## NEW SOUTH WALES—1892.

## PARLIAMENTS.

RETURN showing the NUMBER OF PARLIAMENTS since the establishment of RESPONSIBLE GOVERNMENT, with dates of opening and dissolution ; also, the NUMBER OF SESSIONS in each Parliament.

**FIRST PARLIAMENT.**

Opened, 22nd May, 1856.....Dissolved, 19th December, 1857.

SESSION 1.—(1856-7.)

22nd May, 1856, to 18th March, 1857.

SESSION 2.—(1857.)

11th August, 1857, to 18th December, 1857.

**SECOND PARLIAMENT.**

Opened, 23rd March, 1858.....Dissolved, 11th April, 1859.

SESSION 1.—(1858.)

23rd March, 1858, to 26th November, 1858.

SESSION 2.—(1858-9.)

8th December, 1858, to 9th April, 1859.

**THIRD PARLIAMENT.**

Opened, 30th August, 1859.....Dissolved, 10th November, 1860.

SESSION 1.—(1859-60.)

30th August, 1859, to 4th July, 1860.

SESSION 2.—(1860.)

25th September, 1860, to 8th November, 1860.

**FOURTH PARLIAMENT.**

Opened, 10th January, 1861.....Dissolved, 10th November, 1864.

SESSION 1.—(1861.)

10th January, 1861, to 11th May, 1861.

SESSION 2.—(1861-2.)

3rd September, 1861, to 20th January, 1862.

SESSION 3.—(1862.)

27th May, 1862, to 20th December, 1862.

SESSION 4.—(1863-4.)

23rd June, 1863, to 22nd April, 1864.

SESSION 5.—(1864.)

18th October, 1864, to 9th November, 1864.

**FIFTH PARLIAMENT.**

Opened, 24th January, 1865.....Dissolved, 15th November, 1869.

SESSION 1.—(1865.)

24th January, 1865, to 21st June, 1865.

SESSION 2.—(1865-6.)

24th October, 1865, to 7th April, 1866.

SESSION 3.—(1866.)

24th July, 1866, to 22nd December, 1866.

SESSION 4.—(1867-8.)

2nd July, 1867, to 27th April, 1868.

SESSION 5.—(1868-9.)

13th October, 1868, to 1st April, 1869.

SESSION 6.—(1869.)

28th September, 1869, to 13th November, 1869.

**SIXTH PARLIAMENT.**

Opened, 27th January, 1870.....Dissolved, 3rd February, 1872.

SESSION 1.—(1870.)

27th January, 1870, to 7th May, 1870.

SESSION 2.—(1870-1.)

11th August, 1870, to 22nd June, 1871.

SESSION 3.—(1871-2.)

14th November, 1871, to 1st February, 1872.

**SEVENTH PARLIAMENT.**

Opened, 30th April, 1872.....Dissolved, 28th November, 1874.

SESSION 1.—(1872.)

30th April, 1872, to 13th August, 1872.

SESSION 2.—(1872-3.)

5th November, 1872, to 25th April, 1873.

SESSION 3.—(1873-4.)

9th September, 1873, to 25th June, 1874.

**AUSTRALASIAN RIGHTS PURCHASE BILL.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on 11th October, 1892, the "*Australasian Rights Purchase Bill*,"—beg to report to your Honorable House,—

That they have examined the witnesses named in the list\* (whose \* See list, page evidence will be found appended hereto); and that the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was deemed necessary to make certain amendments.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

*No. 2 Committee Room,  
Sydney, 15 November, 1892.*

THOS. EWING,  
Chairman.

---

PROCEEDINGS OF THE COMMITTEE.

---

WEDNESDAY, 19 OCTOBER, 1892.

MEMBERS PRESENT:—

Mr. Cotton,	Mr. Cullen,
Mr. Dowel,	Mr. Ewing,

Mr. Ewing in the Chair.		
Mr. Cotton,		Mr. O'Sullivan

Present:—E. E. Fosbery, Esq. (*Messrs. Johnson, Minter, Simpson, and Company—Solicitors for the Bill*).

Bill further considered.

Clause 27 30 read, amended\*, and *agreed to*.

Clause 28 read and *omitted*.

Clauses 29 31, 30 32, 31 33, 32 34, 33 35, 34 37, 35 38, 36 39, 37 40 read and *agreed to*.

Clause 38 41 read.

Mr. O'Sullivan moved the omission in line 7 of the word “thirty” with a view to the insertion in its place of the word “fifteen.”

Question put,—That the word proposed to be omitted stand part of the clause.

The

The Committee divided.

Ayes.	No.
Mr. Ewing, Mr. Cotton,	Mr. O'Sullivan.

And so it was resolved in the affirmative.

Clause as read, *agreed to*.

New clause to stand as clause 7 read, amended, and *agreed to*.

New clause to stand as clause 13 read and *agreed to*.

New clause to stand as clause 26 read, amended, and *agreed to*.

New clause to stand as clause 36 read and *agreed to*.

Title read and *agreed to*.

Chairman to report the Bill with amendments to the House.

#### SCHEDULE OF AMENDMENTS.

- Page 3, clause 2, line 1. *Omit* "Minister for Lands" *insert* "Postmaster-General"
- " 3, " 3, " 56. *After* "them" *insert* "between the points of intake and return as aforesaid, and at a distance of not more than one chain from the centre of the channel on either side"
- " 3, " 3, " 58. *After* "so" *insert* "taken"
- " 3, " 3, " 58. *After* "diverted" *insert* "appropriated and utilized"
- " 4, " 4, " 8. *Omit* "of the other" *insert* "subsidiary"
- " 4, " 6, " 32. *After* "Minister" *insert* "for Lands"
- " 4, " 6, " 32. *Omit* "shall" *insert* "may"
- " 4, " 6, " 33. *Omit* "nominal" *insert* "fair"
- " 4, " 6, " 33. *Omit* "special"
- " 4, " 6, " 34. *After* "necessary" *insert* "in the opinion of the Minister for Lands"
- " 4, " 6, " 36. *After* "Minister" *insert* "for Lands"
- " 4, " 6, " 38. *Omit* "or of any bay, harbour, or inlet of the sea" *insert* "contiguous to the water-works and other works contemplated by this Act"
- Page 5, " 8, 9, line 16. *After* "may" *insert* "subject to the provisions of the Crown Lands Acts, and regulations for the time being in force"
- Page 6, " 14, 16, line 8. *Omit* "or"
- " 6, " 14, 16, " 8. *After* "erecting" *insert* "maintaining or repairing"
- " 6, " 14, 16, " 11. *Omit* "or"
- " 6, " 14, 16, " 11. *After* "erecting" *insert* "maintaining or repairing"
- " 6, " 14, 16, " 14. *Omit* "twenty" *insert* "ten"
- " 6, " 20, 22, " 51. *Omit* "negligently" *insert* "knowingly"
- " 6, " 20, 22, lines 53, 54, 55. *Omit* "and a further sum not exceeding two pounds for each day (if more than one) that such offence continues"
- " 7, " 23, 25, line 23. *At* end of clause *add* "such charges not to exceed the rate of one shilling per unit, English Board of Trade standard"
- " 7, " 27, 30, lines 52, 53, 54. *Omit* "and in default of sufficient distress such person shall be liable to be imprisoned with or without hard labour for any term not exceeding three months, unless such money, costs, or expenses be sooner paid"
- " 8, " 27, 30. *At* end of clause *add* "Provided further that nothing in this Act contained shall exempt any wrong-doer from prosecution, fine, or imprisonment, under any Public Act or Acts now or hereafter to be in force"
- " 8. *Omit* clause 28.
- " 4. *Insert* the following new clause to stand as clause 7:—
7. The projectors under such superintendence as is hereinafter specified may open and break up the soil and pavement of any street within the area of operations, and lay down and place within the same area electric lines and other necessary works and plant, and for the purposes aforesaid may remove and use all earth and materials in and under any such street, and they may, in any such street, erect any poles, pillars, or lamps, and do all other acts which the projectors shall from time to time deem necessary or expedient for supplying electricity to the inhabitants of the said area: Provided always that nothing herein shall authorise or empower the projectors to lay down or place any electric line or other works against any building without the consent of the owners and occupiers thereof, except that the projectors may, without any such consent, at any time enter upon and lay or place any new electric line, plant, or works, in the place of an existing electric line, plant, or works in any position wherein any electric line, plant, or work has been already lawfully laid or placed, in pursuance of this Act, and may repair or alter any such electric line or works so laid down. Before the projectors proceed to open or break up any street they shall give to the local authority notice in writing of their intention to open or break up the same, not less than three clear days before beginning such work, except in cases of emergency arising from defects in any of the electric lines, plant, or other works, and then shall give such notice so soon as possible after the beginning of the work, or after the necessity for the same shall have arisen. No such street shall, except in cases of emergency, be opened or broken up, except under the superintendence of the local authority, or of the officer of the local authority, and according to such plan as shall be approved of by such local authority or officer, or in case of any difference respecting such plan as shall be determined by two Justices: Provided always that if the local authority, or the officer of the local authority, fail to attend at the time fixed for the opening or breaking up of any such street after due notice of the projector's intention having been given as aforesaid, or shall not propose any plan for breaking up or opening the same, or shall refuse or neglect to superintend the operation, the projectors may perform the work referred to in such notice without the superintendence of such local authority or officer. When the projectors open or break up the road or pavement of any street they shall, with all convenient speed, complete the work for which the same shall be broken up, and fill in the ground, and reinstate and make good the road or pavement so opened or broken up, and carry away the rubbish

Power to break up streets and lay down electric lines, &c.

Notice to be given to local authority before breaking up streets.

Street not to be broken up except under the superintendence of local authority, unless in case of emergency or of their failing to attend.

Streets broken up to be reinstated without delay.

rubbish occasioned thereby, and shall at all times whilst any road or pavement shall be so opened or broken up, cause the same to be properly guarded, and cause a light sufficient for the warning of passengers to be set up and maintained against or near such road or pavement where the same shall be open or broken up, every night during which the same shall be continued open or broken up, and shall keep the road or pavement which has been so broken up in good repair for three months after replacing and making good the same, and for such further time, if any, not being more than twelve months in the whole, as the soil so broken up continues to subside. If the projectors open or break up any street without giving such notice as aforesaid, or in a manner different from that which shall have been approved of or determined as aforesaid, except in the cases in which the projectors are hereby authorised to perform such work without any superintendence or notice, or if the projectors make any delay in completing any such work, or in filling in the ground or reinstating and making good the road or pavement so opened or broken up, or in carrying away the rubbish occasioned thereby, or if they neglect to cause the place where such road or pavement has been broken up to be properly guarded and lighted, or neglect to keep the road or pavement in repair for the space of three months next after the same is made good, or such further time as aforesaid, they shall forfeit to the local authority of the street in respect of which such default is made, a sum not exceeding five pounds for every such offence, and they shall forfeit an additional sum of not exceeding five pounds for each day during which any such delay as aforesaid shall continue after they shall have received notice thereof. If any such delay or omission as aforesaid take place the local authority of the street in respect of which such delay or omission shall take place may cause the work so delayed or omitted to be executed, and the expense of executing the same shall be repaid to such local authority by the projectors.

Penalty for delay in reinstating streets.

In case of delay, local authority may reinstate and recover the expense.

Page 5. *Insert* the following new clause to stand as clause 13:—

13. Nothing in this Act shall be construed as giving to the projectors, or their officers or servants, any right to enter upon, or erect works upon, any land, works, or erections vested in the Railway Commissioners, save and except with the written consent of the Railway Commissioners, through their Secretary, first had and obtained, such consent not to be capriciously or vexatiously withheld.

Projectors not to enter upon land vested in Railway Commissioners without written consent.

Page 7. *Insert* the following new clause to stand as clause 26:—

26. The Government may, at their own expense, appoint a competent and impartial person to be approved of in writing by the Superintendent of Telegraphs, to be electrical examiner, who shall have power to test from time to time the normal strength of the current of electricity supplied by the projectors, and who shall examine any electric line or plant, or any other electrical apparatus or works; and the projectors may be represented at such testing or examination, but shall not be entitled to interfere with the same. The electrical examiner shall, within four days of the day on which the testing or examination was completed by him, deliver to the said Superintendent of Telegraphs a report in writing of such testing and of such examination, and shall deliver a copy thereof to the projectors, and such report shall be receivable in evidence. No electric main or conductor shall be used for the supply of electricity, and no electric photometer shall be used for ascertaining the illuminating power of electric light, and no electric meter shall be used for ascertaining the quantity of electricity supplied by the projectors, unless the said main, conductor, photometer, or meter, respectively, shall be of a pattern approved of in writing by the Governor.

Government may appoint electrical examiner.

Electrical examiner to report.

Electric conductors, photometers, and meters.

Page 9. *Insert* the following new clause to stand as clause 36:—

36. The projectors shall not, in the exercise of the powers conferred by this Act, lay down any electric line or plant, or do any other work for the supply of electricity whereby any Government telegraph or telephone line is or may be injuriously affected; and before any such electric line is laid down or work is done within ten yards of any part of any Government telegraph or telephone line (other than repairs or the laying of connections with mains, where the direction of the electric lines so laid down crosses such line at right angles, at the point of shortest distance, and continues the same for a distance of 6 feet on each side of such point), the projectors or their agents, not more than twenty-eight, nor less than seven days, before commencing such work, shall give a written notice to the Superintendent of Telegraphs, specifying the course and nature of the work, including the gauge of any electric lines to be used, and the projectors and their agents shall conform with such reasonable requirements, either general or special, as may from time to time be made by the Superintendent of Telegraphs, for the purpose of preventing any such Government telegraph or telephone line from being injuriously affected by the said work. Any difference which arises between the Superintendent of Telegraphs and the projectors, or their agents, with respect to any requirements so made, shall be determined by arbitration. In the event of any contravention of or wilful non-compliance with this section by the projectors or their agents, the projectors shall be liable to a fine not exceeding ten pounds for every day during which such contravention or non-compliance continues, or if the telegraphic communication is wilfully interrupted, to a fine not exceeding fifty pounds for every day on which such interruption continues: Provided that nothing in this section shall subject the projectors or their agents to a fine under this section if they satisfy the Court having cognizance of the case that the immediate execution of the work was required to avoid an accident, or otherwise was a work of emergency, and that they forthwith sent to the Superintendent of Telegraphs, by telegram or letter, a notice of the execution thereof, stating the reason for having executed the same without previous notice. For the purposes of this section a Government telegraph or telephone line shall be deemed to be injuriously affected by a work of the projectors, if telegraphic or telephonic communication by means of such line is, whether through induction or otherwise, in any manner affected by such work, or by any use made of such work, any dispute with regard thereto to be settled by arbitration.

Protection of telegraph and telephone lines.

Any difference with Superintendent of Telegraphs to be submitted to arbitration.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

AUSTRALASIAN RIGHTS PURCHASE BILL.

WEDNESDAY, 19 OCTOBER, 1892.

Present:—

MR. COTTON,	MR. EWING,
MR. CULLEN,	MR. RAE,
MR. DOWEL,	MR. WALL.

T. T. EWING, ESQ., IN THE CHAIR.

E. E. Fosbery, Esq. (Messrs. Johnson, Minter, Simpson, & Co.), appeared as Solicitor for the Bill.

Walter Harcourt Palmer, sworn and examined:—

1. *Mr. Fosbery.*] You are engineer for the company? Yes.
2. For the Australasian Rights Purchase Association (Limited), and also for the New South Wales Electric Supply Company? Yes. The latter company was formed to take over this scheme from the Australasian Rights Purchase Association directly this Bill shall have been passed by Parliament. Mr. W. H. Palmer.  
19 Oct., 1892.
3. Have you read this Bill? Yes.
4. Do you know the nature of the scheme? Yes.
5. And how it is going to be carried out? Yes.
6. Practically and theoretically? Yes.
7. Do you know of any similar undertakings? Yes, several.
8. Have you personally had to do with any other schemes of the same kind? My firm has.
9. What is your firm called? Palmer, Struthers, and Edmiston.
10. Your firm, you say, have had to do with schemes of a similar kind? Yes. Mr. Edmiston was engineer for the Skippers' Creek Works in New Zealand—a scheme similar to this.
11. Can you mention any other schemes of the same kind that you know of, whether you have been connected with them or not? The Nevada Mine in Colorado, America, got the plans of the Skippers' Creek scheme, and erected a similar plant for their mine. Rome is now being lighted by electricity, the power being obtained from the Tivoli Falls. Frankfort-on-Maine is also being lighted by electricity, the power being obtained from falls 108 miles distant.
12. I understand that the Frankfort-on-Maine scheme is a very large one, and has been spoken of among scientists throughout the world? It is supposed to be the best scheme.
13. It is quite a triumph of skill in matters of the kind? Yes.
14. There are some others? Honolulu is lighted by electricity from water-power, and also Wellington in New Zealand.
15. Whether you have been associated with them or not, can you mention some schemes which are akin to this and are now in progress? I am engineer for the Tasmanian Water-power Electric Company, who are now constructing works on the Heims Kirk River, near Zehan and Dundas, for power and light for the mines and towns.

- Mr. W. H. Palmer.  
19 Oct., 1892.
16. Will you tell us something about these other schemes of which you speak, as to how far they have been successful—how far they have been attended with practically successful results? They have all been thoroughly successful—I mean, of course, those that have been completed. The Skipper's Creek Company had a steam plant on the ground. They found that they could not work the power for the mine by steam because of the expense of labour, although they had any quantity of fuel all round the place. They then threw away the steam plant altogether. They could not sell it. It was in a position that was very difficult to get at. They then installed the electricity. From that day to the present the mine has been paying dividends. Of course we say that this has been on account of the use of the electric plant. Other people say that it has been because the gold has got better.
17. The scheme for utilising the water-power for generating and transmitting the electricity has been successful? It has been most successful, carrying out everything that was anticipated.
18. Of the schemes that are now in progress, I understand there is one near Melbourne, in Victoria—do you know anything of it? The Evelyn tunnel on the Yarra River, 12 or 13 miles from Melbourne. They are diverting the Yarra River through a tunnel, and generating electricity by the water-power thus obtained. The contract for that scheme is let to an electrical firm in England.
19. It is a scheme similar to this? It is precisely the same kind of scheme in its main features.
20. That scheme is now in progress? Yes.
21. The works are being carried out? Yes.
22. What you have quoted are merely instances; you are not to be understood as having made a complete statement of works of the kind; there are a great many in various parts of the world? There are hundreds of others which I could mention. This is rather a unique scheme in one way, because of the very large amount of power that we propose to transmit, and the distance which that large amount of power is proposed to be transmitted. In that sense, it is a unique scheme.
23. I understand that the Frankfort-on-Maine scheme is very gigantic? Not as regards the amount of power, but the distance is greater. There never has been the same amount of power proposed to be sent.
24. As an engineer, you, of course, have large professional knowledge in connection with matters of this kind? Yes.
25. In connection with the mode in which it is proposed to carry out this scheme? Yes.
26. And to get a sufficient water-power to work the machines, and all that sort of thing? Yes.
27. You also know how this electricity will be conducted? Yes.
28. And the pressure under which it will be conducted, and all matters of that kind? Yes.
29. From your professional knowledge and also your knowledge of other similar works, do you consider that these works will be in any way prejudicial to the public? Oh, no.
30. Or to property? Not in any way.
31. Or to public health? Not in any way.
32. Or to public safety? No; if the scheme be properly carried out and the wires be properly insulated there will be no danger at all—not one-hundredth part of the danger that there is from the trams running through the streets.
33. *Mr. Wall.*] You say that with proper safeguards there will be no danger? None at all.
34. Have you made any provision in the Bill for those safeguards, or is that a matter that will remain optional with the company? Of course if the company erected works that injured anybody they would be as responsible as the Railway Department would be for injuring anybody; consequently for their own benefit, and also for the credit of the company, as well as because of the danger to their pockets, they would see that the works were properly erected.
35. But you have not in the Bill made any provision of that sort? I do not think there is.
36. *Mr. Fosbery.*] Nothing in particular? No.
37. *Mr. Wall.*] With regard to the power of electricity, have you decided upon the maximum and minimum power of electricity which you will convey? No; the proposal at present is to send 10,000 horse-power. But that would not be the maximum if we could get more from the river.
38. You propose, in clause 5 of the Bill, to supply the city of Sydney and other towns along the main route with electricity? Yes; that is, Windsor, Richmond, and the suburbs through which the cable line will pass.
39. Do you propose to enter those towns and supply electricity there without the consent of the municipalities? Certainly not; this Bill does not give us any right of that kind.
40. But you have made no provision protecting the rights of the municipalities? We cannot enter a town, except to pass through it, as this route shows.
41. But the Bill gives you an absolute right; clause 5 says—

The projectors are hereby empowered to construct, erect, maintain, and work any water-works and other works and plant that may be required for making and generating electricity and transmitting it to the city of Sydney, and to any other towns or places along the main cable line. And also to erect poles to carry wires across or along streets, and across Crown lands or private lands of any tenure above the surface, or to conduct wires beneath the surface of any such streets, or any such Crown lands or private lands, and also across, along, under, or over any river, stream, or creek, or any bay, harbour, or inlet of the sea.

The Bill would give you absolute power; but you are content to supply the electricity, subject to the approval of the municipalities? Oh, yes; certainly.

42. *Mr. Rae.*] By clause 5 you are authorised "to erect poles to carry wires across or along streets";—has not past experience shown that it is unsafe to convey any great strength of electric current overhead? No; that idea did exist in the same way that when gas was introduced into New York some few years ago the people tore up the pipes; but it is proved now beyond doubt that in using the same force of electricity and of steam, fewer deaths are caused by the electric current. In the same districts in America the number of deaths caused by the electric current are in the proportion of one to every 3,000 resulting from the use of steam.

43. But what I wish to know is not the relative danger arising from the use of steam and electricity, but whether conveying electricity overhead is not more dangerous than conveying it underground? Properly insulated it is not dangerous at all. It is simply a matter of proper insulation and proper construction. There is no earthly danger with electricity if it is properly worked. We are completely in control of it, and I think that you will find from statistics that nobody but the employees of the companies in America have been injured by electricity, and then it has invariably been through carelessness.

44. I am aware that a person was killed in Melbourne some time ago through picking up a wire that had accidentally been broken; is it not only possible but also extremely probable that, going through a good deal of bush in some places about the proposed line, the wires will frequently be broken by falling timber during storms? The only thing that could hurt a man would be his picking it up. There would be no danger to anybody unless he picked up the wire and had not indiarubber shoes on at the time. If he had indiarubber shoes on, it would not hurt him then, because the insulation would be complete. I see that in England they have just passed a Bill providing for all the tramways in Staffordshire to be worked by means of overhead wires, and they are allowing it all over the continent and all over America. The Frankfort-on-Maine scheme and the Rome scheme include overhead wires, the use of which is being allowed throughout the world. They are finding them quite harmless; that is, as harmless as possible with the amount of power.

45. *Mr. Cotton.*] Not more dangerous than a tram running through a street? Not one-thousandth part as dangerous as a tram.

46. *Mr. Fosbery.*] You produce certain plans showing the position of the works and the route? Yes.

47. Will the water that you will take from the stream for your works be wasted? No. It will simply pass through the water-wheel or turbine. Power will be obtained from it, and the water will be returned to the stream free from pollution.

48. Will it not be polluted in any way? No, nor wasted—simply diverted along a channel close to the original stream. The water in the channel will be as much open for the use of stock as it was when in the original stream, and it will go back into the original stream without either pollution or waste.

49. *Mr. Rae.*] What distance will there be between where the water will be taken and where it will return to the stream? Approximately, about 5 miles is the greatest distance we may want; but I do not think it will be that. I think that probably the distance will be about 4 miles.

50. *Chairman.*] Will you explain the scheme? The scheme is this: We wish to divert water from the Colo and Grose Rivers at fixed points. On each of these rivers we have applied for, under special lease, a machinery site, a pipe-line, or conduit, and a weir site. The water will be diverted by a small weir, not a weir that will throw water back over the country, but simply a weir high enough to divert water into a 6-foot channel; that is, the weir will probably be 6 or 7 feet high.

51. Have these leases been granted? Yes; subject to a Bill, survey, and two or three other conditions. We have made the surveys to the Grose River, and have contracted for the surveys to the Colo River; so, as far as possible, we have carried out the conditions under which these leases were granted. The water will pass through the turbines.

52. Your turbines will be erected on the machinery sites near the Grose and Colo Rivers? Yes; similar machinery will be erected at the two places. The electricity will be generated at those points, and a cable line will be constructed from the Colo River to the Grose River, connecting the two machinery sites.

53. How far? Fourteen miles, approximately. There will be another cable line from the Grose River machinery site to Sydney, passing through the towns of Richmond, Windsor, Parramatta, Granville, Burwood, and along what is known as the old Parramatta Road.

54. Through or adjacent to the towns? Yes.

55. You will get part of your power from the Grose and part of it from the Colo River? Yes.

56. Will they be brought together at the Grose River site? Yes.

57. Will there be an accumulator there? No; there will be double wires from the Grose River site.

58. There will be no accumulators there? The electricity will be generated at each site.

59. And be conveyed on separate wires? Yes, all the way to Sydney.

60. You spoke of a cable, do you mean a cable suspended on poles? Yes.

61. There is no doubt about the power that you have there? I do not know that there is any doubt. We believe that we have 10,000 horse-power.

62. What steps have you taken to find out whether you have or not? We have taken the rainfall, the catchment area, the usual scientific allowance being made for evaporation and soakage and for flood waters, and we have taken the balance as the quantity passing down the stream.

63. And you believe that there is a sufficient volume of water passing down these rivers to generate the power of which you speak? We believe such is the case.

64. You will make no attempt at all to store water? No. Our weirs are just sufficient to turn the water into the channels.

65. You said something about 5 miles? That is, the length of the channel near the Colo River will be about 5 miles, whilst that of the one near the Grose River will be  $2\frac{1}{2}$  miles.

66. Will you carry out any operations in the channel? Simply make the channel and pass the water through it. There will either be a concrete channel or a wooden fluming in places where we have to cross deep gullies, and, in some places near the machinery site, large pipes to carry the water directly on to the machinery in a concentrated form.

67. Is that adjacent to the valley of the rivers? It is in the valley of the rivers.

68. But not in the natural water-courses? No.

69. You divert the water, in one instance,  $2\frac{1}{2}$  miles, and, in the other, 5 miles? Yes.

70. It runs in artificial channels for those distances? Yes.

71. *Mr. Rae.*] Will you take the whole of the water in its normal state? What we have been allowed to do in Victoria and Tasmania was to leave what the Committee considered was sufficient water for stock and household purposes running in the river. In the Yarra we were allowed to leave one-tenth of the water running down.

72. But there is nothing in your Bill to prevent your taking the whole of it? I do not think there is. Of course it is very much easier to take the whole of it.

73. *Mr. Cotton.*] What is the character of the country in both cases;—could it be used for stock purposes? No; there is no stock there. It could not be used for any other purpose except for getting sandstone.

74. *Chairman.*] Is it accessible? No, quite inaccessible.

75. Nothing is depastured on it now? No.

76. Does any of this water get into the Sydney water supply? No; it goes directly into the Nepean, below Richmond. When we get to Sydney we do not want the right to distribute the electricity, but simply to bring it to a central station in Sydney, and if companies or the corporation of Sydney, or any other corporations want the electricity, as we know they will, they can buy it from us at this central station.

Mr.  
W.H. Palmer.  
19 Oct., 1892.

- Mr. W.H. Palmer.  
19 Oct., 1892.
77. *Mr. Rae.*] The power will be transmitted from the generating station along two cables to Sydney, passing by Richmond, Windsor, Parramatta, and certain suburbs? That is right.
78. If it were possible for Windsor and Richmond to use the electric power you could have works there? Yes.
79. You have made no arrangements with them? No; but several people in each place have asked me whether they should oppose the Bill because we would not do that, and I promised that it should be done. It would be to our advantage to sell to them, because the nearer we sell the electricity the less the loss. If we could sell the whole of it there it would be all the better for us.
80. You have no knowledge about the public feeling at Richmond, Windsor, or Parramatta? All the people to whom I spoke—the three bankers and other people, all leading men in the place—were distinctly in favour of it, and a great many people have promised to take it.
81. *Chairman.*] Your impression is that they view this scheme with favour? Yes.
82. Having got your power along two wires to Sydney, have you any idea where you would have your storage station here? Somewhere near the Parramatta Road and the Glebe boundary.
83. Have you made any arrangements in regard to the city? No; we have not.
84. *Mr. Rae.*] The storage station would be almost on the city boundary? Immediately outside the city boundary I think is the best way to define it.
85. What municipality will it be in? The Glebe, I believe.
86. *Chairman.*] Have you any idea of how the Glebe people will view the matter? I have not heard; but as there will simply be a central station there, all the wires going into it being insulated and covered, nobody could be injured. Therefore, I do not think that they will be at all averse to it.
87. Having got your electrical power into the receiving depôt in Sydney, what then would be the scope of your operations;—who would be your purchasers? The municipalities or any reticulating companies that were formed and got a Bill passed by Parliament empowering them to supply any of the suburbs with electricity.
88. You do not propose to reticulate and to sell to people generally? Not retail. We only propose to sell wholesale at present.
89. *Mr. Fosbery.*] But you would supply large establishments? Large factories, or anyone taking 50 or 100 horse-power.
90. *Chairman.*] Have you ever heard of accumulators? Yes.
91. Do they not in some parts of the world put a certain quantity of power into them? Yes; in Paris they use accumulators entirely for their lighting.
92. And the occupants of private houses can buy? Yes; for all purposes.
93. Would you sell in that form? No; we would not sell in that form, because that would be treading on the corns of companies already formed for that purpose who have made their arrangements for laying down the necessary wires and connections.
94. Will you briefly explain what you conceive to be the difference between wholesale and retail dealing in a case of this kind? I think that supplying any factory or municipality requiring under 50 horse-power would be considered retail. Fifty horse-power of electricity would be equal to 600 lights.
95. Then, if you have only 10,000 horse-power you can only have 200 transactions? Yes; not more than 200 transactions—probably not more than half a dozen.
96. You do not propose to sell for household purposes, or anything of that kind, even if it were possible? No; we do not want to do that. If we could not get a sale for the electricity and were compelled to amend the Bill to as to enable us to do that at some future time, I think that that would be the time to consider it; but we do not intend to do that at present.
97. *Mr. Rae.*] Is there anything in the Bill that would prevent your undertaking the general work of electrical supply? I think so.
98. What will be the distance between the generating station and the terminal station at the Glebe? Forty-eight miles.
99. *Chairman.*] Would there be much leakage of power in the 48 miles? There would probably be a good deal of leakage. I think that 20 per cent. of the power would be lost.
100. *Mr. Fosbery.*] This scheme will involve the expenditure of a large sum of money in the country? Yes; the rough estimates show that it will involve the expenditure of over £250,000—probably £500,000.
101. *Mr. Cullen.*] I understand that the company is not registered in this Colony? Yes; it is registered in Sydney;—I mean the company that is prepared to take over the powers granted under this Bill. The New South Wales Electric Supply Company is registered here.
102. But the company in charge of this Bill is not registered here? No. The company in charge of the Bill is not registered here, but the company formed to take over its rights is registered here, and the agreement and all formalities in connection with it have been made and gone through.
103. That does not appear anywhere in the Bill? No.
104. The original company, I notice, is registered in Melbourne? Yes.
105. Can you supply this Committee with a copy of the articles of association? I think so.
106. What is the capital of the original company—the company applying for this Bill? Two hundred shares of £50 each.
107. When was the company registered in Melbourne? Probably eighteen months or two years ago.
108. How many shareholders are there? I could not tell you without seeing the list. I will supply the Committee with that information. I know that I have it among my private papers in Mr. Michellmore's office.
109. I shall want to know the exact nominal capital, the number of shareholders, the amount subscribed, and the amount actually paid? Yes.
110. With regard to this subsidiary company which you have mentioned, I understand from you that a company is being formed in this Colony? Has been formed.
111. Has it been registered yet? Yes.
112. What is the object of that company? To carry out this work.
113. This particular work? The Colo and Grose River work.
114. Will its scope go beyond this particular work? Its intention at present is not to go beyond it, so far as I know. I think you had better ask Mr. Fosbery what the intentions of the company are, but so far as the articles of association are concerned, and so far as I know, it does not go beyond that.
115. *Chairman.*] Your capital, you say, is £10,000; is that the Melbourne capital? That is the capital of the mother company, the Australasian Rights Purchase Association, which was formed for this purpose.

116. For this specific purpose? No; to take out water rights in different colonies for generating electricity, pass Bills through the Parliaments of those colonies, and then float off-shoot companies to carry out the works in the different colonies.

117. The Australasian Rights Purchase Association is to discover the feasibility of the scheme, and then to find in each locality local people to carry it out? They are always prepared to put down their own capital to carry it out.

118. To find local people, in conjunction with themselves, to carry it out? Yes.

119. You have already said that, as an engineer, you have no doubt whatever about the electric power being a success generally, and that in this case it will be a success? I have no doubt that it will.

120. Do you know anything of a rival scheme? Well, I heard just the other day that there was a rival scheme.

121. Can you express any opinion with regard to it? I know something with regard to it. I have seen, in writing, the rival scheme's promoters' offer of shares to a friend of mine.

122. If they will amalgamate? The promoters of the rival scheme offered amalgamation to us. One of the principal members of the company offered to amalgamate, and two more of them called at Mr. Michelmores' office for the same purpose.

123. You believe there is a rival scheme? Yes.

124. For the same operations? On the Colo, but not on the Grose River.

125. Would your operations prevent their engaging also if they saw fit? No; I do not think so.

126. You do not believe that you are applying for a monopoly? We certainly are not applying for a monopoly.

127. If anyone else wishes to carry out a similar work they can do so? Yes; with pleasure.

128. *Mr. Rae.*] I understood from you that 10,000 horse-power was the amount estimated to be generated by the water in these two rivers? I say that we could get that amount of horse-power for a certainty, but the estimated amount is over 200,000.

129. If you got 10,000, would it be possible for any other company to get sufficient power to carry out anything like a payable scheme? Yes; by getting sites either higher up or lower down they could use the same water.

130. Is the fall sufficient? Yes; it is a very rapid river.

131. *Chairman.*] You furnish a tracing showing the position of the proposed cable-line? Yes; and the proposed pipe-lines and machinery sites.

132. And also showing the position of the distributing depôt? Yes.

133. You do not know how the municipalities view the scheme? No; I do not.

134. In your replies to Mr. Wall and Mr. Rae, I think, with regard to danger to life, you say that you incur the ordinary liability if you injure anybody else? Yes.

135. And you say that you believe the common law of the country is sufficient protection for the public? Yes.

136. *Mr. Rae.*] You say that there is another company—an off-shoot company—which has been formed to take over the rights which this company is attempting to acquire under this Bill? Yes.

137. What is the capital of this off-shoot company? £500,000.

138. The nominal capital? That will be the actual capital if it is required. The arrangement made is the same as was made in Tasmania. The mother company, the Australasian Rights Purchase Association, passed a Bill through Parliament to be taken over by the Tasmanian Water-power Electric Company, the members of the Australasian Rights Purchase Association agreeing to find sufficient money to carry out their scheme if the Bill were passed. The Bill was passed, and out of thirty-nine Bills that were passed in the same Session, ours is the only Bill now in active operation in Tasmania. All our contracts have been let, and the work is actually going on.

139. *Chairman.*] It is the same company as wishes to obtain rights here? Yes.

140. *Mr. Rae.*] What is the name of the off-shoot company? The New South Wales Electric Supply Company.

141. You have stated that the Australasian Rights Purchase Association was willing, under this and similar measures, to assist any off-shoot company to actually carry out the work by putting capital in it? The members of the Australasian Rights Purchase Association are, I believe, the wealthiest men in Australasia.

142. But they only do so as individuals, not as a company? Several members of the association have said, "If this Bill be passed we will find the money."

143. But as individuals? Yes.

144. *Chairman.*] The Grose River survey has been furnished by Messrs. Palmer, Struthers, and Edmiston? Yes; and the Colo River survey is now being carried out. Mr. Goodall, a licensed surveyor, of Castlereagh-street, is carrying it out for the same firm.

Richard Threlfall, sworn and examined:—

145. *Chairman.*] You are Professor of Physics at the University of Sydney? Yes.

146. *Mr. Fosbery.*] Are you an expert in electricity? Yes.

147. Have you read this Bill? I have.

148. And you know something of the scheme, and how it is to be carried out? Yes. I know what I have been told about it.

149. And that accords with what you find in the Bill? Yes; but there are no engineering details in the Bill.

150. Do you know anything of any schemes of the same kind in other parts of the world? Yes; I know what schemes there are.

151. Will you tell the Committee about some of them;—explain them in a general way? Yes, with pleasure.

152. *Chairman.*] You know this scheme? I know it is proposed to transmit the power.

153. You know the general principles of the scheme? In so far as they have been decided.

154. In your explanation, so far as you can, you will refer to schemes that appear to be somewhat similar to this? Yes. There are two which are most to the point. The first is one that was carried out last summer

Mr.  
W. H. Palmer.  
19 Oct., 1892.

Mr.  
R. Threlfall.  
19 Oct., 1892.

Mr.  
R. Threlfall.  
19 Oct., 1892.

summer in Germany at the Frankfort Exhibition, in which there was a considerable power transmitted 109 miles, from Lauffen to Frankfort. The power was drawn from the river Neckar. The power absorbed from the water at Lauffen was very carefully measured, and the power that was given out at Frankfort was also very carefully measured. I have a long table here of the results of those measurements; but, roughly speaking, you may say that from 120 to 130 horse-power was absorbed at Lauffen—supplied by the turbine, that is—and that was then transmitted to Frankfort, and after all losses had been taken into account, the actual efficiency was 74 per cent., or about 89 to 90 horse-power, the loss being about 25 per cent. in 109 miles. The scheme was thoroughly successful. The current was taken by bare copper wires in the most inexpensive way, and without any special protection whatever.

155. Would the leakage be more at the beginning of the power or at the end? There would not be a serious difference; but I could not answer that question without thinking about it a little.

156. As it gets farther along, there is less power in it, if it is losing all the way? It depends what part of the machine is earthed, if any. If no part is earthed, there is no difference in the loss; but if a particular part is earthed there must be greater loss at one end or the other.

157. You say that the leakage is generally uniform? The statement does not say, if it was not uniform, why or where it was not.

158. Would you be justified in saying that there would be half as much leakage in 50 miles as in 100 miles? Yes; all things being equal. The pressure at Frankfort was nominally, I believe, 30,000 volts. It differed from 20,000 to 30,000 volts. During a certain portion of the experiments, the transmission was at 16,000 volts. They tried, you may say, anywhere between 16,000 and 30,000. There was no accident or break down, and the thing worked perfectly satisfactorily from beginning to end.

159. What was this power used for? For working centrifugal pumps in connection with the exhibition. Some of it was used for lighting, and some for running pumps.

160. And for lifts, perhaps? It may have been; but, I think, chiefly for lights.

161. *Mr. Rae.*] I understand that the volt is the unit of pressure in electricity? Yes.

162. Can you express the equivalent of horse-power in volts? A unit of electric current is called an ampere. If you have water going through a pipe on the high-pressure water system, and want to find what rate it is delivering power, you multiply the pressure by the quantity of water it delivers per second. In electricity, if you want to find the electricity delivered by the current, you multiply the electrical pressure by the electrical current or the quantity of electricity that passes per second. If you multiply amperes by volts, you get the horse-power or its equivalent.

163. *Chairman.*] You say that the Frankfort scheme has been a success and has not been dangerous—in point of fact, there has been no accident? There has been no accident, but, of course, if anybody had touched the wire he would have been killed.

164. But nobody did? No; I believe they had a skull and cross-bones painted on each post as a caution.

165. *Mr. Rae.*] I understood you to say that the wires were bare, and were very cheaply erected, and that the leakage was about 25 per cent.;—are there any practical means of reducing the leakage? The total losses were 25 per cent. The losses by leakage were not anything like that. In some cases they might have amounted to half of that. But the loss by leakage hardly affects the safety in any case.

166. Are there any means of preventing loss from any cause? Well, 75 per cent. of power, after going 109 miles, is a very large percentage. If you remember that the power has first of all to be taken from the turbine and put into a dynamo, and taken out of that and put into transformers, and sent into a wire, and that you have to go through the reverse process at the other end, I do not think you can much improve on that. But by spending more money you get better insulation and less leakage. I think the thing was not far from perfect at Frankfort. The loss in leakage varied between 7 horse-power and 25 out of 200. It is most economical to allow such a leakage as would only cost the same as the interest on the money spent in reducing it to one-half. I think I ought to say that this transmission scheme was a very remarkable one, because it was the very first time that it had ever been made with the particular kind of machinery that was employed. It involved a new principle. It was not only the first long distance scheme, but actually the first occasion with that machinery, which is known as the rotary phase system of currents, which, however, I believe has since been abandoned in view of an improvement.

167. *Mr. Fosbery.*] Do you know what the voltage of that system was? I have stated that it varied from 15,000 to 30,000 volts. The majority of transmission was accomplished, I believe, at 25,000 volts.

168. *Mr. Cullen.*] Was that a financial success? Well, it was for exhibition purposes, so I do not know. The actual capital outlay per effective horse-power—that is, horse-power delivered—amounted to £60, and £50 out of that £60 was spent in building the line, but of course they did not sell their power, they gave it away. There is no long distance transmission that has been worked long enough to give any data.

169. *Chairman.*] What do you mean? I mean over a mile or two, unless you regard railways as legitimate instances. There are lots of railways over 20 miles long that are worked very well by electric current.

170. Can you tell us anything with regard to the Niagara scheme for utilising water for electric-power? Yes. There are two distinct schemes—one is a hydraulic scheme. One company is concerned with supplying hydraulic power only, and another company proposes to buy power from them, and then transmit and sell it. Two years ago that company appointed a committee of five or six distinguished European engineers to advise them as to the best scheme, and at the same time they issued a prospectus offering a reward for the best scheme. The committee at that time did not feel justified in thoroughly recommending any of the schemes, but I believe that quite recently they have decided to adopt the scheme of Professor George Forbes. It is the simplest possible transmission scheme by alternating currents. It is known as the Synchronous Alternating Current System. One objection to that scheme is that the machine which has to be run is a motor which will not run at all unless it is independently speeded up to the proper speed—that is, if it ought to run, say, at 100 revolutions per minute, then by some apparatus on the spot you must manage to make it run at that velocity before you put on the current that is going to drive it. The machine is not self-starting, but there is a very simple and ingenious auxiliary machine which will start itself by means of the alternating current, and it is usual to instal in the transmission of power by this scheme a large synchronising machine—that is, a machine to run synchronously—and a small tester motor, which is a motor which is not so efficient, but has the property of being self-starting. So that the method of procedure then is this: A current is first of all turned on to the small tester motor, and that

motor

motor is geared up so as to start the other motor. Then when the proper speed is reached the tester motor is taken off and the synchronising motor runs by itself. The advantage is that the synchronising motor when it is once started is more efficient than the tester motor. It was proposed, and I believe that the Niagara Company have finally adopted it, and are making preparations for distributing on a large scale as far as Buffalo.

Mr.  
R. Threlfall;  
19 Oct., 1892;

171. What distance away is Buffalo? I could not say how far it is from Niagara. Of course, they talk of supplying it to the Chicago Exhibition, which must be 500 miles away. Their idea, at all events, is to send it 400 miles. I know that. I have some notes of a scheme which is now under way in California, which I think is perhaps more to the point. This is a scheme which might do for you. This is a scheme under which power is transmitted from Oregon City to Portland, 13 miles away. It is transmitted chiefly for lighting purposes. The source of power is water obtained from a river called, I think, the Willamatta.

172. *Mr. Fosbery.*] That scheme would be somewhat similar to this? Yes; very similar. They have available there about 200,000 horse-power, but, of course, they are not using all that. They have got several waterwheels, each of which will be about 300 horse-power. The account which I read did not say how many of them they had set up, but only said several. They transmit alternating currents at 4,000 volts without a transformer. That is why they use a low voltage. I should think that that is a very bad plan. The line consists of an ordinary No. 4 wire hung on what is known as double-petticoat glass insulators. The voltage is reduced at the other end to 3,300. There is a loss of 700 volts in the transmission; that is, 7 in 33, which is a good loss. But if they have all that horse-power available, of course it does not matter how much they lose. The efficiency of transmission is said to be 96 per cent. I do not know how that tallies with 7 in 33. I suppose what they mean is that, setting aside the line losses, the other efficiency is 96 per cent.

173. *Chairman.*] Have you any information with regard to the scheme in Oregon? I have not heard of any accidents.

174. In point of fact, you say it is not working yet? This one is actually working.

175. And you have heard of no accidents? I have heard of no accidents.

176. *Mr. Fosbery.*] And that is a high-pressure scheme? Yes; 4,000 volts.

177. *Chairman.*] Is it supposed to be a success? The account which I read of it appeared in the *American Electrical Engineer* for 15th June, 1892.

178. That is a reliable publication? Yes, very reliable; and the account was written by a well-known engineer named Scott.

179. You believe it is a true account? Undoubtedly. Another scheme is the Telluride scheme, Colorado.

180. *Mr. Rae.*] Have you any idea of the financial success or otherwise of the Oregon-Portland scheme? I have not. I do not think the thing has been going long enough to tell. I do not see how the financial success can be doubted if they have that water-power available, because we know from the Lauffen-Frankfort scheme that the cost was only £60 per horse-power transmitted for the whole plant, and the line was 109 miles long. In the Telluride scheme it is for driving machinery at the mine. It is transmitted for 3 miles only, and it is done by synchronising motors.

181. *Chairman.*] Has it been long in operation? I have not got a note as to how long it has been in operation. What I consider to be the best scheme that I know of is at San Antonio, in California. This is a scheme not yet in operation, but in course of construction. The water-power has first of all to be brought through 1,900 feet of pipes, so it is rather dear in that way. The head of water is 400 feet; the loss by friction is 12 feet; the pipes are 13 feet in diameter, and there are 1,900 feet of them, so it is very expensive hydraulic.

182. The available head is practically 388 feet? Yes. It drives four Westinghouse alternating current machines of 200 horse-power each; that is 800 horse-power altogether. The current has to be conveyed by two No. 7 copper wires, bare. They go out together for 7 miles, and then they diverge—one goes to a place called Pomona, 15 miles from the station, and another to San Bernardino. The pressure is raised to 10,000 volts, and just outside the cities where it is distributed it is reduced to 1,000 volts, and distributed at that. That is the pure synchronous motor scheme.

183. Why is it reduced to 1,000 volts? For safety in distribution. I ought to say the Niagara people have gone so far as this: They are going to charge 10 dollars per horse-power for a year; that is, if you take 5,000 horse-power; but if you take only 300 horse-power they charge you 21 dollars.

184. *Mr. Fosbery.*] After it gets to the distributing station it is reduced to 1,000 volts? Yes.

185. Do you know anything about the scheme at Rome? I know of it, but I have not been able to find out anything about it.

186. What you know of these schemes which have been tried experimentally and practically you know sufficient to be able to state that this scheme which we have in hand is perfectly feasible? Absolutely.

187. And can be worked with advantage and profit so as to give good results? I think so. I should not be afraid of going into it at all if I were the engineer. I would go into it with a light heart.

188. I think you may as well explain to us the difference between high and low voltage? Perhaps we had better define what we mean by high and low voltage. I think the Board of Trade definition of low voltage is anything under 200 volts, and high voltage anything over 200 volts, and extra high voltage anything over 1,000 volts—that is, to the best of my belief, but it may be under 300 volts for the low, and 2,000 volts for the extra high. Anything under 200 volts I should call low-pressure, and anything over 500 high-pressure, and anything over 1,000 volts very high-pressure.

189. For a scheme of this kind, which do you think would be the best system to work—high or low? The low voltage would not work. You must work with a high voltage, and the higher the better if it can be properly insulated.

190. Can insulation be effected in such a way as to minimise or altogether remove the danger? I think hardly any of the danger comes from want of insulation, nor do I think that it would be entirely removed by having the insulation as good as it is possible to get it.

191. But for all practical purposes it would be safe? For practical purposes there is no danger to anybody unless he lay hold of the wire, and is connected with earth at the same time.

192. Then you think that if this scheme is carried out it would have to be on the high-voltage system? There is no option.

Mr.  
R. Threlfall.  
19 Oct., 1892.

193. From a public point of view, do you approve of the scheme? Yes; I think that if the water power is there it is a thousand pities that it should be allowed to go to waste.

194. Do you think it would be of advantage to the community? Exactly the same advantage as power in any form is to the community.

195. Do you think it will be attended with any danger to health in any way? Not at all. As far as we know, the relation between electricity and health is a thing which does not exist. I should, perhaps, say that I am sometimes asked a question of this sort: "Supposing a wire breaks, and somebody comes along?" It is easy to arrange—and, of course, such an arrangement could be made—a mechanism, so that if the wire break the current shall be turned off the wire, and diverted before the wire could reach the ground. This could be done by the mere fact of its breaking, the current being actually turned off actually before the wire gets to the ground.

196. *Mr. Dowel.*] No machinery has been invented to carry out that idea yet? You mean to disconnect the wire. As far as I am aware, there must have been many hundreds of similar things. Any automatic switch; any electro-magnetic switch would do it. For instance, the switch used for charging storage cells, if arranged in the proper way, would do it. I think they had an arrangement of that sort at Lauffen, but I am not sure.

197. *Mr. Fosbery.*] Of course when the wire touched the ground the electricity would go to waste in the ground? In systems under extra high pressure the usual custom has been to allow a disconnecting process to take place if one of the wires touches the ground, not if the wire merely separates. They are equally easy to arrange.

198. *Mr. Cullen.*] Then it would be no hardship on the promoters of the Bill to insist that they should have such machinery? Not at all.

199. Would the cost of conveying the electricity underground be prohibitive? Yes; I think so. I have not got my figures here, but I worked out a scheme for lighting Sydney by means of underground wires, and the cost per mile was almost prohibitive for street lighting in Sydney.

200. Of course it would not be so costly in open country as in the city? No; it would not, but it would be very dear.

201. You say that anything over 1,000 volts would be regarded as extra high? In the terminology of Board of Trade.

202. But this would have to be very many thousands to make it pay, would it not? I think so.

203. What do you estimate it would be about? I have not considered the matter from the constructor's standpoint, but roughly speaking, I should say something like 20,000 volts. As long as you go above 1,000 volts—which means you kill anybody who touches the wire, and is on earth at the same time. I do not think it very much matters. If the weather is wet, and you make good contact between the earth and the wire, I think that 500 volts is as much as most people would like to hang on to.

204. *Chairman.*] You believe that the power of electricity is a utilisable power? I do.

205. There is no doubt about that? No doubt at all. It is the finest thing out.

206. You believe it is the great coming motive-power of the world? I believe that the utilisation of power at present going to waste by electricity is the great coming thing. You cannot of course create power by electricity, but only utilise it.

207. Such a scheme as this is no bogus scheme? Quite the contrary.

208. Do you know anything of the horse-power available in the river Grose? I know nothing at all about that. I know the country, and that there is power available, but how much it may be I have no means of knowing. That would be a matter for the company's engineer.

209. Do you think there should be in the Bill special provision for the protection of life? I do not think so. You do not in the case of Railway Bills have special clauses of that kind.

210. You think the ordinary law of the country is sufficient? Yes. If anybody lies in the railway track he knows what to expect; the same if he climb a post connected with an electrical system. If you have the post marked "danger," or with the skull and cross-bones, as they had at Lauffen, I do not know what more can be done.

211. *Mr. Cullen.*] Supposing the wire were to snap, that would be very different from the case of a railway train? I say that at present I believe there are always mechanisms at the generating end, whereby the wire is immediately disconnected when an accident occurs. I believe the ordinary practice is to make the thing separate when the wire touches the ground, but I cannot say off-hand that I know of a place that is actually protected by making the mechanism work when the wire snaps. But we can make such a mechanism work when the wire snaps, and disconnect when it touches the ground.

212. *Mr. Dowel.*] Over any length? Yes; it does not matter what length it is.

213. *Mr. Rae.*] There would be no objection to such a provision being inserted in the Bill? Oh, the company would provide for that, for its own protection.

WEDNESDAY, 26 OCTOBER, 1892.

Present:—

MR. VARNEY PARKES,  
MR. WALL,

MR. COTTON,  
MR. CULLEN.

T. T. EWING, Esq., IN THE CHAIR.

E. E. Fosbery, Esq., of the firm of Messrs. Johnson, Minter, Simpson, & Co., appeared as Solicitor for the Bill.

Edward Charles Cracknell called in, sworn, and examined:—

Mr. E. C.  
Cracknell.  
26 Oct., 1892.

214. *Chairman.*] What are you? Superintendent of Telegraphs.

215. And I presume that you have a good knowledge of electrical arrangements of all descriptions? Yes.

216. You can give us information as to the present state of the science? I will give what information I can.

217. Have you been furnished with a copy of the Bill? Yes.

218. Have you looked through it? Yes.

219. Do you know anything of the scheme in detail? I do not; it is quite new to me. I have not been furnished with any particulars.

219½. Do you know anything of the water power likely to be obtained from the scheme? No; I have no personal knowledge of the matter at all.

220. You cannot tell us anything in regard to the details of the scheme? Nothing whatever.

221. Can you tell us whether it is possible to bring electric power the distance proposed in the Bill? I do not think that it mentions the distance. If the company's engineer had waited on me I might have consulted him on the subject.

222. The distance is about 40 miles;—is it possible to bring electric power that distance? It is quite possible.

222½. Would the leakage be very great? I should think the leakage, or loss, would be about 25 per cent.

223. Would it be of great advantage to the people of Sydney to have a depôt, from which they could obtain power for distribution? I think it would be a very desirable thing to get power of that kind from water instead of from steam where it can be got.

224. It is in accordance with modern science, I presume? Quite.

225. And you believe in it? Yes.

226. Can you tell us of any way in which it would be inimical to the public interest? I think it would be cheaper to produce the motive power from water than from steam engines, where coal would have to be consumed, and in this case the power could be obtained from turbines, or from water-wheels.

227. It appears to you, without expressing any definite opinion, to be quite feasible? Quite feasible.

228. Is there any special danger to life in the use of electric power? There would be in a case of this kind; it would require such a very high voltage, more particularly if the alternating current is adopted, which I think would be.

228½. What voltage becomes dangerous to human life? Anything over 500.

229. Therefore, the difference between 600 and 6,000 would not matter very much? No.

230. Could any method be adopted which would make it perfectly safe? Not with the voltage required for alternating currents. They are much more dangerous than ordinary direct currents.

231. You think there could be no protection under such circumstances? Not that I am aware of.

232. Where does the special danger under a system of alternating currents arise? From the very high tension at which the electricity is conveyed.

233. There is no danger until a person touches it, is there? There is always a danger attached to it. There have been some very serious accidents in Victoria lately arising from alternating currents.

234. Do you think it is as dangerous as a tram car? Just as dangerous if it comes into contact with you.

235. What were the accidents in Victoria caused by? By wires coming into contact with other wires, and people happening to be in the vicinity at the time. One man was killed. With alternating currents even in your station you will meet with accidents.

236. Is electrical science not so perfect that ordinary arrangements can be made to prevent danger? Only by a thorough insulation.

237. Could not thorough insulation be provided for? It could be, certainly.

238. And if thorough insulation be provided for, there is no danger? There ought not to be if the coating of the wire is sufficiently thick.

239. It depends, therefore, upon whether it is properly carried out? Certainly.

240. Therefore, if the scheme were carried out in a workmanlike manner there would be no danger? There should not be, but it means an extraordinary expense, which is a very serious matter.

241. *Mr. Cotton.*] Do you think, looking at the matter in a general way, that there is any more danger in using electric power than there is in using steam power? Yes, I think there is decidedly.

242. *Chairman.*] Why do you think so;—do statistics show that there is greater danger from the use of electric power than there is from the use of steam power? Yes; it requires greater care.

243. Would you be averse to such a scheme as this on the ground of danger? No; not if it were properly carried out.

244. *Mr. Varney Parkes.*] There is no fear of its interfering with any Government wires? Yes; that is what I am afraid of.

245. Can you tell us in what manner it would interfere with Government wires? We must keep a voltage that would be necessary for working the high tension currents, which would be necessary for this scheme, as free as possible from existing lines, both telegraphic and telephonic.

246. What distance would you have to keep them away? I do not know the exact distance. I do not know what the voltage in this scheme is to be.

247. As far as your information goes, what distance do you think would be necessary? I could not say, unless I knew exactly what power they are likely to use.

248. *Chairman.*] Would a distance of 3 feet be quite safe? Oh, no.

249. Would 30 feet be safe? More likely 3,000 feet. Pulsations have been received from telephones 3,000 feet from a wire, carrying a voltage of 3,000 ohms. This is a matter that requires consideration, and I should like to have time to consider it.

George Matcham Pitt called in, sworn, and examined:—

250. *Chairman.*] What are you? Licensed surveyor.

