(SECOND SESSION.)

NEW SOUTH WALES.

CIVIL SERVICE ACT, 1884.

(REPORT OF BOARD FOR 1893.)

Presented to Parliament, pursuant to Act 48 Vic. No. 24, sec. 62.

REPORT

OF THE

CIVIL SERVICE BOARD OF NEW SOUTH WALES,

For the Year 1893.

To His Excellency the Right Honorable SIR ROBERT WILLIAM DUFF, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We have the honor to submit our Report for the year 1893, in terms of section 62 of the "Civil Service Act, 1884."

In conformity with the provisions of the Act, that one member shall retire annually, Alexander Oliver, Esq., M.A., President of the Land Appeal Court, retired on the 31st December, 1892, and the vacancy thus occasioned was filled by the appointment of Critchett Walker, Esq., C.M.G., Principal Under Secretary.

J. H. Storey, Esq., was elected to the position of Chairman.

The Board have held forty-eight meetings for the transaction of business during the year.

The returns furnished in terms of sections 25 and 62 show—

Increases in the number of persons employed in the Public Service under the following heads, viz. :—

Appointments of probationers	11
„ under section 7	115
„ „ 8	203
„ „ 28	9
„ of temporary officers under section 31	282
„ of teachers	120

740

And decreases as under :—

Retirements of Staff Officers	105
Officers dispensed with—contributors	56
Resignations—contributors	167
" non-contributors	173
Dismissals—contributors	30
" non-contributors	70
Non-contributors dispensed with... ..	405
Deaths	82
	1,088

The actual decrease has therefore been 348

The balance at credit of the Civil Service Superannuation Account, a statement of which is submitted herewith in accordance with the 62nd section of the Act, was, on the 31st December, 1892, £473,629 4s. 2d. This was augmented during the year by receipts to the amount of £94,197 2s. 11d. The disbursements during the year were £79,173 4s. 2d., leaving a balance to the credit of the Superannuation Account on 31st December, 1893, of £488,653 2s. 11d., and showing an increase of the credit balance during the year of £15,023 18s. 9d.

The number of officers who have retired on pensions since the Act came into operation on 1st January, 1885, to 31st December, 1893, is 687, and the amount to which they were entitled, £87,578 16s. 9d. per annum. Six pensions, which are not yet payable, have been assigned by the Government, amounting to £1,809 19s. per annum. One hundred and sixteen pensioners, whose pensions amounted to £15,285 12s. 7d. per annum, have died since 1st January, 1885, reducing the amount to £72,293 4s. 2d. During the same period, gratuities, amounting to £90,993 11s., have been granted to 607 recipients, and one gratuity of £166 13s. 4d. has been assigned, but is at present in abeyance. The following statement shows the items in detail :—

To persons whose services have been dispensed with for purposes of retrenchment—	£	s.	d.
For 269 pensioners	41,980	5	7 per annum.
6 pensioners (pensions in abeyance)	1,809	19	0
245 gratuitants	40,074	5	11*
1 gratuitant (gratuity not yet payable)	166	13	4
Retirements consequent on ill-health—	£	s.	d.
For 156 pensioners	16,591	7	5 per annum.
103 gratuitants	16,887	10	3
Officers who have retired voluntarily, being over 60 years of age—	£	s.	d.
262 pensioners	29,007	3	9 per annum.
45 gratuitants	7,114	4	5
Officers who have received injury while in the execution of their duty—	£	s.	d.
9 gratuitants	2,312	12	1
Gratuities to 205 widows and children	24,604	18	4

In addition, there are 15 pensioners, under Schedule B of the Constitution Act, receiving £3,442 11s. 4d. per annum.

The pensions now payable amount to £72,293 4s. 2d., of which £36,081 6s. 11d. are paid to officers who were entitled to retire on account of their age being over 60, or were certified by medical report to be permanently incapacitated for performance of their duty.

In

* Of this amount, £37,442 14s. 2d. has been repaid by the Government.

In the opinion of the Board the pension claims for which the Fund is legitimately liable amount to £36,081 6s. 11d. The balance, £36,211 17s. 3d., is to a large extent a charge upon the Fund not contemplated when the Superannuation Scheme was introduced.

The Board have repeatedly pointed out in previous Reports the effect on the Superannuation Fund of the system of retrenchment carried out in many of the Public Departments, and have urged "that the accruing claims of those who are entitled to superannuation allowance by reason of their age and infirmity, may not be imperilled by the forced retirements already referred to." During the past year the burden on the Fund thus created has considerably increased. A large number of fresh claims having been forwarded to the Board it was thought advisable by the present members to lay the matter before the Attorney-General for his opinion as to the legal interpretation of section 46, which deals with "abolition of office." Owing to Mr. Barton's ill-health and absence from the Colony, Mr. R. E. O'Connor, then Solicitor-General, gave his opinion, which, however, did not settle the difficulty; and as the officers whose services had been dispensed with were anxiously awaiting a decision, and in some cases were in actual want owing to the long delay in dealing with their cases, the Board represented the whole matter to the Colonial Secretary, stating their opinion that "the officers dispensed with appeared to them to be technically entitled to compensation, but that such compensation should not be a charge against the Superannuation Account, which was never intended to have such a burden cast upon it through such Departmental changes as are involved in a general scheme of retrenchment throughout the Service." The reply to this representation was that it had been decided "that these claims must be paid from the Civil Service Superannuation Fund as heretofore, pending consideration of the whole question." This was done and the gratuities so paid have been voted on the Estimates of the various Departments and repaid to the Fund; but no provision has been made for recouping the Fund for the pensions so paid.

Subsequently, on another Cabinet minute, the following decision was arrived at and communicated to the Board:—"The Cabinet have also decided that when the proper time for the adjustment of the matter arrives the Civil Service Fund shall be recouped for any additional burden which may be imposed upon it by reason of this decision."

The triennial actuarial investigation into the state and sufficiency of the Superannuation Account as required by the 54th section of the Civil Service Act, 1884, is now progressing; and as soon as it is completed, the result will be submitted in a Supplementary Report.

J. H. STOREY, Chairman.
 ARCH. C. FRASER.
 JAMES POWELL.
 CRITCHETT WALKER.
 CHARLES PINHEY.

Sydney, 14th September, 1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROYAL COMMISSION TO INQUIRE INTO THE PUBLIC SERVICE OF THE COLONY.

(COPY OF.)

Ordered by the Legislative Assembly to be printed, 20 November, 1894.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth.

To our trusty and well-beloved

THOMAS LITTLEJOHN, Esquire, President ;

The Honorable FREDERICK THOMAS HUMPHERY, a Member of our Legislative Council of our Colony of New South Wales ;

JAMES ROBERTSON, Esquire, a Fellow of the Sydney Institute of Accountants, and a Fellow of the Institute of Accountants of our Colony of Victoria ;

JOSEPH HENRY STOREY, Esquire, one of our Justices of the Peace of our said Colony of New South Wales ; and

RICHARD TEECE, Esquire, a Fellow of the Institute of Actuaries, a Fellow of the Faculty of Actuaries, a Fellow of the Statistical Society, and one of our Justices of the Peace of our said Colony of New South Wales,—

Greeting:—

Know ye, that we, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you or any three or more of you to inquire and report, as hereinafter mentioned,—

- I. As to the changes necessary for the purpose of placing the Public Departments upon a strictly economical and efficient footing.
- II. As to the present methods of public expenditure, and as to the changes necessary to place them upon a sound and economical basis.
- III. As to the state of the Civil Service Superannuation Fund and the steps necessary to place it upon a secure footing—
 - (a) With additional Government aid ; or,
 - (b) Without such aid ; and
- IV. To draw up a scheme for the better regulation of appointments to and promotions in the Public Service.

And we do, by these presents, grant to you, or any three or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means : And we do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this our Commission : And our further will and pleasure is that you do, within three months after the date of this our Commission, certify to us, in the office of our Chief Secretary, under your or any three or more of your hands and seals, what you shall find touching the premises : And we hereby command all Government officers and other persons whomsoever within our said Colony of New South Wales that they be assistant to you and each of you in the execution of these presents : And we appoint you, the said Thomas Littlejohn, to be President of this our Commission, which said Commission we declare to be a Commission for all purposes of the Act 44 Victoriae No. 1, intituled "*An Act to regulate the taking of Evidence by Commissioners under the Great Seal.*"

In testimony whereof, we have caused these our letters to be made patent, and the Great Seal of our said Colony of New South Wales to be hereunto affixed.

Witness our Right Trusty and Well-beloved Councillor, SIR ROBERT WILLIAM DUFF, a Knight Grand Cross of our Most Distinguished Order of Saint Michael and Saint George, our Governor and Commander-in-Chief of our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twentieth day of November, in the fifty-eighth year of Our Reign, and in the year of our Lord one thousand eight hundred and ninety-four.

R. W. DUFF.

[L.S.]

By His Excellency's Command,

JAMES N. BRUNKER.

Entered on record by me, in Register of Patents, No. 16, page 264, this twentieth day of November, one thousand eight hundred and ninety-four.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

1894-5.

NEW SOUTH WALES.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth.

To our trusty and well-beloved

THOMAS LITTLEJOHN, Esquire, President ;

The Honorable FREDERICK THOMAS HUMPHERY, a Member of our Legislative Council of our
Colony of New South Wales ;

JAMES ROBERTSON, Esquire, a Fellow of the Sydney Institute of Accountants, and a Fellow of the
Institute of Accountants of our Colony of Victoria ;

JOSEPH HENRY STOREY, Esquire, one of our Justices of the Peace of our said Colony of New South
Wales ; and

RICHARD TEECE, Esquire, a Fellow of the Institute of Actuaries, a Fellow of the Faculty of
Actuaries, a Fellow of the Statistical Society, and one of our Justices of the Peace of our said
Colony of New South Wales,—

Greeting :—

KNOW ye, that we, reposing great trust and confidence in your ability, zeal, industry, discretion,
and integrity, do, by these presents, authorise and appoint you or any three or more of you to inquire
and report, as hereinafter mentioned,—

- I. As to the changes necessary for the purpose of placing the Public Departments upon a strictly
economical and efficient footing.
- II. As to the present methods of public expenditure, and as to the changes necessary to place them
upon a sound and economical basis.
- III. As to the state of the Civil Service Superannuation Fund and the steps necessary to place it
upon a secure footing—
 - (a) With additional Government aid ; or,
 - (b) Without such aid ; and
- IV. To draw up a scheme for the better regulation of appointments to and promotions in the Public
Service.

And we do, by these presents, grant to you, or any three or more of you, at any meeting or meetings
to which all of you shall have been duly summoned, full power and authority to call before you all such
persons as you may judge necessary, by whom you may be better informed of the truth in the premises,
and to require the production of all such books, papers, writings, and all other documents as you may
deem expedient, and to visit and inspect the same at the offices or places where the same or any of them
may be deposited, and to inquire of the premises by all lawful ways and means : And we do give you
power at your discretion to procure such clerical and other assistance as you may deem necessary for
enabling you duly to execute this our Commission : And our further will and pleasure is that you do,
within three months after the date of this our Commission, certify to us, in the office of our Chief
Secretary, under your or any three or more of your hands and seals, what you shall find touching the
premises : And we hereby command all Government officers and other persons whomsoever within our
said Colony of New South Wales that they be assistant to you and each of you in the execution of these
presents : And we appoint you, the said Thomas Littlejohn, to be President of this our Commission, which
said Commission we declare to be a Commission for all purposes of the Act 44 Victoriae No. 1, intituled
“ *An Act to regulate the taking of Evidence by Commissioners under the Great Seal.* ”

In testimony whereof, we have caused these our letters to be made patent, and the Great Seal of
our said Colony of New South Wales to be hereunto affixed.

[L.S.] Witness our Right Trusty and Well-beloved Councillor, SIR ROBERT WILLIAM DUFF,
a Knight Grand Cross of our Most Distinguished Order of Saint Michael and
Saint George, our Governor and Commander-in-Chief of our Colony of New
South Wales and its Dependencies, at Government House, Sydney, in New South
Wales aforesaid, this twentieth day of November, in the fifty-eighth year of Our
Reign, and in the year of our Lord one thousand eight hundred and ninety-four.

(Signed) R. W. DUFF.

By His Excellency's Command,

(Signed) JAMES N. BRUNKER.

Entered on record by me, in Register of Patents, No. 16, page 264, this twentieth day of
November, one thousand eight hundred and ninety-four.

For the Colonial Secretary and Registrar of Records,

(Signed) CRITCHETT WALKER,
Principal Under Secretary.

ROYAL COMMISSION TO INQUIRE INTO THE CIVIL SERVICE.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such report until the 31st day of March next, to take effect from the 20th instant.

Given under my hand at Government House, Sydney, this 28th day of February, one thousand eight hundred and ninety-five.

By Deputation from His Excellency,
(Signed) FREDERICK M. DARLEY,
Lieutenant-Governor.

By His Excellency's Command,
(Signed) JAMES N. BRUNKER.

ROYAL COMMISSION TO INQUIRE INTO THE CIVIL SERVICE.

WHEREAS the time appointed for the return of the Commission in the above matter was, by an instrument dated the 28th day of February last, extended until the 31st day of March last, and whereas it is necessary to extend the same still further: Now, therefore, I do hereby, with the advice of the Executive Council, further extend the time within which the Commission are to make their report from the 1st until the 8th instant.

Given under my hand at Government House, Sydney, this 3rd day of April, one thousand eight hundred and ninety-five.

(Signed) FREDERICK M. DARLEY,
Lieutenant-Governor.

By His Excellency's Command,
(Signed) JAMES N. BRUNKER.

CIVIL SERVICE INQUIRY COMMISSION.

MINUTES OF PROCEEDINGS.

THE First Meeting of the Royal Commission appointed to inquire and report

DEC. 3, 1894.

- “ (1) As to the changes necessary for the purpose of placing the Public Departments upon a strictly economical and efficient footing ;
- (2) As to the present methods of public expenditure, and as to the changes necessary to place them upon a sound and economical basis ;
- (3) As to the state of the Civil Service Superannuation Fund, and the steps necessary to place it upon a secure footing—
- (a) With additional Government aid ; or
- (b) Without such aid ; and
- (4) To draw up a scheme for the better regulation of appointments to, and promotions in, the Public Service ”

was held in the Long Room, Lands Office, Sydney, at 3 p.m. on Monday, 3 December, 1894.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, F.S.I.A., F.I.A.V., J. H. Storey, J.P., and Richd. Teece, F.I.A., F.F.A., F.S.S., J.P.

The President called upon the Secretary (Mr. Percy R. Meggy) to read the terms of the Royal Commission under which they were to act, as also the letter containing the terms of his appointment as Secretary. The former was dated November 20, and the latter November 28, 1894.

The President drew attention to the wording of the letter containing the Secretary's appointment, in which it was stated that he was to be paid a salary “ without any further remuneration for shorthand notes and the transcription thereof,” which left it ambiguous as to whether he would be able to dictate his notes at the cost of the Commission to a typewriter. He had therefore instructed the Secretary to write to the Principal Under Secretary, so as to have the matter definitively settled.

The Secretary laid on the table a bound copy of the Report of the Royal Commission which inquired into the Civil Service from January 9, 1888, till January 22, 1892 ; half a dozen copies of the Report of the Civil Service Board for each year since its formation on January 1, 1885, under the Civil Service Act of 1884 ; together with a number of issues of the *Sunday Times* containing articles dealing with Civil Service Reform.

Mr. Teece and Mr. Humphery respectively suggested that half a dozen copies of the Civil Service Act and half a dozen copies of the Blue Book for each year since 1884 should be obtained.

The Secretary was instructed accordingly.

Mr. Storey stated that a Report on the Superannuation Fund had been prepared by the Civil Service Board and would be presented to the Government in the course of a few days, and he suggested that that subject should be left over till the Report was obtained.

The suggestion was agreed to.

After a discussion, it was decided to commence the investigation by examining the heads of departments, and the Secretary was instructed to call Mr. Critchett Walker, Principal Under Secretary, and Mr. F. Kirkpatrick, Under Secretary for Finance and Trade, to give evidence at a meeting to be held at half-past 6 o'clock on the following evening.

The Second Meeting of the Civil Service Commission was held in the Long Room, Lands Office, on Tuesday, 4 December, at 6:30 p.m.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The Secretary was instructed to obtain six copies of the Estimates and Supplementary Estimates.

Mr. Critchett Walker, C.M.G., Principal Under Secretary, was the first witness examined.

The Secretary was instructed to write to the witness, requesting him to supply (1) a return concerning the Board of Inquiry into the expenses ; and (2) a report showing the annual expenditure for each year from 1883 to 1894 inclusive, giving the number of officers, salaries, and total expenditure for the Chief Secretary's Department ; all of which particulars the witness promised to furnish.

Mr. Francis Kirkpatrick, Under Secretary for Finance and Trade, was next examined.

The witness supplied a printed schedule, showing (1) the general business of the branch ; (2) the names, ages, and length of service of each officer employed therein ; (3) the nature of their individual duties ; and (4) the salary paid to each officer in 1894.

The Commission then adjourned to 3 p.m. of the following day.

The

Dec. 5, 1894. The Third Meeting of the Civil Service Commission was held in the Long Room, Lands Office, at 3 p.m. on Wednesday, 5 December.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The Secretary read the minutes of the two previous meetings, which were confirmed.

The Secretary laid on the table—(1) copy of an article on the superannuation fund supplied by a constituent of Mr. R. Atkinson Price, M.L.A.; (2) copies of documents touching the police and the superannuation fund, and other matters, by Mr. W. Hogan; as also (3) a very lengthy document by the same gentleman, containing a scheme for the reorganisation of the Civil Service.—Ordered to be acknowledged.

A discussion then ensued as to the best mode of conducting the inquiry. Mr. Teece suggested that the Commission should confine its attention, for the present, to the two Departments opened out on the previous evening, namely, the Chief Secretary's and the Treasury.—The suggestion was approved of.

The Secretary was instructed to ask Mr. E. A. Rennie, Auditor-General, and Mr. C. H. T. Pinhey, J.P., Registrar-General, to attend and give evidence at 6.30 p.m. and 8 p.m. respectively on the following day.

The Commission then adjourned.

The Fourth Meeting of the Civil Service Commission was held in the Long Room, Lands Office, at 6.30 p.m. on Thursday, 6 December.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The Secretary read the minutes of the previous meeting, which were confirmed.

A letter was read from Mr. Gerald Sibthorpe, Geraldton, offering to give evidence with regard to the working and management of the Government Printing Office.—Ordered to be acknowledged.

The examination of Mr. E. A. Rennie, Auditor-General, was commenced, but after two hours was interrupted by the sudden indisposition of the Secretary, who was unable to take any more shorthand notes.

The Commission then adjourned till Monday, at 3 p.m., the Secretary being instructed to recall Mr. E. A. Rennie and Mr. C. H. T. Pinhey, J.P., the Registrar General.

The Fifth Meeting of the Commission was held in the Long Room, Lands Office, at 3 p.m. on Monday, 10 December.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The Secretary read the minutes of the previous meeting which were confirmed.

The examination of Mr. E. A. Rennie, Auditor-General, was continued, and that of Mr. C. H. T. Pinhey, J.P., was commenced.

The Secretary was instructed to call Mr. E. Fosbery, Inspector General of Police, and Mr. T. A. Coghlan, Statistician and Registrar, for 6.30 p.m. and 8 p.m. respectively on the following evening.

The Sixth Meeting of the Commission was held in the Long Room, Lands Office, at 6.30 p.m. on Tuesday, 11 December.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The Secretary read the minutes of the previous meeting which were confirmed.

Mr. E. Fosbery, Inspector-General of Police, was examined, as also was Mr. T. A. Coghlan, Government Statistician and Registrar of Friendly Societies.

The Government Statistician handed in to the Commission the following books, documents, and papers which had been prepared in his Department during the past few years, namely, Census of 1891, Statistician's Report; Census of 1891, New South Wales; The Seven Colonies of Australasia, 1894; Wealth and Progress of New South Wales, 1893; Statistical Register for 1892 and previous years, also Part XI Vital Statistics (Supplementary to Part VIII); Registrar's Report on Friendly Societies for 1893; the Government Statistician's Report on the Vital Statistics of Sydney and Suburbs for 1893; as also for the month of October, 1894.

The Secretary laid on the table six copies of the Appropriation Act.

The Commission then adjourned till 2 p.m. on the following day.

The Seventh Meeting of the Commission was held in the Long Room, Lands Office, at 2 p.m. on Wednesday, 12 December.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

A letter was read from Mr. J. Geo. Corcoran, Livingstone Road, Marrickville, dated the 9th instant, asking that certain charges he had made against Mr. Sydney Maxted, Director of Government Asylums, might be inquired into by the Commission, and that he might be called upon to give evidence in connection therewith. The Secretary was instructed to inform the writer that the matter did not come within the scope of the Commission's inquiry.

The

The President handed in an anonymous printed communication from Newcastle dealing with the question of the travelling expenses of officers. Dec. 12, 1894.

The Commissioners then paid a visit, without previous notice, to the Audit Department to inspect the system of keeping and checking the accounts.

The Secretary was instructed to call Mr. Sydney Maxted, Director of Charitable Institutions, and Mr. E. G. W. Palmer, Secretary to the Civil Service Board, to give evidence on the following evening.

The Eighth Meeting of the Commission was held in the Long Room, Lands Office, at 6:30 p.m. on Thursday, 13 December.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The Secretary read the minutes of the previous meeting, which were confirmed.

The Secretary handed in a number of documents supplied by the Registrar-General, showing the duties performed by the officers of the Department and the work of the Department generally, also an extract supplied by the Auditor-General from the instructions issued by the Lords Commissioners of Her Majesty's Treasury to the Governors of Colonies, framed pursuant to report and resolutions of the Select Committee of the House of Commons appointed to examine into the accounts of Colonial receipts and expenditure, dated June 27, 1846.

Mr. Sydney Maxted, Director of Charitable Institutions, &c., was examined. He handed in a number of documents showing the duties performed by the officers in his Department and the nature of the work carried on, together with a report on the department for 1890.

Mr. E. G. W. Palmer, Secretary to the Civil Service Board, was also examined, after which the Commission adjourned to the following Monday, at 3 p.m.

The Ninth Meeting of the Commission was held in the Long Room, Lands Office, on Monday, at 3 p.m., 17 December.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

Mr. James Powell, Collector of Customs, was examined.

The Secretary was instructed, at the instance of Mr. Humphery, to write to the heads of the different departments asking that a lithographed map of the Colony might be prepared, showing the routes taken by the inspectors attached to their respective departments, and the frequency of inspections made of the different districts.

The Secretary was instructed to call Captain Hixson, President of the Marine Board, for the following evening.

The Tenth Meeting of the Commission was held in the Long Room, Lands Office, on Tuesday, at 6:30 p.m., 18 December.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

A letter was read from Mr. Valentine Miller, C.E., North Sydney, drawing attention to the alleged unjust manner in which he had been deprived of his position in the Government Service by the late Government under the plea of retrenchment. A letter of a similar character was read from Mr. P. O'Brien, of Barcom-street, Darlinghurst.—Ordered to be acknowledged.

A letter was read from Mr. Sydney Maxted, Director of Charitable Institutions, adding to his evidence, and giving an abstract of the reductions in the administrative staff suggested by him when before the Commission.

The Secretary stated that the return asked for by the Commission had been sent by the Auditor-General, giving the names of the officers employed in his department and the duties performed by them.

The Secretary was instructed to write to the Auditor-General requesting him to supply the Commission with a list of officers who were, or acted as, accountants in the public departments, with their rate of pay, years of service, showing the number of clerks in those departments, besides the heads of departments, and their accountants.

The Secretary stated that a return had also been sent by Mr. Kirkpatrick, Under Secretary for Finance and Trade, showing the additional work undertaken by the Treasury, and the duties transferred from the Treasury to other departments from 1885 to 1894, together with particulars of the Funded Stock Act of 1892, and a return, as requested by the Commission, showing persons employed in the Treasury Department in each year during the period 1885 to 1894, with the amount paid as salary, wages, and allowances during the period named.

Capt. Francis Hixson, President of the Marine Board, was examined.

The Commissioners decided to examine Mr. Edmund Sager, Secretary to the Board of Health, and Mr. W. O. Hopkins, Comptroller General of Stores, at their next meeting on Wednesday afternoon.

The Eleventh Meeting of the Commission was held in the Lands Office, at 3 p.m. on Wednesday, 19 December.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

Mr. Edmund Sager, Secretary to the Board of Health, was examined; as also was Mr. W. O. Hopkins, Comptroller General of Stores.

The Commission then adjourned to the following evening.

Dec. 20, 1894. The Twelfth Meeting of the Commission was held in the Long Room, Lands Office, at 6:30 p.m., on Thursday, 20 December.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The President stated that he had communicated with the managers of various banks, asking them to give the Commission details with respect to the salaries paid to the members of their staff, together with the nature of the duties performed by them. He had received a letter from the manager of the Commercial Banking Company of Sydney stating that the information was available, and that an officer was ready to produce it at any moment. He had also received a letter from the manager of the Australian Joint Stock Bank, stating that the secretary of the Bank would be the proper officer to summon.

A discussion ensued. It was considered that the heads of leading mercantile establishments, as well as the managers of banks, might be asked to furnish similar information, and that the following firms might be communicated with on the subject, namely, The Colonial Sugar Refining Co., Messrs. Gibbs, Bright, and Co., Dalgety and Co., Wm. Gardiner and Co., Robt. Grey, Son, and Co., Robt. Reid and Co., John Sands, W. E. Smith, and The Gas Co.

A letter was read from Mr. Sager, Secretary to the Board of Health, asking that certain portions of his evidence, which might do him injury when published, might be excised. The request was acceded to.

Mr. Chas. Potter, Government Printer, was then examined, and the Commission adjourned till Monday, at 3 p.m., on the 31st inst., the minutes of the meeting of the same date being first read and confirmed.

The Thirteenth Meeting of the Commission was held in the Long Room, Lands Office, on 31 December.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The President said he had had an interview with the Premier on the subject of the work of the Commission, in the course of which the Premier said that the Commission would have quite enough to do without inquiring into the individual cases of the Civil Servants in the several departments, and that these would be dealt with by the Government.

The Secretary reported that Mr. E. Sager, Secretary to the Board of Health, had returned his evidence with the portion marked that he wished excised. The Commission decided that one of the questions and answers marked should be eliminated.

A letter was read from Mr. C. H. T. Pinhey, J.P., Registrar General, requesting that certain extract relating to his department from the report of the Royal Commission which recently inquired into the Registrar General's Department, should be added to his evidence. The Commission decided that the extracts should be filed, but not added to the evidence.

A letter was read from Mr. John Musson, giving information with respect to the salaries of the executive officers in the United States.—Ordered to be acknowledged.

The Secretary reported that returns asked for by the Commission had been sent from the Customs Department, and from the Treasury. The Under Secretary for Finance and Trade stated that he had not marked the route of the inspectors on the map as requested, no map being available.

The Secretary was instructed to obtain a dozen maps of the colony from the Lands Department, and send one to each of the departments, requesting the Under Secretaries to have the routes of the inspectors marked thereon, each using a differently colored ink.

Mr. Storey said that Mr. W. L. G. Drew, C.M.G., of the Queensland Civil Service Board, was in Sydney, and was willing to give evidence before the Commission on Wednesday next. The Commissioners decided to avail themselves of the opportunity to hear Mr. Drew's evidence on the day named.

The Secretary reported that he had written to the Parliamentary Librarian and to the Principal Librarian asking them for Blue Books of the different colonies, giving information on the subject of the Civil Service. The only complete Blue Book, with schedule attached, which had been received, was from Queensland, which he laid on the table. He asked for authority to apply to the different colonies for copies of their current Blue Books and schedules. Authority was given, and the Secretary was further instructed to apply to Queensland and Victoria for copies of the rules and regulations of the Civil Service Boards in existence there, and of the reports for the current year, as also of the several Acts of Parliament under which the Civil Service Boards were constituted.

The Commissioners then proceeded to visit the Stores Department, and adjourned to 3 p.m. on Wednesday, the 2nd proximo.

The Fourteenth Meeting of the Commission was held in the Long Room, Lands Office, on Wednesday afternoon, 2 January, 1895.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the preceding meeting were read, amended, and confirmed.

Several maps of the colony, published by the Lands Department, were submitted to the Commission, and one containing the postal stations, mail roads, &c., was selected on which the Under-Secretaries of the different departments were to be requested to have the routes taken by the different inspectors marked.

A return was laid on the table from the Secretary of the Board of Health, giving the information asked for by the Commission respecting the administration of the Board.

The Secretary read a circular letter which he had drawn up under instructions from the Commission, asking for certain information from the Colonial Treasurers in the different colonies respecting the Civil Service in those colonies.—Approved and ordered to be forwarded.

Mr. W. L. G. Drew, C.M.G., Chairman of the Civil Service Board of Queensland, and ex-Auditor General of that Colony, was then examined.

The Secretary was instructed to call Dr. F. N. Manning, Inspector-General of the Insane, and Mr. R. N. Johnson, Commissioner of Stamps, for 6:40 p.m. and 8 p.m. respectively for the following day.

The Commission then adjourned.

The

The Fifteenth Meeting was held in the Long Room, Lands Office on Thursday evening, 3 January. JAN. 3, 1895.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the preceding meeting were read and confirmed.

A return from the Government Printer (giving information asked for by the Commission) was received and laid on the Table.

Dr. F. N. Manning, Inspector-General of the Insane, was then examined, as was also Mr. R. N. Johnson, Commissioner of Stamps.

The Commission then adjourned to Monday afternoon next, and the Secretary was instructed to call the following witnesses, namely:—Mr. Henry Turner, of the Bank of New South Wales, for 3 p.m.; Mr. F. A. Scrivener, of the Commercial Banking Company of Sydney, for 3.25 p.m.; Mr. Wm. Reid, of the A.J.S. Bank, for 3.50 p.m.; Mr. William Lees, of the Union Bank of Australia, for 4.15 p.m.; Mr. Thos. Buchanan, of the London Bank of Australia, for 4.40 p.m.; and Mr. F. P. G. M'Crae, of the Bank of Australasia, for 5 p.m.

The Sixteenth Meeting of the Commission was held in the Long Room, Lands Office, on Monday afternoon, 7 January.

PRESENT:—Messrs. Thos. Littlejohn, President, Jas. Robertson and J. H. Storey.

The following witnesses were examined:—Messrs. Henry Turner, of the Bank of New South Wales; F. A. Scrivener, of the Commercial Banking Company of Sydney; Wm. Reid, of the A.J.S. Bank; Thos. Buchanan, of the London Bank of Australia; and F. P. G. M'Crae, of the Bank of Australasia.

The Commission then adjourned to 6.30 p.m. of the following day, and the Secretary was instructed to call Messrs. Wm. Lees, of the Union Bank of Australia; W. Henderson, of the City Bank; Jno. Sands, and W. E. Smith.

The Seventeenth Meeting of the Commission was held in the Long Room, Lands Office, on Tuesday evening, 8 January, at half past 6 o'clock.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The Secretary read the minutes of the two previous meetings which were confirmed.

A return was laid upon the table from the Post Office Department, giving the information asked for by the Commission together with a large map showing the method of inspection followed by the Department.

A map sent by the Commission to the Treasury was returned marked in green to show the routes followed by the inspectors, and was laid on the table.

The Secretary reported that he had been informed by the Under Secretary for Works that that department was undergoing reorganisation, which would be complete in about three months. The Commission decided not to deal with the Works Department for the present, so as to give the department the opportunity of carrying out its plan of reorganisation.

The President stated that he had received a number of letters containing suggestions of Civil Service Reform:—

- (1) The first was from Dr. Ross, M.L.A., of Molong, drawing attention to the fact that there were a large number of highly-paid stipendiary magistrates scattered over nearly every little inland town in the Colony receiving heavy travelling expenses besides their salaries for doing work which could, for the most part, be done by the 7,000 unpaid magistrates at present in existence. Dr. Ross estimated that from £40,000 to £50,000 a year might be saved if three-fourths of those paid magistrates were dismissed and the unpaid magistrates called upon to do the work or resign.
- (2) An anonymous letter had also been received by the President, forwarded by the Premier, as from "One who ought to know," giving a list of police magistrates who could be dispensed with if the districts were rearranged and the places visited from different centres.
- (3) Another letter was received from Dr. Ross, M.L.A., suggesting that the office of coroner in country districts should be abolished and that a magisterial inquiry should be held instead by a local J.P., who could report to the Attorney-General if there were any suspicion of foul play. This would save a large amount of money in the shape of coroners' fees, travelling expenses, jurymen's fees, &c., which Dr. Ross contended was now uselessly expended.
- (4) A letter was also received from Mr. Kerry, of Messrs. Kerry & Co., photographers, enclosing a letter originally published in the *Sydney Morning Herald*, in which he contended that the bulk of the photographic work required by the Government could be much more artistically done, and at half the cost, outside the Service.
- (5) Mr. I. E. Ives, of the Argyle Bonded and Free Wharehouses, wrote giving information with reference to the cost of storing bales of paper and other information asked for by the President.

The following witnesses were then examined:—Messrs. Wm. Lees, of the Union Bank of Australia; Robt. Sands, representing the firm of John Sands; and W. Henderson, of the City Bank.

The Commission then adjourned to 3 p.m. of the following day.

The Eighteenth Meeting of the Commission was held in the Long Room, Lands Office, on Wednesday, 9 January, at 3 p.m.

PRESENT:—Messrs. Thos. Littlejohn, President, Jas. Robertson and J. H. Storey.

The Secretary read the minutes of the previous meeting which were confirmed.

After discussing what would be the best course to take in the future, it was decided to call Messrs. W. E. Smith; W. H. Hoskings, of W. Gardiner & Co.; A. W. Meeks, of Gibbs, Bright, & Co.; and R. J. Lukey, Acting Secretary to the Gas Company, to give evidence at the meeting to be held on the following evening at 6.30 p.m.

The Commission then proceeded to visit Mr. Fosbery, the Inspector-General of Police.

JAN. 10, 1895. The Nineteenth Meeting of the Commission was held in the Long Room, Lands Office, on Thursday, 10 January, at 6:30 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

A letter was read from the Collector of Customs stating, in answer to the Commission, what changes had been enforced in the department by the Government in consequence of the recommendations of the Civil Service Commission which was appointed in 1888.

A letter was read from the Secretary of the Civil Service Board in Queensland stating that a number of books, documents, pamphlets, &c., had been forwarded containing information with respect to the Civil Service in Queensland, as requested by the Commission.

A letter was also read from the Under Secretary of Justice giving information with respect to the duties of inspectors in the department, asked for by the Commission. The letter was accompanied by a return.

A return was laid on the table, supplied by Mr. Sands, giving information asked for by the Commission.

The Secretary stated that he had received a copy of two works entitled respectively "*Re Accounts*" and "*Advanced Thought on Accounts*" from Mr. W. Butler Yaldwin, who expressed his willingness to give evidence if required to show how reductions could be made in the Government method of dealing with accounts.

All the above communications the Secretary was instructed to acknowledge.

The following witnesses were examined:—Messrs. W. H. Hoskings, of W. Gardiner & Co.; A. W. Meeks, of Gibbs, Bright, & Co.; and R. J. Lukey, Acting Secretary of the Gas Company.

The Secretary was instructed to call Mr. Archibald C. Fraser, Under Secretary of Justice and Chairman of the Civil Service Board, for Monday afternoon, at 3 o'clock.

The Twentieth Meeting of the Commission was held in the Long Room, Lands Office, at 3 p.m. on Monday, 14 January.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

Mr. Archibald C. Fraser, Under Secretary of Justice and Chairman of the Civil Service Board, was examined and promised to attend and give further evidence at the meeting of the Commission to be held on the following evening at 6:30 o'clock.

The Secretary was instructed to call the meeting for 6:15 p.m.

The Twenty-first Meeting of the Commission was held in the Long Room, Lands Office, on Tuesday, 15 January, at 6:15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the two previous meetings were read and confirmed.

The Secretary laid on the table a copy of the report of the Canadian Royal Commission appointed in 1891 to enquire into the Civil Service of the Dominion. The report had been obtained, in answer to an application from the Secretary, from the Parliamentary Librarian.

Mr. Riley, of the *Goulburn Herald*, forwarded two numbers of his paper, dated January 4th and 11th, dealing with Civil Service reform.

Mr. E. W. Knox, of the Colonial Sugar Refining Co. (Limited), wrote offering to give evidence on the subject of wages paid outside the Civil Service.

Mr. James Farr, of 33 Great Buckingham-street, wrote offering to give evidence on the way the Civil Service was conducted.

A similar letter was read from Mr. George Chapman, of Wollombi.

Mr. W. J. Dick, of Newcastle, wrote to draw the attention of the Commission to certain alleged injustice suffered by members of the Pilot Service at Newcastle.

A letter was received from the Principal Under Secretary stating that the Chief Secretary approved of the appointment of Mr. John Ramsay as assistant shorthand writer to the Commission.

All the above letters were ordered to be acknowledged.

Mr. F. P. G. M'Crae, of the Bank of Australasia, wrote asking that certain omissions might be made in his evidence.—Agreed to.

The Secretary laid before the Commission a letter which he had drawn up to the Foreign Consuls, resident in Sydney, asking them to furnish certain information relative to the Civil Service in their respective countries, and to forward a general report with reference to the same for publication by the Commission.—Ordered to be sent.

The examination of Mr. Archibald C. Fraser, Under Secretary of Justice and Chairman of the Civil Service Board, was continued, and was ultimately adjourned till the following afternoon, at 3 o'clock.

The Twenty-second Meeting of the Commission was held in the Long Room, Lands Office, on Wednesday, 16 January, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read, amended, and confirmed.

The examination of Mr. Archibald C. Fraser, Under Secretary of Justice and Chairman of the Civil Service Board, was continued, and the Secretary was instructed to call Mr. E. W. Knox, Manager of the Colonial Sugar Refining Co. (Limited), and Mr. George Miller, Comptroller-General of Prisons, to give evidence at 6:30 p.m. and 7 p.m. respectively at the meeting to be held on the following evening.

The Twenty-third Meeting of the Commission was held in the Long Room, Lands Office, on Thursday, **JAN. 17, 1895.**
17 January, at 6:30 p.m.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

Messrs. E. W. Knox, of the Colonial Sugar Refining Company, Limited, and George Miller, Comptroller-General of Prisons, were examined.

The Secretary was instructed to call Mr. V. W. Williams, Superintendent of the Mercantile Explosives Department, for 3:15 p.m. on Monday, and Mr. William Henry Burton, Chief Clerk to the Customs and Secretary to the Board of Commissioners of Customs, for 4 p.m. on the same day.

The Twenty-fourth Meeting of the Commission was held in the Lands Office, on Monday, 21 January, at 3 p.m.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the two previous meetings were read and confirmed.

The Secretary read a communication from the Principal Under Secretary to the President, stating the amount of fees to be paid to the Commissioners.—Ordered to be acknowledged.

A letter was read from Mr. Fitzpatrick, of Forest Lodge, drawing attention to a case of alleged individual injustice.—Ordered to be acknowledged, with the intimation that in such cases the Commission had no jurisdiction.

The Secretary stated that, in reply to letters addressed to the Principal Librarian and the Parliamentary Librarian, he had received a number of books, reports, and magazine articles on the subject of Civil Service Reform.

The Parliamentary Librarian had forwarded three volumes of Reports on American Civil Service Reform, six volumes of Reports of the English Civil Service Commission, and ten volumes of magazines—Harper's, the Contemporary, the North American Review, the Fortnightly, and the Journal of the Statistical Society, containing articles on Civil Service Reform.

The Principal Librarian had forwarded the Rules and Regulations of the British Civil Service for 1893; the Seventh Report of the British Civil Service Commission, 1862; four volumes of Reports of the South Australian Civil Service Commission; one volume containing the Report of the New Zealand Civil Service Commission; two volumes of Victorian Assembly Papers containing information on the subject; a work entitled "The Englishman at Home," by Edward Porritt; and the Hon. Dorman B. Eaton's book on British Civil Service Reform.

Mr. E. G. W. Palmer, Secretary of the Civil Service Board, who had also been written to, replied that he was not in possession of the English Reports.

Mr. C. D. E. Liardet, of Rockwell-crescent, Potts' Point, drew the attention of the Commission to a recently published work called "The Englishman at Home," in which the British Civil Service was dealt with and its methods described.

The Secretary was instructed to convey the thanks of the Commission to the Parliamentary Librarian and the Principal Librarian for the loan of the books, reports, and magazines named above.

The Commission then examined Mr. V. W. Williams, Superintendent of the Mercantile Explosives Department, and instructed the Secretary to call Mr. J. C. Maynard, Under Secretary for the Department of Public Instruction, to give evidence at the meeting on the following evening, at half-past 6 o'clock, the Commission to meet at 6:15 p.m.

The Twenty-fifth Meeting of the Commission was held in the Lands Office, on Tuesday, 22 January, at 6:15 p.m.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., and Mr. Jas. Robertson.

The minutes of the previous meeting were read and confirmed.

A communication was read from the Secretary to the Public Service Board, Melbourne, forwarding two reports of the Public Service Board of Victoria, containing information *re* classification, as asked for by the Commission, and offering to supply any further information that might be required. Ordered to be acknowledged.

Mr. J. C. Maynard, Under Secretary of Public Instruction, was then examined, and the Secretary was instructed to call Mr. Charles Cowper, Sheriff, and Mr. W. H. Burton, Chief Clerk to the Customs and Secretary to the Board of Commissioners of Customs, for the following afternoon, at 3.15 and 4.30 p.m., respectively.

The Twenty-sixth Meeting of the Commission was held in the Lands Office, on Wednesday, 23 January, at 3 p.m.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

Mr. Charles Cowper, Sheriff, and Mr. W. H. Burton, Chief Clerk to the Customs and Secretary to the Board of Commissioners of Customs, were examined, and the Secretary was instructed to call Mr. S. H. Lambton, Deputy Postmaster General, for the following evening, at a quarter past 6 o'clock.

The Twenty-seventh Meeting of the Commission was held in the Lands Office, on Thursday, 24 January, at 6.15 p.m.

PRESENT :—Messrs. Thos. Littlejohn, President, Jas. Robertson and J. H. Storey.

Mr. S. H. Lambton, Deputy Postmaster-General, was examined, and the Secretary was instructed to call Mr. Jas. Dalgarno, Secretary of the Postal Service, and Mr. A. J. Doak, J.P., Chief Accountant and Controller, Money Order Office and Government Savings Bank, for Monday next, at 3.15 p.m. and 4.30 p.m., respectively, the Commission to meet at 3 p.m.

JAN. 28, 1895. The Twenty-eighth Meeting of the Commission was held in the Lands Office, on Monday, 28 January, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., and Mr. Jas. Robertson.

The minutes of the three previous meetings were read and confirmed.

A voluminous return showing the officers engaged in the Department of Public Instruction, with their duties and salaries, forwarded by the Under Secretary in answer to a request from the Commission, was laid on the table; as also were copies of the Annual Report of the Post Office Department for 1893, together with three copies of the Report of the late Civil Service Commission on the Post Office, forwarded in answer to a request from the Commission by the Deputy Postmaster General.

A letter was read from Mr. Riley, of the *Goulburn Herald*, who forwarded a copy of that paper of the 25th instant, containing a further article on Civil Service Reform.

Mr. W. H. Burton, Secretary to the Board of Commissioners of Customs, &c., forwarded the minute book of the Board as requested for the inspection of the Commission, and asked that a certain phrase in his evidence might be expunged.—Agreed to.

Mr. E. W. Knox, Manager of the Colonial Sugar Refining Company, Limited, forwarded a copy of the rules and regulations of the Employers' Provident Fund of the Company as requested by the Commission, and asked that a certain phrase in his evidence might be expunged.—Agreed to.

Mr. Harrie Wood, Under Secretary for Mines, wrote from Melbourne saying that he would notify the Commission on his return to Sydney, and would be happy to give evidence when required.

Mr. J. A. Falstedt, Consul for Sweden and Norway, wrote to say that he had sent home for the information *re* the Civil Service in the countries represented by him, asked for by the Commission.

The Secretary to the New Zealand Treasury wrote from Wellington, New Zealand, giving information regarding the Civil Service in that Colony, and the system of audit pursued there as asked for by the Commission, and stating that papers and documents had been forwarded dealing with the subject of Civil Service reform.

The Secretary was instructed to acknowledge the receipt of the above letters, and to thank those gentlemen who had forwarded the returns and information named.

Mr. James Dalgarno, Secretary of the Postal Service, was then examined, and it was decided to call Professor Anderson Stuart, M.D., President of the Board of Health, &c., for 6:30 p.m., of the following day, the Hon. C. K. Mackellar, M.L.C., member of the Board of Health, &c., for 7 p.m., and Mr. A. J. Doak, J.P., Chief Accountant and Comptroller, Money Order Office and Government Savings Bank, for 7:30 p.m., on the 29th instant.

The Twenty-ninth Meeting of the Commission was held in the Lands Office, on Tuesday, the 29th January, at 6:15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

A letter was read from the Under Treasurer of South Australia stating that a parcel of papers had been sent dealing with the questions *re* Civil Service reform, on which information had been asked by the Commission.

Herr Julius Mergell, Consul for Austria-Hungary, wrote stating that he had sent home for the information *re* the Civil Service of the country which he represented, as asked for by the Commission.

Mons. Gustave Berthe, Belgian Consul-General for Australasia, wrote from Melbourne acknowledging the receipt of the circular sent to Mons. Froment, the acting Belgian Consul in Sydney, stating that he would send home for the information *re* the Civil Service of Belgium asked for by the Commission, and requesting that papers in duplicate might be sent relating to the constitution of the Commission. The Secretary was instructed to acknowledge the receipt of the above letters, and to thank the writers for taking the requisite steps to obtain the information sought by the Commission.

The Commission then examined Professor Anderson Stuart, M.D., President of the Board of Health, &c.; the Hon. C. K. Mackellar, member of the Board of Health, &c.; and the Secretary was instructed to call Mr. A. J. Doak, J.P., Chief Accountant and Controller, Money Order Office and Government Savings Bank, for 3 p.m. on the following day.

The Thirtieth Meeting of the Commission was held in the Lands Office, on Wednesday, 30 January, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

Mr. A. J. Doak, J.P., Chief Accountant and Controller, Money Order Office and Government Savings Bank, was examined; and the Secretary was instructed to call Mr. P. B. Walker, Secretary of the Telegraph Service, for the following evening at 6:15 o'clock.

The Thirty-first Meeting of the Commission was held in the Lands Office, on Thursday, 31 January, at 6:15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

Mr. P. B. Walker, Secretary of the Telegraph Service, was examined.

The Thirty-second Meeting of the Commission was held in the Lands Office, on Monday, 4 February, at 3 p.m. FEB. 4, 1895:

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the two previous meetings were read and confirmed.

The Secretary read the following correspondence:—

Letter from Mr. J. C. Maynard, Under Secretary for Public Instruction, accompanied by map, showing the different routes of Inspectors of Public Schools under the Department.

Letter from Mr. Edmund Sager, Secretary to the Board of Health, accompanied by statement showing the allotment of the vote of £798 appropriated for quarantine officers and boatmen for the current half-year, and enclosing printed copies of the Coast Hospital Report for 1893 and of the Leprosy Reports for 1892 and 1893.

Letter from Mr. Thos. Gill, Under Treasurer, Adelaide, South Australia, accompanied by a parcel containing the following documents asked for by the Commission, namely, Blue Book for 1893, Loan Estimates 1894-95, Audit Act and Regulations thereunder, Civil Service Act of 1874 with various Amending Acts and Regulations thereunder, and the Progress and Final Reports of the Civil Service Inquiry Commission.

Letters from—(1) Mr. Jas. T. Tillock, Consul for the Argentine Republic; (2) Mr. A. Pholeros, Vice-consul for Greece; (3) Mr. J. H. Amora, Consul-General for Nicaragua and Costa Rica, Consul for Chili, and Vice and Acting Consul for the Netherlands; and (4) Col. G. W. Bell, Consul for the United States; each of whom acknowledged the receipt of a circular asking for information *re* the Civil Service in the respective countries represented by the consuls named.

Colonel Bell forwarded a report on the Civil Service of the United States, and the other consuls promised to communicate with their respective Governments on the subject.

The correspondence was received, and the Secretary was instructed to thank Colonel Bell for the report on the American Civil Service, contributed by him.

Returns were laid on the table supplied by Mr. A. J. Doak, J.P., giving the names and duties, &c., of the officers in the Money Order and Savings Bank Department.

The Secretary was instructed to call Mr. F. H. Wilson, Acting Under Secretary of the Lands Department, to give evidence at 6.15 p.m. on Tuesday.

The Thirty-third Meeting of the Commission was held in the Lands Office, on Tuesday, 5th February, at 6.15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

An anonymous letter, addressed to the President, was read, suggesting—(1) that the registration of State children should be transferred to the Department of Public Instruction, and that the services of truant officers and others might be brought into requisition; (2) that a certificated female nurse and a male hospital dresser, resident on the premises, should be substituted for the two visiting doctors at Newington and Parramatta hospitals, &c., &c.

The Chief Inspector of the Postal and Electric Telegraph Department, G.P.O., wrote, forwarding, at the request of the President, samples of the canvas used for making mail bags, and giving information with reference to tenders.

Mr. Harrie Wood, Under Secretary of the Mines Department, wrote, notifying the Commission that he had returned to Sydney.

The correspondence was received.

Mr. F. H. Wilson, Acting Under Secretary of the Lands Department, was then examined, and was requested to give further evidence at the meeting to be held at 6.15 p.m. on the 7th instant.

The Thirty-fourth Meeting of the Commission was held in the Lands Office, at 3 p.m. on Wednesday, 6 February.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

The Secretary was instructed to prepare a skeleton Report to be submitted to the Commission at its meeting on Monday next.

Mr. A. C. Fraser, Under Secretary of Justice and Chairman of the Civil Service Board, forwarded a fresh type-written copy of his corrected evidence, and asked that it might be substituted for the evidence as originally given.

The Commission went carefully through part of the evidence as amended, and finally adjourned to the following evening at 6.15 o'clock.

The Thirty-fifth Meeting of the Commission was held in the Lands Office, on Thursday, 7 February, at 6.15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., and Mr. Jas. Robertson. After dealing with the evidence, the Commissioners continued their examination of Mr. F. H. Wilson, Acting Under Secretary for Lands.

The Thirty-sixth Meeting of the Commission was held in the Lands Office, on Monday, 11 February, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the two previous meetings were read and confirmed.

The Secretary stated that, owing to extreme pressure of work, he had been unable to prepare a skeleton Report. The

FEB. 11, 1895.

The Secretary reported that the time of the Commission would expire on the 20th instant, and he had therefore drawn up an application for an extension of time.

The letter of application was read and amended, and the Secretary was instructed to forward it to the Colonial Secretary on the 14th instant.

The Secretary read the following correspondence:—

Letters from (1) Mr. R. Sandeman Collum, Consul for Portugal, (2) Mr. W. von der Heyde, Consul for Spain, (3) Mons. F. Froment, Acting Consul for Belgium, and (4) Colonel George W. Bell, Consul for the United States of America, acknowledging receipt of the circular asking for information respecting the Civil Service of the countries they respectively represented.

The Spanish and Portuguese Consuls said they had no information to give; the Belgian Acting Consul said he had sent the circular to the Consul-General in Melbourne; and the United States Consul forwarded a supplementary report to that already given.

Letter from (1) Mr. Harrie Wood, Under Secretary for Mines and Agriculture, in reply to circular asking for maps to be marked with the routes traversed by the inspectors of the department, forwarded maps, together with explanatory statements by W. H. J. Slee, F.G.S., Chief Inspector of Mines and Superintendent of Drills, and Mr. John Mackenzie, F.G.S., Examiner of Coal-fields; (2) Mr. J. Barling, Under Secretary for Works, in reply to a similar circular, forwarding three maps showing (a) districts in charge of the resident officers of the Harbours and Rivers Branch, (b) districts visited by the inspectors of the Government Architect's Branch, and (c) districts visited by the inspectors of the Roads and Bridges Branch.

Letter from Mr. George Miller, Comptroller General of Prisons, forwarding return asked for by the Commission giving the daily average number of persons in the various gaols throughout the Colony in each year for 1889-93 inclusive, the cost per head per day and per year, the amount spent for each of the years named in rations, medicine, clothing, salaries, contingencies, and gratuities, and the total annual expenditure in connection with each gaol; also a return showing the savings effected on the votes for 1894.

Letter from Mr. A. C. Fraser, Under Secretary of Justice, accompanied by returns giving (1) names, duties, and salaries, &c., of the officers in his Department; and (2) Court-houses erected within years 1884-93 inclusive, as asked for by the Commission.

Letters from (1) Mr. H. F. Eaton, Under Treasurer of Victoria, forwarding, in answer to a circular sent by the Commission, the Blue Book for 1893, a memorandum from the Commissioners of Audit explanatory of the system of audit employed in that Colony, the Public Service Act of 1890, the reports of Civil Service Commissions for 1859 and 1879, and the report of the Public Service Board for 1894, &c.; (2) Mr. G. F. Eliot, Colonial Secretary's Office, Perth, in answer to a similar circular, giving information with respect to the Civil Service of that Colony and forwarding a copy of the Blue Book for 1893, as also of the Audit Act and Regulations thereunder, and promising to send a copy of the report of the first Royal Commission, now sitting appointed to inquire into the Civil Service of Western Australia; (3) Mr. Wil Robertson, Secretary of the Queensland Civil Service Board, forwarding two copies of the Civil List for 1895, published under the provisions of the Civil Service Act of 1889.

