown in class a better comprehension both of the general nature and objects of their studies, and of the fact that good results are attainable only by a constant application and the accomplishment of their work little by little during the currency of the term and simultaneously with the lectures they receive.

Most unmistakably also has experience shown them that the difficulty of mastering new work is doubly multiplied when they lose connecting links in a science course of any kind, which must be taken progressively and in logical sequence. It is for this reason that the examinations in all of my subjects—chemistry, geology, and surveying—have, at my request, embraced the work of the whole academic year, and not merely that done in this session, as I should deplore any of my students losing, or even temporarily neglecting, the elementary, yet fundamental, portions of a science about which their knowledge is generally *nil* at the date of their entrance into this college, and which, therefore, emphasises the importance of thorough and constant revision. This is the system I have always adopted throughout my fortnightly class examinations, the institution of which no doubt greatly conduces to thoroughness and proficiency among the students, and the results of the class examinations indicate fairly what should be expected at the sessional examinations.

In surveying it has been difficult to afford sufficient individual practice with the theodolite and level to so large a class of students by merely the half-days of alternate Wednesday afternoons, and as it is indispensable that to make the subject of high practical utility copious use should be made of the instruments, I should recommend that the field work of surveying should be done on the "practical" or "field-work" days. And as proficiency in surveying can only be obtained by much practice, it would be worthy of consideration to afford second-year students this advantage, which, however, entails virtually an extension of the surveying to a two-year course. This is also, I think, of the character of the instruction of our second-year curriculum for the diploma, bearing testimony of the students' practical abilities.

The practical works carried out as field exercises for the students have this session been much of the same nature as those of last session, though in most cases it has been possible to divide the class into sections, each being allotted work, under supervision, in taking levels for draining, pegging out designs and systems of drainage, making flying-level sections for comparing levels at two localities, measuring up quantities, as for example fencing contracts, stacks of wood-fuel, drains, estimating discharge of water through drains from swamps and low-lying areas, sections for embankments for water reservoirs, *et cetera*, whilst, by means of the theodolite, surveys have been made of areas for clearing contracts, areas of grazing paddocks, detail surveys of sites for college buildings, farm houses, plan of the system of pipe drainage in the orchards, *et cetera*.

Regarding the subject of chemistry, it may be said that the students have now had a sound elementary treatise, in which have been advanced to them the general laws of the science as exemplified in inorganic chemistry, for it cannot reasonably be supposed that raw recruits will have obtained sufficient mastery of this difficult science to render themselves familiar in any great degree, during one year, with the actual matter of agricultural chemistry, which comes largely under the head of organic chemistry; but the second-year course will include the systematic study of the carbon compounds and the exact application of chemistry to agricultural practice; dealing, for example, with the chemical composition of soils and fertilizers; the animal body; respiration; plant foods and chemical changes going on in soils, by which means plants receive nourishment; food-stuffs; chemistry of dairy products; ensilage processes; fermentation, &c.

In geology, after the general treatment of the subject, special references have been made to agricultural features, accounting for the formation of soils, the composition of minerals and soil-forming ingredients, being explained; this also being supplemented by excursions to various parts of the country, and the college farm.

The natural philosophy lectures of next year will include mechanics, designed as an applied course, and including the calculation and graphic representation of stresses in roof-structures, girders, retaining walls for earthwork, hydrostatics, pumping machinery, the design of agricultural machine parts, the steam-engine and other motors, together with mechanical drawing and design.

As for the results shown in the recent examinations of the whole year's work in chemistry, geology, and surveying, I must express surprise at the low class averages, but I must congratulate those who have obtained top marks in the respective lists, and hope that all the students may spend a most happy Christmas and New Year, and enjoy a pleasant vacation, returning, next session, in good health and spirits for the more arduous work yet before them.

I have, &amp;c.,

E. CLARENCE WOOD,

Science Master.

J. L. Thompson, Esq., Principal.

REPORT

## REPORT OF THE LECTURER ON BOTANY.

Sir,

December, 1891.

I have the honor to present my report, dealing with the work done by students under my charge during the year 1891.

On Monday, 23rd March, I took up my duties as registrar and lecturer on botany, delivering my first lecture next day—the first session closing on 31st July. Between these two dates a course of thirty-two lectures on elementary botany was delivered, the subject being presented in such a way as should lead students up to a course on economic botany, which occupied our attention during the second session; the consideration of plant diseases being deferred until next year.

The lectures were copiously illustrated by diagrams; whilst by examinations of fresh specimens of flowering plants from time to time, and the use of the microscope, facts as developed in the lectures were brought home to the students in a way that should tend to produce a lasting impression.

An endeavour is made to interest students in the study of plants, and to give to it more thought than is usually the case in merely attending a short course of lectures; and it is to be hoped that a liking for botany may accompany many of them in their future careers. It is very desirable that they should take an interest in plants more than is shown in the mere sowing and reaping of crops.

A man who is in sympathy with his work, and can realise that plants are living things, capable of being coaxed, and made to do for him almost all he desires of them, must be in a better position to cope with difficulties than those who do not realise this, and the successful men of the future will be those who can cope with the difficulties sure to arise. How, for instance, are we to treat plant diseases unless we know their structure, habits, and ordinary wants. A doctor who understands nothing about the structure of the human frame and the functions performed in health, would utterly fail to cope with disease.

How much more difficult for us to deal with subjects unable to tell us as to their feelings and wants. A good grounding, therefore, in structural and physiological botany must be of great use to all who have to deal with plants, and to the agricultural student more especially, whilst special efforts are made to point out the useful application of the plant resources of the world.

The course of lectures on botany is calculated to bring out in strong relief the fact that plants are living things, sensitive to light, heat, and moisture, requiring regular and particular food, sometimes refusing to give us the return we look for, usually from want of knowledge on our part as to their requirements. Add to this, that we are still to a great extent ignorant of the influence on plants of their surroundings, also remembering that in cultivating and improving plants from our point of view we are disturbing the natural equilibrium between the plant and its environment, which means tampering with the conditions giving it natural health, and we can begin to understand how complex and deeply interesting a subject we have to deal with. Under existing conditions, as relating to cultivated plants, can we wonder that the more tender and subject to disease they should become; hence the higher the cultivation, the more need for knowledge concerning their structure and inner life.

A full syllabus of the lectures appears elsewhere. It will be seen that students have here an opportunity to become acquainted with the structure and functions of plants; whilst the natural orders most useful to man are specially dealt with, the whole course of study in this subject being specially adapted to the requirements of an agricultural education.

In dealing lately with technical education the Speaker of the British House of Commons made some remarks that might well be applied to the work of our own college. He says, "What ought to be taught is not a trade, or the particular manipulation of the articles students might have to deal with in after life, but the principles of science as applicable to art. The object should be to elevate the students above the mere manual dexterity of the special professions to which they are to belong."

Applying this to the particular case before us, I say that students here should acquire the principles of science as applied to agriculture. The object should be to elevate students above the mere manual dexterity requisite for ordinary farming operations.

Students are encouraged to make for themselves collections of native plants, weeds, insects, &c. This helps considerably in the technical work, and gives students a knowledge of the various noxious weeds, useful fodder plants, native and introduced, besides introducing them practically to plant diseases. Amongst the latter we have observed maize rust and smut, clover disease; cereals, with rust and smut; numerous insect pests, amongst them fig-trees with galericella, and a number of native plants have been found to be suffering from fungoid pests, examples of most of which have been submitted to Dr. Cobb.

Richmond, it may be mentioned, is particularly rich in introduced plants, over eighty having been already noted. The town also possesses a fine lot of exotic and native trees in the park and elsewhere. Students are instructed as to their characteristics and uses, as they should all possess a practical knowledge of the chief native and exotic timber trees.

Wednesday, being excursion day, the students have with me visited various places in the neighbourhood in search of wild flowers, &c., whilst some of them have gone as far as Kurrajong heights for the same purpose, every advantage being taken to make these "days out" as practically useful as possible.

They have had an opportunity of seeing the working of a vermorel spray-pump, used on pumpkins attacked by beetles at Mr. Pitt's farm, Bronté, and also on pear trees at Richmond.

Fortnightly examinations for each class have been held in botany, in each case dealing with the work done during previous two weeks.

A laboratory in connection with the teaching of botany is in process of formation, but from the want of a proper room it has been impossible to do much microscopical or experimental work.

As an aid to the teaching of botany, I beg to suggest that a garden plot be set aside for the purpose of establishing a collection of living plants, such as are dealt with in lectures, for illustration and experiment, and making the plants familiar to students. A botanic garden on a small scale would be most useful and instructive, not to say ornamental.

I would also ask for another good microscope to be supplied; as there are two masters, it is a matter of inconvenience to both that there should be only one microscope.

I would also suggest that there be purchased, models of flowers, with parts removable, illustrating the following important natural orders:—

- Leguminosæ.
- Graminaceæ, with a model of germinating grain.
- Cruciferae.
- Rosaceæ.
- Compositæ.
- Salsolaceæ.
- Myrtaceæ.
- Aurantiaceæ.

Such models are procurable at a cost of about £2 2s. each, and are invaluable for teaching purposes.

J. L. Thompson, Esq., Principal, H.A.C.

I have, &c.,  
CHAS. T. MUSSON,  
F.L.S.

## REPORT OF THE FARM OVERSEER.

Sir,

I beg herewith to submit my report for the year ending 31st December, 1891.

First, with regard to the students themselves, I have much pleasure in bearing testimony to their general good conduct, and to their increasing skill as workmen. I have to report a very decided improvement in their outdoor work; during the session just ended, the students have done some excellent work; as all-round workmen, the majority have given me very great satisfaction, and I believe that almost all have done their best, and tried to excel in some branch of the outdoor work. Some are really good workmen, and take great interest in their work; they have been close observers of all that has been done on the farm, and obtained information from every available source.

At the commencement of the year, the site of the Hawkesbury Agricultural College Farm was a dense forest, with large swamps, and a few small open spaces, on which some of the trees had been cut down, the stumps and roots in every case being left in the ground. There were no fences, and none of the soil was naturally rich or capable of growing first-class crops without manure and skilful cultivation.

Since

Since the opening of the college, a great change has taken place on the common—grubbing, clearing, fencing, and other work has been pushed on at a great rate—and we have now over 200 acres of ploughed land. The maize and other crops in the cultivation paddock are growing luxuriantly, artificial manures have been used for almost every crop, and several experimental plots sown in order to test the value of the different manures for various crops, but we have been working under difficulties this season, and as it is rather early in the season to write with certainty about results, I do not think that it would be fair for me to make any remark about the different manures experimented with, further than to state that we have obtained very good results by using your mixture of kamit, dried blood, and bonedust.

During the year several trials of agricultural implements have taken place on the farm, at all of which the students have been present, and, judging from their conversation months afterwards, they have been keen observers.

The visits to the Sydney and Hawkesbury Agricultural shows were very highly appreciated by the students, who gladly avail themselves of such grand opportunities to increase their knowledge.

In addition to the general routine of farm work, the students have cheerfully done a lot of rough work, such as road making, draining, grubbing, clearing and filling stump holes, &c. I have always tried to make the work as varied and interesting as possible; but to the students, who were quite unaccustomed to hard work, the rough work on a new farm must have seemed very hard and monotonous, however, they worked on patiently and well, and by their cheerfulness and goodwill to each other, they made it a pleasure for me to work with them.

NATURE and estimated value of work done by Farm Staff and Students, independent of all contracts

	£	s	d
Filling stump holes on Ausburn s contract	187	10	0
Grubbing trees, extracting stumps, cutting and stacking the wood, &c, on 100 acres between Richmond and Clarendon	110	0	0
Grubbing and clearing scrub on 200 acres	70	0	0
Making open drains to drain swamps, &c	117	10	0
Levelling ground, filling large holes, carting sand, forming roads	103	0	0
Making embankments through newly drained swamps on which fences were erected	28	0	0
Clearing lines for fences	11	0	0
	<hr/>		
	627	0	0
Work done under direct supervision of farm foreman—Ploughing, disc harrowing, harrowing with common harrows, sowing manure, sowing seeds, scuffling, hilling corn, scooping, carting, hauling logs, and general routine work (see foreman's report)	447	4	0
Work done under direct supervision of foreman fencer—			
Erecting over 2 miles of six wire fence, with top rail	60	0	0
Preparing and erecting sixteen pairs gate posts	11	0	0
Squaring and otherwise finishing three pairs gate posts	3	18	0
Hanging fourteen pairs gates	9	0	0
Tarring tops of straining posts, &c.	0	10	0
Cutting gate posts, roller, &c	2	10	0
Making cow yard	2	15	0
Thirty-three rods of three rail fencing	6	10	0
Filling stump holes, carting from railway station in March, clearing up the grounds	25	4	0
Counting, passing timber	0	15	0

BRUCE FERGUSON,  
Farm Overseer.

J. L. Thompson, Esq, Principal.

REPORT OF THE FARM FOREMAN

December, 1891.

Sir,  
I have the honor to report that I commenced work as farm foreman on 2nd March, 1891. During the first month little agricultural work could be done, and the horses were employed carting firewood from the common to saw mill, timber for cottages from railway station, also furniture, crockery, and many other household necessaries to the temporary quarters, filling up old excavations, &c.

About 200 acres of land have been ploughed, 6 inches deep, and all roots and stumps grubbed out when met with.

About 70 acres are now under crops of various kinds—maize, sorghum, millet, mangold, beet root, pumpkins, &c.

I have had from four to six students under my immediate control every day, and have done my best to teach them the use of all agricultural implements and machinery. The young men, as a rule have shown great interest in their work, and in every operation of the farm, they have made excellent progress. Some are equal, if not superior, to the ordinary farming hand. I have found them all obedient, civil, and obliging.

I value the work done under my supervision at £447 4s, as per detailed statement below.

I have, &c,  
GEO COBB,  
Farm Foreman.

J. L. Thompson, Esq, Principal, H A C.

ESTIMATED value of work done under Farm Foreman during year 1891.

	£	s	d
Carting timber, roofing iron, furniture, &c, from railway station to college, twenty days, with two horses and drays, at £1 per day	20	0	0
Carting firewood from common to saw mill, 30 cords, two horses and drays, five days, at £1 per day	5	0	0
Ploughing 200 acres maiden land, 6 inches deep, at £1 per acre	200	0	0
Harrowing 100 acres twice, at 3s per acre	15	0	0
Disc harrowing 100 acres twice, at 7s per acre	35	0	0
Sowing 40 acres maize by hand, at 1s 6d per acre	3	0	
Covering 40 acres maize with hoes, at 1s 6d per acre	3	0	0
Sowing 10 acres maize with Farmer's Friend corn dropper, for experimental purposes, two horses, two days, at £1 per day	2	0	0
Sowing 6 acres sorghums with Farmer's Friend seed drill, two horses, one day at £1	1	0	0
Ploughing 12 acres second time for sowing pumpkins, melons, beet, and mangold, at 12s 6d per acre	7	10	0
Ploughing and scooping for filling up excavations and making embankments for erection of fences across swamps, three horses, twenty days, at £2 per day	40	0	0
Extracting stumps on east side of railway line, with stump extractor, one horse employed twelve days, at 12s 6d per day	7	10	0
Carting 150 straining and gate posts, placing same on various lines of fence, two horses, fourteen days, at £1 per day	14	0	0
Scuffling 55 acres maize twice over, at 4s per acre	11	0	0
Hilling 55 acres maize with plough, at 5s per acre	13	15	0
Spreading artificial manures over 80 acres, at 7s 6d per acre	30	0	0
Ploughing 12 acres maiden land in orchard, at £1 per acre	12	0	0
Ploughing 7 acres land in orchard second time, at 12s 6d per acre	4	7	6
Harrowing 8 acres in orchard twice, at 3s per acre	1	4	0
Harrowing 100 acres fallow land twice, at 3s per acre	15	0	0
Scuffling 55 acres maize, at 2s 6d per acre	6	17	6
	<hr/>		
	£447	4	0

REPORT

## REPORT OF THE ORCHARDIST.

Sir,

Richmond, 21 December, 1891.

I have the honor to submit the following report in reference to the orchard work, and also other work connected with the college which has been done under my supervision since the 6th day of April, 1891, on which date I commenced duty.

I first selected a site suitable for the orchard and farm buildings, and prepared a ground plan for same.

On account of the delay in the fencing and clearing contracts, I was prevented from proceeding with the preparation of the orchard land for some time. During the delay I was employed in examining and passing the clearing contracts of Ausburn, Sherrington, and Barnes, and preparing lists of plants required for the orchard, avenue, and college grounds.

While waiting for the orchard to be fenced in, myself and the students were employed in trenching land for a nursery, filling up holes and ruts in orchard land being trenched by contract, and generally preparing land for the reception of young plants.

During the season we have planted a vineyard of 5 acres, containing 8,765 vines, made up of sixty-nine choice varieties. They are doing remarkably well, although it was late in the season before we could plant them, on account of the contractor failing to fulfil his clearing contract.

The vines have progressed so favourably that I would recommend their immediate staking. The number of stakes required for the present vines and those for next year to finish the plot laid out for the vines is 13,000.

I have also planted in their permanent positions a number of peach, apricot, walnut, plum, guavas, persimmon, and fig trees, all of which are growing remarkably well.

The nursery stock comprises a large number of apple stocks, pears, peaches, quince stocks, orange and lemon stocks, and also a number of willows to plant the swamps, for economic purposes. These all look healthy, and are growing very well.

A few olive truncheons have been planted, and are doing very well. On account of the lateness of the season we were unable to secure a plentiful supply of these.

Two and a half acres of potatoes have been planted, comprising Brownell's Beauty, Early Rose, and Ashleaf Kidney. There are also 120 varieties of potatoes planted for experimental purposes. Also, vegetables, &c., as follows:—

Four thousand five hundred cabbages, three varieties, viz.: London Market, Eastham, and St. John's. French beans, pumpkins, vegetable marrows, cucumbers, rock and water melons, artichokes, arrowroot, ginger, mountain rice, sweet potatoes, tapioca, 1 acre of teocinte, and several other miscellaneous plants.

All the crops are doing very well, considering that they were received late in the season for planting, and the ground being in such a raw state. During the last three months I have been pegging out lines for the systematic drainage of upwards of 80 acres of land, and superintending the levels and laying of drain pipes.

The length of drains completed up to date is 537 chains 57 feet 9 inches of 2-inch pipe, and 31 chains of 6-inch piping. The whole of the drainage will be completed in the month of January, 1892.

When the drains are finished, my whole attention will be directed to the laying out and preparation of this land for autumn and spring planting, also the propagation of plants required for this purpose.

I estimate that we shall make £100 out of our potatoes, cabbages, melons, cucumbers, and other vegetables.

The college has been supplied with vegetables to the amount of £3 17s. 6d., whilst we are commencing to sell our surplus stock.

I have, &amp;c.,

W. STIEME,  
Orchardist.

J. L. Thompson, Esq., Principal, Hawkesbury Agricultural College.

## REPORT OF THE FOREMAN CARPENTER.

Sir,

I have the honor to submit my report of the work done under my supervision, also the value (labor only) of such work, since I commenced my duties on 5th March, 1891.

The prices are in accordance with contract rates.

A great deal of my time has been taken up in teaching students, as they not only required to be shown how to do the work, but the tools they required to work with had to be put in working order for them.

Some of the students have made very good progress in this respect, so that more bench-work may be done next session.

The average number of students I have had under my charge each day has been four, and the average number of days each student has had at the work has also been four.

I wish to take this opportunity of stating that I have always found the students willing and obedient, and, with a very few exceptions, taking a very keen interest in the work, but for which we could not have got through so much as we have done.

Very few tools have been lost or broken, but I should like to state that the early supply of tools was a very inferior one indeed, entailing more labour to keep them in working order than those of a good quality would have done.

In the early part of the first session a lot of work had to be done both in the college and the outbuildings to fit them to our requirements, such as fitting up the kitchen, store-rooms, pantry, dining-room, &c., with shelving, cupboards, tables, covering floors with cocoanut matting leaded at ends, easing doors, and fitting locks, bath-rooms, and lavatories for students' use, unpacking and fitting together furniture, a lot of which required repairs.

In the outbuildings we had to fit up chemical laboratory, carpenters' workshop, students' recreation rooms, and store-rooms for farm tools; also cow-bails, piggery, and a few repairs to fences and gates.

The new work that has been done consists of erecting weatherboard cottages for housekeeper and science master, bathrooms, engine shed, large portable cattle feeding-trough, twenty farm gates, and a number of smaller jobs as they were required.

The principal part of the students' work in the shop consisted of gate-making, from the rough timber, so that they have had a good deal of planing, mortising, and sawing, and I must say I have been surprised to see how rapidly some of the students have learned to use the tools.

Value of work done .. £177.

To the Principal, Hawkesbury Agricultural College.

A. BROOKS,  
Foreman Carpenter.

## REPORT OF THE BLACKSMITH.

Sir,

Herewith I beg to submit a brief report of matters connected with the smithing department at the college. I entered on my duties on the 1st October, and for some time was engaged fitting up blacksmith's shop, repairing pumps, making pans for w.c., and sundry works of a like nature. Considerable time was also spent in making many of the necessary tools for my work. In all we have made about fifty, including, amongst other things, drills, clips, tongs, cold chisels, punches, pullers, &c., &c.; whilst the shop is fitted with a set of the necessary implements, obtained by purchase, and including bellows, anvil, vice, hammers, handles, squares, punching and drilling machines, screw tackle, &c., &c.

I value the work done since 1st December at about £10. It includes new shoes, repairs to gates, tanks, shower-baths, drains, &c.; sharpening and repairing farm implements, two sets gate hooks and hinges; in addition to which there is a good deal of work partly finished, now in hand, that cannot at present be priced, whilst many minor jobs have been attended to which cannot very well be priced.

I have, &amp;c.,

T. H. MATHEWS,  
Blacksmith.

J. L. Thompson, Esq., Principal, Hawkesbury Agricultural College.

REPORT

## REPORT OF THE FOREMAN FENCER.

Sir,

December, 1891.

I have the honor to hand in my report for the year 1891. During the months of January, February, and part of March I was employed by Mr. John Coleman, cutting thistles, prickly pear, clearing up rubbish, &c., on the common.

Since 1st April I have had two to four students under my control every day, and have executed the following work:—

	£	s.	d.
Two miles of fencing .....	60	0	0
Preparing and putting in 16 pairs of gate-posts, topped and grooved .....	11	0	0
Three pairs gate-posts, squared from log .....	3	18	0
Hanging 14 pairs of gates, sells, and blocks .....	8	0	0
Twelve weeks' labour cutting thistles and prickly pear, filling stump holes, &c. ....	25	4	0
Putting up cow bails and trough, &c. ....	2	15	0
Felling and cutting 4 pairs gate-posts, and cutting a roller .....	2	10	0
Removing strainers and timber, running a line, &c. ....	2	5	0
Thirty-three rods 3-rail fencing .....	6	10	0
Estimated total value of work done .....	£122	2	0

On the whole the students have shown much interest in the various operations of fencing. Shute and Quodling, in my opinion, can be classed as first-class at this work. All worked well, and their improvement has far exceeded my expectations.

I have, &amp;c.,

GEO. STEAD,

To J. L. Thompson, Esq., Principal, Hawkesbury Agricultural College.

Foreman Fencer.

## REPORT OF THE MEDICAL OFFICER.

Sir,

Richmond, 29 December, 1891.

I have the honor to make my report for the year ending December, 1891.

The health of the students has been satisfactory, with one exception, there having been no serious case of illness.

The only suggestion I have to make is that, owing to the rather crowded state of the dormitories, an isolated room should be set apart for cases of sickness, properly furnished, and well ventilated, as under present conditions, should an infectious case present itself, it would be extremely difficult to limit the spread of the disease.

I have, &amp;c.,

W. M. HELSHAM,

J. L. Thompson, Esq., Principal, Hawkesbury Agricultural College.

Medical Officer.

## REPORT OF THE PRINCIPAL—continued.

WHEN I took over the control of the common on 3rd March, 1891, the following contracts were under way:—

C. H. Ausburn, 301 acres, at a total cost of £1,028 15s.

Sherrington &amp; Co., 230 acres, at a total cost of £862 10s.

A. G. Marden, supply of fencing material.

A. Wilson, do do

A. J. Wilson, do do

Ausburn finished his contract in a highly satisfactory manner, but the same cannot be said of all the contractors. Marden has also fulfilled his first and all subsequent contracts in a highly satisfactory manner, providing first-class fencing material, and giving no trouble in having to cull out timber.

The following is a full list of all contracts entered into during the year:—

	£	s.	d.	
C. H. Ausburn, clearing land—				For supply of fencing material—continued.
49 acres, at £1 5s. ....	61	5	0	A. G. Marden, 8,000 posts and rails, £5 per 100.
60 acres, at £3 12s. 6d. ....	217	10	0	(Champion's contract taken up).
156 acres, at £4 .....	624	0	0	A. J. Wilson, 2,000 posts and rails, £4 10s. ,,
36 acres, at £3 10s. ....	126	0	0	A. Wilson, 2,000 ,, ,, £4 8s. and
Total .....	£1,028	15	0	£4 10s. per 100.
Sherrington & Co., clearing land—				J. Wilson, 1,500 ,, ,, £3 17s. 6d.
230 acres, at £3 15s. ....	862	10	0	per 100.
Barnes & Co., clearing land—				W. Eather, 360 gate, corner, and straining
317½ acres, at £2 .....	635	0	0	posts, at 3s. 6d. each.
J. J. Young, clearing land—				Fencing—
306 acres, at £4 15s. ....	1,147	10	0	Harrison and Jeffries, 2 miles, at, per mile, £30.
192 acres, at £3 10s. ....	672	0	0	J. F. Graham, 4 ,, ,, ,, ,,
486 acres, at £2 5s. ....	1,093	10	0	W. Giddins, 2 ,, ,, ,, ,,
Total .....	£2,913	0	0	H. Martin, 2 ,, ,, ,, ,,

				same, £21 5s. ; the first 30 feet at 7s. 6d., balance
				10s. per foot.

Attached are copies of all specifications for clearing land, supply of fencing material, erection of fences, drainage, &c.

SPECIFICATIONS

SPECIFICATIONS for Clearing land at the Hawkesbury Agricultural College Farm, Richmond.

General Conditions.

1. With the exception of such trees as the Principal of the College may direct to be left standing, the contractor shall be at liberty to utilise any of the timber on the blocks which he undertakes to clear. All other timber, stumps, roots, scrub, or other growth to be extracted by the contractor to a depth of at least 18 inches below the surface of the ground, and the same to be burned on the ground.
2. The holes made in extracting all or any of the above-mentioned to be left unfilled until permission be obtained from the Principal or his accredited representative to fill them up.
3. The land to be left by the contractor in a condition fit for the plough and satisfactory to the Principal.
4. The Principal to have the right of commencing the ploughing whenever it shall seem to him desirable, and the contractor shall be responsible for extracting and burning such roots, timber or stumps as may be met with in ploughing, if the Principal require him to do so.
5. Each tenderer to make a preliminary deposit of £5 as a guarantee of the genuineness of the offer, which sum shall be forfeited if the contract be not commenced within four weeks from the date of the acceptance of tender, and the Minister for Mines and Agriculture may cancel the contract forthwith.
6. A progress payment equal to 75 per cent. of the value of work done to be made, as far as possible, fortnightly, by voucher upon certificate of the Principal; the remaining 25 per cent. to be paid upon certificate of completion according to contract.
7. If the contract be not completed within the time specified as per tender, and to the satisfaction of the Principal, the Minister for Mines and Agriculture may cancel the contract forthwith; and, unless an extension of time be granted by the Minister, the contractor shall forfeit the deposit money, and shall likewise forfeit all claim to the unpaid balance representing 25 per cent. of the estimated value of the work done.
8. If the time for the performance of the work be extended by the Minister, and the contract be not completed to the Principal's satisfaction in such extended time, then the Minister may cancel the contract, and the contractor shall forfeit the deposit money, and shall likewise forfeit all claim to the unpaid balance, representing 25 per cent. of the estimated value of the work done.
9. The lowest or any tender not necessarily accepted.

Form of Tender.

I HEREBY agree to clear blocks of land Nos. \_\_\_\_\_, at the Hawkesbury Agricultural College Farm, Richmond, in terms of the specifications and general conditions stated at the back hereof, and at the prices shown below; and I further agree to complete the work within \_\_\_\_\_ weeks from the date of the acceptance of Tender.

SUPPLY of Fencing Material at the Hawkesbury Agricultural College Farm, Richmond.

General Conditions.

1. A deposit of £5 to be lodged with each tender as a guarantee of the genuineness of the offer, which sum shall be forfeited if the contract be not commenced within four weeks from the date of the acceptance of tender, and the Minister for Mines and Agriculture may cancel the contract forthwith.
2. A progress payment, equal to 75 per cent. of the value of the material supplied, to be made, as far as possible, fortnightly, by voucher upon certificate of the Principal of the College; the remaining 25 per cent. to be paid upon certificate of completion according to contract.
3. If the contract be not completed within the time specified, as per tender, and to the satisfaction of the Principal the Minister for Mines and Agriculture may cancel the contract forthwith, and unless an extension of time be granted by the Minister, the contractor shall forfeit the deposit money and shall likewise forfeit all claim to the unpaid balance representing 25 per cent. of the estimated value of the material supplied.
4. If the time for the performance of the work be extended by the Minister, and the contract be not completed to the Principal's satisfaction within such extended time, then the Minister may cancel the contract, and the contractor shall forfeit the deposit money, and shall likewise forfeit all claim to the unpaid balance, representing 25 per cent. of the estimated value of the material supplied.
5. The lowest or any tender not necessarily accepted.

Form of Tender.

hereby agree to supply and deliver, where directed at the Hawkesbury Agricultural College Farm, Richmond, the undermentioned fencing material, the whole to be of the best quality, and subject to the approval of the Principal of the College, and to be delivered within \_\_\_\_\_ weeks from date of acceptance of tender.

To the Director of Agriculture, Phillip-street, Sydney.

Specifications

## Specifications and General Conditions.

All fencing material to be supplied by the Department of Agriculture, and to be erected, after the following manner, upon the lines marked out by the Principal.

The fence to consist of six wires and one rail placed as follows :—

From ground to first wire.....	6 in.
From first wire to second wire .....	6 in.
From second wire to third wire .....	6 in.
From third wire to fourth wire .....	6 in.
From fourth wire to fifth wire .....	7 in.
From fifth wire to sixth wire .....	8 in.
From sixth wire to bottom of mortise .....	8 in.
Size of mortise to be 6 in. x 3½ in.	
Top of mortise to top of post .....	7 in.
Fence posts to be mortised by the Contractor, and placed in the ground to a depth of .....	30 in.

Posts to be bored with ½-in. holes to receive the wires.

Before erection, all that portion of posts going into the ground must be well tarred. Tar and necessary implements must be found by the Contractor.

Rails to be neatly fitted into mortise with square shoulder. The ends of rails in all cases to be 2 in. at least through the post. A diagonal stay, securely strutted into posts and butted up against the next preceding post, to be put in at all commencements, terminals, and deviations of fence, the wires in all cases to be fastened through the stays.

Wire to be well and properly strained to an even tension to each straining post by Walker's patent wire strainers, which the Contractor must provide. All joints or splices to be made with a figure of 8 knot. No wire to be strained to gate-posts. Straining-posts to be placed in ground to a depth of 36 in., and to be put in at every 10 chains.

Openings for gates and gate-posts, 14 ft. wide, to be left where pointed out by the Principal.

Gate-posts and corner-posts to be at least 6 inches above the height of the fence, and to be placed 4 feet 6 inches in the ground. All posts to be well and properly rammed.

The fence to be completed in every way in a workmanlike manner, and to the satisfaction of the Principal.

A deposit of £5 to be lodged with each tender as a guarantee of the genuineness of the offer, which sum shall be forfeited if the contract be not commenced within four weeks from the date of the acceptance of Tender, and the Minister for Mines and Agriculture may cancel the contract forthwith.

A progress payment equal to 75 per cent. of the value of the work done to be made, as far as possible, fortnightly, by voucher upon certificate of the Principal of the College; the remaining 25 per cent. to be paid upon certificate of completion according to contract.

If the contract be not completed within the time specified, as per Tender, and to the satisfaction of the Principal, the Minister for Mines and Agriculture may cancel the contract forthwith; and unless an extension of time be granted by the Minister, the Contractor shall forfeit the deposit money and shall likewise forfeit all claim to the unpaid balance representing 25 per cent. of the estimated value of the work done.

If the time for the performance of the work be extended by the Minister, and the contract be not completed to the Principal's satisfaction within such extended time, then the Minister may cancel the contract, and the Contractor shall forfeit the deposit money and shall likewise forfeit all claim to the unpaid balance representing 25 per cent. of the estimated value of the work done.

The lowest or any tender not necessarily accepted.

## SPECIFICATIONS for trenching 5 acres land at Ham Common.

## General Conditions.

1. The land to be trenched 2 feet deep in spaces of not more than 2 feet 6 inches wide.
2. The top spit to be turned over into the bottom of the trench, and the bottom shovelled out to the required depth.
3. The work to be performed in a workmanlike manner to the satisfaction of the orchard manager.
4. The work to be completed within six weeks from date of signing contract.
5. A progress payment of 75 per cent. to be made fortnightly by voucher, and upon certificate of the Principal; the remaining 25 per cent. upon certificate of completion according to contract.
6. Tenders will be received up to Saturday, 13th June, for ½ acre or more.

## For subsoiling 45 acres land at Ham Common.

## General conditions

1. The ground to be ploughed in lands of 1 chain wide.
2. All commencements to be thrown out and subsoiled, and then backed up again.
3. The first furrow to be turned over to a depth of 6 inches; the subsoil to be thoroughly stirred to a further depth of 9 inches, or 15 inches in all.
4. A combined plough and subsoiler may be used; or two ordinary ploughs following each other; the last one with the mould board taken off.
5. The work to be performed in a workmanlike manner, to the satisfaction of the orchard manager.
6. The work to be completed within two months from date of signing contract.
7. A progress payment of 75 per cent. to be made fortnightly by voucher and upon certificate of Principal; the remaining 25 per cent. upon certificate of completion, according to contract.
8. Tenders will be received up to Saturday, 13th June, for 5 acres or more.

Hawkesbury Agricultural College, Richmond, 2nd June, 1891.

## DEPARTMENT OF AGRICULTURE, SYDNEY.

## Application for admission to the Hawkesbury Agricultural College.

Parent's or guardian's name and address :—  
 Applicant's name in full :—  
 Age, and date of last birthday :—  
 Name of last school, and date of leaving :—  
 Previous occupation (if any) :—  
 Standard of education, indicating what educational certificates have been gained, and the position attained in the last school :—

NOTE.—This form must be accompanied by a certificate of character from a responsible person, and a medical certificate as to health.

## Form of application for candidates over 21 years of age.

189

I HEREBY apply for admission as a student into the Hawkesbury Agricultural College of New South Wales, on the basis of the prospectus issued by the Minister of Mines and Agriculture, showing the conditions under which students will be admitted thereto; and I undertake at all times to conform to and obey the rules and regulations for the time being in force for the government and management of the said College, and I agree that my continuance as a student at the College shall be conditional upon my compliance with all such rules and regulations.

(Full signature of candidate)

The

The candidate for admission as a student into the Hawkesbury Agricultural College is required to supply the following information :—

Age, and date of last birthday :—  
 Name of last school, and date of leaving :—  
 Previous occupation (if any) :—  
 Standard of education—indicating what educational certificates have been gained, and the position attained in the last school :—

To the Under Secretary, Department of Agriculture, Sydney.

(Signature)

Form of application for candidates under 21 years of age.

189

I HEREBY apply for the admission of my \_\_\_\_\_ as a student into the Hawkesbury Agricultural College of New South Wales, on the basis of the prospectus issued by the Minister for Mines and Agriculture, showing the conditions under which students will be admitted thereto; and I undertake that he shall at all times conform to and obey the rules and regulations for the time being in force for the government and management of the said College, and I agree that his continuance as a student at the College shall be conditional upon his compliance with all such rules and regulations.

The parent or guardian of the candidate for admission as a student into the Hawkesbury Agricultural College is required to supply the following particulars :—

Candidate's age, and date of last birthday :—  
 Name of last school, and date of leaving :—  
 Previous occupation (if any) :—  
 Standard of education—indicating what educational certificates have been gained, and the position attained in the last school :—

To the Under Secretary, Department of Agriculture, Sydney.

(Signature)

I attach the analysis of two samples of soil taken from what we consider the most fertile portion of the College farm. It will be seen how very deficient they are in plant food, as compared with examples of fertile soils given by A. Sibson, F.C.S., page 123 (inserted for the sake of comparison), which may be accepted as standards of fertility for good agricultural land :—

The Common soil has nothing to recommend it, except its excellent mechanical condition, which will doubtless help it to respond generously to liberal treatment in the way of manures.

The special defect in the soil, is in the small percentage of phosphoric acid and nitrogenous matter.

The conclusions drawn from these analyses have been fully borne out by actual experiment in the field, more particularly in the growth of maize. Where the ground was unmanured, the plants are dwarfed, and of an unhealthy yellowish colour, showing that without scientific management good results cannot be achieved. On the manured land the growth of the crop has exceeded my most sanguine expectations. The maximum cost of manures in no instance exceeded £1 5s. per acre, and I am confident that sufficient will be left in the soil after the first crop to produce a good cereal crop without further manuring; thus reducing the annual outlay for manure to 12s. 6d. per acre, an expense which will be met by an extra yield of 6 bushels of maize at 2s. 1d., or 4 cwt. more hay, at 3s. 1½d.—surely not an unreasonable increase to expect. There is an old English, and very true proverb, which says that "one good crop begets another."

I anticipate that with good cultivation and a judicious selection of manures (in the latter matter I hope to have the benefit of the special knowledge possessed by the Director of Agriculture) much may be done. I do not despair of growing profitable crops. I consider, however, that the growing of maize, mangold, and other crops requiring a large amount of water, can only be carried out (with us) under considerable risk. A spell of hot dry weather, such as we are experiencing as I write (30th December), is liable on the high land to do very serious damage to succulent plants, and this brings me to the subject of irrigation.

There is no doubt in my mind but that the valuable effects of irrigation can be as well demonstrated at Ham common as at any place in the Colony. It is true we have a copious rainfall, sometimes close upon 50 inches per annum, but it is sometimes as low as 21 inches (as will be seen in the meteorological table dealing with the rainfall of the last eleven years). The bulk of this generally falls when it is more detrimental to plant life than otherwise. Now with irrigation at command for the artificial watering of such crops as maize, sorghum, teocinte, lucerne, rice, root crops, some varieties of fruit and vegetables, when rain fails us, the results achieved would, I am sure, surprise us all.

Then taking into consideration the many thousands of acres in New South Wales that are now almost valueless for want of sufficient moisture, which, with irrigation, would be capable of producing almost anything. This institution should be first and foremost in the field to demonstrate to the young men here the great value of irrigation, and its importance to the future welfare of the country, teaching them how rainless, unproductive regions, can be made to smile with plenteous harvests. We have only to look at what is being done in Victoria, South Australia, California, India, and other countries, to appreciate the benefits accruing from a proper use of irrigation.

I shall be delighted to co-operate with Mr. McKinney, Engineer-in-Chief of the Water Conservation Department, in this matter. I am quite sure that 100 acres on the farm could be easily graded, and a supply of water provided at a most moderate cost.

We have been doing good work in draining swamps, &c. Hundreds of millions of gallons of water have run to waste from the Glebe swamp. But we must not lose sight of the fact that we also want to conserve water. The utilisation of the surface configuration—its elevations, depressions, swamps, &c.—to best advantage, requires deep thought and sound judgment, and such an important matter as the development of our future water supply cannot be entered into without due deliberation.

Many

Many of the ideas that seemed to me right when I took charge of the place seem to me now to be altogether wrong.

We have struck water at a depth of 50 feet on the highest part of the common; it appears on analysis to be strongly impregnated with mineral matters, and not fit for human consumption.

If we can manage to conserve hundreds of millions of gallons of surface water, as I believe we can, it is of no use going to the expense of raising it from the bowels of the earth.

EXPERIMENTAL WORK AND CROPPING OPERATIONS.

A COMMENCEMENT has been made in this important department, which I trust will develop into one of the most educational branches of the institution.

The whole of the cropping operations this year may be said to be only experimental. Nine months ago the common was a dense forest, the ploughing of the land now under crop being performed with considerable difficulty owing to the large number of roots in the ground which could not be detected before.

During the winter months ploughing was much retarded owing to the excess of moisture in the soil. Every stump-hole and crevice was full of water, and continued so for some months. This is a sure indication as to the need of a proper system of drainage; and, indeed, little can be done in the way of profitable farming until this important work is accomplished on many parts of the Common. The land is the most deceiving I have ever seen during my experience. A casual inspection during dry weather would lead one to suppose that draining would not be required, the surface soil being, as a rule, of a friable sandy loam. It is in the subsoil that the evil exists. From 2 feet to 4 feet below the surface there is in most cases an impervious stratum of clay, above which the water remains until evaporated. This keeps the soil extremely cold during the spring months, and is decidedly detrimental to the growth of higher classes of plant life.

Maize.

Preparation of land.—Ploughed during the winter time to a depth of 6 inches. Harrowed twice with “disc harrows,” and twice with “toothed harrows.”

Drills drawn out both ways in field with the plough 4 ft. 6 in. between drills, and to ensure thorough pulverisation, worked both ways by means of horse hoe.

Hogan's maize.....	18½ acres planted.
Calabash maize .....	15½ ”
Abercrombie maize. ....	7½ ”

Manure used, a mixture of one-third each, blood manure, bone-dust, and kainit, distributed over land at rate of 5 cwt. to acre, at cost of £1 2s. 4d. per acre.

Seed soaked for twenty-four hours in rain-water before sowing. Four seeds planted at centre of cross-furrows and covered with hoes. Planting started 30th September, finished 10th October—seed germinated well, young plants making their appearance above ground on the ninth and tenth days after planting. Harrowed with tubular adjustable harrows when plants averaged 6 inches in height. Scuffle used between drills when required to kill weeds and grass, also to prepare soil for hilling purposes.

Started to hill on 23rd November.

The crop ranges from 6 to 8 feet in height presenting a fine healthy appearance, and giving promise of a good average return if dry hot weather does not set in at the critical time now approaching.

Manurial Experiments.

No. 1 Calabash maize .....	1 acre with blood manure.
„ 2 „ „ .....	1 „ „ bone-dust.
„ 3 „ „ .....	1 „ „ kainit.
„ 4 „ „ .....	1 „ „ lime and mixed manures.
„ 5 „ „ .....	1 „ „ superphosphate No. 1.
„ 6 „ „ .....	1 „ „ „ 2.
„ 7 „ „ .....	1 „ „ „ 3.
„ 8 „ „ .....	1 „ „ „ 4.
„ 9 „ „ .....	1 „ „ „ 5.
„ 10 „ „ .....	1 „ „ farm-yard manure.

Manures.

No. 1, 5 cwt., cost 25s. per acre.	No. 2, 5 cwt., cost 25s. per acre.
„ 3, 7 cwt. 16 lb., cost 25s. per acre.	
„ 4, 2 tons lime, and 5 cwt. mixed manures one-third each. Blood manure, kainit, and bone-dust. Cost per acre £1 5s. for manure. For lime, 16s. 6d.	
„ 5, 5 cwt. 2 qr. 6 lb., cost 25s. per acre.	No. 6, 4 cwt. 2 qr. 5 lb., cost 25s. per acre.
„ 7, 3 cwt. 3 qr. 11 lb., „ 25s. „	„ 8, 3 cwt. 14 lb., „ 25s. „
„ 9, 3 cwt. 14 lb., „ 25s. „	„ 10, truck load „ 25s. „

All the plots were manured to an equal money value, but No. 4 had 2 tons lime in addition.

Land prepared in same way as for three former lots.

Seeds put in with “dropper,” one seed at every 12 inches. Crops healthy.

No. 16 Golden drop maize.....	1 acre	} Manure one-third each, bone-dust, kainit, and blood manure at rate of 5 cwt. per acre, costing £1 2s. 4d. per acre.
„ 17 Hogan maize .....	1 „	
„ 18 Calabash maize .....	1 „	
„ 19 Ninety day maize .....	1 „	
„ 20 Abercrombie maize.....	1 „	

Planted on 12th October. Drills were run out with plough 4 feet apart. Seed soaked for twenty-four hours and planted by hand, four seeds to each hole and hoed over. Scuffle used for cultivating between drills. Plants healthy.

No. 21 Abercrombie maize, 1 acre. Manure same as for Nos. 16 to 21. Sown by “Farmer's Friend” drill on 8th October. Drills 12 inches apart. Land harrowed immediately before drilling. Grass thrown on to headland and burnt. Plants doing well, robust, with no appearance of disease. Germinated in ten days.

No. 53 Abercrombie maize, about 2 acres. No manure used. Land ploughed twice, and worked up well after first ploughing, receiving only one stroke of harrows after second ploughing. Seed soaked for twenty-four hours and put in with “Farmers' Friend” drill. This crop is poor and of a very unhealthy colour, as well as being dwarfed and patchy, does not compare at all favourably with No. 21, put in about same time with manure. It proves that our land will not grow maize without copious manuring.

No. 11 *Sorghum Saccharatum*.—Seed put in with the “Farmers' Friend” drill on 29th September; which distributes about two seeds to every foot. Drills 12 inches apart.

Owing to our having been disappointed in not receiving the horse-hoe to follow the drill, until too late, we were unable to eradicate the couch, and fear that on that account the sorghum will not do very well. The horse-hoe for following the drill has now arrived, and next season we shall be in a position to follow the drill with the hoe, and keep down the couch, as well as ensure a thorough pulverisation of the soil.

No. 12 Early amber cane	} same remarks as No. 11.
„ 13 Planters' friend	

No. 14 Broom millet.—This crop is doing fairly well, and is stooling out with as many as half a dozen shoots from one root.

No. 15 Kaffir corn.—This crop is not doing well, and is patchy.

Nos. 11 to 15 were all treated with a mixture of one-third each of blood manure, bone-dust, and kainit, at rate of 5 cwt. per acre, costing £1 2s. 4d. per acre.

No. 43 Pearl millet.—Land ploughed once, and well worked with disc and toothed harrows. Ploughed crossways. The land was harrowed. Seed drilled in with Farmers' Friend drill 12 inches apart. No manure used. Seeds germinated well, but plants have only stoolled well on the high-lying ground. A sure indication that it is useless for us to attempt to grow any gross feeding crops without a copious application of manure.

No. 44 Mixed sorghum } received same treatment as No. 43.  
 ,, 45 Dhoura }

These crops are very patchy and stunted, no doubt on account of excessive moisture in soil, being too near the big swamp.

Nos. 22 to 32.—Melons and pumpkins were planted on 9th October, but, in some cases, owing to bad seed, they had to be gone over again, and the blanks filled up. The land was cross ploughed and harrowed, drills were run out with plough about 16 feet apart, holes were then prepared by getting rid of couch, and mixing up a large handful of superphosphate with the soil in each hole. Holes 16 feet apart. The plants are doing well.

Nos. 33 to 38.—Sugar-beet in six varieties:—Land cross-ploughed and harrowed. Crowns were put up with plough. Couch grass and other rubbish raked off the crown, which was flattened slightly during the operation, and a seed-bed prepared. Seed sown by hand, soil raked over, on 19th November. The land was cleaned from couch with fork-hoes, and surface raked fine. Plants healthy. Soil being friable roots should expand with ease. Superphosphate was used.

Nos. 39 to 42.—Mangel Wurzel, in four varieties:—Land cross-ploughed and harrowed. Crowns were put up with plough, and all couch grass and other rubbish raked off. Seed bed prepared. Seed sown by hand, and covered with rake, on 13th October. Seed germinated well. Plants were thinned out and land cleaned on 19th November. Crop looks healthy, and now that land has been cleared of couch is doing well. Superphosphate was distributed over the land before drills were made; at the rate of about 5 cwt. per acre.

No. 46.—Rio pumpkin.—Same treatment as Nos. 22 to 32.

Nos. 47 and 48.—Cream pumpkin.—Same treatment as Nos. 22 to 32.

Pumpkin and melon seed obtained locally germinated well. Much of the other seed did not germinate, no doubt owing to age, or its having been kept in a damp place; the germinating power having been destroyed.

Nos. 49, 50.—Preserving melons.—Same treatment as Nos. 22 to 32.

Started to plough the pumpkins and melons by "gathering" round the plants, covering the couch in old drill, "gathered" about six furrows, and "split" the remainder.

Nos. 51, 52.—White Belgian.—Large red Altringham. Seed did not germinate; evidently poor. Land very full of couch.

*Arrowroot*.—Planted 9th October, in nursery; 3 rows 3 feet apart, in rows. Robust and doing well.

*Tagosaste*.—*Cytisus proliferus*.—Seed soaked for forty-eight hours, and sown in nursery; bed sprinkled lightly with wood ashes. Plants now showing up nicely.

*Mountain Rice*.—*Oryza montana*.—Numerous varieties. Land ploughed to depth of 6 inches, and then harrowed. Drills, 2 feet apart, taken out by hoes. Superphosphate distributed along drill. Seed put in by hand, on 2nd November. Germinated in six days, when young plants appeared.

*Salt-bush*.—*Atriplex*, four species.—Drill taken out with hoe. Blood manure mixed with soil, seed covered with about 1½ inches soil; wood ashes sprinkled over surface. Planted 9th October.

*Teocinte*.—*Euchlona luxurians*.—About 1 acre. Land ploughed to a depth of 6 inches, and then harrowed. Drills 4 feet apart. Seeds, after being soaked forty-eight hours in rain-water, planted three in each hole, on 27th October, 4 feet apart, in drills, a handful of superphosphate having been previously mixed with soil in holes. Seed germinated in twelve days. Started to hoe round them on 25th November, to clear young plants from couch and weeds. Plants healthy. They have "stooled" well, as many as eight shoots arising from one seed. I am of opinion that this will prove a most excellent fodder plant, and invaluable for silage.

*French Beans*.—Pale dun.—Four rows. Drills taken out with plough. Superphosphate and blood manure being used. Seed sown on 1st October. Those treated with blood manure have not done so well as with the first-named manure. Lime was applied before harrowing.

*Peas*.—Yorkshire Hero.—Three rows. McLean's little green pea, two rows. Lime was distributed on soil. Drills taken out with plough. Blood manure being used. Rows chipped between and then "hilled." Plants have not done at all well. The first-named variety doing best.

*Artichokes*.—Drill run out by plough. Farm-yard manure distributed along it. Planted 1st October. Hilled with hoes. Plants stand about 18 inches apart, and are doing well.

Rock-melons, "Large Persian."—Cucumbers, "Crystal white."—Water-melons were also sown in orchard. Farm-yard manure being used. Seed sown on 1st and 3rd October. Plants are healthy and doing well. Some seed, planted in land treated with blood manure and wood ashes, shrivelled up when young, new seed having to be put in. Lime was applied before planting.

*Potatoes*.—About 2½ acres "Brownell's Beauty," "Ashleaf Kidney," and "Early Rose."—Land ploughed to a depth of 6 inches, and worked with disc and toothed harrows until brought to a fine tilth. Tubers cut into sets, with not less than two eyes to each cut-piece. In some cases, where "tuber" was small, the "crown eye" was taken out, and the tuber planted whole. Sets planted in every third furrow on the side, in order to save trampling by horses, and to get a greater depth of soil. Howard's "digging plough" used for covering the seed potatoes, which were planted 10th September. When plants were 5 inches in height hoes were put between the drills. Rows hilled when plants 6 inches high, with hollow-crowned hill, to allow moisture to penetrate, and in order not to press plants too much. The land was manured before planting. There is no appearance of disease, though in low-lying places the tubers came to nothing. One hundred and twenty varieties of potatoes were also put in for experimental purposes, for which we are indebted to the Royal Agricultural Society of Victoria. A division of the roots was made where the tubers threw up too much "top," by removing "shoot" from tuber and planting it out. Mr. Stieme has also under experiment, as suggested by me, potatoes planted under precisely similar conditions as to variety, manuring, soil, and date of planting, as follows:—

1. Tubers cut so as to leave only 1 eye.
2.     do     do     do     2 eyes.
3.     do     do     do     3 eyes.
4. The whole potato planted.

It will be interesting to note the result of these experiments. There has long been a diversity of opinion as to whether tuber should be cut to leave one, two, or three eyes, or the whole potato planted. Varying results have been recorded from time to time, and it is a subject in which experiments may be carried on here with profit on a more extensive scale. If we are fortunate enough to preserve our collection of potatoes until May next I intend exhibiting them at the Hawkesbury District Agricultural Society's show, to be held during that month. Some of them are now approaching maturity, whilst others are of later varieties.

*Cabbage*.—About 5,000 plants, in varieties "Eastham," "St. John's Day," "London Market."—Land ploughed twice, and worked with disc harrows. Drills taken out with plough 3 feet apart. Superphosphate distributed by hand in drill, and thoroughly mixed with soil. Plants dibbled in 18 inches apart. Planting commenced September 5. Three weeks later superphosphate was distributed around the plants, and hoed in. Plants were earthed up all round. The first ready for cutting November 18th. They "hearted" well. Have been attacked by cabbage-fly and caterpillar, but not to any serious extent.

*Pumpkins*.—Some were planted in orchard, nightsoil and farm-yard manure being used, lime having been distributed before harrowing. Four seeds in each hole. They germinated in nine days, and are looking very healthy.

Only a very few experiments could be attempted this year, but I trust my recommendation as to the appointment of an experimentalist will be carried out. We require one who will give his whole time, heart and soul, to this important work, which should stand first in significance at our institution.

*Potatoes.*

On 29th April a trial of "stump extractors" and "forest devils" took place on the college farm, under the auspices of the Royal Agricultural Society. Some officers of the Society came, and a considerable amount of local interest was shown. The entries were not numerous, though satisfactory work was done. Messrs. Mellor Bros. stump extractor came first, the other machines entered for competition having broken down.

On 13th June there was a trial of general farm implements in what is now the maize paddock. There was a large exhibit, most of the leading makers being represented. There were ploughs of various kinds—single, two and three-furrow, digging, stump-jumping, deep trenching, and draining ploughs, disc harrows, scarifiers, corn-planters, drilling machines, manure spreader, &c., &c., all of which were thoroughly tried. Over 200 farmers were present, some coming from as far as Hornsby, and all expressing themselves as highly pleased at having had such an opportunity to see the various implements at work, many of which were entirely new to them.

The demonstration was a most satisfactory one, and was, I consider, of great educational value both to the students and farmers. A number of the exhibits were selected and purchased for use on the college farm, among which may be mentioned the farm-yard manure spreader. It will cart the manure same as an ordinary waggon, and distribute it in any required quantity. This is done by means of a revolving bottom. As the load is drawn backwards it is operated upon by a spiked revolving drum, which distributes the material in small particles.

During the second session we had an interesting trial of some of the Planet junr., hand and horse machines, combining several uses in one machine, all of which are extremely useful, being light, easy to work, and answering their various purposes admirably. A few have been purchased for the farm and orchard.

There has also been a trial of the Carlyle patent reversible disc-harrow for cleaning and hilling corn. The advantage in using this machine is that the gangs are adjustable to various angles and reversible; therefore they can be made to throw inwards or outwards at pleasure, and the spread can be varied to suit different widths of rows. There is a good seat provided for the driver. It is a machine that should prove useful to farmers and orchardists, and is considered by far the best soil pulveriser, weed-destroyer, and maize-hiller ever tried on the Hawkesbury, costing only £8.

A list of the implements in use on the farm is appended:—

2 double-furrow governor steerage ploughs	1 farm dray (non-tip)
2 single-furrow digging ploughs	1 water-cart
3 ordinary single-furrow ploughs	1 drill horse-hoe
2 garden " "	1 Mellor Bros. stump extractor
1 single-furrow chilled plough, wooden beam	1 Planet, junr., combined drill wheel-hoe, cultivator, rake, and plough
1 six-furrow cultivator	1 Planet, junr., double-wheel hoe, cultivator, rake, and plough combined
1 nineteen-tinned scarifier (Edwards)	1 Planet, junr., single-wheel hoe, cultivator, rake, and plough combined
2 sixteen-gang disc harrows	1 Planet, junr., fire-fly plough
1 twelve-gang disc harrow	1 " cultivator, four and nine-tine attachments
1 eight-gang corn-hiller	1 Planet, junr., cultivator, four and nine-tine attachments, with roller, furrower, sweeps, and depth regulator
1 Farmer's Friend seed drill	1 Hornsby's power Strawsoniser
1 " corn-dropper	1 " hand Strawsoniser.
2 sets three-leaf zig-zag harrows	
1 set patent adjustable harrow	
1 set steel chain combination harrow	
1 three horse earth scoop	
1 manure spreader	
3 tip drays	

The Strawsonisers enable the grower to apply liquid or solid insecticides or fungicides, and may be used for broadcasting seeds and chemical fertilisers. Solid materials may be distributed down to one-quarter cwt. per acre, and liquids in a fine spray down to 1 gallon per acre. The power machine is worked by one horse, and covers 2 to 4 acres per hour. They will be found of immense use in coping with attacks of insect pests or mildews and fungous blights.

We also have the necessary outfit in whipple-trees, chains, harness, spades, picks, hoes, rakes, and other garden tools

During the year, day and half-day excursions have been made by students under the leadership of the Principal and Masters to various shows and places of interest. In order that they may have full opportunity to see specially important things in connection with agriculture and horticulture. In connection with these excursions students have had to write full accounts of everything, during the Saturday fortnightly examinations.

Places visited were as follows, and it should be mentioned that to the two Sydney exhibitions the authorities kindly gave students free admission:—

March.—Mr. Ezzy's orange orchard.

" Rooty Hill Fruit Preserving Works.

March 26.—Sydney Agricultural Society's Show.

May 7.—Hawkesbury Agricultural and Horticultural Societies Show.

July 4.—Royal Agricultural Society's Sheep Show, Sydney.

November.—Hobartville Dairy (cream separator at work).

Below is a copy of the time-table for last session. Owing to the multiplication of subjects (there will be two separate sets of lectures) next session, the hours of study will require to be somewhat increased.

College Time-table, 1891.

Day	Class.	8 30 to 9 30.	9 30 to 10 30.	10 30 to 11 30.	2 to 3.	3 to 4.	7 to 8.

Friday .....	A or B	Botany.	Principles of Agriculture.	Geology.	Theoretical Chemistry.	Surveying.	Evening Preparation.	
Saturday .....	B or A	Examination in Botany.	Examination in Principles of Agriculture.	Examination, Chemistry or Geology.	.....	.....	.....	

During the year I visited the following sites proposed for experimental and educational farms:—February, Rookwood; March 27, Uralla and Glen Innes; May 2, Wagga Wagga; May 16, Bathurst; July 4, Camden. Full reports concerning same have been forwarded to you.

Outside my usual lecturing work at the college I have given four public lectures:—

August 20, School of Arts, Richmond—The Olive, its cultivation and products.

" 21, Public School Richmond—Tree-planting, its advantages, &c. &c.

" 24, Bathurst—Silos and Silage, its importance as pertaining to dairying.

November 14, St. Mary's—Silos and Silage.

I was well received on all occasions, and the audiences, although not large, were very appreciative.

Now, although I shall be only too glad to meet farmers on special occasions, and confer with them if desired to do so, advising them on any subjects pertaining to my calling, I fully recognise that my work is at the Hawkesbury Agricultural College and Farm, Richmond, and if spared, this will keep me fully occupied for years to come. Although I profess to be a teacher of "Agriculture," I lay no claim to being a lecturer.

We have received numerous letters from all parts of New South Wales and Victoria, requesting information as to poultry and pig breeding, draining, laying down of land with permanent artificial grasses, silage, wheat growing, new machinery, &c., &c. Such inquiries we shall at all times be most happy to answer as fully as possible, as we earnestly desire to be in touch with the farming community throughout the length and breadth of the land.

The following is a complete list of stock now on the College Farm:—

Horses.	Age.	Sire.	Dam.	Cost.	Purchased from.
	years.			£ s. d.	
Brownie, mare .....	7	Muir Lad .....	.....	33 0 0	Mr. P. H. Ridge.
Blossom, mare .....	6	" .....	.....	33 0 0	" .....
Kate, mare .....	7	" .....	.....	25 0 0	Mr. Nowland.
Polly, sulky mare .....	4	" .....	.....	18 0 0	Mr. Bailey.
Prince, gelding .....	4	Scotchman ..	Smiler .....	30 0 0	Mr. Hough.
Robin, gelding .....	5	Malcolm .....	Blossom .....	30 0 0	Mr. Hough.
Nugget, mare .....	7	Davis .....	.....	25 0 0	Mr. Onus.
Charlie, gelding .....	7	King Tom ..	.....	15 10 0	Mr. Hough.
Dolly, mare .....	5	" .....	.....	22 0 0	Mr. Gilmour.
Nelly, mare .....	5	Muir Lad .....	.....	25 0 0	Mr. J. Lamrock, jun.
Gipsy, mare .....	6	" .....	.....	7 0 0	Mr. Madgwick.
Two draught foals .....	.....	.....	.....	.....	.....

We have been extremely successful in the selection of our horses. The nine draughts are fine specimens of the true Clydesdale stamp, bred mostly from stock introduced into Richmond by the late lamented Mr. Andrew Town, whose name is still a household word in all that pertains to horse flesh. They are all young, active, staunch and splendid workers, very quiet, and could not be equalled for our work. They are remarkably healthy, only one suffering from "grease," a point that Mr. Pottie, M.R.C.V.S., our newly appointed lecturer on Veterinary Surgery, may be able to make use of.

#### Dairy Stock.

1 Ayrshire bull, Warrior, 3 years old, purchased from K. B. Ferguson, Dunedin, New Zealand, £15.

The following were purchased from H. H. Brown, Colstoun, Paterson:—

1 pure Ayrshire heifer, Ayrshire Lass, by Sir Walter Scott, £15 15s.

1 " " Nellie, by Sir Walter Scott, £14 14s.

1 " " Maydew, by Sir Walter Scott, £14 14s.

1 cross between Alderney and Ayrshire, Magnet, by Young Baron, £12 12s.

1 pure Ayrshire heifer, Jennet, by Young Baron, £15 15s.

1 " " Queen of Hearts, by Young Baron, £12 12s.

1 " " First Flower, by Young Baron, £12 12s.

1 " " Fleckie, £12 12s., died in July. (See note.)

6 common dairy cows, purchased at prices varying from £5 to £6 10s.; 2 others had to be destroyed. (See note.)

From the Ayrshires we have 5 very fine calves, 4 heifers, and 1 bull, by Cock-a-bendy. As they calved they have been carefully broken into the bail, and, after next calf, should turn out first-class milkers.

Total now on the farm, 19 head, valued at £180.

#### Pigs.

We have already recognised this valuable domestic animal at the college, not as yet in the way of breeding but to utilise the waste from the kitchen.

Our first purchase was on the 15th of June. Two "stores" at 15s. each, which we sold on the 29th of August at £3 each. On the 24th October I purchased five other "stores" which shortly afterwards realised 35s. per head. We have at the present time seventeen head of stores doing remarkably well, which I intend to convert into ham and bacon when the cool weather comes again. I am surprised at the paucity of pigs in this district and their general poor quality. I am convinced that farmers would find them much more profitable than any other class of stock at the present time. With such facilities for producing cheap corn the Hawkesbury should be the leading district in pig raising and bacon curing.

Since the issue of your miscellaneous publication, No. 1, on the pig, more interest has undoubtedly been shown in this neglected animal.

One resident, acting on the instructions given in my article, page 14, killed and cured half a dozen pigs, and when I met him six months afterwards said it was the best bacon he ever tasted, and the only lot they had ever made which they could eat and sell. Being of a generous disposition, he subsequently sent me a ham, which was duly appreciated by myself and family.

There is no reason why we, in New South Wales, should not produce ham and bacon equal to any that ever left old England, and yet we are importing over £50,000 worth every year from other countries.

The Bodalla Company is setting a noble example to others in the way that pig-raising and curing is being entered into.

In stock the chief loss I have to report is that of two cows. Mr. Stanley, the Government veterinary surgeon, visited the college at my wish for the purpose of examining them, on 30th November, reporting as follows:—

"I examined two dairy cattle, one suffering with actinomic tubercle in the supr. maxillary bone. In all probability the actinomyces (or microbic fungi of the disease) gained access through eating affected herbage or straw, the fungi taking root in the gums during dentition. When once established the spores of the fungus are carried by the blood vessels all over the body, and may be arrested and grow in any organ, forming tubercular masses, varying in size from small shot to cricket balls. As the disease is also known in mankind it is dangerous to use the milk or flesh, so that all cattle suffering from actinomycoses are condemned as useless and destroyed.

The second cow had a cancerous growth on an old brand on the rump. The disease is known by its malignancy, it defies healing remedies, and continues to grow; it is incurable and its discharges are liable to contaminate milk, sores, &c."

(Signed) EDW. STANLEY.

The two cows were shot and burned next day.

During the first session we also lost an Ayrshire cow, Fleckie, from tympanitis (hoven or blown) as reported at the time, this occurred during my temporary absence from the college on departmental business. I may add that all cases were made the most of for educational purposes.

Appended is a balance-sheet showing expenditure in the various accounts during the past year. In commencing such an undertaking the outlay must necessarily be great, whilst the income derived from stock, &c., has been, up to the present, small. In future years this latter item will occupy a much more prominent position in our balance-sheets.

It may be noted that "maintenance" account includes some large items (approaching £500) for firewood which is stacked on the farm, and not as yet in use. Laboratory account includes books. No sheep are as yet on the farm, but as soon as another paddock is fenced in I hope to have some. On the Cr. side the items are made up by small returns from different departments with charges to students for books, breakages, &c., &c. The expenditure for clearing and fencing will not occur after the farm is in full working order, and that for furniture and plant will not recur when the new college is fully equipped, except in cases of ordinary wear and tear.

It

It is impossible this year to arrive at any exact statement as to cost of maintenance, the numbers of students have varied so much during the two sessions. After careful calculation, however, it may be said that for the year 1891, including food, fuel, light, and laundry, the cost for each person in the establishment was approximately £26 17s. 6d. Including housekeeper's salary and servants' wages the cost is about £35 13s.

In future years the cost of maintenance should be considerably reduced. When the farm can provide its own meat, fruit, and vegetables (which it is making a commencement to do now) the cost for each person per annum should be brought down to between £23 and £25.

BALANCE-SHEET, H. A. C., 31 December, 1891.

As follows is a list of the College Staff as constituted at present:—Principal, J. L. Thompson, (Late Principal of the Dookie Agricultural College, Victoria); Science Master, E. Clarence Wood, M.A., B. Sc., B.E.; Registrar and Lecturer on Botany, C. T. Musson, F.L.S. (London); Orchard Manager, W. Stieme; Farm Overseer, B. Ferguson; Farm Foreman, G. Cobb; Foreman Carpenter, Adam Brooks; Foreman Blacksmith, T. H. Mathews; Housekeeper, Miss Phoebe Jewell Oliver; Medical Officer, W. M. Helsham, M.R.C.S., L.R.C.P. (London.)

Owing to the extra number of students, and the full College course being now about to be entered upon—i.e., the 1st and 2nd years course—extra teachers will be engaged from the commencement of next session, as per my recommendation of December 3.

## APPENDIX C.

PATHOLOGIST'S ANNUAL REPORT, 1891.

To the Under Secretary for Agriculture.

Sir,

I have the honor to transmit herewith my annual report for the year 1891.

N. A. COBB.

*Organisation.*

The work of organising this, the Pathological branch, extended well into the year 1891, and required much time.

*Publications of this Branch.*

These have appeared mainly in the *Agricultural Gazette*, and I find that the number of pages occupied by them was seventy-two. They were accompanied by sixty-six figures, of which forty-six were drawn by myself, and five by Mr. Grosse; the remainder were copied from other publications. Of those that were drawn on wood in the department, thirty-six were engraved by Mr. W. E. Chambers, and thirteen by myself. Two illustrations produced in this branch were used for illustrating an article on anthracosis, by Mr. Despeissis, and four were used in the illustration of a joint article by Mr. Olliff and myself. The remaining illustrations were photo-lithographed.

A report, issuing partly from this branch, is to be found in the report of the Conference on Rust in Wheat, to which I was delegated.

*Correspondence.*

The number of letters answered, of which there is an official record, was 232. The number of letters, of which there is no official record, must also have been greater than 200.

*Drawings.*

The record of the daily work in this branch is kept more particularly in the shape of sketches made from the material investigated.

With regard to drawings on hand in this branch, there are seventy-five figures cut in wood, that have been already published; and 200 on wood (all but twenty-eight of which are cut) not published. There are ready for publication, four plates, containing sixty-seven figures, illustrating rust fungi, copied from Tulasne by Mr. Grosse; and 125 figures, on seven plates, done by myself, which have been selected from 321 original sketches, nearly ready for publication, illustrative of material obtained from banana plants sent from Fiji. In addition, there are 505 original sketches in this branch, of which seventy-eight, drawn by myself, have been published; 410, drawn by myself, twenty-two by Mr. Grosse, and one by Mr. Fuller, are unpublished.

This statement does not include any of the coloured work, of which there are twenty figures done by Mr. Grosse, and thirty-two by myself. These coloured figures, when they can be properly grouped, and supplemented with certain details, are ready for the lithographer. One coloured plate (six figures) is now in the hands of the lithographer.

*Specimens.*

A small herbarium of fungi is accumulating; there are at present about 150 specimens. Microscopic specimens, mostly sections on slides prepared with great care, have accumulated to the number of about 100. Many of the slides carry over 100 sections, prepared in series by the most recent and best methods.

*Rust Conference.*

About two weeks of my time were consumed in connection with the Rust Conference. This includes attendance at the Conference, and the preparation and publication of reports.

*Investigation at Lambrigg, Queanbeyan.*

Five weeks were spent by myself and Messrs. Lea and Wills, of this department (who were appointed to assist me temporarily), at the farm of Mr. Wm. Farrer, near Queanbeyan, investigating wheat and its relation to rust. The results of this investigation are in process of publication.

*Banana Disease.*

About three weeks have been spent in investigating the banana disease, which occurs at Fiji and in the northern part of this Colony.

*Library.*

The branch has a small collection of books (about three dozen). They are utterly inadequate to the daily requirements. Scarcely a day passes without my having to pronounce upon the identity of a disease without reference to the original sources of information, simply because the original works not only do not exist in the department, but do not exist in Australia. In my opinion it is the duty of the department to purchase a good working pathological library relating to domesticated animals and plants. I have taken a good deal of pains to ascertain what works of that sort are now accessible in our metropolitan libraries, and am bound to say that in the case of parasitic fungi and parasitic worms, two of the most important lines, our libraries are deplorably poor. The cost of a library such as would answer our purposes would be from £600 to £700. This would include the cost of works on fungi, animal parasites, bacteria, and general works.

*Room.*

The space available to this branch is getting very crowded. The same is true right through the scientific staff. I speak for every member of the staff when I say that in no way could a little money be made to do us more good than in providing more room.

*Land.*

The Department of Agriculture does not provide a single foot of land for the experimental work of its scientific staff. This is a matter to which I referred also in my report at the end of the year 1890. A farm, or at least a few acres of good land, is an absolute necessity to the proper conduct of a large amount of the work that should be done by the staff. I speak in this matter for every branch of the work. The botanist would be able to experiment with new economic crops, a matter of great importance, and would be able to furnish fresh material to the artist for the illustrations in the *Agricultural Gazette*. What valuable object lessons the botanist might give to farmers concerning new crops, even if he had only an acre of ground! The entomologist would be able to experiment in the application of remedies for insect pests; would be able to make field observations without loss of time; could rear insects under natural conditions and furnish them easily with food (whether they were root feeders or otherwise), and would have scope for the prompt and careful trial of the numerous new devices which are constantly being brought out in his line. The artist informs me that it makes a very great difference for the better if the plant or animal from which he has to prepare an illustration is alive and fresh. At present much time is actually occupied in excursions for the purpose of securing photographs of living specimens. Much of this time would be saved if the staff were provided with conveniently situated land. Mr. Despeissis points out that his work would be facilitated and made more valuable by the opportunity that convenient agricultural land would give him to test new machines and experiment in grafting vines and fruit trees, and to experiment with manures, &c. To me growing crops would be of the greatest service, if situated near the laboratory, because of the facility they would afford for experiment. Diseases could be studied with care, and remedies tried without waste of time. Machines for the application of remedies could be tried and invented and displayed. At present, when a farmer comes to consult this branch, he is put in possession of formulæ for remedies, and directed how to make the mixtures. He is shown models and illustrations of machines for applying the remedies, and samples and pictures of the disease he desires to treat. I fear he too often goes away with a poor result, simply because he cannot witness the actual process of applying the remedies; and I am certain he sometimes goes away sceptical because we cannot show him results. Again, there are numerous applications, as you know, to this branch for remedies for diseases of the banana, pine-apple, fig, mulberry, almond, orange, lemon, passion fruit, tobacco, onion, &c., &c., to which the stereotyped answer has to be, "we recommend you to experiment with such and such a remedy, but we cannot promise what the result will be, as little or nothing is known concerning

concerning this disease." It is highly desirable that some of these diseases should be investigated by the department. A very great step towards that end would be convenient access to these various crops; such access as would be speedily forthcoming if land were available. If we look to other agricultural departments, whether colonial or foreign, we shall find that they have early taken action in this matter and provided land accommodation to the scientific staff for experimental purposes.

Such an arrangement as here mentioned would in no way duplicate the experimental farms, but would be quite distinct from all other branches of the department's work. Nor would it in any way interfere with experimental work which farmers will undertake on their own land with or without conjunction of the department, but would rather stimulate and supplement such experiments.

#### Reports from Farmers.

In spite of efforts to encourage farmers and orchardists to undertake experiments with fungicides and report on the same, I regret to say that almost no report of this kind possessed of any value has been received during the last year. Perhaps it is too soon to expect such reports. As a rule, the experiments recommended have not been undertaken at all. A few of the more energetic have made experiments. Some have convinced themselves of the great value of fungicides, others have not. Meanwhile the farmers in Great Britain, France, and the United States are making great strides in this direction.

### APPENDIX D.

#### FIRST PROGRESS REPORT OF THE GOVERNMENT ENTOMOLOGIST, TO THE UNDER SECRETARY FOR AGRICULTURE.

Sir,

Entomologist's Branch, Department of Agriculture, 29 February, 1892.

I have the honour to submit the following report of progress in this branch during the year 1891. The organisation incident to the opening of a small laboratory for breeding insects, and the observation of their life-histories and habits, occupied a considerable amount of time in the early part of the year, and it was not until March that accommodation and apparatus for the carrying on of the work was fully available. Since that time a considerable number (more than 200 species) of friendly and injurious insects have been bred, including many kinds whose transformations and economy had not previously been observed or recorded in Australia. Among these latter may be mentioned a Pyralid moth (*Notarcha chytalis*, Walk) which has proved very destructive to kurrajong trees (*Sterculia diversifolia*) at the Mount Pleasant reservoir, Campbelltown; two species of beeswax moths (*Achraea grisella*, Fabr. and *Galleria melonella*, Linn.) that do very considerable damage in the nests of the ordinary hive-bee; the cabbage or diamond-back moth (*Plutella cruciferarum*, Fabr.) a very destructive enemy of cruciferous plants; the potato moth (*Lila solanella*, Boisd.); various species of case-making moths, injurious to foliage and fruit, belonging to the family *Psychidae*; and many other species. Among the beneficial insects that have been bred may be mentioned several species of lady-birds (*Coccinellidae*), including two common steel-blue species (*Orcus australasiae*, Boisd., and *Orcus chrybeus*, Boisd.) that prey upon the red-scale of the orange (*Aspidiotus aurantii*), and a yellow species with black spots, known as *Leis conformis*, Boisd., that feeds upon the common woolly aphid of the apple, and the orange aphid (*Siphonophora citrifolii*). I may here mention that the useful work performed by these lady-birds in destroying these fruit-pests is becoming so fully recognised that shortly after the publication of my report on the observations made in this Branch regarding their habits, Mr. A. Koebele, one of the field agents of the division of entomology, United States Department of Agriculture, who had just arrived on an official trip in search of the parasites and enemies of destructive scale-insects, gathered together a large number of these particular species and shipped them to San Francisco, with a view to their introduction into the orange orchards of California. Other useful species that have been bred are three two-winged flies (*Diptera*) that are parasites on the plague locust, viz., *Tachina adipodæ*, Oll., *Masicera pachytyli*, Sk., and a smaller and nearly related fly, which is probably new to science, but not yet definitely examined and worked out. The parasites of the cottony-cushion scale, and various other scale-insects, have been bred, as well as a large number of other insects and several species of mites.

The specimens brought together in this way, and those obtained through the kindness of correspondents in various parts of the Colony, and by the collector attached to the department, form the nucleus of what should be a valuable reference collection to the fruit-grower and agriculturist. Already more than 7,000 specimens have been mounted and properly labelled, and as proper accommodation for their reception is now being provided, this accumulation of specimens is being classified with a view to their arrangement in such a manner as will enable the inquirer to see what species of insects are injurious to any given tree or crop with the least possible loss of time. To this end it has been decided to group the destructive species in such a way as to bring together the species which attack each variety of crop, placing beside them those beneficial kinds, whether parasitic or predatory, which do good service by keeping the former in check. This is the system very generally followed in writings on economic entomology, and seems better calculated to ensure the aim we have in view—the ready recognition by the orchardist and farmer of any insect-pest that he may find attacking his crops—than a classification on systematic lines, such as that usually adopted in a museum, whereby all the species of a particular class or group are brought together on account of their structural relations without regard to their habits and economy. In this collection it is proposed to illustrate the transformations of the insects as fully as the material at our disposal will permit, and to place beside the different stages of the harmful species a portion of the foliage, timber, or root, illustrating the manner in which the injury is done to the tree or crop. A collection of spirit specimens has been commenced for the reception of those insects—such as wingless females of the case-making moths (*Oiketiscus*) and allied genera, and the early stages of diptera, hymenoptera, and coleoptera—that cannot well be preserved in a dry state. By thus bringing together specimens illustrative of the life-histories of our injurious insects, by showing them in all their stages, and presenting them for inspection in connection with their depredateions upon a particular food-plant, it is hoped that the inquirer will be able to learn almost at a glance, not only the name of any insect he may find attacking his crops, but also something of its history, habits, and transformations.

In the case of a destructive moth, for example, a well-supplied collection, arranged on the system I have indicated, should contain—(a) the egg and egg-shells from which the caterpillar (larva) has made its escape; (b) the caterpillar in various stages of growth preserved in alcohol, and also dry by the inflation-process; (c) the chrysalis (pupa); (d) cocoon or ground-cell; (e) perfect insects, male and female; (f) portion of food-plant showing injuries; and (g) natural enemies and parasites. Naturally, some considerable time must elapse before this completeness is obtained with even a tithe of the enemies of cultivated crops, but a beginning has been made, and already a number of life-histories have been brought together.

A large amount of time has been occupied in identifying insects of economic interest for correspondents in various parts of the Colony. Whenever possible, remedies have been recommended for the destruction of injurious species, and suggestions made for the prevention of insect attack. In this connection, the labours of John Curtis, Professor Westwood, Miss Ormerod, Mr. W. Saunders, and those of the large army of American workers in applied entomology, have been freely availed of; and as far as has been possible in the present very incomplete knowledge of Australian insect pests, I have endeavoured in this department of my work to keep the practical side of the subject in view. In the case of pests of wide distribution, and of those that have been imported through human agency—such, for example, as the codling moth, maize moth, tobacco beetle, grain weevil, cabbage moth, woolly aphid, orange-rust mite, and many others—the experience that has been gained in other countries is frequently applicable to our local conditions, and even in the case of pests that are natives of Australia we can often find valuable hints to aid us in carrying on the work of destruction by studying the methods that have been employed in the case of nearly related pests occurring elsewhere. As instances in the former category may be mentioned the success that has attended the use of soap (preferably whale-oil or other soft soap and sulphur) as a means of destroying the orange-rust mite (*Phytoptus oleivorus*, Ashm.), or so-called Maori disease of the orange, and the great benefits that have accrued to the fruit-grower from the intelligent application of such well-known insecticides as kerosene emulsion and resin compound for the destruction of the numerous scale-insects (*Coccidae*), native and imported, that affect our fruit-trees and ornamental shrubs. In the latter category the fig-leaf beetle, (*Galerucella semipunctata*, Cl.), a species that has committed extensive injuries during the past season to edible as well as native figs—may be quoted as a case in point. A suggestion to try London purple, the arsenical poison so successfully used in the United States for destroying the potato beetle and other pests, having been sent from this branch to several correspondents whose figs were being destroyed by the fig-leaf beetle, it was found upon experiment that the pest could easily be destroyed by the use of a mechanical mixture of London purple and water applied in the form of spray. These gratifying results were obtained in more than one instance, and at various localities, so I am of opinion that orchardists and gardeners have nothing to fear from the fig-leaf beetle if this simple, easily applied, and inexpensive remedy is used as soon as the presence of the pest is noticed.

With

With the object of bringing together as many spraying machines and mechanical contrivances for destroying insects and fungus pests as possible, and ascertaining the relative merits of those obtainable in Sydney at that time, a competition of machines and spray-nozzles, under the direction of a committee, was held in January, and certificates of merit, as authorised by the Hon. the Minister for Mines and Agriculture, were awarded for three different classes of spraying machines and also for spray-nozzles. I am of opinion that this competition had the effect of stimulating the manufacture and importation of improved types of spraying machines and of attracting attention to this important subject. I, therefore, beg to suggest that a similar competition on a somewhat more extensive scale be held at a suitable season during the year 1892. Such a competition would not only give fruit-growers and agriculturists an opportunity of comparing for themselves the new and improved machines of which a considerable number have found their way into the market in the present year, but it would also afford scope for carrying on certain desirable experiments with insecticides which I have only recently been in a position to undertake. Trials have already been made with several insecticides which go to prove the value of resin compound (washing soda and pine resin) against the attacks of soft-bodied suctorial insects, such as aphides, and kerosene and resin compound, and the ordinary kerosene emulsions (soft-soap, kerosene oil, and water), against the scale-insects and other pests with protecting shells or coverings. A series of articles and notes on friendly and injurious insects has been prepared and published in the *Agricultural Gazette*, including special papers or reports on the Plague Locust and its enemies, Saltbush Scale, Mussel Scale, Woolly Aphis, Orange-rust Mite, Pine-case Moth, Cabbage Moth, Dried-fruit Beetle (*Lophocateres*), Lady-birds (*Coccinellidæ*), Grain Weevil, Elephant Beetle or Borer, Rust-eating Fly (*Diplosis*), and other species. Of these, the paper on the Rust-eating Fly (*Diplosis*) was published in conjunction with Dr. N. A. Cobb, and the inquiry into the habits and economy of the Salt-bush Scale (*Pulvinaria Maskelli*), which formed the subject of a special investigation at Wentworth, have as yet been dealt with only in a preliminary way.