251. Do you know the catchment area of the water in the Colo and Grose Rivers? I do.

252. *Mr. Cotton.*] How many years have you been residing in that district? I have lived there ever since I was born; that is 55 years.

253. You know that country thoroughly? I do.

254. I suppose you have had some experience of droughts during that time? Yes.

255. What do you consider to be the lowest flow of the Colo River at the stock crossing on the Upper Colo;—what would the width and depth of that stream be? I have crossed it many times, when the water was high and when it was low. When it was lowest there would be from 18 inches to 2 feet of water, and the distance across would be 2 or 3 chains.

256. Would the width be 200 feet? Yes; nearly 200 feet.

257. Have you any idea as to what rate the current runs at? I do not know; but it passes pretty fast.

- Mr. G. M. Pitt.  
26 Oct., 1892.
258. Would it be at the rate of 2 miles an hour? Yes; perhaps a little more than that.
259. That is immediately below the proposed works, where the river comes out of the mountains? Yes.
260. Do you think it safe to say that in the driest times the river would be 200 feet wide, and have an average depth of 18 inches? Yes; I think so.
261. And the rate of the current would be about 2 miles an hour? Yes.
262. Can you give us some idea of the flow of the water at the proposed machine site on the Grose River? The river is more confined there, and runs amongst a lot of rocks. It has a very swift current.
263. Do you know the place lower down where it joins the Hawkesbury? Yes.
264. What is about the volume of the water there? I could not say.
265. The volume there would not be so great as in the Colo? Nothing like it.
266. But it has not been known to stop running? No; I never saw it stopped.
267. Do you know the country in both the places where it is proposed to have the machinery sites on the Grose and the Colo? Yes.
268. Is it not a fact that both those sites are land that is unused for any purpose? Yes; it is all barren rock.
269. It is not even leased, is it? No; it is of no value for any purpose whatever.
270. The water is to be diverted by a race and returned to the river;—could the diversion of that water affect anybody at present or future interested, or do any one any harm? Not at all.
271. Will the same remark apply to the Grose River? Yes.
272. Can you give us some idea as to whether there would be any objection on the part of the local residents to the proposed scheme? I do not know the opinion of the Colo people, but the people in my neighbourhood would be glad if it could be carried out.
273. You think that no one objects to it? I do not think that there could be any objection to it.
274. *Mr. Fosbery.*] You are a Government surveyor? I am.
275. In this district? Yes.
276. Do you know of any purposes for which this electric power could be used in the district;—I understand that the people of Richmond have no gas? They have no light at all at Richmond.
277. Then the electric light could be used there? Yes.
278. And the electric-power could be used as a motive-power? All over the district it could be used by wood-cutters, and as a motive-power for various purposes on farms—including my own place.
279. You have a farm? Yes; I run steam engines, and use wind-power.
280. Would others be able to use electric-power in a similar way? Yes, all round the district.
281. I understand that there is a deal of fine timber in the district which is almost inaccessible for procuring by means of steam cutting;—they could not get heavy engines to the places where the timber is without going to a very great expense, but this power could be utilised? Yes; I understand that the machinery would not be large, and that it could therefore be taken to where the timber is.
282. The timber could then be utilised? Yes.
283. You have never heard any of the residents in the district saying anything against the scheme? No; I have spoken of it several times since Mr. Palmer mentioned the matter to me, and the residents were delighted to think that such a power could be brought into their midst. I cannot see what objection there can be to it.
284. *Chairman.*] Do you know anything about the opinion of the people of Richmond on the subject;—would they be likely to take electricity for lighting purposes? They would only be too happy to do anything to get light.
285. Do you think they would favourably consider it? I do indeed.
286. Have they a Municipal Council at Richmond? Yes.
287. Would it suit them very well? Yes.
288. Do you know anything about Windsor? Windsor is lighted by gas, but it is not paying, and I think they would be happy to substitute the electric light for gas.
289. You think that if we applied to the local authorities at Richmond and Windsor we might have something favourable from them? I do.
290. *Mr. Fosbery.*] Would this scheme, as far as you know of it, interfere with the Sydney water supply? Not at all, and you pass the water back again to the same source.
291. I mean from the mode in which we propose to use it? No.

John Percy M'Guanne called in, sworn, and examined:—

- Mr. J. P. M'Guanne.  
26 Oct., 1892.
292. *Chairman.*] Do you come from the Lands Department? Yes.
293. What is your position? I am clerk in charge of the Miscellaneous Leases Branch.
294. And you are representing the Under Secretary for the time being? Yes.
295. You have received a copy of the Bill? Yes.
296. Has your Department any expression of opinion to give to the Committee in reference to the Bill? We have not any great objection to it.
297. Have you perused the Bill? I have.
298. Have you any information to offer in regard to it? Clause 6 provides for the leasing of the land for thirty years, but I think that may be too long a period. The Land Act only provides for special leases to be issued for a period of fifteen years.
299. Is the period greater in no instance? No.
300. What do you do in the case of a wharf? The period is fifteen years. That is the maximum; but they may apply for a new lease when the time has elapsed.
301. *Mr. Varney Parkes.*] There is little or no difficulty in getting the lease renewed? No; I have not known them to be refused.
302. Is that the absolute maximum period of any leases issued by the Department? I do not say of any leases; but this would come under the special leases, the period for which is fifteen years.
303. What description of lease may be longer than fifteen years? Leases of inferior land. Scrub lands are leased for about twenty years.
304. Is twenty years the longest period of any lease? Yes.
305. For any purpose? Yes.

306. What is the period of the leases in the Western Division at present? That is a matter I am not familiar with. It belongs to the Occupation Branch.
307. In your opinion twenty years is the maximum? Yes; for such purposes as that for which a lease will be required in this instance. It would come under the 90th clause of the Act of 1884, which makes the maximum fifteen years.
308. But you have said that you do not anticipate any difficulty as regards a renewal? None that I am aware of.
309. The leases carry no right with them? No; some people call them renewals, but they are actually fresh leases.
310. The Department has the right of refusal at the end of the period? Yes.
311. *Chairman.*] Is there anything further in that clause to which you have to refer? The clause says: "Not exceeding thirty years, at a nominal rental." I think that the rent should be determined in accordance with the Crown Lands Act.
- 311½. By the Local Land Board? Yes.
312. *Mr. Varney Parkes.*] Did you ever lease any water before? No.
313. The departmental opinion is that the Local Land Board should be asked for its opinion on the matter? Yes; with regard to the rent. The words used in the Bill are "nominal rental."
314. You would like that to be fixed by the Land Board? Yes.
315. *Chairman.*] It might still remain nominal rental? Yes.
316. *Mr. Fosbery.*] Is it not a fact that under the Land Act it would be impossible for us to get a lease which would give us these powers? I do not think it impossible. The Act says "that any purpose for which a lease is required may be made a special purpose." Under section 90 this may be a special purpose.
317. The Land Court could not justify a person in deflecting the course of a stream, even though that stream were on Government land;—is it not so? The Minister would, of course, have the power. He could give you permission to deflect the stream, but I do not think that the Act refers to anything of the kind.
318. There is no special provision with regard to water? No.
319. Have you any knowledge of the lease that was granted by Government in connection with the building of the Hawkesbury Bridge at Richmond? No.
320. Would you be surprised to hear that it was a lease for a term of forty years? I do not think it came within the purview of our Department.
321. I should have imagined it would? I am not aware of it.
322. With regard to these special leases, they are practically renewable;—it is almost a matter of right, is it not? I should not like to say that. You get a lease, as you would for a house, for a certain period, and when the lease is expired you must apply for a fresh one, which in all probability you will get.
323. It is practically renewable? No; I would not say that.
324. You have not known any case of a refusal? No.
325. Have you formed any idea as to the amount of money that would have to be spent in developing this scheme? Not the slightest.
326. Would it be taken into account by a Department in connection with our application for a lease under this Act if it was alleged by us that we were going to spend a very large sum of money;—would that fact be considered by the Government as a reason strongly in support of our application? These matters would go before the Local Land Board in the first instance, and they would weigh all that information.
327. But would it not be considered? In all probability it would be, but that would be a matter for the Land Board.
328. Would it not be considered that we were going to spend a vast sum of money? I think that the Minister would consider it, but the Act does not say anything about it.
329. *Mr. Varney Parkes.*] Is it not a fact that a former lease was granted for the use of water from the Colo River? Yes.
330. To whom? To some three or four individuals.
331. You do not remember their names? No; Mr. Palmer was one. I do not recollect the names of the others.
332. That application has been granted? It has been approved by the Minister, subject to certain conditions.
333. Can you give a second grant of the Colo River water after you have granted it already? Those leases which have been granted have been for machinery sites, and for the erection of a weir and dam and pipe-line. There would not be a second lease granted for the same purpose in the same locality.
334. *Mr. Cotton.*] The position is that the Land Board approved of the leasing of the land for the erection of machinery, and a pipe-line, and sanctioned their diverting the water, subject to authority being obtained by Bill? Yes.
335. You leased the land, but the question of diverting the water has to be dealt with by Parliament? Yes.
336. *Mr. Varney Parkes.*] But those rights have practically been granted previously? Yes.
337. Was one of the parties Mr. Jamieson? Yes.
338. How would the Department stand with regard to these two applications for the use of the water of that river? They are in separate localities.
339. But the Colo has been applied for before? The applications I am speaking of were all dealt with by the Board at one time, but the sites were in different localities.
340. Are they all one interest? I do not know. They are in different names. I thought at the time that they were, but I have no personal knowledge of the matter.
341. *Chairman.*] Do you mean that the leases appeared to be for carrying out the same class of work? Yes.
342. But a lease to utilise the water of the Colo would not interfere with another lease for the same purpose;—the power of the water is not destroyed by its being used? I do not think so.
343. The water having passed through a turbine or a water wheel to furnish power (say) at point 63 on the map, if you grant another lease at Weeney's Creek to do the same class of work the water is still available? Yes.
344. Therefore you might grant many leases for the same purpose? Yes.

Mr. J. P.  
M'Guanne.  
26 Oct., 1892.

- Mr. J. P. M'Guanne. 345. Would you grant two applications for the right to use the water if they came into competition? I think so, if so advised by the Local Land Board.
- 26 Oct., 1892. 346. In point of fact, the use of the water of the same river, unless the sites clash, need not be an obstacle? Not necessarily. I would invite your attention to clause 8 of the Bill. I think that the provisions of that clause should be subject to the Crown Lands Act. The clause says:—"The projectors may from time to time, for the purposes of this Act, fall timber, and use and carry away the same." The removal of the timber should be subject to the Crown Lands Act. The company might go on a timber reserve and cut down timber indiscriminately. It would be all right if this was done in accordance with the Forest Regulations under section 6 of the Act of 1834.
347. And you believe that they should come under the Forestry Department? Yes; I would also refer to section 38, which provides for the resumption of the land by the Government. There is no provision for the Government to take any of the land for any recognised Government purpose during the period of the lease. I think that the Government should have that right.
348. Mr. Fosbery.] You mean that the Government might want to resume a portion of our lease, not to take over the whole scheme? Only a portion. I do not think that provision is made for the Government to have the right of entry or to resume a portion of any of the land.
349. Rights which would not interfere with the carrying out of our scheme? Yes.
350. Chairman.] Do you think that if the alteration you suggest were made, the Lands Department would regard the Bill as not antagonistic to the public interest as far as that Department is concerned? I think so.
351. Would your Department draft what they would regard as satisfactory clauses embodying what you suggest? Yes.
352. Will you submit amendments in clauses 6, 8, and 38? I will.

Charles Frederick Moore Michelmore called in, sworn, and examined:—

- Mr. C. F. M. Michelmore. 353. Chairman.] What are you? I am an agent.
- 26 Oct., 1892. 354. Mr. Fosbery.] What position do you occupy with regard to the company? I am secretary of the New South Wales Electric Supply Company.
355. Is that company registered in New South Wales? Yes; under the Companies Act.
356. Have you the certificate of the incorporation of the company? I have it at the office.
357. Have you a copy of the memorandum of the articles? Yes.
358. Do you produce it? I do.
359. Who are the present directors of the company in New South Wales? The present directors in New South Wales are William Attenborough, F. G. Duff, Walter Hall, Charles Carleton Skarratt, and Charles Garland.
360. Who is Mr. Attenborough? He is the head of one of the largest firms of solicitors in Melbourne.
361. And who are Mr. Skarratt and Mr. Hall? Well-known Sydney men.
362. For what purpose was this Sydney company formed and registered? The Sydney company was formed with the intention of taking over this Bill of the Australasian Rights Purchase Association as soon as it is passed, to carry out the work.
363. Have the directors of the company held a meeting yet? Yes.
364. And the directors are prepared, as soon as the Bill has become law, to consummate the agreement and to take over the rights and liabilities of the company? Yes; undoubtedly.
365. And to carry out the necessary works? Yes.
366. Has the office of the company been registered? Yes.
367. And all the provisions of the Companies Act, as regards the New South Wales company, have been so far complied with? Yes.
368. And are the men who are interested in this company all sound commercial men? Yes; the majority of them are very sound.
369. And are some of them very wealthy men? Yes.
370. Do you know of any similar scheme to the one in hand that has been carried out elsewhere? Yes; the Australasian Rights Purchase Association have carried out similar works in Tasmania.
371. That is the company that is applying for this Bill? Yes.
372. They have obtained a similar concession from the Tasmanian Legislature? Yes.
373. Are the works in Tasmania being developed? Yes; the contracts for all the first part are let, and contracts for erecting machinery are let.
374. And the whole scheme is going on rapidly? Yes; the last advice I had was that they expected the works to be finished in four months.
375. Was there any off-shoot company formed in Tasmania? Yes; exactly the same as here.
376. Were shares in that Tasmanian company offered to the public? No; they were taken up by the shareholders in the Australasian Rights Purchase Company.
377. Then the off-shoot company has obtained a right, and is developing those works with its own means, and without the necessity of asking the public to come in and contribute? Yes; they have done it all amongst themselves. In Tasmania they have done what they have done here. In Tasmania there is a law which necessitates the formation of a company in that Colony.
378. Mr. Cullen.] I should like to ascertain what is the capital of the company? The capital is 200 shares of £100 each.
379. How much of it is subscribed? All of it.
380. How much is paid up? It is fully paid up.
381. What is the number of the shareholders in that company? There are fifty-one shareholders.
382. How many shares are held by New South Wales men? There are ten Sydney men in the company, and they hold fifty-seven shares.
383. I understood you to say that the New South Wales Electric Power Company was really formed by shareholders in the original company? It was.
384. In what capacity did Mr. Skarratt and Mr. Hall come in? They came in as shareholders in the Australasian Rights Company. They were in the original company.
385. What is the nominal capital of the New South Wales Company? £500,000.
386. In £1 shares? Yes.

387. How many have been subscribed? One hundred and fifty thousand shares have been allotted.
388. How much has been paid up on them? They are all paid up.
389. In cash? No; they are paid-up shares. One hundred and fifty thousand shares have been allotted to the Australasian Rights Purchase Company.
390. Deemed to be paid up? Yes.
391. Have any shares been subscribed for? Not in New South Wales.
392. Then that really means that the parent company hold one-fourth of the shares in the new company? Yes.
393. Have they offered any shares in the open market yet? No.
394. So that this is really an arrangement on paper of the parent company to develop the New South Wales part of their business? Yes; exactly as they have done in Tasmania. As far as I know there has been no intention of offering shares to the public.
395. They have not yet issued a prospectus to the public? No.
396. Have they decided as to the terms on which they will offer the 350,000 shares? No; as far as I know they do not intend to offer them to the public. In the Tasmanian Company, for every share held in the Australasian Rights Purchase Company the holder has the right to take up so many contributing shares in addition to the paid-up shares. You get paid-up shares as a member of the Australasian Rights Purchase, then you take up so many more contributing shares in that company.
397. As a matter of fact, the thing is not fully arranged as regards the New South Wales Company? It is practically arranged, but nothing is settled yet, neither was anything in Tasmania until the Bill had passed.
398. I understand you to say that the New South Wales Company are prepared to take over from the Australasian Rights Purchase Company their rights under this Bill? Yes.
399. It really means that the shareholders of the original company shall then be considered as the shareholders of this new company to the extent of 150,000 shares, and they have pre-emptive rights with regard to the remaining shares? Yes. The idea was, that this being a New South Wales scheme, there should be a New South Wales company to develop it. The directors, Mr. Hall and Mr. Skarratt, are well known in Sydney. Mr. Garland is also a well-known man, and there are two Melbourne directors to represent Melbourne shareholders.
400. *Chairman.*] In the Bill it is described as a company registered in Melbourne? Yes.
401. What steps have you taken about that? This New South Wales Electric Supply Company registered in Sydney will take over all these rights.
402. The company that you intend to carry out the works is registered? Yes.
403. So that virtually, you consider that we are dealing with a company registered in Sydney? Yes.
404. Have you a list of the shareholders in the New South Wales Electric Supply Company (Limited), and a list of shareholders in the Australasian Rights Purchase Association (Limited)? Yes.
405. Do you desire to hand in those lists? Yes; I now do so.
406. Are those correct lists? Yes.
407. *Mr. Wall.*] What towns do you propose to pass through on the road to Sydney? Richmond and Windsor.

Mr. C. F. M.  
Michelmores.  
26 Oct., 1892.

WEDNESDAY, 2 NOVEMBER, 1892.

Present:—

MR. EWING,		MR. COTTON,
MR. O'SULLIVAN,		MR. RAE.
T. T. EWING, ESQ., IN THE CHAIR.		

Mr. Fosbery, of the firm of Johnson, Simpson, Minter, & Company, appeared as solicitor for the Bill.

Edward Charles Cracknell further examined:—

408. *Chairman.*] Have you further considered the Bill since you were last before the Committee? I have. I propose to make certain additions and alterations so as to protect the Railway Commissioners and the Department I represent.
409. Do you produce certain new clauses and suggest certain alterations in the Bill? Yes. The first clause which I intend to suggest will be a new clause 5A. [*Proposed new clause read.*] It is necessary to have a clause of that kind to protect the Government works, otherwise wires containing a very high voltage may be run along the existing lines and upset all their working. I do not think there can be any objection to a clause of that kind.
410. *Mr. Fosbery.*] Do you not think that if this clause is inserted in the Bill it would be right to have a provision to the effect that the consent of the Commissioners is not to be arbitrarily withheld? That is a matter entirely for the Commissioners.
411. *Chairman.*] Do you think the clause should be so worded that if the work in question does not interfere with the Commissioners the application to them should be purely formal? I could not suggest anything of that kind. My opinion is that the Commissioners will not make unnecessary objections.
412. You believe that in dealing with the company they will exercise their common sense? Yes; I think you will always find them very reasonable people to deal with.
413. What will the next clause be? The next new clause will be clause 6A. This clause is to give a power which the company have not asked for, power to break up streets and remove soil; it will strengthen the Bill very considerably.
414. This is a Bill only for transmitting the power to Sydney, and not for distributing it;—these clauses may go beyond the scope of the Bill? The company may have to break up the ground on their main line. I have gone into the matter carefully, and I think it will be found that these clauses are necessary, not only to give powers to the projectors, but also to protect the existing lines. In going through Windsor and Richmond, for instance, it will be necessary for the company to break up the streets; therefore it is necessary to have the powers provided for in this clause.
415. Do you mean all these provisions? Yes; they have been taken chiefly from the Board of Trade Act in England.

Mr. E. C.  
Cracknell.  
2 Nov., 1892.

- Mr. E. C. Cracknell.  
2 Nov., 1892.
416. What is the next amendment? The next will be clause 14A, a clause to protect telegraphs and telephones. This clause provides that when the company cross our lines at right angles and at the intersections of streets they must do so at a certain distance from existing lines, so that by carrying alternating currents of very high tension they may not affect the old lines, such as telephone lines, or the ordinary telegraph system.
- 417-8. That does not affect the main line;—there would be no streets where the main line runs? In all probability there would not be, except in towns. They must cross our lines at right angles in the towns. They must keep away 6 feet, where there is a crossing; and, in running parallel for any distance, they will be required to keep 10 yards away; that means that, instead of keeping on the same side of the street in running parallel, we wish them to go to the other side of the street. The next will be clause 23A.
419. Does that comprise all the alterations that you desire to make? There are one or two other little things. Clause 23A will also provide that the charge is not to exceed the English rate for the Board of Trade unit.
420. *Mr. O'Sullivan.*] Do you think that that rate would be sufficient in this country? I think it would be ample.
421. *Chairman.*] Does that embrace the whole of your suggestions? There is another rather important clause, and that relates to monopoly. If a Bill of this kind is got through, in all probability it will give the company a monopoly over all other companies of the kind. In all previous lighting Bills it has been provided that no monopoly shall exist.
422. Have you a clause to provide for that? Yes. Then I propose a clause to stand as clause 39 of the Bill. This clause also is for the protection of the Government. The company may set up communication between different towns, and this clause is intended to prevent them from doing so.
- 423-4. *Mr. Cotton.*] But that clause would not prevent the company from utilising their own lines for the transmission of their own messages? No; our own regulations provide for that, that is another matter altogether. This is to prevent opposition to the Government lines by the company having power to send messages by telegraph or telephone for the public. Then new clause 40 is a clause to prevent the Bill from becoming a dead letter. The projectors will be required to commence the work within twelve months after the passing of the Act. Then new clause 41 says that nothing in the Act shall be construed as conferring upon the projectors a monopoly of the powers and rights hereby granted, or prevent the granting of similar powers to other persons. I think that that is all I have to suggest. The other clauses of the Bill do not concern my Department, they are for the Minister for Lands to deal with. In clause 2, the interpretation clause, it says that the word Minister means Minister for Lands, but the word Minister should mean the Postmaster-General.
425. *Mr. O'Sullivan.*] Do you want to change it from Minister for Lands to Postmaster-General? Yes; an Electric Lighting Act comes under the Postmaster-General's Department.
426. But you would still have to give the Minister for Lands the jurisdiction? Yes; as regards the land, but the Act itself would be administered by the Postmaster-General.
427. It is only for the purposes of administration that you require the alteration? Yes; as soon as the land had been granted the whole thing would come under our Department.
428. *Mr. Fosbery.*] Would you object to our having those clauses reworded where it is necessary? No; if you do not make any difference in the sense of them.
429. You have had an opportunity of going at some length into the scheme which we propose to carry out—does it seem to you to be quite feasible? It is quite feasible, there is no question about it. Similar schemes have been carried out in various parts of the world already with success.
430. Do you think it would be a success as a commercial transaction? That is rather a difficult question for me to answer. It all depends upon your management.
431. What do you think ought to be the maximum price charged per unit? I do not think you should charge more than 1s. per unit, I do not think it will be necessary for you to charge so much as that.
432. You think that it ought to be remunerative at 1s.? Quite so; there is no question about that. Many of the companies in England have reduced the charge to 8d.
433. But those are companies that have been in operation for some considerable time? Yes; at any rate I am giving you the Board of Trade limit, and I do not think you could ask for anything more than that.
434. Perhaps they are under different labour conditions in England? They are under considerably more expense than you would be. In England the cost of coal is a considerable item, but you propose to do away with that.
435. Do you think it will be a public benefit to have this work carried out? I think that any improvement of this kind, which appears to us to be a novelty, but which is not really a novelty now, would be of great value. I do not wish to set up water as against steam, or anything of that kind, but I think it a very excellent idea to have the question set at rest as to the bringing of electricity into Sydney, a distance of 40 miles, by means of dynamos driven by water-power. What I mean is that I have not the slightest objection to raise against water-power being used for the generation of electrical power at a distance. In fact I am very much in favour of it.
436. In clause 6A, you have a provision for a fine not exceeding £5, and for every such offence, £5 additional for each day. Have you any objection to that being altered, so that it shall not exceed £5? Yes; I object, because other Bills of a similar kind contain the same clause.
437. Then that is put in intentionally? Yes; unless we make it a serious item people will disregard it; and a great deal of inconvenience will be caused to the Department.

David M'Mordie called in, sworn, and examined:—

- Mr. M'Mordie.  
2 Nov., 1892.
438. *Chairman.*] What are you? Engineer for Water Conservation, Public Works Department.
439. Have you seen the Bill before the Committee? Yes; I have read the Bill.
440. Can you suggest any way in which it may be better made to meet the public interest? I read it entirely with a view to the way in which it would affect our own works in the Water Conservation Branch. The first point I noticed was this: Clause 3, lines 57 and 58, page 3, provides for "taking, diversion, appropriation, and utilisation of the waters of the rivers aforesaid; whereas the proviso provides only for returning to the stream waters "so diverted." It struck me that there is a difference between the power

power conferred of taking, diverting, and the utilisation of the waters, and the liability for returning to the stream, that is, that the water taken out of the river may not all be included in the water returned.

441. You think that the taking, appropriation, and utilisation may be separate from the diversion? Yes; I think that to meet the difficulty all those words should be repeated.

442. What is the next point? The next point is as to clause 4. I think the whole of the last paragraph of that clause is of great importance, and it seems to provide for a possible extension of the scheme beyond the supplying of electricity.

443. Why do you come to that conclusion? Because the supply of electricity is fully provided for in the preceding part of the clause. I think the last paragraph might at some future time be taken to cover any use whatever of the water.

444. *Mr. Fosbery.*] Might we not require engines in connection with the works for repairing or for timber-sawing? Yes; but I suggest that that should be dealt with in some other way. This provision would cover irrigation or any other use of the water.

445. *Mr. Cotton.*] The water could not be returned to the stream if it were used for irrigation? The bulk of the water used for irrigation does return to the stream. I think the clause is rather vague, and we want a more definite expression, so that the public would know to what extent the scheme may be developed at some future time. I think the clause is too comprehensive.

446. *Mr. Fosbery.*] You have no objection to a provision being there to allow us to utilise the water-power for subsidiary purposes? No; it is only necessary to guard against a possible extension of the scheme in future which one cannot guess at now. Then in lines 20 and 23, clause 5 seems to be open to the same objection.

447. It is not definite enough? No. Then in line 33, clause 6, the words "nominal rental" are used. I think that the word "nominal" should be struck out.

448. *Chairman.*] Why do you object to the word "nominal"? Because the Water Conservation Department is proceeding on the lines of having the water paid for.

449. But the company are not going to take water, they are only going to take water-power? It should include payment for water-power and the water used.

450. The water is not used in the way that you would use it? No; but it is usual in the national administration of water to charge for all rights granted to individuals or companies.

451. You object then to the word "nominal"? Yes; I would suggest the word "fair" instead of the word "nominal." Then, in line 36, the clause commencing, "And in every, &c.," strikes me as being too comprehensive.

452. You mean that the Minister should not have power to lease beds of rivers? I do not think that he has that power, and I do not think that such power ought to be given to any Minister. He might grant a lease of the bed of the harbour under that clause.

453. You do not think that he has the power? This Bill would confer the power.

454. *Mr. Rae.*] A line or two before that the Bill says that the Minister is to have power to do this with regard to any Crown lands that may be reasonably necessary? Yes; I would suggest that after the word "necessary," the words "in the opinion of the Minister" be inserted.

455. *Chairman.*] From the departmental standpoint, if the alterations which you suggest are made, you do not see that there is anything objectionable in the Bill? I do not. The most important clause to which I have taken exception is clause 4, which, if passed as it stands, would provide for great future developments that no one can foresee now.

456. Will you supply the Committee with a copy of the Bill, with your suggested alterations made on it? Yes.

457. *Mr. Fosbery.*] In regard to the 6th clause, will you explain your objection to our having a lease, if need be, of the bed or part of the bed of any river, stream, or creek? There is a Bill now before Parliament which provides for the public administration of the waters, and this provision would be contrary to the spirit of that Bill. The water and the beds of all rivers, it is proposed by that Bill, shall belong to the Crown.

458. If it belongs to the Crown, why should not the Crown lease it to us? They are trying to get over the difficulties caused by previous leases. It is not considered to be to the public interest that river beds should be leased.

459. Have you considered whether it would be necessary for us to have some part of the bed of this river for a weir? The clause, as worded, seems to cover too much.

460. If it should be necessary for us to have a lease of some part of the bed of a river, would there be any objection to the Crown giving us a lease on such conditions as the Minister might think fit? The leasing of the bed of a public river seems to me to be open to objection.

461. *Chairman.*] Do you know anything about the valley of the Grose and the Colo Rivers? I do not know anything of the valley of the Colo River. I know something about the Grose Valley. I know that the Colo River is a very important tributary of the Nepean.

Mr. D.  
M'Mordie.  
2 Nov., 1892.

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 19th January, 1893, the "*Hay Athenæum Trustees Enabling Bill*,"—beg to report to your Honorable House:—

That they have examined the witness named in the margin\* (whose evidence will be found appended hereto); and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the clauses and schedule of the Bill, in which it was not deemed necessary to make any amendment.

\* Richard Chambers.

Your Committee now beg to lay before your Honorable House the Bill as agreed to by them.

JAMES NEWTON,  
Chairman.

No. 3 Committee Room,  
Sydney, 31 January, 1893.

---

PROCEEDINGS OF THE COMMITTEE.

---

TUESDAY, 31 JANUARY, 1893.

MEMBERS PRESENT :—

Mr. Barbour,                   |                   Mr. Houghton,  
                                          Mr. Newton.

Mr. Newton called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Bill *referred*, together with original Petition to introduce same before the Committee.

Richard Chambers (*Secretary of the Hay Athenæum*) called in, sworn, and examined.

Witness *produced* the minute-book of the Hay Athenæum.

Room cleared.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Clause 1 read and *agreed to*.

Clause 2 read and *agreed to*.

Schedule read and *agreed to*.

Title read and *agreed to*.

Chairman to report the Bill without amendment to the House.

---

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

HAY ATHENÆUM TRUSTEES ENABLING BILL.

TUESDAY, 31 JANUARY, 1893.

Present:—

MR. BARBOUR, | MR. HOUGHTON,  
MR. NEWTON.

MR. NEWTON IN THE CHAIR.

Mr. Richard Chambers called in, sworn, and examined:—

1. *Chairman.*] Are you secretary of the Hay Athenæum? Yes.
2. Do you produce the minute-books of the committee of the Athenæum? I do.
3. Have you got the minutes of the special meeting at which it was decided to apply to Parliament for a Bill? Yes.
4. And was a resolution in favour of that duly carried by the required majority? Yes.
5. *Mr. Barbour.*] Was there a public meeting called of the members of the institution? No; but there was a meeting of the committee and the trustees.
6. *Mr. Houghton.*] Were not the members of the institution consulted? Not publicly.
7. Not at all? No.
8. Have the committee taken the responsibility of inviting Parliament to give this power? Yes; in conjunction with the trustees, who were appointed and gazetted in the ordinary way. I may state, although I have no particular authority for it, that the members as a body are strongly in favour of having this Bill passed, and we have had two or three general meetings since it was determined to ask Parliament to pass the Bill, and no exception whatever has been taken to it.
9. Has the matter been submitted to a general meeting of members of the institution for their opinion? I think not.
10. Do you know why not? Because it was in the hands of the committee. The committee were appointed by a general meeting to carry on the business of the institution, and the necessity has been long felt by the members as a whole for the erection of a hall. They left the matter in the hands of the committee.
11. Did they do it by resolution? I could not say.
12. It was taken for granted that they would approve of it? There has been no exception taken to it by any member of the institution. I have been secretary of the institution for five years.
13. You say that you produce minutes of a certain meeting of the committee, at which it was decided to make application to Parliament for power to mortgage the land on which the building is to be erected? Yes.
14. What is the date of the meeting? The 13th January, 1890. At that meeting it was decided to apply for the first Bill that was introduced; but Parliament was dissolved, and the Bill lapsed when it had reached a certain stage.

Mr.  
R. Chambers.

- Mr. R. Chambers.  
31 Jan., 1893.
15. Has it ever been decided at a subsequent date to make another application? Yes.
16. On what date? At a meeting held on the 5th January, 1892, it was resolved, on the motion of Mr. Stewart, that the sum of £25 be sent to the Colonial Treasurer as a deposit in connection with the passing of a Bill through Parliament to enable the trustees of the Hay Athenæum to mortgage the land on which it was proposed to build a hall.
17. You say that the committee took action in the matter without the authority of the members? Yes, as far as I recollect.
18. And you can give no reason why the committee did not first consult the members? The only reason is that all business in connection with the institution is relegated to the committee—everything is in their hands.
19. Are the minutes of the committee submitted to the general meeting of the members? No.
20. But do the committee report from time to time to the members on the business they have transacted? Yes, at the annual meetings held in January each year. I daresay that this matter is mentioned in the report of 1891.
21. *Mr. Barbour.*] Has any resolution been passed at any meeting of members of the institution to authorise the mortgaging of this property? No, but it has been confirmed by a general meeting adopting the annual report in which the proposal was mentioned.
22. *Mr. Houghton.*] That is what I want to know. Have the committee in their report to the annual meeting made reference to this project in such a way as to bring about the endorsement of it by the members of the institution? Yes.
23. *Mr. Barbour.*] Can you tell us whether any resolution has been passed at a general meeting of members in favor of the adoption of this course? The only way it has been done has been by a general meeting of members adopting the annual report in which the resolution of the committee to obtain a Bill was mentioned.
24. Are you speaking of your own knowledge, or are you saying what should have been done? I prepared the report myself.
25. *Mr. Houghton.*] It would have been a very serious omission on the part of the committee if they had not mentioned this matter, because it is a most important matter. The report has not yet been put into the minute-book.
26. *Mr. Houghton.*] There may be many members opposed to this proposal? In the report to the committee for 1892 it says that a Bill has been before Parliament for some time to enable the trustees to mortgage the land, to raise funds to erect a hall, but that, owing to the dissolution of Parliament and the change of Government, the matter has been deferred. It also says that the Bill is in the hands of Mr. Newton, who promised to push the matter. That report was adopted at the annual general meeting, and at a meeting subsequently held it was confirmed.
27. How many members are there? About ninety members.
28. Have you a library? Yes, containing over 2,000 volumes.
29. *Mr. Barbour.*] Do any of those ninety members object to the course which you propose to adopt? I have never heard one objection.
30. In your opinion the members are all favourable to it? Yes, and so are the majority of the inhabitants of the town. If the town were polled to-morrow, nine-tenths of the inhabitants would be found to be in favour of the Bill, because there is no hall there available for any public purpose.
31. *Mr. Houghton.*] How much money would be required to erect the additional buildings? We called for tenders so as to be in a position to know, and they varied from £1,200 to £1,400 or £1,500.
32. Consequently it will only be necessary to raise that amount of money? Yes. The members of the committee for the last year signed a bond jointly and severally for the sum of £400, and that bond is still in existence. That shows that they are in earnest about the matter.
33. *Mr. Barbour.*] Your present accommodation is unsuitable for the requirements of the place? Entirely unsuitable.
34. *Mr. Houghton.*] You propose to erect a new building entirely? Yes.
35. How do you propose to liquidate the mortgage? By the income. We expect a large income. If a hall were built of the dimensions that we propose it would bring in £200 a year at least by letting, judging by the rent from those halls in the town at present, which are not half so convenient as the one we propose to erect would be.
36. The whole of that would not be appropriated for the liquidation of the mortgage? Part would be used to pay interest, and part would go to a sinking fund.
37. You propose to create a sinking fund? That is the idea of the committee at present. Further than that, there is a sum of money promised by subscribers towards the hall.
38. You have a building fund? Yes.
39. And you receive voluntary subscriptions? Yes.
40. Do you know whether the committee have determined upon the duration of the mortgage? I cannot say. That would be a matter to be dealt with after the Bill is passed.
41. You would wipe out the mortgage at the earliest possible date? Yes, for our own sakes.
42. I understand that one of the trustees is dead? Yes; Mr. Robertson.
43. Has anybody been appointed to succeed him? No.
44. Is it intended to appoint anyone to succeed him? It is not absolutely necessary. We are not to have more than three, but there is no minimum fixed. We can easily get another trustee if necessary.

1892.

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.**

---

VOTES No. 17. WEDNESDAY, 5 OCTOBER, 1892.

13. HILLGROVE AND ARMIDALE WATER-POWER ELECTRIC BILL (*Formal Motion*):—Mr. Garrard moved, pursuant to Notice,—
- (1.) That the Hillgrove and Armidale Water-power Electric Bill be referred to a Select Committee, with power to send for persons and papers, for consideration and report.
- (2.) That such Committee consist of Mr. Cotton, Mr. Ewing, Mr. Lonsdale, Mr. Crick, Mr. McCourt, Mr. Copeland, Mr. Dale, Mr. Lyne, and the Mover.
- Question put and passed.
- 

VOTES No. 18. THURSDAY, 6 OCTOBER, 1892.

17. HILLGROVE AND ARMIDALE WATER-POWER ELECTRIC BILL:—*Mr. Dickens*, for Mr. H. H. Brown, presented a Petition from George Frederick Beck Hancock, praying for leave for the Hillgrove Water and Electric Power Company to appear before the Select Committee on the Bill in person, or by solicitor or counsel, and if necessary, to adduce evidence and send for persons and papers, and to examine and cross-examine witnesses called before the said Committee.
- Petition received.
- Mr. Dickens (*by consent*) moved, without Notice, That the prayer of the Petitioner be granted.
- Question put and passed.
- 

VOTES No. 28. TUESDAY, 1 NOVEMBER, 1892.

5. HILLGROVE AND ARMIDALE WATER-POWER ELECTRIC BILL:—Mr. Garrard, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee, for whose consideration and report this Bill was referred on 5th October, 1892, together with a copy of the Bill as amended and agreed to by the Committee.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 11 OCTOBER, 1892.

MEMBERS PRESENT :—

Mr. Cotton, | Mr. Garrard.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 12 OCTOBER, 1892.

MEMBERS PRESENT :—

Mr. Cotton, | Mr. Garrard,  
Mr. Ewing, | Mr. Lonsdale,  
Mr. McCourt.

Mr. Garrard called to the Chair.

Entries from Votes and Proceedings, appointing the Committee, and granting leave to George Frederick Beck Hancock (Hillgrove Water and Electric Power Company) to appear in person, or by solicitor or counsel, before the Committee, read by the Clerk.

Printed copies of the Bill referred, together with original Petition to introduce same, also Petition of the Hillgrove Water and Electric Power Company, before the Committee.

Present :—H. White, Esq. (*Solicitor for the Bill*); J. C. McLachlan, Esq. (*Messrs. Laurence, McLachlan and Williams, Solicitors for the Hillgrove Water and Electric Power Company*).

Walter Harcourt Palmer (*Electrical Engineer*), called in, sworn, and examined by Mr. White.

Cross-examined by Mr. McLachlan.

Witness withdrew.

Charles Frederick Moore Michelmores sworn, and examined by Mr. White.

Cross-examined by Mr. McLachlan.

George Herbert Westcott, called in, sworn, and examined by Mr. White.

Cross-examined by Mr. McLachlan.

Witness withdrew.

[Adjourned till To-morrow, at a *Quarter-past Eleven* o'clock.]

THURSDAY, 13 OCTOBER, 1892.

MEMBERS PRESENT :—

Mr. Garrard in the Chair.

Mr. Cotton, | Mr. Ewing,  
Mr. Lonsdale, | Mr. McCourt.

Present :—H. White, Esq. (*Solicitor for the Bill*); J. C. McLachlan, Esq. (*Messrs. Laurence, McLachlan, and Williams, Solicitors for the Hillgrove Water and Electric Power Company*).

Charles Frederick Moore Michelmores, recalled, and further examined by Mr. White.

Cross-examined by Mr. McLaughlin.

George Frederick Beck Hancock sworn, and examined.

Witness produced plan and working section of the Baker's Creek Hydraulic Power and Water Scheme and plan of dam sites, and section.

Room cleared.

Committee deliberated.

*Resolved*,—That the Chairman write to the Mayors of Armidale and Uralla respectively, informing them that a Bill to give certain powers to the "Hillgrove and Armidale Water-power Electric Company (Limited)" is under consideration by a Select Committee, and forwarding copies of the Bill.

[Adjourned till Wednesday, 26th instant, at *Eleven* o'clock.]

WEDNESDAY, 26 OCTOBER, 1892.

MEMBERS PRESENT :—

Mr. Garrard in the Chair.

Mr. Cotton, | Mr. Lonsdale,  
Mr. McCourt.

Present;—H. White, Esq. (*Solicitor for the Bill*); J. C. McLachlan (*Messrs. Laurence, McLachlan, and Williams, Solicitors for the Hillgrove Water and Electric Power Company*).

The Chairman read letters from the Municipal Councils of Armidale and Uralla respectively, intimating that no objection will be made to the Bill, provided certain amendments are incorporated.

Walter Harcourt Palmer further examined by Mr. White.

Cross-examined by Mr. McLaughlin.

Witness *produced* plan showing the water conduit from the weir site to the machinery site, and the trial surveys connected therewith, and plan showing the cable line from the machinery site to Hillgrove.

George Frederick Beck Hancock further examined.

Mr. McLaughlin addressed the Committee.

Room cleared.

Preamble considered.

Question—"That this Preamble stand part of the Bill"—put and passed.

[Adjourned till To-morrow, at *Ten* o'clock.]

THURSDAY,

THURSDAY, 27 OCTOBER, 1892.

MEMBERS PRESENT:—

Mr. Garrard in the Chair.  
Mr. Cotton, | Mr. Ewing,  
                  | Mr. Lonsdale.

Present:—H. White, Esq. (*Solicitor for the Bill*).

Bill considered.

Clauses 1 to 5 read and agreed to.

Clause 6 read, amended,\* and agreed to.

Clause 7 read, amended,\* and agreed to.

Clause 8 10 read and agreed to.

Clause 9 11 read and agreed to.

Clause 10 12 read, amended,\* and agreed to.

Clause 11 14 read and agreed to.

Clause 12 15 read and agreed to.

Clauses 13 16 to 22 25 read and agreed to.

New clause to stand as clause 8, read and agreed to.

New clause to stand as clause 9, read and agreed to.

New clause to stand as clause 13, read and agreed to.

New clause to stand as clause 26, read and agreed to.

Schedule read and agreed to.

Title read and agreed to.

Chairman to report the Bill, with amendments, to the House.

\* See Schedule of Amendments.

#### SCHEDULE OF AMENDMENTS.

Page 4, clause 6, lines 28 and 29. *Omit* "twenty-four hours nor more than seven" *insert* "three"

" 4, " 7, line 33. *Omit* "two nor more than seven" *insert* "three"

" 4, " 7, " 39. *Omit* "or repair"

" 4, " 7, " 48. *Omit* "or repair"

" 4, " 7, " 51. *After* "works" *add* "Provided that the Company shall have the right of immediate entry without notice upon any such lands at any time for the purpose of repairing any of the works aforesaid"

Pages 4 and 5, clause 7. *Omit* remainder of clause.

Page 5, clause 10, 12, line 21. *Omit* "giving seven days' notice" *insert* "having obtained the consent"

" 5, " 10, 12, " 22. *Omit* "to" *insert* "of"

" 5, " 10, 12, " 22. *After* "the" *insert* "Minister or"

" 5, " 10, 12, " 22. *Omit* "of their intention so to do"

" 5, " 10, 12, " 40. *After* "thereby" *insert* "to the satisfaction of the Minister or local authority"

Page 5. *Insert* the following new clauses to stand as clauses 8 and 9:—

8. In the exercise of any of the foregoing powers, it shall be lawful for the company and all other persons employed by the company to deposit, and also to manufacture and work upon such lands, materials of every kind used in constructing the said works, and also to take from any such lands any timber, and also to dig and take from or out thereof any clay, stone, gravel, sand, or other things that may be found therein useful or proper for constructing the said works or any such roads as aforesaid, and for the purposes aforesaid to erect thereon workshops, sheds, and other buildings of a temporary nature, or any steam-engines or other machinery. Provided that before any work shall be commenced as aforesaid under the authority of the Act, the owner of such land shall be paid such compensation, if any, for the loss or injury or inconvenience sustained by reason of the occupation of such lands, and the construction of such works as shall be determined by agreement between the owner and the company, and if such compensation shall not be fixed by agreement as aforesaid within one calendar month after the service of the notice before mentioned, then such compensation, if any, shall be determined by arbitration in manner herein-after provided.

9. The company may from time to time for the purposes of this Act fell timber, and use and carry away the same, and dig and use clay, stone, and other materials upon any Crown Land, and may fell all timber which, in the opinion of the company, it may be necessary to remove for the safety of the works hereby contemplated, notwithstanding anything contained in section six of this Act.

Page 5. *Insert* the following new clause to stand as clause 13:—

13. If at the expiration of one calendar month from the date of the service of the notice mentioned in section seven of this Act, the owner of any such lands and the said company shall not agree as to the amount of compensation to be paid by the said company to the said owner in respect of such occupation as is mentioned in the said seventh section of this Act, the amount of such compensation shall be settled by arbitrators in manner hereinafter mentioned (that is to say) unless both parties concur in the appointment of a single arbitrator, each party on the request of the other shall nominate and appoint an arbitrator to whom such dispute or other matter shall be referred; and any appointment of an arbitrator shall be under the hand and seal of such person or persons respectively; and such appointment shall be delivered to the arbitrator or arbitrators, and shall be deemed a submission to arbitration on the part of the party by whom the same shall be made; and after any such appointment shall have been made neither party shall have power to revoke the same without the consent of the other, nor shall the death of either party operate as a revocation: and if for the space of fourteen days after a request in writing shall have been served by one party on the other party to appoint an arbitrator, such last mentioned party shall fail to appoint such arbitrator, then upon such failure it shall be lawful for the Attorney-General for the time being of the said Colony, on the application of the party who has himself appointed an arbitrator

Proceedings in case of disability of arbitrator.

arbitrator to appoint such arbitrator to act on behalf of both parties, and such arbitrator may proceed to hear and determine the matters which shall be in dispute, and in such case the award or determination of such single arbitrator shall be final and conclusive; and if before the matter so referred shall be determined any arbitrator appointed by either party shall die or become incapable or refuse or for fourteen days neglect to act as arbitrator, the party by whom such arbitrator was appointed may nominate and appoint in writing some other person to act in his place; and if for the space of seven days after notice in writing from the other party for that purpose he fail to do so, the remaining or other arbitrator may proceed alone; and every arbitrator so to be substituted as aforesaid shall have the same powers and authorities as were vested in the former arbitrator at the time of such his death, refusal, neglect, or disability as aforesaid.

Appointment of umpire.

Where more than one arbitrator shall have been appointed, such arbitrators shall, before they enter upon the matters referred to them, nominate and appoint, in writing under their hands, an umpire to decide any matters on which they shall differ or which shall be referred to them under the provisions of this Act; and if such umpire shall die or refuse or for seven days neglect to act after being called upon so to do by the arbitrators or either of them, they shall forthwith after such death, refusal, or neglect appoint another umpire in his place, and the decision of every such umpire upon the matters so referred to him shall be final.

Neglect to appoint umpire.

If in either of the cases aforesaid the arbitrators shall refuse or for seven days after request of either party to such arbitrators, neglect to appoint an umpire, it shall be lawful for the Attorney-General for the time being, on the application of either party to such arbitration, to appoint an umpire, and the decision of such umpire on the matters on which the arbitrators differ or which shall be referred to him under this Act shall be final.

In case of disability of single arbitrator.

If when a single arbitrator shall have been appointed, such arbitrator shall die or become incapable, or shall refuse, or for fourteen days neglect to act before he shall have made his award, the matters referred to him shall be determined by arbitration under the provisions of this Act in the same manner as if such arbitrator had not been appointed.

Arbitrators failing to make their award matters referred to umpire.

If more than one arbitrator shall have been appointed, and when neither of them shall die, become incapable, refuse, or neglect to act as aforesaid such arbitrators shall fail to make their award within fourteen days after the day on which the last of such arbitrators shall have been appointed, or within such extended term (if any), as shall have been appointed for that purpose by both of such arbitrators under their hands, the matters referred to them shall be determined by the umpire to be appointed as aforesaid.

Arbitrators may order production of documents, &c.

The said arbitrator or arbitrators or his or their umpire may call for the production of any documents in the possession or power of either party which they or he may think necessary for determining the question in dispute, and may examine the parties or their witnesses on oath, and administer the oaths necessary for that purpose.

Declaration by arbitrators or umpire.

Before any arbitrator or umpire shall enter upon the consideration of any matter referred to him he shall, in the presence of a Justice of the Peace, make and subscribe the following declaration, that is to say:—

I (A.B.) do solemnly and sincerely declare that I will faithfully and honestly, and to the best of my skill and ability, hear and determine the matters referred to me under the provisions of the Hillgrove and Armidale Water-power Electric Company (Limited) Act.  
Made and subscribed in the presence of

C.D.

And such declaration shall be annexed to award when made; and if any arbitrator or umpire, having made such declaration, shall wilfully act contrary thereto, he shall be guilty of misdemeanour.

Costs of arbitration, how to be borne.

All the costs of any such arbitration and incident thereto shall be in the discretion of the arbitrators, and the costs of the arbitrators shall be borne by the parties in equal proportions, unless the amount awarded shall be one-fourth or more less than the amount which shall have been offered by the said company, in which case the whole costs of the arbitration, and also the cost of and incident to the said arbitration, shall be paid by the claimant: Provided that, if either party shall be dissatisfied with the costs allowed by the said arbitrators as aforesaid, the costs may be taxed by the Prothonotary or other proper officer of the Supreme Court, and the amount allowed by such officer shall be the amount of the costs to be paid.

Costs may be taxed.

Arbitrators or umpire to deliver award to company.

The arbitrator, arbitrators, or umpire, shall deliver their or his award in writing to the said company, who shall retain the same, and shall forthwith on demand at his or their own expense furnish a copy to the other party, and shall at all times on demand, at the cost of the said party, produce the said award, and allow the same to be inspected or examined by such party, or any person appointed by him for that purpose, and the amount awarded shall be paid within sixty days after the publication of the award.

Compensation to be paid within sixty days after publication of award.

Submission may be made a rule of Supreme Court.

The submission to any such arbitration may be made a rule of the Supreme Court on the application of either of the parties.

Award not to be set aside for irregularity.

No award made with respect to any question referred to arbitration under the provisions of this Act shall be set aside for irregularity or error in matter of form.

Penalty for not carrying out works.

Page 10. Insert the following new clause to stand as clause 26:—  
26. In the event of the said company not commencing their works within six months, and completing the same within eighteen months from the passing of this Act, all the rights hereby conferred upon the said company shall lapse.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

HILLGROVE AND ARMIDALE WATER-POWER ELECTRIC  
BILL.

WEDNESDAY, 12 OCTOBER, 1892.

Present:—

Mr. McCOURT,  
Mr. GARRARD,

Mr. COTTON,  
Mr. EWING,

Mr. LONSDALE.

JACOB GARRARD, ESQ., IN THE CHAIR.

Mr. H. White, Solicitor, appeared on behalf of the promoters of the Bill; Mr. J. C. McLachlan, Solicitor, appeared on behalf of the Hillgrove Water and Electric Power Company.

Walter Harcourt Palmer called in, sworn, and examined:—

1. *Mr. White.*] You are a civil and electrical engineer? Yes.
2. And you have been employed by the Hillgrove and Armidale Water-power Electric Company? Yes.
3. Will you tell the Committee what you have done for the company? One of the conditions under which the Local Land Board granted a lease was that a survey should be immediately carried out. That my firm have done. All the necessary levels, a traverse of the water conduit, and a survey from the machinery site to Hillgrove, have been completed. The gauges of the river have been taken, and, in fact, all the work necessary to show the entire scheme has been done.
4. The machinery site has been laid out? Yes, and the weir site also.
5. And the traverse from the weir site to the machinery site? Yes, that has been done. A contour showing the area of land that would be submerged by the erection of the weir has also been taken.
6. Can you give an estimate of the cost of the work? The water-works, machinery site, cable, electrical machinery, will cost about £40,000. Provision will be made for 500 horse-power, the amount of power at first required to be used.
7. Do you know of any scheme similar to this? Yes; I know of several similar schemes. My partner carried out a scheme seven years ago at Skipper's Creek, New Zealand, in connection with the working of some gold-mines. Provision was made for crushing, pumping, and lighting. The company had a steam-plant, but it was found that it did not pay, although they had any quantity of fuel right at their door. The belting connection consumed so much power that the plant could not possibly pay, and it was thrown away—the place being so inaccessible that it could not be sold—and an electrical plant substituted. They carried the power a distance of  $4\frac{1}{2}$  miles, which is nearly a mile further than the power has to be carried in this case. From that day to this the mine has been paying dividends, and only £9 17s. has been expended upon repairs.
8. For how long would that be? Seven years.

Mr. W. H.  
Palmer.

12 Oct., 1892.

9.