Letter from Mr. C. Johns giving certain information with reference to an anonymous letter making certain suggestions as to the reform of the Department of Stores.

The correspondence was received, and the Secretary was instructed to tender the thanks of the Commission to those gentlemen who had given the information and supplied the books, reports, and documents asked for by the Commission. Reference was made to a return supplied by the Collector of Customs, which omitted to state the nature of the duties performed by the various officers, and the Secretary was instructed to request the Collector of Customs to supply the deficiency at his earliest convenience. The Commission instructed the Secretary to call Mr. E. Twynam, Chief Surveyor and Director of Trigonometrical Survey, for 6:30 p.m. of Tuesday, the 12th instant, and Mr. Jas. W. Boulton, J.P., Officer-in-charge Public Watering Places and Artesian Boring, for 7:45 p.m. the same day, and adjourned till 6:15 p.m. of the day named.

The Thirty-seventh Meeting of the Commission was held in the Lands Office, on Tuesday, 12 February
at 6:15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

A telegram was read from Mr. S. H. Lambton, Deputy Postmaster-General, asking the Commission to defer his further examination till his return from Melbourne.—Agreed to.

A letter was read from Mr. T. A. Boesen, Consul for Denmark, in answer to the circular sent by the Commission, giving some information *re* the Civil Service, Denmark, and promising to apply to the Minister for Foreign Affairs for more.—Received.

Mr. E. Twynam, Chief Surveyor and Director of Trigonometrical Survey, was examined, and the Secretary was instructed to call Mr. Jas. W. Boulton, J.P., Officer-in-Charge Public Watering Places and Artesian Boring, and Mr. Harrie Wood, Under Secretary for Mines and Agriculture, at 3:15 p.m. and 4:15 p.m. respectively on the following day.

The Thirty-eighth Meeting of the Commission was held in the Lands Office on Wednesday, 13 February,
at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

Mr. Jas. W. Boulton, J.P., Officer-in-Charge Public Watering Places and Artesian Boring, and Mr. Harrie Wood, Under-Secretary for Mines and Agriculture, were examined, and the Commission decided to continue the examination of Mr. Harrie Wood on the following evening at half-past six, the Commission to meet at 6:15 p.m.

The

The Thirty-ninth Meeting of the Commission was held in the Lands Office, on Thursday, 14 February, FEB. 14, 1895, at 6:15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

The Secretary read the following correspondence:—

Letter from Mr. E. Twyman, Chief Surveyor and Director of Trigonometrical Survey, forwarding (1) a sketch of classification of drafting staff, (2) printed copies of the report of the Board of Inquiry into the Lands Department, 1887; (3) report of the Departmental Board, appointed to enquire into the local Land Board and District Survey Offices; (4) a report of the Departmental Board of Inquiry into the General Survey and Trigonometrical branches; and (5) copies of the last seven annual reports containing information touching surveys performed and the staff.

Letter from Mr. W. H. Burton, Chief Clerk in the Customs Department and Secretary of the Board of the Commissioners of Customs, forwarding (1) a return showing the aggregate amount of overtime paid in the Customs Department for 1894; (2) a return of cases tried before the Board of Commissioners of Customs during three years.

Letter from Mr. Henry Bonnard, Consul General for San Salvador, in answer to the circular sent by the Commission, promising to supply information *re* the Civil Service in the republic he represented.

The correspondence was received.

The examination of Mr. Harrie Wood, Under Secretary for Mines and Agriculture, was then resumed and was again adjourned, the witness being requested to give further evidence on Monday, the 18th instant, at 3:15 p.m., the Commission to meet at 3 p.m.

The Fortieth Meeting of the Commission was held in the Lands Office, on Monday, the 18th February, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

The Secretary said he had received an answer to the letter from the Commission, requesting an extension of time from the Principal Under Secretary, in which the Commission were asked to suggest the term of extension required to complete its duties.

A discussion ensued and the President was requested to interview the Premier on the subject before naming any definite period.

Mr. Harrie Wood, Under Secretary for Mines and Agriculture, was again examined, and it was decided to continue his examination on Tuesday evening, the 19th instant.

The Secretary was instructed to call Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines and Superintendent of Drills, and Mr. H. B. Sullivan, Chief Mining Surveyor, for the same evening, the former for 7:15 p.m. and the latter for 8:15 p.m.

The Forty-first Meeting of the Commission was held on Tuesday, 19 February, at 11 a.m., at the Rooms of the Railway Commissioners.

PRESENT:—Mr. Thos. Littlejohn, President, Messrs. Jas. Robertson and J. H. Storey.

The Civil Service Commissioners visited the Railway Commissioners by arrangement, and discussed a large number of questions pertaining to the working of the Railway Commissioners' Department and the Civil Service generally.

The Chief Commissioner (Mr. E. M. G. Eddy), with whom were Messrs. W. M. Fehon and Chas. Oliver (Commissioners), in the course of discussion gave the Commission some valuable information on various subjects, among which were superannuation allowances, the effecting of economies in the various branches of the department, especially that of stores, the increase of efficiency through the reduction of the work of unnecessarily recording documents, the examination of candidates for appointment, and the system of promotion by merit rather than by mere seniority, and the possible improvement in the administrative machinery through the placing of some of the departments under the control of a Commission, or of the Service generally under the control of an independent Board.

The interview lasted from 11 a.m. to 1:20 p.m.

The Forty-second Meeting of the Commission was held in the Lands Office, on Tuesday, 19 February, at 6:15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the two previous meetings were read, those of the latter were amended, and both were confirmed.

The Secretary read a letter from Major Donald Fraser, late 2nd Regiment, Public Accountant to the Hon. Premier and Treasurer, forwarded on to the Commission, suggesting that the Civil Service Commission should be extended to embrace the working of the Military and Military Staff Officers.

It was decided not to ask that the powers of the Commission should be extended to embrace the enquiry suggested.

The examination of Mr. Harrie Wood, Under Secretary for Mines and Agriculture, was resumed and concluded.

Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines and Superintendent of Drills, was examined; as also was Mr. H. B. Sullivan, Chief Mining Surveyor.

FEB. 20, 1895. The Forty-third Meeting of the Commission was held in the Lands Office, on Wednesday, 20 February, at 3 p.m.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The President stated that in company with two of the Commissioners he had had an interview with the Premier that morning, and that the Premier had promised to grant the Commission an extension of time to the 31st proximo.

The Secretary was instructed to make the necessary application.

The Secretary read the following correspondence :—

Letter from Mr. E. Lewis Scott, asking to be examined by the Commission with reference to his individual position on the Superannuation Fund.

Letter from Mr. Jos. Dolton, of North Sydney, giving instances of dual positions held in the country.

Letter from Mr. Alexander Theophilus Dembicki, asking to be examined before the Commission with reference to an alleged injustice from which he was suffering.

Letter from Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines, forwarding regulations relating to the vote in aid of prospecting, the terms and conditions under which the use of diamond drills may be obtained, and stating that he was unable to supply a detailed account of his wardens' duties in 1894 as requested.

Letter from the Chief Commissioner for Railways (Mr. E. M. G. Eddy), forwarding the deed poll of the Superannuation Fund Association of the London and North Western Railway Co., together with particulars of modifications made in the benefits from 1st April, 1878.

The correspondence was received, and the Secretary was instructed to inform the writers who desired to be examined that if the Commissioners had time to take their evidence they would receive due notification.

Mr. Sheriff Cowper forwarded an addition to his evidence in answer to a question for which he had been allowed further consideration.—Accepted.

Mr. E. Twynan, Chief Surveyor and Director of Trigonometrical Survey, forwarded a proposed amendment to a portion of his evidence.—Accepted.

The President stated that in the course of an interview with the Premier, Mr. Reid said that the Commission could be supplied with a copy of the reports by Mr. T. A. Coghlan, Government Statistician, and the Civil Service Board on the Superannuation Fund.

The Secretary was instructed to write to the Premier asking him for copies of the reports in question.

Mr. Teece offered to write a memorandum on the Superannuation Fund for submission to the Commission.—The offer was accepted.

The President further stated, in the course of the interview with the Premier, Mr. Reid had approved of the suggestion that visits should be paid into the country to see the working of the Government Departments there. It was arranged that Messrs. Storey and Teece should visit Wagga Wagga and Goulburn in March, that Messrs. Robertson and Humphery should visit Bathurst, that Mr. Robertson should visit Armidale and Maitland, and that the regular meetings of the Commission should be continued in Sydney.

The Secretary was instructed to call Mr. E. F. Pittman, F.G.S., A.R.M.S., Government Geologist and Lecturer on Mining at the University, Mr. W. S. Campbell, Chief Clerk to the Department of Agriculture, and Mr. R. H. Ormiston, Chief Clerk in the Mines Department, for 6.30 p.m., 7.15 p.m., and 8.15 p.m. respectively, for the 21st instant.

Before separating arrangements were made for sectional visits to some of the departments in Sydney, and for an examination of the amendments to their evidence by Messrs. A. C. Fraser and Sheriff Cowper.

The Commission then adjourned to 6.15 p.m. of the 21st instant.

The Forty-fourth Meeting of the Commission was held in the Lands Office on Thursday, at 6.15 p.m., the 21st February.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The Secretary stated that Messrs. E. F. Pittman, the Government Geologist, and W. S. Campbell, Chief Clerk of the Department of Agriculture, were unable to attend, being out of town. He had, therefore, by direction of the President, summoned Messrs. A. Bruce, Chief Inspector of Stock, and H. G. M'Kinney, Chief Engineer of Water Conservation, who were accordingly examined. Mr. R. H. Ormiston, Chief Clerk to the Department of Agriculture, who had also been summoned, attended, but his examination was postponed.

The Secretary was instructed to call Mr. J. Barling, Under Secretary for Public Works, for Monday, 25th instant, at 3.15 p.m., the Commission to meet at 3 p.m.

The Forty-fifth Meeting of the Commission was held in the Lands Office on Monday at 3 p.m., the 25th February.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the two previous meetings were read and confirmed.

Mr. J. Barling, Under Secretary for Public Works, was examined, and was asked to attend and give further evidence at 6.15 p.m. of the following day.

The Forty-sixth Meeting of the Commission was held in the Lands Office on Tuesday, 26 February, at 6:15 p.m. FEB. 26, 1895.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The examination of Mr. J. Barling, Under Secretary for Public Works, was resumed.

The Secretary was instructed to call Mr. E. F. Pittman, F.G.S., Government Geologist; Mr. R. H. Ormiston, Chief Clerk of the Mines Department; Mr. W. E. Smith, stationer; and Mr. F. J. Thomas, Manager of the Newcastle and Hunter River Steamship Navigation Company, for 3:15 p.m., 4 p.m., 4:30 p.m., and 5 p.m. respectively, the Commission to meet at 3 p.m.

The Forty-seventh Meeting of the Commission was held in the Lands Office on Wednesday, 27 February, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The following witnesses were examined, viz.—Messrs. E. F. Pittman, F.G.S., Government Geologist; R. H. Ormiston, Chief Clerk of the Mines Department; W. E. Smith, stationer and printer, &c.; and F. J. Thomas, Manager of the Newcastle and Hunter River Steamship Navigation Company.

The Commissioners decided to hold their next meeting at the Public Works Department, availing themselves of the invitation of Mr. J. Barling, the Under Secretary, and to examine witnesses from the department there, the Commission to meet first at the Lands Office on the following evening at 6 o'clock.

The Forty-eighth Meeting of the Commission was held in the Lands Office on Thursday, 28 February, at 6 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the three previous meetings were read and confirmed.

The Secretary said he had received a letter from the Principal Under Secretary, of even date, forwarding an instrument under the hand of His Excellency the Lieutenant-Governor, extending the time within which the report of the Commission could be made until the 31st March next.

The Commissioners then proceeded by arrangement to the Public Works Department where they inspected the various offices.

The Secretary was instructed to call Mr. A. J. Gaston, entry clerk and storekeeper of the Government Printing Office, and Mr. F. Bridges, Chief Inspector of Schools under the Education Department, for 3:15 p.m. and 4:30 p.m. respectively on Monday, 4th March, the Commission to meet at 3 p.m. on the day named.

The Forty-ninth Meeting of the Commission was held in the Lands Office on Monday, 4 March, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., and Mr. J. H. Storey.

Mr. A. J. Gaston, entry clerk and storekeeper to the Government Printing Department, and Mr. F. Bridges, Chief Inspector of Schools under the Public Instruction Department, were examined.

The Fiftieth Meeting of the Commission was held in the Lands Office, on Tuesday, 5 March, at 6:15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., and Mr. J. H. Storey.

The minutes of the two previous meetings were read and confirmed.

The Secretary read the following correspondence:—

- (1) Letter from Mr. James Powell, Collector of Customs, giving a return of the duties of the officers employed in his Department as asked for by the Commission.
- (2) Letter from Mr. James Robertson, giving particulars of his visit to Maitland and Armidale.
- (3) Letter from Mr. W. D. Wilks, M.L.A., suggesting that Mr. James Hoey, late superintendent of the Fitzroy Dock, should be called, and stating that he could give valuable information.
- (4) Letter from Mr. E. F. Pittman, F.G.S., Government Geologist, forwarding a copy of his certificates and testimonials, and explaining the circumstances connected with his appointment as Government Geologist.
- (5) Letter from the Under Treasurer of Tasmania, forwarding certain documents and Acts of Parliament asked for by the Commission.

The correspondence was received.

The following witnesses were examined, viz., Mr. C. M. Kellick, clerk-in-charge, Publishing Branch, Government Printing Office; Captains James Edie, Shipping-master, and John Jackson, Manager and Collector of Public Wharves; and Mr. James Hoey, late superintendent, Fitzroy Dock.

The Secretary was instructed to call Mr. A. B. Portus, A.M.I.C.E., Superintending Engineer of Dredges, Harbours and Rivers Department, for 3:15 p.m., of Wednesday, the 6th instant.

MAR. 6, 1895. The Fifty-first Meeting of the Commission was held in the Lands Office, on Wednesday, 6 March, at 3 p.m.

PRESENT:—Mr. Thomas Littlejohn, President, Hon. F. T. Humphrey, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

The Secretary read the following correspondence:—

- (1) Letter from Mr. E. A. H. Stephen, of the Mines Department, making certain statements with reference to the duties performed by him.
- (2) Letter from Mr. Alexander Bruce, Chief Inspector of Stock, forwarding statement of work done by the steam launch "Golden Fleece," as asked for by the Commission.
- (3) Letter from Mr. J. W. Bodron, grocer, enclosing letter to the *Herald*, dated 27/2/95, by "Shopkeeper," suggesting that the reduction of salaries in the case of Civil Servants should be made from the top and not from the bottom.
- (4) Letter from Mr. F. J. Thomas, Manager of the Newcastle and Hunter River Steamship Navigation Company, forwarding a schedule of wages paid to engineers from the 19th October, 1893.
- (5) Letter from Mr. F. H. Wilson, Acting Under Secretary for Lands, forwarding a return showing the name, position, age, annual salary, allowances, and other salaries, length of service, and duties of every officer in his department.
- (6) Letter from Mr. A. C. Fraser, Under Secretary of Justice, in answer to one from the Secretary, explaining why he wished a certain question and answer in his evidence, relating to Murrumburrah, omitted.
- (7) Letter from Mr. W. H. J. Slee, F.G.S., Superintendent of the Diamond Drills, stating the conditions imposed upon the Company hiring the Diamond Drill at Cremorne, and the amounts paid.
- (8) Letter from Mr. W. S. Campbell, Chief Clerk in the Department of Agriculture, regretting his absence when summoned, and expressing his readiness to be examined at any time.
- (9) Letter from Mr. A. Read, 493 Elizabeth-street, drawing attention to the fact that Civil Servants in certain departments competed with professional musicians and teachers of dancing, to the injury of the latter.
- (10) Letter from Mr. H. C. L. Anderson, M.A., Principal Librarian, suggesting that certain witnesses should be called in connection with the Agricultural Department, and offering to give evidence on the subject of the Superannuation Fund Scheme, which he had prepared by request for the Civil Service.
- (11) Minute from Mr. Harrie Wood, Under Secretary for Mines and Agriculture, calling upon Mr. R. W. George, in his department, to explain why certain books, seen by the Commission, contained no entries, together with Mr. George's letter explaining the same.
- (12) Letter from Mr. V. Czarlinski, C.E., enclosing certain printed statements, and offering to give evidence before the Commission.
- (13) Letter from Mr. E. M. Paul, Consul for Russia, regretting that he was unable to give the Commission any information on the subject of Civil Service reform in Russia, as asked for by the Commission.
- (14) Letter from Mr. J. C. Maynard, Under Secretary for Public Instruction, forwarding a number of returns asked for by the Commission.

The correspondence was received.

Mr. Alexander Bruce, Chief Inspector of Stock, wrote and asked that a few lines of his evidence, which he had answered without sufficient information, might be expunged.—Agreed.

Mr. H. B. Sullivan, Chief Mining Surveyor, wrote, forwarding a short supplementary explanation to a question in his evidence, which he asked might be incorporated with it.—Agreed.

Mr. H. G. M'Kinney, M.E., M.I.C.E., Engineer-in-Chief to the Conservation of Water and Irrigation Branch, wrote forwarding a rather lengthy statement, supplementary and explanatory of his evidence, which he asked might be incorporated with it.—Agreed, the Secretary being instructed to make the explanation as brief as possible.

Mr. A. B. Portus, A.M.I.C.E., Superintendent Engineer of Dredges, Harbours and Rivers Department, was then examined.

The Secretary was instructed to call Mr. F. G. Finley, Chairman of the Armidale Land Board, and Mr. R. M'Donald, District Surveyor of Armidale, for 3.15 p.m. and 4.30 p.m. respectively on the following day, the Commission to meet at 3 p.m.

The Fifty-second Meeting of the Commission was held in the Lands Office, on Thursday, 7 March, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

M. F. G. Finley, Chairman of the Land Board, Armidale, and Mr. R. M'Donald, District Land Surveyor, Armidale, were examined.

The Secretary was instructed to call Mr. H. C. L. Anderson, M.A., Principal Librarian, and Mr. H. F. Barton, Master in Equity, for 3.15 p.m. and 5 p.m. respectively on Monday the 11th instant.

The Fifty-third Meeting of the Commission was held in the Lands Office, on Monday, 11 March, at 3 p.m. MAR. 11, 1895.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Secretary read the following correspondence:—

- (1) Letter from Mr. T. Butement, Balmain, asking why Civil Servants should be exempt from being garnisheed.
- (2) Letter from Mr. Edgar Ray, of the Mines Department, stating that he had returned from the country and was ready to give evidence when required.
- (3) Letter from Mr. J. Kennelly, messenger, calling attention to certain anomalies as affecting the payment of messengers in the Public Works Department.

The correspondence was received.

Mr. A. J. Gaston, storekeeper in the Government Printing Office, asked that certain portions of his evidence might be amended. The proposed amendments were read and agreed to.

The Commissioners then examined Messrs. H. C. L. Anderson, M.A., Principal Librarian, and H. F. Barton, Master in Equity, and instructed the Secretary to call Mr. W. L. Vernon, Government Architect, for 3.15 p.m. on the following day, and the Rev. Dr. Harris and Mr. E. I. Robson, head masters of the King's School, Parramatta, and the Church of England Grammar School, North Sydney, respectively, for 4.30 p.m. and 5 p.m., the Commission to meet at 3 p.m.

Before separating, the Commissioners decided to leave Sydney for Goulburn on Thursday, the 14th inst., for the purpose of taking evidence there on Friday and Saturday, Mr. Robertson and the Secretary to proceed thither on Wednesday evening to make the necessary preparations. The latter was instructed to write to the Chairman of the local Land Board, the District Surveyor, the Stock Inspector, the Police Magistrate, the Clerk of Petty Sessions, and the Resident Engineer, to hold themselves in readiness to be examined on one or other of the days named.

The Fifty-fourth Meeting of the Commission was held in the Lands Office, on Tuesday, at 3 p.m.,
12 March.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The following witnesses were examined:—Rev. Dr. Harris, head master of the King's School, Parramatta, and Mr. E. I. Robson, head master of the Church of England Grammar School, North Shore.

The Secretary was instructed to call Mr. W. L. Vernon, Government Architect; Mr. Critchett Walker, C.M.G., Principal Under Secretary; Mr. J. Barling, Under Secretary for Public Works; and Mr. A. C. Fraser, Under Secretary of Justice, for 3.15 p.m., 4 p.m., and 5 p.m., respectively, on the following day, the Commission to meet at 3 p.m.

On the suggestion of Mr. Humphery, it was decided that Mr. Ramsay should go to Goulburn for the purpose of taking evidence on Friday and Saturday, and that the Secretary should remain in town to prepare the draft report.

The Fifty-fifth Meeting of the Commission was held in the Lands Office, at 3 p.m. on Wednesday,
13 March.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Secretary stated that, acting under instructions, he had summoned the following witnesses to give evidence before the Commission at the Goulburn Court-house, viz.:—Mr. A. C. Betts, Chairman of the local Land Board, Cooma, for 10 a.m. on Friday, the 15th inst.; Mr. Wm. Orr, District Surveyor, Wagga Wagga, for 11 a.m.; Mr. J. F. Turner, Inspector of Stock, Yass, for noon; Mr. J. C. Page, Inspector of Conditional Purchases, Burrowa, for 2 p.m.; Mr. O. A. Willans, Crown Lands Agent, Goulburn, for 3 p.m.; Mr. C. Cropper, Inspector of Conditional Purchases, Goulburn, for 4 p.m.; Mr. J. G. Blaxland, Clerk-in-charge, local Land Board, Goulburn, for 5 p.m.; Mr. W. D. Armstrong, Draftsman-in-charge, Goulburn, for 7 p.m.; and Mr. C. Coane, Resident Engineer, Goulburn, for 8 p.m., of Friday, the 15th inst. For Saturday the 16th inst., the following witnesses had been summoned, viz.:—Mr. A. O. Moriarty, Chairman of Goulburn Land Board, for 10 a.m.; Mr. J. W. Deering, District Surveyor, Goulburn, for 11 a.m.; Mr. W. S. Caswell, Police Magistrate, Goulburn, for noon; Mr. J. McKensy, Clerk of Petty Sessions, Goulburn, for 2 p.m.; Mr. F. G. Davies, Goulburn, Postmaster, for 3 p.m.; Mr. C. A. Middleton, Telegraph Master, Goulburn, for 4 p.m.; Mr. J. L. Henderson, Inspector of Stock, Goulburn, for 5 p.m.; and Mr. J. W. Dowell, Clerk of Works, Goulburn, for 5.30 p.m.

A letter was read from the Under Secretary of Finance and Trade, stating that the sum of £300 would be paid to the credit of the Commission that day.

The following witnesses were then examined, viz.:—Mr. Critchett Walker, C.M.G., Principal Under Secretary; Mr. J. Barling, Under Secretary for Public Works; and Mr. A. C. Fraser, Under Secretary of Justice and Chairman of the Civil Service Board.

MAR. 15, 1895. The Fifty-sixth Meeting of the Commission was held at the Goulburn Court-house on Friday, 15 March, at 10 a.m.

PRESENT:—Mr. Thos. Littlejohn, President, Messrs. Jas. Robertson and J. H. Storey.

The following witnesses were examined, namely:—Messrs. Wm. Orr, District Surveyor, Wagga Wagga; A. O. Moriarty, Chairman Land Board, Goulburn; J. G. Blaxland, Clerk-in-charge, Goulburn Land Board; J. McKensey, Clerk Petty Sessions, Goulburn; O. A. Willans, Crown Lands Agent, Goulburn; W. D. Armstrong, Draftsman-in-charge, Goulburn; C. Coane, Resident Engineer, Goulburn; C. A. Middleton, Telegraph Master, Goulburn.

The Commission adjourned at 10 p.m. till the following morning at the same place at 10 o'clock.

The Fifty-seventh Meeting of the Commission was held at the Goulburn Court House on Saturday, 16 March, at 10 a.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The following witnesses were examined, namely:—Messrs. W. S. Caswell, Police Magistrate, Goulburn; J. W. Deering, District Surveyor, Goulburn; F. G. Davies, Postmaster, Goulburn; J. W. Dowell, Clerk of Works, Goulburn; and J. L. Henderson, Inspector of Stock, Goulburn.

The Fifty-eighth Meeting of the Commission was held in the Lands Office, Sydney, on 18 March, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the fifth-fifth meeting were read and confirmed.

A draft of the introductory portion of the report prepared by the Secretary was read, amended and temporarily adopted.

Mr. Robertson was asked by the President to draw up a report on the Audit and Treasury Departments.

The Commission adjourned till the following evening at 6 o'clock.

The Fifth-ninth Meeting of the Commission was held in the Lands Office, on Tuesday, 19 March, at 6.15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous three meetings were read and confirmed.

The following correspondence was read by the Secretary:—

- (1) Letter from Mr. A. O. Moriarty, Chairman of the Land Board, Goulburn, supplying certain information, asked for by the Commission.
- (2) Letter from Mr. E. G. W. Palmer, Secretary of the Civil Service Board, accompanied by a return showing the number of persons employed by the Government on December 31st, 1894, together with the amount of salaries and wages paid them on the day named, as asked for by the Commission.
- (3) Letter from Mr. J. R. Somerville, Goulburn, making certain suggestions with reference to the management of country offices and the expenditure thereon.
- (4) Letter from Mr. W. E. Grant, suggesting certain lines of examination during the visit of the Commission to Goulburn.
- (5) Letter from Mr. Reid, Under Treasurer, Tasmania, forwarding a copy of a report of the Royal Commission of Inquiry into the Civil Service, appointed in 1863, as asked for by the Commission.
- (6) Letter from Mr. H. C. L. Anderson, M.A., Principal Librarian, who returned his corrected evidence, together with an addendum, which he asked might be appended to his evidence.

The correspondence was received, the request contained in the last-named letter not being acceded to.

The Commissioners further considered the draft Report and adjourned till the following afternoon.

The Sixtieth Meeting of the Commission was held in the Lands Office on Wednesday, 20 March, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

The Secretary stated that he had looked up the evidence by Mr. A. C. Fraser as finally authorised by the Commission, and found that the amended answers to questions 2933 and 2982 were agreed to. Mr. Robertson pointed out that the answer to question 2933 as it now stood was the direct opposite of the answer as originally given, and that the succeeding question, which followed naturally as the real answer, had no connection with the answer as it now stood. He objected to the alteration, and, as the matter had gone to press, he moved that the following be added to the errata to be prefixed to the evidence:—"Answer to question 2933: Instead of 'I think it is desirable,' read 'I do not think so.'" Agreed.

The Commissioners further considered their draft Report, and adjourned till the following evening, at 6.15.

The Sixty-first Meeting of the Commission was held in the Lands Office on 21 March, at 6.15 p.m. MAR. 21, 1895.
PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

The Secretary read the following correspondence:—

- (1) Letter from the Under Secretary of Western Australia, forwarding copy of *Government Gazette* of that Colony, dated April 27th, 1894, containing the instructions to the Commission to inquire into the Civil Service of that Colony.
- (2) Letter from Mr. James Connelly, Redfern, forwarding information *re* the Customs Department.
- (3) Letter from Mr. W. J. Foster, Warden's Office, Wagonga, stating that the fees paid him by the Government for attending solely to the multifarious duties allotted to him were quite inadequate for his support.

The correspondence was received.

The Commissioners further considered their Report, and finally adjourned till Monday, at 3 p.m.

The Sixty-second Meeting of the Commission was held in the Lands Office on Monday, 25 March, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Commissioners further considered their Report.

The President submitted memoranda on the departments generally; Mr. Robertson one on the Audit Department; and Mr. Teece one on the Superannuation Fund.

The Commission finally adjourned till the following evening at 6 o'clock.

The Sixty-third Meeting of the Commission was held in the Lands Office on Tuesday, 26 March, at 6.15 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Secretary read a letter from Mr. R. C. Walker, Merrylands, dealing with the question of Superannuation, and forwarding an Act framed by the writer for the purpose of placing the Superannuation Fund on a sound footing.—The letter was received.

The Commissioners further considered their Report, and adjourned till the following afternoon at 3 o'clock.

The Sixty-fourth Meeting of the Commission was held in the Lands Office on Wednesday, 27 March, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Commissioners further considered their Report, and adjourned till the following afternoon at 3 o'clock.

The Sixty-fifth Meeting of the Commission was held in the Lands Office on Thursday, 28 March, at 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Secretary read a letter from Mr. J. Barling, Under Secretary of the Public Works Department, stating that since he was before the Commission the regulations for the classification of the Public Works Department, which had been adopted by the Board of Reference of that department, had been passed by the Executive Council.

The Secretary laid the following returns on the table, namely:—

- (1) Return giving information as to revenue, expenditure, and staff at the whole of the Post and Telegraph Offices within the Metropolitan area, excluding the General Post Office, supplied, at the request of the Commission, by the Deputy Postmaster-General.
- (2) Return compiled by the Secretary of the Civil Service Board, at the instance of the Commission, showing approximately the number of persons (male and female) employed by the New South Wales Government on 31st December, 1894, distinguishing those employed temporarily from the permanent staff of the Public Service.

The correspondence and returns were received.

The Commissioners further considered their Report, and adjourned till the following afternoon at 3.30 o'clock.

MAR. 29, 1895.

The Sixty-sixth Meeting of the Commission was held in the Lands Office on Friday, 29 March, at 3:30 o'clock.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Secretary read the following correspondence :—

- (1) Letter from Mr. A. C. Fraser, Under Secretary of Justice, asking that a certain portion of his evidence, given under a misapprehension and since found to be inaccurate, might be expunged. Agreed to.
- (2) Letter from Mr. F. G. Davies, Postmaster, Goulburn, asking that a certain portion of his evidence, which was of a personal nature and not affecting the main issue, might be expunged. Agreed to.
- (3) Letter from Mr. Henry Bonnard, Consul General for Australia of the Republic of San Salvador, giving information on the subject of Civil Service Reform in the Republic, and forwarding two issues of the *Government Gazette* of the Republic containing regulations controlling the Postal Service and the Roads and Bridges Department respectively, as also the annual report of the Audit Tribunal for 1892.

The correspondence was received.

The Commissioners further considered their Report.

The Sixty-seventh Meeting of the Commission was held in the Lands Office on Monday, 1 April, at 3 p.m.

PRESENT :—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson and J. H. Storey.

The minutes of the previous meeting were read and confirmed.

The Secretary read the following correspondence :—

- (1) Letter from Mr. William Orr, District Surveyor, Wagga Wagga, asking that two lines in his evidence, which were of a personal character, might be expunged.—Agreed to.
- (2) Letter from a "Taxpayer," suggesting that the printing of Government advertisements in the daily or weekly newspapers be done by public tender. He quoted from the message of the Governor of Pennsylvania, where the average cost of printing and supplies of the State Government for the past twenty years had been £38,896, in which he renewed his former recommendation that "the State printing appropriation be guarded by enactments distinctly fixing the amount to be expended by each department for the printing of public documents in prescribed form."
- (3) Letter from Mr. J. H. Amora, Vice and Acting-Consul for the Netherlands, forwarding a very interesting memorandum by Mr. Consul-General de Vicq on the organisation, pay, and methods of appointment and promotion, &c., in the Netherlands. A copy of the Budget of 1894 of the Netherlands Government was also forwarded.

The correspondence was received.

The Commissioners further considered their Report, and adjourned till the following evening at 6 o'clock.

The Sixty-eighth Meeting of the Commission was held in the Lands Office on Tuesday, 2 April, at 6 p.m.

PRESENT :—Messrs. Thos. Littlejohn, President, Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Secretary read the following correspondence :—

- (1) From the Premier, stating that £4 4s. a day, including the sitting fee, would be allowed for the country trips, besides actual travelling expenses.
- (2) From the Premier, stating that a further extension of time would be given to Monday next, when the Report of the Commission must be handed in, as no further time would be allowed.
- (3) From the Principal Under Secretary, stating that the Colonial Treasurer had been asked to place a further sum of £200 to the credit of the Commission.
- (4) From Mr. John Campbell, of the Mines Department, asking to be heard in refutation of certain charges alleged to have been made against him by the Civil Service Commission.

The correspondence was received, and the Secretary was instructed to inform Mr. Campbell that no charges had been made against him by the Commission, and that his name had not even been mentioned, so far as the Commissioners were aware, during the course of the inquiry.

The Commissioners further considered their Report, and finally adjourned till the following afternoon at 3 o'clock.

The Sixty-ninth Meeting of the Commission was held in the Lands Office on Wednesday, 3 April, at 3 p.m.

PRESENT :—Messrs. Thos. Littlejohn, President, Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

Mr. C. A. Middleton, Telegraph-master, Goulburn, wrote to ask that certain words in his evidence might be omitted, and others might be added.—Agreed to.

A letter was read from the Principal Under Secretary, who transmitted an instrument further extending the time within which the Commission could make their report till the 8th instant.

The correspondence was received.

The Commissioners further considered their Report and adjourned till the following afternoon at 3 o'clock.

The

The Seventieth Meeting of the Commission was held in the Lands Office on Thursday, 4 April, at 3 p.m. APRIL 4, 1895.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Commissioners further considered their Report, and adjourned till the following evening at 6 o'clock.

The Seventy-first Meeting of the Commission was held in the Lands Office, on Friday, 5th April, 3 p.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Commissioners further considered their Report and finally revised and adopted the introduction, parts I and II, and the first section of part IV.

At 10 p.m. the Commissioners adjourned till the following day at 10 a.m.

The Seventy-second Meeting of the Commission was held in the Lands Office on Saturday, 6 April, at 10 a.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Commissioners further considered their Report, adopted part IV and the remaining sections of part III with the exception of that on the Post Office.

At 9 p.m. the Commissioners adjourned till 11 a.m. on Monday.

The Seventy-third Meeting of the Commission was held in the Lands Office on Monday, 8 April, at 11 a.m.

PRESENT:—Mr. Thos. Littlejohn, President, Hon. F. T. Humphery, M.L.C., Messrs. Jas. Robertson, J. H. Storey and Richd. Teece.

The minutes of the previous meeting were read and confirmed.

The Secretary stated that Mr. Henderson, Inspector of Stock, Goulburn, in returning his corrected evidence, had forwarded a paper containing certain addenda dealing with the working of the Diseases in Sheep Act and its Amendment Act, as also with travelling expenses.

The Secretary laid on the table a return from the Department of Mines showing the wages paid to caretakers of public watering-places from 1890 to 1894; the revenue collected for the period named; the rents received from leased public watering-places; the annual cost of repairs of public watering-places; the rent received from lease of artesian bores; and the amount of revenue collected from that source, all for the same period.—Received.

The Secretary asked for instructions as to the matter to be included in the Appendices to be attached to the evidence. He was instructed to draw up a list of the returns that had been handed in, and to submit them to an informal meeting of the Commission.

The Commissioners then went through the complete Report, finally revised it, and appended their signatures thereto.

On the motion of Mr. Humphery, it was decided to give the messenger a gratuity of ten guineas for the extra clerical and other services he had rendered to the Commission.

It was also decided to give the assistant shorthand-writer a gratuity of five guineas for extra shorthand work performed at Goulburn during the visit of the Commission.

On the motion of Mr. Humphery, a cordial vote of thanks was tendered to the President for the urbanity and courtesy he had invariably displayed in the discharge of his arduous duties as President.

The President having suitably acknowledged the compliment, the Commission closed.

AN INFORMAL MEETING.

IN accordance with the instructions given him by the Commissioners at the final meeting of the Civil Service Commission, held on 8th April, on which day the Commission expired, the Secretary called an informal meeting of the Commissioners on 8th May, in the Lands Office, to consider which of the returns that had been handed in by the various witnesses should be included in the appendices to be attached to the evidence. The returns filled three large pilot-files.

All the Commissioners were present, namely:—Mr. Thos. Littlejohn (in the Chair), Hon. F. T. Humphery, M.L.C., Messrs. James Robertson, J. H. Storey and Richard Teece.

A discussion ensued, at the close of which Mr. Humphery moved the adoption of the following memorandum to be affixed to the evidence, namely:—“The appendices are very numerous, and many of them so bulky (as will appear by the following schedule and summary of contents) that the cost of their publication must necessarily be considerable. As all the documents have been most carefully arranged and numbered by the Secretary to the Commission, and will be under the custody of the Chief Secretary, they can readily be referred to. Much of the information is explanatory of the evidence, and throws light on the administration and working of the Service. Each of the heads of departments supplied a voluminous return stating the name, age, salary, and duties of every officer in his department. These will be found extremely useful for the purposes of classification, &c. The Commissioners, on the ground of economy, do not recommend that these appendices be printed with the evidence unless required by Parliament.”

The Commissioners unanimously adopted the memorandum, and instructed the Secretary to prepare a summary of the returns, in lieu of publishing them in an appendix, in accordance therewith.

The meeting then closed.

CIVIL SERVICE INQUIRY COMMISSION.

REPORT.

To His Excellency the Honorable SIR FREDERICK MATTHEW DARLEY,
Knight, Lieutenant-Governor of the Colony of New South Wales
and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, the Commissioners appointed on 20th November, 1894, by the late Governor, His Excellency the Right Honorable Sir Robert William Duff, P.C., G.C.M.G., deceased, to inquire and report (1) as to the changes necessary for the purpose of placing the Public Departments upon a strictly economical and efficient footing; (2) as to the present methods of public expenditure, and as to the changes necessary to place them upon a sound and economical basis; (3) as to the state of the Civil Service Superannuation Fund, and the steps necessary to place it upon a secure footing, (a) with additional Government aid, or (b) without such aid; and (4) to draw up a scheme for the better regulation of appointments to and promotions in the Public Service, have the honor to submit the following Report:—

1. The time allowed by His Excellency's Commission has been so limited as to prevent us attempting an exhaustive examination of the large and complex service into the organization and administration of which we were commissioned to inquire. We have, therefore, fixed our attention less on matters of detail than on questions of principle, and we have seen sufficient to convince us as to the urgent need for reform, and are unanimous as to the lines on which that reform should proceed.

2. That the question of Civil Service Reform is of the greatest importance is generally recognised. The Civil Servants in every State form a large, compact, and highly influential portion of the community. The Service should have a high standard with emoluments and rewards regulated on a fair, just, and even liberal scale, and its ideal should be to render true and faithful service to the State.

3. How far the Civil Service of any country has been from attaining a lofty ideal may be inferred from the fact that Commission after Commission has sat throughout the great English-speaking colonies to inquire into the causes that have made it a by-word and a reproach. In order to ascertain what has been done in this matter elsewhere, we sent a circular to the Colonial Treasurer of each of the Colonies, asking for full information on the subject of Civil Service Reform as it affected each particular Colony. We find that each Colony has had a Royal Commission, from Victoria, which led the way in 1859, down to Western Australia, where a Royal Commission commenced its labours in June last year, but has not yet presented a Progress Report. A return giving the principal dates and other information concerning each of these Commissions, as also concerning other Royal Commissions of Inquiries into the Civil Service held elsewhere, will be found in Appendix A attached to this Report.

4.

The Civil Service of Europe revolutionised of late years.

4. Mr. Andrews, an observant American, has written that "during the last three-quarters of a century a complete revolution has taken place in the Civil Service of the principal European States. Rigorous and impartial tests of qualification have been applied, and where formerly were incompetency, routine, and speculation, are now efficiency and fidelity. The prosperity of these States is owing, in a great degree, to the character of their Civil Service; for it has been instrumental to the development of their resources and to public economy."* De Tocqueville says that "all the Governments of Europe have, in our time, singularly improved the science of administration. They do more things, and do everything with more order, more celerity, and at less expense."

The British Civil Service.

5. In England, where an independent Civil Service Commission has existed since 1855, the whole system of the Civil Service has undergone a complete transformation, the Royal Commission of 1887-90, presided over by Sir Matthew White Ridley, having completed the work of reorganisation commenced by the Commission of 1853 and carried forward by the Playfair Commission of 1874. The principle was laid down from the very first, and has been acted on ever since, that the Service should be divided into two distinct grades, one, comprising the great bulk of the Service, for routine clerical work, and the other for work of a more responsible character; the examinations for entrance into the lower division to be on ordinary commercial lines, and those for the higher division to be of a special kind, but all to be openly competitive. Clerks in the lower division are eligible for promotion into the upper, and clerks in the upper for promotion to staff appointments, which, however, may be conferred on persons not in the Service if considered desirable. Then there are also two lower grades, one of abstractors or copyists, and the other of temporary juniors. In addition to the two grades of examinations for the main divisions, there are special examinations for Indian, Consular, and Technical posts, and also direct appointments of experts from outside. The result of these continuous attempts at improvement has been that the British Civil Service, including that of India, is nowhere excelled. Its characteristic features may be summed up as competitive examinations for entry, probation before admission, security of tenure after admission, promotion by merit, and pensions on retirement provided by the State. The steps leading to the present English system are narrated in Appendix B attached to this Report.

The American system.

6. The system of political patronage, which was the bane of the English Civil Service, was transplanted into America in 1830 by President Jackson.† To such a pitch did the evil of political patronage spread that President Garfield declared, in a speech that has become historical, that "One-third of the working hours of Senators and Representatives is scarcely sufficient to meet the demands in reference to the appointments to office," and that "with a wise system of Civil Service the business of the Departments could be better done at half the cost." We cite the case of America, as it represents, or did represent when the system was in full play, the state of degradation to which a Civil Service could sink.

Civil Service Commissions.
(a) The United States Civil Service Commission of 1883.

7. The example set by England in placing the Civil Service under the control of an independent Commission was followed by America in 1883, in the first month of which year an Act to regulate and improve the Civil Service of the United States was passed authorising the President, by and with the advice and consent of the Senate, to appoint three persons as Civil Service Commissioners to form the United States Civil Service Commission. The duties of the Commission were to provide for open competitive examinations for testing the fitness of applicants for the Public Service, such examinations to be practical in their character, and to relate so far as may be to those matters which are fairly a test of the relative capacity and fitness of the persons examined to discharge the duties of the Service into which they seek to be appointed, vacancies to be filled from those highest on the list. The Act provides that in certain cases the examination shall be non-competitive, but that no one, unless specially exempted, can be appointed or promoted unless he has passed an examination. The system was at first given a trial at Washington, and has gradually extended till now it embraces nearly 40,000 persons, the desire being to extend it throughout the entire Service. (See Appendix C attached to this Report for reports from the American Consul and other Consuls on Civil Service Reform.

8.

* "Foreign relations of the United States," 1876, page 553, quoted by the Hon. Dorman B. Eaton in his "Report concerning Civil Service in Great Britain," 1879.

† "It was a New York adherent of Jackson, Marcy, who, speaking in the Senate in 1832, condensed the new doctrine in the phrase that has become famous—"To the victor belong the spoils." Bryce's *American Commonwealth*, chapter LXV.

8. In November, 1883, Victoria led the way among Australasian Colonies by instituting a Public Service Board consisting of three persons to be appointed by the Governor-in-Council, subject to removal in the same way as the Railway Commissioners. The Act was specially passed "to abolish all patronage with respect to appointments and promotions in the Public Service, and to establish a just and equitable system in lieu thereof, which will enable all persons who have qualified themselves in that behalf to enter the public service without favour or recommendation other than that of their own merits and fitness for the position." The Act provided that no new appointment should be made except on the request of the permanent head of the Department to the Minister, and then only upon a certificate from the Board that such an appointment was required. The recommendation of the Board is also made necessary before promotions or transfers can be made from one Department to another, and no new appointments can be made to fill any vacancy unless the Board certifies that there is no person available and competent in the Public Service to be promoted or transferred to fill such vacancy. In 1890 the laws relating to the Public Service were consolidated, but no alteration was made in the duties or powers of the Board. In 1893 the constitution of the Board was altered by the substitution, without additional salary, of the Commissioners of Audit for the then existing Board. One result of the change, according to the report of the Board for 1894, has been "to afford greatly increased facilities for the transaction of business with the other departments, as well as for the examination of accounts for Public Service expenditure."

(b) The Victorian Public Service Board.

9. In 1884 an Act was passed in this Colony constituting a Civil Service Board of five persons appointed by the Governor, one of whom retires annually, and is not eligible for reappointment within twelve months after retirement. The duties of the Board are to test, by examination, the fitness of candidates for probationary entrance into the Service (a certificate of having passed the junior University examination or its equivalent being necessary before the probationers can be appointed to the permanent staff), and to make recommendations for appointments and promotions, the decision, however, resting with the Governor, on the recommendation of the Minister. The Act was, doubtless, designed to secure a more efficient control of the Public Service, and to remove it from political patronage, but it has entirely failed in its purpose owing mainly to the fact that the Board consisted usually of four Civil Servants and one commercial representative, all of whom had other duties to perform, to the absence of any power in the Board to fix the salaries or control the service, and also to the operation of clauses 28 and 31, the former of which provides that in special cases the Minister may appoint anyone not in the Service without either examination or probation, while the latter provides that the Minister may appoint temporary hands on the stipulation, which has remained a complete dead letter, that such temporary employment shall cease at or before the expiration of two years.

(c) The Civil Service Board of New South Wales.

10. In 1889 Queensland appointed a Civil Service Board, consisting of three persons, to hold office during seven years. Their duties are to hold open competitive examinations, recommend candidates for appointment and promotion, examine the departments, classify the officers, and make annual reports.

(d) The Queensland Civil Service Board.

11. The Royal Commission which inquired into the Civil Service of South Australia from 1888 to 1891 recommended the establishment of a Public Service Board, consisting of three members, not Civil Servants, whose first duty should be to classify the Service; that during its tenure of office the Board should have referred to it for report all appointments, promotions, transfers, and dismissals; that the principle of classification should be the value of the work done by each officer; that the salaries paid should be determined by the value of the work done as ascertained and determined by the Board; that the six classes of the present fixed list be abolished, and a new classification based upon salaries be substituted; that the statutory annual increments be abolished, except where officers are not now at the top of their respective classes; that provisional and temporary officers now in the Service be graded equally with fixed list officers, precedence to be determined by salary and seniority; and that all vested interests of officers already in the Service should be conserved.

(e) Proposed Public Service Board for South Australia.

(f) The proposed Civil Service Commission in Canada.

12. The Canadian Civil Service Royal Commission of 1891-2 strongly recommended that a Civil Service Commission should be appointed for the Dominion, whose duties should be (1) to test candidates by open competition for appointment or promotion, and (2) to report upon the state and management of public business, and the official conduct of Public Servants. These recommendations have not yet been carried into effect, but there is a widespread feeling throughout the Dominion in favor of freeing the Service from political control, and even as long ago as 1878, Lord Dufferin, when Governor-General of Canada, was able to say, in his farewell speech, that "Happily both the great political parties of this country have given in their adherence to this principle," namely, that neither the original appointments nor the subsequent advancement of Civil Servants should in any way have to depend upon their political connections or opinions.

Civil Service classification.

13. The initial difficulty in dealing with the Civil Service is in connection with the work of classification. We have given in Appendix D attached to this Report a summary of the different systems which have been tried with more or less success in the various colonies and elsewhere. In New Zealand and Western Australia there appear to be no regularly defined systems of classification; in Tasmania, South Australia, and Queensland the classification appears to be based upon the amount of the salaries. This principle prevailed in New South Wales from 1884 to 1886, when it was abandoned, as on it the system of an annual automatic increase of salaries, which the Government of the day desired to abolish, was based. In Victoria, where the Service is divided into four main divisions—Under Secretaries, professionals, clericals, and non-clericals—the characteristic feature of the British system, that of distinguishing between men of superior and inferior educational attainments, has been introduced into the clerical division, which consists of five classes, three higher and two lower, a junior University examination certificate being sufficient for entrance into the lower, while a senior University examination certificate is necessary for entrance into the higher, no officer of the lower class to be eligible for admission into the higher until he has passed a senior University examination or its equivalent. This principle has just been recommended by the Public Works Department in this Colony with the approval of the Executive Council as the basis of classification for that department, which it is proposed to form into three divisions—the upper division, the lower division, and the temporary staff, a senior University examination certificate being necessary for the first, a junior for the second, while temporary hands, who must pass a Civil Service examination before entering the temporary staff, have to pass a junior University examination before being promoted to the permanent staff.

Political patronage.

14. It will be thus seen that there is abundant testimony in favour of placing the Civil Service on a thoroughly independent basis, and of doing away with political patronage, from the objectionable influence of which it has been apparent throughout our inquiry that the Civil Service of New South Wales is not exempt. We think that the example of Great Britain, the United States of America, of Victoria and Queensland, and the recommendations of Royal Commissioners, both in Canada and South Australia, should not be lost, but that the principles of a reform, which has recommended itself to so many communities differing from each other widely in their general characteristics, are deserving of careful consideration in New South Wales.

Commissioners held 73 meetings, and examined 83 witnesses.

15. Our investigation was commenced as early as practicable. We, however, lost ten days pending the appointment of a Secretary and provision for office accommodation, but from 29th November, 1894, we have sat not less than four times a week. Seventy-three meetings have been held—2 in Goulburn and 71 in Sydney. Eighty-three witnesses have been examined—13 at Goulburn and 70 in Sydney, and a considerable amount of time, in addition, has been spent by us, together or separately, in visiting branches of Public Departments, in the country as well as in Sydney, in order to gain a clearer knowledge of the methods under which the work has been carried on.

The magnitude of the Civil Service.

16. Of the vastness of the Civil Service few people have any conception, but some idea, although necessarily slight and superficial, of its extent may be gained from the statement that on 31st December, 1894, there were employed 21,363 persons, male and female, of whom 14,291 were permanent, and 7,072 temporary, to whom salaries

salaries and wages amounting to £2,618,961 9s. 3d. were paid. A summary of a return contained in Appendix E attached to this Report, shows how these figures, which, of course, are only approximate, were distributed, namely :—

	Permanently employed.	Temporarily employed.	Persons employed.	Salaries or Wages.		
				£	s.	d.
Executive and Legislative Establishments ...	98	5	103	35,292	1	0
Branch Royal Mint	47	1	48	9,355	3	2
Chief Secretary	1,300	477	1,777	172,838	9	9
Treasurer	1,188	414	1,602	264,901	14	7
Attorney-General	47	10	57	19,877	1	2
Secretary for Lands	537	241	778	194,577	10	9
Secretary for Public Works	1,090	3,811	4,901	586,939	16	4
Minister of Justice	1,487	46	1,533	203,868	8	11
Minister for Public Instruction	4,831	11	4,842	600,004	8	8
Secretary for Mines and Agriculture	491	249	740	97,921	6	8
Postmaster-General	3,175	1,807	4,982	433,385	8	3
	*14,291	7,072	21,363	2,618,961	9	3

17. We examined a large number of the principal officers in the Service, as also a number of witnesses occupying responsible positions outside the Service, such as managers of banks, shipping companies, and commercial houses, wholesale printers and stationers, head-masters of schools, with a view, as far as possible, of contrasting the salaries and wages paid in the service with those paid in banking and commercial circles. The information thus obtained is valuable, inasmuch as it will enable Civil Servants to make a wider comparison than they have hitherto been in the habit of doing, and of contrasting the positions they occupy, the duties they perform, and the remuneration they receive, not so exclusively with those which prevail in some other Departments as with institutions more responsive to the laws of supply and demand, and which do not offer the same security of tenure. It should be recorded, however, that some of the evidence obtained from (including several important admissions made by) witnesses in the Service was of a guarded character and reluctantly given.

Evidence from outside the Service.

18. We were surprised at the apathy, arising apparently from the anticipated impracticability of effecting reform, displayed by some of the heads of the Civil Service, especially in view of the fact that only a comparatively short time has elapsed since a Royal Commission, which sat for three and a half years, inquired into the question of Civil Service reform, and presented a series of elaborate reports; and we were unprepared for the assurances given by a number of the permanent heads of departments and sub-departments that the Service is, as a rule, not overmanned nor overpaid, that it is efficient, and that political patronage has not been exercised. We can only conjecture that gentlemen so testifying are either ill informed or are insensible of the nature and gravity of the inquiry on which we have been engaged.

Apathy on the subject of Civil Service reform.

19. In one of the Departments, that of Public Works, efforts have recently been and are still being made to grapple with the problem of Civil Service reform, and that attempt, as confined to one Department, although partial, is estimated to effect a saving of £20,000 per annum. The Department of Lands, which was not dealt with by the Civil Service Commission of 1887-92, we found had already been reported on by Departmental Boards, but even here we obtained information which should lead to large reductions by drastic changes in the system of administration. In the Department of Justice information was freely given which should lead to and be productive of very substantial savings without in any way impairing the efficiency of the service.

Departmental reform.

20. There is a popular assumption that the Civil Service of New South Wales is both over-manned and over-paid, that it includes a number of incompetent or inefficient officers; that its modes of procedure are more or less antiquated; that the economical and rapid dispatch of public business is not its main object; that favouritism prevails in many quarters; and that it is a means of providing employment for relatives and friends of political adherents.