Illustrations for these papers have been prepared by Mr. E. M. Grosse, whose admirable drawings have been reproduced by photo-lithography or in the form of wood-cuts and process-blocks for insertion in the text. Of these, three full-page plates containing 31 figures, 18 process-blocks, and 4 wood-cuts, have appeared.

The total number of specimens now in this Branch is approximately about 7,023, as the following enumerations will show:—

Coleoptera .....	2,566, including larvæ, &c.
Lepidoptera .....	622
Orthoptera .....	215
Neuroptera .....	20
Hymenoptera .....	146
Diptera .....	61
Rhynchota .....	384, including about 50 Coccidæ.
Unmounted specimens in spirits of wine (about) .....	2,000
Duplicate specimens in spirits of wine .....	900
Species under observation in laboratory .....	75
Microscopic slides, chiefly Coccidæ .....	34

In the work of mounting and labelling this large amount of material Mr. C. Fuller has given much useful assistance, and he has also been most helpful in making preparations for the microscope. Apart from the specimens received from correspondents (in themselves a very considerable number), the bulk of the specimens now gathered together were collected by Mr. R. Helms during the time he held the appointment of Collector to the Department of Agriculture, and specimens have been added by Dr. N. A. Cobb, Messrs. Reynolds, Valder, Clarke, Fuller, A. M. Lea (now Departmental Collector), and myself.

The grouping of this material in the manner already indicated will be an important part of my work for the year 1892.

In concluding this, my first progress report, I would venture to bring under your notice one or two suggestions, which would tend, in my opinion, to increase the usefulness of the Entomological Branch, and enable me to carry on the work of investigating the economy of insect-pests and their enemies with a greater measure of success than is possible at present. I do not anticipate that it will be possible to put all the suggestions into immediate effect, but I beg to submit them as indicating the direction which the improvements should take that must necessarily take place with the growth of the Branch.

(1.) At present there are no facilities in the laboratory for breeding and experimenting with root-eating insects, a group that is unfortunately only too well represented in this country, and with our present limited accommodation it is hardly possible to do anything to remedy this defect. A large amount of damage is done to cereal and other crops by the larvæ or grubs of the click-beetles (*Elateridæ*), commonly known as wire-worms, which are among the most injurious of root-feeding pests, and by the larvæ of various kinds of cockchafer (*Melolonthidæ*), that live at the roots of sugar-cane, grasses, and many flowering plants, but nothing can be done towards gaining an exact knowledge of the various species until the laboratory is provided with special breeding-cages, and other apparatus designed for keeping the insects as nearly as possible in natural conditions. Specially designed root-cages of simple construction have recently been planned by Professor J. H. Comstock, of Cornell University, in an elaborate series of experiments that he has conducted with the assistance of Mr. N. V. Slingerland, in his efforts to discover a practicable method of preventing the ravages of certain common American wire-worms. These investigations, Professor Comstock tells us, have not as yet led to the discovery of any satisfactory means of protecting seed or of destroying immature wire-worms in the soil, but certain methods have proved to satisfactorily destroy those larvæ or wire-worms that are about to pupate, as well as the pupæ and adult insects. Perhaps, however, the most interesting and practical outcome of these investigations consist in their proving the futility of many methods that have been repeatedly recommended and constantly used for the destruction of these pests, thus saving the cultivator from a useless expenditure of labour and money. It is highly desirable that similar investigations in regard to our native wire-worms and other root-feeding insects should be made in New South Wales, but this will not be possible until suitable apparatus and increased laboratory accommodation are provided.

(2.) The small size of the present laboratory, and the difficulty of regulating light and temperature, have been the cause of the death of many insects that I have had under observation; I doubt if more than 45 per cent. of the species I have endeavoured to breed have reached maturity. This is a very small percentage, and means that much time and labour has been thrown away in the unsuccessful attempt to breed the remaining 55 per cent. I would, therefore, strongly urge that larger and more suitable laboratory accommodation be provided.

(3.) The artistic work in connection with this Branch has scarcely received the share of attention that is necessary for the proper illustration of the articles that emanate from this Branch. Experience has shown that papers and reports on injurious and beneficial insects have little practical value unless they are amply illustrated. I would, therefore, suggest that further provision be made for the carrying on of this work.

I have, &c.,  
A. SIDNEY OLLIFF.

#### APPENDIX E.

Sir,  
I have the honor to submit herewith my annual report on the work accomplished in my branch of the Department.  
To the Under Secretary for Agriculture.

Department of Agriculture, 31 December, 1891.

I have, &c.,  
FRED. TURNER,  
Botanist.

Correspondence, Reports, &c.

From the 2nd of January, to the 23rd of December inclusive, 1,949 letters, reports, &c., have been written and copied into my letter-books. These were written in answer to inquiries from all parts of the Colony about economic products, weed pests, and other matters pertaining to agriculture. This does not include five exhaustive reports I made on the following subjects:—Drift-sand plantation at Newcastle; Indiarubber-yielding trees—both indigenous and exotic—to the American Consul; Prickly comfrey; tobacco manufactories of New South Wales; recreation reserves, Illawara Lake. Neither does it include the numerous letters, addressed to me from all parts of the Colony, enclosing specimens for identification, and asking for information on various subjects pertaining to botany, horticulture, and agriculture, which I have answered and kept no record of.

*Agricultural*

*Agricultural Gazette.*

I have written nineteen articles, nine of which have been illustrated, on new commercial crops for New South Wales, and these have been published in the *Gazette*, and it is gratifying to know that many of our cultivators have taken much interest in them. Some of the crops are now being cultivated in experimental stages, but in the near future they undoubtedly will be an important source of wealth to the country.

Articles on the supposed poisonous plants of New South Wales, some of them accompanied with illustrations, have been published in the *Gazette*. I have taken this important matter in hand so that pastoralists and farmers might be fully informed about the different suspected poisonous plants of the Colony. It cannot be denied, however, that many conflicting statements are made with regard to many of them. Even in the same district some persons will assert that a particular species of plant is poisonous, while the testimony of others, which is equally reliable, will assert that it makes capital feed.

Articles on weeds, accompanied with illustrations, have also been published in the *Gazette*. It is somewhat remarkable, but it is nevertheless a fact, that the worst weed pests the agriculturists of this country have to contend against are of European or American origin. Over two hundred species of exotic weeds have now become acclimatised in different parts of the country, and the number is on the increase. During the past year I have recorded several new ones to the Colony. The seeds of many of these weed pests, no doubt, have been imported in an accidental way with agricultural and other seeds, and our climate being favourable to their growth, some of them have spread at an alarming rate, especially so during the past propitious seasons.

Forty-one Australian grasses have been illustrated and fully described in the *Gazette* during the past year. Dissection drawings of these grasses have been made—that being the first attempt ever made in Australia—so that no person might have any difficulty in identifying any particular species, and experience has already shown this to be the case. Many inquiries are now made of this department respecting Australian grasses. From the information given it is now beginning to be understood by pastoralists and farmers that there are far more valuable grasses in this country than any yet introduced. If this department, and there is every prospect of it doing so, is the means of saving to the country the hundreds of pounds that are sent away annually to import exotic grass seeds which often prove a failure in this land of drought and flood, it will have accomplished a great thing. If only a part of this money had been expended on the cultivation, or even systematic conservation, of the indigenous grasses, in all probability we should not periodically hear of sheep and cattle dying of starvation during every recurring drought. Whilst writing on this important subject, I would beg to recommend to the favourable consideration of the Honorable Minister of Mines and Agriculture the advisability of forming small reserves in the interior for the preservation of the indigenous grasses. From such reserves seeds could be obtained for dissemination in different parts of the Colony where the best of the native grasses may have been eaten out through overstocking. If this were done it would, no doubt, enhance the value of station property. On rented Crown lands it would be a wise thing for the Government to make grass reserves a compulsory undertaking when granting new leases. The railway enclosures all over the country are excellent reserves for the preservation of native grasses, and the most superficial observer cannot fail to see the amount of seed which is matured and distributed on the adjacent lands by winds and other agencies. When this seed germinates it cannot fail to enhance the grazing capabilities of the country for miles round.

*Publications.*

I have written, and the Department has published, a Census of the grasses of New South Wales, together with a popular description of each species. The publication contained fifty-seven pages, and was issued in pamphlet form. This being the first work on the subject, it was very favourably reviewed in the metropolitan and country Press. I have compiled a work, containing ninety-one illustrations, on the forage plants of Australia, which will shortly be issued from the Government Printing Office. This work gives both a scientific and common description of all the best salsolaceous and other forage plants.

A glossary of the technical terms used in the description of Australian grasses has also been published at the request of many persons who desired to give them a closer study.

*Agricultural Shows.*

So that pastoralists and farmers might become better acquainted with Australian grasses, salsolaceous, and other forage plants, correctly-named specimens have been exhibited at some of the principal Agricultural Shows in the Colony. Much interest has been taken in them, and it will no doubt lead to practical results.

*Herbarium.*

Although it is only a few months since a start was made to form an herbarium of the Australian flora, over 2,000 specimens have already been arranged and classified. Persons possessing botanical specimens often experience great difficulty in keeping them free from mites and other insects. The plan which I have adopted, and found to answer admirably, is to arrange the specimens in close-fitting tin boxes. A few pieces of naphthaline are placed at the bottom of each box, the fumes from which keep away all insect pests. On the outside of each tin box is painted the natural order of the plants it contains, so that when reference to any particular species is necessary it can be done expeditiously.

A named collection of botanical specimens has been forwarded to the Hawkesbury Agricultural College for the use of the students.

A named collection of Australian grasses has been forwarded to the Director, Botanic Gardens, Melbourne, Victoria.

A named collection of Australian grasses and salsolaceous plants have been forwarded to the Department of Agriculture, Victoria.

Mr. F. M. Bailey, Colonial Botanist, Queensland, has presented to this department a collection of Queensland Cyperaceous plants.

*Naming Botanical Specimens.*

Botanical specimens have been received by the department for identification from all parts of the Colony, and the persons forwarding them have often asked for information respecting their economic properties or otherwise, which has been supplied. Although I have kept no record of the number, except on one day, when I named over sixty specimens, there must have been some hundreds named during the course of the year.

*Museum of Economic Botany.*

A commencement has been made towards forming a museum of economic botany, and already over 1,000 specimens of commercial roots, barks, resins, grains, pulses, fibres, fruits, &c., have been arranged and catalogued. The museum also contains a collection of Australian grasses, salsolaceous plants, and other native economic products. To show the interest that is now being taken in them, I was asked a short time ago to name four large collections, and give information respecting their economic value for the Technological Museum, Sydney, Mr. J. H. Maiden, Curator, so that visitors to that institution might become better acquainted with them and their correct nomenclature. I also named that unique collection of Australian grasses sent through the Australian Museum to London.

*Modelled Fruits.*

The collection now comprises 500 models, made from colonial grown fruits. The material used for making these models is *papier-maché*, therefore they are practically indestructible. This material was decided upon after due consideration, for it has been proved by experience that wax models are totally unsuited to this warm climate. The heat in summer makes them go out of shape, and when this takes place of course they are practically useless for the purpose of comparing particular varieties to arrive at a correct nomenclature, which was the object in view when authority was given for the models to be made. All the models have been numbered and catalogued with the names received with the fruits, but it is advisable that an expert should verify them. When this is done, the models no doubt will prove of great value to fruit-growers and salesmen in assisting them to arrive at a correct nomenclature of all the fruits grown in the Colony.

*Distribution of seeds, roots, and cuttings.*

Number of applicants for seeds, &c., 2,042; number of packets of seeds despatched, 4,617; number of roots despatched, 219; number of plants and cuttings despatched, 6,656. All the seeds and plants distributed by the department were of economic value, and not obtainable in Sydney, therefore the department has in no way come in contact with the usual business of the seedsman or nurseryman. Great care has been exercised by the department before distributing the seeds

seeds to have them properly cleaned where necessary, and fumigated in a special apparatus. This was done to separate any foreign seeds from samples, and destroy any insect or fungoid pests that might be introduced with them. There is no doubt sufficient care has not hitherto been exercised in this matter, and to this omission may be attributed the many weed, insect, and fungoid pests, the orchardists and farmers of this country have to contend against.

*Seed Books.*

A book is kept for the purpose of recording the quantity, condition, and the source from which seeds, roots, and plants, are received by the department. A book is also kept for the purpose of recording the names and addresses of the persons to whom seeds, roots, or plants, are forwarded. Each recipient is asked to furnish a report, on a specially-prepared form, to the department whether or not he considers the crop is likely to succeed, in a commercial sense, in his particular district. All this information will be collated in the book, which will be of great value to the department, and, of course, to the Colony, and will be a guide to further work in this direction.

I cannot close this report without acknowledging the services of my assistant, Mr. Geo. Valder. The despatching of the seeds, &c., has been entirely his work, and it has been done in a satisfactory manner.

FRED. TURNER.

APPENDIX F.

1 January, 1892.

REPORT OF THE ARTIST TO THE UNDER SECRETARY FOR AGRICULTURE.

I HAVE the honour to submit the following, being the first year's report of the work accomplished in the Artist's Branch of the Department of Agriculture, during the year 1891, apart from the time necessarily spent in organising.

Assistant obtained on 13th July, 1891.

*Botanical Branch.*

Making drawings for 58 botanical plates, grasses, weeds, plants, &c., which has occupied about one-half of the year, aside from time spent on several occasions collecting fresh specimens.

*Pathological Branch.*

Illustrating for coloured plates, diseases in fruit, leaves, &c., viz. :—Melon, Strawberry, Two Pears, Pear leaf, Bean, Rose leaf, Lemon, Loquat, Fig, Apricot; also plates of Fungi and Cecidomyia Larva; pen and ink drawings of Apple and Pear diseases; 5 plates of Rust-fungi copied from books at the Linnean Society of New South Wales.

Making reduced drawings of Larva, Cecidomyia, also sections of same. Making pen and ink drawings of Potato Plant, treated and not treated with Bordeaux mixture for *Gazette* page. Sketch of Smut in Oats. Five weeks assisting the Pathologist in the Rust investigations at Queanbeyan. One week assisting the Pathologist in the Rust investigations at Sydney.

Drawings on wood as follows :—Several drawings of Fungi, and Spores, Diseased Apple, Nematodes (various), The effects of spraying experiment, Diseased Banana plant, Cow Parasite, Corn Popper, Dissecting Microscope, showing working position, Diseased Oats, Diseased Pear Blossom, Diseased Barberry leaves, Head of wheat (to illustrate Farrar's style of protecting the Hybrid), Microscope on tripod, showing working position, Potato Section, a drawing to explain how to use the eye-glass.

*Inspector's Branch.*

Pen and ink drawings of Artichoke, for production in *Gazette*; drawing Strawsonizer and Spraying Machines for two pages in *Gazette*; drawing Ensilage Stacks, &c., for two pages and eight blocks in special Bulletin; one day at St. Mary's sketching Ensilage presses; drawing Ensilage presses; drawing Cheese presses, &c.

*Entomological Branch.*

Drawing page for February *Gazette*, consisting of the following species of Coccinellidae :—The life history of *Orcus australasiae*, the life history of *Leis conformis*, three figures of *Orcus chalybeus*, Boisd, two figures of *Verania frenata*, Er., two figures of *Halysia galbula*, Muls, two figures of *Epilachna guttato-pustulata*, Fabr.

Drawings of larva of Fig Beetle, Grasshopper and Parasite, Head and Prothorax of young Cecidomyia Larva, also breastbone and head, dorsal and ventral views, Grasshopper and Grub, Salt-bush affected with Scale Insect, details of Salt-bush affected with Scale Insect.

Wood drawings of a Beetle found in dried fruit *Lophocateres pusillus*; of Fiji Banana Aphis; of Lace-wing Fly.

Coloured Plates :—Potato Moths, Life-histories of two Bees-wax Moths and Honeycomb attacked by same, Life-history of two Scale Insects.

*Miscellaneous Drawings, Sketches, &c.*

Designing and drawing Departmental Certificate, designing and drawing Agricultural College Certificate for presentation, designing and drawing Presentation Card for College, sketch of Badge for College.

Under this heading will come many sketches, tracings, &c., of which no account could be kept.

*Photography.*

Ten-inch by 12-inch camera, with two lenses and apparatus, received 14th September, 1891. This camera has been used extensively for enlarging, reducing, photographing for reproduction and preservation, &c.

*Organization.*

Being the first year of the Department it has been necessary to spend considerable time in preparatory work, such as fixing microscopes, instruments, testing camera and lenses, making dark room, developing, printing, and toning, carpentering, &c., &c.

*Note.*

At present our accommodation is altogether inadequate to the demand. The room we occupy is scarcely large enough for the tables, and will not admit of the use of the camera at all, which, when required, is set up either on the balcony, the pathologist's room, or other portions of the building, where it is least in the way. Therefore, it is absolutely necessary for the proper discharge of our duties to have more room at our disposal.

I would like, also, to suggest, for the proper reproduction of our work, that the paper in the letterpress portion of the *Gazette* be altered for one more suitable for engravings.

Yours, &c.,  
E. M. GROSSE.

APPENDIX G.

REPORT OF THE INSPECTOR TO THE UNDER SECRETARY FOR AGRICULTURE.

Sir,

Department of Agriculture, Sydney, 20 February, 1892.

I have the honor to submit my first annual report as Inspector under this Department.

Since the date of my appointment I have been engaged in visiting agricultural centres all over the Colony, meeting farmers, addressing them and instructing them in matters of agricultural interest, as, for example, in the art of fermenting the juice of the grapes, handling their wines in the cellar, and curing and drying raisins. Also in spraying and dressing their trees and crops to protect them against the attacks of the several blights which affect them, and preparing the insecticide and anti-fungicide washes, mixtures, and compounds, which experience and scientific researches have proved to be the cheapest as well as the most efficacious remedies against diseases of plants and our cultivated crops.

I have also given practical demonstrations in the field on the art of pruning, of grafting and training fruit trees and vines, and explained simple methods for applying pressure to masses of green fodder for the purpose of turning it into silage.

Investigations have, besides, been conducted regarding such diseases as the arrowing in the sugar-canes, and also the alleged diseases which occupy at present the attention of the cane-growers of the northern district. Suggestions have been offered to mitigate the evil and improve the system of cultivation, which, if acted upon, will, it is expected, prove beneficial to a flourishing industry.

The attention of the department having been drawn to the fact that some form of sulphur now in the market was of little value as a remedy against the oidium of the vine, a series of experiments were draughted, in conjunction with the Pathologist to ascertain how far the complaints were founded. Pressing business having, however, kept both Dr. Cobb and myself away from the field of experiments kindly placed at our disposal during the month of November and part of December, the owner, fearing that the weather which turned out moist and warm about that time, would prove favourable to the growth of fungoid diseases, sulphured all the plots under experimentations, and thus put an end to our observations.

Great desire was also manifested on the part of vine-growers to receive information as to the best means of preventing Anthracnose, better known under the name of black spot, from disfiguring their table grapes, as the disease tells very heavily in reducing the crop, and, moreover, renders in many cases the grapes almost unsaleable. The matter was fully discussed in one of the numbers of the *Agricultural Gazette*, but unfortunately the information could not be made available until late in the season. A few, however, were able to try the remedies suggested with good results, whereas others were not so successful, the remedy having not been applied as directed. It should be borne in mind, moreover, that just as it takes years of good cultivation to restore a field that has been overrun with weeds to a clean state, in a like manner, whenever insidious diseases, such, as for instance, diseases caused by fungi pests, have been allowed to spread unchecked over an area for a number of years, it can hardly be expected that the trouble can be made to disappear like magic, as there are millions of spores in the ground that only await a favourable opportunity for making a fresh invasion on the crop, and spreading at a rate it is difficult to keep pace with.

To this practical work, I would add that apparatus and agricultural appliances have been thoroughly tested at the request of country correspondents, and duly reported upon.

Several requests have been received for the identification of specimens of table and of wine grapes which were either wrongly named or were not named at all. Samples of wines were also submitted, either for the purpose of ascertaining the nature of disease or their value, or representing what had been produced in different parts of the Colony.

I would take this opportunity of pointing out that that work of identification is greatly facilitated by sending along with the fruits specimens of fully developed leaves and of matured wood, and also, in the case of diseased wines, by sending in a separate flask a sample of the deposit or lees that accumulates in the bilge of casks, and in many instances teems with the micro-organisms, which are the active agents of specific wine diseases.

I have paid special attention, when travelling over the country, to ascertain for myself the nature and character of the rock formation of each locality, and the agricultural value of soils formed by the disintegration of such rocks, as well as their special value for special crops and fruit trees. The climatic conditions of each locality have also, as far as possible, been ascertained as an indispensable preliminary study which should guide in offering sound advice to farmers as to the suitability of any given district in this country for any particular crop.

Numerous requests have been received from Agricultural Societies and Fruit-growers' Associations and invitations tendered to lecture under their auspices. As far as possible I have left the choice of the subject matter to the option of the local societies themselves.

Lectures and addresses have been delivered at Albury on four occasions, Corowa on three occasions, Tenterfield, Cummoock, Morongla Creek (near Cowra), Grenfell, Young, Wollongong, Kempsey, Smithtown, Warneton, Port Macquarie, Wauchope, the subjects discussed being, "How to plant a vineyard, including pruning and training till the time the vines begin to bear," "Wine Fermentation," "Handling of young wines in the cellar," "Racking," "Raisin-curing," "Ensilage and construction of silos," "Dairying," "Utilisation of surplus maize crops," "Swine-feeding to a profit," "Selection of corn and other seeds in order to increase the yield per acre," "Destruction and eradication of certain noxious weeds."

Invitations have likewise been received on several occasions from neighbouring colonies to attend meetings, discuss matters of agricultural interest, and also to act as Judge at Agricultural Shows.

Whenever it has been possible I have responded to this demand, and have lectured at Barnawatha and Rutherglen in Victoria, although I have not been able to accept the invitations from these Societies to act in the capacity of Judge, as it is not deemed expedient for officers of this department, except in special cases, to accept these sorts of functions, which are very flattering indeed, but on the other hand are duties which may sometimes prove onerous, whereas it is not made clear what benefit the department derives through its officers acting as Judges at Agricultural Shows.

With the object, however, of gaining a good insight into the different types of wines produced in our chief vine-growing districts, I have accepted, and acted as Judge, at the Albury and Border Pastoral and Agricultural Society's Show, and also at the Northern Agricultural Society's Show, held at Singleton, while previous engagements have prevented me from accepting to Judge at the Corowa, Junee, and the Kempsey Pastoral and Agricultural Society's Shows.

In connection with the national prizes offered for competition by the department to stimulate and encourage the various branches of the agricultural pursuit in the different parts of New South Wales, I have been appointed to act, last season, in conjunction with Mr. P. F. Adams of Casula, Liverpool, and Mr. L. Frère of St. Hilaire, Albury, as Judge for vineyards entered in the various parts of the Colony.

This season I have been reappointed sole Judge for vineyards, and also for wine-cellars, and have besides adjudicated on the merits of the mixed farms entered in the North Coast Division of this Colony.

I have moreover visited other parts of the country, conferred with the farmers, and acquainted myself with their immediate wants, and in many instances have supplied the information required.

With the object of making the lectures I may deliver more interesting to the average farmer and giving them a practical bent, I have commenced to take photographic pictures, and reproductions of useful and well-designed agricultural structures and constructions, pieces of machinery, plans and models, and typical farm stock. When a number of these pictures will have been collected, I purpose preparing slides for the lime-light lantern and using them to illustrate either the lectures or the papers I may prepare on agricultural matters.

Besides this field-work more proper, I have, in the course of the year, been a constant contributor to the *Agricultural Gazette*, and special editions of several of the articles published in that review have been drawn apart for immediate distribution, or for binding together in pamphlet form as soon as the series of these articles will have been completed.

The articles which have appeared in the *Agricultural Gazette*, and taken in their order of publications are:—"A Report on the Murray River Vineyard"; "Sulphur: A Cure for Oidium"; "Chemical Aspect of Wine-making"; "The Sugar Industry in the North Coast District"; "Coffee Planting in the North Coast District"; "Suitability of New England for Beet-growing"; "The Sugar Beet"; "Planting a Vineyard"; "The Jerusalem Artichoke"; "Wine Fermentation"; "Anthracnose, or Black Spot of the Grape"; "The Surplus Maize Crop," "Distilling"; "Mechanical Application of Insecticides"; "A Visit to the Macleay District"; "Choice Italian Grapes"; "A Report on Candied Lemon and the Lime-juice Industry."

My time has also been fully taken up in the office in attending to letters from various correspondents, offering suggestions, and reporting on the agricultural matters referred to me.

I have been instructed to inspect and report upon a few Government reserves, which have been recommended to the department by local Agricultural Societies as suitable sites for the creation of agricultural colleges and experimental farms, and among such reserves have been visited two commons at Wagga Wagga, on the Murrumbidgee; two reserves on the Murray, between Albury and Corowa; two reserves on the Richmond River—one at Wollongbar, and the other a few miles from Ballina; and also a travelling stock reserve, situated 4 miles from Singleton, on the Hunter.

In the course of a few weeks, and as soon as the more pressing work I have on hand will permit, I purpose submitting for the consideration of the Minister for Mines and Agriculture, a scheme for the preparation of an Australian Agricultural Note-book, containing, in a concise form, for rapid reference, such tables, rules, and memoranda, arranged as methodically as possible as are likely to be required for everyday use, by farmers and agriculturists generally. The publication of such a book will, I am sure, be of considerable help to settlers, and those intending to take to agriculture as a profession; and I hope, by compiling the store of information obtainable in this Department, and collected from all sources, to be able to bring this useful work to a satisfactory issue.

J. A. DESPEISSIS, M.R.A.C.

APPENDIX

## APPENDIX H.

## HALF-YEARLY REPORT OF OFFICER-IN-CHARGE OF TRAVELLING DAIRY TO THE DIRECTOR OF AGRICULTURE.

TOOK charge of the travelling dairy under the Department of Agriculture on 16th July, 1891.

The plant consists for butter-making of :—1 A1 90-gallon De Laval separator ; 1 Finlayson churn ; 1 Cherry's patent circular butter-worker. Smaller installation for butter-making :—1 30-gallon De Laval hand-power separator ; 1 12-gallon Danish hand-power separator ; 1 Thermometer churn ; 2 hand-power butter-presses and weigher. Larger installation for cheese-making :—1 50-gallon steam milk vat ; 1 50-gallon curd drainer ; 1 hand-power curd mill ; 1 combined power cheese press. Smaller installation for cheese-making :—1 return heater, 1 milk vat, and 1 drainer. Milk testing machines consisting 1 Lactocrite.

The larger installation is driven by a three horse-power engine and boiler, by Blackstone, England.

At this time the plant was stored at Orange, 192 miles from Sydney, on the Great Western Railway, a town having an altitude of 2,843 feet above sea-level, and situated within a few miles of Mount Canoblas. The climate at this period of the year, as may be imagined by persons having a knowledge of the district, was intensely cold, natural herbage very scarce, and the cattle in low condition. I began operations under the auspices of the Municipal Council, in a building kindly placed at the Council's disposal by a citizen, which for convenience and adaptability must be regarded as suitable for this temporary service.

The conditions under which committees or Agricultural Societies can receive a visit from the travelling dairy plant have been arranged by the Minister for Agriculture, as under :—

1. To provide for the carriage of the plant to and from the nearest railway station or wharf to the scene of operations, and also to and from any places where the plant shall work within the district covered by the operations of the Association or Committee.
2. To provide a building for housing the plant, which must be—for the complete installation—at least 20 feet long by 20 feet wide, with flooring, and suitable for all purposes.
3. To provide a daily supply of from 30 to 60 gallons of milk, the produce of which will be returned to the Committee, or as may be arranged.
4. To provide the wages, at 7s. per day, of the labourer who travels with the plant to assist in the rough work, such as cleaning up. Total amount for ten days' operations, and one day before and after, £4 4s.
5. To provide fuel and a sufficiency of clean water for washing butter and cleaning up ; 1 cwt. of coal or its equivalent of wood, and a hogshead of water per day will generally be found to be enough.
6. To supply a list to the department, giving the names and addresses of the pupils nominated for a course of instruction with the dairy.
7. In such places where no Agricultural Society is in existence, a Committee must be organised, who will undertake the responsibility of these conditions being carried out.

NOTE.—The weight of the plant is 2 tons, apart from the engine and boiler on its own wheels, which weighs 1 ton 15 cwt. A much smaller installation, consisting of hand separators, and much lighter plant in general, is available for small centres, removed some distance from the railway or from seaports. Its weight is 1 ton 15 cwt.

In the return for the due compliance with the above requirements, the following privileges are accorded :—

1. The Agricultural Association or Committee applying for the services of the plant will be entitled to nominate, for each place in which the dairy operates, at least ten pupils—known as nominated pupils—either male or female, for a course of special instruction with the dairy.
2. Where the accommodation provided for the plant is sufficiently large to permit, and the Officer-in-charge has no objection, an extra number of pupils will be allowed to receive a course of instruction precisely similar to that given to the nominated pupils.
3. The dairy will work for ten days at each place where set up.

Before entering into details regarding the results achieved at Orange and subsequent expositions of dairying methods in other localities, I wish to preface the report by a few comparisons as to the capabilities of groups of districts visited, the classes of stock found there, and their management, and the natural facilities existing for successfully conducting the dairying industry. The latter heading is embraced in the simple expressions "Soil and Climate." The possession of these together with modern appliances, combined with intelligence, assures success. When these essential features are non-existent, particular care as to the cultivation of suitable grasses, and the keeping of a suitable class of cattle should be observed, also the conservation of nutritious heat-producing foods and fodder, by means of rotation of crops and ensilage, and the planting of tree clumps for purposes of shelter from the rays of the sun in summer, and cold cutting winds in winter. The fourteen places that I have visited with the Travelling Dairy plant, and also those districts visited with the object of lecturing on dairy farming during a period of six months, may be grouped as follows :—

- 1st. Orange, Millthorpe, Blayney, Mount Macquarie, Glen Innes, and Armidale.
- 2nd. Wagga Wagga, Cootamundra, and Wallendbeen.
- 3rd. Yass and Tenterfield.
- 4th. Tamworth, Quirindi, and Muswellbrook.

Without attempting to chemically describe the soils of these districts, I will content myself by referring to them in farmers' language. I have endeavoured to, as nearly as possible, group those particular localities which possess similar features, both as regards soil and climate ; but whilst doing this I do not desire it to be understood that in every particular the resemblance is perfect. For the purposes of this report, however, the similarity exists to a sufficient extent in each case to warrant the course I have taken.

Group 1 contains exceedingly rich soil varying from deep, porous, red volcanic soil of a loamy character, to a heavy and sticky, but very fertile, black soil in patches, principally on the flats. Natural herbage in winter months is very scarce, but the good soil is capable, under careful and systematic cultivation, of producing in abundance all classes of nutritious feed. I may mention here that very good silage is made by a dairy farmer at Millthorpe, who speaks very highly of its merits, and what is successful at Millthorpe should, under similar conditions, be successful in other localities in this group, and therefore others interested in dairying should strive to follow this example.

Group 2. This is a grand pastoral and agricultural country, but suffers from periodical droughts, and, speaking from a dairying standpoint, an unsuitable climate. Soil deep, varying from a sandy loam to a heavier but easy working loam of a chocolate colour. Grows good herbage suitable for dairy cattle. To successfully carry on dairying here creameries should be established, and the cream dealt with at convenient centres, where cool storage could be mechanically provided. In this connection the department would do well to offer a national prize of, say, £50 for the introduction of a refrigerator at a price that would come within the means of dairy factories.

Group 3, although similar in climate, and to a great extent possessing the same natural grasses, is dissimilar in soil in many respects. The district about Tenterfield is sandy with strips of rich alluvial soil on the flats and along the banks of the creeks. Yass, judging from the lime and old formations, appears richer than the soil about Tenterfield. Great varieties of natural herbage are to be found in this group, and in this, as in the foregoing groups, great variety of nutritious natural grasses is to be found, which at once give an indication of the soil and climate of each district, and which are capable of being considerably improved by cultivation, which, moreover, would, in my opinion, be advantageous. The renowned Mitchell grasses, which are still found in some of these groups, are of such value that they should be brought under cultivation. There are also the blue grass, the windmill grass, the star grass, wallaby grass, early spring grass, the sugar grass, meadow-rice grass, Australian millet, umbrella grass, wild sorghum, and a number of the *Panicums*, either or all of which would repay cultivation. Too much stress cannot be laid on the necessity for inducing farmers to cultivate all grasses which are suitable to our varied soil and climate.

Group 4. The districts in this group have but a limited rainfall, soil very rich, varying from very fertile alluvial flats along the banks of the Peel and other rivers, to good undulating country. Quirindi, soil gravelly with rich flats. Great varieties of natural herbage ; this is distinctly pastoral country, although in good seasons heavy crops of cereals are grown. To carry out dairying pursuits properly in this group the natural grasses should be extensively cultivated. Creameries should be erected in all the various centres, and the cream sent to refrigerating rooms to be churned. Refrigerating machinery is so expensive that unless the factories in each district become united for the purpose of having the cream treated at one central depot, the price of the best modern appliances to treat cream properly in the hot districts is almost prohibitive ; but by the various factories in each district uniting it is quite possible that the situation may be grasped, and a first-class article produced.

Detail

## Detail of places visited.

- Orange.** Visited from 18th to 29th July, 1891; 367 gallons of milk supplied during the ten days' operations, yielded 124 lb. of butter and 66 lb. of cheese; an average of 24½ lb. of milk to make 1 lb. of butter, and 9¾ lb. of milk to make 1 lb. of cheese; cattle in low condition; crossbred shorthorns and Ayrshire, artificial feeding; average reading of thermometer during time of conducting operations, 45 degrees; number of pupils who received instruction, four.
- Millthorpe (lecture delivered in this district.)** Visited under Progress Committee auspices from 6th to 15th August, 1891; situated on the Great Western Railway, with an altitude of 3,138 feet above sea-level; 357 gallons of milk supplied during nine days' operations, yielded 112 lb. of butter and 109 lb. of cheese; an average of 22½ lb. of milk to make 1 lb. of butter, and 9¾ lb. of milk to make 1 lb. of cheese; cattle in fair condition; mixed breeds; feeding consisted of green barley and hay; average reading of thermometer, 57 degrees during time of conducting operations; number of pupils who received instruction, 4.
- Blayney (lecture delivered in this district.)** Visited from 17th to 26th August, 1892 (2,841 ft. altitude); operations conducted under the auspices P. and A. Association; 325·8 gallons of milk supplied during ten days' operations, yielded 84 lb. of butter and 104 lb. of cheese; an average of 26½ lb. milk to make 1 lb. of butter, and 10 lb. milk to produce 1 lb. of cheese; cattle in low condition, with calves running with them; feed of cattle consisted of green fodder and hay; breed of cattle, Shorthorn and Ayrshire, crossed with Hereford; average reading of thermometer during time of operations, 52 degrees; number of pupils who received instruction, six.
- Mount Macquarie.** Visited for the purpose of lecturing on dairy farming. All these districts are on the Great Western Railway.
- Wagga Wagga.** Visited from 1st to 10th September, 1891; operations carried on under the auspices of the P. and A. Association during show week; 279·7 gallons of milk supplied during the nine days' exposition, yielded 74 lb. of butter and 87 lb. of cheese; an average of 26½ lb. of milk to make 1 lb. of butter, and 10 lb. of milk to make 1 lb. of cheese; cattle principally Ayrshire, had calves running with them; condition very good; feed consisted of natural grass pasture; average reading of thermometer during operations, 70 degrees; altitude of district above sea-level, 607 feet; situated on the Great Southern Railway 309 miles from Sydney; number of pupils who received instruction, three.
- Cootamundra (lecture delivered in this district.)** Visited from 16th to 23rd September, 1891; operations conducted under the auspices of the P. and A. Association; Cootamundra is on the Great Southern Railway, 253 miles from Sydney; 1,079 feet altitude above sea-level; 376 gallons of milk supplied during nine days' operations, yielded 102 lb. of butter and 99 lb. of cheese; an average of 26½ lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; cattle, principally Jerseys, in fair condition; feed of cattle, natural grass pasture; average reading of thermometer during time of operations 70 degrees; number of pupils who received instruction, five. A lecture was delivered in this district on dairy farming.
- Wallendbeen.** Visited for the purpose of delivering a lecture on dairy farming. Situated on the Southern Railway. Number of miles from Sydney 241; altitude 1,514 feet.
- Queanbeyan.** Visited from 29th September to 2nd October, 1891; Queanbeyan is situated on the Southern Railway, 194 miles from Sydney at an altitude of 1,899 feet above sea-level; operations were conducted under the auspices of the P. and A. Association during the show days, in a suitable building erected for the purpose; 131·9 gallons during four days' exposition yielded 40 lb. of butter and 32 lb. of cheese; an average of 25½ lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; cattle, Shorthorn, in good condition; feeding consisted of natural pasture; average reading of thermometer, 65 degrees; number of pupils who received instruction, none.
- Yass.** Visited from 8th to 17th October, 1891; Yass is situated on the Great Southern Railway, a distance of 187 miles from Sydney at an altitude of 1,657 feet above sea-level; operations were conducted in the show building under the auspices of the P. and A. Association; 590 gallons of milk supplied during the exposition, yielding 190 lb. of butter and 102 lb. of cheese; an average of 25½ lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; cattle, mixed breeds in fair condition, some with calves at foot; feed of cattle, principally natural grass pastures; average reading of thermometer, 65 degrees at time of conducting operations; number of pupils who received instruction, one.
- Tenterfield (lecture delivered in this district.)** Visited from 27th October to 6th November, 1891. Tenterfield is situated on the Great Northern Railway, 479 miles from Sydney, with an altitude of 2,827 feet above sea-level; operations were conducted under the auspices of the P. A. H. and M. Association in the show building; 610·5 gallons of milk supplied during the exposition, yielded 176 lb. of butter and 140 lb. of cheese; average of 27 lb. of milk to make 1 lb. of butter and 10½ lb. of milk to produce 1 lb. of cheese; cattle, mixed breeds and Jerseys, with calves at foot; condition very fair; feed of cattle, natural grass pasture; average reading of thermometer, 64 degrees at time of operations; number of pupils who received instruction, six. A lecture was delivered here on dairy farming.
- Glen Innes (lecture delivered in this district.)** Visited from 10th to 19th November, 1891; Glen Innes is situated on the Great Northern Railway, 429 miles from Sydney, with an altitude of 3,518 feet above sea-level; operations were conducted under the auspices of P. and A. Association in the show building; 646 gallons of milk supplied during the exposition, yielded 176 lb. of butter and 154 lb. of cheese, an average of 28 lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; cattle, mixed breeds in low condition, with calves at foot; feed of cattle consisted of natural grass pasture; average reading of thermometer during the exposition, 65 degrees; number of pupils who received instruction, thirteen, eight of whom passed satisfactory examinations and received certificates. A lecture was delivered here on dairy farming.
- Armidale.** Visited from 23rd November to 2nd December, 1891; Armidale is situated on the Great Northern Railway, 132 miles from Sydney, with an altitude of 3,313 feet above sea-level; 461·9 gallons supplied during exposition, yielded 142 lb. of butter and 62 lb. of cheese, an average of 26 lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; operations were conducted under the auspices of the Pastoral and Agricultural Association, in a suitable building lent for the purpose by a citizen; cattle were principally mixed breeds, with the exception of a few Jerseys, which were in very good condition; no interest was taken by the farmers in this district in the operations, although the butter made during the exposition was sold by public auction as high as 2s. 9d. per lb.; number of pupils who received instruction, three; one of whom received a certificate; average reading of thermometer during exposition, 70 degrees; a lecture was announced for this district, but not a single farmer put in an appearance; as a consequence, the lecture was abandoned until some future date.
- Tamworth. (Lecture delivered in this district.)** Visited from 5th to 16th December, 1891; Tamworth is situated on the Great Northern Railway, a distance of 210 miles from Sydney, with an altitude of 1,246 feet above sea-level; operations were conducted under the auspices of the Pastoral and Agricultural Association, in the Alhambra Skating Rink; 422·8 gallons, supplied during exposition, yielded 100 lb. of butter and 146 lb. of cheese, an average of 27 lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; cattle were in good condition; mixed breeds, shorthorns, Devons, Herefords crossed; food of cattle consisted of natural grasses; average reading of thermometer, 90 degrees during operations; number of pupils who received instruction, twelve; seven of whom passed very satisfactory examinations, and received certificates; a lecture was delivered in this district on dairy-farming.
- Muswellbrook.** Visited from 5th to 9th January, 1892; Muswellbrook is situated on the Great Northern Railway, a distance of 178 miles from Sydney, with an altitude of 475 feet above sea-level; operations were conducted in the show building, under the auspices of the Pastoral and Agricultural Association; 203 gallons of milk, supplied during exposition, yielded 36 lb. of butter and 96 lb. of cheese, an average of 29½ lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; cattle were in good condition, with calves at foot; breed of cattle, shorthorns, Devons, Herefords, and Jerseys; food of cattle consisted of natural pasture; number of pupils who received instruction, four; average reading of thermometer during exposition, 95 degrees.
- Quirindi. (Lecture delivered in this district.)** Visited from 12th to 20th January, 1892; Quirindi is situated on the Great Northern Railway, a distance of 242 miles from Sydney, with an altitude of 1,278 feet above sea-level; operations were conducted under the auspices of a Progress Committee in one of the local halls, which may be considered, under the circumstances, suitable for the purpose in every respect; 590 gallons of milk, supplied during the exposition, yielded 180 lb. of butter and 112 lb. of cheese, an average of 26 lb. of milk to make 1 lb. of butter, and 10 lb. of milk to produce 1 lb. of cheese; cattle were in good condition, some with calves at foot; breed of cattle, mixed breeds; feed of cattle consisted of natural grass pasture; number of pupils received instruction, six; average reading of thermometer during exposition, 86 degrees; a lecture was delivered in this district on dairy-farming.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

DEPARTMENT OF AGRICULTURE.  
(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 27 April, 1893.*

*[Laid upon the Table of the House in reply to Questions Nos. 1, 3, and 4, of 15th February, and 13, of 27th April, 1893.]*

Question.

WEDNESDAY, 15 FEBRUARY, 1893.

3. MR. SYDNEY SMITH *asked* THE SECRETARY FOR MINES,—
- (1.) The number of students at the Hawkesbury Agricultural College?
  - (2.) The amount of fees paid by each student?
  - (3.) The cost per head for maintenance, excluding cost of teaching staff.
  - (4.) The value of the students labour on the farm?

Answer.

- (1.) Present enrolment, forty-eight.
- (2.) £25 per annum.
- (3.) The Principal estimates the cost at £24 4s. per annum, which will be much reduced when the farm will be able to supply all necessary provisions. But a Board appointed to inquire into certain matters at the College furnished an estimate based on information supplied from the College books, showing the net cost, after allowing for the value of the students' labour, but including the cost of the teaching staff, at £50 10s. 11d. per annum.
- (4.) £18 9s. per student per annum.

Question.

WEDNESDAY, 15 FEBRUARY, 1893.

4. MR. SYDNEY SMITH *asked* THE SECRETARY FOR MINES,—
- (1.) The exact amount expended on salaries for permanent and temporary officers in the Agricultural Department during 1890, 1891, and 1892?
  - (2.) The amount expended on permanent improvements on Ham Common and other reserves for agricultural purposes?
  - (3.) To what extent have these improvements increased the value of the Government land on which they have been placed?
  - (4.) The amount expended for implements, machinery, and fruit models?
  - (5.) The total amount expended on the operations of the Agricultural Department, excluding Votes to Agricultural Societies for years 1890, 1891, and 1892?
  - (6.) Is it true that the Principal of the Agricultural College estimates that the farm in connection with the College will be self-supporting within a very short period?
  - (7.) Will not the experiments carried out at the College be valuable to the farmers of the whole Colony?
  - (8.) What are the leading lines of experiments being conducted on the College farm?

Answer.

## Answer.

- (1.) 1890, £2,742 16s. 9d. ; 1891, £9,875 2s. 0d. ; 1892, £14,041 14s. 7d.  
 (2.) On Ham Common, £10,914 12s. 10d. Richmond River (two reserves)—Ballina, £175 16s. ; Lismore, £37 10s. ; Wagga Wagga, £463 13s. 6d.  
 (3.) Ham Common by the amount expended, except that £1,656 was expended on a portion of the Common before the land was properly dedicated, and that portion is not now included in the College and farm reserve, consequently that expenditure was lost to the Department. Other reserves to the full value of the money expended.  
 (4.) Implements and machinery at College—scientific instruments and apparatus, fruit models—£3,546 4s. 2d.  
 (5.) 1890, £8,534 15s. 4d. ; 1891, £27,454 12s. 1d. ; 1892, £32,857 3s. 9d. This expenditure would have been largely increased, but when the Minister found that the Department had no title to the land at Ham Common and elsewhere he stopped the expenditure on permanent improvements until the land was properly dedicated.  
 (6.) Yes ; in three years, if the seasons be favourable, and the farm be fully equipped.  
 (7.) Yes.  
 (8.) *Wheat*.—Testing : Quantity of seed per acre ; depth of planting ; value of different manures ; various specifics for the prevention of smut in wheat and other cereals ; various methods of planting, drilling, and broadcast sowing ; rust-resisting varieties for this district ; numerous experiments in connection with rust in wheat ; rape as a fodder plant ; sorghum and millet for ensilage ; flax for seed and fibre ; hemp and jute for fibre ; pulse crops of new kinds ; chicory as a commercial crop ; Mexican dock (Canaigre) for tanning material ; the use of maize-cob pith as food for stock ; numerous grasses and clovers, with other fodder plants for the purpose of improving our pastures ; the making and use of ensilage ; experiments in dishorning ; the advantage of spaying cattle for milking purposes ; the trial of new farm implements, and new dairy appliances ; experiments in connection with the eradication of insect and fungus pests ; experiments with different liquids and powders in the destruction of noxious plants ; tobacco and olive culture ; fruit-drying and canning ; bee culture ; new varieties of fruit-trees and vines ; various methods of pruning and training ; experiments in feeding stock ; experiments with root crops ; to sum up—every experiment that can be thought of to improve the existing condition of the farmer, grazier, dairyman, orchardist, and vinegrower.

## Question.

WEDNESDAY, 15 FEBRUARY, 1893.

## 4. MR. SIDNEY SMITH asked THE SECRETARY FOR MINES,—

- (1.) Will he give full particulars as to the duties and qualifications of the Agricultural Chemist (Mr. Guthrie) ?  
 (2.) The investigations already conducted by that officer, and those now in hand for the benefit of the agriculturists ?  
 (3.) How many agricultural chemists are employed under the Department of Agriculture in America, France, and Germany ?

## Answer.

(1.) *Duties*.—Analyses of soils, manures, and agricultural products, as milks, water, feeding stuffs, wheats, sugar-beets, plants, wines, &c. Answers to inquiries relating to chemical points connected with agriculture. Special reports involving special experimental work, and references on matters of importance. Special investigations into matters of interest connected with chemistry of agriculture extending over longer periods. These are detailed in answers to question 2. The commercial value of the routine analyses, capable of classification, alone amounts to £776 during the past year. These have been appraised by Mr. W. A. Dixon, of the Technical College, and do not include a large number of miscellaneous analyses including plants, &c. *Qualifications*.—Studied chemistry at University College, London, and University of Marburg, Germany, 1877–81. Assistant to Professor of Chemistry, Queen's College, Cork, 1881–88. Lecturer in chemistry of agriculture to Munster Model Farm, Cork, in 1887 and 1888. Assistant in chemical laboratory, Royal School of Mines, London, from 1888 to 1890. Demonstrator in chemistry, University of Sydney, 1890–1892. Examiner in chemistry, Science and Art Department, England, in 1888, 1889, 1890. Examiner in chemistry, Technical College, Sydney, since 1891. Examiner in chemistry, Sydney University, in 1893. Fellow of the Chemical Society of London, in 1887. Possesses letters of recommendation and testimonials from all the gentlemen with whom he has worked in the positions enumerated above, recommending him for the post he now holds ; also letters from Professor Liversidge, Professor David, the Chancellor of the University, Dr. Leibius, &c.

(2.) Investigations conducted and now in hand.—*Conducted* :—Analyses of soils, 70 ; analyses of fertilisers—manures, 38 ; analyses of foods—feeding stuffs, 9 ; analyses of foods—milks, 40 ; analyses of wheats for gluten, 18 ; analyses of beetroots (complete analyses), 18 ; analyses of waters, 5 ; analyses of Darling pea plant ; analyses of the Burrawang nut, and the starch obtained from the same ; also many miscellaneous analyses, such as wine for impurities ; tinned fruit for metallic impurities, &c., &c. Special reports involving both experimental work and special references, including the following :—(a) On gentian bitters, extracted from *Erythraea australis* ; (b) examination into the efficacy of the Babcock machine for estimating the fat in milk, in the interests of the dairy farmers and butter factories ; (c) report on the influence upon vegetation of noxious fumes arising from smelting and chemical works ; (d) methods of estimating the proportion and the quality of gluten in wheat. A number of the above reports and analyses have been published during the year in the *Agricultural Gazette*.

*Now in hand* :—(a) Investigation into the constitution of the supposed poison-plants of New South Wales ; (b) investigation into the composition of the different fruits of the Colony and their ashes ; (c) investigation into the nature of the wines of the Colony ; (d) a large number of soils and manures awaiting analyses.

(3.) *America*.—In head department, colleges, and experimental stations, about 105 ; but the population of America is 62,622,250. *France*.—Eleven professors of agricultural chemistry, and twenty-six at experimental stations ; but the population of France is 38,208,903. *Germany*.—At least six professors of agricultural chemistry, and forty at experimental stations ; but the population of Germany is 49,428,470.

Question.

## Question.

WEDNESDAY, 15 FEBRUARY, 1893.

## 1. MR. SYDNEY SMITH asked THE SECRETARY FOR MINES,—

- (1.) Will he give full particulars as to the duties and qualifications of the Pathologist (Dr. Cobb); the investigations already conducted by that officer; and those now in hand for the benefit of the agricultural community?
- (2.) Is it true that the leading agricultural experts of Australia have on several occasions signified their high appreciation of the value of Dr. Cobb's work, with regard to plant diseases, more especially rust in wheat.
- (3.) What is the estimated loss to the Colony through the ravages of rust in wheat and other plant diseases?
- (4.) What is the loss sustained in England, France, and the United States respectively, through these pests?
- (5.) What per cent. of this loss is preventable through the remedies hitherto discovered, and at what cost?

## Answer.

(1.) *Duties of the Pathologist.*—1. Senior officer of the scientific staff. 2. To advise on scientific matters relating to agriculture. 3. To investigate blight on crops, with a view to their prevention and cure, and to report on the same. 4. To publish such reports for public information, and make his own drawings for the same. 5. To guard the Colony, as far as possible, against the introduction of further pests, such as the peach yellows and other serious pests. 6. To advise and inform inspectors and experts as to the nature of crop pests, and as to the best means of combating the same. 7. To oversee the introduction, distribution, and correct naming of seed wheat. 8. To advise concerning the best special machinery for combating crop pests. 9. To make any necessary difficult microscopic investigations, and to advise and assist in making drawings with the aid of the microscope. 10. To answer all letters of inquiry relating to the diseases of crops.

*Particulars of the Pathologist's Qualifications.*—1. Thirty-three years of age. 2. Has been a successful practical farmer. 3. Head of Grammar School, District No. 3, Spencer, Mass., U.S.A., two years. 4. Received degree, Bachelor of Science, at the head of a class of fifty in the Department of Chemistry, Worcester Polytechnic Institute, Mass., U.S.A. 5. Six years Professor of National Science, Williston Seminary, Easthampton, Mass., U.S.A., and at the same time practising as analytical chemist. 6. Received degree, Doctor of Philosophy with honors at University of Jena, Germany. Subjects: Zoology (parasites), Botany (fungi), and Geology. 7. Appointed by British Association for the Advancement of Science to its table at the International Naples Zoological Station. 8. Occupied Professor Haswell's position (Biology, University, Sydney), during his absence in Europe. 9. Author of—Botanical Catalogue of the plants found growing within 30 miles of Amherst; Text Book of Chemistry; Pamphlet on the Parasites of the Arctic Whale and Seal; and of numerous pamphlets on human parasites, free-living nematodes, and various diseases of crops. 10. Has unsolicited testimonials of the very highest character in connection with the above positions.

*Investigations already conducted by the Pathologist (reports mostly published).*—On—1. Root gall. 2. Rust of wheat. 3. Apple-scab. 4. Bitter-rot. 5. Devastating eel-worm. 6. Best manner of applying a spray. 7. Disease of lucerne. 8. Maize for the table. 9. Mouldy core and water core. 10. Pear mite. 11. Tobacco blight. 12. Potato blight. 13. Onion blight. 14. Smut in oats and other cereals. 15. Strawberry diseases. 16. Insect feeding on rust. 17. Cold storage of apples. 18. Take-all. 19. Leaf-curl of peach. 20. New Australian fungi. 21. Mouldy-root of the vine. 22. Apple-canker. 23. Powdery mildew of the apple. 24. Pear-scab. 25. Shot-hole fungus of stone-fruit. 26. Black spot of vine. 27. Tufted-leaf blight of the vine. 28. Powdery mildew of the rose. 29. Cabbage and pumpkin diseases. 30. Machinery for spraying.

*Investigations, &c., in hand by the Pathologist.*—On—1. Wheat rust and about fifty other rusts. 2. On the manner in which worms get into sheep and other stock. 3. Disease of bees. 4. An extensive work dealing in a practical manner with all the crop blights of New South Wales. 5. Collecting information for an exhaustive Bill relative to crop pests. 6. Improving seed wheat. 7. Banana disease of Fiji and northern New South Wales. 8. Diseases of the cane and orange and other citrus fruits. 9. Wet-rot, and other diseases of the potato. 10. Take-all. 11. Maize blight. 12. A new and serious apple-disease. 13. Antiseptic wrappers for fruit when shipped or stored.

(2.) It is true that the leading agricultural experts of Australia have on several occasions signified their high appreciation of Dr. Cobb's work with regard to plant diseases, more especially rust in wheat.

(3.) Estimated Annual Loss through Rust and other Plant Diseases in New South Wales.

Crop.	Value, based on Coghlan, 1892.	Loss due to Disease.
Wheat .....	£1,000,000	10 per cent., £100,000
Maize .....	900,000	4 ,, 36,000
Barley .....	14,000	2 ,, 280
Oats .....	34,000	10 ,, 3,400
Potatoes .....	240,000	10 ,, 24,000
Tobacco .....	12,000	10 ,, 1,200
Sugar-cane .....	110,000	5 ,, 5,500
Hay .....	695,000	3 ,, 20,850
Lucerne .....	137,000	1 ,, 1,370
Vine .....	150,000	10 ,, 15,000
Oranges .....	82,000	5 ,, 4,100
Orchards, £20 per annum .....	332,000	10 ,, 33,200
Orchards, not in bearing, £5 per annum .....	37,000	2 ,, 740
Market gardens, £25 per annum .....	117,900	2 ,, 2,358
Total .....	.....	£247,998

This takes no account of nurseries and numerous minor crops, concerning which no statistics are available, nor of the losses through disease during storage. The

The average annual loss to this Colony through rust in wheat and other similar pests cannot fairly be estimated at less than a quarter of a million sterling. Inasmuch as it requires just as much seed and land, and very nearly as much labour, to produce a diseased crop as a healthy one, this sum must be subtracted from the margin of profit, and represents, practically, an actual cash loss.

(4.) A similar estimate for France gives at least £10,000,000 annual loss, and for England £3,000,000, but this loss is much diminished in those countries by the application of remedies. There are no complete statistics with regard to the United States, but the loss there must be double that in France, and is sufficiently testified to by the immense sum spent annually there on investigations in plant diseases. The sum expended to support the Pathological staff at Washington and at the country stations exceeds £20,000.

(5.) Fully 30 per cent. of this loss is preventable by known means. The cost of preventing is in very many cases nominal, and in no case exceeds one-third of the saving effected.

### Question.

THURSDAY, 27 APRIL, 1893.

13. MR. SYDNEY SMITH *asked* THE SECRETARY FOR MINES,—

(1.) What was the amount voted for each of the years of the existence of the Department of Agriculture, exclusive of Votes to Agricultural Societies—1890, 1891, 1892?

(2.) The amount actually spent of each of these Votes?

(3.) The cost for each of these years for—(a) permanent staff salaries and expenses; (b) temporary office staff salaries and expenses; (c) temporary inspectors' and travelling officers' salaries and expenses; (d) expenses for railways, &c.; (e) scientific instruments, models, and museum specimens; (f) national prizes for agricultural societies, and best farms, orchards, vineyards, &c.?

(4.) Number of reserves for agricultural purposes for each of these years?

(5.) The revenue for 1891 and 1892?

### Answer.

(1.) 1890, £15,000; 1891, £29,900; 1892, £70,100.

(2.) 1890, £8,534 15s. 2d. (for ten months); 1891, £19,955 5s. 5d., inclusive of £2,005 6s. expended by Vine Diseases Board; 1892, £31,180 5s. 4d., inclusive of £2,500 expended by the Vine Diseases Board. The Vote for this year would probably have been exceeded had the College and farm buildings been erected as intended; but when I discovered that the land had not been properly dedicated I stopped the erection of permanent and costly improvements.

(3.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**AGRICULTURAL CENTRE OF MOAMA.**

(REPORT BY CHARLES DE LA MOTTE, INSPECTOR OF AGRICULTURE, ON.)

*Ordered by the Legislative Assembly to be printed, 2 November, 1892.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 19th October, 1892, That there be laid upon the Table of this House,—

“Copies of the Inspector of Agriculture’s Report upon the agricultural  
“centre of Moama.”

(Mr. Chanter.)

Report on the Chief Agricultural Centres within the Moama radius, visited by C. de la Motte, Inspector of Agriculture, during the week ending the 12th September, 1892.

This district lies on the right bank of the River Murray, in the Murray electorate, embracing the counties of Cadell, Townsend, Denison, and Wakool. The scenery along the river is beautiful, and the soil very fertile, being adapted for the culture of the vine as well as for the growth of cereals, while the geological formation of the above-mentioned counties is composed of tertiary rocks and recent deposits, alternating with extensive areas formed of decomposed trap. The nature of soil is generally a heavy clay with here and there large tracts of sand, having a subsoil of yellow and red clay.

The climate is dry and salubrious, although hotter than in the Albury, Hume, and the Murrumbidgee districts. The climate is hotter, because the cooling influences of proximity to the sea and of elevation are wanting; it is colder because of the more rapid radiation of heat and exposure to cold winds, and dryer, because of the absence of mountain chains to attract clouds—arrest their progress and bring about the precipitation of their moisture. During summer in the shade the temperature has been known to rise to the height of 120° Fahrenheit, while in the winter nights the thermometer has fallen almost to zero. Again while the general character of the climate is that of dryness, it has been varied on the one hand by occasional years of drought during which only a few inches of rain fell, and on the other, by years of excessive rain. The average rainfall in this district during the last 13 years, amounts to 17·5 inches.

The principal cereal grown in the Moama, Mathoura, Tattaila, Moira, Altcar, Ferricoota, Wambo, Wamboota, Tamar, Thyra, and Yarraman districts is wheat, and from very good authorities I learned that not less than 50,000 bags had been sent down the River Murray and up the River Darling, besides great quantities went to Sydney. Mr. George Brook of Moama, and an agent for Mr. Brunker of Sydney, informed me that he had, on behalf of the last-mentioned gentleman, bought the greatest quantity of wheat grown in the above districts, which all found its way to the New South Wales capital. There was, at the time of my visit, stored in the Farmers’ Co-operative stores, at Moama, 20,000 bags waiting for a purchaser, but as only 4s. 1d. was offered the owners declined to sell. Therefore, with the 50,000 bags sold, and 20,000 still on hand, not taking into consideration what had been purchased by Mr. Palmer, the local miller, I found that over 70,000 bags of wheat, principally purple straw, had been grown in these districts.

397—

[870 copies—Approximate Cost of Printing (labour and material), £1 14s. 3d.]

The farmers on the Moama side of the river have recently gone into a more systematical mode of culture than formerly. In the Wamboota district I noticed that there were not less than 3,000 acres under the process of fallowing, and in the same district were under crop about 25 per cent. more than last year. The crops in all the above districts are doing remarkably well, and it is my opinion that if nothing befalls its present state of growth, the farmers should have an abundant harvest this season. The grass paddocks were well covered with grass, and the stock during my tour looked fat, strong, and healthy. Nearly two-thirds of the farmers live in good, comfortable homesteads; many of them have formed orchards around their respective dwellings, nor have they neglected the vegetable garden. Upon the whole, I consider the Moama farm-lands with systematic farming equal to any rich agricultural lands and their excellent farming of their Victorian brethren, and I do not think that I in the least exaggerate when I state that the land in the above districts is equal, if not better than that of the Goulburn Valley in the sister colony.

It is very pleasing for me to report that the "one-crop" farmer, at least in this part of the Colony, will soon be a curiosity, worthy of being placed in a museum, where real farmers can gaze at him and wonder how he managed to exist upon the one crop a year, and in what manner he filled up his time, between seeding and harvest. Those who have tried the "one crop" plan know well enough how hard a life it was, and can tell of year after year of constant and almost unremunerated toil, but still the true "farmer" who grows crops the whole year round and who works really no harder, will not be able to make out how the "one crop" man could make hard work of it for 12 months, and yet raise only the one crop.

There are many farmers now in the district mentioned who raise all sorts of cereal crops, fodder crops, fruit crops of many kinds, grapes included, for sale fresh, dried, or preserved, grow vegetables, raise pigs, sheep, cattle, horses, poultry, make butter, cheese, bacon, and many other things which bring in a constant income and keep work going all the year round, but yet they work no harder than the poor old "one crop" farmer. I only hope and sincerely trust that many of our husbandmen in other parts of the Colony will go and do likewise, it would certainly be to their advantage if they copied the Moama farmer.

It must be understood that all the farmers are not good agriculturists, but I have written this report in favour of the majority. I certainly noticed farms on which although the owner had resided there for years, the old log fences still prevailed, their ground or cultivation paddocks were in some places partly, and upon other farms the crops wholly choked with wild oats and dregs, but such farms are, I am glad to state, few and far between.

The husbandman in this part has found, through practical experience, that fallowing is the only method of preserving the land without assistance of manure, and the only means which has enabled him to give to the soil at least a portion of the vital ingredients taken from it, consequently this year many thousands of acres were under the progress of fallowing when I visited the above districts.

The principal farmers in the Moama district are Mr. H. Holschier, of Woomboo; Mr. A. Berryman, of Wambo; Messrs. Denny, Edwards, and Grimeson, of Wamboota; Messrs. Wm. Anderson and John Holschier, of Altcar; Messrs. J. Eddy, A. Holschier, F. Milgate, and George Milgate, of Tattaita; and Mr. Edward Berryman, of Moira. But Messrs. H. Holschier and A. Berryman, of Wambo, are undoubtedly the two best farmers in the district. Their cultivated paddocks were thoroughly free from wild oats and other weeds, their out-houses in good order, the implements in their proper places under cover, clear and ready for use when required, their orchards, vineyards, and vegetable gardens, well looked after—in fact, they may well be termed the model farms of the west.

On the whole, I was thoroughly pleased with the Moama district, and trust that the husbandman here may reap the reward he so well deserves.

CHARLES DE LA MOTTE,  
Inspector of Agriculture.

Woonona, 13th October, 1892.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

VINE DISEASES ACT AMENDMENT BILL.

(MESSAGE No. 19.)

---

*Ordered by the Legislative Assembly to be printed, 7 December, 1892.*

---

JERSEY,  
Governor.

*Message No. 19.*

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to amend the Law relating to Vine Diseases; to prevent the introduction into this Colony, or removal from place to place in this Colony, of diseased grapes or grape-vines, or any insect or other pest, or any other matter or thing which may injuriously affect any grape-vine or vineyard; and to eradicate any disease affecting grapes, grape-vines, or vineyards, to quarantine, and if necessary destroy any grapes, grape-vine, vineyard, package, or implement, to proclaim Vine Districts, to appoint a Central and other Boards, to make assessments and levy rates; and for other purposes incidental thereto.

*Government House,  
Sydney, 26th November, 1892.*

NEW SOUTH WALES.

---

**VINE DISEASES ACT AMENDMENT BILL.**  
(PETITION FROM CERTAIN ORCHARDISTS AND VINEYARD PROPRIETORS IN THE DISTRICT OF  
LIVERPOOL, AGAINST.)

---

*Received by the Legislative Assembly, 15 February, 1893.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The humble Petition of the undersigned orchardists and vineyard proprietors in the district of  
Liverpool,—

RESPECTFULLY SHOWETH:—

1. That your Petitioners have at great expense and many years of toil brought their vineyards  
to a mature state and free from disease.

2. That the Government have recently introduced into your Honorable House a Bill to amend the  
Vine Diseases Act.

3. That your Petitioners have carefully considered the said Bill, and believe that its provisions are  
so arbitrary and unjust that if passed into law it would prove ruinous to them.

4. Your Petitioners therefore humbly pray that your Honorable House will take the foregoing  
into earnest consideration, with a view to the rejection of the Bill.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 32 signatures.*]

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

ESTABLISHMENT OF MODEL FARMS AT BATHURST,  
ORANGE, MOLONG, AND WELLINGTON.

(CORRESPONDENCE RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 11 May, 1893.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 11th January, 1893, That there be laid upon the Table of this House,—

“ Copies of all correspondence, reports, minutes, and other documents in  
“ reference to the establishment of Model Farms at Bathurst, Orange,  
“ Molong, and Wellington.”

*[The Order of the Honorable the Legislative Assembly, made on the 26th October last, in reference to “ Establishment of Model Farm or Farms in the Western District,” was rescinded, and in lieu thereof the above Order was made.]*

(Dr. Ross.)

MOLONG.

20. The Under Secretary for Mines and Agriculture to Dr. Ross, M.P. 18 July, 1892 .....	10

No. 1.

Dr. Ross, M.P., to The Minister for Mines.

Dear Sir,

Sydney, 17 June, 1886.

I have the honor to draw your attention to Garra, near Molong, as a most eligible locality for establishing a model farm, as now proposed. I hope, therefore, that you will see that an inspector is sent up to the locality to report on the matter. Mr. M'Ivor, Lecturer to the Agricultural and Technical College, has reported strongly in favour of Garra, where an area of 2,000 acres of a reserve can be obtained. I am sure the matter is one that will meet with your approval.

Yours, &c.,

DR. ROSS.

Mr. Campbell, when he returns.—H.W., 29/6/86. Reported on by my letter of this date.—  
W.S.C., 7/9/86.

No. 2.

## No. 2.

## Mr. W. S. Campbell to The Under Secretary for Mines.

## Report on the Garra Reserve, Molong.

Sir,

Department of Mines, 7 September, 1886.

In accordance with the instructions of the Hon. the Minister for Mines, I proceeded to Molong from Orange, and examined the Garra reserve, recommended by Dr. Ross as a site for an experimental farm. I also examined reserves W.R. 599 and R. 272.

W.R. 1,173 (Garra reserve) is situated in the county of Ashburnham, in the parishes of Brymedura and Cumble, on both sides of Mandagery Creek, which is a northern tributary of the Lachlan River. This reserve is distant about 6 miles west of Molong, near the road from Molong to Forbes, and also within a very short distance of the marked and proposed railway line from Molong to Forbes. The land on the reserve has a gentle slope from its eastern and western boundaries to Mandagery Creek. The aspect is northerly and southerly. The soil, a deep loam (sandy loam on the banks of the creek), with good clay subsoil, derived from limestone, granite, and silurian rocks in the neighbourhood, is well adapted for agricultural, horticultural, and pastoral purposes. Limestone, granite, slate, and sandstone can be obtained in the vicinity in any quantity for building and other purposes. The timber on the reserve is chiefly box, of varieties. I beg most respectfully to submit that this reserve will be an admirable locality for an experimental farm and agricultural college or school, and might be conveniently worked in connection with the suggested experimental farms at Orange and Bathurst. It contains an area of about 878 acres, excluding G. Sutton's 40-acre conditional purchase, and some small reserves for school, church, and cemetery.

Reserve 1,173, notified 22nd December, 1879, was originally notified on the 9th January, 1874, as W.R. 408. On the 12th November, 1875, Edward Brookes was granted a pre-emptive lease (undefined) of 600 acres, which included the western portion of the reserve, which does not appear to have been known at the time. Brookes applied under the Land Act of 1884 to convert this pre-lease into a conditional purchase lease for five years, with right of purchase. This was granted by the Local Land Board. I am under the impression that the Land Board considered that the pre-lease made before 1,173 was notified was legal, and was not aware of the existence of water reserve 408 at the time the pre-lease was made. Brookes, however, I was informed by Dr. Ross, is willing to give up this lease, if he is allowed compensation for improvements, which consist of clearing and rough fencing.

The magnificent district in the vicinity of Garra appears to be highly suitable for mixed farming, especially for wheat and sheep-lucerne, and vegetables of all kinds appear to grow admirably, as do a great variety of fruits. Early potatoes are said to succeed well, but not the late. Mangels grow well, but the young plants are liable to be attacked by a grub, which destroys them. Maize is said to yield about 30 bushels to the acre, but a grub also destroys the young plants. Melons and pumpkins are said to grow with extraordinary luxuriance. In the Molong district the system of farming appears to be no better than that adopted in any of the other western districts I have visited. Shallow ploughing is the rule; in fact, I doubt whether such a thing as deep or subsoil ploughing has ever been heard of. The last season was the driest known for years, but as much as 18 bushels of wheat per acre was obtained near Garra. The wheat is said to be of excellent quality, very little bran, plump, and of good weight. A bushel sent to the Colonial Exhibition, now being held in London, weighed as much as 67 lb. Sheep succeed well throughout the district, and the farmers, or a great many of them, keep a flock of sheep in connection with their farms. The last statistics show that there are no less than 327,114 sheep in the electorate.

The area of the Molong electorate is about 1,780 square miles, and according to the Registrar-General's statistics for 1885 the area under cultivation was 28,692 $\frac{3}{4}$  acres. Of this, 27,076 $\frac{3}{4}$  acres was freehold and 1,616 acres leasehold. The various crops and average yields per acre were as follows:—

Wheat,	20,337 acres, for grain ; average, 6 $\frac{3}{4}$ bushels per acre.
"	3,868 $\frac{3}{4}$ acres, for hay; average, 7 $\frac{3}{4}$ cwt. per acre.
Maize,	832 acres, for grain; average, 10 $\frac{1}{2}$ bushels per acre.
Barley,	58 $\frac{1}{2}$ acres, for grain; average, 8 $\frac{1}{2}$ bushels per acre.
"	6 acres, for hay; average, 20 cwt. per acre.
Oats,	304 acres 2 roods, for grain; average, 8 $\frac{1}{2}$ bushels per acre.
"	1,837 $\frac{1}{4}$ acres, for hay; average, 10 $\frac{1}{2}$ cwt. per acre.
Rye,	10 acres 2 roods, for grain; average, 6 bushels per acre.
Potatoes,	268 acres; average 2 tons 3 cwt. per acre.
Tobacco,	5 acres 1 rood; average 5 $\frac{1}{4}$ cwt. per acre.
Grasses,	for hay, 18 acres; average, 1 ton 1 cwt. per acre.
Vineyards,	13 acres.
Gardens, orchards, and other crops,	702 acres.

A very large portion of the area said to be under cultivation is not half cultivated. It is impossible to cultivate it for the standing timber, which is not removed. The trees are ringbarked and killed, and removed by degrees. Meanwhile, crops or half crops are obtained. I was informed that, although the Molong district has suffered from droughts for some years, eighteen crops have been obtained during the last twenty years. There is little or no dairying carried on. Some of the farmers make butter for local demand, and excellent butter is made. I saw localities near Molong on the alluvial flats which would be well suited for dairy purposes. In addition to reserve 1,173, I beg to suggest the Bocoble reserve No. 599, which embraces water reserve No. 1,515, be set apart for agricultural purposes. It is distant about 1 $\frac{1}{2}$  mile from Garra reserve. The soil is not nearly so good as that of Garra, but it will be of considerable value for stock purposes. It is well watered and of easy access.

I beg most respectfully to be permitted to add that the more I travel through the Colony investigating the farming, the more convinced I am of the necessity that exists for the establishment of some means to enable those persons who have settled on the land to acquire some knowledge of the best methods of developing the resources of their districts; some knowledge of the most important national industry, agriculture; and no better method can be adopted than by practically instructing them in the different districts through the proposed demonstrating and experimental farms. By means of these the most suitable articles to produce in the several districts can be determined, and the best and most economical methods

methods of producing them, and at the least injury to the soil, can be explained. I have no doubt that in time these farms will be self-supporting, and pay good interest directly and indirectly on the outlay necessary in connection with them.

The genius of progress is not confined to men of education alone, or wealth alone. It would be a fatal mistake to suppose that the poorest peasant may not be the author of as great improvements in his art as the philosopher. When he has become acquainted with the mode of deducing principles from observations it will be just as possible for the peasant as the philosopher, by the force of common sense and reflection, to convert the most useless and neglected forms of matter into sources of wealth. *Felix qui potuit rerum cognoscere causas.* Happy is the farmer who understands the reasons of his operations.

I have, &c.,

WALTER SCOTT CAMPBELL.

Tracing herewith, showing the reserves referred to, also tables of rainfall.

### No. 3.

Telegram from Mr. W. S. Campbell to The Under Secretary for Mines and Agriculture.

Orange, 28 July, 1886.

ARRIVED at Orange last night; will start for Molong Saturday morning.

WALTER SCOTT CAMPBELL.

Has pass been corrected and sent to Mr. Campbell?—H.W., 28/7/86. No further action necessary.—H.W., 30/7/86.

### No. 4.

Minister for Mines, *re* Deputation.

Department of Mines, 29 July, 1886.

A DEPUTATION, consisting of Messrs. Thomas (Mayor of Parkes), Black (Mayor of Molong), Wynne, Millar, Rubie, and M'Ghee, introduced by Dr. Ross, M.P., waited upon the Honorable James Fletcher, Secretary for Mines, this day, in reference to the proposal to establish model farms in the various agricultural districts in the Colony, and pointed out the suitability of land in the Molong district for the purpose in question. Dr. Ross urged that an officer be sent to examine a block of land 2,000 acres in extent at Garra, near Molong, which the deputation considered in every way suitable for the requirements of a model farm, being well watered and the property of the Crown, consequently its appropriation to the purpose named would be a matter of no expense.

The Minister stated that Mr. Campbell, the officer who had been commissioned to visit and report on the various agricultural districts in the Colony, should include Molong in his tour in the western districts.

J.F., 30/7/86.

Has Mr. Campbell been informed; if not, inform him at once.—H.W., 30/7/86. A telegram was received yesterday from Mr. Campbell, stating that he intended visiting Molong on Saturday.—W.J.C., 30/7/86. Seen.—H.W., 30/7/86.

### No. 5.

Part of Professor Pudney's Report.

To the Honorable Sydney Smith, M.P., Minister for Mines, Sydney, N.S.W.,—

Sir,

Molong, 3 December, 1889.

I have the honor, in sending in my report, as instructed by you, on sites near Molong, Orange, and Bathurst, to advise you to have full inquiries made concerning the Garra and Bocoble reserves, and to prevent any more alienation in any way of any land from either reserve, especially with regard to a portion of the fine Garra lands, which may be taken away unless stayed in time and at once.

These two reserves can, I think, be secured for our agricultural education scheme, at the least cost and friction of feeling between any community and your Department. As soon as possible they should be securely fenced, post and 7-wire, and judicious scrubbing and ringbarking also attended to in the first instance with grubbing. The boundaries would require careful and immediate attention to preserve from encroachment; the land would then acquire immediate value for any purpose.

I have, &c.,

ROBERT L. PUDNEY, M.R.A.C., F.H.A.S.

Report

## Report on Garra and Bocoble Reserves.

In accordance with your instructions, I visited this district to-day, and without delay inspected the reserves previously visited by W. S. Campbell, of your Department, about three years ago. Molong township and railway station is situated 216 miles almost due west of Sydney, on a branch line from Orange running north-west. Height above the sea, 1,736 feet; rainfall average for years 1885, 1886, 1887, and 1888, 29.29 inches; geological formation, limestone and Devonian sandstones. Molong district possesses two very valuable and suitable reserves known as the Garra water reserve and Bocoble water reserve, both invaluable to each other.

Garra reserve No. 1,173, area between 800 and 900 acres of fine agricultural land, which slopes both ways in a gentle incline to the Mandagery Creek, which runs through the reserve, and from which a fine water supply could be obtained by a good weir. The soil is chiefly a warm red loam from decomposition of the limestone, and varying to a lighter sandy loam and clay, all of first-class quality. The timber comprises yellow and grey box, ironbark, and so-called red-gum, small in quantity, and no under scrubs.

Bocoble reserve, water reserve No. 599, area about 1,246 acres, comprises a fortunate variety of valuable agricultural ground, and capable of growing splendid wheat and other crops; also warm dry hills, and undulating land, most suitable for sheep. The Bocoble Creek runs right through the property, thus giving easy means for water supply at a little expense by forming dams, whence a permanent quantity could be secured. The soil varies from the rocky rises of a coarse sandstone to rich, red, warm loam, a reddish clay, and a white sandy loam, with ironstone gravel intermixed, and all of a fertile nature. The timber is comparatively light in quantity, comprising ironbark, grey and yellow box, red-gum, and also the Murray pine on the rocky rises, on which alone there is any scrub. Also, the pine will be very useful for rough shed building and fences, and also a large proportion of the other timber will come in for fencing and other purposes. Native grasses look very well on the reserve. I have no hesitation in endorsing the recommendation of Mr. Campbell's—that the Garra reserve be one of the sites chosen for an experimental farm, with, perhaps, an agricultural college attached eventually; but the Bocoble reserve must be also combined with it, and, perhaps, some other, in order that mixed farming may be properly carried on, which system of the most economical and judicious culture of fields, stock, fruit, dairying, &c., is essential to the success of Australian agriculture, and is to be profitably carried out if farmers know how, and will also try their best themselves. I am convinced that these reserves offer every facility for demonstrating this, from my observation of the splendid wheat and oat crops, grass, and thrifty fruit trees of various descriptions; even maize and potatoes, also lucerne, can be easily grown to advantage, and I find the Railway Commissioners have reduced freightage, to enable farmers to easily compete with Victorian produce. This district being essentially a wheat-growing area, farmers should have the earliest opportunity of obtaining a knowledge of the cheapest method of production and the renovation of their lands, and also ensilage-making, dairying, &c., rotation of crops, together with the opportunity of inspecting improved machinery, as stump-jumping ploughs, so essential for timber country, and others of various descriptions. Also the simplest and most suitable examples of dairies and other farm buildings, &c., which can be made of different materials most available for the settler. These two reserves, Garra and Bocoble, are distant only about 7 or 8 miles from Molong railway-station, and almost abutting on the fine metalled road to Forbes, being distant from each other about 3 miles, the road named above passing between them. Good building-stone is plentiful, timber and water also at little expense. Rainfall is good, also healthy site at Garra; houses and churches adjoining reserve; clearing slight; land in block not scattered. Plentiful supply of good limestone can be obtained.

R.L.P.

## No. 6.

## The Under Secretary for Mines to The Under Secretary for Lands.

Sir,

27 March, 1890.

I have the honor, by direction of the Secretary for Mines and Agriculture, to request that you will move the Secretary for Lands to cancel the reserves at present covering the land mentioned below, and shown in pink tint on the attached tracings; and also the reserves—if no longer required—covering the land shown by blue tint on tracing marked "E"; and, therefore, dedicate under the 104th section of the Crown Lands Act of 1884, those lands to the use and general purposes of this Department; and, further, to notify "the use and general purposes of the Department of Agriculture" a public purpose.

Distinguishing letter on tracing.	Approximate area.	County.	Parish.

## DESCRIPTIONS.

## Molong District.

*Re* land proposed to be used for agricultural purposes, tinted green on tracing. Position—Parish of Brymedura, county of Ashburnham. Area—1,342 acres. Owner—The Crown, under the following reserves:—Water reserve 3,784, notified 6th August, 1887, 982 acres; water reserve 4,015, notified 10th August, 1887, 360 acres. Possession of this land may be obtained by the cancellation of these reserves, the notification of agriculture as a “Public Purpose,” and the re-notification of the land as a “Reserve from Sale and License” for the purpose. Compensation—None is involved. Administrative work, *re* reserves, comes under the Department of Lands. This land should be reserved for agricultural purposes.

S. SMITH.

Letter with tracing to Department of Lands, requesting dedication of 1,590 acres.—A.R., 27/3/90.