- Mr. W. H. Palmer.  
12 Oct., 1892.
9. That scheme includes lighting, as well as the supply of motive power? Yes. Electricity is used for everything except smelting.
10. Can you describe the nature of the country through which this cable will pass? It is an open forest country, almost unoccupied. There is one conditional purchase upon it, I believe, owned by a Mr. Waters. The rest of the country is reserved for different purposes. There is the Great Falls Reserve, and near Hillgrove there is a mineral reserve.
11. You are now describing the country from the Great Falls on the Guyra River to Hillgrove? From the machinery site at the foot of the Falls to Hillgrove. With the exception of a few sheep, it is unoccupied country. The line will pass, I believe, through Mr. Waters' land, but he has informed us that he does not object. He uses the land only for stock; it is uncultivated, and there is nothing which the line could damage. So far as the impounding of the water is concerned, I ought to explain, perhaps, that it would never be above the banks of the river.
12. Is electric power less expensive than other power? Very much less expensive. For instance, at Hillgrove the cost of fuel and labour for steam power varies from £50 per horse-power to £62 per horse-power per annum, whereas electric power could be delivered at Hillgrove for from £30 to £31 per horse-power.
13. Do you know whether there is a plentiful supply of fuel at Hillgrove? Wood has been plentiful, but the immense quantity used for mining purposes, for steam, for smelting, and so on, has so denuded the country that it has now to be drawn from a considerable distance, and it is becoming more scarce every year. It is not a coal country.
14. What is the nearest place from which coal could be obtained? Coal is altogether out of the question. Even if it could be obtained at Armidale it would be out of the question on account of the cost of carriage.
15. Do you consider that any great danger would arise from the working of the cable? I do not think there would be one-hundredth part of the danger which arises from the use of steam.
16. Have you seen, or have you in your possession, any statistics which would illustrate the relative danger of electricity and steam? Yes; I have statistics from Boston, Massachusetts, where the electrical power used is almost equal to the steam power used. The number of deaths from electricity are '003, compared with those that occur from steam-engines. There are over 3,000,000 people carried on the tramways annually, and only about half that number carried by the trams which run into Boston. The only persons who up to the present time have been injured by electricity are the employees of Electric Companies who become so used to handling electricity and so careless that when manipulating the wires they will sometimes turn round and talk to a friend, and, forgetting for the moment what they are doing, will connect their hands. That has been the principal cause of the deaths that have occurred, but as a rule electricity is much more safe than steam. Electricity is thought to be a dangerous thing because if a man happens to be killed by it there is a notice in every newspaper, whereas 100 men may be killed by steam machinery, and perhaps only one newspaper will take any notice of the fact. Very few persons take any notice of the occurrence, because, as a rule, the relatives of the deceased are well compensated.
17. Do you know how many miles of electric tramway are worked in Boston? One hundred and thirty-nine miles in the State of Massachusetts, and there are about the same number of miles of steam tramways.
18. On the whole, you consider that electric power is less dangerous than is steam power? Very much less dangerous. The number of deaths from electricity is equal to the number of deaths caused by servant-girls throwing out ashes which are not entirely extinguished. The two causes of death are exactly level in the statistics of Boston.
19. *Mr. McLachlan.*] Are you a shareholder in the company? Yes.
20. Have you ever carried out a plan similar to this? My partner has.
21. But have you ever done so? No. I am now carrying out a similar scheme at Zeehan and Dundas, in Tasmania. I am in charge of electric works there for the Tasmanian Water-power Electric Company.
22. You have estimated that the cost of these works will be about £40,000? Yes; with everything complete.
23. Do you know if anything has been done to provide the requisite capital? I cannot say.
24. You say that plans have been prepared? They are being prepared.
25. Do you propose to lay them before this Committee? No; I have shown the route of the cable upon the county map submitted.
26. Then you do not propose to submit plans to the Committee? No.
27. When will the plans be finished? It will probably be a fortnight before they are completed.
28. *Mr. White.*] Although you say that you do not propose to submit the plans, there would be no objection to the Committee seeing them when they are completed, if thought desirable? Certainly not; but the plans are virtually submitted by my marked line upon the map, by which I am prepared to stand.
29. *Chairman.*] I understand that you have made application to the Local Land Board at Armidale for the lease of certain Crown lands? The company have made application.
30. The application was considered by the Land Board? Yes.
31. Was it recommended upon the condition that certain plans were prepared? I cannot say; the company had the official recommendation.
32. You propose to impound the waters of the Guyra River at the Great Falls? Yes; we propose to erect a weir 7 feet high.
33. And the water thus conserved will be used for the purpose of driving the dynamos at that particular place for the generation of your electricity? Yes; they will be right on the river.
34. That is what you have called the machinery site? Yes.
35. You use the natural fall of the water at that particular place to generate your electricity? Yes; and we return the water free of pollution.
36. Having generated your electricity, you convey it by overhead wires to Hillgrove or Armidale, or, in fact, to any portion of the county of Sandon? Yes.
37. You supply the electricity for lighting or as a power? Yes.
38. What will be the voltage of the current from the generating station to Hillgrove, for instance? Through the totally unoccupied land between the generating station and West Hillgrove it will be 3,000 volts, and through the streets of Hillgrove and to the mines it will be 400 volts.
39. That is considered quite harmless to human life? Yes,

40. Where there is any likelihood of the wires coming into contact with human beings or with animals the current is reduced to 400 volts? Yes.
41. It is only where there is no such likelihood that the current is 3,000 volts? Yes.
42. What is the distance between the generating station and Hillgrove? The generating station and the distributing station at West Hillgrove are  $3\frac{1}{4}$  miles apart.
43. The distributing station is at West Hillgrove? Yes.
44. How far is it from West Hillgrove to Hillgrove proper? One mile.
45. How far is it from the distributing station to Armidale? Approximately 7—perhaps 8—miles.
46. Your present proposal deals only with a supply to Hillgrove and its immediate vicinity? Yes.
47. The extension of the supply to other portions of the county is a matter for future consideration? Yes.
48. The estimated cost of £40,000 applies to the supplying of Hillgrove and its immediate vicinity? Yes; presuming that 500 horse-power is taken. If only 100 horse-power be taken the cost will be considerably less.
49. Is it estimated that 500 horse-power is necessary to supply Hillgrove alone? Yes.
50. If you have to supply any other place—Armidale for instance—you will have to increase the motive power? Yes; we should have to use the conserved water—the water always running down the stream will give 500 horse-power even in the most severe drought.
51. The water you conserve is for the purpose of increasing, if it be necessary to increase the power? Yes; to meet exceptional circumstances.
52. The cable does not run along any roads with a current of 3,000 volts? No.
53. The land is now used as a sheep run? For something of that kind—sheep and cattle.
54. The current of 3,000 volts ceases at the distributing station? Yes; from that point it is 400 volts.
55. You are convinced that there is no probability of any harm being done between the distributing station and the generating station? There can be no harm whatever.
56. Have you come into contact with Mr. Waters, the lessee or conditional purchaser of some of the land through which the cable passes? My partner met him, I believe.
57. You referred to the fact that you were erecting electric plant at various places in Tasmania;—are the works completed in any of those instances? No; but the contracts are all let, and one nearly completed. The machinery is all ordered, and the works are in course of construction.
58. You referred to some works having been erected in New Zealand some time ago? Yes. In that case electricity is generated in the same way as is proposed here, and is carried a distance of about four miles.
59. Are the works a success? Yes.
60. You estimate that it now costs from £50 to £62 per annum per horse-power at Hillgrove? Yes, for steam power.
61. And you will be able to supply power at from £30 to £31 per horse-power? Yes.
62. *Mr. Lonsdale.*] Your distributing station is, I understand, to be at West Hillgrove? Yes.
63. Is there not a large number of people there? Just at that point, but the distributing station is out of the thickly populated parts, and even if it were not, no harm would be done because the cable runs directly into the transforming apparatus, a quarter of a mile further away. The transforming apparatus, where the current is brought down to 400 volts, is a quarter of a mile from the distributing station. The vicinity of the distributing station may be thickly populated some day, but the current is transformed a quarter of a mile from that point.
64. Could not the wires be so covered as to prevent the possibility of danger to human life? Perhaps it would be better if the last half-mile were covered cable. I do not think there would be any danger, but if the Committee thought it better to have an insulated cable for the last half-mile it would be very little extra expense, and I am sure there would be no objection on the part of the company.
65. *Mr. McCourt.*] How long will it take to complete the works? About four months from the time the Bill goes through.
66. Have you read the Bill? Yes.
67. You are aware that it fixes no time for the commencement or completion of the works? I do not think it does.
68. Do you not think the company ought to be compelled to complete and to commence their works within a reasonable time? Yes.
69. What would you consider a reasonable time? Twelve months would, I should think, be ample for the completion of the works.
70. You think a clause might be inserted providing that the powers granted to the company should lapse in the event of the works not being completed within twelve months? I can see a little difficulty which might arise. In connection with the Tasmanian works, for instance, the electrical machinery was ordered eight months ago from an electrical firm in London. We received a wire last week stating that the machinery had only just been shipped, not that the firm could not turn it out in a week if necessary, but that they were so full of orders.
71. Eighteen months, at all events, would be ample time? Yes.
72. You think, then, that a provision might be inserted in the Bill that if the company did not complete the works within eighteen months the powers granted them by the Bill should lapse? If the company could not carry out the works in eighteen months they would deserve to be kicked out of the country.
73. *Mr. Ewing.*] I think you said the length of the cable would be  $3\frac{1}{4}$  miles? Yes.
74. Would there be any great leakage in that distance? Very little leakage. The impetus of 3,000 volts would prevent any leakage up to a distance of 10 miles.
75. What is the height of the falls? Five hundred feet, perpendicular.
76. That is where you get your friction? Yes.
77. You do not want the water; you merely want the power it gives? The water will be there for all the purposes for which it is there now. I forgot to mention that the water conduit passes through quite inaccessible country. No stock could graze upon it; indeed, it is doubtful whether anyone could walk there.
78. The water is unimpaired both as regards quantity and quality? Yes.
79. You make use of it without injuring it in any way? Yes.
80. Can you tell us how you expect to get your profit? By furnishing motive power for the machinery

Mr. W. H. Palmer.  
12 Oct., 1892.

- Mr. W. H. Palmer.  
12 Oct., 1892.
- machinery; by the lighting of the mines; by the provision of heat for smelting and power for crushing and pumping. There would also be the lighting of the town.
81. You are aware that electrical works have been a success in other parts of the world? Yes.
82. There is no doubt whatever as to their success? No.
83. The danger arises entirely from the carelessness of men in handling the wires? Invariably; by the case of the Melbourne accident the man was too officious. There was a crowd looking on, and he laid hold of the wires. Cases of that kind excepted, the accidents arise from carelessness.
84. You have no doubt as to the theoretical part; the practical part depends upon the care of the workmen? Yes. I might add that copper is the best conductor of electricity—that is, it has the greatest attraction for it. If 10,000 volts were running along a wire, and a piece of copper a foot square were put within 3 inches of the cable, the electricity could then only just jump to the copper, so that it would be absolutely impossible for it to jump to a man at that distance, because he would not be as good a conductor as the copper. Unless a man were to actually touch the wire, and at the same time to touch the ground—an impossibility, seeing that the wire in this case is to be 20 feet high—no accident could happen. If the wire broke and fell to the ground a man would have to catch hold of it and raise it off the ground, and let the electricity pass through him to the ground before any injury could be done. The cable is absolutely without danger, unless a man tries to kill himself with it, so to speak.

Charles Frederick Moore Michelmores called in, sworn, and examined:—

- Mr. C. F. M. Michelmores.  
12 Oct., 1892.
85. *Mr. White.*] You are secretary to the Hillgrove and Armidale Water-power Electric Lighting Company? Yes.
86. The company is registered? Yes; I can, if necessary, produce the certificate of incorporation.
87. You have made application for the lease of a portion of the Guyra River? Yes.
88. Has it been granted? Subject to certain conditions.
89. When was the application made? Some time in February, I think.
90. To whom? To the Local Land Board at Armidale, which gave its decision on 19th June.
91. Have you received any official notification? We received a notification from the Land Board that they approved of the granting of the lease under certain conditions. These were, that the survey should be completed within three months, and that within six months £100 should be spent. We at once proceeded with the survey. On the 24th September, we received the following letter from the Department of Lands:—

Sir,—Referring to your application for special lease for the erection of weir and pipe-line on the Guyra Creek, I have the honor, by direction of the Secretary for Lands, to inform you that the lease will be granted, subject to the accompanying conditions marked A. The conditions are as follow:—

1. The lease to be granted subject to a Bill being passed by Parliament.
2. The lease to be for fifteen years from date of gazettal.
3. Annual rental, £20 to be paid yearly in advance.
4. The sum of £100 to be expended within six months from commencement of lease in improvements on the land and in connection with the purpose of the lease.
5. Should a renewal of the lease be not granted, the fixed improvements, not including machinery or other movable effects upon the land, to become the property of the Crown.
6. The rights of the public to have access to the waters of Guyra Creek and along the pipe-line, but outside the sites for the weir and machinery are retained.
7. Surplus water to be returned to the stream free from pollution.
8. A schedule of charges to be submitted to the Minister for Lands for approval.
9. Plans to be prepared by a licensed surveyor showing the position of the weir and of site required for machinery, also the position of the pipe-line, the length and width of line to be defined. The plan to be sent in for approval of Minister for Lands within three months from this date (date of letter).

We made arrangements for the completion of the survey within three months of the decision of the Local Land Board; but it would appear that it would have been sufficient had the survey been carried out within three months of the date of the letter from the Department of Lands, namely, the 24th September.

92. Mr. Palmer has described the work which has been done; I should be glad if you could inform the Committee of the amount of money which has been already spent in connection with it? Upwards of £1,000 has been expended up to the present time. The contract for the survey, carried out in accordance with an agreement, was £500.

93. Who were the surveyors? Messrs. Palmer and Struthers. Their agreement was for “accurate survey and levels to pass Lands Department of Guyra River Falls, applied for by Mr. C. F. M. Michelmores, gauge of said Guyra River, survey of machinery site, and set of levels showing contour from top of proposed dam, and traverse same with necessary calculations showing quantities of ground, private and otherwise, flooded by the water retained by the said dam.” On 10th October, I received from Messrs. Palmer and Struthers, the following letter:—

Sir,—We have the honor to report that all the necessary surveys for the work your company proposes to carry out at Hillgrove are now completed, and the plans will be completed and forwarded to you in due course.

We hoped to have received the plans before this Committee met.

94. Was any time stipulated for the plans of the survey? No; because we found that the three months allowed for completion dated from the date of the letter of the Department of Lands. On 19th June, we received the promise of a lease, and on 16th July we signed the contract with the surveyors, and sent them up.

95. *Mr. McLachlan.*] Do I understand you to say that you received a promise of lease? The Land Board recommended that a lease be granted, subject to certain conditions which are embodied in the letter I have read from the Department of Lands.

96. Have you not actually sold the thing as a lease? No.

97. Have you not sold it as a lease for one-half the capital of the company? No; it has been sold as a lease, which may be granted.

98. The agreement to which I refer is dated 29th July, 1892; it is registered, and any member of the public can see it;—have you any objection to producing a copy of it for the information of the Committee? No; I have no objection, but I have not a copy of the agreement here.

99. You say that the Company is formed;—are there directors? Yes; Mr. C. M. Garland, Mr. H. E. A. Miller, and Mr. Sandracotta Marshall are the directors.

100. Do you propose to furnish to the Committee the plans of the survey? I expect the preparation of the

the plans will occupy some days yet. If they are not ready before the Committee report we shall be prepared to submit them to Parliament, and we are bound to submit them to the Secretary for Lands.

Mr. C. F. M.  
Michelmores.

101. *Chairman.*] Can you give us any information as to the origin and present position of the company of which you are the secretary? At the beginning of the year a syndicate was formed for the purpose of taking up water rights in various places. Among others taken up, those at Hillgrove were considered the best to make a start upon. We were advised by a solicitor that it would be better for the working of the syndicate if we formed a company. It was pointed out that, as we should have to appoint trustees to sign the petition to Parliament, it would be just as well to get directors to sign it for us. Practically, the company is still in the shape of a syndicate. I would point out that under the Act we are applying for the right to make by-laws. We have no articles of association drawn up, because we were informed by our legal adviser that we might just as well draw those up after the Bill was passed, giving us the power to make by-laws. We, therefore, made the number of directors three, intending, as soon as the Bill became law, to make the number five. The three gentlemen who now hold the positions are practically provisional directors, and are merely keeping the seats warm, as it were, for others. I represent the main point I desire to put before the Committee is this—that there is no intention to float through the public. The only shares likely to be offered to the public at some future time would be 20,000, and that would be done only in the event of our taking up the lighting of Armidale, and in the event of our running a tramway from Hillgrove to Armidale. These are two matters which have been mentioned to us at Hillgrove. In that case, requiring additional capital, we should, in the first instance, offer the 20,000 shares to the members of the company, and if they were not disposed to take them up the shares would be offered to the public. So far as the £40,000 is concerned, there is no intention to make it a public concern at all. I am perfectly willing to submit to the Committee the names of some of the strongest men in these colonies who are quite prepared to take the thing up as soon as it is put upon a firm footing, but who will not be mixed up in any preliminary matters. These men are quite prepared to find the money as soon as Parliament has set its seal upon the thing. I hold 50,000 shares in trust, and I have to allot them as soon as this Bill is passed.

12 Oct., 1892.

102. *Mr. Lonsdale.*] In the event of the Bill passing are you prepared to deposit a certain sum of money as an evidence of *bona-fides*—as a guarantee that the work will be carried out within a reasonable time? That is one of the matters concerning which the gentlemen I have mentioned have hesitated. What they say is that it has cost a certain sum of money to bring the company up to the state it is now in; that they are already required to expend £100 within a certain time, and that their rights would lapse if the survey were not completed within a specified time. They think that, under those circumstances, it would be scarcely fair to hamper them by calling up more capital than is actually required for present circumstances.

103. Would it not be desirable to specify some time within which the work must be started? We can, of course, proceed with the weir and sites within six months of the passing of the Bill. I see no objection to the insertion in the Bill of a provision that the rights of the company shall lapse in the event of the work not being started within six months and completed within eighteen months.

104. *Mr. Ewing.*] Do you consider that this Bill gives you a monopoly? None whatever.

105. There is nothing to prevent any rival scheme from being carried out? No.

106. You say, in proof of your *bona-fides*, that you have already spent £1,000? Yes.

107. And you are not asking for any money from the public? No.

108. You are relying upon the profits of the scheme? Yes.

109. That is, the money obtained from the supply of motive power? Yes; we have contracts with mining companies already.

110. You do not propose to make any money out of the public except for services rendered? No.

111. Do you know anything of a rival company? I only know of them in this way—that they called at my office a few days ago.

112. Do you know in what state the operations of that company are? No.

113. The arrangements you have made are for the protection of other interests—that is to say, the originators of the matter;—you simply hold their shares, not for your own benefit, but in furtherance of the scheme? Yes; we have had to deal with other companies of the same kind.

114. You are simply a trustee? Yes.

115. And the shares you hold will be used for the purposes of the company? Yes.

116. The shares will be used in the way that will best carry out what is intended to be done under this Bill? Yes; the arrangements for the disposal of the shares are our own private business. I have already said that none will be offered to the public at present.

117. *Mr. Cotton.*] If this Bill should pass as it stands, it will be perfectly open to any other company at any time to use any other natural motive power in competition with you? Yes.

118. *Chairman.*] Have you had any communication with the Armidale Council? No.

119. You do not know how they view the proposal to grant these powers to your company? No; originally the scheme had no connection with Armidale, but a Mr. Bliss had great confidence in Armidale as a milling place and in the use of motive power there. Upon his recommendation the provisions affecting Armidale were included, but at the present time we have no idea of going near Armidale.

120. You say that you have contracts with companies at Hillgrove conditionally upon the Bill being passed, for the supply of motive power? Yes.

121. Are they mining companies? Yes; the Garibaldi Company, the Baker's Creek Company, and others.

122. Is it not a mere statement on their part that they will take the power;—they have actually signed contracts? Yes; they were drawn up by our solicitor and submitted to the companies, and they have agreed to them.

123. *Mr. Ewing.*] How far is it from Armidale to the Great Falls? It is 12 miles by road, but in a straight line it would be about 7 miles.

124. Electricity can be carried that distance? Yes, easily, without much leakage. The longest distance gives a loss of only 25 per cent.

George Herbert Westcott called in, sworn, and examined :—

Mr. G. H.  
Westcott.  
12 Oct., 1892.

125. *Mr. White.*] You are a bank manager? Yes; I am stationed at Newtown now, but I was manager of the City Bank at Hillgrove for four years.
126. I want you to give me, as nearly as you possibly can, an idea of the cost of the fuel used to produce steam as a motive power to work the mines at Hillgrove, and for other purposes? On what is called the Hillgrove side of the town I know they were paying 18s. a cord for wood; on the other side of the town, that is, at West Hillgrove, they were paying not quite so much, because they had not to go quite so far for the fuel.
127. Is the supply good? No; they have been drawing upon it for the past six or seven years, and they must now have to go some 6 or 7 miles, or even further, to get it. It is obtained principally along the road towards Willamumbi. The country round about Hillgrove is quite denuded.
128. What would be the cost of taking coal to Hillgrove? They would have to take it from Armidale, and they would have to pay £1 per ton for the carriage. The nearest point at which coal would be found would be Rix's Creek, at Singleton, and they would have to pay the cost of carriage from Rix's Creek to Armidale, and from Armidale to Hillgrove. That would have to be added to the cost of the coal.
129. You have an intimate acquaintance with the mines on the Hillgrove field? Yes.
130. Can you give us any particulars as to the cost of working them? The cost of working the Sunlight Mine for the six months ending June last was about £2 7s. 6d. per ton, and they had the advantage of getting wood at the West Hillgrove rate. The cost of working the Baker's Creek Mine would be even more than that. I believe it is over £3. a ton.
131. Would not a less expensive motive power be of great benefit to Hillgrove? Most undoubtedly. It is only the mines with rich stone that can afford to work at the present time. Three mines have had to shut down because they have poor stone. The Lady Carrington Mine has had to pretty well suspend operations; the Baker's Creek North Mine has been let upon tribute; the Cosmopolitan has had to shut down altogether; and the Garibaldi Mine also had to stop working. When these mines were all in full work they used to pay over £3,000 a fortnight in wages. Of that amount, the Baker's Creek North Mine when in full work used to pay from £500 to £600 a month. The Lady Carrington Mine used to pay about the same, and the Earl of Hopetoun Mine used to spend £1,000 every month. All the mines I have mentioned have what is called a low grade stone. If they had a cheaper motive power it would not only be possible to work them, but, in my opinion, they would pay very well.
132. What would be the lowest return enabling a mine to pay under present circumstances? A mine at Hillgrove could not pay, unless under very favourable circumstances, with a return of less than 1 ounce to the ton. The Elinora Mine is on the surface, and is therefore worked under better circumstances. It has been made to pay only because there is a very wide reef. The smelting plant has been erected; but the mine has really not been paying until quite recently. The last balance-sheet disclosed an overdraft at the Bank of New South Wales, at Armidale, of £4,000 or £5,000; and the mine has never paid any dividend.
133. Can you mention any mine which is now idle which would be worked if the cost of motive power were so reduced as to bring the expenses within the scale you have in view? The Cosmopolitan, the Elinora, the Garibaldi, the Baker's Creek North, and the Lady Carrington. The Earl of Hopetoun would be in full swing.
134. These mines are at the present time idle? Yes; the Cosmopolitan Mine, of course, has a large percentage of antimony, and if the price of antimony were to go up a little, the mine could be worked independently of the gold.
135. *Chairman.*] Are we to understand that a supply of electricity in place of steam as a motive power would enable these mines to be worked? I do not, of course, know what the cost of the electricity would be; but if the cost of motive power could be reduced to one-half of its present price, my impression is, from my four years' experience at the place, that they would be able to start the mines I have mentioned as being financially crippled.
136. *Mr. McCourt.*] You have no practical knowledge of mining? No.
137. You cannot offer any opinion as to the relative cost of electricity and steam? No.
138. *Mr. Lonsdale.*] Do you know how close the Earl of Hopetoun Mine came up to its working expenses? I believe that for the whole of the time they were working they paid their expenses, short of about £600.
139. Was not part of that £600 for plant? I am taking the outlay from the time they started working.
140. If the cost of motive power were reduced, you think it would make all the difference between running at a loss and working at a profit? Just so. A large proportion of the expenses every fortnight was for wood.
141. Have many of the mines the same grade of stone as the Earl of Hopetoun? Yes.
142. The Cosmopolitan has a very low grade of stone, has it not—more antimony than gold? Yes.
143. *Mr. Erving.*] What is a low grade ore at Hillgrove? Five or 6 dwt.
144. Any mine in which they could get 6 dwt. under ordinary conditions, could be easily worked at a reduction of 50 per cent. in the cost of motive power? Yes. The Elinora Mine is a case in point. With 5 or 6 dwt. it has managed to struggle on. The sale of antimony at £40 a ton, was of course of great assistance to the mine and enabled it to carry on.
145. With a reduction of 50 per cent. in the cost of motive power any mine giving 6 dwt. would be worked? Yes.

THURSDAY, 13 OCTOBER, 1892.

Present:—

MR. LONSDALE,  
MR. COTTON,MR. DALE,  
MR. EWING,

MR. McCOURT.

JACOB GARRARD, ESQ., IN THE CHAIR.

Mr. H. White, solicitor, appeared on behalf of the promoters of the Bill; Mr. J. C. McLachlan, solicitor, appeared on behalf of the Hillgrove Water and Electric Power Company.

Charles Frederick Moore Michelmores recalled and further examined:—

146. *Chairman.*] I believe you desire to produce some documents? The Committee asked us yesterday if we could produce any agreements showing our dealings with the mining companies. I have received from the Garibaldi Gold-mining Company the agreement we have submitted to them, and they also send me the following letter:—

Mr. C. F. M.  
Michelmores.  
13 Oct., 1892.

Dear Sir,—Herewith I beg to hand you the agreement as requested, and shall be obliged if you will return same to me before 3 o'clock to-day, as I have a special meeting of my directors to discuss same. I may state that some of my directors have carefully gone into this matter, and are well satisfied with the terms, and I believe the company will adopt the power.—Yours faithfully, A. H. BARCLAY, Secretary.

147. Will you briefly state the terms of the agreement? Yes; I may state that when I was last in Hillgrove a meeting of mining managers was held, and we undertook if any of the companies would put under cover the cost to them of fuel, we would put under cover at the same time the price at which we would supply our power. I have here the statement of the Baker's Creek Company:—"Firewood, per annum, put into boilers, £1,970; light—candles, £294 0s. 3d.; kerosene, £79 7s. 8d.; total, £2,343 7s. 11d.; present horse-power on mine, 64; cost per horse-power, £30 per annum; power required at Baker's Creek, from 90 to 100 horse-power."

148. I believe the total cost per annum is from 50 to 62 horse-power? Yes; what their statement means is that their firewood costs £30 per annum per horse-power. We submitted the following under cover:—"The Hillgrove and Armidale Electric Company are prepared to transmit electricity for power and light purposes to any mine on Hillgrove, to work any machinery that can be worked by steam, and will apply it free of cost to mine-owners without removal of any plant or machinery at present in use on the following terms:—1. If mine-owners purchase necessary motors, the power will be delivered at £29 per horse-power per annum. 2. If motors be provided by the company, power will be delivered at £31 per horse-power per annum. The Electric Company will supply sufficient attendance without additional cost to mines, and light will be supplied at 6d. per unit, equal to gas, at 3s. 9d. per 1,000 feet, or half the price of candles."

149. *Mr. McLachlan.*] Supposing there were forty head of stamps, you would supply the whole power at £1,200 per annum? I should want to know what horse-power they would use.

150. Do you know what the Baker's Creek Company use in horse-power? The present horse-power on the mine is 64, but if the mine were in full work it would be from 90 to 100.

151. Does that include trams, working drills, and everything? Yes; their statement to us is 100 horse-power.

152. And we understand that for £1,200 you will provide everything in that instance? Yes.

153. *Mr. McCourt.*] You have read the Bill, of course? Yes.

154. You will see that under clause 7 large powers are given to your company to enter upon private lands and to do certain things;—is there any provision in this Bill whereby the persons whose land is so entered upon can obtain compensation from your company? I see that in clause 6 there is some protection to the rights of first lessees, and that in some other case compensation is provided for.

155. Do you not think the Bill ought to contain a clause whereby the matter might be referred to arbitration? Certainly.

156. You think there ought to be arbitration clauses? I thought provision had been made for arbitration. I understood the clauses were contained in the Bill.

157. So far as I can see they are not in the Bill;—is it not a fact that if the Bill were passed as it now stands you could enter private property without paying any compensation whatever? Yes; as the Bill stands.

158. But you are willing to have it amended in that respect? Yes.

159. You will see that, according to clause 10, you can break up any street, road, or other place in the county of Sandon;—now, the county covers a large area, and would include other towns besides Armidale? Yes.

160. Are the mayors and municipal councils in those towns aware that you are asking for these powers? You will see that mention is made of the sanction of the Minister or local authority.

161. That is after the work is done. What I want to know is whether the councils are at present aware that you are asking for these powers? Not from us directly, but a copy of the Bill has been sent up to Hillgrove.

162. Do you not think that the sanction of the councils ought to be obtained? We noticed that a member of the Armidale Council was also a member of this Committee, and we thought, under those circumstances, that he would look well into these matters.

163. But is Armidale the only town in the county of Sandon? It is the only incorporated town, I believe.

164. However, the mayor and municipal council of Armidale have not been communicated with as to the powers contained in this Bill? No.

165. Do you not think they should be communicated with? I discussed the question with the editor of one of the local papers, and he agreed that Mr. Lonsdale would be most likely to watch the local interests.

166. But do you not think that the councils should be communicated with? I see no objection to communicating with them.

167. You think they should be acquainted with the powers for which you ask? Yes. 168.

- Mr. C. F. M. Michelmore.  
13 Oct., 1892.
168. Do you not think that the persons through whose land the wire would be taken would require compensation? I believe we go through private property in only one case.
169. You know that there is a case in which you do so? Yes.
170. And if you extended your works further into the county of Sandon you might go through other private property? Yes; I suppose we should.
171. For instance, if you went to Armidale you would go through private property? Yes.
172. Do you not think that persons through whose property you pass with a cart and horse, for instance, in the process of erecting the wires would be entitled to ask for compensation? It is a question of damage done.
173. Do you not think they would be entitled to compensation? Certainly, if any permanent damage were done.
174. Is there any provision in the Bill under which these persons could claim compensation? Not that I know of.
175. Ought not such a provision to be in the Bill? Yes; I think so.
176. *Mr. Ewing.*] You know the conditions under which the Sydney Water and Sewerage Board act? I cannot say that I do.
177. There would be most likely very stringent conditions as to the breaking up of the streets? I do not know what the conditions are.
178. *Mr. Lonsdale.*] I suppose you have no objection to the insertion in the Bill of a clause to this effect, that the company must obtain the consent of the council of any town before they can touch the streets within its boundaries? There will be no objection to such a provision. All that we ask for is fair play.
179. *Mr. McLachlan.*] Can you tell me how you can estimate the cost of fixing the wires when the route has not been chained the whole way, and having regard to the rough ground? I do not know that it has not been chained.
180. It is chained only to a certain point, not the whole way? That is the business of the surveyors. We have been informed that the survey is completed.
181. How do you get at your estimate in the absence of plans and specifications? I do not suppose that the estimate would be exact to a pound or two but we have sufficient information to enable us to form a fair idea as to what the cost would be.
182. *Mr. White.*] Have you any objection to the usual arbitration clauses being inserted in the Bill? None whatever.

George Frederick Beck Hancock sworn and examined:—

- Mr. G. F. B. Hancock.  
13 Oct., 1892.
183. *Chairman.*] What is your occupation? I am an agent.
184. A mining agent? A mining and general commission agent.
185. You are one of the persons signing the petition in opposition to the powers asked for by this company? Yes.
186. Will you kindly state upon what grounds you oppose the Bill, and in what respects it affects your interests and the interests of the other petitioners? We have a distinct scheme for the supply of water and electric power to the mines. We have had full surveys made, and we have estimates for our works. We have also acquired water rights from the Government. We possess them now, and we have done work on them.
187. Have you them here? I have not the papers here, but the rights are registered.
188. What is the nature of your water right? It is a right to take water from Baker's Creek.
189. Not from the Guyra River? No.
190. So that the taking of a water supply, as proposed by the promoters of this Bill, will not affect your water rights? Not that I am aware of, but I have not seen their plans.
191. You are aware that they propose to take their supply from the Great Falls on the Guyra River, whereas your water rights apply to Baker's Creek; the two streams, I understand, are entirely separate? Yes; but our works will extend over the whole mining field.
192. At all events, so far as the supply of water is concerned, this company will not be doing you an injustice? Not unless they come upon our land. There is nothing in their Bill to prevent them from coming in to-morrow and applying for a portion of our land, and thus upsetting our catchment area.
193. Have you not obtained your rights from the Department of Lands? No; we are on private land.
194. Then I suppose you are secured by the private persons who own the land; under those circumstances, how can this company interfere with you? Under their Bill they can claim to go upon any land in the county of Sandon without paying any compensation.
195. If provision were made in the Bill that the company should not, without consent, or without granting compensation, go upon private land, that would meet the objection you have raised, would it not? So far as the land is concerned it would, but their line of wire might conflict with ours. We propose to generate at the foot of Baker's Creek. We propose to take 300 horse-power down the creek, and give the mines an opportunity to use the water. It would be cheaper. The surplus could be used for generating and supplying the mines on the surface and below, and the townships at practically no cost.
196. You say that you have a full and complete survey of your works? Yes.
197. The plans are now before you? Yes.
198. Do you mind producing the plans? I have been courteous enough to show them to Mr. Michelmore, to Mr. Palmer, who claims to be the civil engineer for the company, and to Mr. Cotton. They were also shown to the surveyor of the other company. He went over our catchment area, and was shown all our plans. We thought that we should see the plans of the scheme before the Committee, but up to the present time no plan of the route has been put in.
199. You state that the interests of this company, if granted, might conflict with yours; we have it in evidence that the plans are being prepared, and that they will be ready in a fortnight; you say that you have your plans now before you; the Committee want to know from your plans what is the extent of your rights, so that we may be able, when we obtain the other plans, to see if there is any conflict of interests; if you have shown the plans to the other company, there can surely be no objection to your showing them to the Committee, who merely desire to see that your rights are not jeopardised in any way? The Committee are at liberty to see our plans.
200. Your catchment area is north of Hillgrove? Yes.
201. How far north? About  $2\frac{1}{4}$  miles.

202. Do you know anything of the Big Falls on the Guyra River? I know the locality.
203. I believe it is south-west of Hillgrove? I could not say; I thought it was west.
204. How many miles west? I suppose it would be from 7 to 8 miles west of Hillgrove.
205. Then the catchment area of this company, if situated at the Great Falls of the Guyra River, is from 7 to 10 miles south-west of your catchment area? Approximately, I presume.
206. So that if this company propose to utilise the catchment area of the Great Falls on the Guyra River, and your catchment area is at Baker's Creek, there can be no clashing of interests so far as that is concerned? Not so far as the catchment area is concerned, unless they exercise the right they will have under this Bill of coming in upon our land.
207. But if they exercise their rights only so far as the Great Falls are concerned they would not interfere with you? No.
208. If they exercised their right of conveying power from the generating station at the Great Falls to Hillgrove, will they interfere with your connection between Hillgrove and your catchment area? They do not propose to bring their line to Hillgrove, they propose to bring it to Hillgrove West; but it is very difficult to say in what way it will affect us without seeing the plans.
209. If they generate their power at the Great Falls, and bring it *via* West Hillgrove to Hillgrove, will that interfere with the line of communication between your generating station at Baker's Creek and Hillgrove? In the absence of any plans I could not say. We have nothing before us in any shape or form showing what the route of their line will be.
210. That is quibbling with a plain question;—I suppose you understand the question? I understand it perfectly.
211. Then I must have "yes" or "no" for an answer? The only answer I can give is this, that in the absence of any plans I cannot say.
212. You admit that the question is plain, and that you understand it;—I must ask you to say "yes" or "no"? I think I have given a very fair answer.
213. You have told us of the position of your catchment area, and you say you know the position of this company's catchment area at the Great Falls relative to Hillgrove; the question I now ask you you admit to be perfectly plain, yet you will not answer it? In the absence of plans, I cannot say.
214. I am putting a question to you—the plans have nothing to do with it;—again I ask you to say "yes" or "no"? The question is not put to me in a direct manner.
215. If the company's plans show that their generating station is at the Great Falls on the Guyra River, and if they also show that they propose to convey the electricity there generated direct to Hillgrove, *via* West Hillgrove, will that communication interfere with your line of communication between Baker's Creek and Hillgrove? We are also supplying West Hillgrove.
216. That is not an answer to the question? I was about to point out the locality of our distributing station.
217. Surely it is possible for you to answer the question in the form in which I have last put it;—I have said "if the company's plans show such and such a thing to be the case"? It is more than probable that they would seriously interfere with our work.
218. Where? Well, they may claim under this Bill the right to come in upon any portion of our lease.
219. Where do you aim at taking the power which you generate? We generate from the bottom of the Falls and we go in the first instance to the Baker's Creek Mine.
220. The first point you aim at is a mine lying south of your catchment area and interposed between your catchment area and Hillgrove? We intend to supply mines at Hillgrove, West Hillgrove, and the Falls.
221. Where is your generating station? At Baker's Creek.
222. Will it not be north of Hillgrove? No.
223. Then your generating station is south of your catchment area? Yes.
224. And consequently lies between your catchment area and Hillgrove? I should prefer you to ask that question of the surveyor.
225. At all events, your generating station would be west of Hillgrove approximately? Yes.
226. How far west? About a mile from the centre of the town.
227. If the plans of this company show that they are coming from the Guyra River Falls to Hillgrove, *via* West Hillgrove, will their line of communication interfere with your line? I cannot say, in the absence of their plans. At the point you fix, west of Hillgrove, a mile from the Post Office, we have a generating station which works the mines around the Falls. There is then a wire coming up to the table-land and to the Sunlight Mine. There is another generating station to the Sunlight Mine which goes on to the West Sunlight and the Hopetoun.
228. Are all these to be worked from one catchment area? Every one of them.
229. You have full power to move round? Well, we have water rights such as one may have upon a mining field.
230. For instance, you have power to move over Crown land or through private property? We are not going over any private property.
231. Have you power to go through Crown land without a special Act? Yes; under the Mining Act.
232. Your company does not propose to come to the Legislature for any special powers? No; we are not advised that it is absolutely necessary at this moment.
233. Will you say whether in the evidence given by the promoters of this Bill, or from the Bill itself, anything is disclosed which will interfere with any interests which you may have now, or in the future? I think the evidence before the Committee is of a most meagre description.
234. That is not the point;—the question is whether your interests are likely to be jeopardised? So very little evidence has been given that it is hard to say.
235. But in that evidence, whatever it may be, or in the Bill itself is there a word pointing to anything which will jeopardise or interfere with your interests? I think our interests may be seriously jeopardised.
236. In what respect? I am so advised by my engineer, and I should like you to question him.
237. Then you have come here without any distinct evidence that your interests will be injured? I have come here prepared with the evidence of my engineer.
238. Can you point to any clause giving a monopoly, which you think should be amended? I think Clause 7 is a very serious provision. It was brought under my notice by one of the directors of the Baker's Creek Consolidated Company.

- Mr. G. F. B. Hancock. 238½. The clause refers to power to take temporary possession of land; would that interfere with you? It might do us considerable injury.
- 13 Oct., 1892. 239. How? Well, they can take what portion of our land they like.
- 239½. If a provision were inserted in the Bill providing for compensation in cases of that kind, would it be likely to do you any harm? If there were a clause providing for compensation, and the company could show its ability to meet compensation that would be a different thing.
240. Can you point to any other clause which you think should be amended so as to prevent injustice being done to individuals, and to prevent a monopoly? No particular clause occurs to me at this moment, but you will see that the Bill gives very large powers. The company may go all over the county of Sandon, and do what they like.
- 240½. If the Bill were so amended as to prevent any monopoly being given would your company have any objection to it? No, providing they did not interfere with us.
241. In what way do you anticipate any interference? Well, they might come down to the Sunlight Mine, and establish a distributing station there, and in that case their wires might get across ours.
- 242-3. Is there any difficulty in keeping the wires apart? The country is V shaped; it is a gorge.
244. But supposing provision were made that in the event of their having to cross other wires, proper safeguards should be provided. Would not that be all right? No doubt precautions could be taken. So far as the question of contracts is concerned, I should like to point out that we shall be contracting with the Baker's Creek Company.
245. As a matter of fact, is it not because you think the company will compete with you within a certain area that you object to their Bill? We are not afraid of their competition. We do not believe they can compete with us in any shape or form.
246. You would have no objection to the Bill if its provisions were stringent enough to prevent any monopoly? Providing they do not interfere with our works.
247. You are afraid they might take possession of your works? They might locate their distributing station near us if they liked. They might come on to the land which we are holding in fee simple as well as on to the land which we are holding from the Government.
248. Under what clause of the Bill could they do that? Under clause 7. A director of the Baker's Creek Consolidated Company brought it under my notice officially.
249. You are afraid that land which you lease from the Crown may, under the provisions of this Bill, be taken possession of over your heads? Yes.
- 249½. *Mr. Ewing.*] The water rights given to your company and the water rights given under this Bill do not clash, one being situated on the Guyra River and the other at Baker's Creek. What I mean is that the generating power given to you at Baker's Creek is not the same generating power as that which this company require on the Guyra River? I believe not.
250. Therefore, your powers will not clash in that respect? I do not know that there is anything to prevent the company from coming in and taking our land.
251. But the powers granted at Guyra River will not interfere with the powers granted at Baker's Creek? Not if they undertake to take water merely from the Guyra River in order to generate; but they have the right to go to any part of the county of Sandon.
252. You spoke just now of a gorge. You think that some complication is likely to arise in the transmission of the power? Certainly; if our wires run together an accident may occur.
253. Are you not aware that two currents cannot fuse at a distance of a few feet away from one another? That is so, but their wire might be blown down upon ours, or some other accident might happen.
254. Under ordinary conditions there would be no complications in that respect, however? I do not know how close to us they are going to run.
- 255-6. But if reasonable precautions be used in the erection of the wires in open pastoral country there would be no reason why the currents should interfere one with the other? That is a question I should prefer to leave to the engineer.
257. Then the only complication that can arise would arise from the fact of your having to compete for the same clients? That we do not mind. We are quite open to competition.
258. You consider your scheme so much cheaper than theirs that you are not afraid of competition? Yes; I do not think any man would use electricity having water power at his door.
259. You say you do not fear their competition? I do not fear their competition, but I think there is reason to fear that their distributing station may clash with ours.
260. As to your own scheme, you think it is possible to go on without a Bill from Parliament? Yes.
261. But you are not going on with it? We only signed the lease last August.
262. You have no agreements with the mining companies? No; none actually signed, but we know that they are prepared to take the power at the price at which we can supply it. We have had estimates made out by engineers.
263. But you have made no actual contracts? No; but the Garibaldi Company would be prepared to take the power from us. The Baker's Creek Company were desirous that we should put the distributing station at the back of their batteries.
264. If your power be cheaper than the power of the other company, no doubt the mining companies would purchase from you? Exactly. We shall have the advantage of water, and some of the mines have had to shut down because of the absence of water. If the other scheme is to be absolutely carried out we have no fear of it; but we object to their having a sort of monopoly for eighteen months without the possibility of doing anything. The mines are shutting down one after another, and there are to-day only two live mines on the field instead of fifteen.
265. You think that the existence of a monopoly by this company may deprive the mines of the opportunity to enter into legitimate transactions with your company? I am satisfied that they cannot carry out their scheme for double the cost. They estimate that it will cost £40,000. The estimate for our scheme is only £22,000.
266. You have no money to subscribe? We are in the syndicate stage.
267. In about the same stage as this company? I do not wish to be personal in the matter, but I will say that we have some very strong men in our company.
268. You do not call the plan you have produced an engineer's plan—it is merely a tracing of the trial survey? An absolute survey has been made. Mr. Conroy did the work. 269.

269. This is a tracing from it? That is the second survey.
270. But it is a tracing of surveyor's levels rather than an engineer's plan? The engineer is in attendance, and can give you the fullest information. Mr. G. F. B.  
Hancock.
271. But is not this a tracing of an ordinary licensed surveyor's levels? It is a plan upon which we could get a contract to-day, with the estimates prepared in the engineer's office. 13 Oct., 1892.
272. No one would tender upon that, would they? We have the estimates at the engineer's office.
273. What I desire to ascertain from you is that the engineer's plan is not here—this is a mere tracing of surveyor's levels? Our engineer is here, and can give evidence upon that point.
274. Do you regard this as an engineering plan? I have another plan showing the dam sites. At the same time we could get a contract to-day upon this plan.
275. *Mr. McCourt.*] How long is it since the syndicate you represent commenced surveying operations at Hillgrove? The survey was carried out in April.
276. Have the syndicate promoting the present Bill carried out a survey at Hillgrove to your knowledge? I understand that they have done so recently.
277. How long is it since you knew their surveyor was there? I understood that their surveyor was there last month. He was on our ground, and saw our catchment area.
278. How is it that you have not proceeded with the work since April last? Because we have had to get a lease of our catchment area. After great difficulty we succeeded in getting the lease signed on the 5th August last. I can produce the lease if you like.
279. Is it a lease from private persons? The catchment area is entirely on private land. The difficulty we had was that the lease was only for twenty-one years, and we were paying a considerable rent.
280. If, as you say, you have not required a Bill to protect you, what has prevented you from going on with the work? The syndicate would not go on with the matter under our old lease. We now have a forty years lease.
281. What have you been doing since the lease was signed on the 5th August? We have had to get considerable information as to the expense and other matters.
282. But you have subscribed no money? Except what has been necessary to pay for the lease and surveys.
283. But you have no money to let contracts for the carrying out of the work? No; we are only in syndicate form so far. We could not go among the public and mining companies until we got our lease. We could not expend £20,000 upon the original lease.
284. I understand you object to this Bill simply because it contains a provision enabling the rival company to wander all over the county of Sandon;—you think they should be bound to a certain route? Yes; I think their plans and specifications ought also to be upon the table. We ought to know exactly what their route is.
285. You think that if the Bill passes in its present form the rival company might actually jump your rights? There would be nothing to prevent them from doing so.
286. What is a fair charge per unit for electricity? I am not an electrician; I cannot say.
287. I asked the question because the Bill states that the charge shall not exceed 1s.? We have an engineer of experience who could tell you what would be a fair charge. We had our own estimates from the Brush Electric Lighting Company.
288. *Mr. Cotton.*] Could any harm arise to the general public from the carrying out of the two schemes? No. If both schemes were actually carried out it would be a public benefit.
289. *Mr. Lonsdale.*] If your rights are properly guarded you have no objection to this company having the rights for which they ask? No; but I submit that the information before us as to what this company intend doing is of a most vague and unsatisfactory character.
290. You do not object to their running their lines parallel with yours? Providing they do not interfere with our distributing stations. As a matter of fact we do not know where they intend taking their lines. We understand that they have 2 miles of piping down a gorge, but that is about all we know.

WEDNESDAY, 26 OCTOBER, 1892.

Present:—

Mr. McCOURT,

Mr. LONSDALE,

Mr. COTTON.

J. GARRARD, ESQ., IN THE CHAIR.

Mr. H. White, solicitor, appeared for the promoters of the Bill; Mr. M'Lachlan, solicitor, appeared for the Hillgrove Water and Electric Power Company.

Walter Harcourt Palmer recalled and further examined:—

291. *Chairman.*] Do you produce the plans asked for at the last meeting of the Committee, showing the route of the proposed connection between your weir site and machinery site? Yes; showing the water conduit from the weir site to the machinery site and the trial surveys connected therewith, and also a plan showing the cable line from the machinery site to Hillgrove. Mr. W. H.  
Palmer.
292. Does the pipe line from your weir site to your machinery site run through any land other than Crown land? No. 26 Oct., 1892.
293. Then, from your machinery site to Hillgrove, does the cable line run through Crown or purchased land? It runs through some conditional purchases of Mr. Waters.
294. That is shown on the plan? Yes.
- 294½. With the exception of those conditional purchases of Mr. Waters, the line passes through Crown land? I believe that to be the case.
295. *Mr. Lonsdale.*] But would it not run through some of the private property on the Gara Run? No.
296. *Mr. M'Lachlan.*] Did you personally prepare these plans? No; my firm prepared them.
297. Were they prepared in Sydney or in Melbourne? In Melbourne.
298. Are they the result of actual survey? Yes.
299. Who was the surveyor? Mr. Edmiston.

- Mr. W. H. Palmer.  
26 Oct., 1892.
300. Was it he who prepared the plans? He and Mr. Struthers together.
- 301-2. Referring to the line shown on the plan from the Guyra River to Baker's Creek; has that portion been surveyed? Yes.
303. By Mr. Edmiston? Yes.
304. How do you know that it has been surveyed? From seeing the field-notes of the survey. All the features in the field-notes correspond with the country through which the line runs. Mr. Edmiston was a perfect stranger to the district before he went up there, and the country being well known to me, I know that he could not have the features to which I refer on his field-notes unless he had made a survey.
305. Do you remember saying at the last meeting of the Committee that the survey had been made to the Sunlight Battery? I do.
306. This plan does not show the Sunlight? No; it shows the west Sunlight.
307. Nothing was said at the last meeting of the Committee about the survey having been made at that point to Baker's Creek? As far as I recollect what I said at the last meeting of the Committee was that the distributing station would be at the Sunlight batteries.
308. What is the distance from Baker's Creek to the tramway shed? You will find the scale on the plan.
309. Would that be on the table-land? Yes.
310. Do you swear that the route from Baker's Creek to the tramway shed has been surveyed? I firmly believe that it has been surveyed. I have been told so by my partner.
311. Did you see the field-book, showing that a survey had been made from Baker's Creek to the tramway shed? Yes.
312. When did you see it? When Mr. Edmiston came back from Hillgrove I saw it in Sydney.
313. You have not had an opportunity of comparing it with these plans since you received them? No; I may say that the plans before the Committee will be stood to by the company. They are prepared to erect their lines in accordance with it.
314. What is the distance from the weir site to the machinery site? Approximately,  $2\frac{1}{4}$  miles, as far as I can remember.
315. *Chairman.*] That is by your conduit route? Yes.
316. Not as the crow flies? No.
317. *Mr. McLachlan.*] What is the distance from the machinery site to the tramway shed? About 5 miles.
318. Are these plans in any way connected by any reference to the Bill? I think so.
319. In what way? Well, there is mention of the site on the Guyra River, from which the water is to be diverted, and again returned to the river free from pollution. I believe there is a clause in the Bill to that effect.
320. Are these plans put in? No; they are only produced.
321. Are there any leases in the neighbourhood of Baker's Creek, where the proposed cable-line crosses the creek? There are mining leases.
322. Are any of those leases shown on the plan? No; for the reason that the Government have not charted up their district map. They have not a district plan showing all the leases, and until a comparison can be made with a map showing the leases in their proper position as now surveyed, and not according to the old county plan, the Government map would be absolutely useless.
323. *Mr. White.*] As a matter of fact, Mr. Edmiston was engaged for some time on the survey? For about three months.

George Frederick Beck Hancock recalled and further examined:—

- Mr. G. F. B. Hancock.  
26 Oct., 1892.
324. *Mr. White.*] Have you seen these plans? I have thrown my eye over them within the last few minutes.
325. Does the route as shown upon the plan in any way affect your interests or the interests of the company? I do not claim to be an expert in these things, but I would simply state this, that there is a mere line shown; there is no indication as to the property through which it passes.
326. But do you think the plans affect your interest or the interests of your company? I think they may do so seriously.
327. But do they? Our wires traverse from point to point in all directions.
328. *Chairman.*] You have sufficient data before you showing you the position of the company's lines; you have indicated certain points on the plans showing that you are perfectly familiar with what you are talking about, and surely you can answer a question as to whether the line shown upon the plans interferes with your rights? Only one line is shown on the plans, and therefore it is impossible to say. The plans do not show me sufficient to enable me to answer the question.
329. *Mr. White.*] Then you know nothing about these plans? No.
330. Consequently you know nothing about the country? Undoubtedly I do.
331. That being so, cannot you say if the plans affect your rights? They may seriously affect our rights; they probably would.
332. *Mr. Cotton.*] In what way? They propose to bring a line to the West Sunlight battery, and across to the Baker's Creek tramway shed, and we propose to have a generating station at the Baker's Creek battery. Our lines come by this very route.
333. *Mr. White.*] I understood you to presume something just now;—suppose your presumption be correct, how would you be affected? Well, our wires go up to these mines.
334. But you cannot directly say as to how they will affect you? Not without having the leases specified.
335. In your previous evidence, when you were asked by the Chairman as to how the proposals of this Bill affected your interests, you said that in the absence of plans you could not say; the plans are before you now? I call them very insufficient plans. I think I could call upon professional men who would have no hesitation in saying that they were not sufficient.
336. I will ask you again whether they in any way affect your interests or the interests of your company? In my opinion the plans do not show sufficient to enable me to answer the question. Perhaps I had better answer your question by saying that there is nothing in the plans to indicate whether that would or would not be the case.

337. *Mr. McCourt.*] Mention has been made of the rights of your company;—what rights have they got? We have acquired leases and a freehold for our catchment.
338. In the particular portions shown in these plans, what rights are interfered with? Water rights.
339. In this particular locality? Yes; we have the water rights from the head of Baker's Creek down to the Sunlight Battery.
340. If the promoters of this Bill carry out the works proposed, will they interfere with your water rights? I think I answered that question at the last meeting of the Committee by saying that the company might, under clause 7 of their Bill, come in and interfere with our catchment area. It has been foreshadowed that the company will endeavour to get the right to a road through land which will intercept our catchment.
341. You have spoken of interference with your wires, what rights have you as to the erection of your wires, have you acquired rights to take wires anywhere? No.
342. You have not applied for a Bill? We have no intention of doing so at this moment.
343. You propose to erect your wires without a Bill? That can be done on mining leases.
344. Cannot this company do the same thing? I suppose they can, but they are applying for direct powers.
345. *Mr. Lonsdale.*] You spoke of a road coming through to intercept your catchment area is that road to be applied for by the public, do you understand, or by this company? The public are not applying to my knowledge.
346. *Chairman.*] Do you know of anyone else applying for a road through the land? I know of no direct application.
347. *Mr. Lonsdale.*] Do you know of any road being surveyed by the Government through that property? No; I do not.
348. Your water reserve is at the head of Baker's Creek? Yes.
349. Presuming that the wires of this company cross part of Baker's Creek, and are protected from your wires, will that interfere with you in any way? What I have pointed out is that they might come in on our catchment area.
350. But cannot two sets of wires pass over one another? Certainly you can have ten sets of wires passing over one another.
351. Your wires may cross each other without either of you interfering with the other's power? Unless the wires are blown down, which is not unlikely.

Mr. G. F. B.  
Hancock.  
26 Oct., 1892.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## HILLGROVE AND ARMIDALE WATER- POWER ELECTRIC BILL.

(PETITION FROM GEORGE FREDERICK BECK HANCOCK, PRAYING TO BE HEARD PERSONALLY OR BY COUNSEL BEFORE THE SELECT COMMITTEE ON.)

*Received by the Legislative Assembly, 6 October, 1892.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of George Frederick Beck Hancock, Robert Amos, James F. Frew, John W. Keller, and James Thompson Hackett (the Hillgrove Water and Electric Power Company),—

RESPECTFULLY AND HUMBLY SHOWETH TO YOUR HONORABLE HOUSE:—

1. That a Bill has been introduced into your Honorable House, in pursuance of leave in that behalf given, intituled "A Bill to enable the Hillgrove and Armidale Water-power Electric Company (Limited), a company registered in Sydney, in the Colony of New South Wales, under the provisions of the Companies Acts, to construct and maintain machinery, works, and other appliances for making, generating, and transmitting electricity, and supplying the same to any city, town, mine, company, co-partnership, person or persons whatsoever within the county of Sandon, in the said Colony of New South Wales, and for other purposes therein mentioned."

2. That such Bill has been referred to a Select Committee, appointed by your Honorable House, for consideration and report.

3. That your Petitioners being largely interested in the questions to be considered by such Select Committee, your Petitioners are advised that it is desirable that they should be represented before such Select Committee.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to grant them permission to appear before the said Select Committee in person or by Solicitor or Counsel, and, if necessary, to adduce such evidence, and send for such persons and papers, as your Petitioners may be advised, together with power to examine and cross-examine witnesses called before the said Committee.

And your Petitioners, as in duty bound, will ever pray.

G. F. B. HANCOCK.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**HILMGROVE AND ARMIDALE WATER-POWER ELECTRIC BILL.**  
(PETITION FROM CERTAIN RESIDENTS OF THE DISTRICT OF HILMGROVE, IN FAVOUR OF.)

*Received by the Legislative Assembly, 22 November, 1892.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of Hillgrove District, in the Colony of New South Wales,—

SHOWETH:—

That leave has been granted to the Hillgrove and Armidale Water-power Electric Company (Limited) to introduce a Bill to your Honorable House to enable the said Company to construct and maintain machinery, works, and other appliances for making and generating electricity within the county of Sandon, in the Colony of New South Wales, and transmitting the same to the cities and towns of the said county, for the purpose of working any machinery that may be erected by the said Company; for drawing or propelling trams, tramways, carriage, and other vehicles within the said county; also for the purpose of supplying the inhabitants of the said county with electricity for any purpose, and for other purposes set forth and mentioned in said Bill.

That the said Bill is now before your Honorable House for consideration.

That mining is the principal industry of the said Hillgrove District.

That in working and developing the mines of the said district steam is the chief motive power; that the said Hillgrove District is situated at a great distance from the coal-producing centres of the Colony of New South Wales, and by reason of such situation, and the consequent enormous expense of importing coal thereto, wood is the only fuel which can be used for producing steam for the purpose of working the machinery of the mines of the said district, and is year by year becoming scarcer, and the cost of obtaining, cutting, and carrying the same to the different machinery sites greater, with the result that the development of the said mines is being retarded and the interests of the district seriously prejudiced.

That the mining industry cannot be advanced and extended unless some less expensive motive power than that of steam be adopted. Owing to the great cost of fuel necessary for the production of steam, a very large area of mineral land is at the present time quite unworkable. That if some cheaper method of working the machinery of the mines were carried into effect, the mining industry would be largely developed and the general interests of the town and district materially advanced.

That the adoption of electricity, generated by water-power, for the working of machinery, as proposed by the Bill now before your Honorable House, will overcome the present difficulties of carrying on the business of mining within the district of your Petitioners; and, it is believed, will result in very great development of the mining industry of the said district, and a consequent demand for and large increase of labour, besides opening other avenues of employment.

That electrical power will be much less expensive than that of steam, and a large number of mines, which at the present time, owing to the great cost of fuel, are almost unworkable, can be immediately developed and made financially successful.

That the large areas of mineral and other land in the said district, which, by reason of the great cost of steam power, are now lying idle, will, by the adoption of a system of electrical motive, be opened up and worked, and will give employment to a large number of men, and form a considerable source of revenue to the Colony.

That by the passing of the Bill of the Hillgrove-Armidale Water-Power Electric Company (Limited), now before your Honorable House, the means will be afforded of developing the great mining industry of this district, and will also largely aid in advancing the general interests and welfare of the said district of Hillgrove.

That your Petitioners believe that although the said Bill will be of very great advantage to this district, it will in no way interfere with or injure the rights and interests of any person or persons.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to pass the Bill of the Hillgrove and Armidale Water-Power Electric Company (Limited).

And your Petitioners will ever pray, &c.

[Here follow 320 signatures.]

1892-3.

**LEE AND BRADY SETTLEMENT BILL.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on the 14th February, 1893,—the “*Lee and Brady Settlement Bill*,”—beg to report to your Honorable House,—

That they have examined the witnesses named in the list\* (whose <sup>\* See list, page 4.</sup> evidence will be found appended hereto); and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the several clauses and the Schedules of the Bill, in which it was deemed necessary to make an amendment.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

T. WADDELL,  
Chairman.

No. 2 Committee Room,  
Sydney, 28th February, 1893.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

LEE AND BRADY SETTLEMENT BILL.

TUESDAY, 28 FEBRUARY, 1893.

Present:—

MR. KELLY, | MR. MORGAN.  
|  
MR. WADDELL.

T. WADDELL, Esq., IN THE CHAIR.

Mr. J. M'Phillamy appeared as solicitor for the Bill.