Popular idea of the Civil Service.

21.

* This list does not include the Railway employés, the Police, the Military or Naval Forces.

What the
Civil Service
of New South
Wales is.

21. After the best examination we have been able to make of the system, we have come to the conclusion that, while the Service has many admirable features, and contains officers as high-minded, as able, and as patriotic as can perhaps be found anywhere, the assumption above referred to is not without justification. The evidence we have taken proves that the Civil Service of the Colony could be efficiently conducted with a much smaller staff than is now employed; that salaries and wages generally are on a much more liberal scale than is paid for equally responsible work outside; that, owing to the system of promotion by seniority rather than by merit, officers are forced into positions which they are not competent to fill; that, owing largely to the operation of the same principle, as also to the absence of any well-ordered system of classification, the grossest inequalities and anomalies exist in the salaries of officers attached to different departments, and frequently even to the same department; that there is much duplication of work which necessitates the employment of a large staff of officials to enter up in various, and sometimes even in similar, forms the very same facts; that, owing to the free exercise of the Parliamentary privilege of calling for returns, an elaborate system of recording useless documents has to be maintained; that the expenditure on public buildings is in excess of what is necessary owing to the system of political interference, which is responsible for the erection of special post-offices in country townships where shops could be used, and of costly Courts of Justice and other structures which are not required; that there are cases where incompetency, neglect of duty, and even drunkenness have formed no bar to continued employment, and that persons can be, and have been, introduced into the Civil Service who are unfit to discharge their duties. As an illustration of the anomalies referred to, we learned from the Government Architect that the officer in his department who designed the great building in which the work of the Lands Department is carried on, and who supervised its erection, was receiving less remuneration than the principal messenger.

Instructions
to the
Commission.

22. It appears to us that the question which is placed last on the list of our instructions lies at the base of our inquiry; that if it is treated in a comprehensive manner the other questions, with the single exception of that of the Superannuation Fund, will practically regulate themselves, and that, unless this question be promptly and satisfactorily determined, whatever other recommendations we may make will be ineffective to free the Civil Service from the influence of political patronage or control.

A re-classi-
fication.

23. We venture, therefore, to re-arrange the order of our instructions with the view of dealing with them in the following manner, namely:—(I) To draw up a scheme for the better regulation of appointments to and promotions in the Public Service. (II) To report as to the present methods of public expenditure, and as to the changes necessary to place them upon a sound and economical basis. (III) To report as to the changes necessary for the purpose of placing the Public Departments upon a strictly economical and efficient footing. (IV) To report as to the state of the Superannuation Fund, &c.

I.—APPOINTMENTS AND PROMOTIONS.

In dealing with this part of our investigation we find that a Royal Commission has already inquired into our Civil Service, and after years of searching examination, costing the country a large sum of money, presented reports with recommendations, but nothing has been done to give them effect.

The establish-
ment of an
independent
Commission.

The attempt to regulate appointments to the Civil Service by the Civil Service Act of 1884 having proved ineffectual, we recommend the repeal of that Act and the passing of a new Act establishing an independent Board of Commissioners, three in number, to be chosen for their ability, probity, and administrative capacity; that their first duty should be to institute a thorough investigation into every branch of the Service, valuing the work and responsibility of each officer, determining his salary accordingly, and recommending such combination of duties and re-arrangements of branches and departments as may be deemed essential to economise expenditure without lessening efficiency. They should be further charged with the duty of recommending to the Minister candidates for employment and promotion in the Service when additional officers are required or when vacancies occur

occur, and no appointment or promotion should be conferred by the Ministers without such recommendation. The salaries of the Commissioners should be liberal in order that the services of the best men may be obtained, and it would be imperative that they should devote the whole of their time to the duties of their office. By the establishment of such a Board political or other undue influence to secure appointments would cease, the frequent and pertinacious solicitation of members of Parliament by their constituents would be obviated, and Ministers would be relieved of many importunities. The Service would become more honorable and it would certainly possess a higher status than at present.

Promotion should be according to merit, and seniority should have weight only in the case of equal merit in the officers concerned. Where expedient, the choice of an officer for promotion to a vacancy should not be restricted to the particular department in which such vacancy occurs, but ability to fill a vacancy should be recognised in any department of the Service. Promotion, &c.

We recommend the immediate cessation of new appointments to the Service ; also, the cessation of increase of salaries to the existing staff of Civil Servants. Cessation of appointments, &c.

The evidence shows that many of the officers of the Public Service magnify the importance of their duties, and, as already mentioned, the tendency is for each to compare his work and remuneration with those in other Government Departments. But when we compare the average salaries paid by Government with those paid by large institutions in the Colony, which require of their employes capacity, education, and industry at least equal to what is essential in the Civil Service, it is seen that the rate of pay in the former is excessive. The result of a comparison which we have instituted between the salaries enjoyed by a large number of clerical officers in the Civil Service with those paid in seven banks doing business in the Colony is to establish the fact that the rate of pay in the Civil Service is from 20 to 30 per cent. higher, and we are confirmed in our conclusions by the evidence given of salaries paid in mercantile establishments. A comparison of salaries.

The great number of messengers employed in the departments is conspicuous. In two instances, the principal messengers receive, with allowances, up to £300 per annum, and a great number receive from £125 up to £200 per annum. The practice of appointing adults at high salaries as messengers (excepting for confidential work) or lift attendants, should be discontinued. Intelligent lads of good character might be employed, as is the case in the Customs, where there are twenty-one boy messengers at salaries ranging from £26 to £50 per annum. Messengers.

One of the early duties of a permanent Civil Service Commission should be to deal with the question of temporary officers, of whom there are 7,000 employed, as also with the question of holidays. The present regulation of allowing so much as three weeks' holidays in the year, in addition to the regular and casual holidays, seems to us to be unnecessary. Temporary officers and holidays.

The Service should be classified as follows :—

- Classification.
- 1st Class. Probationers entering at not less than 16 years of age nor more than 20, to receive £25 per annum for the first year, £50 for the second, £75 for the third, and after that small annual increments till £100 be reached, when they should be eligible to fill vacancies occurring in the second class.
 - 2nd Class. Salaries in excess of £100 per annum, with a maximum of £250.
 - 3rd Class. Salaries in excess of £250, with a maximum of £400.
 - 4th Class. Salaries in excess of £400, with a maximum of £500.
 - 5th Class. Salaries in excess of £500 with a maximum of £700.
 - 6th Class. Under Secretaries, Heads of Branches, and Officers not embraced in the foregoing classes, receiving salaries in excess of £700 per annum.

Beyond class 1, there should be no statutory increases, and all increments and promotions should be regulated by the Board of Commissioners, and no promotions from a lower class should take place except to fill a vacancy in a higher class.

All candidates for admission to the Civil Service should pass an examination not of the elementary general character at present in existence but devised for the particular branch of the Service which they select, and they should also be required to pass a medical examination. Examinations.
All

Curtailment
with con-
sideration.

Where there is an excess of employés in the Service, and where the remuneration is above the value of the services rendered, we recommend curtailment as soon as may be practicable and with as little severity and as much consideration as possible.

Heads of
Departments:
their re-
muneration,
&c.

We desire to express an opinion that heads of departments and superior officers holding important positions in the Service should receive liberal remuneration as a strong inducement to qualify themselves for the discharge of their important duties; and vacancies should be filled by officers in the Service of the highest attainments, as well as of mature experience and practical capacity for business, who should be held directly responsible for the efficiency and good conduct of the staffs under their control. We think that the possession of these qualities is absolutely necessary in the case of Under Secretaries.

II.—METHODS OF PUBLIC EXPENDITURE.

Committee on
Public
Expenditure.

Having regard to the present method of Public Expenditure we are of opinion that before expenditure is authorised, and before proposals regarding the same are placed on the Estimates, in every case where the probable outlay would exceed £5,000, the matter should be considered and reported on by a Committee, consisting of the following, viz. :—

The Permanent Head of the Public Works Department,

The Permanent Head of the Treasury, and

The Permanent Head of the Department on whose behalf the proposed expenditure would occur.

Committee on
Parliamentary
Returns.

We recommend the appointment of a permanent Parliamentary Committee, to which all Motions for Returns by Parliament should be referred for report. By this means we believe that a reasonable restraint would be placed upon the too frequent practice of calling for copies of papers and returns, often involving great labour and expense in their preparation and printing.

III.—THE PUBLIC DEPARTMENTS.

THE CHIEF SECRETARY.

(a) The
Ministerial
Branch.

We may here make a general statement, applicable almost without exception to the whole of the departments, and that is, that the office premises are so constructed that a proper supervision is impossible, and that the accommodation available is not utilised to the best advantage. It is common to find a number of separate rooms in each of which there are only one or two officers and to find tables used where desks ought to be employed. In the Chief Secretary's Office, the Chief Clerk, who, presumably, ought to exercise supervision over the general staff, occupies a separate room. In this department, too, as in a number of others, the officer designated accountant keeps books of an elementary character. We are of opinion that the salaries of the clerks in charge are in excess of the amounts justified by the nature of the work performed, and that members of the general staff engaged in merely clerical work are too highly paid.

(b) The Audit
Department.

As far back as 1864 the then Treasurer prepared recommendations, subsequently adopted by the Executive Council, in which the following statements were made :—

“The majority of these clerks” (*i.e.*, twenty clerks employed in the Audit Office) “are engaged upon duties altogether incompatible with those of audit, and which should be confined exclusively to the Treasury.”

“The design of the present Government is to impose on the Treasury exclusively the appropriate duty of keeping the public accounts of receipts and expenditure, and of exhibiting the results to the Parliament, and to confine the Audit Office to its legitimate province of auditing the accounts as kept by the Treasury.”

In

In the course of the investigation attention was drawn to the case of an extensive fraud in the Public Instruction Department, and the Commission was supplied with the report furnished on the subject. We deem this report sufficiently important to quote it at length.

THE AUDIT OF THE EXPENDITURE ACCOUNTS.

11 July, 1893.

THE disclosures in connection with the recent frauds in the Public Instruction Department demonstrate the immediate necessity for some radical alteration in the present system of auditing the expenditure accounts of the Government.

It has transpired that the frauds in question have been systematically perpetrated for the past eight years, and are now only detected in consequence of the culprit's own carelessness. It is found that the elaborate system of audit to which the Government looks as a protection and safeguard has signally failed to exercise any reasonable control or check over a most important portion of the Government expenditure.

There is no disguising the fact that the conditions which made these frauds so possible and free from detection are part of a general system under which the audit of our Public Accounts is at present conducted, and the fear of similar opportunities and temptation existing in other departments of the State naturally suggests itself.

It appears to me that the present system is wrong in principle as well as in detail. It is essentially a post audit by voucher, wherein the verification of accuracy mainly depends upon an examination of the vouchers that they contain the endorsement of the responsible officers certifying to the computations, &c. It necessitates a large amount of purely mechanical work, and the keeping of books of account by the Auditor-General, which, in some cases at least, are already kept in duplicate by other Government Departments.

With the exception, perhaps, of the Customs Department, no personal inspection is made, and as pointed out in the report on Scott's defalcations, "the method of book-keeping, the necessary precautions for the prevention of frauds by a division of responsibility, and a personal verification of the current balances" do not come under review.

It is possible that this is partly the fault of our Audit Act, 33 Vic. No. 18, which, although apparently copied from the Imperial Act 29 and 33 Vic., c. 39, is not so comprehensive, and several important provisions contained in the latter measure are omitted. This is especially noticeable in the limited authority vested in the Auditor-General by the local Act.

The Imperial Act, section 28, provides that "in order that such examinations may as far as possible proceed *pari passu* with the cash transactions of the several accounting departments, the Comptroller and Auditor-General shall have free access at all convenient times to the books of account and other documents relating to the accounts of such departments, &c., &c."

Under our present system, instead of the audit proceeding *pari passu*, it is often months in arrear. This was illustrated some time since in an investigation of the expenditure accounts of the Departments of Mines and Justice, when it transpired that adjustments of advances to those departments amounting in the aggregate to over £100,000, which should have been rendered to the Auditor-General, were several months in arrear.

The Victorian Audit Act 54 Vic., No. 1,066, is even more emphatic with regard to the necessity of a personal inspection. The Department of Audit in that Colony is administered by three Commissioners, responsible, as here and in England, only to Parliament. Section 40 provides for an inspection by the Commissioners, or one of them, at least once a year, of the books and accounts of every receiver and paymaster, and that they shall take stock of all stores on hand and examine all contract accounts and all circumstances affecting or attending the making of such contracts, &c., &c. By the 44th section they have power "to call for persons or papers for the purpose of special inquiry, and they are also empowered "to cause search to be made in and extracts taken from any book or records in the custody of the Treasurer or in any public office, &c., &c." and by section 45, they may examine upon oath, &c.

Our present system is a cumbrous one. It entails considerable unnecessary inconvenience to accounting officers in the formal information and elaborate detail which have to be furnished to the Audit Office. The contributory negligence brought under notice in connection with the recent frauds is the natural outcome of the mechanical process resulting from the conditions of the present imperfect system.

It can readily be understood that where mere copies of the transactions are furnished for the purpose of verification, opportunities are afforded for deception which would be impracticable under a good system of periodical personal supervision, where the original books, vouchers, and authorities are critically reviewed. This is the only satisfactory method for the detection of errors of principle and commission, in addition to the errors of omission. Apart from these considerations, the moral influence of an independent personal supervision is an additional safeguard.

There should be little difficulty in so amending the present Act and the system of audit as to attain the desired efficiency, and it is probable that with a less cumbrous method a more effective result may be attained with less expense to the Government.

The Victorian Act is very complete, and contains many excellent provisions that might with advantage be adopted by this Colony.

N. LOCKYER,
Senior Inspector.

The Under Secretary for Finance and Trade.

Notwithstanding the recommendations and criticisms of the work of the Audit Department, the condition of affairs referred to in 1864 and 1893 apparently continues to the present time. A large and expensive staff is still maintained whose duties are quite distinct from what we regard as the work of audit. We think the

duplication

duplication of work which obtains in this Department is wholly unnecessary. As an instance, it may be pointed out that there are 173,000 to 200,000 conditional purchasers' current accounts, all the cash and transfer entries in connection with which are recorded in the Treasury Department. This work is duplicated in the Audit Office from the documents and information originally supplied to the Treasury and recorded there. A system so elaborate and unnecessary must be condemned, and points to the necessity for a prompt rearrangement of the work of the Department.

Where practicable we think that each Ministerial Department might be entrusted with the duties of receiving and paying all moneys properly connected with the business of the Department, and that the Audit Office should be an inspecting authority in the fullest sense of the term.

(c) The Registrar-General.

The Registrar-General considers that his office is not overmanned or overpaid, but that there are one or two clerks who, by virtue of long service, have been gradually pushed up, and are receiving higher salaries than their work is worth.

(d) The Police.

The Police Department appears to us to be well administered. In the course of his evidence the Inspector-General stated on the subject of travelling allowances that the country is absolutely over-run with Government officers travelling, and that one cannot go to any town without finding half-a-dozen different inspectors inspecting water tanks, police stations, public buildings, &c. Further he believes that if there were a very searching audit into expenditure throughout the Colony, it would lead to the correction of many abuses in the way of lavish and unnecessary expenditure, that our expenditure has been based on too liberal a scale and not on business or economical lines, and that a certain amount of money has been asked for, and without much inquiry it has almost invariably been paid. From the highest to the lowest, from the expenditure on enormous buildings to the few shillings on mere travelling expenses, he says there has not been that attention to business arrangements by the responsible officers of the Government, from one end of the Service to the other, to ensure that the Public Service should be carried on at the least possible cost.

(e) Hospitals for the Insane.

The Inspector-General of the Insane states with regard to the payment of his staff that, considering the current rate of wages, they are well and sufficiently paid, and the seniors highly paid; the carpenters, painters, and engineers, too highly paid. He has never been in a position to reduce the salaries once granted, although a suggestion he made to commence at a lower rate was approved by Government. He has to compete to an extent with the police and the gaols who require the same class of people.

(f) Master in Equity and in Lunacy.

The Equity Branch is self-supporting, but the Master is of opinion that an Accountant in Equity is not required, and that his services might be dispensed with without in any way interfering with the efficiency of the office.

(g) The Government Statistician.

We had not an opportunity of inspecting the work of the branch of the Government Statistician, which costs about £7,600, but the Statistician states that there is one officer upon the Estimates, for whom he had no employment, at £470 a year, and that two of his staff are overpaid.

(h) Charitable Institutions.

The expenditure in connection with Charitable Institutions appears to us to be upon a most extravagant scale, and could be largely curtailed by judicious retrenchment, which should be the work of, and promptly taken in hand by, the proposed Civil Service Commission. It might be suggested that much of the work of inspection could be efficiently undertaken by the police and local honorary inspectors.

(i) Civil Service Board.

If the recommendations of the Commission for the appointment of a Civil Service Commission be carried out the existing Civil Service Board will not long be required.

THE TREASURY.

(x) The Head Office.

The salaries paid to some of the heads of branches appear to be large in comparison with that paid to the Under Secretary, and lead us to the conclusion that they are excessive.

In the Account Branch the Chief Inspector, who is also Accountant, receives £740, and included in the staff there are eight clerks receiving from £291 to £450 per annum.

annum. An inspection of the books disclosed carelessness on the part of some of the officers and the reprehensible practice of erasures of mistakes by means of a knife was frequently resorted to.

In the Revenue Branch the Receiver, who has important duties to perform, receives a salary of £700, and, of a large staff, seventeen chiefly engaged in clerical work receive from £200 to £450 per annum each. In this branch there is a conditional purchase room as also a lease room in which are employed eleven clerks with salaries amounting to £2,466. Their work has relation to operations in connection with some 200,000 current accounts for conditional purchases and leases. This is the work remarked upon in the paragraph referring to the Audit Office.

We have given some consideration to the question of the relation of this portion of the Treasury work to that performed by the Lands Office, and we think that the public convenience would be consulted and considerable economy effected if the whole responsibility of dealing with the sale and lease of the public estate could be imposed on the Lands Department. It is however so large and important a question that we leave it to be dealt with by the Commission whose creation we have elsewhere recommended.

In the Pay Branch the Paymaster has a salary of £650, and there are six clerks, receiving from £219 to £411. The Branch is rightly surrounded by many checks. The Paymaster signs all cheques, and the Assistant Paymaster countersigns.

In the Examining Branch the Examiner of Accounts and the Assistant Examiner receive respectively salaries of £500 and £345.

In the Correspondence and Contract Branch the Chief Clerk, who is also Registrar of Funded Stock, has a salary of £620. The matter of contracts, which are practically considered and dealt with within a few weeks of each year, is admittedly the most onerous portion of his duties. The system of recording outward correspondence is crude and somewhat cumbrous. With the view of saving time, all letters are press-copied on loose sheets; but whatever time may be alleged to be saved must be lost again, as these loose sheets are afterwards pasted in guard-books, for which special indexes have to be prepared.

We have referred with some detail to the salaries paid in the Treasury, because we believe them, in many cases, to be higher than is justified by the nature of the work.

The Record Branch, which costs annually £1,138, could be worked with the Correspondence Branch, thus saving at least the salary of one head of a branch.

The Inspecting Branch should properly come under the control of the Auditor-General and the work of inspecting should be extended to include all expenditure as well as revenue. The Audit Department, rearranged as we have suggested, should be made to include this branch.

While dealing with the Treasury Department we deem it necessary to point out that the building is altogether unsuitable for the proper carrying out of the work of so large and important a branch of the Service. The want of convenient arrangement is so manifest that we think only one course should be followed, and that is to demolish the interior and build better lighted and more convenient rooms.

The Collector of Customs has always regarded the Indoor Department of his branch as being underpaid, and the Outdoor Department as being overpaid.

(b) The
Customs
Department.

The effect of the system of promotion by seniority or rotation is apparent in this department, and we concur in the Collector's opinion as to over-payment, but we cannot wholly agree with him as to the under-payment of the Indoor Department. Some highly-paid officers are doing unimportant and irresponsible work such as could be performed by any clerk of ordinary intelligence. The system of recording extends to the formal registration of applications for leave of absence, and the mode of advising payments of salary to officers outside of Sydney is laborious and expensive, being by type-written letters on foolscap, where brief printed forms with necessary blank spaces would answer the purpose.

The steam-launch belonging to the Custom House was almost forced upon the Collector, who thinks he might have done better with something of a less expensive character. The Chief Clerk, whose salary is £515, besides £45 as Secretary to the Commissioners of Customs, does not exercise any supervision over the other clerks.

The

The pay of £384 to a landing-waiter appears to be "a remnant of old traditions," and, we were told, will be discontinued when opportunity occurs. For landing-waiters the Collector considers the maximum salary should be £300, with a minimum of £150 for juniors, and for lockers £225, and would reduce their minimum below £180, a fair minimum for junior lockers being £125 a year.

He also considers that the salaries of Inspectors of Distilleries should be rearranged when the present officers retire or are removed, and that instead of £425, £335, and £245, a lower maximum should be fixed, and he expressed the opinion that there should be classification throughout the Service, with maximum salaries fixed for the various grades, and that a too slavish fashion of promotion by seniority is fraught with mischief.

(b) Commis-
sioners of
Customs.

We are of opinion that if the Commissioners of Customs were remunerated by fees for attendance, which should be required only when there was business to transact, the purpose of the establishment of the Board would be fully met, with an appreciable saving to the State.

(c) Govern-
ment Printer's
Department.

The Department of the Government Printer appears to be conducted with efficiency, but in some respects without sufficient regard to cost. This is probably owing in a large degree to the requirements of Parliament, and the lavish production of publications. We recommend an examination, by an officer acquainted with Parliamentary requirements, of the accumulated stock of printed matter in the Government store at the A.S.N. Co.'s wharf, with a view to the selection and retention of a sufficient number of copies of the different publications to be supplied on requisition; the remainder to be sold as waste paper, or otherwise disposed of in as lucrative a manner as possible. It may be remarked that the binding alone of many of the publications which are now useless has cost from 5s. to £1 16s. per volume. The clerk in charge estimated the cost of production of the documents and papers in the store at £25,000, which as new paper would be worth from £5,000 to £6,000, but as waste paper would only realise about £100.

The practice of taking in a year's supply of stationery and other materials cannot be commended, as it necessitates the leasing of a store at a high rental (£624 per annum) besides having the basement of the printing building filled. The value of the stock in the leased store was estimated to be, in February last, £21,000, being more than a year's supply. The value of the stock in the basement of the Printing Office was then about £12,000. There is no insurance against fire on the stock in Circular Quay store. This system contrasts unfavourably with the practice of the Railway Commissioners. The contractors should be required to deliver such quantities as may be needed, and at such times as may be necessary, and the leased store would be no longer required. For any surplus the store at the A.S.N. Co.'s old wharf would give ample accommodation. We think the impression that contractors would charge an increased price for goods by having to deliver at any time when required, instead of once or twice a year as they now do, is a mistaken one, as the competition among manufacturers would keep the tenders down. By adopting the system we suggest, a large annual saving would be effected in wages, rent, and interest. The possession of so much storage room has, possibly, encouraged the retention of excessive stocks on hand. We are confirmed in this opinion by the fact that the annual contracts have fallen from £21,000 in 1893 to £15,000 in 1894, £6,650 in 1895, and to £7,000 as estimated for 1896, yet notwithstanding these reductions the stores are still well filled.

The salaries and some of the wages in this Department need revision, the cost of supervision being especially high when compared with that in leading printing establishments in the city. The wages of compositors do not appear to exceed those ruling elsewhere.

The Government Printer states that by the introduction of Linotype machines, at a cost of £7,000, an annual saving of £2,000 could be effected.

(d) Stores and
Stationery.

The Department of Stores is conducted at an annual cost of over £6,000, exclusive of interest on the value of the stock and rent of stores. The Comptroller said he could save the country thousands of pounds if he had sufficient storage, and explained that by contracting for fixed quantities, and taking from the ship's side, he could purchase with greater advantage than having to buy indefinite or open quantities, where the contractor has to deliver from day to day, in small or broken parcels.

parcels. The Comptroller's proposal would necessitate the use of large stores, with attendants, besides which the unbusinesslike methods that now prevail would, in our opinion, increase the already large expenditure of this branch. We believe that the system introduced in the railways of having annual contracts, with deliveries of the articles as required from day to day, is preferable, as it saves much handling, as well as interest, and throws the burden of storing goods upon the contractor. With regard to the probable saving in price that the Comptroller's plan would effect, we believe that competition among tenderers would be a sufficient safeguard against any extra rate. We suggest that this branch should receive immediate consideration by the Commission, with the view of ascertaining its usefulness and determining the propriety of its continuance.

In the Mercantile Explosives Department all the wages-men, of whom there are a considerable number, receive pay for Sunday, although not actually at work on that day. For this no sufficient reason has been assigned, beyond that it is the custom of the Service. The Superintendent is of opinion that £2,000 a year could be saved by abrogating the law which at present exists, compelling the storage of different varieties of explosives in separate magazines, coupled with the removal of the dynamite hulk at Broken Bay to a more convenient position, say at Middle Harbour. (e) Mercantile Explosives Department.

The number of members of the Board of Health is apparently greater than needed. In the opinion of the witnesses examined from five to seven would be sufficient, and an officer on the staff of the Quarantine Station, Manly, might be dispensed with. (f) Board of Health.

The Marine Board Department, like many others, is capable of being conducted at much less cost. The salaries and wages paid to pilots' boats' crews, masters and crews of steam launches, are much higher than are paid outside the Service. It is worthy of consideration whether the President should not combine with his own the office of Harbour-master in Sydney, which would appear to be compatible with the nature of his duties. The annual cost of maintaining the pilot steamer "Captain Cook," which is £3,504, could be largely reduced. The President admits that this is a high expense, but that it has been going on for a number of years, and he does not see any way to recommend that any of these people should be reduced, as they are working under Marine Board Regulations. If these regulations do exist, we recommend that they be immediately amended with the object of securing economy in the conduct of the department. (g) Marine Board.

The following is a comparison between the pay of the officers and men of the "Captain Cook" and the officers and men of the Newcastle and Hunter River Co.'s steamers:—

<i>Government Pilot Steamer.</i>				<i>The Newcastle and Hunter River Co. passenger steamers.</i>			
£				£			
1 master	416 with board.	Masters	300 with board.
1 mate	214 "	First officers	180 "
1 second mate	170 "	Second "	144 "
1 first engineer	272 "	Third "	120 "
1 second "	200 "	First engineers...	270 "
2 firemen, at £141	282 "	Second "	192 "
1 fireman...	125 "	Third "	162 "
1 "	120 "	Seamen	60 "

2 A.B. seamen, at £123...	246 "	Greasers	96 "
2 " " at £118...	236 "	Donkey-men	96 "
1 A.B. seaman	101 "				
3 boatmen, at £143	429 "				
1 boatman	121 "				
2 lookout-men, at £143...	286 "				
1 cook and provedore	143 "				
			£3,504				

The Manager of Public Wharves thinks that the wharfinger at Darling Harbour could be dispensed with, and further that, if inward wharfage could be collected by the Customs, some of his officers would be unnecessary. (i) Public Wharves.

PUBLIC

PUBLIC WORKS DEPARTMENT.

(a) Head Office.

This Department is in a condition of rearrangement, and, therefore, some branches of it do not admit of investigation and report at the present moment. One of the propositions in connection with the reorganization scheme is to completely amalgamate the whole of the accounts. The staff would be decreased, and the services of some of the more highly paid officers would be dispensed with, and economies would be practised in other ways resulting in a large saving. A recent press announcement, presumably inspired, places this saving at £26,000 per annum. Further, in the past, lavish and useless expense has been incurred in the erection of public buildings, some of which have not even been required. We believe, however, that a repetition of this abuse will be avoided if the suggestion we have already made be adopted.

(b) Dredge Service.

The evidence shows that the pay of the staff of the Dredge Service is on an extremely high scale. The Superintending Engineer asserted that efforts to effect reductions have been met with objections by Members of Parliament, and that Ministers have interfered to maintain the rate. He admits that the rates paid are too high, and that there is room for a reduction in wages of from $12\frac{1}{2}$ per cent. to 15 per cent. throughout. Another witness stated that the pay of the men in the dredge "Sydney" is from 15 to 20 per cent. above that obtainable in private employ, and that the "Little Nell" costs 15 per cent. over the fair rate for the work of the men employed. The President of the Marine Board regards the cost of this service as very extravagant, but he says that it has been established owing to pressure on the Government, and he could not suggest any way of dispensing with much of the Dredge Service in the rivers under our present political system. We think that considerable reduction can be made in the number of men employed in this service, and we recommend that the rates of pay enjoyed by those retained be placed on a level with those paid for similar work by private employers.

(c) Government Architect.

From the Government Architect we learn that it has sometimes happened that after plans have been prepared and work commenced, influence has been brought to bear, resulting in costly additions, notwithstanding that such were deemed unnecessary. For this reason, the Government Architect adds that he can in very few cases carry out a building quickly and in a business-like way. The District Inspector at Goulburn for this branch stated that the Goulburn Court-house was built for outside effect; also that some time ago he managed the Albury District, in addition to his own district, for three months, and there was so little to do in it that he could easily have managed it at a little extra cost in travelling and saved £500 a year. He could still manage the two districts efficiently, or, with his present work, he could undertake the inspection of public schools in the district.

We note that under the Department of Public Instruction there exists a separate branch with an Architect and staff, involving the expenditure of nearly £5,000 per annum. We see no reason why the work done should not be performed by the Government Architect, and a considerable saving be effected.

DEPARTMENT OF JUSTICE.

Proposed changes and saving.

Information as to the working of this department was given by the Under Secretary, with a number of suggested alterations and changes among the Police Magistrates, Clerks of Petty Sessions, &c., whereby a saving of about £10,000 per annum could be effected. We have it in evidence that the number of Circuit Courts and Quarter Sessions is unnecessarily large and could be reduced, without interfering with the due administration of justice. Such reduction would of course result in a considerable saving. This witness confirmed the view we have already expressed

expressed regarding the unnecessary expenditure on public buildings, by citing the cases of the Paddington and Glebe Court-houses, which he asserts were not required.

A further saving could be effected by an arrangement between the Departments of Justice and Lands for the amalgamation in a large number of cases of the offices of Clerk of Petty Sessions and Land Agent, and by a combination of the Patents, Copyrights, and Weights and Measures Offices under one head in the Department of Justice. Justice and Lands.

Evidence was given by the Sheriff that the Court-houses were built upon too lavish a scale, that architectural beauty was more attended to than the real comfort and necessities of the Court, and that at Bathurst and Goulburn the jurors' rooms are not large enough to bed down twelve jurymen. The Goulburn Court-house cost £36,000, and a great part of it is set apart for the use of officials, who, we understand, rarely enter it, whilst the necessary accommodation for jurors is not provided. The costly character of this Court-house attracted attention on our recent visit to Goulburn, and we were informed that a suitable and more useful building could have been erected for half the cost. The Sheriff confirms the evidence given by the Under Secretary of Justice that a large reduction in expenditure might be made by decreasing the number of Assize Courts and Courts of Quarter Sessions. If this were done, more cases might be tried in Sydney, which would save travelling and other expenses. Sheriff.

DEPARTMENT OF MINES.

In the Department of Mines we think the Prospecting Vote of £20,000 ought to be discontinued. Mr. Slee is of opinion that the expenditure of this Vote is of advantage to the Colony, but we can find no reason for its being again placed on the Estimates. One of the witnesses stated that out of the hundreds of mines which have been assisted, not a half per cent. have turned out any good at all, and thinks the money is only being wasted, and he could not conscientiously advise its continuance. Another witness says that it is a useless waste of public money. We may state that there was a contribution from this Vote of the sum of £695 10s. 3d. to the Cremorne Coal Company in connection with its first bore, and £1,600 in connection with the second. (a) The Prospecting Vote.

In the Geological Branch the Superintendent of Caves has a staff of nine. He describes the caves as a serious cause of worry and inconvenience, and has reported in favour of putting them in the hands of a public tenderer, or allowing competition, as the expense is very heavy, and he says it is a question whether the Government is justified in spending so much without return. The cost of the branch staff is £4,474, and in the contingencies a further sum of £1,500 is provided for the preservation of caves. A charge might be made for admission to caves to cover the cost of superintendence. (b) The Superintendent of Caves.

The cost of the Public Watering Places and Artesian Boring Branch is about £18,600 per annum and seems to us large. Considering the class whom its establishment is intended to benefit, we think a scale of fees should be instituted sufficient to meet the annual outlay. We are informed that some of the places are leased to men who have obtained portions of land on the spot for cultivation, but that there are eighty-one places for which tenants cannot be found, and caretakers have been appointed at an average annual salary of about £140 each. We find that in this Branch there is an officer in receipt of a salary of £245 who was retrenched from the Lands Department on December 31, 1888, and at that time received a gratuity of £381 11s. The expense of inspecting and travelling, set down in the Estimates at £2,000, might be saved as well as the salaries of the inspectors by getting the work done by the Department of Public Works without additional expense, which the Under Secretary for that Department thinks could be done. Failing an arrangement of this character, we are of opinion that the work of inspecting watering places could be performed by the Stock Inspectors. (c) Public Watering Places and Artesian Boring.

The

(d) The Examiner of Coal-fields.

The Under Secretary for Mines informs us that the office of Examiner of Coal-fields may be abolished and the salary saved. He is also of opinion that the number of foresters might be reduced.

(e) The Diamond Drill Branch.

Looking at the fact that there is practically no work being done by the Diamond Drill Branch we see no reason for the retention of the two clerks employed there at a salary of £514 per annum. It would follow that the sum of £2,250 for the half-year placed on the last Estimates for the purpose of working the drills will not be wholly required.

(f) Great laxity of control.

We think there has been in the past great laxity manifested in the control of this Department. Evidence shows that in connection with Mining-Lease rentals, arrears were allowed to accumulate to the amount of over £14,000, resulting in loss of revenue to the Colony, and in other branches loss has resulted through want of proper oversight. In the larger and more conspicuous case of neglect the services of the senior of two offenders were dispensed with, and the other was fined and disgraced. In this case dispensing with services meant that the clerk was allowed to retire on a pension provided through the Superannuation Fund. The disgraced clerk has now almost regained his former salary.

(g) Travelling expenses.

In the matter of travelling expenses we find the Chief Inspector of Mines was during 1894 stationed for some months at Wyalong as Acting Mining Warden, and was absent from Sydney continuously from April 27th to June 26th, and from October 25th to December 20th. He was absent from Sydney altogether 196 days, and received, in addition to his salary, 30s. per day for 192 days, and 15s. per day for 4 days. The matter of travelling expenses generally is one that needs critical examination.

(h) Clerks too highly paid.

We are of opinion that some clerks are too highly paid for the work they perform, and we wish to draw special attention to the existence of five record branches, an amalgamation of which would result in a reduction of cost.

(i) The Forestry Branch.

In the Forestry Branch there is employed an officer receiving 15s. per day, who was retrenched from the Trigonometrical Branch in 1890, and received a gratuity on retiring of £207 15s. 6d.

(j) The Government Metallurgist.

Before closing our remarks on the Mines, we wish to draw attention to the appointment of the Government Metallurgist. Some time ago a School of Mines was established in connection with the University, and it was considered advisable to engage the services of a metallurgist. The Agent-General was accordingly entrusted with the task of engaging a suitable officer, and a gentleman was selected for the position for a period of three years, at a commencing salary of £1,000 a year, with a yearly increase of £100. On arriving in Sydney the metallurgist found that no preparation had been made for the exercise of his calling, and, although he is now in the third year of his engagement, he has had no opportunity of entering upon the special duties he was engaged to discharge.

PUBLIC INSTRUCTION DEPARTMENT.

Retrenchment.

The provision for this Department is £757,000. Having regard to the reduced cost of living and the salaries paid outside the Public Service, it appears to us that retrenchment to a very large extent might, without injustice, be effected. We have already dealt with the question of transfer of the Architect's Branch to the Government Architect.

Salaries, &c.

It appears to us among other things that there is room for reduction in the salaries ranging from £250 to £400 for the performance of clerical work. The salaries for teachers amount to the enormous sum of £508,000 per annum. The evidence of the Chief Inspector of Schools is to the effect that the scale of payments is fixed by regulations made by the Department, and approved by the Minister. An examination of these regulations leads to the conclusion that the salaries are on too high a scale, and this is borne out by a comparison with the salaries paid in private schools. We think a large saving could be effected in this department by

by

by a reduction in the salaries of teachers, except those in the lower classes. The liberality of the salaries is most marked in the cases of female teachers, especially those in charge of infants' departments. There is evidence to the effect that the Cadet Corps may be dispensed with, and that the work of drilling can be done by the teachers, as formerly. We think that the Technical Education Branch is too costly, with a tendency to extravagance, and we recommend a strict scrutiny of the expenditure.

We may point out that during the ten years ended 31st December, 1894, the State has spent, in the cause of public instruction, excluding Technical Education, a sum of £6,792,820, and has received in school fees only £697,078, or little more than 10 per cent. of the outlay. Salaries which in 1885 absorbed £393,313 rose in 1894 to £522,416, an increase of £129,103, while the fees increased during the same period by only £11,767.

We do not express any opinion as to the policy of making superior education practically free, as we hardly think that this comes within the legitimate scope of our inquiry.

DEPARTMENT OF LANDS.

The clerical staff at the head office is very large, and we are of opinion that a considerable reduction in salaries and in numbers could be effected if a proper system of classification of work and emoluments were introduced by the proposed Commission, the creation of which we have recommended.

Local Land Boards, with a chairman and two colleagues in each district, have entailed a large expenditure in fees and travelling expenses, and the preponderance of evidence is in favour of dispensing with the services of the two colleagues. There is also evidence in favour of a reduction in the number and a corresponding increase in the area of the districts. Another important suggestion has been made upon which, however, the evidence is not unanimous, viz., that the offices of chairman of Land Board and of district surveyor should be amalgamated. At present the chairman is mainly dependent upon the district surveyor for preparation of cases and recommendations relative thereto, and we believe that in some cases the amalgamation can with advantage be carried out, a district surveyor being appointed to the dual office. The changes and amalgamations referred to would effect marked savings in fees and travelling expenses.

The Land Act of 1884 was intended to establish a system of decentralisation, by which much duplication of work, with its attendant expense, would be avoided; but it is obvious to us that full effect has not been given to this intention. In the evidence it will be found that the late Hon. J. S. Farnell, the late Right Hon. W. B. Dalley, the Hon. Sir J. P. Abbott, and the Hon. H. Copeland, recognised this principle, and it must be clear to anyone reading the evidence that much of the work performed by the staff at the head office might be more satisfactorily and expeditiously done at the district survey offices.

The Departmental Board of Inquiry, appointed in 1889, stated that the inspectors of conditional purchases would be fairly and reasonably paid if they received from £200 to £250 per annum, and, in addition, their travelling allowance of one pound per day. The Estimates show that there are thirty-one inspectors, six of whom receive each £245, and twenty-five receive each £290, together with the daily allowance. It will also be seen that occasionally salaries are augmented by equipment allowances, and, in the case of one witness, not a semblance of equipment was necessary or maintained.

The Acting Under Secretary stated that if the Forest Branch were transferred back to the Lands from the Mines Department, his department might conduct the forest rangers' work. This is a subject that would, of course, engage the attention of the proposed Commission. He also stated that, in his opinion, the Land Appeal Court could be dispensed with, and a large saving thereby effected, any appeals being dealt with by a District Court Judge.

THE

THE POSTMASTER-GENERAL'S DEPARTMENT.

The expenditure for 1894 in the Postmaster-General's Department, exclusive of interest on the cost of the buildings, was £752,000; revenue, £626,864; loss, £125,136. The estimated expenditure for 1895 is £770,578. It was not possible to do more than make a cursory inspection of some divisions of the General Post and Telegraph Offices besides taking the evidence of some of the principal officers. It will be perceived, from an examination of the figures, that nothing short of an exhaustive investigation of the expenditure in the head offices and the branch establishments will lead to the retrenchment that is possible and necessary to produce something like an equilibrium of revenue and expenditure. It is only right to express the opinion that, while the staff comprises a number of experienced and competent officers, a radical improvement in general classification and the curtailment of expenditure are desirable. There is duplication of work and payment is beyond the value of the services rendered. The result of political influence in the multiplication of branches, the great cost of buildings, and, as a corollary, the increased and increasing permanent annual expenditure, are evident. Without the strong support of an independent Civil Service Commission the reforms demanded would be difficult if not impracticable, and the exercise of a masterful control alone can bring about the closing or reduction in the annual cost of unnecessary or unimportant branch offices, which may either be wholly dispensed with or placed upon a more moderate footing. In a return forming Appendix F attached to this Report will be found a list of city branch offices entailing an annual charge, aggregating £15,470. Whilst we are of opinion that the convenience of the public should be studied in every reasonable way, it appears to us that the annual cost of some of these necessary adjuncts of the head office exceeds proper limits, and a glance at the return will show the necessity for trenchant handling by the proposed Commission.*

IV. THE SUPERANNUATION FUND.

The request that we should report upon the steps necessary to place the Superannuation Fund upon a secure footing imposes upon us a task of grave magnitude. A valuation of the fund as at 31st December, 1887, was made by Mr. R. Teece, at which date the estimated deficiency was £1,325,706, and the causes which had led to this deficiency and which must, unless removed, tend to perpetuate and intensify it, were pointed out. Notwithstanding the perilous condition of the Fund, no steps were taken to afford relief, and a second valuation was made as at 31st December, 1890, by Mr. J. B. Trivett. Mr. Trivett estimated the deficiency at £1,592,568. Again, the alarming condition of the Fund was ignored, and a third valuation as at 31st December, 1893, has just been completed under the direction of the Government Statistician, alleging a deficiency of £2,905,200.

Making due allowance for all elements of uncertainty inseparable from the valuation of funds of this character, the deficiency is so large that any doubt as to the condition of insolvency into which the Fund has been allowed to drift is removed. This fact will be confirmed by confining our attention to the pensions already entered on, regarding the valuation of which there can be no doubt. In the following table the values of these at the several investigation dates are compared with the amount of the funds and the value of the statutory endowment at corresponding dates.

Date.	Fund.	Value of Pensions.
1887	£362,177	£238,492
1890	494,086	530,513
1893	576,153	713,132

From this table it will be seen that the liability under pensions now being enjoyed is about £137,000 in excess of the total existing Fund, together with the value of the statutory endowment; in other words, not only is the whole of the Fund insufficient to meet the pensions which have already become a charge upon it, but there is no provision whatever to meet pensions which may become due in the future and towards which the members of the Civil Service are now required to contribute. To require these members of the Service to continue to contribute to a
Fund

* While giving full attention to the respective departments in their entirety, we have been restrained by want of time from examining the officers of many of the branches. We mention this lest it might be assumed that we have overlooked the desirableness of taking their evidence.

Fund from which it is quite certain a majority of them can never derive any benefit, is an injustice which calls for immediate redress. Mr. Coghlan, in his report, makes several suggestions for improving the condition of the Fund, which suggestions have been recommended by the Civil Service Board for favourable consideration. These suggestions are:—

1. That the retiring age be postponed from 60 to 65 years.
2. That pensions to persons retrenched be made a charge on the Consolidated Revenue till the age of 65 is reached.
3. That no contributors above the age of 35 be in future admitted on the present scale of contributions.
4. That pensions be computed on the average salary of the last seven years of service instead of the last three years as at present.
5. That gratuities to relations be abolished.

In the absence of a valuation of the fund on this basis we are unable to say what effect these suggestions would have on its condition, but Mr. Coghlan admits that their adoption would not remove the deficiency. We think that the time has arrived when nothing short of heroic treatment should be resorted to, and that any method of adjustment which failed to place the Fund on a solvent basis would only reproduce in the future the disappointment and discontent which are so apparent in the Service to-day. Two extreme courses present themselves for consideration. The more acceptable to the Service no doubt would be for the Government to guarantee the solvency of the Fund. The more disastrous would be (following the usual practice in cases of insolvency) to place the Fund in liquidation and pay each beneficiary the dividend represented by his interest in the Fund. The deficiency is now so large and must be increasing so rapidly that it would be utterly futile to invite the Parliament to place the Fund as at present constituted on a solvent basis. On the other hand, the liquidation of the Fund would involve so much hardship that the suggestion cannot be seriously entertained. It therefore becomes necessary to consider what adjustment can be made which will secure the largest measure of justice to beneficiaries under the Fund both existing and prospective. It will be necessary to an intelligent conclusion on this point that regard should be had to the two classes of existing pensioners:—

1st. Those who have retired through incapacity or on the attainment of the age of 60.

2nd. Those who have been placed on the Fund for retrenchment purposes.

The former are legitimate, the latter illegitimate, claims on the Fund.

In the report of the Civil Service Board for the year 1893 it is stated that the annual pensions payable out of the Fund amounted, at 31st December, 1893, to £72,293, of which sum only £36,081 was payable in respect of the first-class, leaving £36,212 per annum, representing a charge for which the Fund should never have been made liable except in the cases of such of the pensioners as had attained the age of 60.

The only remedy provided by "The Civil Service Act, 1884," for a deficiency in the Fund is a reduction of the amount of pensions payable, both in regard of those in possession and of those in expectation, and we think that in any adjustment which may be made the largest measure of relief must be sought in this direction. As a preliminary to any re-adjustment, it appears to us absolutely necessary that the pensioners who have been improperly placed on the Fund should be entirely taken out of the Fund and separately dealt with. It is, we believe, a fact that in the majority of these cases the Fund has received from the Government a payment of money estimated to be equal to the back contributions that would have been paid prior to 1885, had the Act been in existence, in return for the grant of a full pension. An adjustment of accounts in all such cases should be made between the Government and the Fund in which the former would receive credit for payments made to the fund by it, and for the contributions of pensioners, while the latter would receive credit for all payments made by way of pension or gratuity. It may fairly be contended that these pensions (at the reduced rate hereafter referred to) should then be made a charge on the Consolidated Revenue of the country.

Having

Having thus cleared the ground, we are in a position to deal with the pensions which have legitimately become claims on the Fund, and the interests of those members of the service who are still contributing. Two courses present themselves:—

- 1st. The existence of the Fund as a going concern may be terminated by returning to those now in the service the contributions which they have made, and by then handing over the balance of Fund to the Government, upon its assuming the responsibility of paying the pensions at the reduced rate to be presently discussed.
- 2nd. The existing pensions, as well as the rates of future pensions, may be sufficiently reduced to bring the liabilities within the resources of the remaining funds, supplemented, if deemed expedient, by some moderate assistance from the Parliament.

It remains to discuss the question of the reductions which, in all of the above cases should be made in the rates of pension. In their Report of February, 1895, to the Principal Under Secretary, the Civil Service Board remark, "Whatever causes have led to the disastrous condition of affairs disclosed by the actuaries, the Board feels that the pensions already granted should not in any way be interfered with." Whilst there is no doubt a strong feeling in the mind of every British community that any step involving an appearance of repudiation should not be taken except in obedience to the demands of the sternest necessity, the question arises whether a reduction in the rates of pension does involve repudiation. In the first place section 54 of the "Civil Service Act, 1884," under which the fund was constituted expressly provides for a reduction in the scale of pensions, and although such a course may press with considerable severity on a large number of pensioners, it can scarcely be classed as repudiation, for were the Fund placed in liquidation and distributed among the beneficiaries in proportion to their respective interests in it, the existing pensioners would be entitled only to the present value of pensions calculated on a reduced scale; in other words, their dividend would be considerably less than 20s. in the £.

In the second place, the Fund being insolvent and unable to meet its liabilities, any reconstruction would be manifestly unfair which pressed with unequal severity on the man who retired last year and the one who may retire next year. There appears to us no escape from a reduction in the rates of pension. We do not think that much exception can be taken to this reduction in the cases of officers who have been retrenched below the age of 60, for the reason that had there been no Superannuation Fund in existence, such officers would, presumably, have been liable to dismissal without any compensation whatever.

The question, then, is, on what basis should the reduction be made? Our view is that a pension agreeable to the scale prescribed by the Act, but based on the average salary for the entire period of service, must be substituted for the existing one. Only on such a basis can the benefit be properly equated to a contribution which is a fixed rate on the annual salary.

The only escape, as we have indicated, from one of the alternatives mentioned above, is to wind the Fund up, and distribute the assets in proportion to the interest of each beneficiary in the Fund.

Assuming the Fund to be reconstructed and placed on a solvent basis, how is it to be preserved so? We suggest the following precautions:—

1. No future contributor to be admitted above the age of 25 except at an increased rate of contribution corresponding with his increased age.
2. No gratuity of any kind to be granted except to an officer of ten years' service or upwards, and then only if he become incapacitated for service either from illness or accident, such gratuity to be at the rate of one month's salary for each year of service; in other words, one-twelfth of the total amount received as salary.
3. The contributions made to the Fund to be returned in the cases of an officer dying in or retiring from the Service, or being dismissed, except for misconduct.
4. Retirement before the age of 65 not to be insisted upon.

We

We further suggest that female teachers should be charged a lower rate of contribution (corresponding with the risk incurred) than is levied on male members of the Service.

The retiring allowances on the basis we have indicated will, of course, be very much smaller than those provided by the existing Act, but we think that when the Fund has been so reconstructed that its solvency is placed beyond doubt, the Parliament may be fairly asked to make such annual contribution in aid of the Fund as will enable it to bear such increase of pensions as may be considered fair and equitable.

We desire to express our strong approval of the value, both to the Service and to the public, of a scheme of superannuation, believing as we do that its tendency is to attract to, and to retain in, the Public Service the best talent available, and that it affords a convenient means of dispensing without hardship with the services of officers whose usefulness has become impaired by age or infirmity. If this view be correct it follows that the support of such a scheme should not be entirely the duty of the Civil Servants.

SUMMARY OF RECOMMENDATIONS.

To sum up, we recommend—

1. The repeal of the Civil Service Act of 1884, and the passing of a new Act establishing an independent Board of Commissioners to take entire control of the Civil Service, with duties as narrated at length in our report.
2. The immediate cessation of new appointments and of increases to salaries to the existing staff.
3. The appointment of a committee of departmental heads to report on proposals for expenditure above £5,000.
4. The appointment of a Parliamentary Committee to report on motions for Parliamentary returns.
5. The rearrangement of the Audit Department on the lines laid down in our Report.
6. The reorganisation of the Superannuation Fund.

In recommending so strongly the appointment of an independent Civil Service Commission, with large powers, we have no hesitation in stating, as the outcome of our inquiry, short as the time has been, that, by a thorough re-arrangement of departments, classification of the work and salaries of officers, and the economies that can otherwise be effected, a saving to the State of certainly not less than a quarter of a million sterling would result. So fixed are our convictions on this head that we despair of any permanent reform in the Service unless our recommendations hereon are approved and adopted. It will, of course, take some considerable time for the Commission to thoroughly complete its work, and we would therefore suggest (pending such completion) that in the Estimates about to be framed initiatory reductions, equitably apportioned amongst all departments, should be made. In conclusion we may say that, while we are conscious that we have been engaged on an unenviable task, and that our recommendations, if approved, will produce much disappointment and some hardship, we are nevertheless satisfied that we have indicated the path to a valuable reformation in the Public Service.

In closing our Report we desire to acknowledge our obligation to Mr. Percy R. Meggy, the Secretary of the Commission, for the zealous and efficient service rendered to us, and to Mr. John Ramsay, who assisted in taking down the evidence in shorthand.

We have the honor to be,

Your Excellency's most obedient Servants,

THO. LITTLEJOHN, President.

F. T. HUMPHERY.

JAMES ROBERTSON.

J. H. STOREY.

RICHARD TEECE.

PERCY R. MEGGY,

Secretary,

Sydney, Monday, 8th April, 1895.

APPENDICES ATTACHED TO THE REPORT.

Appendix A.

ROYAL COMMISSIONS OF INQUIRY INTO THE CIVIL SERVICE IN ENGLAND, UNITED STATES, CANADA, AND AUSTRALASIAN COLONIES.

[By the Secretary.]

	Country.	When appointed.	When to report.	First Report.	Last Report.	How long in Session.	Scope of Inquiry.	Remarks.
*1	England	1853	Sir Chas. Trevelyan and Sir Stafford H. Northcote were the Commissioners. They strongly recommended the adoption of the principle of open competition as being founded upon the principles of justice, and favourable to the education of the people. The two cardinal points insisted upon by them as the basis of a sound Service, namely, a proper division of official work and a proper system of selecting Civil servants, were endorsed by the Playfair Commission of 1874.
2	Victoria	26/5/59	With as little delay as possible.	6/12/59	6/12/59	6 months 10 days	Strength and efficiency of the Service; rules of advancement, promotion, and remuneration; improvements necessary to promote efficiency and economy; retiring allowances, and widows' pensions.	The Commissioners, of whom there were six, comprised a merchant, an M.L.C., a University Professor of History, a Royal Navy Commander and Clerk in the Victorian Executive Council, the Victorian Registrar-General, and the Collector of Customs at Melbourne. The Report, which was very comprehensive, pointed out that the Civil Service had three "great natural divisions," viz., the ordinary, the subordinate, and the special or professional.† It contained in a series of special departmental reports, a full account of the duties performed by the different officers in every department of the Service. The report concluded with thirty-one suggestions for reform, of which nineteen were embodied in the Civil Service Act of 1862 without any modification, and five with some qualification. This Act was subsequently adopted, with slight alterations, by the Governments of Queensland and New Zealand.
3	Tasmania(a)‡	9/2/63	1/7/63	1/7/63	4 ,, 22 ,,	The mode of liquidating public accounts and of conducting business in the Service.	For further particulars of these Commissions, see Appendix D, section dealing with Tasmania.
(b)‡	12/2/63	Three months	24/6/63	24/6/63	4 ,, 12 ,,	The mode of keeping public accounts; amount of business transacted; reduction of expenditure without impairing efficiency.	