## Molong.

*Re* land proposed to be used for agricultural purposes (edged by red on tracing). Position—Parishes of Brymedura and Cumble, county of Ashburnham. Area—900 acres (approximate). Owners—Forty acres (portion 3-1, parish Brymedura), 15 acres approximate, dedicated in several lots for school, church, and cemetery purposes. Five acres 2 roods 33 perches reserved from sale as reserve 10, 13th October, 1885. Three hundred and ninety-five acres, parish of Cumble, held under lease. Eight hundred and forty acres held by the Crown under the following reserve, subject to the lease over 395 acres, water reserve 1,173, notified 22nd December, 1879. Possession of the land may be obtained by cancelling water reserve 1,173 and part of converted pre-lease 2,618, Molong, notifying agriculture a “Public Purpose,” and then re-notifying the land as a reserve from “Sale, Lease, and License,” for agricultural purposes. Compensation will be required for the improvements, if any, upon the 395 acres, embraced by converted pre-lease 2,618. Administrative work, *re* reserves, comes under the Department of Lands. Letter with the tracing to Department of Lands, requesting dedication of 1,040 acres.—A.R., 27/3/90.

See Appendix A.

## No. 7.

## Dr. Ross, M.P., to The Minister for Mines and Agriculture.

Dear Sir,

Sydney, 30 July, 1890.

To-day I left with Mr. Anderson, the Director of Agriculture, a sample of oranges grown in the district of Molong, and I wish you would kindly look at it. It will, I think, convince you that the climate of Molong is an exceptionally good fruit-growing district, besides the growth of all kinds of cereals. I do hope you will not forget the reserve at Garra as a suitable place for a model farm—one of the best sites in the Colony.

Yours, &amp;c.,

DR. ANDREW ROSS.

Seen.—S. SMITH, 31/7/90.

Noted.—H.C.L.A., 4/8/90.

## No. 8.

## Dr. Ross, M.P., to The Minister for Mines and Agriculture.

Dear Sir,

Molong, 17 April, 1890.

It is, I understand, your intention to establish model farms in the most eligible and favourable districts throughout the Colony, and also agricultural colleges.

Having, in early life, been reared on a farm, and therefore practically acquainted with the nature of the work pertaining to such often vexatious and uncertain occupation, I take the liberty of placing the following few remarks bearing on this all important question for your favourable consideration.

The subject and future success of agriculture (based on scientific principles) in these colonies depends entirely on the course now proposed to be adopted to establish these long-delayed and valuable institutions for the collection and establishment of solid, practical information, and the dissemination of reliable agricultural knowledge pertaining to agriculture carried on in a semi-tropical country. “As you now sow, so shall you reap,” and, therefore, if a bad beginning and foundation is now made, it will only tend to increase the difficulties hereafter. It behoves you, therefore, to do nothing rashly, and with the aid of your excellent officer and Director of this Department, you will do well to study future as well the present aspect of the question, which may tend to puzzle, if not to warp and mislead your decision in carrying out the true principles pertaining to these two schools, and sources of deriving or acquiring agricultural knowledge.

I scout the idea of proposing to establish several agricultural colleges in inland towns in the interior. Three, I understand, are proposed—one north, south, and west, and one perhaps for Sydney, which will make four. The thing is a perfect absurdity, and will be attended by an enormous unnecessary expense, and in place of aiding the cause, it will simply, in my belief, tend to break down the system in the very threshold of its inception and existence. What is wanted is the establishment of one central agricultural college in Sydney, where better facilities would be afforded students following their studies under trained practical professors and laboratory, and where students so enrolled could carry out a curriculum of study. The Colony is not sufficiently advanced to support three or four colleges, but should be established in the interior in the future as occasion required. The thing in my idea is a farce, if not absurdity, to think of establishing such a college, say, as proposed, in Albury, Goulburn, Newcastle, Bathurst, &c., and would be most expensive, and would, I feel certain, result in a failure. One in Sydney is enough to start with. The same objection cannot be raised against the establishment of model farms in the most eligible localities and centres of farming population, because it would then afford students, say, who had spent six or twelve months at college, to go on these farms for six or twelve months to acquire a thorough knowledge of the practical working of farming in all its diversified branches. By this means a system would be established that could bring forth good fruit, and then encourage the young men of the occasion to take up and follow the occupation, and thus become successful farmers. At college their education would be more rudimentary and theoretical than practical; the practice would be obtained on the model farms by residence, if desired, where the student could manually follow the work, from planting to reaping, &c. In the selection of a model farm for the western district (four is enough, viz., Sydney and suburbs, one south, one north, and one west) I unhesitatingly say that the district of

Molong

Molong is admirably adapted for one of these model farms, from its excellent climate—rainfall 35 inches, temperature all the year round moderate—good soil—deep rich loam, limestone country, mountain and table lands, the best site for wheat growing. For this purpose two reserves can be obtained at Garra, 6 miles from Molong, consisting of 2,000 and 650 acres, in every way fitted for such a model farm, and through which the proposed railway, Molong to Parkes and Forbes, will pass. A model farm, therefore, has every advantage to make it a practical success. Average yield of wheat from 17 to 40 bushels per acre. The land, besides, is in the hands of the Crown, and therefore can be obtained at once without expense of purchasing. It is a rare thing that crops ever fail in Molong district. The land is composed chiefly of white and yellow box timber, the ashes of which are the best of all fertilizers. The road to market is fairly good. Molong district stands pre-eminently at the top of the tree as a wheat-growing and agricultural locality, from its rich soil, mild climate, limestone formation. Mild climate, rainfall good, and fair seasons, nearness to a central settled population, and good access to the outer world for produce by the proposed line of railway, advantages that should not be lost sight of in choosing a site of a model farm in the west. Wheat here, as a rule, when sown early, is seldom affected by rust or blight. My experience of the district, extending over thirty-three years, justifies me in placing these facts before your notice in helping you to arrive at a conclusion in your decision on this all important, but sad to say, neglected matter. In deciding, then, on the selection of a model farm in the west, I hope the claim of the excellent district of Garra will not be overlooked; aye, and what is more, it is a first-class fruit district, of all sorts—apples, cherries, grapes luxuriant, &c.—also vegetables. Hoping these few and hurriedly-written lines will at your hands meet with favourable consideration, and be submitted to your excellent officer, the Director of Agriculture, for his information and guidance in arriving at a speedy decision. The season is advancing for farming operations, and now is the time to decide and begin operations, otherwise delay will simply impede the matter for an additional twelve months. With best wishes for the success of an agricultural college and model farms that will redound to the future welfare and prosperity of New South Wales.

Yours, &c.,

ANDREW ROSS, M.D.

Garra is situated on Garra Creek, where there is plentiful supply of water. Take up the reserves at once, and see that steps are taken to secure the land. At this model farm you can carry on experiments to test the rust-proof wheat.—A. R.

Seen.—S. SMITH, 21/4/90.

#### No. 9.

#### The Mayor of Molong to The Minister for Mines and Agriculture.

Forwarding resolutions *re* establishing model farms at Garra, in Molong district. Presented by Dr. Ross and strongly recommended to the Minister's favourable consideration.

Sir,

Town Hall, Molong, 27 October, 1890.

Herewith I have the honor to submit the following resolutions, which were carried at a public meeting held in the Town Hall at Molong, the 27th day of October, for favourable consideration:—

*Resolution 1.*—Proposed by Mr. Wren, J.P., seconded by Mr. Tempest, J.P., "That, in the opinion of the meeting, it is desirable, in the interest of the agricultural industry of Molong and Colony in general, that the Government be advised to establish a model farm on the reserve at Garra, as being the most eligible site for the whole district." Carried unanimously.

*Resolution 2.*—Proposed by John Black, J.P., seconded by Alderman Windred, "That the foregoing resolution be submitted to the Minister for Agriculture through Dr. Ross, the Member for the district." Carried unanimously.

I am pleased to say that the district of Molong is one pre-eminently adapted for the establishment of a model farm, the climate, rainfall, and soil being in every way favourable for such a purpose. The model farm site suggested being situated on the railway from Molong to Parkes, and therefore within easy access to railway communication.

I have, &c.,

H. S. M. BETTS,

Mayor.

#### No. 10.

#### Dr. Ross, M.P., to The Minister for Mines and Agriculture.

Dear Sir,

Molong, 4 May, 1891.

Mr. Prentice (of the Agricultural Department) was here during the week and inspected the reserve at Garra, and I am pleased to say that he is in every way delighted with it. No locality in the western district could be selected for a model farm under the Government regime, and I am not surprised at the favourable opinion formed of it by Mr. Prentice. This is the fourth authority on such matters that has been up from Sydney to report on the Garra reserve as a suitable site for a model farm, viz. :—Mr. McIvor, a very high authority; 2nd, Mr. Mackay, from Technical College; 3rd, Mr. Campbell; 4th, Mr. Prentice, and all speak in the highest term of the locality for such a purpose. Under these circumstances you can have no difficulty in arriving at a conclusion in the selection of a suitable site for a model farm in the west. You must bear in mind that the reserve at Garra is all Government land, and, therefore, you have nothing to pay for the land. The area is about 2,600 acres in all, so you have a good scope of land to work on. I refer you to my previous correspondence on this matter for fuller information. You can have no doubt or difficulty in selecting the Garra district as the site for the model farm in the face of the four reports you have received from these four gentlemen, and all reliable authorities. It is time the matter was settled one way or the other, and I hope soon to hear the result of your decision.

Yours, &c.,

DR. ROSS.

Report on Garra Reserve.

Sir,

Meranburn, 27 April, 1891.

I have the honor to inform you that in accordance with your instructions, I have to-day inspected the Government reserve at Garra, near Molong. It contains an area of about 800 acres of excellent land of a fairly undulating nature. The Garra Creek runs through the reserve, and offers great facilities for economical and successful irrigation, and with this properly applied a farm started here could not but be a commercial success. I think there is no doubt from the splendid specimens of fruit I saw that were grown on adjoining farms that any kind of English fruit could be grown here in profusion; part of the reserve would be valuable wheat land. The soil varies from sandy to very rich loam, and most of the land has a topsoil of about 4 inches of rich organic matter. The labour of clearing would be very slight, and could, I should say, be done all over the reserve at a cost of about 12s. per acre. The timber is principally yellow gum and apple-tree. The road from Molong to Meranburn is close to the reserve, which would be an advantage in carting produce from the farm.

The average rainfall is 33 inches 49 points, and the site has an elevation of 1,600 feet above the level of the sea.

There is evidently a considerable amount of interest exhibited throughout the district, as I was accompanied, on the occasion of my visit, by Dr. Ross, M.P. for the district, and Messrs. Griffiths, Ruby, Fleeting, Glasson, Barton, and several others; many of whom afforded me valuable information respecting the average of crops of cereal being grown per acre, and I found that 30 bushels of wheat per acre were formerly obtained before the ground was worn out by continuous wheat cropping. There are two very nice sunny slopes in the eastern portion of this reserve eminently adapted for orchards.

The climate is warm in summer, being sometimes up to 95 degrees; it is rather cold in winter, but not so much so as to kill orange trees, some of which I saw looking very healthy.

I have, &amp;c.,

GEORGE S. PRENTICE.

When Mr. Prentice was at Molong lecturing, I instructed him to look at Garra reserve, thinking that his independent views might be of interest, taken together with Mr. Pudney's report.—H.C.L.A. Submitted, 8/5/91. The Minister seen.—S. SMITH, 11/5/91.

## No. 12.

## Dr. Ross, M.P., to The Minister for Mines and Agriculture.

Dear Sir,

Parliament House, 10 September, 1891.

Enclosed find resolutions framed at a public meeting held at Garra, urging on the Government to select Garra as a most suitable position for a model farm. None better in New South Wales, and one I can honestly and strongly recommend.

Hoping the matter will receive favourable consideration. Kindly send an answer to Mr. Carroll, through me if needed.

Yours, &amp;c.,

DR. ROSS.

Seen.—S. SMITH, 11/9/91. Send acknowledgment to Dr. Ross.—A.P., 14/9/91. Ackd., 15/9/91. Put with papers, 15/9/91.

[Enclosure.]

From W. C. Carroll to Dr. Ross, M.P.,—

Dear Sir,

Garra, 9 September, 1891.

At a representative meeting held at Garra, on the 8th day of September last, the Chairman instructed me, as Secretary, to acquaint you of the following resolution, which was carried unanimously:—

“That, in the opinion of this meeting, the Government model farm for the western district should be placed on the Garra reserve, for the following reasons:—

- 1st. It is the centre of a large farming district.
- 2nd. The climate of the district is such that all cereals can be grown to perfection, as well as any kind of vegetables, and also fruits of all kinds.
- 3rd. It is Government property, and would, therefore, obviate the necessity of purchasing land at a high valuation, and so save the money of the country.
- 4th. The land on the reserve alluded to is virgin soil.”

I have also been instructed to add that a petition in support of the above will be forwarded to you by Mr. Griffith, of Garra, and I also respectfully solicit your hearty co-operation in the matter.

Yours, &amp;c.,

W. CARROLL.

## No. 13.

## The Director of Agriculture to Dr. Ross, M.P.

Sir,

15 September, 1891.

I am directed by the Minister for Agriculture to acknowledge the receipt of your letter of the 10th instant, enclosing a communication from Mr. W. Carroll, urging the establishment of an experimental farm on the Garra reserve, and to say that the Minister is in possession of all necessary information about the different sites for the western experimental farm, and will give the whole matter his best consideration.

I have, &amp;c.,

H. C. L. ANDERSON,  
Director of Agriculture.

## No. 14.

Dr. Ross, M.P., to The Minister for Mines and Agriculture.

Dear Sir,

Sydney, 19 January, 1892.

A decision having been arrived at by your predecessor to establish a model farm in the north and south, it is also time, I think, that some decision should be arrived at to establish a model farm in the west. The claim of Molong, at Garra, has been put forward as a most eligible site for a model farm, it being all vacant Crown lands, and surrounded by every facility for conducting the farms in a proper manner.

The site, too, has also been recommended by several of the best authorities of your Department, and the best authorities in agriculture, viz., Mr. McIvor, Mr. Mackay, Mr. Campbell, and Mr. Prentice. I feel sure that the Director of Agriculture, viz., Mr. Anderson, will also tell you that the Garra site is one in every way adapted for a model farm, and, therefore, I would be glad if you will, at an early date, be able to decide on this important matter, as residents in my district are anxious to know your decision on the matter. Awaiting, I hope, an early reply.

Yours, &amp;c.,

ANDREW ROSS, M.D.

---

The Director.—How does this matter stand?—H. W., 20/1/92.

Reserves at Bathurst, Orange, Molong, and Wellington have been inspected and reported on by different officers at various periods during the past five years. The late Minister left a minute, not dealt with by Cabinet, indicating his preference for Bathurst as the centre to be chosen. What seems needed now is a comprehensive report, dealing with the four sites mutually compared, the respective advantages and disadvantages being carefully noted and contrasted. No such comparison has yet been attempted, as no one man has inspected all the sites. If the Minister deem it desirable—taking it for granted that there must be an experimental farm in the western district—I shall be happy to furnish such a report as soon as practicable.—H.C.L.A., 3/2/92. The Under Secretary.

Submitted.—H. W., 3/2/92. I shall deal with this matter during recess.—T.M.S., 4/2/92. Re-submitted.—H.C.L.A., 8/4/92.

## No. 15.

Dr. Ross, M.P., to The Under Secretary for Mines.

Dear Sir,

Molong, 28 April, 1892.

Will you kindly inform me what decision (if any) the Minister has arrived at in regard to establishing a model farm at Garra, in Molong district. He promised to see to the matter during the recess, but I have yet heard nothing since about the matter, and my constituents are anxious to know what has been done.

Yours, &amp;c.,

Dr. ROSS,  
Molong.

---

Has anything been done in this matter?—H. W., 30/4/92. The Director. All papers relating to sites for an experimental farm in the western district have been submitted for Minister's consideration.—H.C.L.A., 2/5/92. Submitted, in connection with previous papers.—H. W., 4/5/92. Circular letter, re Bathurst site selected, 12/5/92.

## No. 16.

Dr. Ross, M.P., to The Minister for Mines and Agriculture.

Sir,

Molong, 14 May, 1892.

I was somewhat surprised to learn the other day that you had decided to establish a model farm at Bathurst (on what, I am informed, is a waterless, hilly country), but nothing has been said about the site at Garra, near Molong. I cannot refrain from expressing my disappointment at this decision, after having been led to believe that the claim of the site at Garra would not be overlooked—a site that has been recommended by the highest authorities in agriculture, viz., Mr. McIvor, Mr. Mackay, of Technical College, Mr. Campbell, and officers in your Department, even to the Director of Agriculture. It was also contemplated to establish two model farms in the western district, viz., at Bathurst and at Garra, but I am disappointed that the latter has evidently been left out in the cold.

The order and proceedings will show that over and over again I have taken the trouble to try and elicit some definite answer to this question, but always put off on the score that the matter would be dealt with during the recess, and your decision has at last been given in favour of Bathurst. Of that I have nothing to complain, but it is apparent to me, as it must be to the public, that you lost no time in letting your colleague, Mr. F. B. Suttor, know, while you did not do me the common courtesy of informing me of your decision, although I had repeatedly, both in and out of Parliament, asked for it. Treatment like this at the hands of a Minister of the Crown is not very complimentary to myself, or a representative of the people, and especially of an important agricultural district.

I had, I think, as much right to receive a reply from you as Mr. Suttor, and I won't go about the bush to hide my intention, for as soon as Parliament meets I will make it my business to get the fullest possible information on this public affair.

I have nothing to gain by holding a seat in Parliament, but as long as I have the honor to occupy that position I shall take every opportunity of demanding fair play and justice on behalf of my constituents.

I have to direct your attention to the enclosed leading article which appears in the *Molong Express*, on this very question, of this date, and which I feel sure has the approval of every unbiassed intelligent resident in the district.

It is not yet, however, too late to reconsider the question of establishing an additional model farm at Garra—one of the most eligible sites that can be obtained in the Colony for that purpose, being near to the railway line, and centrally situated to a large number of thriving inland townships and agricultural population.

population. The whole of the land belongs to the Crown, and, being a reserve, there is no difficulty in obtaining the land free from any expense. The creek runs right through the centre of the land, and therefore there is a plentiful supply of water for irrigation or any other purpose. The fact is, it is impossible to select a more eligible site for a model farm in the Colony.

Yours, &c.,  
ANDREW ROSS, M.D.

There have been a large number of sites reported upon favourably, but it is not possible to establish farms on all of them. A start will be made as soon as possible on a limited number, and then, in all probability, the number of such farms will be from time to time increased, and in that way other sites than those at present approved will be selected. A letter was sent to Dr. Ross, M.P., on or about the 13th instant, informing him the site of Bathurst had been approved.—H.W., 23/5/92.

Submitted. Seen.—T.M.S.

[Enclosure.]

THE MODEL FARM.

Extract from the *Molong Express and Western Districts Advertiser*, Saturday, 14th May, 1892.

FROM a letter, which we reprint in another column, from the *Bathurst Free Press*, and addressed to the Secretary of the Bathurst A., H., and P. Association, by the Hon. F. B. Suttor, it will be seen that the model farm for the Western district is to be located at Bathurst. From the letter in question it will be seen that Mr. Suttor, while no doubt writing as the Member for Bathurst, also makes reference to his position as a colleague of the Minister who has decided upon the respective merits and claims of the two places. This is unfortunate for Mr. Suttor, because while those who know him in his private life are aware that he would be the last one to descend to anything shady or underhand, those who are not acquainted with him will at once jump to the conclusion, however unjust, that some secret and occult influence has been at work. No one can blame Mr. Suttor for doing the best he can for his electorate, and, as a matter of fact, he would be unfaithful to his trusts if he neglected their interests; but at the same time, it is as we have already said, unfortunate that one of his own colleagues should have decided in favour of Bathurst. No doubt in deciding this question Mr. Slattery, as Minister for Agriculture, has been guided by representations made to him by certain interested parties, and it would be interesting to see the correspondence and hear a phonographic record of every verbal message in the matter, because we feel fully convinced that Mr. Slattery had no personal knowledge of the respective merits of the various sites suggested. We are not so bigotted as to say that no other site could come within coo-ee of the Garra reserve, near Molong; but this we do assert that if it rested between Garra and Bathurst, and the question were decided strictly on its merits, the site selected at Bathurst would not be looked at. At Garra there is a fine stretch of virgin soil, almost as level as a bowling green, with a permanent supply of water, and situated in the centre of one of the best (if not the best) wheat-producing districts in the Colony, with an average yield that ranks about second or third in the Colony. The site selected at Bathurst is within the town boundary, hilly, far removed from a permanent water supply for farming purposes, soil comparatively poor in quality (although containing some small patches of fair soil), and the average yield of the Bathurst district, far below the average, not only of the Molong district, but many other districts in the Colony, the comparative unsuitability of the Bathurst district for farming being fully shown at the late Bathurst Exhibition. The suitability of the site selected may be well imagined when it is stated that it forms part of the approaches to what are known under the suggestive name of the Bald Hills—a barren cluster of hills very much resembling the Pinnacle Hill, between Molong and the Gamboola paddocks. This is the spot that has been selected for the model farm, and its claims as a suitable site have been looked upon as far superior to the claims of the Garra reserve and other sites that have been suggested in other places. By no stretch of imagination can it be looked upon as either suitable or central, and it is to be hoped that either Dr. Ross or one of the Members for Orange or Wellington will take action as soon as the House meets, and move for the production of all papers connected with this matter, and so make public the name of the person or persons who brought about such an absurd decision. We do not say that Molong should have had it at all hazards, nor do we say that Bathurst's claims should not be considered at all; but what we do maintain is that the site selected should never have been considered for a moment while better were available and under recommendation. As for Molong, the model farm has been lost through nothing else but supineness and want of combined action, and perhaps this loss will now arouse the people of this district from their listlessness and want of energy in matters that vitally concern their well-being.

No. 16A.

The Under Secretary for Mines and Agriculture to Dr. Ross, M.P.

Experimental Farm and Agricultural School for the Western District.

Sir,

Department of Agriculture, Sydney, 12 May, 1892.

I have the honor to inform you that the Minister has had under final consideration the respective sites in the western district, brought under notice as being suitable for the purposes of an Experimental Farm and Agricultural School, and to intimate that he has decided to establish the institution at Bathurst.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines and Agriculture.

No. 17.

Dr. Ross, M.P., to The Under Secretary for Mines and Agriculture.

Dear Sir,

Molong, 2 July, 1892.

Kindly inform me if the Minister of Agriculture has yet reconsidered the question of establishing a model farm at Garra, near Molong—the site being upon Crown lands, and no outlay to obtain the land for the purpose. It was the intention of the Department to establish two model farms for the west, and, therefore, I hope the splendid site offered at Garra will not be overlooked, it being very favourably situated, and about  $1\frac{1}{2}$  miles from the Parkes and Forbes railway line now under course of construction.

Kindly submit the matter to the Minister, and inform me of the result and his decision, as a large number of farmers in the district are anxiously awaiting to know the decision arrived at.

Yours, &c.,

DR. ROSS,

Molong.

Dr. Ross, M.P., may be perhaps informed that the site referred to will be duly considered with others when the time arrives for selecting additional sites. Submitted.—H.W., 4/7/92. Approved.—T.M.S., 9/7/92. Dr. Ross informed, 13/7/92.

## No. 18.

The Under Secretary for Mines and Agriculture to Dr. Ross, M.P.

Sir,

Department of Mines and Agriculture, 13 July, 1892.

I am directed by the Minister to acknowledge the receipt of your letter of the 2nd inst., and with reference to your communication regarding the establishment of an experimental farm at Garra, near Molong, to say that the reserve referred to will be duly considered with others when the time arrives for selecting additional sites for this purpose

I have, &amp;c,

HARRIE WOOD,

Under Secretary.

## No. 19.

Dr. Ross, M.P., to The Minister for Mines and Agriculture.

Dear Sir,

Molong, 11 July, 1892.

I am anxiously waiting to hear your decision *re* establishing a model farm at Garra, near Molong, the most suitable and eligible place in the Colony, good land, well watered, and excellent climate, the whole of the area being Crown lands. I have always been led to believe that it was the intention of establishing two model farms for the western district, and that Garra in all probability would be one of the places selected.

Awaiting your answer on this important subject. Your Director of Agriculture knows the land and locality, and I am sure will recommend it

Yours, &amp;c,

DR ROSS,

Molong.

Inform Dr. Ross that it is not intended to establish another model farm at present, but, as soon as it is proposed, his recommendation in favour of Garra will receive every consideration.—T M.S., 13/7/92. Dr. Ross informed, 18/7/92.

## No. 20.

The Under Secretary for Mines and Agriculture to Dr. Ross, M.P.

Sir,

18 July, 1892.

I am directed by the Minister to acknowledge the receipt of your letter, of the 11th instant, and in answer to your inquiries, to say that it is not intended to establish another model farm at present, but as soon as it is proposed, your recommendation in favour of the Garra reserve will receive every consideration.

I have, &amp;c,

HARRIE WOOD,

Under Secretary.

## No. 1.

Thos. Dalton, Esq., M.P., to The Minister for Mines and Agriculture.

Sir,

Sydney, 15 July, 1886.

In view of the Government having (as I understand), decided to establish model farms in all agricultural centres throughout the Colony, I desire to bring under your notice the fact that Orange is the premier farming district of the west, it is the oldest, and has been for many years recognised as possessing every advantage in points of position, climate, soil, and agricultural population. I consider it my duty, as one of the representatives of the district, and in the public interest, to suggest, for your information, the choice of a site on the temporary or permanent common adjacent to the town of Orange.

The

The soil is unequalled by any other in the district, possessing every constituent required for the growth of cereals and root crops, which can be verified on inspection. You will understand that as the land is public property, and unapproached in excellence by any other land in the west, I suggest that a portion from these commons be resumed for the purpose of a model farm, as marked in plans of the district (A and B) submitted herewith. I would first bring under your notice the 50 acres granted to the Orange Agricultural and Pastoral Society (edged in blue on map A), but now resumed by the Crown, and at present being cut up for sale in suburban lots by the Government. I think it would be advisable to have the inspector go there at once, and if approved by him as a suitable site, to prevent any further action being taken by the Government for the sale of this property. Then again (as shown on plan B) anywhere on the temporary common could be chosen, but I think that a site on the permanent common, fronting Gosling's Creek, would be found more suitable. The Pastoral and Agricultural Society's land is only about  $\frac{1}{2}$  a mile distant from the town boundary of Orange; the temporary common is 1 mile, and the permanent common from 2 to  $2\frac{1}{2}$  miles distant. It is immaterial which point is selected, my chief concern being to have the farm situated in such a position as to benefit, educationally, the largest number of the community; and on consideration, I feel sure that no more suitable or central position could be found for the purpose than those I have indicated.

I have, &c.,

THOMAS DALTON, M.P.

Inform Mr. Dalton, M.P., that an officer will inspect the sites at the beginning of next week.—H.W., 16/7/86. Informed.—19/7/86. Mr. W. S. Campbell, B.C., 20/7/86. G.H., A.U.S.

### No. 2.

#### The Secretary to The Premier to The Minister for Mines.

Sir,

The Treasury, New South Wales, Sydney, 4 August, 1886.

I have the honor, by direction of the Premier, to inform you that when at Orange on Monday last, 2nd instant, a deputation introduced by Mr. T. Dalton, M.P., waited upon him with reference to the establishment of a model farm in the neighbourhood of that town, and as to paving and walling up the open creek running through Robinson's Park. Very strong representations were made as to the unhealthy character of the creek, which it was stated acted as the main sewer of the town. I enclose newspaper report of the deputation.

I have, &c.,

R. SCARLETT,

Secretary to the Premier.

Inform that an officer has already visited the Richmond River district, that he is at present in the western district, and that he probably visited Orange about the date on which the deputation waited upon the Premier. That after the western district, he will visit the Clarence River and New England districts, and then it is proposed to select from the sites referred to in the reports those which, in the opinion of the Government, are most suitable for the establishment of model or experimental farms in various parts of the Colony, and in the selection the claims of the Orange district will not be overlooked.—H.W., 6/8/86. Submitted. Approved.—J.F., 7/8/86. Informed, 10/8/86.

[Enclosure.]

EXTRACT from *Sydney Morning Herald*, 3rd August, 1886.

#### REPORT OF ORANGE DEPUTATION.

IMMEDIATELY afterwards the same deputation was introduced by Mr. Dalton, M.L.A., to Sir Patrick Jennings, who was welcomed by the council to Orange. The deputation brought several matters under his notice, the first being with reference to the establishment of a model farm near the town of Orange. It was urged that Orange being the centre of a large agricultural district, and possessing good land, with much variety of soil, was especially fitted to be the site of a model farm.

Sir Patrick Jennings said that it was a reproach to the Colony that it did not produce enough breadstuffs to meet its own consumption, and, in order to stimulate the public thought and action in this direction, he had pointed out the necessity for education and exertion. Model farms were not always a success, but that he thought was not so much the fault of the farms themselves as bad management and careless selection of locality. In the Orange district there was a diversity of circumstances, which would point it out as an exceedingly good district for the establishment of such a farm. Its altitude, climate, and soil, and also its central position and the fact of a railway going through, made it present more advantages than any other place he knew of.

### No. 3.

#### Mr. W. S. Campbell to The Under Secretary for Mines.

Sir,

Department of Mines, 6 September, 1886.

In accordance with the instructions of the Honorable the Minister for Mines, I proceeded, on the 27th July, from Bathurst to Orange, and examined the areas suggested, and offered for sale to the Government as sites for an experimental farm; and also the areas on the temporary and permanent commons, suggested for the same purpose, and have the honor most respectfully to report that, having carefully examined these areas, I am of opinion that the most suitable farm for the purpose is that known as "Chapman's farm," recommended to the consideration of the Government by the Millthorpe Farmers' Union. The particulars of this farm are well and correctly given in the secretary's (Mr. Goodman's) letter. The improvements are for the most part substantial, and are of considerable value, and the price asked, considering the improvements, the proximity of the land to a railway station and village, and the very large proportion of unquestionably good land, the price asked is reasonable. That portion of the farm adjoining the village of Spring Hill might be sold (about 50 to 100 acres), without injury to the farm, as town allotments, and I believe it would realise a very large sum of money. The village contains an area only of between 60 and 70 acres, and all the allotments have been alienated. Of the areas suggested on the commons, that on the permanent is altogether unsuited for farming purposes, consisting almost entirely of a mass of basaltic rock, but I think that sufficient good land could be obtained on the temporary common

common for all the purposes of a farm, and an everlasting supply of good water can be obtained. The land is flat and undulating, intersected by very stony ridges, with red basaltic soil, and light-coloured schist. A considerable portion of the red soil is very stony. The timber consists of "apple" and "gum," and is of little or no value except for shade and shelter, and hence the advantage of the stony ridges in this district—the timber on them is not removed.

In the event of the Government not entertaining the offer of "Chapman's farm," I most respectfully beg to recommend that the whole of the temporary common of Orange be set apart for the purpose of an experimental farm. I may state that the common appears at present to be a waste and a nursery for "black thistles," and also sweet-briar, which is becoming a great pest to the district. I was informed that the fees paid for grazing purposes amount to the sum of about £25, sufficient to pay the secretary's salary. The electorate of Orange contains an area of about 1,780 square miles, and of this, in 1885, according to the Registrar-General's last statistics, 27,911 acres were under cultivation (22,783½ freehold and 5,127½ leasehold), and this area was cropped as follows:—

Wheat, for grain ... ..	12,974½ acres ;	average yield, 13½ bushels per acre.
Do for hay ... ..	2,845 "	15 cwt. "
Maize ... ..	228½ "	14 bushels "
Barley, for grain ... ..	46 "	" "
Do for hay ... ..	55 acres 2 roods	20 cwt. "
Oats, for grain ... ..	1,133 acres 1 rood	16¾ bushels "
Do for hay ... ..	6,936 "	15 cwt. "
Rye, for grain ... ..	46 "	" "
Millet ... ..	32 "	" "
Potatoes ... ..	2,386 acres 2 roods	2 tons 1¼ cwt. "
Tobacco ... ..	7 "	43 cwt. "
Sown grasses, for hay ... ..	162 "	11½ " "
Vineyards ... ..	10¼ "	" "
Garden and orchards ... ..	353½ "	" "

During the same year two of the best farmers in the district—one at Milltorpe and the other at Spring Hill—produced respectively 18½ bushels and 21 bushels of wheat to the acre; and in 1882, a very favourable year for wheat, the one obtained 23 bushels, and the other 30½ bushels, to the acre.

It will be observed from the above table that the farmers here, as in the Bathurst district, depend chiefly on wheat (for grain and hay), and oats for hay, but here they cultivate potatoes considerably for a rotation; and on many farms potatoes succeed fairly well; accounts of very large yields were given me, but I am under the impression that from 2 to 6 tons an acre will be a fair average. I was informed that the best year known for wheat was 1883, when it rained continuously for about six weeks during October, November, and the beginning of December. One farmer gave me his return as 25 bushels 35 lb. (not including tailings), and the price received was 5s. per bushel, and the return of another was 30¼ bushels. Some of the straw of that year was held over and sold this year (1886). In 1884, the yield dropped to 17 bushels 45 lb., in one case (price obtained 3s. 11d.), and 22½ bushels in the other. As a rule the farmers do not keep accurate accounts of their returns or of any transactions on their farms, but the above two may be relied upon. I may add that in 1886, the price obtained by one farmer for his wheat was 11s. per bushel, and in 1886 the price was 4s. 11d. per bushel. His average yield for the last twenty years has been 19 bushels 49 lb. per acre, and the average price obtained was 4s. 11½d. per bushel. Wheat in the field is at times so foul with wild oat, under careless farming, that it has to be cut for hay, and I was informed that this is the reason why so much hay is now grown in the district. Heavy crops of oats, (seed) have been obtained at times, but the seasons are said to be too dry, as a rule, for this grain, and the land is foul with the "wild oat." English barley has succeeded well; as much as 50 bushels of a good sample has been obtained per acre, but there is no market for it as there is no malt made in the district. Some endeavours were made to float a company at Orange to build a malt-kiln, but for some reasons it was allowed to drop. The climate is said to be too dry for beans. Some varieties of peas appear to succeed well but for caterpillars, which at times destroy the pods.

Chicory grows well, and large crops, as much as 7 tons per acre, have been produced, but the labour of washing the roots for market prevents its being very profitable, especially to farmers who depend on their own labour. Mangels and beetroot succeed well, but they are difficult to grow in consequence of most of the farms through neglect having become so foul with weeds. I have no doubt that under an improved system of agriculture many of these plants could be profitably grown. I could not ascertain that draining or subsoil ploughing had ever been attempted on even the best farms. I was informed that many years ago "new land" would yield six or eight good crops; but that the "new land" put under cultivation now will not yield more than three good crops.

In many localities in this district I believe irrigation could be carried out without much difficulty, as many of the creeks are constantly flowing, but I could not ascertain that it had ever been attempted. Artificial grasses, cotsfoot, prairie, rye, and all the other clovers succeed very well. I found red clover seeding well. Fruits of temperate and cold climates succeed admirably, so well, that at times there is no local market, but at the best of times the profit appears to be made by the "middleman." A fruit manufactory should succeed well at Orange. Some of the apples and pears that were exhibited at the London Colonial Exhibition, and presented to the Queen, were grown in this district. Apples and pears keep well through the winter. I saw some very fine specimens, which would realise £1 per case in the Sydney markets. A very large number of trees are being planted this year. In fact, the nurseryman cannot supply enough to meet the demand. The birds, especially the parrots, play great havoc amongst the fruit, so much so that one grower is considering the advisability of covering his trees with galvanised wire netting. This would, however, be a rather costly undertaking. Raspberries succeed well, and should be very profitable to grow. In Lilydale, in Victoria, many selectors grow nothing else, and the profits are very large. The fruit is sent to Melbourne, and made there into jam.

Gooseberries also succeed well, and cherries grow to an immense size, as do all varieties of plums. Fruit-growing will, I believe, be a most profitable industry in this district, especially as there appears to be good reason to suppose that a large trade will be established between the colonies and Great Britain and other European countries.

Some

Some of the best, if not the best, farms in the district are to be seen at Spring Hill and Millthorpe, and these are owned and worked by intelligent, energetic, and hard-working farmers, who have attended to their business, and have consequently prospered. It was a great pleasure to see these farms—good, comfortable homesteads, with every domestic convenience, excellent barns, stables, and fences; gates in good order near orchards and flower-gardens, and yards and out-building clean and tidy, and here also are to be seen some of the most improved labour-saving appliances. One of these industrious and intelligent farmers informed me that in 1863 he had, by hard work, saved £25, just sufficient to select 100 acres, where his comfortable house now stands, but for several years after this he was unable to clear his land or make improvements. At last he made a start, and is now a comparatively wealthy man.

Others also, who have exercised common sense, and attended to their work, have invariably succeeded in making comfortable homes, although many have started with little or no capital. One informed me, "I have always had to work hard, and can do almost all kinds of labour belonging to a farm, for I find if a man succeeds in farming he must turn his hand to all sorts of work, even carpenters', bricklayers', or stonemasons', or painters'; he must tackle all, for mechanics' labour is too high in this country for the farmer. This is one reason you do not see better homesteads on the farms. If farmers were paid equal to other classes they could employ mechanics and all the rest of the unemployed in the country; but farmers, generally speaking, start without capital and without experience, and this is a great drawback to them."

All the farmers I have spoken to on the subject are exceedingly anxious to see an experimental farm established in the district, and are fully alive to the advantage to be derived from one.

The climate, soil and conditions under which farming is carried out on the table-lands of the Orange district are quite different to those of Bathurst and Molong, and I think it will be advisable to establish farms in each of these districts. They can easily be worked in conjunction with one another, owing to the railway communication and the differences of seasons.

The farming in these three districts is, with some few exceptions, equally wasteful; even some of the very best farmers are working in the dark, and might improve their farms greatly if they could see how to take advantage of improved systems of farming, and be guided by scientific principles.

Some few farmers in the Orange district keep sheep on their farms, and find great benefit from them, but they are difficult to keep within the present miserable log fences which are generally in use in this district (owing to the difficulty of burning the timber). A farmer informed me, "Now my experience and opinion is, that good, large-framed, coarse-wool sheep would be the most profitable stock a farmer could keep if he could trust them out in the paddocks without shepherding. I had the cross-bred Lincoln and Merino, three times out of four, drop me two lambs each, and I had fat mutton all the year round for the use of the house; but since the hares have become so plentiful about here, and so many persons are keeping dogs to hunt them, that I had such losses by the dogs, that I had to give up keeping sheep; the dogs would get at them in the daytime in consequence of people taking dogs along the road. Few persons keep these dogs tied up at night. The Dog Act requires amending, and a great tax should be put on dogs, and people be compelled to keep them under control, or tied up at home."

There is no doubt that this man is quite correct; the hares and dogs are a terrible nuisance, not only in this but in all the western districts I have been through. It is useless to plant fruit-trees without protecting them against the hares.

Insect pests are said to be a very great nuisance and cause of loss, and it is through that the dry seasons have been favourable to them.

Red rust does not appear to any extent in the district, but precautions are necessary against smut. The wheat has to be "pickled" before sowing; bluestone is used for the pickle.

I believe the smut or some other fungus is destroying a very useful grass known locally as "Coss's grass," said to have been introduced by a man named Coss; being an annual, it was not above ground during my visit, but specimens will be sent to me with the "smut" for investigation.

The "old land" in the district appears to be very foul with weeds, the worst one "sweet-briar," sorrel, wild oat, and black and variegated thistle, also sedgely grass; and it is almost impossible to grow some crops in consequence of these. Refuse lime can be easily obtained at Blayney, and this could be applied to the sorrel with good effect if water slacked on the ground.

I understand that a manufactory for superphosphate of lime is likely to be established at Blayney; if so, the farmers should take advantage of it, as it is far superior to bone-dust, but they should insist on a guarantee being given as to the percentage of phosphate and nitrogen in the matter sold.

Very little dairying is carried on in the district in consequence of the long winters. I was informed that good pastures for milking cows can only be obtained for about three or four months in the year.

I have, &c.,

WALTER SCOTT CAMPBELL.

#### No. 4.

R. Pudney, Esq., M.R.A.C., F.H.A.S., &c., to The Minister for Mines and Agriculture.

Sir,

Orange, 4 December, 1889.

In accordance with your instructions, I have the honor to report upon the temporary common of Orange, as a mentioned site for an experimental farm, and just give a few data and my opinion concerning it. Town of Orange, distant from Sydney 192 miles, almost due west; the common about  $\frac{1}{2}$  a mile distant; height above the sea, 2,843 feet; rainfall average for last eighteen years, 36.56 inches; geological series, volcanic and trap (basalt). The Orange district does not possess any suitable reserve to my knowledge after much inquiry, in your Department, and locally at Orange. The temporary and permanent common is close to the town, and much valued by the inhabitants for grazing purposes, for which it is almost entirely rented. The flats are small, irregular, and swamp at parts in wet weather, and intrusive ridges and outcrops of basalt appear on every rise. The herbage is naturally good, and, combined with fine rainfall, naturally make it much valued by the inhabitants.

The

The fine water reservoir is in one portion, and I would not advise you to attempt to resume it, either for our agricultural education scheme, or to try and make a better use of it than its present purpose. We must not have too many of these demonstrating or special model farms scattered about, and the one near Molong, at Garra, would serve the district well, as suitable for the products and stock that are best adapted for the districts of Molong, Orange, and Bathurst.

I have, &c.,

ROBERT L. PUDNEY, M.R.A.C., F.H.A.S., Etc.

#### Office Memorandum.

*Re* land proposed to be used for agricultural purposes; position, county of Bathurst, parish of Orange; area, 180 acres and 220 acres (approx.); owner, the Crown, under the following dedication and reserves:—Part of Orange temporary common, notified 1st March, 1867, 180 acres; part of Orange permanent common, dedicated 2nd October, 1868, 220 acres; part of Orange population area, proclaimed 14th July, 1885, 400 acres.

POSSESSION of these two pieces of land may be obtained by the cancellation of the parts mentioned of the above dedication and reserves, the notification of agriculture as a public purpose, and the renotification of the land as reserve from "sale and lease generally" for that purpose.

Compensation may be required for improvements on permanent common only.

Administrative work, *re* reserves, &c., comes under Department of Lands. The reserves should not be cancelled.

S. SMITH.

Letter to Department of Lands requesting that the permanent and temporary commons be not cancelled.—A.R., 9/4/90. Reply, *vide* Miscellaneous 90-1,891, that request has been noted in District Surveyor's Office, Orange, 15/7/90.

### No. 6.

T. Dalton, Esq., M.P., to The Minister for Mines and Agriculture.

Sir,

Sydney, 24 April, 1890.

Understanding that a gentleman from the Department of Agriculture is now in the west, with a view to reporting upon a suitable site for the establishment of a model farm, I have the honor to request that you will kindly ask him to extend his visit as far as the district of Orange, which, as you are aware, is the centre of a very large agricultural community, as both the soil and climate there are especially suitable for the growth of cereals and fruits. During a former Administration a gentleman visited the district and was in communication with Mr. Chapman, of Spring Hill. I am, however, quite willing to base the claim of Orange for the establishment of an Agricultural College upon the opinion of any Government expert. If the gentleman who is to make the report will call upon the Mayor of Orange and Mr. Chapman, as well as the Police Magistrate (Mr. Lane), they will give him all the information necessary for him to obtain, and I would again ask that before any locality is decided upon that the district of Orange may be inspected.

I have, &c.,

THOMAS DALTON.

### No. 7.

T. Dalton, Esq., M.P., to The Minister for Mines and Agriculture.

Sir,

Sydney, 25 April, 1890.

Referring to my letter of yesterday, upon the subject of the proposed model farm, I now desire to direct your attention to the enclosed application upon the same subject, from the Borough Council of Orange. You will observe that they state that they consider that the district of Orange should also be inspected, as they are confident that more suitable land can be obtained there than in the district of Bathurst.

"They would also point out that Orange possesses a very large common, a great portion of which is very suitable for such a farm, and they do not doubt that the townspeople would freely surrender it for that purpose, and thereby save the Government the heavy cost of purchase of private lands."

Trusting to receive a favourable reply,

I have, &c.,

THOMAS DALTON.

Seen.—S. SMITH. Place with other papers.—S.S. Acknowledge to Mr. Dalton the common has been inspected and a report on it is now before the Minister.—H.C.L.A., 12/5/90. Informed, 13/5/90.

[Enclosure.]

[Enclosure.]

Borough Council, Orange, to T. Dalton, Esq., M.L.A.

Dear Sir,

Town Hall, Orange, 23 April, 1890.

I am directed by the Municipal Council of Orange to request that you will be good enough to write to the Minister for Agriculture, and bring under his notice the suitability of the district of Orange for the establishment of a model farm.

The Municipal Council are informed that an inspection of lands round Bathurst has lately been made by an officer of the Department, and they consider that the district of Orange should also be inspected, as they are confident that more suitable land can be obtained here.

They would also point out that Orange possesses a very large common, a great portion of which is very suitable for such a farm, and they do not doubt but that the townspeople would freely surrender it for that purpose, and thereby save the Government the heavy cost of purchase of private lands. The Municipal Council, therefore, respectfully ask that you will bring their claims under notice of the Minister at an early date. A similar request has been sent to your colleague, Mr. J. Torpy, M.L.A.

I am, &amp;c.,

THOMAS W. REEVES,  
Council Clerk.

No. 8.

The Director of Agriculture to Mr. H. W. Newman, M.P.

Sir,

15 September, 1891.

I am directed by the Minister for Agriculture to acknowledge the receipt of your letter of the 11th inst., enclosing a communication from Mr. P. Flanagan, urging the establishment of an experimental farm on the Orange Common, and to say that the Minister is in full possession of all necessary information about the different sites for the western experimental farm, and will give the whole matter his best consideration.

I have, &amp;c.,

H. C. L. ANDERSON,  
Director of Agriculture.

No. 9.

H. W. Newman, Esq., M.P., to The Minister for Agriculture.

Honorable and dear Sir,

"Hotel Metropole," Sydney, 11 September, 1891.

Referring to the question I asked in the House the other night in reference to the Orange Common, I have been making further inquiries, and respectfully submit from the replies to hand you have either been misled or misinformed on the matter, and, as the Orange district may perhaps suffer in consequence, venture to draw your attention to my friend, Mr. Flanagan's, letter of the 9th, and hope before you finally decide against Orange you will cause further inquiry as to the suitability of Orange for a model farm, and also the Orange Common, which we are perfectly willing to hand over for that purpose.

Anticipating a favourable reply,

I am, &amp;c.,

H. W. NEWMAN.

Seen,—A report has already been obtained.—S.S.

Inform Mr. Newman that the Minister is in possession of all necessary information about the different sites of the western experimental farm, and will give the whole matter his best consideration.—H.C.L.A., 15/9/91.

Informed, 15/9/91. Circular *re* selection of Bathurst site sent to Messrs. Torpy and Newman, M's.P., and Council Clerk, 12/5/92.

[Enclosure.]

Dear Newman,

Orange, 9 September, 1891.

I do not remember whether Mr. Anderson said that the gentleman who came from the Agricultural Department said that the common was suitable or not, but I am sure Mr. A. told myself and Mr. Warboys that it was reported to the Minister that the principal citizens were opposed to giving up the common on any consideration, and that, therefore, it was useless to entertain the question of the common at all for a model farm. Now, it is undoubtedly untrue that any objection ever was raised to the common being taken for a model farm—in fact, the people would only be too glad to give the common up for such a purpose. And when one comes to consider all the circumstances, the climate, the character of the soil, the fact of this being the centre of the largest agricultural area in the Colony, it is rather surprising that the matter has not been settled long ago. If there is any place in the Colony where a model farm could be made to pay it is here, and you know that no matter what may be produced on a model farm, unless the management can show that it is paying all their efforts as an example to farmers are simply waste time. The one great thing is to show that improved methods pay. If that cannot be shown, then, what is the advantage sinking 30s. and producing 20s. in such a life and death struggle as farming is at present? The whole thing would only be food for ridicule as much as anything else. It is true that scientific farming would give farmers many useful hints which would pay them and would not pay those who would have to employ labour at every turn; but then that would not justify the establishment of model farms. Only the fact that scientific farming would pay as an industry would entitle any Government to go to the expense of establishing model farms. I spent three years after leaving college attending lectures at an institution in Dublin, and my opinion is that if the Government could show the combined industries of farming and grazing would pay, it would do far more good in this Colony than farming alone. I notice Sir H. Parkes laid upon the Table the maps of which I spoke to you in my last. I wish you could get me one. You see Barton's idea of protection is just as I told you mine was during the election. I also see that the Queensland Prime Minister has given expression to the same idea. I see old Brigam Torpy is in favour of divorce. Don't touch it; it's a beastly subject, and not calculated to raise any member who votes for it. No news of any consequence.

H. W. Newman, Esq., M.P.

Yours, &amp;c.,

P. FLANAGAN.

No. 10.

J. Torpy, Esq., M.P., Orange, to The Minister for Mines and Agriculture.

Sir,

Orange, 13 July, 1892.

A number of farmers and other residents of the district and town of Orange have requested me to ask you to establish, somewhere near Orange, an experimental farm. They for some time past were quite sanguine that a model farm would have been located in the vicinity of the town, and were greatly disappointed when it transpired that Bathurst had the preference. I need not inform you that the land round Orange is as good for agricultural purposes as any in New South Wales, and is as thickly settled upon as any part of the country taken up for agricultural purposes. Some of the finest wheat, oats, and hay are grown here, a crop seldom failing, owing to our ample and regular rainfall. I may add that all

the

the English fruits thrive here well, and are equal, in size and quality to the best of the Tasmanian or Californian fruit. A site for an experimental farm would cost the Government nothing, as a piece of land could be resumed from the temporary town common perfectly suited for the purpose. There is a piece of land marked B on the plan (tinted blue) I am sending herewith, of 508 acres, admirably suited for a site for an experimental farm. It is close to Orange, and adjoining the railway, and is in every respect adapted for cultivation. Cereals, fruit, and vegetables would grow well upon it. Very little clearing would be required, as most of the heavy timber has been removed for firewood. The establishment of an experimental farm near Orange would be so great a boon that I trust you will see your way to grant it.

Yours, &c.,

JAMES TORPY.

See Appendix B.

I am sending plan. The piece marked B, 508 acres, is the temporary common.—J.T.

Perhaps a reply may be sent to Mr. Torpy in the same terms as to Dr. Ross, *re* his application for an experimental farm at Molong.—H.C.L.A., 20/7/92. The Under Secretary. Submitted.—G.E.H., 22/7/92. Approved.—T.M.S., 22/7/92. Mr. Torpy, M.P., informed, 25/7/92.

#### No. 11.

The Director of Agriculture to J. Torpy, Esq., M.P.

Sir,

16 July, 1892.

I am directed to acknowledge the receipt of your letter of the 13th instant, addressed to the Minister, recommending a site near Orange for the establishment of an experimental farm.

I have, &c.,

H. C. L. ANDERSON,

Director of Agriculture.

#### No. 12.

The Under Secretary for Mines and Agriculture to J. Torpy, Esq., M.P.

Sir,

25 July, 1892.

I am directed by the Minister to acknowledge the receipt of your letter of the 13th instant, and in answer to your representations to say that it is not intended to establish another model farm at present, but as soon as it is proposed your recommendation in favour of the temporary common site near Orange will receive every consideration.

I have, &c.,

HARRIE WOOD,

Under Secretary.

#### No. 13.

Office Memorandum.

Experimental Farm, Orange.

THE Hon. Thos. Dalton, Esq., M.L.C., wishes the Minister to receive him as a deputation on Wednesday next, at noon, *re* setting apart (say) 100 acres of the temporary common at Orange as an experimental farm. Mr. Dalton would be glad if Mr. Inspector de la Motte can be present.—H.W., 24/10/92.

Yes. Wednesday next, at 12 o'clock noon.—T.M.S., 24/10/92. Will the Director be good enough to instruct Mr. de la Motte to be present if he is within easy reach of Sydney.—H.W., 24/10/92. Inspector de la Motte instructed.—H. C. L. ANDERSON. A.P., 24/10/92. The Under Secretary.

#### No. 14.

Deputation.

On Wednesday, 26th October, 1892, at noon, asked for by the Hon. Thos. Dalton, M.L.C.

*Subject*:—Proposal to set apart 100 acres of the Orange temporary common as an experimental farm.

Papers herewith.

Minister's decision:—Adjourned to Friday at noon.

#### No. 15.

Deputation.

On Friday, 28th October, 1892, at noon, asked for by the Hon. Thos. Dalton, M.L.C.

*Subject*:—Proposal to set apart 100 acres of the Orange temporary common as an experimental farm.

Papers herewith.

DEPUTATION received by the Hon. T. M. Slattery, Esq., Minister for Mines and Agriculture, 28th October, 1892. Introduced by J. Torpy, Esq., M.P. for Orange.

*Subject*:—Experimental farm at Orange.

Present:—The Hon. T. Dalton, Esq., M.L.C.; J. Torpy, Esq., M.L.A. for Orange.

*Mr. J. Torpy, M.P.*: I may state that my colleague, Mr. Newman, would have joined this deputation to-day, but on account of urgent business he had to start away for Orange this morning. At the same time he is quite in accord with the application. I have already had some communication with you by letter and verbally in reference to the application of the people of Orange for an experimental farm.

I wish to point out that we do not want a model farm, but an experimental farm, and we think that we have singularly and specially-considered claims for this experimental farm. The strength of our case is, that the Government would not be compelled to purchase land for use, as we have fortunately a piece of land known as the temporary town common, which is, from a geographical point of view, almost perfectly situated. This land is just 1 mile from Orange. It is on the main Western Railway, going in one direction to Bourke, and the other to the metropolis. The main Western Railway crosses through this piece of land. In addition to that the Molong Railway junctions at this particular part. So really this piece of land is in the angle where the Molong Railway joins the Great Western Railway, showing that for the purpose of sending the produce away, and receiving seed, it is perfectly situated. It is in the centre of our chief agricultural land. It is also close to the rich districts of Milthorpe, Springfield, the Forest, Blayney, and Carcoar. It is situated in the centre of all these places. For years the residents have been agitating for this experimental farm. They have applied to previous Ministers, and they have never been refused, but they never succeeded in getting any direct action taken; but as a matter of fact, the previous applicants wanted the Government to purchase a piece of land that was the chief trouble, but recently finding that they could not induce the Government to purchase the necessary land, they determined to apply for a portion of this temporary common. It consists of fine chocolate soil, and it is admirably suited for the cultivation of every kind of cereal, and the best of English fruits. Several experts from your department have pointed out strongly to us that the Orange farmers are certainly backward in scientific farming, and they really want certain instructions. Another thing, I know that one of the arguments put forth why we should not have an experimental farm is the proximity of Orange to Bathurst. It is 42 miles from Bathurst, but Orange is 700 feet higher than Bathurst, so that the class of cereals grown in Orange varies to those grown in Bathurst, which has a different climate and different soil. I do think that in addition to the services already rendered to Orange by your department, of which the people are perfectly conscious, because we have received visits from your officers (the Inspectors of Agriculture) which have done good service to the place. They have instructed the people how to compete with the different pests, and they have taught them a great deal, and the people recognise the important services rendered by the department. But there is intense anxiety about this experimental farm. It would cost very little. It is quite a distinct thing from a model farm, and I think the claim of the Orange community is exceedingly strong. We do not press this question with the idea of getting anything expensive, but we really do think that the arguments are so strong and the facilities so great, that we trust you will give this matter very full consideration. Sometime ago we had one of your officers up there, and I, always anxious to do what I can for the district, drove the officer, Mr. de la Motte, around the district. I showed him the site, and, of course, without in any way committing himself, he expressed the most favourable opinion of this site. The soil is admirably situated for growing cereals and fruits. I do think that you will be able to see that this is not at all an application which is made in a light way. It is really a solid local want, of which every man in the community is deeply interested. They have been agitating now for this experimental farm some years, in fact, they originally wanted a model farm, but they would be content now with an experimental farm.

*The Hon. T. Dalton, M.L.C.:* I can add very little to what Mr. Torpy has said, but I can corroborate what he says with regard to the people of Orange. They have always been agitating for a model farm, but they have now decided, owing to the fact that a model farm is to be established at Bathurst, to ask for an experimental farm. The people of Orange will never cease agitating until they have this experimental farm, and as has been pointed out to you, the locality where the experimental farm would be situated is on the Great Western line, within 1 mile of Orange, and at the junction of the line now running to Molong, and at the present time in course of construction to Parkes. If an experimental farm is established there the travellers going out east and west will see the crops growing, and see what is being done, and as Mr. Torpy pointed out the farmers of Orange are certainly deficient in knowledge with regard to high-class farming, the farming is carried on in a very crude manner. The object of the people at the present time in agitating for this experimental farm is to teach the farmers how to cultivate the land, in order to grow the different cereals, and what is best to grow. The experimental farm at Bathurst will not meet the case at all. It will not be sufficient for the Orange people, simply because the soil is different, the climate is different, and they can produce productions at Orange which cannot be produced at Bathurst. Therefore, if these people are to be considered at all—and considered they must be, some day or another—it is only a question whether it will be considered at the present time. They never will stop agitating until they get that experimental farm. It has been pointed out by Mr. Torpy that it will cost the department nothing whatever at the present time. All you have to do is resume 100 acres of land.

*Mr. Torpy, M.P.:* Or perhaps 200 acres.

*The Hon. T. Dalton, M.L.C.:* They will be satisfied, I think, with 100 acres, from what I can learn from Mr. De La Motte, and he also tells me that in the course of four or five years the farm will be self-supporting and leave a profit under proper management. I have already pointed out to you that the place where the people want the farm is situated at the junction of the Molong and Great Western lines, and people living along those lines will come to receive instructions by seeing how the farm is carried on. The soil and climate at Molong and Orange is very nearly similar; I think a little warmer at Molong. Both are basaltic, as well as limestone countries. The people of Orange, we think, are entitled to some consideration. If favours are going to be distributed at all, I do not know of any other part of the Colony where people are more entitled to this means of education which they ask for than the people of Orange.

*The Hon. T. M. Slattery, Minister for Mines and Agriculture:* Gentlemen, as you see, I have a large bundle of papers before me, and this particular bundle refers to the question of an experimental farm at Orange; and I may tell you that I have similar large bundles of papers relating to the question of experimental farms for various districts, north, south, and west, and one of the difficulties in coming to a conclusion or prompt decision about the question of the establishment of experimental farms is really the question of what I may term conflicting claims. I am anxious, while I am Minister here, not to give a favour to any district. What I am anxious to do is to do what is right between all the districts, and, as these experimental farms must be established in various portions of the Colony, to have them established in such centres of various portions of the Colony as will not be taken into consideration at all with regard to the locality, but taken into consideration with regard to the general benefit of the community. Now,

in regard to this question of an experimental farm for Orange, my friend Mr. Torpy has certainly not been idle about the matter. I suppose he has spoken to me no less than twenty times about this matter. I have correspondence from Mr. Torpy, also from Mr. Newman, about this very same question. This question was first raised as far back as July, 1886, by Mr. Dalton himself, when he was one of the members representing Orange in the Legislative Assembly. In consequence of the representations then made, a gentleman who is very expert in matters of this kind, Mr. Walter Scott Campbell, and who is one of the high officers in the Department of Mines, was sent to report upon the question of the establishment of an experimental farm at Orange.

*The Hon. T. Dalton, M.L.C.:* "A model farm."

*The Minister:* It may have been a model farm because both questions are raised in his report. I may read to you the report to show in exactly what position Orange stands. It does not require any favour at the hands of the Minister or Government, because the report of Mr. Campbell, who is a very competent authority, states "The climate, soil, and conditions under which farming is carried out on the table-land of the Orange district are quite different to those of Bathurst and Molong, and I think it will be advisable to establish farms in each of these districts. They can easily be worked in conjunction with one another owing to the railway communication and the difference in seasons. The farming in these three districts is, with some few exceptions, equally wasteful, even some of the very best farmers are working in the dark, and might improve their farms greatly if they could see how to take advantage of improved systems of farming, and be guided by scientific principles." So, in 1886, Mr. Campbell stated in his report exactly what you and Mr. Torpy said to-day. I may say that I am very glad to hear such excellent reports on all hands on the work done by the Inspectors of Agriculture. I have heard from all parts of the country that the inspectors have rendered great services in giving advice to farmers. I know from facts on all hands that the farmers in the country acknowledge the great work rendered to the farming interest, by these visits of the inspectors, and it is gratifying to me to-day, to hear as Minister, from you Mr. Dalton and Mr. Torpy, expressions of the same opinion.

I may say that this question of the establishment of model farms will very soon have to be decided upon. It must be done, it is part and parcel of the scheme of agricultural education, and we have to proceed naturally enough with caution, because I do not want to make any mistake. I fully recognise the importance of the district of Orange. I know the district well myself. I know it is one of the richest districts in the Colony; and I can only say to you, to-day, gentlemen, exactly what I said in July last to Mr. Torpy. I directed that a letter be sent to Mr. Torpy, informing him that it was not then intended to establish another model farm at present, but as soon as it is proposed, the recommendation in favour of the site near Orange will receive every consideration. All I can say is this, that with regard to this question of an experimental farm for Orange, the report of Mr. Campbell is in favour of it, and I shall call on Mr. de la Motte, not in any way that I think it necessary to confirm Mr. Campbell's opinion, but merely because so many years have elapsed since a report was obtained. I shall ask Mr. de la Motte to furnish me with a report which I shall put with the papers, and as far as I can see Orange is certainly entitled to the very greatest consideration when this question has to be decided. I would not, until I have all the papers relating to the various other districts that have applied, make any promise, and I am sure that you, gentlemen, who are experienced in public life would not expect me to do so until I have all the papers from the various districts before me. Having them all before me, and getting the best advice I possibly can from the scientific officers connected with the Department of Agriculture, I shall come to a conclusion, and I may say that, when I do come to a conclusion, I shall come to it, I hope, conscientiously without attempting, or desiring to attempt to favour any particular locality in the Colony.

#### No. 16.

J. Torpy, Esq., M.P., to The Minister for Mines and Agriculture.

Sir,

Sydney, 28 October, 1892.

Referring to previous correspondence regarding the proposal that an experimental farm should be established at Orange, I beg respectfully to point out that the people of that district have been agitating for this farm for a great number of years, and have made repeated representations to previous Ministries as well as to the present Government upon the subject.

The inhabitants of Orange feel very forcibly that they have a particularly strong claim for this experimental farm, and they further desire it to be pointed out that the land suggested to be used, and which is especially well adapted for the purpose, is a portion of the temporary common at Orange, and could therefore be resumed without expense to the Government. The location of the land is also greatly in favour of the proposal, it being situated at the intersection of the Western and Molong lines of railway, and on the border of the high road to the chief agricultural district, embracing Springhill, Millthorpe, Blayney, Carcoar, and Forest. The farm would also be in full view of all travellers over the Western line. It would be distant about 1 mile from the town of Orange, and produce could be easily conveyed either eastward or westward by means of a railway siding on the farm itself. Relying upon your giving this application your most favourable consideration.

I have, &c.,

JAMES TORPY.

Yes.—T.M.S., 31/10/92.

Sent to Mr. Torpy,

## Mr. C. de la Motte to The Director, Department of Agriculture.

Report of the Orange Common, with a view of establishing an Experimental Farm there.

Sir,

Woonona, 4 January, 1893.

On the 28th October last I was, by the Honorable the Minister for Mines and Agriculture, Plan A. instructed to furnish a report of the Orange Common, with a view to have an experimental farm of 100 acres established in the neighbourhood of the town of Orange, I now have the honor, through you, to lay the above-mentioned report before the Honorable the Minister.

I may add that the reason the report has not been drawn up ere this was that I preferred to wait until I again visited the district, so that I could thoroughly inspect the common and the surrounding district, thereby enabling me to conscientiously recommend to the Minister that the district warranted the establishment of an experimental farm. Acting upon this, I, in company with the Mayor of Orange (Mr. Tanner), visited and inspected, on the 22nd December ultimo, the permanent as well as the temporary common, of the Orange Permanent Common, visited and inspected by Charles de la Motte, Inspector of Agriculture, on the 22nd December, 1892, with a view to have a 100-acre experimental farm established in the above-mentioned district, as suggested by the deputation that waited on the Honorable the Minister for Mines and Agriculture on the 28th October, 1892.

The town of Orange, situated 192 miles north-west of Sydney, and some distance from the left bank of the Macquarie River, is a rising town in the centre of a fine agricultural and mining district, being about 2,843 feet above the sea-level. But the proposed experimental farm (as marked red on the accompanied plan) being 170 feet higher than the town; the altitude would, therefore, be 3,013 feet, and a distance of 3 miles from Orange in a southerly direction, but only three-quarters of a mile from the Bloomfield railway-platform. The 100 acres suggested by me for experimental purposes forms a part of the permanent common, which contains 508 acres, dedicated the 2nd October, 1868, and situated in the county of Bathurst, parish of Orange. The aspect of this portion of the common being north and east. It is bounded on the north by Brandy's Creek; south by Gosling Creek; east by Cadiangullong Road; and west by Mr. M. Lyster's conditional purchase. The soil near the Gosling Creek and Mr. Lyster's conditional purchase is a rich reddish chocolate loam, of volcanic origin, more or less stiff, varying from 1 to 14 feet in depth, which is highly adapted for fruit-trees, judging from adjacent orchards; while the soil towards the Cadiangullong Road and Brandy's Creek is different in character, besides varied in colour and texture. It is a strong black alluvial soil with a grey-yellowish subsoil, and should be excellent for wheat, barley, rye, hemp, flax, and any other cereals the climate may allow of; also, for root crops. Possibly it would be the better if some of the silica from the hilly land, which would tend to stiffen the straw for wheat. The chocolate soil would, no doubt, after a while, require manure to keep it in top condition if used for grain, and also to improve their texture for holding moisture, as the quality in that respect is low.

The land, which is undulated, is lightly timbered with white and yellow box. Of large trees there are, comparatively speaking, few, the principal being saplings. A good many old stumps and dry logs are on the ground; the latter would assist in burning off the timber when grubbed, as the green timber will be of little or no use for fencing purposes. I, however, learn from the Mayor (Mr. Tanner) that stringy-bark posts and rails could be had for £4 and £3 per 100 respectively, delivered at Bloomfield railway platform.

As I have already pointed out, there are two creeks, viz., the Gosling and Brandy's, which contain good permanent water—the former creek supplies the town of Orange. The reservoir into which this creek is running forms one of the largest natural water supplies in the Colony. The reservoir, being only half a mile from the suggested farm. The climate is, by reason of its elevation, colder than that of the other sections of the Colony. The mean annual temperature is 55 degrees, the mean summer maximum is 83 degrees; the mean winter minimum, 27 degrees; and the range of the thermometer between these points, 56 degrees. As regards humidity, it holds a position between the coast and the plains being drier than one and moister than the other. The mean annual fall of rain amounts to 30 inches, while the average number of wet days may be put down at 114. Some portion of the differences in this district is, doubtless, occasioned by the presence of the mountain chain which, though never rising to the level of perpetual congelation, is, during certain seasons, covered with snow, although not for a very long period. In winter the temperature frequently falls below zero, and ice is then very common, but the frost is generally of short duration, as the power of the mid-day sun is sufficient to produce a thaw. Altogether the climate closely resembles that of the south of England, though, from the fact that the rain falls more rapidly and less constantly, the excessive humidity of the English climate is not experienced. The fruits, grain, and vegetables can be cultivated to great perfection in the Orange district.

Although I am aware it is the intention of the Government to establish a model farm at Bathurst, I do not hesitate, after my inspection of the Orange district on this and other occasions, to strongly recommend that an experimental farm of 100 acres, as requested by the deputation, be granted to this district, while my reasons for recommending same are as follows:—

1. The elevation between Bathurst and the suggested farm at Orange differs greatly, the last-mentioned district being not less than 860 feet above Bathurst, which alone will make a considerable difference from an agricultural point of view.

2. That the soils in the neighbourhood of Bathurst are of a totally different character, and vary considerably in colour and texture.

3. That the majority of farmers would, in the Orange district, gain much knowledge from such a farm, as a visit to it would convince them that cereals, root, and leguminous plants, not omitting fruits hitherto foreign in this locality, could, in a climate like theirs, be grown with advantage to themselves and benefit to the country.

4. That seeing is believing, and that more good would be derived from a single visit than from half a dozen lectures. Farmers, as a rule, being prejudiced towards theory.

5. That not only Orange would derive good from such a farm as suggested, but districts like Spring Hill, Millthorpe, Blayney, Nacton, Shaw, Mount Macquarie, Cudal, Bowen Park, Trajerie, Mount Canobalas, and many others would derive an unlimited benefit from it. Besides, the districts are nearly all within 3,000 feet above sea level.

6. That in districts like the above mentioned, with a climate equal, if not superior, to that of South England, ought to be further advanced than they are, and only through want of knowledge in tilling the soil for plants at present foreign to their respective districts debars the farmer here to cope with the other countries.

Trusting my reasons for recommending the Orange district with a view to having an experimental farm established there will meet with your approval.

I have, &c.,  
CHARLES DE LA MOTTE,  
Inspector of Agriculture.

No. 19.

Mr. C. de la Motte to The Director of Agriculture.

Woonona, 4 January, 1893.

See Appendix C I HAVE by to-day's post forwarded report, together with a plan of the proposed experimental farm near Orange, as instructed by the Honorable the Minister.

CHARLES DE LA MOTTE.

Attach previous reports. Submitted.—H.C.L.A., 6/1/93. The Under Secretary. In submitting this report, I venture to suggest that the area is very small for a farm, and that there might be some difficulty about obtaining a title to the land for that purpose.—H.W., 17/1/93.

No. 1.

Mr. I. W. Toynton to The Minister for Mines and Agriculture.

Sir,

Comobella, 23 May, 1890.

I wrote to you, saying that I would acquaint you with a suitable piece of land for College Farm. There is a piece of land adjoining me, a reserve of over 2,400 acres, all good land. There is about 5 or 6 acres of limestone on it. There is one place on the same land which holds water well below my dam; rich chocolate soil, some of it is a little brown. I can show you another place about 4 miles away from my place, good land, in Mr. James Rodd's resumed area; it would be better to recompense him, and take the land from both squatters. The same land would have been selected years ago, owing for being reserved to suit the squatter, and if you send any person to me with a note from you wishing to show them the land, I would only be too glad to oblige you, but do not mention my name—although I do not care for them, for I am independent of either of them. I have grown apricots a quarter of a pound in weight; dessert apples 1½ lb. in weight. I believe it would be a grand place to grow grapes.

I have, &c.,

ISAAC W. TOYNTON.

P.S.—Anything you wish to know write to me, and if it is in my power to let you know I will. Such land as I recommend to you is scarce.

For report.—S.S., 27/5/90.

No. 2.

Mr. I. W. Toynton to The Premier.

Sir,

Comobella, 14 June, 1890.

I think it my duty to acquaint you of a suitable piece of land for a College Farm, and would be, if properly carried out, one of the most interesting industries New South Wales could be possessed of. There is a reserve adjoining me over 2,400 acres, all rich chocolate soil, about 5 or 6 acres of limestone on it. There is one good place for to make a tank, and will hold water well, and I can lay you on to another place larger, very good, 4 or 5 miles further away, which has been locked up to suit the squatter's pockets. This incoming week I mean to send you a sample of purple-straw wheat for you and also other professional wheat-growers to judge. I defy competition against the world, which is a big word to say. I have grown dessert apples over 1½ lb., apricots a quarter lb., egg plum a quarter lb., Italian

Italian red peach 1 lb. in weight. I shall also send you some of the grasses, and after I send you the samples you will not forget to send a person to me to inspect this land. No frost, good climate, not too hot nor too cold.

Hoping this will meet with your approval. Hoping you are recovering as fast as can be expected, for if we have not the pleasure of seeing you we have the pleasure of reading the reports.

I remain, &c.,

I. W. TOYNTON,  
Comobella Post Office.

P.S.—If you approve of an inspection of this land after I have sent you the samples, send the person to me. I live 1 mile from Comobella Post Office; and not to make it known to anyone before seeing me. I expect a reply to say that you have received this note.

Refer to Mines. The Under Secretary for Mines. C.W. (P.U.S.), B.C., 17/6/90. Acknowledged, 19/6/90. Place with other proposed sites.—H.C.L.A., 26/6/90.

### No. 3.

D. A. Ferguson, Esq., M.P., to The Under Secretary for Mines.

Sir,

Wellington, 30 June, 1890.

I have the honor to inquire if the Minister for Mines will make it convenient to receive a deputation from Wellington on the subject of the proposed model farms on Friday next, 4th July, at 11 o'clock a.m.

Will you kindly wire your reply, as I have to confer with the deputation on the subject.

I have, &c.,

DAVID A. FERGUSON,  
Member for Wellington.

Will the time named suit the Minister.—H.W., 1/7/90. Submitted. I will receive deputation on Friday, 11th July, 1890.—S.S., 1/7/90. Telegram, 1/7/90.

### No. 4.

#### Deputation.

DEPUTATION on Friday, 11th July, 1890, at noon—asked for by Mr. D. A. Ferguson, M.P., in reference to the establishment of a model farm in Wellington District.

*Present*:—Mr. Ferguson, M.P., Messrs. O'Halloran, Barton, Ireland, Aaron, and others.

MR. FERGUSON, M.P., in introducing the deputation, said that the application for the establishment of a model farm at Wellington, was entitled to much consideration on account of the enormous resources of the district.

Mr. O'Halloran said he thought the deputation would be able to show to the Minister's satisfaction the great claims the Wellington District had for the establishment of an experimental farm.

He pointed out that Wellington was the centre of a very large farming population, distinct in soil and climate from the surrounding towns, and it would be the most suitable site in the Western District.

The residents of the district depended more upon farming pursuits than in any district in the Colony. At present the farmers supply all the surrounding towns with produce, and with a scientific method of farming, such as they could learn at an experimental farm, they could compete with any district in the Colony.

There was Government land in Wellington District, at Jawbone, about 4 or 5 miles from the town. The soil was very good of a basaltic formation, and there was water in abundance for irrigation works.

He pointed out it would perhaps be more advisable to purchase a farm in full operation with buildings and everything else complete, than to reclaim the bush land. Fruit thrived wonderfully in the district, some of the farmers fed their pigs on grapes, and everything pointed to the possibility of very successful experiments being made with the view of increasing the number of products.

There were 346,650 acres occupied by freeholders, and 341,597 acres leasehold in the district. Wheat averaged 18.98 bushels per acre, maize produced enormous yields and a large quantity of butter was made. All that was required to advance the industries, was the establishing of the farm, and he hoped the Minister would give the question his most earnest consideration.

Mr. Barton stated that he could fully indorse Mr. O'Halloran's remarks. The Government had exhibited great earnestness in the matter of choosing sites for experimental farms, and more interest had been taken in the matter during the last few months than ever. The Wellington people depended almost entirely on the soil, which, no doubt, was very fertile, but required a more scientific method of cultivation. The inhabitants are mostly natives, and being to some degree isolated, have never had an opportunity of learning how to cultivate their land profitably. A model farm in the district would have a wide field for development. The climate is somewhat drier than that in most agricultural districts, and this, he thought was one reason that established the claims of Wellington for the establishment of an experimental farm. Orange and some of the surrounding districts did not suffer from droughts to one-half the extent that Wellington did, and for this reason they should endeavour to find out what kinds of plants, &c., would stand the climate. He was certain that sufficient evidence could be brought to show what a strong claim they had upon the consideration of the Government.

Mr. Ireland, who represented the ratepayers of Wellington, said that the farmers in the district were greatly in need of assistance in the way of a model farm.

Mr. Aaron wished to draw attention to the vast capabilities of the Wellington district. Even with the rude method of cultivating the soil adopted for the last thirty-six years enormous crops of hay, potatoes,

potatoes, and maize had been grown. Fruit grew in abundance. The country was limestone, and in places there is rich alluvial soil to a depth of 20 feet. Wellington occupies a central position, and the farmers could send their produce all over the Colony, and even to Melbourne. He considered that Wellington was the most suitable district in the Colony for the establishment of a model farm.

The Honorable Sydney Smith, in reply, said that he was fully aware of the strong claims of the Wellington district for the establishment of an experimental farm, but the Government had to exercise extreme caution in the selection of sites. He was desirous to fix upon sites in places where a farm would be of benefit to the majority of inhabitants. He hardly thought it would be necessary to inform them that the claims of Wellington would receive his most earnest consideration. The sites had not been selected yet, and he intended to have all the information and statistics submitted to him before finally deciding upon any site. At present he could promise nothing, but could assure them their district would not be overlooked.

---

No. 5.

Mr. M. C. O'Halloran to The Under Secretary for Mines and Agriculture.

Sir,

Wellington, 25 November, 1890.

Many months ago a deputation from here, introduced by the Member for Wellington, waited on the Minister for Mines and Agriculture in reference to a model farm for this town and district.

The deputation, of which I was the spokesman and secretary, was favourably received, and the Minister promised to have a report compiled of the claims of the place as soon as possible; since that time nothing further has been done in the matter, as far as we know, and I therefore respectfully request your kind attention to and completion of the promise made by the Minister at the time referred to.

I have, &c.,

M. C. O'HALLORAN,  
Times Office, Wellington.

---

Acknowledge. The whole matter of choice of suitable sites for the first few experimental farms is now engaging the attention of the Minister, and the claims of Wellington will not be overlooked.—H.C.L.A., 1/12/90.

Letter written, 2/12/90.

Mr. Dunnicliff, who is about to visit Wellington on other departmental business, will please arrange to inspect the site herein referred to and furnish a report upon the soil and its capabilities. No doubt Mr. O'Halloran will arrange to accompany Mr. Dunnicliff to the place if called upon.—H. C. L. ANDERSON (*per* A.P.), 10/12/90.

See report of 18/3/91.

No. 6.

The Director of Agriculture to M. C. O'Halloran, Esq.

Sir,

Department of Agriculture, Sydney, 2 December, 1890.

I have the honor to acknowledge the receipt of your letter of the 25th ultimo, with reference to the establishment of an experimental farm in the district of Wellington, and in reply beg to inform you that the whole matter of the choice of suitable sites for the first few of these farms is now engaging the attention of the Minister, and may add that the claims of your district will not be overlooked.

I have, &c.,

H. C. L. ANDERSON.

Director.

---

No. 7.

Mr. I. W. Toynton to The Director of Agriculture.

Sir,

Comobella, 20 December, 1890.

Mr. Dunnicliff visited my place last Monday, unexpected, and I hope whenever anything of the sort happens again for the benefit of the people and the district time will not be so precious with the inspectors, for it is a question of great importance to many in some centres and the product of the district.

It grieves me to make the remark that Wellington has not been made better known on account of its silent Members—I will not say dummies. I only wish you had visited the Wellington district this time twelve months back, under favourable season. I showed Mr. Dunnicliff the reserve that I recommended as a suitable piece of land for a model farm. I took a maddock with me and a shovel, and showed him the surface soil and subsoil in two different places, but I would have been better pleased if he had taken a sample from three different places to convince everyone of the fertility of the soil and its adaptability. I was anxious to show Mr. Dunnicliff One-tree Hill, and in approaching it Mr. Dunnicliff asked me if I thought this was a massive stone hill. I said, "Yes." Mr. Dunnicliff made no reply. I was under the impression that he was a geologist. He was surprised to see such a view from the top of it—further than the eye could discern. He ought to have been provided with a powerful telescope or magnifying glass. I must tell you that I do not believe that One-tree Hill is a massive hill. The stone that is on it lays on its flat, and this hill has been higher than it is at present. My opinion is that it has been formed by volcanic eruptions. My opinion is that if there was a shaft sunk down from the top of this hill 40 or 60 feet the sinking would be through loose stones and soil, and then you might sink up to 200 feet with an odd boulder, and then I would just as soon think one would come on to sandstone, basalt, or granite. I have a reason for saying so. Wonders never cease. I gave Mr. Dunnicliff a sample of surface soil and subsoil. I am afraid it is too dry and friable for a summer crop. I would recommend the reserve where I showed Mr. Dunnicliff. I would recommend in preference, and I would be better pleased if there had been three samples of surface soil and subsoil tested in comparison with other places that have been inspected and samples been taken for testing to know their qualities and capabilities for the

the benefit of every person. This reserve is well known by every person that knows its fertility in producing such abundance of grass per acre, and constantly under pasturage, which is plain proof of its fertility or the amount of virtue which it contains—a decided proof—surrounded by and intersected with granite ridges and limestone reef; and I hope my wishes will be fulfilled before any place is decided upon as a model farm.

I remain, &c.,

ISAAC W. TOYNTON.

Acknowledged, 24/12/90. Circular sent *re* selection of Bathurst site, 13/5/92.

### No. 8.

Mr. A. A. Dunnicliff to The Director of Agriculture.

Report on proposed Site for Model Farm at Wellington.

Sir,

18 March, 1891.

In accordance with your instructions, I took steps, when at Wellington, to inspect the site suggested by the local Agricultural Society, as suitable for a proposed model farm or experimental station for that portion of the Colony.

On the 13th December, 1890, I went to the reserve known as "Jawbone," No. 171, recreation reserve, parish of Nanima, about 5 miles beyond the town of Wellington.

"Jawbone" is approached by a bush road, which was in good passable order at the time of my visit, and contains an area of about 2,000 acres, as per map attached, nearly all being open forest country, of fine grazing quality, with a good proportion of good arable lands, suitable, apparently, for the cultivation of all the usual farm and orchard crops in abundance.

The land is comparatively level surface, and occasionally slightly undulating, with a splendid site, marked "A" on map, for necessary buildings, vineyard, &c., having a commanding oversight of much of the surrounding country, a matter which is of considerable value in the practical working of a large establishment.

The samples of soils Nos. 1 and 2 are taken from near this portion of the reserve at the spot marked 1 and 2, and are a fair average of that locality.

Again, around the place marked "B" is a splendid piece of country, fit for any description of high-class culture, or, indeed, any work. The samples of soils Nos. 3 and 4 are taken from this flat, through which a blind creek runs at times.

Adjoining and below this, towards the west, could be made, at a small outlay, an immense dam for the conservation of storm-waters, and which would not only be available for the watering of live stock, but also useful for an irrigation demonstration on a small scale if desired.

There does not appear to be any creek or permanent running water on this reserve, but I was informed by several persons that water could always be obtained anywhere in that locality at a few feet below the surface, and there are many places naturally suitable for inexpensive dams.