Mr. John M'Phillamy sworn and examined:—

1. *Chairman.*] You are solicitor for the Bill? Yes.
2. Will you make a brief statement of the various points in connection with the Bill, explaining it? Mr. William Lee, in 1843, made a settlement in favour of two daughters, Maria Brady and Elizabeth Lord, of certain land—that they should have an equal share in the rents and profits. About 1861, for certain reasons, Mrs. Brady made a settlement on herself and children, precluding herself from mortgaging or alienating the land in any way, for which, I believe, she had good reasons at the time.
3. *Mr. Kelly.*] Have you any knowledge of those reasons? Yes; she was afraid her husband might induce her to sell the land, and the property would be wasted. For that reason the settlement was made, it being her own property, given her by her father. Shortly afterwards her husband sold whatever interest he might have in the property to the father—Mr. William Lee—that is, what is called a life interest of the husband, and some time afterwards became insolvent. The official assignee afterwards also sold the interest of James Brady, the husband, to Mr. George Lord, for the sum of £500, and that was afterwards paid to Mr. Lord by Mrs. Brady's trustees, out of £1,000 left to her by the father. Afterwards, Mrs. Lord, wishing to build on her property, they arranged to have a partition, and found, on account of Mrs. Brady's settlement, that it could not be done without a Bill being passed by Parliament. In 1873 an Act was passed called the "Lee's Partition and Sale Act," under which Mrs. Lord took her share of the property, and Mrs. Brady hers. Mrs. Lord took hers in fee simple, and Mrs. Brady took hers under the settlement of 1861; that is, subject to the trustees as in the settlement of 1861. At that time there was a large hotel and several shops on the property in one of the best positions in Bathurst. The shops have fallen into disrepair, and have become untenable. Two of them have had to be pulled down lately in order to prevent loss of life. The hotel, although a very good one, and in a good position, is behind the times, and requires a considerable sum of money being spent upon it for the purpose of additions and other conveniences.
4. *Mr. Morgan.*] This is Mrs. Brady's property? Yes. I may mention that Mrs. Lord has built on her own properties, and they are bringing in a return of about £1,400 a year. In consequence of the hotel getting behind the times, we have not as good an opportunity of letting it as we should have. Tenants say, "You must give us improvements." The shops have had to be pulled down, and it will take £2,000 or £3,000 to build shops of a character similar to the adjoining property, and they will then let very well. Mrs. Brady has no other income, and unless she can borrow some money with which to build these shops, she will

Mr. J.  
M'Phillamy.  
28 Feb., 1893.

- Mr. J. M'Phillamy. will not only lose their rent, but a great deal of the rent of the hotel as well. She has arranged with an architect to have shops built, and she can increase her income to the extent of £300 or £400, if she borrows money.
- 28 Feb., 1893. 5. *Chairman.*] I do not know that you need state anything further, beyond making it clear to the Committee that this property was left as a birthright to Mrs. Brady, and, consequently, as a matter of right, she should have control of it? Yes.
6. *Mr. Morgan.*] It was not, under the will, to pass to her children? It was left to herself by her father. Then she settled it to herself and to her children, but not giving herself power to mortgage.
7. Is there any objection on the part of the children to this? No; they are all consenting parties. We have asked, under the Bill, for power to sell part of the property. There is another part of the property close to Rankin-street, through which the Jordan Creek runs. Mrs. Brady has 5 chains, with a frontage to Rankin-street, and it would require £200 to put up a fence along the creek in order to make it of any use. Dr. M'Cathie is willing to give a piece of land in exchange for another piece, and if he does so, it will give Mrs. Brady a back lane, and will enable her to utilise the whole of the frontage.
8. *Chairman.*] That is a part which you wish to be sold? Yes.

The Hon. George Lee, M.L.C., sworn and examined:—

- Hon. G. Lee, M.L.C. 9. *Mr. M'Phillamy.*] You are a grazier, residing at Bathurst, and a trustee under the settlement of Brady's. Do you know the property in Rankin-street, and George-street, and the Duke's Hotel? Yes.
- 28 Feb., 1893. 10. It is one of the principal sites in Bathurst? Yes.
11. Have you noticed that the shops have lately become dilapidated? Yes; they are unfit for occupation.
12. The same remark applies to the property in William-street and Howick-street? Yes.
13. The hotel has been built for a great number of years? Yes; it is in a dilapidated condition, and it will be necessary to repair it before very long, if it is to be occupied at all as an hotel.
14. *Mr. Kelly.*] To whom did the land originally belong? To my father.
15. Then the property is inherited by your family? Yes.
16. Does not the property belong to the husband of Mrs. Brady? No; it was originally my father's property, and he willed it to my two sisters. It was a joint property, and they introduced a Bill into Parliament to get the power of dividing it; and it was divided. An equitable division took place.
17. It states in the Bill that during the lifetime of Mrs. Brady there should be no mortgages of any description on the land? Yes.
18. *Mr. M'Phillamy.*] Do you know the property in Raglan-street? Yes.
19. Has that fallen into disrepair? Yes.
20. Do you know where the creek crosses? Yes.
21. Leaving a small piece on one side and another piece adjoining it? Yes.
22. Would it be a benefit to have that piece extended? Yes. I may mention that whilst Mrs. Brady was in England, Dr. M'Cathie, the owner of the adjoining property, came to me as trustee, and suggested that course to me. I thought it a good plan to obtain the adjoining land and give up an equivalent for it. If the exchange is effected it will increase the value of both properties.
23. *Mr. Kelly.*] Is it the wish of all who are interested in the land that it should be disposed of in the manner suggested to the Committee? Yes.
24. With a view to enhancing the value of the property? Yes.
25. And to put more modern structures upon it? Yes.
26. The object is the benefit of the family? Yes. I am not directly interested in any way. My object is to provide for the family in the best way.
27. And they are perfectly satisfied? Yes.
28. *Mr. Morgan.*] This Bill is brought in at the wish of Mrs. Brady? Yes.

Mr. Edric Hubert Brady sworn and examined:—

- Mr. E. H. Brady. 29. *Mr. M'Phillamy.*] You are one of the sons of Mrs. Brady, who owns the property? Yes.
- 28 Feb., 1893. 30. I think you manage the property? Yes.
31. Do you know the property in Bathurst well? Yes.
32. What state is it in? It is in a state of great disrepair. Some of the places have fallen down, and they have been obliged to remove them.
33. The walls were tottering? Yes.
34. The municipality insisted upon removal? Yes.
35. And it brings in no return? No.
36. The hotel is one of the best sites in Bathurst? Yes.
37. It was built forty years ago? More than that, about sixty years ago.
38. Will considerable additional improvements be required to make it in keeping with the modern hotels in Bathurst? Yes, the present tenant is only staying in on condition that it is to be put into thorough repair.
39. Would it be a benefit to your mother if she could borrow money with which to build shops, something like those of Mrs. Lord, adjoining? Decidedly.
40. And unless she gets the Bill she has no power to do it? No.
41. *Mr. Kelly.*] I suppose you are agreeable to the proceedings? Yes.
42. In accordance with the wishes of your mother? Yes.
43. *Mr. M'Phillamy.*] Can you answer for your brothers and sisters? Yes, they are all willing.
44. *Chairman.*] This property was left to your mother by your father? Yes.
45. And owing to certain changes which took place after marriage, she has lost the full control of it,—that is, the right to mortgage it? Yes.
46. Your father has not been living with your mother for some time? No, not for thirty-five years.
47. And she is the sole support of your family? Yes.
48. *Mr. Kelly.*] Does Mr. Brady ever make any attempt to claim the property? No.
49. *Mr. Morgan.*] He could have no claim under the father's will? No; moreover I think that whatever claim he may have had once he has sold. He has sold his life interest.
50. Then he could not be an objector to the Bill in any way? No.
51. And it does not interfere with any of his rights? No.
52. Your brothers and sisters are agreeable to the passing of the Bill? Yes, I can answer for that. Mr.

Mr. James Brady sworn and examined:—

Mr. J. Brady.

28 Feb., 1893.

53. *Chairman.*] Do you live at Bathurst? I do.
54. Are you the husband of Mrs. Brady referred to in the Bill? I am.
55. Have you any objections to the Bill being passed? I have.
56. Will you state your objections? I will. The Bill has to be passed, it appears, under the father's will, for Mrs. Brady. The Bill seeks to give the trustees under that will power to sell or mortgage to which I object.
57. *Mr. Kelly.*] On what grounds do you object? By the father's will.
58. But you have no claim of any description to the property which is inherited by your wife? But I say that I have.
59. *Chairman.*] Will you state what claim you have to the property? I say, first that it is mine by a deed of gift.
60. And have you lost all control over the property for many years past? No, I have not lost it.
61. Have you received any rents? Not a sixpence.
62. Why have you not taken some legal action to ensure your getting your rights if you have any? Why I did not do so is one thing. I have not done so, but I intend to do so.
63. *Mr. Morgan.*] You say you hold certain rights under a deed of gift. Can you prove to the Committee that you hold those rights? Yes, through Judge Stephen.
64. *Mr. Kelly.*] Where is the deed of gift? I expect it is in the Registry Office.
65. Rather a peculiar place to have it? It is registered there.
66. *Chairman.*] Have you anything more to say with reference to your claim to the property referred to? I have. They are seeking under the father's will, are they not?
67. Before you go further, did Mrs. Brady's father make his will before her marriage, or was it after her marriage? After her marriage.
68. Did he, in his will, stipulate that you should have a right to this property the same as she had? None whatever. He had no such power at the time to make it to her.
69. *Mr. Kelly.*] But it was his own property? How can that be, when in a deed of gift years before that, he was dispossessed of it.
70. Do I understand you to say there was a deed of gift made out in your favour prior to the marriage of yourself and Mrs. Brady? No; I do not attempt to say such a thing. Before she became Brady by marriage, a deed of gift was made to Maria Lee.
71. Whom you married? Yes; and there was a deed before she became Mrs. Brady in her favour.
72. You told the Committee you have had a deed of gift? The deed of gift I allude to is a settlement by the father on Mrs. Brady.
73. What deed of gift have you got—that is the question? Only that deed.
74. But surely your own common sense must tell you that you could have no claim upon a deed of gift made in favour of Mrs. Brady. Would you attempt to say that? When she becomes married it goes to the right of her husband.
75. How long have you been separated from Mrs. Brady? Many years.
76. How many? I cannot tell you.
77. Twenty, ten, or five years? More than that.
78. More than twenty years? I do not believe it is.
79. Prior to your separation from Mrs. Brady this deed of gift had been made out by her father in her favour? Yes, before she became married.
80. You claim that when you married Mrs. Brady you had a right to inherit what her father had given to her as a free deed of gift? I do; that is my right.
81. How long did you live with Mrs. Brady after marriage? Close on thirty years.
82. Mrs. Brady never made any overtures to you about giving you a free deed of gift to the property? No, I do not think we ever had any conversation about it.
83. And to the best of your knowledge you have no deed of gift made out by Mrs. Brady, your wife, in your favour? No, none. She has no power.
84. The deed of gift to which you actually refer is the deed of gift that was originally made out by her father in her favour? Yes.
85. And that deed of gift, you contend, is in the Registry Office at the present day? Yes.
86. Then you have no deed of gift? I am not possessed of it, but you can send for documents of that sort.
87. Did you ever in any way collect rents, or receive any money in connection with this property? Not a farthing.
88. What is your main reason why your family should not enhance the value of the property? Her trustees under the will want a Bill to be passed through the Upper House, to give them power to sell, mortgage, and do as they like with the property.
89. Why do you oppose enhancing the value of the property when it is for the benefit of your own family? But how can it be benefited by her being dispossessed of it.
90. But why should you raise any objection to this property, which is your wife's, being mortgaged;—the property will be enhanced in value and will eventually go to the benefit of your family? Will it be enhanced in value if it is mortgaged?
91. It will. The fact of your wife being able to obtain a mortgage on the property—which she cannot obtain now—will enable her to erect suitable buildings upon it. Those buildings will go to the benefit of your family, perhaps when we are on the other side of the grave. I ask you why should you object to that? I do. It is possible that it is not Mrs. Brady who wishes the property to be mortgaged. It is her agent or trustee who is asking for it. I am quite opposed to the trustee being possessed of it. What position will she be in if he has power to mortgage, and if the property is lost by his bad management, by "swopping," or anything of that kind? He will not have to be asked as to where it went to. I am going to stop it before it gets to his hands.
92. Are you aware that the whole of your family have consented to the Bill? I am not aware of it. They are stupid to trust the property to other people, and I am going to oppose it.
93. Will you tell us what your main objection is to the Bill? That the trustees should not be possessed of the property.
94. Is not the trustee a brother of your wife? Yes.

- Mr. J. Brady. 95. Why do you think confidence should not be placed in him? He wants to get possession of this property, and to have the power to sell it, "swop" it, or to do anything he likes with it. Perhaps he wants to meet some liability of his own. What position would my wife and children be in then? He could go and waste the property, and do as he liked with it.
- 28 Feb., 1893. 96. *Mr. Morgan.*] Did you at any time receive any money for any share you were supposed to possess or did really possess in the estate? Yes, I did.
97. You say that at one time you held a right to some portion of the property? Yes.
98. Did you sell it? I did.
99. Did you sell the entire right? I did not.
100. What portion of the right did you sell? I sold my right for the future and not for the past.
101. You sold any future rights you might hold in the property? I did. That question has been tried in the Supreme Court.
102. That was in the year 1861? Yes.
103. *Mr. Kelly.*] According to this deed of gift (produced) you have actually sold your right in connection with this property? Not at all.
104. Then why does your name appear to it? I sold for the future. That question has been tried by Sir Alfred Stephen.
105. *Mr. Morgan.*] In 1861 you sold all future right you might have in the property? That is correct.
106. That is in the property dealt with under the Bill? Yes.
107. *Mr. M'Phillamy.*] Since you seem to be so anxious about your wife and family may I ask whether you have in any way, during the last thirty years, contributed to their education and support? I have not—I have been so robbed of the estate.

#### SCHEDULE OF AMENDMENTS.

Page 2, clause 2, line 25. *Omit* "for and on behalf of Her Majesty."  
 " " " 29. *After* "occupier" *insert* "and lessee or licensee under the Crown."  
 " " *Add* to clause,—  
 " " "Public Land" means Crown land not held under lease or license under the Crown Lands Acts or under any other Act authorising the occupation or use of Crown lands, or any lands reserved or dedicated for public uses or purposes (exclusive of roads), whether held by trustees or not, if such lands are not, for the time being, lawfully held under any lease or license.  
 " " "Private land" means any land which is not Crown or public land, or which is hereinafter expressly referred to as private land.  
 " " "Road" means a public road so constituted by reservation, proclamation, dedication, or otherwise howsoever.  
 " " The intervention of a road or water-course (not being a permanent river) shall not prevent holdings or lands being held to be "adjoining."  
 " " 3, line 45. *Omit* "both public and private."  
 " " " 47. *Omit* "both public and private" *insert* "whether the same shall be Crown, public, or private lands."  
 " " lines 48 and 49. *Omit* "in part thereof on private lands" *insert* "on Crown or public lands."  
 " " " 49 and 50. *Omit* "thirty-three feet, and on public lands in breadth."  
 " " line 54. *After* "lawful" *insert* "for the Promoter."  
 " 3, " 9, line 26. *Omit* "said"  
 " " " 30. *Omit* "said"  
 " " 10, " 33. *Omit* "private"  
 " " " 38. *Omit* "proprietors" *insert* "owners"  
 " 4, " 14, " 30. *Omit* "lessees" *insert* "Promoter."  
 " " " 33. *Omit* "lessees" *insert* "Promoter"  
 " " 16, " 42. *Omit* "lessees" *insert* "Promoter"  
 " 5, " 17, " 3. *Omit* "which" *insert* "such rates, tolls, or charges"  
 " " 20, " 30. *Omit* "lessees" *insert* "Promoter"  
 " " " 31. *Omit* "lessees" *insert* "Promoter"  
 " " " 32. *After* "same" *insert* "and the expenses incurred by the Promoter in connection with such goods"  
 " " " 36. *After* "money" *insert* "and expenses"  
 " 5, *Omit* clause 21.  
 " 6, clause 22. *Add* to clause, "And provided also that where lands entered upon by the Promoter are Crown lands, nothing in this Act contained shall be held to exempt the Promoter from the provisions of Part VI of the Crown Lands Act of 1884"  
 " " 24. *Omit* "Provided that where such Tramway passes over Crown lands, the Promoter shall pay to the Crown such annual rent, not exceeding two shillings per acre, for such Crown lands passed over by such Tramway, as the Minister for Lands may direct"

 ,, 11, ,, 44, 45. *Insert the following new sub-section, to stand as sub-section I:—*

(I) As to the determination of compensation to absent parties. Sections forty-two and forty-four, both inclusive.

Page 13, clause 52. *Omit clause.*

,, 14, ,, 59, line 47. *After "lands" insert "within the counties of Menindie, Tandora, and Yancowinna"*

,, 5. *Insert the following new clause, to stand as clause 21:—*

21. Upon publication of the notification mentioned in Part II of this Act, the Promoter shall be entitled to a lease for twenty-one years from the Crown of such Crown lands as shall be necessarily used or required for the tramway, including such Crown lands as shall be necessarily used or required for sidings, stations, station buildings, workshops, offices, embankments, approaches, and other works and conveniences in connection with the tramway, and shall pay to the Crown such annual rent not exceeding two shillings per acre for such Crown lands so used or required, as the Minister for Lands may direct. Provided that, after the expiry of the said twenty-one years, the Promoter shall be entitled to a renewal of the said lease from year to year, unless and until the tramway shall be resumed by the Governor, under the provisions of this Act.

Page 7. *Insert the following new clauses, to stand as clauses 28 and 29:—*

28. Before the Promoter shall put into force any of the provisions contained in this Act with respect to the acquisition or occupation of private lands otherwise than by agreement, if any shall be so required to be resumed and taken under the provisions of this Act, the following conditions and provisions shall be observed:—

- (i) The Promoter shall publish once at the least in each of three consecutive weeks in some local newspaper circulating in the Police District of Mitchell, a notice describing shortly the nature of the undertaking in respect of which it is proposed to take any private lands, naming their registered office as the place where a plan of the proposed undertaking may be seen at all reasonable hours, and stating the quantity of lands required.
- (ii) The Promoter shall serve a notice on every owner or reputed owner, lessee or reputed lessee and occupier of such private lands, describing in each case the particular lands intended to be taken, and requiring an answer, stating whether the person so served assents, dissents, or is neutral in respect of taking such lands.
- (iii) On compliance with the provisions of this section with respect to notices, the Promoter may, if he think fit, present a petition to the Governor, and such petition shall state the private lands intended to be taken, and the purposes for which they are required, and the names of the owners, lessees, and occupiers of lands who have assented, dissented, or are neutral in respect to the taking of such lands, or who have returned no answer to the notice. And it shall pray that the Promoter may, with reference to such lands, be allowed to put in force the powers contained in this Act, with respect to the acquisition or occupation of private lands otherwise than by agreement, and such prayer shall be supported by such evidence as the Governor may require.
- (iv) On the receipt of such petition, and on due proof of the proper notices having been published and served, the Governor shall take such petition into consideration, and may either dismiss the same, or direct a local inquiry as to the propriety of assenting to the prayer of such petition, but until such inquiry has been made, no provisional order shall be made affecting any such lands without the consent of the owners, lessees, and occupiers thereof.
- (v) After the completion of such inquiry the Governor may, by provisional order, empower the Promoter to put in force with reference to the private lands referred to in such order the powers of this Act with respect to the acquisition and occupation of private lands otherwise than by agreement, or any of them, and either absolutely or with such conditions and modifications as the Governor may think fit, and it shall be the duty of the Promoter to serve a copy of any order so made, in the manner and on the person in which and on whom notices in respect of such lands are required to be served.

29. After the approval by the Governor of the acquisition of private land otherwise than by agreement, if any shall be resumed and taken under the provisions of this Act, and after publication of the notification in the last section mentioned, but not before, it shall be lawful for the Promoter to acquire the lands described in the First Schedule hereto, in manner and under and subject to the conditions in this Act specified and contained.

private lands.

Promoter may  
acquire lands  
after approval of  
Governor.

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MENINDIE AND BROKEN HILL TRAMWAY BILL.

WEDNESDAY, 19 OCTOBER, 1892.

Present:—

MR. BARBOUR,		MR. CANN,
MR. GORMLY,		MR. FRANK FARNELL,
		MR. BOOTH.

ROBERT BARBOUR, ESQ., IN THE CHAIR.

Mr. Alexander Matheson, solicitor, appeared on behalf of the Promoters of the Bill.

Mr. Charles Edward Hogg called in, sworn, and examined:—

1. *Chairman.*] What are you? A consulting engineer.
2. *Mr. Matheson.*] Have you been occupied on railways in this Colony? Yes; I was one of the railway engineers on the Government Railways here for about ten years.
3. What as? As field engineer.
4. Have you resided at Broken Hill? Yes, for about three years.
5. Were you following your profession? Yes, all the time.
6. Were you the original engineer of the scheme to supply Broken Hill with water from Stephen's Creek? Yes, of the scheme at present in force with some modifications.
7. In that connection did you ever have to consider the question of a water supply for the treatment of ores? Yes; frequently.
8. Is there a sufficient local supply of water for that purpose? No, there never will be.
9. Do you consider the scheme commercially feasible of bringing water from the Darling River to Broken Hill? No; I inquired thoroughly into it when it was proposed to bring water to Broken Hill, and it was proved to my mind to be perfectly impossible to do it with any hope of financial success.
10. Then do you consider that, in order to treat the low grade ores profitably, the ores must be taken to the water? Undoubtedly.
11. *Mr. Farnell.*] What is the difference between taking the water to the ores and taking the ores to the water? We could carry a ton of ore from Broken Hill to Menindie at a cost of about 4s. 6d. per ton, but it would cost from £1 5s. to £1 10s. to pump the requisite quantity of water from Menindie to Broken Hill—that is without any profit whatever. That is the minimum cost at which the water can be delivered at Broken Hill from the Darling River. Of course some portion of that water could be used over again, but it would have to be repumped, and it is always against the treatment of ores to use water twice over.
12. *Mr. Matheson.*] Is crude ore at present sent out of the Colony for treatment? Yes; to the extent of about 90,000 tons a year.
13. Where to? To South Australia.
14. If the proposed tramway were made do you think these ores could be treated profitably on the Darling? I do. I think that is the only place where they could be treated. A great deal of ore which could

Mr.  
C. E. Hogg.  
19 Oct., 1892.

Mr.  
C. E. Hogg.  
19 Oct., 1892.

could not be sent such a long distance as to South Australia; could be properly treated if it were taken the shorter distance to the River Darling.

15. Have you examined the route of the proposed tramway? I have.

16. Have you a plan here? Yes; I produce a sketch plan, showing the proposed route. The line would start at Menindie, and from there it would enter the Darling stock route No. 9,867. It would keep that stock route, of course, with some slight local modifications, until it reached travelling-stock route No. 700. It would then enter a travelling-stock route (keeping westerly) No. 244. It would then turn off at a place known as Coombara Tanks. From there it would pass through what are known as the Rockwell paddocks, and keeping round the white lead mine and the Broken Hill tank, it would enter Broken Hill on the south side, and it would probably terminate near the western boundary of the Broken Hill Proprietary, allotment 10, section 50.

17. Would the length of the line be from 63 to 64 miles? Yes, about that.

18. Are there any engineering difficulties? None whatever. The country is comparatively level with the usual undulations that are met with in that plain country.

19. Would the grades and curves be favourable for the traffic? Very favourable. There will be no necessity to have any grades heavier than 1 in 50 or 60 or curves shorter than 12 chains, at the very least.

20. What character of line do you propose to make? The same kind of line as that now in use at Broken Hill at the mines and the flux quarries. The gauge would have to be 3 ft. 6 in., so that the trucks used at the mines could run over the proposed line without there being any necessity for transshipment.

21. Is it proposed to make the cutting, embankments, and waterways, in the first instance, to suit the 4-ft. 8½-in. gauge of the State railways? I should propose that the waterways and bridges should be made to suit that gauge, and, if insisted on, the cuttings and embankments; but they could be widened just as easily at any subsequent time. The curves and gradients should be those adopted on the State railways.

22. What do you estimate the cost of the line at? About £150,000 complete.

23. *Mr. Farnell.*] Does that include the rolling stock? It includes what we at present anticipate will be the rolling stock required.

24. *Mr. Matheson.*] Would the line interfere with any vested interests? With none whatever.

25. Would the construction of the line lead to a reduction in the present cost of transit to Broken Hill? Yes; to a most material reduction.

26. Can you give any illustration of it? Yes. I will illustrate the saving which I anticipate will be made on coke alone. Coke manufactured in New South Wales could be water-borne through from Bourke or Corowa, on the Murray River, in through the mouth of the river, and delivered at Menindie when the river is navigable; and from there it could be sent to Broken Hill. I estimate that the saving per ton on the carriage of coke would be about 12s. which would amount to a total saving to Broken Hill of about £48,000 per annum. I think that the saving on coal would amount to £4,000 or £5,000 a year. The annual saving on timber fuel may be set down at about £15,000 per annum. Timber fuel near Broken Hill is becoming scarce, but there is an unlimited supply on the Darling, at Lake Menindie and other places near the starting point of the proposed line. I estimate that the saving on mining timber would be equal to 25 per cent. on the present cost of transit. The saving on general merchandise would be about 50 per cent., and on machinery used at the mines, about 30 per cent.

27. You mentioned just now that the traffic would be carried on the river if it was navigable? Yes.

28. Have you any figures bearing on that? Yes; I obtained very accurate figures on the navigability of the rivers on the Murray and the Darling from the Customs officers, and also from the Government Astronomer. From the year 1880 to the year 1892 the river was navigable on an average from eight to ten months per annum, for river steamers drawing from 5 to 6 feet of water.

29. *Chairman.*] Have you any other information about the navigation of the river? No.

30. Is from 5 to 6 feet about the draught of the largest steamers running? That is the average draft of the steamers in use. They are ridiculous steamers; the worst any one ever saw on a river.

31. They are made for the purpose, I suppose? I do not think they can be.

32. Do you propose to improve on them? I should employ steamers with a 2½-foot draught, and very likely increase the navigation of the river from one to two months per annum.

33. *Mr. Matheson.*] What is the present traffic to Broken Hill? I will give some of the leading items. There are 76,500 tons of coke per annum, on which £131,600 is paid as trainage to the South Australian Government and the Silverton Tramway Company. The value of that coke is set down at £373,000. There are 28,000 tons of coal valued at £68,000. Of mining and building timbers there are upwards of 21,000,000 superficial feet, equal to about 15,000 tons passing over those lines, and as nearly as I can ascertain, there are also general goods to the value of £647,000 going over the lines.

34. *Chairman.*] Is that freight? No; what I have mentioned is the value. You can get the value from the Customs, but it is very difficult to get the weight, as the Silverton Tramway Company, and the South Australian railway authorities do not expose more than they are obliged to. They lump it. The inwards and outwards loading to and from Broken Hill, amounts to about £320,000 per annum.

35. *Mr. Matheson.*] It is proposed in the Bill to give the promoters power to charge rates up to 50 per cent. in excess of those charged on the Government railways? Yes.

36. Do you consider that equitable? Yes, I consider it very equitable. The line very largely depends upon the existence of the Broken Hill mines which are at present valued in the public market at from one to four year's purchase. The Darling is not at all times navigable and provision has to be made against loss of traffic during periods of drought. The line will be an isolated line, only 64 miles in length, and a short isolated line always requires a larger staff in proportion to its length than any other line would require. I think that the charges would be very fair.

37. Have the people of Broken Hill any alternative route at present? None whatever.

38. If this line is not made what do you think will be the effect on Broken Hill? I think that large quantities of ore would have to be sent into South Australia, and that would largely tend to the shifting of the remaining smelters from Broken Hill to Port Pirie or Adelaide. It would lead to a shrinkage of the town and to the depopulation of the place to a very large extent. A considerable amount of the poorest ore it would not pay to send a distance of 254 or 324 miles those being the distances to Adelaide and Port Pirie respectively. The poor ore will have to be left in the mines if they could not be brought down to the near waters of the Darling.

39. Where does the mining timber in use at Broken Hill come from? It nearly all comes from the west coast of North America—from Puget Sound and Vancouver.
40. Is New South Wales river gum suitable for mining purposes? Yes, very suitable.
41. Why is it not used at present? On account of its weight. It does not pay to carry such heavy timber over such a great length of railway. The New South Wales river-gum timber weighs about 60 lb. per cubic foot, whilst the American weighs only from 30 to 35 lb. per cubic foot. If this line were made timber could be got in the big valleys of the Darling and the Murray—it would be sent by water to Menindie and be sent from there a short train journey to Broken Hill. I may mention that Mr. Patton, the late manager of the Proprietary Mine, frequently told me that if we could deliver Australian gum as cheap as the American timber he would very much prefer to use it.
42. What difference per 100 superficial feet do these rates make? It would make about 5s. per 100 superficial feet.
43. *Chairman.*] To carry the timber by Menindie to Broken Hill instead of over the South Australian railways? Yes, 5s. less. That would be in favour of our own timber and would practically compel its use.
44. *Mr. Matheson.*] Would the mines have to use as much of the gum timber as they now use of the American timber? No. The Australian timber is nearly twice as strong again and they would perhaps have to use only two-thirds as much of the Australian timber.
45. I suppose the Australian river timber could be very cheaply taken to Broken Hill in the empty trucks that have brought ore for concentrating? Yes; it could be done very cheaply.
46. Would the construction of this line lead to the establishment of local saw mills? Yes. When I was on the Murray lately making inquiries into this matter, I found local saw-mills there closed, and the people connected with them assured me that if this line were made those saw-mills would be once more in full work giving a great deal of employment.
47. Then all this money spent on the American timber would be kept in the country? Yes. I think the amount spent is about £250,000 per annum in the purchase of the American timber. Most of that money could be kept here.
48. Would the extension of the Government line from its present terminus at Cobar to Wilcannia serve the same purpose as this line from Menindie to Broken Hill? No.
49. Why not? Because the ore on which it is material to save every penny that can be saved must be taken by the shortest journey to the river. The distance from Broken Hill to Wilcannia is about 125 miles, whilst the other distance is only about one half of that.
50. *Chairman.*] Give the other distance? It is from 63 to 64 miles. I may also state that the Darling River is frequently navigable to Menindie, when it is not at all navigable between Menindie and Wilcannia.
51. Can you give the approximate distance from Menindie to Wilcannia by road? Ninety-five miles by the coach road, and by the river about 260 miles.
52. *Mr. Matheson.*] Would ore in any case ever be sent to Wilcannia? Never. It would be nearly as cheap to send it down to the seaboard at once.
53. *Chairman.*] To Adelaide? It would be nearly as cheap to send it to Port Pirie at once.
54. *Mr. Matheson.*] If Broken Hill were connected by a Government railway with Sydney, *via* Wilcannia, do you think that the proposed line to Menindie would deprive the Government railway to Wilcannia of any traffic? No. I think by keeping Broken Hill alive by developing the mines as this tramway will do, it will give a traffic to the line from Wilcannia to Broken Hill, whilst without this tram-line Broken Hill would suffer so considerably that the Wilcannia line would not be worth making.
55. Do you know anything about the proposal to make an irrigation settlement at Menindie? I do.
56. Is there a company formed to get a Bill passed? Yes; a company has been formed, and the first reading of the Bill has taken place in the Legislative Council.
57. Will the proposed tram-line pass through the settlement? It will.
58. If the line is not made, what effect will it have upon the proposed settlement? The settlement will have to send all their produce that would not be water-borne by drays to Broken Hill, and Broken Hill looks to the settlement to get its horse feed, vegetables, green fruit, and other perishable goods, which would want to be delivered with considerable rapidity.
59. What is the extent of this proposed settlement? Twenty-five thousand acres. It is estimated, judging by the settlement at Mildura, that it will settle from 5,000 to 6,000 people.
60. *Chairman.*] Is the settlement to be formed on the same lines as those of the Chaffey Brothers? Yes; with some slight modifications.
61. *Mr. Matheson.*] Do you think that that settlement would be a boon to Broken Hill? I think it would be an immense boon to Broken Hill. That is the opinion of the people in the district.
62. *Chairman.*] Do you think that this tramway will give satisfaction to the Broken Hill people? I am sure of it. They require a tramway very much indeed.
63. Could you give us the corresponding rates charged by the South Australian railway and by the Government railways of New South Wales? Not now; but I shall have them by me at the next sitting of the Committee.
64. You spoke of the line affecting a saving of something like 25 per cent., and that you calculated on the basis of the present South Australian charges? I based my estimate of the saving upon the difference, not in the rates, but in the distances. I assume that the rates will be the same. The saving is effected in the distance. For instance, goods would be carried by water at 10s. or 11s. a ton to Menindie, and at 5s. or 6s. a ton—I am speaking of common goods—from Menindie to Broken Hill. I made some comparisons in the report I made on the scheme. I gave, not the percentage, but the actual savings, and on a comparison of the traffic between the two places, I find that the savings on some goods would be considerable. One hundred tons of drapery sent over the South Australian railway would cost £575, and 100 tons of drapery sent over our line would cost, including the river charges, £255. Iron and steel castings, which are very largely used in that district, carried over the South Australian and Silverton tramway (and the Tramway Company are the people who really add up the charges) would cost £299, but if carried over our proposed route £165 per 100 tons. The same saving is made in regard to machinery, and on mining timber—that is, props and rough timber used underground. One hundred tons carried over the South Australian and Silverton lines would cost £168, and over our proposed route by the river and Menindie £126.

Mr.  
C. E. Hogg.  
19 Oct., 1892.

65. *Chairman.*] If this tramway from Menindie to Broken Hill was made is there any prospect of a direct trade being done between Sydney and Broken Hill; for instance, by our southern railway as far as Moama, the goods being transferred to steamers at that place? Yes; the goods would leave Moama in steamers, go down the Murray and up the Darling, and also by rail to Bourke, and thence down the Darling. The river has been navigable continuously for three years except during a few weeks.

66. Have you given attention to the relative rates from Sydney to Broken Hill by Menindie and round by South Australia? Yes. I was a long time in business at Broken Hill and I studied every route. We thought at one time that it would be as cheap to send goods to Menindie and to get them up by horse teams as to get them by the South Australian railway.

67. Can you tell me how much saving there would be in sending goods between Sydney and Menindie as compared with the route by South Australia? About what I have stated.

68. The rates you have given before are calculated on that basis? Yes.

69. Then you think that the traffic if opened up would largely increase the connection between Sydney and Broken Hill? Yes, it would; in fact it would make a trade. It would also give a traffic to the Government railways, to Bourke and to Albury or Corowa.

70. Now as to the carrying out of this enterprise;—have you any strong expectation of this company being able to carry it through? Yes, Mr. Purves will give evidence on that point. I have no personal doubt of it whatever. The tramway is asked for everywhere in that district, and a great deal of support has been promised to Mr. Purves.

71. Do you know whether the people are in favour of it throughout the district? They are in favour of tramway communication between Menindie and Broken Hill.

72. Have any petitions been presented to Parliament on the subject? Yes.

73. How many in favour of the scheme and how many against it? There are six petitions in favour of the line being constructed by the company, and one or two petitions from Broken Hill in favour of the line being constructed by the Government. A special petition from the Mayor and Aldermen of Broken Hill has been sent to Parliament in favour of the Bill being passed.

74. And do those petitions fairly express the opinion of the people in the neighbourhood? I think they do, without any exception.

75. *Mr. Farnell.*] There are two petitions against private enterprise? Well, one of them is hardly against private enterprise. They say that they signed the petition by mistake.

76. And they think that the Government ought to undertake the work? Yes.

77. Have you made a calculation in regard to the traffic to be carried on this line, on the basis of the charges on the Government line? No. The basis of my calculations are the present rates on the South Australian railways, so that I could get an exact comparison.

78. I do not think that a private company has ever received power to charge more than is charged on the Government railways. You are not in a position to say whether the line would repay the promoters? Our rates in this Colony are practically the same as those charged in South Australia.

79. But you propose to charge 50 per cent. more than the Government charge? The rates charged would be kept in check, because of the competition of existing railways.

80. Your main object in seeking power to make the line is to secure the more economical treatment of crude ores? Yes.

81. *Chairman.*] Is there any other object? To secure the general traffic.

82. A traffic in goods, timber, coke, and coal? Yes.

83. *Mr. Cann.*] Do you know whether the mining companies will send their ores to the river, if the line is constructed? I think that such Directors as are interested in the Silverton Tramway Company would at first object, but I know that a considerable number of directors, whom I saw in Melbourne—some directors of Block 14 and other mines—are very anxious indeed to have this line to take the ore down to the river. I think that the managers of the Broken Hill mines will insist on the ore going by the shorter and more payable route.

84. Have not the companies already got reduction plants situated in South Australia? They have some smelting plants there.

85. Do they not carry their surplus ores down to South Australia, and treat them there? They do.

86. In constructing the line with a gauge of 3 ft. 6 in., and making provision for a 4-ft. 8½-in. gauge, do you intend to lay sleepers for a 4-ft. 8½-in. gauge? No, and the reason is that the line would probably not be resumed for some years. A river gum sleeper has a life of seven or eight years, and the sleepers would be worn out before that occurred, so that to lay sleepers for a 4-ft. 8½-in. gauge would be a waste of money.

87. Seeing that the river is not always navigable, could you enter into a contract for the carriage of merchandise generally? No. I do not think any lines enter into contracts for the carriage of merchandise anywhere.

88. Is there not a contract existing between the mines and the Silverton Tramway Company? I believe there is with regard to their ores and timber. I am not sure that there is. It is very hard to find out whether there is a contract.

89. Is it not hard to get information as to what exists between the mining companies and the Silverton Tramway Company? It is extremely hard.

90. I suppose you could enter into a contract whilst the river is navigable? We could enter into a contract at any time, subject to the state of the river.

91. What would be the effect if reduction plants were erected on the banks of the river, and the river was not navigable? We propose to carry the ore from Broken Hill to the river, to be there reduced. That would reduce its bulk to about one-sixth of its former bulk, and we shall send it back to Broken Hill for smelting.

92. You do not intend to have smelting at Menindie? No, not if we can avoid it. One object of the line is to make sure that the smelters will be retained at Broken Hill. We do not wish in any way to interfere with them.

93. Do you know whether there are any deposits of flux on the route? Yes; of iron flux in particular.

94. How near are they to Menindie? They are at Sebastopol, about 50 miles from Menindie, and 13 or 14 miles from Broken Hill.

95. And how far is that from your line of route? I think we shall go within a mile or two of it. We ask for power to deviate the route right or left to take advantage of those iron mines.

96. Is that not one of the flux quarries the proprietors of which already have power to construct a line? Yes; but they do not seem to be doing it.

97. How long have they got? I do not know. They would, I believe, be very glad for us to construct this line.

98. Do you know at what price per 100 feet you could deliver the gum timber at Broken Hill? I think we could deliver it at 14s. or 15s. per 100 feet.

99. What would be the dimensions, would it be 10 by 10? I think that they would reduce the hardwood down to 6 by 6.

100. What are the dimensions of the timber used for the Broken Hill mines? The largest they use for props is 10 by 10. They use 10 by 2 and 10 by 4 for planking.

101. Is it not a fact that the timber used for mining is cut into certain lengths on the surface before it is put underground? Yes.

102. Do you know what price they are paying for Oregon timber? I believe about 25s.

103. You could not tell what the difference would be per 100 feet if they use Australian timber? No; but I think they would probably save 6s. or 7s. per 100 feet, perhaps 10s.

104. You wish to show that you would secure the timber trade? I have not any doubt that we would do that.

105. How would you effect a saving? By having a considerable reduction in the sections of the timber, Australian gum timbers being so immeasurably stronger than the Oregon timber.

106. *Chairman.*] Would a piece of hardwood timber 8 by 8 be as strong as a piece of Oregon timber 12 by 12? No; that proportion would be too great. The proportion would be about as 3 to 2 or 2 to 1. By using Australian timber the mines would require about one-third less timber than they will if they use Oregon.

107. *Mr. Cann.*] Do you think that in any alteration in the kind of timber used it would have to be adapted to the Oregon timber now in use? Oregon would have to be gradually displaced.

108. But you would not be able to alter the dimensions of the timber, because it would not fit? Not at once, but you could very soon diminish it so as to get it to fit in.

109. I suppose you are aware of the way in which they develop the stopes from the timber? Yes.

110. I suppose you know that they open off from every direction once they start? Yes.

111. Is it not likely that they would not know the next place they would have to open off from? Yes.

112. How would they be able to work from a mixed set of timber? They would not mix it, but gradually substitute one for the other. There is no reason why a small piece of timber should not abut on to a larger one.

113. I suppose you have not taken the opinion of any mining experts? No, I have not. I speak more as an engineer. I am sure that I should have no difficulty in working with the smaller timber.

114. I suppose you are aware that mining managers do not follow engineering methods? I wish they did.

115. *Chairman.*] Do you mean that by using hardwood scantling smaller than you would use of Oregon that would reduce the cost in addition to the reduction in the cost of freight? Yes.

116. That would further reduce the price of the timber to the mine-owner? Yes.

117. And even if the present sized scantling were used there would still be a reduction of about one-third? Yes.

118. *Mr. Gormly.*] And it would actually reduce the cost of the timber to about half? I think it would. That was Mr. Patton's opinion.

119. *Mr. Cann.*] I suppose you have read the Bill? Yes.

120. Do you think that the promoters of the Bill would be willing to make the same charges as are made on the Government railways? Yes, the same as the Government would charge on an isolated line of the same length.

121. That is to say that the promoters would be prepared to make the same charge as the Government would make on the same length of line? Yes. I think we might leave it to the Commissioners. What the promoters would be prepared to do would be to charge the same rates, as the Government would fix for themselves under similar circumstances.

122. *Chairman.*] You mean that you would refer your rates to the Railway Commissioners? Yes; we have really done so, except that we limit their power to reduce them beyond a certain amount.

123. Have you had any consultation with the Commissioners? We did not like to do that. You will have the evidence of the Commissioners and we thought it not fair to discuss the matter with them.

124. *Mr. Cann.*] I suppose you have seen other tramway Bills, such as the Tarawingee and the Silvertown Tramway Acts. Are you aware that they all go through on a lease? No; I was not aware of that. I do not think it is so.

125. I see from clause 21 that you ask for a grant of the land in fee simple after the tramway has been constructed. Would the company be prepared to accept a certain lease of the land? A perpetual lease; it is a question of security to the financiers.

126. But you said that the mines at Broken Hill were on a four years' purchase. Would not your line be in a similar position? That would be a question that would affect the rates.

127. Then would you not be in just as good a position if you accepted a lease? No; because we have to raise capital for the line.

128. Are you aware that the Silvertown Tramway Company has got the fee simple of their land? I do not know. We should be prepared to accept the same terms as the Silvertown Tramway Company.

129. Would you not be prepared to accept the same terms as the Tarawingee Tramway Company? I do not know what their terms were.

130. Would your company be prepared to take a twenty-one years' lease? And the Government would do what at the end of that time?

131. The Government to have the right of extending your lease or resuming on the terms of the Bill? Oh, yes; that is the Tasmanian system.

132. *Chairman.*] It is suggested that the Government should have power to resume after a certain time. Mr. Cann suggested a twenty-one years' lease. The Government at the end of that time to resume and pay compensation or to extend the lease for a further term? We should be prepared to agree to that.

133. *Mr. Cann.*] I see that you want to be empowered to seize anyone who trespasses on the land or who does not comply with the provisions of your Act. I suppose that you would be prepared to hand them over to the police? I suppose that is a clause usually put in such Bills.

Mr.  
C. E. Hogg.  
19 Oct., 1892.

Mr.

Mr. John Mitchell Purves, called in, sworn, and examined :—

Mr.  
J. M. Purves.  
19 Oct., 1892.

134. *Chairman.*] You are the promoter named in the Bill? I am.
135. *Mr. Matheson.*] You are a land and estate agent, and a member of the firm of Batt, Rodd, and Purves? Yes.
136. Have you been to Broken Hill? Yes.
137. You are applying for this Bill? Yes.
138. Have you not an association formed for the purpose of carrying out its provisions? Yes.
139. How many members are there of that association? Forty.
140. Have you any doubt about being able to raise the capital for the construction of the tramway? I have no doubt about it. We have received a great deal of encouragement in every quarter. When the Bill is passed shares will be applied for in large numbers.
141. You are quite satisfied you will have the capital? Yes.
142. Is the coal and coke industry represented on your association? Yes.
143. Are those engaged in that industry anxious to see the line constructed? Yes, because they believe that if the line is made, they will be able to secure a large amount of trade in coke, and that the New South Wales manufacturers will get a share of the Broken Hill trade. They think they can send coke to Bourke when the river is navigable, then down to Menindie, and from there by tram to Broken Hill; and also by Corowa or Moama.
144. From what you have heard from Broken Hill men, do you think the line is required? I do.
145. Have any of the leading residents of Broken Hill urged upon you the construction of the line? Yes; I have seen the ex-Mayor, Mr. Coombes, on the matter, and the present Mayor, and they both consider that the proposed tramway will be a most valuable thing for Broken Hill, and that it will contribute very much to the permanent success of the township.
146. Did those gentlemen express any opinion to you in regard to the treatment of the low-grade ores? Yes; they said that undoubtedly ores which it would not pay to treat in any other way, could be sent to Menindie by this tramway, and by the aid of the water there could be made profitable.
147. Have any petitions been sent into Parliament in favour of the line? There have been several.
148. Where from? Three from Broken Hill, one from Narrandera, one from Wentworth, and one from Menindie; and there is one to be presented from Hay.
149. Is it within your knowledge that the corporation of Broken Hill passed a special resolution in favour of this Bill, and attached the seal of the corporation to their petition in support of it? Yes.
150. Do you know of any petitions that have been presented to Parliament in opposition to the line? Not in opposition to the construction of the line, but expressing a desire that the line should be constructed by the Government.
151. How many? One or two.
152. Where from? From Broken Hill. Some people think that no line ought to be constructed except by the Government.
153. Generally speaking do you believe the people of Menindie and Broken Hill are unanimously in favour of the line being constructed? I believe so. I think that if half a dozen competing lines were constructed it would be a blessing to them.
154. *Chairman.*] In a general way from what you know of Broken Hill do you believe that a tramway such as is contemplated to be constructed under the Bill would be a great public benefit? I do. The cheaper you can make the carriage of all material to and from Broken Hill the greater must be the public benefit.
155. Do you think there is a probability of its opening up direct communication between Sydney and Broken Hill by way of the Murray? I am assured that it would be so.
156. By a railway to Moama, and then by river steamers to Menindie, and by the tramway from Menindie to Broken Hill? Yes; it is merely a question of the cost of carriage. If we can land any commodity at Broken Hill by this tramway cheaper than it can be got by any other route it must be a benefit to the people of Broken Hill. If we can save 1s. or 6d. a ton on coke that must be a benefit.
157. Would the company be prepared to carry goods at such rates as would induce trade? We shall have to do it or we shall not get the trade. Competition will prevent that. I may also point out that in case of a water famine it would be no distance to bring the water in a temporary way for household purposes by this line. It would prevent any fear of a water famine at Broken Hill.
158. It would be a good standby? Yes. I believe that during the last drought they carried water 140 miles to supply Broken Hill.
159. From your information do you think it would lead to the treatment and use of a large quantity of low-grade ores if the line were made? I believe it would. I believe that a large body of water is necessary for the treatment of low-grade ores, and the only place at which they can get the water is Menindie.
160. *Mr. Cann.*] Do you know the reason why they do not use the colonial coke at Broken Hill now? I believe it is because the imported coke is better, and does not break so much, and therefore, as they have to pay a high price for carriage, they may as well have the best quality. If the cost of carriage were lower they could use a larger quantity of New South Wales coke. At Sunny Corner, and at Lewis Ponds it is used.
161. On landing the imported coke could they not carry it by this route just as cheaply as you could carry colonial coke? I believe they could.
162. Have you been along the banks of the river? No.
163. You could not say how it is timbered? I could not from personal knowledge, but I can from inquiries that I have made.
164. I see that the promoters of the Bill are named the Ore Dressing Company? Yes.
165. Do the company intend to erect any plant? Not at present. It may develop into that some day. It is not their present intention.
166. Have you consulted the mining companies in reference to the undertaking? We have consulted some of the directors.
167. Are they offering any opposition to it? No.
168. Do they give you any encouragement; do they say that they will treat their ores down there and make use of the line? Yes.

Mr.

Mr. Henry Hudson called in, sworn, and examined :—

169. *Mr. Matheson.*] You are a director of the firm of Messrs. Hudson Brothers? I am.
170. Are you acquainted generally with the use of timber in connection with the mines at Broken Hill? I know what is required for mining.
171. Do you know that almost all the timber used in connection with the mines at Broken Hill, comes from the west coast of America? Yes.
172. Is New South Wales river gum suitable for mining purposes? I should think it is very suitable indeed.
173. As suitable as Oregon timber? It would bear a very much greater strain, being much stronger.
174. Can you say why it is not used at Broken Hill? Because of the difficulty of getting it there.
175. That is on account of the cost of transit? Yes; that is the principal cause.
176. There is no timber near Broken Hill which could be utilised? No.
177. *Chairman.*] I suppose that Australian timber is not used, because of the extraordinary costliness of carrying it such a long distance? I believe it is only the cost. If it were not for that, it would supersede the Oregon timber for mining purposes.
178. Do you know the distance from Port Pirie to Broken Hill? No.
179. *Mr. Matheson.*] Can you say what difference there is between the cost of the trainage of 100 superficial feet of timber from Adelaide to Broken Hill and from Menindie to Broken Hill? —
180. *Chairman.*] The Menindie tramway would be 64 miles, and the distance by the other route is 270 miles, what would be the difference in the cost? That would be governed entirely by the rates of the different companies and the South Australian Government. On equal conditions the difference should be about 5 to 1.
181. *Mr. Matheson.*] Are you aware that there is plenty of river gum growing on the banks of the Murray, which could be taken to Broken Hill by this route? I have no knowledge of it personally, but I should think that there is any quantity of timber available there. The red gum is certainly suitable for mining. I should think that the life of red gum timber underground would be three or four times that of Oregon timber.
182. It is very much stronger? Yes, stronger and more durable.
183. Would it be possible to use small scantlings in the mines? Certainly.
184. *Chairman.*] That would further reduce the cost to the mine owners? Most undoubtedly.
185. *Mr. Matheson.*] Would the construction of the line, to your knowledge, assist the trade of Broken Hill as regards the carriage of machinery, &c.? That I am not in a position to say.
186. *Mr. Cann.*] Are you aware that Oregon timber is largely used in the Proprietary mines? I have not seen it, but I believe it is so.
187. You do not know their system of timbering? No.
188. Then you would not be in a position to say that they can save a great deal by using gum timber? No; but a piece of Australian gum 8 inches square would carry a superincumbent weight equal to what a piece of Oregon timber 9 inches square would carry.
189. I suppose that you are aware that it is not a back weight that they get in the Broken Hill mines? Crushing is the principal weight that the timber has to resist.
190. Creeping and shifting? Then, in the red gum you have a great advantage in regard to anything with a lateral thrust. Red gum would be better for a lateral thrust than Oregon—better than it is for a crushing weight—the red gum being freer from knots.
191. Are you aware that there is not much knotty timber used? They stipulate to have it free from knots, but it is almost impossible to get a cargo free from knots.
192. Are you aware that in timbering the mines at Broken Hill they almost build the timber solid in many instances? I am told so.
193. Under the circumstances you will agree that whatever timber is used it will be necessary to take the same precautions? Yes; the great thing is with timber carrying a crushing weight to brace it properly.
194. It would depend on the dimensions of the timber to get the resisting power? To a certain extent the timber bears a certain amount of crushing weight at per square inch—6 by 6 will bear a certain weight. It will only bear in proportion to the sectional area.
195. *Chairman.*] A piece of timber 8 by 8 would carry more than a piece 6 by 6? A piece of timber 8 by 8 would carry two and a half times as much as the piece of timber 6 feet 6 inches.
196. *Mr. Cann.*] You have been in the timber trade a long time? Yes.
197. Have you ever tried to enter into a contract to supply timber to the mines? Once, only.
198. Do you attempt to supply them with colonial timber? No; colonial timber is inaccessible to us.
199. You do not know what price they are paying at Broken Hill at the present time? I do not.
200. Therefore, you could not say at what cheaper rate colonial timber could be supplied? I do not, because I do not know the rate of transit from where the timber would be felled.
201. You have not consulted the mining managers at all about the size of the timber used in mines? I had a conversation once or twice with Mr. Patton on this subject.
202. *Chairman.*] What is his opinion with regard to the use of hardwood and with regard to the use of Oregon? We will not discuss the matter.
203. From your knowledge of timber, if the gum timber could be had in any quantity on the Murray, what would it be worth at the mills? About 6s. per 100 feet.
204. Then the freight to Menindie might be 2s. or 3s.? I think that is an unknown quantity.
205. To carry timber from Menindie to Broken Hill, a distance of 64 miles, would cost less than to carry it from Port Pirie to Broken Hill, a distance of 270 miles? Certainly.
206. Then, at a rough guess, if the charge was 6s. at the mill, 4s. for the freight by steamer, and 4s. by the railway, that would make it 14s. at Broken Hill? Yes.
207. Have you any idea at what rate you would be inclined to tender to supply Oregon timber at Broken Hill? You can land it at Adelaide for 9s. per 100 feet. I could not tell the freight to Broken Hill.
208. Would hardwood be cheaper to Broken Hill than Oregon, if it could be carried by this tramway? I should certainly say yes.
209. How much per 100 feet? I should say at least 2s. We can produce it at the mill at 6s. per 100 feet.
210. What would the percentage be? It would be as 6 is to 8, in my opinion.

Mr.  
H. Hudson.  
19 Oct., 1892.

- Mr. H. Hudson.  
19 Oct., 1892.
211. Then that would be nearly one-third cheaper? That would be nearly 30 per cent. cheaper.
212. *Mr. Cann.*] Are you aware that the principal objection to the use of colonial timber has been its weight? Not its weight so much as the cost.
213. That is what causes the cost? Yes.
214. I suppose you are aware that whatever timber is used it must be of the same dimensions as that which they are using at present? I do not think it would follow.
215. *Chairman.*] If they use new timber, would it be necessary to have the scantlings of the same size as the old ones? I do not see why it should. I suppose they do not put more timber in than is necessary to carry the superincumbent load.
216. *Mr. Cann.*] That is where you make a mistake? You have to carry a certain load, and you do not want a 12 by 12 red-gum scantling to do the work of a 12 by 12 Oregon scantling. Red-gum will carry three times the load that Oregon will.
217. Have you ever seen them timbering underground? I have not.
218. Are you aware that the timber all fits together—that every dimension is the same? I should imagine that that would be necessary to brace it together.
219. Are you aware that every set of timber when put in has to fit in with the last set of timber that went in? I am not aware of that.
220. Are you aware that if one set of timber breaks it damages the whole stope? I dare say that that would follow.
221. Are you aware that it is built up like a house of cards, and that if you pull out the bottom the whole thing will come down? I was not aware of that.
222. I suppose you have used timber in other mines? Yes; I have done a little in my time.
223. Under the old system I suppose what you say would be correct? I think so.
224. You are aware they have a new system of timbering at Broken Hill? I cannot say. I have not seen it.

Mr. William Yuill called in, sworn, and examined:—

- Mr. W. Yuill.  
19 Oct., 1892.
225. *Chairman.*] What are you? Civil engineer. Associate Member of the Institute of Civil Engineers.
226. *Mr. Matheson.*] Have you been connected with the coke industry? Yes, ever since I came here four years ago.
227. Have you considered the effect upon the coke industry of New South Wales of this proposed tramway from Menindie to Broken Hill? I have.
228. Can you give us a general statement of what the effect will be? I think the effect will be that the coke manufacturers of New South Wales will be able to send coke by way of the river to Menindie, then get it across the country to Broken Hill at a reduction of the present charge of from 10s. to 14s. a ton.
229. Can you say anything about the quantity of colonial coke used at present at the Broken Hill mines? At present colonial coke is not used at all there.
230. Can you say why? Because they say the colonial coke—I am speaking more especially of the Illawarra coke—has a greater percentage of ash than the English coke.
231. And of course they pay freight upon the ash? Yes.
232. But if the freight is considerably reduced, do you think they would then use colonial coke? I think it would tend to induce them to use the colonial coke.
233. And that would give employment in the Colony? Yes.
234. How would you send coke to Broken Hill after the tramway was made? We would send it just now by Corowa. We should very much prefer a new line being made to Moama, and we would send the coke down the Murray and up the Darling, stack it at Menindie, and send it by railway to Broken Hill. That is what we would do if the line were made.
235. Would you ever send it by Bourke? We might do so, but it would be very much better to go by Moama. The river from Bourke to Menindie is crooked, and it is difficult to send the coke that way.
236. Would it be an advantage in the carriage of coke that the gauge of the tramway from Menindie to Broken Hill should be the same as that of the other tramways? Certainly; 3 ft. 6 in. is the gauge of the Silvertown tramway and the tramways used on the mines, and every break of gauge necessitates transshipment, and every transshipment tends to break up the coke which is a disadvantage.
237. Do you know what quantity of coke is used at Broken Hill? I think about 100,000 tons a year.
238. Is it possible for the colonial manufacturer of coke to compete at all with the English coke at Broken Hill at present? Yes; I think so. At first, when the colonial coke was introduced, the Broken Hill people said there was too much ash in it—6 per cent. more than in the English coke. We estimated that that would reduce the price 7 per cent., and we have offered the coke at 36s. per ton as against 54s. for imported coke landed at Port Pirie.
239. *Chairman.*] Does that satisfy them? No; they have not given us a contract yet.
240. *Mr. Matheson.*] If this line were made, would you be able to compete at Broken Hill? It will save us from 10s. to 14s. a ton in carriage, and that is a tremendous help.
241. Would it lead to a large traffic in coke passing over the Government railways of New South Wales? I think so.
242. Does the saving in carriage really mean that the mines could afford then to use the coke with this surplus ash? Certainly; I think so.
243. *Chairman.*] I suppose you know a little about this proposed tramway? I do.
244. Do you think that it would be beneficial to the Colony as a whole, and to the people at Broken Hill in particular? I certainly think so.
245. Do you think the people at Broken Hill would appreciate it as a benefit? Certainly.
246. And would it be largely patronised by the public? I think so. The principal thing would be getting the ores to the nearest water.
247. Do you think the line would be much used for bringing low grade ores from Broken Hill to the river? It is a question between Port Pirie and the river. Two hundred and sixty miles as against 60 miles.
248. Would it also be a stand-by in the event of any drought? Certainly. Water could be trucked up from Menindie to Broken Hill, and there is an unlimited supply at Menindie.
249. In your opinion, this line could very successfully compete with the line to Port Pirie? I think so.