* There is no copy of the Report of this, the first Civil Service Inquiry Commission, in any of the Sydney Public Libraries. The information contained in the "Remarks" has been gleaned from other sources.

† For further particulars as to classification see the article on Civil Service Classification, Appendix D, section dealing with Victoria.

‡ Two Royal Commissions were appointed at the same time, one for the northern side of the Island and the other for the southern side.

	Country.	When appointed.	When to report.	First Report.	Last Report.	How long in Session.	Scope of Inquiry.	Remarks.
4	New Zealand	23/5/66	With as little delay as possible.	30/6/66	17/9/66	3 months 25 days	Same as that of the Victorian Commission of 1859. (See <i>ante</i> .) The Commissioners were further instructed to report on "the manner in which an Income Tax might be raised, and the most effective and economical mode of raising the same, and especially what proportion the cost of collection would probably bear to the gross amount of tax collected."	The Commissioners, of whom there were four, comprised the Auditor-General, the Principal Under Secretary, the Collector of Customs, and a leading member of the Civil Service of Victoria. The Commissioners prepared a draft Bill divided into six parts, dealing (1) with classification; (2) with the alteration of offices; (3) with appointments and promotions; (4) with discipline and leave of absence; (5) with superannuation and allowances; and (6) with miscellaneous matters. This Bill was made law, with some slight modifications, in October of the same year. It provided for the establishment of a Board, to which Civil servants might appeal if dissatisfied with their salaries and classification.
5	Canada	1868	Appointed to submit a scheme for the reorganisation of the Service under the provisions of the Act of 1868, the intention of which was to limit the age and ensure the proper qualifications of candidates, to establish a regular classification, to provide for judicious promotion, to check the unnecessary employment of extra clerks, and guard against an undue expansion of expenditure for Civil Government.*	The Commissioners were of opinion that three considerations should be taken into account in determining the position of each individual, namely, the nature of his duties, the length of his service, and the salary to which he had attained. They drew up a set of rules founded upon these three points, very carefully applying them in each individual case throughout the whole of the departments, modifying them if it seemed necessary, so that as far as possible substantial justice might be done in all.† With the view of preventing indiscriminate promotion, the Commission recommended that Parliamentary sanction should be requisite before promotion to a second class clerkship, as was already the custom in Canada for first class clerkships. An Act passed in the same year (May 22, 1868) provided for the creation of a Civil Service Board of fourteen deputy heads of departments, to frame regulations, examine candidates, grant certificates, and present an annual report.
6	Victoria	8/8/70	With as little delay as possible.	18/4/73	18/4/73	2 years 8½ months	State of the Service and working of the Civil Service Act; advisability of establishing an insurance fund, or making some other arrangement to provide for widows and orphans; to suggest improvements without impairing efficiency.	Among other things the Commission recommended the establishment of a Public Service Board with duties similar to those of the Board established in Canada in 1868 (see paragraph immediately above), but that, instead of being a permanent Board composed of heads of departments, it should be selected by the Governor in Council from a list of persons annually laid before Parliament, and that this Board should "inquire into and report upon complaints against public servants other than those which the Ministerial head of the department might be willing to deal with." The Commission further recommended (1) that the Audit Commissioners should be required to furnish reports upon the condition of the Public Service at stated periods to the Chief Secretary, making suggestions for simplifying work and lessening cost;‡ and (2) that an Inspector of the Public Service should be appointed to present a yearly report to the Chief Secretary on all the public departments; these reports to be laid before the Civil Service Board for the purpose of being dealt with according to instructions.

* See the Report of the Canadian Royal Commission of 1891-2 in the Parliamentary Library.

† A lengthy summary of the Report of the Canadian Commission of 1868 was published as an appendix by the Victorian Civil Service Commission of 1873, a bound copy of whose report, as also of that of every other Civil Service Commission so far held in the Australasian Colonies, has been obtained by this Commission, and handed over to the temporary custody of the Parliamentary Librarian.

‡ The Public Service Board of Victoria is now administered solely by the Audit Commissioners. (See Report, paragraph 8.)

	Country.	When appointed.	When to report.	First Report.	Last Report.	How long in Session.	Scope of Inquiry.	Remarks.
7	United States	3/3/71	15/4/74	3 years 1 month 12 days.	For particulars of this Report* see Appendix C—"Civil Service Reform in Foreign Countries," Part II, article entitled "President Grant and Civil Service Reform."
8	Queensland	4/7/73	No limit	23/12/73	23/12/73	5 months 19 days...	How the public accounts are kept, and whether they are in accordance with the ordinary and improved methods outside; special inquiry to be made as to duplicate and unnecessary work.	
9	England	25/4/74	No limit	24/12/74	Method of selection of Civil Servants; the principle of transferring men from one department to another; grading the Service as a whole.	Particulars concerning this, the Playfair Commission, will be found in Appendix B, Part II.
10	New Zealand ...	10/3/80	With as little delay as may be, consistent with a due discharge of the duties imposed.	18/6/80	18/6/80	3 months 8 days ...	Constitution and organisation of the Service, and means of lessening cost without impairing efficiency.	The Commissioners inquired principally into the Railway Department, and also touched upon the Public Works Department, the Survey Department, the Crown Lands Department, the Customs, the Post and Telegraph Department, the Justice Department, the Printing Department, and the Treasury and Audit Departments. The Commissioners acknowledge themselves "conscious of having left some large and important branches of the Service altogether uninvestigated, of having inquired very superficially into others, and of having gone exhaustively into none."
+11	Canada.....	16/6/80	5/3/81	The Commissioners recommended the adoption of the essential principles of open competitive examination and promotion by merit as an effectual remedy for all the important defects of the system then in vogue. A new Civil Service Act was passed in 1882, which provided for examinations to test the qualifications of candidates for appointment and promotion, and partly carried out the recommendations of the Commission. It has been frequently amended, and its provisions relaxed.‡
12	England	20/9/86	With as little delay as possible.	6/9/87	30/7/90	3 years 10½ months	The establishments of the different Offices of State at home and abroad; whether the work is efficiently and economically performed; whether it can be simplified; whether the method of procedure can be improved; whether the system of control is deficient or unnecessarily elaborate; and whether the pension regulations are equitable alike to the State and to its servants.	This Commission was appointed to review the working of the scheme of organisation recommended by the Playfair Commission. Particulars will be found in Appendix B, Part II.

* A Copy of this Report, which was presented to Congress by President Grant on April 18, 1874, is in the Parliamentary Library. It does not appear from the evidence obtainable here whether this was the final or only a progress report of the Commission of 1871, but it seems to have been by far the most important.

† There is no copy of the Report of this Commission in any of the Sydney Public Libraries.

‡ See the Report of the Canadian Royal Commission of 1891-2 in the Parliamentary Library.

318-9

	Country.	When appointed.	When to report.	First Report.	Last Report.	How long in Session.	Scope of Inquiry.	Remarks.
13	Queensland	15/12/87	No limit	31/7/88	24/4/89	1 year 4 months 9 days, with a break of 6 months.	The general working of the Service; the best means to increase efficiency; the mode of keeping the public accounts.	The Commission recommended the appointment of a Civil Service Board of three, to be entirely free from political influence, responsible to Parliament only, and that every appointment, promotion, &c., should be recommended by them for the approval of the Governor-in-Council. This recommendation was almost immediately carried into effect.* The Commissioners condemned the system of employing messengers at high salaries—£150 to £300, with allowances—while many educated professionals in the Service only received £150 or less.
14	New South Wales	16/12/87	Six months	18/5/88	22/1/92	4 years 1 month and 2 days, with a break of 6 months.	The existing arrangements for carrying on the Service; to strictly scrutinise the organisation for carrying on the business of each separate branch; to report as to amalgamation or abolition of offices, with a view to general improvement and economy.	The Commission adjourned from 25/1/89 to 31/7/89. The evidence given before this Commission was given confidentially, and was not published. The Report as a whole was, in consequence, not laid on the table of the House, the only portion presented to Parliament being that which referred to the Post Office, Telegraph, and Money Order Office. At least one of the departments refused to act upon its recommendations on the ground that the non-publication of the evidence made it informal.
15	South Australia...	20/ 1/88	Without delay....	28/8/88	24/9/91	3 years 8 months and 4 days.	To examine the state of the Service and report on the means for securing more efficient and economical working.	Their principal recommendation was for the establishment of a Public Service Board, for particulars of which see Report, paragraph 11.
16	Canada.....	14/11/91	No limit	21/4/92	21/4/92	5 months 7 days ...	To make recommendations for remedying any evils which may prevail in the Service; for increasing its efficiency and economy; and to inquire especially as to appointments, promotions, salaries, superannuation, &c.	The Commissioners, of whom there were four, comprised a bank manager, a deputy finance minister, and a judge. The Secretary was a Q.C. The Commissioners embodied the most important of their recommendations in the shape of a draft of a new Civil Service Act. The principal recommendations contained in the Bill were (1) the appointment of a Civil Service Commission†, and (2) the adoption of the principle of appointment by open competition. They also drew up a scheme for the classification of the Service.‡
17	Western Australia	13/ 5/94	As soon as the same can be conveniently done, using all diligence.	No report had been issued when this(N.S.W) Commission closed its inquiry.	To ascertain if the Service can be placed on a more satisfactory basis.
18	New South Wales	20/11/94	Three months	8/4/95	8/4/95	4 months 19 days..	To report on the changes necessary to place the Service on an economical and efficient footing; to place the methods of public expenditure on a sound and economical basis; to deal with the Superannuation Fund; and to draw up a scheme for the better regulation of appointments and promotions.	Recommends the establishment of an independent Civil Service Commission, as a condition precedent to all real reform.

* See Report, paragraph 10.

† See Report, paragraph 12, entitled "The proposed Civil Service Commission in Canada."

‡ See Appendix D, entitled "Civil Service Classification," paragraph dealing with Canada.

Appendix B.

CIVIL SERVICE REFORM IN GREAT BRITAIN AND INDIA.

(By the Secretary.)

PART I.

PRIOR TO 1853.

MODERN Civil Service Reform in Great Britain dates from 1853, but long anterior to that the thousand and one abuses that creep into the administration of a State department had formed the subject of rebellions on the part of the people, of inquiries by Royal Commission, and of reforms by Parliament. Up till quite recently there was no standard work on the subject of Civil Service reform in Great Britain; but in 1877 the Hon. Dorman B. Eaton, President of the Commission appointed to inquire into the Civil Service of the United States under the Act of 1871, was requested by the President of the United States to investigate and make a report to him concerning the action of the English Government in relation to its Civil Service, and the effects of such action since 1850. The result was a voluminous and most exhaustive historical account of Civil Service reform in Great Britain from the very earliest times, which was published in 1879, and is not likely to be superseded.* A brief summary of the contents of this remarkable work will be an apt introduction to the account of the present state of the service in Great Britain.

Hon. Dorman B. Eaton's book on the Civil Service of Great Britain.

The writer points out that the spoils system of America originated in feudal times, when all offices were for sale, all officials were venal, and all administration was corrupt. The forty-fifth article of Magna Charta, which makes the King promise that "we will not make any justices, constables, sheriffs, or bailiffs, but of such as know the law of the realm and mean to truly observe it," is cited by Mr. Eaton as the first Civil Service rule, the first authoritative provision for securing due qualifications for a post, to be found in English history. He quotes Stubbs† to show that under the Norman Kings "it was mainly for the sake of profit that justice was administered at all," and that offices of State were sold to the highest bidder as a matter of course.

The first Civil Service rule in Magna Charta.

The two rebellions of Wat Tyler in the fourteenth century, and of Jack Cade in the fifteenth, are stated to be the first distinct attempts made by the people to bring about Civil Service reform in England, though the rebellion under King John had, in part, the same end in view. The abuses which led to the outbreak in 1377, early in the reign of Richard II, were "the open sale and prostitution of official power in manifold forms; the granting of monopolies; the extortion of money for the forbearance of injustice; the exaction of illegal fees; the invasion of private right by official favourites (male and female); gross injustice in the courts; oppressive taxes to maintain a great army of sinecurists and supernumeraries in offices and public places; domineering and insulting conduct on the part of high officials."

Two rebellions to bring about Civil Service reform.

In order to avert the threatened outbreak a Parliament was called, known as "The Good Parliament," which considered 140 petitions for the redress of grievances, and appointed a council to act as a check on patronage. An examination of public accounts was demanded and granted, and the great offenders were impeached and removed from office. An inquiry, authorised by High Commission, was next held into the abuses of public administration, and was the first Royal Commission ever appointed in England to inquire into the Civil Service. "The concise enumeration of abuses to be investigated," observes Mr. Eaton, "fills over four pages of this ancient statute. The Act opens with a solemn recital of the pervading abuses of administration, saying 'That whereas by the grievous complaints . . . it appears that the rents and revenues of the realm . . . by insufficient counsel and evil government of . . . great officers and other persons be so wasted and destroyed . . . and there is so great and outrageous oppressions . . . and the laws are not executed, nor justice nor right done, to the people . . . and great mischief and damage has happened'"—therefore, &c., &c. This first Royal Commission to inquire into the Civil Service seems to have resembled not a few of its successors, inasmuch as the good that it accomplished was practically *nil*. Mr. Eaton points out that the Commission was proposed by the aristocratical leaders in Parliament in the hope of allaying popular indignation, and he sarcastically adds that "what they did was the equivalent in our day of the series of sonorous resolutions for economy and reform adopted by the National Convention, and trampled upon by the party that adopted them," alluding to the action of the Republican Party on the subject of Civil Service Reform in the time of President Grant.‡

The first English Royal Commission of inquiry into the Civil Service.

In the meantime "the Parliament of 1377 resumed its work of reform, and boldly assumed the control of the expenditure by means of a standing committee of two burgesses of London, while that of 1378 demanded and obtained an account of the mode in which the subsidies had been spent."§ But the reforms came too late. The rebellion under Wat Tyler broke out, and, after the usual sanguinary reprisals, was put down, with the result that "the spoils system was left essentially unchanged, though for a considerable period its greater abuses were arrested."

The "Good Parliament."

In 1388 a remarkable Act was passed which provided that "none shall obtain office by suit or for reward, but upon desert." This Act laid down rules, one of which forbade the authorities to make "officers of the King for any gift or brokerage, favour, or affection," and provided that the authorities should "make all such officers and ministers of the best and most lawful men, and sufficient to their estimation and knowledge." These rules, observes Mr. Eaton, "may be justly regarded as the second series of Civil Service rules ever promulgated in England. It (the Act) plainly affirms the great and fundamental principles of all reform in the public service, viz., that the appointing power is not a perquisite, and must not be exercised as matter of favour; but is a public trust, requiring those clothed with it to withstand all the pretensions of birth, wealth, and social prestige, and to make all appointments out of regard for personal merit and the public welfare."

Remarkable Civil Service Act in 1388.

In the following century, viz., in 1450, the Commons of Kent framed a complaint, which called for "administration and economical reform, for a change of Ministry, a more careful expenditure of revenues," &c.,‡ and followed Jack Cade to London to secure their demands. That there was some cause for the revolt may be inferred from the fact that by an Act of Parliament passed about that time (1444) the

The complaint of the Commons of Kent.

* A copy of this Report in book form is in the Free Public Library, and another, very much better printed, will be found among the United States Executive Documents for 1877-80 in the Parliamentary Library. † Stubbs' Constitutional History. ‡ See Appendix C, Part II, article entitled "President Grant and Civil Service Reform." § Green's History.

term of a Sheriff was limited to a single year, "for the significant reason that, so demoralising was their official life that a longer term tended 'to the upholding of manslaughter, perjury, and great oppression of many of the King's liege people.'" This second rebellion, like the first, arrested the grosser abuses, but the source and the methods of the old system were but little disturbed.

Cromwell substitutes a partisan system for the spoils system.

The spoils system in England survived till the time of Cromwell, who dealt it its first blow, and substituted for it a partisan system, adding a religious to the political test for office, and "placed the creed of Congregationalism at the door of his Conventions and Parliaments, as we place the creed of our party at the doors of our post offices and custom houses." Mr. Eaton thinks it probable that, in the intolerant period in which Cromwell lived, "any less mercenary and partisan system than his would have failed of support"; and he adds that, while "it cannot be said that Cromwell really broke the spoils system as a whole, but only in part, his administration caused some salutary changes in public opinion on the subject, and the old system lost much of its prestige, which it never regained." As a Civil Service reformer Cromwell seems to deserve high praise, for we are informed that he "struck from the pay-rolls many drones and sinecurists. He dealt heavy blows upon court favouritism and extravagance generally; he infused vigour into every part of the administration, and character and economy were more regarded in his appointments than ever before."

The Civil Service under the Stuarts.

The evils of the Civil Service administration under Charles II. are graphically described by Macaulay. James II., says Mr. Eaton, "combined together the worst elements of the despotic spoils system and the partisan spoils system, to both of which he added a taint of his own character," with the result that, eventually, "James, his tyranny and his Civil Service system, fell together, never more to be tolerated in England."

William III. a practical Civil Service reformer.

William III. is described by Mr. Eaton as not only the greatest statesman of his age that had sat on the English throne in modern times, but as "the first of her kings who had any sense of the vital importance of good administration; an importance all the greater in the fearful stress of arms and of civil discontent in which so much of his reign was involved. Finding so few officials worthy of confidence, he became a practical reformer himself; taking time in the midst of the most exacting duties to make investigations into the departments; for example, going in person day after day to the Navy Department and to the Treasury, and overhauling records and accounts, which disclosed the most flagrant incompetency, neglect, and corruption. He removed many sinecurists, enforced economy in various ways, and brought able men into the Public Service. He was his own Secretary for Foreign Affairs and reformed that branch of the Service. He vetoed several bills, and (except in a single instance) he was the last English sovereign who has thought it prudent to use that high authority. He did not allow members of Parliament to acquire much control over patronage, but he used it in the hope of strengthening the Whig party. Still, in his reign there began to be a strong indication of patronage falling into the hands of members. His influence was in favour of retaining efficient officers as long as they were honest, and this much strengthened the example of the permanent tenure of judges. But he resorted to pensions, sinecures, and venal patronage to influence Parliament. Though in advance of his age, he did not wholly keep clear of its corruptions."

A landmark of Civil Service reform.

The next landmark of Civil Service reform, according to Mr. Eaton, is contained in the Act of Settlement of 1689, which provided that the salaries of judges should be ascertained and established; but that it might be lawful to remove the judges upon an address of both Houses of Parliament. This rule was supplemented in the first year of George III (1760) by an enactment that the Judges should continue to hold their offices notwithstanding the demise of the King, and that they should continue to enjoy their salaries during their terms, which should be during good behaviour. "Taken together," observes Mr. Eaton, "these provisions may be designated as another (a third) series of Civil Service rules. They broadly broke into the old spoils system in various ways, but more especially by raising the judiciary above Executive interference." These precedents were followed by the Americans, who provided in their Constitution that judges "shall hold office during good behaviour," but the difference in the two countries has been, as Mr. Eaton points out, that while in England the same tenure has been gradually extended to nearly the whole Civil Service, the Americans "confined it to judges alone."*

The Civil Service and the Cabinet system.

Mr. Eaton next deals with the introduction of the Cabinet system, which was proposed by Sutherland and approved by William in 1693, and which led to the origin of political parties in the modern sense, and of party government in England, and indeed in the world. From that date commences the long trial in Great Britain of the efficiency of the partisan system of appointment to office, under which "the sharing of the opinions of the party in power, and the unhesitating support of the policy of its administration, are conditions paramount to personal merit, of receiving or retaining each and every office however humble." This system "went into effect (as far as the situation would allow) in 1693, and was continued, though somewhat modified in detail, without fundamental change, for 160 years, or until 1853, when the first elements of the merit system were formally introduced."

George III and the Civil Service.

"On the accession of George III," observes Mr. Eaton, "Parliament had for the first time assumed control over the personal expenditure, 'the civil list' of the Crown; but that servile body allowed the law to remain a dead letter. In less than nine years the King had exceeded the allowance by more than £500,000. The climax of the last phase of the spoils system in English politics was reached under Lord Bute, and with his fall the era of practical reform opened. . . . For the first time the character and the practical methods of the administration became a great issue before the people. . . . The struggle for reform was opened in Parliament by Lord Chatham in 1766, the same year," as Mr. Eaton, in his report to the American President, takes care to point out, "in which he spoke against the Stamp Act, and openly 'rejoiced that America had resisted.'"

The letters of Junius and the speeches of Burke.

In 1769 appeared the first of the letters of Junius, in which a vigorous protest was entered against the system of administrative abuse. In 1780 "numerous public meetings were held, associations formed, and petitions presented in favour of economical reforms, complaining of the undue influence of the Crown, and of the patronage and corruption by which it was maintained."† It was on the 11th of February in that

* The force of this remark has, however, been considerably weakened since the passing of the Act of 1883, for particulars of which see Report, Paragraph 7, and Appendix C, sections dealing with America.

† May's Constitutional History.

that year that Burke made his celebrated speech in the House of Commons, in which he submitted his plan for "the economical reform of the civil and other establishments." Burke bent the whole force of his mind, as he tells us in his speech, "to the reduction of that corrupt influence which is, in itself, the perennial spring of all prodigality and of all disorder; which loads us with . . . debt, takes vigour from our army, wisdom from our Council . . . and authority and credit from the more venerable parts of our constitution."

In the course of his speech Burke laid down seven fundamental rules under which, he said, all regulations for the reform of the Civil Service should come. Though couched in somewhat oratorical language these rules are as sound and as applicable now as they were then. They are as follows:—

Burke's seven fundamental rules.

- First, That all jurisdictions, which furnish more matter of expense, more temptation to oppression, or more means and instruments of corrupt influence, than advantage to justice or political administration, ought to be abolished.
- Secondly, That all public estates which are more subservient to the purposes of vexing, overawing, and influencing those who hold under them, and to the expense of perception and management, than of benefit to the revenue, ought, upon every principle both of revenue and of freedom, to be disposed of.
- Thirdly, That all offices which bring more charge than advantage to the State; that all offices which may be ingrafted on others, uniting and simplifying their duties, ought in the first case to be taken away; and in the second, to be consolidated.
- Fourthly, That all such offices ought to be abolished, as obstruct the prospect of the general superintendent of finance; which destroy his superintendency, which disable him from foreseeing and providing for charges as they may occur; from preventing expense in its origin, checking it in its progress, or securing its application to its proper purposes. A Minister, under whom expenses can be made without his knowledge, can never say what it is that he can spend, or what it is that he can save.
- Fifthly, That it is proper to establish an invariable order in all payments; which will prevent partiality; which will give preference to services, not according to the importunity of the demandant, but the rank and order of their utility or their justice.
- Sixthly, That it is right to reduce every establishment, and every part of an establishment, (as nearly as possible), to certainty; the life of all order and good management.
- Seventhly, That all subordinate treasuries, as the nurseries of mismanagement, and as naturally drawing to themselves as much money as they can, keeping it as long as they can, and accounting for it as late as they can, ought to be dissolved. They have a tendency to perplex and distract the public accounts, and to excite a suspicion of government even beyond the extent of their abuse.

The result of Burke's speeches and of public opinion generally was that "the public expenses were reduced, and Commission after Commission was appointed to introduce economy into every department of the Public Service."* This was the era of petitions for "Parliamentary and Economical Reform," as the succeeding period was the era of Parliamentary patronage, the right of selection for official places in the Civil Service below heads of departments being substantially in the hands of Members of Parliament.

Economical reform and Parliamentary patronage.

It was not, however, till 1820, when George IV came to the throne, that the tide commenced to set definitely in favour of Civil Service reform. In that year a commission of inquiry was held into the Customs Service, which made a strong presentment of the abuses that existed, and upon its recommendation Lord Liverpool sacrificed all the patronage, and laid down the principle that superior officers in the Customs should be supplied by promotion from the inferior ranks. In 1830 Lord Grey followed up his example, and gave up the exercise of patronage in matters of promotion. About the same time Sir Robert Peel introduced his Metropolitan Police Act, which provided that no one should be admitted as qualified for the office of inspector or superintendent who had not been trained by actual service in each subordinate rank. These police rules, observes Mr. Eaton, "were the first rules (since the Act of Richard II) that in principle made personal qualification in an officer paramount to political opinions, or the favour of some great lord or politician." During Lord Melbourne's administration, between 1834 and 1841, there was a general demand, both on the part of the officers of the Civil Service themselves, and on the part of the more enlightened members of the public, for examinations as a condition for admission into the Civil Service, and the principle of examination, sometimes, but not always competitive, was introduced by public officers themselves in self-defence many years previous to 1853.

George IV and Civil Service reform.

An attempt at the reform of the Indian Civil Service was made as early as 1781, when a law was passed ordering a trial of the system of promotion, based mainly on seniority instead of on favour and patronage, and to prevent abuses the Indian authorities were ordered to keep and transmit a report to the Directors, specifying all the circumstances in each case, with their reasons whenever they departed from the terms of the Act. This same Act (Geo. III, 24) contained a remarkable clause providing that every Indian Civil Servant on returning to England should, within two months, make a sworn declaration of the exact amount of his property, specifying what had been acquired in consequence of his residence in India; the penalty for false information being the forfeiture of the property.

Civil Service reform in India. (a) Promotion based on seniority.

Long before 1853 it was provided that those designed for the Civil Service in India should not only be subjected to a pass examination, but should be subjected to a course of special instruction; but the Directors had the power of nominating who should be candidates, with the result that the Service, both Civil and Military, stood in need of radical reform.

(b) Radical reform required.

1853

(c) Open competition first tried in 1853.

1853 was the starting point of Civil Service reform both in England and in India. In that year an Act was passed which provided that the power of the Court Directors to appoint whom they chose as students for the Indian Civil Service should cease, and that all natural-born subjects of Her Majesty should be admitted to be examined. "It was the first example of the kind," observes Mr. Eaton, "the first time that a nation had declared in its statutes that its officers should not have either a patronage, a privilege, a profit, or a monopoly in the authority of saying, irrespective of merit, which of its citizens shall be allowed to present his claims for a place in its service." Macaulay and Lord Ashburton were the leading men on the Committee which the Administration selected to draw up the regulations to which the statute referred. "Their Report was made in 1854, and provided for open competition, in which the best qualified would win the right of admission to the proper college, where two years of special study would complete their preparation for entering the Civil Service of India. The report was approved, and thereupon the merit system, based on open competition, was for the first time put into actual practice on a large scale."

(d) Unanimous verdict in favour of the merit system.

The first official inquiry into the effects of the new system was made in 1863, which reported in its favour, as also did Lord Lawrence, the Governor-General, in a despatch dated May 5, 1866. The advantages of the merit system, as tried in England, were so much appreciated there that as early as 1859-60 it was provided by statute "that no candidate shall be admitted to the Service in India . . . without a certificate from the Civil Service Commissioners of examination by them." The "new system completely excluded all patronage, favouritism, threats, and solicitation, success in competition alone giving a chance for a place in the Service." In 1875 the Secretary for India ordered a thorough investigation of the Indian Civil Service. Lord Northbrook, the late Viceroy, and Lord Napier, were among the eight eminent persons by whom it was conducted. In their final and unanimous report made in September, 1875, they "consider that the experience which has been gained since the Government of India expressed their opinion, in Despatch No. 25 (public) of the 5th May, 1866—that the result was satisfactory—amply confirms the favourable judgment then expressed. In our opinion, the Civil Service is filled by officers of merit and ability, and we are confident that they will be found fully competent to discharge the duties which they have to perform, and to supply statesmen and administrators of high distinction in the different branches of the administration."

(e) Open competition finally adopted in 1876

In the following year, 1876, an official order was passed, and "open competition in which those of every race, religion, caste, colour, or party could freely participate on the same terms became the established and sole means of entering the Civil Service of India," and it was provided that, "during the two years of special study which are to follow success in the competition, the sum of £150 is to be paid to each successful competitor, thereby enabling the children of the poor to go on with their preparation for the Public Service." The merit system which has been enforced in the Military Service as well as in the Civil Service in India is stated by competent observers to have proved equally salutary in both.

PART II.

FROM 1853-1894.

Sketch of the system from its inception in 1853.

Prior to 1853 "the appointment of clerks in the Civil Service," reads the Report of the Playfair Commission of 1874, "was a matter of patronage, nor, generally speaking, was there any attempt made to separate inferior from superior work, or to pay for it according to its merit and value. The rapid growth of the administrative offices rendered the evils arising from this state of things more and more apparent, and in 1853 the first serious step was taken by the appointment of the present Chancellor of the Exchequer (the late Lord Idedesleigh), and Sir C. E. Trevelyan, then Secretary to the Treasury, to assist in revising various growing offices, and also to report generally on reforms in the Civil Service."* In their report, which may be regarded as the basis and starting-point of the changes which have since been in progress, they recommended (1) the separation of intellectual from mechanical labour, and (2) the selection of clerks by open competition.

The English Civil Service Commission established in 1855.

In 1855 the English Civil Service Commission, consisting of three Commissioners, was established for the purpose of holding examinations as recommended by the Royal Commission, although for some years it was optional whether the departments should avail themselves of its services. In 1859 the Superannuation Act was passed, by which the possession of a certificate from the Civil Service Commission was made an essential condition of the right to superannuation. About the same time most of the offices adopted the plan of limited competition, under which each department had a scale of examinations suited to its own requirements, and three or more candidates were nominated, of whom the one who got the most marks was appointed to the clerkship. A large volume of Civil Service papers was printed in this year by the British Government, containing the opinions of many persons of great experience in administration upon its previous condition, and setting forth the causes of existing abuses.

The Parliamentary Committee of Inquiry of 1860.

In 1860 a Parliamentary Committee of fifteen was appointed "to inquire into the present mode of nominating and examining candidates for junior appointments in the Civil Service, with a view of ascertaining whether greater facility may not be afforded for the admission of properly qualified persons." On the Committee were Sir Stafford Northcote, John Bright, Robert Lowe, Monckton Milnes, Lord Stanley (afterwards Lord Derby), and Mr. Roebuck. The Committee presented an elaborate report in July of the same year. Those in every grade of the Service, from heads of departments down to messengers and copyists, were examined. The Committee was unanimously of opinion that open competition, free alike to every British subject, and an end, utterly, of the monopoly of patronage, at that time reduced to mere selections for examination, were demanded in the public interest. Lord Palmerston's administration approved of the report, and ordered its recommendations to be carried into effect.

In

* See the preliminary remarks to the first Report of the Playfair Commission, 1874. See also the memorandum by Sir R. G. Hamilton, K.C.B., contained in the Appendix to the first Report of the Royal Commission appointed to inquire into the Civil Establishments of the different Offices of State at home and abroad, presented to Parliament in 1887.

In 1870 the late Lord Sherbrooke (then Mr. Lowe) obtained an Order in Council prescribing that clerkships in all public offices, with two or three exceptions, were for the future to be recruited by open competitive examinations, and that no person was to be employed, even in a temporary capacity, without a certificate from the Civil Service Commission. By this order two distinct schemes of examination were devised for admitting clerks to the Civil Service, the subjects in the first being arranged with a view to securing the best class of University men, while those in the second, which was made to apply to the great bulk of the offices, were suitable to lads trained in middle-class or commercial schools. A distinct class of Civil Service writers, mere temporaries, to whom the lowest and most purely mechanical duties were committed, was also created.

The first attempts to deal with the problem unsuccessful.

The operation of the two schemes under which the offices were recruited was made so unequal that it caused widespread dissatisfaction, and in 1873 another Parliamentary Committee was appointed to inquire into the Civil Service. The Committee consisted of seventeen members of the House of Commons, among whom were Sir Stafford Northcote (chairman), Mr. Childers (of Mr. Gladstone's Cabinet), Mr. M'Laren (a brother-in-law of Mr. John Bright), and Mr. Vernon Harcourt. The report, in three volumes, was both thorough and searching. The object of the investigation was to inquire whether any or what reductions can be effected in the expenditure for the Civil Service. The inquiry extended to the whole subject of organisation, official authority, subordination, discipline, hours of labour, mechanical appliances, holidays, health and sickness, ventilation in the offices, pride in the Service, honesty, efficiency in making collections, satisfaction in performing public duty, promotion, increase of pay with length of service, retiring allowances, proper ages for coming into and going out of the Public Service, &c.

In the following year, namely, in 1874, the Playfair Commission, comprising many permanent heads of departments, was appointed. The Playfair Commission unanimously reported in favour of a scheme similar to that recommended by the Commission of 1853, inasmuch as it endorsed the principle of dividing labour into intellectual and mechanical sections, modified so as to enable all who could successfully compete in the ordinary commercial examination to enter the lower division of the Service in which the work, pay, and prospects would in all branches be comparatively uniform. It recommended that for this lower division the minimum salary should be £80, rising by triennial increments, subject to a certificate from the head of the department, to a maximum of £200 a year, with a prospect of "duty pay" not exceeding £100 a year, similar to that given in the Bank of England and similar institutions to clerks of special aptitude. The Commission further recommended that candidates should be subject to a year's probation, at the end of which period, if unsuitable to the department in which they had entered, they could be transferred to another, and if unsuitable to any, might, on the recommendation of the Civil Service Commission, be discharged.

The Playfair Commission of 1874.
(a) The lower division.

Candidates for the upper division were recommended by the Commission to be tested by a preliminary non-competitive examination, open to all persons over 17, and subsequently by a competitive examination suitable for young men of 18 to 23, adequately trained at a good school or University. The Commission recommended that as vacancies occurred the head of each department should be able to select any one of the candidates on the list, who in his turn would have the privilege of declining the proffered post or any other till he was 25. This gave considerable freedom of selection on the part of officers and of refusal on the part of candidates. The minimum salary of the upper division was fixed at £100, rising by triennial increments, subject as in the lower division to a certificate from the head of the department, to £400, so arranged that a clerk whose increments were awarded without stoppage or deduction would reach his maximum in (say) twenty-four years from his first entry into the Service. There was also to be a collateral scale of "duty payments," bringing the salary up to £600, to be awarded to the most competent, without regard to seniority; and beyond this there were the staff appointments, including such officers as principal clerks, open to all clerks in the Service competent to fill them, and open also, according to the recommendations of the Playfair Commission, to others not in the Service if the head of the department, acting in concert with his principal officers, considered it desirable.

(b) The upper division.

The Commissioners pointed out that in the lower division of the Service clerks could be transferred from one department to another as their services might be required, and they were of opinion that, even in the higher divisions, such transfers in the earlier years were very desirable. They laid great stress on their recommendation that promotions in the two divisions should be made on the ground of merit alone, the system of promotion by seniority being regarded by Sir Lyon Playfair as the real evil of the Service; but promotion from the lower to the higher divisions of the Service, they thought, should be a matter of rare occurrence, not allowed without a certificate from the Civil Service Commissioners, granted upon the special recommendation of the head of the department and with the consent of the Treasury and published in the *Gazette*.^{*} They recommended that clerks in the lower division should be allowed a longer time to compete than the outside public, and that the greatest possible publicity should be given to all appointments, the partiality of individual judgment to be guarded against by the heads of departments calling into counsel the officers responsible for the work of the clerks from among whom promotions might be made.

(c) Transfers and promotions.

The Commission recommended that the rate of remuneration of the lower division of clerks should only exceed the rate fixed for similar work in the open market as would attract to the Public Service the *élite* of the class employed on similar work outside of it.

(d) Rate of remuneration.

The pith of the Playfair scheme for the division of labour into two grades was summed up in the words:—"Persons should be appointed on the distinct understanding that they have no claim to go beyond the maximum salary of the grade in which they are placed, and that any further advancement must depend on special official aptitude."

(e) The pith of the Playfair scheme.

The scheme of organisation recommended by the Playfair Commission was given a fair trial by the Government, especially as regards the lower division, and after the lapse of ten years another Royal Commission was appointed to inquire how the scheme had worked. The Commission endorsed the principle of the division of labour as already recommended by the previous two Commissions, but said that the line of demarcation had been drawn too low; that the bulk of the lower division clerks were not contented

The Civil Service Commission of 1887-90.
(a) The lower or second division.

^{*} "Not only," as explained in the Commissioners' report, "because the original qualifications are lower, but also because the character of the work in the inferior grades will be rarely calculated to develop superior capacities."

contented with their position and prospects, and that a considerable proportion of those clerks were fitted to fill a large number of places now unnecessarily reserved for the upper division. They therefore recommended that the initial salary should be reduced to £70; that after a year's real probation annual increments of £5 should be granted on the certificate of the principal up to £100; that a special report should then be required on the competence, character, and diligence of the clerk from the principal, and unless this were satisfactory there should be no further advance; that if the report were satisfactory the annual increments should be sums of £7 10s., to total up to £190. At this point a second report, signed by the superior officer, and countersigned by the permanent head of the department, as to the clerk's competency to efficiently perform work of a superior and more advanced character, should be required, after which the annual increments should be by sums of £10 till a maximum of £350 was reached. A limited number of staff appointments, as well as certain upper division posts, should be reserved for the best clerks of the lower division.

(b) The upper or first division.

The Commission endorsed the view of the Playfair Commission that the best preparation for the limited number of posts in the upper or first division was not to be found in the purely clerical routine of the ordinary clerkships, and although the clerks of the lower division should be eligible, yet a strict line ought to be drawn between the work of the two divisions. They recommended that candidates should be from 20 to 24 years of age; that the initial salary should be £200 a year, rising by annual increments of £20 to £500, which would be the limit for clerkships of the third grade; that the limit for clerks of the second or superior grade should be £800, while for the best there would be a higher grade still, with a limit of £1,000. The Commission recommended a strict probation of two years, at the end of which period a clerk showing unfitness for official work could be discharged.

(c) Promotion only by merit.

The Commission also endorsed the view of the Playfair Commission by recommending that promotions from each grade should only take place upon the occurrence of a vacancy in the grade above requiring to be filled up, and that promotions in both divisions should be made by merit, by selecting always the fittest man, instead of considering claims in order of seniority, and rejecting only the unfit.

Under this scheme there are still certain special appointments requiring professional or technical knowledge which could not be satisfactorily filled by open competition, for which the Commission recommend a range of age from 25 to 40 years.

(d) How the Civil Service now stands.

The recommendations of the Royal Commission of 1887-90 are now in force, with the result that the permanent Civil Service at home now consists of the two grades of clerks named, supplemented by abstractors or copyists and boy clerks. A considerable number of vacancies in Class I offices have been filled by the promotion of meritorious second-division clerks; but staff posts are often conferred on men from outside. The second-division clerks are entitled to a fortnight's holiday every year during the first five years, and three weeks afterwards, exclusive of public holidays and alternate Saturday half-holidays, while the first-division clerks are entitled to six weeks holiday for the first ten years and eight weeks afterwards, also exclusive of public holidays. Seven hours constitute a day's work.

It should be added that every Civil Servant on the Permanent Staff must hold a certificate from the Civil Service Commission. These certificates are issued after success in the various competitive examinations, combined with a satisfactory medical certificate and testimonials as to general fitness and respectability from two householders.

The Commission of 1887-90 made several important modifications in the system as laid down by the Commission of 1874, in addition to such as may be named above. It increased the maximum of the salaries in the different classes, and, as a consequence, abolished "duty pay"; it did away with the preliminary of the two examinations for the upper division, and it changed the designation of the two divisions from upper and lower to first and second.

(e) Admission by competition.

Cassell's "Guide to Employment in the Civil Service," published in 1894, contains the following:—"Since the year 1870 admission to the Civil Service of the Crown has been gained to a yearly increasing extent by success in open competition, so that at the present date quite three-fourths of the clerkships, and similar appointments in the Home Civil Service, have been filled by persons who have, at the least, proved their power in excelling in an educational contest. Of the few remaining appointments of the better class, for which official nominations are required, a considerable proportion is won in limited competitions, in which three or more persons are nominated to compete among themselves. A very few situations of tolerably good rank—in fact, a mere remnant—are obtainable by direct nomination after a purely qualifying test."

National elementary education.

A very important branch of the Civil Service is that which deals with national education. The following details of the system pursued, and the salaries paid, have been culled from Edward Porritt's recent work (1893) on "The Englishman at Home." The salaries of head masters of elementary schools, he states, range from £460 a year, the maximum paid by the London School Board, to £90 or £100 a year paid by School Boards in the rural districts. The salaries for head mistresses range from £300, in London, to £70 or £80 a year paid by the smaller Boards in the provinces. The salaries of certificated assistant masters are much smaller. In the Board Schools all over England they average £100 a year; in the voluntary schools they are still lower. The average in those of the Church of England is £67 a year, in the Roman Catholic schools £73, and in the Wesleyan £76 a year. As regards assistant mistresses, their salaries under Boards average £77, in Roman Catholic and Wesleyan schools £48, and in those of the Church of England £47. Most of the Roman Catholic and Wesleyan schools are in the large towns, while the majority of the Church schools are in the thinly-populated rural districts, where the payment for all classes of work is lower than in the large towns. School Boards in these country districts pay only slightly higher rates than Church of England school managers. The higher average of salaries paid by School Boards is due to the fact that the majority of teachers under School Boards are engaged in the large cities. In all schools receiving the Parliamentary grant the work of the men and women teachers is the same. A number of the larger School Boards during the winter months maintain evening schools, in respect of which the Education Department also makes grants based on attendance and the results of examinations. Payment for this work is by the hour, and ranges from 2s. 3d. an hour, paid by the London School Board to its teachers, to 1s. 3d. an hour paid by the Manchester School Board. Except in London and Leicester, women also receive less pay than men for evening school teaching. Their payment ranges from 1s. 5d.

an hour in Leeds to 1s. an hour in Manchester. The Manchester School Board pays a bonus of £3 a session. To obtain it a teacher must conduct a class with an average attendance of thirty pupils three nights a week for six months. The object of these evening schools is to afford opportunities to scholars, formerly in the elementary day schools, of continuing their general studies after they have left school and commenced work. The curricula are so arranged as to make it easy for a boy who left school for work when in the fifth or sixth standard to resume at the point where his education in the day-school came to an end. In 1893, at the instance of the trade unionists, whose societies are federated with the Trades Congress, and also at that of the members of the numerous co-operative societies which flourish in the North of England and the Midlands, the teaching of the duties of the citizen was included in the courses of the evening schools, and the Education Department drew up an additional code of subjects to be taught under this head. These subjects are grouped in five divisions :—(1) Local Government ; (2) Central Government ; (3) the Duties of Citizens in relation to Local and Central Government ; (4) the Empire ; and (5) Industrial and Social Life and Duties.

There are two other departments of state-aided education, namely, the Science and Art Department, South Kensington, and the system of technical education. The Science and Art Department was established about 1840 as the National School of Design. It was then under the control of the Board of Trade, the State Department which now has the oversight of railways, canals, and harbours, and the administration of the navigation laws, the laws as to trade marks, and the collection of statistics and information in regard to trade, emigration, and labour. In 1853, when the Council for Education was re-organised, the Science and Art Department was transferred to it from the Board of Trade, and since then it has been under the management of the President and the Vice-President of the Council for Education and a separate branch of the Education Department. In the House of Commons the Vice-President is responsible for the Science and Art Department, as he is for the administration of the Education Acts. For half a century past Parliament has made a grant to the Science and Art Department. This grant has increased as the work of the Department has assumed larger proportions, until in 1893 it had reached £535,000. These annual grants are expended (1) in the maintenance of the National Art Training School and the Normal School of Science, South Kensington ; the Royal School of Mines in Jermyn-street, London ; the South Kensington, Indian, Bethnal Green, and Geological Museums ; the Science and Art Libraries ; the museums of Edinburgh and Dublin, and the Geological Survey of the United Kingdom ; and (2) in grants to teachers of art and science whose students pass the examinations held under the auspices of the department. Grants are also made to elementary schools whose scholars pass the department's examinations in drawing. Classes in connection with South Kensington are held all over the country, and every year thousands of young men and women who have gone through the elementary schools, and are at work or in business, continue their education in the evening classes organised in connection with the Science and Art Department. The department carries on this branch of its work with the help of local voluntary committees.

The Department of Science and Art at South Kensington has also the oversight of technical education, so far as it is given out of funds provided by Parliament or raised by local rates. The system of technical education dates only from 1889. Under the provisions of an Act passed in that year, supplemented by another Act passed in 1891, town councils and county councils may "from time to time, out of the local rates, supply or aid the supply of technical or manual instruction." Technical instruction is defined by the Act of 1889 as "instruction in the principles of science and art applicable to industries, and in the application of special branches of science and art to specific industries or employments." It is stipulated that it is "not to include teaching the practice of any trade, or industry, or employments." Manual instruction is defined to be "instruction in the use of tools, processes of agriculture, and modelling in clay, wood, or other material." Grants are made by the local authority administering the Technical Instruction Acts in proportion to the nature and amount of the efficient instruction supplied by the schools or institutions within its district ; but no grant can be made to any institution on the governing body of which the council making the grant is not represented, nor can any grant be made in aid of a school conducted for private profit. Certain taxes which are collected by the Imperial Exchequer through the Inland Revenue Department are allocated to the town and county councils for carrying out the Technical Education Acts ; and, in addition, these local governing bodies are empowered to raise a rate not exceeding 1d. in the £1 on the Poor Law valuation to supplement the fund received from the Treasury. In 1892 the total sum received from the Imperial Exchequer for technical education was £734,000. £535,000 was disbursed by the Science and Art Department, and the £5,000,000 expended on elementary education by the Committee of the Council for Education made up a total of £6,269,000 paid out of the Imperial Exchequer for national education. The whole of this sum was raised as taxes. In addition, about £1,750,000 were raised by school boards and other local authorities by means of rates for the same purpose, to say nothing of the total sum which was subscribed by the friends of the voluntary schools—those schools which receive from £1 2s. 6d. to £1 7s. 6d. per scholar from the annual Parliamentary grants, but in respect of which the difference between the total cost of the education given and the amount received from the Government has to be raised by the friends of the school.

Appendix C.

CIVIL SERVICE REFORM IN FOREIGN COUNTRIES.

PART I.

REPORTS BY THE FOREIGN CONSULS.

At an early stage of the Commissioners' inquiry a circular letter was addressed to all the foreign Consuls stationed in Sydney asking them to supply a copy of the blue-book published by their respective Governments, showing the nature of the offices held by, and the salaries paid to, Civil Servants; also of any Act or Acts of Parliament under which the Civil Service might be regulated and controlled, as well as of any Report or Reports by Royal Commission, Civil Service Board, or otherwise, dealing with the subject of Civil Service Reform. The Consuls were further asked to supply the Commission with information as to the method of making appointments and promotions, whether by Civil Service Board or otherwise, and also as to the method of audit pursued. Finally they were asked to state what books were published in their respective countries on the subject of Civil Service reform. The following answers were received, but in the majority of cases the Consuls stated that they had forwarded the circular to their respective Governments, and the replies have not yet come to hand.

(1.) DENMARK.

Extract from a letter received from the Consul, dated 9 February, 1895.

All Civil Servants get their positions from the King, except those in the lower grades. If a place is vacant a petition must be sent in, and, of course, the Minister's opinion is taken.

THEODOR AUGUST BOESEN.

(2.) GERMANY.

Translation of Memorandum by the Secretary to the Consul-General.

The immediate Civil Officers in Germany are divided into four classes :—

- (a) The higher officers.
- (b) Those engaged in the preparatory service for higher offices.
- (c) The subaltern officers.
- (d) The inferior officers.

In all high State offices, with Ministries and superior authorities, provision is made for the training of officers for employment in the Service. According to the regulations, officers must undergo a certain period of probationary service, and pass certain examinations. Besides this, the very fact that a man occupies a position in the employ of the State implies that his character is above reproach. After the employment of a person for a State office has been discussed, the appointment is made, if it be for a high office, by special ordinance of the local ruling Sovereign or territorial lord; but the appointment of other officials rests with high officers, on whom devolves this duty, or with the Ministers of the departments interested. Appointments for the German Empire are made by the Chancellor.

It would not be possible in this short memorandum to give an idea of the whole Civil Service of Germany, or to enter into a criticism upon it. It must suffice to merely indicate the essential features of the Service.

In connection with certain offices the Federal Council has a voice.

1. The Federal Council appoints the officers in the Audit Department and the disciplinary bodies, the Emperor giving his formal sanction to the appointments.

2. The Federal Council submits to the Emperor recommendations in the appointment of Consuls and Imperial Plenipotentiaries, and of District Controllers of Customs and Revenue. The Emperor has the power to ignore these recommendations.

3. After consultation with the Federal Council, the Emperor finally appoints the members of the Imperial Tribunal, the Attorney-General-in-Chief, the Attorneys-General, and the permanent members of the Federal Board of Home Affairs, the Directors of the Imperial Bank, and the Imperial Patent Officers. The officers of the National Assembly are appointed by the president of that body.

The Service comes under the operations of the Imperial Law of 31 March, 1873. Some of the features of this law may be referred to.

Every appointment of a State official is considered to be for life, unless some special provision to the contrary is made at the time of the appointment.

Every officer must take an oath to fulfil the duties of his office, and he receives a warrant of his appointment. Payment of salary is made every month; sometimes, however, it is made quarterly in advance.

On the death of an officer the widow, or legitimate issue, is entitled to one quarter's salary of the deceased.

Every officer is personally responsible for the legality of his official acts.

Special regulations exist as to leave of absence, or the appointment of a *locum tenens*.

Special consent is required before an officer can accept titles, honorary distinctions, presents, or rewards.

An Imperial officer is not allowed, without permission, to accept any additional employment for which there is constant remuneration, nor is he allowed to carry on any trade.

The same permission is requisite for an Imperial officer who desires to sit upon the Board, the Executive Council or the Council of Supervision of any company whose object is gain, but such permission is not granted if a remuneration of any kind is connected with the position.

The salaries of the higher officials are fixed once for all by Parliament. The salaries of other officials range from a minimum to a maximum.

Increase of salary in each class depends chiefly upon length of service.

Officers who are considered to be no longer fit for service are entitled, after ten years of service, to a pension to the extent of one-fourth of their salary; for every further year of service they are entitled to one-sixtieth of their salary in addition; but no pension can ever exceed three-fourths of the salary of the office.

Widows and orphans under age are entitled to certain pensions after the death of an officer.

The daily rate of travelling expenses is dealt with in a special regulation.

Officers of the different branches are selected to compose a tribunal which deals with breaches of discipline on the part of officials.

CONTROL

CONTROL of the Accounts of State Revenue and Expenditure.

To examine the systems of dealing with accounts in the several States would occupy too much time. The system that prevails in the German Empire will therefore be the only one referred to.

The transactions in connection with the receipt and expenditure of State moneys are all subjected to examination and audit. Increase and decrease in the Imperial assets, and the administration of the debts of the Empire, are dealt with by the Imperial Court of Accounts.

The Court of Accounts is the highest controlling authority. It must examine all accounts in order to satisfy itself that in every branch of the administration the law is being observed, and that all expenditure is authorised.

All the accounts of the German Empire are submitted to Parliament for its sanction.

H. MEINCK,
Secretary.

(3.) THE NETHERLANDS.

Memorandum by the Consul-General.

1. The administration of Government in the Netherlands is divided between eight Ministerial Departments, viz. :—Foreign Affairs, Justice, Home Affairs, Navy, Finance, War, Waterworks and Trade Industry, Colonies.

2. The total public expenditure, as estimated in the Budget of 1894, a copy of which is annexed, amounts to 138,444,203 guilders, or £11,537,017.

3. There exists no Civil Service Board, or any similar institution. The appointment, promotion, and dismissal of Civil and other State servants is a prerogative of the King, or rather an act of the executive power which is vested in the King.

4. In this, as in all other Government actions, the King goes by the advice of his responsible Ministers, who, each for his Department, has to countersign appointments and dismissals, and is responsible to Parliament.

5. For some high officers of State, as Governor-General of the Netherlands-India, Ambassadors, Commissaries of the King in the Provinces, &c., the proposal to the King is made, not by one Minister, but by the Council of all the Ministers.

6. For some offices, which it is desirable to keep entirely independent of the Government, the proposal to the King does not emanate from the Ministers. For members of the High Court of Justice, for instance, the King's choice is limited to five, proposed by the Second Chamber of Parliament; for members of the General Chambers of Audit, to three, proposed in the same way; for a vacant judgeship, a proposal of three is made by the members of the court in which the vacancy occurs.

7. For the same reason—independence from Government—the above-named functionaries are appointed for life, and can be dismissed only by their own request, or by judgment of the High Court.

8. Other Civil Servants have no absolute certainty of office. No case, however, is known of a Civil Servant being dismissed unless he misbehaves himself, or grossly neglects his duties.

9. No regulations or rules exist with regard to advancement. A Civil Servant, however, who fulfils his duties well generally gets on.