This reserve, "Jawbone," has one great advantage over either of the other sites suggested in the very large area obtainable if desired, for contiguous to this property are several blocks held under annual lease from the Government, any of which, I was informed by the representative of the lessees, they would be willing to surrender any time if the Minister should require the land for such a public purpose, and hence here could be exhibited the working of each of the great interests of this portion of the Colony, viz., the vigneron, the orchardist, the arable farmer, sheep farming and grazing, both dry working, and some little irrigation.

Of the great value to the Colony of an experimental station being located in such a position as Wellington, combining so many advantages, naturally, I suppose, it is beyond my province to speak, beyond saying I was very favourably impressed on this point.

I have, &c.,

A. A. DUNNICLIFF.

### No. 9.

Mr. A. A. Dunnicliff to The Director of Agriculture.

Report on Sites suggested for a Model Farm at Wellington.

Sir,

18 March, 1891.

I have the honor to state that, in accordance with instructions received, I inspected the reserves Nos. 148, 214, 180, and several others, on which I submit my report as to their suitability or otherwise for the purposes of a model farm or experimental station, as follows:—

Reserve No. 148.—This reserve (outlined blue on the map herewith), which lies to the east of the "caves."

Reserve No. 214 is about  $3\frac{1}{2}$  miles south of the town of Wellington, and contains about 200 acres of undulating, open forest land, on which, as indicated on map, the limestone rocks crop out at the north-western portion. The remainder is red land, as shown by soils, samples 5 and 6, which are taken from the centre of the block, and show the average quality.

The main road from Wellington to Molong runs through this piece, as dotted on the map. The telegraph line also runs through in a more direct manner. I could find no permanent water on the place, but there is a blind creek on the eastern side of the Molong Road, which runs a little after rains. However, I was informed, plenty of water could be got readily by sinking at shallow depths. At its north-west extremity it has a small frontage to the Bell River, where good water is always available. Taken alone, I was not favourably impressed with this as a site for a model farm, but if taken in conjunction with, and supplementary to reserve No. 180, to which it might be joined by taking a portion of the southern part of the "caves" reserve No. 214, it might then be of service.

Reserve No. 180, outlined in red on accompanying map, is a very nice piece of land, sloping from the limestone hill of the "caves" reserve, on its eastern side, to the Bell River on its west, to which river it has a frontage of over half a mile. It contains 160 acres, and of this area probably 130 acres (or more) could easily go into cultivation. The soil varies much for such a small piece, from chocolate loam

loam to almost sand, but that would be an advantage rather than otherwise for an experimental station for which purpose this piece seems otherwise well suited. The soils, samples 7 and 8, which may be taken as representatives, are taken from about the spot marked 7 and 8 on the map.

All farm, garden, and orchard crops would thrive here, whilst the gentle gradient of the land, the free porosity of the soil, combined with the genial climate of Wellington, and the abundance of water available in the Bell River, stamps this as an excellent place to exhibit the advantages of irrigation for the people of that portion of the Colony.

Should this area of 160 acres be deemed insufficient for this interesting work, I was privately informed that the lots to the south of this portion, Nos. 92 and 95, also having river frontages, and containing 50 acres and 160 acres respectively, could be obtained very reasonably, and, as before suggested, reserve 148 and portion of reserve 214 might be annexed. An objection may be raised to this reserve 180, inasmuch as it was in 1880 dedicated for public recreation as a "race-course," for which purpose it has never been used, but I was assured by several prominent townsmen (sporting men) that the public would make no objection to its being resumed for the purposes contemplated, and that they could readily obtain a suitable portion nearer the town.

As requested, I also inspected all those lands marked by a waving red line on the map, but found nothing there worthy of further notice.

I have, &c.,

A. A. DUNNICLIFF.

#### No. 10.

Mr. G. S. Prentice to The Director of Agriculture.

Sir,

Wellington, 23 April, 1891.

I have the honor to inform you that, in accordance with your instructions, I have to-day inspected the reserves Nos. 180, 214, 148.

No. 180, area 160 acres, is a piece of fairly good agricultural land, 110 acres of which could be easily worked with the plough; it has good frontage to the Bell River, and is well situated for successful irrigation. The character of soil is very variable, grading from rich chocolate loam to sand. I think all kinds of English fruits would do well here, and oranges might be tried with, I think, fair chance of success.

This block is not so heavily timbered as the other blocks, and would probably be cleared at a cost of 35s. per acre.

No. 148, area about 200 acres. This block is heavily timbered, and would cost at least £2 15s. for clearing. The land is of an undulating nature, and it is of rather a rough description towards the north-west portion, where limestone boulders spread over some areas. The soil is rich chocolate, and in those parts of the block where there are no rocks the land would be easily worked, and should prove very productive. The road to Wellington to Molong runs through this block dividing it into almost equal parts. Water could be obtained on this block by sinking to about 40 feet.

No. 214, area 94 acres; of good rich land with considerable depth of black loam, the ground is slightly undulating, and is well adapted for the successful establishment of experimental farming. This block is slightly timbered, and could be cleared at a cost not exceeding 30s. per acre; it could be economically irrigated from the Bell River. There might be some difficulty in getting possession of this block, as it was given to the district for a recreation ground or race-course some years ago. I was told that some objection might be raised to this land being resumed as an experimental farm. These blocks are about 1,100 feet above the level of the sea.

I have, &c.,

GEORGE S. PRENTICE.

#### No. 11.

Mr. G. S. Prentice to The Director of Agriculture.

Sir,

Wellington, 23 April, 1891.

I have the honor to inform you that, in accordance with your instructions, I inspected a reserve known in this district as "Jawbone."

This piece of land has an area of nearly 2,000 acres, as will be seen by the accompanying map, it is about 1,200 feet above the level of the sea, and is situated 5 miles from the town of Wellington. The road to this reserve is not particularly good, being little more than a bush track, which looks as if it would be very boggy in wet weather.

The timber is principally white gum, yellow gum, and apple-tree, and as it is very thick, the clearing would be a considerable item, and could not be done under £3 per acre on an average.

The soil is reddish loam, with limestone subsoil in some parts of the reserve, in other parts a dark-coloured loam of several feet in depth is found. There are three capital sunny slopes very suitable for fruit-growing, otherwise the ground is fairly level. There are a very large number of shafts sunk in various parts of the reserve of different depths, all contained water. These shafts would cost a good deal to fill in, and would be some time before they settled down firm enough for ploughing to be properly done.

There is no permanent water on this reserve; it would, therefore, be necessary to obtain it by entirely artificial means, either boring or digging dams. There is a position between two slopes on the western side of the reserve, where a large dam could be constructed, but it would necessarily be a costly operation to make the break sufficiently substantial to withstand so large a volume of water as would collect during heavy rains.

This is good healthy sheep country, and would grow cereals and fruits of all kinds in profusion. The farming industry generally is in a very backward condition and education in this direction, is much needed in the district. The clearing and other operations that would be necessary to convert this reserve into a commercially successful farm would be a costly undertaking.

Mr. F. D. Morrah, who is manager of "Nanina," kindly drove me round the boundaries of the reserve.

I have, &c.,

GEORGE S. PRENTICE.

Circular, *re* selection of Bathurst site, sent to Mr. York, M.P., 13/5/92.

## No. 12.

The Director of Agriculture to T. H. York, Esq., M.P.

Sir,

Department of Agriculture, Sydney, 21 October, 1891.

With reference to the selection of a site in the Western District for the purposes of an experimental farm, the Minister desires me to say that, in response to frequent representations as to the suitability of a site near Wellington, an officer was sent to inspect the land, and furnish a report as to its adaptability for the desired purposes, and the matter is receiving the Minister's best attention.

I have, &amp;c,

H. C. L. ANDERSON,

Director.

## BATHURST.

## SCHEDULE.

NO.		PAGE.
1.	W. S. Campbell to the Under Secretary for Mines and Agriculture, with enclosures. 31 August, 1886 ...	25
1A.	J. W. Little to the Minister for Mines, with enclosure. 19 August, 1886 . . . . .	28
2.	R. L. Pudney, M.R.A.C., F.H.A.S., to the Minister for Mines and Agriculture, with plan. 5 December, 1889	28
3.	Office Memorandum (by Director of Agriculture). 26 July, 1890	29
4.	Principal, Agricultural College, to the Director of Agriculture. 19 May, 1891	29
5.	Principal, Agricultural College, to the Director of Agriculture. 19 May, 1891	30
6.	J. G. Thompson to the Minister for Mines and Agriculture. 24 May, 1891	30
7.	Minute by Minister for Mines and Agriculture (Hon. S. Smith). 1 June, 1891	30
8.	The Director of Agriculture to Secretary, P. A. and H. Association, Bathurst. 3 June, 1891. . . . .	31
9.	The Mayor of Bathurst to the Director of Agriculture, with enclosure. 5 June, 1891	31
10.	Hon. Secretary P. A. and H. Association, Bathurst, to the Director of Agriculture. 5 June, 1891	31
11.	Office Memorandum (by Director of Agriculture). 7 June, 1891	32
12.	Gazette Notice No. 548. 21 August, 1891	32
13.	The Director of Agriculture to the Under Secretary for Lands. 31 August, 1891	32
14.	The Crown Solicitor to the Under Secretary for Lands. 4 September, 1891	33
15.	The Director of Agriculture to the Under Secretary for Lands. 15 October, 1891	33
16.	The Director of Agriculture to the Under Secretary for Lands, and minutes. 15 October, 1891	33
17.	The Under Secretary for Lands to the Under Secretary for Mines and Agriculture, with tracings. 2 November, 1891	34
18.	Mr. Surveyor C. Thurnburn to the District Surveyor, Orange, with minutes. 2 May, 1892	34
19.	The Under Secretary for Mines and Agriculture to the Hon. F. B. Suttor, M.P. 10 May, 1892	35
20.	The Under Secretary for Mines and Agriculture to the Mayor of Bathurst. 13 May, 1892	35
21.	The Under Secretary for Mines and Agriculture to Wm. Kite 13 May, 1892	35
22.	The Under Secretary for Mines and Agriculture to the Under Secretary for Lands. 16 May, 1892	35
23.	The Under Secretary for Mines and Agriculture to the Under Secretary for Lands, with three enclosures. 16 May, 1892	35
24.	Office Memorandum (list of sites for model farm attached). 16 May, 1892	36
25.	Macintosh & Co., to the Under Secretary for Lands. 17 May, 1892	37
26.	Borough Council, Bathurst, to the Under Secretary for Lands. 19 May, 1892	37
27.	Borough Council, Bathurst, to the Under Secretary for Mines and Agriculture. 19 May, 1892	37
28.	Office Memorandum by the Under Secretary for Lands and minutes 25 May, 1892	37
29.	The Hon. F. Suttor, M.P., to the Under Secretary for Mines and Agriculture, with minutes and enclosure. 22 June, 1892	38
30.	The Director of Agriculture to the Hon. F. B. Suttor, M.P. 23 June, 1892	38

49.	The Under Secretary for Mines and Agriculture to the Hon. F. B. Suttor, M.P. 21 January, 1893	46

## No. 1.

Mr. W. S. Campbell to The Under Secretary for Mines.

Sir,

Department of Mines, 31 August, 1886.

In accordance with personal instructions from the Hon. the Minister for Mines, I proceeded to Bathurst on the evening of the 21st July, for the purpose of making inquiries as to the advisability of establishing an experimental farm in the vicinity, and I have the honor most respectfully to report that the establishment of such a farm will prove of vast importance and value, not only to the farmers and landowners of the district, but will be of the greatest benefit to their children; and I take this opportunity of most respectfully submitting that the elementary principles of agriculture might be taught in the Public Schools throughout the Colony; and the children be prepared in some measure to take advantage of any agricultural schools or colleges, which the Government may hereafter consider it

advisable to establish. Many of the most progressive farmers of the district are fully alive to the advantages to be gained from a knowledge of modern scientific farming, and will gladly welcome anything that will assist them in gaining that knowledge. The present system of farming which obtains here may be described briefly as one of spoliation, as I shall presently endeavour to explain.

The Bathurst district may be considered as the area within the electoral district of East and West Macquarie, and may be said to contain an area of about 1,720 square miles. Within this area, according to the Registrar-General's statistics for 1885, 47,851 acres (about 74 square miles) are under cultivation; 16,607 acres freehold; and 31,244 acres leasehold. The various crops were as follows:—

Wheat for grain	...	...	12,858	acres.	Average	8 $\frac{3}{4}$	bushels per acre.
"  hay	...	...	11,826 $\frac{1}{2}$	"	"	9	cwt.
Maize	...	...	883 $\frac{1}{4}$	"	"	21 $\frac{1}{2}$	bushels per acre.
Barley (for grain)	...	...	114 $\frac{3}{4}$	"	"	14	"
"  (for hay)	...	...	356	"	"	9	cwt. per acre.
Oats (for grain)	...	...	1,077	"	"	17	bushels per acre.
"  (for hay)	...	...	18,429 $\frac{3}{4}$	"	"	9	cwt.
Rye (for grain)	...	...	30 $\frac{1}{2}$	"	"	11	bushels per acre.
Potatoes	...	...	552 $\frac{1}{4}$	"	"	3	tons 1 cwt. per acre.
Tobacco	...	...	110 $\frac{1}{4}$	"	"	13 $\frac{1}{4}$	cwt. per acre.
Sown grasses (for hay)	...	...	299	"	"	1	ton 6 cwt. per acre.
Gardens, orchards, &c.	...	...	575 $\frac{1}{4}$	"	"		

It will be observed from this return that the chief crops depended on are wheat for grain, and oats for hay. These two crops are grown year after year on the same land, and all the grain, straw, and hay is sold off the farms without any equivalent being returned in the shape of manure. No green crops are ploughed in, or other steps taken to maintain the fertility of the soil, or render available "locked up" soil constituents of plants, and, consequently, there is a perceptible annual decrease of produce from the old farms. If grain only was sold, and the straw returned to, or even burned on the land, the exhaustion would not be nearly so great. The total quantity of grain from a field, removing less of the mineral constituents of plants from the soil than the straw. Oaten hay, sold off the farm, is exceedingly exhausting to the soil. The same kind of crops grown year after year causes the land to become foul with weeds, and insect pests, and one reason why green crop manuring is so beneficial is that it cleans the land, besides many important reasons, which it is not necessary to mention here. I could not discover that any system of rotation of crops had been practised, nor that draining or subsoil ploughing had been attempted. The average depth of ploughing is about 4 inches only, and this for wheat, the roots of which will penetrate to a great depth, if the sub-soil is free and open when the plants are enabled to resist severe droughts. Draining is not only a means of getting rid of water from swampy land, but is also a means of conserving water from evaporation in dry districts. In this district the evaporating power of the atmosphere must be more than double the rainfall, which, for the last six years, has not exceeded 21.79 inches. One inch of rain on an acre of land is equal to 101 $\frac{1}{2}$  tons of water, and, as the minimum rainfall during the last six years was 19.53 inches, sufficient water could have been conserved in the soil during the driest year to meet all the requirements of the crops had subsoiling and draining been practised, whereas they suffered severely. It will be observed in the Registrar-General's statistics given previously that, of the area under cultivation, the leasehold is nearly double that of freehold, and, as there are no covenants in the leases to require the maintenance of the fertility of the soil, the whole object of the lessees apparently is to obtain the largest crops possible in the shortest time at the expense of the soil. When the land is "worked out" the farms are given up. It may be as well to mention that this apparently worked-out soil might easily be restored to its original fertility by skilful farming at no very great cost; and one other important matter I beg leave to invite attention to, one either not generally known or considered of importance by those who keep flocks of sheep. "It is well known to those acquainted with agricultural chemistry that sheep take from the land on which they graze a large amount of potash, which, after circulating in the blood, is excreted from the skin with the sweat. . . . It is found that 1,000 lb. of raw wool yields from 140 to 160 lb. of sudorate of potash (smut), equal to from 70 to 90 lb. of pure carbonate and 5 to 6 lb. of sulphate of potash and chloride of potassium. It may, however, be mentioned that Lawes and Gilbert estimate that 1,000 lb. of common raw wool contains about 40 lb. of potash, or 58.7 lb. of carbonate. Taking this latter estimate as the basis of our calculation, and assuming 1,000 sheep to yield 5,000 lb. of raw wool per annum, we find that the pastures lose in the course of two years no less than 400 lb. of potash, in addition to the other mineral matters required to produce bone, flesh, blood, &c." The homesteads on many of the farms are of a very poor description, and the shelter for stock is wretched. There are few or no gardens, fruit-trees, shelter-trees, or household comforts or conveniences on the bleak Bathurst plains. The want of shelter-trees to break the force of the cold winter and hot summer winds is striking. Little or no attention appears to have been given of late years to fruit-growing. I have no doubt that many varieties of fruit could be profitably cultivated, such as apples, pears, plums, nuts, raspberries, strawberries, &c. I was informed that peaches used to succeed admirably, but of late years a blight attacks the trees, and no crops are now obtained.

The soil around Bathurst, disintegrated granite and silurian rocks, appears to be shallow in many places, but the alluvial flats on the banks of the Macquarie and its tributaries are deep and extremely fertile, and here might be raised, with a little care, enormous crops of various kinds. Lucerne has been grown on these flats, and appears to thrive well. Here also are several Chinese vegetable gardens, where are raised all the vegetables for the city and a large portion of the district. In one of these gardens an irrigating pump and a steam-engine have been erected, the water being obtained from the river. I was greatly surprised to see the enormous quantity of valuable manure from stables, street sweepings, &c., allowed to go to waste, also apparently the whole of the nightsoil from the city of Bathurst. There are hundreds, if not thousands, of loads deposited on an area set apart in the park, at the head of one of the small tributaries of the Macquarie, near the race-course, whence a great portion of it must be washed into the river. The population of Bathurst is said to be about 10,000 inhabitants; the value, therefore, of the nightsoil lost, according to calculations made by Sir John Lawes and Dr. Cameron, must be between £3,000 and £4,000 per annum. I cannot form an estimate of the value of the stable manure and street sweepings wasted annually, but it must be very considerable. As many farms adjoin the city boundaries,

and

and considering that all this manure may be had for nothing, it seems surprising that the farmers do not avail themselves of it. Again, with regard to bones, I was informed that there is a bone-dust manufactory near the city, and that the greater part, if not all, the dust was exported to New Zealand, this must mean another considerable loss to the district. This bone-dust is not of the best description for a general manure, for I believe the manufacturer makes glue. He must, therefore, extract all the nitrogen from the bones. One thousand pounds of good bone-dust should contain from 35 to 38 lb. of nitrogen. One ton of good bone-dust contains about as much nitrogen as  $8\frac{1}{2}$  tons of fresh stable manure, and as much phosphoric acid as 110 tons of fresh stable manure. But 1 ton of manure contains more potash than 5 tons of bone-dust. (During last year 3,756 tons of bone-dust, worth about £18,000, was exported from Sydney for other colonies.) Many of the farmers are becoming alive to the importance of having good labour-saving machinery. Double-furrow ploughs are common in the district, as well as improved reapers and binders, &c.

I beg most respectfully to invite attention to the "sweet briar," which has become a great pest in the district, and will become a still greater, owing to the difficulty of eradicating it. It is to be found in great abundance on the alluvial flats, where it has taken entire possession of the land in many places. Sorrell and thistles, black and variegated, are to be found in abundance, especially sorrell, which has apparently overrun the district, owing, probably, to neglect. I could not ascertain that dairying is carried on by anyone as a special occupation, beyond a few milk dairies for the supply of milk to the city. Butter is made to a small extent on some of the farms, but is, I believe, very difficult to obtain at times. I beg most respectfully to recommend as a site for an experimental farm the race-course, which contains an area of  $19\frac{3}{4}$  acres 2 roods, and as much of the adjoining "park," tinted pink on the accompanying tracing, as can be obtained from the City Council.

The trustees of the race-course are willing to hand over the land they hold to the Government for the sum of £2,800 (*see* enclosed letter). The improvements, with the exception of the fencing and about 70 or 80 acres of clearing, are of little or no value to a farm. The land within the area shown in pink is, I think, characteristic of that around Bathurst. Some portions are inferior, especially to the west and south of the race-course. On the remainder will be found some very fair soil. Water can be conserved without difficulty, and there is a lagoon, which could be deepened and improved without much expense, and made capable of holding sufficient water for the requirements of a farm. The night-soil which I alluded to previously can be utilised, and the benefits resulting from its application will be demonstrated. Red rust or other fungus pests do not appear to cause any damage to the white straw crops in this district, except on rare occasions, in consequence, probably, of the dryness of the atmosphere.

It may, perhaps, be as well for me to mention that the infertility of soils caused by the continuous cropping of one kind of plants is due, not to the complete exhaustion of the soil constituents of plants, but to the exhaustion of one or more of those immediately available. Thorough cultivation, under-ramming, and tillage, must be resorted to in order to unlock the plant food, which may be present in the soil in abundance in an unavailable form. In conclusion, I most respectfully beg to submit that I am under the impression that many of the farms are too large for the capital employed on them. If the farms were worked on sound principles, and the labour employed on a large one was expended on one half or a quarter the size, probably more produce would be obtained. From want of capital, also, many of the farmers are compelled to sell their produce at disadvantageous times, whereas those who can afford to hold are enabled to take advantage of better markets.

And I also beg most respectfully to submit that I have come to the conclusion that, leaving aside the modern labour-saving appliances which are employed for farming purposes, the system of farming which obtains in the Bathurst district, and also many other districts in this Colony, is, judging from the writings of Xenophon, Cato, Pleney, Columella, and other old writers on agriculture, inferior to that adopted by the ancient Greeks and Romans.

I have, &c.,  
WALTER SCOTT CAMPBELL.

[Enclosures.]

I BEG most respectfully to submit the following quotations which bear directly on the subject of the exhaustion of soil, one from Columella, a Latin writer, who lived nearly 2,000 years ago; and the other from Liebig, one of the most renowned agricultural chemists of this century:—

"It is not, therefore, from weariness, as many have believed, nor from old age, but indeed from our own slothfulness, that our cultivated lands don't so bountifully answer our expectations as formerly, for we might receive a great product if the earth were refreshed and cherished with frequent seasonable, and moderate stercoration."—Columella, Chap. I, Book II.

"A practical agriculturalist, Albrecht Block, is reported to have said: 'A farmer to sell and permanently alienate only that portion of the produce of his farm which has been supplied by the atmosphere—a field from which something is permanently taken away cannot possibly increase, or even continue equal in productive power.' The axiom thus enunciated is simply a natural law. In this opinion of this truly experimental man, to whom future agriculture will surely raise a monument, is at once expressed the whole foundation and groundwork of rational farming, and all this knowledge that the science of nature can teach the practical farmer. . . . In the produce of his field the farmer sells, in reality, his land; he sells in his crops certain elements of the atmosphere that are constantly being replaced from that inexhaustible store, and certain constituents of the soil, that are his property, and which have served to form out of the atmospheric elements the body of the plant, of which they, themselves, also constitute component parts. In altogether alienating the crops of his fields he deprives the land of the conditions for their reproduction. . . . Every system of farming based on the spoliation of the land leads to poverty."—Liebig.

Dear Sir,

In reference to our conversation as to the Bathurst Race-course being taken for the purposes of the model farm, I may mention the trustees will be quite willing for the Government to resume the land for that purpose, provided they are relieved from the responsibility of the debt incurred by them in connection with the improvements, &c., thereon. The debt is now £2,800, or thereabouts.

Yours, &c.,

WILLIAM KITE,  
(For self and co. trustees).

Walter Campbell, Esq.

Bathurst, 27 July, 1886.

## Mr. J. W. Little to The Minister for Mines.

Sir,

Bimbenang, Glanmire, 19 August, 1886.

I do myself the honor of addressing you with reference to establishing a model farm at Bathurst, and herewith enclose a letter of mine which appeared in the *Western Independent*, a Bathurst journal, to which I would invite your very kind attention. Understanding that it is the intention of the Government that the proposed model farm should embrace agricultural, horticultural, pastoral, and, I should hope, other important industries; and as each department will require to be under the management of persons qualified for their various duties, I have much pleasure in offering my humble services to take charge of the horticultural department; and in doing so, I may inform you that I am well known in the western district as a horticulturist, as a contributor to the press of articles on horticulture, of which I shall be most happy to forward you testimonials from journalists. I may also inform you that I am personally known to the following gentlemen:—By E. Combes, Esq., C.M.G.; Hon. W. H. Suttor, M.L.C.; Hon. F. B. Suttor, Postmaster-General; George Campbell, Esq., J.P., late Member for Carcoar; Sydney Smith, Esq., M.L.A., and I could name many others of my acquaintance. The other day, when in Bathurst I had a discussion with Mr. Jacob Knight, President of the Bathurst Farmers' Union, and Mr. E. P. Marks, the secretary, about a model farm, as well as having talked the matter over with some of our leading farmers, and, to a man, all seem quite anxious that the new school for industries should be established at Bathurst—the oldest, the largest, and most important town out of Sydney, with its splendid climate, its varied soils, its surroundings of agricultural, horticultural, pastoral, and many other important industries, all of which point conclusively to its strong claim for having the model farm. I notice that Orange claims it to be there—quite a different climate, soils not so varied as Bathurst, atmospherical influences more severe, evaporation quite different from that of Bathurst, and certainly not nearly, in my humble opinion, possessed of the many advantages which Bathurst has, for the experimental work of a model farm. I shall be happy to have your kind advice in the matter.

I have, &amp;c.,

J. W. LITTLE.

[Enclosure.]

## SUMMARY OF MODEL FARM BY J. W. LITTLE, Esq.

We want the model farm to be situate near a town embracing a variety of soils for experimental work. We want agricultural, horticultural, and pastoral taught on the farm. We want to show what can be done by cultivation proper of the various soils, and in order to carry out properly and profitably the work to be undertaken, it will be necessary and most essential to the future success and prosperity of the whole thing to have plenty of manure at hand and a good command of water for irrigation. I will assume that we have found a suitable spot, containing at least three classes of soils, viz., rich alluvial deposits, medium red soil, and sandy and clay soils interspersed, and having all of these, we can assay upon all of them, taking so much just as it stands naturally, and see how we can get on without artificial work. Then take so much and experiment upon it with manure (various), irrigating it well and carefully, and afterwards contrasting the products obtained from such soils under such treatment. Then we shall be in a position to gather from actual results practicable, reliable instructions how to cultivate to advantage our poor soils. Not only this, but we want to arrive at what can be grown in the district profitably, for we must, you know, not lose sight of the "almighty dollar," without which the boats will not sail through the ocean of life properly. And in order to carry out so very important a feature in our programme it will be necessary to experiment with an immense number of things to find out what will do and what will not do. We want the land, we want the manure, and we want the water. We want seeds and plants of all sorts of things, and what is of very great consequence to obtain complete mastery of the various subjects, we want first-class managers in all branches of the establishment, men who thoroughly understand their business, and who shall be well qualified to teach the pupils who may attend this proposed School of Industry. We believe that under proper management our model farm will, when once fairly established, prove self-supporting and profitable. I am quite prepared to point out how the whole thing can be made to pay handsomely, and shall conclude this brief summary by recommending Bathurst as a most desirable locality for our model farm, situated as it is amidst agricultural, horticultural, and pastoral industries, and having suitable soils for the grand new school of these industries.

## No. 2.

## Mr. R. L. Pudney, M.R.A.C., F.H.A.S., to The Minister for Mines and Agriculture.

Sir,

Bathurst, 5 December, 1889.

I have the honor to enclose, with others, this brief report on the site mentioned by Mr. W. S. Campbell as possibly available for one of the demonstrating farms so much needed. This was the old race-course reserve, situated almost in the centre of the town park or common, about 1 mile distant from the town; height above sea level, 2,153 feet; rainfall average for last thirty-one years, 23.6 inches; geological series, granite, diorite, and quartz drift and gravel. This only reserve near Bathurst would contain about 800 acres, including the race-course and a portion freshly fenced off by the corporation, each area being about 200 acres in extent. The race-course (193½ acres), is fenced in by a rail and paling fence, very rickety, and about twenty years down. It contains a dilapidated grandstand, saddling paddock, stretches of old fencing, and small gate-keeper's cottage, outside value £200 in my opinion. There is also a shallow dam and small shed besides. The soil is a coarse sandy loam, gravel, and sandy loam, and of a very medium quality, although growing trees very well. The outside land is nearly all very-hilly, and with scrubby timber and poor grass. There is a serious overdraft on the race-course portion, for which the trustees are apparently responsible, and this, combined with the great inevitable opposition likely to follow or to secure any portion for our agricultural education purpose suitable to ourselves, make it at present unadvisable to recommend this site to you, although otherwise fairly suitable, and in a district very much needing advanced farming in practical and easily accomplished methods.

I have, &amp;c.,

ROBERT L. PUDNEY, M.R.A.C., F.H.A.S.

See Appendix D.

## No. 3.

## Minute by Director of Agriculture.

*Re* Land proposed to be used for Agricultural Purposes.

26 July, 1890.

POSITION—County of Bathurst, parish of Bathurst. Area—800 acres (approximate). Owner—The Crown, under the following reserve and dedications:—Part of population area proclaimed 20th March, 1885; area, 800 acres (approximate). Part of park for town pasturage and common, dedicated 10th January, 1865; area, 800 acres (approximate). The race-course dedicated 27th July, 1863, 193 acres 2 roods.

Possession of the land can be obtained by cancelling the necessary parts of the population area, and the park, and the whole of the race-course, and then reserving or dedicating the land for agricultural purposes.

Administrative work *re* reserves, &c., comes under the Department of Lands.  
Compensation may be required for improvements.

Seen.—S.S.

## No. 4.

## Mr. J. L. Thompson to The Director of Agriculture.

Report upon the Bathurst Farm Sites.

19 May, 1891.

Sir,

In obedience to instructions received on Friday last, the 15th instant, I have inspected several sites proposed for the establishment of an experimental and educational farm in the vicinity of Bathurst, and have now the honor to report thereon for the information and consideration of the Honorable the Minister for Agriculture.

*Race-course.*

The residents of Bathurst interested in the advancement of agriculture, being of opinion that there is not sufficient commonage of good land available for educational agriculture purposes, have arranged with the trustees of the racing club, to offer to the Department for the sum of £2,000, the racecourse comprising about 190 acres of good agricultural land, with a paling fence all round, and a grandstand, the whole having cost £4,000. The improvements, however, are not of much value for other than their present use. The land is of exceptional fertility, being capable of growing all products suitable for the district. There is a permanent water supply on the course. The land is nearly all cleared and immediate operations in the way of tillage could be commenced. Adjoining the race-course there are about 400 acres of available common fairly suited for tillage, and another 700 acres of good grazing land extending towards the Bald Hills. The country here is said to be very fattening, and it is estimated that 1,000 sheep or their equivalent in other stock could be fattened thereon.

Although the land mentioned, including the race-course is not so compact as I would have wished, for what may one day be a model farm site—taking into consideration the central position of Bathurst—the number of its inhabitants (said to be 12,000), and the difficulty of obtaining land suitable for the purpose, without purchasing private property, I am fully of opinion that the Minister could not do better than fall in with the wishes of the people in establishing an experimental and educational institution on the site proposed. Although I saw some well kept and well-cultivated farms, the majority were in a most wretched condition. The fences, homesteads, &c., being sadly out of repair, and devoid of all home comforts, such as fruit, vegetables, or a nice flower garden; nor has any provision been made for a permanent supply of succulent food for cattle in times of scarcity.

*Water Supply.*

There are several permanent springs on the reserve capable of being opened up, and ensuring a good supply. Large quantities of water rush down the ravines from the higher lands; this could be impounded at several points by damming the creek, thus securing sufficient water for all the requirements of the place, enough to carry out experiments in irrigation, and for the growth of esculent vegetables. The water from the town supply can be laid on to the proposed site of the college buildings. Nature has provided a magnificent and picturesque site for these, viz., on a bald low hill south of the town, and within quarter of a mile of St. Stanislaus' College, where upwards of eighty boys, from 12 to 16 years of age, are now being educated. This site is not more than a mile from the post-office, and commands a magnificent view of the town and surrounding country. The farm buildings would be erected in a more central position in the vicinity of the race-course.

*Manuring.*

One important consideration in connection with this site should not be lost sight of, *i.e.*, the manurial value of the night-soil from a town of 12,000 people. The pan system prevails. The night-soil is now taken to a part of the common, put into trenches, and mixed with dry mould. This forms a most valuable fertilising compost, and its manurial action can hardly be over estimated. According to Lawes and Cameron, the night-soil, from a manurial point of view, in a town of 10,000 inhabitants may be valued at between £3,000 and £4,000 per annum, whilst in thus dealing with the voidances of households it is claimed that we have fulfilled all sanitary, commercial, and agricultural conditions. The corporation are prepared to enter into an agreement to supply the proposed farm with the whole of the night-soil from the town free of all cost.

*Characteristics of the Soil.*

The soil varies from a darkish loam on the flats and margins of the creeks to a rich chocolate-coloured soil on the higher lands, resting on a clay subsoil of considerable depth. The general underlying formation being basalt and granite (with diorite).

*Clearing.*

The common carries at present a stunted growth of gum and box trees, which have sprung from the stumps of imperfectly cleared land. The country having been in former times heavily timbered, it would cost from 25s. to 30s. per acre to clear the land, and make it fit for the plough, but the firewood obtained would recoup more than half the cost expended in clearing.

The

*The Dockairne Site.*

This comprises an area of 400 acres of fine fertile land, 7 miles from Bathurst, the property of William Kite, Esq. It is mostly alluvial soil, well fenced into convenient-sized paddocks, and has all been under cultivation. If required for educational purposes, Mr. Kite will accept £12 per acre for it. The land is, doubtless, well worth the money, but I do not think the Minister would sanction the purchase of a site when Crown lands can be obtained.

*The Westbourne Site.*

This site, formerly the residence of the late Joseph West, Esq., is situated on the O'Connell Road, 9 miles from Bathurst. It comprises an area of 800 acres, now the property of the Honorable E. Webb. It is a compact estate. The land is not so fertile as that of the Dockairne site, but is well adapted for an experimental farm. Mr. Webb considers he is making a great concession in offering this land for educational purposes at £8 per acre.

I did not go into particulars regarding either the Dockairne or the Westbourne sites, as I consider it unlikely that the Government would pay a high price to any individual for private lands.

Conclusion.—I consider that the establishment of an experimental farm in the Bathurst district would be productive of great good. There is a large population in the town, and it is the centre of a very important agricultural district. Magnificent wheat can be produced, as well as all other cereals, in addition to pulse crops, fruits, and vines, whilst dairying can be carried on all the year round, by making use of ensilage. The more I see of New South Wales, the more I am impressed with its wonderful capabilities as to soil, climate, and productions, and it reflects seriously on the state of agriculture in the Colony generally, when, according to statistics published in the *Agricultural Gazette* of New South Wales, Vol. I, part 1, p. 148, "The excess of imports in agricultural products over exports during 1889 reached no less a sum than £4,472,565, and this for products nearly all of which can be grown to perfection within the Colony.

I have, &c.,

J. L. THOMPSON.

## No. 5.

Telegram from J. L. Thompson, Principal, Agricultural College, to The Director of Agriculture.

19 May, 1891.

HAVE been very busy since return. Report on Bathurst site posted to-night.

J. L. THOMPSON,

Richmond College.

## No. 6.

Mr. J. G. Thompson to The Minister for Mines and Agriculture.

My dear Mr. Smith,

The Mayor and Aldermen and the Committee of the Agricultural Society will meet you at the Town Hall on Saturday morning next at 10 o'clock. I think we shall be able to make proposals that will meet with your approval. I think we will be able to make the visit of the travelling dairy very interesting. With kind regards,

Bathurst, 24 May, 1891.

Yours, &c.,

J. G. THOMPSON.

## No. 7.

Minute by The Secretary for Mines and Agriculture.

*Re* Site for an Experimental Farm and Agricultural Farm in the Western District.

1 June, 1891.

As indicated in my previous minute dealing with the establishment of experimental farms and agricultural schools in the more important districts or regions of the Colony, and on glancing at the necessity for having one of these in the western district there can be no doubt that the large district extending from the Blue Mountains out to the Great Western Plains as far as Dubbo, and even on to Bourke—which has been such a source of wealth to the Colony from the earliest days of settlement in the matter of pastoral industry—is now awakening to the great value of agriculture, as calculated to give a larger return per acre for the excellent soil and climatic conditions of this district. All thinking persons in the district are agreed that agriculture must gradually take up the ground which is now left uncleared and devoted to the uses of comparatively few sheep, and that many new and more profitable industries can be started. I have found great difficulty in choosing the site for such a farm or school that would meet the different conditions which I have laid down for myself.

1st. The land should be in the hands of the Government and available for the purpose indicated.

2nd. It should be in a convenient situation, in fairly close proximity to some large centre of population, and so situated that it could be visited by large numbers of those who would use it for instructional purposes.

3rd. The land should be suitable by reason of the character of its soil, having a fair variety of different kinds, some rich enough to ensure a fair prospect of commercial success and other parts being so poor as to indicate the need of the best scientific treatment. I find that there are plenty of reserves available in some parts of this district, but most of them situated in such remote portions as to be comparatively of little value for educational purposes at the present time. I instructed Principal Thompson, therefore, to make inquiries as to all available and suitable sites around Bathurst, and to make a full report upon the most eligible. He reports that there is a piece of land fairly suitable for the purpose of an experimental farm, situated at the back of the race-course, about a mile from the city of Bathurst. It has been reserved as a common for the people, and contains about 400 acres of fair soil. The people in their anxiety to have an experimental farm in their midst, are willing to surrender this common

common together with some poor hilly country adjoining it, which would be of little practical use for agriculture. Adjoining this common is an area of 193 acres, which is used as a race-course. This has been cleared, and is fenced, having buildings suitable for race purposes erected upon it. The trustees have signified their willingness to surrender this land for the purpose of the Department on payment of the sum of £2,000 to relieve them in part of the liability now existing on the property, and incurred in making these improvements, they themselves being willing to discharge the remainder of the liability.

Having regard, therefore, to all the circumstances of the case, I am of opinion that the site should be chosen somewhere in the vicinity of Bathurst—a city of 12,000 inhabitants surrounded by large tracts of agricultural land, and a magnificent centre of railway communication. The great success of the local Agricultural Society at Bathurst, whose show is attended by from 12,000 to 16,000 people every year, indicates very clearly the value of Bathurst as a central position, and the progressive spirit of the surrounding farmers.

Its rich soil and satisfactory climate are evidenced by the valuable fattening properties of the grasses and native plants which have produced such splendid results in the pastoral industry.

Unfortunately, agriculture is not conducted on such scientific lines as it might be, and no one is more anxious for instruction and improvement than the farmers themselves. It seems to me, in view of the offer of the race-course and common, advisable to inquire into the terms on which this land is held by the trustees, as also into the question of the value of the improvements in buildings, clearing and fencing on this particular piece of land, and its suitability for the purpose of an experimental farm and school of agriculture.

S. SMITH.

No. 9.

The Mayor of Bathurst to The Director of Agriculture.

Dear Sir,

Town Hall, 5 June, 1891.

With reference to your letter of the 3rd instant, addressed to W. G. Thompson, Esq., Secretary, P., A., and H. Association, asking whether there would be any difficulty in the way of your Department's obtaining possession of the town common for the purpose of a model farm, I have pleasure in forwarding for your information the following copy of a resolution passed by the Council of this borough, who are trustees of the Common, viz., that this Council raise no objection to the Government resuming for the purpose of an agriculture college and farm any portion of the reserve on the south-west and west side of Bathurst race-course. I also enclose a letter from one of the trustees of the race-course, stating upon what terms the trustees are willing to surrender the deed of trust to the Government for the same purpose.

I have, &c.,

FRANCIS CRAGO,  
Mayor.

[Enclosure.]

Dear Sir,

Kelso, 12 May, 1891.

In answer to your communication of the 11th instant, *re* race-course, I, as trustee, and on behalf of the guarantors, for the debt resting upon it, will take £2,000, and hand over the trust deed to the Government, should they require the race-course for a model farm.

I have, &c.,

W. G. Thompson, Esq., Hon. Sec., Bathurst A., H., and P. Association.

WILLIAM KITE.

No. 10.

The Hon. Secretary Bathurst Agricultural, Horticultural, and Pastoral Association, to  
The Director of Agriculture.

My dear Sir,

Bathurst, 5 June, 1891.

Upon the receipt of your letter of the 3rd instant, asking me to make judicious inquiries as to whether there are any difficulties in the way of your Department obtaining possession of the race-course and local common, I placed myself in communication with the Mayor and Aldermen and trustees of the race-course, and the unanimous opinion is that there is no difficulty (legal or otherwise) in the way of your obtaining immediate possession. The Mayor promised to write you by this day's post, and to enclose a letter which I received from the trustees of the race-course, and a resolution passed by the Council upon this subject. I may add that there is a very unanimous feeling on the part of the Bathurst people to assist the Government to establish the farm here.

Yours, &c.,

W. G. THOMPSON,  
Hon. Sec., A., H., and P. Assoc.

## Minute by The Director of Agriculture.

Bathurst Park and Permanent Common—Abstract of actions taken on this land.

7 July, 1891.

ON 30th April, 1864, in response to a request from the Bathurst Municipal Council, the Secretary for Lands decided that 762 acres of the park reserve—exclusive of 193½ acres set apart for the race-course, but originally part of the same park—should be handed over to the corporation in trust as a permanent common. On the 10th January, 1865, the Bathurst Park was dedicated for commonage and public recreation by notification in the *Government Gazette*. On 22nd March, 1865, the permanent common was included in the abstract laid before Parliament, but the corporation had not yet been appointed trustees. Consequently, on the 6th December, 1866, the Executive Council approved of the permanent common—area about 450 acres—being vested in the Municipal Council of Bathurst, under the 29th clause of the Crown Lands Occupation Act of 1861. Apparently, this decision was not notified in the *Government Gazette* until November, 1871. No deed has, however, been issued. On the 28th January, 1890, the District Surveyor at Orange, in reporting on an application by the Justice Department for an area of 17 acres 2 roods 10 perches for a reservoir for the gaol, supported the application to take this area from the park and common, and stated that no expenditure had yet been incurred for the improvement of the common. The Bathurst Municipal Council were then asked, as trustees, to state if they had any objection to this land being revoked. On the 15th August, 1890, they objected, and it was then submitted to the Minister for Lands by the Under Secretary “that this objection would form no insuperable bar to the taking of the land for the purpose required,” and the Justice Department were asked to state if the requirements of the case were such as to justify the over-ruling of the objections urged by the trustees, and the resumption of the land required for the park. However, on the 10th October, 1890, all objections were withdrawn by the Council. Steps are now being taken by the Lands Department to revoke, under 105th section of the Crown Lands Act, this part of the park, and to dedicate it, under 104th section of the same Act, to the Justice Department.

## Bathurst Temporary Common—Abstract of actions taken.

ON 30th April, 1864, in response to a request from the Bathurst Council, the Secretary for Lands approved that two portions of land at Bathurst, containing 147 and 376 acres respectively, should be placed in the hands of the Bathurst Municipal Council as a temporary common, to be resumed as the Government should see fit. On 6th December, 1866, the Executive Council approved of the temporary common being placed in charge of the Municipal Council, and this reservation for temporary common was made public by notification in the *Government Gazette* of 18th December, 1866. A small area of the temporary common was revoked on 13th October, 1884.

## Bathurst Race-course—Abstract of action taken.

THIS area of 193½ acres was originally part of the 762 acres which formed the Bathurst Park reserve. On the 30th December, 1864, the Secretary for Lands decided that the reserve for race-course should be placed in the hands of trustees, whom Mr. W. H. Suttor, M.L.A., was asked to name. On 29th September, 1864, this land was dedicated for public recreation—race-course, cricket-ground, &c.—and deed granted to Messrs. J. M’Phillamy, W. Kite, and J. de Clouett, upon trust, it being provided in the grant that “the Governor may resume and take possession of all or any part of the said land not hereinbefore reserved,” and if the land, or any part thereof, is not used for the purposes for which it was dedicated it shall become forfeited, and revert to the Crown.

## No. 12.

## Gazette Notice.

Proposed Resumption of part of Common and Recreation Reserve at Bathurst.

Department of Lands, Sydney, 21 August, 1891.

It is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of that part of the land at Bathurst, dedicated 10th January, 1865, for permanent commonage and public recreation, within the boundaries of measured portion 160 of 17 acres 2 roods 10 perches, parish of Bathurst, county of Bathurst—as shown on plan catalogued B. 3,347-2,009, with a view to the reservation of that area for Gaol reservoir.

[Ms. 91-6,458 Dep.]

JAMES N. BRUNKER.

## No. 13.

The Director of Agriculture to The Under Secretary for Lands.

Experimental Farm and Agricultural School site for Western District.

Sir,

31 August, 1891.

The site which it is considered would be likely to be most suitable for the above purposes is the race-course at Bathurst (comprising an area of 193 acres 2 roods), in addition to about 400 acres on the land surrounding the race-course, known as the “park,” which it is understood has been dedicated to the local municipal council for commonage and public recreation. The race-course is vested in trustees, and was originally part of the park. The trustees of the race-course are willing, for a consideration of £2,000, to give up possession. The Bathurst Council also will not raise any objection to the resumption of a portion of the park for the purpose of a model farm. As a preliminary to the final determination of where the site is to be, I am directed by the Minister for Agriculture to inquire what steps would have to be taken to secure the land to this Department.

I have, &amp;c.,

H. C. L. ANDERSON,  
Director of Agriculture.

No. 14.

## No. 14.

## The Crown Solicitor to The Under Secretary for Lands.

Sir,

Crown Solicitor's Office, Sydney, 4 September, 1891.

I have the honor to return herewith the papers No. as in margin, and to state that the proposed resumption of Moree Park and re-dedication of part thereof as a cricket-ground, does not come within the terms of 105th section of the Crown Lands Act of 1884. Mis. Dept. 91-6,742.

The only power under which the resumption could be made is that contained in the words: "That it is expedient, in the public interest, to resume the whole of the land."

This power, it will be observed, does not extend to a resumption of a portion thereof.

The suggested proposal is, *pro formâ*, to resume the whole, but in the same breath, as it were, it is proposed that part of the land is to be re-dedicated to the same purpose as those upon which the whole is now held.

To attempt to do this would be to extend the provisions of the 105th section in a way not justified by law.

I have, &amp;c.,

R.S.

(For JOHN WILLIAMS,

Crown Solicitor).

Submitted, as to whether this opinion is to govern action in this and all similar cases, or whether (in view of the great importance of the matter) it should not be supported by the opinion of counsel.—J.O.D., 14/9/91. Special.—R.H.D., 14/9/91. Apparently the proposed resumption and re-dedication of a portion of the park as a cricket ground would be *ultra vires*, and cannot, therefore, be carried into effect. The only course to make the ground available for cricket, would be for the trustees to grant an annual license to the club. There may, however, be some other Crown land available for the purpose to the appropriation of which there may be no objection. Perhaps the District Surveyor might be asked for a report.—W.H., 14/9/91. Approved.—J.N.B., 15/9/91.

## No. 15.

## The Director of Agriculture to The Under Secretary for Lands.

Sir,

15 October, 1891.

I have the honor to invite your attention to my letter of the 31st August last on the subject of the site for the experimental farm and agricultural school in the western district. The Minister for Agriculture is anxious to receive the information asked for, and would feel much obliged if a reply to the above communication could be furnished as soon as possible. I have the honor to enclose a copy of the letter referred to.

I have, &amp;c.,

H. C. L. ANDERSON,

Director of Agriculture.

## No. 16.

## The Director of Agriculture to The Under Secretary for Lands.

Sir,

Department of Agriculture, Sydney, 15 October, 1891.

I have the honor to invite your attention to my letter of the 31st August last on the subject of the site for experimental farm and agricultural school in the western district. The Minister for Agriculture is anxious to receive the information asked for, and would feel much obliged if a reply to the above communication could be furnished as soon as possible. I have the honor to enclose a copy of the letter referred to.

I have, &amp;c.,

H. C. L. ANDERSON,

Director of Agriculture

(Per A.P.).

The Department of Agriculture is desirous of acquiring the Bathurst race-course 193½ acres, and 400 acres of the dedicated commonage and public recreation reserve of 762 acres (which is under the control of the Borough Council) as a site for experimental farm and agricultural school, and ask for information as to how the area mentioned can be acquired for that purpose. With regard to the race-course, it could be re-dedicated as desired under section 105 of the Crown Lands Act of 1884, but it is stated that the trustees require a sum of £2,000 as consideration for giving up possession thereof. In a similar case, however, that of the re-dedication of Biggs Square, Liverpool, for railway purposes, the principle of allowing compensation in changing the purpose of a dedication was not favourably viewed by this Department, and it was decided to let the Department requiring it resume under the Public Works Act. As regards the 400 acres of the dedicated common and recreation ground, a difficulty presents itself in the recent advising of the Crown Solicitor to the effect that "resumption of a part" in such cases would be illegal. Viewing the latter difficulty and the case of Biggs Square, Liverpool, as a precedent, in cases where it is proposed to compensate public trusts for deprivation of the estate vested therein, it would appear that the Department of Agriculture should acquire the land required by resumption under the Acquisition Act of Public Works Act. It is, however, suggested that a report should be first obtained respecting the effect of such a disposition of the land upon public interests coming within the province of this Department. A proposal to dedicate 17 acres 2 roods 10 perches of the common and recreation ground as a gaol reservoir is at present blocked by the legal difficulty before mentioned. It will perhaps be sufficient to inform the Mines Department that the proposed action cannot be taken under the Crown Lands Act, but may perhaps be carried out under the Lands for Public Acquisition Act in conjunction with the Public Works Act.—J.A., 26/10/91.

R.H.D., 27/10/91. F.H.W., 28/10/91. May be so informed.—W.H., 28/10/91. Under Secretary, Mines, informed (m), 2/11/91.

## [Enclosure.]

Experimental Farm and Agricultural School Site for Western District.

Sir,

Department of Agriculture, Sydney, 31 August, 1891.

The site which it is considered would be likely to be most suitable for the above purposes is the race-course at Bathurst (comprising an area of 193 acres 2 roods), in addition to about 400 acres of land surrounding the race-course known as the park, which, it is understood, has been dedicated to the local municipal council for commonage and public recreation.

The race-course is vested in trustees, and was originally part of the park. The trustees of the race-course are willing for a consideration of £2,000 to give up possession. The Bathurst Council also will not raise any objection to the resumption of a portion of the park for the purposes of a model farm.

As a preliminary to the final determination of where the site is to be, I am directed by the Minister for Agriculture to inquire what steps would have to be taken to secure the land to this Department.

I have, &amp;c.,

H. C. L. ANDERSON,

Director.

The Under Secretary for Lands.

## No. 17.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

Sir,

Department of Lands, Sydney, 2 November, 1891.

See Appendix E

With reference to your letter of the 15th ultimo, No. 3,666, relative to the acquisition of the Bathurst race-course, and 400 acres of the dedicated commonage and recreation reserve as a site for experimental farm and agricultural school, I have the honor to inform you that the proposed action cannot be taken under the Crown Lands Acts, but may perhaps be carried out under the Lands for Public Purposes Acquisition Act, in conjunction with the Public Works Act.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary.

## No. 18.

Mr. Surveyor C. Thurburn, Bathurst, to The District Surveyor, Orange.

Survey of strip of land to be dedicated as an addition to the park, in the City of Bathurst, parish of Bathurst, county of Bathurst. Instruction to me, No. 92-1, of 11th January, 1892.

Sir,

Bathurst, 2 May, 1892.

With reference to the survey of the strip of land between Vittoria-street, as now defined, and the "Park," in the City of Bathurst, parish of Bathurst, county of Bathurst, to be dedicated as an addition to the "Park," I have the honor to request that date be furnished me as to the position of the original north boundary of the park, and also what number is to be used in marking the corners of the land.

Since the park was first dedicated, several alterations have been made, viz., by the excision of lands required for gaol purposes and reservoir, the direction of the road to Blayney; and I would suggest that perhaps it would be desirable to make a complete survey of the reserve as it now exists on the ground, with provision for road to Poor Man's Hollow, and along the southern side of the race-course, instead of merely measuring the small strip for an addition to "Park."

I have, &amp;c.,

CHAS. THURBURN.

It would appear from inquiry that the "Park," although dedicated, has never been surveyed, and as roads have not been sufficiently provided for, and those charted are incorrectly shown, it would appear a favourable opportunity to have complete survey effected, action for cancellation and rededication to follow.—H. A. CROUCH, D.S., 10/5/92. The Under Secretary for Lands.

Submitted for approval.

## [Enclosures.]

Extract 91-5,370, Department.

PLEASE quote plan for proposed dedication of recreation ground. Mr. M'Lean.—W.H.S. (pro J.O.D.), 9/12/91.

There does not appear to be any survey of the area referred to. It embraces a vacant strip of land between the position of Vittoria-street, as originally designed, and the recently altered position of that street.—R.M., 15/12/91. Miscellaneous Branch.

Referred for survey. The District Surveyor, Orange, for survey —J.O.D. (for the U.S.), B.C., 22/12/91. Forwarded to Mr. Surveyor Thurburn, B.C. 92-1.—A. DARE (pro D.S.), 4/1/92. Returned to the District Surveyor with my memo. of 2/5/92.—CHAS. THURBURN, Surveyor.

Extract from Miscellaneous 90-9,073.

FROM the District Surveyor at Orange to the Under Secretary for Lands, 30/6/90. Proposed alteration of design, City of Bathurst, No. 90-104.

\* \* \* \* \*

The altered position of Vittoria-street will leave a vacant area of about 6 acres 1 rood 24 perches, adjoining the "Park," it is proposed to dedicate this area as an "addition to the park," and a description defining it is enclosed.—H. A. CROUCH, D.S.

Submitted for approval.—J.O.D., 19/6/90. R.H.D. (for the U.S.) Approved.—J.N.B., 23/6/90. Gazetted, 27/6/90. Land agent and Chainman (with tracing), 27/6/90. Ministerial Branch, with a view to advertisement in local newspapers.—J.O.D., 1/7/90. Authority issued in Bathurst *National Advocate*, on 5th July, 1890; *Free Press*, 2nd August, 1890; *Times*, 3rd September, 1890.—W.H., 3/7/90.

No. 19.

The Under Secretary for Mines and Agriculture to The Minister for Public Instruction.

Sir,

10 May, 1892.

I am desired by the Hon. the Minister for Mines and Agriculture to inform you, with reference to the establishment of a model farm and agricultural school in the western district, that after carefully considering the merits of the respective sites brought under the notice of the Department, he has decided to establish the institution at Bathurst, upon land adjacent to the town, known as the "Race-course" and the "Park." The former comprising an area of 193 acres 2 roods, and is vested in trustees of the park, which is dedicated to the Bathurst Municipal Council for commonage and public recreation purposes. About 400 acres surrounding the race-course will be acquired. The trustees of the race-course will be at once communicated with to effect an early completion of the transfer of the land to this Department. After this is done it is the Minister's intention to commence operations in preparing the site as soon as possible.

I have, &amp;c.,

HARRIE WOOD,  
Under Secretary.

No. 20.

The Under Secretary for Mines and Agriculture to The Mayor, Bathurst.

Sir,

13 May, 1892.

The Minister having provisionally decided to establish an experimental farm and agricultural school at Bathurst, I have the honor to state that the site selected embraces about 400 acres of the land vested under the Municipal Council for commonage and recreation purposes, and known as the "Park," together with the land vested in trustees, comprising an area of 193 acres 2 roods, and known as the "Race-course." It is understood that the Council raises no objection to forfeiting the abovenamed area of the park land, and it is, therefore, desired that steps shall be taken by those concerned to effect, as soon as possible, the transference to this Department of the required land. From preliminary inquiries made as to the procedure to be adopted, I find that the Council will require to intimate to the Minister for Lands that no objection is raised to the re-dedication of the land to this Department for the purpose set forth.

I have, &amp;c.,

HARRIE WOOD,  
Under Secretary.

No. 21.

The Under Secretary for Mines and Agriculture to W. Kite, Esq., Kelso.

Sir,

13 May, 1892.

The Minister having provisionally decided to establish an experimental farm and agricultural school at Bathurst, desires that steps shall be taken by those concerned to effect, as soon as possible, the transference to this Department of the required land. The site selected for the establishment of this institution embraces a portion of the land vested in the Municipal Council for commonage and recreation purposes, and known as the "Park," together with the land vested in trustees, comprising an area of 193 acres 2 roods, and known as the "Race-course." In your capacity as trustee of the race-course I beg to intimate to you that the Minister is prepared to pay the sum of £2,000 on completion of the transfer to this Department of the trustees' title, land, and improvements. From preliminary inquiries made as to the procedure to be adopted, I find that the trustees will require to surrender the deeds to the Minister for Lands, and send an intimation to the same source that this Department will apply for re-dedication of the land for the purposes of an agricultural school and experimental farm.

I have, &amp;c.,

HARRIE WOOD,  
Under Secretary.

No. 22.

The Under Secretary for Mines and Agriculture to the Under Secretary for Lands.

Sir,

16 May, 1892.

The Minister having provisionally decided to establish an experimental farm and agricultural school at Bathurst, I have the honor to make application for the re-dedication to this Department for the purpose set forth of the lands hereinafter mentioned, viz. :—The race-course, comprising an area of 193½ acres, vested in Messrs. J. McPhillamy, W. Kite, and J. de Clouett, as trustees; and about 400 acres of the land vested in the Municipal Council for commonage and recreation purposes, and known as the "Park."

I enclose copies of the communications made to Mr. W. Kite, trustee for the race-course, and the Mayor of Bathurst, indicating the procedure to be followed by them to effect the transfer of the land and other property to the Department.

I have, &amp;c.,

HARRIE WOOD,

### No. 24. Office Memorandum.

ALL papers in connection with selection of site for experimental farm in western district herewith submitted.—H.C.L.A., 12/4/92.

The Under Secretary,—After a careful consideration of all the papers relating to model farm sites in the western district, I think the most suitable for the purpose the race-course at Bathurst, comprising an area of 193 acres 2 roods in addition to about 400 acres, known as the park, which seems to be vested in the Municipal Council of Bathurst, as trustees. As the race-course authorities and the Municipal Council are agreeable to hand same over on the conditions mentioned in the papers, steps may be at once taken for the purpose of obtaining their lands referred to, in order that the model farm may be established at Bathurst as soon as possible. As a number of applications were received from other districts, I think that letters should be sent in each instance, informing the writers that Bathurst has been selected.—T.M.S., 7/5/92.

Hon. F. B. Suttor, Mr. Kite, Municipal Council, Members of Legislature, informed on various dates from 10th to 14th May, 1892—A.P. Now write Lands Department as indicated. Letter to Lands, 16/5/92.

No. 25.

Messrs. McIntosh &amp; Co. to The Under Secretary for Lands.

Sir,

Bathurst, 17 May, 1892.

At the request of Mr. William Kite, of Bathurst, we have the honor to bring under your notice the following facts, and to request that you will be pleased to give the matter your favourable consideration.

By Crown grant, dated the 16th day of December, 1864, 193 acres and 2 roods of land at Bathurst were granted to Messrs. John M'Phillamy, William Kite, and John de Clouett, all of Bathurst, upon trust as a race-course, and for any other public amusement.

Mr. William Kite is now sole surviving trustee—Messrs. John M'Phillamy and John de Clouett both being dead.

Mr. Kite has just received a letter from the Under Secretary for Mines, informing him that the Minister has provisionally decided to establish an experimental farm and agricultural school at Bathurst, and has selected as a site for the establishment of this institution, with other lands, the abovementioned race-course, and intimating that the Minister was prepared to pay £2,000 on completion of the transfer to that Department of the trustees' title to land and improvements.

It is suggested that the trustee will require to surrender the deed to the Minister for Lands, and request that the Department of Agriculture will apply for a re-dedication of the land for the purposes of an agricultural school and experimental farm.

We have in our possession the deed of grant before mentioned, and shall be obliged by your intimating to us what course is proposed to be adopted with a view to carrying into effect the proposition of the Department of Agriculture. Awaiting your early and favourable reply,

We have, &amp;c.,

M. McINTOSH &amp; CO.

No. 26.

The Borough Council, Bathurst, to The Under Secretary for Lands.

Sir,

Town Hall, Bathurst, 19 May, 1892.

The Minister for Mines and Agriculture having intimated that he has decided to establish an experimental farm and agricultural school at Bathurst, and that the site selected embraces about 400 acres of the land vested in this Council for commonage and recreation purposes, and known as the "Park," I am directed to inform you that this Council raises no objection to the re-dedication to the Department of Agriculture of the area mentioned for the purposes of an experimental farm.

I have, &amp;c.,

D. F. VENESS,

Town Clerk.

No. 27.

The Borough Council, Bathurst, to The Under Secretary for Mines and Agriculture.

Sir,

Town Hall, Bathurst, 19 May, 1892.

I have the honor, by direction, to acknowledge the receipt of your letter of the 13th instant, No. 91-7,938, and, in reply, to inform you that an intimation has been forwarded to the Under Secretary for Lands, to the effect that this Council raises no objection to the re-dedication to the Department of Agriculture for the purpose of an experimental farm of 400 acres of land, being portion of reserve vested in this Council for commonage and recreation purposes.

I have, &amp;c.,

D. F. VENESS,

Town Clerk.

No. 28.

Office Memorandum.

Bathurst Park and Common (Joint Dedication).

Department of Lands, Sydney, 25 May, 1892.

An area of 762 acres was dedicated for public recreation and commonage, 10th January, 1865, and placed under the control of the Borough Council of Bathurst without a deed. There are now three proposals respecting the land before the Department.

The first proposal is for resumption of 15 acres of the land for Government reservoir, under section 105 of the Crown Lands Act of 1884. This has been gazetted, and duly laid before Parliament, but can proceed no further in view of legal advice, that "resumption of 'part' of a dedication is not authorised by section 105, except in cases of exchange."

The second proposal is from Department of Mines and Agriculture, who apply for 400 acres of the land for experimental farm and agricultural school, in addition to the present dedicated race-course site of 193½ acres, the Minister for Mines, &c., having intimated to the surviving trustee of the race-course that £2,000 will be paid for the latter site and buildings, &c., upon acquisition.

The third proposal is from the District Surveyor, who finds that no survey of the park and common has ever been made, and recommends that survey be now carried out, and the land resumed and re-dedicated. It would appear advisable that a report should first be obtained from the District Surveyor on the proposal made by the Department of Mines and Agriculture, when the respective sites could be determined (if any be approved of), the survey then carried out, and resumption and appropriation of the land completed as may be decided upon. It is understood by Department of Mines and Agriculture that the Borough Council, as trustees of the park and common, are agreeable to the proposal made by that Department (the Council has since stated that they will raise no objection—see 92-2,238, enclosed); and a letter from

from the trustee of the race-course (W. Kite), asking what procedure is necessary to carry out the proposal, indicates his concurrence therewith. Submitted that, in the first instance, a report be obtained from the District Surveyor. J.A., 25/5/92.

R.H.D., 26/5/92. For approval of course proposed.—W.H., 27/5/92. Last paragraph approved.—H.C., 30/5/92. The District Surveyor, Orange, for report.—J.A., B.C., Lands, 2/6/92. Returned with my report of 10th August, 92—152.—H. A. CROUCH, D.S.

## No. 29.

The Honorable F. B. Suttor, M.P., to The Under Secretary for Mines and Agriculture.

Dear Sir, Chief Secretary's Office, New South Wales, 22 June, 1892.

In forwarding the enclosed letter from the Borough Council at Bathurst, in reference to the desirableness of the preliminary work at the model farm being soon proceeded with, I desire to say that I shall be very glad if the Council's representations are favourably considered by the Minister and early authority given for the proposed work to be put in hand.

Yours, &c.,  
F. B. SUTTOR.

Ask Lands Dept. whether the deeds have been surrendered.—H.W., 23/6/92. Letter to Lands, 23/6/92.

Inform the Hon. Mr. Suttor, M.P., that the Lands Dept. have been asked to dedicate the land for an experimental farm as soon as the present titles have been cleared away, and a reminder has been sent this day.—H.W., 23/6/92. Hon. F. B. Suttor, 23/6/92.

[Enclosure.]

Sir,

I have the honor, by direction, to respectfully request that you will be good enough to urge the Minister for Mines to proceed with the clearing and grubbing of the land, and such preliminary work as may be deemed necessary in connection with the model farm. I am to point out that the present would be an exceptionally good time to proceed with the above works, there being a large number of men out of employment. Hoping that this matter will receive early and favourable consideration.

Town Hall, Bathurst, 20 June, 1892.

I have, &c.,  
D. F. VENESS,  
Council Clerk.

The Hon. F. B. Suttor, M.P.

## No. 30.

The Director of Agriculture to The Honorable F. B. Suttor, M.P., Acting Chief Secretary.

Sir,

23 June, 1892.

In answer to your letter of the 22nd instant, enclosing a communication from the Municipal Council of Bathurst, urging that the preliminary work in connection with the establishment of a model farm on the site adjacent to that town may be soon proceeded with, I have the honor to inform you that the Lands Department has been asked to dedicate the land for an experimental farm as soon as the present titles have been cleared away, and a reminder in the matter has been sent this day.

I have, &c.,  
H. C. L. ANDERSON,  
Director of Agriculture.

## No. 31.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir,

23 June, 1892.

In connection with my letter of the 16th ultimo, requesting that 193½ acres of land at Bathurst, known as the "Race-course," and about 400 acres of the common and recreation reserve, known as the "Park," may be re-dedicated to this Department for the purpose of an experimental farm and agricultural school. I have the honor to inform you that the Bathurst Council has intimated that a communication has been sent to you to the effect that no objection is raised to the re-dedication to this Department of the 400 acres above mentioned. Mr. Kite has not, however, sent any reply with regard to the race-course land. I have the honor, therefore, to inquire if Mr. Kite has surrendered the deeds relating to that property, and in what position the whole matter at present stands.

I have, &c.,  
HARRIE WOOD,  
Under Secretary.

## No. 32.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

Sir,

5 July, 1892.

Referring to your letter of the 23rd ultimo (No. 92-3,745), asking if Mr. Kite has surrendered the deed of the Bathurst race-course, the dedication of which, together with about 400 acres of the recreation reserve, known as the "Park," has been applied for by your Department as an experimental farm and agricultural school, and also asking how the whole matter stands. I have the honor to inform you that the deed has not been surrendered, and that the papers in the case are at present under reference to the District Surveyor for report.

I have, &c.,  
WM. HOUSTON,  
Under Secretary  
(Per R.H.D.).

Mr. Kite may be asked to expedite the surrender of the deeds of the race-course, and the Lands Department may be asked to expedite their action.—H.W., 8/7/92. Submitted. Approved.—T.M.S., 9/7/92. Letter to Lands Department, 12/7/92. Mr. Kite, 12/7/92.

No. 33.

39

No. 33.

The Under Secretary for Mines and Agriculture to W. Kite, Esq.

Sir, 217, Macquarie-street, 12 July, 1892.  
 Permit me to remind you of my letter of the 13th May last, with reference to the establishment of an experimental farm at Bathurst, and to ask that you will kindly expedite the surrender of the deeds of the land known as the "Race-course."

I have, &c.,  
 HARRIE WOOD,  
 Under Secretary.

No. 34.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir, 12 July, 1892.  
 I have the honor to acknowledge the receipt of your letter of the 5th instant (No. 92-3,745), and to ask that you will kindly expedite action with regard to the re-dedication of the areas at Bathurst required by this Department for the purpose of an experimental farm.

I have, &c.,  
 HARRIE WOOD,  
 Under Secretary.

No. 35.

Messrs. McIntosh &amp; Co. to The Under Secretary, Department of Agriculture, Sydney.

Sir, Bathurst, 19 July, 1892.  
 Mr. William Kite has just handed us your favour of the 12th instant, with instructions to reply.

We have now the honor to inform you that on receipt of your letter of the 13th May last, which was also handed us by Mr. Kite, we wrote to the Under Secretary for Lands informing him that we had the deed of grant, and saying that we should feel obliged by his intimating to us what course was proposed to be adopted with a view to carrying into effect the proposition of the Department of Agriculture, but to this letter we have received no reply.

We have now forwarded to our agents in Sydney, Messrs. Curtis and Barry, of 167, King-street, solicitors, the deed of grant, with instructions to furnish all necessary information.

We have, &c.,  
 McINTOSH & CO.

Re-submit end of month, or when reply is received from the Lands Department.—G.E.H. (for U.S.), 21/7/92. Re-submitted. The only communication from the Lands Department since 12th July is the enclosed formal acknowledgment of this Department's letter of that date.—H.C.L.A., 2/8/92. The Under Secretary. A copy of this letter may be sent to the Under Secretary for Lands, with a request that action may be expedited.—H.W., 10/8/92. Letter to Lands Department, 11/8/92.

No. 36.

The District Surveyor at Orange to Mr. Licensed-Surveyor W. H. Lee.

Model Farm at Bathurst.

23 July, 1892.

APPLICATION has been made that about 400 acres of "the Park" at Bathurst, in addition to the race-course, should be devoted to the purposes of an experimental farm and agricultural school.

From inquiries made, I think the area should be located on the western side of the road to Blayney, but, in order to enable me to report fully, I would request Mr. Lee to inspect and make the following tracings and connections:—

1. To traverse the Blayney Road from the town boundary to the east boundary of Steward's 9,406 acres, and nearest section corner, race-course enclosure and portion 160. Traverses to be made on southern side of the road, 150 links wide, with lines chosen and marks left, so that if required they may hereafter be permanently adopted as part of boundary. Metalling to be followed as centre line.
2. Connection to be made to rifle range and positions of targets and 600 or 800 yards, giving point shown.
3. Traverse to be made of road or roads, which should be reserved to the quarries and Poor Man's Hollow and any other track through the portion of the park south of Blayney Road, reservation of which may appear to be called for.
4. Rough traverses of these tracks will be sufficient, with positions for roads designed.
5. Any other improvements to be fixed. Traverses and information to be shown on tracing forwarded herewith. This tracing being taken from original plan, it is probable that discrepancies will appear, but Mr. Lee will understand that at this stage it is simply regarded as a diagram.

In report Mr. Lee will be good enough to explain his views as regards necessary roads. He will consider whether it would be desirable to reserve a strip along the east boundary of Steward's 9,406 acres, and he might suggest boundaries on tracing for the farm.

Payment, as per special service, not to exceed one and two-third days in field and one day in office.

H. A. CROUCH,  
 District Surveyor.

Returned with my letter, No. 92-52, of 9th August.—W. H. LEE, Licensed Surveyor.

No. 36A.

## No. 36A.

The Under Secretary for Lands to The District Surveyor, Orange.

Sir,

Department of Lands, Sydney, 21 July, 1892.

I have the honor to request that you will be good enough to expedite your action on papers numbered Ms. 92-3,691, relating to site for experimental farm and school at Bathurst, forwarded to your address on the 3rd June, 1892. I have also to inform you that the Department of Agriculture represent this to be an urgent matter.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary

(Per J.D.).

Replied to by my memo. of 10th August, 1892.—H. A. CROUCH.

## No. 37.

The Under Secretary for Lands to The Under Secretary for Mines, &amp;c.

Sir,

21 July, 1892.

In reference to your letter of the 12th instant on the subject mentioned hereunder, I have the honor to inform you that the case is under reference to the District Surveyor at Orange, whose attention has been invited thereto.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary.

*Subject*:—Respecting re-dedication of areas at Bathurst for experimental farms and agricultural school.

## No. 38.

The District Surveyor at Orange to Mr. Licensed-Surveyor W. H. Lee.

*Re* Model Farm at Bathurst.

2 August, 1892.

In connection to previous instructions, a helio. is enclosed for information from tracing with Mr. Thurburu's report on road to quarries, which he proposes should pass along the western boundaries of portions 131-134.

Consideration should be given as to the necessity for reserving road shown as "from farms," near north-west corner of portion 104; thence to proceed road along south-east site of race-course enclosure; road northerly from portion 131, or along northern boundaries of portions 131, 132, and north-west boundary of portion 124; and road from north-west corner of portion 124 to William-street, through the park.

Provided public requirements can be satisfactorily met, it would appear desirable to concentrate traffic as much as possible. In this connection the Mayor might, with advantage, be consulted.

A road, 1 or 1½ chains wide, should be continued along boundaries of adjoining portions in extension of Havannah-street.

As the race-course enclosure will be done away with, if suitable, a more direct line—William-street, through the corner of that enclosure—might be proposed.

H. A. CROUCH,

District Surveyor.

Returned, with my letter, No. 92-52, of 9th August.—W. H. LEE, Licensed Surveyor.

## No. 39.

The District Surveyor at Orange to The Under Secretary for Lands.

Model Farm at Bathurst.

Orange, 10 August, 1892.

In connection with your instructions of the 2nd June last, No. 92-103, relative to land required for experimental farm and school at Bathurst, being part of the "Park" dedicated for commonage and public recreation, I have the honor to report, from inquiries made, I found it was desired that the model farm should include the "Race-course" of 193½ acres, and about 400 acres of adjoining land, but that the actual location of the latter area had not been considered.

2. To assist in determination, instructions were issued to Mr. Licensed-Surveyor Lee to fix improvements, to traverse roads necessary for reservation, and to suggest a suitable position.

3. His report, No. 92-52, and tracing are enclosed, and on the latter is shown by red edging an area of about 677 acres, exclusively of a road, which he suggests might be adopted. It would, however, appear to me to be more desirable that the western boundary should be restricted to a line north from north-west corner of portion 104, as shown by pencil hatching on tracing, by which hilly interior country would be excised, and a more suitable area for connecting the temporary common and the balance of the "Park" would be retained. I think, also, that a slight deviation in proposed reserved road to junction with road between portions 32 and 124 merits further consideration.

4. It has, I understand, been stated by officers of the Department that drives and walks will be laid out in connection with the experimental farm, which will be available for public use and enjoyment, and as the residents are, I understand, unanimously in favour of the step, no objection appears in that score to the change of dedication.

5. I have the honor, therefore, to recommend a reference to the Under Secretary for Mines for an expression of an opinion as to the area herein suggested, and that if approved instructions be conveyed to me for the survey of it.

*See Appendix G.*

By this proposal the total area for resumption would be 516 acres, exclusively of roads (about). The area asked for being 593½ acres.

6. Also for the survey of an area, as shown by green dotted lines, for rifle range; and,  
 7. For survey of balance of park, exclusive of existing appropriations, with a view to the cancellation of the present dedication, and the rededication of the three areas for experimental farm, rifle range, and public recreation respectively.

I have, &c.,

H. A. CROUCH,

District Surveyor.

Please supply copy of tracing of proposed site for Mines and Agricultural Department.—J.A., 16/9/92. Mr. Shaw. Urgent. Tracing herewith.—A.S., 24/8/92.

[Enclosure.]

Sir,

Bathurst, 9 August, 1892.

I have the honor to transmit herewith tracing showing preliminary survey in connection with proposed resumption of part of the park at Bathurst, for the purpose of a model farm, surveyed by me, on the 8th August, 1892, in accordance with instructions contained in your memo., No. 92-39, dated 23rd July, and further memo. of the 2nd August, and to report as follows:—

(1.) It will be seen that considerable discrepancies appear between my survey and the tracing taken from the town map.

(2.) I have indicated by red border on tracing the area I would recommend for model farm, containing (roughly) about 677 acres, exclusive of road. If this be in excess of the area deemed suitable for the purpose, I would recommend, as an alternative north-east boundary, a production of the north-east boundary of the race-course enclosure, which would leave about 83 acres adjoining Lost-street as a recreation reserve in a very suitable position for the use of the townspeople.

(3.) I have indicated by red lines the roads necessary for reservation through the model farm. A road northerly from 131 does not appear to me to be now required. The Council originally intended to form and metal roads to the quarries and night-soil pits, and desired this road so that it might answer both purposes. The necessity of a road to the night-soil pits will cease when the model farm is established, and the slight saving in the distance will not compensate them for the heavy expense of bridging over the creek shown on tracing. The Council, therefore, is willing that the road to the quarries shall run southly from William-street to portion 124, and thence along boundary of portions 124, 132, and 131. The grades along this road being equally good, and a bridge having been erected over the creek. This road will in any case be required for access to farm.

If the two creeks shown on tracing were bridged over, the road from Steward's boundary north-east to the race-course fence, and thence along road formed by the Council, might be dispensed with, and traffic diverted along south boundary of model farm. Unless this be done, I would recommend the reservation of a road 1 chain wide, as shown on tracing. I consider that a chain road should be left along east boundary of Steward's 9,406-acre grant.

(4.) The soil along the western portion of proposed model farm appears to me inferior, being very sandy, and would not retain moisture in a dry season.

I have, &c.,

W. H. LEE,

Licensed Surveyor.

Forwarded to the Under Secretary for Lands with my memo. of the 10th August, 1892.—H. A. CROUCH, D. S. Tracing enclosed, No. 5,940. The District Surveyor, Orange.

#### No. 40.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir,

11 August, 1892.

The following is a copy of a letter received from Mr. William Kite's solicitors respecting the rededication of areas at Bathurst for experimental farm and agricultural school purposes. [Copy of letter given below.]

#### No. 41.

The Under Secretary for Mines and Agriculture to The Under Secretary for Lands.

Sir,

Department of Agriculture, Sydney, 11 August, 1892.

The following is a copy of a letter received from Mr. William Kite's solicitors respecting the rededication of areas at Bathurst for experimental farm and agricultural school purposes:—

19 July, 1892.

Mr. William Kite has just handed us your favour of the 12th July, with instructions to reply. We have now the honor to inform you that on receipt of your letter of 13th May last, which was also handed us by Mr. Kite, we wrote to the Under Secretary for Lands, informing him that we had the deed of grant, and saying that we should feel obliged by his intimating to us what course was proposed to be adopted, with a view to the carrying into effect the proposition of the Department of Agriculture, but to this letter we have received no reply. We have now forwarded to our agents in Sydney, Messrs. Curtis and Barry, of 167, King-street, solicitors, the deed of grant, with instructions to furnish all necessary information.

We have, &c.,

J. McINTOSH & CO.,

Bathurst.

Permit me to request that you will be good enough to expedite action in the matter, so as to enable this Department to obtain possession of the land as early as possible.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines and Agriculture.

Proposed experimental farm and agricultural school, Bathurst. The enclosed tracing may be sent to Department of Mines and Agriculture, with a view to consideration of the site suggested by the District Surveyor on 92-5,940.—J.A., 25/8/92.

The papers may be forwarded to the Under Secretary for Mines and Agriculture.—R.H.D., 25/8/92. Yes.—W.H., 26/8/92. The Under Secretary for Mines, B.C. Lands.—J.A., 29/8/92.

So far as I can see, the right of the trustees of the race-course have not yet surrendered. If I am correct in this, I would suggest that it might be done at once, so that no further delay need occur after the boundaries of the whole area required for the experimental farm have been settled. The Director may be asked to inspect as proposed by the District Surveyor and report thereon.—H.W., 14/9/92.

Submitted. Approved.—T.M.S., 14/9/92.

The Director. Report herewith, No. 92-9,622. I am informed that there is no necessity for the trustees to surrender their rights in the course, as the Lands Department will take the necessary steps when the plan has been approved to secure the land, either under the 105th section of the Crown Lands Act of 1884 or under the Lands for Public Purposes Acquisition Act.—H.C.L.A., 6/10/92.

As there is a sum of £2,000 to be paid to the surviving trustee of the race-course, I think it would be proper to ask the Crown Solicitor to advise how such trustee should be divested of his rights, and how the land required for an experimental farm and school should be vested in this Department.—H.W., 10/10/92.

Submitted. Approved.—T.M.S., 11/10/92. Letter to Crown Solicitor, 14/10/92.

No. 42.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

My Dear Wood,

Department of Lands, Sydney, 5 September, 1892.

I send you promised list of experimental farm sites. This list includes all that we know of.

Yours, &c.,

W. HOUSTON.

What has been done in regard to the papers sent to this Department?—H.W., 6/9/92.

Bathurst papers received last week, contain the Surveyor's plan of proposed boundaries, roads, &c. and I shall proceed to Bathurst as soon as possible to inspect the site before giving my views of the matter. Queanbeyan—there is no proposal to establish an experimental farm here. Uralla—a proposition has been made as to the appointment of a manager. Papers still with the Under Secretary.—H.C.L.A., 8/9/92.

The Under Secretary,—Let me see the papers *re* Bathurst, please.—H.W., 12/9/92.

Office Memorandum.—Experimental Farms.

Department of Lands, Sydney, 5 September, 1892.

BATHURST.—Papers (92-6,026, Misc. Dept.) sent to Mines Department, 29th August, 1892.

Queanbeyan.—Papers (92-2,964, Misc. Indv.) sent to Mines Department, 30th June, 1892.

Richmond River (parish of Tuckombil, county of Rous), two areas of 384 and 456 acres have been reserved. Dedication has been approved, but the District Surveyor has since suggested that 10 acres be excised from the 384 acres for future requirements (Public School, Post Office, School of Arts, &c.) The papers (92-5,059, Misc. Dept.) were sent to the District Surveyor on the 19th July last, for measurement of the land, on completion of which dedication will be proceeded with.

Wagga Wagga, North.—One thousand nine hundred and ninety-four acres. Case included in abstract of dedications now about to be laid before Parliament.

J.A.

For the information of the Under Secretary for Mines.—W.H., B.C., 5/9/92.

No. 43.

The Director of Agriculture to The Under Secretary for Mines and Agriculture.

Minute Paper.

Proposed site for Experimental Farm at Bathurst.

Department of Agriculture, Sydney, 6 October, 1892.

ON Saturday last, in company with Mr. Licensed-Surveyor W. H. Lee, I visited the race-course and park at Bathurst, which it is proposed to resume and dedicate for the purpose of an experimental farm and agricultural school.

I went over the whole of the ground, as shown in Mr. Lee's plan, and thoroughly examined the boundaries and means of access, the different kinds of soil, and the proposed roads.

I am of opinion that the area as suggested by Mr. Lee in his report, and shown in the plan with the pink edging, will be most suitable for the purposes of the Department.