250. *Mr. Cann.*] Have you tendered for any contract called for by the company to supply coke? Yes we have, but they made it a *sine qua non* that the quantity of ash shall be under 7 per cent., but the ash in the southern coke is 13 per cent. Mr. W. Yuill.  
19 Oct., 1892.
251. Then, you cannot produce in the southern district a coke containing less than 13 per cent. of ash? We cannot.
252. Is the coke suitable for smelting purposes in every other respect? Yes; and it contains 1 per cent. less of sulphur than the English coke.
253. *Chairman.*] Is that an advantage? It is a great advantage.
254. Have you any knowledge of the coal that has been discovered about Dubbo and Wellington? Not very much.
255. Do you think there is any probability of that coal showing a better result in regard to ash if made into coke? No; I think it would produce more ash than the southern coal.
256. Would any of our colonial coal give less ash than the southern coal? Yes; the Newcastle coal, but it has its faults too. The coke from the Newcastle coal is very light, and it is easily crushed down by the charge of ore.
257. Therefore it is not so valuable for smelting purposes? No.
258. If the mines got into the way of using colonial coke, do you think it would have advantages that would exceed those of the imported coke? I think so. In Sydney, here, they now use the southern coke entirely for the smelting of iron. They had the same difficulties to begin with. They said that they could not use the colonial coke, because it contained too much ash, but now they use nothing else.
259. Is that complaint vanishing? Yes, entirely.
260. Is it your opinion that if the Broken Hill people were induced to use colonial coke, they also would change their opinion? Yes, if they got it at a cheaper rate.
261. If they had the inducement of cheapness? Yes.
262. And would the construction of this line give that inducement? Yes; it would help materially, reducing the freight by 14s. a ton.
263. You think that if the line were made it would be a means of developing the resources of the Colony? I think so.
264. And of adding to the income from the railways? Yes. We should send the coke along the railway up to Corowa, and when connection is completed, to Moama.
265. *Mr. Cann.*] Have you tried any other method on the southern coast of producing coke than your present method? We have experimented in every way. We have taken the opinion of all the best chemists in Sydney. We sent 6 tons of the best coal to the Luhrig Company, who are supposed to be the greatest authorities on the subject of coal-washing. They got about 27 per cent. of the whole mass of coal with 5 per cent. of ash by washing it, but that process would add 15s. a ton to the price. To add the cost of washing to the price, would make the total cost prohibitory.
266. That is to say that with the washing process you would not be able to compete in the supplying of coke? No, it is no use trying it.
267. I am speaking about the southern coal? The Newcastle coal can be improved a little by washing.
268. I suppose you are aware that Newcastle coal does not make coke sufficiently dense to stand the weight of the charge? Yes.
269. Are they producing coke anywhere else? In Queensland they are, but the same complaints, are made in regard to it.
270. Are they using coke at Hartley? That coke is very full of ash also.
271. You cannot say that it is any better than the other? No.
272. With this new tramway would not the English people who are sending coke be in the same position as yourselves as regards that route? No. We expect to send our coke by the Government railway to Corowa or Moama, then down the river; they would never dream of landing English coke and sending it that way.
273. Would not the carriage of coke by water landing it at Port Victor be a material saving as compared with landing it at Port Pirie? Yes, then we should be in the same position as the English importers.
274. What would the advantage be of sending it by the Government railways, or sending it to Port Victor? You see there is no return freight from Port Victor. I do not think we could get freight down to there under about 22s. a ton for our coke.
275. That would be more than it is costing to take the coke to Port Pirie now? It is the same price.
276. What would it cost to take it by railway and down the river? I will call it 500 miles to the river. The Railway Commissioners said that they would do it for a halfpenny per ton per mile. Taking it by the river we should get carriage with regular supplies for about 10s.
277. You admit that the foreign coke would have its price materially reduced by being sent on the water route? I am not sure about that. You mean by sending it to Goolwa.
278. I mean that by sending it to Port Victor and then up the river it would cost far less by the tramway? Yes.
279. The position would be that coke would really be reduced in price at Broken Hill? Certainly.
280. *Chairman.*] By legitimate competition? I think so.

THURSDAY, 27 OCTOBER, 1892.

Present:—

MR. BARBOUR,		MR. CANN,
MR. GORMLY,		MR. FARNELL.

ROBERT BARBOUR, ESQ., IN THE CHAIR.

Alexander Matheson, Esq., appeared as solicitor for the Bill.

Hugh McLachlan, Esq., called in, sworn, and examined:—

281. *Chairman.*] You are Secretary to the Railway Commissioners? Yes.

282. *Mr. Matheson.*] Have you seen a plan of the proposed Menindie and Broken Hill tram-line? No. Perhaps it would expedite matters if I said at once, as far as this Bill is concerned, that the Commissioners have not gone into its conditions. They, some time ago, made a report upon a proposed railway from Cobar

H.  
McLachlan,  
Esq.

27 Oct., 1892.

H.  
McLachlan,  
Esq.

27 Oct., 1892.

Cobar to Wilcannia and Silverton and Broken Hill. The same proposal now before the House was suggested, viz., for making a line from Broken Hill to Menindie, and in their report which I shall hand in the Commissioners said:—

The Bill now before Parliament for constructing an extension of the present Silverton Tram-line to the River Darling at Menindie, a distance of about 80 miles, regarding which we have been asked to report, is also affected by this scheme. We are of opinion it would be unwise to authorise the line, yet it is desirable that access should be given with the river from Broken Hill, and if the Government decide to make the Wilcannia line we would advise the rejection of the Bill.

During the present month, as soon as the Bill was revived, they sent the following minute to the Minister:—

We notice that a Bill was introduced to the Assembly on the 5th instant for the purpose of obtaining authority for constructing a tramway from Broken Hill to Menindie. We desire to call attention to the report made by us on the same question on the 15th July, 1889.

The extract from that report I have already read. The Commissioners have not looked at the conditions of the Bill because they think the question involved is a matter of policy. It is a question for the Government to determine which line should be made; but if this line were made of course it would seem to put an end to the idea of making a Government line from Cobar across to Broken Hill. The Commissioners do not enter into questions of policy, but they wish to put that matter before the Committee.

283. *Chairman.*] Is that all you are inclined to say at present? Yes.

284. *Mr. Farnell.*] It practically means that if this tramway-line were constructed it would obviate the necessity of the Government making a line to Broken Hill? Of course two lines would not pay.

285. *Chairman.*] Mr. Farnell wishes to know whether it is absolutely necessary if this line is made that the other line should not be made? It would almost appear so. The two lines could not pay. This line would enter into competition with the Government line if the policy of the Government were to make a through line to Broken Hill.

286. If this line is made is it possible that it may prevent the necessity for the Government making a through line to Broken Hill by way of Wilcannia? That is a matter of policy which the Commissioners do not wish to go into. They have sent in their report for the Government to consider.

287. *Mr. Matheson.*] Are you aware of the chief object of this line from Menindie to Broken Hill? I do not know anything about it.

288. If the Commissioners were aware that the chief object of the line is to bring the low grade ores of Broken Hill to Menindie for treatment it might alter their opinion? One idea of the Commissioners in their report as to the Broken Hill line was that the carriage of ores would form a very considerable item of traffic which would help to make the line profitable, and as the country is so level they could carry very big train loads, so that this line would be a direct competitor with the Government line and with one object the Commissioners had in view in recommending it.

289. Do you know where it is proposed to treat these low-grade ores? At Lithgow or Dubbo, where coal-mines are to be opened up. It is probable that coal-mines may be developed there. They were opening a mine at Wellington about that time.

290. Do you know what the average value of low-grade ores at Broken Hill is? No.

291. Are you aware of the cost of the relative treatment of low-grade ores at Menindie, and at Dubbo or Lithgow? No.

292. Would it surprise you to find that the cost of raising the ore and of the carriage and treatment at Lithgow, would result in a loss on the Broken Hill ore? We could carry ores at a cheap rate because of the big loads we should take.

293. But taking your ordinary rates? We should not charge the ordinary rates.

294. Carrying them at the rates which were discussed before the Public Works Committee, when the railway from Cobar to Cockburn was considered, 25s. a ton to Lithgow, are you aware that the expenses I have mentioned would give a loss per ton on low-grade ores? I am not aware of it.

295. If it is the case do you think it is likely that ores will be sent from Broken Hill to Lithgow? I could not say that I am aware of the conditions affecting it.

296. If it could be shown that sending ore to Lithgow would result in a loss, do you think it is likely that it would be sent? People would not throw money away.

297. Can you tell the difference in length between a line from Broken Hill to Wilcannia, and a line from Broken Hill to Menindie? I have not the exact mileage, but it is in the report.

298. Are you aware that it is proposed to establish an irrigation settlement at Menindie? As I have already mentioned, the Commissioners have not looked at the conditions of this proposal. They would rather not be examined on it at present. I have not come prepared to give their views, and I do not want to commit them in any way, they lay the matter before the Committee as a matter of policy.

299. I want to show that the Commissioners have no information on which to base their antagonistic views? The Commissioners went over the line and saw everybody interested.

300. Are you aware that it is proposed to establish a large irrigation settlement close to Menindie? Not of my own knowledge.

301. Provided that such a settlement were established, and 5,000 people were settled there, would such a line as is proposed not be almost a necessity for the supply of the produce of the settlement to the inhabitants of Broken Hill? I do not know. Whatever point of the Darling the Government line touches would, I suppose, be equally valuable for irrigation.

302. There is no proposal to make a Government line from Menindie to Broken Hill? No; but a line has been suggested to Broken Hill, touching the Darling at another point.

303. Where is that point? Wilcannia. If the Government makes a line, the proposed line from Menindie to Broken Hill will be in direct competition with it.

304. Can you tell the distance between Menindie and Wilcannia? No.

305. We will take it at about 100 miles, would a line from Wilcannia to Broken Hill in any way benefit the irrigation settlement at Menindie? No; what I say is that if there is to be an irrigation settlement, we might as well have it in the country about Wilcannia. The land there is, I believe, equally suitable, and if a railway is necessary, and you have it at Broken Hill, it would answer the same purpose as Menindie.

306. Are you aware that there are certain lakes at Menindie in which water can be readily conserved for irrigation purposes, whilst there are none at Wilcannia? There is the Talia-Walker Creek country.

I do not know the circumstances of the country, but I understand that it would be suitable for irrigation.  
307. Is there not a difference in having the water in a lake, and in having it in a creek? It all comes from the river.

H.  
McLachlan,  
Esq.

27 Oct., 1892.

308. As far as you know there are no lakes at Wilcannia? I did not look into the question.

309. Are you aware that there are iron-flux mines on the route of the proposed tramway the fluxes of which cannot be used unless the tramway is made? It is wasting time to ask the question. I have stated I know nothing about the merits of the proposal.

310. May I take it that the Commissioners have not considered the merits of the proposed tramway, in view of the altered circumstances since the date of their report? No; they have not.

311. *Mr. Cann.*] What would be the cost of the carriage of coke from Lithgow to Broken Hill? The Commissioners say about 25s. a ton.

312. What would be the cost of the carriage of bullion to Sydney? I do not recollect that being worked out.

313. I suppose that it was anticipated that the trucks would be returned loaded with bullion? Yes, to some extent.

314. Could you tell the Committee what is the cost of the coke per ton delivered at Broken Hill? I could not.

315. I suppose they could not go into the prices of coke? No.

Henry Deane, Esq., called in, sworn, and examined :—

316. *Chairman*] You are the Engineer-in-Chief for the New South Wales Railways? Yes, in the Railway Construction Branch.

H. Deane,  
Esq.

27 Oct., 1892.

317. *Mr. Matheson.*] Have you examined this tramway Bill? I have.

318. Have you made some notes upon it? I have reported to the Under Secretary for Works on the subject. I made my notes under nine heads, seven of which I should like to refer to. The first note which I have is this. "There is a question of policy which is to be considered in connection with this route. The tramway from Menindie to Broken Hill would be to a large extent a competing line with the Wilcannia-Broken Hill railway when the latter is constructed. 2. Clause 3, require alterations so that promoter may use roads, streets, &c., and take and use lands, &c." That is an alteration that has been made in previous Bills. I think there can be no objection to it. 3. "Clause 17, I think that rates and tolls should be limited in amount by the Bill." That also has been provided for in other Bills. 4. "Rolling stock should only be used subject to the approval in the first place, and to the examination and approval from time to time by the Railway Commissioners." That was inserted in Simpson's Railway Bill, and in some tramway Bills. 5. "Clause 21, Crown lands should not be granted in fee simple, but should be subject to a rent, the amount of which be limited by the Bill." I have since been given to understand that clause 21 is to be altered so that the lands would not be granted in fee simple. 6. "Clause 27, in case of purchase no compensation to be given in respect to any Crown land or public property which may be traversed or touched by the said tramway or in respect of any roads, streets, or highway along or over which the said tramway may be laid." Of course if Crown land is purchased that alters the case. A provision of this kind was introduced in the Willoughby Tramway Bill.

319. *Mr. Cann.*] Do you mean that if the Company get the fee simple of the land the powers of the Crown will be limited? No. I mean that supposing rent were paid for Crown lands the Company should not have any right of compensation at the time of purchase in respect to that land.

320. Of course they could ask for compensation for the land? It is a question for the Committee to decide whether any clause such as I have suggested, should be inserted in the Bill :—"7. I recommend that the provisions introduced into the Tarawingie Tramway Act and Simpson's Railway Bill be carefully compared with the provisions of this Bill. There are probably other objectionable clauses which might be removed or amended without detriment to the objects of the Bill." I thought there might be some clauses to which objection might be taken, but which might be amended without detriment to the objects of the Bill.

321. *Chairman.*] You have not yet gone into that yourself? It seemed to me more a matter for a lawyer to go into than for an engineer. I recommend that the Bill should be forwarded to the Crown Solicitor for his report. That has been done in some other cases with advantage, and certainly without detriment to the objects of the promoters. If that were done you would get the Bill worded in a proper manner so that there could be no doubt about the meaning of the clauses, and the public interests would be preserved as well as the interests of the promoters.

322. *Mr. Matheson.*] I suppose that you are not aware that the Bill has been examined by the Under Secretary for Lands and his officers and that certain suggestions have been made? Not officially.

323. Can you give me your estimate of the cost of the line from Wilcannia to Broken Hill? My estimate of the cost of the line from Wilcannia to Broken Hill was £2,870 per mile. That was a line without fencing and with a minimum of earthwork.

324. *Chairman.*] Is that a line which you still recommend? That is a line in the original scheme for the connection of Cobar with Broken Hill. That is the line which I should recommend. I should expect the cost to be somewhere about what I have stated. Of course, it is very difficult in a country of that nature to estimate the cost to a pound, because much would depend on the seasons that we might have.

325. Can you tell us the estimate of the total cost of the line from Cobar to Cockburn? The original estimate was £1,037,000. I increased that to £1,168,000 in order to provide for additional flood openings on the Darling, fencing, and the improvement of the grades.

326. *Mr. Cann.*] Was the line to terminate at Cockburn or at Broken Hill? To terminate at Cockburn.

327. The Committee decided not to continue it to Cockburn? Yes.

328. *Mr. Matheson.*] Would the alteration of the terminus from Cockburn to Broken Hill make any appreciable difference in the cost? The estimated cost of the line from Cobar to Cockburn, 30 miles, was £118,517.

329. So that the total cost would be about a million? A little over a million.

330. Does that include rolling stock? No, merely the cost of the construction of the works.

331. Then that large sum of money would have to be found by the country for the construction of the line? That is the estimate.

332. Will you give an estimate of the cost of the rolling stock for the line? I am not in a position to do that.

H. Deane,  
Esq.  
27 Oct., 1892.

333. I presume that we might take it that it would cost about £50,000? I would rather not give an estimate, it is a matter for the Railway Commissioners.
334. *Chairman.*] I suppose that line would have the ordinary gauge of the New South Wales railways? Yes, 4 ft. 8½ in.
335. *Mr. Cann.*] I suppose a 3-ft. 6-in. gauge would be materially cheaper? Not very much. I should not be at all in favour of a break in the gauge in the New South Wales territory.
336. But could you give us any idea of the difference between the cost of a 3-ft. 6-in. gauge line, and a line with a 4-ft. 8½-in. gauge? If you have the same weight of rails, and the same number of sleepers, there is very little difference; you have all the earthworks, draining, fencing, and sidings practically the same. If you did save anything in having a narrow gauge, it would be lost in the sidings, because you would have to have longer sidings.
337. *Mr. Matheson.*] Does that apply to level or rough country? That applies to level country. In rough country it is somewhat different. With the narrow gauge the curves are usually much sharper than on a larger gauge. It would thus make very little difference whether the gauge was 4 ft. 8½ in., or 3 ft. 6 in.; the advantage would all be in favour of the 4-ft. 8½-in. gauge, because there would be no break of gauge. I think it would be out of the question altogether to continue the line from Cobar on the narrow gauge.
338. On the smaller gauge the same weight of rail would not be required as on the larger gauge? I might say, in regard to that, that between Nyngan and Cobar we have laid 60-lb. rails, and on the Queensland lines also they use 60-lb. rails.
339. The Queensland lines are very hilly, are they not? Some of them.
340. The heavier rail can be used with more safety? It is an economy. The heavy rail is stronger, and you get more wear and tear out of it.
341. Are fewer sleepers required with the heavier rail? That depends on the weight that you want to put on the line.
342. Would the rolling stock for the narrow gauge not be much cheaper than the rolling stock for the wider gauge? Yes; but of course you have not the same capacity.
343. But still it would be a cheaper outfit altogether? Possibly. I have not gone into that question very closely.
344. Do you think it is likely that this line from Cobar to Broken Hill would be constructed in a reasonable number of years? That is entirely a matter for the Government and the House to decide. It is not an engineering matter. I am only prepared to give evidence on engineering matters.
345. Can you say how long it would take to construct the line? That depends on how it is attacked. If the whole line is let at the same time, it could be attacked at five different points.
346. That would require a full Treasury? It would mean the supply of something like over a million of money.
347. Straight off? Within the time for the construction of the line.
348. Suppose it were attacked at five different points, could you tell what time it would take to complete the line? I should say something between eighteen months and two years.
349. Have you seen the plan of the proposed line from Menindie to Broken Hill? I have seen it here to-day.
350. Can you give any estimate of the cost of making such a line on the narrow gauge? Not without having some particulars as to the rails to be used, the fencing, and so on.
351. Are you aware that it is proposed to place an irrigation settlement at Menindie? I have no exact information on the point. I have heard of such a thing.
352. As the chief object of the line is to bring low-grade ores from the mines at Broken Hill to the water at Menindie for treatment, do you not think it advisable that the line should have the same gauge as the private lines belonging to the different mines? Well, I should say that if the Bill is approved of by Parliament, it will be natural to adopt the same gauge.
353. *Chairman.*] I understand that you gave evidence with regard to the 4-ft. 8½-in. gauge, on the presumption that any line connected with the New South Wales railways should be constructed on the same gauge? Yes.
354. Not with reference to the promoters of this Bill at all? No.
355. You have looked through the Bill? Yes; I have.
356. And beyond the matters that you have pointed out as necessary to be provided for in the public interest, you have no objection to the Bill? No; I have not observed anything in the Bill that is objectionable, beyond those points that I have mentioned. I recommended that the Bill should be carefully examined by the Crown Solicitor. I think that it ought to be carefully examined by a lawyer.
357. Looking at the Bill from an engineering point of view, you see nothing that it is necessary to call the attention of the Committee to in the public interest? Everything that occurred to me I made a note of.
358. *Mr. Cann.*] In reporting on a line of this kind, I suppose that, as an engineer, you paid due regard to what the probable traffic would be? No; I do not go into that as a rule. When proposals for new lines are submitted, the Railway Commissioners give their report on that part of the question.
359. Do you mention the limit of the fares, what do you consider a proper fare to charge? I think that the other Bills that have been passed, such as the Tarawingee Tramway Act, will contain the necessary information on that point.
360. I suppose you have no knowledge of any arrangement made in the Department fixing the fares on private lines? No, but they have been fixed in the Acts that I have referred to.
361. Do you notice that there is a provision in the Bill that the Company may be controlled by the Railway Commissioners, I suppose that that is a new provision? I do not think that is altogether new, but I have nothing more to say on that point. I have merely offered my suggestions to the Committee.
362. Would you rather see a definite fare laid down, or see it open? I thought it my duty to bring that matter before the Committee for their decision. I have no personal wish one way or the other.
363. Is it the custom in private Bills to fix a maximum fare? It has been the practice during the last few years.

Mr. Robert Henry De Low sworn and examined :—

364. *Chairman.*] What are you? I am clerk in charge of the lease division of the Lands Department.  
365. *Mr. Matheson.*] Are you aware that the Under Secretary has examined the provisions of this Bill? He has looked through the Bill as far as it bears on the Crown Lands Act.

Mr.  
R. H. De Low.  
27 Oct., 1892.

366. And you have also? Yes.

367. You and he made certain suggestions with reference to providing for compensation being paid to Crown lessees and licensees, and also as to the payment of 25s. per acre for the land required? Yes; certain suggestions were made.

368. Have those suggestions been given effect to by the promoters? A copy of the Bill was placed before the Under Secretary and passed on to me, and it seemed to deal with those points; but whether the exact phraseology is sufficient to secure the rights of the Crown, we as laymen cannot say.

369. Have you got a copy of the Bill? I have a copy that was sent to us containing that suggestion. Certain alterations have been made in red ink. I produce that copy of the Bill. The alterations are in clauses 21, 24, 28, 32, 59.

370. And you hand in a copy showing the corrections that the Department suggests should be made in the Bill? The Department did not make those alterations or suggestions in that phraseology. The Department pointed out how the Bill affected their rights in three particulars. In the first instance there is a question of free grant. That is a point to which we drew attention, and the additions made to clause 21 in red ink provide that the land shall not be a free grant, but that it shall be paid for. Another point was, that if the lands were used the revenue of the Crown should not suffer by the lands being used by a tramway company any more than it would if they were used by private persons—in other words, that the Crown should not have to pay the piper for someone else using the land. The other point was that the tramway would run through a large area of country at present under pastoral lease or occupation license or homestead lease. The Crown Lands Act provides that if the Government take any of those lands during the periods of tenure, it must be for recognised public purposes, and in so doing they render themselves liable for compensation of two classes. One is for the loss of area, the other is in the case of pastoral and homestead leases for the prospective use of the land for the unexpired term of the lease. The Department take the view that if a tramway company takes those lands, the Government should not be put in such a position that the lessee might make a claim upon them for the loss of the ground and for the unexpired term of the lease.

371. *Chairman.*] In other words, the Government want a provision in the Bill that the company shall compensate any parties from whom they take land? Decidedly. Then, as regards the occupation licenses which are on a different footing from pastoral and homestead leases, the provision of the Land Act is that if part of an occupation license is taken for public purposes every improvement on it must be paid for by the Government. We thought that if the Crown lost the rent for that land it certainly should not be liable to have any demand made upon it for the value of the improvements.

372. The Tramway Company should also pay any compensation that was required in that respect? Yes; and the suggestions in red ink in the clauses, as far as our non-professional judgment goes, seem to meet those very points.

373. Would the Department like the Bill to be submitted to the Crown Solicitor? I have no authority from the Under Secretary to speak on that point. I may mention one point, viz.: that some of that land may be required for cutting timber, and the view the Department takes is that timber reserves not open for the ordinary public should not be made by a private Bill available for any individual.

374. The opinion of the Department is that the timber reserves should be secured to the use of the public? Yes. The promoters should have no right to go on a reserve to cut timber, unless the public have the same right.

375. *Mr. Cann.*] Has the Department set aside a certain area of land at Menindie for irrigation purposes? Yes; about 25,000 acres have been set aside for irrigation.

376. What is the area allowed for an individual in an irrigation settlement? There is no fixed area, because it is not provided for in the Land Act.

377. Have you had any experience of irrigation settlements? I have only read about them.

378. What area of land is required to keep a man and his family under ordinary conditions? That I cannot say.

379. *Mr. Gormly.*] The land is merely reserved by the Department for the purposes of an irrigation settlement? Yes.

380. That is all that has been done? The land has only been reserved for irrigation.

381. *Mr. Cann.*] You have no idea of the number of people that the 25,000 acres would carry? I have not.

382. I suppose that that is about the extent of the area available for that purpose, at present, at Menindie? That is the area which the Department have reserved for irrigation. Whether it is the only area available or not I cannot say.

383. Are not most of the other lands taken up on leases and occupation licenses? Yes, the land under occupation licenses is still available, but the land under homestead leases is not.

384. Is not the greater portion of the land in the neighbourhood of the irrigation settlement Crown land? The greater portion of it is.

385. *Chairman.*] If this irrigation colony goes on and is successful, will it very much add to the traffic on the tramway, if the tramway is made? I can only give my personal opinion on that point. I should think it would.

386. And this tramway is convenient to the irrigation area, is it not? Part of it goes through the irrigation area.

Mr. Charles Edward Hogg recalled and further examined :—

387. *Mr. Matheson.*] Have you any special knowledge of the general treatment of silver ores at Broken Hill? Yes, I was appointed by a Smelting Company in Melbourne to make a thorough inquiry into the whole system, and the cost of smelting at Broken Hill and other places.

388. And you made that investigation? Yes.

389. What is an average low grade silver ore? It is one containing about 13 oz. of silver and 15 per cent. of lead per ton.

Mr.  
C. E. Hogg.  
27 Oct., 1892.

Mr.  
C. E. Hogg.  
27 Oct., 1892.

390. Is that the chief class of ore which it is proposed to treat at the Darling River at Menindie? It is the principal class.
391. Are there believed to be very large deposits of that class of ore at Broken Hill? It is believed that that class of ore predominates, and will increase in volume with the development of the mines.
392. What is the gross value of such ore in the mines at the present time? At present the value would be about £2 19s. 2d. in the mine.
393. What is the cost of winning or raising such ore out of the mine per ton including timbering? About 17s. per ton, that is based on the annual returns given by the various large mining companies.
394. Has it been proposed that if a railway line from Broken Hill is made to Lithgow, *via* Wilcannia, low grade ore from Broken Hill would be sent there for treatment? Yes, in the report for 1891, of the Parliamentary Standing Committee on Public Works, on the proposed railway between Cobar and Cockburn, *via* Broken Hill, it is stated that one of the largest, if not the largest, branch of traffic on that line would be this class of ore carried from Broken Hill to Lithgow for treatment there.
395. What is it estimated the cost of the trainage of such ore to Lithgow will be? They thought they could make a special rate and carry it for £1 5s. per ton.
396. What would be the probable cost per ton of the treatment of crude ore at Lithgow? The ore would have to be "concentrated," which would cost about 10s. per ton. This would reduce it to about one-fifth of its original bulk. It would have to be smelted at a cost of 6s. per ton which would be 30s. per ton for the crude ore. The bullion produced would then have to be sent to Sydney at a cost of about 1s. 6d. per ton. This would bring up the total cost of treating this class of ore at Lithgow, and delivering it in Sydney to £2 19s. 6d. per ton, which would show an absolute loss on every ton of ore sent to Lithgow, of 4d. per ton. I do not think that any ore would ever be sent from Broken Hill to Lithgow. The high-grade ores would be treated locally, and it would not pay to send the low-grade ores.
397. Can you give similar evidence with regard to the treatment of ore sent to Port Pirie? Yes, the trainage would be 16s. 6d. per ton; concentrating, 10s. per ton; smelting concentrates, 6s. per ton; the carriage of the bullion round to Sydney, 2s. 6d. per ton, and that, with the cost of extracting it from the mine, would amount to £2 12s., leaving a profit of 7s. 2d. per ton. The same class of ore, if sent to Menindie, would be subjected to the following charges: trainage to Menindie, 5s. 4d. per ton; concentrating at Menindie, 10s. per ton; re trucking the concentrates back to Broken Hill, 1s. 1d. per ton; smelting the concentrates at Broken Hill, 7s. per ton, which allows a charge of 5s. per ton extra on Broken Hill smelting. The carriage of the bullion from Broken Hill to Port Pirie, 5s. per ton; freight to Sydney, 2s. 6d. per ton; cost of getting the ore from the mine, 17s. per ton, total £2 7s. 11d., leaving a net profit of 11s. 3d. per ton.
398. Are you aware that it is proposed to make an irrigation settlement at Menindie? I am.
399. Do you consider that the traffic occasioned by that settlement will be of great value to the proposed tramway? Yes, very great value indeed. I think it will be to a great extent the making of it.
400. What amount of irrigated land is usually considered sufficient to support a man and his family? It is considered, at the Californian settlements, and at Mildura, that 10 acres of irrigated land will keep a family of five persons.
401. How many people do you expect to see settle on this irrigation settlement? From 10,000 to 12,000.
402. *Mr. Cann.*] Are there not a large number of low-grade ores which carry about 21 oz. of silver to the ton? Yes; I should rather call them refractory ores.
403. And it really does not pay under the present system to treat them at Broken Hill? No.
404. They also must be treated by a cheaper method? Yes; they must have cheap carriage and cheap fuel.
405. Could not this ore be taken on the same estimate that you gave us just now to Lithgow and treated there? The ore could be taken to Lithgow and treated there, but the disadvantage would be that the coke at Lithgow would not be of the quality of that used at Broken Hill unless the ore was imported. I believe that there is an objection to the use of the Lithgow coke because it is inferior to the English coke.
406. I thought they were producing good coke now? The smelters at Broken Hill will not use it.
407. I suppose you do not know that an expert who has commenced at Lithgow has been more successful than the other manufacturers? No, I did not know that.
408. *Mr. Matheson.*] Would these refractory ores require a large amount of roasting by wood fuel? Yes.
409. Does wood for fuel exist in large quantities, and can it be got cheap at Menindie? Yes.
410. *Mr. Cann.*] Would small coal answer the same purpose? I believe it would.
411. Are they smelting iron with small coal at Newcastle? I could not say.
412. *Mr. Gormly.*] Nothing has been done with regard to the irrigation settlement except that a certain area of Crown land has been reserved for that purpose? Nothing else has been done by the Crown. There is a Bill dealing with the matter before a Select Committee of the Legislative Council, and an irrigation company has been formed and registered in Sydney to carry out the undertaking.

Mr. John Mitchell Purves recalled and further examined:—

Mr.  
J. M. Purves.  
27 Oct., 1892.

413. *Mr. Matheson.*] Have you seen in the *Sydney Morning Herald*, of the 22nd instant, the statement that a special meeting of the Municipal Council of Wilcannia was held on the 20th instant to take steps to oppose this Bill? Yes; they opposed the Bill on the following grounds:—1. Because a State railway to Broken Hill has been passed. 2. That Broken Hill has no interest in a State railway which will not serve equally with the proposed tramway. 3. That this tram-line is being pushed through solely in the interests of Adelaide, and will raise a monopoly which will be destructive to railway interests and the taxpayer. 4. That it will open up a competitive interest, which will carry at lower rates than the Bourke railway, and give Adelaide the command of the upper river and the Bourke trade. 5. That it is in opposition to the settled policy of the country to permit private lines to compete with the Government railways and the interest-paying taxpayer. 6. That if Broken Hill wants immediate communication with the river, let the railway section from Broken Hill to Wilcannia be completed. This will meet any immediate demand and lessen the distance, linking Broken Hill to Sydney, and leaving only one more section to Cobar, which will also complete the strategic proposal for uniting all the colonies.
414. Generally speaking, is there any force in those objections? There is none that I can see. In No. 1, they state that the proposed railway to Broken Hill has been passed, but it has not been passed. It has been recommended by the Works Committee, but not passed by Parliament. I do not understand

No. 2. No. 3 says that this tram-line is being pushed through solely in the interest of Adelaide, and will raise a monopoly which will be destructive to railway interests and the taxpayer. There is not a single word of truth in that.

Mr.  
J. M. Purves.  
27 Oct., 1892.

415. Have you considered the interests of Adelaide in connection with this tram-line? Not in any way. I consider that this tramway will be in opposition to the interests of Adelaide. The interests of New South Wales are opposed to the interest of Adelaide. *Via* Adelaide is the only present means of communication to Broken Hill, and we propose to take away from South Australia so much of the ore as is now sent to Port Pirie, so that it may be treated in New South Wales. It cannot be to the interest of Adelaide that we should do that; the thing is absurd.

416. The tramway will interfere with the present monopoly held by the Silverton Tramway Company, and South Australian railway? It will, very seriously. Then, they say in No. 5, that it is in opposition to the settled policy of the country to permit private lines to compete with the Government railways, and the interest-paying taxpayer. This line will not compete with the Government railways. It is very likely to be a source of profit to the Government railways, if only by enabling New South Wales coke manufacturers to send coke to Broken Hill.

417. Then, as to No. 6? They say in No. 6 that if Broken Hill wants immediate communication with the river, let the railway section from Broken Hill to Wilcannia be completed. But that will not meet the demand, because it will be just about double the distance of the proposed tramway. The only way to get the low-grade ores dealt with successfully is to cheapen everything in connection with the treatment of them; the carriage of the ore especially should be as cheap as possible. By the line from Broken Hill to Wilcannia, the cost of the carriage would simply be doubled.

418. *Mr. Cann.*] Where do you propose to terminate the tramway? Near Menindie, I believe, just on the outskirts of the town.

419. Are you aware that there is any opposition to the tramway at Menindie, on account of the terminus being some distance from the town? I have not heard of any opposition.

420. *Chairman.*] Have you fixed the terminus near the Darling River? The terminus will be close to the Darling River. Probably, the station will not be right on the bank of the river, but there is sure to be an extension to the wharf. It would be absurd to cart goods from the terminus to the river.

421. You recognise that you will have to connect it with the river? We shall have to go down to the bank of the river.

422. You will have sidings running down to the river bank? Yes. I am told by the engineer of the company that the terminus of the tram will join the land reserved for wharf purposes by the Government where there is deep water, and it is the most suitable place, as we expect to get a large quantity of timber for mining purposes from the Murray, water-borne, and also coke water-borne. Of course, we must have the line down to the river, and have plant for transferring cargo in a cheap manner.

Mr. John Ahern called in sworn, and examined:—

423. *Chairman.*] What are you? Government contractor.

424. *Mr. Matheson.*] Have you been to Broken Hill? Yes.

425. Do you know the class of timber used in the mines there? I believe it is principally Oregon.

426. Do you know how it is used? Yes.

427. Do you know the Australian gums? Yes; I have had a lot of experience of them in Victoria.

428. Would they be suitable for the same purposes as the Oregon timber used in the mines at present? Yes.

429. Are they very much stronger than the Oregon timber? I should imagine that the Oregon timber is about two-thirds of the strength of the red gum.

430. Are there large quantities of red gum to be had on the banks of the Murray? Yes; all along the Murray, any quantity.

431. If Australian red gum could be supplied to Broken Hill for mining purposes would it be used there in preference to the Oregon timber the price being the same? I think so; in any event the price must be much less of red gum timber from the Murray River.

432. Would it be feasible to carry these Murray timbers by water to Menindie then truck them over the proposed line to Broken Hill? Yes. You can get timber delivered at Broken Hill at less cost than the Oregon timber. The cost of shipping would be 4s. to 5s. per 100, and then carrying it along the tram line 5s. or 6s. per 100 superficial feet. The original cost at the mill would be about 8s. per 100; that would bring it up to 17s. to 19s. per 100.

433. Do you know the price of Oregon timber at Broken Hill? I do not. I think that at Adelaide it is about 14s.

434. Would there be any difficulty in changing the timber used in the mines from Oregon to gum, if gum could be used of similar size? I cannot see any. I think that small gum props can be put in the place of the large Oregon ones.

435. Would that be an additional saving? Certainly. In section the red gum would not be necessarily more than two-thirds of the section of the Oregon timber.

436. *Chairman.*] In your opinion the red gum timber would be quite as suitable as, if not more suitable than, the Oregon timber? Judging from my own experience I should prefer it.

437. You prefer red gum to Oregon timber where strength is required? Certainly.

438. And would a smaller scantling of colonial timber be as strong as a larger scantling of Oregon timber? Yes; a section of red gum two-thirds the size of the Oregon timber would be equal in strength to the Oregon.

439. And, in your opinion, would the colonial timber cost the mine-owners less or more than the timber they are using at present? The red gum could be delivered at considerably less cost than the Oregon timber.

440. What would the saving be in price? Admitting that it can be delivered at the same price as blue gum, you would want to put in colonial timber that would cost 12s. per 100 where Oregon timber would cost 18s. a 100.

441. *Mr. Cann.*] Have you ever worked in any of those big lodes? No.

442. You have never had anything to do with mining timber at Broken Hill? No.

Mr.  
J. Ahern.  
27 Oct., 1892.

Mr.  
J. Ahern.  
27 Oct., 1892.

443. Have you ever consulted mining managers and experts about the size of the timber, the methods adopted, and so on? No; I am given to understand that the timber used at Broken Hill is 10 x 10.
444. Are you aware that they build solid with blue gum between the sets of timber? No; I was not aware of that.
445. Is it not only a matter of opinion as to whether the size of the timber can be diminished? It is not a matter of opinion as to the strength of the timber.
446. No; but as to the adoption of the system? It may be.
447. You are not in a position to say that the mine managers would adopt the suggestion you make? No. If I were timbering a mine I should be prepared to stake my reputation on the statement that red gum timber 8 x 8 would be equal in strength to Oregon timber 10 x 10.

Edward Bulwer Lytton Dickens, Esq., M.L.A., called in, sworn, and examined:—

E. B. L.  
Dickens, Esq.,  
M.P.  
27 Oct., 1892.

448. *Chairman.*] You represent Wilcannia in the Legislative Assembly? I do.
449. I understand that you wish to give evidence with reference to the proposed tramway from Menindie to Broken Hill? Yes.
450. What is your opinion with regard to that tramway? I am opposed to the proposal, not only as the representative of Wilcannia, which place I candidly own it would have a tendency to injure, but also on the broader grounds of public policy. I would point out that the subject of railway communication between Broken Hill and Nyngan was considered at very great length by the Public Works Committee some considerable time since, and the Public Works Committee then recommended that the line should be extended. I think they also recommended that it should be done in three sections, from Nyngan to Cobar, from Cobar to Wilcannia, and from Wilcannia to Broken Hill. Of course, their idea was that the line could be expedited very much by being carried in three sections as it could very easily have been done, owing to Wilcannia being situated on a navigable river, and owing to the facilities for obtaining the necessary materials. I may state that owing to this recommendation the railway has been so far carried from Nyngan to Cobar, and it is a well-known fact that the railway cannot pay if left at that particular spot. In taking the preliminary steps in Parliament, Mr. Bruce Smith, the then Minister for Public Works, stated on several occasions that the Government would never dream of taking the railway to Cobar, unless with the view to its further extension. Another ground on which I object to this tramway is that it is virtually a further extension of the South Australian railway system into the heart of our Colony. We ought to be guided by past experience in matters of this kind, and I think that this Committee and Parliament should consider the result of two measures similar to this that were authorised in the past. I allude first of all to the Moama to Deniliquin tramway, which is simply a tramway taking produce from our own Colony to Victoria, and secondly to the Broken Hill and Silverton tramway which is also a railway run under exactly similar conditions, and in connection with the South Australian railway system. The latter is a gigantic monopoly, and the charges are excessive, and although the Government of the day will have power in the course of time to take into their hands the two lines, which I have mentioned, it is very doubtful whether at that time it will be expedient to do so. I would point out that if the Broken Hill people wish to get communication with the river Darling for any purpose, it would certainly be advisable to carry out that portion of the railway scheme already recommended and approved by the Public Works Committee. That is to say, to construct a railway from Broken Hill to Wilcannia, and, of course, ultimately to create a third link from Wilcannia to Cobar. This would give the Broken Hill people speedy and cheap communication with the railway, at Bourke. Although it would not be the nearest it would be the cheapest on account of the water carriage from Wilcannia to Bourke. There would also be all the facilities for irrigation at Wilcannia, that there are at Menindie. In fact more, because certain surveys have been made at Wilcannia with the view of locking the river Darling, a few miles below that place, that is down the stream, and the Minister for Works has stated that if the report of the surveyor is satisfactory, it is his intention to proceed at once with the construction of a lock. When I say at once, I lay some stress on those words, because the Minister has stated that it is not necessary to wait for Parliament to authorise the expenditure of the money inasmuch as he already has the money at his disposal. Certain moneys voted for the purpose of improving the navigation of the river Darling. My experience of the river Darling, extending now over some twenty-four years, is to the effect that unless we conserve the water by means of locks, any system of navigation must necessarily fail.
451. *Chairman.*] Owing to the want of a continuous supply of water? Yes. I may state that I have seen the river Darling dry, I suppose, for half a mile at a stretch in times of severe drought. Of course, that is an exceptional thing, but it does happen. There is no interest at Broken Hill that the State railway would not serve. I think, from my knowledge of the place, and I have an intimate knowledge of Broken Hill and the inhabitants, that it is immaterial whether the people of Broken Hill get communication by rail, because this tramway virtually is a railway with Wilcannia or with Menindie. On the broad ground of public policy as the State has decided that it shall have the control of our railways it would be a most unwise thing to allow any competition. I might say in conclusion, simply to explain my own position in the matter that although last Session I took charge of a tramway Bill in connection with Broken Hill, which was sanctioned by Parliament, it was a Bill on an entirely different basis to this, inasmuch as it was simply brought forward with a view to enabling certain persons to carry limestone to the mines. That line could not in any way interfere or compete with any Government railway that might be made in the colonies.
452. *Mr. Matheson.*] Are you aware that the proposed line from Nyngan to Cobar and Broken Hill would cost at least £1,000,000? I cannot recall the exact sum; it would cost a large amount, no doubt. When I say a large sum I mean in the aggregate. The cost per mile will not be very great, it will be a cheap line.
453. We have had evidence that it would cost at least £1,000,000, and considering the present state of the Treasury, have you any reasonable expectation that the line would be constructed within a reasonable number of years? I believe so, simply taking the statements of the Minister for what they are worth.
454. Was it not one of the chief arguments in favour of that line that ore would be carried from Broken Hill for treatment at Lithgow? I really could not tell you the arguments that were advanced before the Public Works Committee, because I did not hear them.

455. Can you tell the distance from Broken Hill to Wilcannia and the distance from Broken Hill to Menindie? Yes, approximately, it is about 120 miles by the new surveyed route from Broken Hill to Wilcannia, and, approximately, I think it is 80 or 90 miles from Menindie to Broken Hill. E. B. L.  
Dickens, Esq.,  
M.P.
456. The distances are 120 miles and 63 miles? You are right; it is between 60 and 70 miles from Menindie to Broken Hill. 27 Oct., 1892.
457. That is nearly 2 to 1? Yes.
458. You are aware that it requires the utmost economy in treating the low-grade ores of Broken Hill? Yes.
459. Naturally, to carry ores on the line from Broken Hill to Wilcannia would cost twice as much per ton as it would to convey them from Broken Hill to Menindie? That depends on the inducements which the Government could offer.
460. Whatever inducements the Government could offer, I presume, the tramway could offer? I do not know.
461. Are you aware that very high opinions have been given that the extension of the line from Nyngan to Broken Hill cannot pay? I do not think the Public Works Committee would have recommended the line unless they thought it would pay.
462. I say, are you aware that very high opinions have been given to the effect that it cannot pay—opinions entitled to respect, such as that of Mr. Kirkaldie, the Traffic Manager on the Government railways? Yes; I think he said that at the present time it would not pay.
463. You have said that the proposed tramway would be virtually an extension of the South Australian railway system? Undoubtedly.
464. Are you aware that there is no provision in the Bill for connecting with the South Australian railway system? When I said that I was thinking of our experience of the Silvertown tramway.
465. You have not inquired into it? I know that this line will be of the same gauge as the line to Adelaide.
466. You said it would be an extension of the South Australian railway system? Virtually.
467. You are not aware whether it would be connected or not? It would be a very easy thing to connect it by making a connection with the Silvertown tramway.
468. You assume that there would be a connection between this tramway and the Silvertown tramway? Yes.
469. *Chairman.*] Are you aware whether there is to be a connection? I am not.
470. *Mr. Gormly.*] You are aware that a connection could very easily be made? It could very easily be made.
471. *Mr. Matheson.*] Had not the Government of New South Wales the chance to construct the Silvertown tramway if they had chosen? Yes.
472. Has that tram-line not been a great benefit to the mines at Broken Hill? Yes.
473. In order to provide facilities for irrigation at Wilcannia, would it not be absolutely necessary to lock the Darling? Yes.
474. Are there any large lakes at Wilcannia such as exist at Menindie? No; not near Wilcannia.
475. Do you know that the amount of money the Minister has at command for locking the Darling is about £20,000? It is more than that, I think.
476. To carry on irrigation at Wilcannia one would require to wait for the completion of that lock? I think so, to carry it on to any extent.
477. Is the river ever navigable up to Menindie when it is not navigable between Menindie and Wilcannia? Yes.
478. Frequently? Yes.
479. And that applies still more to the distance between Wilcannia and Bourke? Yes, naturally, the higher up the stream you go.
480. Therefore, timber coming from the Murray River for use at Broken Hill mines would have a much better chance during ten months of the year to reach Broken Hill, *via* Menindie, than it would to reach Broken Hill *via* Wilcannia? With a falling river it would have, but people as a rule make arrangements to ship when there is a prospect of getting goods to their destination.
481. The same thing would apply to general goods? Yes.
482. Would not the cost of carrying Murray River timber to Broken Hill, *via* Wilcannia, be very much greater than the cost of carrying it *via* Menindie, the distance being greater *via* Wilcannia? The extra distance by the river is very little indeed. The freights are so low that the extra 18 miles makes very little difference.
483. But of course the traffic would run a great risk of not getting up the river at all if taken *via* Wilcannia instead of *via* Menindie? Of course, but people as a rule ship their goods when there is a fair probability of their reaching their destination.
484. *Mr. Cann.*] Is there any opposition to the tramway in Wilcannia? Yes.
485. By the people of Wilcannia? Yes; I received a communication from the Municipal Council asking me to oppose the Bill, but I intended to oppose it on broad public grounds, independent of any request of that sort.
486. I suppose the groundwork of your opposition is that it may block the State line? Yes, and also that it is the settled policy of the country that the Government should have the control of our railway system. It is a mistake, especially with our past experience, to allow competition with the State railways.

1892.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MENINDIE AND BROKEN HILL TRAMWAY BILL.

(PETITION FROM CERTAIN RESIDENTS OF BROKEN HILL AND DISTRICT IN FAVOUR OF THE.)

*Received by the Legislative Assembly, 7 September, 1892.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament Assembled.

The humble Petition of the undersigned residents of Broken Hill and District,—

RESPECTFULLY SHOWETH:—

That whereas Mr. John Mitchell Purves, of Sydney, has applied to the Parliament of New South Wales, on behalf of the Menindie and Broken Hill Tramway and Ore Dressing Association of Sydney, for leave to construct a tramway between the towns of Menindie and Broken Hill, are of opinion that the proposed tramway would prove of great benefit to your petitioners for the following reasons:—

1. That the proposed tramway line between Menindie and Broken Hill would enable goods sent *via* the Murrumbidgee, Murray, and Darling Rivers to Menindie, to be delivered at a cost considerably lower than the cost of transit over the South Australian Railways, *via* Cockburn and Silverton, thus reducing the cost price of necessary commodities to the inhabitants of Broken Hill.
2. That timber fuel, which is now at a very high price in Broken Hill, is abundant around Menindie and along the valleys of the Darling, Murray, and Murrumbidgee, and would by means of the proposed tramway, be delivered in Broken Hill at a greatly reduced cost.
3. That wool and other station produce would be sent over the Tarrawingee and Silverton Tramways from the districts penetrated by those lines, and from the surrounding stations, by the proposed tramway, at a great reduction on present freight charges.
4. That in the event of a water famine occurring at Broken Hill at any future time, fresh water could be trucked from the Darling River at a comparatively small cost, thus obviating, or at least minimising the painful experiences of the past year.
5. That, as it is contemplated, to establish an Irrigation settlement near Menindie, the inhabitants of Broken Hill would by means of the proposed tramway be able to avail themselves of fresh fruit and vegetables, as also of abundant horse feed and farm produce grown on the settlement, and that the residents would by the same means be placed within easy reach of a healthful change of air, and of placing their families at a profitable employment on the Irrigation settlement.
6. That the line when constructed would be of great advantage to the economical development of the mines at Broken Hill by enabling them to obtain coke, fuel, timber, and other necessary commodities at a substantial reduction on the present rates.
7. That owing to the reduced freight and charges, many mines now lying idle and abandoned could be economically worked.
8. That the construction of the proposed tramway line would give employment to a large number of workmen.
9. That generally the proposed tramway would be of great assistance to the whole district, and would materially tend to reduce the cost of living in Broken Hill and neighbourhood.

Your Petitioners, therefore, pray that your honorable House will take the above facts into your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 2,093 signatures.*]

A similar petition was received on 7th September, 1892, from certain residents of Broken Hill and district; two signatures.

1892.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MENINDIE AND BROKEN HILL TRAMWAY BILL.

(PETITION FROM CERTAIN RESIDENTS OF WENTWORTH AND DISTRICT, IN FAVOUR OF THE.)

*Received by the Legislative Assembly, 15 September, 1892.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, residents of Wentworth and District,—

RESPECTFULLY SHOWETH:—

That whereas Mr John Mitchell Purves, of Sydney, has applied to the Parliament of New South Wales, on behalf of the Menindie and Broken Hill Tramway and Ore-dressing Association of Sydney, for leave to construct a tramway between the towns of Menindie and Broken Hill, we are of opinion that the proposed tramway would prove of great benefit to your Petitioners, for the following reasons:—

- (1.) That whereas there is at present no direct communication between this district and Broken Hill, the various producers of grain, flour, fruit, horse-feed, &c., in the district are unable to make use of the extensive market available there.
- (2.) That among other natural products for which a ready market could be found at Broken Hill is the fine hardwood timber of the district, which, owing to its weight and density, cannot at present be economically conveyed to Broken Hill over the lengthy route *via* the South Australian railways, but could be sent by river to the Menindie tramway, and thus successfully compete with the light but inferior timbers of America, of which three and a half million superficial feet are now said to be used annually at Broken Hill.
- (3.) That the river trades would be very largely benefited.
- (4.) That the development of the timber and other trades would give employment to a large number of workmen.
- (5.) That, generally, the proposed tramway would be beneficial to the residents of this town and district.

Your petitioners therefore pray that your Honourable House will take the above facts into your favourable consideration.

And your Petitioner, as in duty bound, will ever pray.

*[Here follow 52 signatures.]*

A similar Petition was received,—

On 15th September, 1892, from certain residents of Narrandera and district; 49 signatures.

1892.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MENINDIE AND BROKEN HILL TRAMWAY BILL.

(PETITION FROM CERTAIN RESIDENTS OF MENINDIE, IN FAVOUR OF.)

*Received by the Legislative Assembly, 12 October, 1892.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The humble Petition of the undersigned residents of Menindie and District,—

RESPECTFULLY SHOWETH:—

That whereas Mr. John Mitchell Purves, of Sydney, has applied to the Parliament of New South Wales, on behalf of the Menindie and Broken Hill Tramway and Ore Dressing Association of Sydney, for leave to construct a tramway between the towns of Menindie and Broken Hill, are of opinion that the proposed tramway would prove of great benefit to your Petitioners for the following reasons:—

1. That whereas there is at present no direct communication between this district and Broken Hill, the various producers of grain, flour, fruit, horse-feed, &c., in the district are unable to make use of the extensive market available there.
2. That among other natural products for which a ready market could be found at Broken Hill, is the fine hardwood timber of the district, which, owing to its weight and density, cannot at present be economically conveyed to Broken Hill over the lengthy route *via* South Australian railways, but could be sent by river to the Menindie tramway, and thus successfully compete with the light but inferior timbers of America, of which three and a half million superficial feet are now said to be used annually at Broken Hill.
3. That the river trades would be very largely benefited.
4. That the development of the timber and other trades would give employment to a large number of workmen.
5. That generally the proposed tramway would be beneficial to the residents of the town and district.

Your Petitioners [therefore pray that your Honorable House will take the above facts into your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 383 signatures.*]

1892.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MENINDIE AND BROKEN HILL TRAMWAY BILL.  
(PETITION FROM CERTAIN RESIDENTS OF HAY AND DISTRICT, IN FAVOUR OF.)

*Received by the Legislative Assembly, 20 October, 1892.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of Hay and District,—

RESPECTFULLY SHOWETH:—

That whereas Mr. John Mitchell Purves, of Sydney, has applied to the Parliament of New South Wales, on behalf of the Menindie and Broken Hill Tramway and Ore Dressing Association of Sydney, for leave to construct a tramway between the towns of Menindie and Broken Hill, we are of opinion that the proposed tramway would prove of great benefit to your Petitioners for the following reasons:—

1. That whereas there is at present no direct communication between this district and Broken Hill, the various producers of grain, flour, fruit, horse-feed, &c., in the district are unable to make use of the extensive market available there.
2. That among other natural products for which a ready market could be found at Broken Hill, is the fine hardwood timber of the district, which, owing to its weight and density, cannot at present be economically conveyed to Broken Hill over the lengthy route *via* South Australian railways, but could be sent by river to the Menindie tramway, and thus successfully compete with the light but inferior timbers of America, of which three and a half million superficial feet are now said to be used annually at Broken Hill.
3. That the river trades would be very largely benefited.
4. That the development of the timber and other trades would give employment to a large number of workmen.
5. That generally the proposed tramway would be beneficial to the residents of this town and district.

Your Petitioners therefore pray that your Honorable House will take the above facts into your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## MENINDIE AND BROKEN HILL TRAMWAY BILL.

(PETITION FROM CERTAIN COKE MANUFACTURERS, COAL PRODUCERS, AND THOSE INTERESTED  
IN THESE INDUSTRIES OF THE COLONY, IN FAVOUR OF.)

*Received by the Legislative Assembly, 23 March, 1893.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The humble Petition of the undersigned coke manufacturers, coal producers, and those interested  
in these industries of the Colony of New South Wales,—

RESPECTFULLY SHOWETH :—

That whereas Mr. John Mitchell Purves, of Sydney, has applied to the Parliament of New South Wales, on behalf of the Menindie and Broken Hill Tramway and Ore Dressing Association of Sydney, for leave to construct a tramway between the towns of Menindie and Broken Hill, we are of opinion that the proposed tramway would prove a great benefit to your Petitioners for the following reasons :—

- (1.) That there being at present no direct communication with Broken Hill through the territory of New South Wales, coke manufacturers and coal producers in New South Wales, who desire to trade with Broken Hill, are at a considerable disadvantage owing to the long train journey to Broken Hill through the Colony of South Australia, and the difficulty of getting freight at a moderate and remunerative charge to Port Pirie in South Australia from the ports of shipment in New South Wales.
- (2.) That the proposed tramway would bring Broken Hill into direct communication with the Murray, Murrumbidgee, and Darling River Steam Navigation services.
- (3.) That New South Wales coke and coal could then be sent over the New South Wales railways from Sydney to Bourke, Albury, or Corowa, and (when the projected connection with Jerilderie is carried out) also to Moama.
- (4.) That this merchandise could then be carried by steamers to Menindie, on the River Darling, for transmission to Broken Hill over the proposed tramway.
- (5.) That generally the proposed tramway would be beneficial to your Petitioners.

Your Petitioners therefore pray that your honorable House will take the above facts into your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

NEW SOUTH WALES.

---

MENINDIE AND BROKEN HILL TRAMWAY BILL.

(PETITION FROM CERTAIN CITIZENS OF BROKEN HILL AGAINST.)