10. In order to enter the Civil Service, in almost all cases candidates have to undergo an examination or to possess certain degrees or certificates. All the members of the Judicature, for instance, must be Doctors of Law of one of the Universities; the Government engineers must have a certificate of the Engineering School. For others, the examinations are mostly competitive, the number of candidates being larger than the vacancies.

11. As a matter of course, the Ministers, in proposing appointments to the King, are limited their choice to those who have successfully passed the examination.

12. Change of Ministry does not cause a change of Civil Servants.

13. Salaries of Civil Servants are brought by the Executive on the yearly Budget proposed to Parliament. The Second Chamber (Assembly) can, by amendment, either increase or decrease a salary, or, by refusing the money, altogether abolish a post.

14. The salaries of the Netherlands Civil Service are not high compared with what they are in Australia. At the Departments the Secretary-General (permanent head) has about £340 a year. The Referendaries (Chiefs of Divisions) receive from £240 to £260 a year. Clerks, on entering the Service, begin generally at from £40 to £50.

15. All Civil Servants are obliged to contribute to a Pension Fund, as well for themselves as for their widows and orphans. They are entitled to a pension after forty years' service and attainment of 60 years of age, unless ill-health obliges them to leave the Service before that time.

16. For administrative purposes the country is divided into eleven Provinces, and a great number of Municipalities. The provincial and municipal Civil Servants are appointed by the authorities in province or municipality.

17. The system of Civil Service, which, I believe, is practically the same as in other European countries, works well. I am not aware that complaints have arisen, or that any investigation by Commission or otherwise has become necessary.

18. With regard to the system of audit, there exists a General Chamber of Audit. Its seven members are appointed for life by the King from a number of those proposed for each vacancy by the Second Chamber of Parliament. The King appoints one of the number as President, and the Secretary, from a number of three proposed by the Members. The salary of the Members of the Audit Chamber is about £340 a year. They must be over thirty years of age, exercise no other profession, and not be Members of Parliament, or of a Provincial or Municipal Council.

19. The Chamber has the control over public finances. All accounts must be audited and approved by it, and it has to see that all expenses are in accordance with law, and do not exceed the amount voted for every particular purpose. The yearly accounts of public finances to be presented to Parliament by the Government have to be audited and approved by the Chamber. It has authority to make proposals to the King concerning ameliorations or economies in the Administration of the public finances.

27 March, 1895.

J. A. DE VICQ,
Consul-General for the Netherlands.

(4.) SALVADOR.

Memoranda by the Consul-General.

The appointments and promotions of heads of departments, chiefs of branches, and of all other officers of somewhat responsible and similar high rank, in the Civil Service of the Republic, remain with the Executive, in accordance, however, with such Acts as are enacted by Parliament, or with such decrees as are issued by the President, with respect to any particular branch of the Public Service. Subordinate officers are appointed by the heads of their respective departments, subject, however, to approval by the Executive.

As a rule, besides citizenship or naturalisation, University qualifications are required for admission to the General Administrative Service. Judges and Law Officers must further produce diplomas from the Faculties of Jurisprudence and Law; Military officers and non-commissioned officers are prepared for their positions by Military Schools.

Audit.—The method of Audit employed by the Government of Salvador is by a special court, designated as the *Tribunal Superior de Cuentas*, the members of which hold a judicial status, and to whom all public accounts are periodically submitted by each department through a special official occupying a position similar to that of Attorney-General. I have the honor to remit you herewith, for the Commission, a yearly report of such Tribunal for the year 1892.

Vitis Park, near Richmond, 26 March, 1895.

The following is an abstract of the expenses of each Ministerial Department of the Republic of Salvador for the year 1891:—

	Pesos.
Department of Internal Affairs	743,434·49
„ Public Works	188,262·19
„ Public Instruction	246,766·82
„ Finances ..	445,824·99
„ Justice ..	143,306·68
„ National Defence ..	2,031,124·83
„ Foreign Affairs ..	86,325·52
„ Pensions, Charity, Hospitals, and Asylums	189,370·78
Total.....	4,074,416·30
In addition to which must be added for Loans, Foreign Debts, Debentures, Interest, and sundry obligations.....	3,373,406·73
General total	7,447,823·03
which, at the exchange of 5 pesos per £ stg. = £1,489,564.	

Certified extract from the Report of the Secretary for Finance and Public Credit of Salvador for the year 1891-2.

I must add, however, that the military expenditure of the Republic has been greatly reduced by the Government which came into office in the early part of last year.

In my first memorandum I omitted to mention that retiring pensions are allowed to officers of the various branches of the Civil Service of the Republic, according to the merits of each case, after due consideration by the Executive, whose decision is confirmed and made secure by Presidential decree.

Vitis Park, near Richmond, 30 April, 1895.

HENRY BONNARD,
Consul General de la Republica del Salvador.

(5.) UNITED STATES.

Memoranda by the Consul.

The Civil Service in the United States is a vast business machine, requiring special study when even approximately correct knowledge is desired. Our "Blue-book" contains little information, aside from the names, nationality, whence appointed, place of duty, and salary of employés, while it embraces two large volumes, aggregating about 2,600 pages.

As the term "servant" is little used in the common speech in our country, what you call "Civil Servants" we call "Civil Service Employés," and the appointments, promotions, &c., in the Civil Service proper are strictly regulated by rules, established by a non-partisan Board, in conformity with legislative enactments.

For the convenience of your honorable body I will endeavour to summarise the laws creating and governing the controlling powers of our Civil Service system.

The President is authorised to appoint three Civil Service Commissioners, styled the United States Civil Service Commission, not more than two of whom shall belong to one political party, to hold no other office under the United States during the term, each to receive a salary of \$3,500 (£700) per year, with necessary travelling expenses, vacancies to be filled by the President "by and with the advice and consent of the Senate."

The duties of the Commission are to aid the President—though the Commission performs the whole duty as a fact—in preparing rules for carrying out the spirit of the law, and really to see that such rules are strictly executed or obeyed.

The Rules provide for open competitive examinations to test the fitness of applicants in the classified Service. The examinations are to be "practical," and relate to the duties in the Service into which the applicant seeks employment. Vacancies are to be filled by those passing the best examinations, and the appointments in the Departments "at Washington" are to be apportioned among the States "on the basis of population."

The applicant must be examined under oath; there is a probation before appointment; the employé shall not be required or requested to contribute to any political fund or perform any political service, nor shall any person "in said Service" use his official authority to coerce another's political action.

The Commissioners have control of these examinations, and under the rules no consideration of party or politics is allowed.

The Commissioners shall, "at Washington and in each State and Territory," appoint suitable persons, "not less than three," in the official Service residing in said States, to act as a Board of Examiners, under the instruction of the Commissioners; and this examining Board is often, if not usually, aided by a "Chief Examiner," who is provided by the law, and who receives \$3,000 (£600) per year.

The Boards are to be located in convenient places, all applicants to have equal opportunities, and there are stringent laws providing for the punishment of any who might, through favour or prejudice, do injustice to any applicant. By practice (though the law does not strictly so provide) the labourers are also protected from political influence by these Civil Service laws.

The law provided that, after six months from its passage, no person should be appointed or promoted in the classified Service without having passed the necessary examination. No recommendation, except as to character, shall be considered, even from Senators or Representatives.

The rules are not to be strictly adhered to in cases of honourably discharged soldiers, and do not apply to persons employed solely as labourers.

When the Civil Service laws were passed, gentlemen of wealth, high character, and great business ability accepted the arduous duties of the position, though the salary would be regarded very low in any other country, and, by the most tireless energy in the pursuit of public virtue, the political atmosphere throughout the country soon began to show signs of greater purity.

It must not be thought that all persons employed by the Government are under the rules of the Civil Service proper. At first those rules were made to apply to heads of Departments; then they were broadened to include all branches where fifty persons were employed; but, with experience and the perfecting of machinery, the rules are being extended down towards the base of the political structure.

The railway mail clerks, who number over 6,000, are now under the Civil Service rules, though many of the carriers are not.

In the Postal Service there are over 112,000 persons employed, probably not less than one-half of whom come under the Civil Service rules. To illustrate: There are 64,329 post offices in the United States. Now, the 64,329 postmasters do not come under the Civil Service rules, and, though they are not elected by the people, as it is hoped they may be in the near future, yet they are appointed on petition of the patrons of the offices respectively. Unfortunately, regard is still had to the "party in power." As a vast majority of these offices are kept by business men in shops, stores, &c., and as the clerks are usually business employés, neither come under the Civil Service rules.

For the departments in Washington I think the examinations are held only in Washington, the dates of sittings of Boards being well known by all aspirants. For the Railroad, Mail Service, Treasury, Interior, &c., there are examinations as to the service required, usually as often as once a year, the Boards being arranged with date and place with sufficient notice to inform all interested parties.

Not having access to recent Civil Service reports, I am not able to give even approximately the number of Civil Service employés now under Civil Service rules, but the purpose in view is to gradually extend the operations of the law until, in the selection of public servants, all considerations save fitness alone shall be eliminated.

Thus summarised it will be seen that our Civil Service is under a non-partisan Commission of three, who formulate rules and direct the workings of the whole system; that examinations for appointment and promotion are made at convenient times and places by a Board selected with care from a non-partisan Civil Service, and from the same branch of Service desired to be entered by the applicants, and usually assisted by the General Examiner, with every possible safeguard against partiality or fraud. The local or specially appointed local or State examining Boards are members of such Boards *ex officio* only, and when selected have no increased compensation unless ordered away from place of duty, in which cases actual expenses are paid on presentation of sworn vouchers.

The

The question of salary in our Civil Service presents less difficulties, though, owing to the magnitude of our Civil Service, it will be necessary to present the cases by illustrations or comparisons.

There is one bold and prominent fact in our Civil Service that none but Americans appreciate, and few but Americans would approve of, and that is that though the average wage of all who render service for a consideration is over 30 per cent. higher on an average in the United States than in any other considerable nation, our public servants, as a whole, receive over 30 per cent. less than those of any other nation. It is objected by other peoples that our low salaries may conduce to dishonesty and inefficiency. No well-informed man of any nation will claim for any Civil Service a higher efficiency than that in the United States, and—aside from municipal affairs, uninfluenced by Civil Service—the records show as low a percentage of malfeasance and misfeasance in the Great Republic as ever shown in any country on earth. With us, government is a business machine with the head office at Washington. We are ruled by law through delegated agencies, and we will differentiate no ruling and a ruled class by taking from those whose toil or enterprise enriches the nation to aggrandise those who for the time guard the gates and keep the books.

We have in our Railway Mail Service what is called Railway Postal Clerks, an army of over 6,000. They are all bright young men, active, well educated, of highly moral character, and under heavy bonds. They perform very arduous duties, requiring a high degree of skill, extensive knowledge of the country, and constant study. They are away from home at least half of the time, and yet but twenty-five out of this great number get as much as \$1,400, or £280, per year. These twenty-five are on runs demanding great skill, endurance, and competency. The average salary of all the others will hardly average \$1,000, or £200. Then there are no free clothing, no expenses money for necessary absence, no perquisites of any kind or nature. There are no holidays but national ones, and leave of absence means to furnish a "sub." at the expense of the employé. I doubt if anywhere there is a more active, moral, or efficient body of men. Then there is no retiring or pension, no hanging on when unfit for duty. The Government pays for the service, and the public interest alone is consulted. The man must rely upon himself, and seek the sphere of action that will secure a competence. As a rule, young men do not remain long in this service; very few after the per cent. in the required semi-annual examinations begin to run down.

We had 64,329 post-offices in 1891. The average salary is but \$225, or £45 per year. The New York City Post Office pays \$8,000, or, in round numbers, £1,600; Brooklyn, \$6,000, or £1,200; Chicago, Boston, Baltimore, Philadelphia, San Francisco, St. Louis, and Cincinnati pay the same price. Of the 64,329 post-offices the Government does not own, I think, but 116 of the buildings in which the offices are located. Of all the rest there are probably not over 3,000 for which the Government pays rent, fuel, or lights; and in most of these 2,932 Presidential offices the postmaster even furnishes the boxes, the Yale outfit costing usually over \$1,000, or £200. None of these postmasters have any perquisites, any houses furnished, any uniforms, or any other favours. There are no pensions, no leaks, and no claims for continued service. The public only is consulted. I will illustrate by a single case. Indiana is rather above an average state. Her population is about 2,000,000, and she has 1,262 post offices. Of these but 5 pay as much as £600 per year, 22 but £400, 82 but £200, 113 but £100, and 1,040 under £20 per office. This is probably a fair average, and tells much of the story. I should think that over 90 per cent. of the offices were held by business men who perform the duties for the aid the office is to their private business. But the bonds are heavy, the inspectors are present at unlooked for times, and the quarterly returns must show every cent. and every stamp. As before remarked, only a portion of the postal service is yet under the Civil Service rules. I see by the records that there are hundreds of post offices that do not yield \$20 or £4 per year to the postmaster, yet they are efficiently managed as a rule.

The large force in the public printing department are labourers, with wages based upon current rates, and only chiefs or heads of departments are under the Civil Service rules, and they receive from £900 for the responsible public printer down to £200 for the clerk. The labourers, too, while not strictly under Civil Service rules, are protected by them against annoyances or removals for political differences or opinions. Most of the labourers in this department work by the hour, and get from 25 cents to 40 cents per hour. In the War and Navy Departments, also, heads of departments receive £400 or £500, and clerks £200 to £240, and are under Civil Service rules, while labourers get a wage varying little from the wage for like service in open market. These two are not under, but are protected by, Civil Service rules.

As to our methods of audit, I am not familiar with the details of the work. The first Auditor of the Treasury receives a salary of \$4,000 (£800) and his deputy receives \$2,500, or £500.

There are really six auditors assigned to the duties of various branches of the Government. The jurisdictional duties of these separate officers are well defined, and the salaries of the chiefs and the deputies are the same, to wit £800 and £440 respectively. The staff and clerical force of this department, a branch of the Treasury Department, are all under Civil Service rules, chiefs of divisions receiving respectively \$2,250, or £450, and clerks according to class—\$1,800 = £360, \$1,600 = £320, \$1,400 = £280, \$1,200 = £240, \$1,000 = £200, \$900 = £180.

As no officer in our Government has discretionary power to the extent of a single dollar, every account must be accompanied with a voucher, or be sworn to or certified by a designated authority, and paid out of funds specially appropriated on estimates submitted to Congress.

Unfortunately I have none of the Civil Service Commissioner's Reports, and I venture to express a fear that this statement will convey but an imperfect idea of the working of our system.

Sydney, 1 February, 1895.

WITH a little more deliberation I have noted a few more points *re* the Civil Service in the United States which may be of interest to you. The present classified Civil Service covers *now* little less than 40,000 persons, embracing the State, Executive, Labour, Customs, Pension, Postal, Indian, Signal, Railroad and Mail Departments, with qualifications.

In some of the departments the rules do not cover Chiefs of Divisions, or places filled by the President and appointed by the Senate, nor, as before remarked, labourers.

All appointments are for a probationary term of six months, the conduct and capacity then deciding the future of the candidate. The whole Railway Mail Service is under these rules, but applicants for examination must be over 18 and under 35 years of age.

For

For Departmental Service the age must be 20, for Customs Service, 21, except clerks or messengers, who must be 20 years old.

For positions purely clerical the examinations are on orthography, penmanship, copying, arithmetic, discount, elements of English language, letter writing and the proper construction of sentences, and grammar. None who use intoxicating liquors are appointed.

There is no discrimination on account of sex or political or religious opinions, but physical fitness is considered.

The examinations must not fall below 70 per cent.

Applications for examination must be made in writing.

Sydney, 7 February, 1895.

OWING to the demand for higher efficiency and the abuses which had crawled into our Civil Service under the old appointing system called in reform phrase the "Spoil System," there began an agitation for reform many years ago, and, under the leadership of George William Curtis, of "Harper's," Carl Schurz, and a few such disinterested masters of thought, the agitation gained strength to such a degree as to take tangible form in 1883, when our present Civil Service laws were passed.

As I have already informed you the President and the three Commissioners had power under the law to make "Rules" for the carrying out of the spirit as well as the letter of the law.

The law and the rules first applied to departments with fifty or more employes, but, as experience has shaped the public mind for the change, the rules have been changed by gradually broadening the scope of their operations. In the absence of data, I am unable to give dates of successive steps in the reform movement, but, as indicated in my first communication, almost the entire Service is "protected" by the practice, for public opinion keeps ahead of the annual movement of the Commission.

Of course among ambitious and unpatriotic men there is yet a bold declaration that "to the victor belong the spoils," but this grows fainter as the years pass, and we hope to see its extinction in the no distant future. There will be no going backward.

You will find the full text of the law of 1883 on page 392, "Supp. Revised Statutes, United States, Vol. I."

GEO. W. BELL,
U. S. Consul.

Sydney, 11 February, 1895.

PART II.

(By the Secretary.)

(a) PRESIDENT GRANT AND CIVIL SERVICE REFORM.

PRESIDENT Grant brought the need of Civil Service Reform officially before the country for the first time in his message to Congress, dated 5 December, 1870. "There is no duty," he pointed out, "which so much embarrasses the Executive and heads of Departments as that of appointments; nor is there any such arduous and thankless labour imposed on Senators and Representatives as that of finding places for constituents." Not that he was by any means the first to observe or to endeavour to rectify the evils of the prevailing system. Some of them, as Mr. Bryce points out, "were observed as far back as 1853, when an Act was passed by Congress requiring clerks appointed to the Departments at Washington to pass a qualifying examination"; but "neither this nor subsequent legislative efforts in the same direction produced any improvement, for the men in office who ought to have given effect to the law were hostile to it."* In 1866, a joint Select Committee of the two Houses was appointed to consider the question of Civil Service Reform, and a report was brought up by the Hon. Thomas A. Jenckes, of Rhode Island, which was long regarded as the "strongest, fairest, and most statesmanlike presentation of the change proposed."† Mr. Jenckes introduced a Bill into Congress in January, 1867, which provided for admission to the Civil Service by open competition, and for the appointment of a Board of three Commissioners to carry out the work of reform. The latter recommendation was not adopted till 1883, when an Act was passed constituting the present Civil Service Commission.‡ Four months after President Grant delivered his message to Congress advocating Civil Service reform, namely, on 3 March, 1871, an Act was passed by which the President was authorised to "prescribe such Rules and Regulations for the admission of persons into the Civil Service of the United States as will best promote the efficiency thereof . . . and to establish Regulations for the conduct of persons who may receive appointments." Under that Act a Royal Commission was appointed to inquire into the whole question. Nine months after the passing of the Act, namely, on 19 December, 1871, the President transmitted to Congress a set of Rules for the better regulation of the Civil Service which went into operation, as the Act said they would, on 1 January, 1872. Congress regularly made preparations for carrying them into effect, and the President referred to them continually in his annual messages. These Rules only applied to the fourth division of the Civil Service, but that included the great mass of the Service. They provided for the division of that portion of the Service into a number of groups of officers and clerks having similar duties and relations, each group to be divided into, as a rule, four classes or grades, class 1 being lowest, and having a salary of \$1,200 a year. Below these was a class of female clerks who were paid at the rate of \$900 a year, and above them were certain officers, such as the heads of departments and other superior officers. The Rules provided that all original admissions to the Service were to be to the lowest class by examination and probation, candidates to give adequate written proof that they were of good moral character, of temperate and industrious habits, of suitable age, and healthy.

In 1872 the Republican Conventions throughout the country passed resolutions favouring the scheme of Civil Service reform as proposed by the President, and the National Republican Convention resolved that "any system of the Civil Service, under which the subordinate positions of the Government are considered rewards for mere party zeal, is fatally demoralising, and we therefore favour a reform of the system by laws which shall abolish the evils of patronage and make honesty, efficiency, and fidelity the essential qualifications for public positions, without practically creating a life tenure of office." President Grant owed his triumphant re-election, in some degree at least, to the favourable reception by the country of his scheme of Civil Service reform. The

‡ See Report, paragraph 7.

The Commissioners appointed by the Act of 1871 reported in 1874. The first question discussed by them in their report was whether the principles of Civil Service reform, as sanctioned by President Grant in the Act of 1871, were consistent with the constitution and the national character; and, if so, whether the essential methods of administration they required were best adapted to promote the welfare of the people. After answering these questions in the affirmative, they next proceeded to consider the "essential conditions of any remedy promising to be in its nature effective, bearing in mind that the real problem was how most surely and beneficially to advance the worthy private citizen to a public position, and to make him most useful to the people while in that position." They found that the "essential conditions" were the following, namely:—

- (1) That the opportunities of those having capacity and character suitable for the Public Service to freely reach that Service by reason of being so qualified, must be improved.
- (2) That the practice and opportunity of having more regard, in making appointments, to opinions and influence than to qualifications must, as a consequence, be restrained.
- (3) That the obstructions interposed between the private citizen and all offices by those who make a trade of politics must be removed.
- (4) That, to secure these results, it was necessary that the executive power should be exercised with its original and constitutional regard to personal fitness.
- (5) That confirmations by the Senate ought to be made with the same regard to fitness; and that the practice of treating nominations as a right or a function of individual senators, rather than as a duty of the Executive, is indefensible, and ought to be abandoned; but recognising that the objects of the reform and the theory of the constitution could be carried out only by the self-sacrificing co-operation of senators.
- (6) That the practice of permitting representatives to dictate appointments in or from their districts, and of holding them responsible for any such appointments, ought not longer to exist.
- (7) That the discretion of heads of departments in making appointments or promotions ought to be so qualified as to give more protection to merit.
- (8) That the opportunities and influence of mere selfish and partisan combinations among the people, under the false pretences of principle and patriotism, for the purpose of securing appointments, removals, or promotions, ought to be limited; and that the practice on the part of any voluntary association of coercing the payment of assessments by those in public employment, because so employed, ought to cease.
- (9) That to secure, even in a moderate degree, such results, it would be necessary to apply tests of actual personal qualifications by a method not yet practised.
- (10) That these tests must be applied by persons having no power in respect of promotions and appointments, and must be sustained by evidence to be preserved and ready to be produced at any time, so that the justice of these tests can be at any time examined into and confirmed.
- (11) That these conditions of relief should be so applied and limited as to allow legitimate scope and freedom to the principles and policy of parties.
- (12) That the reform must be so conducted as not to tend to create any permanent official tenure, or otherwise affect such tenure than as the securing of better officers, the development of a better sentiment among the people, and the exclusion of partisan proscription by the rules, would surely tend to keep good men longer in office.
- (13) That a system of impartial examinations, in reference to the common information every officer ought to possess, and in more special reference to the practical qualities his particular position might demand, was an essential part of any real reform.
- (14) That within certain limits, and especially in the larger departments, and, to some extent, for promotions, those examined should compete as to qualifications; and that the appointments and promotions should be from among a certain number of those shown to possess the higher qualifications; but that the method of competition is not yet, at least, proved to be best for universal application, and, therefore, must be limited to the places where alone it is appropriate.
- (15) That the question of the places that should be filled by women cannot, in the existing condition of the statutes, and of official experience, be determined by the rules, the rules of examination only undertaking to guarantee that all persons desiring office, whether male or female, shall be examined and tested by an impartial method.
- (16) That the question of the just or appropriate distribution of offices among the different sections of the Union must be left to Executive discretion, and to the exigencies of the Public Service, from time to time, the rules only offering, as far as practicable, equal facilities to persons from all sections and States to demonstrate their possession of the necessary qualifications.
- (17) That no one connected with the Commission, or under its supervision, should have anything whatever to do with influence, applications, or any other method of securing any office or appointment, save by justly examining, and fairly certifying in writing, the results of the examination of the several applicants, from whatever part of the Union.
- (18) That, in the discharge of such duties, neither the members of the Civil Service Commission, nor any examiner, nor any other person acting under the supervision of the Commission, should have any regard for, or make any inquiry about, the applicant's political opinions, the right of making such discrimination, so far as may be just or wise, belonging wholly to the appointing power.

The rules put in force on 1 January, 1872, were stated by the Commissioners in their report, dated April, 1874, on the authority of the heads of departments, to have worked well, and the method of reform inaugurated by the President was pronounced a success. They mentioned the following as among the advantages which had resulted:—

- (1) They have on an average, where examinations apply, given persons of superior capacity and character to the service of the Government, and have tended to exclude unworthy applicants.
- (2) They have developed more energy in the discharge of duty, and more ambition to acquire information connected with official functions, on the part of those in the Service.
- (3) They have diminished the unreasonable solicitation and pressure which numerous applicants and their friends, competing for appointments, have before brought to bear upon the departments in the direction of favouritism.

(4.)

- (4) They have, especially where competition applies, relieved the heads of departments and of bureaus, to a large extent, of the necessity of devoting, to persons soliciting places for themselves or for others, time which was needed for official duties.
- (5) They have made it more practicable to dismiss from the Service those who came in under the Civil Service examinations, when not found worthy, than it was, or is, to dismiss the like unworthy persons who had been introduced into the Service through favour or dictation.
- (6) They have diminished the intrigue and pressure before too frequent, for causing the removal of worthy persons for the mere purpose of bringing other, perhaps inferior, persons into the Service.
- (7) And, for such reasons, those officers think that it is expedient to continue the reform upon the method upon which it has proceeded, making from time to time such modifications in details as experience may show to be most useful.

The Commissioners, at the close of the report, make these statements as to the practical working of the new methods:—

- (1) The practicability of fairly conducting examinations as to the qualities to be tested, and of fairly rating the results of competition, and of preserving reliable evidence of the same, has been established.
- (2) It has been demonstrated that competitive examinations for entrance to the Public Service will, besides diminishing evil influences in our politics generally, bring a better class of persons into that Service and insure more efficiency in administration.
- (3) In regard to promotions, it has been shown that the method of competition may be so united with the exercise of the proper authority of heads of offices or bureaus as to prevent the favoritism and discouragements too frequent under the old method of making promotions, and secure more fidelity and intelligence to the Service.

Notwithstanding the excellent result of the trial of the President's scheme of reform, it was abandoned in 1875, Congress refusing to make any further appropriation, although requested to do so as usual by the President in his Annual Message, delivered on 7 December, 1874, and "treating with contempt an experiment for which the party and administrative power were responsible." Mr. Bryce, in his chapter on "Spoils," states that similar causes to those which defeated the Act of 1853 "defeated the system of competitive examination, inaugurated by an Act of Congress in 1871, when the present agitation for Civil Service reform had begun to lay hold of the public mind." He adds that "Mr. Hayes (1877-1881) was the first President who seems to have honestly desired to reform the Civil Service, but the opposition of the politicians, and the indifference of Congress, which had legislated merely in deference to the pressure of enlightened opinion outside, proved too much for him." Why Mr. Bryce should thus slightly pass over the action of President Grant does not appear. After referring to the passing of the Pendleton Act of 1883,* which instituted the present Board of Civil Service Commissioners, as "a real step in advance," and stating that President Arthur named a good Commission, and under the rules framed by it some good was effected, Mr. Bryce proceeds as follows:—"The action of the two succeeding Presidents has been matter of recent controversy; but while admitting that less has been done in the way of reform than might have been desired, it is no less true that much more has been done than it would have been safe to expect fifteen years ago. In the so-called 'classified service,' to which the examination system is applied, some removals for political reasons are still occasionally made, but the percentage is far smaller than in the unclassified service, and the Civil Service Commissioners seem justified in the view they expressed in their report of 1891, that 'either outside the classified service poorer grades of appointments are made, or else there are many removals of perfectly good men who are sacrificed simply for party or personal considerations. Probably both these conclusions would be just.'" After stating that the moral effect of the Act of 1883 had been even greater than represented by the fact that as yet it applied to only about 43,000 out of a total estimated at 130,000 posts, and that it had stimulated the Civil Service reform movement in States and municipalities, he points out that several States have now instituted examinations for admission to their Civil Service; and similar legislation has been applied to New York, Brooklyn, Philadelphia, Boston, and other cities. "Some years," concludes Mr. Bryce, "must pass before the result of these changes upon the purification of politics can be fairly judged. It is for the present enough to say that while the state of things above described has been generally true, both of Federal and of State and city administration during the last sixty years, there is now reason to hope that the practice of appointing for short terms, and of refusing to reappoint, or of dismissing in order to fill vacancies with political adherents, has been shaken. Nor can it be doubted that the extension of examinations will tend more and more to exclude mere spoilsmen from the Public Service."

(b) CIVIL SERVICE REFORM ON THE CONTINENT.

France

The era of Civil Service Reform in France dates from the Revolution. Prior to that date, as Arthur Young informs us, "the purchase of offices was legalized. A bureau was opened for their sale. . . . The Kings of France, in order to raise money, made the judicial offices in Parliament saleable," a custom which, as Mr. Eaton points out, has been prevalent in every European country in a certain stage of its civilisation. The first Napoleon confirmed and established the principle that all public offices should be filled by the most competent persons. In 1840 Mons. Victor Cousin, who was at that time Minister of Public Instruction, appointed Mons. Labouleye a sort of Royal Commission of one to inquire into and report upon the systems of Civil Service in the various German States. The publication of this report led to further improvements in the French Civil Service. That Service, it is said, "moves on with the regularity of clock-work and the inflexibility of fate. In a country liable as France was and is to be tossed about by political storms, the Civil Service may be said to be, next to the Courts of Law, the only organization which survives all changes, and furnishes an historic link between the past and future."† The following works are stated by the French Consul (M. G. Biard d'Aunet) to contain the latest information on the subject of Civil Service in the Republic as now administered:—*Almanach National (Annuaire Officiel de la République française)*—*Personnel et organisation des Services*—1,500 pages, relié, 17 francs; éditeurs: Berger, Levrault, 5, rue des Beaux-Arts, Paris. *Dictionnaire général de l'administration*, par Maurice Block; nouvelle édition, 1891, 35 francs; éditeurs: Marchal et Billard, place Dauphine, 27, Paris. Ferrand: *Les Institutions administratives en France et à l'étranger*, 1879, 3 francs; éditeurs: Marchal et Billard, place Dauphine, 27, Paris. The

* See Report, paragraph 7. † *North American Review*, October, 1867, article on "Civil Service of the United States."

The Hon. A. S. Hewett, in a speech made in the United States House of Representatives some years ago, contrasted the consular system of America, which, he said, offered "an impediment rather than an aid to commerce," with the consular systems of Great Britain, France, and Germany, which he proposed as models for imitation. Speaking of the French Consular system Mr. Hewitt said, "a most elaborate scheme of examination is laid down for admission to the permanent consular and diplomatic service, . . . they must understand two modern languages besides their own, the examinations include international law, diplomatic history, statistics, political economy, geography, and the languages, and promotion is made from the lower grades of the entire Foreign Service." This system, he declared, had been found so efficient that it had remained unchanged for nearly half a century. He was especially eulogistic when dealing with the British Consuls, whom he characterised as "missionaries in the cause of British trade," whose zeal and energy were apparently tireless, and whose reports were "models of patient labour and treasuries of valuable commercial knowledge." He says of them that "they devote themselves for life to the promotion of British trade and commerce" and "seek out new avenues for enterprise." Promotions, he says, "are made for merit and length of service . . . They are never removed for political causes, nor is it ever intimated on a change of administration that they are expected to make room for hungry politicians," as Mr. Hewitt did not fail to point out was the case in America.

The Consular Service.

The German States, particularly Württemberg and Prussia, were at one time considered to be more advanced than any other country in their system of examination for appointments to the Civil Service. But it was not always so. A graphic, amusing, and at the same time historically noteworthy instance of an abuse of patronage by a local sovereign, which was probably at that time a fairly typical case, is given by Sir Julius Benedict in his life of Weber, whose father, the Baron von Weber, was for some years a Civil Servant in one of the Petty German Courts. He rejoiced in the titles of "Financial Councillor" without, apparently, knowing more about money than how to spend it, and of "District Judge" without, apparently, knowing more about law than how to break it. But the evils of the system of favouritism were not allowed to become dominant in German politics. "Prussia long since led the way," says a writer in the *North American Review* for 1871, and "under the guidance of her Stein and Scharnhorst, showed the world what could be done in making an intelligent people by general education and a model Civil and Military Service by applying to them the rigid principle of selection, without favouritism in the one or exemption in the other." Referring to this same statesman, Mr. Eaton says that "Stein, like William III (of England), was the first, under the Government he had in charge, to appreciate the vital importance of good methods in administration; and each of them gave the subject a prominence which in later years it has never lost. The German statesman secured the gratitude, and in large measure the greatness, of the country by three great measures of administrative reform—the re-organisation of the army, improved municipal government, the 'constitution of the supreme administrative departments,' and by his emancipation of the serfs." In the opinion of Mr. Eaton, Prussia owes it very much to the high order of efficiency which has been introduced into her Civil Service that she has risen to be one of the first Powers in the world"; while another competent observer, quoted by Mr. Eaton, says that "our Civil Service should be above temptation and beyond suspicion. Prussia has such a service. The pay is, indeed, not large; but it is graduated on the economical habits of the people. The Service is honourable and brings certain social consideration; it admits of promotion as the reward of merit, and it ensures a pension for the decline of life."

In Prussia.

From an article in the *North American Review* it appears that so long ago as 1867 all Government officers in Russia were classified. "There are fourteen grades," states the writer, "all of them implying the rights of nobility, the fourteenth grade being the lowest in the scale. No one can be appointed to a public office in Russia without furnishing a college education, and the offices are assigned according to these educational qualifications. Persons without such qualification are not entitled to any grade, but they may fill lower offices, as those of copyists, &c. They may be promoted, however, and there are not a few instances of copyists rising to the highest offices. Russia, however, is far from being purged of the abuses of favouritism, and the public offices swarm with mere parasites. But the principle of the Civil Service is, at any rate, established upon a sound theory." The same writer states that "in Greece, no person is admitted to the Public Service unless he has graduated at a University. In Italy, Portugal, Spain, Belgium, Holland, Switzerland, as in the German States, qualification tests prevail together with the system of promotion."

In Russia, Greece, &c.

Mr. Eaton states that in Sweden the reform of the Civil Service, though not sufficiently excluding opportunities of bureaucratic and aristocratic influence, perhaps, has been attended by results closely analogous to those in Great Britain. The Swedish Government, he states, "many years ago provided for the examination of candidates for office. The standard of attainment, which (like that first fixed in the British Service) somewhat reflects the influence of an aristocratic class, appears to be higher than in Great Britain, and may, perhaps, be fairly objected to as tending to give a needless monopoly to highly-educated persons. As the democratic spirit shall gain strength, the standard will doubtless be lowered in the interest of humble life, so as to include only the qualifications essential to the Public Service. The king has patriotically surrendered his arbitrary right of appointment for the sake of obtaining the worthiest men for the service of the State; and, without interference from the Members of the Legislature, he uses the appointing power for selecting the best from among those examined. The severe tests of character and capacity for admissions gives the Service a social rank which makes it attractive and honorable. . . . The tenure of office is much the same as in Great Britain, and there is an analogous system providing for an increase of pay based on length of service and for retiring allowances." Mr. Andrews, American Minister to Sweden, says:—"There is no doubt that the high respectability and rank of the Civil Service in Sweden tend much to induce people to enter it." Anything like patronage, it is said, does not obtain. But one of the most remarkable facts about the Civil Service in Sweden, which we learn from Mr. Eaton, is that the Rigsdag appoints and pays its own special Attorney-General (under the Constitution) to see that persons in the Public Service fulfil their duties, and to accuse them before the Courts of Justice if they fail to do so.

In Sweden.

Appendix D.

CIVIL SERVICE CLASSIFICATION.

[By the Secretary.]

(a) IN THE AUSTRALASIAN COLONIES.

The Tasmanian classification upset by the discovery of gold.
(a) The four divisions of 1851.

IN 1851 a scheme of classification was adopted in Tasmania which divided the subordinate officers into four classes, with the following scale of salaries:—(1) £200, increasing to £260; (2) £150, increasing to £180; (3) £100, increasing to £140; (4) £50 to £100. This scheme also included a system of periodical additions, which, however, were not adopted in practice. When the gold discoveries were found to produce so material a depreciation in the value of money the salaries of all public officers were supplemented by an allowance, varying in a certain inverse proportion to the salary. In 1856, when the value of money returned to its normal level, these allowances were withdrawn, and an adjustment took place by which the salaries of the superior officers were reduced to the original scale, while those of the subordinates were left considerably higher, with an immense detrimental effect to the working of the departments.

(b) Classification accompanied by annual augmentation.

The Tasmanian Royal Commission of 1863, which inquired into the working of the Government Departments on the northern side of the island pointed out that there was in operation a system of classification of certain Civil Servants, accompanied by an annual augmentation of salary, until a maximum of the salary in each class had been reached. The system was said to be introduced for the purpose of encouraging a superior class of persons to enter and remain in the Public Service, but the Commissioners pointed out that no such result had been obtained, partly in consequence of the inconsiderable number of classified clerks, and partly because it chiefly embraced within its operation those whose duties were, as a matter of fact, routine clerical duties, demanding no special capacity. The Commissioners recommended that each officer should be engaged for that particular service he was to fill, with an adequate fixed salary, and that all vacancies which might occur should be filled by those occupying inferior positions in the Service and who might be recommended for promotion by a faithful and efficient discharge of their duties.

(c) Classification must be carried out according to judicious and uniform rules.

The Tasmanian Royal Commission which inquired into the working of the Government Departments on the southern side of the island in 1863 made the following pertinent remarks when dealing with the subject of classification. "Classification," observed the Commissioners, "is undoubtedly a wise and useful principle, inasmuch as it affords a ready mode of adjusting the staff of each department, and it presents to employés an incentive to continued exertion. But this principle must be carried out according to judicious and uniform rules; no advancement or increase of salary being granted except on the certificate of the head of the department. While, however, making these observations we desire most emphatically to express our recognition of the importance of stability and certainty in the Civil Service. Nothing is more detrimental to that Service, or tends more to impair the usefulness of its members, than the annual dread of change, prompting to those solicitations to Members of the Legislature which must be as irksome to the latter as they are degrading to the Civil Servants. For this reason the mode of submitting the Estimates in the House of Commons appears to us preferable to that adopted in the Legislature of this Colony, namely, to submit a gross amount for each department, leaving it for individual members to move for amendments upon notice previously given. This practice would relieve Ministers of some of the unnecessary labour of discussing in Parliament each detail of official machinery, which cannot fail to encourage jobs of an individual and personal character, when the decision of Parliament should be arrived at on broad and general principles; and it would tend to obviate that state of annual excitement and uncertainty among the Civil Servants so detrimental to the free and steady discharge of their duties."

(d) The present state of the Service.

There is no Civil Service Board in Tasmania, and there are no special Acts of Parliament regulating the Service, with the exception of those in certain instances fixing the salaries of particular officers. Appointments and promotions are made by the Governor or Governor-in-Council on the recommendation of Ministers in charge of the several departments. Office hours are from 9 a.m. to 4:30 p.m., except on Saturdays, when the hours are from 9 a.m. to 1 p.m.

The Victorian system of classification.
(a) The Public Service Act of 1862.

The first serious attempt at classification in Victoria appears to have been made by the Royal Commission of 1859, which recommended that the Service should be divided into the ordinary, the subordinate, and the special or professional service; all persons entering the ordinary service to be subject to examination and six months' probation. Then followed the Act of 1862, which carried out some of the recommendations of the Royal Commission and classified the Service into two divisions—the ordinary and the professional—the first class in each division to consist of the heads of departments, &c., and the remaining classes, of which the ordinary division contained five altogether, to have a minimum and maximum salary attached to each, candidates to be subject to non-competitive examination and probation; promotion in the ordinary division to be from the class below, but in the professional division either from inside or outside the Service, as considered advisable, with or without examination or probation. This Act provided that the detailed work of classification should be carried out by the Governor-in-Council.

(b) The Public Service Acts of 1883, 1890, and 1893.

In 1883 Victoria passed a new Public Service Act, in which the lines were laid down on which the Service is at present regulated.* In 1890 the previous laws were consolidated, and in 1893 an Amending Act was passed. The Service now consists of four divisions, the first division comprising the Secretaries for the different departments, &c.; second, the professional division; third, the clerical division; and fourth, the non-clerical division; the last named being of very wide range, including messengers and matrons, caretakers and carpenters, superintendents and seamen, engravers, engine-drivers and engineers. The officers in the first division, professional division, and non-clerical division are paid on a scale determined by regulation, and as may be provided in the annual Appropriation Act. The clerical division is further divided

* See Report, paragraph 8.

divided into five classes, three higher and two lower, each with a minimum and a maximum salary, with annual increments depending on "good and diligent conduct," as follows:—

	Minimum.	Maximum.	Increments.
1	£ 610	£ 750	Seven annual increments of £20 each.
2	500	600	Five " " £20 "
3	360	450	Six " " £15 "
4	210	350	Nine annual increments of £10 each, with two further increments of £25 each for long service at intervals of five years, subject to recommendation of permanent head and Board.
5	£80 on entrance at 19 years or upwards, and £10 less for every year below 19 years of age.	200	£10 per annum up to £100, and £20 per annum up to £200.

The Victorian Acts provide for two separate examinations for employment in the clerical division, one for the higher class and one for the lower, no officer of the lower class to be eligible for promotion to the higher unless he have passed the prescribed examination. (c) The clerical division.

The Victorian Public Service Act contains a noteworthy clause, which provides that no probationer shall have his appointment confirmed until he have effected with some Life Assurance Company an insurance on his life providing for the payment of a sum of money at his death should it occur before the age of retirement from the Public Service, or if he survive till that age of a sum of money or annuity on the date of such retirement. This clause was rendered necessary inasmuch as the Act did away with pensions in the case of officers appointed after the passing of the Act. (d) A noteworthy clause.

The Royal Commission which inquired into the New Zealand Civil Service in 1866 recommended that the Service should be divided into five classes, the first class to consist of certain specified officers, whose salaries would be definitely fixed by appropriation, and who would not be entitled to the annual increases provided for the four other classes, which were to have maximum and minimum limits of salary, also fixed by appropriation, such salary being annually increased between these limits by one-sixth part of the difference between minimum and maximum rates. The Commissioners recommended that the minimum and maximum salaries of the four lower classes should be as follows:— Classification in New Zealand.

	Minimum.	Maximum.
Fifth Class	£80	£140
Fourth "	150	240
Third "	250	370
Second "	390	600

The Commissioners recommended that the salaries of classes and not of officers or persons should be voted—except in the first instance, as regards the first class—and that the Governor should, when thought requisite, recommend a ratable reduction or an increase on the salaries of all classes. Whether these recommendations were actually carried out into practice does not appear, but the latest information supplied to this Commission by the New Zealand authorities is to the effect that the Civil Service there has not been classified as a whole, and there is no regular scale of salaries or order of promotion. Promotion is by merit, at the discretion of the Minister of each Department. The Post and Telegraph Department is classified under a special Act (1890), which is said to be working very smoothly. Appointments to the Service are made under the "Civil Service Reform Act, 1886," and the Act of 1887 amending it. Entry is confined to candidates who have passed the Junior Civil Service Examination at the top of the list, and to experts. The Civil Service Amendment Act of 1871 repealed the pension clauses of the Civil Service Acts of 1858 and 1866, so far as further appointments were concerned.

The Civil Service in Queensland, as classified by the Act of 1889, consists of two divisions—the professional division and the ordinary division—and an unclassified division, including all such officers and classes of officers as the Governor-in-Council shall from time to time direct, and all officers not appointed by the Governor-in-Council. All officers of the classified divisions (other than teachers in the State schools) are classed according to their salaries, *i.e.*, (1) Under Secretaries, and such other officers receiving not less than £600 per annum; (2) all those receiving under £600 and not less than £400; (3) all those receiving under £400 and not less than £300; (4) those receiving under £300 and not less than £200; and (5) all receiving under £200 and not less than £50. Below these, of course, is the probationary class, consisting of members who, after passing the requisite competitive examination, have been appointed to the Service on the request of a permanent head of a department, supported by a certificate from the Board that such an appointment is required, the probationers serving six months before their appointments can be confirmed. The Queensland system of classification.

The Civil Service of South Australia appears to have been first classified by the Act of 1874, which separated the Service into two divisions—the professional and the ordinary. These divisions were further divided into six classes,* the first consisting of Under Secretaries and heads of departments and sub-departments, with salaries fixed by the Appropriation Act. The remaining classes had minimum and maximum salaries allotted to them, with annual increases on "satisfactory proof of industry and general good conduct," as follows:— The South Australian System. (a) The Act of 1874.

Class.	Minimum.	Maximum.	Annual Increment.
2	£ 350	£ 425	£ 15
3	280	330	10
4	220	270	10
5	160	210	10
6	100	150	10

Professional officers engaged in the performance of strictly professional duties were entitled to receive 10 per cent. per annum on the salaries above mentioned, but this clause was repealed in 1885.

* The South Australian Royal Commission of 1888-91 recommended that these six classes should be abolished, and a new classification, based upon salaries, should be substituted. (See Report, paragraph 11, headed "Proposed Public Service Board for South Australia.")

(b) The Amending Act of 1881.

The Act of 1874 provided that, on the death, removal, or resignation of an officer, he or his legal representative should receive one month's salary for every year he had been in the Service, the salary being taken on the average salary received during the three years preceding. The operation of the clause was limited by the Amending Act of 1881 to the end of that year, after which 4 per cent. was to be paid on the total amount so payable from the end of 1881 to the date of the death, removal, or resignation. The Amending Act also provided for a possible two weeks' holiday in the year, or of two months in case of sickness, or eight months' leave of absence on full salary after twenty years' continuous service. Another Amending Act, however, was passed in 1894, excluding persons in the employ of the South Australian Railways from the operation of this clause, and providing that leave on the terms stated should only be granted on account of service subsequent to the passing of the Amending Act. The Act of 1881 further provided for granting of six months' leave of absence, in case of pressing necessity, to any officer. Under the regulations of 1874, office hours were from 10 a.m. to 4 p.m., excepting on Saturdays, when they were from 10 a.m. to noon. Under the amended regulations the hours are from 9.30 a.m. to 5 p.m., and on Saturdays from 9.30 a.m. to noon, no charge for overtime to be made except when specially authorised by a responsible Minister and approved by the Chief Secretary.

The Civil Service of Western Australia in a very unsatisfactory state.

No steps have been taken in Western Australia since the inauguration of responsible Government to place the Civil Service on a proper footing except by the appointment of a Royal Commission in April, 1894, "to inquire into the organisation of the Civil Service of the said Colony with a view to ascertaining if it can be placed on a more satisfactory basis." The rule has been to adhere closely to the regulations of the Colonial Office affecting the Service while Western Australia was a Crown Colony. The question of appointments and promotions is not regulated or controlled by any Act of Parliament, and at the present time is said to be in a very unsatisfactory state.

Classification in New South Wales.

(a) A system of classification and increases inaugurated by the Act of 1884.

The Civil Service in this Colony was classified for the first time by the Act of 1884. It was divided into three divisions: (1) the general division; (2) the professional division; and (3) the educational division. Teachers were classified under the rules and regulations of the Public Instruction Act of 1880, and were entitled to promotion and increments thereunder, while the other officers in that Department were classified according to their respective positions in the general or professional division. The general division was divided into six classes: (1) heads of departments and all officers whose salaries were fixed by the Appropriation Act at not less than £800; (2) officers with salaries of not less than £650 and under £800; (3) officers with salaries of not less than £500 and under £650; (4) officers with salaries of not less than £350 and under £500; (5) officers with salaries of not less than £200 and under £350; (6) officers with salaries under £200. The professional division was divided into four classes: (1) officers with salaries fixed at not less than £900; (2) officers with salaries of not less than £600 and under £900; (3) officers with salaries of not less than £300 and under £600; and (4) officers with salaries under £300. In addition to the above a probationary class was attached to the general division, and a cadet or junior class to the professional division. Candidates were not to be under 17 or over 25 years of age, were to be subject to twelve months' probation, and were to be entitled to £50 per annum for the first six months, and to £25 additional at the end of that period if they had passed the junior University examination, or given proof of possessing educational attainments not inferior thereto, and no probationer was to be eligible for promotion to the higher class till he had passed the prescribed examination. The Act provided for annual increments to the salaries in the general and professional divisions of £30 a year to officers in the first class not in receipt of the maximum salary in their class, and of £25 to officers in the second and third classes who had not attained the maximum, and of £20 in other classes, any officer who had received the maximum salary of his class for four years to enter the class above him at the minimum rate of such class, except that no officer was entitled to enter the first class in either division unless there was a vacancy. Messengers, &c., might receive annual increases of £10. These increases were to be given in every case unless the Minister recommended the contrary, and unless the Board had at least seven days' notice before the nullifying of the order was made.

(b) Repeal of the classification and increase clauses of the Act of 1884.

Exactly two years after the passing of the Act of 1884, namely, in October, 1886, so much of the Act of 1884 as prescribed a classification of all officers within divisions, and so much of it as entitled such officers to increases based on such classification was repealed. The indiscriminate granting of annual increases whereby the salaries of officers were being unduly augmented out of all proportion to the duties they had to perform was the cause of the repeal, as also the fact that these increases made a very heavy annual charge on the Consolidated Revenue. The classification was done away with because the increments were based on the classification.

(c) Holidays.

The unrepealed portion of the Act of 1884 provided that every officer should be entitled, without diminution of salary, to three weeks' holiday in each year, and to an accumulation of leave not exceeding two months, if the holidays had not been taken at the time, and to leave of absence not exceeding three months on full or less salary in case of illness or pressing necessity; in the latter case, if the leave extended to one month the officer forfeited his right to his next ordinary annual leave, or to any portion thereof. The Act further provided for extended leave of absence of twelve months on half salary, or of six months on full salary to any officer of twenty years' service, or of six months on half salary or three months on full salary to any officer of ten years' service.

(d) Proposed classification for the Department of Public Works.

On the reorganization of the Public Works Department, which took place while this Commission was sitting, regulations classifying the officers in the Department, and dealing with the question of appointments and promotions in the clerical branch of that Department were made and approved by the Executive Council. By these regulations the officers were divided into three divisions—the principal division, the lower division, and the temporary staff—the principal division consisting of all officers in receipt of a salary of £300 and upwards, and the lower of those in receipt of a salary of less than £300, while the temporary hands consisted of those not on the permanent staff but who should be eligible for promotion to the permanent staff on their passing the necessary examinations. Seventeen to twenty-five was to be the age limit of candidates, no applications for admission to be considered without a health certificate and satisfactory reference as to character, the Civil Service examination or its equivalent to be passed before a candidate could be appointed on the temporary staff, the junior University examination or its equivalent to be passed before a candidate could be admitted to the lower division, and the senior University examination or its equivalent to be passed before a candidate could be admitted to the upper division. The regulations also provided that in case of any vacancy arising a Board, consisting of the sub-heads of the clerical branch, should report to the Board of Reference (composed of the heads of branches, presided over by the Under Secretary), who in their opinion

(g) Classification of the Government Printer's Department.

Rules and Regulations, setting forth in conformity with the "Civil Service Act of 1884," the conditions of employment in the Government Printer's department, came into force on October 1, 1890. Part I deals with "sub-overseers, readers, and others." Section 1 provides that advancement shall be by promotion according to length of service, capacity and general conduct, combined with ability to fill the superior position. Under section 2 the scale of remuneration is as follows, viz. :—

	Minimum salary.	Maximum salary.
Sub-Overseers	£310	£350
First Reader	325	350
Assistant Sub-Overseers	240	300
Readers	200	300
Assistant Readers	150	200
Reviser	275	315
Assistant Revisers	150	250
Storekeeper	350
Assistant Storekeeper	250	300
Assistant Computer	180	250

The maximum salary is to be obtained by increases of £10, or such portion of £10 as may be necessary in the last increase to reach the maximum rate, the granting of such increase to be dependent upon good conduct and continued efficiency. Two weeks' leave of absence, in addition to public holidays, are allowed in the year.

Part II deals with the "mechanical class." The composing branch consists of a permanent wages staff of compositors and a permanent salaried staff, the former to be paid from 10s. to 12s. a day, and the latter from £156 to £225 a year; the number of those eligible to receive salaries over £156 to be limited; the salaried staff to be recruited from the wages staff. Under section 3 the scale of remuneration for employés of the branches of the mechanical class other than the composing branch is as follows, viz. :—

Machine and Press Branch.—Machinists, pressmen, lithographers, and assistants—Yearly rates of wages, £156 to £225; the number of those eligible to receive salaries in excess of £156 to be limited. Weekly rates of wages, from 9s. to 12s. per diem. Time rates of wages, from 1s. 4d. to 1s. 6d. per hour.

Bookbinding Branch.—Bookbinders, paper-rulers, embossers, assistants, and others—Yearly rates of wages, £156 to £225; the number of those eligible to receive salaries in excess of £156 to be limited. Weekly rates of wages, 9s. to 12s. per diem. Time rates of wages, from 1s. 4d. to 1s. 6d. per hour. Female Sewers and Folders—Forewoman, 8s. 6d. per diem; assistant forewomen, 7s. 6d. per diem; full hands, from 3s. 6d. to 5s. per diem. Female apprentices to serve three months on probation, after which they will receive—First three months, 6s. per week; next six months, 9s. per week; following twelve months, 2s. per diem; following twelve months, 3s. per diem; after three years' apprenticeship, rates to vary according to competency.

Warehouse and Publishing Branches.—Yearly rates of wages, £156 to £200; weekly rates of wages, 9s. to 12s. per diem; time rates of wages, 1s. 4d. to 1s. 6d. per hour.