The whole area, as shown by Mr. Lee, is computed to be 677 acres, without roads, but it is to be noted that a very large proportion of this land is of the poorest quality, and it is very much intersected with water-courses, which will seriously reduce the area of land immediately available for agricultural purposes.

This land is, however, fairly typical of many thousands of acres of the soil on the surrounding hills, extending 15 miles out of Bathurst in every direction. As the farms in the surrounding district have been thoroughly worked out by the wretched system of farming prevailing, immense good will be done by some scientific teaching in the best methods for conserving and restoring the fertility of the soil.

With regard to the suggestion of the District Surveyor, that a piece of the land on the western boundary might be reserved for the temporary common, I would point out that this land is exceedingly poor and very hilly, and would, therefore, be of no value as a common. It would certainly be of little value to the farm, except for the sake of the herbage for lambs and sheep in wet seasons.

The road which is shown by Mr. Lee as traversing the common from the south-west corner to its junction with the other road in the south-east may, I think, be dispensed with, as an excellent road could be provided round the boundaries of the common with an expenditure of a small amount for two bridges over the creeks indicated. Mr. Lee, in his report, has himself suggested that this road might be dispensed with. As it is at the present time in a very bad condition, it will be little loss to the few people who use it.

I therefore recommend:—

- 1st. That the plan shown by Mr. Surveyor Lee with pink edging be accepted by this Department.
- 2nd. That the road passing through the common from the south-west corner, shown on the plan, be dispensed with.
- 3rd. That the Public Works Department be asked to form the necessary roads round the western and southern boundaries of the common, in order to obviate the necessity for this road, as shown.
- 4th. That the Lands Department be requested to have this land surveyed and resumed, under the Lands for Public Purposes Acquisition Act, as early possible.

I

I may mention that the Municipal Council of Bathurst seem to have the hearty support of the people in their action in surrendering this common for the use of this Department, as sufficient provision can be made for reserves and parks outside the boundaries of the portion allotted to us.

H.C.L.A.,

Director of Agriculture.

Submitted.—H.W., 10/10/92.

No. 44.

The Under Secretary for Mines and Agriculture to The Crown Solicitor.

Sir,

Department of Agriculture, Sydney, 14 October, 1892.

In connection with the determination of this Department to establish at Bathurst an experimental farm and agricultural school, land has been chosen in the vicinity of that city which comprises 400 or 500 acres, vested in the City Council (as trustees) for commonage and recreation purposes, and, in addition, an area of about 193 acres 2 roods, known as the race-course, which originally formed part of the area for commonage and public recreation. The race-course is vested in trustees, one only of whom is surviving, and he, in view of improvements made to the land, requires a consideration of £2,000 before giving up possession.

The object of this communication is to ascertain how such a trustee should be divested of his rights, and how land required for an experimental farm and agricultural school should be vested in this Department.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines and Agriculture.

No. 45.

The Under Secretary for Lands to The Under Secretary for Mines and Agriculture.

Sir,

Department of Lands, Sydney, 17 October, 1892.

I have the honor to request that you will be good enough to return to this Department, as soon as possible, papers 92-6,026, Dept., relating to site for experimental farm and school at Bathurst, which were forwarded to you on the 29th August, 1892.

I have, &c.,

WM. HOUSTON,

Under Secretary

(Per J.A.)

Unless the Crown Solicitor desires to see the papers in connection with my letter they may be returned to the Lands Department.—H.W., 14/10/92.

No. 46.

The Crown Solicitor to The Under Secretary for Mines and Agriculture.

Sir,

Crown Solicitor's Office, Sydney, 17 October, 1892.

I have the honor to return herewith the papers relating to the proposed resumption of land at Bathurst for an experimental farm and agricultural school, which land is said to comprise some 400 or 500 acres vested in the City Council as trustees for "commonage and recreation purposes," and also an area of about 193 acres 2 roods, known as the race-course, which originally formed part of the area for "Commonage and public recreation."

(2.) It is stated that the race-course is vested in trustees (one of whom is surviving), who requires a consideration of £2,000 before giving up possession, and I am asked to say how such trustee should be divested of his rights, and how the land required for an experimental farm and agricultural school should be vested in this Department.

(3.) Before I can express any opinion at all on the matter it will be necessary to have definite information as to the mode in which this dedication was made. At present I do not understand how land can be dedicated for "common and recreation purposes." It is now well known that a common is one thing and that a recreation-ground is another and totally different thing, so that it seems unlikely that any land should have been dedicated indiscriminately for these two different purposes.

(4.) From a hurried perusal of the papers, I notice that it is stated that the land was dedicated on the 10th January, 1865, and placed under the control of the Borough Council without a deed. Amongst the papers there is the draft of a deed purporting to be a grant for the purposes of a race-course, cricket-ground, &c., but I cannot ascertain whether this deed was ever completed.

(5.) It will be necessary that the *Gazette* notice or notices of dedication, and also the copies of any deeds that may have issued dealing with this land, should be sent with the papers.

I have, &c.,

ERNEST N. SMITH,

Crown Solicitor.

Will the Under Secretary for Lands be good enough to cause the information required by the Crown Solicitor to be supplied as speedily as possible.—H.W., B.C., 17/10/92.

The race-course at Bathurst was dedicated under section 5 of the Crown Lands Act of 1861. A copy of the notice is enclosed herewith marked "A." Copy of the deed issued in that case is also enclosed—Enclosure "B." The "common" was also dedicated under section 5 of the Act cited, *vide* copy of notice marked "C," the purposes being specified as "Permanent Common and Public Recreation." The Borough Council were appointed trustees, as per copy of notice, "D," but no deed has issued. The draft deed referred to by the Crown Solicitor in paragraph 4 of his letter—that of the race-course. The trustees of the race-course were not gazetted. The papers may be returned to the Crown Solicitor with the above information.—J.A., 27/10/92.

Under Secretary for Lands, 31/10/92. The Under Secretary for Mines.—R.H.D. (for the U.S.) The Crown Solicitor.—H.W., B.C., 2/11/92. The Crown Solicitor, 3/11/92—(92-764).

[Enclosure.]

## [Enclosures.]

(A.)

Dedication of Race-course at Bathurst.—Notice in *Government Gazette*, of 4th August, 1863, No. 151, page 1703.

Department of Lands, Sydney, 27 July, 1863.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to dedicate the Crown lands herein described to the several public purposes mentioned in connection therewith, an abstract of such intended dedication having been duly laid before Parliament, in accordance with the 5th section of the "Crown Lands Alienation Act of 1861."

JOHN ROBERTSON.

Schedule of lands authorised to be dedicated to religious and other public purposes, in accordance with the 5th section of the Act 25 Victoria No. 1:—Town or place, Bathurst; county of Bathurst; locality, adjoining the town of Bathurst; to what purpose appropriated, race-course; area, 193 acres 2 roods.

(B.)

S. 64-2.—New South Wales.—Grant for the purposes of public recreation.

VICTORIA by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen Defender of the Faith, and so forth.

To all to whom these presents shall come, greeting:—

WHEREAS our right trusty and well-beloved Councillor, Sir John Young, Baronet, Knight Commander of our Most Honorable Order of the Bath, Knight Grand Cross of our Most Distinguished Order of St. Michael and St. George, our Captain-General and Governor-in-Chief of our Colony of New South Wales, with the advice of our Executive Council of our said Colony, hath determined that it is desirable for the public interest that the land hereinafter described shall be dedicated for purposes of public recreation, and shall be granted unto John McPhillamy, William Kite, and John de Clouett, all residing in the district of Bathurst, Esquires, their heirs and assigns, upon the trusts, with the powers and subject to the conditions hereinafter mentioned: Now, know ye, that we of our especial grace with the advice of our Executive Council of our said Colony, and in consideration of the quit-rent hereinafter reserved, have granted, and for us, our heirs, and successors, do hereby grant unto the said John McPhillamy, William Kite, and John de Clouett, and their heirs, all that piece or parcel of land in our said Colony, containing by admeasurement 190 acres 2 roods, be the same more or less, situate in the county of Bathurst, parish of Bathurst, at Bathurst: Commencing at a point bearing south 30 degrees 16 minutes west, and distance 4 chains and 92 links from the western corner of allotment 10 of section 122; and bounded thence on the north-east by a line bearing south 30 degrees east 43 chains; on the south-east by a line bearing west 30 degrees south 45 chains; on the south-west by a line bearing north 30 degrees west 43 chains; and on the north-west by a line bearing east 30 degrees north 45 chains, to the point of commencement; with all the rights and appurtenances thereto belonging, to hold unto the said John McPhillamy, William Kite, and John de Clouett, their heirs and assigns for ever, yielding and paying yearly therefor to us, our heirs and successors, yearly and every year the quit-rent of one peppercorn on demand, subject to the conditions, reservations, and provisos hereafter mentioned, and upon and for the trusts, interests, and purposes hereinafter declared of and concerning the said lands—that is to say, upon trust, in their discretion to permit and suffer the said land, or any part thereof, to be used by such persons, clubs, or associations, at such times, and upon such terms and conditions as the said John McPhillamy, William Kite, and John de Clouett, or any other trustee of the said land appointed as hereinafter provided, shall think fit and proper for any of the purposes hereinafter described, that is to say:—Firstly, as a race-course, upon which horse races may be run under the direction of any club or association now existing, or which may hereafter be formed, for the purpose of horse-racing; secondly, as a training ground for the purpose of training horses intended to race; thirdly, as a cricket ground or place at, and upon which, the game of cricket may be played; fourthly, and for any other public amusement or purpose which His Excellency the Governor of the said Colony for the time being, with the advice of the Executive Council thereof, may from time to time declare to be a public amusement or purpose for which the said lands, or any part thereof, shall or may be used. Provided always, and it is hereby declared, that it shall or may be lawful for the trustees for the time being of the said lands, for any of the purposes aforesaid, to make all, any, or every such rule and regulations for the use of the said lands, or any part thereof, and to vary or alter the same from time to time as they may think fit for any of the purposes aforesaid. Provided always, and we do hereby declare that when and so often as the said John McPhillamy, William Kite, and John de Clouett, or any trustee or trustees to be appointed by virtue hereof, shall die, resign, cease to reside in the Colony of New South Wales, or become incapable of acting in the trusts hereby created, it shall be lawful for the Governor for the time being of our said Colony, with the advice of the Executive Council thereof, from time to time, by writing under his hand, to name and appoint a new trustee or trustees in the place and stead of any trustee or trustees so dying, resigning, ceasing to reside in our said Colony of New South Wales, or becoming incapable of acting in the said trusts, and thereupon the said lands shall be conveyed and assured by the surviving or continuing trustee or trustees, or by the heirs of the last surviving trustee, their or his heirs or assigns upon the trusts and for the interests and purposes hereinbefore created and declared of and concerning the said lands. And we do hereby reserve unto us, our heirs and successors, all such parts and so much of the said land as may hereafter be required for public roads or ways in, over, or through the same to be set out by the Governor for the time being of our said Colony, or some person by him authorised in that respect, and also all stone and gravel, all indigenous timber, and all other materials the produce of the said land, which may be required at any time or times hereafter for the construction and repair of roads, ways, and bridges for naval purposes and for public works, together with the right of taking and removing the same, and also all minerals, with full and free liberty and power to search for, dig, and take away the same; and also the right of full and free ingress, egress, and regress into, out of, and upon the said land for the several purposes aforesaid. And we do further reserve unto us, our heirs and successors, full power for us or them, for the Governor for the time being of our said Colony to resume and take possession of all or any part of the said land not hereinafter reserved which may be required at any time or times hereafter for any public purpose whatsoever. Provided always and these presents are upon the express condition that if the said land hereinafter described, or any part thereof, shall be used for any other purpose than is hereinbefore provided or declared in and by the said trusts, the said trusts shall cease, and the said land shall be forfeited and reverts unto us, our heirs and successors, and these presents and every matter and thing herein contained shall cease and determine and become absolutely void to all intents and purposes, and it shall be lawful for us, our heirs and successors, by our Governor for the time being of our said Colony, or some person by him or authorised in that behalf, to re-enter upon the said land, or any part thereof, and the said grantees, their heirs and assigns, and all occupiers thereof therefrom wholly to remove.

In testimony whereof we have caused this our grant to be sealed with the seal of our said Colony.

Witness our right trusty and well-beloved Councillor, Sir John Young, Baronet, Knight Commander of Our Most Honorable Order of the Bath, Knight Grand Cross of our Most Distinguished Order of St. Michael and St. George, our Captain-General and Governor-in-Chief of our Colony of New South Wales, at Government House, Sydney, in New South Wales aforesaid, this 16th day of December, in the 28th year of our reign, and in the year of our Lord 1864.

[L.s.] JOHN YOUNG.

(C.)

Dedication of Recreation Ground and Common at Bathurst.—Copy of notice in *Government Gazette*, 10th January, 1865, No. 6, page 69.

Department of Lands, Sydney, 10 January, 1865.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to dedicate the Crownlands hereunder described to the several public purposes mentioned in connection therewith, an abstract of such intended dedication having been duly laid before Parliament, in accordance with the 5th section of the "Crown Lands Alienation Act of 1861."

J. BOWIE WILSON.

Abstract of Crown lands authorised to be dedicated to religious and public purposes, in accordance with the 5th section of Act 25 Victoria No. 1:—County, Bathurst; locality, parish of Bathurst, at Bathurst; area, 762 acres; to what purpose dedicated, permanent common and public recreation.

Appointment of Borough Council as Trustees of Common.—Copy. Notice in *Government Gazette* of 7th November, 1871, No. 268, page 2,541.

Department of Lands, Sydney, 7 November, 1871.  
It is hereby notified for public information that His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the appointment of the Borough Council of Bathurst as trustees of the land at Bathurst, which has been set apart for permanent commonage.

J. BOWIE WILSON.

N. 68-5,165.

## No. 47.

## The Crown Solicitor to The Under Secretary for Mines and Agriculture.

Sir,

Crown Solicitor's Office, Sydney, 12 December, 1892.

I have the honor to return herewith the papers numbered as in margin, relating to the proposed resumption of land at Bathurst for an experimental farm and agricultural school, which have been sent to me (with the further information asked for in my letter of 17th October last), for advice as to how the land required can be vested in the Department of Agriculture. 9938, 18/10/92.

The land required consists of (1) 193 acres 2 roods, known as the "race-course"; and (2), some 400 or 500 acres, part of a larger area of 762 acres, vested in the Municipal Council of Bathurst.

It now appears that the 193 acres 2 roods were dedicated as a racecourse by *Gazette* notice of 4th August, 1863, and by deed dated the 16th December, 1864, were granted to John M'Phillamy, William Kite, and John de Clouett, as trustees upon trust, to permit the same to be used as a race-course or training-ground, or as a cricket-ground, or for any other public amusement.

The 762 acres were, by *Gazette* notice of the 10th January, 1865, dedicated "for a permanent common and public recreation," and by *Gazette* notice of the 7th November, 1871, His Excellency approved of the appointment of the Borough Council of Bathurst as trustees of the land at Bathurst which had been set apart for "permanent commonage."

No deed of grant has issued in respect of the 763 acres. Both these dedications purport to have been made under the 56th section of the Crown Lands Alienation Act, 1861.

It is very difficult to see what is the exact legal effect of the second dedication, namely, for commonage and public recreation, but for present purposes, perhaps, it is not necessary to consider and decide this question.

The question is, whether these dedications can be revoked, and the lands specified rededicated for other purposes, viz., an experimental farm and agricultural school.

By section 105 of the Crown Lands Act of 1884, power is given to the Governor, with the advice of the Executive Council, to revoke any dedication, and to make a new dedication, in any one or more of the following cases:—

- (1.) In case the Governor shall be of opinion that the purposes for which any dedication was made have failed wholly or in part.
- (2.) Where there is any doubt or uncertainty as to such purposes.
- (3.) Where the trusts annexed to any land dedicated have failed, or cannot reasonably be carried out.
- (4.) Where it is expedient in the public interest to resume the whole of the land so dedicated, or to make an exchange of any portion of such land for other land of equivalent value to be dedicated on similar trusts or for like purposes.

In any of the events above mentioned the Governor may direct a notice under the hand of the Minister (*i.e.*, the Minister for Lands), to be published in the *Gazette*, setting forth the mode in which it is proposed to deal with the dedication, and a copy of such notice is to be laid before both the Houses of Parliament within ten days of the publication of the *Gazette*.

If Parliament should not, within one month, declare by resolution that it does not assent to the proposals set forth in such notice, then the Governor may direct such proposals to be carried out, and for that purpose may, by proclamation in the *Gazette*, revoke the dedication, and make a new dedication, and issue such grants as the circumstances of the case require.

From the evidence before me, I am unable to say whether it can be shown that any one of the cases mentioned in the section has occurred so as to enable the revocation and new dedication to be made under that section.

In dealing with the matter I think it would be as well to revoke the dedication of the whole 762 acres, and not merely that portion which is now required for the school, and dedicate the balance of the 762 acres, after deducting the area required for the school, either as a common, or for public recreation, or partly for one and partly for the other purpose.

I think, with regard to this dedication of the 762 acres, there is sufficient doubt or uncertainty as to what the purposes as now declared really are to bring it within case No. 2 above mentioned.

I have, &amp;c.,

ERNEST N. SMITH,  
Crown Solicitor.

The action herein advised will need to be carried out by the Department of Lands, but I presume that Department will require from us evidence that, at any rate as regards the race-course, the dedication has failed. Will the Director who has inspected this land say if he can produce any, and what evidence?—H.W., 13/12/92.

I am not aware of any evidence that the purposes for which the dedication was made have failed either wholly or in part. There is a Bathurst Turf Club (Mr. W. Kite, President), which had a race meeting on November 9th last. It is also used as a training-ground.—H.C.L.A., 16/12/92. The Under Secretary.

Will the Crown Solicitor please say whether, in view of the above facts, it is possible to proceed in so far as the race-course is concerned?—H.W., 19/12/92. B.C., Crown Solicitor, 19/12/92.

## No. 48.

## The Crown Solicitor to The Under Secretary for Mines and Agriculture.

Sir,

Crown Solicitor's Office, Sydney, 23 December, 1892.

12,215.

I have the honor to return herewith the papers numbered as in margin, relating to the proposed resumption of land at Bathurst for an experimental farm and agricultural school, which have been sent to me for advice as to whether, in view of the facts stated in the minute of the Director of Agriculture on my letter of the 12th instant, it is possible to proceed with the proposed resumption in so far as the race-course is concerned.

It is stated in the minute referred to that the Director is not "aware of any evidence that the purposes for which the dedication was made have failed wholly or in part." There is a Bathurst Turf Club, which had a race meeting on the 9th November last. It is also used as a training-ground.

In view of these facts, I do not think that there is any ground at present for a recommendation to His Excellency the Governor to revoke the dedication of this race-course, under section 105 of the Crown Lands Act of 1884, referred to in my letter of the 12th instant.

The sole trustee, I understand, is willing to consent, but I do not see that that in any way helps the matter. So long as the dedication exists the land must be used for the purposes and held upon the trusts declared and upon no other, and the only way to revoke the dedication is, as already pointed out by me, under section 105 of the Act, and this power only arises on the happening of one or more specified events, not one of which it can at present be shown has happened.

I have, &amp;c.,

ERNEST N. SMITH,

Crown Solicitor.

Submitted.—H.W., 18/1/93. Seen. A copy of this letter had better be sent to the Hon. F. B. Suttor.—T.M.S., 18/1/93. Hon. F. B. Suttor, 21/1/93.

## No. 49.

## The Under Secretary for Mines and Agriculture to The Minister for Public Instruction.

Sir,

Department of Agriculture, Sydney, 21 January, 1893.

Some years ago you communicated with the Minister for Mines and Agriculture requesting that the dedication of the land chosen at Bathurst as a site for an experimental farm might be proceeded with and operations commenced as speedily as possible.

There have been legal difficulties in the way, and I have now the honor, by direction of the Minister, to forward for your information the opinion of the Crown Solicitor in the matter.

The land required consists of (1) 193 acres 2 roods, known as the "race-course," some 400 or 500 acres, part of a larger one, of 762 acres, vested in the Municipal Council of Bathurst.

It now appears that the 193 acres 2 roods were dedicated as a race-course by *Gazette* notice of 4th August, 1863, and by deed dated the 16th December, 1864, were granted to John McPhillamy, William Kite, and John de Clouett, as trustees upon trust, to permit the same to be used as a race-course or training-ground, or as a cricket-ground, or for any other public amusement.

The 762 acres were by *Gazette* notice of the 10th January, 1865, dedicated "For a permanent common and public recreation," and by *Gazette* notice of the 7th November, 1871, His Excellency approved of the appointment of the Borough Council of Bathurst as trustees of the land at Bathurst, which had been set apart for "permanent commonage."

No deed of grant has issued in respect of the 763 acres. Both these dedications purport to have been made under the 5th section of the Crown Lands Alienation Act of 1861.

The question is whether these dedications can be revoked, the lands specificaly rededicated for other purposes, viz. :—An experimental farm and agricultural school.

By section 105 of the Crown Lands Act of 1884, power is given to the Governor, with the advice of the Executive Council, to revoke any dedication, and to make a new dedication in any one or more of the following cases :—

1. In case the Governor shall be of opinion that the purposes for which any dedication was made have failed wholly, or in part.
2. Where there is any doubt or uncertainty as to such purposes.
3. Where the trusts annexed to any land dedicated have failed or cannot reasonably be carried out.
4. Where it is expedient in the public interest to resume the whole of the land so dedicated, or to make an exchange of any portion of such land for other land of equivalent value to be dedicated on similar trusts, or for like purposes.

From the evidence before me, I am unable to say whether it can be shown that any one of the cases mentioned in the section has occurred so as to enable the revocation and new dedication to be made under that section.

A reply having been forwarded to the Crown Solicitor with regard to the race-course, that the Department is not aware of any evidence that the purposes for which the dedication was made have failed wholly or in part; that there is a Bathurst Turf Club, which had a race meeting on the 9th November last; and that the race-course is also used as a training-ground, the Crown Solicitor further advises :—

In view of these facts I do not think that there is any ground at present for a recommendation to His Excellency the Governor to revoke the dedication of this race-course, under section 105 of the Crown Lands Act of 1884, referred to in my letter of the 12th instant.

The sole trustee, I understand, is willing to consent, but I do not see that that in any way helps the matter. So long as the dedication exists the land must be used for the purposes, and held under the trusts declared and upon no other, and the only way to revoke the dedication is under section 105 of the Act, and this power only arises on the happening of one or more specified events, not one of which it can at present be shown has happened.

[*Laid upon the Table of the House in answer to Question No. 13, of 31st May, 1893.*]

—  
**Question.**

(13.) *Agricultural Gazette*:—DR. ROSS asked THE COLONIAL SECRETARY,—

- (1.) The cost of publishing the New South Wales *Agricultural Gazette* annually?
- (2.) The number of copies published monthly, and the cost of the same?
- (3.) The number of copies delivered free?
- (4.) The number of subscribers or the number of copies sold monthly, and the amount received for the same?

**Answer.**

1. The cost of publishing for the year 1892 (inclusive of index) was £1,146 16s. 8d.
2. The number of copies published monthly, and cost of same is as follows:—January, 1892, 4,000 copies, £93 5s.; February, 1892, 4,000 copies, £64 15s. 8d.; March, 1892, 4,000 copies, £85 11s.; April, 1892, 4,000 copies, £94 2s. 3d.; May, 1892, 4,000 copies, £76 3s. 4d.; June, 1892, 4,000 copies, £78 15s. 9d.; July, 1892, 5,000 copies, £84 11s. 5d.; August, 1892, 4,500 copies, £102 15s. 6d.; September, 1892, 4,500 copies, £123 3s. 11d.; October, 1892, 4,500 copies, £114 9s.; November, 1892, 4,500 copies, £101 6s. 9d.; December, 1892, 4,500 copies, £99 14s. 3d.; Index, 1892, 4,500 copies, £28 2s. 10d.; total. £1,146 16s. 8d.
3. Three thousand copies of each monthly issue, from January to June inclusive, and 4,000 copies from July to December, 1892, inclusive, were supplied to the Agricultural Department for free distribution.
4. The number of subscribers is sixty-three, at 10s. each per annum—£31 10s.; and the number of copies sold per annum to casual purchasers is, approximately, 400 at 1s. each—£20.

1892-3.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.

VOTES, No. 89. TUESDAY, 18 APRIL, 1893.

6. AGRICULTURAL HOLDINGS BILL :—The Order of the Day having been read,—Mr. Bowes moved, “That” this Bill be now read a second time.

Debate ensued.

Mr. Copeland moved, That the Question be amended by the omission of all the words after the word “That,” with a view to the insertion in their place of the words “the Bill be referred to a Select Committee, with power to send for persons and papers, for consideration and report.”

“(2.) That such Committee consist of Mr. Bowes, Mr. Bruncker, Dr. Cullen, Mr. Ewing, Mr. Henry Clarke, Mr. Scobie, Mr. Young, Mr. Garrard, Mr. McFarlane, and the Mover.”

Question proposed,—That the words proposed to be omitted stand part of the Question.  
Debate continued.

*Point of Order* :—Mr. Neild requested Mr. Speaker’s ruling as to whether the Bill related to trade, and should have been introduced in a Committee of the Whole.

Mr. Speaker said that, in his opinion, the Bill did not relate to trade, and had therefore be properly introduced.

Question put,—That the words proposed to be omitted stand part of the Question,—and Division called for,—but there not being Tellers on the part of the *Ayes*, no Division could be had, and Mr. Speaker declared the Question to have been passed in the *negative*.

Question,—That the words proposed to be inserted in place of the words omitted be so inserted,—put and passed.

Question then,—

(1.) That the Bill be referred to a Select Committee, with power to send for persons and papers, for consideration and report.

(2.) That such Committee consist of Mr. Bowes, Mr. Bruncker, Dr. Cullen, Mr. Ewing, Mr. Henry Clarke, Mr. Scobie, Mr. Young, Mr. Garrard, Mr. McFarlane, and the Mover,—put and passed.

VOTES No. 108. TUESDAY, 30 MAY, 1893.

11. AGRICULTURAL HOLDINGS BILL :—Mr. Bowes, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee for whose consideration and report this Bill was referred on 18th April, 1893, together with a copy of the Bill as amended and agreed to by the Committee.  
Ordered to be printed.

**AGRICULTURAL HOLDINGS BILL.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 18th April, 1893, the "*Agricultural Holdings Bill*,"— beg to report to your Honorable House :—

That they have examined the witnesses named in the list\* (whose \*See List, p. 4 evidence will be found appended hereto), and carefully considered the Bill referred, in which it was deemed necessary to make certain amendments.

That grave doubts exist in the minds of certain members of the Committee as to whether the Bill should not be made permissive; but your Committee, after deliberation, decided that the matter should be left for the consideration of the House.

Your Committee, now beg to lay before your Honorable House the Bill as amended by them.

Dr. Cullen,		Mr. Ewing,
Mr. Garrard,		Mr. Scobie.

Henry Croaker called in, sworn, and examined.

Witness withdrew.

George Henry Stephens called in, sworn, and examined.

Witness withdrew.

Donald Kennedy called in, sworn, and examined.

Witness withdrew.

The Clerk submitted the following claims for witnesses expenses:—G. T. Carmichael, £3 9s.; H. Croaker, £3 15s.; G. H. Stephens, £3 9s. 6d.; D. Kennedy, £6 4s. 6d.

Claims considered and passed.

[Adjourned till Tuesday next at *Two* o'clock.]

---

TUESDAY, 2 MAY, 1893.

MEMBERS PRESENT:—

Mr. Bowes in the Chair.

Mr. Ewing,		Mr. Garrard,
	Mr. Scobie.	

George Bishop called in, sworn, and examined.

Witness withdrew.

The Clerk submitted a claim from G. Bishop for £3 15s., witnesses expenses.

Claim considered and passed.

[Adjourned till Tuesday next at *Two* o'clock.]

---

TUESDAY, 9 MAY, 1893.

MEMBERS PRESENT:—

Mr. Bowes in the Chair.

Mr. Henry Clarke,		Mr. Garrard,
	Mr. Scobie.	

Thomas Charles Worboys called in, sworn, and examined.

Witness withdrew.

*Ordered*,—That Mr. W. C. Kelk be summoned to give evidence next meeting.

The Clerk submitted claim from T. C. Worboys for £5, witnesses expenses.

Claim considered and passed.

[Adjourned till Thursday next, at *Two* o'clock.]

---

THURSDAY,

THURSDAY, 11 MAY, 1893.

The meeting called for this day postponed by order of the Chairman.

TUESDAY, 16 MAY, 1893.

MEMBERS PRESENT:—

Mr. Bowes in the Chair.  
Mr. Ewing, | Mr. Scobie.

William Coates Kelk called in, sworn, and examined.

Witness withdrew.

The Clerk submitted claim from W. C. Kelk for £4 0s. 6d., witnesses expenses.

Claim considered, and passed.

[Adjourned till Thursday next, at *Two* o'clock.]

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

AGRICULTURAL HOLDINGS BILL.

TUESDAY, 25 APRIL, 1893.

Present:—

MR. BOWES,		MR. SCOBIE,
MR. HENRY CLARKE,		MR. EWING,
MR. COPELAND,		MR. GARRARD,
	MR. YOUNG.	

J. W. BOWES, ESQ., IN THE CHAIR.

Philip Henry Morton, Esq., M.P., called in, sworn, and examined:—

1. *Chairman.*] You are a Member of the Legislative Assembly? Yes.
2. Have you read the Bill now before this Committee? Yes; I have looked through it very carefully.
3. I believe you have some knowledge, gained, not from practical experience, but from other sources with regard to the working of a similar measure in Great Britain? Yes.
4. And you are prepared to give the Committee some information as to the carrying out of principles such as those embodied in this Bill? Yes; under the conditions of agriculture in a new country.
5. Perhaps it would be more convenient if, in the first place, you placed your views before the Committee in the form of a statement? In considering this question one is led a good deal to form his opinions according to what he would like to have. By that I mean that one man may look at it from the point of view of the landlord, and another may look at it from the point of view of the tenant. But having been for some years closely connected with landlords and tenants, and viewing this question more in the light of a middleman, I think I am able to arrive at what is a fair thing in the interests of both, and it is more on those lines that I shall make a statement to the Committee rather than as one closely concerned in the landlord side of the question. One has to start from a certain basis before he can go on to formulate any views as to the position the tenant should occupy in relation to the landlord, and in this case that basis is whether a tenant farmer is a labourer or a partner in the concern. I consider that a tenant when he takes land becomes at once a partner with the landlord. The landlord finds him the land, and the tenant agrees to do certain things, and I hold that if he performs those conditions which are incorporated in his lease, any improvements over and above what he is so bound to carry out are his property—that is to say, he puts into the concern so much more capital which represents a larger value given to the land. It is only on these lines that I could give an idea as to what I think is a fair thing to put in a Bill by which to define more clearly the tenant's right. At present a great deal of hardship exists in the case, not only of the tenant, but also of the landlord. I say this from my own knowledge, being connected with one of the largest estates in the Colony, on which there are, or there were, before the late sales, 350 tenants. I found in connection with the management of that estate that the tenants were selling a great many of their so-called rights which they had no power to sell; and of course they were selling certain rights—so-called rights—which we, who favour tenant right, look upon as their just rights. The selling of these so-called rights was a great hardship to the incoming tenant who purchased, and who afterwards found that he had purchased something which the outgoing tenant had no right to sell. You will see the hardship upon the second tenant—the buying tenant—who comes in and finds that not only has he to pay, at the end of his time, an increased rent, but an increased rent upon the value of the permanent improvements which he had already bought. Therefore, some doubt exists in the first place as to what are

P. H. Morton,  
Esq., M.P.  
25 April, 1893.

P. H. Morton,  
Esq., M.P.  
25 April, 1893.

are tenants' rights. The fact that a large number of tenants in this country are selling what they have no right to sell does a great deal of harm in the commercial world, and I think we should consider what are the rights that the tenant should be allowed to sell, and provide, by means of machinery, in this or some other Bill, the way in which the tenant is to obtain those rights, and afterwards transfer them to some other person. On the estate with which I have been connected for a number of years—the Berry Estate—the tenants have been getting very large good-wills, because they have enjoyed the privilege of holding land under very low rentals. Some of them have been selling out their good-will, there being no rights defined, which was based on the difference between a fair rental for the land and what they were paying. That has been looked upon as their good-will—a capitalised amount arrived at by finding out what is the true yearly rental value of the land, and the yearly rent they were paying.

6. *Mr. Young.*] Even when they had no lease? Yes. Few of the tenants until lately have had a lease. They have been yearly tenants, and some of them have been receiving as much as £1,200 for the good-will for one year.

7. There was a sort of implied idea that they would be allowed to go on? Yes; that was before Mr. Berry died. A few of the rents were raised, and some of the tenants obtained as much as £1,200. The outgoing tenant obtained this money, which did not represent the value of the improvements that were put upon the land, and the incoming tenant, when he had to pay a fair rent upon the land, found himself in difficulties, and throughout the whole of the district, even to this day, people are in trouble through having bought good-wills. If we could remove that trouble, and at once arrive at what a tenant has a right to sell, we would do good to the tenant, and encourage him to make improvements that he would not otherwise make. By a Bill like the present we should at once remove a great danger to the commercial life of these districts where there are a large number of tenants. The outgoing tenant on selling out leaves the district, and takes the money with him, and the incoming tenant is in an unfortunate position, because he has had, in many cases, to borrow money to buy the good-will. My idea of what the tenant should be allowed is this: Although it has not always been the custom on the estate to which I refer, still of late there has been a recognition that where a man has a lease he has a right to sell what permanent improvements he placed upon the land over and above those he agreed to make under the terms of his lease. I think that is a fair thing, and if we could make that plain the great danger to which a man is subjected by buying what is of no value and a great deal of the damage that is done to commercial life would be obviated, and men who now do not care to improve other people's land would be encouraged to do so. In this way I believe a benefit will accrue to the State generally as well as to the tenant, while I cannot see that any injury would be done to the land-holding class, because at present there is a large amount of neglect—perhaps not exactly neglect but there is a large amount of work which is not done on a farm that would be done, and thus at the termination of the lease the land would be of greater value to the landlord, the tenant who is leaving would get the value of the permanent improvements beyond those which he had agreed to make, and the State would be benefited also. It would give a larger amount of employment throughout the Colony and it would transfer what is now a doubt into a certainty. Of course what we have to guard against is blackmailing by tenants who do not wish to remain upon the land, but who wish to get improvements made—men who being labourers—and we have a great many of such men on farms—would do labourers work and neglect the proper farm work, and then ask the landlords to pay them for the work they did. They would neglect the proper farm work and only go in for improvements such as fencing and draining for which they were better fitted. I see there is a provision in clause 8 to this effect:—

But a landlord shall not be entitled to have taken into account against compensation any waste or breach by the tenant in relation to a matter of husbandry or cultivation committed or permitted more than two years before the determination of the tenancy.

That would have to be very carefully gone into, in order to see that the landlord could take from the amount of compensation granted for permanent improvements, an amount represented by neglect on the part of the tenant to carry out any improvements which he should have made under his lease. Unfortunately, in this country the majority of our farmers are not real agriculturists. Many of them are labourers who, if they got compensation for improvements, would improve the holdings in the manner I have described, instead of carrying out proper farming improvements for which they would get no compensation.

8. *Chairman.*] I have drafted an amendment which I propose to introduce into the Bill which may perhaps meet the objection you have just referred to. The purport of it is that the landlord and tenant shall make an arrangement before the improvements are carried out, that those improvements are in the interests of the holdings, and if the arbitrators consent to that course being taken it will immediately get rid of the difficulty; the amendment I intend to propose will be inserted at the end of clause 4? That requires careful consideration, because the majority of our tenant farmers in this country I do not think are agriculturists. Take for instance a brickmaker who has taken a farm. He would be able to build a brick house or a barn, or some other improvement of that character much cheaper than he could get it built. While he was engaged in that work he would be neglecting the proper improvements necessary for the working of the farm. At the end of the time he might claim compensation from the landlord for his own work in carrying out improvements, while all the time he was so employed he was neglecting to work the farm in a husbandlike manner. These things should be considered because though such a tenant may make a certain living off the land he would make a greater amount of money from his own labour as an artisan on the farm.

9. *Mr. Young.*] It is provided somewhere in the Bill that the value of the improvement is only its value to the incoming tenant? Quite so; and the improvements of the kind to which I have referred would of course be of value to the incoming tenant. But from the value of these improvements it would be necessary to deduct the amount represented by the neglect on the part of the outgoing tenant of specified improvements on the farm. I think that for want of a true definition of what are tenants' rights a great many farm lands are neglected and large quantities of land on farms are lying waste. Under present conditions the more a man improves a farm as a rule the higher will be his rent at the termination of his lease, especially where he improves his farm over and above what he has agreed to do in his lease. Tenant farmers at the present day will, as a rule, do no more than they are bound to do under their lease. A great many of them, unfortunately for the landlord, do not do as much as they agree to do; but if you give those who have leases the right to the permanent improvements over and above what they agree to make

make it will be a great deal better for the tenant, and for the landlord also, I believe, in the long run. The value of the land I think can be fairly divided into three parts—first its value as handed over by the landlord to the tenant; then there is the unearned increment which can never go from the land, but can only be touched by the State; and the third value is that given to the land by the tenant who, I think, should have a right to part of that value. I think the schedule of the Bill ought to be considered carefully, because a great many persons will agree as to what compensation should be paid for in general way, but might find great fault with the schedule which I think is one of the chief parts of the Bill. A great many people will at once admit that if a man builds a house or drains the land after his landlord has declined to do the work he has a right to the value to the improvements at the termination of his lease. But it is a question whether the tenant should be paid for repairs. Repairs are very often consequent upon neglect, and the question to consider would be whether the arbitrators should go into the whole question of neglect. If a tenant has neglected his farm and allowed his houses and fences to go to ruin, it would be very unfair to the landlord that he should lose the value that should be placed upon these. Therefore, I think the schedule is one of the most important parts of the Bill. There are one or two other points. All notices, either from the landlord to the tenant, or from the tenant to the landlord, should be in writing. At present it is not the rule between landlord and tenant that everything should be in writing. I think a provision of this kind should be adopted, so that when matters go before the court it should not have to depend upon men's words. Then, again, there is an omission in the Bill with regard to the power of the arbitrators to call witnesses. If they have not the power which a Court has to call witnesses it would be very hard to prove these claims, because the landlord, if he wishes to evade them, will object to his manager or overseer giving evidence, and on the other hand, the tenant will not encourage his servants to give evidence against him. In this respect the arbitrators should have more power than is given them in the Bill. I think an amendment is required in clause 3, by the insertion of these words: "other than any improvement made under agreement in lease"—that is to say, no compensation shall be awarded for any improvements that a tenant has agreed to make. Of course, the more improvements a tenant agrees to make the lower his rent is, and he also should be considered in this Bill. In regard to clause 9, which begins—"Where an incoming tenant has paid to an outgoing tenant"—I think these words should be added—"with the consent, in writing, of his landlord." There are many tenants who, for faults of their own, are turned off the land, and it would not be right that an outgoing tenant should be allowed to sell to an objectionable tenant. If you admit that a tenant has a right to sell, you should provide that he should only sell to a person whom the landlord, or in all cases of disagreement the arbitrators, would like to have upon the land in his place. Then, I think, that the landlord should have a prior right to buy the improvements in all cases at the termination of the lease, so that if he wished to take the land into his own hands, he would have the right to do so, rather than be compelled to accept a tenant whether he was a good or a bad one. It should be provided that no tenant should put unnecessary improvements upon the land. Tenants, like other people, are sometimes faddists, and will place improvements on the land that are only experimental, and of no real value to the property. Then, again, in sub-section 9 of clause 12, there is an omission. Where an umpire fails or refuses to act, the Court or the arbitrators should have power to appoint somebody in his place; because these are all matters of dispute, and if people on one side or the other wish to get out of paying a just claim, they will try to appoint a man as umpire whom they know will refuse to act, and so have the matter hung up. There is a provision of the kind to which I refer in the English Act. Another point that requires careful consideration is whether the Bill should apply to yearly tenancies, and whether it should apply to improvements made after notice to quit has been given. These are not allowed in the English Act, and generally speaking, should not be included in this Bill. Certainly not; the Bill should apply generally to the cases of tenants at will, and one question is important in regard to tenants, what time is to be disallowed to the tenant after he has made improvements. At the present time many landlords would willingly carry out improvements, but they cannot find the money, and consequently the farms are lying waste; and tenants have to live in miserable houses simply because the landlords have not the money. But if they had these rights, which are always transferable, many of the tenants could obtain loans which would enable them to build houses, if the landlords were unable to build for them.

10. *Chairman.*] In regard to compensation, that would be given according to the value of the improvements when the arbitrators gave their award. But, of course, the longer those improvements remained in use by the tenant the more they would depreciate in value; so that, I think, that is matter which will rectify itself? Yes. I may mention that in my experience I have found that the idle and indolent tenant feels the most secure. I have noticed that on large estates the hard working man who improves his land the most, fears the most, especially where he is under lease, I have known men to say that they would not improve their farms but would leave them idle, because then no one else would want them. So that the present condition of things as between landlord and tenant encourages idleness and indolence, and on the other hand there is a great amount of uncertainty, especially in regard to the better farms and the better tenants who work their land, and whose land is always wanted by some outside person.

11. I understand that as far as the principles of the Bill are concerned, giving compensation for improvements to tenants, you agree with them? Certainly, with proper safeguards, and with provisions for counter claims for neglect of proper husbandry,

12. Those are matters merely of detail? No; they are vital principles which should be incorporated in the Bill. You might have an Agricultural Holdings Bill which would give everything to the tenant, but I think the landlord should have a counter claim for damages done to the property through neglect.

13. Have you anything else to suggest? There is a provision in Section 59 of the English Agricultural Holdings Act, 1883, which I think should be adopted. It is as follows:—

Subject as in this section mentioned, a tenant shall not be entitled to compensation in respect of any improvements begun by him, if he holds from year to year within one year before he quits his holding, or at any time after he has given or received final notice to quit, and, if he holds as a lessee, within one year before the expiration of his lease.

14. *Mr. Copeland.*] Do you think there is any real scarcity of land in a country like this;—scarcity of land which could be obtained under lease? I do not think so. I think there is no scarcity.

15. You are still administering the Berry Estate—or your father is? No. It is administered by the trustees, with the assistance of my father, a brother of one of the trustees, and myself.

16. Are the trustees now giving leases? Yes.

17. For what tenure? Ten years is the highest in the case of farm leases, but generally speaking seven years.

P. H. Morton,  
Esq., M.P.  
25 April, 1893.

- P. H. Morton, Esq., M.P.  
25 April, 1893.
18. Would it not be possible for tenants to obtain longer leases than ten years? Not in that estate, I think, because the trustees have to carry out certain conditions under the will; they must not lock the land up.
19. The Berry estate is an exceptional case then? Yes.
20. Speaking generally from your knowledge of the country, is it not a fact that there is plenty of land all over the Colony that can be obtained under lease with a good long tenure? Yes; and at a fair rent both from private owners and from the Crown.
21. Would it not obviate all these difficulties if what are termed improvement leases were granted—give a man a lease of sufficiently long tenure and let him carry out what improvements he thought it would pay him to make, so that he would have the advantage of them during the currency of his lease; would not that obviate all this difficulty? It would obviate it if he did not want to sell out. In this respect it has been brought under my notice that a great danger is done to commercial life by the present conditions.
22. You mean if he did not want to sell out his lease before it expired? Quite so. The difficulty is to get over the trouble that comes about through people selling out before their time and impoverishing the incoming tenant, and where the right to sell is not recognised by the landlord. I do not think this right to sell is recognised by one landlord in ten. It is productive of much danger to commercial life.
23. But if the tenant had a lease for a certain tenure and one of the provisions of that lease was that he should have the right to transfer, would he not then be able to obtain an equivalent premium from the purchaser for what the lease was worth generally, without specifying so much for this improvement and so much for that? Certainly he would; but the tendency is to get as much money as possible by the seller who very often sells to an incoming tenant in a misleading manner.
24. But would the purchaser not want to see the lease before he bought so that he would know what he was buying? Not in the majority of cases. Unfortunately for us, and for the whole community—speaking of a community consisting largely of tenants—the incoming tenant always shows great neglect. He buys a tenancy, and then finds he is in difficulties.
25. But would it not be more difficult for a purchaser of a lease to get at the facts by valuing this improvement and that improvement than it would be for him to go on the land, see a farm which was improved to a certain extent, and say, “Now this lease has so many years to run, it will pay me to give so much for the balance of the term”—would not that be a simpler way? It would be simpler and much easier, I admit, because, suppose a tenant is paying 10s. an acre and has improved the land up to 15s. an acre, the incoming tenant will see at once that the land is worth 15s., and he will pay 5s. an acre extra for the number of years still to run. That is much the easier way.
26. The way I suggest? Exactly; but they do not do that.
27. In general terms, do you not think it is desirable for the State to interfere as little as possible with land transactions; that it should give every man perfect freedom to buy and sell and lease land just as he likes, without coddling him or making provisions, because every provision makes a difficulty? Yes; I am strongly of opinion that there is too much interference with people's dealings in business. But the interference I advocate in this matter is only to try and define what is a custom and recognised as a right.
28. I understand that in the Berry Estate they had no leases until recently? No; the whole difficulty has arisen because their terms were so easy.
29. The Berry Estate is exceptional? Yes; and my evidence might not apply to other estates.
30. You would not think it desirable to make a general enactment based on exceptional circumstances such as have occurred in the Berry Estate? Oh, no. But as there was a demand for legislation in the North of Ireland, where custom was first made into law, and as this legislation settled disputes there and also in England and in Scotland, I cannot see why in this country, where we have a great number of tenants, and they are increasing every year, we should not have some court to say what are the tenants' rights and what is the value of them.
31. But would you require a court—would you require a definition of tenant right—if the general custom was to have a lease for so many years and let the tenant put on the land what improvements he thought would pay him, and at the end of the lease go out of occupation and out of possession of the improvements? No; I do not think there would be any need for this legislation if the landlords would give long leases and allow the tenant who makes the improvements to sell for what he can get from the incoming tenant.
32. Do you think there would be any difficulty in tenants getting possession of land with long leases in different parts of the country? Yes; I think there is a difficulty. It is a hard thing for tenants to get long leases. I have been on most of the rivers from the Bellinger down to the Moruya district, and the tendency in all the places I have been is not to give long leases.
33. What is the general tenure of the leases on the rivers to which you have referred? I think in most cases about seven and ten years.
34. I suppose you would not consider that sufficiently long to warrant a man in spending very much? I do not think it is sufficiently long to warrant him in doing what he ought to do to the land.
35. What might be termed permanent improvements? Yes; permanent improvements, such as drainage with flood gates, valuable buildings, the plantation of orchards and trees for the sheltering of stock and all such improvements.
36. I suppose you are aware that in many parts of the country you can purchase private land to-day cheaper than the price at which you can select land from the Government? Yes. You can buy good land right out for less than is paid per acre per year in some of the coast districts for land convenient to railway communication with Sydney.
37. In looking over the schedule, would you think it necessary to include any other form of improvement? No; I am not in favour of leaving in the word “repair” because repair as a rule is consequent upon neglect. The schedule includes “drainage of land,” which I suppose would include reclamation and flood gates, “erection, repair, or enlargement of buildings” and “making and repairs of fences.” I would leave out the words “repair” and “repairs.”
38. Speaking in general terms, do I understand that your opinion is that it would be preferable that the tenant should have what is known as an improvement lease—that is, that he should have a tenure for a number of years and make all the improvements he thinks it will pay him to make, having in consideration that at the end of the lease he would have to abandon those improvements without compensation? Certainly, if the lease is long enough.

39. What do you think would be a fair and reasonable period? I should say, from fifteen to twenty years. That is double the term of the leases now. Unfortunately in most of our districts there is an immense loss—as in dairying for instance—from want of shelter. People have gone through the country right and left, and have cut down every tree they could get at. The return from dairying would be 25 per cent. more if the stock were made warmer, especially as they do not house them at nights. If you give time to the tenants to get some return after putting down plantations of trees, and shrubs, and hedges, and all that sort of things, then I believe the return to them would be fully 25 per cent. more on account of their being able to keep the cattle warmer in winter. Therefore I think the leases should be sufficiently long to enable such improvements to be made.

40. In reference to the provision in clause 12 as to appraising the value of land, do you not think it would be a simpler method to have these improvements valued by the Local Land Boards? Of course one answers that question by considering who are the members of the Land Board in the district with which he is familiar. Speaking with regard to my own district I should certainly answer "Yes," but in the case of other districts in which I have been, I should say "No," because I know of Land Boards consisting of a Government official who is a land officer, a man who has a grocer's shop, and another man who knows nothing about land. In the district I represent the chairman is a well-known man, and the other two members of the Board are men who have been farmers and selectors. In that case, I should say it would be much better to use the services of the Local Land Board.

41. But do you think it would be cheaper and more expeditious to refer cases of that kind to the Local Land Board? Yes, I think it would be better, and I think it would be juster, because, as a rule, where two umpires are appointed, each side appoints a man who they think will favour them, and there is a conflict of opinion. But I believe from what I know that the members of the Land Board in most places are very competent men, and would do the work satisfactorily in this case as they do in all others.

42. Do you not think that the power vested in a tenant to effect improvements should be limited. Suppose one man went on improving and another man went on improving, would there not be a danger that in the course of a little while the improvements, the right to which would vest in the tenant, would ultimately assume a greater value than the value of the land? It might be so if they went on improving, but I do not think there is any danger of that from what I know of tenants.

43. If the value of the improvements always vest in the tenant and is a transferable commodity it might come to that position—that one man would spend £100 or £200, and the next man coming in would spend £100 or £200, and the farm might be over-improved? I do not think that would be the case where the landlord or the arbitrators have to agree, and where you strictly define what the improvements are to be. In England the improvements in some cases have been such as to destroy the value of the land. A gentleman out here who has land at home, informed me that he had been called upon to pay almost more than the land was worth for the tenant's right. The Committee will see by the schedule to the English Act where all the money goes. The first schedule to that Act is as follows:—Part I.—Improvements to which consent of landlord is required. (1.) Erection or enlargement of buildings. (2.) Formation of silos. (3.) Laying down of permanent pasture. (4.) Making and planting of osier beds. (5.) Making of water meadows or works of irrigation. (6.) Making of gardens. (7.) Making or improving of roads or bridges. (8.) Making or improving of water-courses, ponds, wells, or reservoirs, or of works for the application of water power or for supply of water for agricultural or domestic purposes. (9.) Making of fences. (10.) Planting of hops. (11.) Planting of orchards or fruit bushes. (12.) Reclaiming of waste land. (13.) Warping of land. (14.) Embankment and sluices against floods. Part II.—Improvement in respect of which notice to landlord is required. (15.) Drainage. Part III.—Improvements to which consent of landlord is not required. (16.) Boning of land with undissolved bones. (17.) Chalking of land. (18.) Clay-burning. (19.) Claying of land. (20.) Liming of land. (21.) Marling of land. (22.) Application to land of purchased artificial or other purchased manure. (23.) Consumption on the holding by cattle, sheep, or pigs of cake or other feeding stuff not produced on the holding. The great danger is that by adding so much to the schedule and giving everything that is put on to the land to the tenant, you would destroy the value of the land to the owner, leaving nothing but the first value, which might deteriorate with a fall in the price of land, while the value of the improvements would remain. Take a case like this: A tenant has a lease for ten years, and in the first year he puts a drain through a swamp. He immediately begins to derive extensive benefit from the draining of the swamp—clover springs up perhaps, or he cultivates it. Throughout the whole of his lease, with the exception perhaps of the first year, he would get a very great advantage from the labour thus bestowed on the swamp. You would, at the end of the year, give that man compensation or value for cutting the drain, notwithstanding the fact that his rent had been fixed and that he had to pay no increased rent by reason of the greater value given to the land by the cutting of the drain, though the land might have doubled in value by the expenditure of so much capital.

44. He would immediately get advantage from his labour in cutting the drain, and do you think it would be proper for him, at the end of the lease, to claim compensation from the landlord for having cut the drain? No; I do not think so. I think the arbitrators would see that he had got the value back. Under this Bill there would be no trouble in finding out the compensation to be paid in such cases.

45. The same with ringbarking and scrubbing? That is looked upon as one of the things the tenant always has to do, and there is never any proposal to compensate him for that.

46. Ringbarking and scrubbing would not come under this Bill? No; I may mention that in leases a clause is generally inserted that where the land is increased in value by a drain—that is, when the landlord takes it in hand—the tenant has to pay the increased rental. In any well managed estate a clause would be put into the lease to say that when it is proved to the landlord, or when he finds out, that it will pay him to drain the land, then he may drain it and charge the tenant the increased rent. There would be such a clause in any lease given by a thoughtful manager or landlord.

47. Do you not think that when a lease expired there would be a great deal of difficulty in appraising the value to the incoming tenant of buildings such as barns and stables? No; I do not think so. Those connected with estates have to value buildings almost every day.

48. What would be the length of life you would give to a brick building, say, or to a fence? You would have to find out by judging. You can at once arrive at what the value of a building is to the incoming tenant. It may be of no value at all to him, although it is worth hundreds of pounds, and the same with a fence. Fences are erected all over some farms—sometimes simply for the use of the tenant—which should

P. H. Morton,  
Esq., M.P.  
25 April, 1893.

P. H. Morton, should never have been put there. You could not give compensation in such a case. You would have to consider each item separately, according to its value of the incoming tenant.

Esq., M.P.

5 April, 1893.

49. Assuming that the lease has expired, under this Bill the tenant would still be able to claim the value of his improvements from the incoming tenant;—if the old tenant did not obtain a renewal, the incoming tenant would have to pay him the value of his improvements, appraised according to their value, to the incoming tenant? Yes.

50. But suppose the landlord said, "Now, A, your lease has expired; I am going to charge a higher rent to B." Of course, it is supposed that B would know what rent the landlord required, and then it would be a question whether it would pay B to give the landlord his increased rent and pay A for his improvements as well. Suppose the landlord said, "Well, notwithstanding that, I insist upon an increased rent of 50 or 100 per cent." Then there might not be any tenant who could afford to pay this increased rent and at the same time pay the outgoing tenant for his improvements? This would happen—the landlord would not get a tenant at that exorbitant rent. No one would take the land at a rent which was too high, and the landlord would then in return for, what I call, his greediness, have to pay the outgoing tenant.

51. He might not do that at all. He might say, "This farm has now got into working order; it is nicely improved, and I do not think I will have another tenant; I think I will farm it myself; or if anybody wants to rent it from me they must pay £1 an acre, or twice as much as the previous tenant paid." The landlord demands an exorbitant rent; he cannot get a tenant, and, therefore the outgoing tenant cannot get compensation for his improvements and the land is not let at all? The outgoing tenant gets compensation from the landlord. I think you will find, according to the Bill, that this claim for compensation lies against the land where there is no incoming tenant. The provision is contained in clause 3. In clause 10 there is a peculiar error which has been copied from the English Act. The clause provides that the tenant shall give notice in writing to the landlord "of his intention to make a claim for compensation." It should be "claiming compensation." As the clause now stands the notice would have to be in these words: "I hereby give you notice that I intend to make a claim and now claim." This is unnecessarily long.

52. *Mr. Young.*] Do you think from your knowledge of what has taken place that a Bill of this kind is necessary, or, at any rate, advisable, in the interests of the whole country? I think that a Bill like this, the rights of the landlord being carefully considered, would do good, because, as I have pointed out before, a great deal of commercial trouble has arisen by tenants selling what they thought were their rights, but which afterwards proved to be the property of the landlords. The Bill would clear up a doubt in such cases.

53. Do you not think that it should be left between the buyer and seller, as in every other case? It is not so left in every other case.

54. In every other case the well-known principle of law, *caveat emptor*, comes in, that the buyer should be satisfied as to what he buys. Does not that apply in this as well as in other matters? Yes; but there are customs which overrule all legal maxims.

55. But I understand you to say, quite independently of that, a very much stronger reason is this—that you think greater improvements would be put on the farms? Certainly, that is the greatest point of all, better farming would be done, and more labour would be employed.

56. And you think that the production of the agricultural districts would be greatly increased? It would be immensely increased if the tenants felt safer.

57. Do you think it should apply to every tenancy or would it not be wise to limit it to tenancies that have two or three years to run? I do not think it would be wise to apply it to every tenancy.

58. For instance yearly tenancies should be kept out of a Bill of this kind? I think we should adopt a provision in clause 59 of the English Act as follows:—

A tenant shall not be entitled to compensation in respect of any improvements begun by him, if he holds from year to year, within one year before he quits his holding, or at any time after he has given or received final notice to quit, and if he holds as a lessee, within one year before the expiration of his lease.

59. Do you think that would cover it? I think that is a fair thing.

60. In the South Australian Act tenancies of twenty-one years duration are excepted, the idea being that in a long lease of that kind the tenant would make his improvements and get the value of his improvements before the close of his tenancy—do you think that would be wise? I think that is a fair thing. In the case of a long lease there would not be the same anxiety after having more improvements carried out than were necessary for agricultural work.

61. As a matter of fact a lease of twenty-one years is in the nature of an improving lease? Quite so.

62. And the tenant naturally puts his improvements on at such a time that he will be able to get the value from them without a money value at the end of his lease? He will do all that he wants to do in the first few years.

63. You said, with reference to clause 8, that you thought the landlord should be able to claim compensation for a matter of breach before the two years. Do you think that is wide enough in favour of the landlord? I do not consider it enough. If a man breaks his contract at any time during his tenancy any damage done should be taken from the amount awarded to him at the expiration of his tenancy.

64. That would be quite right if the landlord had no other right or claim. But has he not at any time a right to bring his tenant to book for not carrying out his agreement? Yes; a landlord can apply to the Court to have the lease annulled for breach of agreement.

65. Having that right, do you not think it would be unwise to allow him to go back for such a length of time as two years to bring up against his tenant as a matter of breach what the landlord had in his power to compel the tenant to carry out long before. Do you not think there should be some sort of statute of limitations in the matter? It might be unnecessary to put it in this Bill. If a clause were put in limiting it to two years there would be no danger.

66. You think it would be wise to leave that limit in the Bill. I do not think it would make much difference one way or the other.

67. *Mr. Ewing.*] This is an attempt to define the tenant's right and the owner's right, is it not? No; I do not think there is any attempt to define the owner's right.

68. You pointed out in part of your evidence that there were various rights. It is an attempt to define these rights? Quite so.

69. That is your strong point? My strong point is that it is an attempt to define the rights of the tenant and to encourage agriculture. That is what the attempt is—to encourage better agriculture. P. H. Morton, Esq., M.P.

70. In your experience have attempts of that kind been satisfactory in the past—attempts to define the tenant's right by law? I think a great many difficulties have been settled. 25 April, 1893.

71. Do you remember that Lord Dufferin said that it was like two men in a bed; you could not tell which the bed belonged to until at last one kicked the other out? I do not think the analogy holds good, because in this case you have a man leasing land to another man, and the two not occupying at the same time.

72. Following Mr. Copeland's inquiry, it appears to me that the tenant may be very likely to kick the landlord out. Take a case of this kind, and your experience will tell you it is a correct one. Suppose a man clears, scrubs, and drains his land and makes other necessary improvements, and by the time he gets his crop in he has spent £10 or £12 an acre on his land. At a time like this you could buy land in that condition at £8 or £10 an acre. Would not the tenant's right, which he would claim as compensation upon that, be greater than the fee simple of the land? No; there would be no claim in such a case. The landlord would not give up his land to a tenant unless he agreed to do that work, and, therefore, there would be no claim.

73. Would not a landlord who, generally speaking, knows what he is doing, contract himself out of this Bill altogether? No, I do not think he would, because a great number of landlords admit that improvements ought to be done on the farms—permanent improvements which they are not able to do—and a great many of them look to the tenant to carry those improvements out, and recognise by custom what we wish to make law.

74. Presuming a tenant wants a man's land, the landlord will only let that land go on terms that are satisfactory to himself; therefore, he will make a certain lease to his tenant that will be satisfactory to the landlord. If the tenant wants the land he will have to accept those terms? The great power still remains in the landlord's hands. Suppose this Bill were passed with amendments, which we think necessary, a landlord can put in all these things as conditions to be carried out, and there will be nothing left.

75. You hold definite opinions with regard to this because of your experience in connection with the Berry Estate? Quite so.

76. Do you not think it was the slipshod way that things were done in the Berry Estate that created these difficulties to a great extent? I do not think so. I do not think your adjectives are correct. I would say the kind way, and not the slipshod way, because the person who owned that estate recognised that the tenants had done an immense amount of labour, in the first place, in bending their backs and clearing the soil, and he left them there for the length of his time. It was a matter of kindness and consideration.

77. In other words, the tenants were in possession, and the men who bought their rights imagined they could have the same terms? It was a speculation on an old man's life—that is what it was.

78. That is a special case, therefore? Yes, and when it came to an end and the speculation ceased those who had bought a few years previously found they had paid too much.

79. You said an idle and indolent man was better off than an industrious man? I said that an idle and indolent man if he could make a living felt more comfortable than a hardworking man, because the farm of the hardworking man would be desired by outsiders. The latter was, therefore, always conscious that there were people desirous of getting his land. In that way I think the present state of affairs discourages industry.

80. Could not the landlord improve the farm? If he goes and works it himself.

81. If he improves the land and makes it productive he will get a higher rent? I think these things are in the tenants' own hands, it cannot be done by the landlords. The idleness consists in allowing a tree if it falls down to remain there without burning it off, and in allowing ferns and tussocks to grow.

82. Do you not think there will always be trouble between the landlord and tenant? There will be unless the law is altered and human nature alters. But I do not think there need be trouble between landlord and tenant. We should look upon the matter as one of partnership.

83. Being reasonable men? Yes.

84. Do you think it is better as a general principle to allow men to settle their difference, the landlord directly with the tenant, or to allow them to seek their remedy in a court of law—which is the better way? I could not say. We have never yet seen them have the opportunity to settle their troubles in a court of law, and we cannot know what that would bring about.

85. *Mr. Scobie.*] Do you think that a Bill of this kind should apply to existing leases? Certainly not, for this reason that a great number of farmers are now under rent and under agreements that would be altogether altered by this Bill. I think it should apply to all agreements entered into after the commencement of the Act. I think it would be unfair to the landlords, who in many cases have given lands without written agreements—there are hundreds of cases where there has been an understanding between the two parties—if the Bill were to apply to such cases.

86. Under present conditions is not the length of lease very often given in compensation for improvements that might be made upon the land? The length of lease is given, and at a lower rent than, perhaps, the land would bring without those conditions.

87. And in a Bill of this kind should there not be some clause requiring a very clear statement of the condition of the farm when the lease was entered upon, otherwise at the end of the ten years it would be difficult to say what the improvements were? Quite so. It would be very hard for the people who settled the dispute to arrive at what the improvements were if they did not know the condition of the farm. It would also be very difficult for them to deduct what the landlord claimed on the ground of neglect if they did not know what the farm was like when the tenant went into occupation.

88. Then you think that in a Bill of this kind it would be necessary to have a clause inserted making it compulsory to state the condition of the holding when the lease was entered upon? That would be to state the value of the permanent improvements. As the claim is only for permanent improvements you would have to state what the value of the permanent improvements were when the tenant entered upon the lease.

89. What I mean is that it should be shown what was the exact position of the holding when the tenant took possession of it, so that his improvements might be ascertained at the end of the lease? Yes; or that

P. H. Morton, Esq., M.P.  
25 April, 1893.

that it should be shown what parts of the farm could be improved by making permanent improvements. For instance, if there were 30 acres (say) of swamp land, that would have to be stated, because that land could be improved, or it should be stated what was the condition of the houses which could be improved, and so on.

90. You have had considerable experience with tenants;—have you found a strong desire on the part of tenants, when they become possessed of means to leave their tenancy, and take up a freehold elsewhere? Certainly. Their greatest anxiety is to obtain the farm as a freehold. In every case where they have had the opportunity they have done so.

91. I understood you to say that the goodwill of the farms on the estate with which you are connected have been sold by the tenants to a large amount. Is that for the improvements put on the land or the increased value upon the small rental at which the tenants entered upon the land? It generally includes both. It is not recognised. It is done between one tenant and the other without the knowledge or sanction of the landlord. But it is generally brought about by the fact that rents are low and they put improvements on the land, both.

92. *Mr. Young.*] I do not suppose that would be the case on any other estate? Of course I may be looking at the matter in a different light to others.

93. *Mr. Scobie.*] Do you think that the landlord, in a Bill of this kind, should not have a voice in the nature of the improvements? Certainly. Care should be taken that the landlord should give his consent.

94. Do you find anything in the Bill to that effect? Yes; that is one of the chief points in the Bill. I should object to the whole thing unless the landlord gave his consent, or the arbitrators.

95. You say that a great deal of the land on these farms is not cultivated? Yes; a great deal of it. There is a great deal of waste and neglect.

96. To what cause do you attribute that? The chief cause is indolence—the nature of man. He does not like to work; he simply makes enough to pay his rent and live upon. Another reason is that they do not like improving land especially when the lease is near its termination, because they know they will have to pay an increased rent on their own work. The first reason is indolence, and the next is that they do not like to improve another man's land for his benefit. The result is that the land lies waste.

97. Have you not noticed that the large amount necessary to raise crops and house them, and the great failures that occur very often after the best attempts are used, are the causes why people give up agriculture as not payable? That has not come to my knowledge—it may be the case in other parts of the Colony. Most of the farmers in the district with which I am connected are dairy farmers.

98. In your district dairying is followed more than agriculture? Quite so. It has superseded agriculture—maize growing—altogether.

99. With reference to the item "Drainage of land" in the First Schedule of the Bill, do you understand that to mean surface drainage or under-drainage, or both? I would take it as a general term which would include the making of clay lands better by under-drainage, or the cutting of drains in swamp lands, or the putting up of embankments along salt water places, or a flood-gate to keep the water out and so on.

100. You are aware that in the case of most of these drainage schemes, they are carried out on a large scale—that is to say, in draining hollow lands and lagoons, a number of people would be employed? Not generally. There are many cases in which one hollow piece of land or a swamp will have to be drained on one farm. There are other cases where the work is carried out on a large scale and where a union is formed. But in most instances the drainage would apply to small swamps on a farm.

101. I suppose you would understand, from your experience, that a good deal of under-drainage or pipe drainage would take place by tenants? Very little would take place except on small areas of land, and I think such cases would be excluded from this Bill—I refer to gardens and market gardens, and places of that kind. They are excluded from the Bill.

102. I think you said, in answer to a question, that you approved generally of clause 5? Quite so. The provisions of the Act could be put aside by the landlord and tenant agreeing.

103. And is there not a possibility of a landlord injuring a tenant by putting on improvements for him, or a tenant injuring a landlord by requiring improvements—that is, for instance, where the landlord is very short of means. He would be able to charge 5 per cent., but if he were short of means he might have to pay 8 or 9 per cent.? But he is not compelled to make the improvements; he may refuse to do so if he has no money. It really means that the tenant makes the improvements, and at the end of the lease the landlord has to pay for them, less the depreciation.

104. *Mr. Garrard.*] Suppose the tenant has got his money at 10 per cent., the landlord might have got it at 5 per cent.? Under this Bill the landlord has a right to refuse to put them up.

105. I understand that your opinion as to the necessity for legislation of this kind is mainly on the ground of the loose way in which leases are at present drawn? Yes; that is one reason.

106. If leases were properly drawn and the conditions fully and properly stated, there would be very little necessity for a measure of this kind? It would do away with the necessity in a great measure; but then men would not be encouraged to work their farms.

107. Do you think this Bill should only be applicable to leases of short duration—seven or ten years? It is applicable to all, but I do not think there is the same necessity in the case of a long lease where the tenant would be able to make sufficient to pay him back for the money he has laid out on another person's land, which he was not compelled to lay out.

108. I understand you object to the word "repairs" being included in the First Schedule. You think that is usually embraced in the ordinary covenant to keep in good repair and should be met in that way? Yes; because the word "enlargement" is put in, which would give a tenant who had entered upon a farm with a bad building the right to ask the landlord to enlarge his house or his barn.

109. Therefore, compensation for repairs should not be included in the provisions of this Bill? No; unless you put in a provision that where the repairs are consequent upon neglect by the claimant no compensation shall be granted.

110. Consequent upon the neglect of some prior tenant? No; consequent upon the neglect of the tenant claiming compensation. If there is a line of fencing for instance, and the tenant allows it to fall down. It was a good fence, but now it has become neglected. It would be unfair that the landlord should have to pay for a new line of fence when the old one could have been kept in repair.

111. Suppose a bush-fire or a flood destroys a fence, or a house, upon whom would you cast the responsibility of re-erecting it? I think, that in case of burning of fences landlord and tenant should contribute equally. In case of fire the landlord generally makes an allowance.

## ON THE AGRICULTURAL HOLDINGS BILL.

112. There is nothing in the Bill to meet a case where fences are burnt down and crops are destroyed;— P. H. Morton, Esq., M.P. 25 April, 1893.  
is such a provision usually inserted in properly drawn leases? No; not in reference to the destruction of crops. Where a tenant is not to blame I think it is proper for the landlord to pay half the cost of erecting fences destroyed by fire, if the lease is a short one.
113. Would you leave that to be expressed in the general terms of the lease, or would you include it in the provisions of this Bill? I think I would leave it to the general terms of the lease.
114. *Mr. H. Clarke.*] Do you consider, from your experience, that a Bill of this kind is absolutely necessary? It would, at present, only benefit tenants in two or three places. I do not think it would be of much benefit to tenants on the northern rivers.
115. Do you not think that the ordinary agreements between landlord and tenant, by lease or otherwise, limiting the tenant to make certain repairs and improvements, the lease being either a short or a long lease—the longer the lease of course the more improvements he would make, and the shorter the lease the less improvements he would make;—do you think that would not work as well as to make provision by legislation? I do not think it would encourage a good manner of agriculture as well as an Act giving them compensation at the termination of the lease.
116. I see that this Bill is only intended to apply to the drainage of land, the erection, repair, or enlargement of buildings, and the making and repair of fencing. I suppose you are aware that in a good many districts of the Colony—take, for instance, the southern districts south of Shoalhaven—there is very little land to drain; it is mostly hilly country? Yes.
117. Of course the drainage would not apply there—it would only apply where there was hollow and swamp land? It would apply to every river from the Shoalhaven River up to the Richmond River.
118. I mean south? South of that I know nothing about; but I do not think it would, because the country there is hilly.
119. In the southern districts south of Shoalhaven as far as Ulladulla, with the exception of a few places the country is nearly all hilly? The first item in the Schedule—"Drainage of land"—would not apply to any land south of the Shoalhaven River.
120. Do you know if there is much land south of the Shoalhaven on lease? I do not know anything about any of the land south of the Ulladulla district.
121. This Bill then, would apply more to agricultural farms than to dairy farms? No; I do not say that. The chief thing is the erection of farm-houses, and that applies to dairy farms as well as to agriculture.
122. With reference to the repairs of fencing, is it not usual, when a lease is given to the tenant, to stipulate that he shall keep them in repair, reasonable wear and tear excepted? Certainly.
123. And also buildings and everything of that kind? Yes. That is why I do not agree with the word "repairs" being put in. It is one of the conditions to which the tenant agrees—to keep the houses and fences in repair.
124. This Bill will, of course, not apply to anything not mentioned in the Schedule? No.
125. *Chairman.*] What is about the average size of the holdings in the Berry Estate? They run from 50 to 300 acres. I daresay the average is 70 acres.
126. You said just now that you did not think a Bill of this kind would apply so much to tenants on the northern rivers? From what I know of the northern rivers I do not think the tenants had the goodwills to sell, and the first object I had was to clear up the commercial part of the trouble caused by tenants selling out something which it was afterwards found did an injury to the buyer. In the northern rivers, and especially on the Macleay, rents are so high that people are not so ready to buy.
127. I suppose the system of selling the goodwill of farms has been more extensively practised on the Hunter River than in any other part of the Colony, although the rents there are very much higher than in any other part? I do not know much about that.
128. I understood from what you said that one good effect that this Bill would have would be to create long leases which do not exist at present? Yes; I believe that if this Bill were passed, landlords would give longer leases and bind the tenants to do all the improvements that a tenant ought to do on his farm. Clause 5 of the Bill would not then apply to those leases.
129. *Mr. Garrard.*] The landlords would either contract themselves out of the Act by specifying stipulations in their leases or by giving long leases? Quite so.
130. *Chairman.*] If a measure somewhat on similar lines to this Bill were passed, do you think anything would be done in the way of giving longer leases? That is a question I could hardly answer. I do not know enough of the landlords generally throughout the Colony to say whether they would or not.
131. You think that if a Bill like this were passed it would lead to longer leases being given by landlords? It would have the effect of making the landlords consider their position, and by giving longer leases to compel the tenants to carry out all the improvements necessary. But in case the landlord would not consider the tenants position, it would give the latter the right to claim compensation for improvements over and above what they had agreed to carry out.
132. With regard to the Schedule, you do not think it necessary to include any improvements besides those enumerated? No; except with regard to drainage. It should include all matters appertaining to drainage, such, for instance, as the erection of flood-gates and embankments to keep out salt water. As I said before, I should like to see the word "repairs" struck out, because as a rule, repairs are consequent upon neglect.
133. *Mr. Ewing.*] Why do you leave out of consideration the clearing of land? Because that is one of the conditions upon which the tenant takes the land. That is the first condition. When you first let a man a farm it is on condition that he clears it.
134. Therefore, with regard to clearing that is outside? The condition is very often put in in lieu of rent.
135. You put the clearing in, because it is of special importance? It is of first importance.
136. And if you thought these other things were of importance you would put them in the lease too? Certainly; but you never have to do clearing twice. You have to build a house twice, and you have to fence and to drain land twice.
137. *Mr. Young.*] You would not be inclined to put in a clause such as they have in the South Australian Act, prohibiting parties from contracting themselves out of the Act? Certainly not; because I think people should be free to make what contracts they choose.

Mr. Gavin Thomson Carmichael called in, sworn, and examined:—

Mr. G. T.  
Carmichael.  
25 April, 1893.

138. *Chairman.*] What are you? I am a wine-maker living at Porphyry, Williams River.
139. Have you had an opportunity of reading the Bill before this Committee entitled a Bill amending the law relating to agricultural holdings? Yes.
140. You, therefore, understand the principles of the Bill—to alter the conditions of landlord and tenant with regard to agricultural holdings? Yes.
141. Particularly to allow compensation to tenants for improvements placed upon their land during their occupancy; do you approve of the principles of the Bill; do you think it would be a good thing for the Colony generally, and farmers in particular? If legislation is required I approve of the principles of the Bill on the whole. There are some details I do not quite approve of.
142. I am talking now about the general principles? Yes.
143. And you think a Bill of this kind carried into law would be the means of improving the position of the tenants, and also of benefiting the landlord? I have not seen the Bill until to-day, and have hardly had time to give it sufficient consideration.
144. You said “if legislation is required”; what did you mean? I was not aware that legislation had been asked for by either the tenants or the landlords.
145. Have you had much experience as a landlord? Not very much; I have had a little.
146. Do you know anything about the working of a similar Act in England, Ireland, or Scotland? No.
147. You are aware that an Act on lines similar to those in this Bill has been in force in Great Britain for some years? I am not familiar with it.
148. Do you think that allowing compensation to tenant farmers would be the means of increasing the production of the farms and would lead to a higher state of culture? I could not say.
149. Have you really given this matter serious consideration with regard to the working of a measure of this kind? I have not, because I knew nothing about it until to-day, and had not seen the Bill.
150. But I mean generally as to the effect of a law of this kind? I know that in many cases compensation has been given by landlords to tenants. That has been a mutual arrangement.
151. It is provided in this Bill that if landlord and tenant make an arrangement with regard to compensation for improvements, they will be outside the Act? So far as I have given any consideration to it, it appears to me that the matter could be arranged between the contracting parties without legislation. A tenant entering upon a holding is aware of the conditions upon which he enters.
152. Do you think a tenant would put any improvements upon his holding if he did not know that at the expiration of his tenancy he would receive compensation from his landlord for the improvements he had placed on the land? No; not under a short lease.
153. Therefore, the effect of a Bill of this kind allowing compensation would be in other words to give fixity of tenure to some extent, and by encouraging the tenant to put improvements on his holdings make the land more productive? Yes; I think it would.
154. *Mr. Ewing.*] What do you regard as a short lease and a long lease\*? There are yearly leases and leases for three, five, and ten years. I should think that anything under five years was a short lease.
155. And anything over five years would be a long lease—that is your definition? That is what I should consider.
156. *Mr. Young.*] Have you been either a landlord or a tenant;—do you speak from personal experience? I have been a landlord and I have had the management of trust estates.
157. *Mr. Scobie.*] As a matter of fact you have had large experience in the management of trust farms in the Bolwarra Estate? Yes.
158. Did you ever find any serious hitch there with the tenants with reference to improvements? Not to any extent. At the time the estate was sold we had some differences about allowances.
159. As soon as the tenants had a chance of buying those properties they bought and became themselves the owners? Yes.
160. Do you think that the making of a lot of laws with regard to compulsory payments by the landlord to the tenant for buildings put up and for the drainage of land and so on, would be preferable to arrangements by mutual agreement between the tenant and the landlord? I do not think so. My view is that mutual arrangement between the parties would effect all that is required.

THURSDAY, 27 APRIL, 1893.

Present:—

MR. CULLEN,  
MR. GARRARD,

MR. SCOBIE,  
MR. EWING.

J. W. BOWES, ESQ., IN THE CHAIR.

Mr. Henry Croaker called in, sworn, and examined:—

Mr. H.  
Croaker.  
27 April, 1893.

161. *Chairman.*] Where do you reside? At Woodville.
162. You have had long experience in connection with farming, I believe? Yes.
163. How long have you been farming? Since I left school. I have been on a farm all my life.
164. Do you know a good deal as to the relations existing between landlord and tenant? Yes; a little. I have been connected with agriculture for a good many years.
165. Have you read the Bill before this Committee providing for compensation to tenant farmers for improvements? No; I have not seen it.
166. The Bill is for the purpose of allowing compensation to tenant farmers for improvements they may carry out;—do you think legislation of that kind would be beneficial both to the tenant and to the landlord? I think it could be made so.
167. Have you any knowledge with regard to the working of a similar Act in Great Britain? No.
168. From your knowledge of farming, have you found that tenant farmers have received encouragement, as a rule, from landlords in the way of erecting improvements upon their holdings? I know of some farmers

\*NOTE (on revision):—In my answer, I did not mean to imply that a lease for five years would be of sufficient length to induce a tenant to make substantial improvements without a guarantee for compensation.

farmers who make considerable concessions to tenants for improvements. That has been the custom of late years in the case of properties in which I am connected, and properties near me. A kind of understanding is arrived at between the tenants and the landlords; but I do not think that the custom is general.

Mr. H.  
Croaker.

27 April, 1892.

169. *Dr. Cullen.*] That is at the time of getting the lease? Yes.

170. *Chairman.*] In the part of the Colony with which you are acquainted, is it customary to grant short leases or long leases? Short leases prevail. A man takes a lease of a farm for twelve months, and his tenancy will generally extend over a period of perhaps ten, fifteen, or twenty years. He does not get a renewal of the lease. The lease is taken for granted year after year.

171. *Dr. Cullen.*] Is a written lease usual in such a case for the first year? Yes.

172. And then they work on the same system from year to year? Yes.

173. *Chairman.*] As a matter of fact the tenant has no security in his lease—he may get notice to quit at any time? It would depend upon the terms of the lease. Occasionally, if a man wishes to put up certain improvements he will ask perhaps for a lease of five or ten years. A man may hold a farm for ten years on the terms originally agreed upon in the yearly lease.

174. *Dr. Cullen.*] If he wishes to make improvements he would ask for a lease? Yes; he would either ask for some concession from his landlord, or for a lease which would, in a measure, compensate him.

175. *Chairman.*] Where tenants have resided for some length of time on an agricultural holding, and have put improvements upon the land, is it customary for the landlord to raise the rent after the improvements have been effected? I have heard of such cases, but only by hearsay.

176. If a tenant had some security that he would get compensation for improvements placed upon his holding, do you think it would be an encouragement to tenants to farm on a better system than is the case at the present time? Yes; I think it would.

177. It would virtually increase the value of the holding, not only to the tenant, but also to the landlord? Yes; if the improvements were legitimate. That would have to be determined.

178. The improvements mentioned in the schedule of this Bill are: "Drainage of the land; erection, repair, or enlargement of buildings; making and repairs of fences." I suppose those improvements would pretty well cover all that would be required? Yes; I think so. Drainage of land, I suppose, would include protection by embankments. That is sometimes a very necessary improvement.

179. That would have to be an addition to the Schedule which only provides for the drainage of swampy and hollow land. I think, as far as the drainage of land is concerned, that is a work which should be undertaken by the landlord, the rent to be fixed accordingly.

180. I understand you have had experience as a landlord as well as a tenant? Yes, for some years.

181. You are one of the trustees for a large agricultural farm? I am acting as agent for an agricultural estate.

182. So that you are in a position to give reliable information not only from the tenant's standpoint, but also from the landlord's standpoint? I think so.

183. *Dr. Cullen.*] Has your experience been confined to one district? Yes; a portion of the Upper Hunter.

184. Whereabouts? Just above the confluence of the Paterson, about 5 miles up the Paterson from its junction with the Hunter.

185. That would be near Hinton? About Hinton—between Hinton and the Paterson township, perhaps midway. Dunmore Bridge goes on to the property.

186. That is level rich farming land alongside the river? Yes.

187. What is the average size of the holdings there? Between 20 and 30 acres.

188. They raise hay and crop a good deal, do they not? The principal productions consist of hay, grain, potatoes, and crops of that kind. Dairying is coming a little to the front now, but not on these rich parts.

189. Back on the grass lands, off the alluvial? Yes.

190. Is there much of that land held by leasehold tenants? On the banks of the Paterson the greater portion of the land is held by tenants on leasehold.