---

*Received by the Legislative Assembly, 22 September, 1892.*

---

To the Honorable Speaker and Honorable Members of the Legislative Assembly of New South Wales.  
WE, the undersigned Citizens of Broken Hill, respectfully beg to notify to your Honorable House, that it having come under our notice that a Petition has been signed praying for the construction of a tram-line from Broken Hill to Menindie by private enterprise, your Petitioners beg to strongly protest thereat, and humbly petition your Honorable House as follows:—

- (1.) That the proposed tram-line be constructed by the Government as a State enterprise, as your Petitioners feel assured that the undertaking would prove highly reproductive work.
- (2.) That no power or concession of any description be granted to any private company or syndicate to carry out the said tram-line.
- (3.) Your Petitioners humbly pray that a Government official be at once deputed to inspect and report upon the proposed route, with a view of Parliament being asked to sanction the undertaking in the interest of the people as a whole.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 2,490 signatures.]

NEW SOUTH WALES.

**MENINDIE AND BROKEN HILL TRAMWAY BILL.**

(PETITION FROM CERTAIN CITIZENS OF BROKEN HILL, IN FAVOUR OF.)

*Received by the Legislative Assembly, 27 September, 1892.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales.

The Petition of the undersigned citizens of Broken Hill,—

HUMBLY SHOWETH:—

- (1.) That having attached their signatures to a Petition already presented to your Honorable House, praying for the construction of a Tramline from Broken Hill to Menindie, their signatures were attached under the misconception that such Tramline was to be a State undertaking, and not to be carried out by private enterprise.
- (2.) That the proposed Tramline should be constructed by the Government in the interests of the people as a whole.
- (3.) That the proposed route be at once inspected and reported upon by a Government official.

Your Petitioners, therefore, humbly pray that a Government official be at once deputed to inspect and report upon the proposed route, with a view to Parliament being asked to sanction the undertaking in the interests of the people of the Colony as a whole.

And your Petitioners, as in duty bound, will ever pray.

REPORT FROM THE SELECT COMMITTEE

ON THE

**MENINDIE IRRIGATION BILL;**

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDIX.

---

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,  
22 *March*, 1893.

---

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1893.

1892-3.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.

VOTES No. 69. WEDNESDAY, 23 FEBRUARY, 1893.

5. **MENINDIE IRRIGATION BILL**:—The Order of the Day having been read,—Mr. Barbour moved “That” this Bill be now read a second time.  
Debate ensued.  
Mr. McCourt moved, That the Question be amended by the omission of all the words after the word “That,” with a view to the insertion in their place of the words, “the Bill be referred to a “Select Committee, with power to send for persons and papers, for consideration and report.  
“(2.) That such Committee consist of Mr. Lyne, Mr. Barbour, Mr. Young, Mr. Dickens, Mr. Gormly, Mr. Cotton, Mr. Hayes, Mr. A’Beckett, Mr. O’Sullivan, and the Mover.”  
Question proposed,—That the words proposed to be omitted stand part of the Question.  
Debate continued.  
Question,—That the words proposed to be omitted stand part of the Question,—put and negatived.  
Question,—That the words proposed to be inserted in the place of the words omitted be so inserted,—put and passed.  
Main Question,—  
(1.) That the Bill be referred to a Select Committee, with power to send for persons and papers, for consideration and report.  
(2.) That such Committee consist of Mr. Lyne, Mr. Barbour, Mr. Young, Mr. Dickens, Mr. Gormly, Mr. Cotton, Mr. Hayes, Mr. A’Beckett, Mr. O’Sullivan, and the Mover,—put and passed.

VOTES No. 74. WEDNESDAY, 8 MARCH, 1893.

5. **MENINDIE IRRIGATION BILL**:—Mr. Barbour (*by consent*) moved, without Notice, That Mr. Young be discharged from attendance upon the Select Committee on the “Menindie Irrigation Bill,” and that Mr. Cann be added to such Committee.  
Question put and passed.

VOTES No. 80. WEDNESDAY, 22 MARCH, 1893.

4. **MENINDIE IRRIGATION BILL**:—Mr. Barbour, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee, for whose consideration and report this Bill was referred on 23rd February, 1893, together with Appendix and a copy of the Bill as amended and agreed to by the Committee.  
Ordered to be printed.

**MENINDIE IRRIGATION BILL.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 23rd February, 1893,—the “*Menindie Irrigation Bill*,”—beg to report to your Honorable House,—

That they have examined the witnesses named in the list\* (whose <sup>\* See list,</sup> evidence will be found appended hereto), and carefully considered the Bill referred, <sup>p. 8.</sup> in which it was deemed necessary to make certain amendments.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

ROB. BARBOUR,  
Chairman.

*No. 3 Committee Room,  
Sydney, 21st March, 1893.*

" " 91 87, " 34. *Omit* "upon the application of the Promoters"

" " lines 35 to 42. *Omit* "declare that the provisions of this Act, or any of them, shall be extended to lands within the Counties of Menindie, Tandora, and Yancowinna, other than those within the areas described in the First and Second Schedules hereto, and thereupon such lands, which shall in such proclamation be described, shall be included within the provisions of this Act, in the same manner and, so far as possible, to the same extent and effect, as if such lands had been part of the lands described in the First and Second Schedules to this Act originally" *insert* "alter the boundaries of the Irrigation Cultivation Area, but so that the extent thereof shall not be increased or decreased"

" " 92 88, " 43 to 46. *Omit* "irrigation works and permanent improvements to the value of five thousand pounds be carried out upon or in connection with the Irrigation Cultivation Area within two years after the passing thereof" *insert*

"(a.) The construction of irrigation works be commenced by the Promoters within six months after the passing of this Act.

"(b.) The sum of two thousand five hundred pounds be expended upon or in connection with the irrigation works and permanent improvements contemplated in this Act within one year after the passing of the Act.

"(c.) The sum of five thousand pounds be expended upon or in connection with the irrigation works and permanent improvements contemplated in this Act within two years after the passing of the Act.

"Provided that the Minister shall have power to extend the time in each of the aforesaid cases for a further period of six months if reasonable cause be shown by the Promoters."

Page 5. *Insert* the following new clause to stand as clause 7 :—

7. Any person authorised by the Minister in that behalf may at any time except Sundays, between the hour of six in the morning and six at night, enter the lands of the Promoters and view and inspect the irrigation works thereon, and any irrigation works belonging to the Promoters, and may take such steps as he may deem necessary to gauge the discharge and flow of water at any part of the works, and the Promoters shall afford to such person every facility for making such inspection.

Page 14. *Insert* the following new clauses to stand as clauses 60 and 61 :—

60. Subject to the performance by them of the conditions specified in this Act, the Promoters shall, on the publication of the said notice, hold the lands described in the Second Schedule hereto, or the balance thereof from time to time, of which no such grant shall have been issued under the provisions of this Act, as lessees from the Crown, and shall pay to the Crown an annual sum in name of rent, at a rate to be fixed as provided by the existing Lands Acts, or any future amendment thereof. And, until such grant shall have been issued as aforesaid, the Promoters shall be entitled to sub-lease any part of the lands described in the Second Schedule hereto, or the balance thereof from time to time, of which no such grant shall have been issued, and to enter into any contract for the sale of any such part of the said lands conditional upon the issue of any such grant thereof.

Conditions on  
which grants to  
issue.

61. For every two pounds expended by the Promoters upon or in connection with the Irrigation Cultivation Area in irrigation works and permanent improvements, the Governor shall, on payment to the Crown by the Promoters of the sum of one pound five shillings, and on the performance of such of the conditions herinafter mentioned as they were then liable under this Act to perform, issue to the Promoters a grant of one acre of land required by the Promoters within the area described in the Second Schedule hereto, provided always that no such grant shall be issued except for a parcel of land containing not less than one hundred acres. And every such grant shall be for an estate of inheritance in fee-simple in possession, subject to the conditions and reservations contained in Crown grants issued under the Crown Lands Acts in force for the time being and the provisions of this Act.

Page 22, First Schedule, line 50. *Omit* "those thirty-eight thousand six hundred and forty acres of"  
*insert* "that"

" " " 51. *Omit* "including" *insert* "being"

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MENINDIE IRRIGATION BILL.

WEDNESDAY, 1 MARCH, 1893.

Present:—

MR. A'BECKETT,	MR. GORMLY,
MR. BARBOUR,	MR. HAYES,
MR. COTTON,	MR. McCOURT,
MR. DICKENS,	MR. O'SULLIVAN.

R. BARBOUR, Esq., IN THE CHAIR.

Alexander Matheson, Esq., appeared as Solicitor for the Bill.

Mr. Hugh Giffen McKinney called in, sworn, and examined:—

1. *Chairman.*] What are you? Chief Engineer for Water Conservation.
2. *Mr. Matheson.*] Have you read the Menindie Irrigation Bill? Yes.
3. Have you had ample opportunity of considering all its terms and provisions? Yes.
4. When the Menindie Irrigation Bill was before a Select Committee of the Legislative Council were you absent on the Darling River? I cannot speak exactly.
5. It was in October or November, 1892? I know I was absent from Sydney during the greater part of November, 1892.
6. When you returned did you make a report to the Minister for Works upon this Menindie Irrigation Scheme? I believe that when I was in the country I was asked to report.
7. Did you do so? Yes.
8. When the Bill was before the Legislative Council did you attend on every occasion when it was discussed? Yes, I believe I did, or at all events on almost every occasion.
9. Did you give the benefit of your advice to the Minister of Justice who was representing the Government in the Upper House? I did, so far as I had opportunity.
10. Did you propose any amendments in the Bill? I made some suggestions to the Minister of Justice.
11. Were those suggestions adopted by the promoters of the Bill? I believe they were.
12. Were they incorporated in the Bill? I am not sure about all of them, but I know most of them were.
13. Was one of those suggestions the provision contained in clause 6 for the preservation of the rights of the Crown and resumption, and that the provisions of the Act should be subject to the provisions of any general legislation to deal with water conservation throughout the Colony? I think so.
14. Was another of those suggestions the provision incorporated in clause 7, that the promoters shall make payment to the Crown of charges for water-rights? Yes.
15. Generally speaking, do you approve of this scheme? Yes; I think that schemes of this kind, properly carried out, would be beneficial to the country.
16. *Chairman.*] As Chief Engineer for Water Conservation, do you think this Bill sufficiently protects the rights of the public? Well, I think that is a very doubtful point.

Mr. H. G.  
McKinney.  
1 Mar., 1893.

Mr. H. G.  
McKinney.  
1 Mar., 1893.

17. Have you any suggestions to make so as to make the Bill more perfect? The best suggestion I have to make is that a Bill defining riparian rights should be passed first. My reason for that suggestion is this: We have got clause 6 in this Bill, which apparently protects the rights of the public completely; but I suppose that this company, like any other company or municipality, is only mortal, and it is only natural that having a clause like that in the Bill they would be antagonistic to the passing of a general measure. That is the fear I should have.
18. What effect could they have in any opposition against the passing of a general Bill? It would be merely adding one more to the number of opponents to a general Bill.
19. In what way would the carrying through of this scheme be antagonistic to a general Bill? In this way: Clause 6 puts the company under any general Bill that may be passed by Parliament. A Bill that will be passed by Parliament will no doubt contain certain restrictions and limitations under which the company would come, and it is very natural that the company should not care to be put under any more restrictions or limitations.
20. But do you think their wishes in that matter would affect such a large public measure of that description? As far as my opinion is concerned they would not very materially. But there are a number of Bills of this kind being passed, and every new Bill of this piecemeal legislation may raise up other opponents to a general measure. For instance, these Bills for municipalities raise up opponents. The people of Hay, Balranald, and other places would not care for a general Bill being passed.
21. But do you think that a matter involving a public benefit should be made to remain in abeyance until some other Bill is passed by the Legislature, which may not be passed for years? That is a point upon which I do not think I can express an opinion. That is more a matter for the statesmen of the country. I only just give the opinion that it does raise up objections. But supposing that those who know a great deal more than I do about the statesmanship of the country believe that a general Bill would not be passed, it certainly would be a pity to see private enterprise blocked.
22. Are there any other suggestions you would make for the protection of the public interests, as an improvement in the Bill? There are one or two points where I think amendments would be beneficial. I think if this Bill were passed that it would be worth while to insert a clause in it providing that the promoters could not in any way obstruct such a work as the locking of the Darling. For instance, if it were proposed to construct a weir near Lake Menindie, that the company not only could not obstruct that work in any way, but that if they could be proved to derive a benefit from the work, they should pay a certain amount in proportion to the benefit so received.
23. Is there not a clause in the Bill already that binds them to pay? That is merely in case a general rate for water were put on. It does not apply to a case where public works would be carried out beneficial to the company. For instance, supposing it were found out that they could not depend on a permanent supply without a weir, the Government might construct the weir to secure a permanent supply, and that would be worth a certain consideration to the company. I am only supposing a case.
24. Do you suppose it possible that the Government would construct any works specially for the benefit of this company? No.
25. Would the works the Government would be likely to construct be entirely for the public benefit? They would be intended to be so; but they might benefit the company.
26. And you think that the company ought to contribute a share? If they derive benefit.
27. Would it not be difficult to put such a clause in the Bill, as the provision would be contingent upon something which might never occur? It is a difficult point to meet, no doubt.
28. Do you not think that clause 7 would provide for all you want; or would you like to insert some additional words in it? I am not very sure. That would be more a matter for a lawyer to decide. I could not say exactly whether that might be made to cover the whole matter.
29. As you have already been in correspondence with the Minister of Justice in reference to the Bill, will you take an opportunity of still further asking him if he could advise you whether any alteration should be made? Yes.
30. And if he does suggest anything, would you furnish it to me as Chairman of the Committee, and we will see that it is inserted—would that meet your views? Yes; I will do that.
31. You will be guided by the Minister of Justice as to the necessity for any additional words being inserted in the Bill? Yes.
32. That will be satisfactory to you? Yes.
33. Is there any other suggestion you would make? Yes; there is another point. I am doubtful as to whether sufficient provision is made for the company paying any compensation that may be involved by the interference with the present tenure of the land. I am not sure whether the clauses are sufficient to protect the Government from any loss with regard to the land around the lakes, supposing claims were made.
34. As representing the Water Conservation Department, will you be satisfied if the Lands Department see that proper provision is made for compensation? Certainly. That applies also to the temporary common reserves at Menindie that run into the lake. The Lands Department have to deal with those also. There is another point in reference to which I think it might be advisable to insert a provision in the Bill. As the lands which are being given over are public lands, and there are concessions being given to the company, it seems reasonable that something definite should be stated as to the manner in which the land will be settled. I understand the idea is to bring in settlement on the land.
35. There is a condition that the company must spend £2 an acre upon improvements, and then they are to have the right of purchase at £1 5s. an acre, the land then becoming freehold? I see, however, from the examination of Mr. Hogg, who gave evidence on behalf of the company before the first Select Committee, it was mentioned that there would be an arrangement under which the land would be divided up into blocks of certain sizes.
36. I suppose you will give the same answer on this point—that if the Lands Department see that sufficient provision is made in the Bill, you will be satisfied? Quite so.
37. Is there anything else you would suggest? No; I think those are the only points.
38. Is it your opinion that a work of this description established on the Darling River at the spot stated would be a benefit to the country? Yes; I believe it would.
39. Especially would it be a benefit to Broken Hill if there was a tramway leading from it? Undoubtedly.

Mr. H. G.  
McKinney.

1 Mar., 1893.

40. Would it prejudice in any way the benefits the Government are now deriving from that land, in your opinion? No, not at all, I think.
41. Would it interfere in any way with the conservation of water, looking at it from a public point of view—would the making of weirs and other things there be beneficial, in your opinion? The proposed works would be beneficial, I believe, from a public point of view—that is, of course, provided there are sufficient safeguards on the points I have mentioned—that there should be no obstruction to the locking of the Darling, and so on.
42. Are you aware that the point where the proposed irrigation land commences is some miles away from the river? Yes.
43. And would not interfere in any way with any works that might be made on the banks of the river itself? It would not necessarily; but I understand that the dam, which is to be made near the entrance to Lake Menindie, will be near the river.
44. *Mr. Gormly.*] Are you acquainted with the situation of Menindie and with the adjoining land? Yes; I have been over most of it.
45. The lake is only filled periodically from the river? Yes.
46. And the flow from the river does not run into the lake in some years? When it is very low it does not run in; there are some years, I believe, when it does not run in.
47. And it is proposed, I suppose, that when the water runs it will be prevented from running back again into the river? That is the intention, I believe.
48. By erecting dams or flood-gates? Yes.
49. Are you of opinion that if weirs were placed in the Darling it is probable they would ensure a more constant supply of water in the lake? It seems probable they would have an effect of that kind. If the company store very high supplies in the lake, I believe they ought to make it permanent.
50. There would not be much chance of a failure of water? I do not think so, if they make the best of the circumstances.
51. *Chairman.*] And it will be to their interest to make the best of the circumstances? Undoubtedly.
52. *Mr. Gormly.*] The land is suitable for irrigation? There is a large amount of it, I know, that is suitable.
53. And will the lift from the water to the land be anything considerable? No; it is not a great lift. I forget the height of it, but I know the lift is moderate. Speaking from memory, I should not think it was more than 25 or 30 feet.
54. *Chairman.*] The height will not be objectionable? No.
55. *Mr. Gormly.*] It is a practicable scheme for irrigation—it could be carried out? Yes; I think it is.
56. Probably carried out profitably? Yes; I think it probably could.
57. And the climate and soil, if there is a supply of water, will be likely to cause the land to be made productive? Undoubtedly.
58. And the country would probably carry a large population? Quite so.
59. And have a large amount of produce to sell profitably in that part of the country? Yes, undoubtedly. I think the land only wants water. I think with water it would be very productive.
60. *Mr. Hayes.*] It is provided in the Bill that the water-rights will be absolutely given to the company. Do you not think it desirable that there should be some limitation—I mean looking at the future of the country? Yes. I think you will find it is only the right of user.
61. But there is an unlimited right of user—there is no limit of time? That is a point I am not very sure of—in fact, that is a matter that comes within the province of statesmanship more than anything else. It is not a question I could give much of an opinion upon. There may be strong reasons against it; but, on the other hand, there are strong reasons for it, because people who would settle down on a freehold with the intention of irrigating it would like to have a perpetual right.
62. Is there any provision in the Bill by which, in the event of irrigation not being carried on, the water-rights will cease? I do not think so.
63. Do you think it advisable that a clause of that kind should be inserted? Well, it might be just as well.
64. As a matter of fact, would it not be advisable, in your opinion? I think it would be better. Supposing the company did not put these rights in force within a certain length of time, it would be advisable.
65. Or if they left them in abeyance afterwards for any period? Yes; I think it would be a useful condition.
66. Is not that the system adopted in America? I do not know, but I know the systems they adopt in America are remarkably bad, as a rule. Their legislation in America so far has been a terrible failure.
67. It has been State legislation, and different in some States to what it is in others? My own idea is that all these things should come under a general Bill, which should be passed, defining riparian rights. I think there should be no necessity at all for all these separate Bills.
68. You are of opinion that it is absolutely essential that a Bill should be brought in at as early a date as possible defining the riparian rights of the Crown? Certainly.
69. And the conditions on which they should supply private individuals with water? Certainly.
70. You have referred to clauses 6 and 7, which you propose should be amended as you have pointed out? Yes; clause 7 is the one I have promised the Chairman to attend to.
71. Would it not be necessary also to provide clearly in these clauses that in the event of the Government resuming, which they have power to do under clause 6, the manner in which compensation should be awarded should be definitely settled. Clause 90 provides for arbitration in general terms. Clause 6 provides that the Governor may take possession and control of the whole of the lands, works, &c. Then the question of compensation arises, and the provision in clause 90 is rather vague. Would it not be advisable to have that clearly defined? I think it would. Perhaps I might refer this also to the Crown Law Officers for advice.
72. You know the area of land proposed to be taken by the company? Yes; I think the cultivation area is 25,000 acres.
73. I should like your opinion as to whether it would not absorb the whole of the water in the lakes, and all the water that can be put into the lakes, to irrigate that area? I do not think so. Lake Menindie has an enormous area, and, as the promoters of the company point out, 1 foot of water off the lake would irrigate the whole of the area for a year. If it would not do it, it would come pretty near it. I fancy it would.

Mr. H. G.  
McKinney.  
1 Mar., 1893.

74. How many inches per acre do you think it would take to irrigate the proposed irrigation farm? I should say probably from 12 to 15 inches, if the water were economically used. It might not be economically used; but still that is allowed for. The area of the lake is something like 38,000 acres, and the cultivation area is about 25,000 acres; so that 1 foot of water from the lake would put considerably more than 1 foot of water on the ground.

75. You think the irrigation area would not absorb all the water from the lake? No; I do not think so.

76. There will be room for other irrigation farms if necessary? I think so.

77. Do you think it will be necessary to erect a weir, so that when the Darling rises to a certain height it will run in and fill up the lake—I mean in order to provide a permanent supply of water? If the company carries out its proposal to have flood-gates erected in such a way that all the water that goes into the lake will be kept in, I think it will probably be permanent in that way.

78. You think that that would be sufficient? I think it would.

79. You said in answer to a question by the Chairman that you wanted provision, in the event of the Government erecting weirs, by which the rights to be given to the company should not in any way interfere with those Government works? Yes. Of course there are two ways of looking at the question of erecting the weirs. I said, in the first place, it would be a bad thing if the company were in a position to obstruct the construction of such weirs; and, in the second place, if they derived any benefit they should pay for that benefit. At the same time, I think that if the company constructed flood-gates so as to retain the whole supply that went in, they ought to have a permanent supply.

80. Independently of the river? Dependent only on flood-water. It does not take a very high flow in the Darling to make a flow into the Menindie Lake.

81. *Mr. Gormly.*] Do you know what additional quantity would be retained by the erection of the proposed flood-gates—the additional depth? I have not seen any designs supplied by the company.

82. Have you sufficient knowledge of the channel to know what additional quantity of water the flood-gates would retain in the lake? We measured the water in the lake a year ago, and found the depth to be 13 feet 3 inches, and at that time it was not at its highest, so that I fancy it would be possible to retain a depth of 14 or 16 feet.

83. *Mr. a'Beckett.*] Was the water running into the lake when you measured it? It was pretty nearly steady at the time. But I have no details at all in regard to the scheme. I just know the general statement of it—in fact, no details have been furnished, and probably have not been prepared, so that it is impossible for me to say exactly what the company intend. I only went by the general statements that have been made.

84. *Mr. Hayes.*] It is provided that the water for irrigation shall be provided by pumping? Yes.

85. You have a knowledge of similar works in Victoria, and the cost of pumping at Mildura, where I understand the lift is pretty much the same as it will be at Menindie, namely, about 30 feet? No, it is much higher at Mildura.

86. Are you aware what is the cost of pumping per acre at Mildura? I know how much they say it is. They say they would require to strike a rate of at least £1 an acre per year.

87. That is the cost of pumping alone? I understood that in addition to the cost of pumping that included interest on the construction of the channels, and the cost of maintenance of the channel. Of course that was not a very heavy item.

88. *Mr. a'Beckett.*] Is that what they state now, or what they stated formerly? That is what they stated recently.

89. Formerly they said the cost was 6s. an acre? Five or six months ago they stated it would cost £1 an acre.

90. *Mr. Hayes.*] Are you not aware that that cost of £1 per acre merely represented the cost of pumping and the maintenance and repairs of channels, irrespective of interest on the cost of machinery? I believe so. I do not think it did include interest.

91. Can you say whether people who go on irrigated farms such as this can compete successfully with those on land that does not require irrigation? I fancy that, under favourable circumstances, they can compete.

92. *Mr. McCourt.*] If the company settle people on this irrigation area of 25,000 acres for the purpose of working the land, do you not think they should be bound by the Bill to continue the supply of water to those people? Yes. That is a very complicated question, especially as there is nothing definite made known at the present time as to the character of the settlement.

93. You know there is a difficulty at Mildura now about the very same thing? There undoubtedly is a very serious difficulty.

94. Do you not think that after they have sold this land to people for the purpose of working it by irrigation the company ought to be strictly bound under this Bill to continue the supply of water to these people? I think so, certainly. There is not the least doubt that the interests of the settlers at Mildura were not sufficiently protected.

95. Do you not think there ought to be a clause in this Bill protecting the people who settle on the land in this respect—that is, providing for a constant supply of water by the company who sell the land? I think there should certainly be sufficient provision, if not contained in the present laws. But this Bill gives really very little information as to the settlement.

96. If the company settle people on this land, and sell the land to them, ought they not to be bound to continue the supply of water? Yes, most decidedly.

97. There ought to be a clause in the Bill to that effect? Yes.

98. Do you think Lake Menindie will give a permanent supply of water? Well, I think it will, if they make the most of the storage that is afforded. But, of course, that involves a big work of which we have seen no plans. There is a large work required. There is a large weir and flood-gate wanted, and if that great supply of 38,000 acres, with a depth of 16 feet, is retained, I do not see why they should not have a permanent supply.

99. When you gave evidence on the Broken Hill Water Supply Bill, did you not throw doubts on the permanency of the supply? Yes, I did; but that was a different matter.

100. In what respect? It was quite different in this respect: To begin with, they did not intend to use Lake Menindie at all, but Lake Speculation. Lake Menindie was to be used only as the channel through which the water would flow to Lake Speculation.

Mr. H. G.  
McKinney.  
1 Mar., 1893.

101. But did you not say that Lake Speculation was the best lake? It was the better lake of the two for them, because the bottom of Lake Speculation is about 9 feet lower than the bottom of Lake Menindie. And then supplying a town is a very different thing to supplying an irrigation settlement. You estimate your water for a town by gallons, but you estimate your water for an irrigation supply by cubic feet per second. It makes all the difference.

102. There would be more water used in this case? The quantity of water used for domestic supply is a mere trifle compared with what is used for irrigation.

103. In your evidence on the occasion referred to, did you not state that Lake Menindie was very often dry? Yes.

104. What is the evaporation from Lake Menindie? It is very difficult to say. It might be 3 or 4 feet in the year, or it might be more.

105. It might be 3 or 4 feet in the year? Probably 3 or 4 feet in the year, as far as experiments go at the present time; but it is a thing about which the information is very contradictory. Mr. Russell thinks that evaporation depends more on the winds than on the sun.

106. *Mr. Gormly.*] And the depth of the water? It depends a good deal on the depth of the water, of course.

107. Is there much shallow water in Lake Menindie? There is a good deal.

108. The evaporation would be greater on that account? Yes.

109. *Mr. McCourt.*] Before any of the lands were sold, do you not think it would be necessary to have the dam constructed, of which you speak, so as to ensure a permanent supply—that before they sell the land the company should be compelled to make the dam which you say is necessary to provide a permanent supply? I think it would have been well if, in the first instance, details had been supplied as to the arrangement by which the supply would be kept up; that is to say, details as to the construction of these works. There is no information supplied; we have merely a general statement.

110. Do you not think also that there should be a plan accompanying this evidence showing exactly the land the company propose to take and the rights they propose to have? It would be advisable, undoubtedly.

111. Will giving the company Lake Menindie practically give them the control of the other two lakes—Cawndilla and Lake Speculation? Well, as I understand the Bill, they have only the right to use the water of Lake Menindie.

112. They have control of all lakes and channels leading into Menindie;—does not the channel from Lake Speculation lead into Lake Menindie? There is a small channel connecting Lake Menindie with Lake Speculation.

113. If they had control of that channel, would they not have control of Lake Speculation for all practical purposes? I am not quite sure of that.

114. *Chairman.*] Are there other channels? No; Lake Speculation depends entirely on the channel connecting with Lake Menindie.

115. *Mr. McCourt.*] If this company have control of the channel between the two lakes, which they propose to take under one of the clauses of the Bill, will they not have practical control of Lake Speculation as well as Lake Menindie? Yes. If they have a right of preventing the water from flowing into Lake Speculation when they pleased—if their right includes that, of course, it would practically give them control of Lake Speculation.

116. *Mr. Hayes.*] Would not an amendment of this kind cover that—that only all creeks running from the Darling into Lake Menindie should be reserved to the company? Yes.

117. *Mr. McCourt.*] But if the company supplied us with plans showing the rights they want we could see what they would take? Yes; it would make the matter clear.

118. At present we are really in the dark as to the rights they require—or you are? No; I am not altogether.

119. You have not seen a plan, have you? I have seen a plan. When the Bill was put into my hands, seeing that there was no plan with it, I got the schedule taken up and a plan made out from it of the irrigation area the company wanted.

120. But just now you stated that you did not know the company claimed these channels and creeks running into Lake Menindie? I know they claimed the creeks running into Lake Menindie, because they claimed a right to put a dam across.

121. And the channels too? And the channels necessarily.

122. Would they control Lake Speculation if they have the right to these channels? Yes.

123. Do you think it is right to give them control of Lake Speculation as well as Lake Menindie? No, it is not. I certainly did not think that they would have control of Lake Speculation as well. I understood there was a provision which reserved that.

124. You think the Bill ought to be altered so as not to give them control of Lake Speculation? Yes, it ought. It was mentioned somewhere in connection with the evidence that the company did not want control of Lake Speculation. It was mentioned in the proceedings before a Select Committee of the Legislative Council.

125. But if they have control of the channels they practically have control of Lake Speculation? Yes; and it is certainly desirable they should not.

126. Do you think the words used in the first schedule of the Bill “including the area covered by Lake Menindie” would give the company sole control, and the exclusive use of Lake Menindie? I do not think so, especially as it is mentioned in the Bill that they have only the right of user.

127. Do you think that this company should have the exclusive right to Lake Menindie to the exclusion of all other companies? No, I do not. But I understood from the wording of the Bill that they had not the exclusive right. That is what I understood from the term “right of user.”

128. At any rate, if it is not so provided in the Bill, you think it should be distinctly stated that the company should not have the exclusive right to the whole of Lake Menindie? Quite so, I think that should be made clear.

129. *Mr. Cotton.*] Clause 48 is as follows:—

Upon the publication of the notification in the *Gazette* declaring that the lake, creeks, and lands therein described are so required and set apart, the right of user of the water in, over, or upon such lake, creeks, and lands shall be vested in the promoters in trust for the purposes of this Act.

How do you interpret that clause? I understood it simply gave the company the right to use the water. I may have misunderstood the legal signification of the term.

Mr. H. G.  
McKinney.  
1 Mar., 1893.

130. And are they the only people who will have the right to use the water? No; I did not understand that.

131. *Mr. McCourt.*] At any rate, you think a clause ought to be inserted in the Bill to provide distinctly that they shall not have this exclusive right? Quite so.

132. Will you look at clause 91? That is intended to provide for any possible extension of the irrigation area.

133. But under that clause the company could enlarge their area to an unlimited extent within the three counties named? Yes; if they get the sanction of the Government.

134. And exclude everybody else? Yes; if the Government allowed it, I suppose they could.

135. Do you think that clause sufficiently protects the public interest? Well, it certainly should do so. It is to be supposed that the sanction of the Government would not be given to a thing that was in any way unjust to the public.

136. Would it not be better to confine the company to the rights given in the two schedules of the Bill? I am not very sure of that. In the case of the Wentworth irrigation area they found there was an error—at least they believed there was an error—in the original description. They were bound to erect their pumping machinery within what was proclaimed in the Act as the irrigation area, and the result was that the scheme the people mostly favoured fell through. In the same way it is possible that there may be something in the calculations of the promoters of this scheme that might lead to the discovery that they would require to take a very small portion of additional land, and the omission of the clause you mention would prevent them from getting any such extension. There might possibly be some clause limiting the extension, saying that it should not go beyond a certain area.

137. You think the clause might be amended in that way? Yes; it is just a question whether it does or does not protect the rights of the public sufficiently in its present form. If it is decided that it does not, a clause such as I have indicated could be inserted.

138. *Mr. Cotton.*] Taking clause 48 in conjunction with clause 52, is it not obvious that the promoters of this scheme are the only persons who will have the right to take the water from these lakes, and supply it to persons using it? I did not understand that.

139. *Mr. McCourt.*] According to the last clause the company are bound to spend £5,000 within two years after the passing of the Act, or it will become null and void. Do you think it is right to give the company a period of two years, within which they may hang up this Bill, and do you not think one year would be sufficient? It would certainly be an improvement if it were stated that the work should be commenced within a certain period, and that there should be so much money expended within two years.

140. I mean to prevent the hanging up of this Bill for a couple of years, which might otherwise be done. Would it not be better to provide that the company should commence operations within six months? Yes, it would improve the clause.

141. Do you think that two years is too long a time for the expenditure of £5,000. Do you not think that that sum should be expended in one year; or say £2,500 in the first year, and a similar amount in the second year? Yes, that would be better, certainly. There is a certain delay involved in ordering machinery from England. But it would undoubtedly be an improvement to provide that £2,500 should be expended in the first year, and the same amount in the second year.

142. Do you not think that the expenditure of this sum of £5,000 should be approved of, or certified to, by yourself or some other responsible officer under the Government? Yes.

143. You think that that provision ought to be inserted in the Bill? Yes; it would be an improvement if the clause were worded to the effect that this expenditure should be made subject to the Minister's approval, and that he should be satisfied that the terms of the Act had been carried out.

144. *Mr. Cotton.*] Do you think it would be a sufficient guarantee of the *bona-fides* of the undertaking if the promoters were bound to commence operations within six months, and to spend £5,000 within two years? Well, "commence" is a very vague term.

145. *Mr. Hayes.*] Do you adhere to your first answer on that point—that it would be advisable to commence within six months and spend £2,500 the first year, and £2,500 the second year? Yes; I mentioned that I thought that would be a decided improvement.

146. *Mr. McCourt.*] And that an officer of the Department should certify that the money has been expended? Quite so.

147. *Mr. Cotton.*] Clause 6 states as follows:—

Nothing in this Act shall be construed to limit or in any way interfere with the rights of the Crown to the general control of natural supplies of water; and the provisions of this Act shall be subject to the provisions of any general legislation to deal with water conservation throughout the Colony.

Do you think it possible for the promoters to acquire any rights under clause 48, relating to the right of user, which would conflict with clause 6—which clause 6 would not over-ride? I think clause 6 would cover everything.

148. You think it would be impossible for the company to get any absolute monopoly of rights under these other clauses which could not be over-ridden by clause 6? So I understood. But there is a question about the interpretation to be put on the term "right of user," and I will ascertain the opinion of the Government law adviser on the subject.

149. *Mr. McCourt.*] And would you also find out whether the words "general control of natural supplies of water" in clause 6 would enable the Government to use the water? Yes.

150. *Mr. Hayes.*] Do you think it would be advisable to provide in the Bill that this company shall not have the exclusive right of user over the waters of Lake Menindie? Yes; it certainly would. They should not have the exclusive right.

151. *Mr. Dickens.*] You say you do not know what the evaporation from Lake Menindie is? No, I could not tell exactly.

152. Do you know what the drain from the lakes would be in irrigating 25,000 acres? It is stated by the company that 1 foot off the lake would irrigate the whole of their area for the year.

153. Is that your opinion? Yes; I think they could do so, because the lake covers 38,000 acres, and their whole area is only 25,000 acres; so that I do not see why they should not be able to do it with proper management. Besides, as a matter of fact, they are not in the least degree likely to irrigate the whole area for a good many years to come.

154. Do you know how the scheme will affect people who have frontages on the lake? There are reserves that go into the lake more or less. There is the temporary common at Menindie for one thing, and there are one or two homestead leases that go into the lake.

Mr. H. G.  
McKinney.

154½. Mr. McCourt asked you about the right to the channel. Suppose the channel from Lake Menindie to Speculation were left open and not touched, would that remove one of the objections to the Bill? Yes; I think it would.

1 Mar., 1893.

155. Generally speaking, do you consider the scheme is practicable, if guarded by reasonable precautions? Yes; I think such a scheme could be carried out. Of course, in saying that the scheme is practicable, I am only speaking from the general information that is given.

156. You think it would be a judicious scheme to authorise in the public interest? I mentioned that the great objection to the Bill was the passing of a Bill like this before a measure is passed defining riparian rights—that there is an objection to passing any Bill of this kind before a Bill defining the position of the Government is passed—even for Municipalities.

157. *Mr. a'Beckett.*] I think you said that though you have an objection on that ground, Clause 6 would allow the Government to take any control that might be given at any future time under a Bill defining riparian rights—it would get out of the difficulty in that way? Yes; I think it would to some extent.

158. So you do not think that is an absolute objection to the Bill? No. It is a matter for statesmen and politicians as to whether things of this kind should be delayed. They know, better than I do, when such a general Bill is likely to be passed.

159. Is there any record as to how long a period Lake Menindie has stood without the Darling running into it at all. Is it a fact that the Darling sometimes does not run into it for two or three years? I know there was a period of two years, during which, little or nothing ran into it.

160. And you say that when it is locked, they will be able to conserve about 14 feet of water in the lake? That is well within the mark. I forget the exact depth, but I know that is well within it.

161. *Mr. Dickens.*] The lake is deeper in places under ordinary conditions? Yes; I believe it is.

162. *Mr. Hayes.*] That would not be the average depth across the whole of the lake? It would be the depth over a wide area in the centre. It would not be the average depth.

163. *Mr. a'Beckett.*] How many inches of water does it require to irrigate land for cultivation purposes? The quantity varies very much. I have known in this country something like 12 inches of water being put on at one watering. In India, where they know how to use the water economically, they can do it very well with from 3 to 4 inches.

164. But in a climate like Menindie have you any idea of the quantity of water that would be required for irrigation purposes for twelve months? From 12 to 15 inches ought to be ample. In India they generally reckon that an ordinary crop will not require more than four waterings at the outside. That would be about 13 inches—4 inches at the first watering, and three other waterings of 3 inches each. That is the common allowance that is taken for a pretty dry season. But in Australia, although the water is generally pumped, it is used very extravagantly.

165. What is the nature of the soil in this locality? There is a great deal of light-reddish soil—blue bush land, to a large extent.

166. You know Mildura I suppose? Yes.

167. Is the land at Menindie more absorbent than the land about Mildura? No; I should say it is less absorbent.

168. I believe, as a matter of fact, there is an enormous quantity of water wasted at Mildura owing to soakage? Their channels are badly designed to begin with.

169. That could be obviated under a proper irrigation scheme? To a considerable degree it could. If any one on an Indian canal were to propose channels of that kind, he probably would not have an opportunity of proposing any more for some time afterwards.

170. You do not think there would be the same waste from soakage in a properly laid out scheme as now takes place at Mildura? I do not think so.

171. *Chairman.*] How long have you known Lake Menindie? The first time I actually saw Lake Menindie was not more than four or five years ago.

172. During the whole of that time has the lake ever been dry? I do not think it has.

173. Have you always seen an ample supply of water in it? Well, any time I have been there, there has been plenty of water in it.

174. And the information about its being dry is from reports you have heard? Yes.

175. From your knowledge, gained by these reports, how long ago is it since the lake was dry? I am under the impression that it was dry for a short time just before I saw it in 1888.

176. Had there been a drought before that? That was a remarkably dry year.

177. Then, except in extraordinary dry seasons, do you believe the lake would be dry? Only in dry seasons, certainly.

178. And it is your opinion that if weirs and other works are constructed that would be sufficient provision for keeping a continuous supply of water in the lake? Yes; I think the thing is quite possible.

179. That the supply the river will give, supplementing the lake supply, will keep a continual supply in the lake? Yes. Of course the lake depends altogether on the rise of the flood water, and if all the flood water that can be conserved is conserved, I think it ought to give a permanent supply.

180. *Mr. Matheson.*] I think you said that when you saw Lake Menindie it had 14 feet of water in it? About that. I know I had it sounded about the time I was there, and the depth over a good part of it was 13 feet 3 inches.

181. At that time was the water running from the channel into the river? I think it was just beginning to be on the move out. I think the river had fallen at the time I was there first. It flows out again of course under present circumstances when the river falls.

182. Was the river in flood at that time? Yes, it was high.

183. The level marked on the Government plan shows that there was in the deepest part of Lake Menindie, in the 1890 flood, 25 feet of water. Is that right? Yes.

184. Suppose the company put flood-gates upon the river, is there any reason why it should not maintain the level of the water at that height or within 5 feet of it? It would be necessary to see the plans of the works that would be required, before one could tell that. I am not very sure. I know the side of

Lake

- Mr. H. G. McKinney.  
1 Mar., 1893.
- Lake Menindie towards the river; but I do not know the side of it towards Lake Cawndilla, and I do not know therefore, how much it will hold as a permanency without a dam at that side also. I believe I have sufficient levels to ascertain if the Committee desire the information.
185. If a flood gate were put on Menindie Creek to maintain the water at a high level, would not that also keep Lake Cawndilla and Lake Speculation full? It would keep Lake Speculation full; but I think there is an outlet again from Lake Cawndilla which would have to be stopped if there was an idea of keeping it full too.
186. But any person having land round Lake Speculation would have the benefit of the work put up by this company to maintain the high level of the water? Yes, they would benefit certainly if the opening were kept between the two lakes.
187. *Mr. Gormly.*] If you look at the first schedule to the Bill you will see that it contains these words "and the creeks leading into and from the same." Are you of opinion that it would be undesirable that this company should have the right to control the water that would flow from Lake Menindie into other lakes. Do you think it undesirable that they should have the control of the outlets from Lake Menindie which supply other lakes? Yes, I think so. I do not think they should have that control.
188. Do those channels from the Lake Menindie supply the other lakes? Yes, they do.
189. Therefore, you are of opinion that the company should not have control of the outlets from the lake? Yes, quite so.
190. Are you of opinion that it would be desirable that the Bill should be accompanied with plans of the proposed works? It certainly would be better. In any case it should be accompanied by a plan of the lands proposed to be dealt with.
191. And the proposed weirs and flood-gates? It would be better certainly.
192. *Mr. McCourt.*] This information should be printed along with the Bill, so that Members of the House could see it? Yes, it would be better.
193. *Mr. Gormly.*] Are you of opinion that this Bill should be accompanied by plans for the information of Parliament? It certainly would be much more satisfactory.
194. Plans of the proposed works—that is, the flood-gates and weirs? Yes. It would set the matter at rest, because in reply to the questions I have been asked with regard to the feasibility of the scheme and so on, I can only speak from general information.
195. Because you have not had plans before you? I have got the general information from our own preliminary surveys, and I have got general information from the company, and the whole thing seems quite feasible enough. But, of course, speaking in the absence of the plan, I cannot say that the particular scheme to be carried out by the company is feasible, not knowing the details of the plan.
196. And you think that the plans should be submitted and that the promoters should be bound to carry out that scheme according to those plans? That certainly would be the quickest way of doing it. The Bill provides that the plans shall be approved by the Minister; but if the course now suggested were followed the plans would be approved by Parliament.
197. You think that would be the most desirable way? It would be a very satisfactory way.
198. *Mr. Matheson.*] How long do you think it would take to make the surveys necessary to furnish these complete plans? I was under the impression that the surveys had been made already.
199. Are you aware that the Government surveys have been placed at the disposal of the company? Yes.
200. How long do you think it would take to make all designs and plans that would be required in order to say that the works were the best works to be put up and so forth? I was under the impression that in getting out the scheme in this way the company had really the substance of the matter in the rough that is to say, that they had settled what was to be the height of the dam, the width of the flood-gates, and matters of that kind.
201. I presume you mean detailed plans? No.
202. *Chairman.*] What you mean is that general plans should be submitted to show the proposals? Yes.
203. *Mr. Gormly.*] To store the additional quantity of water? Yes.
204. *Mr. Hayes.*] And that when the proper plans are drawn in detail they should be approved of by you? Yes. A clause in the Bill provides that the plans shall be approved by the Minister before the work is carried out.
205. *Mr. Matheson.*] Is not that a sufficient safeguard for the public in regard to any works the promoters intend to put up. They cannot put up anything without the consent of the Minister, and the matter will also be submitted to you;—is not that a sufficient safeguard to the public in connection with the works? As to the character of the works constructed it would be; but it might be more satisfactory to Parliament to know something about what the works were going to be.
206. *Chairman.*] A general outline? Yes.
207. *Mr. Matheson.*] Have you seen the plan now put into your hand which was before the Select Committee of the other House? I do not know that I have seen this plan to look at until to-day. I believe I saw it in Mr. Hogg's hand, but I do not believe I had it in my hand until to-day.
208. *Mr. a'Beckett.*] Do I understand that the plan which you think should be prepared is a plan showing the amount of water conserved—the depth, and so on, and not details of the works? Showing the position and height of the dam particularly.
209. *Mr. Gormly.*] And the additional quantity of water that would be stored by those works? If we had the position and height of the dam we could tell that pretty well. The position of the dam I see is marked on the plan produced.

Mr. Robert Henry De Low called in, sworn, and examined:—

- Mr. R. H. DeLow.  
1 Mar., 1893.
210. *Chairman.*] What is your position in the Lands Department? Clerk in charge of the Lease Division.
211. *Mr. Matheson.*] You have read the Menindie Irrigation Bill, I believe? I read the one which was before the Legislative Council. I have not read the Bill since it left the Council.
212. Assuming that the Bill before the Assembly contains nothing new—it contains less than the Bill as originally submitted to you—can you say you have read that Bill? Yes.
213. Was the Bill submitted to the Lands Department before it was brought to a Select Committee of the other House, and did you see a copy of it and read it? Yes; the Bill was submitted to the Lands Department before the Select Committee of the Legislative Council sat.
214. Did you attend as a witness and give evidence before the Select Committee of the Legislative Council? Yes.

215. Did you propose certain amendments in the Bill in the interests of the Lands Department? The Lands Department proposed certain amendments. I was simply the mouthpiece of the department.

216. Did the promoters adopt those amendments? I believe so.

217. Are you satisfied that the interests of the public are conserved by this Bill, speaking as a representative of the Lands Department? We did not take up the subject as far as the public are concerned; it was only as regards the interests of the Crown that we took it up.

218. Are you satisfied that the interests of the Crown are sufficiently conserved in the provisions of the Bill? As presented to the Council, after consultation with the Under Secretary, I am, as far as the office is concerned.

219. Have you any further amendments to propose on behalf of the Lands Department? I have not. But we have not considered it further. The Bill has never been presented to us since it passed the Council.

220. Do you produce a plan showing the land set aside for this company as an irrigation settlement? I produce a large plan showing the area and the locality. I may say that this was prepared in connection with the tramway. It shows the irrigation cultivation area in red.

221. *Chairman.*] Can you tell us what frontage the cultivation area will have to the lake? About 2 miles.

222. That is the frontage the Crown lands will have to the lake if this scheme is carried out? No; I cannot say that. That is the area the Minister of Lands has reserved from homestead lease and license—homestead lease in particular—an area of 25,000 acres, on the representations of Mr. Hogg for the company. I am not prepared to say that it follows the exact boundaries laid down in Schedule 2 of the Bill presented to the Council, but I have every reason to believe that it coincides very closely, if not exactly.

223. *Mr. Matheson.*] If the schedule of the Bill is a copy of the *Gazette* notice inserted by the department, then it correctly describes the land set aside by the Minister? Yes.

224. Is that land in occupation at present? By the occupation licensees it is.

225. What rent does he pay? Six-tenths of a penny per acre per annum.

226. Can you say what is the carrying capacity of the land? I cannot. I was not prepared for that question.

227. Do you know sufficient of the nature of the land to give your opinion of its market value, supposing it were put up at auction? No, I do not.

228. *Mr. O'Sullivan.*] In the First Schedule of the Bill it is stated—

All those 38,640 acres of land in the counties of Menindie and Tandora, including the area covered by Lake Menindie and the creeks leading into and from the same.

That is described as "the irrigation water conservation area," and these words are used, "including the area covered by Lake Menindie;"—is there not some error in that description? I should not say so just at the moment. It is possible that the 38,000 include Lake Menindie.

229. *Chairman.*] Can you tell the Committee what has been set aside as the cultivation area for the company? The area shown in red—25,000 acres.

230. Is there any other land, so far as you know, to be given to the company? Not that I am aware of.

231. *Mr. O'Sullivan.*] Then the area referred to in the First Schedule as 38,640 acres simply means the land covered by the waters of Lake Menindie, which are set apart for irrigation purposes? I do not know that they are set apart. As far as our department is concerned, what is set apart is that marked red on the map, and which does not come within the borders of the lake at all.

232. Then, to the best of your knowledge, there are only 25,000 acres of land set apart for irrigation purposes for this company, and those 25,000 acres are irrespective of the land covered by the water of Lake Menindie? Yes.

233. *Chairman.*] And the frontage which the 25,000 acres would have to the lake is about 2 miles? Yes.

234. Of what does the other frontage to the lake consist;—there are some homestead leases, are there not? Yes, there are some homestead leases, and part of the travelling stock reserve comes along the frontage. But the simple fact of that land being a travelling stock reserve would not prevent it from being included in the homestead leases. I notice two homestead leases going right down to the water's edge.

235. *Mr. Dickens.*] The travelling stock routes are included in the leases and paid for? Yes.

236. *Chairman.*] Will you have a tracing prepared from this map, to be attached to the Report of the Committee? Yes. [*Vide Appendix A1.*]

237. *Mr. O'Sullivan.*] Can you tell us approximately what is the circumference of Lake Menindie? I should say it is about from 28 to 30 miles.

238. Of this 28 or 30 miles, the irrigation area will only occupy about 2 miles? Yes; it is under 2 miles.

239. *Mr. McCourt.*] When Mr. Hogg made application to have this 25,000 acres of land reserved for the company, was the District Surveyor asked to report upon the application? I could not say without referring to the papers.

240. Is it not usual when such applications are made to ask for the report of the District Surveyor? In ordinary cases it would be done.

241. You are not sure whether it was done in this case or not? I am not sure.

242. Are you aware that according to the Bill, as soon as it is gazetted, these people will have the right to purchase the 25,000 acres of land? There is a provision in the Bill, I believe, for the purchase of the land after certain conditions have been complied with.

243. They have a preferential right to purchase this land? Yes.

244. The same as a conditional leaseholder now has, or something similar? They have a right to purchase the land after certain things have been fulfilled.

245. It is provided, also, in the Bill that the promoters are to have this 25,000 acres at the rental the lessee is now paying for it? That is only to lease it.

246. But are you aware that these people are to have the right to this land at the same rate as the leaseholder of the run pays for it now? Yes.

247. Do you think it is right, considering that they have a preferential right of purchase, that they should have the land for the same rent as the leaseholder is paying for it? That is a matter of opinion, and I do not know whether I am here to express my individual opinion. I have not consulted my senior officer on that point.

248. You do not do the same, at any rate, with conditional leaseholders? Those things are laid down by statute. The Crown Lands Act itself governs those.

- Mr. R. H. DeLow. 249. There is a clause in the Bill providing that the company are to have this land at the same rent as the leaseholder ;—do you think that is right, considering that they have a preferential right of purchase ? As a matter of opinion, I do not think it is the correct thing. That is my individual and personal opinion.
- 1 Mar., 1893. 250. Having a preferential right to purchase, you do not think it is right to give the company this land at the same rate as the lessee is paying for the run ? I do not think it right.
251. Mr. Dickens.] You said that the occupation licensee is paying six-tenths of a penny per acre ? Yes.
252. That is upon the whole of the resumed area of the Kinchega pastoral holding ? Yes.
253. How many acres are there in that holding ? In round numbers, 420,000 acres in the resumed area.
254. That is including good and bad country ? Yes.
255. Watered and waterless country ? Yes.
256. Can you tell us what the homestead lessees are paying who are in this neighbourhood ? I cannot at this moment, but I could get the information. [*Vide Appendix A2*]
257. Would it be more than six-tenths of a penny ? I could not say.
258. Mr. a'Beckett.] I presume that in the office there is an appraisalment of this resumed area giving a description of the country ? Yes.
259. I suppose we could easily be supplied with a copy of that ? Yes.
260. And there is also a description of the country in the homestead leases ? I think so.
261. I mean there is a description of the resumed area and why it is rated. There is a description of this piece of country and of the homestead leases, because they are under separate appraisements ? There is a description of the cultivation area shown on the plan in red, but not in detail—only as part of the whole occupation area.
262. Mr. O'Sullivan.] You have had a good deal of experience in connection with the Lands Department with regard to the right of user ? Yes.
263. Will you kindly give us your interpretation of the 48th clause of the Bill, as follows :—

Upon the publication of the notification in the *Gazette* declaring that the lake, creeks, and lands therein described are so required and set apart, the right of user of the water in, over, or upon such lake, creeks, and lands shall be vested in the promoters in trust for the purposes of this Act.

Does that mean the right only to use the water, or the sole right to use the water ? I should be disposed to read it that it was simply a right common with all others. That is my opinion.

WEDNESDAY, 8 MARCH, 1893.

Present:—

MR. A'BECKETT, | MR. McCOURT.  
R. BARBOUR, Esq., IN THE CHAIR.

Alexander Matheson, Esq., appeared as Solicitor for the Bill.

Cecil West Darley called in, sworn, and examined :—

- Mr. C. W. Darley. 264. Chairman.] You are Engineer-in-Chief for Harbours and Rivers ? Yes.
- 8 Mar., 1893. 265. Do you know Lake Menindie ? I know of it, but unfortunately I have never had an opportunity of visiting it. I know that it is a very large lake, and that it has acted hitherto as a very important feeder to the Darling—that is to say, it is a storage feeder to the Darling River, maintaining navigation after the river falls low.
266. Mr. Matheson.] Have you made a report upon the locking of the Darling ? I have.
267. In that report, do you state that the locking of the Darling would be inadvisable until settlement was further extended on the banks of the river ? I do not think I expressed it in that way. I said that no doubt it would not be profitable until more settlement took place to create greater traffic. I did not say it would not be advisable to lock the Darling at once. I said it might probably be advisable to carry out the work at an early date in order to open and develop the country, but that it might not be immediately profitable—that no doubt as the country became opened up by means of constant and proper navigation, and more settlement took place along the river, the traffic would increase, and ultimately become profitable.
268. If a large population were settled upon this irrigation area, would not that tend to increase the traffic on the river ? Assuming that Menindie were connected by tramway with Broken Hill, it is probable that the traffic would all go to Broken Hill. The irrigation settlement would supply produce to Broken Hill, in which case it would bring no traffic to the river. If it became an ordinary irrigation settlement, I should say that Broken Hill would very likely be the chief market for its produce, in which case the traffic would go by railway, and not by the river.
269. Would not a large body of people settled there require general goods the same as any other large body of people in any other part of the country ? Yes ; no doubt it would bring a certain amount of traffic up the river in the shape of goods.
270. You mentioned just now that you considered Lake Menindie an important storage feeder to the Darling ? Yes.
271. How does that come about ? When the flood is up, the water is stored in the lake. The lake is of immense area, and it has always been observed that the water running out again, as a rule, helps to keep up the navigation of the river for nearly three months longer than would otherwise be the case. I may mention, in connection with that, that a few years ago a very hasty movement was made to get a number of unemployed out of Sydney, and it was proposed to put a dam across during flood-time to hold all the water in the lake. But I pointed out over and over again that a dam constructed at the mouth of the lake would really injure the navigation of the river, unless it was accompanied by a flood-gate to hold in the water and to let it out when the river was low ; that simply to store water in the lake, and hold it there by means of a fixed dam, would be to waste the water and do the river a great deal of harm ; it would practically close the navigation probably three months earlier than under ordinary circumstances. But so far, no inconvenience has really been felt, because the dam has, to a certain extent, broken away, and it is lower than was intended. We have had fairly wet seasons ever since ; we have never had a long

long spell of dry weather and a low river, so that the ill effect of having a solid dam at the mouth of the lake has not been felt. But I am satisfied that if we had very dry weather it would have been felt, with very likely serious results—that is to say, the navigation of the river would probably have closed two or three months earlier—perhaps two months earlier—than it formerly did. The body of water stored in the lake by a flood can only find a moderately slow outlet into the river, and in running back into the Darling it keeps up the river.

272. If the lake were filled, say, to the flood-level of 1890, how much of the water would be left in the lake when the river had returned to the summer level? It would depend altogether upon the works constructed. If a proper dam were built it would probably be kept up to the full level. But the dam that is now there was only constructed of sandbags during flood. It was a very rough and ineffective way of making a dam—simply tipping bags of sand into the water.

273. Do you state from your own knowledge that the navigation of the river is maintained for three months by the water flowing from Lake Menindie? All my officers have reported to me to that effect, from information collected there, and from what they have been told by old residents on the river. I have never been there myself, and cannot speak on this point from personal knowledge. Mr. Price, my principal assistant, may be able to give some more information on that point.

274. Are you aware that the captains of river steamers totally disregard the flow of water from Menindie as being any assistance in keeping up the navigation of the river? I had a long conversation with one of the old river captains whom I saw in connection with the Bourke wharf, and who, I think, was a resident of Bourke. I saw him several times, and had a long conversation with him on the subject. I would not say for certain, but I am rather inclined to think that that was his opinion also. Two of my officers, who spent some time in the locality, gave me to understand that such was the case. I also got the information from Mr. David Howison, who was there for some time constructing the dam.

275. Taking the area of Lake Menindie, as marked on the Government plans, at about 30,000 acres, and its depth in the centre 25 feet, or an average depth of 10 feet, and taking the width of the river Darling at 400 feet, and its length from Menindie to the sea at 1,500 miles;—how long would you say that the water flowing out of Lake Menindie would preserve the river in a navigable state? I do not know that it would affect the lower part of the river, but only the river between Lake Menindie and Wentworth.