Engineering and Mechanical Branch.—Printers' joiner, yearly rate of wages, £225; carpenters, 9s. to 12s. per diem; fitters, engine-drivers, &c., 9s. to 12s. per diem; stereotypers, electrotypers, and type founders, 9s. to 12s. per diem; time rates of wages, 1s. 4d. to 1s. 6d. per hour.

Photo-lithographic and Photographic Branch.—Yearly rates of wages, £156 to £225; weekly rates of wages, 9s. to 12s. per diem.

Photo-mechanical Branch.—Pressmen, 9s. to 12s. per diem; assistants, 6s. to 8s. per diem.

Drafting Branch.—Draftsmen, £156 to £250, or by the piece, according to the nature of the work performed; assistants, 3s. 6d. to 8s. per diem.

Stamps and Tramway Tickets Branch.—Printers, yearly rates of wages, from £156 to £225; assistants, weekly rates of wages, from 9s. to 12s. per diem; junior assistants, 3s. 6d. to 6s. per diem.

Railway Ticket-printing Branch.—Printers, yearly rates of wages, £156 to £225; assistants, weekly rates of wages, from 9s. to 12s. per diem; junior assistants, 3s. 6d. to 6s. per diem.

Miscellaneous Employés.—Principal messenger and office-keeper, yearly wages, £160, with allowance for quarters, to enable him to reside in close proximity to the office, and £12 per annum as an allowance for washing; vanmen, watchmen, labourers, and others, 8s. to 12s. per diem; time rates of wages, 1s. per hour. Section 4 provides that candidates for employment as apprentices must not be under fourteen years of age, must be in sound bodily health and of good character, and must pass a satisfactory elementary examination before an officer nominated by the Government Printer. The period of apprenticeship is fixed at seven years at the following rates of pay, viz. :—

		Overtime.
First year	1s. 6d. per diem.	6d. per hour.
Second ,,	2s. 0s. ,,	6d. ,,
Third ,,	2s. 6d. ,,	6d. ,,
Fourth ,,	3s. 0s. ,,	8d. ,,
Fifth ,,	4s. 0d. ,,	8d. ,,
Sixth ,,	6s. 0d. ,,	9d. ,,
Seventh ,,	7s. 0d. ,,	1s. ,,

Overtime after 12 p.m., one-half extra. Rates for Improvers same as for Apprentices. Apprentices are placed in the Branches for which they may seem best adapted. Those selected for the Reading Branch receive 25 per cent. in addition to the above-mentioned rates, but before selection they have to pass a special examination.

There is also a temporary staff. Temporary hands, being under engagement by the day without notice on either side, are paid by piece and time according to a schedule liable to alteration as may be deemed expedient.

Rules and Regulations were issued by the Marine Board on 13 August, 1885, setting forth, in conformity with the provisions of the Civil Service Act of 1884, the conditions of admission, examination, promotion, classification, salaries, and retiring allowances in the Marine Board Department, applicable to all persons except officers classified under the said Act. Candidates must be under 35, in vigorous bodily health, free from defective eyesight, bearing testimonials of sobriety and fitness for the particular office applied for, and in the case of pilots and other seafaring persons having certificates of a grade not lower than that of the position sought. In case of a vacancy promotion depends on length of service, good conduct, and the necessary qualifications. Two weeks' leave of absence, in addition to public holidays, are allowed. The scale of classification and remuneration fixed by the Regulations, is as follows:—

Office.	Minimum salary.	Maximum salary.	Value of quarters, fuel, and light.	Total amount of salary and allowances. Maximum obtainable.	Annual increment.*
First-class Pilots	£ 200	£ 400	£ 50†	£ 450	£ 10
Second-class Pilots	150	250	25	275	10
Principal Light-Keepers	157	250	50	300	10
First Assistant Light-Keepers and Principal Light-Keepers in Subordinate Lights	120	157	30	187	7
Second Assistant Light-Keepers	96	120	30	150	5
Inspectors	200	350	Nil	350	10
Mates	175	225	Nil	225	10
2nd Mates	150	175	Nil	175	5
Chief Engineers	200	280	Nil	280	10
2nd Engineers	150	200	Nil	200	10
Firemen	120	144	Nil	144	5
Pilot and Lightship Establishment, stationed at the Heads of Port Jackson, including seamen, boatmen, look-out men, cook and provodore, and crew of the Lightship	96	144	Nil	144	5
Mate of Lightship	120	150	Nil	150	7
Boatswain, Government Boatshed	150	200	30	230	7
Boatmen—Sydney and Out Ports, including coxswains, drivers, and look-out men	96	126‡	18	144	5
Signal Masters	175	250	50	300	7
Operating Clerk, South Head	100	150	30	180	5
Assistant Signal Masters	96	120	30	150	5
Messengers	75	150	Nil	150	5
Carpenters, &c.	152	180	Nil	180	5
Coxswain and Engineer, Harbour Steamer, Newcastle	108	152	18	170	5
Engineer, Electric Light	220	270	30	300	10
Assistant Engineer, Electric Light	110	150	30	180	5

In the case of Pilots, Light-keepers, Boatmen and others, whose quarters are assessed as a portion of their salaries, the following is the scale:—

First-class Pilots	£50 per annum.
Second-class Pilots	25 „
Principal Light-Keepers	50 „
Signal Masters	50 „
Assistant Light-Keepers, Assistant Signal Masters, Enginemen of Electric Light, Operating Clerk, South Head, and Coxswain, Government Boatshed	30 „
Boatmen	18 „

The Public School teachers of New South Wales are classified and remunerated under the “Public Instruction Act of 1880.” The current regulations, which superseded those of prior date, were issued on 1st July, 1893. They are published as Appendix XXII in the Annual Report of the Minister of Public Instruction for 1893. Primary schools are divided into ten classes, the first class comprising all schools in which the average daily attendance is not less than 600, and in which the standard of proficiency prescribed for that class of schools is fully reached; § second class schools must have an average daily attendance of between 400 and 600; third class schools between 300 and 400; fourth class schools between 200 and 300; fifth class schools between 100 and 200; sixth class schools between 50 and 100; seventh class schools between 40 and 50; eighth class schools between 30 and 40; ninth class schools between 20 and 30, and tenth class schools under 20.

Regulation 91 provides that the attainments of Teachers, Students of the Training Schools, and Candidates for employment as Teachers, shall be tested by written and oral examinations, and their skill in teaching determined by their ability to manage a school or class; and, according to such attainments and skill, they are classified in the following grades:—The first, or highest, class, has three grades, distinguished as I A with Honors, I A (without Honors), and I B; the Second Class has three grades, distinguished as II A with Honors, II A (without Honors), and II B; and the Third Class has three grades, distinguished as III A, III B, and III C. This classification is provisional only, to be confirmed at the end of three years if inspectors' reports are satisfactory.

Teachers

* The right to receive any annual increment depends on the good and diligent conduct of the person concerned, and in only granted on the recommendation of the head of his department.

† 1st class pilots, not provided with quarters, receive a minimum salary of £250, and a maximum of £450 per annum.

‡ Where quarters are not provided the maximum salary of this class is £144 per annum.

§ The prescribed standard of efficiency must be reached by every class. In case of failure the Minister may remove such school to a lower class.

Teachers are eligible for appointment to any Primary School or any boys' or girls' department, in accordance with the following Schedule:—

Class of School or Department.	Teacher's Classification.
I	I A
II	I B
III	II A with Honors.
IV	II A
V	II B
VI	II B
VII	III A
VIII	III B
IX	III C
X	III C

The salaries of male teachers are according to the following scale:—

For a teacher in charge of a school of the	First Class	£380
"	Second Class	319
"	Third Class	239
"	Fourth Class	228
"	Fifth Class	217
"	Sixth Class	205
"	Seventh Class	171
"	Eighth Class	148
"	Ninth Class	125
"	Tenth Class	103

In schools ranking below the fourth class the salaries of unmarried male teachers, of married teachers who are not assisted by their wives, as required by regulation 96, and female teachers in charge, are £12 per annum less than the foregoing rates.

In addition to these salaries, residences, vested or rented, are provided for classified married male teachers in charge of classified Public Schools.

The salaries of mistresses are according to the following scale:—

School of the	Girls' Department.	Infants' Department.
First Class	£285	£194
" Second Class	239	182
" Third Class	194	171
" Fourth Class	182	160

Mistresses of Infants' Departments must hold a classification of II A. In a school containing female children but no female teacher, it is the duty of the teacher's wife to teach needlework to the girls during at least four hours in each week. Married women are not accepted for employment as teachers.

The Salaries paid to assistant teachers are as follows:—

	Male.	Female.
To a First Assistant, holding a First-class Certificate, in a school of the First Class	£237	£160
To a Second Assistant, holding a Second-class Certificate, in a school of the First Class	142	114
To a Third Assistant, holding a Third-class Certificate, in a school of the First Class	103	95
To a First Assistant, holding a Second-class Certificate, in a school of the Second Class	171	137
To an Assistant, holding a Second-class Certificate, in a school of the Third, Fourth, or Fifth Class... ..	142	108

Candidates for the office of pupil-teacher must be not less than fourteen nor more than seventeen years of age, and free from any bodily infirmity likely to impair their usefulness. They must also pass an examination in specified subjects. Their remuneration consists partly of instruction to be given by the teacher, and partly in a yearly salary.

Salaries are paid to Pupil-teachers at the following rates:—

	Male.	Female.
First Class	£68	£46
Second Class	57	34
Third Class	46	29
Fourth Class	40	23

Work-mistresses may be appointed to schools of the first and second classes, with salaries at the following rates:—

In a First-class School with an average daily attendance of not fewer than 250 girls	£114 per annum.
In a First-class School with an average daily attendance of fewer than 250 girls	95 "
In a Second-class School	86 "

The time devoted to their duties by Work-mistresses is fixed as follows :—

In First-class Schools with an attendance of 250 girls	5 days a week.
In First-class Schools with an attendance of fewer than 250 girls	4 „
In Second-class Schools	4 „

Provisional Schools may be established in any locality where not fewer than twelve, but not more than nineteen, children between the ages of six and fourteen years can regularly attend such school, provided that no Provisional School shall be established within 4 miles of any existing Public, Provisional, or Half-time School.

First-class Provisional Schools must have an average attendance of eighteen or nineteen, Second-class Provisional Schools between fifteen and eighteen, and Third-class Provisional Schools between twelve and fifteen. Teachers in First-class Provisional Schools receive £91 per annum; in Second-class Provisional Schools £80 per annum; and in Third-class Provisional Schools £68 per annum.

An Evening Public School may be conducted in any Public School, or elsewhere in a suitable place. The salaries of teachers in such schools, who must be trained and classified, are as follows :—

For an average attendance of 10 to 15	£19 per annum.
„ „ 15 to 20	25 „
„ „ 20 to 30	30 „
„ „ 30 to 40	36 „

Whenever twenty children, between the ages of six and fourteen years, are residing within an estimated radius of 10 miles from a central point, and can be collected in groups of not less than ten children in each, an Itinerant Teacher may be appointed and shall visit two such places only, and the schools so established are designated Half-time Schools. Half-time Schools are classified in the same manner as Public Schools, according to the total average attendance of pupils, and teachers are paid the same rates of salary as teachers of Public Schools of corresponding classification.

Teachers not necessarily trained may be employed in house-to-house teaching, but they must be persons of good moral character, and capable of imparting the rudiments of an English education. Their remuneration is at the rate of £4 15s. per annum for each pupil in average attendance up to a maximum salary of £95 per annum, with an additional forage allowance, where necessary, of £10 per annum.

In compliance with the request of the Commissioners, Mr. E. Twynam, Chief Surveyor and Director of Trigonometrical Survey, forwarded the following sketch of classification for application to the Drafting Staff of the Survey Branch, viz. :—

(j) Proposed classification of the Survey Branch.

	Chief Draughtsman	£550	
	Heads of important Branches at the head office	£400	
Senior Division ...	1st class	£350	7 years...
	(To include draftsmen in charge at Board District Offices.)		
	2nd class	£300	7 years...
	3rd class	£250	5 years...
Junior Division ...	4th class	£200	3 years...
	5th class	£150	2 years...
	6th class	£125	2 years...
	7th class	£100	2 years...
	8th class, probationers	£50	1 year ...
			Minimum Period of service in each class.

The minimum period of service in each class to be as noted; but it would be reasonable to provide that promotion to the next grade shall be within three years in the Junior Division and within seven years in the Senior Division.

In a scheme of promotion it might be arranged that junior draftsmen should pass through at least three branches of the Department, so as to acquire a general knowledge of business; and that the head of each Branch should at end of term of employment report fully to the Chief Surveyor as to service and capabilities.

The Departmental Board of Inquiry on Local Land Board and District Surveyors' offices, which presented its final report in 1889, recommended, among other things, that a field assistant should be attached to each permanent salaried surveyor's party. The Board suggested that there should be two classes—(1) juniors at £109 10s. per annum (6s. per diem); (2) assistant surveyors at £150, and that the latter should be licensed surveyors. Whether a junior or assistant surveyor is appointed should depend upon the nature and character of the work, but juniors should have had at least one year's office experience, and have proved themselves fair draughtsmen.

The Postal and Electric Telegraph Department is classified and remunerated under regulations which, with a slight subsequent amendment, superseded all prior ones on July 1, 1894. These regulations set forth, in conformity with the provisions of the Civil Service Act of 1884, the conditions of employment in the department controlled by the Postmaster-General. The department is divided into two groups—A and B—the first comprising messengers and letter-carriers, stampers and sorters, line-repairers and mail-guards; while the second embraces operators, letter-sorters, and post and telegraph masters. Candidates for employment in the first group must be able to read manuscript, write from dictation, and have a knowledge of the four rules of arithmetic; candidates for employment in the second group must have passed a Civil Service examination; and candidates for either grade must be of sober habits and good character, and free from bodily or mental infirmity.

(k) Classification in the Postal and Electric Telegraph Department

The

The following are the ages at which candidates are admitted and the rates of pay attaching to the several positions mentioned hereunder :—

Rank	Age.		Rate of Pay.	
	Minimum.	Maximum.	Minimum.	Maximum.
GROUP A.				
	Years.	Years.		
Telegraph Messengers	14	18	10s. per week, with annual increments of 5s. per week, to 20s. per week.	£1 per week.
Mailboys	14	18	10s. per week, with annual increments of 5s. per week, to 30s. per week.	£1 10s. per week.
Junior Letter-carriers and Junior Stampers and Sorters.	14	30	10s. per week, with annual increments of 5s. per week, to 30s. per week.	£1 15s. ,,
Letter-carriers	18	30	£100 per annum	£170 per annum.
Line Repairers	18	30	£100 ,,	£150 ,,
Stampers and Sorters, and Mail Guards.	18	30	£100 ,,	£200 ,,
GROUP B.				
Cadets.....	14	18	(See below.)	
Switch-board Attendants	14	18	10s. per week, with annual increments of 5s. per week, to 30s. per week.	£1 10s. per week.
Junior Assistants and Junior Letter-sorters.	14	30	10s. per week, with annual increments of 5s. per week, to 30s. per week.	£1 15s. ,,
Junior Operators	14	30	£1 per week for first six months, and thereafter 30s. per week.	£1 10s. ,,
Letter-sorters	18	30	£100 per annum.....	£200 per annum.
Assistants and Operators	18	30	4th Class—£100 per annum.....	£160 ,,
Telegraph Masters and Official Post-masters.	21	30	3rd ,, —£180 ,,	£240 ,,
			2nd ,, —£260 ,,	£320 ,,
			1st ,, —£340 ,,	£400 ,,

No operator is entitled to rank higher than 2nd class; no assistant can be promoted to the 2nd class unless he have served three years at the maximum of the 3rd class without the chance of an appointment to the charge of an office: the employment of females appointed after 1st June, 1892, is limited to the 4th class; and persons already in the employ of the department are not ineligible for transfer or promotion to any other position by reason of their being over the maximum age specified in connection with such position. Any official whose conduct has not been satisfactory, or who has not proved himself efficient in the discharge of his duties, forfeits his right to the prescribed annual increment. Promotions are made according to seniority, efficiency, good conduct, and eligibility in all other respects.

As vacancies occur, successful candidates are appointed junior operators at a salary of £52 per annum, which, subject to good conduct and continued efficiency, is after six months' service increased to £78 per annum, pending vacancies on the staff at £100 per annum.

No married female is eligible for appointment to the charge of an official Post or Telegraph Office in connection with which quarters are provided by the department, and should any female now holding such a position marry she immediately forfeits her appointment.

“District allowances” according to the following scale are made to officials appointed to outlying districts, where the necessaries of life are exceptionally dear:—

To officials receiving salaries varying from £100 to £240 per annum £20 per annum.
To officials receiving salaries above £240 per annum £30 ,,

Cadets and messengers desirous of being taught telegraphy are required to pay a fee of £1 per quarter, provided that messengers appointed since the 30th June, 1893, must produce a Civil Service Examination Certificate before being allowed to become learners, and that whilst undergoing instruction their pay shall not exceed 10s. per week.

Wherever practicable, the services of cadets may be utilised either as assistants or for the delivery of messages, if they choose to accept the positions, in either of which cases they are entitled to payment at the rate of 10s. per week; but they are not required to wear uniform, nor be styled messengers, but retain the title of cadets.

Telegraph messengers, mail-boys, letter-carriers, and mail-guards are allowed uniforms.

(b) OUTSIDE THE AUSTRALASIAN COLONIES.

(a) Classification in Great Britain.

The principles of the system of classification adopted in the British Civil Service have already been given in Appendix B, but the following details of the salaries of the various grades quoted from Cassell's “Guide to Employment in the Civil Service,” 1894, will be found of interest. Above these clerkships, &c., in many of the offices, there are valuable staff appointments:—

CLASS I.—APPOINTMENTS.

Treasury :—£200 by £20 to £600; £700 by £25 to £900; £1,000 by £50 to £1,200.

Colonial Office and Home Office :—£200 by £20 to £500; £600 by £25 to £800; £850 by £50 to £1,000.

Exchequer and Audit Office :—£200 by £15 to £400; £420 by £20 to £600; £620 by £20 to £750; £775 by £25 to £900.

War

War Office:—£150 by £15 to £400; £450 by £20 to £650; £700 by £25 to £900.

Post Office (Secretary's Office):—£210 by £10 to £300; £310 by £15 to £400; £400 by £20 to £500; £500 by £20 to £600; £625 by £25 to £800.

Inland Revenue (Secretary's Office):—£100 by £12 10s. to £400; £600 by £25 to £700; £725 by £25 to £800.

Public Record Office:—£100 by £10 to £300; £315 by £15 to £500; £520 by £20 to £700.

British Museum Assistants:—£120 by £10 to £240; £250 by £15 to £450; £500 to £600; £650 to £750.

SECOND DIVISION CLERKS.

The salary of a Second Division Clerk begins at £70, and increases by £5 a year to £100, and afterwards by £7 10s. to £190. From that point the increments are £10 annually up to a maximum of £250. There is a peculiar arrangement by which, when any clerk reaches £250, "a promotion" must be made to the higher grade of the Second Division, in which the salary proceeds by £10 annually up to £350. There is a proviso, too, that the Treasury may for exceptional merit make an earlier promotion. All these annual increments and promotions are subject to satisfactory reports on service, and the promotion to the higher grade must be made according to positive merit, and not according to seniority.

Boy Clerks:—14s. per week, rising by 1s. per week per annum.

Excise Assistants:—£50 by £5 to £80, with officiating allowance of 2s. per day when actively employed; after one year at £80 allowances cease, and salary begins at £115 and rises by £7 10s. to £150. First-class Officers, £170 by £7 10s. and afterwards £10 to £250. Second-class Supervisors, £260 by £10 to £300; first-class, £310 by £10 to £400. Collectors, £480 to £650 and £700 to £800.

Customs (Out-door Officers):—£55 by £2 10s. to £80, £85 by £2 10s. to £100. Second-class Examining Officer, £110 by £7 10s. to £220; first-class, £230 by £10 to £340; three classes of Surveyors, £350 to £550.

POST OFFICE.

Female Clerks, £65 by £3 to £100, £105 by £5 to £130, £140 by £10 to £190; three Assistant Superintendents, £200 by £10 to £240.

Female Telegraphists:—First year, 10s. per week; second, 12s.; third, 15s.; then by 1s. 6d. per week annually to 38s. Assistant Supervisors (three grades), £100 by £5 to £120; £120 by £6 to £160; £160 by £8 to £200.

Female Sorters:—12s. per week, by 1s. per week annually, to 14s.; thence by 1s. 6d. per week annually to 21s. 6d. First-class, 23s., by 1s. 6d. to 30s.

Male Telegraphists (Central Office):—12s. to 14s. and 16s.; thence to £45 per year, rising by £6 to £110. First-class Telegraphists, £110 by £6 to £160; seniors, £160 by £8 to £190. Above these are three classes of Superintendents, with salaries between £200 and £400.

Male Sorters:—18s. by 1s. to 20s.; then by 2s. to 40s. First-class, 40s. by 2s. to 56s. First-class Overseers, 56s. by 2s. to 68s.

In Canada the Royal Commission of 1891-2, following apparently the lines already laid down, recommended that the Service should be divided into two divisions, to be called respectively the first and the second division, the first to consist of (a) deputy heads of departments; (b) officers having special professional or technical qualifications; (c) chief clerks; (d) first-class clerks; (e) second-class clerks; and (f) third-class clerks. The second division was to consist of (a) officers having special professional or technical qualifications; (b) short-hand writers, type-writers, précis-writers, abstractors, indexers, copyists, and writers generally; and (c) messengers, overseers, packers, sorters, and persons following like positions. The salaries and increments were recommended to be as follows:—

	Minimum.	Maximum.	Annual Increments.*
	\$	\$	\$
Division I.—(a)	3,200	5,000
" (b)
" (c)	1,800	2,400	100
" (d)	1,400	1,600	50
" (e)	1,000	1,200	50
" (f)	500	800	50
Division II.—(a)	Not to exceed the lowest salary paid to an officer of like class in the first division.		
	\$	\$	\$
" †(b) 1.	25 per month.	75 per month	50
" ‡(b) 2.	40 "	75 "	50
" †(c) 1.	15 "	50 "	30
" ‡(c) 2.	25 "	50 "	30

The recommendations of this Royal Commission have not as yet been carried out, but the principle of classification outlined above is apparently not very dissimilar from that now followed throughout the Dominion.

* Any clerk who performs his duties "with zeal and efficiency," as certified by the deputy head, concurred in by the head of the department, is entitled to receive an increment not exceeding this amount till the maximum of his class is reached.

† If under 18 years of age.

‡ If over 18 years of age.

Appendix E.

THE CIVIL SERVICE OF NEW SOUTH WALES.

(a) RETURN showing approximately the number of persons (male and female) permanently and temporarily employed by the New South Wales Government on the 31st of December, 1894, and also the amount of money paid by each Department in salaries and wages during the same year *

CIVIL SERVICE COMMISSION.

MINUTES OF EVIDENCE.

TUESDAY, 4 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
 THOMAS LITTLEJOHN, Esq., PRESIDENT.

Critchett Walker, Esq., C.M.G., Principal Under Secretary, sworn and examined:—

1. *President.*] What is your name? Critchett Walker.
2. You are the Principal Under Secretary for the Colony? I am.
3. One of the purposes for which the Commission has met is to consider what changes are necessary in order to place the public departments on a strictly economical and efficient footing. We have not all of us had the benefit, as yet, of consulting the Report of the late Royal Commission which inquired into the Civil Service. Therefore, perhaps, if you were examined by that Commission, some of the questions which we shall put may be merely duplicates of what you have already answered. But, of course, we would not be aware of that. Could you tell us in what way the officers and others employed in your department are appointed—whether they are appointed by the Minister without respect to the Civil Service Board, or whether the appointments are made through the Civil Service Board? As a rule, appointments are all made through the Civil Service Board. There are one or two appointments of a temporary character made by the Chief Secretary. I am speaking of my own department, of course. I am not speaking of the whole of the departments under the control of the Minister.
4. Your department administers a great many of what may be called sub-departments? Yes.
5. I suppose you could tell us, in round numbers, the number of officers and others who are employed in all these departments? Yes. There are 3,752 individuals under my control, and including the Partially-paid Military and Naval Forces, 5,782 more, making altogether 9,534. The salaries in the department amount to £428,013, the volunteer pay to £39,716, and the contingent expenses of the department, including charitable and municipal subsidies, amount to £434,456, or a total of £902,185.
6. Would returns which the superior officers or heads of these sub-departments render to you enable you to give us exact particulars as to the efficiency and under-manning or over-manning of their departments? I think they would.
7. The returns that you receive from them? We do not get returns as a rule from them, but we could get returns from each department which would give the information.
8. Would you help us in selecting the names of those officers who would be of service to us in giving us information? Yes. There is Dr. Manning for one, there is Mr. Maxted for another. Each of these is at the head of a large expenditure department. Then there is the Registrar-General. I do not know whether you would care to have any military head, but Mr. Fosbery, the Inspector-General of the Police; would give you some information. I think these are all. They are the largest branches of my department.
9. *Mr. Storey.*] Mr. Walker has prepared what I think we want, namely, a list of all the departments under the control of the Colonial Secretary. I would suggest that the head of each of these sub-departments should be asked to give a report? I could get that for you.
10. *President.*] It would save a certain amount of time if that were done. Can you tell us whether, in your opinion, any of these officers are surplusage, or whether they are all absolutely necessary? The staff that I have got is absolutely necessary. I do not think that I could do away with one, except to replace him with a better. There are inferior men in the department, and I may say that the amount of work keeps on increasing.
11. Would that apply to the sub-departments? I could not answer for that till I got a return from the heads.
12. We have to consider economy in a very trenchant manner, and whether it take the shape of reductions of salaries or of numbers, or of both, we cannot tell, but we are expected to find out how the Service can be economically administered, and wherever there is even the glimmer of a possibility of disbanding any officers we should have to act accordingly. I suppose in your special department there is no sort of collusion or working in duplicate, as occurs in some other departments? No.
13. There are no forms or sets of books which are kept in a similar manner in any other department? No; they are quite distinct.
14. So that there could be no lopping off of anything of that kind? No.
15. And the forms of your books and procedure are, I suppose, thoroughly efficient? They are; I do not think we could improve on them in any way at all.
16. *Mr. Teece.*] With regard to the books, I suppose you are not really concerned with the expenditure? Only in connection with the hospitals and asylums. All the hospital accounts go through us. We have to check them. The school of arts also used to, but that is now done through the Education Department.
17. You actually check these accounts then? Yes.

C. Walker,
 Esq., C.M.G.
 4 Dec., 1894.

C. Walker,
Esq., C.M.G.
4 Dec., 1894.

18. Would that be also carried into the Treasury books? It passes through us as correct.
19. It is paid in the Treasury, I suppose? Yes.
20. You are not concerned in the payment, are you? No; ours is not a money department, but we check the accounts. They sometimes put in a claim which we consider unjustifiable, and we strike it out.
21. You are not, of course, able to exercise personal supervision over the whole of the staff of your department? No; the shape of the building would prevent that.
22. Under any circumstances you could not walk about supervising the staff? No.
23. What steps are taken with regard to the head office under your control to ensure its proper supervision? We have a head of the long room and a head of the Corresponding Branch. Mr. Brodie is one, and Mr. Patterson is the other. Mr. Cohen is head of the Record Branch; he supervises that. Mr. Fotheringham supervises the Account Branch. Everything is sent through Mr. M'Kenny, the Assistant Under Secretary, to Mr. Taylor, the chief clerk, who relieves him of the minutiae, and has the supervision and direction of minor matters.
24. Do you receive reports from these heads of the rooms? No; not written reports. They communicate to me all day long. If any clerk misconducts himself there would be a written report about him.
25. Do you make any report—an annual report, say—to the Minister? No.
26. Are new appointments made without your knowledge, or are you consulted? They are always made through me, and always have been since I have been Principal Under Secretary.
27. So that if a man is not wanted he is not brought in? Quite so. He must be brought in with my knowledge. For instance, the other day a young fellow was recommended to me, and I was asked if I would appoint him. I said if he had passed through his examinations, and there was no objection, I would submit his name to the Minister for appointment.
28. Could that be done without your initiative? No; I should say there was a vacancy, but I would not create one. If I wanted an additional man I should have to get one from the Service unless there was one with special qualifications.
29. If there were more than you required you would say that you did not want another man? I certainly would.
30. Is there any general system followed in the matter of recommendations for increases in emoluments? I cannot say that there is, but, as a rule, when I go through the Estimates, I consider the value of the services rendered by the officers and submit the names of such as I think ought to have an increase to the Minister for his consideration, leaving him to decide the matter.
31. You make recommendations to the Minister, and there your responsibility ceases? Yes.
32. With regard to other accounts in your departments, such as supplies, are these all put in the Estimates? Yes.
33. Do you prepare that estimate? Yes; with the assistance of the sub-branches.
34. When any change is proposed in the Estimates, either by way of reduction or increase, are you consulted? Always. The Minister generally calls me in and says, "These have all to be reduced so much; you will have to see the different heads and ask them about it," which I accordingly do.
35. I see by the Blue Book that there is quite a large number of temporary clerks and others employed;—can you give the Commission any information with regard to these temporary clerks; what is the occasion for them? It is very hard to say. It arises from various causes. For instance, in bringing in this new Electoral Act, the Electoral Officer (Mr. Lewis) had to get 120 clerks to transcribe and lift the names from one list to another. A number of hands were wanted to do the work, as the electorates absorbed bits of other electorates, and a lot of work had to be done in that way.
36. But that would not appear in the current Blue Book, would it? No. Then take another instance—a new asylum is opened. We have to employ a lot of wardsmen, nurses, &c. Rookwood, for example, took 100 or 200 men from Parramatta. They are put on temporarily at first and, perhaps, kept on permanently afterwards.
37. Are not a large number of those who have been in the Service for some years temporary officers? Some. They are not put on to oblige anybody. They are put on because they are wanted. I am only speaking of my own department. I know Mr. Maxted has had a great many of them.
38. Then in the ordinary office work you would not have many? No; the largest number is in the Electoral Department.
39. *President.*] Then there are very few "permanent temporaries," if the expression may be used, in your department? Very few; we have none of twenty and thirty years standing as in the Works and Lands Departments.
40. *Mr. Storey.*] Could you give us the names of the proper persons to apply to in your department for information? Certainly. In the Registrar-General's Department there is Mr. Pinhey, who gets reports from the heads of the branches connected with that department.
41. Then we had better ask him to give us the reports from the heads of his various departments? That would be the safest way.
42. *President.*] We might then call the heads of the sub-departments? Yes.
43. *Mr. Tecco.*] Would it not be more convenient to get the information from Mr. Walker instead of from the various departments? If you like I will get the reports from the heads of each department in the same style as I have furnished mine. It might take perhaps a fortnight to get them prepared.
44. The question is whether it would be better in the case of Mr. Pinhey, in the Registrar-General's Department, to get the names of sub-officers from him and examine them, or get Mr. Walker to obtain the information. I think if you would supply us with the names of the heads of the various departments under your control then we would get from them the names of those under their immediate control who would do the same? I can do whichever you wish.
45. *Mr. Robertson.*] I think you said that you did not prepare periodical reports upon the general work of your department? No.
46. Do you receive them from the heads of your sub-departments? Dr. Manning supplies us with a report; so does Mr. Maxted for the Charitable Asylum and the State Children's Relief Board; and the Auditor-General furnishes a report to Parliament.
47. *Mr. Tecco.*] That is hardly what we mean? —
48. *Mr. Robertson.*] Does the report in question show the general efficiency of the office, and the necessity or advisability of increasing or diminishing the staff? I do not think any department does that, but

but an annual return is furnished to the Civil Service Board by each department showing particulars of each officer's duty.

49. Do you at any time personally inspect the various branches under your control? No; I leave that to the heads of the branches.

50. And you receive verbal reports? Yes. Except in the case of those who misconduct themselves, when a written report is furnished.

51. But you do not get reports bearing particularly on the working of the department, and as to the advisability of increasing or diminishing the staff? Certainly not.

52. You said there were some temporary hands employed in the department without reference to the Civil Service Board? Yes.

53. Do you not think that all these appointments should go before the Board? Not temporary appointments. They cannot well go before the Board, because there is no qualification for a temporary hand. The Act requires that an applicant for appointment should pass a Civil Service examination and a Junior University examination. A temporary officer may be too old to pass either of these examinations, but still he may be useful for temporary work.

54. He would only be qualified for temporary work, would he? Yes; unless he came in under the 28th section of the Civil Service Act.

55. *Mr. Teece.*] One clause provides that a temporary officer shall not be employed longer than two years. I suppose that is honored in the breach? Yes. I can only speak of my own department.

56. *Mr. Robertson.*] You said that 120 clerks had been employed by the Electoral Office without reference to the Civil Service Board? Yes.

57. *Mr. Teece.*] That was a special thing? Yes.

58. *Mr. Robertson.*] What you know of these sub-departments of yourself you know through the reports rendered by the heads? Yes; and by occasional inspection. For instance, Parramatta and Liverpool Asylums and the Lunatic Asylums have been visited occasionally by me.

59. *Mr. Humphery.*] How many officers have you under your immediate supervision in the Ministerial department? Twenty-two officers, exclusive of messengers.

60. Under your immediate supervision? Yes.

61. How many messengers and cleaners? Twenty-four.

62. What is the total amount of the salaries of the staff? I could not tell that except from the Estimates, but I think between £6,000 and £7,000 for clerks' salaries.

63. How much is provided for the department? About £10,000, exclusive of the Chief Secretary. It includes eight or ten pavement or corridor cleaners of the Works Department, the expense of which is borne on our Estimates.

64. What would be the amount set apart for the messengers? I could not tell without the Estimates, but I think about £2,000.

65. I want you to distinguish between the amounts paid for officers and for messengers? —

66. *Mr. Teece.*] £1,400 a year is down for messengers, office-cleaners, housekeeper, &c.? Yes; from that to £2,000 a year.

67. *Mr. Humphery.*] Then the balance of the £10,000 would be for the staff, would it not? Yes.

68. In answer to the Chairman, you said that you could wish for greater efficiency in some of the officers in your department? Yes; one or two of the clerks are not quite up to the standard. There are about three of them; they are very willing and industrious.

69. Men of long service? Yes.

70. Have you reported them to the Chief Secretary? No; because I thought it would be doing an injury to the men. They have not very large salaries.

71. When did you enter the Public Service? In October, 1856.

72. What positions have you held? I was Sessional Clerk in 1856, in the Legislative Assembly; clerk in the Executive Council Office in 1857; and private secretary to several Ministers, commencing in November, 1858. After that I was Inspector of the Police. I then went out of the Service for a year and eight months and entered the Bank of New South Wales, and came back as private secretary to Sir Charles Cowper in 1865. Then I was appointed clerk of the records, then first clerk in charge of the Long-room of the Chief Secretary's Office; and, finally, Principal Under Secretary of the Colony, which appointment I have held for the last sixteen years.

73. Has the work in your department increased of late years? Very largely. It is increasing now.

74. Kindly supply the Commission with a ten years' report upon your own Ministerial department, just to show what the increase has been in the number of the staff, the amount of the expenditure, and so on? The number of letters and despatches recorded in 1883 was 12,142; in 1893 it was 17,347; and in 1894, up to the 31st of October, it was 16,513. The number of letters despatched in 1883 was 9,564; in 1893, 11,984, and in 1894; up to the 31st of October, it was 11,173. The number of communications despatched under blank cover in 1883 was 7,560; in 1893 it was 9,550; and in 1894, up to the 31st of October, it was 6,628.

75. Would you kindly prepare a return showing the annual expenditure in your department for each year from 1883 to 1894 inclusive? Yes; showing the number of officers, salaries, and total expenditure in my department.

76. Would any retrenchment be effected by altering your present office arrangements—by having a larger number of clerks in one office, instead of spreading them over several offices; that is the practice followed in the great offices in this city? I can hardly say. You would have better discipline, but I do not know if you would save expenditure, except in the way of messengers.

77. Would there not be a great saving of time? I do not know, because the Government offices are worked differently to merchant offices.

78. *Mr. Storey.*] In what way? The work is not the same. In a mercantile office the work is finished every day. It is never finished in a Government office. In a Bank—I served nearly two years in a Bank—you must clear up your work before you go. You cannot do that in a Government office. Suppose you are reading and correcting the proofs of a report of 500 pages; the work goes on for months.

79. *Mr. Teece.*] If a man has got some work to do, and he is alone by himself in a room, might he not take longer over it than if he were supervised? It might save supervision, but I hardly think it would save expenditure—at any rate, not in my office—and then, to do the thing thoroughly, you would have to rebuild all the offices.

C. Walker,
Esq., C.M.G.
4 Dec., 1894.

- C. Walker, Esq., C.M.G.
4 Dec., 1894.
80. Are most of your officers in separate rooms? There are eight in one room, five in another, and four, three, and two in others.
81. *Mr. Robertson.*] How many are there in separate rooms? Five. There is the Assistant Under Secretary and the chief clerk, the accountant, the record clerk, and the type-writer. But the last-named is hardly in a separate room, as he has generally someone with him. I would certainly like to see a mercantile system introduced, that is the system of having a big room, which can be supervised, and in which you can see what the men are doing.
82. *Mr. Teece.*] What are the office-hours? Nine to 4:30 p.m., with an hour in the middle of the day.
83. *President.*] With regard to the completion of pressing work, would it not be well that the same rule should be applied in the Government Service as in a Bank or mercantile office—finish the day's work whether it be for the mail or anything else, before you go? You could not very well do that, because the work sometimes lasts over several weeks.
84. I am referring only to the immediate day's work? That is done.
85. Do they expect to be paid overtime in such case? No. I was kept up from 9 to 12 for a month once, Sundays and all.
86. *Mr. Teece.*] The staff does not necessarily clear off at 4:30 p.m. if there is any work on? No.
87. Why not reduce the luncheon-hour? It is nominally half an hour, but they go and return within the hour. You could not change that.
88. *Mr. Robertson.*] Is the time kept? Yes.
89. *President.*] Is it ruled off at a quarter past? Yes. Fines are inflicted in some of the offices for being late, but I do not know whether it is so in all the departments.
90. *Mr. Robertson.*] Lateness would be brought under your notice in the verbal reports, would it not? Yes; but I must say the clerks are always to time in my office, and I may add that you have only to tell them, and they would stop till 10 or 12 at night if required.

Francis Kirkpatrick, Esq., Under Secretary for Finance and Trade, sworn and examined:—

F.
Kirkpatrick,
Esq.
4 Dec., 1894.

91. *President.*] What is your name? Francis Kirkpatrick.
92. You are Under Secretary for Finance and Trade? I am.
93. Broadly speaking, the duties that have been entrusted to us are to consider what changes may be necessary for placing the Public Service on a strictly economic and efficient basis. The department of which you are the head has not many branches, but it has some of considerable importance, and I think we might begin with that section which comes particularly under your own cognisance. What are the offices that come more immediately under your own eye? We have under our supervision the Stamp Duties, Customs, Printing, Stores and Stationery, the Mercantile Explosives Department, the Board of Health, the Pharmacy Board, the Shipping Masters, Marine Board, and the Public Wharfs.
94. *Mr. Robertson.*] And the Railways? The Treasurer is the Minister for Railways, but the Railway Department is separate from the Treasury, and is controlled and managed by the Commissioners.
95. *President.*] With regard to your own special department or section, those of us who have had a few minutes to give to the perusal of the report of the previous Royal Commission that inquired into the Civil Service have learnt that there are duplicate books and records kept of precisely the same business in your department and in the department of the Auditor-General? That is so.
96. What records do you keep? The books we keep, which are duplicated, are the registers of the Conditional Purchases and also the Appropriation Registers.
97. Is the Treasury Department of more importance as the keeper of such records than the Auditor-General's? Yes; we are compelled to keep these records. We could not get on without them. I cannot answer for the Auditor-General's Department.
98. If any lopping off of one or other is suggested you would say that yours ought to be the one to be retained? Undoubtedly; I could not help myself. We would have to close the department otherwise. We could not carry on the business if we did not keep the records.
99. How many officers are employed, respectively, in the keeping of each of these duplicate sets? Will you allow me to hand you a schedule containing the duties of every officer in the Treasury. It contains a little summary at the end. You will see from this schedule that the department employs 78 permanent officers, 3 temporary clerks, and 8 messengers and housekeepers.
100. The document you have handed in contains a list of the books used in the Account Branch. First, there is the principal ledger;—does that contain general accounts only? Yes.
101. Then there is the journal; what are the entries that are passed through the journal? The ordinary bookkeeping entries for the month.
102. Then you journalise everything and afterwards post it in a ledger? Yes.
103. The next is the Intercolonial Accounts Current Ledger;—what is that? The ledger showing the position of the accounts with the other Colonies.
104. What would be the nature of the transactions? Sums due for the conveyance of mails and on account of telegraphic and railway business, and various other matters.
105. Then there is the London Ledger? That merely records the transactions in London, and shows the extent of our remittances.
106. With the Agents-General? No, with the Banks.
107. Next comes the Consolidated Revenue Fund? This is in connection with the votes of Parliament. We keep detailed accounts of expenditure, and we strike the balances once a month.
108. In this Consolidated Revenue Fund Appropriation Ledger do you credit each particular account with the sum voted? Yes.
109. And as the disbursements take place they are debited? Yes.
110. It is kept separate from everything else? Yes, and no account is allowed to be overdrawn.
111. So that, for instance, if a small line of railway had an appropriation of money voted for it there would be an account opened for it? Yes.
112. And every disbursement could be checked in that way? Yes.
113. Suppose £100,000 were voted for any work, and only £20,000 were disbursed to the end of the financial year, would there be £80,000 left to its credit? Yes.

F.
Kirkpatrick,
Esq.
4 Dec., 1894.

114. Is the amount of the appropriation debited to the general fund—to the consolidated fund? An appropriation of £100,000 for railways would be a loan expenditure, I take it. In that case the whole amount of £100,000 would be credited as the sum voted, and expenditure charged thereto as payments were made. If the loan had not been raised, the expenditure would be made out of moneys at the credit of the General Loan Account.

115. But for a small amount, say of £5,000 voted for an addition to a Court-house? The whole sum would be debited to the revenue of the year in which the appropriation took place.

116. It would be a charge against the revenue, then? Yes.

117. While the other would be a loan? Yes.

118. That would figure as an indebtedness of the Colony in your annual account? Yes, if the loan had been negotiated.

119. You next have on your list of books subsidiary appropriation ledgers? Those are necessary for details that could not well be kept in a general account.

120. Trifling accounts? No; we divide appropriations into the various items making up the total amount thereof. One of the accounts would show that at once. I will take the police. The total amount for the year 1894 is £59,100 for contingencies, but the details of the different items are kept distinct in the subsidiary ledgers. Forage, for instance, is credited with £16,000, being the amount voted, and so on, each item making up the total.

121. Those show the details? Yes.

122. And the total amount is shown as a single sum? Yes.

123. They are subsidiary books that are not necessary in the scientific book-keeping of the Treasury? They might not be considered strictly necessary, but they are very useful. We sometimes inform the departments when the separate sums are exceeded, in order that they may be aware of the state of the votes.

124. What are the cash-books for—I suppose all money received by the Treasury is entered through these cash-books, whether payments by selectors or otherwise? Yes, no matter by whom paid.

125. And they are credited in the cash-book under their respective headings, are they? We could not do that, but in the revenue ledger they are. We give some idea in the cash-book to the ledger-keepers where to post the items.

126. *Mr. Teeco.*] Would all those entries in the cash-books be repeated in the journal? No; only the totals monthly.

127. *President.*] Would the posting be direct from the cash-book? No; it would be into the appropriation ledgers, but not into the general ledger.

128. In mercantile book-keeping some have a system of journalising all entries that are not cash, and they keep a proper cash-book, with full details of every transaction, and post direct from the cash-book into the ledger, and then all other entries which are not cash are journalised. Of course the Government accounts are not balanced as a merchant would balance his books. The Report of the Royal Commission which recently inquired into the Civil Service refers to the amount which is supposed to be outstanding by selectors, but they allege that the payments made from time to time are not written up into an account which ought to be shown of the total indebtedness? The late Colonial Treasurer, Mr. See, gave an authority to have the conditional purchase registers written up. There are about 170,000 of these purchasers.

129. Each of whom would have a personal account with you? Yes.

130. And as he made his payments his account would be written up? Yes.

131. And you would make a summary? Yes, and put it in the general ledger.

132. And would that show how much the selectors are indebted? Yes.

133. *Mr. Storey.*] How soon will that be finished? We commenced it in June; it will be finished, perhaps, in another month. A part of it was done by six extra clerks when Mr. McMillan was Colonial Treasurer, but afterwards it fell into abeyance.

134. How could you tell what any man owes? The difficulty was to ascertain the total. It was easy to find out what each man owed.

135. *President.*] On page 5 of the Report of the late Civil Service Commission it appears that the Commissioners were informed that an approximate balance had been arrived at, but they found that there were 123 books containing conditional purchases. How many accounts do you say there are? About 170,000.

136. This matter is now in course of being scientifically arranged, is it not? Yes.

137. The Commissioners refer to the Auditor-General keeping a duplicate of all these things. You could not dispense with them? No. Ours is the only perfect record in existence, so far as I know.

138. Is there any part of your staff that, in your opinion, is superfluous? I can speak in the very highest terms of the staff, of its correctness, and of everything connected with the working of the office. The staff is efficient, and the officers work well and loyally.

139. And no part could be spared? Not without injuring the efficiency of the whole. I would like to say that there has been an increase in the numbers of persons employed in the last three years. In 1891 there were eighty-six persons in the Treasury; in 1894 there were ninety. There were some boys appointed, but the salaries—that is to say, the aggregate annual amount of the salaries—in 1891 was £25,110; in 1894 it was £23,290, so that the staff has been increased by four persons since 1891, and a decrease in the expenditure has been effected to the extent of £1,819 14s. These figures do not include the salary of the Paymaster of Imperial Pensions, who received £400 a year in 1891, and is at present in receipt of salary at the rate of £380 a year. The Paymaster of the Treasury and the Receiver both retired on the 16th December, 1893, and the Treasurer appointed two officers who were already in the department to succeed them, slightly increasing their salaries, but effecting a very great saving as a whole.

140. What about the conditional purchasers? There are 168,000 conditional purchasers' current accounts on the books.

141. *Mr. Humphery.*] How many officers are found to be necessary for doing the work in connection with the conditional purchases? Eight.

142. *Mr. Teeco.*] Do I understand that within four days the vouchers from the Treasury are sent to the Auditor-General? Yes; the Auditor-General prepares his own books on these vouchers. At the end of the month balance-sheets are prepared, which are lent to the officers of the Auditor-General's Department, and in the event of any discrepancy between their accounts and ours an officer is generally sent down from the Auditor-General's Department to inquire into the matter, and to trace the discrepancy.

F.
Kirkpatrick,
Esq.
4 Dec., 1894.

143. *Mr. Humphery.*] Do the land agents throughout the country also keep records? Yes.
144. So that the conditional purchasers' accounts are in triplicate? Yes; but the land agents' registers in many cases are not reliable.
145. *President.*] Do the land agents send a return every week? Yes.
146. The previous Commission seems to have gone very closely into all the expenses of the officers connected with the Customs, their duties, and everything connected with that department. We cannot do that? The whole of the recommendations of the late Civil Service Commission in connection with the Customs have, I believe, been carried out. They have not been carried out in connection with the Treasury.
147. There is a body of gentlemen known as the Customs Commissioners? Yes.
148. I think Mr. Storey formerly belonged to it? *Mr. Storey:* I still do.
149. It would be desirable, I think, to get a little information about them and their duties? Sometimes people object to the Collector of Customs charging them duty on certain articles. The persons concerned can appeal to the Commissioners, who decide the matter after hearing the evidence.
150. What is the cost of the Commissioners? £600 a year. I think there are three. The expense is provided for by special appropriation under the Act.
151. In the Customs Mr. Powell would be the proper one to refer to, would he not? Yes.
152. Then the Store Department is under you? Yes.
153. Is that the square building in Young-street? Yes.
154. Mr. Hopkins, I see, is the Comptroller-General of Stores? Yes.
155. The salaries paid to the officers in that department seem to be pretty heavy? They are not high salaries, in my opinion, but rather low; I mean as to the rates.
156. Do you personally know all about it, or do you think it would be better for us to call Mr. Hopkins? It would be undoubtedly better to call the head, the Comptroller-General.
157. I suppose you could not speak with absolute personal knowledge about the Government Printing Office? No; it is too large. Mr. Potter is the officer to see.
158. What other branches are there? There is the Board of Health, of which Professor Anderson Stuart is the Chairman and Mr. Sager the Secretary. The Marine Board is also a large department; the President is Captain Hixson. The Manager of the Public Wharfs is Captain Jackson; he has improved the public wharfs very much since he has had them in charge, and he has increased the public revenue. Mr. Johnson is manager of the Stamp Department. Captain Edie is Shipping Master. Only a branch of the Ordnance and Barrack Department is under the Treasury; Mr. Williams is the Superintendent; Mr. Blanchard is head of the military section. The department has been divided into two—the civil and the military branches. Then there is the Pharmacy Board, of which Mr. W. Pinhey is the Secretary. I think it would be advisable to see the heads of the departments, otherwise, in the event of changes being recommended, they might say they had not been examined by the Commission, and had therefore no opportunity of saying anything on behalf of the departments under their charge.
159. You administer these branches? To some extent. The papers are submitted by me to the Minister.
160. *Mr. Teece.*] What arrangement is made for the supervision of your offices? Every branch has its head, who is responsible for the work thereof.
161. The clerks in that branch are all under his immediate supervision? Yes.
162. Can he see them all? Nearly so. In one or two cases he cannot, but the head of a branch has a right to see that all work properly.
163. Do these heads of branches report to you their work at times? At times. I can see every day's transaction if I wish. I happen to have been in nearly all the branches. If the weekly returns were not prepared in time I should at once know, and so with regard to the monthly returns. Every morning I get certain reports from the officers so that I know how the business is being conducted.
164. Would you know if a man was late or stayed away? Yes, it would be reported.
165. With regard to the appointments, would you report if an additional appointment were necessary? Yes. I should bring the matter under the notice of the Minister with a recommendation.
166. If no additional appointment were necessary would a clerk be sent there without your knowledge? No; I would not accept him.
167. You are also responsible for the Estimates, are you not? To a great extent; we prepare them.
168. To submit them to the Minister? Yes.
169. And in those Estimates would be placed any increases that were thought necessary? Yes.
170. And if not accepted by the Minister they would be sent back to you for revision? Yes; after consideration by the Government in Cabinet.
171. What are the office hours? Nine a.m. to 4.30 p.m.
172. Is that pretty general? Yes.
173. With an hour for luncheon? Three quarters of an hour.
174. You, of course, are concerned naturally in seeing that the department is economically and efficiently administered? I am.
175. Can you carry on the department with a smaller number of clerks than you have at present? I do not think so. I might, perhaps, manage to do without the Paymaster of Imperial Pensions by putting the emergency clerk in his place, but some of the officers complain to me of being overworked.
176. *Mr. Storey.*] Do you consider the salaries adequate, or too high or low? I consider the salaries very fair at present. There are some very deserving officers I would like to get increases for but I cannot.
177. What about officers having pensions to fall back upon after having served for fifteen years, do you not think their salaries are high? Not considering the responsibility of the offices and the duties they have to perform.
178. That is your opinion? Undoubtedly. I would like to point out that the Accountant formerly received £800 a year but now only gets £740, and that the Receiver who formerly received £500 a year now receives only £700.
179. How is that accounted for? By the changes that have taken place.
180. Are the duties of the Accountant heavier than those of the Receiver? Yes; I speak from some considerable experience and I consider them heavier.
181. *Mr. Humphery.*] I should like to see a return, for say ten years, showing the number of persons employed in your department and the aggregate annual salaries for each year from 1883 to 1894 inclusive, and also a statement of the additional work undertaken by the Treasury or the work transferred from the Treasury

Treasury during that period? Respecting additional work, I suppose you mean such as the issue of Treasury Notes which took place last year, and for which we did not have any extra assistance.

182. Will there be any difficulty in obtaining that information? None whatever.

183. *President.*] In a general way can you suggest any way to economise in your department? Speaking for the Treasury, I do not think it possible to economise any more. I have endeavoured to bring the expenditure down to the lowest point consistent with efficiency, and no appointments have been made except boys, whom we train up. We have trained six within the last few years. Each of the heads of the branches has had a letter from me, stating that retrenchment must be carried out, and that the Minister expects them to exercise the greatest economy. After the passing of the Estimates it is customary for the Treasurer to send round a circular, stating the amounts of the votes, and that the branch heads must exercise great economy, so that the amount of the vote will not be exceeded.

184. *Mr. Teece.*] Outside the matter of salaries, I suppose your Ministerial department expends a considerable sum of money for stationery, furniture, and so forth? Undoubtedly.