191. And your experience there is that they usually have yearly leases, but that men sometimes take a lease for a longer period when they wish to improve the land—when they wish to build or fence? Yes. I do not know that that is a general rule, but there are cases where a tenant farmer wishing to make improvements applies for a longer lease which, in a measure, would reimburse him for his outlay on the improvements. It could scarcely be expected that a man holding only a yearly lease would make many improvements.

192. Have you heard of any cases where a man has not been able to get a longer lease when he wished to make improvements? No; I do not know of such cases. I have heard of some, but I cannot speak from my experience.

193. Practically, it is a matter of agreement between the landlord and tenant at the beginning of a lease if it is intended on either side, that any expense will be incurred in improving? Yes; generally it is.

194. In some places there are very long leases, and renewal of leases—that is to say, a man is entitled to hold for a number of years, and then he is entitled to get his lease renewed on making a certain payment. In a case like that he has not so much chance of agreeing with his landlord, because if the landlord is not a liberal man he will refuse to renew the lease if the tenant wants him to make terms so as to allow him to improve the land. In that case there is a great deal of hardship. Do you know of any cases of that kind in your experience? I know of cases where a man has held a farm for a number of years and has improved it, and when there was a wish on his part to renew the lease the rent has been raised. I know of a case or two of that kind, but the custom cannot be said to be general.

195. In that case there was, of course, no agreement that the tenant should have the right of renewal, or else the landlord could not have refused it? No; I could not say there was a right of renewal.

196. Do you know whether in the case referred to the man had a written lease? No; I do not know.

197. You think that in the case of the lands in the district with which you are familiar, improvements would be made by constructing embankments to prevent the flood waters from washing the land away? There are improvements of that kind needed, and that was why I thought they would be included in the Schedule of the Bill.

198. But could that description of work be done by a small holder;—would it not be useless for a small holder to protect his bank unless his neighbours above him, and perhaps below him, did the same?

- Mr. H. Croaker. Exactly. I have before my mind a case where the owners of estates might very well protect the land in that way, numbering in the aggregate perhaps thirty or forty farms.
- 27 April, 1893. 199. If they united they could protect the land? Yes.
200. But it would not be much help to enable a farmer to do it at his own expense, and charge it to the landlord unless it was done generally? No; not unless it was done generally.
201. Has there been much drainage done on farms in New South Wales in your experience? All the low lands I know of in my district are drained in a manner, but most of them are drained independently of the tenants. The landlords undertake to drain them.
202. And what are the farm-buildings like in that district;—are they, generally speaking, sufficient for the purpose, or are they inferior? On tenant holdings generally, I think, there has been an improvement of later years.
203. And in the matter of fencing? In an agricultural district like that fences are not of much concern.
204. It would be rather in places where cattle are kept that fencing would be of importance? Yes. In the district to which I have been referring the farms are separated by an imaginary boundary line, and fences are not much required.
205. Then, I suppose, in the district of which you have had experience the great improvement that would be of use, and which has not yet been dealt with, is protection from the flood waters? The principal improvements the tenant would carry out would be in the shape of buildings.
206. What I mean is, what is there the greatest need for at the present time;—I think I understood you to say that the building were already showing some improvement? Yes.
207. *Mr. Ewing.*] Have you heard this Bill discussed? No.
208. Is there any great demand for a Bill of this kind? There has been a promise of a Bill of this kind. It has been held before the electors in our district for a number of years, and has been looked forward to with a great deal of anxiety.
209. What is your electoral district? Morpeth.
210. And the people there have been looking for a Bill of this kind? They have been expecting a Bill of this character for some time.
211. Is there a general feeling among the people of Morpeth that it would be a wise thing to legislate in this direction? Yes; I think there is.
212. And they believe good results would follow? Yes.
213. Upon what is their belief that a Bill is necessary based? They think it is necessary to avoid friction between landlord and tenant. At the present time, if a tenant wants certain buildings, unless he can make arrangements with the landlord he has to do without them.
214. Is there much friction? Not that I know of personally.
215. Do the landlords and tenants, as a rule, get on fairly well? Yes; in our neighbourhood, I think I may say so.
216. I am referring to your neighbourhood, because you say definitely that the Morpeth people want this Bill; I want to know why they want it, and I ask you if the tenants are suffering any injustice from the landlords;—do they think they are suffering any injustice from the landlords? I think some tenants do.
217. What proportion of them would there be? That would be hard for me to say.
218. Do you think any great number of the tenants believe that they are suffering an injustice? A considerable number, I should think.
219. You believe that in the Morpeth district there are a considerable number of tenants who cannot agree with their landlords? Who would agree better, I think, under a Bill of this kind.
220. You mean, that they are not able to make arrangements with their landlords that are satisfactory to themselves? I think so.
221. Do you think that tenants are a little unreasonable? That has not been my experience.
222. You think that, as a rule, the tenants are reasonable, and the landlords are unreasonable? I think the tenants are not unreasonable.
223. You think it is possible for the State to step in and prevent any further friction between the two parties? I think a measure of this kind would be a benefit to both parties.
224. You understand that it embodies compulsory arbitration—that the landlord and tenant must agree to the terms approved of by the arbitrators, and must agree to the arbitrators in the first instance? My attention was called a little while ago to the fact that improvements might be made under an arrangement entered into previously.
225. Still, the Bill provides for compulsory arbitration and the enforcement of the award; suppose you are a landlord and I am a tenant; I want to put on certain improvements, and you say you cannot afford to do anything of the kind; it does not suit you; we should have to go before the Court provided by the Bill, and the Court would say whether you should agree to my terms or not, and *vice versa*;—is that satisfactory? Does not the Bill provide in the first place that before improvements are put up they must be reckoned as necessary? It would be manifestly hard that improvements should be made on a holding that were not needed by a landlord.
226. Have you looked at the case in this way: Suppose a person took a heavily timbered piece of land on the bank of the Paterson. By the time he had it cleared, and the fences and buildings put up, it would be highly improbable that he would be able to sell the whole property for the value of the improvements; you have no doubt there would be many instances of that kind? Not in my district. The land there has all been cleared.
227. You can understand that after a man had gone to the cost of clearing, fencing, draining, and building a house, if he had to sell in these depressed times, the value of the improvements would be more than the value of the land? I would not like to say “Yes” to that. My experience has been that most of those brush farms are let on specific clearing leases.
228. *Dr. Cullen.*] And then, of course, the tenant gets something in return for his improvements; he gets the land at a lower rent, or perhaps free of rent altogether, for the first few years? In the case of properties like those just described, a clearing lease would be taken, perhaps for seven years, or a longer period free of rent, or pretty well free of rent, and at the end of the time when the land was cleared the rent would begin at perhaps a moderate figure.
229. *Mr. Ewing.*] Have you had any knowledge of properties on which the value of the improvements, if paid for, would be more than the value of the whole place if it were sold? I have not.
230. *Mr. Scobie.*] Tenants, as a rule, do not put up such costly buildings? No.

Mr.  
H. Croaker,  
27 April, 1893.

231. *Dr. Cullen.*] In your district the land was all cleared long ago? Yes.
232. *Mr. Ewing.*] You say then, that, as far as your experience goes in the Morpeth district, this Bill is looked for? Yes.
233. Because there is friction between the two parties? There is some friction.
234. Generally speaking, if two people disagree, would it not be better for them to deal with each other directly, and come to terms, than to endeavour to do so by the intervention of the law? Yes; I think that method would be better.
235. But you doubt whether it is possible? No; I do not doubt it. Personally, if I had a grievance, I should much prefer to deal directly with the other party.
236. *Dr. Cullen.*] The principle of this Bill is that where the parties have not made an agreement with themselves, the tenant has the right to carry out what improvements he thinks fit, subject to approval by the tribunal to be appointed, and then the value of the improvements is assessed by arbitrators, subject to appeal to the District Court. That may lead to a good deal of legal work. Then the District Court can make the expenses in certain cases a charge upon the property. Do you think the difficulty of getting agreements at the present time is sufficient to call for legal intervention of that sort? I should say no.
237. *Mr. Ewing.*] If this Bill were passed, and the landlord recognised danger from it, would he not make special agreements with his tenant, and so contract himself out of the Act? I think it would lead to that.
238. And suppose he could not make agreements with his tenants, what would happen;—suppose the tenant refused to sign the lease which the landlord offered, what would happen? It would be offered to another tenant, probably.
239. If the landlord and tenant do not agree at present, what happens is that the tenant goes? Yes.
240. If the landlord and tenant were brought together, and the landlord, knowing such a Bill as this was in existence, offered a lease on certain terms to the tenant, and the tenant did not sign it, what would happen? The same thing, I suppose.
241. *Dr. Cullen.*] I suppose if there was much demand for land in the district, and the tenant refused to sign the lease, the landlord would have no difficulty in getting another tenant; but otherwise, he would probably moderate his terms. Practically it would depend upon the demand there was for land in that particular district? Yes.
242. *Mr. Scobie.*] The improvements specified in the schedule of the Bill, are these, "Drainage of land; erection, repair or enlargement of buildings; making and repairs of fences." As far as the property with which you are connected is concerned, what do you find is the great want in regard to improvements? The drainage of land is very fair, the buildings are very fair, and the fencing is very fair. I should say the drainage of land is the most important matter, and the one that wants looking after.
243. In regard to the drainage of land, do you find that at present the cost falls very unequally on the parties interested? On the property with which I am connected the drainage has been undertaken by the landlord only.
244. I believe there is an Act in force providing for the drainage of land? Yes; by trusts or unions.
245. Looking at clause 5, do you think the condition of affairs there stated would be superior to the conditions proposed in the Bill generally? Not having read the Bill, I should think that if the landlord and tenant agree as to the terms of compensation, that is all that is wanted.
246. *Mr. Ewing.*] Are the farmers in your district fairly well off? Taking the district, embracing a large area, I think they may be said to be fairly well off.
247. Speaking generally, do they hold their farms on such terms as would enable them to make a fair living? There are freehold farmers and tenant farmers. The tenant farmers I do not think are very well off.
248. *Dr. Cullen.*] What is the prevailing rate of rent;—what rents have you yourself paid? The rents paid range from £2 upwards. In my immediate neighbourhood the rents are from £2 to £3 per acre for agricultural land.
249. What is the highest you know of? £5 an acre is paid for land near Maitland.
250. Could you tell us the name of the tenant? Mr. Long, of West Maitland.
251. Is his place near the town? Within the municipality—almost near the town.
252. To what use does he put the land? He grows vegetables, principally for sale in the town.
253. *Mr. Scobie.*] When the seasons are dry, the tenant farmers on the estate with which you are connected are pretty well off? Yes.
254. But for the last four years the seasons have been very wet, and they have sustained losses from overflows of water? That is so.
255. *Chairman.*] I understood you to say that there had been almost a demand for a Bill of this kind;—has that demand existed for a great many years, and not simply within the last three or four years? Yes; for many years.
256. I think you said that the houses and other improvements on the farms had improved within the last two or three years? Yes; within the last few years there has been a general improvement in the buildings.
257. Is there not room for great improvement in this respect;—are there not many dilapidated sheds and buildings which cannot be improved, because the landlord will give no encouragement to the tenant to carry out improvements? The improvements have been better of late years, because the tenants have made arrangements with the landlords to be enabled to carry out improvements.
258. If a Bill providing for compensation for improvements were carried into law, would it not lead to great improvements being carried out, and to more beneficial working on the farms? I think it would.
259. *Dr. Cullen.*] What would be the usual rent of dairy farms in your neighbourhood? Dairying is only just coming into vogue there.

Mr. George Henry Stephens called in, sworn, and examined:—

260. *Chairman.*] You reside at Phoenix Park, near Morpeth? Yes.
261. How long have you been residing there? Forty years.
262. And during that time you have been engaged in farming pursuits? Yes.
263. As a tenant or as a landlord? Both.

Mr. G. H.  
Stephens.  
27 April, 1893.

- Mr. G. H. Stephens.
- 27 April, 1893.
264. Then you have had some experience of the wants of landlords as well as of the wants of tenants? Yes.
265. Have you read the Bill before this Committee? Yes; but I have not gone into it very carefully.
266. You understand pretty well the principles embodied in the Bill in regard to compensation for improvements to tenant farmers? Yes.
267. Do you know of your own knowledge whether such a Bill as this has been asked for for any time in the district with which you are acquainted? Yes; a Bill of this kind has been needed for a long time.
268. Not of recent years only? No; for a long time.
269. Has any Bill of this kind been promised to the people of that district? Yes; years ago Sir Robert Wisdom promised to bring forward a Bill, but we heard no more of it.
270. As a matter of fact, a Bill of this kind was promised by Sir Robert Wisdom and others at different times? Yes; I do not know about any others, but I know Sir Robert Wisdom promised.
271. What are the conditions that exist between landlord and tenant;—are there any difficulties with regard to the tenancies; do they get along smoothly, or is there any friction? Most of the friction is with regard to the improvements. If a tenant improves his tenancy he receives no compensation unless there has been an agreement with the landlord beforehand.
272. What is the general effect upon the agricultural holdings owing to this want of compensation for improvements? The tenants will not improve. If they do so it is a sort of risk, and they get no compensation in the end. I know of one instance in which a person with whom I am well acquainted improved his holding to the extent of about £500. Since the last flood the owner wants the holding, and he gives the tenant notice to leave, and he has to leave without a farthing of compensation for his improvements.
273. Are there any leases, as a rule, made between landlord and tenant for any term? A few; but most of the tenancies in the Hunter River district are yearly tenancies.
274. Under those yearly leases a tenant may be called upon to leave his holdings at any time? Yes; with six months' notice.
275. And all the improvements he has placed upon the land go to the landlord? Yes.
276. Do you know of any cases where the rates have been increased to the tenant after he has placed improvements on the land? No; I cannot say I do.
277. From your practical knowledge, and your large experience of the wants of farmers, do you think a Bill of this kind would benefit them? Yes; to a certain extent. There is a clause in the Bill providing that the tenant may make improvements after he has given the landlord notice. I do not think that would apply in the case of a yearly tenant. In such a case, if the tenant carried out the improvements in opposition to the landlord, the landlord could give him six months' notice, and turn him out of the farm.
278. You refer to clause 6, which provides that if the landlord refuses to carry out the improvements the tenant may do so himself? Yes; I think that is where the hardship would come in. A tenant with a lease could afford to act in opposition to the landlord, but a yearly tenant could not.
279. Do you think it would be an improvement in the Bill if a clause were inserted providing that an understanding might be arrived at before the improvements were carried out? Yes; but there are many cases where the tenant wishes to make improvement, and the landlord will not agree to it.
280. A matter of that kind would be left to the arbitrators, and not to the landlord and the tenant; they would have to abide by the decisions of the arbitrators as to whether the improvements were necessary or not;—do you think, if the Bill went on those lines, it would be beneficial? Yes; I think it would.
281. Do you think legislation of this kind would tend to create a higher class of farming? Yes, I think so; but I could not say for certain.
282. If a man knew that he would get compensation for improvements he would enter upon his farming operations with greater zeal? Yes; I think so.
283. *Mr. Ewing.*] You mentioned a case to the Chairman just now about a landlord requiring his farm upon which a tenant had placed about £500 worth of improvements, and you say the tenant had to give it up at once? Yes.
284. Did the tenant have a lease in that case? It was only a yearly tenancy.
285. Do you think he was a very wise man? No; I am sorry to say there are a great many who act in the same way in the Hunter district.
286. Suppose he had gone to the landlord before putting on the £500 worth of improvements, and had asked him for a lease for three or four years, on condition that he effected the improvements, would he have got the lease? No; they will not give leases up in that part. They just tell you to make what improvements will suit yourself. If you want a permanent improvement, the majority of the landlords will not even allow you anything for it.
287. Do the tenant farmers do pretty well there as a rule? Yes; when they get a fair season.
288. I suppose if they did not do fairly well they would leave the district? I suppose they would.
289. And notwithstanding the hardships between them and the landlords they still remain? Well, they remain. They are in a fix at the present time. They must remain—they cannot get away.
290. What rents are paid there, as a rule? From £2 up to £3 10s. per acre.
291. In your opinion, should it be made imperative upon all landlords and tenants to come under this Bill? Yes; I think so.
292. What is your reason for thinking so? If the Bill did become law it would not prevent the landlord and tenant from coming to any agreement they thought proper.
293. And, therefore, it does not go quite far enough? No.
294. *Mr. Scobie.*] You are aware that sometimes a lease is given for ten years, or for a number of years, as compensation for improvements that may be made during the term? Yes.
295. A long lease is given to enable the tenant to put up his improvements, and to get the full benefit of them before the expiration of the lease? Yes.
296. Do you think that this Bill should apply to existing leases, or only to leases made after it comes into force? I do not think it should apply to existing leases.
297. There is not much fencing in the district in which you live? No—hardly any.
298. The improvements that are mostly required are houses and sheds? Yes.
299. Most of the buildings that are put up are of timber? Yes.
300. And they would deteriorate a good deal in the course of ten or twelve years? Yes; twenty years at all events.

301. You referred to landlords who would not give a lease for more than one year;—are they landlords who have a number of farms, or do they own a farm here and there? They are mostly landlords who have a number of farms. I have been a tenant for forty years on the farm I now occupy, and I have been a yearly tenant during the whole of that time.

Mr. G. H. Stephens.

27 April, 1893.

302. Was the landlord who took the farm from the tenant who had spent £500 upon improvements one of the large land-owners? Yes; he owns some half-dozen farms.

303. Have you found that those who do well on the land are more inclined to leave than those who do not, being desirous of getting a freehold of their own? Yes.

304. *Chairman.*] If provisions such as those embodied in this Bill were enforced, do you think that those who leave the farms would not be induced to stay longer under more liberal conditions? Yes; they would be able to put up buildings that would suit them, and be more comfortable. In my own case I could certainly put up a better house than the one I have, but I do not wish to build a house upon another man's land.

305. *Mr. Scobie.*] Looking at clause 5, do you think it is impossible to get arrangements of that kind with landlords generally? I am very doubtful. Landlords will not agree to improvements sometimes. A tenant wants a shed of certain dimensions, and the landlord will not have such a thing on the place.

306. If this Bill were passed into law, providing for compensation for improvements, might not a tenant put improvements on the land that would be more costly than the value of the land itself, and would not the landlord in some cases be unable to bear the burden imposed upon him in that way? Yes; I think so.

307. Might not a person engaged in trade in the town lease a piece of agricultural land and build a house upon it that would be altogether out of keeping with the requirements of a farm, and which could not be let for farming purposes afterwards? There is a possibility of that being done.

308. *Chairman.*] Do you not think it would be rather a remote possibility? Yes.

309. Do you think that if an amendment were made in the Bill, by which the arbitrators could arrange before the improvements were carried out as to the value of those improvements to the holding, it would be a good arrangement? Yes; it would be.

310. If the landlord and the tenant decided to call in arbitrators, and the tenant stated what improvements he would require, and the arbitrators decided that the improvements should be carried out as being a desirable addition to the holding; or, on the other hand, if they decided that they were not of any value to the holding,—do you think that would cover the difficulty mentioned by Mr. Scobie? Yes, it might; but I think the tenant would rather go on as he is than go to the bother of appointing arbitrators.

311. Not that he would fear the award? No.

312. *Mr. Scobie.*] Suppose that in the district of which you have been speaking improvements were put up in connection with the production of hay, which is the principal product there at the present time, and dairying were afterwards adopted, the money expended on those improvements would be comparatively misspent? Yes; they would not be required for dairying purposes.

313. *Mr. Ewing.*] Do you think that as long as there are landlords and tenants there will be friction and quarrels? Very likely so.

314. Could you not solve this difficulty by getting rid of the landlords altogether? That is a difficult job. There is one thing I have often thought of, and which, I think, could be carried out. The tenant should be allowed to remove his buildings at the end of his term, or the landlord should pay him compensation for them. I think that plan could be carried out mutually.

315. If the landlord did not want the buildings you would let the tenant remove them, and if the landlord wanted them you would let him buy them? Yes.

316. Do you think a short Bill to that effect would be sufficient? I think it would, so far as our district is concerned—applied to movable improvements.

317. Primarily, the trouble in your district is in connection with buildings and things of that kind? Yes. I have spoken to a great many on the subject, and they are of opinion that what I have suggested would meet the case, at any rate so far as our district is concerned.

318. As far as the people of the Morpeth electorate are concerned, if they had a short Bill permitting the tenant either to remove his building or sell it to the landlord, or enabling the landlord to buy it, or permit it to be removed, you think that would meet the whole case? I think it would. Mr. Scobie spoke about dairying. I know a case in which a party is taking some five or six farms and putting them into a dairy. If he were called upon to pay compensation for the whole of the buildings on those farms it would be a great hardship for him; whereas, if he said to the tenant, "they are of no use to me, you can take them," there would be no hardship at all.

319. *Mr. Scobie.*] At the present time any improvements made by the tenant that are not fixed to the soil can be removed by him? Yes; but all the improvements are not fixed.

320. If the plan you suggest were adopted would it not involve very great waste of property, because the buildings after they were pulled down would diminish in value? Yes; but there would be no hardship to the landlord, because the buildings would be worth more standing on the ground, even if he took them, than they would be to the tenant if they were pulled down. So that the tenant could take no advantage of the landlord.

321. But they would not be anything like the value? They would not be the value to the tenant; but I have spoken to a good many and they would be satisfied with that.

322. *Chairman.*] They would be satisfied merely because it is an improvement on the present system? Yes.

323. Still you think it would be better if a Bill of this kind were carried making compensation for improvement compulsory, but failing that you would like the other system carried out? Yes; I would.

324. *Mr. Ewing.*] What, in your opinion, would be the real result of this Bill? It would be hard for me to say.

325. Do you think one result would be more careful leases? Yes; very likely.

326. Might another result be more stringent terms in those leases? Yes; that might be so also. But if the plan I suggest were carried out it would be fair to both parties.

327. Your suggestion that the landlord should have the right of purchase and that the tenant should have the right of removal? Yes; it would do away with the necessity for arbitrators and everything of that sort. The landlord would only have to say, "I do not want the property," and the tenant would remove it, and if the landlord wanted it he must agree to the tenant's terms.

328.

Mr. G. H. Stephens.  
27 April, 1893.

328. Have you thought of this aspect of the case; a tenant has a building worth £400, and he wants to sell it for that amount; the landlord says, "I will give you £200 for it"; the tenant knows perfectly well that if he pulls it down it will not be worth £200 to him; in that way could not the landlord blackmail the tenant to the extent of £200? I do not think so.

329. Could not that case be met by having the value of the building decided by arbitration? Yes; but according to the plan I suggest, the tenant would have no occasion to go to the landlord at all. If he wanted a certain building he would put it up without consulting the landlord, and at the end of his term he could either remove it or get compensation for it.

330. *Mr. Scobie.*] I suppose the result would be that the tenant would only put up improvements that he could easily remove? Yes.

331. *Chairman.*] The method you suggest, of course, would not only apply to such improvements as the drainage of land? No; it would only apply to movable improvements.

332. Where compensation was allowed for improvements, would not the drainage of land be one of the principal items? Yes, perhaps so; but at present drainage is a matter of agreement between the landlord and the tenant.

333. Do you think there is anything which should be added to the schedule under the head of improvements? No; I do not think so.

Mr. Donald Kennedy called in, sworn, and examined:—

Mr. D. Kennedy.  
28 April, 1893.

334. *Chairman.*] Where do you reside? At Ulladulla.

335. Have you been residing there long? About twenty-three years.

336. What is your occupation? Dairy farmer.

337. How long have you been engaged in farming generally? About thirty-five years.

338. Have you had an opportunity of reading the Agricultural Holdings Bill which is under consideration by this Committee? Yes.

339. Do you know anything about the principles of the Bill or of the working of a similar measure in the old country? Yes.

340. Have you had any experience of the working of the Act at home? I was rather young when I left Scotland, but still I understand the provisions of the law pretty well.

341. How does the Act operate in Scotland? I do not think such an Act was in force in Scotland when I left.

342. Then, as a matter of fact, you know nothing personally with regard to the operations in Great Britain of the principle of compensation for improvements? No; not personally.

343. Are you a tenant farmer or a landlord? I am both. I am a tenant and a landlord.

344. Having read the Bill, and knowing something about its principles, do you think the principle of allowing compensation for improvements to tenant farmers would be a good one in the interests of farmers? Yes; I have always thought so. Ever since I have had any experience in the matter I have always thought it would be a good thing for both landlord and tenant, and also for the community at large. 345. Perhaps you would like to make a statement of your views on the question to the Committee? I do not know that I can throw much light on the matter. I have read the Bill carefully, and I have given the question a great deal of consideration. Some of the provisions, I think, require one or two slight alterations, but, on the whole, I thoroughly agree with them. Ever since I have had any experience in farming I have held the opinion that such a law would be beneficial to both landlord and tenant. You will easily understand that the more progressive the tenant is the more he is handicapped at the end of his lease by making improvements, because at the end of his lease he is liable to be rated on his own improvements. Unless his landlord is a very benevolent man the tenant is liable to be charged at the end of his term for the improvements he himself has made by being called upon to pay an increased rent. If he does not give the increased rent, tenders may be called for his holding and somebody else will get it at his expense. The incoming tenant could afford to give a few shillings an acre more, because he would be banking his money while the other man had spent his money upon the improvements. On the other hand, I know of farms which have been let at 18s. an acre to a good tenant; the next tenant coming after him has allowed the fences and buildings to become dilapidated, and inferior grasses to be introduced, the consequence being that at the end of his term the landlord could only get 12s. an acre for the land. Therefore the present system in such a case is injurious to the landlord himself, where he does not encourage compensation for improvements. In the case of the property just referred to the landlord took possession of it again, and expended money upon it, and now it is worth £1 an acre. If the tenant made similar improvements why should he not get the increased value which the landlord gets when he makes the improvements?

346. The increased value caused by the improvements? Yes; compensation should be given only upon the value of the improvements at the expiration of the term—the value they would be to the incoming tenant and the landlord; but it should by no means be given according to the expenditure by the tenant.

347. Are you aware that that is provided for in the Bill—that compensation should be given according to the value of the improvements at the end of the lease? I fancy the Bill is not sufficiently explicit on that point. I have had a very long experience, and I thoroughly endorse the principle of compensation for improvements with the restrictions provided in this Bill. I do not think a tenant should be paid for all improvements he thinks proper to make if they are of no use at the end of his lease; but if the improvements he has made tend to increase the leasing rental of the land, then he should be paid for them. I think a slight alteration might be made in clause 6. It says:—

If no such agreement shall be come to within one month after the notice shall have been given, the landlord may, unless the notice is previously withdrawn, undertake to execute the improvement himself, and may execute the same accordingly in any reasonable and proper manner he shall think fit.

That leaves a loop-hole. If the landlord and tenant are at variance the landlord may effect certain improvements, "as he may think fit," which might be utterly useless to the tenant.

348. If the matter were settled before the improvements were carried out, would it get over the difficulty—if, for instance, the landlord and tenant arranged as to the kind of improvements that would be placed upon the land before the improvements were started? Yes; but supposing they did not arrange?

349. Do you think an amendment should be included in the Bill providing that before carrying out the improvements the landlord and tenant should agree as to the kind of improvements to be made, and that if they did not agree arbitrators should be called in? Yes; that is the very thing I was going to suggest, that arbitrators should step in in the event of the landlord and tenant not agreeing.

Mr.  
D. Kennedy.  
27 April, 1893.

350. And that they should award a value upon the improvements necessary to be carried out? Yes. Then I would suggest a slight alteration with regard to the appointment of referee. The Bill says, "If the parties do not concur in the appointment of a single referee, each of them shall appoint a referee." You can easily conceive a time when the landlord and tenant may be at variance with each other, and there may be ill-blood between them. Under such circumstances the referee, that each would appoint, would be an extremist, and the award might be utterly unreasonable. I admit that an umpire may be appointed, but everything depends upon the umpire, so that you might as well appoint only one man. My view is that the Bill should empower land owners and leaseholders each to appoint a referee, not individually, but collectively, as a body. The two referees to decide for all land owners and all leaseholders. For the purposes of this Bill, all land owners should elect a referee to represent them, and all leaseholders should elect a referee on their behalf, and then an umpire should be appointed by the Crown. Under the system of the appointment of referees individually, as I have already pointed out, if the parties are at variance each is likely to appoint an extremist, and an umpire may step in who is, perhaps, the least capable of the lot, and the award may not be satisfactory to either party. On the other hand, if the general body of landowners, and the general body of leaseholders each appointed a referee for the purposes of this Bill, the parties would be more likely to get justice.

351. You are aware that there is a provision in the Bill for the appointment of a referee or umpire by the District Court? Yes; in the event of the parties not agreeing. But I see that the Registrar of the Court may be appointed as umpire. The Registrar of the Court might know nothing at all about the matter in dispute between the landlord and tenant. He might be able to take evidence, but that is hardly sufficient. But these are matters of detail more than anything else, and I am so much in favour of the Bill that I should like to see it passed even without the amendments I have indicated. I will give a case in point illustrating the injustice of the present system. For the benefit of his farm a man may require to erect a barn. He may only have a lease for five years, and the barn may cost him £200. The life of a well-constructed barn would be thirty years. The tenant would only have the use of that barn for five years, and the landlord would have it for the other twenty-five years. Is it not fair and reasonable that, in the event of the landlord taking possession of the property, the tenant who had expended so much money upon the barn should receive compensation, based upon its value, at the end of his lease?

352. *Mr. Ewing.*] You come from Ulladulla? Yes.

353. Has there been much consideration given in Ulladulla to a Bill of this kind? Well, I have talked about it as much as I could; I do not know what others have done. I am satisfied it will be a popular Bill. In fact, I have talked to landowners about it, and, putting the matter to them in the form in which it is embodied in this Bill, they have thoroughly endorsed the principle. There are many who are under the impression that a tenant might put on any improvements he thought proper, and which might be utterly useless to the farm. But the Bill provides for that, and unless the improvement was of use to the farm the tenant would receive no compensation. I think the Bill would be generally accepted. I have advocated and agitated the matter for some time—in fact, long before this Bill was before the public. It is no new thing to me.

354. And you think it would be a sufficient protection to the landlord to provide that the compensation should fairly represent the value of the improvements to the incoming tenant? I do not know what more protection he could require.

355. You think that is quite sufficient, and would preclude the possibility of unwise improvements being put on? The Bill, in the first instance, requires that notice should be given to the landlord before improvements are made.

356. Is there much friction in your district between landlord and tenant? No, fortunately very little.

357. In your part of the country they get on very well without a Bill of this kind? Yes; they get on very well so far, but there is no telling what may occur.

358. Generally speaking, it is time enough to legislate for a difficulty when it arises? It is wise sometimes to take time by the forelock, and legislate for incoming difficulties. Although my part of the district may not, perhaps, suffer a great deal at present; I know this as a fact, that when a lease expires and the landlord and tenant do not agree about the rental, tenders are invited for a fresh lease. You can easily understand that a stranger who never expended a penny upon the farm could afford to offer more rent than the man who had spent all he made upon it.

359. *Mr. Scobie.*] As I understand, the great benefit you see in this Bill is the keeping up of the properties to a higher standard of fertility, and as regards repair, and so on? Exactly, that is the effect it would have.

360. You have had something to do with leases, I suppose? Yes; I have had a lot to do with them.

361. Have you not found that a clause is generally inserted in the lease, stipulating that the holding is to be kept in order, "ordinary wear and tear excepted"? Yes.

362. And that is with the view of effecting the object just mentioned? Yes.

363. The improvements for which provision is made in this Bill are principally in respect of drainage, buildings, and fencing; at home there are a number of other improvements; for instance, much importance is attached to the question of the unexpended manure that has been placed on the land, and also the question of underground drainage;—those are matters very much noticed at home, but they are not provided for here, simply because there is not much done in that way? In some parts of the country I suppose it is done.

364. Is there much under-drainage in your district? No; the country is undulating, and nothing of that sort is required. It is a dairying district. But there is another item not mentioned—clearing and stumping. The country in my district has been hardwood country. The timber is now dead, and it would be beneficial to the land and a great improvement if it were cleared and stumped. The tenant would have the benefit of that work while his lease lasted, and the landlord would have the benefit of it for ever.

365. As I understand you, you see some reason to think that the landlord should have a voice as to the improvements that are put on the land? Yes; I think the landlord should have some voice, but, at the same time, I do not think he should have the whole voice. If the landlord did not agree, I think it should

be

Mr.  
D. Kennedy.  
27 April, 1893.

be left to two arbitrators to decide whether the improvements were beneficial to the land, and if they agreed that they were, the improvements should be done.

366. Then, on the other hand, the landlord might wish to put something on the land which a tenant might not approve of;—you think both parties should have a voice as to the improvements to be carried out? Nes. 367. That would come to a matter of mutual agreement? Yes; a landlord might be of a churlish disposition and not a progressive man, and he might refuse to allow the improvements; and the Bill provides that they should be done to the benefit of the tenant and the country at large.

368. Then, with reference to the appointment of referees, I think you see some difficulty in getting that provision to work nicely? Yes; I think the suggestion I made, although only in a crude form, might be a slight improvement.

369. What are the improvements generally put on the holdings in your district? In the first instance the land has to be cleared and ploughed, and very often laid down with artificial grasses. Then it has to be fenced, and buildings have to be erected and all the other necessary things connected with a dairy farm.

370. The fencing and the buildings are the principal things? Yes; there is not much drainage—a little perhaps on the flats, but not a great deal. Reference has been made to the usual clause in a lease that the tenant must keep the fences in repair, fair wear and tear excepted. Now, when a tenant takes possession of a farm the fences may have been erected for twenty years, and are almost worthless. If the tenant puts up a new fence, having only a ten years' lease, at the end of his term the fence has still ten years of its life to last, and the landlord gets the benefit of that. Of course, the tenant might keep the old fence and patch it up the best way he could, but it would not afford sufficient protection between himself and his neighbours. Still by keeping it in repair he could comply with the clause in his lease.

371. But if an intending tenant saw that the fences were so very bad, he would naturally want to know what the landlord was going to do before he took possession? But supposing the landlord says, "I will do nothing. There it is, you can do the best you can."

372. In that case, unless the landlord gave the man some compensation in the terms of the lease, he would not be likely to take it at all? Well, necessity has no law sometimes. A man, by force of circumstances, may be compelled to take it. He might have a family, and not be in a position to remove somewhere else. It is all very well to say the country is wide, and that a man can go wherever he likes, but a man cannot go wherever he likes—he may not be in a position to remove wherever he likes.

373. *Chairman.*] You were asked whether the landlord and tenant could not come to an agreement without a Bill of this kind; but don't you think that if a Bill of this kind became law it would compel satisfactory arrangements to be arrived at between landlord and tenant, and if it had no other effect than that it would do good? I have always admitted that if the landlord and tenant could come to a satisfactory arrangement there would be no necessity for any other process in their particular case. But suppose they do not, then the Bill comes in and says, "You shall do so." That is why I approve of the Bill. That is exactly the provision in Mr. Gladstone's Bill with regard to Irish holdings. He does not propose to compel the landlord and tenant to go to court, but in the event of their not agreeing a court is provided to take evidence as to what the land is worth, and the parties have to submit to its decision, and so it would be in this case.

374. *Mr. Garrard.*] You are speaking of an existing tenant who may want his lease renewed? Yes; or even an incoming tenant.

375. But you would not pass a law to compel an owner of land to give his land to a tenant upon any conditions that might be set down in any particular law, without his consent? Well, it is a great question whether the landlord can simply do what he likes with his land. In my opinion, he simply holds it as a trustee for the benefit of the public at large. He has a certain right to it according to the money invested in it, but I do not know that he can do just as he likes with it.

TUESDAY, 2 MAY, 1893.

Present:—

MR. EWING,

MR. SCOBIE,

MR. GARRARD.

J. W. BOWES, ESQ., IN THE CHAIR.

Mr. George Bishop called in, sworn, and examined:—

Mr.  
G. Bishop.  
2 May, 1893

376. *Chairman.*] Where do you reside? At Woodville.

377. What is your occupation? I am a tenant farmer.

378. How long have you been so engaged? Well, all my life.

379. Have you always resided at Woodville? With the exception of about nine months. I came there in 1849.

380. How long have you been following the occupation of a farmer? About thirty years.

381. Have you read the Bill now before the Committee, called the Agricultural Holdings Bill? I have.

382. You have had a good deal of experience with regard to the relations of landlord and tenant? Yes.

383. Having read the Bill, do you think that it would be in the interest, not only of the tenants, but also of the landlords? I do, most undoubtedly.

384. You believe in the principle of compensation for improvements to tenant farmers? I do.

385. Has there been any demand for a Bill of this kind, so far as you know, in your part of the country? Yes. As long almost as I can remember anything in connection with farming, it is a matter I have heard a deal said about.

386. And although there has been no active agitation, so far as public meetings are concerned, for a Bill of this kind, still you know that the farmers generally in your part of the country have been asking for such a measure? They have.

387. I think the late Sir Robert Wisdom promised to introduce a Bill somewhat on the lines of this Bill? He did.

388. Do you know if he ever did introduce that Bill? I think not.

389. From your knowledge of farming and of the interests of landlords, do you think it would be detrimental to that class in any way? No; rather the reverse.

Mr.  
G. Bishop.  
2 May, 1893.

390. What would be the effect as regards agriculture generally of having this Bill introduced into our Legislation? I think the tenant farmers would have better buildings to occupy.

391. And you think it would improve farming generally, and lead to a higher class of agriculture? Yes; I believe it would.

392. In short, you believe it is a Bill that is decidedly in the interests of farmers? I do.

393. It is my intention, if the Bill gets into Committee, to propose an amendment by which some understanding shall be come to as to whether the improvements to be carried out are in the interest of the holding. I propose to add these words at the end of Clause 4, which provides that the tenant shall give notice of intended improvements:—

And the landlord may within one month from the giving of such notice, deliver to the tenant a dissent in writing to such intended improvements, and require the matter in difference to be referred to arbitration, and, thereupon, a reference may be had in manner provided by this Act—

- (1.) If the referees or umpire shall determine that the improvements specified in the tenant's notice, or some of them, will increase the value of a holding to an incoming tenant and be a suitable and desirable improvement to the holding, they shall make an award accordingly, and the tenant shall be entitled to compensation for the improvements which he shall make in accordance with such award.
- (2.) If the referees or umpire shall determine that such improvements, or some of them, will not increase the value of the holding to an incoming tenant, and are unsuitable and undesirable improvements to the holding, the tenant shall not, if he executes any improvements which have been disallowed, be entitled to any compensation therefor.

Do you think such an amendment would be an improvement? Yes, I do.

394. *Mr. Scobie.*] Have you heard much complaint in connection with the estate you are on, with reference to any hardship under existing circumstances? Not as far as people leaving the place is concerned, because the tenants there are almost there for a lifetime. They complain in this way—they say it is not worth their while to make improvements, for they do not know when they may have to leave, and they would get no compensation for their improvements. Our landlord has compensated the tenants—that is, he has assisted them in building in some cases, although not in mine.

395. When tenants want to get improvements made on the land, is it difficult to arrange with the landlord as to these improvements, if they are reasonable? In my individual case the landlord would not give me a penny. He told me straight that what improvements I made I should have to carry out at my own expense, unconditionally.

396. Generally speaking, of what tenure are the leases? My lease was for five years in the first instance—that is, about fourteen years ago.

397. I think we understood from the evidence of Mr. Croaker that the landlord kept the fences up? Not in my case.

398. I think he referred to the cultivation part? Yes; they do keep those fences in repair, but in our paddock we have had to maintain them. I have had to put my fences there and keep them in repair—that is, along the three sides of the holding.

399. The improvements to which this Bill applies are only "Drainage of land; erection, repair, or enlargement of buildings; making and repairs of fences." Do you think that estate would be benefited in any way by this Bill in the matter of drainage? Most undoubtedly I do.

400. Drainage is required? Very much. It is very flat black country.

401. There are other estates that would require to unite in carrying out any drainage as well as the estate you occupy? I believe that would be the simplest course to pursue. The estate on which I reside—the Woodville Estate—could be drained independently of any other; but, perhaps, not at the same expense as if two were done together.

402. The drainage as applied to that estate would be the surface drainage of flat lands? Yes.

403. Do you think this Bill should apply to present leases? Of course I know that in justice it should, but it is a question with me if there is any chance to do anything with it if it is made to apply to present leases.

404. In the part of the country to which you have been referring are the tenants allowed to sub-let without the consent of the owner? No.

405. With the consent of the owner the incoming tenant might give something for the improvements on the land upon taking possession? That has been done on one or two occasions, but it is not the general rule.

406. I understand that the proposed amendment read by the Chairman is to enable an arrangement to be come to between the landlord and the tenant, before they are compelled to go to work, as to what is required or necessary? Yes.

407. Is that not what is pretty much the practice at present—it would be an arrangement between the landlord and tenant? Not as far as my personal experience is concerned.

408. If a man wants to put a building up he does so at his own cost without consulting the landlord? Yes.

409. And he is liable to go out at the end of his term? Yes.

410. Five years? Yes; or one year as the case may be. Most of them are annual tenants.

411. It has been stated in evidence that a good deal of the land after having been cultivated goes out of cultivation—do you notice much of that? As far as my experience is concerned on the greater portion of the Woodville Estate—perhaps one-half of it—the cultivation was once turned into a paddock on account of seasons of flood such as the one we are passing through at present. But, ultimately, it was all put under cultivation again, and it has been under cultivation for about fourteen years.

412. The land to which you refer is all good lucerne land at the bottom of the range of hills, where the houses are generally built? No. On perhaps one-third of the Woodville Estate the land is too low to grow lucerne. There is too much saltpetre in it. It will grow anything else.

413. *Chairman.*] It will grow good potatoe crops, for instance? Yes; or oats, maize, barley, or anything else you like.

414. *Mr. Ewing.*] How long is your present lease? I had a lease for five years at first. At the end of that time, about thirteen years ago, I renewed the lease for ten years, and it expires within two years from the present time.

415. What rent are you paying? Under my present lease I pay £3 an acre for 51 acres, and £2 an acre for 20 acres, and there is attached a paddock of about 7 acres, for which I pay nothing.

416. You pay then about £2 10s. an acre rent? Yes; I dare say that would be about the average.

417.

Mr.  
G. Bishop.  
2 May, 1893.

417. When your lease runs out, will you get the farm at the same price again? At less, or I will not occupy it.
418. Would you have any difficulty in getting another place? It is hard to get a good place in that district.
419. Do you know that there are large portions of the Colony where you can get land very much cheaper, and land which will give you as good a return as you are getting from your present farm? Yes, I do. Unfortunately I did not know it soon enough.
420. Why? If I had I should not have laid out so much money where I am. That is where the trouble is.
421. The difficulty in moving? Besides that, I have laid out £500 in building fences and so on, for which I should get no compensation, except at the good grace of my landlord.
422. You have then about 78 acres of land? Yes.
423. And you are able to make a fair living out of it? I have not done so for the last four years; I have not lived at all.
424. You have been making nothing lately? I have been losing £200 a year.
425. Because of the floods? Yes. I have lost £200 a year for four years.
426. Is it to the interest of the landlords that this Bill should pass? I think so.
427. And you think the landlords think it is themselves? Perhaps not. I cannot, of course, answer for the landlords, though, I believe, honest landlords think it would be to their interest.
428. When you speak of honest landlords you mean reasonable landlords? Yes; a man must be honest to be reasonable.
429. Suppose they were all reasonable landlords and reasonable tenants, would there be any need for a Bill at all? No; on the same principle that there would be no need for constables if everybody were honest.
430. Suppose this Bill does pass. Take your own case. You will go back to your landlord for a new lease. Do you think he will come under the conditions of this Bill, or will he make a special lease with you binding you in any way he sees fit—that being, of course, any way you are prepared to agree to? I do not think it probable that my landlord would. But that is where the trouble would come in with most of the tenants, I think.
431. Even if the Bill passes the landlord will still have it in his power to say, "Either you sign my lease on my terms or you go"? That is the difficulty.
432. Therefore, to make this Bill so that it would be absolutely safe for the farmer you must put a penal clause in it prohibiting the landlord from making another agreement? Yes.
433. That appears to be the difficulty in the whole case? That is the great difficulty I see in the Bill. The landlord may compel the tenant to come under certain terms. I do not think my landlord would do so, but I think the landlords generally would.
434. Generally speaking, a man who has been able to acquire land has a pretty good knowledge of the best way to get the profits out of it? Yes.
435. What is the main difficulty under which you labour in connection with improvements. A witness from the same part of the country told the Committee that primarily it was buildings, barns, and things of that kind? Barns, houses, stables, sheds, and underground tanks.
436. Those are the main things? Yes.
437. The same witness also told the Committee that if the outgoing tenant had the right to move his barns and houses when he went away he would be fairly well satisfied. What do you think of that view of the case? I think it would be much better than the existing system, but it would not be as good as the proposal in the Bill.
438. Still it would be some relief for the tenants? Yes; most undoubtedly.
439. Farmers could generally put up such buildings as could be removed and so that the timber would be worth its value. Under those circumstances would not the buildings be worse than ever? No; I think they would be of a better class, because, as a rule, tenant farmers only build of wood. In our district they do not, as a rule, build brick or stone houses.
440. *Chairman.*] You have seen the schedule of improvements to be allowed under the Bill? Yes.
441. Do you think they cover pretty well all that is required by tenant farmers? As far as I know they do.
442. It has been suggested by one of the witnesses that the word "repairs" should be left out of the schedule; do you think that would be an advisable alteration? No, I do not think so. If the tenant were allowed compensation he would keep his buildings in repair.
443. And you think there are times when repairs are absolutely necessary in the form of improvements? Yes.
444. There are occasions when the goodwill of a holding is sold? Yes; but landlords object to that.
445. This Bill if it became law would obviate that difficulty? Yes.
446. Then in that respect it must be in the interest of the landlord? I think so.
447. What is about the average rental in your part of the country? From £2 to £3 an acre until you get nearer Maitland. In our district the bulk of the land is let at something between £2 and £3 an acre.
448. Do you know of cases where the rent has been increased after improvements have been placed on the land by the tenant? The rent has been increased on my holding, but I do not think it has been from that cause.
449. What is the state of the farms in your district, as a rule. Are they in good order and repair—the buildings generally? The buildings generally are barely tenantable.
450. Very dilapidated? Yes; the bulk of them are very old, and very low and bad in structure.
451. That is the case simply because the tenants have no encouragement to place improvements upon the land? Yes; they will all tell you that, at any rate. If you speak to a tenant he says, "What is the use of my improving it."
452. What is the present system with regard to leases? On our two estates the land is leased from year to year. I believe my case is nearly the only exception. I had to lay out so much money that I would not take the land without a lease.
453. I understand that you have given this matter a good deal of consideration, that you have carefully read the Bill, and made inquiries for some years into the principles embodied in it, and you believe that a Bill of this kind if passed into law would really be a benefit? I do, both to the landlord and the tenant.

TUESDAY, 9 MAY, 1893.

Present:

MR. H. CLARKE,

MR. GARRARD,

MR. SCOBIE.

J. W. BOWES, ESQ., IN THE CHAIR.

Mr. Thomas Charles Worboys called in, sworn, and examined :—

454. *Chairman.*] Where do you live? At Spring Hill, near Orange.

455. What is your occupation? A farmer.

456. How long have you been engaged in farming? Since 1863.

457. During that time have your operations been confined to the Orange district? Yes.

458. I suppose you have a pretty general knowledge of the state of the law as between landlord and tenant, not only in that district but in the Colony generally? Yes, a fair knowledge, not perhaps as intimate a knowledge as some have, but in my position as a magistrate I have come into contact with men having difficulties, and I have had to deal with matters in relation to landlord and tenant to a considerable extent.

459. From your knowledge of the question, do you think any improvement could be introduced to do away with the friction which exists to some extent between landlord and tenant? Yes. As soon as I received a copy of this Bill, which I did without any previous intimation, I read it carefully through, and it seemed to me exactly to meet the difficulties that are complained of between landlord and tenant. I had conversations with men only just previously in reference to the matter—men at Bathurst and other places who were complaining greatly about the present state of things. They said that it was really a misery now to have anything to do with letting land to tenants; that there was nothing binding; that the tenants really took all they could get out of the ground, and that there was no inducement for a man to do anything on the land; that it did not pay the owner to do anything to the land; and there was no inducement to the tenant to do anything beyond getting all he could out of the ground. I was convinced that something was necessary to do away with this state of things between landlord and tenant, and when I got this Bill it seemed to me to be just the thing to meet all the difficulties. I have looked carefully through the Bill, and with the exception of one or two clauses which might be made a little more definite, it does not contain anything objectionable. The principle of the Bill is a most excellent one, and the measure is just what is necessary to remove the friction that exists between landlord and tenant. At present no encouragement is held out to the tenant to make improvements, and the landlord has no encouragement to make improvements because he cannot get sufficient rent to cover his outlay. But this Bill just meets the difficulty. When improvements are wanted under this Bill they will have to be carried out. I think it is a most excellent measure, and I shall only be too glad to see it come into operation.

460. From your experience as a farmer and having read the Bill, you believe that the principles embodied in it if passed into law will ameliorate the conditions which exist at the present time between landlord and tenant? I really do, and I believe it will be the means of elevating the system of farming very greatly.

461. You think it will be as much in the interest of the landlord as in the interest of the tenant farmer himself? Yes, it will be equally in the interest of both parties. If clause 4 as amended, which the chairman has indicated, is inserted in the Bill that will meet all that is wanted.

462. You mean as a safeguard to prevent the tenant going to unnecessary expense in putting improvements upon his holding that are not required? Yes, it would be a safeguard to both parties.

463. *Mr. H. Clarke.*] You think that the ordinary leases or agreements hitherto made between landlord and tenant are not sufficient for the ordinary purposes of both? No; they have not hitherto proved to be sufficient.

464. You think then, that the Bill as a whole would be a great improvement upon the present mode of operations between landlord and tenant? A very great improvement. I believe it would cause a revolution in many places in regard to the character of the homesteads, and would lead to an improvement in the farms generally. Some of the tenant farms round about Bathurst are in the most dilapidated state for want of something of the kind.

465. The only improvements to which the Bill applies are those mentioned in Schedule I, namely, "Drainage of land, erection, repair or enlargement of buildings, making and repairs of fences." Do you think those improvements would be sufficient? Yes. There is another improvement of very great importance, and that is, the manuring of land to keep it in good condition. If I were letting land I should encourage that in every possible way. It is done in England. The system of colonial farming is going to be altered very much in the future, and we shall have to adopt the practice of manuring.

466. When the land becomes exhausted, and there is no fresh land to go upon, you think the people will have to resort to the system in existence in the old country? Yes.

467. *Chairman.*] Do you not think it would be rather premature to include manures in the Schedule of the Bill? Perhaps it would just now.468. *Mr. Scobie.*] What are the principal crops grown in your district? Wheat, oats, potatoes, and hay—a great quantity of hay. It seems to me that the production is drifting principally into hay and potatoes. There is of course a large quantity of grain grown there now, but I believe that in a very short time there will be less wheat and more potatoes and hay. Wheat is cut for hay. We also grow turnips largely.

469. In the case of potatoes, do you have to use manure to get a fair crop? No; we get a fair crop without manure; but I have used manure for two years and I find it pays excellently. It pays a good 50 per cent. to use manure.

470. What is about the rent of the land per year? About 10s. an acre.

471. What are the principal evils which you find in connection with the present state of things? Things are done in such a loose way. There is nothing binding on either landlord or tenant, and neither will carry out improvements. The landlord seems to aim at nothing but to get his rent, and the tenant seems to aim at nothing but to get all he can out of the land. If the tenant wants a new fence the landlord will say, "Put it up" and the tenant will say, "I cannot afford to put it up—I may not be here another year," and so on. There is no agreement between the two, and the consequence is that nothing is done and the farm is left in the most dilapidated state. There are one or two men whom I know who let their land

Mr. T. C.  
Worboys.  
9 May, 1893.

Mr. T. C.  
Worboys.  
9 May, 1893.

land on liberal terms, and who have sufficient forethought to see the advantage of encouraging their tenants to make improvements. They pay their tenants £1 an acre for all the land they clear, and they pay them for all the fencing they put up. In that way they improve their own property and are able to get a higher rent when they want to let it, and they have no trouble in letting their land. There are only one or two men I know of who do that, but they are reaping the benefit of the encouragement thus given to the tenant, and are able to get a much better class of tenant on their farms.

472. I suppose the perfect cure for anything you complain of in that way would be to combine landlord and tenant in one person in the shape of a freeholder? Yes. I think this Bill will just meet the difficulty.

473. The rent you mentioned is small compared with the rents which according to the evidence is obtained in other places, and unless a landlord had a very large place his rents would very soon be swallowed up in improvements? The improvements that are required on an agricultural farm are not of any expensive character.

474. Do you think that before improvements are effected there should be an agreement between landlord and tenant, or should each have power to force the other? I believe that each should have a certain power to force the other to make improvements. I take it that is the object of the Bill—to force either party to do things which are really wanted.

475. *Mr. Garrard.*] Is there anything in the Bill to make the landlord force the tenant to do what he thinks necessary? No.

476. You say that there should be power on either side to demand that certain things should be done. As a matter of fact, does not the Bill only give the tenant power to do the things and make the landlord pay for them? Yes. It provides that if the landlord does not make the improvement the tenant shall do so, if the improvement is necessary, and, in regard to this the proposed amendment by the Chairman seems to put the matter in the proper form.

477. *Mr. Scobie.*] What is the length of lease that is generally given in your district? Generally about five years, not less than five years. There may be some leases longer, but I know of hardly any that are shorter.

478. A long lease is sometimes given for improvements that are to be put upon the ground? There are only one or two instances of that kind of which I am aware; but where that plan is adopted it is working very satisfactorily. Of course the owner does not get very much rent for the first few years. Where the tenant clears perhaps 30 or 40 acres of land every year the owner allows him £1 an acre, and he also allows for substantial fencing that is put up. In a few years his land is thoroughly well cleared and fenced, and he is amply recouped for the encouragement he has given to the tenant.

479. *Chairman.*] In other words this Bill would have the effect of giving to tenants what they would get by obtaining long leases from the landlord? Yes.

480. *Mr. Scobie.*] From the character of the land I understand that drainage would not be much required in your district? In some places it is very much required.

481. What sort of drainage? Underground drainage.

482. You understand this Bill to apply to underground drainage as well as other drainage? Yes.

483. Underground drainage is a very expensive operation? Yes.

484. It would be worth a good deal more than the land up there? In some places it would be worth more than the value of the land, but there are places where the drainage of 1 acre would benefit 8 or 10 acres. There are many instances of that kind.

485. Suppose a case of this kind—A man rented a farm of 40 acres at 10s. an acre, and being impressed with the advantage of underground drainage demanded improvements of that nature from the landlord. If the landlord were short of means do you think it would be a hardship to compel him to make improvements of that kind? In a farm of 40 acres there is very little, as a rule, that wants draining. It is not as if the whole of it or even one-third of it required to be drained. There is no farm that I know of that wants much drainage. An acre or two would be about the extent of the drainage required on most farms. It is generally ridgy ground. It is not flat; you cannot get a farm anywhere that is flat.

486. My observation as to the necessity of drainage is that these hills that have a clayey subsoil, are the very places that require draining. On the Hunter, the alluvial flats have a deep soil which the water goes down through when once the level of the river falls; but on the hills, where there is clay subsoil, the rain falling on the surface sinks in and runs down, and drowns the bottom part of the hills, and these are the places which require pipe draining. Is that so in your district? No; it is only just where the soakage comes out. There is a certain soakage that comes out, but that is only very small. Sometimes it comes out of the side of the hill, and comes down and covers a lot of ground which would really be dry ground if the soakage were tapped.

487. The soakage is more in the nature of a spring? Yes. The expense of draining a farm in our neighbourhood would only be very small. If it were done by means of open drains, it would be much cheaper than underground draining, and would answer the same purpose, only you would lose a certain amount of the surface of the land.

488. Then the improvements that would take place in your district under this Bill, would be principally the erection or enlargement of buildings, and the making or repairs of fencing? Yes, the farmer just wants a good big shed to stow away winter feed for the cattle.

489. Are there any additions that could be made to the Bill, in your opinion, that would make it more complete? No; I have gone carefully through the Bill, and I cannot see that there is anything which might be added to it, except the amendment to clause 4, which the Chairman intends to propose.

490. *Mr. Garrard.*] Do I understand that, in your opinion, the great drawback to farming hitherto is the loose manner in which the leases have been drawn, or the fact that there have been no leases at all? Yes, principally to the fact that there have been no leases at all.

491. Would it not be possible to draw a lease that would set forth clearly and distinctly what was due on the part of the tenant to the landlord, and what was due on the part of the landlord to the tenant, without any legislation? No, I do not think it would. There are so many men, who can afford to do so, who will not spend a shilling on the land if they can avoid it.

492. If this Bill is passed, and landlords have it in their power when the present leases fall in, and when they are giving new leases, to stipulate exactly what is to be done—in other words contract themselves out of the Act altogether, by having a specific lease drawn up—what good would the Act do? Of course there is nothing to prevent them from doing that.

493. Then, what help is the Bill going to be, except to those who have indefinite leases at the present time— it will be a help to them, I suppose? I think it will be a help to a great many people who will fall in with it, and see that it will be to their own benefit.

Mr. T. C. Worboys.

9 May, 1893.

494. You think that if this Bill were passed it would have such an effect upon landlord and tenant that they would avail themselves of its provisions? I believe that they would, because at present there is such a loose way of dealing as between landlord and tenant. One or two landlords at Bathurst have told me lately, that owing to the present state of things it is really unpleasant to have anything to do with tenants.

495. But if both parties are mutually dissatisfied, have they not the power to make an agreement without legislation? But there are so many who will not do so unless they are compelled.

496. You said, in answer to Mr. Scobie, that long leases are sometimes given in consideration for improvements;—do you not think it would be unfair, where a landlord had given a long lease as compensation to the tenant for improvements, that he should be made to pay for such improvements at the end of the lease under a Bill like this? If he gave a long lease as compensation he would already have paid for the improvement.

497. *Chairman.*] In other words, he would have contracted himself outside the scope of this Bill? Just so, and it would not be fair to ask him to pay compensation again.

498. *Mr. Garrard.*] In your district is it usual for the lease between landlord and tenant to be drawn by a lawyer? Yes.

499. What terms are usually employed? I could not say exactly.

500. Is it not set forth that all existing improvements upon the land shall be maintained? There is nothing about improvements, as a rule.

501. Is it usually stipulated that certain improvements shall be done? No.

502. It is simply a lease of certain land for so many years? Yes, and at a certain rent.

503. *Mr. H. Clarke.*] The fences to be kept in repair, fair wear and tear excepted? Yes; but they are not kept in repair. Generally when the tenant leaves they are dilapidated.

504. *Mr. Garrard.*] Is it not a fact that under the very inefficient system of leasing you have just described, leases are given at a comparatively low rent, and for a long term, so as to compensate the tenant for any improvements he may effect upon the farm? No; I do not know of one instance where land is let like that. The men who encourage improvements being put on the land make an offer to the tenant that if he clears 1 acre of ground he will get £1 for it, and if he puts up so many rods, or a certain line, of fencing he will be allowed so much for it. I only know of two men in our district who will go to that extent. Every year their properties are improving in value, and as soon as one of their farms is to let there are twenty men ready to take it at once because of the improvements. In the case of other places the men say, "Oh there is not a bit of fencing upon it; I shall have to re-fence it; I am not going to do it," and even if they can get the land for half the rent they will not take it. So that encouragement should be given to make improvements on the holdings. If I had twenty farms to let I should offer every tenant all the inducements I could to make improvements.

505. You are a tenant farmer? No; I am a freeholder—a free selector.

506. You have no tenants? No.

507. Have you ever occupied the position of tenant farmer? No; I took up my land under the Robertson Act.

508. You have never occupied the position of landlord, letting land out to tenants? No.

509. *Chairman.*] Notwithstanding that, you have had a very wide experience with regard to the existing conditions between landlord and tenant, having been for a long time a resident in the district where you live, and knowing the conditions and the friction which exist between landlord and tenant? Yes.

510. As a matter of fact, this Bill, if it becomes law, will not affect such persons as you referred to just now, and whom we might style reasonable and good landlords, and who are quite willing to give concessions to their tenants in the manner provided by the Bill, but on the other hand it will compel those who do not accept the proper responsibility of landlords to do the same thing? I think so. I think it will encourage that system.

511. A previous witness expressed the opinion that the Local Land Boards would be more competent to deal with the regulations under which this Bill would be carried out than arbitrators as proposed in the Bill; from your knowledge of the persons who compose the Land Board in your district, do you think that they would be able to determine matters in dispute between landlord and tenant than arbitrators appointed by the parties? I think so, because they are men taken from the community as qualified to judge of such matters, and they are supposed to have a knowledge of all particulars in connection with land.

512. You do not think there would be any bias on the part of members of the Land Board one way or the other? Certainly not in my district.

513. How is your Board composed? The Police Magistrate is one member, and another is an independent gentleman in Orange.

514. They are not pastoral tenants or free selectors? No; they have no interest in land whatever.

515. They are all thoroughly impartial persons appointed by the Government? Yes.

516. *Mr. Garrard.*] And you think it would be better that we should avail ourselves of existing machinery, rather than bring in outside arbitrators? I think so.

517. *Chairman.*] You have no personal knowledge of the working of the English Act? No.

518. I understand you to say, having given consideration to the Bill, that, in your opinion, it is on lines that would be likely to be as beneficial to the landlord as to the tenant? Yes; just as beneficial to the one as to the other.

519. And it would bring about a much better condition of things between the two parties than exists at present? Yes; and it would lead to an improvement in the holdings, and also in the system of agriculture generally.

520. *Mr. Scobie.*] Do you think the Bill, if it should come into force, should apply to existing leases, or only leases made after the commencement of the Act? I fancy it would be rather a difficult thing to interfere with existing leases.

521. As a matter of fact, if there was anything in this Bill objectionable to either tenant or landlord, there would be nothing to compel a landlord to let his land, or compel the tenant to lease it, and they would fall back upon such an arrangement as is contained in clause 5? Yes.

Mr. T. C.  
Worboys.

522. That would be the practice were either the tenant or landlord to object to anything in the Bill? Yes.

9 May, 1893.

523. There is a resort to Courts provided in the Bill where arbitrators fail to agree;—do you think litigation would be increased by the Bill in that way? I am hardly prepared to say. As a rule, in my experience, I have found that there has not been any difficulty in coming to a conclusion where arbitrators have been appointed to settle disputes in reference to land, and so forth.

524. But they do disagree sometimes? I suppose they do; but I have never known such a case in our district. Where disagreement occurs a fresh appointment of arbitrators is necessary, and a great deal of additional expense is incurred, and, therefore, such a proceeding is naturally avoided as much as possible.

525. Where this would come into action would be on the more valuable lands, where more expensive improvements are necessary in carrying on the work of a farm? Yes.

526 *Chairman.*] In reference to the question asked by Mr. Scobie just now, if you will read the clause in the Bill providing the machinery for carrying the Act into operation, you will find that the District Court is only to be called in for the purpose of appointing referees or giving a decision in the event of the referees appointed by the contending parties not acting? Yes; such a necessity would very seldom occur. I approve very much of the principle of compensation for improvements adopted in South Australia in connection with pastoral holdings. There the Government pay the squatter for his improvements, and are reimbursed by the incoming tenant.

527. Are you aware that this Bill is drawn partly on the lines of the South Australian Act, and contains the same principles? I was not aware. I have suggested several times that the New South Wales Government should take a lesson from South Australia, and thus do away with the friction between free selector and squatter, of which there is none in South Australia.

528. You would like to see the same principle in regard to compensation for improvements as applied to Crown lands introduced into New South Wales that is adopted in South Australia? Yes.

TUESDAY, 16 MAY, 1893.

Present:—

MR. SCOBIE,

MR. EWING.

J. W. BOWES, ESQ., IN THE CHAIR.

Mr. William Coates Kelk called in, sworn, and examined:—

Mr.  
W. C. Kelk.

16 May, 1893

529. *Chairman.*] Where do you reside? At Bathurst.

530. How long have you been living there? Twenty-one years.

531. Then you know a good deal about the district? Yes; I know it thoroughly.

532. I understand you have had a good deal to do with the farmers in that district—landlords and tenants? Yes; I know nearly all the landlords and their tenants.

533. Is there any friction existing between the landlords and tenants with regard to the tenant holdings;—have they any difficulty in regard to getting on, as a rule? I cannot say that I am aware of any cases of hardship that have actually occurred as between landlord and tenant in respect of agricultural holdings.

534. Have you read the Bill that is before this Committee? Yes; in fact, I may say that I have gone carefully through it, and examined it, and made inquiries about it.

535. If it became law do you think it would be a benefit to tenant farmers? Yes; most decidedly I do.

536. You think it would improve the relations existing at the present time between landlords and tenants with regard to improvements on the holdings? Speaking with regard to the Bathurst district, the Bill being thoroughly mutual in its character, I do not see that the position would be adversely affected, but rather otherwise.

537. In other words, would not the power given by this Bill to tenant farmers to place improvements on their holdings give a great impulse to agricultural pursuits, lead to a better class of farming, better improvements, better kept farms? I think it is most desirable that farmers generally in the district should reside in better dwellings, and in that respect, of course, their holdings would be made much more valuable to them; and on the other hand, as a result, the landlord would be benefited by the fact that the tenure would be lengthened, and as the Bill provides for ample compensation to the landlord, I think I can reply to the question in the affirmative.

538. You are, of course, aware that, at the present time, a tenant can only get improvements placed on his holding at the will of his landlord—the landlord may refuse to do anything with regard to improvements? Exactly so.

539. Do you know of any case where tenants, after placing improvements on their holdings, the rents have been raised? No; but I can tell you of a case in which my own brother-in-law, a sheep farmer or small squatter in the Bathurst district, required his house to be considerably enlarged and other improvements effected. He held his holding under lease from a landlord living at Richmond, and he would not put these improvements on the land unless his lease was renewed at the old rent, because he was certain that if he made the improvements the landlord would afterwards exact a higher rent. He has told me that repeatedly, and I believe there are other cases of a similar kind.

540. As a matter of fact, tenants are deterred from putting improvements on their holdings, fearing that they will either get notice to leave or that the rent will be raised? Yes; I know that for a fact.

541. Having read the Bill, you think that the principle embodied in it, of compensation for improvements, is in the interest of both classes? Yes.

542. From your knowledge of the Bathurst district, having lived there for many years, and having come in contact with the agriculturists, what is the condition of the farms—the houses, the fencing, and the drainage? As a rule, they are of a very indifferent character.

543. There is plenty of room, therefore, for improvement in these matters? Yes, and if the Bill came into operation I believe the improvements would be carried out forthwith in a good many cases.

544. What is about the average rental per acre generally in the Bathurst district? I should think about 12s. 6d.

545. What is the average size of the farms? I should say the average would be from about 70 to 80 acres.

546. Have you read the Schedule to the Bill? Yes.

547.

547. Do you think the improvements mentioned there—drainage of land, enlargement of buildings, and making and repairs of fences—would cover the requirements of the farmers in your district? Yes; I cannot think of any other improvements that could be added to make the schedule more complete—at any rate none that a landlord could be asked to make.

Mr.  
W. C. Kelk.  
6 May, 1893.

548. Do you think that the improvements specified in the schedule are such as might be legitimately carried out by a landlord in the interests of his holding, to be paid for by him? Yes; I do not know whether it would be proper to consider the advisableness of suggesting that the tenants should manure the land in any way. At present there is much impoverishment of the soil by reason of bad farming.

549. You mean that manures should be added periodically? Yes, something should be done. There is an everlasting complaining about the impoverishment of the land year after year.

550. In the English Act manuring is one of the strong features? Yes; it is compulsory there.

551. Are the leases in the Bathurst district long or short, or are the tenancies only yearly? To the best of my belief they are principally yearly tenancies.

552. Your interests, I presume, are as much with one class as with the other? Yes; just about equal.

553. And the information you are giving the Committee now is information which you think would be as much to the benefit of the landlord as the tenant? Precisely so. I am very much impressed with what I consider is the mutual character of the Bill. It is equally beneficial to both landlord and tenant.

554. I propose to add an amendment to clause 4 of the Bill, which will provide that before the tenant shall have power to make improvements a referee shall decide whether or not they are such as ought to be carried out. Do you think that would be an improvement? Yes; I think it would decidedly add to the mutually beneficial character of the Act; and it struck me that some provision of the kind should come in after clause 3. It meets an objection which I had noted in that part of the Bill—that there should be some provision enabling the landlord to see whether the tenant is really *bonâ fide* in his application, and the improvements are actually required.

555. Have you heard any desire expressed on the part of the farmers in the Bathurst district for legislation of this kind? I have heard intelligent farmers speak of the necessity for an Act somewhat similar to what they speak of as the Irish Act, and this Bill seems to me to meet the case.

556. Having read the Bill, and having considerable experience in regard to the wants of farmers, you believe that if carried into law it would be of great assistance to agriculturists, both landlord and tenant? I believe it would be a great advantage both to landlord and tenant. It would be an advantage to everybody, and we should have an improvement in the character of farming.

557. I believe you are a member of the Land Board of your district? Yes.

558. It has been suggested that instead of appointing referees for the purpose, as proposed in the Bill, it would be better if the duty of deciding as to the value of improvements and so on were left to the Local Land Boards;—what is your opinion in regard to that? I am decidedly of opinion that the work could be done by the Land Boards. I cannot think of a better tribunal to which these matters in dispute could be brought, the members of the Land Boards being men accustomed to make appraisements and valuations, and who are thoroughly in touch with matters of this kind. I think it would be a saving of expense, and give greater confidence as to the working and the *bonâ fide* carrying out of the Act. It would give great confidence to the tenants if they knew that they could bring their cases before such a Board. The working of the Land Boards seems to me to be thoroughly satisfactory, and their decisions in the matter of appraisements are very seldom appealed against. I am now speaking of the Bathurst district, where it is a very rare thing to have any appeals. The very fact of the lessees so seldom relinquishing their leases is a proof that the awards of the Boards in the matter of rent are fair and equitable, and I think the same would apply to the carrying out of this Act.

559. Do you think the landlords and tenants would both have sufficient confidence in the Land Boards to accept their awards in lieu of the clause in the Bill framed for this purpose? Yes; I feel sure they would. The Land Boards are men of experience and judgment, and men of common sense. I am assuming that they would have power to take evidence, and that the landlord and tenant could each bring witnesses in support of his case. Under such circumstances a fair judgment would be given.

560. *Mr. Scobie.*] What are the principal crops grown in the Bathurst district? Wheat and hay.

561. Are they very paying crops? In ordinary seasons they pay very well. As a rule, farming does not pay up there. There have been exceptional years when it has paid remarkably well; but, as a rule there, the farming is not of a superior character. The yield of the crops, for some years past, has been light. When, judging from the early appearance, you would think there was going to be a splendid yield it has turned out the reverse. It seems to depend on a few showers towards the end of the season.

562. How many bushels per acre of wheat is considered a fair crop? Twelve bushels would be considered a fair crop.

563. You spoke of manures being required, have you any supply of material suitable as manure for the growth of wheat? No; I do not think we have—not artificial manures.

564. Considering the small value of his crop, the tenant could not afford to put up anything like expensive buildings on the holding? Certainly not, as a rule. There are a number of tenants who have been residing in the district for a lifetime, who were there in the good old times, and some of these are exceedingly well off, but those who have taken farms recently are not in such good circumstances.

565. Many of the farmers, then, will pay wages from the accumulations of previous years? Exactly so. Most of the farmers who have started in the district recently are the sons of old farmers who have done well. Not many of them are fresh arrivals.

566. The rent you have mentioned of 12s 6d. per acre is not such a rent as would enable the landlord to put up many improvements? Though perhaps 12s. 6d. is a fair average, there are many tenants who pay considerably more than that. There are some landlords who derive immense rentals.

567. Are there many large land-owners who let their land out for agricultural purposes? No; not many large ones. The large land-owners are comparatively few in number.

568. Does the land there require draining for agricultural purposes? No; there is very little land there that requires draining. It is mostly sloping or undulating land.

569. Have you heard anything like a loud demand for a Bill of this nature? Not a loud demand.

570. Just in conversation? Well, the farmers up there seem to be men who will submit to anything so long as they can keep body and soul together. Still I have heard the opinion expressed that it would be a great benefit if such an Act as this were passed, though there is no decided clamour, so to speak, on the part of the farmers for a measure of this kind.

Mr.  
W. C. Kelk.  
16 May, 1893.

571. You mentioned a case where the tenant would not put up improvements till his lease was renewed; was that renewal of lease considered as something equivalent to assistance in making the improvements? No; it was simply done because the landlord was a man who took advantage of that kind of thing, and who, because a tenant improved his land would demand a higher rental afterwards. It was because he did so on a previous occasion that the tenant took this precaution, and deprived himself of a great deal of comfort and convenience in consequence.

572. The tenant in that case used the same prudence that all tenants should use? Precisely.

573. Do you think such an Act as this should apply to present leases, or only to leases made after it comes into operation? To present leases, decidedly. I know of a case that occurred only the other day where a landlord, who I am sorry to say is a representative of several others, actually told a person who desired to become his tenant, "I shall not only not make these improvements, but I shall not allow you to make them."

574. In some cases a landlord on being appealed to says he will not go to the cost of making improvements but will give the tenant a long lease and he can make what improvements he likes. I suppose that will occur pretty often? Of course that is a matter of arrangement. An alternative of that kind might be frequently advanced by landlords in preference to going to the expense of making improvements themselves. That would occur as a matter of course; but it would be for the tenant to say whether the length of lease would really be an equivalent.

575. In a case of that kind where there was an understanding between the landlord and tenant and where the landlord had given the tenant a long lease on the condition mentioned, would it be fair for the tenant to charge the landlord for the improvements? Certainly not, if there was a satisfactory understanding and a proper agreement drawn up between them. At present there is very great looseness in regard to agreements, and the importance of these things being in black and white should be pointed out.

576. There is a certain amount of compulsion in the Bill—the landlord or the tenant can compel the other in certain cases; do you think that is advisable, or do you think it would be better to have an agreement between the two, so as to avoid friction? I think that is provided for in the Bill.

577. In the present state of affairs do you think it would not be preferable to act on clause 5 of the Bill than that a law should be passed compelling either one party or the other to make improvements when they might not be in a position to do so? It seems to me that to act on clause 5 would remove the difficulty. All this Bill requires is that the landlord shall make the improvements suggested by the tenant, subject, of course, to any modifications which the tenant might consider reasonable on the part of the landlord, and clause 5 very properly provides for the matter being removed, so to speak, from the operation of the Act.

578. Clause 5 is what is acted upon at the present time in the absence of the law, the parties agree one with the other as to what is required. But this Bill goes somewhat further, and introduces a sort of compulsion? Yes, and with it compensation.

579. I suppose in your experience you are aware that there are a number of landlords who are only so in name, who have mortgages on their property, and who are not in a position to make the improvements required by the tenant without getting accommodation? Yes; they are not the absolute owners. But in my experience, as a member of the Land Board, I find that the mortgagees, who I suppose are the absolute owners for the time being, as a rule do all they possibly can to encourage improvements. I can easily understand an impecunious landlord not being in a position to do very much. He is bound, perhaps, hand and foot to a Bank. In that case I presume it would be necessary to get the consent of the Bank or mortgagee.

580. With regard to the amendment which the Chairman wishes to add to clause 4 providing for reference to referees before improvements are undertaken, considering the poor condition of the tenants in your district, as you have mentioned, and that expense is generally attached to such reference, if one party compelled the other, would there not be a certain amount of irritation created? I cannot see why there should be. If the landlord disputes the necessity for the improvements or their character he can object, and certainly the tenant should have some means of acting with certainty as to what he is doing. It would not do for him to go blindly to work. While the tenant is protected, there is a clause under which the landlord can claim compensation, so that it is not as if the compensation were one-sided.

581. Suppose you were a landlord and had a piece of land to let, and you did not approve of the provisions of this Act, and wished to make provisions of your own, would you not simply say to the intending tenant, "These are my conditions; I will do so and so," apart from the Act altogether;—would he not either have to comply with your conditions or not take the land? It is competent for any landlord to make what agreement he likes. But it would have to be a proper and legally-drawn agreement. If it were not, the landlord would be out of court, and the tenant could operate. It would be competent for any landlord to safeguard himself in the manner suggested.

582. If you were a landlord, a tenant who, having read a little, had a fad about underdraining, might under this Bill require you to put improvements on the land which would not be of any value, and to which you would object. On the other hand, if you were an intending tenant, you would act in a prudent way, like the tenant you have mentioned, and if the landlord's terms were not suitable you would look elsewhere, as in any other matter of business? Yes, of course. The effect of this Bill will be that at the beginning of the term the landlord and tenant will have these things pretty well squared up, and a great many unnecessary applications for so-called improvements afterwards would be saved. If I were a tenant, and knew there was an Act like this in operation, I should be very careful indeed to see that I did not go upon a place unless the fences were good, the necessary drainage were made, and the buildings were in good repair; and I suppose any ordinary tenant would do the same.

583. From your knowledge of this question, do you think it wise to introduce a law regulating the relations of landlord and tenant in this way unless there is a pronounced demand for that law? I have only spoken of my own district which is a very old and settled district, and from my observation and my knowledge of the character of the farms in that part of the country I believe that legislation of this kind is absolutely necessary.

584. Is land easily obtainable by tenants in your district? A good deal of the land is locked up, but every year more and more is being thrown open.

585. *Mr. Ewing.*] Is there much friction in the Bathurst district between landlord and tenant? Not that I know of.

586. You have no evidence of it? No; only that I know that many tenants wish that certain things should be done but they are afraid to ask to have them done because they know they will be refused—they have been refused over and over again.

587. As a rule do the landlords in your district treat their tenants fairly well? Yes, as a rule—what they consider fairly well.

588. And therefore the difficulties or troubles are details? Yes.

589. Do you regard it as a wise thing to legislate for details? It depends on what is meant by details.

590. Suppose as a rule the landlords and tenants are getting on satisfactorily, though some landlords and some tenants are not, if the general state of things is satisfactory would it not be well to leave them alone and let the parties adjust their differences themselves? That would encourage what I call a happy-go-lucky way of living with which many of them are satisfied. But there is a great difference in tenants. For instance, with regard to details, a tenant may have lived on his holding for a great many years and required a lot of fencing to be done, but if the landlord says "Go on, patch it up, patch it up" he will patch it up so as to live on the holding. But I do not think it is right and proper that a tenant should be compelled to carry on in that way. The same thing occurs in regard to the houses—there is a great deal of this patching up and making shift on the part of tenants who have occupied farms for a great number of years, and who are entitled to greater comfort and convenience than they have at present.

591. Of what value will the Bill be to those tenants. The landlord need not come under the Bill unless he sees fit. He can make his own lease or agreement? I consider that the best effect of legislation of this character would be that before the tenant took a holding he would be careful to see that it was in proper order. At present tenants take holdings in whatever state they may happen to be.

592. A man takes land because he wants it? Certainly.

593. While there is plenty of land and few tenants the tenants make good terms, but while there are plenty of tenants and little land, the landlords make good terms. Is that not the experience in all countries? Yes; I dare say it is. I am speaking of what I know. Bathurst is an old settled district, and many of the farm-buildings there are very dilapidated.

594. How will legislation of this kind help those tenants, if the landlord says, "I am not going to bother about this Bill; if you want my land, these are my terms"? Having read the Bill, all I can say is that I believe it would lead to a better understanding between landlord and tenant, and improve the condition of farming.

595. As long as the landlord has the right of making such terms as he may see fit under the laws of the country, a law of this kind can be of no value to a tenant in that he is not affected by the operation of it? But an Act of this character is in existence in other parts of the world, and I suppose there must be a reason for its being called into operation. There may be tenants in other parts of the country besides the Bathurst district to whom the provisions of the Bill would apply with great advantage.

596. If the Bill is required at all had you not better perfect it by making it compulsory that the landlord and tenant should adjust their differences in the terms of the Act? I consider that this Bill is compulsory.

597. It cannot be compulsory as long as the people can evade it. Before it can be compulsory you must make it an offence for a man to contract himself out of the Act? I consider the advantages to the tenant to be so great that in view of clause 5 I should not venture to look at the matter in the light suggested.

598. Would you impose a penalty on any man making a contract outside the terms of the Act? No.

599. Then, you would not make the Act compulsory? It strikes me that it would require another section or some other provision in order to do that.

600. But would you do it? Most decidedly not.

601. You would still permit the landlord and tenant to make such agreements as they saw fit? Of course, and that will be the very effect if this Bill is passed into law.

602. Would you permit the landlord and tenant to make mutual agreements without respect to the Act if they saw fit to do so? They could do so in terms of clause 5.

603. Would you put in a penal clause forcing the landlord or the tenant to come under this Bill? I cannot help thinking that there is quite sufficient of compulsion in the equitable and mutual agreement between landlord and tenant provided for by the Bill. Clauses 6 and 7 provide as follows:—

If no such agreement shall be come to within one month after the notice shall have been given, the landlord may, unless the notice is previously withdrawn, undertake to execute the improvement himself and may execute the same accordingly in any reasonable and proper manner he shall think fit, and may charge the tenant interest after the rate of £5 per centum per annum on the outlay incurred in executing the improvement, such interest to be payable and recoverable as rent in the same manner and at the same time as the rent in respect of the holding is payable and recoverable.

In default of any such undertaking by the landlord within two months after the notice shall have been given, and also in the event of the landlord failing to comply with his undertaking with all reasonable despatch, the tenant may execute the improvement himself, and shall in that case be entitled to compensation in respect thereof.

With two such clauses as that in the Bill, I think both landlord and tenant, as men of business, would protect themselves sufficiently, and I still adhere to my opinion that the existence of an Act like this would have the effect of causing that better and proper understanding between landlord and tenant at the beginning of a tenancy which should exist, and the tenant would enter upon his holding with some security as regards improvements.

604. Is this your position;—you think that the Bill is so equitable and so reasonable that both landlord and tenant would come under it? I believe so—and so requisite.