276. How long, do you think, it would affect the navigation? I could not possibly say. To answer such a question would require close investigation, and perhaps a week's study. It is only a natural inference to draw that Lake Menindie, together with other lakes along the Darling, in storing water and letting it slowly down the river must have some influence on the navigation. As to the actual time during which this effect would last I could not say; but I have been informed that the navigation has been assisted in this way for a period of from two to three months. That this is actually the case I could not say positively from my own knowledge; but I can quite understand that the navigation of the river must be affected for a certain period. I pointed out in my report that all these lakes must be carefully preserved and flood-gates put on them to help to store the water, because when the river comes to be locked it will be of the utmost importance to store all the water possible along the river to supply the loss of water from lockage. That will be the great mainstay of the canal scheme to canalise the river. In Russia and other countries they have to spend enormous sums in constructing artificial reservoirs to store water, and here we have the natural reservoirs. I could instance cases where very much smaller lakes than this keep up the navigation in some of the Russian rivers for many months through the water being let down properly.

277. *Mr. a Beckett.*] Where they have the water under control? Yes; that ought to be done here, as I point out in my report. There are other lakes further up the river—a series of lakes—none so large as this, all of which could be made to help the navigation.

278. *Mr. Matheson.*] Assuming that the company only intend to dam up and conserve one-third of the water which could return to the Darling, would that not make a very material difference in your view of the effect of the storage upon the river? If the water were properly stored a very large supply could very well be afforded to be given for irrigation purposes. I quite admit that with proper management a very large supply could be taken from the lake in this way. At present a large body of water is absolutely wasted, and passes to the sea, and by proper storage it would be quite reasonable to give off a large portion of the water for irrigation purposes. I think that might be fairly done without injuring the navigation.

279. Would you expect settlement on the Darling River to increase greatly without facilities for irrigation? No; I think something must be done in regard to irrigation. It is essential to settlement on the river.

280. Do you consider that the scheme for putting flood-gates on the creek leading from Lake Menindie to the Darling is a feasible one? It is quite feasible. It ought to be done with great care, because the ground is of a very friable and sandy nature; but with works carefully designed it is quite feasible.

281. Do you consider that the provision in the Bill, that the plans and designs of works to be constructed shall be submitted to the Minister for his approval, is sufficient to secure that the works will be of a permanent nature? I think that would be a great safeguard.

282. *Chairman.*] It is proposed to construct a tramway from Menindie to Broken Hill;—do you not think that the establishment of this proposed irrigation colony would be beneficial to Broken Hill, by furnishing that place with a supply of produce? I can only speak in a general way, not having been in the district myself, but I should think it must be so.

283. Looking at the matter from a general point of view, do you think that the carrying out of this irrigation scheme would be a benefit to the Colony? I do. I would be very glad to see some large irrigation schemes started.

284. You are aware that Menindie, being on the river Darling, would then be in communication, by means of boats, with Bourke, Moama, and Hay, and also with South Australia, by Victor Harbour. It would have four communications with the outside world, by means of steamers on the rivers, and would have these outlets for its produce, in addition to Broken Hill? Yes; for a great part of the year that would be the case.

285. Do you see any material objection to this irrigation colony, as regards the locking of the Darling? I do not think that the quantity of water that would be taken for irrigation would seriously affect the river. My impression is it would not seriously affect the river, if the water is properly stored.

Mr.  
C. W. Darley.  
8 Mar., 1893.

- Mr. C. W. Darley.  
8 Mar., 1893.
286. Do you think the quantity of water that would be necessary to irrigate this land would interfere, to any material extent, with the locking of the Darling? With proper storage in the lake—making use of the lake when the flood was up—I do not think it would materially affect the river.
287. *Mr. McCourt.*] Do you think that this company ought to have an exclusive right to the waters of Lake Menindie—that is, as against other people requiring water for irrigation purposes? I do not think so.
288. You think opportunity ought to be given to other people as well to come in and use the water? I think the Government ought to have the right to give other people the water as well as the company. The Government interest in the matter is too great to allow of a monopoly being given.
289. Subsection 3 of clause 5 of the Bill contains these words—  
To take or divert water from Lake Menindie, or from any creek, channel, or watercourse leading to or from the said lake, or from the river Darling.
- If the company had this power, would it not give them control over the three lakes—Menindie, Speculation, and Cawndilla? It might give them some control over the other lakes.
290. Do you think the power should be strictly confined to Lake Menindie? I think so.
291. You object to the authorisation of the use of water in Lake Menindie, or any of these other lakes, to the detriment of the navigation of the river Darling? Unquestionably.
292. In subsection 3 of clause 5 there is a proviso to this effect—  
Provided, nevertheless, that nothing contained in this Act shall authorise the use of water from the said river for any purpose, so as in any way to diminish the quantity to such an extent as to interfere with the navigation of the river, or reduce the flow of the water of the said river beyond such mean discharge as the Governor shall from time to time prescribe by notification to be published by the Minister in the *Gazette*.
- That is protection, so far as the river is concerned? Yes.
293. If the words “or any lakes adjacent thereto” were inserted in that proviso between the words “river” and “for,” would that meet your objection, seeing that you do not think water should be taken from Lake Menindie in such a way as to injure the navigation of the Darling? Yes; I think that would meet the case.
294. *Mr. a'Beckett.*] You say that a great quantity of the water that falls back from the lake is wasted at present because it falls back before it is wanted? Yes.
295. If that water were properly stored, do you think it would be beneficial to the navigation of the river, in spite of the quantity that might be taken for irrigation purposes? I think that by storing the floods there the company might very well be given what they require, and there would still be enough kept to supply the river.
296. Do you think it would supply the river even more beneficially than it does now, because the water would not require to be held back until it was absolutely useless? Quite as beneficially, or perhaps more so. The quantity of water that is now wasted will be more than the company will require for irrigation, and the balance would be held in reserve for navigation purposes.
297. Do you think that under these conditions the irrigation colony would rather assist than injure the navigation of the river, if they constructed suitable flood-gates on the outer channel? If the company constructed suitable flood-gates they would have all the water they required, and the river would get more benefit than at present with regard to navigation. I think that is quite possible.
298. *Chairman.*] Are there any remarks which you would like to make, as the Committee would be glad of any information that would be of use to them? I do not think I have any remarks to make, except this, that I think everything depends upon the nature and design of the impounding dam; that is the important part of the whole matter. If the company carry out a design approved of by the Government, I think the work could be mutually beneficial.
299. There is a clause in the Bill that requires that the plan shall be submitted to the Minister, and consequently to his officers;—would that provide sufficient safeguard in respect to the nature of the works to be constructed? I think so. Of course by “submitting” is meant that they can only be carried out subject to approval. As long as it is understood that the company are to carry out a design in every way to be approved of by the Minister, that would be a sufficient safeguard.

Edward Bellingham Price called in, sworn, and examined:—

- Mr. E. B. Price.  
8 Mar., 1893.
300. *Chairman.*] What are you? Supervising Engineer in the Harbours and Rivers Department.
301. Have you any knowledge of the district in the neighbourhood of Menindie, on the Darling? Yes; I have been there three or four times.
302. Have you had any opportunity of knowing the character of the country in the locality? Yes; I have travelled round the lake a couple of times, and travelled there from Broken Hill, passing along the bank of the lake, and I have been on the lake.
303. Do you think the district is suitable for the establishment of an irrigation colony? A portion of it is. One side of the lake seems poor sandy land, of no use at all; but back from the Darling the land is rather better.
304. You see the contemplated site, marked black, on the plan produced? Yes; there is some good land there.
305. Do you think the land included within those black lines, comprising 25,000 acres, would be suitable for an irrigation colony? Yes, I think so. All that land wants is water to make it produce. It is not what you call first-rate land, but still it is land that would grow a great many things. It grows good grass—with rain.
306. If it had water, do you think it would grow sufficient to make the irrigation colony a success? Yes, I think so.
307. Would Lake Menindie, with an area of about 38,000 acres, be sufficient to supply all the water required for irrigation without interfering with any other use for which the water might be wanted. Would the lake supply the Darling with what water is wanted, and also supply the irrigation area as well? It very much depends on the sort of works that are carried out on the Darling in future. If there are a great many locks put on the Darling, then you will not require so much water; but if you want to do with few locks, and cheapen the scheme, you will have to take every drop of water in the lake, and want more, to keep the navigation up.
- 308.

308. But, with ordinary care in securing all the water, would they not be able to get supplies from time to time from the flooding of the river to recruit the supply in the lake—say several times during the year? No; sometimes for three or four years there is not sufficient rise in the Darling to fill the lake at all.

309. How often have you known that in your experience? The first time I saw the lake it was in high flood, and that was in October, 1836. I was sent there in reference to closing the entrance to the lake, and I reported in favour of it. They sent down some of the unemployed, and the work was done in a temporary manner, and was never completed, and the dam is absolutely worthless at present. I was there again two years afterwards, in October, 1838, and the Darling was perfectly dry; you could walk across it in many places. If there had not been a dam there, Menindie lake would have been dry, too.

310. But it was not? No; it was held up by the dam.

311. And if this company put flood-gates at the entrance to the lake, and proper weirs and other contrivances, would not that retain in the lake more water than at present? It would depend on what height they made their dam. I think they could make the lake to contain an average of from 10 to 12 feet of water all over.

312. And if they required only 2 feet of water, there would be a large surplus to use for the Darling? Yes. You would have to allow about 4 feet for evaporation every year. It would be about 3 feet 6 inches for the first year; but, as the lake got shallower, the evaporation would increase, and you would have to allow 4 feet for the second year. That would take about 7 feet 6 inches in the two years. If there was no flood in the Darling for three years, that lake would dry up. The evaporation alone would dry that lake in three years.

313. Except the second time you speak of, did you ever know that lake to be dry? I have never been there since.

314. Have you heard that it was dry? No; it cannot get dry on account of these dams.

315. If there were proper weirs constructed, there would be still less chance of its getting dry? It would depend upon whether the Darling was in flood. Many cases have been known where the Darling has not been in flood for five years; then the lake must get dry, no matter what dams you put up. It would be very good for two or three years for irrigation, but after that you would get no water from it.

316. No water from the lake? None at all. The lake must dry up in three years or three and a half years—three ordinary years. Evaporation is a known quantity, and it goes on year after year.

317. Are you aware that the river has been navigable for the last three or four years? Yes; there have been exceptionally good seasons.

318. Then the lake must have had a continuous recruiting of water? Yes.

319. Continuous rains? Yes; there have been very good seasons in the Darling for some years past. When I first went to the Darling, in 1835, the river had not been navigable for several years—so I was informed. It was very low then. It was dry; you could walk across it.

320. If Lake Menindie were filled, for how many years would it give a supply? Three years, I think.

321. Of course, if the Darling was dry, any supply of water from this lake would be of no use to the Darling? Oh, yes; it would be useful to the Darling.

322. In making it navigable, if it were dry? Yes. When I say "dry," I mean this: It dries in bars; there are a number of waterholes, perhaps 20 miles long. If you could send enough water out of the lake to cover those bars 3 or 4 feet, nearly every steamer on the Darling could go down.

323. It would take an enormous quantity to fill the river? That lake alone would fill the Darling a hundred times over when it gets as low as that. It is only about 150 feet wide. It is only a simple calculation to see how many square miles of water would be supplied. Take Lake Menindie, Lake Speculation, Lake Cawndilla, and three or four other lakes not shown on the map, but which are all filled from Lake Menindie. If you place a dam across the entrance to Lake Menindie—I had occasion to go into this matter very fully at one time—it will impound 100 square miles of water, with an average depth of 10 feet. That 100 square miles of water, with a depth of 10 feet, represents 100 miles long, 1 mile wide, 10 feet deep, of water. Divide that by 200 feet, and only 5 feet deep, and it will give you 5,200 miles of water.

324. Running 2 miles an hour? It runs very much less than that. I have gauged the Darling several times. Sometimes it does not run a quarter of a mile an hour. Allowing for a flow of 1 mile an hour, that will keep the Darling running for about 160 days—that is, the water in the lakes alone, without any sluices or locks being constructed.

325. If these locks and sluices were properly constructed, would it not conserve a great deal more water than is the case now? Yes; it would allow the water to get in. The present dam was constructed during a very high flood—in fact, it was constructed when it was all under water—and it impounds a certain amount of water. Then there was another rise in the river which overtopped that dam, and washed away one of the dams. With such a rapid current going in it could not do anything else. After the river fell—I think it fell about 3 feet—they were able to put a small dam in. They caught about 7 feet of water over the lake.

326. And if they had flood-gates they could catch how many feet? They could catch from 10 to 12 feet. It depends on the height of the flood.

327. At present they can only catch, how much—6 feet? About 7 feet. In fact they do not catch that, except it overtops the dam. There have never been any gates put in.

328. On the whole, do you think the irrigation area would be an advantage to that district? Certainly it would be an advantage to the district. It would bring a number of people to live there.

329. Would it not also be an advantage to Broken Hill—you know something of Broken Hill? Yes, I think it would also be a great advantage to Broken Hill—that is, provided there was proper communication between Menindie and Broken Hill.

330. If there was a tramway from the irrigation colony to Broken Hill you think it would be a great advantage? Yes. It would reduce the cost of living in Broken Hill considerably, particularly to persons who have to keep horses; they would get horse-feed much cheaper. They could grow very good horse-feed at Menindie, and it is very expensive at present at Broken Hill, and the same may be said with regard to vegetables and fruit.

331. *Mr. McCourt.*] You think then that with proper safeguards this company might be allowed the use of a large quantity of water that could be stored there? Well, I think they would have to give very good safeguards. I look upon Menindie lake as one of the most valuable lakes on the Darling for maintaining the navigation of the river. If the navigation of the Darling is to be maintained, Menindie lake should never be parted with, except under very stringent conditions, providing that they must return to the Darling,

Mr.  
E. B. Price.  
8 Mar., 1893.

Mr.  
E. B. Price.  
8 Mar., 1893

Darling, when the river gets very low, a large quantity of water; and I am afraid if they were compelled to do that their Irrigation Bill would be of no use to them, because they would have no water at the very time they wanted it.

332. You spoke of a dam having been put across the lake;—do you remember the cost? I think that dam must have cost over £4,000. It was a series of dams. First it was done by the unemployed, and they all struck after they started, and there was a lot of trouble. While they were on strike the river rose and washed the whole work away, and it had to be done over again. It cost over £4,000. If it were done when the river was low it could be done probably for £2,000.

333. Have you glanced at the Bill at all? I only saw it for a few minutes; I did not look carefully through it.

334. To see whether there were safeguards? No; it was not sent to the office.

335. According to the tenor of your evidence, you do not think any power ought to be given over Lake Menindie to anyone? No, not absolute power, unless they guarantee to give back water when it is required for the Darling.

336. If in the proviso contained in sub-section 3 of clause 5, between the words "river" and "for," these words were inserted, "or any lakes adjacent thereto," do you think that would protect the public interest? If those words were put in I think it would protect the public interest sufficiently, because it would allow the Government to take as much water as they chose out of the lake. The company would then be able to irrigate when there was a fair season and a proper flow in the Darling; but when there was a dry season they would not be able to irrigate under the clauses as so amended, because all the water would be required for the Darling.

337. Then you think the Bill would be no good in that shape? I would not like to say that. I think it would be good for some years, but it would fail whenever a time of drought came.

338. *Mr. a'Beckett.*] I think you said you did not think they could impound a permanent supply of water in the lake at all? No; I think it would fail. We have had seasons in this Colony when the Darling has not flowed for more than three years. That is absolutely certain, and the lake could not possibly hold more than three years' supply of water.

339. You could not impound more than an average depth of 10 feet? I think, with an expensive dam, you could get 12 feet. Well, 12 feet would not evaporate in three years; it would last nearly four years, because the deeper the water the slower the evaporation. You might say it would last four years at the very outside—that is, supposing they did not pump a drop of water out of it.

340. The mere vaporation? Yes, would dry it up in four years. I know as a matter of fact that during the nine months from October, 1888, when I was there, until the following July, the lake had fallen 3 feet 1 inch from evaporation alone—that is, in the nine summer months. In the winter months there is not much evaporation, and the rainfall returns what is thus taken away.

341. *Chairman.*] Was there no outlet during that nine months? No; the dams were in good order. There were two or three men watching them, and there was not the slightest leak. The same thing occurs in the case of an iron tank put into the ground; the evaporation would be rather more than that. Dry winds blow there, and there is very little rainfall. A few years ago they only had about 3 inches in one year.

342. You are of opinion that they could not impound a permanent supply of water in the lake—not at all times? No, they could not.

343. *Mr. Matheson.*] You know the country pretty well upon the banks of the Darling? Yes; I know it pretty well from Wentworth to Wilcanna, which is some distance above.

344. Are you acquainted with the details of the scheme for locking the Darling? I have read both reports on the subject.

345. To make those schemes pay, would it not be necessary to have increased settlement on the banks of the Darling? That would certainly help to make them pay. I do not think they would pay at present.

346. Knowing that country as you do, do you not think that to induce settlement it will be absolutely necessary that settlers should have water-rights for irrigation purposes? Yes, I certainly think they should.

347. A dam across Lake Menindie Creek would maintain the level of the water in Lakes Cawndilla and Speculation? Yes; and there are several small lakes as well that open off Cawndilla Lake.

348. Does the flood-water which escapes from Lake Menindie do any good to the river at present in the way of assisting navigation? No, not at present, because it only escapes when the river is high. The moment the river is below a certain level the water ceases to escape. That is why there is a necessity to put sluices in the dams.

349. Then, until such waterworks as are now contemplated have been constructed, the flood-waters conserved in Lake Menindie are of no use whatever to the navigation of the river? No, no use whatever.

350. When the flood-waters run out of Lake Menindie, I understand that the flood-waters from Lakes Cawndilla and Speculation run into Lake Menindie? From Cawndilla they do; but from Lake Speculation only a portion of the water runs back, Lake Speculation being deeper than Lake Menindie.

351. If the plans of the proposed works were submitted to your department, in your opinion would the officers of the department insist that the works should be so constructed as to preserve a higher level in Lakes Menindie and Speculation than would otherwise be the case? I cannot say what other officers would do. I know that if the whole question were submitted to me I would not allow anyone to touch the lakes unless they put a high dam in with proper sluices, and were compelled to let out a certain quantity of water when the river became low.

352. Suppose the locking schemes were carried out, would the proposed works on Menindie Creek not be of great assistance towards those schemes? No; not unless the company were compelled to let the water out. If they were so compelled, then it would be of assistance. I may say that if the locking scheme is carried out, there will not be so much water required from Lake Menindie. There will only be enough required to make up for the evaporation and soakage that will take place in the reach of 319 miles between Menindie and Wentworth. If the locking scheme is not carried out, Lake Menindie could be made very useful by an expenditure of £10,000 upon it, without any locks at all, for maintaining the navigation of the Darling. It would maintain it for over 100 days without a lock at all.

353. Still, until the works are carried out by the Government for locking Menindie and the Darling, the proposed works of the company cannot possibly do any harm to the navigation of the river? They can do

do no harm, the way it is at present. Temporary dams have been constructed, which are really worse than nothing. They put a temporary dam there, and then the permanent dam was not gone on with afterwards. This permanent dam would have had sluices to let the water back into the Darling. I should never have recommended the construction of the dam at all if I had thought they were not going to follow it up, and put in a permanent dam afterwards, because the work in its present state is worse than worthless, and would do more harm than good.

354. When you state that the waters of Lake Menindie would fill the Darling 100 times over, you mean that they would fill the bed of the Darling, if it were emptied, 100 times in succession? I mean that if the Darling went down to what we call summer level—that is, when the rocky bars and the sand bars are touched with water—then, if you had Lake Menindie full, and kept it full, and opened your sluices and let the water flow out so as to cause the current to go down the Darling at 1 mile an hour, that would be maintained for about 160 days, and would allow small boats to come up.

355. So that really the works proposed by this company would be of great assistance in the navigation of the Darling? Yes, if they were compelled to let out all the water we asked them to let out.

Mr.  
E. B. Price.  
8 Mar., 1893.

THURSDAY, 9 MARCH, 1893.

MR. A'BECKETT,  
MR. COTTON,

Present:—

MR. HAYES,  
MR. McCOURT,

MR. O'SULLIVAN.

R. BARBOUR, ESQ., IN THE CHAIR.

Alexander Matheson, Esquire, appeared as Solicitor for the Bill.

Hugh Giffen McKinney recalled and further examined:—

356. *Chairman.*] Since you were last examined before the Committee, have you, in accordance with the arrangement then made, consulted with the Crown Solicitor with regard to several points in connection with the Menindie Irrigation Bill? Yes. The first point I submitted for the consideration of the Crown Solicitor was the following:—

Mr. H. G.  
McKinney.  
9 Mar., 1893.

When the Menindie Irrigation Company constructs the dam which will store the flood-water in Lake Menindie, will the Government have the right to use the water so stored, or to authorise the use of that water?

That had special reference to clauses 6 and 48. The Crown Solicitor is of opinion that the Government would not have the right to use or authorise the use of the water from Lake Menindie as the Bill is now drafted. To meet the case, I would suggest this amendment in clause 48:—That after the words "set apart," line 3, the following words be inserted—"The promoters shall have the right to use for the purposes of this Act the water in, over, or upon such lake, creeks, and lands; but the Governor shall retain the right to use or to authorise the use of the water in, over, or upon the said lake, creeks, and lands." I may mention that the Crown Solicitor, who had not time to go into the matter himself, suggested that it would be better to refer the wording of these different clauses to the Parliamentary Draftsman for his opinion on the points where alteration is required. The second point referred to the Crown Solicitor was as follows:—

As the proposed dam will have some effect in storing water in Lake Speculation and Lake Cawndilla, will the Company have any claim against users of water in these lakes?

In reference to that the Crown Solicitor is of opinion that the promoters will have no claim against users of the water from Lakes Cawndilla and Speculation. The Crown Solicitor thought the case was sufficiently met in the Bill; but I would suggest that it might be as well to have the matter clearly stated, and, therefore, I think it would be better to insert the two following provisos to sub-section 5 of clause 5:—Provided (a) that the natural supplies of water received under existing circumstances by Lake Speculation and Lake Cawndilla from the river Darling shall not be diminished or rendered less useful; and (b) that the promoters shall have no special right to the water stored in Lake Speculation and Lake Cawndilla. The third point referred to the Crown Solicitor was in reference to clause 6, viz.:—

Is it not necessary to state more clearly how compensation should be fixed if the property of the company were taken over by the Government?

In reply to that, the Crown Solicitor considers that under this clause the works and property of the promoters could be taken over without compensation. The Crown Solicitor thought words should be added providing for the publication of the notice in the *Government Gazette* in reference to any such resumption, and I suggested that the following be added to the clause:—"And on the publication of a notice in the *Government Gazette* all such lands, works, goods, chattels, and funds shall vest in the Crown." In the case of the resumption of the works it is necessary that there should be a proclamation in the *Gazette*. The next question submitted to the Crown Solicitor was:—

If it were intended, under clause 6, to take possession of the works, could the promoters claim the right, under clause 90, to refer the matters in question to arbitration?

That is to say, could the promoters use clause 90 to prevent clause 6 from coming into operation? The Crown Solicitor says he thinks not. Then with regard to the question—

If the Government construct works on the river Darling, or in connection with the river, which benefits the promoters, could the Government recover from the promoters the value of the benefit conferred?

The Crown Solicitor says he does not think it could, and he also says this will be a very difficult matter to provide for in the Bill. He does not suggest anything with regard to that. The next question was:—

Does clause 48 give any exclusive power to the promoters to enable them to prevent others from using the water stored?

That is covered by the answer of the Crown Solicitor to the first question already given. It does give that power as regards Lake Menindie, but not as regards Lakes Speculation and Cawndilla. On examining the Bill in the light of the questions asked on the previous day I find there are some points as to which

Mr. H. G.  
McKinney.  
9 Mar., 1893.

I should like to make suggestions. In the first place, in clause 5, line 1, after the word "Act," I propose that these words should be inserted, "And to the sanction of the Minister previously obtained." Then, in sub-section 3 of clause 5, I propose to strike out the words "or from any creek, channel, or water-course leading to or from the said lake." I was going to suggest also the excision of the words "or from the river Darling"; but I found to-day, from Mr. Hogg, that part of his scheme is to take water from the river Darling, if necessary. I did not understand that before.

357-8. *Chairman.*] Your attention having been drawn to provisions in other parts of the Bill, do you think now there is any necessity for the amendment you have just suggested? No; I think that amendment need not be put in. In clause 47 the Crown Solicitor pointed out that in line 2, instead of the word "Minister," the word "Governor" should be inserted. In regard to clauses 47, 48, and 49, the Crown Solicitor points out that there is a confusion in regard to the references that are given back from clause 49 to the other clauses. Clauses 47 and 48 refer to the first schedule. Then clause 49 begins "where the lands contained in the area described in the second schedule hereto are Crown lands at the date of such publication" the words "such publication" refer to the first schedule. Therefore the wording of clause 49 requires alteration. This is one of the points that it is desirable should be considered by the Parliamentary Draftsman. The Crown Solicitor thinks the whole of clause 49 should be redrafted. Then, again, in clause 60 the word "Minister" should be omitted, and the word "Governor" inserted instead. The whole of Part 4, the Crown Solicitor thought, should be gone through by the Parliamentary Draftsman. There are several matters about the transferring of land, and so on, that require revision. I should recommend that in sub-section 9 of clause 63, in both places where the word "Auditor-General" occurs, the word "Minister" should be substituted. In regard to sub-section 8 of clause 63, the Crown Solicitor mentioned that he could not exactly see the intention of this sub-section, unless the words "without compensation" were inserted after the word, "resume." There are some alterations the Committee required me to make at the last meeting in clause 91, which I propose should be modified. I would suggest that the first words, "Upon the application of the promoters," should be struck out; that all the words after "proclamation" to the end of the clause should also be struck out, and these words inserted instead, "alter the boundaries of the Irrigation Cultivation Area and increase or diminish its extent." The clause would then read: "The Governor may by proclamation alter the boundaries of the Irrigation Cultivation Area and increase or diminish its extent." In clause 92, another alteration I propose is that all the words after "unless," in the first line, be omitted, with a view to the insertion in their place of the following words:—"(a) The construction of irrigation works be commenced within six months after the passing of this Act; (b) the sum of £2,500 be expended on the irrigation works contemplated in this Act within one year after the passing of the Act; (c) the sum of £5,000 be expended on the irrigation works contemplated in this Act within two years after the passing of this Act." The case might be met by adding to the clause a proviso giving the Minister power to extend the time, if necessary, for a further period of six months in each case.

359. Is there any other suggestion? There is a point about which Mr. Hogg spoke to me this morning in regard to clause 7, as to whether there should not be some limit to the royalty that might be charged for the water. I do not see any objection to specifying a maximum amount. I would suggest at the end of the clause the insertion of these words, "but shall not exceed the rate of 1d. for every thousand cubic feet of water used." There is a remark I should like to make in regard to this. I do not like the principle that is carried out in all these Bills of charging what is much over the market value for the land, and charging what is ridiculously under the market value for the water. If there is anything charged at all, I think there should be a royalty fixed on the water. I think there should be a higher charge for the water, and a lower charge for the land, and that the charge should be made as irrigation goes on. It would be better in every way. It would give the Government a better return, and it would not have a tendency to cripple a company. The charges could be made in proportion to the water actually taken.

360. As in this case, the Bill has fixed the rate which the company are to pay for the land, do you think what you have said would apply to this scheme—would it not be wrong to apply it in this instance, seeing that the price of the land is fixed in the Bill at 25s. per acre? I am afraid that in the present state of the laws it could not be applied in this case.

361. *Mr. McCourt.*] You say you understood this morning that the company would have power to pump water from the Darling? Yes; it certainly would so appear. I overlooked that part of the scheme before.

362. You understand now that they have that power in the Bill? Yes.

363. I suppose they would only pump from the Darling in very bad times? That, I understand, is the proposal—not to use the Darling unless it is necessary.

364. I understood from one of the previous witnesses that when the Darling was low the water stored in Lake Menindie and these other lakes could be allowed to flow into the river to assist the navigation? I have looked into that question. I know it has been stated that the flood-waters out of these lakes keep up the navigation for a longer period than would otherwise be the case.

365. And for that reason it would be an advantage to store water in these lakes? It would be an advantage for navigation purposes, no doubt; but to some extent the storing of water, as the promoter propose to do it, would be prejudicial to navigation.

366. Do you object, therefore, to their storing the water? Well, on the whole, I think, where there is a question between irrigation and navigation, if one of them has to suffer, it should be navigation. I think the question of irrigation is a much more important one. But, if I may be allowed to say so, there is one point about pumping from the Darling that raises that question again of the promoters paying compensation to the Government, or paying a portion of the cost of any works which the Government may carry out. There is not the least doubt that if the promoters pump any considerable quantity of water from the Darling they will benefit largely by any works the Government may construct. It is not at all unlikely that at some future time a weir may be constructed at a short distance below the outlet to Lake Menindie, and that weir would certainly hold a fine supply of water for some distance above the town of Menindie. That would benefit the promoters very largely if they pumped from the river.

367. You therefore think they should bear a share of the cost of the weir? In a case of that sort they should certainly pay.

368. *Mr. Hayes.*] Would not that be provided for by the amendment you propose in clause 7, providing for a maximum charge for the water used? That is a point about which I asked the Crown Solicitor, and he said he did not think it would cover it.

369. Could you not so arrange the maximum charge for the water per thousand cubic feet as to cover the use of the water pumped from the Darling? Yes, I think it could be arranged in that way. I was under the impression until this morning that pumping from the Darling was a thing that was not likely to be resorted to—that it was simply a stand-by. As I understood the scheme, it was to pump from Lake Menindie, and to regard the Darling as a last reserve to fall back upon in case of any accident to the works, or in case anything went wrong with the supply. But from what Mr. Hogg told me this morning, it appears that that is not the light in which the Darling is regarded, and there is a considerable probability that they will take to pumping from the Darling.

Mr. H. G.  
McKinney.  
9 Mar., 1893.

370. The scheme gives the company the right to erect a weir across the channel from the Darling. I think in your former evidence you said there would be enough water put into the lake to last for at least three years? Yes, I believe so; but then there is a chance of accident to the weir, and the chance of the water escaping. As a matter of fact, it is a place that presents very considerable difficulties to the successful construction of a weir.

371. There may be an accident to the weir? Quite so.

372. *Mr. Cotton.*] With reference to the charges, how many inches of water per acre do you consider would be required to successfully irrigate the cultivation area? If it were economically used, not more than from 12 to 15 inches.

373. *Mr. Matheson.*] According to this morning's newspaper, it appears that a report by yourself, to the Minister for Public Works, upon this Bill, was laid on the table of the Legislative Council last night, and from the summary given of the contents of that report it would appear that you reported very strongly against the Bill. At what date was that report written? About the 12th or 14th of November last.

374. Since then the Bill has passed through a Select Committee of the Upper House, and through a Committee of the whole House? Yes, it has passed through the Upper House since then, I believe.

375. And you have already given evidence of your having attended there, and had certain amendments put in? Yes.

376. Including clauses 6 and 7, which provide that the rights of the Crown shall be preserved, and that the company shall pay water-rates to the Crown? Yes.

377. When the Bill came into the Legislative Assembly, it contained those amendments of yours? Yes, it contained several amendments which I suggested.

378. Therefore your report to the Minister referred to the Bill as it was originally drawn? Yes.

379. On the assumption that the amendments formally made by you, as well as those you have suggested to-day, will be given effect to in the Bill, are you satisfied that the Bill properly serves the interests of the Crown and of the public? Well, I think it does serve it very fairly; but I should have been very much better satisfied if a Government Bill had gone through first.

380. What I want to know is this: Provided that the amendments you suggested to-day, and on previous occasions, are given effect to in the Bill, are you satisfied that the interests of the Crown and the public are sufficiently conserved? I do not think that any Bill of this kind can be passed at the present time without having a prejudicial effect on the Government interests in water.

381. Can you propose any further amendments to conserve and protect the interests of the Crown and of the public? No, I can suggest no further amendments.

382. Do you know about the scheme for locking the river Darling? Yes.

383. Do you expect that that scheme will pay interest on the money, unless very considerable additional settlement takes place on the banks of the Darling? Certainly not. The scheme is based on the supposition that it will induce settlement.

384. Do you think that any considerable additional settlement will take place on the banks of the Darling, unless settlers get water-rights for irrigation purposes? No; I think settlement cannot take place unless water is used for irrigation purposes. The whole settlement of that district, in fact, depends on irrigation.

385. And you have already said you consider irrigation comes before navigation? I do.

Mr. Charles Edward Hogg called in, sworn, and examined:—

386. *Chairman.*] You are a civil engineer? Yes.

387. *Mr. Matheson.*] Have you had considerable experience in connection with irrigation works? I have—lately, especially.

Mr.  
C. E. Hogg.  
9 Mar., 1893.

388. Are you the engineer to the Menindie Irrigation Settlement Co. (Limited), in whose favour this Bill is drawn? Yes.

389. Have you visited Lake Menindie? Yes; I went to Lake Menindie for the purpose of examining into this question.

390. Have you gone carefully into the details of the scheme? I have.

391. Do you think the scheme is thoroughly feasible, and likely to be of advantage to the public? Yes, thoroughly so. It is a most popular scheme up there; every one wants it.

392. Knowing the size of Lake Menindie, and the particulars as to floods and so on, would you give the Committee your view as to the effect of the water stored in Lake Menindie upon the navigation of the river as the river falls? I took particular trouble to find out about that, because that was a question raised before I left here. I found that Lake Menindie in flowing out on an average flood—of course I am not speaking about the flood of 1890, because that was phenomenal—but the average flood would keep the river Darling navigable for about a week longer than otherwise. From a week to ten days the ship-captains reckoned it would keep it navigable.

393. *Chairman.*] Under present arrangements? Yes. Only about a third of the water that goes into Lake Menindie under usual circumstances comes out again; the rest disappears by evaporation.

394. *Mr. Matheson.*] It was stated yesterday by Mr. Price, of the Water Conservation Department, that when the river was dry in parts, if the water in Lake Menindie were let into it judiciously, assuming that the river flowed at the rate of 1 mile per hour, the water flowing from Lake Menindie would keep the river navigable for 160 days;—would you give your opinion upon that evidence? I think it is, as stated, a most ludicrous statement. Without particulars from Mr. Price, I could not think of such a thing, because it seems a most astounding statement. The river is 1,500 miles long from Menindie to its mouth—for, of course, you must treat with the Murray—and if you were to spread the waters of Lake

Menindie

Mr. C. E. Hogg. Menindie that would come out, they would not add more than a foot to the whole of the river from end to end. I cannot conceive how such a statement as that referred to could be made. It is a most extraordinary one. I think Mr. Price must mean something else. I do not think an engineer could make such a statement.

9 Mar., 1893.

395. *Mr. McCourt.*] He did not take the whole length of the river? But he should.

396. *Mr. a Beckett.*] Would you have to take the whole length of the Murray from Wentworth to its mouth? Certainly—1,000 miles of the Murray and 500 miles of the Darling.

397. *Mr. Matheson.*] Taking the distance from Menindie to Wentworth, which is 500 miles, what would 10 feet of water off the area of Lake Menindie do for that stretch of the river in the way of raising its level? It might add about  $1\frac{1}{2}$  or 2 feet, but certainly not more.

398. Therefore, if Lake Menindie is only 20 feet deep, the whole of the water from the lake could not raise the river more than 6 feet? The whole of the water could not get into the river, or anything like it. Under the most favourable circumstances, unless in a big flood, it would not raise the river more than  $1\frac{1}{2}$  feet, whatever happened.

399. Can you state what is the average flow of the river? One and a half miles an hour. The fall of the river is about  $2\frac{1}{2}$  inches per mile.

400. Do you think it possible that a judicious letting out of the waters that could be stored in Lake Menindie could possibly give a height of 5 feet to the river for 160 days? No; I think there must be some astounding mistake; the whole thing is ridiculous.

401. *Chairman.*] How many days, in your estimation? Perhaps ten days or a fortnight. I doubt very much if it would last more than a fortnight at the most. I saw it; I was there at the time suitable for taking observations.

402. *Mr. Hayes.*] It would be an easy calculation, taking the area of the lake and the area of the river? Yes.

403. *Mr. Matheson.*] Is the Murray at any time unfit for navigation between Wentworth and the sea—at times when the Darling is capable of being navigated between Wentworth and Menindie? Certainly. When I was there last May that was exactly the case. Vessels were coming from Wilcannia down to Menindie, and on towards Wentworth, at a time when there could be no navigation between Wentworth and the mouth of the Murray.

404. On account of the low state of the Murray? Yes.

405. *Chairman.*] Does that occur owing to the flooding of the Darling when there is no flood in the Murray? Yes.

406. A flood going down the Darling makes it navigable, and there being no flood in the Murray that river is not navigable? Quite so.

407. *Mr. Matheson.*] Does that show a reason why, in calculating the effect of the water from Lake Menindie upon the navigation of the river, you ought to take into account the whole length of the river from Menindie to the sea? Yes, certainly, because otherwise a vessel would simply stop at Wentworth, and could not go any further.

408. Can you explain to the Committee the conditions under which it might be necessary for the company to pump water from the Darling? The erection of a dam or of flood-gates on Lake Menindie Creek depends entirely upon whether the lake is fairly dry. But if the water is either rushing in or rushing out, as it frequently is, we would have in the meantime to take water from the Darling. My scheme is to have a floating pump—an engine in a punt—on the Darling; that is to say, if the lake is in such a condition as to compel us to do it, to pump water from the Darling on to the settlement; and after we have secured the water in the lake, then, of course, we can remove that work and have done with the river Darling altogether. We look upon the use of the Darling as a temporary measure; it might have to be used at the beginning of the scheme, or under circumstances such as those pointed out by Mr. McKinney.

409. *Mr. Cotton.*] What is the average width of the navigable channel of the Darling? About 400 feet.

410. *Mr. Matheson.*] Might it not be necessary, when the water in the lake gets very low, to pump water from the river to be supplied for domestic use by the settlers? Yes; I think that might occur on several occasions.

411. Does not the water in the lake get brackish and unfit for human consumption when it gets low? Yes. It would not become so under our system of confining the water, unless there was a very exceptional drought, lasting for four or five years. I would point out that precisely similar works to those we propose have been successfully carried out at Lake Fletcher. That lake is connected with the Darling exactly as Lake Menindie is. In the year 1870 they stopped the passage there, and from 1870 to 1890 the lake has never been dry. I mention this because I know there are some peculiar views about evaporation held by some gentlemen. I should like to point out also that between the years 1870 and 1890 six floods occurred on the Darling—not ordinary rises which would fill Lake Menindie, but large floods—which, under the very worst circumstances, would cause Lake Menindie to fill once every three years. In regard to the question as to whether, if the river was locked, there would be any necessity to draw water from Lake Menindie to supply the locks, I find that a lock such as that proposed by Mr. Darley, Engineer-in-Chief for Harbours and Rivers, would have to be opened 1,600 times to diminish the water between the locks 1 foot. That water would be lost to such lock; that means it would fall from one lock into the next lock. They would have to open the locks 1,600 times to reduce the water between one lock and another—a distance of 40 miles—to the extent of 1 foot. So that the possibility of requiring water from Lake Menindie must be very remote indeed.

412. Would such a locking system provide ample water for all possible navigation and irrigation purposes? Yes; it would be a great scheme, no doubt—a splendid thing.

413. *Mr. Hayes.*] But a scheme in the remote future? I fear so.

414. Then you propose, in the first instance, to erect your first pumping-plant on the Darling? Well, if the lake is not favourable for my Menindie Creek works to begin.

415. I understand that you intend, in the first instance, to do so until you get the lock complete? Yes, until we get the lock complete, and the Lake Menindie full, we propose to pump water from the Darling.

416. Have you made provision in the Bill for getting a site for your pumping-plant? Yes, I believe there is such a provision. That is the reason we have to have those two counties.

417. Do you anticipate much difficulty in making the lock at Menindie? No; I should not attempt to make

make it at such a level as the one that was washed away. That was made in such a way that it was bound to wash away; there was nothing to prevent it. The flood of 1890—that is, the standard flood—has a level of 202 feet above the sea. I propose that the crest of my flood-gates shall have a level of 195 or 197 feet, so that if a phenomenal flood, such as that of 1890, should occur, the flood would pass over the gates; but an ordinary flood would give me 20 feet of water in Lake Menindie. It would be filled then by a reasonable rise on the Darling. But I do not propose to confine the water above that level.

418. *Mr. McCourt.*] Besides being engineer for the company, are you one of the promoters of the Bill? I am.

419. Would you be favourable to the rent of the irrigation area being fixed by the Local Land Board in the usual way, as in the case of other leases? I think so. I think it would be fair if the rent were fixed in that way.

420. Under clause 64, when you come to have the fee-simple of the land, you can take any area not less than 100 acres. That will enable you to "peacock" the 25,000 acres? That must occur under any circumstances. If you run a contour channel to supply water over any area, you have to keep that level for that channel, and it would necessarily lead to "peacocking." It is done at Mildura and all irrigation settlements. It is unavoidable.

421. *Mr. a'Beckett.*] You said you considered that you could put 20 feet of water in Lake Menindie? Yes. 422. Is that the average depth, or the greatest depth? That would be the greatest depth. The average depth would not exceed 16 feet, according to the levels I have been able to obtain.

423. There would be an average of 16 feet? Yes. I may mention that the deepest part of the lake, by a very considerable amount, is close to where we propose to put our pumping machinery. That is the reason I selected that place.

424. What do you consider the evaporation is up there? Well, I have read a great deal on evaporation, and it seems a most difficult question to determine. I see that experiments have been tried up in that district, by putting water in pans 3 feet long and 2 feet wide, to see how water evaporates. That appears to me to be ridiculous. I should think that where the water is 17 or 18 feet deep, from 1½ feet to 2 feet a year would be a very large evaporation.

425. You consider this supply would be a permanent supply? I should think so. There is a rainfall of about 8 inches, and that would supply half the evaporation on an average, even if there was no contribution from the river.

426. Having a considerable knowledge of the country, do you think there would be a permanent supply of water? I should call it strictly a permanent supply.

Mr. John Mitchell Purves called in, sworn, and examined:—

427. *Chairman.*] What are you? I am a land and estate agent in Sydney.

428. And you are the promoter named in this Bill? I am one of the promoters of the Bill. The Bill is being promoted by a company, of which I am a director—The Menindie Irrigation Settlement Company (Limited). This company was registered in August, 1892, with a capital of £50,000, with power to increase the same. I produce the Certificate of Incorporation and a copy of the Memorandum and Articles of Association. I am advised that, speaking strictly in a legal sense, the only members of the company are the seven persons who have signed the Memorandum of Association; because, pending the passing of the Bill, it was considered useless to ask any person to bind himself to take any particular number of shares, or to go to the expense of issuing a prospectus and proceeding with the allotment of shares. There are, however, practically speaking, twenty shareholders who are really members of the company, though legally, I believe, there are only seven.

429. *Mr. Matheson.*] Of the company as registered? Yes. There are a number of others besides those twenty who have promised their support, and I have received very encouraging promises of support both in furthering this company and also in taking up land. But I have always put them off with the remark that, of course, we do not know what Bill we will get, and it would be impossible to make any promises as to what we could do.

430. I suppose the company is a pretty strong company? Yes. It would be impossible for me here to say what the company will do, because when the directors are elected they may do exactly the opposite of what we contemplate at the present moment, and that is to raise some of the money by debentures. It does not require very much money to begin with in starting this scheme—at least we do not anticipate so—and we have had a great many promises of support both here and in the Old Country, and also at Menindie and Broken Hill, especially.

431. Can you say, from correspondence received by the company, that a large number of people in Broken Hill look forward to the creation of this settlement with very great interest? Yes; I gather from the correspondence that they do. I was told that a good many people connected with Broken Hill would live down there in preference to living at Broken Hill, on account of the better climate and more healthy conditions.

432. That is, provided the tramway is made? Yes; I was thinking of the tramway at the time I was speaking.

Mr.  
C. E. Hogg.  
9 Mar., 1893.

Mr.  
J. M. Purves.  
9 Mar., 1893.

## MENINDIE IRRIGATION BILL.

## APPENDIX.

[To Evidence of Mr. R. H. De Low, 1 March, 1893.]

[A1—Plan.]

[A2.]

KINCHEGA RESUMED AREA NO. 244.

ESTIMATED area available for Occupation License on 1st July, 1892 (419,777 acres).—Rate per section of 640 acres per annum, £1 12s. or  $\frac{1}{3}$  of a penny per acre.

Extracts from Mr. Inspector W. C. Wright's evidence given before the Local Land Board, at Broken Hill, on the 30th October, 1890.

THE country consists of level and undulating open salt bush and cotton bush plains, gravelly in parts, mixed scrub country with open patches of salt bush and blue bush; on the south-east side near lakes sandy ridges with scrub and box flats; on the north-east side a range of stony hills with mulga and oak scrub; on the north-west side some stony hills, and part of the west side stony hilly country. The timber being red gum along Stephen's Creek and the river, and gum and a little pine along Pine Creek, the scrub being oak, mulga, acacia, nelia purtie, apple bush, broom, quondong, hop bush, sandal-wood, and a few patches of leopard-wood. The grasses, wild oats, silver, and others with herbage. The water supply is partly artificial, partly natural, being the Darling River for about 2 miles.

Lake Menindie.—This lake drains out as the waterfalls leaving two or three holes lasting about six months.

Speculation Lake.—Filled by a cutting from Menindie Lake, about 1 mile long, about 25 feet wide, with a depth of between 2 to 12 feet, now stopped by two small dams made by the Broken Hill Water Supply Company. This lake lasts about five years when full.

I estimate the carrying capability as, unimproved for three months in favourable winters, 3 acres per sheep.

As at present, improved by fencing and conservation of water,  $7\frac{1}{2}$  acres per sheep. As if fully improved by fencing and conservation of water, 7 acres per sheep.

Extracts from Mr. Inspector W. C. Wright's Report.

LAKE Menindie is supplied by the Darling River, Speculation Lake is filled by cutting from Menindie Lake. On river frontage and in the lakes, blue clay or black soil, and sand hills. Remainder of the area, red soil, rock, and quartz.

The following homestead leases have been granted, having frontages to Lake Menindie, within the resumed area of Kinchega pastoral holding:—

Homestead lease, No. 124; Land District of Willyama.

Lessee, William Maiden; area, 10,240 acres; rate per acre,  $1\frac{1}{2}$ d.; annual rental, £80. Grazing capabilities:—Mr. Licensed-Surveyor H. Hartung estimates that the whole lease in all seasons should be able to carry one sheep to 7 acres. Nature of country:—The lease consists of land of a sandy nature, with good salt and cotton bush. Part of the lease is low-lying country, covered with cane-grass.

Homestead lease, No. 340; Land District of Willyama.

Lessee, Raimondo Pedroga; area, 10,240 acres; rate per acre,  $1\frac{3}{4}$ d.; annual rental, £60. Grazing capabilities:—Licensed Surveyor H. Hartung estimated the carrying capacity of the area at one sheep to 8 acres. The applicant, at one sheep to 8 acres. Nature of country:—The land consists of open undulating country and scrubby country. The first is covered with good salt bush, and in places with blue and cotton bush. The second part is timbered with belar, nelia, sandal-wood, leopard-wood, and mulga, with low scrub. This latter portion also grows salt and cotton-wood.

Homestead lease, No. 1,176; Land District of Willyama.

Lessee, Henry Files; area, 9,830 acres; rate per acre,  $1\frac{1}{5}$ d.; annual rental, £42 12s. Grazing capabilities:—Mr. Inspector J. K. Doyle estimates that it will take  $6\frac{1}{2}$  acres for one sheep. Nature of country:—About half the lease is open undulating red soil plain, lightly grassed, and inferior grazing land; the balance is lightly timbered and fairly good soil. The timber is small and stunted, a little suitable for wire-fence posts, but not enough for the necessary fencing. The frontage to Menindie Lake is of very little value, being available only when the lake is full, which is only when the Darling River remains in high flood.

Homestead lease, No. 1,177; Land District of Willyama.

Lessee, George Samuel Maiden; area, 9,834 acres; rate per acre,  $1\frac{1}{10}$ d.; annual rental, £47 18s. 10d. Grazing capabilities:—Mr. Inspector J. K. Doyle estimates that the area will carry one sheep to 6 acres. Nature of country:—The country consists of undulating ridges, covered with small and stunted timber of no value; lightly grassed with spear, foxtail, and silver grass, and a plentiful supply of herbage in favourable seasons. The soil is of a red sandy loam.

REPORT FROM THE SELECT COMMITTEE

ON THE

GUNNEDAH SCHOOL OF ARTS ENABLING BILL;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE

AND

MINUTES OF EVIDENCE.

---

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,

23 *March*, 1893.

---

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1893.

1892-3.

---

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.**

---

VOTES No. 69. THURSDAY, 23 FEBRUARY, 1893.

3. GUNNEDAH SCHOOL OF ARTS ENABLING BILL (*Formal Motion*):—Mr. Kirkpatrick moved, pursuant to Notice,—
- (1.) That the Gunnedah School of Arts Enabling Bill be referred to a Select Committee, with power to send for persons and papers, for consideration and report.
- (2.) That such Committee consist of Mr. Suttor, Mr. Donald, Mr. Hart, Mr. Darnley, Mr. Dowel, Mr. Collins, Mr. Gardiner, Mr. Lee, and the Mover.
- Question put and passed.
- 

VOTES No. 81. THURSDAY, 23 MARCH, 1893.

5. GUNNEDAH SCHOOL OF ARTS ENABLING BILL:—Mr. Hart, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee, for whose consideration and report this Bill was referred on 23rd February, 1893, together with a copy of the Bill as agreed to by the Committee.
- Ordered to be printed.

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 23rd February, 1893, the "*Gunnedah School of Arts Enabling Bill*,"—beg to report to your Honorable House:—

That they have examined the witness named in the margin\* (whose evidence will be found appended hereto); and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was not deemed necessary to make any amendment.

\*J. Kirkpatrick  
Esq., M.P.

Your Committee now beg to lay before your Honorable House the Bill as agreed to by them.

JOHN S. HART,  
Chairman.

No. 3 Committee Room,  
Sydney, 23 March, 1893.

---

## PROCEEDINGS OF THE COMMITTEE.

---

THURSDAY, 23 MARCH, 1893.

## MEMBERS PRESENT :—

Mr. Donald,                    |                    Mr. Hart,  
                                          |                    Mr. Kirkpatrick.

Mr. Hart called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Bill *referred*, together with original Petition to introduce same before the Committee.

James Kirkpatrick, Esq., M.P. (*a member of the Committee*), sworn and examined in his place.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Clauses 1 to 10 read and *agreed* to.

Schedule read and *agreed* to.

Title read and *agreed* to.

Chairman to report the Bill without amendment to the House.

---

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

GUNNEDAH SCHOOL OF ARTS ENABLING BILL.

THURSDAY, 23 MARCH, 1893.

Present:—

MR. DONALD, | MR. HART,  
MR. KIRKPATRICK.

J. S. HART, Esq., IN THE CHAIR.

J. Kirkpatrick, Esq., M.P., sworn and examined in his place:—

1. *Chairman.*] You are Member for Gunnedah? Yes.
2. You are connected in some way with the Gunnedah School of Arts? Yes; I am prepared to make a statement to the Committee.
3. I think that that would be the best thing to do? Some ten years ago a School of Arts was erected at Gunnedah at a cost of £1,000. It is a brick building, but the town has grown very rapidly, so that now it is not suitable for the population. I may state that it is free of debt—we owe nothing on the building, and, in fact, we have a slight surplus in hand, though it is not sufficiently large to meet our requirements in this matter. The Bill has been introduced to enable us to add a two-storied front to the building, and to enlarge the hall. That will give a decent class-room and a reading-room. The reading-room we propose to make the full width of the top storey, so as to give ample accommodation to the public.
4. These will be additions to the present building? Yes, and we require the Bill to enable the Trustees to mortgage the land and building in order to raise money for these improvements, which have been designed with a view to making the building suitable for the purpose for which it was erected. It is now altogether too small. I may mention, incidentally, that within the last two years we have cleared off a debt of £300 which remained on the institution. The Bill has been introduced to enable the Trustees to make the place what it was really designed to be—a place of education and resort, to keep young men from wasting their time elsewhere.
5. Was it resolved at a meeting of the members of the School of Arts to bring in this Bill? Yes.
6. A duly convened meeting? Yes, and the meeting was advertised in the usual way—four weeks in succession in the local papers, four weeks in succession in the *Government Gazette*, and four weeks in succession in the *Sydney Morning Herald*. There has not been the slightest objection on the part of any member of the School of Arts to the introduction of this measure.
7. There has been no objection whatever to the Bill? None whatever. I have been President of the institution for the last three years, and, although the matter has been constantly spoken of during that time, up to the present nothing has been done. I am intimately acquainted with nearly every member of the institution, and if any one had objected to the introduction of this Bill I should have heard of it.
8. How many members have you on the roll of the School of Arts? About 100, I think.
9. How many were there present at the meeting to which you have referred? I could not give the exact number, but I know that the meetings were well attended. All the committee men were there—there are eight altogether—and the three Trustees. They generally turn up.
10. Was the meeting unanimous in favour of the Bill? Yes; it decided that the Bill should be introduced.

J.  
Kirkpatrick,  
Esq., M.P.  
23 Mar., 1893.

11. *Mr. Donald.*] How many rooms are there in the present building? A hall and two other rooms, one of which is used as a library, and the other as a reading-room; but these rooms are small.

12. The hall is used chiefly for amusements and meetings? For meetings and amusements. Our income is about £100 a year.

13. *Chairman.*] From the hall alone? From the hall alone.

14. That is, excluding what is received by way of members' fees? Yes. We look upon the members' fees as simply paying the librarian's salary and buying new books, but they do not do that, and we have to trench upon what we receive from the hall in order to keep everything up to the proper standard; as a rule we spend from £20 to £25 a year upon new books.

15. It is the intention of the Trustees to build additional rooms, in order to extend the library and to give more facilities for reading and amusements? Yes, additional facilities for amusements, such as chess and draughts, and so on—in fact, we want to make the School of Arts what it is intended to be, an attraction for the young.

16. Are you aware if this Bill is drawn upon the same lines as Bills of this description are usually drawn? I may state that the Bill has been drawn upon the lines of the Casino School of Arts Enabling Act, and I have included in it the amendments which were made in that Act by the Minister of Public Instruction. The Bill follows the wording of that Act exactly, except where it has been necessary to alter it to meet the circumstances of the case. For instance, the word "Gunnedah" occurs in place of the word "Casino," and "£1,000" for "£4,000." I took that Act because I thought that its phraseology suited our purpose exactly. Last year the Minister of Public Instruction promised to bring in a Bill which would enable all Schools of Arts, subject to his approval, to do what we are now asking permission to do. If such a measure were passed, it would save a great deal of money to the various institutions throughout the Colony, because it costs something to have these enabling Bills passed.

**PARRAMATTA STREET-WATERING BILL.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 26th April, 1893, the "*Parramatta Street-watering Bill*,"—beg to report to your Honorable House :—

That they have examined the witnesses named in the list\* (whose \*See List, p. 4. evidence will be found appended hereto); and that the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was deemed necessary to make an amendment.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

*No. 2 Committee Room,  
Sydney, 23 May, 1893.*

FRANK FARNELL,  
Chairman.

---

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 17 MAY, 1893.

MEMBERS PRESENT :—

Mr. Barbour,		Mr. Bowes,
Mr. Frank Farnell,		Mr. Hugh Taylor.

Mr. Frank Farnell called to the chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Bill *referred*, together with original Petition to introduce same before the Committee.

Present :—J. E. Bowden, Esq. (*Solicitor for the Bill*).

John Ebenezer Bowden sworn and examined.

Witness withdrew.

Charles Joseph Byrnes (*Mayor of Parramatta*) called in, sworn, and examined.

Witness withdrew.

Edward Nicoll Murray called in, sworn, and examined.

Witness withdrew.

*Ordered*,—That Messrs. John Taylor, G. Ralph, and Alderman Thorpe be summoned to give evidence next meeting.

[Adjourned till Friday next, at *Two* o'clock.]

FRIDAY, 19 MAY, 1893.

MEMBERS PRESENT :—

Mr. Frank Farnell in the Chair.

Mr. Barbour,		Mr. Hugh Taylor.
--------------	--	------------------

Present :—J. E. Bowden, Esq. (*Solicitor for the Bill*).

The Chairman read a letter from Mr. John Taylor, who had been summoned to give evidence, stating his inability to be present, in consequence of having to attend a Revision Court for the hearing of appeals against municipal assessment.

John Thorpe (*Alderman of the Council of the Borough of Parramatta*) called in, sworn, and examined.

Witness withdrew.

George Ralph called in, sworn, and examined.

Room cleared.

Committee deliberated.

*Ordered*,—That the evidence be printed and distributed to Members of the Committee before next meeting.

[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 23 MAY, 1893.

MEMBERS PRESENT :—

Mr. Frank Farnell in the Chair.