185-7. Do you think that is always done in the most economical way? I believe it is now. A Board was appointed last year of Under Secretaries, together with the Comptroller-General of Stores, to decide in any case in which objection might be taken by the Comptroller-General on the ground of excess in the application for stores; and if the head of the department insisted that he should be supplied, the matter was referred to the Board, and their decision was final. The same Board, with the substitution of the Government Printer for the Comptroller of Stores, deals with the printing. These Boards have been the means of effecting a considerable saving in expenditure.

F.
Kirkpatrick,
Esq.

4 Dec., 1894.

THURSDAY, 6 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Edward Alexander Rennie, Esq., Auditor-General, sworn and examined:—

188. *President.*] Your name is Edward Alexander Rennie? Yes.

189. And you are Auditor-General of the Colony of New South Wales? Yes.

190. Will you tell us the mode of procedure in your department as regards the book-keeping, and the way in which the accounts are kept;—I understand that all the vouchers from which you compile the accounts are supplied to you from the Treasury? Not all. All the Treasury final payments come to me, but all the payments made by subordinate departments come through the departments in adjustments of advances made to them by the Treasury.

191. Which are intimated to you by some former document? These advances appear in the Treasurer's daily payments. He makes an advance. That is entered in his cash-sheet, and the voucher comes to me. I enter that as an advance to be accounted for. In due time the department sends me the vouchers for it.

192. That is the process during the year. Then at the end of the year there is a complete and perfect statement made out by the Treasury, I suppose, of the whole of the accounts for that year,—is there not? Yes. The Treasury make out what we call an abstract statement of the whole of their receipts and payments. That comes to me in a complete form, so far as they are concerned, and I take that statement up and report upon it to Parliament according to the various points which I think need to be brought under the notice of the country.

193. As regards the items themselves do you take steps to verify their accuracy in any way;—I mean the accuracy of the items in the Treasury statement? As a matter of fact all the details are examined day by day. That is to say, the vouchers which the Treasury send to me as they are daily completed are examined every day. I get these documents nominally four days after the transactions take place. They are generally about a week on the road before I get them. In about a week after the transactions take place all the vouchers come to me for audit, and they are recorded in my books, and when the Treasury statement, to which you refer, comes at the end of the year it is compared with the results of my audit.

194. If they made a mistake of £10 in the addition of any column, would that be detected by you? Oh, yes. I do not remember there ever having been an error in the addition.

195. In your department do you keep books at all such as a merchant does—Do you keep a cash-book, a journal, or a ledger? No; not in that form. The daily transactions at the Treasury consist first of all of receipts under the different heads of taxation, accounts, and so forth, and of payments classified according to the votes of Parliament. All of these, both receipts and payments, I register under the different heads, both of receipts and disbursements. Of course they are totted up and made to agree with the Treasurer's cash sheet, which is sent to me every day.

196. I suppose that is a transcript of his? Yes; the cash sheets are supposed to be transcripts of his cash-book.

197. Then you keep registers of all those different accounts or headings? Yes; we find that necessary very much by way of index to the documents we receive. We could never carry on the daily audit, unless we had a register of all the transactions. That is one point, and the other is that we are bound so far as the expenditure is concerned to see that the payments do not exceed the votes of Parliament.

198. And the work is kept up within a week at any rate of the date when the transactions take place? They are supposed to be posted forthwith. Some take more than a day to post up, but generally every day's work is posted up within the day.

199. The cost of your department is a little over £12,000, and there are some officers well paid in it. They seem to be men who have been a considerable time there, and their salaries have increased accordingly. As we are put here to find out the best means to economise in the Public Service, paying due regard to efficiency, the idea has occurred to me that, where particulars of any transactions are prepared in any section of the Government departments, it is undesirable to incur any unnecessary expense in having duplicates of records, which it is to be presumed are absolutely complete in themselves, and looking at the great trouble and the great cost of the Auditor-General having a duplicate set of accounts prepared

it

E. A. Rennie,
Esq.

6 Dec., 1894.

E. A. Rennie,
Esq.
6 Dec., 1894.

it is a question whether it would be advisable for your staff, or such members of your staff as you select for the work to attend at the Treasury, and verify the accounts in the Treasury with the vouchers proper to the investigation. It appears to me that such an investigation would be just as complete as the present method under which you have the vouchers in your own separate building, and under your own separate control. Would it be possible to have a certain section of your staff so employed as to economise as much as possible, and still be as efficient? I may say that that question has occupied my attention a great many years, and on a number of occasions, and I have always come to the same conclusion. Seeing that we must do certain things under the Audit Act, I always come to the same conclusion, that the process by which we are now recording for our own purposes the Treasury transactions is really the most economical way of doing it. The verifying of the Treasury books in the way you propose would lead everything, so to speak, astray. We should just have the vouchers with nothing to refer to them, and there would be a running backwards and forwards, either on our part or on their part, if the plan you propose were adopted. Running backwards and forwards would take up more time than if we had the books to ourselves. I may say that our books are not kept in the same way as the Treasury books. We keep them for one purpose, and the Treasury keeps them for another. We do not keep them as duplicates. For example, we do not have a regular debit and credit ledger such as the Treasury keeps. We do not need to have that, but the expenditure register is so kept as to show the votes and the warrants that have been issued against those votes, and as transactions daily occur it can be at once seen both how they stand in regard to the warrants, and also in regard to the votes. Every month there is a total made up. A balance is then struck, so that the expenditure registers we keep are essential to our keeping up the appropriation audit. It is perhaps the most important part of our duty.

200. Supposing there were a large and commodious building in which the Treasury Department was located, and there were also plenty of space to accommodate your staff, would that help in any way to carry out the object I have suggested? I do not think it would. Practically we are as near the Treasury now as is necessary. There is a very great objection to all the clerks being constantly in the same building, or even to the Audit clerks going frequently into the rooms of the Treasury Offices. That is a matter of principle that has been taken notice of in other countries, and I have always myself felt that if it is not a dangerous practice, it is an inexpedient one that the Audit clerks should be hand in hand with the Treasury clerks. It is not a safe plan to follow. Formerly the Audit Office and the Treasury were both in the same building, but considerable inconvenience arose from it in that way. The Treasury clerks were always coming to us for information, and ours were going to the Treasury for information. To some extent that is done now, although I have always discouraged it. The Treasury trust a great deal to our correctness in some things. Unless it is something very urgent, that they should know at once, I always keep my clerks as clear from the Treasury as possible.

200½. Do you consider, from the long experience you had with your staff, that there is any possibility of reducing the staff to any extent for the sake of economy? I may say that I was considering that point to-day with the Inspector of Accounts, who has charge of the office, and both he and myself have come to the conclusion that we may be able to dispense with several clerks, partly because two or three of them are not very efficient, and partly because I think a little more could be got out of the better ones. They have a certain amount of work to do, and when it is done they do not care about doing more, but we might be able to dispense with perhaps three or four of the less efficient clerks.

201. Those of us who are in mercantile circles are fully persuaded that the scale of payment generally is on a much higher grade than in mercantile circles, and I suppose that some of these less efficient men that you have in your mind have been forced up by circumstances—by seniority, for example? That has been the main reason, I think, why some have been retained. I have lately come to the conclusion that the principle of seniority is carried too far—a great deal too far,—and that the main element in promotion ought to be the efficiency or qualifications of the individual, and that when a vacancy occurs it should not be the next man who should go up, but that the head of a department should have the privilege of recommending some of the lower clerks on the staff to fill the position. Of course you know that we are very much hampered by rules, regulations, and traditions, and outside influence. If I wanted to promote an officer lower down on the staff to fill a vacancy I could not do it. First of all, the Government would not acknowledge it, and then I should bring upon myself a great deal of disturbance in the office. I have found that out before on one or two occasions.

202. So you are sometimes obliged to put a round man in a square hole? I cannot help it. In one case about which I gave evidence before the former Civil Service Commission a clerk was recommended for promotion, but as I had already given evidence before the Commission that I considered he was fully overpaid I passed him over, and as a matter of fact he has never got the promotion since, and two or three have gone over his head. But I could not pick out an individual and say, "Well, I think that you had better leave. I think I had better recommend you to leave the department, because I do not think you are worth your pay." I could not do that because I would have to give very strong reasons to the Government why I considered him inefficient. My opinion might not be the same as that of other people, and, of course, his friends would come in shoals and say, "What do you mean by saying that so-and-so is not efficient?" We might be perfectly satisfied that an individual in the department was not so efficient as to justify his getting his present salary, and yet not be able to remedy it. That is a difficulty which occurs throughout the Service.

203. That would lead to the conclusion that the system of appointments and promotions is a bad one? Well, I think it requires amendment.

204. Do you think it is capable of improvement? Yes. I may say, in regard to the new hands, that I never take on any until they have passed an examination in my own office as to figures. I put them through a stiff examination, and I have rejected a good number, even some who have passed University examinations. I could not have them because they were not sufficiently accurate at figures or sufficiently quick. And though they may have been sent to me by the Minister I have said I could not take them. Of course he would not be likely to over-rule me in a matter of that kind, because I could at once report that I had people put on me who were not fit for the work.

205. Then there would be an appreciable saving by dispensing with the three or four clerks you speak of? Yes. There is this other consideration that if some alteration were made in the Treasury work and the departmental work, in regard to dealing with money, it would make a great difference in the amount of work; but so long as the present arrangements continue there is a great amount of work that has to be done, that I feel might be considerably reduced, but under the Audit Act I am bound to do certain things.

206. Then you could suggest certain changes in the mode of doing the business that would minimise the work? I think so. I will give one illustration: The Treasury have what I call a half-and-half system of making payments under votes. They generally pay the departmental salaries under advances to the heads of the departments, while they retain the direct payment of contractors' vouchers for forage and rations and that sort of thing. I do not know why. The Police Department is a case in point. There is a very large number of vouchers for forage for the mounted police of the country. I looked at the ledger to-day, and there are from 1,500 to 2,000 single entries for forage vouchers. There is page after page of them which the Treasury pay over the counter. All these vouchers pass through the Inspector-General of Police or his officers before they come to the Treasury. I say that as the Treasurer advances the Inspector-General of Police the amount of salaries, which is very much the larger part of the vote, he might advance the other too. The Inspector-General pays all the salaries and accounts to me for them, and besides that he gets a small advance, £1,500, to pay petty contingencies, but all the forage vouchers and some others are paid by the Treasury over the counter. If the Treasury were to make the Inspector-General of Police the paymaster for the whole of his vote you will at once see that the amount of entries in the Treasury books and in mine would be very largely reduced. That is the same case with a number of other departments. As a set-off against that we have the Education Department, which has an annual expenditure of about three-quarters of a million pounds. In that case the Treasury pay them advances to the extent of £50,000 or £60,000 each month, and the Treasury never see a single voucher. The Education Department furnish me with an account current, supported by vouchers which come to me every month. There the whole thing is in a nutshell. They do not occupy a couple of pages in my book while the police payments occupy a large number. I think that might be amended.
207. *Mr. Teece.*] With reference to the difference in system already referred to between the Treasury and the Audit Departments, I understand that the cash-books in the Treasury are not put under the heads of the different appropriations. For example, let us take the salary of the Principal Under Secretary. When that is paid by the Treasurer it would appear in the same way as the salary of the Under Secretary for Lands? Yes.
208. And in your books one would appear against the vote for the Colonial Secretary's Department, and the other against the vote for the Lands Department? Yes.
209. And it is that distinction which you wish to preserve? Yes. The cash-sheet furnished to me shows on the margin of receipts and payments the heads of account to which I suppose they post them.
210. Then their book is a duplicate of yours? Well, I am certain it is not kept in the same way as mine.
211. Do you think it is necessary in order to keep a check on the accounts appropriated that you should keep the books in that way? Yes.
212. You want to see that the vote is not exceeded? Quite so.
213. That would not hold with regard to the receipts by the Treasury? No.
214. Nor with regard to the Customs receipts? No.
215. Do you get vouchers for Customs receipts? Yes.
216. And who records these? We do.
217. For what purpose? Partly as an index to the vouchers. The Customs vouchers which we get every day are checked in another way. The Collector of Customs pays the money over to the Bank. The Treasury never see the money at all. They simply take the Bank entry as their receipt and enter it in their book.
218. Speaking generally of receipts by the Treasury, I suppose they will appear in their books under the heads to which they belong? Yes. They could not make their statements without.
219. And would they appear in your books in the same way? Yes; but we make them as brief as possible.
220. You give a summary of them? Yes; but each day's transactions are posted all the same.
221. Separately? Yes.
222. But you would not post the individual items? Every voucher has to be entered in some way.
223. So that it would be an exact duplicate? Yes. The copy of the Treasurer's book contains an enumeration of the vouchers which the Treasury sends to us. That is in accordance with the Audit Act. We post them all up under their different heads, and then check them to bring out the Treasurer's total. We have to check our work by the Treasurer's total.
224. Your records, then, are a copy of the Treasury sheet differently arranged? It is an abstract. We retain all the vouchers, and it becomes a most useful reference. We could not do without it.
225. With regard to those receipts, seeing that your books are a transcript of this cash-sheet from the Treasury, could not you compare those vouchers with the entries in the Treasury books? Yes; we could do that.
226. And still retain the vouchers? Yes; we could do that; but I have an objection to our clerks going to the Treasury at all.
227. You think there might be collusion? Yes. As far as the Customs are concerned, that department is subject to a very minute audit apart from the Treasury altogether. I send down two clerks for the purpose to the Custom-house. All the goods that are passed into bond are entered into the Customs warehouse-keeper's register, and the Collector's warrants which we get are all put in that book, and the home-consumption warrants are dealt with in the same way. They are all called off against the warehouse-keeper's stock book, and those warrants are brought up to my office, and the amount of duty on each of those warrants is computed there.
228. That is to avoid the loss of the duty? Yes.
229. Not to account for the moneys received? No. The total of the Customs receipts for the day corresponds to the amount paid to the Bank, and that is entered in the Treasurer's cash-sheet.
230. That would not apply to the land receipts? No; they are a class *per se*, totally different.
231. Do you know anything about these? Only from the accounts which the land agents send.
232. Then the land agent's money goes to the Treasury? Yes; and the Collector's money goes to the Treasury.
233. If it were practicable, confining our attention to the matter of receipts, for that Treasury's book to serve you for the purpose of verification, instead of repeating the entries in your own books, would that save a considerable amount of labour and expense of books? It might do so, but I rather think that the saving would be very small.
234. Do you keep account for the conditional purchases? Yes.
235. Individual accounts? Yes.
236. And are they also kept by the Treasury? Yes.

E. A. Rennie,
Esq.
6 Dec., 1894.

- E. A. Rennie, Esq.
6 Dec., 1894.
237. We are informed that there are 180,000 or 200,000 of these separate accounts; I believe they are kept in the form of ledger accounts? I think that their registers are kept somewhat differently from ours. I am not quite certain, but I think these registers of conditional purchasers were in the first instance started by me in my own office.
238. However, the object of keeping these registers both by yourself and the Treasury is, I presume, the same, namely, to know how much has been paid by the conditional purchasers, and how much they owe? We do not concern ourselves about how much they owe. What is paid we know is right or wrong. The registers are all framed to run on for a long time, till the very end of the time, viz., twenty-five years or so.
239. Are yours in the form of ledger entries? No; they are framed for the year. The conditional purchasers' account shows all the years that they have to run and the amount payable on each. Take a 40-acre allotment on which £2 a year is payable. It should be paid not later than 31st March. The land agent sends vouchers to the Treasury and then they come to us.
240. If the instalment is not paid when it is due? Then we call attention to it.
241. Whose attention? The attention of the Treasury. But there is not very much of that. Sometimes the Minister for Lands allows an extension of time.
242. Would there not be a great saving if only one set of books were kept, and would it not be practicable for you to compare the Treasury's books instead of rewriting them in your own books and comparing them there? It is necessary to have a duplicate, as in case of fire either place might be burnt down.
243. In case of two fires they might be both burnt down? Yes.
244. Do you happen to know if similar books are kept in the Lands Office? No. My idea has always been that it is a mistake for the Treasury to keep them at all. The Minister for Lands, who is the landlord in this case, should have them in his own department. It has always seemed to me wrong that the Treasurer should keep them at all.
245. *Mr. Storey.*] But the Treasury gets the money? The Lands Department might collect the money and then hand it over to the Treasury. At all events, that question has been considered over and over again, and we have always come to the same conclusion, that it would be safer and better for the Audit Department to keep a separate record.
246. You mean as a matter of safety? Partly, and partly so as to have an independent record, because if there were only one record you can easily see that there would be an open door for fraud.
247. But the record is the same? That does not matter. I would not like to abandon the custom.
248. Are all the departments subject to your audit? Yes.
249. What steps do you take in regard to the railways? Are you speaking of the receipts?
250. Yes? And of the receipts only?
251. Yes? We have a small staff of inspectors who supervise the work of the traffic auditors. This question came up ten years ago or more, when it dawned upon the Treasurer and myself that there was a large amount of money that was not subject to any audit whatever, except that of the Commissioner's own officers. After a good deal of correspondence, the late Sir Alexander Stuart, when Colonial Secretary, went into the whole matter, and he approved of the plan of our having separate inspectors to go round the stations. Our officers do that. There are four of them now. They go over the whole of the stations once a year. They have done an immense amount of good, and the Commissioners think a great deal of their work. My inspectors investigate the whole of the operations. They count the cash and the tickets, look at all invoices, and see that the traffic between the platforms and the main stations is carefully looked after. In this way we have managed to recover a considerable amount of money. The whole of the receipts are compared with the carriage rates, the fares for passengers, and the rates for the goods traffic. All that is carefully examined. Of course they cannot go over the whole in twelve months, but the Railway Traffic Auditor has examined up to a certain date, and lately we have come to an understanding that the inspectors should not cross each other.
252. Does this inspection apply to the Sydney office too? Yes; but not to the Railway Commissioners' office. That is an expenditure branch chiefly. It is the stations that I am speaking of.
253. You told us that one of your duties was to see that the money voted to special purposes was spent in that way? That is a different matter.
254. I am speaking of the whole Railway Service—what audit do you make? We apply to the expenditure exactly the same rules that we apply in the case of the other departments.
255. Do you record all this in your office? All that appears in the Treasury accounts. We do not attempt to enter the adjustments of advances in detail. We take the advances as they are charged by the Treasurer, and see if the adjustment is according to the appropriation.
256. You do not think it necessary then to check the receipts and disbursements of the Railway Commissioners in their own office—you do not obtain vouchers from them? The receipts all go to the Treasury, or rather are paid into the bank. It is the same with their expenditure as with that of the police. There are certain things that are paid at the Treasury, but the wages are paid by the Commissioners.
257. You said you found it necessary to duplicate entries in the Treasury books in your own books, in order to have an independent record? Yes.
258. Do you pursue the same course with regard to the railways, which is an extremely large branch of the Public Service, that you do with the other departments? The Railway Department has certainly a very large expenditure, but the greater part of it is for wages which are advanced by the Treasury once a month or a fortnight. They account to me for it. They send me all the wages sheets. Every penny which does not appear as a final payment in the Treasury accounts comes to me in the way of an adjustment of an advance, so that nearly the whole expenditure by the Commissioners comes to me in the way of wages sheets.
259. Do you record them? No; we have an adjustment ledger. The Commissioners send in (say) £80,500 worth of vouchers. That is entered against (say) £100,000 advanced.
260. In one entry? Yes; there is an acquittance for every 6d. that is paid away. We do not enter those in detail.
261. Do you think it necessary to go through the railway accounts to see that the passenger fares or goods rates have been received? We do not check the whole of the moneys which are collected by the Commissioners. We simply see that the work is done at different stations.
262. You send an inspector to look at the Commissioners' books? Yes; at the Commissioners' station books.

263. And seeing that they are right, you accept them—you do not duplicate them? No; and we do not go over the whole of them.
264. If you are content to accept, after a proper inspection, the Railway Commissioners' statements of what they do, why cannot you accept the Treasurer's statements with regard to the conditional purchases and their books? There is this fact, that although the Traffic auditors and the Commissioners' inspectors are officers of the Commissioners, they audit the accounts. All I have to do is to see that they do it properly, and I am satisfied; but it is not the same thing with regard to the conditional purchases or any other branch, because there is no other outside inspection of the same kind.
265. No, exactly; but I suggest that there might be that outside inspection by you and your officers? The two things are not quite alike. The Treasury books include everything—all the receipts in the different departments.
266. In the same way as the Public Instruction—you get a monthly pay-sheet? Yes; an account current and a schedule, supported by all the vouchers which they pay.
267. How are the school-fees received? All those are collected by the Education Department. We could not do it.
268. You accept what they tell you? We can only accept their sworn account. I do not know whether the Under Secretary for Education gets sworn returns from his teachers, but all the money which they collect is sent to the cashier, I suppose, at the Education Department, and that is paid to the Treasury, and we simply take it as it stands. We could not attempt to check that.
269. The principle adopted in treating these things depends upon the extent of the transactions, I suppose. The Railway and the Education Departments are so large and the items of receipt are so extremely small that it would be an enormous labour to do it, but the same thing occurs in the Treasury with respect to the receipts of the conditional purchases, and if they were of equal magnitude you would probably accept the Treasury's statement;—is not that so? We might be satisfied with the land agents' vouchers. All the instalments and interest on conditional purchases are paid through land agents. There may be some paid direct to the Treasury, but the great bulk are paid by the land agents, and we get their attested accounts showing what they say they have collected. We have to see that what they say they have sent to the Treasury is actually there, and we get the vouchers from the Treasury.
270. Could you not avoid that second record in your office? It could only be done as you suggest—by verifying the Treasury—but their books are not under our control. We do not know what alterations they may make in them, and, as a matter of fact, alterations have been made.
271. Would you not be equally ignorant with regard to the Railway Commissioners or the Education Department? To my mind the transactions are so totally different that I cannot compare them.
272. They are different in kind, but they are exactly the same in principle, surely? I have no desire at all to magnify the office over which I preside, nor have I any desire to extend its work; in fact my whole purpose for years past has been to reduce the work as much as possible.
273. The Commissioners are perfectly satisfied that you recognise that you are a public officer of a unique character—that you are the custodian of the good faith of the departments, and are anxious that no mistake should occur? And I wish that the work should be carried out in the most economical and the most efficient way. I have always found the arrangements of the office to be very effective, and I would hesitate to recommend any other.
274. You have said that you thought you could dispense with three or four clerks;—are you responsible for the preparation of the Estimates from your department? Yes.
275. Would you suggest to the Colonial Secretary that these might be reduced? No. I have not done that because I could not pick this or the other one out and say, "You are of no more use to me." I could not say that to one or two officers not 60 years of age. They do their work to a certain extent.
276. You feel there is not full work for all the staff? Not if they all worked as they ought to do. Of course they are not under me all the day long. I scarcely ever see them, nor are they always under the eye of the Inspector of Accounts. He cannot be always about the rooms.
277. If you felt that two or three clerks could be dispensed with, and you intimated that to the Colonial Secretary, he would naturally ask you which they were? No doubt.
278. And you would say which? Yes.
279. What would be the aggregate amount of salaries? £700 or £800 a year would be about the total amount of the salaries of the clerks I am speaking of. The highest one gets £300 a year; another receives over £150. Most of the clerks consider themselves underpaid by comparison with the salaries paid in other departments to officers whose duties are not a bit more responsible, perhaps less so, than in my department. The Receiver in the Treasury Department gets £700 a year, and the Examiner £500 a year, and I am sure that is an extravagant rate to give for duties compared with the salary paid to the examiners in my department. The duties of the Examiner in the Treasury Department are certainly not more onerous than in my department. Then the Senior Inspector gets £560, and the junior £550, another junior £515, and so forth. In my department the Senior Inspector only gets £470, and the junior only £357 10s., and I am sure that their work is quite as laborious as that of similar officers in the Treasury Department; perhaps it is more so.
280. Have your inspectors free passes? Yes; and a daily allowance. On this side of Goulburn and Bathurst within a certain radius they get 15s. a day, and beyond that £1. The Treasury inspectors get 15s. a day.
281. Have clerks been sent you whom you did not want? If they do not suit me I will not have them.
282. Do you submit a report to the Colonial Treasurer on the discipline of the staff? No. I have nothing to do with the Treasurer.

E. A. Rennie,
Esq.
6 Dec., 1894.

MONDAY, 10 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
 THOMAS LITTLEJOHN, ESQ., PRESIDENT.

Edward Alexander Rennie, Esq., Auditor-General, recalled:—

- E. A. Rennie, Esq., 283. *Mr. Robertson.*] You said in your evidence on Thursday that you could not say what the Treasury books showed—that you had never seen the Treasury books? That is a fact. I have not seen them for many years.
- 10 Dec., 1894. 284. But you do have the books in connection with the Customs Department, do you not? I do not see the Customs books. I get their cash-book; I think that is all—that is to say, the cash-books showing their daily receipts.
- 285-6. And do you make up from those cash statements books for your own guidance and for your own purposes? I cannot say we do;—in fact we do not. My chief business is with the Treasury vouchers. These include, of course, the daily transactions with the Customs. It might save some questions if I were to call attention to the fact that the Audit Act provides that all the vouchers with the Treasurer's cash-sheets—all that is necessary to let me know what the Treasury does in receipts and disbursements—show both the heads of receipts and of disbursements. The cash-sheets come to me with the vouchers. The vouchers are detached from the cash-sheets and go to the posters, and after their work is done it is compared with the cash-sheets, so that there is a thorough check.
287. You said you retained all the vouchers? Yes.
288. Have you got all the Treasury vouchers? Yes.
289. Have you never destroyed any? Yes. They were destroyed up to 1879; that was done some years ago.
290. You have them from 1879 on? Yes; beginning from the year 1880—I have them all.
291. You said that four officers were constantly travelling over the railway-stations? Yes.
292. Do they do any other work besides? No.
293. That occupies their whole time? Yes, and very hard work it is to get it done.
294. Do you audit the accounts of the Commissioners at the head office? No; not in their own office.
295. What you do is only a partial audit? It is a review audit of the work of the Commissioners' Traffic Auditors, and an examination of the work at the different stations. The Commissioners' accounts of expenditure come to me in a regular way. We get vouchers for advances from the Treasury to the Railway Commissioners, and they furnish to me adjustments of those advances.
296. *Mr. Teece.*] Do you mean statements of their expenditure? Yes. They furnish me with a list of their paid vouchers and the total of their abstract list of those vouchers is set against the advance.
297. *President.*] The pay-sheets, I suppose, are signed by each individual, salary or wages? Yes.
298. *Mr. Teece.*] And for every disbursement you get vouchers? Yes. I think I may say that this is so chiefly; the other payments are made at the Treasury.
299. And you get the vouchers from there? Yes; with the daily sheets. They pay partly by advance and partly by vouchers.
300. *Mr. Robertson.*] This audit extends only so far as the stations outside of Redfern? Including Redfern and Darling Harbour as well.
301. Is that for revenue? Yes.
302. Do you not think that the remark you made with regard to the dangerous practice of your Audit clerks being too near the Treasury, or being seen too often going into the Treasury, would apply to officers who were on the stations? Hardly; they are only there once a year, and my officers and those of the Commissioners are, so to speak, strangers to each other.
303. What is the danger of an auditor being seen too often near the work which he is supposed to audit—you said it was a dangerous practice the other night. As I understand it, the oftener an auditor checks the work that comes under his notice the better? Yes; if we know anything of human nature, we must come to the conclusion that there is always more or less danger of collusion in some way or other.
304. I think that would be a very sorry view to take of auditing generally? It is not only my own opinion, because it has been expressed before.
305. But you agree with it? Yes.
306. Do you remember a paper being laid on the table of the Legislative Assembly in October, 1864, entitled "Improved system of conducting the business of the Treasury"? Yes.
307. You remember that well? Yes; I had good cause to remember it.
308. Do you remember the Ministerial minute with reference to it? It is such a long time since I read the papers that I cannot be sure.
309. The following are extracts from the paper in question:—

IMPROVED SYSTEM OF CONDUCTING THE BUSINESS OF THE TREASURY.

Ordered by the Legislative Assembly to be printed, 18 October, 1864.

No. 1.

16 June, 1864.

THE Treasurer submits, for the consideration and approval of His Excellency the Governor and the Executive Council, an improved system of conducting the business of the Treasury, as embodied in the accompanying minute.

Immediately on taking office the Treasurer became aware of the great inconvenience and defects of the present system, and particularly in reference to his inability to furnish, from resources within his own department, Statements of the Public Balances and Accounts, in that satisfactory manner which his responsibility to Parliament and the country demands. He desired, however, to test the efficiency of present arrangements before recommending a change, and now, after eight months' experience, he submits the annexed propositions, as calculated to place the Public Expenditure and Accounts on a safe and intelligible basis.

GEOFFREY EAGAR,
 Treasurer.

There are twenty clerks employed in the Audit Office, at an annual cost of	£5,320
There is a further vote for clerical assistance of.....	250
In all	£5,570

The

The majority of these clerks are engaged upon duties altogether incompatible with those of audit, and which should be confined exclusively to the Treasury. E. A. Rennie,
Esq.

The design of the present Government is to impose on the Treasury exclusively the appropriate duty of keeping the Public Account of Receipt and Expenditure, and of exhibiting the results to the Parliament, and to confine the Audit Office to its legitimate province of auditing the accounts as kept in the Treasury. 10 Dec., 1894.

Do you remember reading that? Yes; that was his opinion. The Audit Act was passed in 1870, which knocks all that on the head.

310. These recommendations, then, were never given effect to? To some extent they were, but not altogether.

311. Do you know what the then Auditor-General (Mr. Mayne) wrote upon it? Yes. Since then the Treasurer has made out his statements, and we have reported on them to Parliament, but we did not report on them to Parliament till the Audit Act came into force in 1870.

312. *President.*] Since the Audit Act of 1870 came into force, has the same system been followed that exists now? Yes.

313. The then Auditor-General further wrote as follows, on the occasion to which I have referred:—

No. 12.

Auditor-General to Principal Under Secretary.

Sir,

Audit Office, Sydney, 23 June, 1864.

I have the honor to acknowledge the receipt of your letter of the 21st instant, enclosing one from the Department of the Treasury with a printed copy of a Minute of the Honorable the Secretary for Finance and Trade, which had been submitted to and approved by His Excellency the Governor and the Executive Council, and conveying to me the instructions of the Honorable the Principal Secretary—that so far as the document in question relates to this department, I shall take the necessary steps for carrying its provisions into effect, * * * and shall, consequent on the instructions you have conveyed to me, apply myself earnestly to give, to the best of my ability, effect to the decision of His Excellency the Governor and the Executive Council, and to carry out the audit of the Public Accounts to the utmost that the means left at my command will admit.

I simply drew attention to that. Although the inconvenience of the practice was pointed out then it still went on. It has gone on up to this year, keeping the vouchers posted up and duplicating the books, has it not? We do not duplicate the Treasury books.

314. But you enter up all the revenue and the expenditure in books of your own? They are wanted for one very important end, namely, to furnish me with an index to the vouchers. We could not proceed with our duties a day without doing this, and without entering up the vouchers in these abstract ledgers, or, as I call them, index ledgers. Unless we did that, I should have to get out the older vouchers and compare them, and the danger of getting mixed up would be very great. We have always found that the present system is the most convenient and effective means of carrying on our work. There are certain things required to be done. For example, I could not tell whether the Treasury made a payment without a warrant, unless the item was posted up against a warrant. The votes and the warrants are both important means of checking all the payments which the Treasury makes.

315. Which entries are already entered up into books provided for the purpose from the Treasury Department? But the Audit Act says I am not to have the Treasury books. I am provided with an independent audit, and I believe that the Treasury would not with any degree of willingness allow my people to go over there and look into their books. First of all, the Treasurer has to furnish me with certain documents under clause 20 of the Audit Act, which reads as follows:—

20. The Treasurer shall keep at the Treasury a book, to be called the "Cash-book," with such subdivisions as the Treasurer may deem fit, and shall enter therein daily, under specific heads, the several sums received from Public Accountants or others, and his several drafts or cheque upon public account, and shall on every day on which the public offices are open send to the Auditor-General a copy (to be called the "cash-sheet") of so much of the said book as he shall not have previously sent to the said Auditor-General, so that the said cash-sheet shall not contain any entries of older date than four days previous to the day on which it is so sent, and with such sheet shall transmit the several vouchers and documents relating to the moneys so received and paid out of the Public Account.

21. The Treasurer, as soon as conveniently may be after the expiration of every quarter of the financial year, shall publish in the *Gazette* a statement in detail of the receipts and expenditure, as well of the Consolidated Revenue Fund as of the said Trust Fund during such quarter, together with a comparative statement of such receipts during the corresponding quarter of the previous financial year, and in like manner at the expiration of the financial year shall publish an annual statement of receipts and expenditure, with a comparative statement of such receipts during the previous financial year.

316. That is what the Treasurer has to send to you for audit? Yes.

317. But it does not say there that you are not to audit the Treasury books? But I do not need to do that. There is no provision for that.

318. *President.*] The sheets and the vouchers are mentioned in that clause? Yes.

319. *Mr. Robertson.*] It shows that the Treasury is to keep a "cash-book"? It is hardly necessary to show that it has to keep other books.

320. *Mr. Teece.*] There is an entry in the Treasurer's cash-book of the various transactions. A copy is sent to you with the vouchers, and there is another entry of the same in your book? But I do not copy his cash-book. I make an abstract of it.

321. The same transactions are recorded three times? Yes; you may say they are. They are entered a good many more times than that, counting all the cheques and bank entries.

322. *Mr. Robertson.*] There are three distinct writings up of one thing? You may say there are four.

323. By the Act you say it is not provided that you are to audit the books? No.

324. But you audit their vouchers? Exactly; and that cash-sheet which they send.

325. You do not think that auditing the accounts of the Treasury necessitates your consulting the books which they keep? I do not need to do that at all. Clause 28 of the Audit Act provides as follows:

33 VICTORIA, No. 18. 28. The Auditor-General on receipt by him of the cash-sheet referred to, section twenty of this Act, shall in the first place compare the credit and debit entries with the supporting vouchers and documents forwarded therewith and examine their correctness as to rates, computations, and castings, and in the next place examine the supporting vouchers as to whether they bear upon the face of them a correct description of the proper heads of receipt or of expenditure to which the moneys mentioned therein have been debited or credited respectively, and in the next place ascertain whether the moneys mentioned on the debit side of the said cash-sheet have been duly paid over to the Public Account, and whether the sums mentioned as paid on the credit side of the said cash-sheet have been actually and duly disbursed under competent authority, and on the prescribed certificates, and the Auditor-General shall allow and discharge the Treasurer monthly for all receipts which shall be found correct in the particulars hereinbefore mentioned, and for all payments made in pursuance of the warrants under the hand of the Governor prescribed by the eleventh section of this Act, and accompanied by the receipts of acquittances of the respective persons to whom such payments have been so made.

I contend that when that is done, the whole audit is complete and as perfect as it is possible to be.

- E. A. Rennie, 326. *Mr. Humphery.*] There is no provision in that clause for transcribing the vouchers that you get from the Treasury into books? No; but I could not audit them unless I jotted the information down on sheets. I must make an abstract of the vouchers to see how far the different votes have been operated on and how far the Treasurer has acted upon the Governor's warrants. These two points are most essential. I do not need to go to the Treasurer's books to find that out. I must make that out myself.
327. *Mr. Robertson.*] But you could do that from the Treasurer's books if they were audited by you, and, as a matter of fact, they are recorded in the Treasurer's books? In a certain way.
328. *President.*] Is it the case that the heads of accounts for all these vouchers are absolutely alike in the Treasury books and yours;—are the heads of accounts which are adopted for a payment exactly alike in both? They are in accordance with the votes of Parliament. I get a copy of the cash-sheet from which I take the information I require.
329. *Mr. Robertson.*] Then they would be under the same heading;—if not, you would draw their attention to the fact that they had entered an amount under the wrong heading? But that would be discovered by the vouchers.
330. The vouchers and the sheet go to you together? Yes.
331. If you found that an expenditure was under the wrong heading you would immediately have it rectified? Yes.
332. Take one account as an example. Suppose a disbursement were made of £198,020;—the Treasury account with the same heading should show exactly the same balance as your accountant's would? It ought to. That is just where the audit comes in. My audit of the vouchers made independently of the Treasury brings out the same result as theirs if they are both correct. I say that an independent audit is the most important point of all.
333. What is your practice with regard to contracts—take, for instance, the Education Department;—what is your practice with regard to their vouchers;—upon what authority do you pay or permit a payment to be made? We have the contracts themselves. They come to us. If they do not come I take very good care to ask for them. I get the contracts and the rates, and so forth. The payment of these contracts is made before I see the vouchers at all, and all the payments are made before I see the vouchers in any case.
334. Who certifies on the voucher that the amounts are correct? That is certified by the officer in charge.
335. *Mr. Teece.*] Who would that be in the Education department? The Under Secretary, I suppose.
336. *Mr. Robertson.*] Would the Department provide you with a schedule of contracts? Yes.
337. Which you enter up? No.
338. What do they do with the schedule which they send you? They send us now the contracts with the schedule. Some time ago we did not get these, and, consequently, an officer in the Education Department manipulated the vouchers, and robbed the public of some very large sum of money.
339. I had that under my consideration when I asked you that question? Now, we get the contracts themselves.
340. How long ago would that be? A year or two ago. Whenever there is evidence of a contract on a voucher we always call for it, and the contracting party—that is to say, the head of the department in which the contract occurs—it might be the Engineer-in-Chief for Harbours and Rivers—is responsible, and certifies that the work has been done according to contract. There is generally an account signed by the officer incurring the expense. These accounts are generally doubly certified.
- 341–2. Do you then pass the payment as correctly made? No; we are not even satisfied with that, because certificates may be signed as a matter of form. We check all the computations. I am bound to do that.
343. Take this matter to which we have referred, I think Scott was the name of the man you referred to? Yes.
344. He provided you with schedules of the contracts, did he not? Yes.
345. What did your Department do with those schedule numbers? They were nearly all for single sums. When we got the vouchers we compared them with the schedules.
346. Did you only keep the schedules by you—what did you do with the schedules? Nothing.
347. Did you not enter the expenses up? No. We did not enter expenditure. We got the voucher and checked it by the schedule entry of the contract. I just happen to remember that one of the entries he made was, say, "John Smith." £13 was the amount of the contract. He put the figure 1 before the 13 and it was entered as £113. That came before me, and if I had had the contract itself I should have at once seen that it was only £13.
348. Up till 1893 you did not have the contracts? No.
349. So far as this particular matter was concerned, you did not get the architect's certificate;—do you not ask for architects' certificates? I could not be certain as to the Education Department, but my impression is that as a general rule we do get the architect's certificates.
350. You could not have got them in Scott's case? No; but, at the same time, if he had made a false voucher we could not have found it out.
351. But that would have been an additional signature to forge? Yes. I would not like to say whether we really get the architect's certificate or not.*
352. In this case you did not? No.
353. Do you not think that, in that case, if you had had an architect's certificate it would have protected the department? It might.
354. You cannot say that the custom is to obtain architect's certificates in support of the vouchers rendered to you;—the money is paid on the vouchers signed by the person incurring the expense? I have not come across any of these vouchers of late, but in all the large contracts there are advances from time to time, and when the last advance is made there is a final voucher detailing all the particulars according to the schedule, and that is certified, in the case of a railway contract, by the Engineer-in-Chief (formerly Mr. Whitton), who states that the work has been efficiently carried out. The same method is pursued in contracts taken under the Works Department. I believe it is the Engineer-in-Chief who certifies that the work has been carried out according to the contract, and I cannot go beyond that.

355.

* NOTE (on revision):—I have since ascertained that the architect's certificates now accompany the vouchers for school buildings.—E.A.R.

355. Do you not think that the Architect's certificate ought to accompany the vouchers? You might carry it a good deal further and say, "I ought to have an expert architect to look into the whole matter."
356. I do not wish you to go further than my question takes you. It is possible that a man might forge a whole voucher, is it not? Yes.
357. Have you had such a case come under your notice? Yes. Touching these large contracts a very curious thing happened a long time ago. The balance of a certain contract was £650. A final payment was made twice because there were two vouchers. The first one was supposed to be lost. A second one was made out and was taken to the Treasury and paid. In the meantime the first was found and was also paid. Of course the money was recovered. That shows that with all the precautions we may take such things may happen. You cannot possibly foresee everything. But, so far as we are concerned, we do the best we can under the Audit Act.
358. With regard to the Treasury, you said that for the purposes of economy you have always decided that it was necessary to keep your own books? Yes; certainly. I explained just now that we could not proceed with our duty except at an enormous disadvantage without these lists of payments, balancing the votes every month. That is the purpose of this method. And then, when we get the Treasurer's statement of the result of his books, we compare it with our own. We have got it all in an independent shape and form.
359. If you keep the books from the statements prepared by the Treasury, is it necessary for the books to be kept in the Treasury at all? I do not think myself they will need to keep more than a cash-book.*
360. *Mr. Humphery.*] For instance, if a mistake occurred in the Treasury, would that be repeated in your books by reason of the duplicate vouchers being sent in? If a duplicate payment were made I would have to enter it.
361. That would appear in your books just the same? Yes; but the Commission should know this. We found some years ago that double payments occurred. We only ascertained this accidentally. Then I devised a plan by which all the contingent vouchers were shown month by month like the salaries. By registering these under the heads of the various parties who got money from the Treasury, I was able to discover double payments, and, as a matter of fact, the cost of two clerks who are employed in keeping these registers is about recouped by recoveries in that way. I will just give an example. As it happened, it was when the former Civil Service Commission was sitting and Mr. Wise was on the Board, that a case occurred of which he was cognisant. There was a voucher for 4 guineas for some law book, I think it was. Some months afterwards another voucher came in for the same book, with an additional item of 17s. 6d., making £5 1s. 6d. That would have passed through the books, and nobody would have found it out, either at the Treasury or elsewhere, but owing to this registry we found that 4 guineas had been paid before; we made inquiries, and ascertained that the bookseller had failed to record the receipt of the original charge at first, somehow or another, and so he sent in a second voucher for the full sum of £5 1s. 6d. There was a recovery of 4 guineas on that voucher. Similar cases occur very frequently.
362. Would not the recovery of that amount have been possible by an examination of the Treasury books instead of by an audit done in your way? No; because the two entries were made in different months, and there was nothing to show there was any connection between the two.
363. What advantage would there be in examining the audit books over the Treasury books? The discovery to which I refer was made through the registering of the vouchers separately for the purpose of finding out these things.
364. I understand you to say that not only do you get these vouchers to show that a payment has been made, but also to show that these payments have been authorised? The Governor will not sign a warrant till I certify it as being within the Parliamentary vote, and I have to show that the Treasury does not make a payment except on the Governor's warrant.
365. *Mr. Teece.*] A warrant is a warrant to purchase, is it not? That is another kind of a warrant. The Colonial Secretary will write to the Treasury and say that such a thing is to be done. That is a warrant. It authorises the Treasury to make certain payments. That is a warrant so far, but the Treasurer cannot pay it until he gets the Governor's warrant. That is the warrant to which I refer.
366. All the warrants are got before payment is made? Yes.
367. And in this case would there have been two warrants given? No; because the warrants are issued for a round sum of £500 or £1,000, as the case may be, against the vote.
368. As a matter of fact the error occurred in the Treasury, did it not? No. The certificate was signed by the Justice Department. It might have occurred in any department.
369. It would not occur if things were not purchased without an order, would it? But there was only one order for the purchase.
370. Suppose it was a book which the Justice Department wanted to purchase, would they not give a written order, and keep the butt of it in the office? Yes.
371. If they only gave one order, and two books were charged for they could have detected the error? Yes; it was their fault, no doubt. I was only showing how things of that kind could occur. I found it out from having queries addressed to my department from home many years ago. I never could understand how they could find out surcharges, but I subsequently learned that they abstracted the accounts that we sent home, and which we supposed to be perfectly audited. They must have taken the accounts and abstracted the information in the same way that I do now. At any rate they discovered the surcharges, and directed the Colonial Treasurer's attention to them. I am satisfied there is nothing so effective for doing this class of work as abstracting original documents in the way we are doing. The other day I was looking up some old reports of Committees of the House of Commons. There is a very elaborate report upon the Colonial accounts as far back as 1846. The Imperial Treasury devised a splendid set of books, and curiously enough the Treasurer there has to furnish a duplicate of his cash-book and his vouchers to the Auditor in each of the Colonies, and the Auditor-General was to abstract all these documents and actually make an abstract book which the Treasurer was called upon to journalise and post in his ledger so that the Treasury accounts were directed to be based upon the Auditor-General's abstract. That shows that the principle upon which we have been going for years has been upheld as the correct way of dealing with the audit.
372. *Mr. Humphery.*] You obtain from the Treasury a copy of the cash-book? Yes.
373. You copy that copy into a book in your department? No.
374. What do you do with the copy of the cash-book that you receive from the Treasury? After we have done with it we lay it aside and do not refer to it again.

E. A. Rennie,
Esq.
10 Dec., 1894.

375.

* NOTE (on revision) :—I desire to add here "except for finance purposes."

- E. A. Rennie, Esq.
10 Dec., 1894.
375. You do not make any use of it again? No.
376. You receive it accompanied by the vouchers during that period? Yes.
377. Do you check the copy of the book with the vouchers? Yes; the vouchers are all called in the moment they are got. They are all called in to this cash-sheet. The Inspector of Accounts keeps the cash-sheet by him and sends out the vouchers to be dealt with, and when they are dealt with for the purpose of checking the work the cash-sheet is got and compared with it.
378. When you have checked the copy of the Cash-book what do you do with it;—do you make any entries from it? No. As the Treasurer quotes all the cheques that he draws for the payments these are called into the bank-sheets which I get from the Bank every day, independently of the Treasurer. The Banks furnish me with a copy of their bank-sheet; that is to say, a copy of the entries for the day, and that contains all the numbers of the cheques. These are all called into it.
379. *President.*] Are the cheques numbered? Yes; there is a column for them. That is the only thing we do with this copy of the cash-sheet after we have abstracted the vouchers and compared the entries.
380. Then, what you call the Ledgers are compiled by posting from the vouchers themselves? Yes.
381. The actual voucher is the authority for recording the entry? Quite so. There is an independent check as to the head of the service to which it belongs, and the vouchers are examined to see that they are really chargeable upon the votes quoted in the cash-sheets.
382. *Mr. Humphrey.*] As it is not necessary to keep the copy of the cash-book could you not check all the vouchers with the Treasury books, in which are entered the vouchers direct? The Treasurer might send us his cash-book, but he would want to see it. He could not well dispense with his cash-book. That was the practice many years ago. That was abandoned before this arrangement was come to by the Audit Act.
383. Touching the conditional purchases, were you to make inquiry as to the number of books used? I framed certain questions to my officers in regard to the conditional purchases. I will read them.
1. How many Conditional Purchases' Registers have we? 60.
 2. What was the reduction in number on revised register for old conditional purchases? 30; *i.e.*, 38 old registers reduced to 8.
 3. Are not the recent additional registers prepared on the revised and shortened form? Yes.
 4. Has the Treasury adopted our revised form? No.
 5. How many clerks are occupied in registering the year's entries of instalments and new conditional purchases? Distributed amongst 7 officers, representing 2 officers, whole time; moreover, the interest entries are self-checking.
 6. Supposing we had no registers and checked the Land Agents' vouchers with the Treasury registers; how many clerks would it take to do it? Probably 3.
 7. If we had neither registers of our own, nor checked the Treasury ones, in what way would we be able to audit effectively the Land Agents' vouchers for instalments, &c.? No method of greater efficiency or economy than that now in operation, so far as I can see.
 8. The bulk of the payments occur in March, but the posting is spread over the whole year, is it not? Yes.
 9. Other land rentals—how could they be audited effectively and economically without keeping our own registers? No better method than that now in operation, so far as I can see.
 10. (1) How many queries on conditional purchase entries, short payments, &c., for the last complete year? (2) How much actually recovered? (1) None; (2) nothing.
 11. Expense of clerks engaged in registering conditional purchases? About £300 per annum.
- I forgot to say that the number of outstanding conditional purchases, interest bearing, from 1862 to 1891, is 150,329. That is the whole of the open accounts recorded in these registers.
384. *President.*] Not in arrear? Subject to current payments.
385. *Mr. Teece.*] What about non-interest bearing payments? There are none. One reason why the Treasury have got so large a number of registers is that they make up their registers as the conditional purchases are taken up. They obtain that information from what we call weekly abstracts from the lands agents. They report every week what conditional purchases are taken up. I get a duplicate copy of that sent to the Treasury. A great number of these which are now taken up never come to anything, but are cancelled. That explains why the registry is so large.
386. Do not the conditional purchasers pay something on deposit? Yes; but that is very often refunded—always, when the purchases do not come to anything.
387. Still you have to audit that payment all the same? That is a separate thing. We do that, but it is marked on the weekly abstracts. The Treasury put it in their registers, and write up a lot of information which is of no earthly use.
388. *Mr. Humphrey.*] How do you deal with pastoral rents? They are all registered in my office the same as conditional purchases.
389. Have you any vouchers showing the amount owed by each pastoral tenant? Yes; it is published in the *Gazette*.
390. You have books containing all the entries? They are all entered in the books with the dates.
391. Are similar entries to be found in the Treasury books? They must have that information there too.
392. And would there also be similar entries in the Lands Department? No; they keep no record. They fix the rent, and it is gazetted, and their work is done so far. The Treasury and Audit Office do the rest.
393. You make no use of the copy of the cash-book beyond checking that with the vouchers;—do you not extract from the copy of the cash-book the moneys received? Yes; the cash-sheet shows both receipts and payments, and we abstract both.
394. Where do you get the entries you make in your books of the moneys received? From the vouchers.
395. Does a separate voucher accompany every entry in that copy of the cash-book? Yes.
396. A separate voucher of the moneys received, as well as of the moneys paid? Yes; and all the details are given on that. These very conditional purchases, land agents' vouchers, are all entered. A good many of them are entered twice, because the Treasury cannot post them up at once, and they put the money in suspense.
397. Would a licensee furnish a voucher to the accountant? I do not know. They have what they call counter-books. They enter that in their counter-books, and they post from that into their registers, and the

the receiver furnishes a voucher of what he collects. There is a kind of comprehensive voucher with all the odds and ends of documents. These are all put into a schedule. The clerk receives perhaps £500 or £600 for pastoral licenses. That is the total, say, of his counter-book for that particular service.

398. Instead of a voucher you get a certificate from the Treasury receiver for certain sums received? It is a voucher signed by the receiver at the Treasury. He does not certify to anything. He simply signs the voucher, and whatever this abstract voucher shows is to be found in the counter-books with the details.

399. What evidence have you of the accuracy of the information supplied by the receipt as a voucher? The counter-books.

400. Therefore, practically, the Treasury gives, as far as you are aware, a correct account of the moneys received. You cannot make the Treasury account any better? I cannot touch the receipts as I do the payments, except where I know certain sums have to be paid. In the case of conditional purchases and land rentals I know what should be paid.

401. As far as the receipts go, your books are a copy of the Treasury books? They are a copy of the vouchers.

402. They are a copy of a copy of the Treasury books, are they not? No; they are not a copy of the vouchers, but simply a statement of what the voucher is.

403. *Mr. Teece.*] I understand with regard to these receipts, you are furnished by the receiver with a schedule of moneys he has received, which you call a voucher? Yes; over the counter.

404. It is a schedule made up by him of moneys he has received, as abstracted from his cash-book? Yes.

405. And you accept that as correct? I have to see that he pays the money to the Public Account in the Bank.

406. If he had received £1 over the counter, and had put it into his pocket and not in the cash-book, you would not detect it? Of course not.

407. *President.*] Suppose that Thomas Jones paid him £100 over the counter, and that the counter clerk who received it omitted to enter it by collusion with the next clerk who had to do with such payments, and put the money in his pocket, that would not be detected until an application was made to Thomas Jones for the money? No.

408. I suppose that the man paying money to the Treasury would get a receipt? Yes.

409. And there would be a butt? Yes.

410. And that butt would be checked by someone in the Treasury? Yes.

411. Are the butts numbered? I think they must be, because the receipts are all numbered. We call for the receipts sometimes.

412. If an officer receiving the money and giving the receipt, and also filling up the butt, were in collusion with another officer, you would not know anything about it? No; unless the transaction was something connected with the lands.

413. In that case it would be discovered by other means? Yes.

414. If it were part of your duty to examine the butts, you would discover it? Yes; always supposing the butts were correct.

415. I am assuming that? In that case we would discover it.

416. The case of a man putting a sovereign in his pocket when nobody was looking is difficult to detect, but when he gives a receipt, and that receipt is checked, your examination of the butt might detect that? I suppose it would, but we never have checked the Treasury butts.

417. *Mr. Humphery.*] Then your audit would be made more complete by checking the Treasury butts with the Treasury receipts? Yes; I could expand my audit to any length. I could very greatly enlarge it by going into all those things.

418. *Mr. Teece.*] With regard to the receipts—you accept the statements which the receiver at the Treasury gives you as to the moneys he receives over the counter? Yes.

419. *Mr. Storey.*] Moneys are paid in the Treasury only upon vouchers which are certified by the proper Departments, but after the Treasury has paid them, they come to you as a payment. Here is an item of £4. That is marked on this document dealing with the Lismore-Tweed Railway. Have you any way of checking whether that £4 is a proper charge against the Lismore-Tweed Railway? We could not go beyond the certificates. We could not tell as to the actual performance of the service.