605. Suppose the landlord does not want to come under it, for reasons best known to himself, and he says "those are my terms; I will not come under your Bill;"—would you force him to do it? You are supposing the case of a new tenancy, and I have been considering this question more from a point of view of a tenant who has occupied a holding for some years, and who may perhaps continue in occupation for some years to come. I can see now that there is another aspect in which the matter may be viewed.

606. Will you express an opinion as to whether or not the Act ought to be compulsory? I should certainly say it should be made compulsory with regard to contracts at present existing between landlord and tenant.

607. You will go no further than that? I would not like to go any further than that, because, I think, the common sense of men would lead them to make proper arrangements. If I were a landlord and knew of the existence of an Act like this, I should be very careful with regard to my tenant. On the other hand if I were a tenant, I should be very particular to see that the fences were in good repair, and that the buildings were what they ought to be before I went on to the holding.

608.

Mr.  
W. C. Kelk.  
16 May, 1893.

608. You say you would make the Act compulsory with regard to leases at present in existence; say, for the sake of argument, that those leases have three years to run; therefore the value of the Act would cease in three years; you would virtually make it compulsory only for three years? I would make it compulsory for one year, because the Act provides for compensation and the incoming tenant will have to pay.

609. Supposing in the leases at present running the landlords have a hard and fast agreement signed by the tenant, would you supersede those agreements under this Bill? Certainly not. I do not see how that could be done. The right of the landlord would be saved by clause 32 as follows:—

Except as in this Act expressed, nothing in this Act shall take away, abridge, or prejudicially affect any power, right, or remedy of a landlord, tenant or other person vested in or exercisable by him by virtue of any other Act or law, or under or in respect of any contract, or of any improvement, waste, emblements, tillages, fixtures, rents, rates, assessments, or other things.

610. Therefore, it would be limited to such landlords and tenants as had not leases, or had leases that were executed in a slipshod way? Yes; I presume so.

611. Do you think that this Act would bring into existence a better state of things? I do certainly.

612. Even though it were not made compulsory? Yes.

613. *Chairman.*] Do you think the landlords would be likely to any very great extent to contract themselves out of a Bill of this kind;—would they not be likely to avail themselves of its provisions? I think so, inasmuch as their property would be improved.

614. Therefore, if they did not like the Bill and contracted themselves out of it, it would at all events have the effect of bringing about a better state of things, and would compel them to be more reasonable in their arrangements with their tenants? I would not like to say that the landlords are an unreasonable lot of men, but they would be more considerate of the actual requirements of the tenants, if it were found that it were required of them that they should do certain things, they would do them.

615. I think you said you had not heard any desire expressed for a Bill of this kind? No loudly expressed desire.

616. Still you have heard that there is a good deal of grumbling privately on the part of tenant farmers who say, at all events, that they are not satisfied with the existing relations between landlord and tenant, and desire something better? Yes; my experience is that the wishes of many tenants in the Bathurst district would be met by legislation of this kind.

617. As a matter of fact, I suppose there are not a great many tenants up there who know that there is a law in existence at the present time in England, Ireland, and Scotland, and also South Australia, somewhat on the lines of this Bill? Yes, a great number of them are aware of that.

618. And those who have given consideration to the matter, think it would be beneficial if similar legislation were introduced into this Colony? Exactly so. I have not the slightest doubt that it is because of the knowledge of legislation of this kind in other parts of the world that they have ventured to express themselves as they have done to me. I have often heard these other Acts quoted, more especially the Irish Act:

619. How many tenancies are there approximately in your district—a large number? A large number; I could not give you an exact idea.

620. It is a thickly populated farming district? Yes; and every year the number is increasing.

1892-3.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## SOIL SURROUNDING NATIVE DOG BORE.

(RETURN RESPECTING ANALYSES OF SAMPLES.)

*Ordered by the Legislative Assembly to be printed, 2 May, 1893.**[Laid upon the Table of the House in answer to Question No. 11 of 26th April, 1893.]*

## Question.

11. SOIL SURROUNDING NATIVE DOG BORE:—MR. SYDNEY SMITH *asked* THE SECRETARY FOR MINES,—Will he lay upon the Table of this House copies of the analyses of samples of soil from the vicinity of the Native Dog Bore by the chemist of the Department, together with any reports by other officers of the Department of Agriculture?

## Answer.

Mr. J. Coleman to The Director of Agriculture.

The Native Dog Artesian Bore.—Report as to the advisability of utilising the land adjoining this bore for the purpose of an experimental irrigation farm.

Sir,

I have the honor to report that, having received instructions from the Minister for Mines and Agriculture, I proceeded from the town of Bourke on the morning of the 3rd of May, 1892, in company with Mr. John Low, Chief Inspector of the Water Conservation Branch, and Mr. O. C. Macdougall, Inspector for the district of Bourke, towards the Native Dog bore. In connection with the above business we arrived as far as the Grass-tree Hut Hotel and stayed the night. Early in the morning we started and arrived at the bore about 10 o'clock, and commenced our inspection of the water and the portion of land proposed to be irrigated.

*Situation of the Site.*—About 45 miles from the town of Bourke, on the Barrigun Road, the portion of land adjoins the road, and is situated in the parish of Leila, county of Gunderbooka.

*Output of Water from Bore.*—It is estimated at 2,000,000 gallons per day. (See Mr. Low's remarks on page 8.) There certainly is a large supply of water that is now running to waste, and, if suitable for irrigation, could be utilised to the best possible advantage, as about 1,000 or 1,200 acres of land could be easily irrigated on every portion by the water from the bore. Without this supply of water, the locality may well be called "Waterless West." It may well be called at the present time by this name, as the total rainfall in the present year, from 1st January to 24th May, is but 34 points. On looking at the registered rainfall for the last five years, the average has been 17 inches; this is a small quantity for cultivation land, and shows the need for irrigation if it can be carried out with a small cost for water and if other conditions be favourable. The water as it comes from the bore has a temperature of 92 degrees Far., and has a strong taste of soda; but, allowing it to cool, the taste improves, and the alkaline flavour is not so pronounced. The caretaker, Mr. Harlow, informed me that himself, wife, and family of six children have used the water for all purposes for several months past, and had felt no ill effects. Tea made from this water is very dark in colour and rather rough in taste, as if all the colouring matter or tannin from the leaves was extracted. Mr. Harlow said if underlinen was allowed to soak in the water for a few hours, it had a yellow tinge which was removed only by hard scrubbing. Flour when mixed with this water to make bread, had the effect of making splendid light bread, as if an extra quantity

of

of baking powder had been used. I will give you a copy of the analysis of the water taken from Mr. J. W. Boulton's (officer in charge for Water Conservation) report on "Artesian Boring"—

Water from Native Dog Bore—Depth, 475 feet; temperature, 92° Far.

	Grains per gallon.	Rate per 1,000.
Total solid residue ... ..	45.108	0.644
Soluble saline matter ... ..	44.044	.6292
Insoluble mineral matter ... ..	1.064	.0152
Chlorine ... ..	4.500	.0642
Equal to chloride of sodium ... ..	7.415	.1059

*Remarks.*—The water was clear and colourless and free from odour. On evaporation gave a strong alkaline reaction; before evaporation, a slight alkaline reaction. The soluble saline matter consists chiefly of alkaline carbonates, chloride of sodium (common salt), silica, and strong traces of lime, magnesia, and sulphuric acid. The quantities of both the samples received were rather small for analysis. The alkaline carbonates, which were present in a large quantity, are known to excite a strong corrosive action upon the roots of plants, their action being to a great extent remedied by the addition of gypsum to the soil. The amount present in these waters, however, is small, and they may be classed as of a good description for irrigation purposes, and suitable for all domestic purposes.

JOHN C. MINGAYE, F.C.S.,

Analyst.

The main points for consideration in connection with this proposal are the chemical constituents of the land and the action of the water on the same. In the absence of detailed information on these points, I can only suggest that experiments in cultivation be made on the land on a small scale. I would here remark that this site would be in a good situation for the disposal of produce grown, it being close to the main road where all teams and droves of beasts are continually passing from Queensland to Bourke, Sydney, Melbourne, &c., &c.

Should it be thought desirable to utilise this water for irrigation, perhaps the following information may be some value:—

*Timber.*—The timber is not very large except a few white box, which could be utilised for fencing. The other varieties are mulga, yarran, quondong, gidhea, beefwood, ironwood, mugga, turpentine, and various varieties of scrub. The timber is rather thick on the land.

*Fencing—Cost of Fencing.*—On making inquiries of several squatters in the district I found a good 7-wire fence of the following description, viz.:—7 wires No. 8 best steel, with posts 6 x 5 inches square, 6½ feet long, 2 feet in the ground, 7½ feet apart; straining-post erected every 10 chains, and at angles where required, with stays put on each side of straining-posts; rabbit-proof netting 1½-inch mesh, 42 inches wide, No. 17 gauge, with fixing same to fence. I estimate the cost of this description of fence, with the rabbit-proof wire attached, at about £95 per mile. This, if done in the summer months, would be, proportionally, of higher cost.

*Cost of clearing.*—I made inquiries of several adjoining selectors and squatters as to what the cost of clearing land was in this district. If cleared fit for the plough, from 40s. to 45s. per acre; if for grazing purposes only, from 30s. to 35s. per acre.

*Rabbit pest.*—If thought desirable to start an irrigation farm at the Native Dog Bore, the land selected, as marked on the attached plan, will require to be secured with wire-netting, as the rabbits are very numerous; and I may say that on my visit they were there in hundreds. I would respectfully suggest that the caretaker, Mr. Thos. Harlow, be supplied from the Department with a small collection of seeds of fodder and vegetable plants for an experiment to see what effect the water fresh from the bore has on them; also a sufficient quantity of wire-netting to enclose a small paddock or plot close to the bore, and a few lengths of piping or length of hose to apply the water to the said plot.

Respectfully submitted,

JOHN COLEMAN.

14/6/92.

### Director's Minute.

THE analyses of the four soils submitted to the chemist show disappointing results, as only one is a good soil. The other three are weak in the most important constituent phosphoric acid, and would not stand the drain of intense culture for more than a few years. Under the circumstances, profitable manuring would be out of the question at present. Soil, No. 4, shows the deleterious nature of the water issuing from the bore. It has been treated with the water for some time, and has evidently filtered the alkaline carbonates out of the water till it has become charged to the extent of over 6 per cent., an amount fatal to all vegetable growth. It would, therefore, be unwise to do more at present than to conduct a small experiment.

If the Officer-in-charge of Public Watering Places can allow the caretaker to do the work needed, and can provide the wire-netting necessary to protect the vegetation, we can provide seeds of lucerne, wheat, grasses, and other plants for trial on the plot selected.

Very little labour will be needed to cultivate (say) 10 square roods and to apply the water when necessary; but the results ought to prove whether the soluble constituents of the bore-water accumulate in the soil in sufficient amounts to injure plant roots.

The Under Secretary.

H.C.L.A., 18/7/92.

### The Analytical Chemist of the Department of Agriculture to The Director of Agriculture.

Analysis of No. 4 sample of soil from the neighbourhood of Native Dog Bore.

Sydney, 23 May, 1892.

SAMPLE No. 4 of the soils from the neighbourhood of the Native Dog Bore was mixed with a deposit consisting principally of sodium carbonate and chlorides. The sodium carbonate amounted to 6.22 per cent. in the entire soil. An analysis of the Artesian Bore water at Native Dog is given in Mr. Boulton's report on Artesian boring.

In this report Mr. Mingaye describes the water as of a good description for irrigation purposes. In the case of the sample of soil the water had no doubt dried up and left the deposit. I would have no hesitation in saying that this soil was unfit for growing crops, sodium carbonate having a corrosive action on the roots. It might be worth while to estimate the percentage of sodium carbonate present in the water, which Mr. Mingaye says is small. Mr. Mingaye also finds strong traces of lime, magnesia, and sulphuric acid, which, however, have not increased the percentage of these substances in the sample of soil to any perceptible extent.

F. B. GUTHRIE.

Department

Department of Agriculture, Sydney, July, 1892.

I HAVE the honor to transmit herewith the Report, by Mr. F. B. Guthrie, F.C.S., Analytical Chemist to the Department, on the analysis of the soil submitted by Mr. Coleman, Department of Agriculture. Sample marked No. 4:—

Locality of soil, Native Dog Bore Reserve; geological formation of surrounding country, tertiary; nature and depth of soil, sand; reaction of soil, alkaline (strongly); capacity for water, 20 per cent.; absolute weight per acre, 6 inches deep, 2,959,139 lb.

*Mechanical Analysis.*

Root fibres, .0 per cent.; stones over  $\frac{1}{4}$  inch diameter .0 per cent.; coarse gravel, more than  $\frac{1}{16}$  inch diameter, .0 per cent.; fine gravel, more than  $\frac{1}{32}$  inch diameter, 8.63 per cent.; fine soil—sand, 88.56 per cent., impalpable matter (chiefly clay), 2.76 per cent.—91.32 per cent.

*Analysis of Fine Soil.*

Moisture, 7.359 per cent.; volatile and combustible matter, principally organic, 6.056 per cent.

*Fertilising Substances soluble in hot Hydrochloric Acid of 1.1 specific gravity.—General Value.*

Lime (CaO), .195 per cent. satisfactory, equivalent to 5,655 lb. (a) in an acre of soil 6 inches deep; potash (K<sub>2</sub>O), .048 per cent. indifferent, equivalent to 1,392 lb. (b) in an acre of soil 6 inches deep; phosphoric acid (P<sub>2</sub>O<sub>5</sub>), .069 per cent. fair, equivalent to 2,001 lb. (c) in an acre of soil 6 inches deep; nitrogen, .069 per cent. fair, equivalent to 2,001 lb. (d) in an acre of soil 6 inches deep (equal to .085 per cent. ammonia); magnesia (MgO), .113 per cent. satisfactory; ferric oxide (Fe<sub>2</sub>O<sub>3</sub>), 1.624 per cent. satisfactory; ferrous oxide (FeO), .434 per cent.; sulphuric acid (SO<sub>3</sub>), .059 per cent. satisfactory.

NOTE.—(a) This amount of lime would be supplied in 6,283 lb. of quicklime, or 8,482 lb. of slaked lime, or 11,310 lb. of chalk. (b) This amount of potash would be supplied in 2,784 lb. of commercial sulphate of potash, or 11,595 lb. of kainit. (c) This amount of phosphoric acid would be supplied in 8,004 lb. of commercial bone dust, or 12,006 lb. of superphosphate. (d) This amount of nitrogen would be supplied in 10,005 lb. of sulphate of ammonia, or 12,006 lb. of nitrate of soda.

In connection with the foregoing, I have the honor to forward additional particulars, as follow:—Special points of value in the soil, mechanical condition; special defects in the soil, potash deficient; alkaline carbonates in excess and deleterious to most forms of vegetation; general character (a), mechanically very good (b), chemically indifferent; crops for which it seems most suitable, judging by the mechanical condition and chemical composition of the soil, and the climate of the district, none, till the carbonate of soda is neutralised or washed out of soil; manures and treatment recommended for trial: Without irrigation no crops are likely to thrive; with irrigation, drainage would be necessary in order to get the soluble alkaline carbonate of soda washed out of the soil, intense cultivation, by means of watering, would probably soon reduce the stores of potash, phosphoric acid, and nitrogenous matter below the remunerative point.

*General Remarks.*

The high percentage of carbonate of soda suggests the idea that a large quantity of water from the bore has been allowed to lie on the surface of this soil till it evaporated and left this saline deposit. It indicates the need of caution in applying the water for continuous periods.

I would particularly impress upon you—

1. That this Report is intended to be merely suggestive, and must be followed up by careful experiments on your own part.
2. Though every precaution is taken to consider each soil in the light of its mechanical condition and other peculiarities, as well as its chemical nature, the advice herein given may need to be modified by reason of special circumstances, such as extreme variation of climate, aspect, drainage, want of shelter, and many others that your own experience will suggest.
3. That you should impart to your neighbours any information you may gain from this Report as freely as it is given to you.
4. That you should communicate regularly with the Department as to the results of your experiments, for we have special facilities for advising you as to the best manures for your special needs, and the cheapest form in which you can get the same.

I have, &c.,

H.C.L.A.,

Director of Agriculture.

Department of Agriculture, Sydney, July, 1892.

I HAVE the honor to transmit herewith the Report, by Mr. F. B. Guthrie, F.C.S., Analytical Chemist to the Department, on the analysis of the soil submitted by Mr. Coleman, Department of Agriculture. Sample marked No. 2:—

Locality of soil, Native Dog Bore Reserve; geological formation of surrounding country, tertiary; nature and depth of soil, light sandy loam; nature of subsoil, similar to top soil; reaction of soil, neutral; capacity for water, 22.8 per cent.; absolute weight per acre, 6 inches deep, 3,326,481 lb.

*Mechanical Analysis.*

Root fibres, .00 per cent.; stones over  $\frac{1}{4}$  inch diameter, .00 per cent.; coarse gravel, more than  $\frac{1}{16}$  inch diameter, .00 per cent.; fine gravel, more than  $\frac{1}{32}$  inch diameter, 7.00 per cent.; fine soil—sand, 78.47 per cent., impalpable matter (chiefly clay), 14.53 per cent.—93 per cent.

*Analysis of Fine Soil.*

Moisture, 2.470 per cent.; Volatile and combustible matter, principally organic, 2.868 per cent.

*Fertilising Substances soluble in hot Hydrochloric Acid of 1.1 specific gravity.—General Value.*

Lime (CaO), .190 per cent. satisfactory, equivalent to 6,270 lb. (a) in an acre of soil 6 inches deep; potash (K<sub>2</sub>O), .136 per cent. satisfactory, equivalent to 4,488 lb. (b) in an acre of soil 6 inches deep; phosphoric acid (P<sub>2</sub>O<sub>5</sub>), .038 per cent. indifferent, equivalent to 1,254 lb. (c) in an acre of soil 6 inches deep; nitrogen,

nitrogen, '112 per cent. satisfactory, equivalent to 3,696 lb. (*d*) in an acre of soil 6 inches deep (equal to '136 per cent. ammonia); magnesia (MgO), '066 per cent. indifferent; ferric oxide (Fe<sub>2</sub>O<sub>3</sub>), 2'741 per cent. satisfactory; ferrous oxide (FeO), '217 per cent.; sulphuric acid (SO<sub>3</sub>), '040 per cent. satisfactory.

NOTE.—(*a*) This amount of lime would be supplied in 6,966 lb. of quicklime, or 9,405 lb. of slaked lime, or 12,540 lb. of chalk. (*b*) This amount of potash would be supplied in 8,976 lb. of commercial sulphate of potash, or 37,385 lb. of kainit. (*c*) This amount of phosphoric acid would be supplied in 5,016 lb. of commercial bone dust, or 7,524 lb. of superphosphates. (*d*) This amount of nitrogen would be supplied in 18,480 lb. of sulphate of ammonia, or 22,176 lb. of nitrate of soda.

In connection with the foregoing, I have the honor to forward additional particulars, as follow:—  
Special points of value in the soil, potash; special defects in the soil, phosphoric acid and organic matter; general character (*a*), mechanically good (*b*), chemically not evenly balanced; crops for which it seems most suitable, judging by the mechanical condition and chemical composition of the soil and the climate of the district, fruit and lucerne (with good water); crops for which it seems unsuitable without special manure or special treatment, cereals; manures and treatment recommended for trial: Irrigation will probably soon exhaust the rather small stores of phosphoric acid and nitrogenous matter. Moderate dressing of bone dust would be very serviceable, if available at moderate cost.

#### General Remarks.

With artificial watering this soil would give very satisfactory results for a few crops; but the low percentage of phosphates would in time cause disappointment, and the remote situation would probably preclude the possibility of profitable manuring under present conditions.

I would particularly impress upon you—

1. That this Report is intended to be merely suggestive, and must be followed up by careful experiments on your own part.
2. Though every precaution is taken to consider each soil in the light of its mechanical condition and other peculiarities, as well as its chemical nature, the advice herein given may need to be modified by reason of special circumstances, such as extreme variation of climate, aspect, drainage, want of shelter, and many others that your own experience will suggest.
3. That you should impart to your neighbours any information you may gain from this Report as freely as it is given to you.
4. That you should communicate regularly with the Department as to the results of your experiments, for we have special facilities for advising you as to the best manures for your special needs, and the cheapest form in which you can get the same.

I have, &c.,

H.C.L.A.,

Director of Agriculture.

Department of Agriculture, Sydney, July, 1892.

I HAVE the honor to transmit herewith the Report, by Mr. F. B. Guthrie, F.C.S., Analytical Chemist to the Department, on the analysis of the soil submitted by Mr. Coleman, Department of Agriculture. Sample marked No. 1:—

Locality of soil, Native Dog Bore Reserve; geological formation of surrounding country, tertiary; nature and depth of soil, sand; nature of subsoil, similar to surface soil; reaction of soil, neutral; capacity for water, 22·2 per cent.; absolute weight per acre, 6 inches deep, 3,418,316 lb.

#### Mechanical Analysis.

Root fibres, '0 per cent.; stones over  $\frac{1}{4}$  inch diameter, '0 per cent.; coarse gravel, more than  $\frac{1}{16}$  inch diameter, '0 per cent.; fine gravel, more than  $\frac{1}{64}$  inch diameter, 6'43 per cent.; fine soil—sand, 89'43 per cent., impalpable matter (chiefly clay), 4'14 per cent.—93'57 per cent.

#### Analysis of Fine Soil.

Moisture, 1'166 per cent.; volatile and combustible matter, principally organic, 1'796 per cent.

#### Fertilising Substances soluble in hot Hydrochloric Acid of 1·1 specific gravity.—General Value.

Lime (CaO), '183 per cent. satisfactory, equivalent to 6,222 lb. (*a*) in an acre of soil 6 inches deep; potash (K<sub>2</sub>O), '086 per cent. fair, equivalent to 2,924 lb. (*b*) in an acre of soil 6 inches deep; phosphoric acid (P<sub>2</sub>O<sub>5</sub>), '039 per cent. indifferent, equivalent to 1,326 lb. (*c*) in an acre of soil 6 inches deep; nitrogen, '091 per cent. fair, equivalent to 3,094 lb. (*d*) in an acre of soil 6 inches deep (equal to '111 per cent. ammonia); magnesia (MgO), '167 per cent. satisfactory; ferric oxide (Fe<sub>2</sub>O<sub>3</sub>), 2'639 per cent. satisfactory; ferrous oxide (FeO), 1'447 per cent. excessive; sulphuric acid (SO<sub>3</sub>), '033 per cent. satisfactory.

NOTE.—(*a*) This amount of lime would be supplied in 6,913 lb. of quicklime, or 9,333 lb. of slaked lime, or 12,444 lb. of chalk. (*b*) This amount of potash would be supplied in 5,848 lb. of commercial sulphate of potash, or 24,356 lb. of kainit. (*c*) This amount of phosphoric acid would be supplied in 5,304 lb. of commercial bone dust, or 7,956 lb. of superphosphate. (*d*) This amount of nitrogen would be supplied in 15,470 lb. of sulphate of ammonia, or 18,564 lb. of nitrate of soda.

In connection with the foregoing, I have the honor to forward additional particulars as follow:—  
Special points of value in the soil, none; special defects in the soil, phosphoric acid deficient, ferrous oxide in excess; general character (*a*), mechanically good (*b*), chemically tolerable; crops for which it seems most suitable, judging by the mechanical condition and chemical composition of the soil, and the climate of the district, fruit, if water be supplied; crops for which it seems unsuitable without special manure or special treatment, heavy, continuous crops of maize, hay, and cereals; manures and treatment recommended for trial: Intense cultivation by means of artificial watering, will soon exhaust the small stores of phosphoric acid and organic matter; if available, bone dust would be the best manure.

#### General Remarks.

This soil is the poorest of the four samples from this reserve, and the difference between this one and the best (No. 3) is very striking. Fallowing and exposing to the air will turn the deleterious black oxide

oxide into red oxide of iron. Green manuring with lupine peas, vetches, or clover, will improve the texture of the soil and increase its supplies of nitrogen. Bone dust, or bone dust and dried blood, would be of great value.

I would particularly impress upon you—

1. That this Report is intended to be merely suggestive, and must be followed up by careful experiments on your own part.
2. Though every precaution is taken to consider each soil in the light of its mechanical condition and other peculiarities, as well as its chemical nature, the advice herein given may need to be modified by reason of special circumstances, such as extreme variation of climate, aspect, drainage, want of shelter, and many others that your own experience will suggest.
3. That you should impart to your neighbours any information you may gain from this Report as freely as it is given to you.
4. That you should communicate regularly with the Department as to the results of your experiments, for we have special facilities for advising you as to the best manures for your special needs, and the cheapest form in which you can get the same.

I have, &c.,

H.C.L.A.,

Director of Agriculture.

Department of Agriculture, Sydney, July, 1892.

I HAVE the honor to transmit herewith the Report, by Mr. F. B. Guthrie, F.C.S., Analytical Chemist to the Department, on the analysis of the soil submitted by Mr. Coleman, Department of Agriculture. Sample marked No. 3:—

Locality of soil, Native Dog Bore Reserve; geological formation of surrounding country, tertiary; nature and depth of soil, sand; nature of subsoil, similar to top soil; reaction of soil, neutral; capacity for water, 22.2 per cent.; absolute weight per acre, 6 inches deep, 3,418,316 lb.

*Mechanical Analysis.*

Root fibres, .0 per cent.; stones over  $\frac{1}{4}$  inch diameter, .0 per cent.; coarse gravel, more than  $\frac{1}{16}$  inch diameter, .0 per cent.; fine gravel, more than  $\frac{1}{32}$  inch diameter, 7.2 per cent.; fine soil—sand, 87.95 per cent., impalpable matter (chiefly clay), 4.85 per cent.—92.8 per cent.

*Analysis of Fine Soil.*

Moisture, 1.259 per cent.; volatile and combustible matter, principally organic, 2.487 per cent.

*Fertilising Substances soluble in hot Hydrochloric Acid of 1.1 specific gravity.—General Value.*

Lime (CaO), .141 per cent. satisfactory, equivalent to 4,794 lb. (a) in an acre of soil 6 inches deep; potash (K<sub>2</sub>O), .144 per cent. satisfactory, equivalent to 4,896 lb. (b) in an acre of soil 6 inches deep; phosphoric acid (P<sub>2</sub>O<sub>5</sub>), .119 per cent. satisfactory, equivalent to 4,046 lb. (c) in an acre of soil 6 inches deep; nitrogen, .104 per cent. satisfactory, equivalent to 3,536 lb. (d) in an acre of soil 6 inches deep (equal to .127 per cent. ammonia); magnesia (MgO), .051 per cent. indifferent; ferric oxide (Fe<sub>2</sub>O<sub>3</sub>), 2.030 per cent. satisfactory; ferrous oxide (FeO), .224 per cent.; sulphuric acid (SO<sub>3</sub>), .043 per cent. satisfactory.

NOTE.—(a) This amount of lime would be supplied in 5,326 lb. of quicklime, or 7,191 lb. of slaked lime, or 9,588 lb. of chalk. (b) This amount of potash would be supplied in 9,792 lb. of commercial sulphate of potash, or 40,783 lb. of kainit. (c) This amount of phosphoric acid would be supplied in 16,184 lb. of commercial bone dust, or 24,276 lb. of superphosphate. (d) This amount of nitrogen would be supplied in 17,680 lb. of sulphate of ammonia, or 21,216 lb. of nitrate of soda.

In connection with the foregoing, I have the honor to forward additional particulars, as follow:—Special points of value in the soil, potash; special defects in the soil, deficiency of organic matter; general character (a), mechanically very good (b), chemically good; crops for which it seems most suitable, judging by the mechanical condition and chemical composition of the soil, and the climate of the district, any crops suited to climatic conditions; manures and treatment recommended for trial: With suitable water this soil ought to yield good crops for some years; green manuring with leguminous crops would improve the soil and increase its stores of organic matter; nitrogenous manures such as dried blood would probably pay.

*General Remarks.*

This soil is much richer and more evenly balanced than the other three from the same reserve. It should give good results with fruit, vines, lucerne, maize, sorghum, and grass, with intense cultivation by means of watering.

I would particularly impress upon you—

1. That this Report is intended to be merely suggestive, and must be followed up by careful experiments on your own part.
2. Though every precaution is taken to consider each soil in the light of its mechanical condition and other peculiarities, as well as its chemical nature, the advice herein given may need to be modified by reason of special circumstances, such as extreme variation of climate, aspect, drainage, want of shelter, and many others that your own experience will suggest.
3. That you should impart to your neighbours any information you may gain from this Report as freely as it is given to you.
4. That you should communicate regularly with the Department as to the results of your experiments, for we have special facilities for advising you as to the best manures for your special needs, and the cheapest form in which you can get the same.

I have, &c.,

## ANNUAL PROGRESS REPORT

OF

## STATE FOREST ADMINISTRATION

IN

NEW SOUTH WALES,

FOR THE YEAR

1891,

BY

J. EDNIE-BROWN, J.P., F.L.S., F.R.H.S.,  
DIRECTOR-GENERAL OF FORESTS.

---

Presented to Parliament by Command.

---

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1892.

[2s.]

11—*a*

[2303 copies—Approximate Cost of Printing (labour and material), £130 11s. 6d.]

Forest Department, Sydney, March 30th, 1892.

To the Honorable George R. Dibbs, Premier and Colonial Secretary,—

Sir,

I have the honor to lay before you my Annual Progress Report upon State Forest Administration in New South Wales, for the year 1891.

I have the honor to be,

Sir,

Your obedient servant,

J. EDNIE-BROWN,

Director-General of Forests.

## ANNUAL PROGRESS REPORT of State Forest Administration in New South Wales for the year 1891.

### SECTION I.

#### THE DEPARTMENT.

DURING the course of the year various important steps were taken in the direction of reorganising the department, as foreshadowed in my first Report of 1890.

Notwithstanding many difficulties, every effort has been made to carry out necessary reforms which will, I trust conduce, if even though in a small way, towards that reorganisation which is so imperatively called for.

#### *A.—The Staff.*

The officers at present constituting the Staff are as follows:—

Director-General ... J. Ednie-Brown.	Assistant Forester ... F. E. Brunker.
Secretary ... P. J. Holdsworth.	Acting Forester ... H. K. Cavaye (Lord Howe Island).
Consulting Botanist... J. H. Maiden.	Do ... G. G. Benson.
Inspecting Forester ... J. M'Keown.	Overscer of Nursery... J. M'Coig.
Do ... J. A. Manton.	Forester ... J. S. Taylor.
Relieving Officer ... H. V. Jackson.	Do ... G. R. Brown.
Chief Clerk ... W. F. Piper.	Do ... J. G. Condell.
First Clerk ... J. S. Cheesbrough.	Do ... E. J. Deverell.
Accountant ... W. C. Hinwood.	Do ... J. Guilfoyle.
Clerk of Records ... G. W. Whatmore.	Do ... T. H. B. M'Gee.
Clerk ... J. R. Bell.	Do ... S. Payten.
Do ... T. F. C. Binney.	Do ... H. W. Powell.
Do ... J. E. Davis.	Do ... H. O. Rotton.
Draftsman ... O. Dimelow.	Do ... R. L. Siddons.
Clerk ... J. A. Quinlan.	Do ... O. Wilshire.
Do ... A. S. Walker.	Do ... E. Coberoft.
Do ... J. D. Smith.	Do ... J. H. Smith.
Do ... E. E. O'Connor.	Do ... W. Macdonald.
Forester ... J. S. Allan.	Do ... W. F. Crowley.
Do ... F. P. Huxham.	Do ... J. W. Chanter.
Do ... J. Martin.	Assistant Forester ... J. G. Postlethwaite.
Do ... W. Mecham.	Do ... W. Byron.
Do ... T. Kidston.	Do ... W. Coulter.
Do ... R. Stevenson.	Cadet... ... P. Holdsworth, jun.
Do ... A. E. Stopford.	Do ... G. Macfarland.
Do ... A. Rudder.	Messenger ... J. J. Watson.
Do ... C. Marriott.	Do ... J. Kennerk.
Do ... W. P. Pope.	Office-keeper... ... A. O'Loughlin.
Do ... Edward Kingsford.	
Assistant Forester ... G. King.	

The Colony has up to date been subdivided into twenty-five districts, which are being supervised by Foresters and Assistant Foresters.

These districts embrace certain areas in which there are timbered portions of the country as yet unalienated.

Two Inspecting Foresters were appointed, viz., Mr. J. M'Keown and Mr. J. A. Manton (late forester.)

Mr. J. M'Keown takes the northern portion of the Colony embracing districts in charge of the following Foresters:—

G. R. Brown...	... Port Macquarie.	J. H. B. M'Gee	... Narrabri.
W. Byron ...	... Glen Innes.	W. Macdonald	... Kempsey.
F. E. Bruncker	... West Maitland.	J. Marriott ...	... Mudgee.
E. Coberoft ...	... Singleton.	W. Mecham ...	... Fernmount.
W. Coulter ...	... Dubbo.	W. P. Pope ...	... Murwillumbah.
W. F. Crowley	... Casino.	H. Powell ...	... Quirindi.
E. J. Deverell	... Glen Innes.	H. Rotton ...	... Bowral.
F. P. Huxham	... Grafton.	A. Rudder ...	... Booral.
G. King ...	... Coonamble.	R. L. Siddons	... Armidale.
E. D. Kingsford	... Lismore.	J. H. Smith ...	... Singleton.
J. Martin ...	... Gosford.	A. E. Stopford	... Penrith.

Mr. J. A. Manton takes charge of the southern portion of the Colony embracing districts supervised by the following Foresters:—

J. Allan ...	... Ulladulla.	J. G. Postlethwaite ...	Grenfell.
G. G. Benson	... Bega.	S. Payton ...	... Tocumwal.
J. S. Condell...	... Narrandera.	R. Stevenson...	... Cowra.
W. F. Chanter	... Koondrook.	J. S. Taylor ...	... Wagga.
J. Guilfoyle ...	... Moama.	O. Wilshire ...	... Deniliquin.
T. Kidston ...	... Condobolin.		

The duties of the Inspecting Foresters consist of a regular inspection of the Foresters' work in their respective districts, and they are required to report to me generally in regard thereto.

As recommended in paragraph 25 of my Report of 1890, a Relieving Forester has since been appointed. This position has been given to Mr. H. V. Jackson, whose duties consist of taking charge temporarily of a district in the absence of any Forester on annual leave, or when any forester is incapacitated from any cause, and also to report to me generally upon matters of importance in a district where he may at the time be located.

The appointment of the last three officers will, I think, result in all matters in connection with the outside work being properly checked and brought before me in an independent manner, and by this means I have no doubt that continued activity will be the result.

Prior to the 1st of August, 1890, the revenue of the Forest Department was received by the accountant at the office of the Colonial Secretary; since that date, however, arrangements have been made under Ministerial sanction whereby this is now being received direct at the office of the Forest Department.

This change, necessarily augmenting the amount of work to be done by the office staff, has required the appointment of an Accountant, and to this position Mr. Hinwood has been promoted from that of clerk.

In order to show the importance of the clerical work of the department it may be interesting to note the following:—

Pamphlets, &c., issued 1891.

	Numbers.
Forest flora frontispiece ...	6,000
Hints for botanical collections, &c. ...	1,000
Lectures for schools on arboriculture ...	7,000
Catalogue of trees for distribution ...	7,000
Annual Report for 1890 ...	1,250
Total ...	22,250

Letters, documents, &c., despatched 1891.

	Numbers.
Letters—Manuscript ...	2,765
Letters on printed forms ...	2,124
Blank cover communications ...	2,218
Type written ...	315
Total ...	7,422

Of letters, papers, &c., received and registered there were 10,000, exclusive of 1,016 timber license returns, representing an exchange of correspondence amounting to 18,438.

As recommended in paragraph 27 of my previous Report, two Cadets were appointed to the staff. These are respectively G. MacFarland and P. Holdsworth, and they are now being gradually trained in the various branches of forestry with the view of eventually taking up more important positions in the department as vacancies may occur.

Three new appointments as Foresters have been made during the year, these being Messrs. J. W. Chanter, W. F. Crowley, and Edward Kingsford; the first being placed at Koondrook, on the Murray River, in place of Mr. Cousins retired. The second is stationed at Casino in place of Mr. T. H. Green retired, and the third has been for the present placed in charge of the Lismore District, as the important timber areas existing in that neighbourhood require special supervision.

The services of Mr. R. J. Cork, Assistant Forester, were dispensed with during the year. In future I propose that the term "Assistant" Forester will be abolished, and where necessary, such existing officers will be retained as Foresters.

There are yet many changes which will be made in the subdivision of districts as I find such changes necessary.

For many reasons the present system of locating Foresters permanently in a certain district is one to which, in the interests of the department, I have considerable objection, and I therefore recommend that in the future a system of transfer from one district to another from time to time should be adopted.

## SECTION II.

### REVENUE AND EXPENDITURE OF THE DEPARTMENT.

The following are tabulated statements of Revenue and Expenditure:—

#### A.—STATEMENT of REVENUE and EXPENDITURE since 1877.

Year.	Receipts.			Expenditure.		
	£	s.	d.	£	s.	d.
1877	4,324	10	3	4,579	7	6
1878	5,934	14	0	5,592	12	6
1879	7,945	18	2	5,920	2	11
1880	8,990	4	3	6,635	10	0
1881	10,812	13	8	7,093	4	11
1882	13,046	18	10	12,591	19	5
1883	16,685	19	7	15,389	15	11
1884	18,250	5	8	17,480	14	5
1885	13,863	2	8	18,145	17	6
1886	14,606	12	3	17,932	15	4
1887	12,249	18	9	18,038	0	2
1888	19,727	18	5	19,505	1	5
1889	17,137	1	11	18,211	12	1
1890	15,436	15	11	20,779	3	10
1891	18,455	9	7	23,875	0	3
Total	£197,468	3	11	£211,770	18	2

#### B.—STATEMENT of REVENUE and EXPENDITURE of the DEPARTMENT during the year 1891.

##### REVENUE.

State Forests and Reserves under class A, B, and C—		£	s.	d.	£	s.	d.
1.	State Forest block licenses	269	2	6			
2.	Permit licenses, class C	746	15	6			
3.	Timber cutters' licenses, classes A and B (without royalty)	2,054	15	0			
4.	Miscellaneous	27	5	0			
					3,097	18	0

## E.—General Remarks.

The accounts of revenue and expenditure for the year show an increase in each case on those of the previous year, and may be taken as a fair indication of the progressive work of the department. The revenue for 1890 was £15,436 15s. 11d., whilst that of 1891 was £18,455 9s. 7d., thus showing an increase upon the previous year of £3,018 13s. 8d. The expenditure for 1890 was £20,779 3s. 10d., whilst that for 1891 was £23,875 0s. 3d. This shows an increase of expenditure over that of the previous year of £3,095 16s. 5d.

Owing to the reorganisation which has taken place and operations on certain areas, I may state that the increase in expenditure was anticipated. This excess was owing chiefly to the extensive operations which were carried out in connection with the conservation of the red cedar upon the Northern Reserves, the thinning of the wattle at Otford and West Bargo, and the thinning and pruning of the valuable red gum saplings on the river Murray Reserves.

Had the operations as indicated above not been carried out, the expenditure over revenue would not have been much in excess; but the work done was absolutely requisite, and the returns in a few years will amply justify the outlay.

F.—The following is a return of prosecutions during the year, and the receipts derived therefrom:—

Offence.	Number of Prosecutions.	Number of Convictions.	Amount of Penalty.
Illegally cutting and removing timber .....	137	109	£ s. d. 112 10 2
Quarrying or removing other material .....	Nil.	Nil.	Nil.
Trespass on Crown Lands .....	2	2	Nil.

Number of cases in which timber and other material has been seized .....	103
Number of cases in which claims have been proved to seized material .....	19
Number of cases in which such claims have been confirmed .....	16

SECTION

## SECTION III.

## A.—Total Number and Class of Forest Reserves.

As at present constituted under the Crown Lands Act, the following is a return showing the total number of each class and area of the timber reserves in the Colony:—

	Number of reserves.	Area in acres.
Reserves in Class A, regulations 7 and 8, including twenty reserves partly in Class C. ... ..	719	3,555,131
Reserves in Class B, regulations 7 and 8 ... ..	9	57,585½
Reserves in Class C, regulations 9 and 10, including five reserves, partly proclaimed State Forests ... ..	286	1,890,120¾
State Forests ... ..	21	97,711¾
Reserves for planting (101st section C. L. Act of 1884) ... ..	3	104
Total number of reserves from sale, after making deductions for those in two classes ... ..	1,013	.....
Total estimated area reserved ... ..		5,600,653

NOTE.—Twenty-two reserves were cancelled, their area being 91,589 acres; and forty-five reserves were reduced by 97,650 acres, thus making a total revocation of some 189,240 acres, which were required for settlement.

## B.—Remarks thereon.

At this point I desire to emphasise the fact that the commercial value of forests in this young country is not fully realised by our people, and there are, I fear, but few leading men who are even in the smallest degree interested in the work we have in hand.

On our immense territorial area of some 198,843,000 acres there is so much timber growth and scrub that is good, bad, and indifferent, and it has been found necessary in so many instances for pastoral and agricultural purposes to destroy forest growth, that the idea of conserving timber seems almost inimical to the ideas of some people.

As a matter of fact, the reservation of forest land in certain districts is apt to be regarded in this country as opposed to what is termed "opening up" the land for settlement, but too often such opposition is an excuse to secure certain areas simply to obtain the timber thereon free of such legitimate charges as are justly due to the State.

In many instances of course, claims on behalf of settlement mean that the land is required for agricultural purposes, but frequently well-timbered Crown land sought after is land that will cost £25 or £30 an acre and sometimes more than that, to clear, before it can be utilised; in cases, therefore, where land bearing valuable timber is not permanently required for forest conservation the State will not be likely to lose anything in value by retaining such land until the area has been to a *certain extent* cleared by the timber-getter; thus the value of the timber to the State will not be sacrificed for the sake of the surface area of the land: the State will obtain its just share of revenue from that which by right belongs to it from the timber, and at the same time the surface rights of the land remain valuable for the purposes of bona-fide agricultural settlement.

Under our present Land Laws, in the Eastern Division of the Colony it is open to the timber-getter to select splendidly timbered unreserved Crown lands of an area of from 40 to 640 acres upon a deposit of 2s. per acre, and the conditions otherwise are such that he can have cut and drawn away the very finest of the indigenous timbers before ever being called upon to fulfil other conditions of the Land Act, and as a matter of fact eventually he may allow the selection to lapse.

I may point out that in certain timbered districts, the Reserves which have been allotted to the Department of Forests have been in many cases bounded by well-timbered private lands, consequently our Reserves were not largely operated upon, but the more conveniently available adjacent country to such Reserves in private hands, whether obtained under grants, by auction purchase, or selection, have been a source of revenue to the owners. Now, however, it is important to note that the timber in many such private holdings is either "cut out" or nearly so, and as a consequence the timber-getters must now fall back upon Crown lands and Reserves for their supplies.

Under these circumstances, the depletion of timber on private lands may result in some cases in an agitation for cancellation of Reserves, under the plea of the land being required for settlement.

I desire emphatically to point out that it is not in the interests of the department to retain under reserve unsuitable land, which may be valuable for the purposes of settlement, but every possible effort must be made to conserve bona-fide forest land in the true interests of the State.

It is this cutting out of timber upon private estates, which is now commencing to operate in favour of the Forest Department, and which will every year tend to increase the amount of revenue derived from Forest Reserves, enhance the permanent value of our forest country, and ultimately more than recoup the State for its outlay in the past.

The foregoing remarks are sufficient to show how necessary it is that extreme caution should be exercised in considering any demands for the cancellation of valuable timber Reserves. In fact, unless such care be exercised, the work of the department as regards the conservation and natural renovation of the indigenous forests, will be practically nullified.

C.—

## C.—Area and number of Reserves under the supervision of the various Foresters.

Locality.	Forester.	No. of Reserves.	Area in Acres.	Localities, ranges, number of reserves and areas.

D.—The following is a Return showing lands exempted from the operation of wood-cutters and cedar licenses. Exemptions in addition to the lands specified in the 4th Timber Regulation of 2nd December, 1889, have been notified as exempted from the operation of wood-cutters and cedar licenses:—

County.	Parish.	Area.	Date of Gazette Notice.	Particulars of Land.
Clarence .....	Elland, Clarenza, and Southampton	.....	24 Sept., 1886	All Crown lands within the population boundary of South Grafton.
Cook .....	Jamieson .....	.....	25 ,, 1888	Reserves for recreation, Nos. 100, 101, and 102.
Cumberland .....	Sutherland* .....	.....	24 Dec., 1887	All Crown reserves in the parish.
Do .....	Bulgo, Heathcote, and Southend .....	.....	4 Mar., 1885	Crown lands.
Do .....	Londonderry .....	.....	29 Oct., 1877	All Crown lands in the parish.
Do .....	Hunter's Hill and Field of Mars .....	6,235	4 Nov., 1879	Field of Mars Common.
Do .....	Hunter's Hill* .....	170	22 Dec., 1879	Lunatic Asylum Reserve.
Do .....	Botany .....	.....	23 Nov., 1886	Crown lands lying south of Church and School lands, and the Bunnerong Estate.
Do .....	Bulgo* .....	173	22 Dec., 1891	Forest Reserves Nos. 14,660, 14,661, and 14,662.
Caria, Taila, and Wentworth.	.....	.....	13 July, 1891	The red gum within 3 miles of the Murray River, from the junction of the Murrumbidgee River down to the town of Wentworth.
Durham .....	Barford* .....	950	7 Nov., 1891	Railway Reserve No. 12,533.
Denison and Hume..	.....	.....	9 Dec., 1886	All pine, on lands for which permission to ringbark has been granted in the Land District of Corowa.
Dampier .....	Noorooma .....	240	5 Mar., 1886	Reserve No. 440.
Gloucester † .....	Wang Wauk, Nerong, &c. ....	217,600	1 ,, 1889	Crown lands between the A. A. Company's grant, the Wollomba River, and the Ocean.
Leichhardt .....	Euroka and Youendah .....	4,703	8 Dec., 1884	On the bank of the Barwon River.
Macquarrie .....	Torrens .....	.....	2 June, 1885	Within the population boundary of Port Macquarie.

\* Timber cutting prohibited.

† Timber cut under timber-cutters licenses class A, regulations 7 and 8.

County.	Parish.	Area.	Date of Gazette Notice.	Particulars of Land.
Mouramba .....	.....	2,870	11 Sept., 1888	The wool-shed, ram, and horse paddocks, and the out-station horse paddock.
Northumberland ...	Awaba, Teralba, and Stockrington...	3,080	22 Feb., 1887	Reserves 83B (part of) 105, and 106.
Do .....	.....	.....	20 Jan., 1891	Newcastle Pasturage Reserve.
Pottinger .....	Dubbleda .....	30	2 Oct., 1885	Reserve No. 7.
Rous .....	.....	175	18 Dec., 1887	Reserve No. 545.
Urana .....	.....	640	28 June, 1887	Reserve No. 4, Colombo Dam.
Wynyard .....	Wagga Wagga .....	1,000	19 Aug., 1884	Travelling Stock Reserve, No. 3,067.
Yancowinna .....	Alma and Soudan .....	.....	28 Oct., 1887	Within 2 chains of the Gum Creeks, on homestead lease No. 86-5.
Do .....	Do .....	.....	8 Nov., 1887	Within 2 chains of the Gum Creeks, on homestead lease No. 86-4.
Young .....	.....	1,600	20 June, 1879	Part of Wilcannia Population Reserve (census of 1871).
	.....	.....	14 Oct., 1878	Lord Howe Island.
	.....	.....	7 Jan., 1887	All Cedar on Timber Reserves north of the Macleay River.

Sandal-wood.—The felling of the sandal-wood-tree within 5 miles of the Darling River, and within 5 miles of the Murray, below the junction of the Murrumbidgee River, is not permitted, but the lighter branches may be lopped for feed in time of drought, *vide Gazette Notice* of 9th October, 1889. The same restriction also applies to this tree in the Counties of Farnell, Mootwingee, Yungnulgra, Killara, Yancowinna, Tandora, Young, Werunda, Menindie, Livingstone Windeyer, Woore, Perry, Manara, and Mossgiel, but the twigs are permitted to be used in connection with the destruction of rabbits, *vide Gazette Notice* of 23rd May, 1890.

The Mangrove-tree was exempted from the operation of timber licenses or permits by notice in the *Government Gazette* of 22nd March, 1887.

#### E.—Statement of State Forests and Reserves under the Department.

In the Appendix a return is given in alphabetical order of various State Forests and Reserves under the department, showing the county, parish, and land districts in which they are situated, their numbers and names, their class according to the present regulations, their areas in acres, and generally some remarks in regard to the class of timber growing upon them.

### SECTION IV.

#### STATEMENT OF RESULT OF FORESTRY OPERATIONS DURING THE YEAR.

THE result of operations (the cost of which is included in previous statement) during the season on different reserves and plantations is very satisfactory. The total number of trees which have succeeded and are now making fair progress from the different systems adopted in thinning and planting are as stated below.

From Planting .....	16,450
„ Distribution to Schools and public bodies .....	75,000
„ Thinning on the Murray (red gum) .....	2,000,000
„ „ on Don Dorrigo (red cedar) .....	7,000
„ „ at Otford and West Bargo (wattles) .....	128,000
Total number of trees growing in plantations and on forest areas which have been operated upon during the year under review .....	2,226,450

Roughly speaking, the expense in connection with these operations has not exceeded three-eighths of a penny per tree.

### SECTION V.

#### THE PROPOSED FOREST BILL.

THE proposed Forest Bill, a synopsis of which was given in Section II of my Report for 1890, has not yet been brought before Parliament. This was framed with the view of putting the department in a position to work the Forest Reserves and other timber areas in the best interests of the State.

Under the present Crown Lands Act I have very great difficulty in exercising that proper control of our forests which is essential to the success of the department.

Failing the introduction of a Forest Bill to Parliament, I recommend that, that portion of the Crown Lands Acts of 1884 and 1889 referring to Timber, State Forests, and Quarry Reserves should be amended, providing new regulations and investing the department with the necessary powers to frame by-laws or a code of regulations for each district as may be required, and amending clauses dealing with prosecutions and penalties.

Under the present Crown Lands Act the powers of the department are very limited, and in regard to prosecutions the possible fines for illegal cutting of timber are of such a light character that they encourage rather than deter the cutting of timber without licenses, and prosecutions only too frequently result in magistrates inflicting the very lightest of penalties; so that it is obvious that under present circumstances the proper conservation and working of the forests is to a great extent retarded.

SECTION

## SECTION VI.

## BOTANICAL WORK OF THE DEPARTMENT.

THE following is a Report of the Botanical Work of the department, under Mr. J. H. Maiden, Consulting Botanist:—

*Museum of Economic Forestry.*

The most important event of the year, as regards the museum work of the department, is the transfer from the Department of Mines and Agriculture of the magnificent series of Australian timbers which were prepared for the purpose of display at International Exhibitions. This collection was got together while the Forest Conservancy work was under the control of the Minister for Mines. The collection was last shown at the Crystal Palace Exhibition of Mining, &c., and its return from London accentuates the need of proper museum accommodation in the Forest Department. There is absolutely no room to store these valuable timbers in the Department, much less display them.

The timber specimens received from other sources are fairly numerous, but only a portion of these can be displayed. Slabs of them are hung along the lobby and up the staircase in the building used as offices, but the light is bad, and no person can stand to examine them without causing inconvenience to others.

A number of small collections of native timbers have been sent during the year to public departments, country institutions, and to persons outside the Colony likely to assist in the work of utilising New South Wales timbers.

Increased interest is being taken in various parts of the Colony, not only in the cultivation of tanning wattles, but also in ascertaining the names and value of wattles found locally. Analysis of wattle barks sent to the department by Foresters or by private persons have been made during the year, and advice has been given as to whether the trees producing them are worthy of conservation.

A large number of specimens have been forwarded during the year by some of the Foresters. Foresters are supplied with the botanical names of all specimens as speedily as possible after the receipt of suitable material, and many of these officers take an interest in the botanical work of the department, not merely by spontaneously sending specimens, but also by sending material asked for to elucidate botanical points.

Some Foresters do not yet appear to recognise that it is part of their duty to send botanical specimens to headquarters; but it is hoped that during the present year specimens will be received from districts hitherto unrepresented. It is in every way desirable that Foresters should send specimens to the department, chiefly in order that they may be furnished with the names, and, if required, particulars of the forest trees in their districts, as compared with those of other districts, and also to assist in the formation of a museum of economic forestry.

## HERBARIUM AND CARPOLOGICAL COLLECTION.

As will be seen in list marked A, a very large number of herbarium specimens have been received during the year. These have all been named, labelled, and mounted, and the department already possesses the nucleus of a good herbarium. The collections of each Forester are kept separate, so that it may be ascertained with facility what are the principal plants in a particular district. The foresters are expected to keep numbered duplicates of all they send. The herbarium specimens received during the year have all been dealt with, and most of the specimens also which were taken over when the Forest Department was formed. Of these, those which have been considered worthy of preservation are in poor condition.

The carpological collection, part of an indispensable adjunct to the herbarium, has received many notable additions during the year, and many of the seeds and fruits have been sent in large quantity, affording abundance for display, propagation, and exchange. All the specimens received during the year have been bottled and labelled, and are arranged on shelves in natural orders, available for ready reference. The bulk of the old stock has also been displayed and classified; but this is kept separate, as usually the locality, date of collection, and other necessary particulars were omitted to be recorded.

Classified registers are kept of specimens of any kind whatsoever which are received in the department, and are posted strictly to date. Every specimen bears a register number. Specimen pages of these registers were given in the last Annual Report.

*A.—List of Herbarium Specimens received in 1891.*

In these lists no attempt has been made to give a complete glossary of vernacular names. Only those names have been given which are stated by the Foresters to pass current in their particular districts.

D—List of Timbers received in 1891.

Date	Description.	Botanical Name.	Vernacular Name.	Remarks
Collected by Forester Rotton.				
23 Feb.	Trunk of tree .....	Xylomelum pyriforme ..	Native pear ... ..	
1 Sept.	One block of wood .....	Eucalyptus eugenoides ...	Stringybark ... ..	
Donation from Engineer for Roads and Bridges.				
4 Mar.	Piece of plank .....	}	}	These specimens were taken from old Rushcutter's Bay bridge, 12 feet below the surface of the ground, said to have been built over fifty years.
4 "	" pile .....			
Collected by Mr. G. Musto for Forester Huxham.				
9 April	Rough piece of timber with bark on.	Flindersia australis ... ..		
Collected by Mr. Thomson, Cardwell, Queensland.				
14 April	.....	Unknown .....	Maple .....	
Donation from Forest Branch, Melbourne.				
5 May..	Seven pieces of blackwood.	.....	.....	From Gippsland.
5 "...	Two pieces of muskwood..	.....	.....	
Collected by Mr. S. Flynn.				
1 June..	.....	Grevillea robusta ... ..	Silky oak .....	
Donation from Roads and Bridges Department.				
8 June..	Piece of timber, No. 1 ...	.....	.....	Wentworth Bridge. Sample of timber (red gum) from Koondrook, Upper Murray River, cut March, 1891, J. P. Carew, Gibson. Each specimen shows one cut with the grain, one cut against the grain, one cut diagonal grain, and a split section.
8 " "	" " No. 2 ...	.....	.....	
8 " "	" " No. 5 ..	.....	.....	
8 " "	" " red gum.	.....	.....	
10 " "	Three specimens of timber, taken from the pile of hardwood decking-plank at O'Connell-st bridge.	.....	.....	
Collected by Forester Rudder.				
23 June.	Specimens of timber suitable for engraving.	Hemicypha australasica ..	.....	
Collected by Mr. M'Cog.				
23 " "	" " " " ..	Monotoca elliptica, No. 3 ..	.....	
2 July.	.....	Eucalyptus resinifera ...	Forest mahogany ... ..	
2 " "	.....	" acuminoides ..	White mahogany ..

## SECTION VII.

## ARBOR DAY.

In 1890 an Arbor Day in connection with the Public Schools of the Colony was instituted by Mr. J. H. Carruthers, the late Minister of Public Instruction, and he decided that for the year 1891, the 21st of August be celebrated as a public holiday by the schools for Arbor Day.

At most of the Public Schools, Arbor Day was regarded as a holiday either on the particular day appointed or at a later date as circumstances permitted.

Most of the trees supplied to the schools were obtained from the Gosford State Nursery.

Every endeavour was made by the Forest Department to execute the many orders which were received for trees and shrubs, and I think Arbor Day proved to be a pleasing and successful educational scheme. It brought parents, scholars, and teachers together under agreeable circumstances, and opened up to youthful minds a fresh and almost unknown page in the natural history of the Colony.

Some 4,000 catalogues of the trees for distribution, and also of the lecture upon Arboriculture, and the botanical drawings issued by the Forest Department, were distributed by the Department of Public Instruction to the various schools in the Colony. In many cases also both the lecture and the catalogues were distributed to the various corporate bodies in the Colony, to whom also trees at the Gosford Nursery were available.

It is estimated that during the year something like 100,000 trees and shrubs were given away by the Forest Department to Schools, and corporate bodies in connection with Arbor Day, and as exchanges for trees, plants, and seeds received.

Last year there was some comment upon the smallness of some of the plants issued to schools, and in a few cases there appeared to be a prejudice against small and young plants in favour of those of larger growth. No doubt in the first instance largely developed plants look much nicer, but they are not always so successful in maturing.

Should Arbor Day be continued in 1892, the following is a list of trees and shrubs available at the Gosford State Nursery for distribution to schools and corporate bodies in connection therewith:—

Botanical Name.	Vernacular Name.	Numbers available.	Botanical Name.	Vernacular Name	Numbers available.
<i>Araucaria Bidwilli</i> .....	Bunya Bunya .....	1,000	<i>Frenela Macleayana</i> .....	Port Macquarie pine .....	403

## SECTION VIII.

## THE PLANTING AND THINNING OPERATIONS OF THE YEAR.

SINCE the formation of the department a considerable amount of its attention has been devoted to organising a systematic plan of operations dealing with the proper conservation of some of our most valuable indigenous timber trees. Its energies have also been, although in a lesser degree, devoted to the planting in suitable situations of trees of a like character.

*A.—Red Cedar.*

Thinning and transplanting operations have been undertaken on one of our most important reserve areas, known as Don Dorrigo, situated upon the plateau at the head of the Bellinger and Macleay rivers. Some of the work was commenced upon this area during the latter part of 1890, further work being continued from time to time during 1891.

From November, 1890, to the end of September, 1891, the work performed consisted of clearing all vines and undergrowth around 7,693 young cedar plants, while 823 self-grown young trees were transplanted to favourable localities. The total cost amounted to £859 5s., and the area operated upon was about 1,500 acres, and the cost per plant was about 2s. each.

I have not yet had an opportunity of inspecting this work, but the officer in charge, Mr. Forester Mecham, reports that the work has been of a highly satisfactory character, and that the young trees have been greatly improved in every respect by the felling and clearing.

On Forest Reserve, No. 6,264, situated in the county of Drake, which is one of the natural habitats of the red cedar, some 300 young naturally-grown plants were dug up where growing too thickly and transplanted into favourable situations.

This work was done under Mr. Forester Deverell, and from his report upon the subject it is satisfactory to note that the results therefrom are of a very encouraging nature.

This work was carried out for the small expenditure of £5, equal to a cost of 4d. per tree.

In the month of August, 1890, an experiment in planting red cedar seedlings was carried out upon the Crawney Forest Reserve, No. 1,266, situated in the counties of Brisbane, Parry, and Buckland.

The number of trees put out were about 50, and the work was carried out at a nominal cost in the first instance.

Mr. Forester Powell, under whose supervision the work was carried out, reports that the growth of the young plants has been of such a nature as to justify a still further expenditure of a similar character, and it is more than probable that this will be carried out during the coming season. The only drawback to the work is the fact that some of the trees were damaged by stock and marsupials, and it was found later on in the season that the young plants had to be properly protected with wire-netting, the cost of which amounted to £10, equal on the whole to about 4s. per tree.

On Mount Royal Forest Reserve, situated in the county of Durham, which is also a natural habitat of the red cedar, some 1,500 young plants raised at Gosford nursery were planted out in the month of October last, under the supervision of Mr. Forester Smith, at a cost of £10, equal to about 1½d. per tree.

This reserve being of the character known as "scrub," a good deal of undergrowth had to be cut away to allow this planting to be carried out. The particular portion of the reserve thus operated upon consists of about 500 acres in extent, situated at the foot of Mount Royal, and from the fact that the place is a natural field for cedar, I am of the opinion that the result will be satisfactory.

At Wyong plantation some 6,000 young cedar trees were put out, the result of these will be shown in the following sub-section.

*B.—Wyong Plantation.*

This plantation is some 3 miles from Wyong Railway Station, and is about 18 miles from the township of Gosford. The site was chosen and purchased for a plantation previous to my appointment.

During the months of August and September, after all preliminary ploughing and trenching was completed, the more important work of planting this area (some 16 acres) was taken practically in hand.

The kinds and numbers of trees planted out are as shown in the following tabulated statement:—

Botanical Name.	Vernacular Name.	Number.	Botanical Name.	Vernacular Name.	Number
<i>Cedrela australis</i> .....	Red cedar .....	7,000	<i>Eucalyptus rostrata</i> .....	Red gum .....	50
<i>Pinus pinaster</i> .....	Cluster pine .....	1,000	<i>Eucalyptus robusta</i> .....	Swamp mahogany .....	100
<i>Pinus halepensis</i> .....	Aleppo pine .....	1,000	<i>Eucalyptus microcorys</i> ...	Tallow-wood .....	50
<i>Catalpa speciosa</i> .....	American Catalpa .....	2,500	<i>Eucalyptus calophylla</i> ...	Red gum of West Australia ..	100
<i>Populus fastigiata</i> .....	Lombardy poplar .....	1,500	<i>Tristania conferta</i> .....	White box .....	100
<i>Ulmus suberosa</i> .....	Cork elm .....	72	<i>Syncarpia laurifolia</i> .....	Turpentine .....	100
<i>Platanus acerifolia</i> .....	Maple-leaved plane tree... 50		<i>Podocarpus elata</i> .....	Colonial deal .....	250
<i>Quercus robur</i> .....	English oak .....	1,750			
<i>Fraxinus americana</i> .....	American ash .....	286		Total .....	16,408
<i>Eucalyptus corynocalyx</i> ...	Sugar-gum .....	500			

Upon a recent inspection I found that of the trees planted the following are alive:—

Botanical Name.	Vernacular Name.	Number.	Botanical Name.	Vernacular Name.	Number
<i>Cedrela australis</i> .....	Red cedar .....	6,720	<i>Fraxinus americana</i> ..	American ash .....	286
<i>Catalpa speciosa</i> .....	American catalpa .....	2,475	<i>Eucalyptus corynocalyx</i>	Sugar-gum .....	500
<i>Populus fastigiata</i> .....	Lombardy poplar .....	1,475	<i>Podocarpus elata</i> .....	Colonial deal .....	250
<i>Ulmus suberosa</i> .....	Cork elm .....	72			
<i>Platanus acerifolia</i> .....	Maple-leaved plane .....	50			
<i>Quercus robur</i> .....	English oak .....	1,733			13,561

I may say I am very much pleased at the result of the red cedar planting, as I estimate that only about 4 per cent. of the whole number put out have succumbed, while those remaining show a degree of healthy growth and strength which is an exceedingly agreeable surprise. Several of the plants have made a growth of at least 2 feet in height, and judging them by their appearance all round, they have evidently been planted in a site suitable to their requirements.

The same remarks apply to the *Catalpa speciosa*, of which very few have died. The plants are strong and healthy, showing that the soil and situation are evidently favourable.

All the elms are alive, and although they do not show very vigorous growth, yet they are sufficiently forward to warrant my being of the opinion that eventually they will be a very marked success.

English oak-trees are doing well; very few failures have occurred among them, and, from the character of the subsoil clay, I am of opinion that they will be successfully matured in the coming years.

As anticipated, the pines of various kinds planted have turned out an absolute failure, the ground being too damp and stiff for them.

The poplars have done well, and are now a marked feature of success in the plantation.

On a higher lying portion of the enclosure a number of sugar-gums (*Eucalyptus corynocalyx*) were planted in bamboo tubes. These have also done well, several having now attained a height of over 2 ft. since they were planted. Most of the other gums, however, planted in a lower lying portion of the plantation, owing to the wetness of the ground have been a comparative failure.

As it was only in October the plants were put out the result is so far favourable, and on the whole I think this experimental plantation shows a record of fair success, especially with regard to the red cedar, catalpa, and elm.

The expenditure on this work amounted to £294 17s. 6d., equal to about 4½d. per tree, and was carried out under the supervision of Mr. McCoig, Superintendent of Gosford Nursery.

#### C.—Hogan's Brush Plantation.

Hogan's Brush Plantation is situated about 4 miles from Gosford and in a sheltered situation, where the soil is of a rich deep loamy character. This plantation was formed about three years ago. Some 300 trees were planted during 1891 to fill up blanks as follows:—

Botanical Name.	Vernacular Name.	Number.
<i>Podocarpus elata</i> .....	Colonial deal.....	150
<i>Tristania conferta</i> .....	White-box.....	125
<i>Eucalyptus corynocalyx</i> .....	Sugar-gum.....	25
	Total.....	300

All the trees here are now making very satisfactory progress, and the site appears to be eminently well suited to the growth of red cedar and silky oak.

#### D.—Wilcannia and Broken Hill Plantations.

The proposed plantations at Wilcannia and Broken Hill have not yet been carried out owing to the great distance at which these areas are situated from convenient centres of the Colony, thereby necessitating a greater cost for materials in connection with them than was at first anticipated. All preliminary steps have, however, now been arranged, and it is hoped that during the coming winter the work will be commenced.

In connection with the fact that it is intended to establish a plantation of suitable trees at Broken Hill, and regarding the scarcity of timber trees in that part of the country, I may point out that certain areas of Mulga Acacia and other edible scrub are being denuded of forest-growth by the timber-getters cutting the same for fuel for the mining and household requirements of the Barrier. There is an outcry from certain pastoral and homestead lessees in the Broken Hill District who complain that the edible scrub they are depending upon for sheep feed is being rapidly destroyed. This is a matter requiring extreme care in its treatment, and at the same time it forcibly illustrates the necessity for some attempt being made to produce useful timber in that district.

Broken Hill mining companies are a good deal interested in the source of wood fuel, and any drastic attempt to debar wood-getters from obtaining such timber as there is in the district would cause considerable inconvenience to some of the mines. At the same time there is the fact that wood for fuel for all purposes can be imported by rail into Broken Hill.

On the other hand, the Department of Lands is largely interested in the preservation of Mulga, and all other edible trees in the district, as it is the mainstay of the pastoralists; and in that droughty country, so frequently void of grass, the growth of the edible shrubs upon pastoral holdings is of grave consequence, and therefore any depletion of such trees and shrubs must depreciate the value of station properties.

This very serious matter is receiving consideration at the hands of the department.

The following is a list of the chief edible trees and shrubs in the district:—

Botanical name.	Vernacular name.
<i>Acacia aneura</i> .....	Mulga.
<i>Acacia pendula</i> .....	Myall.
<i>Acacia salicina</i> .....	"Koobah" or native willow.
<i>Pittosporum phylliraeoides</i> .....	Native willow.
<i>Casuarina glauca</i> .....	Belar.
<i>Flindersia maculosa</i> .....	Leopard tree.
<i>Geijera parviflora</i> .....	Wilga.
<i>Sterculia diversifolia</i> .....	Kurrajong.
<i>Fusanus acuminatus</i> .....	Quandong.
<i>Eremophila longifolia</i> and other <i>Eremophilas</i> .....	Emu Bush.
<i>Eremophila Mitchelli</i> .....	Sandal-wood.
<i>Atalaya hemiglauca</i> .....	"White wood" or Cattle bush."
<i>Dodonaea lobulata</i> and other <i>Dodoneas</i> .....	Hop bushes.

In reference to edible trees exempted from the operations of timber-getters, regulation 43 of the Timber, State Forest, and Quarry Regulations provides as follows:—"The kurrajong and quandong trees are exempted from the operation of all timber licenses or permits, and cutting them down is prohibited; but in time of drought, if the leaves of the kurrajong-tree are required for feed for stock, the lighter branches may be lopped.

"Any other description of trees in specified localities may be from time to time exempted from the operation of licenses and permits, and the felling prohibited by notice in the *Gazette*."

On the 9th of October, 1889, the following notice appeared in the *Government Gazette*:—"Notice is hereby given that, under the provisions of the 2nd and 63rd Timber Regulations of 18th August, 1885, the cutting of the sandal-wood tree within 5 miles of the Darling River, and within 5 miles of the Murray, below the junction of the Murrumbidgee River is prohibited. When in time of drought this tree is required for feed, the lighter branches only should be lopped."

A further notice appeared in the *Gazette* on 23rd May, 1890, as follows:—"Notice is hereby given that, under the provisions of the 4th and 43rd Timber Regulations of 2nd December, 1889, the Sandal-wood tree within the counties of Farnell, Mootwingie, Yung-Nulgra, Killara, Yancowinna, Tandora, Young, Werunda, Menindie, Livingstone, Windeyer, Woore, Perry, Manara, and Mossgiel, is exempted from operations of timber licenses and the felling prohibited. When, in times of drought, the leaves of this tree are required for fodder or for stock, the lighter branches only should be lopped; the twigs may also be used in connection with the destruction of rabbits."

From the foregoing it might be inferred that kurrajong, quandong, and sandal-wood in particular, were the most valuable of our fodder-trees, but, as a matter of fact, there are others of equal and even more value, if not owing to the more succulent property of the leaves at any rate to the quicker and more abundant growth.

Owing to the proclivity of the rabbit for sandal-wood, it has been in especial favour, as the twigs are used by graziers in rabbit-infested districts for making poisoned baits, but this system of rabbit destruction is now little in vogue, having given way to more elaborate measures in the shape of poisoned grain, poisoned water, and tank-trapping. Mulga is one of the very best small timber-trees in the Western district for fencing purposes, and where not eaten out or destroyed is valuable as edible food for stock.

#### *E.—The Murray Red-Gum Forests.*

A portion of the extensive red gum forest tract on the Murray River, extending for 500 miles, and comprising some 460,000 acres, has during the past twelve months received some attention in the matter of thinning operations—a necessary action previously too long delayed.

The forest contains a very large number of self-grown seedlings and saplings, and it has been found necessary, owing to their thickness on the ground, with a view to the permanency of marketable timber, that they should be properly attended to in the way of thinning and pruning.

A start in this direction was made in April, 1891, the work being continued till the end of the following June, when it had to be given up for a time owing to the land being inundated.

These operations so far have been conducted along the banks of the river in the counties of Cadell and Wakool.

Some sixty men were employed upon the work, and the result was that some 3,500 acres of forest land were operated upon.

The works were again commenced in November of last year, and up to the date of this Report some 2,000 acres more or less have been similarly operated upon.

The work is still in progress, and about thirty men are employed in connection with it.

The young trees are in all stages of growth, ranging in height from 2 ft. and 3 ft. to over 50 ft. and 60 ft., and in all cases they are of a straight growth, almost branchless except at the top, healthy, and show every sign of eventually producing timber of a knotless and superior quality.

Roughly stated, I may remark the thinning operations have so far extended for about 12 miles of frontage along the Murray River.

It is estimated that, taken as a whole, there have been 5,500 acres operated upon in the manner described, and something like 350 healthy young trees have been left to the acre, thus showing that up to date about 2,000,000 of young trees have been treated, and will remain as a standing crop to serve as a future timber supply.

The operations up to date have cost £1,428 2s. 4d., the cost per tree being at the low rate of about  $\frac{1}{3}$ th of a penny each. The work was under the supervision of Mr. Inspecting Forester Manton.

I may emphatically point out that, in order to secure the permanency of the timber output of the Murray Reserves, it is absolutely necessary that these operations should, for many years to come, form a special feature of the working of the Forest Department.

As already pointed out, the work, owing to the uncertainty of the floods in the river, can only be proceeded with at certain periods of the year, and therefore it is desirable that a special provision should be made for it, without depending upon any fluctuations or delays which might occur in connection with the passing of the Estimates. This matter will therefore form the subject later on of a special recommendation to the Government, but at the present time it may be as well for me to indicate that I consider the work of the very utmost importance to the Colony, and is deserving of the very best attention and acquiescence of the Government.

There is a large extent of red-gum country upon the Victorian side of the Murray River, and it is gratifying to hear that the Government of that Colony is carrying out thinning operations also.

From our lands thus operated upon I anticipate that in course of from five to ten years there will be a very large number of excellent piles available, ranging from 50 ft. to 70 ft. in length, and by that time the Department will be in a position to keep up a continuous supply, as also possibly of timber available for sawing purposes, not only for our own constructive works, but also of those in other colonies.

It may be of interest to note here that the department is now readily obtaining at the rate of from 15s. to 35s. each for such piles.

In making some expenditure upon this forest country, and regarding it as a valuable and permanent timber reservation, the country is not suffering from any withdrawal or locking up of land suitable for settlement, for, as a matter of fact, owing to its liability to sudden and prolonged inundations, it is only fit for the purpose to which it is at present devoted, and as such it is a splendid investment for the Government of this Colony, for present and future time.

In order to justify the expenditure which has been, and which I propose shall still further be increased in connection with the proper conservation of the red-gum forests of the Murray River, I think a few remarks in regard to the quality and durability of this tree are necessary.

Mr. Inspecting Forester Manton was instructed to visit Melbourne with a view of getting some information upon the subject, and his report upon the matter is of an interesting character.

It appears that the timber of the red-gum (*Eucalyptus rostrata*) is held in very high repute in the Colony of Victoria, and is there preferred to any other class of timber in the construction of piers, wharves, and bridges, and also for railway sleepers.

In Melbourne, Sandridge, and Williamstown he reports having examined piles of red-gum which had been over twenty-seven years in the ground and still perfectly sound. In a wharf at Echuca, constructed of red-gum timber twenty-five years ago, the girders and planking are yet quite sound. The same may be said of a wharf at Moama erected sixteen years ago.

In the early days of the opening up of the Murray, boats of various kinds were constructed of red-gum from the Murray and adjoining forests, and many of these, although over twenty-five years old, are still in good condition.

The department is in possession of a Red-gum street-paving block, obtained through the courtesy of Mr. Mountain, City Surveyor, Melbourne, which was taken out of the Flinders-street roadway near King-street, Melbourne, after being there nearly eleven years—the street, after being laid with wood blocks, having been opened for traffic on the 9th April, 1881.

Although this block was situated in a part subject to the heaviest traffic, the wear has only been about three-quarters of an inch, and the wood of the block is perfectly sound.

The block was taken up midway between the curbing and the tram rail, consequently it represents a fair average wear upon the roadway at that particular place.

Inquiries made in Sydney as to the success or otherwise of wood pavement laid down in some of the principal streets show that the timbers used have stood the wear of heavy traffic exceedingly well.

The department, through the courtesy of Mr. R. W. Richards, City Surveyor, Sydney, is in possession of four sample blocks taken from the carriage-way of George-street between Market and Park Streets, being a portion of roadway subject to almost continuous and heavy traffic.

This carriage-way was opened for traffic during July, 1882. The sample blocks were lifted on 11th February, 1892, and after nine and a half years usage show upon examination the following wear:—

Black-butt wore	$\frac{1}{3}$	an inch, or	$\frac{1}{15}$	of an inch per annum.
Tallow-wood wore	$\frac{1}{2}$	"	$\frac{1}{15}$	" "
Spotted-gum wore	$\frac{1}{6}$	"	$\frac{1}{4}$	" "
Turpentine wore	$\frac{3}{8}$	"	$\frac{1}{6}$	" "

The latter showing signs of brushing.

It will be seen from the foregoing statements that owing to their varied utility red-gum, black-butt, tallow-wood, and other of our timbers may be rated at a high commercial value, and that if now properly looked after, our forests will become the source of a large revenue to the State.

#### F.—Wattle Conservation.

Although the subject of wattle cultivation and conservation was gone into pretty fully in the report of 1890, the matter is of such importance that further reference to it, especially as to what the department has done in regard to it, does not require apology.

The consumption of wattle-bark is very large indeed, especially in this Colony where we have such a large number of tanneries.

Through the want of proper conservation of the tree, and increasing demand for bark, there is a continued depletion of our natural scrubs of wattle; to a large extent causing a scarcity of our own produce, it has at the same time caused an upward tendency in price.

So far as our own consumption of wattle-bark goes, no doubt that of New South Wales would bring much higher prices, but for the extensive shipments of the product from Tasmania, which is generally of an excellent quality, and meets with a ready sale in this Colony.

Our largest export of wattle-bark in 1890 was to Queensland, the quantity being 9,328 cwt. of our own bark and 15,301 cwt. of bark from other colonies. In 1891 we exported some 1,824 tons, valued at £13,056; only 845 tons, valued at £4,660 was the produce of this Colony. Our imports of bark amounted to 3,708 tons, value £28,162.

After Queensland probably Great Britain is our largest customer.

A very considerable trade is done with Tasmania by New South Wales tanners and merchants, the importations from that colony alone having amounted in 1890 to 54,340 cwt., valued at £21,796.

In consequence of the increasing demand for the bark, and the indiscriminate manner in which trees of all sizes, ages, and quality have been stripped, the regulations under which strippers are allowed to remove the bark from Forest Reserves and Crown lands, have been made much more strict during the year.

As they now stand the license fee is 20s. per month per man, and where the Forester reports wattle of superior quality and convenient to market, a special royalty ranging from 10s. to 20s. per ton is also imposed.

In all cases it is imperative that no wattle-trees shall be stripped which are of less girth than 15 inches of the black or feather-leaf species, nor less than 12 inches of the golden or broad-leaf species of wattle, measured 2 feet from the ground.

In consequence of these restrictions it is gratifying to be able to report that there has been much less destruction and waste in the matter of stripping young and growing trees during the past season than there was in former years. Strippers are now beginning to realise that they are dealing with a valuable commodity, and that their yearly living depends upon the proper conservation of the young crop.

In order that the head office of the department and foresters in the field, may be brought more directly in contact with bark-strippers, and the areas they are operating upon, licenses for wattle-stripping have all to be taken out at the office of the Forest Department, Sydney, instead of being issued indiscriminately by Clerks of Petty Sessions as formerly.

The Foresters have now to report on each application received by the department.

Under this arrangement the department is better able to gauge the amount of licensed stripping in each district, and to estimate from time to time the amount of revenue coming in from each district.

These arrangements require modifying and improving to a certain degree, but under the present Act it is difficult otherwise to meet the case.

During the year the department has, besides writing a large number of letters, giving advice to applicants as to how, where, and when to plant wattle, done a considerable amount of initiatory conservation of the tree, upon its own account, upon Forest Reserves.

At Otford Railway Station, on the Illawarra line of railway, about 30 miles from Sydney, some 140 acres of indigenous wattle country were declared Forest Reserve.

At the time this land was handed over to the department, a very considerable portion of it was covered with a dense crop of young *Acacia decurrens*, in all stages of growth.

The soil here is of good quality, and capable of growing the wattle-tree to a large size.

Immediately upon the ground being handed over to the department, steps were taken to have the wattle-trees properly thinned and pruned, and for this purpose a squad of ten men under a foreman were detailed for the work.

The whole ground was carefully gone over in the manner indicated, and fire-breaks formed around and through it.

This was done at a total expense of £115 15s., or a little over 16s. per acre.

It is estimated that there is an average of 600 trees to the acre upon about 70 acres of the Reserve.

Since the thinning, the trees have made wonderful growth in height and diameter, and it is expected in the course of a couple of years' time will produce something like 2 tons per acre over all, or, in round numbers, 200 tons in all, which, at present prices, say £6 per ton, will give the handsome return of £1,800.

At West Bargo, near the Southern line of railway, the department has some valuable wattle lands, on what is known as Reserve No. 57. One plantation, situated about 12 miles from Picton, and about 7 miles from Thirlmere, is called "Wattle Hill," and consists approximately of about 60 acres. Another wattle area, known as "Lupton's," about 3 miles from "Wattle Hill," is also some 60 acres in extent.

In the latter part of 1890, operations were commenced at Bargo, in thinning the wattle and ploughing fire-breaks and burning off. The cost of this work was £112 11s. 11d.

The number of wattles to the acre on the entire area of 120 acres is estimated at about 1,000.

On the 16th March, 1891, work was again commenced in this vicinity on Reserve No. 57, when about 40 acres of wattle land were properly thinned. The amount expended during 1891 in thinning operations at Bargo was £53 4s.

Owing to the rapid growth, and remarkable improvement generally which has taken place in the wattle-trees since the thinning operations were completed, I anticipate the department will be able to derive some return from a portion of this plantation in the coming season of 1892, and if my expectations are realised, some 30 tons of wattle-bark may be obtained.

It is the intention of the department to take up each year a portion of the natural-grown wattles upon the various Forest Reserves, with a view to thinning and pruning, as was done in the cases referred to.

It is—subject to the approval of the controlling Minister—also intended to form wattle plantations upon suitable sites on some of the Forest Reserves lying near the coast, and as a start in this direction it is proposed that 100 acres upon a comparatively worthless belt of protected sand-hills at Lake Illawarra, near Wollongong, shall be planted.

The system of operations in connection with this plantation, and the results accruing therefrom, will be dealt with in a subsequent report.

The difficulty has always been to secure seed true to name, and, in order to avoid any blunder in this way, the department has now arranged each year to collect a sufficient quantity of the true black-wattle (*Acacia decurrens*) seed for its own purposes. Carrying this idea out, we have now on hand some 3 cwt. to 4 cwt. of excellent seed, collected from large, healthy, and thick-barked trees.

These operations, as indicated, will of course entail a considerable amount of expenditure to begin with, but the results in a few years time will unquestionably mean a very large increase to the revenue of the department.