Mr. Barbour,		Mr. Bowes.
--------------	--	------------

Present :—J. E. Bowden, Esq. (*Solicitor for the Bill*).

Room cleared.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Clause 1 read, amended,\* and *agreed* to.

Clauses 2 and 3 read and *agreed* to.

Title read and *agreed* to.

Chairman to report the Bill with an amendment to the House.

SCHEDULE OF AMENDMENT.

Page 2, clause 1, line 19. *Omit* “locality” *insert* “streets.”

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PARRAMATTA STREET-WATERING BILL.

WEDNESDAY, 17 MAY, 1893.

Present:—

MR. BARBOUR,		MR. HUGH TAYLOR,
MR. BOWES,		MR. FRANK FARNELL.
FRANK FARNELL, ESQ., IN THE CHAIR.		

John Ebenezer Bowden, Esq., appeared as solicitor for the Bill.

Mr. John Ebenezer Bowden sworn and examined:—

1. *Chairman.*] You hold the position of solicitor for the Borough of Parramatta? I do.
2. And you have held that position for a considerable time? For many years.
3. You have drafted a Bill for the purpose of enabling the council of the Borough of Parramatta to levy a special rate for street-watering purposes within certain portions of the borough? I have.
4. Will you explain to the Committee the object of the Bill? The object of the Bill is to enable the council of the Borough of Parramatta to provide for the watering of certain portions of streets within the borough. Where the greater traffic exists, and all the business premises are situated, the street is sometimes very dusty. There are clouds of dust, and the goods of the tradesmen are injured, and trade also is injured thereby. From time to time there have been applications to the council on the part of some of the shop-keepers to provide for the watering of the streets. The rates of the borough are levied to the full extent for other purposes. The borough is a very extensive one, and it takes the whole of those rates to repair the roads and to carry out other improvements. Under the circumstances it has been found impossible to provide for the street-watering without raising special funds for the purpose. In consequence of that subscriptions were raised by some of the shop-keepers from time to time, but it was found that the subscriptions were very unequally paid. Some subscribed more than they ought to subscribe; others subscribed too little; and others subscribed nothing. In consequence of the necessity which arose, I received instructions to prepare a Bill. The Bill empowers the council to levy a rate in order that the necessary funds may be raised should a majority of the ratepayers of any particular locality send in a petition to the council for that purpose, not otherwise.
5. So that the ratepayers will be consulted before any action is taken to carry out the provisions of the Bill? Yes.
6. Do you know of any precedent on the same lines as this Bill? I do not think there is one. I think this is the first occasion upon which a matter of this kind has been taken up by any municipality.
7. Have you had any opposition offered to the Bill? No; I have mentioned the matter to various of the shop-keepers concerned, and they have expressed an opinion favourable to the Bill.
8. *Mr. Barbour.*] Those whom you have seen are principally those who would be benefited by the Bill? Yes; persons who are within the area in which the Bill is likely to be applicable.
9. Has any public meeting been called? No.

Mr.  
J. E. Bowden.  
17 May, 1893.

- Mr. J. E. Bowden.  
17 May, 1893.
10. Has there been any expression of public opinion by the council or otherwise? The matter was initiated by resolution of the council, duly notified on the business paper. The items on the business paper are published in the newspapers, and this resolution was published along with the rest.
11. Has any public notification of the intention of the council to apply for the Bill been made? It is well known in Parramatta. The matter was published in the local papers, and in the *Gazette* in accordance with the rules of the House.
12. You have had no expression of opinion from the ratepayers in regard to the matter? They have not been called together as a body. I have only seen some individuals.
13. You do not know whether it is a matter which would be favourably received by them or not? No; I could not say, excepting so far as I have seen them. Those whom I saw were persons largely interested, persons who own large properties, and they would suffer from the levying of the rate as much as anybody.
14. In the event of the Bill becoming law would you levy the rate on the whole of the municipality? No; the petition will be restricted to a certain portion of the street where the petitioners may reside or carry on business. That is provided for in the Bill. No action could be taken without some such provision.
15. What is the purport of the 168th section of the Municipalities Act? It provides that the special and general rates of any municipality shall not exceed 2s. in the £1.
16. *Mr. Taylor.*] Do you know whether a petition was presented by the ratepayers of the main street of the borough—Church-street—against the passing of the resolution to apply for the Bill? No.
17. But it was so? I do not know of it.
18. No petition was ever presented in favour of it? Not that I am aware of.
19. I am the largest ratepayer in the main street, and I object to it. I think we are taxed quite sufficient? It can only be done on petition of the majority of the ratepayers.
20. I am only one out of fifty, and I am the largest ratepayer, consequently I shall only have one vote against forty-nine? It might be arranged so that the voting should be in accordance with the Municipalities Act—cumulative.
21. Would the Bill apply to any portion of a street? Yes, to any portion on petition.
22. You know the locality well. Supposing the majority of the ratepayers from Lennox Bridge to the Railway Bridge, petitioned in favour of street-watering, it would be carried out to that extent, and to that extent only? That is all.
23. *Mr. Barbour.*] Is it intended to go for rates outside the streets where the watering takes place? No; where the watering does take place the levying will be made.
24. *Chairman.*] With regard to the street from Lennox Bridge to the railway station, no one would be asked to agree to the levying of the special rate excepting the people in that street? No.
25. *Mr. Taylor.*] And they must petition? Yes.
26. *Mr. Bowes.*] As a matter of fact, if the Bill becomes law, it cannot be put into operation in any part of the borough, unless it is petitioned for by the ratepayers? No.

Mr. Charles Joseph Byrnes sworn and examined:—

- Mr. C. J. Byrnes.  
17 May, 1893.
27. *Chairman.*] You are the mayor of the Borough of Parramatta? Yes.
28. And you have been connected with the Borough of Parramatta for a long period? I have been mayor for thirteen years.
29. You are aware of the object of the borough in promoting a Bill asking for powers to establish and levy a special rate for street-watering purposes within certain portions of the borough? I am.
30. Do you think any injustice would be done to the ratepayers in the particular localities in which it is proposed to apply the Bill? I think not. The Bill is an equitable one. The street-watering will only be carried out on requisition of the majority of the people who require the street or a section of it to be watered. If there is a majority who petition, the council will authorise the rate to be levied.
31. How many aldermen have you in the borough? Twelve.
32. It was owing to the decision of the council that this Bill was promoted? Yes. I might explain that it was upon the resolution of Alderman Cox, who had been spoken to repeatedly by the ratepayers in reference to the great nuisance caused by the dust, particularly in Church-street. After conferring with a number of the ratepayers he made the suggestion that it would be better to get a Bill passed to enable the council to levy a rate for the watering of any street or portions of a street, instead of obtaining subscriptions as has been done hitherto, from various tradespeople. He was so far satisfied that it would please the people that he placed a resolution on the business paper, and after due consideration it was passed by the council.
33. Have you heard any expression of opinion on the part of the people of Parramatta in opposition to the passing of the Bill? Yes; a petition was presented to the council against it, signed by over 107 persons, but I have since been informed that a great number of the petitioners signed the petition because they had been told that the Bill would enable the council to levy a rate indiscriminately all over the borough, and when they found out that it was only upon requisition or petition to the council to water certain portions of the town, they withdrew their opposition.
34. There has really been no public expression of opinion against the Bill by way of public meeting? None, whatever.
35. *Mr. Barbour.*] Your opinion is that the majority of the people in Parramatta who are likely to be affected by the Bill are in favour of it? Yes.
36. And that is the opinion of the majority of the council? Yes.
37. Was the resolution unanimously passed, or by a majority? By a majority. I forget what the majority was. Of course, Mr. Taylor is an alderman, and as he has told you he is opposed to the Bill. You may depend upon it that he was in the minority.
38. And the council have no desire to fix the payment upon any part of the borough, except in the localities where the watering is to take place? Where the majority call for it. There must be a majority of the ratepayers in a section of a street or the whole of the street to petition the council to levy a rate and the rate would not in all probability be more than 1d. instead of 3d.
39. But the intention of the council is not to levy the rate excepting in respect of the localities in which the watering is to be carried out? Exactly; in fact, the Bill has the same principle embodied in it—only it

Mr.  
C. J. Byrnes.  
17 May, 1893.

it is done by petition—as the principle which is contained in many Acts of Parliament which are extended to certain places by the proclamation of the Executive after having been asked for.

40. *Mr. Bowes.*] As a matter of fact, if the Bill becomes law, it cannot be brought into operation unless a petition is presented by residents of a certain street? Yes.

41. How will the voting be calculated—by the cumulative vote under the Municipalities Act, or by the individual vote? I do not know whether the Bill has provided for that, but I should think that the principal of cumulative voting, being in existence under the Municipalities Act, should be extended to this Bill.

42. Do you think that would be a fair way of arriving at a decision of the majority in regard to a certain street; as you know the storekeepers would be large voters, and the ratepayers as a rule would be men entitled to only one or two votes, they would thus be placed at a disadvantage? I think that is a matter in regard to which the House should decide. I think, myself, that the cumulative principle, being in existence, should be extended to the Bill.

43. *Mr. Barbour.*] But there is nothing in the Bill providing for an election taking place. It provides for a petition.

44. The bill provides, "that it shall be lawful for the Council of the Borough of Parramatta at any time upon receipt of a petition purporting to be signed by a majority of the occupiers of the ratable properties situated in any street or portion of any street within the Borough, praying that the street or portion of street adjacent to the premises occupied by the petitioners may be watered, to proceed to establish and levy upon or in respect of the ratable properties in the localities proposed to be watered, a special rate." The petition must be signed by a majority of the occupiers? Yes.

45. There would be no voting at all? No.

46. And the petition must be signed by a majority of the occupiers of the ratable property situated in any street or portion of any street within the borough, and attested by some respectable person to the satisfaction of the council? I take it that Mr. Bowes means if Brown and Jones represent on the municipal roll eight votes, it should be a question as to whether they should be represented by eight votes or by two.

47. The Bill refers to majority of those who sign the petition? Yes.

48. *Chairman.*] The Bill states that the petition shall be signed by a majority of the occupiers. An occupier need not necessarily be a ratepayer. Do you wish to extend the Bill to the occupiers or to confine it to the ratepayers? Under the Municipalities Act the Judges have made the occupier capable of voting as well as the owner of property. The Court has decided that if Jones owns a house and Brown lives in it, and Jones pays the rates, and Brown declares that he is the ratepayer, and that he is not in arrear with his rates he can vote, so that the question is as to who is the ratepayer proper.

49. *Mr. Barbour.*] The Bill uses the word "signed by a majority of the occupiers of the ratable properties situated in any street," but it is the majority of names on the petition which will operate with the Council? The object of the Bill is to relieve those people who are principally shopkeepers in the main street from having their goods destroyed by dust, and as they are the occupiers and the persons whose goods are damaged, perhaps it would be as well that the Bill should apply to them only; but I must take exception to Mr. Taylor's statement that he is the largest ratepayer in Church-street, and that he will have twenty-three votes because no man in existence could have twenty-three votes.

50. According to this Bill one man will have one vote? The Council considered that it was best to give each person who is an occupier an opportunity of saying whether he should be taxed or not.

51. *Mr. Taylor.*] We will suppose that Mr. Murray owns property in the street and pays the whole of the rates for his different properties. We will also suppose that he is against the water-rate. Are his tenants to vote for the watering when they pay no rates? That is a suppositious case.

52. *Mr. Barbour.*] If there is to be an election the Bill will have to be altered by Parliament? There is to be no election.

53. *Mr. Bowes.*] Are there many streets in Parramatta in regard to which the residents are likely to ask that the petitions should be extended to them? Not more than three.

54. And has the Council really been able to find money to water the streets without getting a Bill through Parliament to enable them to levy a special rate? The Council is unable to find the money. I might point out that a very great injustice has been done to the ratepayers in the back streets. In these back streets there are a large number of ratepayers who contribute very largely to the revenue of the Borough. If we take any money out of the general revenue in order to water two or three streets of the borough—and I may say that the ratepayers of Church-street have been conspicuous in persistently asking the Council for money from the general revenue to water that street—we shall be committing an injustice to those who are living in the back streets.

55. And you think there would be no material objection on the part of the ratepayers generally to a Bill of this kind being introduced? That is my opinion.

Mr. Edward Nicoll Murray called in, sworn, and examined :—

56. *Chairman.*] You are a resident of Parramatta? Yes.

57. And a ratepayer of the borough? Yes.

58. You are aware of the provisions of the Bill which it is sought to pass through Parliament to enable the Council of the Borough of Parramatta to levy a special rate for street-watering purposes? Yes.

59. Do you think any injustice will be done to the ratepayers of the borough by the passage of the Bill into law? No.

60. Have you heard, or do you know of any public expression of opinion against the Bill being passed into law? I have heard a good deal indirectly, but nothing to speak of—nothing that I would call opposition.

61. You have never heard of any public meeting being called in order to protest against its passage into law? No.

62. Do you think, generally speaking, that the Bill will be accepted as a boon to the ratepayers or occupiers of property in the different streets to which the Bill is to apply? Yes.

63. *Mr. Barbour.*] Have you seen the Bill? I remember it when it was going through the Council. I think I am fairly conversant with its provisions.

64. Are you a member of the Council? No.

Mr.  
E. N. Murray.  
17 May, 1893.

- Mr. E. N. Murray. 65. Are you aware whether the Bill is meant to tax only those who are benefited by the watering, or is it meant to tax more than those who will be benefited through the watering? It is only meant to tax those who will receive a benefit from it.
- 17 May, 1893. 66. And those who will receive no benefit from it will not pay anything? No.
67. It is specially applicable to those who live in the streets, which will obtain the benefit of being watered? Yes.
68. Mr. Bowes.] Of course, in levying the tax upon a certain street the whole of the ratepayers of that street will have to contribute their quota? Yes.
69. Mr. Bowden.] By the whole of the ratepayers, you mean the whole of the ratepayers who petition? Yes.
70. Mr. Bowes.] Whether they sign the petition or not? Yes; the whole of the ratepayers in that particular part.
71. Mr. Bowden.] You can speak of the nuisance created by the dust in Parramatta? Yes; myself and brothers are, as partners, the largest business people there. We are the largest taxpayers, and we occupy something like 120 feet of business property. More than half of that is freehold. We also hold other freehold property in the street, and we shall be taxed considerably more than anybody else. Our goods being hardware, will receive considerably less injury than other classes of goods. Nevertheless, we suffer greatly by the inconvenience to our customers, and also because of the damage done to a certain amount of our goods which are perishable. We do not, however, suffer to the same extent as drapers and other soft goods dealers. We are altogether in favour of the Bill. We have collected money from time to time in order to carry out the street-watering. In fact, we have purchased a water-cart which, I think, cost about £70. We used to collect subscriptions in order to pay for the watering. We presented the cart to the Council, and also handed to them the subscriptions we received. The scheme, however, became inoperative, owing to some refusing to give. Others who were willing to give would not do so because some withheld their subscriptions. Then we found that one cart was not sufficient, and the people at the other end of the town collected money and purchased a second cart. Church-street is the main thoroughfare for the whole of the outside districts, and the quantity of dust is something unbearable. In addition to that it affects business.
72. Mr. Bowes.] You do not know of any objection on the part of the ratepayers to the Bill? No, I know of no serious objection, although I heard that there was some objection.
73. Do you think a majority of the ratepayers are in favour of a Bill of this kind? Decidedly so. The fact that subscriptions were raised to pay for the street-watering proves it.
74. How do you propose to water the streets—by hydrants or what? I believe by water-carts. The hydrants tear up the streets too much. The Council now owns the two carts which were presented to them.
75. What do you think it will be necessary to raise in the £1 in order to carry out the work of watering the streets. I should think it will be something very nominal—about 1d. The Council have their own water-works.
76. What is the amount of the ratable property? That I could not say.
77. Mr. Taylor.] Can you state what will be the amount of the rate which would have to be levied for that portion of the street from Fuller's corner to Lennox Bridge? No; it would be only guess work.
78. The distance is about 400 or 500 yards? Yes.
79. Are you aware that during the last five or six months the people in that portion of the street collected £30, and handed it to the Council, and they expended it in watering the streets morning and evening for fifteen weeks? I know that we should be agreeable to double and treble our subscriptions in order to get it done again.

FRIDAY, 19 MAY, 1893.

Present:—  
MR. BARBOUR, | MR. TAYLOR.  
FRANK FARNELL, ESQ., IN THE CHAIR.

J. E. Bowden, Esq., appeared as solicitor for the Bill.

Mr. John Thorpe sworn and examined:—

- Mr. J. Thorpe. 80. Chairman.] You are an alderman for the Borough of Parramatta? Yes.
- 19 May, 1893. 81. You have been an alderman for some years? I am in my second year.
82. You are aware that a Bill has been presented to Parliament for the purpose of obtaining power to levy a specified rate for street-watering purposes within certain portions of the Borough of Parramatta? Yes.
83. Was that Bill submitted to the Council for its approval? Yes.
84. Was it approved by the Council? By a majority.
85. Can you tell us what the majority was? I think it was eight to three, but I could not say positively.
86. You opposed it? Yes.
87. You are aware what will be the effect of the Bill if it is passed into law? Yes.
88. Can you give us any reasons why you are opposed to the Bill passing into law? I believe sufficient money is already contributed as rates to effect, if properly spent, all the objects of the Bill. In my opinion, and I speak as an alderman, the rates are not properly spent.
89. You are aware of the financial position of the Borough? Yes.
90. Will you tell the Committee what its position is? Financially it is in straitened circumstances, but no one can tell exactly unless it be the Council clerk what money the borough is possessed of. I have been trying for some time to find out, and I submitted a resolution, but it was ruled out of order by the Mayor without any explanation. No one can find it out.
91. Can you tell us whether the Council has a credit balance or not? They have several credit balances—fifteen or sixteen of one kind or other, under four headings. There are balances of deposit account and balances of current account. I could not say from memory, what the balances are, but I can tell you that in the aggregate the money on deposit and money on credit would be about £3,700 on the 5th February last.

Mr.  
J. Thorpe.

19 May, 1893.

92. Was that after making provision for meeting the interest due on moneys borrowed? No; that was in February last. That was the actual balance in the bank in the shape of deposits, and the money at credit, after taking off the various debts.

93. It has been stated that the Borough Council has only £7 to its credit. Can you bear out that statement? No.

94. Could you tell us what credit balance the Council would have after making due provision to meet its debts? Do you mean taking the year's estimates of rates into consideration as well.

95. Yes? I could not tell you from memory, but in my opinion the credit balances and deposits and open credit accounts will be over £4,000.

96. Then you contend that there would be sufficient funds to pay for this service out of the general rates if the Council so desired? That is my contention.

97. If the Council, through the Mayor, has stated that it is practically because of funds that they are introducing the Bill, it would not be in accordance with facts? I oppose that idea altogether.

98. Do you think the object of the Bill to provide for certain streets being watered is a good one? Not under a separate rate. The people who will be affected by it have never asked for it. There has been no such thing as a petition or request from anybody. It was brought forward by the Mayor without any requisition from the ratepayers. That is one reason why I object to the Bill. I also object to special rates of this kind, when I think sufficient money is paid by the people to enable the work to be done without them.

99. Do you not recognise that it would be manifestly unfair that the ratepayers' money, as a whole, should be spent in watering Church-street, whilst the streets at the back would probably not be watered at all? I believe the whole of the borough would be benefited. If you reticulate the water *pro rata* according to the rates, there will be quite sufficient water to water Church-street for the rates collected there. It is the incidents of taxation to which I object. I do not want to tax a person twice over for what he does not have.

100. Supposing a majority of the people should ask that they be taxed in this way, would you have any objection? If a majority—two-thirds of the *bona fide* ratepayers of Church-street sent in a petition to the Council for a special rate I would agree to it.

101. Are you not aware that there is a provision in the Bill to this effect:—

Upon receipt of a petition purporting to be signed by a majority of the occupiers of the ratable properties situate in any street or portion of any street within the said borough and attested by some respectable person to the satisfaction of the said Council praying that the street or portion of street adjacent to the premises occupied by the petitioners may be watered to proceed to establish and levy upon or in respect of the ratable properties in the locality proposed to be watered a special rate not exceeding three-pence in the pound.

? Yes, exactly. It is like a man providing a stable long before he has a chance of buying a horse.

102. If the Bill came into force, what would be the probable amount of the rate which would be levied on the people applying for the water service? Three-pence in the £.

103. The Bill provides that the rate shall not exceed 3d.? You may rely upon it that it will be 3d.

104. Are you aware that some of the principal people in Church-street purchased a water-cart? I believe they did and paid for the watering.

105. Do you remember what they paid? No.

106. What do you think it would cost per day for watering Church-street? I do not think it would cost more than £200 a year. They have plenty of water, because the water is fit for nothing else.

107. Do you think that a rate bringing in £200 a year from the ratepayers of Church-street would fall heavily on those ratepayers? It would fall heavily on some. A good number would object to it and it would be palpably unjust to tax people in that particular way. Some of the large establishments pay a very heavy water-rate—9d. in the £—and they do not use as much water as a cottage which pays one-fiftieth of the amount. It is unjust to tax them twice. Again, the people in the back street would benefit in the same way as those in Church-street; in fact it is the back street people who grumble at the dust in Church-street.

108. Do you not think that the prevalence of dust in Church-street deteriorates the value of the goods in the shops? I dare say it does, but that has nothing to do with the principle of watering. It is only a question of how to do it.

109. It is a question as to who shall bear the cost? Exactly.

110. Do you not think, in the interests of owners of property themselves, it would be better for them to pay a small extra rate and retain their tenants rather than lose them? If I were an owner of property in Church-street I would not agree to it.

111. Are you aware that the largest ratepayer in Church-street has stated that he is prepared to pay his proportion towards the watering? I have been told so.

112. Do you know of any public expression of opinion against the Bill? I know of a petition which was got up and signed by 100 ratepayers.

113. Residents of where? I do not know whether they were located in Church-street or not.

114. Were they not of opinion, when they signed the petition, that the rate would be levied as a general rate? I do not think so.

115. I take it that if two-thirds of the occupiers ask for this special service it should be given? I contend that two-thirds of the ratepayers in Church-street should have asked for the Bill before it was brought before Parliament. I may mention that tenants in all instances do not pay the rates.

116. But they have been ruled to be the occupiers? Exactly, that is where the trouble comes in. The person who pays the rates should be the one to say whether, in this particular instance, the rate should be levied. A tenant does not care how much rates and taxes are imposed.

117. But do not landlords generally take into consideration the amount of rates in fixing the rents? So far as they can they do, but in these bad times they are obliged to swallow a great deal.

118. *Mr. Barbour.*] Where do you live? I live close to Church-street, in Macquarie-street.

119. Not in Church-street? No; but within two shops of it.

120. If the Bill be passed, will you be required to contribute any of the rates? No.

121. Then you are not personally interested? No.

122. Do you think it is necessary that Church-street should be watered? Yes.

123. And the only objection you have is that an extra rate would be charged for watering it? I think it should be done out of the present rates, and it could be done if they were properly administered.

- Mr. J. Thorpe.  
19 May, 1893.
124. Are you aware that the Bill only authorises the charging of an extra rate to people who are benefited? Yes.
125. Would you have any objection, if the people in the street were willing, to pay for the water? If two-thirds of the people in the street—that is two-thirds of the people who pay the rates—wish to have it, let them have it. A tenant may sign the petition and not pay rates. His landlord, however, pays them.
126. The leases sometimes contain a clause binding the landlords to pay rates and taxes? Yes; but he would not bind himself to pay rates and taxes imposed by his tenant, which would virtually be the case in this instance.
127. We have had evidence from certain interested persons living in the street to the effect that they were willing to pay the rate? Exactly; there are a few of that kind.
128. Do you not think they should have the chance of obtaining the water? Certainly; but they ought not to impose it on those who do not want it.
129. *Chairman.*] In the particular street in which the service is applied? Yes.
130. *Mr. Taylor.*] You have stated that a petition has been presented by about 100 ratepayers against the Bill? Yes.
131. Was any petition ever presented to the local Council in favour of the Bill? No.
132. Have you had conversations with residents of Church-street in reference to the Bill? Yes.
133. What are their opinions? Some of the storekeepers in the centre of the town are strongly in favour of it; others in the more sparsely populated portions of the street are against it.
134. *Mr. Barbour.*] Not against the watering, but against the special rate? Only against the special rate.
135. *Mr. Taylor.*] Can you give us any idea what amount is to the credit of the water account in Parramatta? There is a large sum at deposit in connection with the water account, and also an open account, but I could not tell you what the figures are.
136. *Mr. Barbour.*] That is the supply of water account? Yes.
137. *Mr. Taylor.*] Are you aware that former Mayors have had the streets watered without charge? Yes.
138. Is it not a fact that Church-street is partly watered every morning now by means of the water-tables? Yes.
139. And the water with which they flush the drains is put upon the streets with the hose? The whole street can be done in the same way if it were properly managed.
140. You state that it would cost about £200 a year to water Church-street, are you not aware that we have men under contract who supply horses and men at 7s. a day? Yes.
141. *Mr. Barbour.*] That would come to about £104 per annum? Yes; but I do not think that would cover the water-cart business. I do not think one man could water the whole of Church-street with one horse and cart.
142. But how about the portion of Church-street from Lennox Bridge to Fuller's corner? If you are going to tax the whole of Church-street you must water the whole of it.
143. *Mr. Barbour.*] If a man were kept going from morning to night, would he not be able to furnish sufficient water? I do not think so. Church-street is  $1\frac{1}{2}$  miles long, and if he started at one end, that end would be dry by the time he got back to it.
144. *Chairman.*] But he could obtain water at the other end? There is only one place at which he could obtain water.
145. *Mr. Taylor.*] You object to that portion of the Bill which gives the occupiers power to vote? I object to occupiers being empowered to impose a new rate on landlords.
146. Do you know that a number of houses in Church-street are empty at present? Yes.
147. Then, no one could be asked to sign a petition in connection with those houses? No; the landlord ought to be able to do so, but he cannot, because he is not the occupier.
148. It seems to come to this, that eight or nine men living in the populated part of Church-street may get up a petition, and get the street watered at the cost of others who will receive no benefit from it? Influences are of such a character in Parramatta that I have no doubt a petition would be got up which would carry the point.
149. *Chairman.*] You state that it would cost £200 a year to supply the service in Church-street? Yes.
150. Do you know how many ratepayers there are in Church-street? I cannot say exactly.
151. Do you think there will be 1,000? I do not think so. I do not think there are more than 300 or 400. Of course there are more occupiers.
152. Supposing £200 is divided between 400 ratepayers—do you not think they would pay a reasonable amount for the service they received? I think the service would be largely in favour of some, and of little benefit to others.
153. You say a petition signed by 100 ratepayers was presented to the Council against the Bill? Yes.
154. How many ratepayers are there in the borough? About 3,000.
155. So that out of this number only 100 signed the petition? The petition against it was signed by 100, but there has been no petition signed in favour of it. There has never been a request or letter that I know of asking the Council for it.
156. Do you not think that the ratepayers or occupiers have had ample opportunity of protesting against the Bill? You will find a great many more objections to it when the rate collector goes round.
157. *Mr. Taylor.*] Are there not more Government properties, church buildings, and buildings not rated, in Church-street, than in any other part of the town? There are not more than in any other part of the town, but the non-ratable property bears a very large proportion to the ratable property.
158. But not a larger proportion? No; I do not think it is larger.
159. But a larger proportion than in any one street? Yes.
160. *Mr. Bowden.*] Are you aware that many applications have been made to the Council to have the street watered? Yes.
161. And the requests have not been complied with? Sometimes they have, but not under the present Mayor.
162. Are you aware that the reason it was not complied with was because there were no funds? The Mayor alleged that not only were there no funds, but that it was illegal to do it.
163. You use Church-street a good deal? Yes.
164. You know that it has been partly watered by means of subscriptions? Yes.
- 165.

165. That was of very great benefit to you? I like to see it watered on a dusty day.
166. Were you one of the subscribers to the fund? No. At the same time I want the street watered, and I am willing that the rates should be spent for that purpose. I object to subscriptions being raised, because I think the rates of the borough, if properly expended, are sufficient for the work.
167. *Mr. Barbour.*] The water-rate is 9d. in the £? Yes.
168. And you think that that should include the watering of the street? In my opinion, the 2s. in the £ paid by the ratepayers is ample for everything.
169. *Mr. Bowden.*] There is a debt on the water-works for which interest has to be paid? Yes; I am aware of it.
170. *Chairman.*] Are you aware of the fact that a petition was presented to the Legislative Assembly against the Bill? I know that there was a petition.
171. Do you know how many people signed it? No.
172. Would you be surprised to hear that only one person signed it? I should not be surprised at anything taking place in Parramatta.

Mr.  
J. Thorpe.  
19 May, 1893.

Mr. George Ralph sworn and examined :—

173. *Chairman.*] You are a resident and a ratepayer in Parramatta? Yes.
174. You are aware of the nature of the Bill we are considering? Yes.
175. Have you any objection to the passing of that Bill? Yes.
176. Will you state your objections? It is quite unnecessary, because they have at the present time provision for street-watering under the 156th section of the Municipalities Act. There is no necessity for this Bill, provided that the Council will recognise the 166th section, which lays down that the rates shall not exceed 5s. per room per annum for the water-rate. I have other objections to the Bill which I presented in a petition. I may say that I have property to the extent of about £8,000, which makes me interested in the question. I certainly think you should report to Parliament against occupiers, who do not pay rates, being allowed to vote in connection with the street-watering.
177. Supposing the Committee made an amendment substituting ratepayers for occupiers, would you then be prepared to allow the majority of the ratepayers to say whether the streets should be watered or not, and a special charge made for the service? I do not see any necessity for the Bill, in view of the fact that the Council has power already under the Municipalities Act.
178. *Mr. Barbour.*] But would you have any objection to the Bill if ratepayers were substituted for occupiers? Yes.
179. You would have the same objection whether ratepayers or occupiers were allowed to vote? Not exactly. I object to the Bill because I think it is unnecessary.
180. *Chairman.*] You think it is an unnecessary tax on the ratepayers in the particular streets to be served? They can levy at present if they like under the 166th section of the Municipalities Act, a street-watering rate.
181. A special rate? Yes.
182. Where did you obtain that advice? I obtained it myself from Sly and Hamilton.
183. Supposing the Council have found from their advisers that they cannot levy a special rate, and that their funds are insufficient for this particular service, do you not think, under such circumstances, that they are justified in introducing a Bill of this character, provided that the ratepayers are to be consulted? I object to the Bill, because it is quite unnecessary.
184. You object to paying any further rates than you are paying now. You think they ought to cover everything? As a matter of fact the cost of street-watering might, with fairness to all concerned, in the main street, be taken out of the water account.
185. But why should the promoters of the Bill ask for it if it were not really necessary? They are in such a state of bankruptcy that they must get money somehow. In order to show you whether you should entrust them with further powers, I may state that instead of owing five years' rates, as laid down in the Municipalities Act, they owe nearly eight years' rates. Their indebtedness is £56,600.
186. Do you know whether they have a credit balance or not? I could not say; I believe the object of the Bill is to get fresh revenue.
187. For this particular purpose? It adds to the revenue.
188. It could not be applied to any other object than that mentioned in the Bill? It would really be extra revenue.
189. *Mr. Barbour.*] How much do you think would be the cost of watering the business portion of the town for one year? It might be done for £150.
190. What would that be per £ on the ratable property? I could not say.
191. Would it be 1d.? Probably.
192. Would it be 2d.? I should think between 1d. and 2d.
193. *Chairman.*] You presented a petition against the Bill to Parliament? Yes.
194. Did you ask anyone else to sign it? No; I could not waste the time to canvass the town, and if I had done I might not have obtained a majority, so I signed it myself.
195. Your objection to the Bill, then, is this, that you think the Council should, out of its general funds, pay for the service? Out of the water fund.
196. But you have admitted that it is in a state of bankruptcy; consequently the service cannot be rendered until the Council is in funds? There is only one account which I think is in credit, and that is the water account.
197. But it might be illegal for them to apply a single penny of that fund to street-watering? I do not know.

Mr.  
G. Ralph.  
19 May, 1893.

1892-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**PARRAMATTA-STREET WATERING BILL.**

(PETITION FROM GEORGE RALPH, OF CHURCH-STREET, PARRAMATTA, AGAINST.)

*Received by the Legislative Assembly, 28 February, 1893.*

To the Honorable the Speaker and Honorable Gentlemen of the Legislative Assembly of New South Wales.  
Petition against the "Parramatta-street Watering Bill."

The humble Memorial of the undersigned, a resident and ratepayer of the Borough of Parramatta,—  
RESPECTFULLY SHOWETH:—

1. That there is no necessity for the Parramatta-street Watering Bill, if the Borough Council will respect the 166 section of the Municipalities Act as to charging for water. In the business portion of the town I believe every assessment—at the Council's mode of charging for water 9d. in the pound on the rental—exceeds 5s. per room per annum; as an instance, assessment No. 255, one of my properties shows for one room a water-rate of £2 12s. 10d., and of seven properties of mine, comprising twenty-nine rooms, the water-rate average 9s. 7½d. per room per annum, such being contrary to section 166 of the Municipalities Act.

2. That there is at present provision for a street watering rate under the 165 section of the Municipalities Act, and the Council's action in disregarding section 166 is the only bar to such rate being levied.

3. That nine-tenths ( $\frac{9}{10}$ ) of the residents of the business street in Parramatta did petition the Borough Council against this Bill.

4. That as an owner I beg to protest against the occupier of my property—who is a migratory individual—who by this Bill may vote and fix a rate on my property for all time.

And your memorialist respectfully prays that after taking the foregoing into your consideration you will reject the Parramatta-street Watering Bill.

And your Memorialist, as in duty bound, will ever pray.

GEORGE RALPH.

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 16th November, 1892, the "*Raymond Terrace Mechanics School of Arts Sale Bill*,"—beg to report to your Honorable House,—

That they have examined the witnesses named in the list\* (whose \*See list, page 4. evidence will be found appended hereto); and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was deemed necessary to make an amendment.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

JOHN S. HART,  
Chairman.

No. 3 Committee Room,  
Sydney, 24 November, 1892.

## PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 24 NOVEMBER, 1892.

MEMBERS PRESENT:—

Mr. Edden,		Mr. Hart,
Mr. Lee,		Mr. Stevenson.

Mr. Hart called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.Printed copies of the Bill *referred*, together with original Petition, to introduce same, before the Committee.Present:—W. M. Vindin, Esq. (*Messrs. Thompson and Vindin—Solicitors for the Bill*).

Walter Mullens Vindin, sworn and examined.

Witness *produced* conveyance, dated 30th December, 1879, between James Hill, of the one part, and John Richardson and others, Trustees of the Raymond Terrace School of Arts, of the other part; certificate of the death of James Kilgour; memorandum dated 26th August, 1886, showing that William Edward Shaw retired from the trust; memorandum showing that Lot Bishop and John Parsons Green were duly appointed Trustees in room of James Kilgour, deceased, and William Edward Shaw, resigned; document under the hands of Lot Bishop, President, and J. C. Garrett, Secretary of the Raymond Terrace School of Arts, certifying to a resolution of the subscribers, dated 14th September, 1886, to the effect that the Trustees were authorised to borrow the sum of £400; indenture of mortgage, dated 19th October, 1885, between John Richardson and others, of the one part, and William Scully, of the other part.

Witness withdrew.

John Cowan Garrett (*Secretary of the Raymond Terrace Mechanics School of Arts*) called in, sworn, and examined.

Witness *produced* minute-book containing a resolution of the 14th September, 1886, to the effect that the sum of £400 should be borrowed from William Scully on the security of the Mechanics School of Arts property.

Witness withdrew.

Lot Bishop (*Mayor of Raymond Terrace*) called in, sworn, and examined.

Witness withdrew.

John Parsons Green (*President of the Raymond Terrace Mechanics School of Arts*) called in, sworn, and examined.

Witness withdrew.

Andrew Laurie Adams (*Council Clerk of the Municipal Council of Glen Innes*) called in, sworn, and examined.

Witness *produced* minute-book containing minutes of a special meeting of the Municipal Council held on 12th September, 1890, when correspondence from the trustees with reference to the conveyance of the School of Arts property to the Council was under consideration.

Witness withdrew.

John Parsons Green recalled and further examined.

Room cleared.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Solicitor called in and informed.

Clause 1 read, and *agreed* to.Clause 2 read, amended,\* and *agreed* to.Clauses 3, 4, 5, 6 read, and *agreed* to.Schedule read, and *agreed* to.Title read, and *agreed* to.

Chairman to report the Bill with an amendment to the House.

## SCHEDULE OF AMENDMENT.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

RAYMOND TERRACE MECHANICS SCHOOL  
OF ARTS SALE BILL.

THURSDAY, 24 NOVEMBER, 1892.

Present:—

MR. EDDEN,		MR. SCOBIE,
MR. LEE,		MR. STEVENSON.

J. S. HART, ESQ., IN THE CHAIR.

Mr. W. M. Vindin appeared as Solicitor for the Bill.

Walter Mullens Vindin sworn and examined:—

1. *Chairman.*] You desire to produce some documents? I produce a conveyance, dated 30th September, 1879, of the piece of land set out in the Schedule to the Bill, between James Hill of the one part, and John Richardson and others, trustees of the Raymond Terrace Mechanics' School of Arts, of the other part. By this indenture it was agreed and declared that "it shall be lawful for the members of the said School of Arts present at any duly convened and constituted meeting, by a resolution of the majority of such members actually present, from time to time, to appoint a new trustee or new trustees in the room of any trustee or trustees who may die or desire to be discharged, or become unable or unwilling to act, or go to reside out of the said colony, and the entry of such appointment in the minutes of such meeting, or the conveyance of the trust estate purporting to be made in pursuance of such resolution or conveyance be conclusive evidence of the due appointment of the trustees therein named." I also produce a certificate of the death of James Kilgour; a memorandum dated 26th August, 1886, showing that William Edward Shaw retired from the trust. I produce a memorandum showing that John Parsons Green and Lot Bishop were duly appointed trustees in the room of James Kilgour, deceased, and William Edward Shaw, resigned; a document under the hand of Lot Bishop, president, and John Cowan Garrett, secretary, of the Raymond Terrace Mechanics' School of Arts, certifying to a resolution passed by the subscribers on the 14th of September, 1886, to the effect that the trustees were authorised to borrow a sum of £400; and an indenture of mortgage, dated the 19th October, 1886, between John Richardson and others, of the one part, and William Scully, of the other part, and the consideration is £400.
2. *Mr. Lee.*] On what date did the mortgage expire? 13th September, 1891.
3. Does the mortgage deed bear any endorsement of release? No, it has not been released. The time for payment has expired, and the trustees are unable to pay.

Mr. W. M.  
Vindin.  
24 Nov., 1892.

John

John Cowan Garrett called in, sworn, and examined.

- Mr. J. C. Garrett. 4. *Chairman.*] You are the secretary of the Raymond Terrace Mechanics School of Arts? Yes.  
 5. *Mr. Vindin.*] Do you produce the minute-book, showing that on the 14th September, 1886, it was resolved that a sum of £400 should be borrowed from Mr. William Scully, on the security of the Mechanics School of Arts property, to liquidate to that amount the debts and liabilities of the institution? I do.  
 6. *Mr. Edden.*] How many members of the School of Arts were there at that time? From sixty to seventy.  
 7. Did your by-laws specify how many members should form a quorum at a meeting? Yes.  
 8. Was a quorum present at the meeting at which this resolution was passed? Yes; seven formed a quorum.  
 9. *Mr. Lee.*] At a general meeting? Yes.  
 10. *Chairman.*] Have you a copy of the by-laws? No.  
 11. *Mr. Edden.*] There has been no opposition to the resolution since it was passed by the members? Not to my knowledge.  
 12. You are not sure? I have not heard of any.  
 13. *Mr. Scobie.*] Have you been secretary continuously? I was secretary up to three years ago, when I left Raymond Terrace.  
 14. *Chairman.*] How long has the School of Arts been defunct? Almost since I left Raymond Terrace.  
 15. Was another secretary appointed in your stead? The president can give that information.  
 16. *Mr. Vindin.*] Did they pass a resolution agreeing to sell the allotment of land to the Municipal Council? Yes.  
 17. *Mr. Lee.*] By whom are the minutes of that meeting signed? By Mr. Lot Bishop as president and by myself as secretary.

Lot Bishop called in, sworn, and examined:—

- Mr. L. Bishop. 18. *Chairman.*] You are Mayor of Raymond Terrace? Yes.  
 19. You were President of the Raymond Terrace Mechanics School of Arts? Yes.  
 20. *Mr. Lee.*] In what year? In 1886, when these records in the minute-book were written.  
 21. *Mr. Vindin.*] Do you know whether the Municipal Council of Raymond Terrace are desirous of purchasing this land with the building as a Town Hall and for the purpose of establishing a School of Arts and Free Library there? Yes.  
 22. Did you take legal advice as to whether it could be conveyed to you straight away without an Act of Parliament? Yes.  
 23. What advice did you receive? That it could not be conveyed without an Act of Parliament.  
 24. Your Municipal Council came to the conclusion that they would not purchase unless they were sure of a good title? Yes.  
 25. Do you know whether there are any goods and chattels in connection with the School of Arts besides the land and the building? There are the seats in the hall and the books.  
 26. Your Council is willing to take over the property? Yes.  
 27. You believe the Mechanics School of Arts are desirous of selling to the Council? Yes.  
 28. *Mr. Stevenson.*] What is the area of the land? Half an acre.  
 29. What buildings are on the land? The School of Arts building, which I should think would be 72 feet long by 36 feet wide.  
 30. Any rooms besides the main hall? Two rooms at the back.  
 31. Is it used now as a Council Chamber? Yes.  
 32. How many books have you in the Institution? About 700 volumes.  
 33. Is the Council willing to pay off the mortgage and take over the property? Yes.  
 34. *Mr. Scobie.*] Is there any objection on the part of the members of the School of Arts to the sale of this property? I am not aware of any objection.  
 35. *Mr. Stevenson.*] You think it is the wish of the residents that this property should pass into the hands of the Municipal Council? I believe it is.  
 36. *Mr. Lee.*] It is stated in the preamble that "the Municipal Council are desirous of purchasing the land with the buildings and improvements thereon as a Town Hall, and for the purpose of establishing, when convenient, a School of Arts and a Free Library, in accordance with the Municipalities Act of 1867";—has any resolution been passed by your Council to give effect to the provision in the Municipalities Act in relation to the establishment of a Free Library? I do not think there has.  
 37. Have any steps been taken towards the establishment of a School of Arts or Free Library in the building in contemplation of your purchase of the property? No; not up to the present.  
 38. The object of the Council is to secure the property for the purpose of a Town Hall? Yes.  
 39. And the School of Arts and Free Library is quite an after consideration? Yes.  
 40. You are still a trustee of the School of Arts property? Yes.  
 41. Why do the trustees apply to Parliament for a Bill to enable them to sell the property? Because the School of Arts are unable to carry on. They cannot meet their financial obligations.  
 42. Is the School of Arts still in existence? It has not been meeting for a long time.  
 43. Is the nucleus of the School of Arts in existence;—there are some books there and a managing committee? The books are there, but the institution has not been meeting for a long time.  
 44. *Chairman.*] In point of fact, it is defunct? Practically it is.  
 45. *Mr. Lee.*] Has the mortgagee been pressing the trustees for the repayment of the money? I do not think he has.  
 46. Is the interest accumulating on the mortgages? Yes.  
 47. Since when? I cannot recollect.  
 48. Do you, as a trustee, think that it is desirable that the property should be sold, and the proceeds applied to the payment of the mortgage and the interest thereon? Most decidedly.  
 49. If the property is not sold, have you any means of raising money to discharge the debt? I do not know of any means unless the trustees find the money privately.  
 50. Has any effort been made to raise the money? No.  
 51. Who is the chairman of the trustees? The president of the School of Arts, I think. 52.

52. What chattels belong to the School of Arts? The chattels consist of the furniture in the hall, the book-cases, and the books. Mr. L. Bishop.  
24 Nov., 1897
53. Do the trustees purpose selling these chattels to the Council as well? Yes.
54. Will the Municipal Council be willing to buy them? Yes.
55. *Mr. Scobie.*] Are you aware how much more than the £400 is owing by the trustees? No.
56. *Mr. Stevenson.*] What do you think is the market value of the property? On a rough estimate, I should think it is worth from £700 to £800. If it were forced into the market, possibly it would not realise so much.
57. You were a trustee when the building was put up? No.
58. You cannot tell us what it cost? No.

John Parsons Green called in, sworn, and examined:—

59. *Chairman.*] You are president of the Mechanics School of Arts at Raymond Terrace? Yes. Mr.  
J. P. Green.  
24 Nov., 1892.
60. You are also a trustee of the School of Arts? Yes.
61. *Mr. Lee.*] How long have you been president? About four years.
62. When were you last elected? About four years ago.
63. Has there not been a general meeting of the subscribers held during the last four years to elect officers? The last meeting was held on the 6th February, 1890.
64. Are not your officers elected annually? They should be; but the interest in the School of Arts has died out completely.
65. How many subscribing members are there on the roll? At present there are none, as the School of Arts is defunct.
66. Has there been any meeting of the late subscribers held to protest against the sale of the property to the Council? None whatever. They are all in favour of its sale.
67. You are aware that the Town Council will have the option of establishing a School of Arts if they become the purchasers of the property? Yes; it is mentioned in the minutes.
68. Do you think it will be advisable under these circumstances to sanction the sale? Certainly.
69. Do you think there will be some likelihood of a permanent Mechanics Institute being brought into existence through the medium of the Municipal Council? I think so. I look upon them as the proper persons to carry on a Mechanics Institute.
70. The townspeople having failed to sustain the interest in the School of Arts, it becomes necessary for the trustees to do something to relieve themselves of their liability? According to our lawyer's advice we have no liability. We must repay the money. Mr. Thompson stakes his reputation as a lawyer that we have no personal liability—that we borrowed the money entirely for the benefit of the School of Arts, and not for our own benefit at all.
71. At what do you value the building and the land, not including the chattels? I should say it is worth nearly £900. The original cost of the building was £850, and we spent £150 more. As it has deteriorated a little, perhaps we may place the value at £900.
72. The mortgagee has power to foreclose and take possession? That is a doubtful matter. According to the idea of everyone, he has no claim whatever on the building.
73. Do you think it will be in the interest of the mortgagee and in the interests of the people to sell this building for £400 which is worth £700? Not to a private individual but to a public body, who should take the same interest in the School of Arts as the people would. As president I called a meeting twice through the press to see whether something could be done. To the first meeting I think no one came, and to the second meeting I think four persons came.
74. The Committee are to understand that the townspeople are taking no interest in the School of Arts? None whatever.
75. The late subscribers are taking no interest? None whatever. Nearly all those who kept it up in the past have left the district.
76. You think it will be difficult to get a sufficient number of subscribers to carry on the building as a School of Arts and raise sufficient revenue to pay the interest on the mortgage? It is impossible at the present time. I am very sorry that it is, as I was one of its principal supporters.
77. You live at Raymond Terrace? I have been living there for eight years. I have charge of the Superior Public School there.
78. *Mr. Edden.*] How many people are there at Raymond Terrace? About 800, I believe.
79. You have had no public meetings whatever to see whether this property should be sold? I called two meetings through the newspapers, and I went round amongst the people and asked them to attend, but no one came to the first meeting, and only four to the second meeting.
80. *Mr. Lee.*] You also ask for power to sell the goods and chattels, the furniture, and books, in addition to the land, with the building? It is not a sale; it is more like the Council taking over the liabilities of the institution and getting the property.
81. Are you basing your calculations on the fact that the money which you will receive for the land, building, goods, and chattels will be about sufficient to pay off the mortgage and the interest thereon? We shall not receive any money. The Council will just liquidate the debts of the institution and take over the whole property.
82. You will have no balance to distribute amongst your subscribers? Not a penny. If the Bill does not pass, the Council will be in debt, as they have advanced a sum of money already.
83. *Mr. Stevenson.*] How much? I think £6, to pay a few outstanding accounts to the newspapers.
84. *Mr. Edden.*] How much money is owing? In addition to the mortgage, which is £400, we owe three years' interest at £32 per year, and then there will be the cost of this Bill.
85. We can put it down at £600 altogether? The Council have agreed to pay £534, but of course in the meanwhile they are responsible for the interest accruing, so that it will make the total about the same. The Council have been in occupation of the building for about two years.
86. I suppose they have been paying money to the School of Arts for the use of the building? There has been no School of Arts since they have been in occupation.
87. *Mr. Stevenson.*] They are taking care of the building? They are taking care of the building, and for themselves I hope.

- Mr. J. P. Green. 88. *Mr. Lee.*] As president of the School of Arts, and also as trustee of the institution, you are of opinion that it will be to the best interest of the people that this property should be transferred by way of sale to the Town Council? Most decidedly.
- 24 Nov., 1892. 89. *Mr. Edden.*] You stated that the mortgagee has no claim on you for the money? I merely go by Mr. Thompson's advice. It is a legal point.
90. You feel in duty bound to pay the money back? Decidedly.
91. I suppose the reason why Mr. Thompson said that the mortgagee has no claim on you for the money was that there was some technicality in the drawing up of the deed? —
92. You owe the money? Undoubtedly.

Andrew Laurie Adams called in, sworn, and examined :—

- Mr. A. L. Adams. 93. *Chairman.*] You are Council Clerk of the Municipal Council of Raymond Terrace? Yes.
- 24 Nov., 1892. 94. Do you produce the minute book of the Council? I do.
95. *Mr. Lee.*] On what date was a motion carried by the Council relative to the purchase of the School of Arts? On the 12th September, 1890, a special meeting of the Council was held to consider the correspondence from the trustees of the School of Arts, embodying the conditions upon which they were prepared to convey the property of the institution to the Council. At that time their liabilities were set out as follows :—Mortgage due in September, 1891, £400; interest due to 30th September, 1890, £32; caretaker's salary to 31st December, 1890, £6; H. Courtenay, books, &c., £3; periodicals, £6. Total, £447. It was moved, seconded, and carried, "That this Council agrees to take over the property of the Raymond Terrace School of Arts upon the conditions contained in letter dated 6th September, 1890, and that the mayor be empowered to take the necessary steps to give effect to the same."
96. *Chairman.*] Have you the letter from the trustees? No.
97. *Mr. Lee.*] Has there been any subsequent action? A special meeting was held on the 12th December, 1891, and the minutes of that meeting read as follows :—

Business : To consider correspondence from R. W. Thompson, solicitor, and J. P. Green, president of the School of Arts, on the subject of the purchase by the Council of the School of Arts property.

The letter from Mr. Green gave the result of an interview (in conjunction with the mayor), with R. W. Thompson, solicitor, on the subject set forth above.

Mr. Thompson's letter was to the effect that provided he should not have to pay the sum of £25 a second time, and the witnesses before the Select Committee did not look to him for their expenses, he would undertake that the private Bill shall not cost more than 70 guineas. Further, that the Council will have power to mortgage the site if need be; that it was not a matter of compulsion to establish a School of Arts and Free Library, but if established would be entirely under the control of the Council; that there was no other way to divest the trustees of their title and to make a good title to the land except the private Bill; and also that the Council have no power to take upon themselves the duties of trusteeship and cannot therefore succeed the present trustees.

In consequence of the reduction in the cost of Bill, the liabilities were now set down as follows :—Mortgage, £400; accrued interest, £64; Act of Parliament, £70; total, £534.

After a long discussion Alderman Hanlon moved, "That the Council hereby agrees to extend the amount to be paid for the School of Arts property to the sum of £500 in view of the additional expense in having to obtain a private Bill through Parliament, giving the Council a perfect and indefeasible title to the property."

Seconded by Alderman Garred.

Alderman Crane moved, "That the amount be increased to £534."

Seconded by Alderman Hart.

The amendment was carried.

Alderman Crane moved, "That the Mayor be authorised to sign, on behalf of the Council, the petition to Parliament praying for the passing of a private Bill."

Seconded by Alderman Hart and carried.

98. Are the Committee to understand that although £530 has been passed by the Council, it is to be paid conditionally on the mortgage, the interest, and the cost of this Bill reaching that amount? Unless that resolution is rescinded the Council cannot exceed the amount.

99. In other words the Council are to pay the mortgage, the interest, and the cost of the Bill, so long as it does not exceed £534? Yes.

John Parsons Green recalled and further examined :—

- Mr. J. P. Green. 100. *Mr. Lee.*] Did you, as president, on the 11th September, 1890, address a letter to the Municipal Council, placing the property known as the Mechanics School of Arts under offer to that body? Yes.
- 24 Nov., 1892. 101. Had you prior to that event been in communication with the Department of Public Instruction as to the transfer of the property? Yes.
102. Did you receive a reply? I did. I asked the Under Secretary whether the Department had any control over the institution, and whether they would have any objection to our parting with the institution to the Municipal Council, and they wrote back saying that they had no objection whatever; they did not support the institution except to give so much in the pound to every pound raised.
103. Did they intimate that they had any objection to the transfer on the facts that you placed before them? None whatever.
104. Was that information sent on to the Council? Yes; I sent the letter.
105. *Mr. Stevenson.*] The Department had no interest in the land? No interest at all.
106. It was a purchase and not a Crown grant on which the building was erected? Yes; it was a purchase from Dr. Knaggs.

**SCOTTISH AUSTRALIAN MINING COMPANY (LIMITED) RAILWAY BILL.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 11th October, 1892, the "*Scottish Australian Mining Company (Limited) Railway Bill*," beg to report to your Honorable House:—

That they have examined the witnesses named in the List\* (whose evidence will be found appended hereto), and the Preamble as amended having been satisfactorily proved to your Committee, they proceeded to consider the clauses and Schedule of the Bill, in which it was deemed necessary to make certain amendments.

Your Committee now beg to lay before your Honorable House the Bill, as amended by them, with an amended Title and Preamble.

NINIAN MELVILLE,  
Chairman.

No. 3 Committee Room,  
Sydney, 22nd November, 1892.

## PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 27 OCTOBER, 1892.

MEMBERS PRESENT :—

Mr. Edden, | Mr. Kelly,  
Mr. Melville.

Mr. Melville called to the Chair.  
Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.  
Printed copies of the Bill *referred*, together with original Petition to introduce same before the Committee.

Present :—G. C. Westgarth, Esq. (*Messrs. Westgarth & Company, Solicitors for the Bill*).  
[Adjourned till Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 2 NOVEMBER, 1892.

MEMBERS PRESENT :—

Mr. Melville in the Chair.

Mr. Edden, | Mr. Kelly.

Present :—G. C. Westgarth, Esq. (*Messrs. Westgarth & Company, Solicitors for the Bill*).  
Harry Wood Kerle (*Civil Engineer*), sworn and examined.  
Witness *handed in* tracing showing proposed railway for the "Scottish Australian Mining Company, Limited [*Appendix A*"].  
Witness withdrew.  
Thomas Croudace (*General Manager of the Scottish Australian Mining Company, Limited*) called in, sworn, and examined.  
Room cleared.  
Committee deliberated.  
*Resolved*,—That the Engineer-in-Chief and the Secretary for Railways be summoned to give evidence next meeting.  
[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY, 8 NOVEMBER, 1892.

The House having adjourned over to Thursday, the meeting called for this day lapsed.

THURSDAY, 10 NOVEMBER, 1892.

MEMBERS PRESENT :—

Mr. Edden, | Mr. Hayes.

[In the absence of a quorum, the meeting called for this day lapsed.]

WEDNESDAY, 10 NOVEMBER, 1892.

MEMBERS PRESENT :—

Mr. Melville in the Chair.

Mr. Edden, | Mr. Hayes,  
Mr. Kelly, | Mr. Levien.

Present :—G. C. Westgarth, Esq. (*Messrs. Westgarth and Company, Solicitors for the Bill*).  
Henry Deane (*Engineer-in-Chief for Railways*) called in, sworn, and examined.  
Witness withdrew.  
Hugh M'Lachlan (*Secretary for Railways*) called in, sworn, and examined.  
Witness withdrew.  
Ordered :—That the evidence be printed and circulated to members of the Committee before next meeting.  
[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY, 22 NOVEMBER, 1892.

MEMBERS PRESENT :—

Mr. Melville in the Chair.

Mr. Edden, | Mr. Frank Farnell,  
Mr. Hayes.

Present :—G. C. Westgarth, Esq. (*Messrs. Westgarth and Company, Solicitors for the Bill*).  
Room cleared.  
Preamble considered and amended.\*  
Question,—"That this preamble as amended stand part of the Bill,"—put and passed.  
Solicitor called in and informed.

Clause

\* See Schedule of Amendments.

Clause 1 read, amended,\* and *agreed to*.  
 Clause 2 read, amended,\* and *agreed to*.  
 Clause 3 read, amended,\* and *agreed to*.  
 Clause 4 read, amended,\* and *agreed to*.  
 Clause 4 read, amended,\* and *agreed to*.  
 Clause 5 read, amended, and *agreed to*.  
 Clause 6 read, amended, and *agreed to*.  
 Clause 7 read, amended,\* and *agreed to*.