## SECTION IX.

### GOSFORD STATE NURSERY.

As yet the only Nursery in the hands of the department is that at Gosford. The area reserved for this establishment embraces about 65 acres, of which there are now some 30 acres cleared and partially under a crop of young trees.

During the year considerable improvements were made in the Nursery, consisting chiefly of clearing, trenching, draining, road-making, the construction of new buildings, and the formation of avenue rows for Arboretum purposes; also the construction of bamboo pits, bush houses and sheds.

A large number of new introductions of trees and shrubs were made during the year, and the total stock now consists of about 1,200,000 trees.

## A.—Stock of Plants in Gosford Nursery.

## SECTION X.

## THE INTRODUCTION OF EXOTIC TREES.

To a large extent the timbers of Australia are of too hard and heavy a character for general house building purposes, and it is, therefore, incumbent upon us to introduce other kinds of trees which produce timbers of a lighter nature.

At present we send out of the country a large amount of money annually for such classes of timber, these being obtained chiefly from America, Canada, Northern Europe, and New Zealand.

As showing the importance of this subject it will be interesting to note the following figures in connection with the value of our importations of timber during 1890 :—

	Dressed Timber.	Rough.	Total.
	£	£	£
From United Kingdom .. .. .	15,653	7,284	22,937
„ New Zealand .. .. .	2,863	59,928	62,791
„ Canada .. .. .	950	17,197	18,147
„ Norway and Sweden... .. .	10,131	15,520	25,651
„ United States... .. .	5,558	66,587	72,145

From the above it will be seen that there is an extensive timber trade being done by us with foreign countries in light and easily worked woods, which at present we do not produce.

Our requirements in this particular line are very great, and, therefore, if we can produce the light timbers referred to, the gain to the country in more respects than one will be immense.

That we can produce these soft-wooded timbers, especially those of America and Europe, there can be no doubt, as the physical features of the Colony are such that the climate, soils, situations, and aspects required for their successful growth can be found within our boundaries. We have soils ranging from that of a sandy nature to that of a deep clay, and in many instances they are composed of a deep humus; at the same time we have good forest lands at various altitudes up to 4,000 and 5,000 feet above sea level.

No doubt some years must elapse before such timber trees will be available for manufacturing purposes, but the present outlay would in the near future be amply repaid to the country.

In the planting operations at Wyong last season the fact of our requirements in the future in regard to European and American timbers was not overlooked, as something over 7,000 young plants of this character were planted. The principal of these being *Pinus pinaster*, *Pinus halepensis*, *Populus fastigiata*, *Ulmus suberosa*, *Platanus acerifolia*, *Quercus robur*, *Fraxinus americana*, and *Catalpa speciosa*.

As is well known the ash timber of commerce, both American and European, is largely used.

If, therefore, we could produce a marketable timber of this kind alone, it would be a very considerable boon to the Colony; and in order to show that this can be done even in a less favoured clime than ours, I may mention incidentally that from trees of the American ash, which were planted by me in South Australia some ten or eleven years ago, excellent samples of timber have been produced.

The timber just referred to has been tested in every conceivable manner, with the result that it is found to be equal to, if not of a better quality than that grown in its natural habitat.

The Department is in possession of two samples of South Australian grown *Fraxinus americana* (American ash), cut and turned for buggy wheel naves.

These pieces of wood are of a beautiful light colour, perfectly sound, and while light in weight, are exceedingly tough, and calculated to bear well all the ordinary wear and tear and straining which the wheel of any vehicle may put upon it.

The question, therefore, of growing exotic timbers, I regard as a very important one, and I hope to be able to practically prove in this Colony that it can be successfully done, and that the result will be the production of a timber equal in quality to the at present imported article.

Following

Carrying out the idea of the introduction of the American and European trees into our State forests, I have to submit the following:—

A.—*List of Exotic Trees which are now being raised at Gosford State Nursery.*

Botanical Name.	Vernacular Name.	Numbers Available	Botanical Name.	Vernacular Name.	Numbers Available.
<i>Abies Douglasii</i> .....	Douglas pine .....	80	<i>Pinus ponderosa</i> .....	Yellow pitch pine .....	182
<i>Abies nigra</i> .....	Black spruce .....	30	<i>Pinus pungens</i> .....	Cluster pine .....	3,018
<i>Abies jezensis</i> .....	Spruce .....	67	<i>Pinus picea</i> .....	Norway spruce .....	464
<i>Acer negundo</i> .....	Box-elder or maple .....	150	<i>Phoenix dactylifera</i> .....	Date palm .....	4,547
<i>Acer rubrum</i> .....	Maple .....	50	<i>Populus cinerea</i> .....	Silver poplar .....	840
<i>Cupressus macrocarpa</i> ..	Californian cypress .....	2,154	<i>Populus nigra</i> .....	Black poplar .....	3,200
<i>Cupressus Goveniana</i> ..	Goven's cypress .....	255	<i>Populus alba</i> .....	White poplar .....	600
<i>Cupressus sempevirens</i> ..	Common cypress .....	395	<i>Populus fastigiata</i> .....	Lombardy poplar .....	5,000
<i>Cupressus McNabiana</i> ..	M'Nab's cypress .....	30	<i>Platanus acerifolia</i> .....	Plane-tree .....	600
<i>Cupressus Lawsoniana</i> ..	Lawson's cypress .....	340	<i>Quercus virens</i> .....	The live oak .....	116
<i>Cupressus torulosa</i> .....	Nepal cypress .....	355	<i>Quercus bicolor</i> .....	.....	50
<i>Cupressus Knightii</i> .....	Knight's cypress .....	19	<i>Quercus robur</i> .....	English oak .....	13,870
<i>Cupressus pyramidalis</i> ..	Common cypress .....	60	<i>Quercus macrocarpa</i> .....	Burr oak .....	48
<i>Ceratonia siliqua</i> .....	The carob-tree .....	212	<i>Quercus suber</i> .....	Cork oak .....	130
<i>Cryptomeria japonica</i> ..	Japanese cedar .....	44	<i>Quercus Ilex</i> .....	Evergreen oak .....	18
<i>Cedrus Deodara</i> .....	Deodar pine, India .....	97	<i>Quercus pseudo coccifera</i> ..	Palm oak .....	18
<i>Carya alba</i> .....	Shag-bark hickory .....	24	<i>Quercus sideroxylon</i> .....	Mexican oak .....	16
<i>Carya microcarpa</i> .....	Balsam hickory .....	20	<i>Quercus paniculata</i> .....	.....	68
<i>Carya sulcata</i> .....	Furrowed hickory .....	20	<i>Quercus lusitanica</i> .....	Portuguese oak .....	57
<i>Carya in var.</i> .....	Hickory .....	45	<i>Quercus lyrata</i> .....	.....	34
<i>Catalpa speciosa</i> .....	American catalpa .....	14,855	<i>Quercus phellos</i> .....	Willow oak, N. America ..	54
<i>Fraxinus americana</i> .....	American ash .....	350	<i>Quercus Bannisteri</i> .....	.....	22
<i>Hovenia dulcis</i> .....	Raism-tree .....	40	<i>Sequoia gigantea</i> .....	Mammoth-tree .....	165
<i>Juniperus virginiana</i> .....	Pencil cedar of N. America ..	20	<i>Sophora tetraptera</i> .....	The "Pelu" of New Zealand.	188
<i>Juniperus Cracoria</i> .....	Polish juniper .....	33	<i>Salix Russellianum</i> .....	Willow .....	2,380
<i>Juglans nigra</i> .....	Walnut .....	15	<i>Salix purpurea</i> .....	Purple willow .....	1,800
<i>Pinus Strobus</i> .....	Weymouth pine .....	138	<i>Salix Babylonica</i> .....	Weeping willow .....	850
<i>Pinus halepensis</i> .....	Aleppo pine .....	30,085	<i>Salix aurea</i> .....	Golden willow .....	40
<i>Pinus rigida</i> .....	American pitch pine .....	60	<i>Thuja aurea</i> .....	Golden arbor-vitæ .....	221
<i>Pinus pinaster</i> .....	Cluster pine .....	38,536	<i>Thuja orientalis</i> .....	Chinese arbor-vitæ .....	123
<i>Pinus densiflora</i> .....	Aka-matsu of Japan .....	300	<i>Thuja occidentalis</i> .....	American arbor-vitæ .....	19
<i>Pinus Thunbergia</i> .....	Kuro-matsu .....	700	<i>Taxodium distichum</i> .....	Bald cypress .....	18
<i>Pinus pinea</i> .....	Stone pine .....	4,660	<i>Ulmus campestris</i> .....	English elm .....	8,000
<i>Pinus resinosa</i> .....	Red pine, North America .....	30	<i>Ulmus suberosa</i> .....	Cork elm .....	350
<i>Pinus insignis</i> .....	Remarkable pine .....	101,399	<i>Ulmus sinensis</i> .....	Chinese elm .....	260
<i>Pinus sylvestris</i> .....	Scotch fir .....	35			
<i>Pinus Sabiniana</i> .....	Californian nut pine .....	39			
<i>Pinus muricata</i> .....	Bishop's pine .....	42			
				Total .....	243,200

With a portion of such exotic trees, I propose, when the season arrives, to have some small areas on State forests in favourable and suitable districts planted with various species of pine, cypress, ash, oak, or elm, as the circumstances of the country to be operated upon may admit.

## SECTION XI.

### NEW OFFICES AND MUSEUM OF ECONOMIC FORESTRY.

THE offices at present occupied by the department are situated at 52, Phillip-street, Sydney.

For departmental offices they are not suitable, as their accommodation is utterly inadequate for the satisfactory working of our clerical staff.

There are only six rooms available, and there is very little space for desks and other office furniture; in one small room alone seven clerks are crowded together.

During the year I have repeatedly drawn attention to this fact, and asked that suitable quarters should be provided for the Department at as early a date as possible; but so far nothing definite has been done towards securing such premises as we require.

It is evident that without proper accommodation the working of the department in a proper and systematic manner cannot be carried out.

Apart altogether from the space required for the clerical staff, we have no accommodation whatever for a proper display of our magnificent timbers, or for the herbarium and carpological specimens which form such an essential feature in forest economy.

To have these specimens properly represented and classified, in order to be of some general public utility, a large room is necessary for a Museum of Economic Forestry. Such an exhibit would, I think, be highly advantageous for public educational purposes generally, in connection with the forest wealth of the Colony.

Under these circumstances I earnestly trust that the Government will see its way at a very early date to provide the department with such accommodation as will meet its requirements.

Under Section III of last year's report I proposed a scheme for the establishment of a School of Forestry, Museum, and Arboretum, but I regret to say that nothing has yet been done towards the formation of this very desirable establishment.

## SECTION XII.

## THE ILLUSTRATED WORK OF THE FOREST FLORA OF NEW SOUTH WALES.

It was intended that the first part of this work should be published about the middle of the year, but owing to unforeseen difficulties that was not done.

Arrangements however, have recently been made whereby the work will now be issued at an early date, in consequence of a special artist, lithographer, and printer having been engaged to carry out the coloured illustrations, which will form its special feature.

It is intended to print 4,000 copies of each part of five plates, with corresponding letterpress.

The work is intended to illustrate and describe in a popular manner the forest trees and shrubs of New South Wales.

All the Illustrations will be life size, in colour, and will show representations of the barks, fruits, leaves, and flowers of the various species dealt with.

The letterpress will embrace a description of the origin of the vernacular and technical name of plants, their geographical distribution, and popular and botanical description, with a full account of their uses.

The work will be published as far as possible in quarterly parts, at 5s. each to subscribers, and 7s. 6d. each to non-subscribers; postage extra in each case. The liabilities of subscribers is limited to four consecutive parts prepaid.

In the publication of this important work I am being ably assisted by Mr. J. H. Maiden, F.L.S., Curator of the Technological Museum, and who is also Consulting Botanist to the Department.

## SECTION XIII.

## THE CHICAGO EXHIBITION OF 1893.

THE Government being desirous that the timbers of New South Wales should form an important feature in the New South Wales Court at the World's Columbian Exposition to be opened on 1st May, 1893, the Director-General of Forests was appointed as one of the Commission in connection with the general representation of the Colony thereat.

The timbers of the United States and Canadian territories, it is well known, are composed chiefly of those which are called "light-wooded," and although they are very valuable in their own way, are still in many instances unsuited for general heavy constructive works of a certain class in these Colonies.

The principal valuable feature in the timbers of America is lightness in weight, and the ease with which they can be manipulated in general constructive purposes. Such timbers are naturally much in demand for constructive works of various kinds, but as a rule their durability compares very unfavourably with the hard-wooded timbers of Australia.

At least 80 per cent. of the timbers of New South Wales, or perhaps it may be said of Australia generally, are hard woods of great density and strength, and it is not too much to say that in no part of the world are there timbers more suited for the construction of railways, harbours, jetties, and for mining purposes generally.

The life of the Australian timbers, whether exposed to the effects of being continually immersed in water, or in underground workings, certainly far surpass that of the timber from any other part of the world. Their density is such that their proof against dry-rot and attacks of insects is remarkable.

That such timber as ours will in course of time assert its superiority for heavy constructive purposes in the commercial world there can be no doubt, and in order that their special and varied qualities may be practically brought before the engineering talent of the world, it is the intention of the department to have the timbers fully represented.

It is at the same time worthy of note that many of our coastal soft woods are valuable for household and general decorative purposes. Although to a large extent not widely known even amongst ourselves, yet there are many of our timbers which as regards texture, grain, durability, and suitability for general cabinet-making purposes cannot be excelled.

In order to show our various timbers in a manner illustrative of their usefulness, it is intended they shall be well represented at the Chicago Exhibition. It being recognised that this is a very important matter, all the efforts of the department are being made to obtain exhibits, and there is every probability that these will form an instructive and important adjunct to the New South Wales Court at the "World's Fair" of 1893.

## SECTION XIV.

## THE COMMERCIAL IMPORTANCE OF FOREST PRODUCTS.

It is estimated that about 10 per cent. of the earth's landed area is covered with forest growth. In Australasia it has been computed that there is some 94,000,000 acres of forest land. In New South Wales we may estimate our forest area at 21,000,000 acres, of which we have 5,600,653 acres under Reserves.

A.—The Forests of some of the Chief Commercial Nations of the World have been summed up approximately as under.

	Millions of Acres.	Product—millions Cubic Feet.	Cubic feet per Acre.	Value of Produce.
Russia .....	426	6,200	15	£ 40,800,000
United States .....	466	9,300	20	112,000,000
Brazil .....	135	150	1	1,000,000
Canada .....	64	650	5	8,200,000
Sweden and Norway .....	61	900	15	12,000,000
Austria-Hungary .....	46	2,000	45	18,000,000
Gran Chaco .....	37	40	1	500,000
Germany .....	32	1,300	40	13,000,000
France .....	21	1,100	50	10,000,000
Italy .....	10	440	44	4,000,000
Algeria .....	6	120	20	1,000,000
Switzerland .....	2	140	70	1,200,000
United Kingdom .....	2	120	60	2,000,000
Total .....	1,308	22,460	17	£223,700,000

From the above we see what a very valuable commodity merchantable timber is in the older and settled states of the civilised world.

B.—Taking the total weight of sea-borne Merchandise composing the world's commerce of twenty-seven years, down to 1887, and the approximate value, the following tables place the timber trade among the most important articles of commercial exchange.

	Millions of Tons.	Value—Millions.	Ratio of	
			Weight.	Value.
Coal .....	830	410	36.0	1.3
Iron .....	170	480	7.4	1.6
Timber .....	220	660	9.5	2.1
Grain .....	180	1,050	7.8	3.4
Sugar .....	55	1,130	2.4	3.7
Petroleum .....	32	180	1.4	0.6
Cotton .....	27	180	1.2	0.6
Salt .....	30	18	1.3	.....
Wine .....	23	510	1.0	1.6
Coffee .....	11	840	0.5	2.7
Meat .....	10	560	0.4	1.8
Sundries .....	712	24,982	31.1	80.6
Total .....	2,300	31,000	100.0	100.0

C.—Approximate weight—tons, merchandise, sea-borne yearly.

	1840.	1861-70.	1871-80.	1880.	1887
Coal .....	1,400,000	20,300,000	30,900,000	39,200,000	49,300,000
Iron .....	1,100,000	4,200,000	6,000,000	8,500,000	11,800,000
Timber .....	4,100,000	6,300,000	8,000,000	9,000,000	12,100,000
Grain .....	1,900,000	4,400,000	11,200,000	16,800,000	19,200,000
Sugar .....	700,000	1,200,000	1,800,000	2,900,000	4,400,000
Petroleum .....	.....	240,000	1,400,000	2,100,000	2,700,000
Cotton .....	400,000	600,000	1,000,000	1,200,000	1,800,000
Wool .....	20,000	100,000	250,000	300,000	350,000
Jute .....	.....	100,000	300,000	400,000	600,000
Meat .....	.....	100,000	400,000	650,000	700,000
Coffee .....	200,000	300,000	400,000	500,000	600,000
Wine .....	200,000	500,000	900,000	1,200,000	1,400,000
Salt .....	800,000	1,000,000	1,200,000	1,300,000	1,300,000
Sundries .....	9,180,000	16,660,000	24,250,000	28,950,000	33,750,000
Total .....	20,000,000	56,000,000	88,000,000	113,000,000	140,000,000

D.—Timber ranks among the principal articles of Merchandise imported by Great Britain, and we have approximate quantities given of such retained for Home consumption.

Year.	Tons.
1854 .....	2,650,000
1860 .....	2,850,000
1870 .....	4,500,000
1880 .....	6,400,000
1889 .....	7,870,000

E.—

## E.—General Remarks.

In Great Britain and Ireland private land-holders are not slow to realise the growing value of timber. In the county of Wicklow, Ireland, Lord Powerscourt has a plantation of 3,000,000 trees on an area of 1,000 acres. He commenced operations some twenty-three years ago, his outlay having averaged £3 6s. per acre. He calculates that in another twenty-three years the plantation will be worth £50 per acre. The Earl of Seafield, at Inverness, Scotland, has 60,000,000 trees planted out on 40,000 acres; and the Duke of Athol at Dunkeld, has 28,000,000 trees put out on 16,600 acres. The total area under forest in Great Britain and Ireland may be computed at 2,790,000 acres, or about 4 per cent. of the total area. The value of timber importations by Great Britain in 1890 amounted to £17,130,000.

In France, since 1848, the area of forest land has been increased by some 7,000,000 acres, and no less than 9,000,000 acres of waste lands have been planted with trees. France has about 16 per cent. of her total area under forest, such forest area being 20,750,000 acres. The most interesting feature to us, however, in connection with French arboriculture is the extensive planting in Algeria, where, at Lake Fettara, 12,700,000 Australian gum-trees have been planted on an area of 130,000 acres.

In Germany the forest area has been reduced since 1859 by 2,000,000 acres. Nevertheless, she has yet 34,350,000 acres under forest, or 26 per cent. of the whole area. In European Russia also, owing to the immense consumption of timber, some 100,000,000 acres of forest land has been depleted since 1872. But there are yet 527,427,000 acres under forest, or 42 per cent. of the whole area of the country.

The area under forests in the United States of America may be estimated at 380,000,000 acres, equal to about 17 per cent. of the total area. In the United States, arboriculture has not been neglected, and various States have adopted measures to promote the replenishing of denuded forests, Arbor-day being an important epoch in each year. "Mulhall" gives the following particulars of the timber trade of the States for 1880:—Saw-mills, 25,700; hands employed, 141,600; wages, £6,700,000 yearly; output, 18,000,000 linear feet of boards, valued at £48,000,000 sterling.

Of timber exports from San Francisco, from July, 1887, to November, 1890, 37 per cent. of the total quantity exported was for Australia.

## F.—In reference to Colonial and other British Settlements, the area of Woodland may be stated as follows:—

	Australasia.						Acres.
New South Wales	...	...	...	...	...	...	21,000,000
Victoria	...	...	...	...	...	...	12,000,000
South Australia	...	...	...	...	...	...	1,984,000
Queensland	...	...	...	...	...	...	25,000,000
West Australia	...	...	...	...	...	...	19,000,000
Tasmania	...	...	...	...	...	...	4,000,000
New Zealand	...	...	...	...	...	...	12,000,000
Total	...	...	...	...	...	...	<u>94,984,000</u>

If we take about half the above area for useful timber, Australasia has an area of 47,492,000 acres.

	Other British Possessions.						Acres.
India and Lower Burmah	...	...	...	...	...	...	144,000,000
Canada	...	...	...	...	...	...	900,000,000
Cape Colony	...	...	...	...	...	...	10,800,000
Total	...	...	...	...	...	...	<u>1,054,800,000</u>

## G.—Mr. T. A. Coghlan, in the Statistical Register for 1890, supplies the following information upon the number of saw-mills, &amp;c., in New South Wales:—

Saw-mills—Number of hands employed, quantity of timber sawn, power and value of plant, 1881–90.

Year.	Number of.	Hands Employed.	Quantity of Timber Sawn, &c.	Plant or Machinery.	
				Power.	Value.
			1,000 super. ft.	Horse-power.	£
1881	280	2,382	.....	.....	.....
1882	334	3,013	.....	.....	.....
1883	370	3,318	.....	.....	.....
1884	376	3,477	.....	.....	.....

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

1893.

[1s.]

946—A

[1,465 copies—Approximate Cost of Printing (labour and material), £12 19s. 7d.]

The Under Secretary for Mines and Agriculture to The Minister for Mines and  
Agriculture.

Sir, Department of Mines and Agriculture, Sydney, 24 April, 1893.

I have the honor to submit the Report of the Director-General of Forests for the year 1892.

The work of the Department comprised under the head of Forestry operations during the year was very satisfactory; but as regards receipts and expenditure the result has not been so satisfactory, the excess of expenditure over receipts being greater in 1892 than in any previous year. From 1878 to 1884, inclusive, the receipts exceeded the expenditure; since then, with the exception of 1888, each year has shown an excess of expenditure. It must, however, be remembered that prior to 1885 nothing was done in the way of planting, thinning, and otherwise improving our timber supply; nor was any expenditure incurred in connection with the eradication of prickly-pear.

The area of land reserved for forest purposes was reduced last year by about 88,000 acres, and I am inclined to think the area might with advantage be still further reduced. To this end steps are now being taken to ascertain to what extent the several reserves can be further curtailed without detracting from their value for the purposes of timber supply.

It is gratifying that such good progress has been made in the Botanical Branch of the Department.

The red cedar plants put out at the Otford plantation were obtained from the Gosford Nursery, and were two years old and upwards. Those at Smith's Creek were transplanted from an adjacent spot. Those planted in the Glen Innes district were obtained from Reserves 11,453 and 6,264.

It is much to be regretted that the Don Dorrigo Reserve should be cancelled for the purpose of selling the land, as about 23,000 acres cedar seedlings and root-cuttings were transplanted in this reserve, and seed-beds were made. Since then the trees have been thinned and the undergrowth cleared away. These works were commenced in 1884, and the total expenditure thereon amounts to £3,025, and the reserve is, I understand, specially adapted to the growth of cedar. In the event of land within the reserve being sold, care will, I am informed, be taken not to sell any portion that has been improved.

The thinning operations have greatly improved the red gum forests on the Murray; and it is much to be regretted that this work was not commenced when first recommended by Mr. Inspecting-Forester Manton. Had this been done, and the work carried on continuously, the value of these reserves would have by this time been immensely increased; but in former years it was most difficult to obtain funds for such a purpose.

Some 5,000 plants were put in the Wilcannia plantation. Of these, 3,000 came from the Gosford Nursery and the remainder from the Forest Department in South Australia. Of those from Gosford, about 25 per cent. are reported to be doing well. Those from South Australia, unfortunately, failed.

The question of creating plantations of exotic trees for timber supply on reserves not likely to be cancelled for sale, and so situated that the transit of the timber to market will be as free as possible from difficulties, is receiving consideration.

The question of planting timber-trees of special value on our Public Watering Places in sparsely timbered localities is engaging our attention, the object being to secure supervision without extra cost, and to provide a supply of useful timber where most needed.

I have, &c.,  
HARRIE WOOD,  
Under Secretary.

# ANNUAL PROGRESS REPORT of State Forest Administration in New South Wales, for the Year 1892.

By J. EDNIE-BROWN, J.P., F.L.S., F.R.H.S., DIRECTOR-GENERAL OF FORESTS.

## INTRODUCTION.

IN consequence of Ministerial instructions issued to all the Departments of the State to condense Annual Reports as much as possible, with a view to economy, the contents of this Report simply contain a bare record of the operations carried out during the year, together with brief references to the general position of the Department at its close.

Taken as a whole the work of the Department during the year has been satisfactory, especially as regards the continuance of previous operations. A certain amount of progress has also been made, but I regret to say that this has not been so extensive as the importance of the subject demands. The cause of this is due, in a large extent, to general indifference, and, perhaps, chiefly to the depressed condition of things generally in the Colony.

That the affairs of the Department will, however, eventually receive that support which they deserve there can be no doubt.

I am pleased to record that during the year the offices of the Department were changed to much more commodious ones in Macquarie-street. In the Hall of these offices a museum of woods, veneers, barks, and herbarium specimens of our principal timber-trees has been started, and I am glad to say that these are, as a whole, exercising some considerable interest in regard to the educational features of our forest wealth. The museum will be extended from time to time as specimens are obtained.

I much regret to say that no further progress has yet been made with regard to the introduction of a Forest Bill before Parliament. Until this be done, and the proposed Act becomes law, I fear that little or no properly organised reforms can be carried out with regard to the management of our valuable forests. As pointed out in previous reports the memorandum of this Bill has now been framed for over two years.

## SECTION I.

### STATEMENT OF RESULT OF FORESTRY OPERATIONS DURING THE YEAR.

FOLLOWING is a brief statement of the planting and thinning operations of the Department, season 1892:—

Trees planted at Otford, county Cumberland—		
Quercus robur (English oak) ... ..	400	
Fraxinus americana (American ash) ... ..	330	
Ulmus campestris (English elm) ... ..	800	
Populus fastigiata (Lombardy poplar) ... ..	200	
Catalpa speciosa (American catalpa) ... ..	1,150	
Cedrela australis (red cedar) ... ..	1,500	
		4,380
Trees planted at Smith's Creek, county Durham—		
Cedrela australis (red cedar) ... ..	350	
Trees planted Glen Innes District—		
Forest Reserve No. 1,433, county Gough—		
Catalpa speciosa (American catalpa) ... ..	300	
Quercus robur (English oak) ... ..	200	
Forest Reserve No. 11,453, county Drake—		
Cedrela australis (red cedar) ... ..	300	
		800
Trees planted at Wyong Plantation—		
Quercus robur (English oak) ... ..	200	
Melia composita (white cedar) ... ..	100	
Fraxinus americana (American ash) ... ..	1,000	
Catalpa speciosa (American catalpa) ... ..	2,500	
Populus fastigiata (Lombardy poplar) ... ..	2,200	
Eucalyptus corynocalyx (sugar gum) ... ..	200	
Eucalyptus, in varieties ... ..	8,000	
		14,200
Trees planted at Wilcannia—		
Eucalyptus corynocalyx (sugar gum) ... ..	4,000	
Eucalyptus maculata (spotted gum) ... ..	500	
Casuarina torulosa (forest oak) ... ..	200	
Hungarian acacia (acacia) ... ..	50	
Gleditschia horrida (honey locust) ... ..	256	
		5,006
Trees planted at Mullet Creek—		
Avicennia officinalis (mangrove seedlings) ... ..	1,402	
"    "    (mangrove) ... ..	2,000	
		3,402
		Trees

## Trees planted at Hogan's Brush—

Populus fastigiata (Lombardy poplar)	...	...	...	...	...	12
Sterculia diversifolia (kurrajong)	...	...	...	...	...	6
Melia composita (white cedar)	...	...	...	...	...	6
Plantanus acerifolia (maple-leaved plane)	...	...	...	...	...	6
						30
Total number of trees planted on reserves and plantations in 1892	...	...	...	...	...	28,168
Trees distributed to schools and public bodies, season 1892	...	...	...	...	...	130,000
						158,168
Thinning red gum forests on the Murray—Balance under-estimated last year (say)	...	...	...	...	...	600,000
						758,168

Of the trees planted and thinned something like 95 per cent. have survived, and are doing well as a whole.

In addition to the above work of propagating and planting trees, the general supervision of reserves and Crown timbered lands, the checking of unlicensed cutting of timber, seeing to the due payment of royalties, inspecting prickly-pear leases and lands, and attending to ringbarking cases, have all been seen to by the field staff of the Department.

## SECTION II.

## ESTIMATE OF IMPROVEMENTS AND STOCK OF THE DEPARTMENT.

THE following is a rough estimate of the value of the stock of the Department and the permanent improvements effected by it up to date:—

Estimated value of trees planted and thinned	...	...	...	£133,983	0	0
Estimated total value of trees and shrubs distributed to schools and corporations	...	...	...	10,000	0	0
Estimated value of improved properties, such as formation of Gosford State Nursery; fencing, ploughing, clearing, thinning at Wyong, Wilcannia, Wollongong, and other plantations	...	...	...	3,600	0	0
Value of stock of trees and shrubs in the Gosford Nursery	...	...	...	22,000	0	0
				£169,583	0	0
Total estimated value of improvements and stock	...	...	...	£169,583	0	0

## SECTION III.

## COMPARATIVE STATEMENT OF EXPENDITURE AND ASSETS OF FOREST DEPARTMENT.

IN order to show clearly the present financial position of the Department, I beg to draw special attention to the following:—

Estimated value of the improvements and stock belonging to the Department as per last section	...	...	...	£169,583	0	0
Revenue received from timber, &c., since the organisation of the Department in 1877, exclusive of 1892	...	...	...	197,468	0	0
				£367,051	0	0
Deduct expenditure of the Department up to 1st January, 1892	...	...	...	211,770	0	0
				£155,281	0	0
Showing a clear credit balance in favour of the Department of...	...	...	...	£155,281	0	0

## SECTION IV.

## REVENUE AND EXPENDITURE OF THE DEPARTMENT.

FOLLOWING are tabulated statements of the Revenue and Expenditure of the Department:—

## A.—TOTALS of REVENUE and EXPENDITURE since 1877.

Year.	Receipts.			Expenditure.		
	£	s.	d.	£	s.	d.
1877	4,324	10	3	4,579	7	6
1878	5,934	14	0	5,592	12	6
1879	7,945	18	2	5,920	2	11
1880	8,990	4	3	6,635	10	0
1881	10,812	13	8	7,093	4	11
1882	13,046	18	10	12,591	19	5
1883	16,685	19	7	15,389	15	11
1884	18,250	5	8	17,480	14	5
1885	13,863	2	8	18,145	17	6
1886	14,606	12	3	17,932	15	4
1887	12,249	18	9	18,038	0	2
1888	19,727	18	5	19,505	1	5
1889	17,137	1	11	18,211	12	1
1890	15,436	15	11	20,779	3	10
1891	18,455	9	7	23,875	0	3
1892	16,176	8	11	24,634	15	9
Total	£213,644	12	10	£236,405	13	11

The fluctuations in receipts are due to the fluctuations of the market. For instance, during last year our Red Gum receipts on the Murray suffered from the low state of the Melbourne Market.

B.—

## B.—STATEMENT of REVENUE during the year 1892.

		REVENUE.					
		£	s.	d.	£	s.	d.
State Forests and Reserves under class A, B, and C—							
1.	State Forest block licenses	81	0	0			
2.	Permit licenses, class C	900	7	0			
3.	Timber-cutters' licenses, classes A and B (without royalty)	1,583	5	0

## SECTION V.

## TOTAL NUMBER AND CLASS OF FOREST RESERVES.

As at present constituted under the Crown Lands Act, the following is a return showing the total number of each class and area of the timber reserves in the Colony:—

Reserves in Class A, regulations 7 and 8, including nineteen reserves partly in Class C.	Number of reserves.	Area in acres.
...	704	3,316,766 $\frac{1}{4}$
Reserves in Class B, regulations 7 and 8	16	72,405 $\frac{3}{8}$
Reserves in Class C, regulations 9 and 10	346	2,301,386 $\frac{1}{2}$
State Forest	1	1,831 $\frac{3}{4}$
Reserves for planting (101st section C. L. Act of 1884)	10	1,644 $\frac{3}{4}$

Total number of reserves from sale, after making deductions for those in two classes	1,058	.....
Total estimated area reserved	.....	5,694,034 $\frac{1}{2}$
		5,694,034 $\frac{1}{2}$

NOTE.—Eighteen reserves were cancelled, their area being 39,867 $\frac{1}{2}$  acres; and thirty-six reserves were reduced by 48,079 $\frac{1}{2}$  acres, thus making a total revocation of some 87,946 $\frac{1}{2}$  acres, which were required for settlement.

## SECTION VI.

## BOTANICAL WORK OF THE DEPARTMENT.

In this branch of the Department the year has been marked by a considerable amount of general forestry progress, and addition to the herbarium, carpological, and timber collections. Although we are still somewhat confined for want of room to show them off, the removal from Phillip-street to our new premises has created a very great improvement.

Mr. Maiden, the Consulting Botanist, states that most of the Foresters are now taking much interest in the discrimination of the trees in their respective districts, and, consequently, many points of interest have been elucidated in dealing with the specimens sent in by them. List of the aboriginal and other local names of trees in their respective districts were furnished by Mr. Forester Allan and Mr. Forester Kidston. They are very interesting and will be of considerable use when dealing with the descriptive matter in the work upon "The Forest Flora" of the Colony. Of the number and variety of the

the specimens forwarded, the Consulting Botanist speaks most highly of the collection made by Mr. Forester Brown, of Port Macquarie. Special reference is also made to the ample notes made by Messrs. Foresters Rudder, Pope, and Rotton.

Personally, Mr. Maiden had done a large amount of good work for the Department by botanical collections, analysis of barks, gum, resin, timber, and eucalyptus oils, besides assisting in the classification and arrangement of the large exhibit of the Department which has been sent to the Chicago Exhibition, and seeing generally to the branch of the Department under his charge.

From Mr. Maiden's return it appears as follows:—

That 443 packages of seeds were received during the year. These were chiefly of indigenous trees from Foresters.

Some valuable seeds were also obtained from the Deputy-Conservator of Forests, Octacamund, India; the Director of the Botanic Gardens, Jamaica; the Director of the Bureau of Forests, Tokio, Japan; and from W. S. Lyon, Esq., of the Forestry Department, California.

About 148 packages of seeds of various kinds were sent out to various parties as exchanges and for experimental purposes.

A large number of timber and bark specimens were also received and given away during the year.

Altogether, I am glad to report that this branch of the Department has done good and instructive work during the year.

## SECTION VII.

### REPORT OF SURVEY AND PLAN BRANCH.

THE plans in official use are lithographic copies of maps compiled by the Lands Department.

They consist of county maps on which all forest reserves are charted as soon as the *Gazette* notification is received, at the same time a lithographic copy of the parish map or a tracing showing the locality of the reserve and its surrounding features is forwarded to the Forester in whose district the reserve may be situated.

These county maps, being on a scale of 2 miles to an inch, are found to be of too small a scale to locate any operations which it may be proposed to carry out; therefore a system of charting the reserves on parish maps, on a scale of 40 chains to an inch, is gradually being introduced, and will be found to be of great convenience to the Department. As these parish maps will be obtained through the Lands Department no extra expenditure will be incurred.

When special plantations are formed in the country districts plans on a larger scale are prepared, in order to show the exact position and the number of trees planted from year to year. These plans are kept as office records, and for reference as required.

As the reserve boundaries are in many cases formed by the surveyed boundaries of selected or alienated portions, and in others by the natural features of the country, it has not been found necessary as yet to have them marked by survey, except in a few special cases.

The only surveying at present being done by this Department is where it is found necessary to locate belts of valuable timber, redefine boundaries of portions adjoining reserves, verify the position of doubtful cases of illegal cutting, &c.

Such cases as the above are performed by the officer in charge of the plans, who is a qualified surveyor.

## SECTION VIII.

### THE PLANTING AND THINNING OPERATIONS OF THE YEAR.

#### A.—*Red Cedar.*

1,500 red cedar plants were put out on a small reserve at Otford during August. The locality being a natural habitat of the red cedar species in former years, the young plants have taken kindly to the soil and are progressing favourably. Red cedar plants were also put out at Smith's Creek, and in reserves in the Glen Innes district. On Don Dorrigo Reserve no work has been carried out in the way of planting or thinning during the year. As mentioned in the Annual Report for 1890 planting was begun on this reserve as far back as 1884, and in 1890-91 over £800 was expended by this Department in thinning and planting.

The claims for land for settlement are such that it is contemplated by the Lands Department to cancel a large portion of this the most valuable cedar-growing reserve now remaining. In view of the fact that so much has been attempted in the way of timber conservation and propagation on this area, it is advisable that some action be taken by the Government to permanently allot some reasonably small portion of this reserve as a plantation area, otherwise, to all appearance, it is evident it is only a matter of time that the whole of this valuable reserved timber must pass into other hands.

#### B.—*The Red gum Forests of the Murray.*

Thinning operations on the red gum forests were commenced in April, 1891, and discontinued in June of the same year; the work being recommenced in November of the same year and continued up to April of 1892, £1,399 14s. 1d. being the amount expended, while the area operated upon is approximately put at about 7,500 acres. The work was carried out on the Moama Forest Reserve, in the county of Cadell, and on the adjoining Koondrook Forest Reserve, in the county of Wakool.

The approximate value of the red gum forests on the Murray is a difficult sum to arrive at, there being little or no available data as to the rate of growth of the various species of our hardwood trees.

The forest reserves within the counties of Hume, Denison, Townsend, Cadell, and Wakool comprise an area of about 256,500 acres, and allowing two trees to the acre on this area which are fit for saw-mill purposes, and these being worth 15s. each, we have a marketable asset of £256,500; and if all the trees that are matured, but not used for saw-mill purposes, could be utilised for railway sleepers and street blocks, then at least four times the amount previously mentioned would be obtained.

Since

Since a fair amount of settlement has been brought about resulting in large numbers of stock depasturing and eating down the grass and herbage, there have been fewer bush fires devastating the Murray forests; and while the timber-cutting, which has been an industry for the past thirty years, has reduced the quantity of matured timber—yet these forests to-day are more prolific in growth, and contain sounder young timber than they did formerly, owing to the less frequent destructive fires. The enormous growth of young healthy saplings has, however, its disadvantages, as they are so close together that they interfere with the growth of each other, and, therefore, judicious thinning is a necessity.

On the 7,500 acres already thinned, the Inspecting Forester reckons it would not be too much to reckon that fully 250 to the acre should arrive at maturity in ten, fifteen, twenty, and twenty-five years from now, maturing in rotation according to their present stages of growth, such computation giving at the low estimate of £1 per tree the sum of £1,875,000, and as the process of spontaneous reproduction is going on the supply can be easily kept up for all time under a judicious system of thinning.

There are something like 50,000 acres covered with a dense growth of young trees, which will, in all probability, never be marketable unless thinned.

If the growth of the young trees be assisted by proper treatment, then we may fairly expect a magnificent young forest in a few years, leaving 300 to 350 of the best trees to the acre, or 12,500,000 on the 50,000 acres, which, in from ten to twenty-five years, should be worth £1 each.

The balance of the Murray River Forest Reserves are not so thickly grown with young trees, but there is a very large number of trees upon them which might be estimated at ten or twelve million in all stages of growth; but it would be impossible to approximately estimate their value at the present time.

#### C.—Otford Plantation.

On a small forest reserve situated at Otford, on the Illawarra Railway Line, about 30 miles from Sydney, some 12 acres in a sheltered corner have been fenced in and planted with various timber-producing trees, indigenous and exotic.

The site chosen was at one time the natural home of the red cedar (*cedrela australis*), and upon this some 1,500 young cedar plants were put in.

The soil on the lower-lying portions of the area is a rich black loam, in which the plants have shown a wonderful vitality.

The exotic trees planted were English oak, ash, elm, and American catalpa, the total number of trees planted being 4,380.

The plants were put in among the natural bush and scrub, the very dense undergrowth only being cleared from around the sites of the plants.

Judging by the fair progress made over the four months ending December 31st, 1892, this plantation, in the course of a few years, will be a very interesting example of what can be done in tree (indigenous and exotic) planting in the moist climate of the coastal region.

#### D.—Wyong Plantation.

On this plantation some additional work has been done, some 14,200 plants having been put in, consisting of English oak, white cedar, American ash, American catalpa, Lombardy poplar, sugar gum, and eucalypts in varieties.

This plantation is unfortunately situated, in so far as it is subject to more or less inundation in a severely wet season; and, should the present crop of young plants meet with any disaster therefrom, it will be time to consider whether it is not advisable to throw up this area as a plantation, and sell or lease the property, if possible, for some other purpose.

#### E.—Hogan's Brush Plantation.

This plantation has now been in existence some five years, and the trees planted are coming well forward. Only some thirty young trees were planted this year to fill up any failures that had taken place.

#### F.—Wilcannia Plantation.

The Wilcannia plantation area is situated on the town common, about 2 miles from the township.

The plantation is 50 acres in extent, and has been fenced with a substantial fence, netted with rabbit-proof wire of a small mesh.

Five thousand plants were put in, of which some 3,000 were supplied from the Gosford Forest Nursery. They consisted of sugar gums, spotted gum, forest oak, and accacias of sorts.

The planting operations were effected in October, and reports to hand at the end of December show that a good majority of the plants from Gosford have survived the extreme heat of the summer so far.

Apart altogether from the success or otherwise of this plantation in the future, the action of the Minister for Mines, enabling the Forest Department to proceed with the work, has caused a healthy inquiry into the utility of tree-planting in the district, and no doubt some activity will be displayed in the future by private persons anxious to conserve or grow timber-trees, and, at the same time, beautify their homesteads.

#### G.—Broken Hill Plantation.

Various small areas have been allotted by the Department of Lands as available for experimental planting at Broken Hill. Should the necessary amount of money be voted by Parliament, some action will probably be taken in regard to tree-planting in the vicinity of the Barrier township, if the areas reserved are suitable and the seasons favourable.

#### H.—Wentworth Plantation.

The fact that an experimental plantation has been commenced at Wilcannia no doubt caused the attention of the authorities at Wentworth to be brought to bear upon the subject of timber production, as a request has been received from the municipal authorities of Wentworth for an experimental plantation area to be formed at that place. The carrying out of such work, however desirable, will mainly depend upon the amount of money available for planting purposes.

*I.—Wattle Conservation.*

Wattle forests and plantations have received a share of attention during the year.

At Tomaga £139 16s. 3d. has been expended in thinning the wattle, and no stripping has yet been done.

At Otford, apart from the expenditure incurred in fencing, planting, and thinning, there was an expenditure of £20 1s. 2d., against which £29 19s. 4d. was obtained for wattle-bark stripped.

At Bargo plantation £27 8s. 10d. was expended thinning the wattles, £20 9s. 10d. was expended in stripping, and £79 6s. 8d. were the receipts from wattle-bark obtained and sold.

*J.—The Planting in Glen Innes District.*

The young cedars planted on Forest Reserve 6,264, in the County of Drake, in 1891 are reported by Forester Deverell to be doing remarkably well; but those planted in June and July of this year on the reserve, owing to the lack of rain, have not progressed so well, about half only having survived.

On Reserve 1,433, County of Gough, American catalpa and English oaks were planted in September last. Of the 300 *catalpa speciosa*, Forester Deverell reports that they have made a wonderful growth, and fully three-quarters of those planted are doing remarkably well. The English oaks have not been so successful, about half only having struck. They appear to be healthy, but of slower growth than the catalpa.

*K.—Planting in the County of Durham.*

Forester Smith reports that the red cedar trees planted by him in 1891 on Mount Royal Timber Reserve have not latterly done so well as might have been expected. They have had to endure so very hot and dry weather, and out of 1,500 trees planted there are now only about 1,000 growing, which, however, are making good progress. The young cedars planted on Jock Smith's Creek, Paterson River, Forest Reserve 202 and 3,496, during the year, are reported to be growing splendidly.

*L.—Planting on Crawney Forest Reserve.*

Forester Powell reports that the trees planted at Crawney Forest Reserve have made a good start, there having been a splendid growing season.

## SECTION IX.

## THE INTRODUCTION OF EXOTIC TREES.

THE necessity for the introduction of exotic trees is not being lost sight of by the Department.

During the year some 9,000 exotic trees were put out upon reserves and plantations, apart altogether from the quantity of exotic trees distributed to public schools and corporate bodies.

These young trees consisted chiefly of English oak, elm, ash, American catalpa, poplar, &c.

If possible, a more extensive planting of similar trees will be undertaken upon reserves and plantation areas during 1893, the necessary plants having been reared at the State Forest Nursery, Gosford.

## SECTION X.

## CHICAGO EXHIBITION.

ONE hundred specimens of timber in the shape of slabs and flitches of various descriptions and sizes were prepared for the New South Wales Commission of the Chicago Exhibition under the supervision of the officers of the Department.

A number of miscellaneous exhibits of New South Wales timber was also prepared, consisting of red gum railway sleepers, sawn and hewn, the material having been obtained from the Murray River Forest Reserves. A red gum railway sleeper, which had been in use for some seventeen years on the Deniliquin-Moama Railway, was included among these exhibits.

Hewn railway sleepers of ironbark timber, obtained from Cooranbong, were shown as samples of timber in use on the New South Wales Railways; together with a sample railway sleeper of ironbark timber which had been originally obtained from Bargo Brush, about 50 miles from Sydney, and was laid on the railway line at Moss Vale in 1866; taken up finally, December, 1891; thus having been in use twenty-five years.

Dray-wheel naves, shafts, spokes, and fellows were prepared of ironbark, spotted gum, lancewood, yellow box, flooded gum, &c., bullock-yokes of Murrumbidgee oak, boat-knees of mangrove, honeysuckle, and tea-tree.

Black wattle (*Acacia decurrens*) chopped and ground of ordinary commercial quality was prepared; also bundles of shingles of forest oak, and gun-stocks of sycamore, black bean, forest oak, red bean, myall, blackwood, honeysuckle, and lightwood.

The Botanical Section received attention at the hands of Mr. J. H. Maiden, F.L.S., &c., Consulting Botanist to the Department. Over 100 herbarium specimens mounted on boards were prepared, illustrating some of the forest flora of New South Wales, as also specimens of seeds and seed vessels. Specimens of the bark of various indigenous trees were also prepared, being mounted on boards; the whole exhibit constituting an illustration of the timber, flora, and bark of the New South Wales forests.

With the valuable additions made to the timber exhibit by Mr. Alexander Kethel, on behalf of the Commissioners of New South Wales, and the beautiful suites of furniture manufactured of New South Wales woods, apart from exhibits contributed by private persons, this Colony is well represented in its timber products at the World's Fair, Chicago.

## SECTION XI.

## STATE FOREST NURSERY, GOSFORD.

At the State Forest Nursery, Gosford, the usual work of a Forest Nursery in the propagating of plants for the use of the Department has been carried out during the year, and young trees are being reared, and are obtainable in various stages of growth from seedlings upwards, grown in boxes, beds, pots, and bamboo tubes.

Further work has been carried out upon a portion of the State Forest Nursery area not previously utilised, resulting in about 9 acres being cleared and stumped, while about 5 acres of newly opened ground has been thoroughly trenched.

One hundred and twenty-five chains of additional drains have been made.

About 2,000 loads of alluvial soil have been carted on to the ground, and some 500 loads of gravel and stone laid down for walks and cart-ways within the property.

Some 235 yards of permanent hedges have been planted, and about 1½ acres have also been planted permanently with trees required for seed, cuttings, shade, shelter, and ornament.

Five hundred and twenty-seven young trees were planted on permanent borders.

The output from the Nursery has been some 24,000 trees and 200 shrubs planted on reserves and plantation areas, and 134,122 trees and shrubs were distributed to schools and public bodies in connection with Arbour Day.

The stock of plants in State Forest Nursery, Gosford, at December 31st, 1892, are given by the Superintendent as follows, and are valued at an overhead price of £22,000:—

Botanical Name.	Vernacular Name.	Total.	Botanical Name.	Vernacular Name.	Total.
<i>Araucaria excelsa</i> .....	Norfolk Island pine .....	5,918	<i>Laurus camphora</i> .....	Camphor laurel .....	3,600
<i>Araucaria Bidwillii</i> .....	Bunya bunya .....	1,100	<i>Melia composita</i> .....	White cedar .....	33,789
<i>Araucaria Cunninghamii</i> .....	Moreton Bay pine .....	300	<i>Morus alba</i> .....	White mulberry .....	8,362
<i>Acacia Baileyana</i> .....	Cootamundra wattle .....	70	<i>Morus var.</i> .....	Cuttings .....	1,101
<i>Acacia var.</i> .....	Acacia .....	300	<i>Olea, Europea</i> .....	Olive .....	35,038
<i>Achras australis</i> .....	Black apple .....	600	<i>Olea, Europea</i> .....	Olive seedlings .....	600
<i>Acer pseudo platanus</i> .....	Sycamore .....	792	<i>Pittosporum undulatum</i> .....	Mock orange .....	500
<i>Acer Negundo</i> .....	Canadian maple .....	244	<i>Pittosporum revolutum</i> .....	.....	300
<i>Ailanthus glandulosa</i> .....	Tree of Heaven .....	250	<i>Phoenix dactylifera</i> .....	Date palm .....	1,000
<i>Arunda donax variegata</i> .....	Variegated bamboo reed .....	8,000	<i>Photinia serrulata</i> .....	.....	1,000
<i>Arundo Donax</i> .....	Bamboo reed .....	100,000	<i>Pinus insignis</i> .....	Remarkable pine .....	110,082
<i>Bohenia purpurea</i> .....	.....	500	<i>Pinus pinea</i> .....	Stone pine .....	1,386
<i>Cupressus macrocarpa</i> .....	Large-fruited cypress .....	1,048	<i>Pinus picea</i> .....	Norway spruce .....	270
<i>Cupressus Goveniana</i> .....	Goven's cypress .....	100	<i>Pinus ponderosa</i> .....	Yellow pitch pine .....	1,120
<i>Cupressus Laesoniana</i> .....	Lawson's cypress .....	100	<i>Pinus canariensis</i> .....	Canary pine .....	400
<i>Cupressus, in varieties</i> .....	Cypress .....	5,350	<i>Pinus Thunbergi</i> .....	.....	2,000
<i>Cupressus sempervirens</i> .....	Upright cypress .....	9,963	<i>Pinus pinaster</i> .....	Cluster pine .....	23,729
<i>Cupressus pendula</i> .....	Drooping cypress .....	2,880	<i>Pinus halepensis</i> .....	Aleppo pine .....	17,778
<i>Cupressus orientalis</i> .....	Oriental cypress .....	2,016	<i>Pinus var.</i> .....	Mixed pine .....	5,150
<i>Cedrela australis</i> .....	Red cedar .....	7,076	<i>Podocarpus elata</i> .....	Colonial deal .....	2,200
<i>Cerasus lusitanica</i> .....	Portugal laurel .....	700	<i>Phormium tenax</i> .....	Flax .....	200
<i>Casuarina torulosa</i> .....	Forest oak .....	100	.....	Palms in varieties .....	2,300
<i>Cryptomeria japonica</i> .....	Japanese cedar .....	200	<i>Psidium cattleianum</i> .....	Guava .....	350
<i>Ceratopetalum gummiferum</i> .....	Christmas-bush .....	500	<i>Paniflora edulis</i> .....	Passion fruit .....	500
<i>Corynocarpus laevigatus</i> .....	Karaka of New Zealand .....	335	<i>Pyracantha Spc.</i> .....	.....	500
<i>Castanea vesca</i> .....	Spanish chestnut .....	352	<i>Pittosporum eugenioides</i> .....	Taraka of New Zealand .....	3,000
<i>Cornus serricea</i> .....	Dogwood .....	720	<i>Pittosporum crassifolium</i> .....	Karo .....	300
<i>Cassia candolleana</i> .....	Native laburnum .....	100	<i>Photinia serrulata</i> .....	.....	8,640
<i>Cassia spc.</i> .....	.....	200	<i>Poinsettia gilliesii</i> .....	.....	50
<i>Ceratonia saliqua</i> .....	Carob bean .....	2,880	<i>Poinsettia pulcherrima</i> .....	.....	50
<i>Cerataegus oscyacantha</i> .....	Hawthorn .....	666	<i>Populus nigra</i> .....	Black poplar .....	528
<i>Catalpa speciosa</i> .....	Catalpa .....	8,533	<i>Populus alba</i> .....	White poplar .....	730
<i>Doryphora sassafras</i> .....	Sassafras .....	100	<i>Populus fastignata</i> .....	Upright poplar .....	10,350
<i>Dalliergia latifolia</i> .....	.....	200	<i>Platanus orientalis</i> .....	Plane-tree .....	2,340
<i>Eucalyptus calophylla</i> .....	West Australian red gum .....	300	<i>Quercus robur</i> .....	English oak .....	24,312
<i>Eucalyptus leucoxydon</i> .....	White ironbark .....	200	<i>Raphiolepis intermediate</i> .....	Indian hawthorn .....	500
<i>Eucalyptus microcorys</i> .....	Tallow-wood .....	200	<i>Raphiolepis ovata</i> .....	Indian hawthorn .....	3,330
<i>Eucalyptus pilularis</i> .....	Blackbutt .....	240	<i>Raphiolepis indica</i> .....	Indian hawthorn .....	470
<i>Eucalyptus maculata</i> .....	Spotted gum .....	100	<i>Schinus molle</i> .....	Pepper-tree .....	10,450
<i>Eucalyptus, in varieties</i> .....	Mixed .....	8,428	<i>Salix Russelliana</i> .....	Basket willow .....	3,700
<i>Eucalyptus corynocalyx</i> .....	Sugar gum .....	55,400	<i>Salix species</i> .....	Willow .....	400
<i>Eucalyptus melliodora</i> .....	Yellow box .....	200	<i>Salix Babylonica</i> .....	Weeping willow .....	880
<i>Elaeocarpus holopteralus</i> .....	Blueberry ash .....	300	<i>Salix aurea</i> .....	Golden willow .....	4,882

## SECTION XII.

## ARBOR DAY.

THE Hon. T. M. Slattery, Minister for Mines and Agriculture, together with the Hon. F. B. Suttor, Minister for Education, having arranged that Arbor Day was to be held on the 19th August, 1892, every endeavour was made by the Department to facilitate the successful carrying out of the work of tree-planting on that day.

Plants were supplied to the schools from the Gosford State Forest Nursery.

Catalogues of trees ready for distribution were issued to schools and corporate bodies.

It is estimated that during the year something like 130,000 trees and shrubs were distributed by the Forest Department to schools and corporate bodies in connection with Arbor Day.

Should Arbor Day be continued in 1893 there will be something like 200,000 trees and shrubs available at the Forest Nursery for distribution.

## SECTION XIII.

THE Staff at the end of the year were as follows :—

Director-General	... J. Ednie-Brown.	Assistant Forester	... F. E. Brunker.
Secretary	... P. J. Holdsworth.	Acting Forester	... H. K. Cavaye (Lord Howe Island).
Consulting Botanist	... J. H. Maiden.	Do	... G. G. Benson.
Inspecting Forester	... J. M'Keown.	Overseer of Nursery	... J. M'Coig.
Do	... J. A. Manton.	Forester	... J. S. Taylor.
Relieving Officer	... H. V. Jackson.	Do	... G. R. Brown.
Chief Clerk	... W. F. Piper.	Do	... J. G. Condell.
First Clerk	... J. S. Cheesbrough.	Do	... E. J. Deverell.
Accountant	... W. C. Hinwood.	Do	... J. Guilfoyle.
Clerk of Records	... G. W. Whatmore.	Do	... T. H. B. M'Gee.
Clerk	... J. R. Bell.	Do	... S. Payten.
Do	... T. F. C. Binny.	Do	... H. W. Powell.
Do	... J. E. Davies.	Do	... H. O. Rotton.
Draftsman	... O. Dimelow.	Do	... R. L. Siddons.
Clerk	... J. A. Quinlan.	Do	... O. Wilshire.
Do	... A. S. Walker.	Do	... E. Cobcroft.
Do	... J. D. Smith.	Do	... J. H. Smith.
Do	... E. E. O'Connor.	Do	... W. Macdonald.
Forester	... J. S. Allan.	Do	... W. F. Crowley.
Do	... F. P. Huxham.	Do	... J. W. Chanter.
Do	... J. Martin.	Assistant Forester	... J. G. Postlethwaite.
Do	... W. Mecham.	Do	... W. Byron.
Do	... T. Kidston.	Do	... W. Coulter.
Do	... R. Stevenson.	Cadet	... P. Holdsworth, jun.
Do	... A. E. Stopford.	Do	... G. Macfarland.
Do	... A. Rudder.	Messenger	... J. J. Watson.
Do	... C. Marriott.	Do	... J. Kennerk.
Do	... W. P. Pope.	Office-keeper	... A. O'Loughlin.
Do	... Edward Kingsford.		
Assistant Forester	... G. King.		

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**FORESTRY DEPARTMENT.**

(REPORT BY LATE DIRECTOR-GENERAL OF FORESTS ON.)

*Ordered by the Legislative Assembly to be printed, 18 May, 1893.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 28th February, 1893, That there be laid upon the Table of this House,—

“ A copy of the Report submitted in January last by Mr. J. Ednie Brown  
“ (late Director-General of Forests) to the Honorable the Minister for  
“ Mines, giving a summary of operations carried out by the Forestry  
“ Department during the year 1892.”

(*Mr. Dickens.*)

The Director-General of Forests to The Under Secretary for Mines and Agriculture.

Sir,

Forest Department, Sydney, 17 January, 1893.

In view of the discussion which may take place on the Estimates coming before Parliament, I have the honor to hand you herewith, for the information of the controlling Minister, some notes in regard to the operations of the Forest Department up to date, and the permanent work resulting therefrom, over and above the usual work of supervision exercised by the field staff.

I have, &c.,

J. EDNIE BROWN,  
Director-General of Forests.

For the information of the Minister.—H.W., 18/1/93. Seen. The Estimates were decided and approved by the Cabinet before this minute came to hand.—T.M.S., 19/1/93. The Director-General.—H.W., 19/1/93. Record and put away.—J.E.B., 20/1/93.

Following are a few brief notes in regard to the operations of the Department during the last few years :—

1. Trees planted at Otford, county Cumberland :—English oak, American ash, English elm, Lombardy poplar, American catalpa, and red cedar ; in all, 3,880.  
The trees planted at Otford were obtained from the Gosford Nursery, probably raised before Mr. Brown's appointment. Most of the trees sent out of the nursery are two years old and upwards.
2. Trees planted at Smith's Creek, county Durham :—Red cedar, 350.  
The trees planted at Smith's Creek were obtained from an adjacent spot and transplanted.
3. Trees planted, Glen Innes District :—American catalpa, English oak, and red cedar ; in all, 800.  
The trees planted in Glen Innes District were (1) cedars from reserves 11,453, and 6,264, and (2) other trees from Gosford Nursery, which were probably raised before Mr. Brown's appointment.
4. Trees planted at Wyong Plantation :—English oak, white cedar, American ash, American catalpa, Lombardy poplar, sugar gum, and other varieties of eucalypts ; in all, 14,200.  
The trees planted at Wyong were obtained from Gosford Nursery. The plantation was acquired in May, 1887 ; fenced in November, 1890 ; ploughed in April, 1890 ; and planting commenced in January, 1891. No trees were planted at Wyong prior to Mr. Brown's appointment, but the trees were raised before such appointment.

5.

951—

[770 copies—Approximate Cost of Printing (labour and material, £2 7s. 6d.)]

5. Trees planted at Wilcannia:—Sugar gum, spotted gum, forest oak, and honey locust; in all, 5,006. The trees planted at Wilcannia were obtained from the Gosford Nursery and from the Forest Department, Adelaide; 5,000 plants were put in, of which 3,000 came from the Gosford Nursery. Of the Gosford lot 25 per cent. are reported to be doing well. The South Australian trees perished, owing, it is said, to defective packing. The cost on the plantation was £260 12s. 4d.
6. Trees planted at Mullet Creek:—Mangroves, 3,402. The trees planted at Mullet Creek were mangrove seedlings obtained from the creeks, and they were planted in October and November, 1892, to protect the railway embankment.
7. Trees planted at Hogan's Brush:—Lombardy poplar, kurrajong, white cedar, and maple-leaved plane; in all, 30. The trees planted at Hogan's Brush were obtained from the Macleay and Clarence Rivers and Gosford Nursery. They were planted in 1886 and 1891. Those from Gosford were raised before Mr. Brown's appointment.
8. Total number of trees planted on reserves and plantations, 1892:—27,668. Such of these as came from the Gosford Nursery had probably been there two or three years.
9. Trees distributed to schools and public bodies, 1892:—130,000. The trees distributed to schools, &c., in 1892 were propagated at Gosford Nursery, and were mostly two years old when distributed in 1891 and 1892.
10. Estimated total value of trees distributed to schools and public bodies at an average value of 1s. each (1892), £6,500.
11. Estimated total value of trees planted on reserves and plantations at an average value of 1s. each (1892), £1,383 8s.
12. Total value of trees and shrubs distributed and planted in 1892, £7,883 8s.
13. Stock of plants and shrubs at Gosford State Nursery, December 31, 1892—700,000, £22,000. The stock of plants, &c., at nursery in 1892, were propagated at the nursery.
14. Total estimated value of plants distributed, trees planted by the Department, and stock on hand at Gosford State Forest Nursery, December 31, 1892, £29,885 8s.
15. In addition to the above work of planting and propagating trees, the general supervision of reserves and Crown timbered lands has been exercised by the field staff of the Department; checking unlicensed cutting of timber; seeing to the due payment of royalties; inspecting prickly pear leases and lands, and attending to ring-barking cases.
16. The trees planted during 1891, 16,450. The trees planted in 1891 were propagated at the Nursery from seeds and cuttings in 1889 and 1890 and 1891.
17. Trees distributed to schools and public bodies in 1891, 75,000. The trees distributed to schools in 1891 were propagated at Gosford Nursery, commencing in 1889 and 1890, from seeds and cuttings.
18. Trees planted during 1892, 27,668.
19. Trees distributed to schools and public bodies (1892), 130,000.
20. Total number of trees planted and distributed, 1891 and 1892, 249,118.
21. In addition to the value of plants put out upon reserves and plantations during 1892, and which are valued at £1,383 8s., there are some 6,000 young trees of five years' growth at Hogan's Brush Plantation, valued at £1,500; and other small reserve plantations of red cedar, valued at £100—making a total of £2,983 8s.
22. Permanently improved properties made by the Department, such as the State Forest Nursery at Gosford, Wyong Plantation, Otford Plantation, Wilcannia Plantation:—Consisting of cleared and improved lands, dwellings, bush-houses, fencing, wells, tanks, draining, road-making, &c., at a low valuation, £3,526 3s. 4d. The expenditure incurred in clearing, &c., at Gosford Nursery, prior to Mr. Brown's appointment, was £3,513 4s. 3d., and the number of trees then in the Nursery was 250,000. Since Mr. Brown's appointment the cost has been £6,489 15s. 1d.; the number of trees in the Nursery at the end of 1892 was 700,000, being 1, 2 and 3 years' old. At Wyong nothing was expended in planting, &c., prior to Mr. Brown's arrival. The cost since has been £462 10s. 3d.
23. Besides the above properties, there are the forests of natural indigenous growth, which have been operated upon by thinning, &c., the most important of which is the Red Gum Forest Area, operated upon on the Murray River frontage. Taken at an average of, say, 350 young trees to the acre, over 7,500 acres, at an average price of 1s. each, this portion of forest reserve represents, say, in round numbers, £131,000.
24. And it must be borne in mind that on this area there are merchantable trees worth from 10s. to 35s. each as piles, while there is the whole of the 450,000 acres of river frontage reserves containing merchantable timber, upon which thinning operations have not yet been commenced. The thinning operations on the Murray River red gum forest reserves were commenced in April, and discontinued in June, 1891, being then recommenced in November of the same year, extending to April, 1892. In the latter year there were on an average twenty-three men engaged per month, the total cost in connection with work to date being £1,899 14s. 1d., and the area operated upon, some 7,500 acres. The work has been carried out in the Moama Forest Reserve, in the county of Cadell, and on the adjoining Koondrook Forest Reserve, in the county of Wakool, where the growth of young trees was so dense that it was impossible to ride through it, and had it been left much longer in that state nearly the whole of the trees would have simply become useless. Where the thinning operations have been carried out the Colony is possessed of a magnificent young forest of splendid straight-growing trees, from 10 feet to 70 feet in height, averaging about 350 to the acre. They have made excellent progress. In about two years

years the Government will be able to supply from the land first operated upon a considerable number of 60 to 70-foot piles, from 16 to 20 inches in diameter, at 3 feet from the ground. These trees were not more than 10 to 12 inches in diameter when thinning operations were first commenced. The question of thinning out the Murray River forest reserves is of national importance, and every penny expended in the work is an investment bound to be profitable in the future, and this is obtained from land utterly unsuited to any other purpose, excepting the grazing of stock for a few months in the year when the flood waters of the Murray River have subsided, and the system of thinning is an inexpensive system of insuring a continuous supply of valuable timber in the future. The approximate value of the matured red gum on the Murray may be stated as over several millions of pounds sterling.

25. After the red gum forests come the areas of wattle growth, which have been dealt with by the Department, such as the plantations at Tomago, Otford, and Bargo, and which are now coming in for stripping.
26. On Don Dorrigo Forest Reserve, one of the few remaining centres for the obtaining of red cedar, a large sum of money has been expended from time to time in cedar planting and clearing. The Department is, however, unable to now take credit for any operations thereon, the reserve having been surveyed and cut up into areas for settlement.

On Don Dorrigo Reserve about 23,000 cedar seedlings and root cuttings were transplanted in the reserve, and seed-beds were made, at a total cost of £1,890 5s. 11d. prior to the appointment of the late Director-General; and, since his appointment, the trees have been thinned and the undergrowth cleared away, at a cost of £1,135 10s., but no planting has been done.

27. When the whole of the operations of the Forest Department are shown, it is soon apparent that while statements of revenue and expenditure may show what appears to be an excess of expenditure over revenue, such is not a loss involved in the ordinary work of forest supervision by a field staff, but is represented in tangible assets of a more or less valuable nature; and without falling back upon the natural wealth of our red gum, cedar, or wattle forests, which have been improved at the cost of the Department, the permanently-improved properties in the shape of state forest nursery and fenced-in plantation areas, with a stock of plants taken at a valuation, will show the Department to be in credit.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**NATIONAL PARK TRUST.**

(REPORT FROM 1 JANUARY, 1891, TO 31 DECEMBER, 1891.)

*Ordered by the Legislative Assembly to be printed, 7 September, 1892.*

The Acting Chairman of the National Park Trust to The Colonial Secretary.

National Park Trust Office, 3, O'Connell-street, Sydney, 18 August, 1892.

Sir,

The Trustees of the National Park have the honor to present you with an Annual Report of their operations from the 1st January to 31st December, 1891.

It is with deep regret the Trustees have to state they were deprived of the valuable services of the Secretary, Mr. J. E. Ormiston, whose lamented death occurred during the year.

During the period abovenamed, the following alterations in Trust have been made, viz.:—Joseph H. Carruthers, Esq., M.P. (in place of Sir John Robertson, K.C.M.G., deceased), Maurice J. O'Connor, Esq., M.R.C.P., &c. (in place of the late Honorable Geoffrey Eagar, resigned), Charles Alfred Lee, Esq., M.P. (in place of Edward Bingham Woodhouse, Esq., J.P., deceased), the Honorable John Davies, C.M.G., (in place of George Frederick Want, Esq., whose seat was declared vacant in consequence of his absence from the Colony), and Francis Abigail, Esq., J.P. (in place of Varney Parkes, Esq., M.P., resigned), were appointed Trustees. Alterations in Trust.

The Trustees have again much pleasure in referring to the continued interest manifested by the public in the various attractions of the Park—the number of visitors having greatly exceeded that of previous years. Visitors to Park.

As stated in former reports, the rules for prohibiting shooting are being strictly enforced, so as to encourage the increase of birds which abound in the Park. Great care has also been exercised in the preservation of the flora, and all available means used to make this grand National Domain popular and worthy of the Colony. Shooting prohibited.  
Flora.

The principal works carried out during the year are as follows:—

A rustic bridge, constructed on piles, available for vehicles, has been erected across Kangaroo Creek, at the junction of Port Hacking River, affording the public access to a large and picturesque part of the park hitherto only reached by boats. Varney Bridge, across Kangaroo Creek.

A road has been formed leading to and across the bridge on to the western side of Robertson Grove; the grove has been cleared of useless trees and undergrowth, and sown with grass-seed: It is now a delightful retreat, and will become one of the favourite resorts of the park, more especially as an aviary is in course of erection there for the preservation of Australian birds and acclimatising purposes. Road to and from Varney Bridge, and Improvements at Robertson Grove.

A portion of the Park now called Kookaburra Flat, situated on the western side of the river, has been cleared of all trees and undergrowth, leaving only the palms and tree-ferns. Six acres have been sown with grass-seed. The ground has been kept in good order, and will prove highly advantageous for picnic parties. Kookaburra Flat.

Fig Tree Flat, about 2 miles up the river from Audley, has been cleared and laid down with grass. Rustic tables, &c., have been placed there for the convenience of picnic parties. Fig-tree Flat.

The flat on the western side of Kangaroo Creek, opposite Audley, has been cleared and cultivated. Other flats previously cleared have been kept free from undergrowth, and all practical means used for encouraging the growth of grass. Flats.

This portion of the Park has also been cleared of under-scrub, sown with grass seed, and otherwise improved. Farnell Downs.

An efficient and substantial causeway has been constructed across the ford leading from the Waterfall to Lady Carrington Road. The causeway impounds a fine sheet of water for about a mile. This improvement is a great boon to the travelling public, who can now safely cross the river at all times. River improvements and causeway.

Snagging.	The navigable waters have been kept clear of snags and falling timber, both above and below the dam.
Jetties.	A good and substantial pile jetty has been erected for boating parties at Audley, on the fresh water. A similar one has also been erected for the convenience of the public at Want's Beach, about a quarter of a mile below the dam.
Dredging.	The steam dredge, under the directions of the Harbours and Rivers Department, has greatly improved the river, making the upper part of it, from Wentworth Hut to the Bay, near Swallow Rock, navigable at all tides for large pleasure boats and steam launches.
Buoys.	Two large buoys have been laid down at Jibbon Beach, inside Port Hacking Heads, providing for safe, sheltered holding-ground for coasting vessels in bad weather, and for pleasure yachts or steam launches.
Garie Road.	The road leading to Garie Beach (a favourite fishing resort) has been thoroughly repaired, all landslips at the lower end removed, and it is now a beautiful and interesting drive down to the beach.
Lady Carrington Road.	About half-a-mile of this road has been widened, reformed, and ballasted, several landslips removed, larger culverts constructed, and the road throughout maintained in good working order.
Finger-posts.	Finger-posts have been placed at all junctions of roads and pathways, directing the public on their way to the most remote parts of the park—a much appreciated convenience.
Fencing.	About 1 mile of substantial fencing has been erected round the cultivated land and parts specially reserved for recreation purposes.
Buildings.	A Board-room has been added to the Trustees cottage; four cottages have been built on convenient sites for the Park employees; and a kitchen has been erected at Audley to meet public requirements.
Water-supply.	A windmill has been erected which efficiently supplies all water requisite for the main establishment at Audley.
Net-fishing.	All net-fishing has been, with great difficulty, kept in check through rangers by order of the Trustees, thereby preserving the river bed as breeding ground, and affording sport for line fishermen who highly appreciate the efforts made to conserve the fish for visitors recreation.
Deer Park	Further portions of the Deer Park have been cleared, and the deer are improving and increasing in numbers. There are at present about twenty head. It has been considered advisable to erect a cottage at Point Danger, near Wentworth Hut, and steps are now being taken to carry this out. It is one of the most picturesque out-looks on the river.
General.	The whole of the buildings, roads, &c., throughout the park, have been maintained in good order during the year.

In concluding this report, the Trustees have again to express their thanks to the Legislature for the liberality bestowed, enabling them to conserve the interest and enjoyment of the public in connection with this grand National Reserve, and trust in future sufficient funds will be granted to carry out further improvements.

I have, &c.,

JOSEPH GRAHAM,

Acting Chairman National Park Trust.

## NEW SOUTH WALES.

## PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR AND IN CONNECTION WITH THE ESTABLISHMENT AND CONSTRUCTION OF A PUBLIC RECREATION GROUND AT ULMARRA.)

Presented to Parliament pursuant to Act 51 Vic. No. 37.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
44 VICTORIA No. 16.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
(L.S.) of Her Majesty's Most Honourable  
Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
JERSEY, } Saint Michael and Saint George,  
Governor. } Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the establishment and construction of a Public Recreation Ground at Ulmarra, in the said Colony, for and towards the completion of which said works public funds are lawfully available: And whereas the land described in the Schedule hereto is required for the construction of the said works: Now, I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, declare that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose hereinafter mentioned, that is to say, for and in connection with the construction of a Public Recreation Ground at Ulmarra, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned

Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estates, interest, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee; and I declare that the following is the Schedule of the land hereinbefore referred to:—

## SCHEDULE.

All that piece or parcel of land situate in the parish of Ulmarra, county of Clarence, and Colony of New South Wales, containing by admeasurement 10 acres: Commencing at a point on the north side of a road one chain wide bearing south 89 degrees 41 minutes west and distant 6 chains 61 links from the south-east corner of portion 7; and bounded thence on the south by part of the north side of that road bearing south 89 degrees 41 minutes west 10 chains to the south-east corner of Frederick Forayth's 1 acre; thence on the west by the east boundary of that allotment and its prolongation northerly forming part of the east boundary of S. Mawhinney's land bearing north 21 minutes east 10 chains and  $\frac{1}{2}$  a link; thence on the north by a line bearing north 89 degrees 41 minutes east 10 chains; and thence on the east by a line bearing south 21 minutes west 10 chains and  $\frac{1}{2}$  a link, to the point of commencement,—as shown on plan catalogued Ms. 360 Gfn.; and said to be in the possession of John Lee, jun.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this third day of January, in the year of our Lord one thousand eight hundred and ninety-three, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

## LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR AND IN CONNECTION WITH THE ESTABLISHMENT OF A PUBLIC PARK AT ST. MARY'S, PARISH OF MELVILLE, COUNTY OF CUMBERLAND.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
44 VICTORIA No. 16.

NEW SOUTH WALES, ) Proclamation by His Excellency The  
to wit. ) Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
of Her Majesty's Most Honourable  
(L.S.) Privy Council, Knight Grand Cross  
By Deputation from of the Most Distinguished Order of  
His Excellency: Saint Michael and Saint George,  
FREDK. M. DARLEY, Governor and Commander-in-Chief of  
Lieutenant-Governor. the Colony of New South Wales and  
its Dependencies.

WHEREAS I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the establishment of a Public Park at St. Mary's, in the said Colony, for and towards the completion of which said works public funds are lawfully available: And whereas the land described in the Schedule hereto is required for the construction of the said works: Now, I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, declare that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose hereinafter mentioned, that is to say, for and in connection with the establishment of a Public Park at St. Mary's, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on

behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee; and I declare that the following is the Schedule of the land hereinbefore referred to:—

## SCHEDULE.

All that piece or parcel of land situate in the village of St. Mary's, parish of Melville, county of Cumberland, and Colony of New South Wales, containing 5 acres 1 rood and 25 perches: Commencing at the intersection of the south-western side of Princes-street with the south-eastern side of the Great Western Road; and bounded thence on the north-west by that side of that road to its intersection with the north-eastern side of Albert-street; thence on the south-west by that side of that street to its intersection with the north-eastern side of Putland-street; thence on the south-west by that side of that street to its intersection with the south-western side of Princes-street before mentioned; and thence on the north-east by that side of that street, to the point of commencement.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this thirteenth day of July, in the year of our Lord one thousand eight hundred and ninety-two, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,  
WILLIAM JOHN LYNE.

WHEREAS I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the establishment and construction of a Public Recreation Ground at Plattsburg, in the said Colony, for and towards the completion of which said works public funds are lawfully available: And whereas the land described in the Schedule hereto is required for the construction of the said works: Now, I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, declare that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose hereinafter mentioned, that is to say, for and in connection with the construction of a Public Recreation Ground at Plattsburg, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works

and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee; and I declare that the following is the Schedule of the land hereinbefore referred to:—

## SCHEDULE.

All that piece or parcel of land situate in the parish of Hexham, county of Northumberland: Commencing on the east side of the road from Plattsburg to Ironbark Creek, at a point bearing south 5 degrees 1 minute west 13 chains 61 links from the north-west corner of J. Brooks' 320 acres, portion 24; and bounded thence on the west by that side of that road bearing south 20 degrees 9 minutes west 6 chains 39 links; on the south-west by a line bearing south 69 degrees 51 minutes east 16 chains 87 links; on the east by a line bearing north 11 degrees 38 minutes west 12 chains 6 links; and on the north by a line bearing west 11 chains 21 links, to the point of commencement,—as shown on plan catalogued Ms. 445 Mp., containing 12 acres and said to be in the possession of C. Crutch.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twelfth day of November, in the year of our Lord one thousand eight hundred and ninety-two, and in the fifty-sixth year of Her Majesty's Reign.

## LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR AND IN CONNECTION WITH THE EXTENSION OF ST. PETER'S PARK,  
PARISH OF PETERSHAM, COUNTY OF CUMBERLAND.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
44 VICTORIA No. 16.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Right Honourable VICTOR ALBERT  
GEORGE, EARL OF JERSEY, a Member  
(L.S.) } of Her Majesty's Most Honourable  
Privy Council, Knight Grand Cross  
of the Most Distinguished Order of  
Saint Michael and Saint George,  
Governor and Commander-in-Chief of  
the Colony of New South Wales and  
its Dependencies.

WHEREAS I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the extension of St. Peter's Park, in the said Colony, for and towards the completion of which said works public funds are lawfully available: And whereas the lands described in the Schedule hereto are required for the construction of the said works: Now I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, to be published in the Government Gazette, and in one or more newspapers published or circulated in the Police District wherein the said lands are situated, declare that the Crown Land comprised within the descriptions set forth in the Schedule hereto has been appropriated, and the private property within such descriptions has been resumed, for the public purpose hereinafter mentioned, that is to say, for and in connection with the extension of St. Peter's Park, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee; and I declare that the following is the Schedule of the lands hereinbefore referred to:—

## SCHEDULE.

1. All that piece or parcel of land situate in the parish of Petersham, county of Cumberland, and Colony of New South Wales, being G. Woodcock's grant of 1 acre 1 rood 35 perches: Commencing on the north-western bank of the

estuary of Cook's River, at the mouth of Shea's Creek, at the eastern corner of portion 2 of 8 acres 3 roods 31 perches; and bounded thence on the south-west by the north-east boundary line of that portion bearing north 62 degrees 30 minutes west 1 chain 52 links to a road 50 links wide; on the north-west by that road dividing it from part of T. Smith's 470 acres bearing north 37 degrees 45 minutes east 8 chains 37 links; on the north-east by the south-west boundary line of portion 3 of 4 acres 1 rood 5 perches bearing south 50 degrees 10 minutes east 2 chains 40 links to the estuary of Cook's River aforesaid; and on the south-east by that estuary south-westerly to the point of commencement,—being the land proclaimed as lot 11 on 21st February, 1859, and selected by the said G. Woodcock.

2. All that piece or parcel of land situate in the parish, county, and Colony aforesaid, being part of G. Talbot's grant of 4 acres 1 rood 5 perches, containing by admeasurement 2½ perches: Commencing at the most northerly corner of G. Woodcock's grant of 1 acre 1 rood 35 perches; and bounded thence on the south-west by the north-eastern boundary of that grant south-easterly to the high-water mark of Shea's Creek; thence on the south by that high-water mark easterly about 15 links; and thence on the north-east by a line bearing north 52 degrees 28 minutes 10 seconds west 2 chains 50<sup>2</sup>/<sub>10</sub> links, to the point of commencement.

3. All that piece or parcel of land situate in the parish, county, and Colony aforesaid, being part of F. Mitchell's grant of 8 acres 3 roods 31 perches, containing by admeasurement 1 rood 24 perches: Commencing at the most westerly corner of G. Woodcock's grant of 1 acre 1 rood 35 perches; and bounded thence on the north-east by the south-western boundary of that grant south-easterly to the high-water mark of Shea's Creek; thence on the south-east by that high-water mark; thence on the south-west by a line bearing north 57 degrees 27 minutes 20 seconds west 2 chains 67<sup>2</sup>/<sub>10</sub> links to the south-eastern side of Swamp Road; and thence on the north-west by that side of that road bearing north 37 degrees 45 minutes east 1 chain 94<sup>2</sup>/<sub>10</sub> links, to the point of commencement.

In witness whereof I have bereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-sixth day of November, in the year of our Lord one thousand eight hundred and ninety-two, and in the fifty-sixth year of Her Majesty's Reign.

By His Excellency's Command,

## NEW SOUTH WALES.

## LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR RECREATION GROUND AT DAPTO.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER  
44 VICTORIA No. 16.

NEW SOUTH WALES, } Proclamation by His Excellency The  
to wit. } Honorable Sir FREDERICK MATTHEW  
(L.S.) } DARLEY, Knight, Lieutenant-Governor  
FREDK. M. DARLEY, } of the Colony of New South Wales  
*Lieutenant-Governor,* }  
*Administering* }  
*the Government.* } and its Dependencies.

WHEREAS I, the Lieutenant-Governor of the said Colony, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the establishment and construction of a Public Recreation Ground at Dapto, in the said Colony, for and towards the completion of which said works public funds are lawfully available: And whereas the land described in the Schedule hereto is required for the construction of the said works: Now, I, the Lieutenant-Governor aforesaid, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification, to be published in the Government Gazette, and in one or more newspapers published or circulated in the Police District wherein the said land is situated, declare that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose hereinafter mentioned, that is to say, for and in connection with the construction of a Public Recreation Ground at Dapto, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations

estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee; and I declare that the following is the Schedule of the land hereinbefore referred to:—

## SCHEDULE.