420. Then you only certify that the £4 has been correctly paid, and that it is a charge against this particular Department? Yes; that is all.

421. The only other check you have is to see that these payments are made on certain votes? Yes; I am bound to show that the voucher has all the appearance of being a satisfactory one, and properly certified by the authorities.

422. Your duty is to show that it is a proper expenditure under the authorities? Yes.

423. If there was no vote for that railway, you would not pass it? That is so.

424. And the same thing applies to every payment that comes before you? Yes; there must be some fund to pay it from. More than that, the Treasury is not supposed to make any payment except on a warrant, by which I certify to the Governor that money is available for that particular service.

425. *President.*] The Commission would be very glad some day to go over your department to see your books? I should be glad at any time to show the Commission over the department and give them any information they require.

426. Could you prepare half a dozen schedules of the different headings of the accounts that you keep in your audit office, so that we may see the accounts to which you carry the postings? The Appropriation Act is the best thing for that. That contains all the votes and their numbers, and you may notice in the cash-sheet that the services are marked as numbers instead of as services. When a service is referred to you will find there not the name of the service but its number. I would like to add that I have had a statement made of clerks who left my office some years ago, what they received then, and what they receive now, which I will hand in to the Commission.

427. *Mr. Robertson.*] Are there any departments exempt from detailed audit? No; I would like, however, to say that when the Audit Act was passed a special examiner was appointed to deal with the railway accounts. It must, I think, have been the Commissioner who got the Government to pass the Executive Minute, exempting his department from a detailed audit. That was the only case in which a minute was passed under that clause of the Act. But since then the custom has been practically abandoned by the appointment of my own railway inspectors, so that I am correct in saying that there is

- E. A. Rennie, Esq., no department which is now exempt from a detailed audit. That was the only case in which a minute was passed.
428. I think you said that in the case of school buildings the Education Department supplies you with a contract and a statement of the various payments made on account, and a filed settlement, so that you have the means of seeing that a proper sum is paid for the buildings? According to contract, yes.
429. Do you make in your books any record of those payments? No.
430. Then where do you get the figures for your Report to Parliament in connection with the buildings? They do not appear in the printed statement at all.
431. Do you not report to Parliament the payments made on account of various loans? In the case of loans I do.
432. Would not the public schools come under that head? No; they are all paid out of the Education Estimate, so that Parliament really does not know how much is paid for schools and how much for salaries, and I am not called upon to divide the vote.
433. You simply say whether the vote has been exceeded? Yes.
434. How do you know if it has been exceeded? Only by the sum total. I get that from the Appropriation Act and the Estimates.
435. The amount voted for the department? Yes.
436. How do you know when the vote has been exceeded? If it were exceeded they would have to get the money from some other source.
437. How would you know in your department? That would appear in the Treasurer's accounts and the cash receipts. It would come through the Treasury.
438. *Mr. Storey.*] Then you have to keep some account of how the vote has been expended? Certainly. This abstracting of the vouchers is done for the purpose of testing the condition of the votes.
439. But you do not do that with regard to the Education Department? Yes; so far as Parliament tells me what to do.
440. If £760,000 were voted for the Education Department you would go on checking the expenditure till it reached that sum, and then you would stop it? Yes.
441. *Mr. Teece.*] Then, as a matter of fact, you do report these school payments? No; the chief payments that are made are made in advance money.
442. That will come to you as one of those vouchers, will it not? Yes.
443. Do you enter that somewhere? Yes, as against the vote. All the subordinate part comes by way of the accounts current.
444. You do not enter those? No; the great bulk of the vouchers that pass through my hands are not entered anywhere. The amount of vouchers which I examine in adjustment must be at least ten times as many as the Treasury have, and none are entered in the books. The advances are entered, and I have to see that those advances are properly adjusted. If I had to enter these payments it would multiply the work enormously.
445. If you did for the Railway Department and the Education Department as you do for the Treasury it would largely increase your work, would it not? Yes.
446. *Mr. Robertson.*] Could you not make it less? I have, I think, made it as low as possible consistent with efficiency. I take credit for that, and I have tried to reduce the work in other departments in the same way.
447. *President.*] Could you suggest any change for the better? If there is to be a change in the mode of voting for moneys in the Appropriation Act, if they would make the appropriation for the payments that fell within the year, it would marvellously reduce the work in the Treasury and in my office too, because now we have to keep ledgers open for three or four years. If the accounts were to close on the 31st December it would make a vast difference.
448. *Mr. Robertson.*] Then there would have to be another vote for the next year? Yes; all charges outstanding at the end of the year would have to be paid in the next year.
449. Would not that be a very proper thing to do? I have always advocated it and tried my best to get it done.

C. H. T. Pinhey, Esq., J.P., Registrar-General, sworn and examined:—

- C. H. T. Pinhey, Esq., 10 Dec., 1894.
450. *President.*] In the list of officers in your department I see the number mentioned is seventy-four? That is upon the voted salaries.
451. The Land Titles Office has six officers engaged in it? These are the heads of the various branches. They are the principal officers of the sub-branches in the Land Titles Office. The whole of the draftsmen belong to the Land Titles Office, and a considerable number of officers.
452. Are these six principal officers of the Land Titles branch men with professional knowledge? The senior examiner of titles and the two examiners of titles are solicitors. The principal draftsman is a professional draftsman of some thirty-four years standing, thirty-two of which have been passed in the office to which he was appointed when the Real Property Act was first introduced.
453. Are the Deputy Registrars-General, of whom I see there are three, men upon whom much responsibility devolves? Yes.
454. Are they necessary to carry out the duties properly? The first deputy is absolutely necessary. The second is only termed Deputy Registrar-General. He is the next officer to the principal deputy, and he is appointed to act for him in case of my absence or death. The Act provides that in certain cases the duties of the Registrar-General shall be carried on by his deputy. That is the reason why he has been named and appointed to act in case of emergency—although that emergency has not yet arisen.
455. In sub-section four, Deeds Branch, I see there is a Deputy Registrar-General, and a Deputy Registrar of Deeds? Yes. That has been the case for very many years, and it is essentially necessary under the Act.
456. Neither is a solicitor? No.
457. Are the duties of the Correspondence and Records Branch, and the Account Branch at all onerous? In their relative positions I should say, unmistakably so. In my opinion, relatively to other institutions and Government departments, the officers in charge of these branches are unmistakably underpaid.
458. What is the special duty of the draftsmen, roughly speaking? I have prepared a paper showing the duties of the officers which I beg to hand in to the Commission. The duties of a draftsman throughout the

C. H. T.
Pinhey, Esq.
10 Dec., 1894.

the Drafting Branch of the department are only rarely approached in responsibility by those of any other branch of the Service.

459. *Mr. Storey.*] What is their work? They have a great deal of compilation to do.

460. *President.*] If they were to allow an error to slip in, it might very seriously jeopardise a title? Yes. They have to see that the titles in the deeds to be brought under the Real Property Act exactly refer to the lands in question, and that the lands are not infringed on in any way, and that the title is clear and complete.

461. *Mr. Storey.*] That is the duty of a draftsman? Yes.

462. *President.*] Then the officers? The officers are distributed throughout the different branches. They are put in this way, and not under individual headings, in order that they may, if found necessary, the more readily be changed from one department and branch to another.

463. I see a few of them are paid on a very liberal scale;—is that through long service or from efficiency, or owing to the character of the work? Do you speak of the first officers?

464. I am speaking of the first four? Take the officer at £398 a year. He is the principal searcher. I am sure you won't misunderstand me when I say that from my experience I consider that officer is very considerably underpaid. He bears the brunt of the whole work of searching for the titles of land to be brought under the Real Property Act. He has been in his position ten and a half years, and we have never had to charge him with a single blunder. The next one has £380 a year. He is the officer who holds the position of clerk to the examiners. I confess that this office may appear a little anomalous. It is held by one who has had fifteen years and five months service. He came in to take the place of one who has raised himself by ability to this position. It was proposed that this latter officer should be disrated, and sent into another department. The present officer, who has had fifteen years service, came in in 1890, and filled his position.

465. Some of those lower down on the list are, I suppose, attendants at the counters? The one who receives £272 a year attends to the counter, and there are others. Some are clerks within the several branches, doing work between the counters and the deputies.

466. Do you think you are under or over manned? I think the officers are well disciplined and under good subordination, and I say emphatically that the department is not over manned.

467. *Mr. Storey.*] Or overpaid? Still less do I consider it is overpaid. Several officers are unmistakably being underpaid. One or two by virtue of long service having been gradually pushed up are receiving higher salaries than their work is worth. It is bound to be so by force of circumstances.

468. *President.*] You have a number of messengers, and a caretaker receiving £190 a year? There are four messengers at £52 per annum. The caretaker and printer has been over thirty years attached to that office and he has the care of the premises at night and during the daytime he acts as printer to the Land Titles Office. He is required to print in large consolidations, and his work enables us to save very much clerical labour. We frequently put sixty or seventy grants in one certificate. Each would have to be endorsed in ordinary hand-writing, if it were not for this printing machine. We give the whole of the particulars, leaving only the signature to be written. He is a very useful man.

469. How about the storekeeper? He has been there for seventeen years, and £150 a year is not excessive for the work he does. He has charge of and receives and distributes all stores, registers, forms, &c., in use in the Births, Deaths, and Marriages Branch. There are some 240 district registrars who are supplied upon requisition and whose accounts of stock are kept by him.

470. Then there is a stamper? Yes. He saves a good deal of clerical labour. A skeleton stamp is used. We do not use it in the large consolidations, but in certain work we put in all that can be printed, leaving the rest of it to be inserted by the clerks. This applies to mortgages, discharges, transfers, and so on, which have then only to be endorsed.

471. What about the junior clerks? They are a great help. When I went there we had none. It was very difficult to keep the men in their places; they were continually wandering all about the rooms on one excuse and another. Now that is all changed. All the juniors have passed the Junior University Examinations.

472. If I wanted a will, which of the officers would be the one to ask? We have only one class of wills in our department. We have nothing to do with the probate of wills. If you were to come to us for a will, you would be presented with a register.

473. I have been several times and had the wills given to me, and I was left in a room by myself and made whatever extracts I pleased? That did not happen with deposited wills. You could not take copious extracts, because the wills are all sealed up.

474. I thought it an exceedingly unsafe method; I might have mutilated a will or even walked away with it? The system with deposited wills is different.

475. *Mr. Humphery.*] I think you are speaking of wills of a different class? The wills that I have are all those of living people. The Wills Office at the time you speak of was in, but not part of, the Registrar-General's Office. All the wills of deceased persons have been sent to the Probate Office of the Supreme Court since then. They were never under the control of the Registrar-General at all.

476. *Mr. Teece.*] Then no will deposited with you can be inspected? No.

477. *President.*] The district registrars are very numerous and require considerable pay? They receive 2s. an entry, which is paid by the Government.

478. *Mr. Storey.*] Is it too much or too little? I think it is not sufficient.

479. *Mr. Humphery.*] Is it covered by a charge to the public? No.

480. *President.*] If I wanted the date of birth of a living person, what would be the charge? If you required a search to be made you would have to pay 5s., and if you wanted a certified copy, 2s. The Government pay 2s. per entry to the Registrar for his trouble.

481. *Mr. Teece.*] Have you any temporary clerks in addition to those seventy-four permanent ones? Seven.

482. How came they there? By the demands and exigencies of the business and by representations of the heads of branches, approved always by the Minister, under recommendations made by the department.

483. What is the amount of their salaries? £996 in all.

484. Have any been there for any length of time? Three have been there for periods ranging from one year to six years and five months; the last is the longest period. The two next under him have just been four years, and the next man has also been four years in the department.

C. H. T.
Pinhey, Esq.
10 Dec., 1894.

485. What is the object of keeping temporary clerks? In the first place we could not probably get them at all if we had to place them on the permanent staff and had to add the amount of their salaries to the Estimates, and in the second place none of these men, with one exception, have passed the necessary examinations to enable them to come upon the staff. They are most competent in the discharge of their duty, but they could not pass University examinations.

486. Could their places be supplied and their duties performed by juniors introduced in the ordinary way? I do not see any reason why comparative juniors, not boys, should not be employed. Three are employed for indexing deeds. They would have to be accurate and know how to pick out the gist of a deed. I would not say that juniors could be well introduced to the positions occupied by the first three. Intelligent juniors of 18 years of age might be used for this class of work after six months apprenticeship. 486½. Of course juniors would be useless for the first six months? Yes. They would require instruction and aid, in this class of work, for a considerable time.

487. Might not a different arrangement be made which would lead to greater justice to the general staff? We have several very intelligent juniors. They are the more intelligent, I should think, taken as a whole, on account of the examinations they have passed. The temporary hands are, generally speaking, officers of almost middle age, who have been in other departments and have been retrenched, and have been put on at 10s. a day generally, and in three cases these elder ones have been recommended after considerable service to be paid 12s. a day and the recommendation has been approved.

488. *Mr. Robertson.*] What is the salary of the one who has been there the longest? £187 a year—that is 12s. a day—for six days in the week.

489. *Mr. Teece.*] Are they paid weekly? Monthly. They are paid out of the general contingencies. Payments out of the general contingencies in my department and in the Treasury and also in the Audit Department are accepted as a whole. We must not exceed the totals.

490. Would it come out of "Incidental Expenses"? It might come out of that or out of the item for extra clerical assistance. That estimate was struck out by the Minister. I have again and again sent memoranda to the various heads of departments calling upon them to tell me whether they could not do without some clerk or suggest some reduction in the cost of the conduct of their business. They all report that they are as hardly pressed as they can be, and that they can only get through their work by constantly remaining late.

491. *Mr. Teece.*] Have you taken any steps to verify these reports? So far as I possibly could. In the first place I have monthly reports as to attendance. These reports show what kind of discipline there is and I have from time to time had half yearly and annual reports made to show how the work is progressing. The monthly reports contain analyses in each case of every officer's attendance. This is done in every branch. These reports give the arrivals after 9 a.m. and the departures after or before 4:45 p.m. [*Reports handed in.*]

492. Then you get these reports periodically? Every month. They are abstracted from the attendance-books which are signed every day by the heads of the branches.

493. So you are kept informed of the attendance and of the manner in which the men do the work? Yes.

494. In fact you take the same steps in regard to these people as if you were running your own business? Yes. Every one of the heads of branches has to tell me the state of his work and if he has any suggestions to make with regard to any arrears.

495. Do you report that to the Under Secretary? If I had occasion to I would. But I make no reports as regards attendance.

496. You do not make a report to him? I submit to the Minister every year a report on the whole of the business conducted by the department. This shows the work done, but not the attendance.

497. You do not report as to the efficiency of the staff? No, unless it were so unsatisfactory as to demand the intervention of the Minister.

498. *President.*] Trifling cases you would deal with yourself? Assuredly.

499. *Mr. Teece.*] We hear outside that a number of officers are put into public offices who are not required, owing to political influence? I can emphatically state that that has never been my lot. I have never had an officer thrust upon me, and I have never made any endorsement of a recommendation without inquiring whether the appointment was actually requisite.

500. With reference to the certificates of birth—what is your charge? 5s. for the search, 2s. for the copy.

501. What is the difference between the two? The work of searching is more than that of copying. We are compelled to so charge under the Acts under which they come—that is, under the schedule of 19 Victoria No. 34, and other charges of less amount come under the Act 7 Vic. No. 16.

502. How long does it take to get a certificate of birth—supposing I know the date of my birth and I want a certificate? Ordinarily it would take twenty-four hours. Of course it could be done in three-quarters of an hour, as in fact was done to-day on an order of the Court, and the same would be done in an ordinary case, if reasonable representations were made that special urgency was required; but it would put the rest out of gear. There are certain formularies which have to be gone through.

503. If you know that a man was born on January 1, 1880, at a certain place? You could put your hand on the register at once.

504. And you could get it at once? I didn't say that. The clerk might have half a dozen cases to search for, and we have only two men to do it. You would have to take your turn in any institution, even at the bank counter.

505. You might have to wait half an hour at the bank, but not twenty-four hours? I have had to wait a great deal longer than that for the receipt of documents.

506. Could not the work be more expeditiously performed? No. Whereas it took three or four days some years ago it now takes only twenty-four hours.

507. Where is your office? The branch is now in Castlereagh-street.

508. *Mr. Robertson.*] Paying an additional rent of £750 a year? Yes; that is an item which was rendered necessary by the change.

509. *Mr. Teece.*] You have had a long experience of the Public Service—do you say that this office is economically and efficiently managed, and that, with the exception you have mentioned already, the salaries are not in excess of the value of the work performed, and that you cannot conscientiously recommend any reduction in the expenditure? There is an officer getting £470. He holds an honorable office with responsibility attached to it. Provided the responsibility were put on the shoulders of the right person the

C. H. T.
Pinhey, Esq.
10 Dec., 1894.

the salary would not be too much, but he has been thrust up by force of circumstances, and the class of work which he performs does not warrant the money which he receives. The question is, how is it to be mended. There are very few of these anomalies.

510. With that exception you think your office is economically and efficiently administered? I think it is efficiently administered. There can be no question that in any institution you can always get men to do work equally as well as good men who are employed, and possibly cheaper. I would say that the department is economically administered—that many of the salaries are less than officers ought to be getting. I know three or four in which it is cruelly so, and there are several among the higher officers. They do not receive as good salaries as officers doing similar work in other departments. The accountant, for instance, who is in receipt of £326 a year, is much underpaid. That is on page 18. And I would further say that the cashier is, if anything, underpaid at £272 a year. His work is a good deal more difficult than that of a bank teller who gets £300. He does not pay anything away. I do that. But he receives on a rough average about £700 a week. He receives this in infinitesimal fees, and has the preparation of important returns.

510½. *Mr. Teece.*] Your department receives a lot of fees—it is a revenue department? Yes, it is; it has something like £40,000 a year.

511. *Mr. Storey.*] In reference to these temporary clerks, were they brought in at the request of yourself or were they put in without reference to you—at the time they were brought in could any juniors have been raised to those positions? The juniors would not go out of the permanent staff on to the temporary staff; a junior with £50 a year would not go on to the temporary staff for £100 a year.

512. Were these temporary clerks brought in at your request? It was upon the representations of the heads of the branches that their officers were much overpressed that these men were brought in. The permanent hands were kept in night after night in order to get through the work before these temporary hands were appointed. I therefore made the recommendation, and the money for their salaries has been found out of the contingency fund.

513. Have the staff increased more than in proportion to the work? No.

514. *Mr. Robertson.*] Have the temporary hands a distinct advantage over the permanent hands in the way of salary? No; they will not go beyond a certain amount, while the permanent hands will gradually go up and receive higher salaries. The temporary clerks will always be temporary clerks, and nothing more.

515. Was your department called upon to submit to a 10 per cent. reduction with the others? Yes, of course.

516. How did that affect the temporary clerks? There was not one of them receiving £200 a year.

517. And the 10 per cent. did not therefore apply in their case? No; any one receiving £220 would only have a reduction of £2, that is, of 10 per cent. on the amount over £200. The reduction did not apply to salaries under £200 a year.

518. What prospect is there of coming to a finality on the employment of those temporary hands? I don't know. When I think of the temporary clerks in some of the other departments, one of whom, years ago, I had known to be there for twenty-two years, it would be difficult to say. There is a provision made in the Civil Service Act that the temporary clerk's position should cease after two years.

519. After which it is renewed, is it not? Not on paper, but tacitly. Nothing is said about it and the salary goes on.

520. And the temporary employment continues? From time to time the temporary hands drop out, but, pending good behaviour, their services would be continued, in all probability, if they were required.

521. *Mr. Humphery.*] Have you the statistics for your department for the last ten years? I think I have them for the last five or six years. Here are the printed documents.

522. Can you by looking at these statistics say whether the transactions in your department have increased or diminished? You can undoubtedly.

523. Can you say whether the transactions in your department within the last three or four years have increased? Taking the dealings under the Real Property Act I find as follows:—1890, transactions in the shape of transfers, re-transfers, mortgages, discharges, and so forth, 17,754; 1891, 19,140; 1892, 19,489; 1893, 18,467.

524. Can you prepare a statement showing the total annual transactions of your department for ten years? Do you want the statement to give the information from each branch separately, births, deaths, and marriages, Crown grants, the land titles transactions, the annual revenue, and so forth?

525. I want to form some idea of the revenue derived from your department and whether the work has been increasing or decreasing? This document will show in quinquennial periods the increases that have taken place for long periods past in the Deeds Branch alone.

526. Was this paper supplied to the Royal Commission to inquire into this matter a few years ago? No. I would like to state, as you have been speaking about salaries, that my present salary is £740 a year. I desire to draw attention to a Parliamentary paper published in 1863, in which was a letter written at the instance of the Hon. Charles Cowper by the Under Secretary in anticipation of the introduction of the Real Property Act. Mr. Cowper wrote to the Registrar-General to say that his salary would be increased to £1,000. That was in 1862. The work has been increased very considerably since then, while the salary has decreased to £740; although, in the interim, the administration of the Trade Marks Act of 1865 and the Companies Acts of 1874 and 1881 has been placed upon him. In February of the present year, the duties of the Commissioners of Titles, to whom 300 guineas per annum had previously been paid, were transferred to me without emolument. At the same time (1862) it was promised that the salaries of the Examiners of Titles should be £1,200 and £1,000 respectively. For a number of years and until the end of 1891 there were four Examiners at £860 each. There are now but three at salaries of £794 each. In accordance with the terms of the 5th section of the Real Property Act they are solicitors of this Colony.

527. *President.*] I suppose the Torrens' Title Act simplifies the work? It simplifies all transactions in land brought under its operation. The dealings under the old registration Act do not, however, decrease.

528. When overtime is required in mercantile circles, clerks do not get extra pay. If they are kept in of an evening they might get tea money, but they are expected to work extra for nothing? And the same applies in our department. Running through the whole returns you will see that one-third and frequently two-thirds of the officers work overtime through the month, but they are not paid extra for that.

- C. H. T. Pinhey, Esq.
10 Dec., 1894.
529. *Mr. Humphery.*] How much has been paid for overtime? On an average £800 per annum. But that is not for current work. It is work that cannot be performed till the expiration of the year. When the whole of the work throughout the Colony is brought to a focus an Annual Index has to be prepared. There are returns from the country, quarterly returns of births, marriages, and deaths, which cannot be received till the end of the quarter. These have all to be collated and put in order for indexing, and indexed in the general index. That is not current work. It occurs only once a year in two branches. That is a work for which overtime is charged, but, as you will see from the returns, one-third and often two-thirds of the officers work overtime without charge.
530. The heads of the branches in your department would see that nothing is thrown on extra pay that could be done by the officers? I could affirm that, but it was not so when I went there.
531. Would you like to see the system of appointments altered? The appointment of district registrars rests with myself.
532. Only with you? Yes. The 240 Registrars get in the aggregate £6,500 a year.

TUESDAY, 11 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Edmund Walcott Fosbery, Esq., Inspector-General of Police, sworn and examined:—

- E. W. Fosbery, Esq.
11 Dec., 1894.
533. *President.*] You are Inspector-General of Police of the Colony? Yes, and I have held the appointment for more than twenty years.
534. We have met here to consider and inquire as to the changes necessary for the purpose of placing the Public Departments upon a strictly economical and efficient footing, and we have to ask you to favour us with such particulars as we think may help us in arriving at that conclusion as far as your department is concerned. In the Estimates of Expenditure you have a general establishment comprising eight individuals, that includes yourself, of course. There is a secretary at £606 per annum, a first clerk, and four other clerks, and an office-keeper. Can you tell us if they are all indispensable in their different offices? I think that my head staff is under-manned, and in some respects underpaid. In the year 1864 the expenditure of the office was only £167 less than it is thirty years afterwards, when the work has increased fivefold. I am speaking literally when I say that. The number of police thirty years ago was 1,000, and now it is 1,841; I had then 235 stations, I have now 524, and the population of the Colony is three times what it was then. The following are the additional duties which the police have now to perform:—Acting Clerks of Petty Sessions, Crown Lands Bailiffs, Acting Gaolers, Acting Forest Rangers, Inspectors of Slaughter-houses, Inspectors of Distilleries, Inspectors under Fisheries Act, Inspectors under Gunpowder and Explosives Act, Inspectors under Licensing Act, Local Authority Dairies Supervision Act, Agents for Curator of Intestate Estates, Agents for Master in Lunacy, Collectors of Electoral Roll; Collectors of returns in respect of Pastoral and Agricultural holdings, Slaughtering Establishments, Mills, Manufactories, and Private Schools; Mining Registrars, Wardens' Clerks, and Bailiffs; Issuers of Miners' Rights, Business and Mineral Licenses; Registrars of Small Debts Courts, Bailiffs of Small Debts Courts, Customs Officers, Agents for State Children's Relief Department; Agents for Superintendent, N.S.S. "Sobraon"; serving Land Board notices, Agents for Aborigines Protection Board; Agents for Society for Relief of Destitute Children, Randwick; Deputy Electoral Registrars, Agents for Public Instruction Department (Compulsory Clauses Education); Agents for Superintendent, Labour Bureau; Local Authorities, Diseased Animals and Meat Act; Local Authorities, Noxious Trades and Slaughtering Act. Those are duties the Police are called upon to perform, in addition to their ordinary duties. The work in the office is very much greater than it was in former years, and the clerks have to work over-hours to enable them to get through it. But it has been a rule in my department that there never should be any arrears. There is a clerk who receives £214 a year, and I do not hesitate to say that any gentleman at this table would be glad to get his services at a much higher rate. He is a most competent officer, and his duties would be reasonably paid at a much higher amount.
535. Is that the one who is Secretary to the Aborigines Protection Board? Yes; but he does that work after-time.
536. Are there any of the staff under the heading General Establishment who have been raised to their positions simply through seniority, and whom you find somewhat out of date for their duties;—are there any who can be characterised in that way? I have appointed the whole of them myself with the exception of the Secretary. The others are all young men and absolutely capable of performing their duties.
537. The next heading is Constabulary. There are ten superintendents mentioned; I suppose they are scattered over Sydney and the Colony? The Colony is divided into ten districts, and there is a superintendent in charge of each division.
538. Are they all active men? No; I do not say that as regards the officers of police. A good many of them have arrived at the time of life when it would be for the benefit of the Service that they should be superannuated. They are entitled to claim it, and further than that they have claimed it, but they are still performing their duties. The reason why I encourage them to remain is that they are still fit to perform their duties, and the Police Superannuation Fund is not in a position to bear the considerable charges of more retirements.
539. But you believe these superintendents are absolutely capable? They are perfectly capable. Of course an officer when he is over 60—some of them are 67—if there were any great emergency, could not get on his horse and ride 50 or 60 miles as when he was half the age. He will go about in a buggy and superintend the police. His judgment is perhaps riper, his knowledge greater, and in some respects he is more efficient than a young man, but he cannot be said to possess that physical activity that would be desirable in a superintendent of police.
540. Does the same hold good with regard to the inspectors and sub-inspectors? As you go down in rank, as a rule, you also go down in age, and some of the junior officers are young men, but some of the intermediate

intermediate and even junior officers have come to that time of life when, in the interests of the public service, it is desirable that they should be superannuated.

E. W.
Fosbery, Esq.
11 Dec., 1894.

541. Then we come to sergeants, first and second class, senior constables and constables? That makes the greater portion of my estimate. The country is a large one, and the Government and Parliament have often said I might have more men if I thought it necessary. These men consume the greater portion of the money voted for me. The rate of pay is settled by the Government and Parliament, and I think, considering the great extent of country, the multifarious duties that the police have to perform, and the fact that even now we do not nearly reach the proportion to the population in Sydney that the police do to the six million population of London, we cannot be said in this country, considering the emergencies which so frequently arise, to have an excessive number of police. As regards the rate of pay, that is for the Government and Parliament to settle. I think if you get a good man he is worth all the money paid him.

542. You have made an effort to keep the Estimates down by abstaining from employing fresh men which you might do by the permission of Parliament? I have always acted up to the full amount of the vote, but there has been a general understanding that there were not sufficient men, and that if I asked for more it would be cheerfully voted.

543. In the papers we see every now and then remarks passed that there are not a sufficient number of policemen to protect persons? That is generally said, but in the disturbances which have arisen from time to time in the metropolis and country I think I have given a very good answer as to the sufficiency of the police to preserve law and order, although I could make very good use of more men.

544. Of course, from personal observation, we can see the constables are men of good physique, and most of them in the prime of life. But looking at the higher grades of your staff, suppose you had the option of substituting more energetic and younger men in place of some of the older men who are now on the staff, would you yourself prefer to have the younger and more energetic men? I think the changes by retirement, promotion, and transfer are extremely beneficial for an organised force. It would be an improvement to replace some of the older men by new blood and greater vigour.

545. The contingencies run into a large sum—£60,000 about. These expenses almost all speak for themselves in the Estimates? Yes, I think you will see that some of the expenditure under these heads is absolutely fixed by the requirements. If you have a certain number of prisoners to feed or to escort from one place to another a certain number of horses are required, and a certain number of sets of shoes. The expenditure is fixed absolutely by the requirements, and is not at the will of the Inspector-General. The system of expenditure in my Department is one of the simplest as regards prompt payment in cash and simplicity of contract. If the Commission had time to investigate more closely they would see that with the minimum of labour there is the maximum of efficiency with regard to promptitude of payment. That is the first thing necessary to reduce the expenditure of this country. If a man has to wait three months before he gets paid for a set of horseshoes, he will stick on 25 per cent.; but if we pay him cash, we get the article at the lowest possible charge. In purchasing a horse, if a man thinks he has to wait two months for his money he will charge £20 for a horse which you might get for £13 if you paid cash. The system is this: Each superintendent of police has a sum of £100 or less given to him at the beginning of the year in cash, and as fast as he sends me in receipted vouchers for money paid away under authorities obtained beforehand, or under contracts accepted beforehand, or, on emergency, I instantly reimburse him the amount of these accounts, so that he is always in funds to pay cash for the smaller demands upon the department.

546. Does that apply to the payment for forage? That is by Treasury contract, and is paid at the Treasury.

547. It has been suggested to us that as you pay the wages of the constables in your own department, and I suppose send the wages book signed to the Treasury—? That is a very simple process. On the 25th of each month a superintendent sends his monthly estimate, which is checked in the office. The amounts are gathered together, and I draw on the Treasury for the total amount required—£20,000 or more. It is lodged in the bank to the credit of each superintendent, and is disbursed by him by cheque, as an additional security each man writing his name on the back of the cheque. He signs his pay abstract, and at the end of a week or two the abstracts are perfected. There may be some few shillings sent down with the adjusted abstracts. The police in Sydney are paid in cash.

548. Could the same system be followed in the payment of forage accounts? It would make very little difference, because most of the people who supply forage supply it to several stations and get the amount paid into the bank; it suits their business better. I do not think there is any delay in the Treasury.

549. We understand there are from 1,500 to 2,000 payments for forage in the Police Department? I think more than that. There are 500 stations, and even if the accounts came in only once a quarter, it would be 2,000 accounts. Of course there are a large number of accounts for forage that come in at odd times. When we have no contract we buy half a ton or a ton the best way we can; then there is a separate account for that.

550. Could paying through the offices be done with the same staff? There would be no difficulty whatever.

551. With regard to the allowance for quarters is there any principle which regulates these allowances? It is this way. The Government has spent a large sum of money in building barracks for the police, and, as a rule, single men are appointed to occupy these barracks, for obvious reasons, so that they may be together in a state of discipline, manage to have a mess man to feed them, and that they may be together in cases of emergency. But it is also a good thing the police should live among the community to a certain extent. That is, if a man has a lodging, say, in the centre of Redfern, he would naturally be employed to ask questions about certain residents in that district. And if a crime is committed in the neighbourhood the people there know where to find a constable. It is an advantage to have them living in the community, and also a certain number of them barracked together in case of fire, disturbance, or other emergency. Those living in barracks get no allowance. A certain number of quarters are provided for married men, and the single men live in the single men's quarters. But the married men in Sydney—and the majority are married—have to pay expensive rents for their houses, in their respective divisions, so the Government authorised their being paid a shilling a day as lodging money. That is also authorised to the married men who have to provide quarters for themselves in the country. That makes up the total amount. It has been said some of the married men do not get any allowance at all. That is accounted

for

E. W. Fosbery, Esq.
11 Dec., 1894.

for in this way. If there are six single men in the barracks at Goulburn, for example, and one of them wishes to get married, I tell him that if he wishes to go out of doors the Government are not going to pay him £18 5s. a year to allow him the privilege of getting married. It may seem a little unfair, but if every man was permitted to get married, I would never be able to keep any men in the barracks, and they are selected for appointment as single men.

552. *Mr. Teece.*] All these constables and troopers are paid on a fixed scale, I suppose? Yes; according to the estimates.

553. How is the estimate for quarters arrived at? The officers have quarters provided for them by Government, and the estimated value of these is put down. In a few cases quarters have to be rented, and the amount is put down. It is necessary that a police officer should live in Government quarters, or where he can be found, as he must be available day and night.

554. Some of these officers, you have said, are too old to efficiently discharge their duties? I do not go quite as far as that. I said they were not so active as might be desired, but they have their wits about them. They are certainly efficient, but not so efficient as they have been.

555. You say the Police Fund will not admit of the retirement of a number of those officers entitled to retire, and that is the only fund by which they can claim? May I inquire if you want me to go into the question of the superannuation of police. I could not explain it piecemeal.

556. Perhaps it would be better? A Bill has been prepared to set the whole matter on a satisfactory footing, but nothing has been done. Successive Governments have handed it on to their successors. The fund is not solvent at the present time. The Police Reward and Superannuation Funds are practically one. They were instituted by an Act of Parliament passed in the year 1851, and very heavy charges fell on them on account of services of police before that date, who contributed only a few pounds to the fund. In one instance a man who contributed £12 to the fund drew a pension out of it to a capital amount of between £7,000 and £8,000, according to the calculation of an actuary, and a pensioner died last week who had drawn a pension for 40 years, and whose contribution to the fund was under £15. Under that Act, if the contributions to the fund fell short of the legitimate charges upon it, the balance required was to be made good from the Consolidated Revenue. When Sir Charles Cowper passed the present Act, in 1862, the provision was left out. We had then a considerable sum of money invested, but, as the revenue began to fall short of the expenditure, the whole force agreed to tax themselves by an additional 1 per cent., and every fresh man joining the force agreed to do the same. I roughly calculate that this has produced in the course of nearly thirty years a sum of about £60,000, which £60,000 has been the means of keeping the fund afloat to the present time, and there is still left £17,000 invested.

557. And are the annual pensions to be charged on that? The annual pensions amount to £20,000. They are not to be charged against the £17,000; that is capital invested. The remainder of the invested funds now amounts to £17,000. The ordinary revenue of the funds combined is not sufficient to bear the charges, and part of the invested capital has had from time to time to be realised.

558. *Mr. Humphery.*] What is there short? I should say at the present time that between £3,000 and £4,000 a year is expended in pensions above the revenue.

559. *Mr. Teece.*] Your £17,000 will soon disappear? Yes; we have just had debentures for £3,000 of it sold to enable me to clear up to the end of the year. The fund has never had a shilling from the Treasury, but in other countries such provision is made to a very large extent for the payment of police pensions from the public funds.

560. *Mr. Humphery.*] Paid by the Government? From the local funds. In Victoria the income falls short of the expenditure for the year by the sum of £30,000 although they have a fixed endowment of £2,000 per annum by Act of Parliament. Yet in Victoria the claims upon the fund should not have been as heavy as they were in New South Wales, because of the large number of police that have lost their lives in this Colony during the bushranging time, and in other ways, necessitating heavy pensions to widows and families.

561. *Mr. Teece.*] What is the amount of the capital fund in Victoria? The interest is £2,800 a year. The fund was about £75,000 when I last heard of it. Perhaps I might tell you what my proposal is: The pensions at the present time are too high. I propose that the pension, instead of being full pay for thirty years down to half-pay for fifteen years, should be altered so as to give a pension only after twenty years' service, and then at one fortieth of the amount received per annum for each year. That would be half after twenty years service. For a few years there might be a few thousand pounds wanted in addition to the invested funds, and that charge would have to be borne by the Crown so as to give security to the fund, but I believe in ten years that the fund would be self-supporting.

562. If this fund were in a solvent condition would you be able to dispense with a lot of older officers, and while improving the efficiency of the Service, reduce the cost? I could improve the efficiency of the Service to some extent, but if the same rate of salary were paid to men about to be promoted there would be no reduction in expenditure.

563. Suppose the sub-inspector were promoted to an inspectorship through the death of an inspector, is it your rule that he would receive the salary of that inspector? The increased gradation is not a very heavy one from rank to rank, and as the men wait so many years for their promotion, if the Government think the rates of pay are not too high, we adhere to them. Relatively, I do not think they are too high compared with the salaries paid in other departments.

564. Have you any temporary clerks? No.

565. Do you have any clerks sent you that you do not require; in other words, is political influence used to put men on your staff? There has never been but one that I did not appoint myself.

566. *Mr. Storey.*] All this extra work having been put on the police, I suppose it involves certain duties in the shape of reports which come to your office? Yes, all comes through my hands.

567. That involves much clerical work in Sydney? Well, it does not in reality under the system in operation. For instance, one of the heaviest portions of such work is in connection with the truant children business. I undertook that this duty should be performed by the police on the understanding that instead of making truancy a matter of constant criminal prosecution the police should on all occasions see that parents send their children to school, that they should advise parents of the great advantages the children lose in neglecting to attend school, and that only as a last resource should they prosecute for non-attendance. This, to my mind, has worked much better than having special officers to go about to
summon

summon the parents of the truants. When statements are sent to us of truant children from the Public Instruction Department they are stamped "Superintendent so-and-so, for action." This is initialled; you could do 100 of them in five minutes. When it comes back the result is forwarded to the Minister of Public Instruction for his information. E. W.
Fosbery, Esq.
11 Dec., 1894.

568. When you spoke of the large additions to the work of the police, I thought you mentioned that to show your officers had so much more work to do? So they have in the country, and there is also a good deal more in my office.

569. Do they get extra pay? No. Some half-dozen of them are Customs Officers, and they get a little for that.

570. Does the duty of looking after truant children interfere with their duties as policemen? To some extent.

571. Have you ever objected? Yes; I have pointed out that a man cannot be travelling through the mountains looking for cattle and sheep stealers, and at the same time hunting up truant children.

572. What reply was given? That it is in the public interest, as I think it is, the police should do the duty, because they can do it better. It is objectionable for a constable to be a Clerk of Petty Sessions. He is the prosecutor, but as Clerk of Petty Sessions he is also adviser to the Magistrate, he himself being prosecuting officer, but such appointments are unavoidable.

573. With regard to rates of pay, you say you do not think them too high relative to other departments; but if you were managing this department as your own concern, would you consider the rate of pay too high? I would not consider the rate of pay too high. If you get an educated man who is competent to do all these duties intelligently he deserves to be well paid. He would earn more in any other capacity. Although, if I required 500 men to-morrow at a less rate of salary, of course I could get them.

574. Still, you could not conscientiously reduce the rate of pay? No; I would rather have less men. You must remember that, when you pay a policeman more than the ordinary current rate of wages, the result is that he values his appointment. He strives to win my approval and his officers' approval, and he knows, if he makes a *faux pas*, he will lose something he cannot replace. The consequence is the men conduct themselves better.

575. About the forage;—is that done by tender? Yes.

576. All over the Colony? Yes.

577. You would not object to have the forage under your own control? We buy it cheaply enough where there are no contracts.

578. *Mr. Robertson.*] Can you tell us how much you spend in your department for travelling expenses? The whole vote, as a rule, is expended—£7,700.

579. What are the travelling allowances? A constable gets 4s. a night, and a superintendent of police gets £1, but he has to travel long journeys with a buggy, a pair of horses and a man.

580. Does that £1 cover the expenses of buggy, horses, and man? No; that is for his personal expenses. The sum of 30s. is given for personal expenses to heads of departments, and the sub-heads get £1 a day.

581. Is there nothing between the 4s. and the £1? Yes; a junior officer gets 12s.

582. Do you think that any reduction could be made in the matter of travelling expenses? The general impression in Parliament the other night was that 4s. a day was inadequate, but I could not explain to Parliament that it is not too small for this reason:—A constable travels and travels. If he goes through a pastoral district he must stay at a squatter's house sometimes. His horse is fed for nothing, and he himself is bedded down and fed for nothing, and he gets his 4s. The next night he may have to go to an inn where it costs him perhaps 7s. 6d., but in the long run the 4s. a night is a sufficient sum to recoup him fairly.

583. Would not the same thing apply to the sub-inspectors and inspectors? Well, an officer travelling has to spend more, although he need not absolutely do so. But there is a sort of obligation. He could not, for instance, go into the public-house and eat his meals in the kitchen with any one about. He must go into a room where there is some sort of privacy. Perhaps a person calls upon him, and he has to entertain him. You can travel in two ways—you can pay your bare expenses or be more liberal.

584. I think the usual rate is from 12s. to 30s.? Yes.

585. Do you think it a proper thing for all who travel in the various departments to take into consideration the fact that they may have to spend money in that way? No, I do not. I think there is much abuse. The country is absolutely overrun with Government officers travelling. You cannot go to any town without finding half a dozen different inspectors at hotels inspecting water tanks, police stations, public buildings, everything under the sun. As a matter of course, I do not suppose these public officials travel at a loss. I think it is likely they travel at some little advantage; in fact I know they do.

586. You said just now that in many cases inspectors meet together in one town, possibly in one hotel. I suppose you have known that from your own experience? Yes.

587. Do you not think some of these offices could be advantageously united, and the inspection of the various concerns which you have mentioned made by one person? Most undoubtedly. There is no reason, for example, why a Treasury inspector should not inspect a post-office account instead of having a postal inspector to do it. I am rather loth to give my ideas about the Public Service generally, although I may know more about it than any man in it.

588. *Mr. Robertson.*] With your knowledge could you tell the Commission what inspectorships should be united in the one person? I could not do that offhand because I should have to have before me a list of the various departments and inspectors to see what combinations might be made. I think if the Treasury inspector is inspecting accounts at the court-house he could inspect the accounts at the post-office.

589. Do you know if there is one set of inspectors for water conservation and another for artesian boring? I do not know anything about those departments. But I think as regards travelling expenses a rule should be applied that a public official must not make a profit out of his travelling expenses, that he should make a certificate on honor that he has spent all the money in necessary charges; he should also be called upon to furnish details if thought requisite.

590. *Mr. Humphery.*] Is the scale which you adopt the one which was agreed to by the Under Secretaries? It has been in operation a great many years. It is a very hard thing to deal with Government travelling expenses. I am perfectly certain that in private employment they pay men much higher than in the Public Service. I know I received a much higher rate when I was a boy in England travelling on business.

- E. W. Fosbery, Esq.
11 Dec., 1894.
591. *Mr. Robertson.*] You are in favour of making the allowance less? I think the higher grades might be reduced.
592. *Mr. Humphery.*] How does the scale of pay in New South Wales compare with that in Victoria? It is about the same.
593. And can you speak of the pay in England? The rate in London is very much less. It is about one-half going up to about two-thirds; that is for constables.
594. With regard to the system adopted in your department of making all payments direct instead of through the Treasury could not that be done in other departments? I do not know that any other department is constituted as mine is. I have a general expenditure spread over the entire Colony.
595. So the system you adopt could not be made to apply to any other branch of the Service? Not in its entirety. It would not be capable of application to other departments.
596. Do the audit officers examine your accounts? There is no inquisitorial audit here; it is an audit by Treasury officials only as regards revenue. I have always advocated an inquisitorial audit as they have in Victoria. I think the travelling auditor should look into the expenditure as well as into the revenue.
597. *Mr. Robertson.*] Has not that been done? The audit is only a computation audit.
598. *Mr. Teece.*] The auditor accepts the Treasury vouchers and goes no further? Yes, only to see that the expenditure is charged to the right vote, and that the computations are correct.
599. *Mr. Humphery.*] Did you make any communication to the Treasury? No. I believe that if there were a very searching audit into expenditure throughout the Colony it would lead to the correction of many abuses in the way of lavish and unnecessary expenditure. If I may be allowed to give so large an opinion, I may say our expenditure has been based on too liberal a scale, and not on business or economical lines. The practice in the past has simply been that a certain amount of money has been asked for, and without much inquiry it has almost invariably been paid. From the highest to the lowest, from the expenditure on enormous buildings, to the few shillings on mere travelling expenses; there has not been that attention to business arrangements by the responsible officers of the Government, from one end of the Service to the other, to ensure that the Public Service should be carried on at the least possible cost.
- 600-1. It is your opinion that the present method of audit simply verifies the proper appropriation of votes? Yes.
602. And the correctness of the items? Yes.
603. It is, therefore, incomplete? As far as my judgment goes it is not anything like searching enough. Of course the Treasury inspectors looking after the revenue are very useful, but they would be much more useful if they had the power to go into the office of a superintendent of police, for example, and say, "We have seen your collections duly accounted for; let us see how you spend Government money in the district; show us how you pay for every single item of your expenditure." The fact of these gentlemen going round making these inquiries would have a good effect. A country officer would know he had someone looking very closely at his expenditure.
604. An audit of that nature would be the means of saving a large annual expenditure? It would detect abuses, and by so doing would correct them, thereby effecting economy.
605. *President.*] Do you see all the accounts from every district? Every voucher is signed by me. From having travelled so much in the Colony, I know what the reasonable and proper charges should be.
606. *Mr. Teece.*] On the question of audit—do you supply any vouchers to the auditor, or do they go to the Treasury? They go to the Treasury in abstract for the cash, and after adjustment are passed on to the Audit Office.
607. *President.*] And each one of the country accounts for forage passes through your hands first? It is certified by me after examination with the contract list. I pass it on to the Treasury, and it is paid into the bank almost immediately.
608. Into the man's credit? Yes.
609. Unless he calls personally? Then he can get it over the counter.
610. *Mr. Humphery.*] Is the statement of your disbursements furnished to the Treasury? Only in that way—in the adjustment of abstracts. When I send an abstract in, the money is placed to my account and I have to adjust it afterwards.
611. Are these vouchers passed on to the Audit Office? Yes.
612. Are they entered in the Treasury books? I believe so.
613. *President.*] Your payments are monthly? The payment of salaries is monthly, but of many things in the country it is quarterly, unless prompt payment is an object, in which case the claimant is paid in cash. In a general way the contractor for shoeing has to shoe three horses once a month, which would amount to, say, 12s. He does not care to draw that 12s., but at the end of the quarter or half-year he sends in for 36s. or 72s., as he may wish. But if we make a purchase of a ton of hay that costs £5 we pay it at once when required.
614. There was a good deal of talk or writing in the newspapers about the propriety of paying the Civil Servants weekly;—would you approve of such a thing in your department? I think it would give a good deal of unnecessary trouble. It might be a hard thing to resist in my department as regards the policemen, but I am unfavourable to it. If a man is moderately economical and manages his affairs prudently it is often enough to pay him once a month.

Timothy Augustine Coghlan, Esq., Government Statistician and Registrar of Friendly Societies, sworn and examined:—

- T. A. Coghlan, Esq.
11 Dec., 1894.
615. *President.*] In the Estimates your department is put down as having a staff, including the messenger and housekeeper, of fourteen? There are more than that. Under the heading of contingencies there is a vote for extra clerical assistance of £2,500.
616. Is that always in existence? Yes, it is always in existence.
617. What number would be comprised within that? There are seventeen, including myself, in the Statistical, and six in the Friendly Societies and other branches.
618. I mean how many outside of those who appear in the columns? There are eleven on the contingent staff.
619. These eleven are the gentlemen employed who receive this payment of £2,500 per annum? Yes, they receive that, and some of the Friendly Societies' money.

620. Now, to take these columns. The first mentioned is called the chief compiler at £426. Is his work very responsible? Yes. The office is divided into certain portions, and he has charge of one portion, the compilation of vital statistics.

T. A. Coghlan,
Esq.

11 Dec., 1894.

621. Does he himself compile or does he superintend? He both compiles and superintends the others.

622. Those whom he superintends are the six compilers mentioned lower down? No; there are various persons, not necessarily those that follow him.

623. Some of them might be the extras? Yes. He superintends only two of the salaried staff. One gets £100, and one £150.

624. What are the duties of the chief clerk? The chief clerk is Mr. Tregarthen; he has charge of banking, building societies, and co-operative societies. All the others you see there are compilers.

625. Is the assistant actuary more particularly under him? He is at present in charge of Friendly Societies' work and Trades Unions.

626. Is it the case that there is one of the officers upon the Estimates here who still ranks as an officer, but has no employment, at £470 a year? It is a fact that a gentleman is on the staff nominally, but does no duty. I recommended about three months ago that the position should be abolished. I explained the reasons to the Colonial Secretary at the time, and asked his authority to give the officer leave of absence, as I could not employ him to any advantage. But I have not heard the Colonial Secretary's decision in the matter.

627. But he draws his salary regularly? He draws his salary every month.

628. And attends every morning? Yes; he signs the time-book daily. I have no work for him. In justice to him I must say he is quite willing to do work if he had it to do.

629. But you have no need of him? No.

630. You say the extra clerical assistance as required is a continuous thing? Most of the extras are continuously employed. Sometimes, when we have a press of work, we are compelled to get a man or two for a month. The same remark applies to a vote of £400, for compiling stock and agricultural returns. That lasts for about two months. When work is slack the staff is again reduced.

631. That goes with a little more flow, or gives you a little more labour at a particular season? Yes. In February, March, and April I have ten or twelve men on for a few weeks, but not all at once, compiling agricultural statistics.

632. Do the officers on your staff require to be men of rather superior ability to that possessed by ordinary clerks in an office? Yes. Ordinary clerks would not suit my office at all; men have to be above the ordinary stamp of clerk.

633. Do they require to be good mathematicians? Not exactly. They may be good compilers but not necessarily advanced in mathematics, although I have two men who are singularly advanced in mathematics; a man must be accurate in figures, but not necessarily a mathematician.

634. Are there any others you could dispense with, and still have perfect efficiency in your department? It is just possible I may be able to dispense with some hands, but until I get over the rush of work I cannot say. Perhaps next year I may be able to reduce a little.

635. That would be among the officers upon the Estimates, besides the extras? Perhaps a man or two out of the extras I may be able to dispense with,—I am not quite sure; it depends whether I can get through the work, and generally I may say it depends whether the work I have been doing hitherto shall be continued. For example, suppose the Government decided to do away with a portion of the work, with the publication of one of my books, say, that would mean I could dispense with three officers. It would depend on what work I have to get out. If I have to continue as in the past, I would perhaps require the same staff, but if any of the work is dispensed with I could dispense with a certain number of men.

636. We are put here to make inquiries as to changes necessary to make the expense of carrying on the department more economical without interfering with its efficiency, and we must endeavour to find out whether there is any excess of strength in the department which could be dispensed with? I may say at present there is not. So closely are we kept to work that I have had to refuse the ordinary leave of absence for about two years except in special cases where men have been ill. I myself have had only two weeks' leave since I took up this post.

637. How long ago is that? A little more than eight years. I attempted to go away on leave of absence twice, but had to come back. I have one man away now, but I have had to refuse all the others because I cannot spare them.

638. *Mr. Teeco.*] Are you responsible for the preparation of the estimates for your department? Yes, but one prepares his estimates, and does not know what happens to them afterwards.

639. With regard to this clerk at present doing nothing, did you put this salary upon your estimates? No, I did not.

640. It has been put there since? Since they left my hands.

641. According to the Blue Book for 1893, you had at the end of that year twenty-one persons employed;—that would apparently include three temporary clerks? There is a boy messenger for the Friendly Societies as well.

642. That would reduce the temporary clerks to two? No; the temporary clerks are mixed up with the others.

643. It says, "The number of persons of each sex employed permanent and temporary";—that is twenty-one, but if I count up the names there are eighteen? They include more than you see on the Estimates. There were fourteen on the Estimates; the others are temporary clerks whose names appear in the Blue Book. A person whose name appears in the Blue Book is not necessarily a permanent officer.

644. All these twenty-one do not appear here? No; only some of them.

645. They are summarised here as twenty-one, but there are only eighteen names? Those eighteen are not all persons whose salaries are voted by Parliament.

646. But they do not include the whole twenty-one? That is so.

647. That twenty-one is now increased to twenty-five? There was a death at the end of 1893, and the position was not filled up.

648. At the end of 1893 there were twenty-one persons employed? There were more than twenty-one. There were three officers on leave without pay, the work for the year having been completed.

649. As a matter of fact, at the end of the year there were only twenty, because Mr. La Meslée died on December 17th? Yes.

- T. A. Coghlan, Esq.
11 Dec., 1894.
650. There would appear to have been only twenty; would this information in the Blue Book be furnished by you? It would not be compiled by me, but I think by the Civil Service Board.
651. What I want to get at is this: if that number, twenty-one at the end of 1893, is correct, and making allowance for Mr. La Meslée, assuming him to have been there —? I think the number should have been twenty-four, including those on leave without pay, who are now on duty.
652. It is now increased to twenty-five; there are fourteen names on the estimates, and you have told us that there are eleven extra temporary clerks? Yes; they are not all clerks; there is the housekeeper and messenger, and there is one vacancy amongst the fourteen; the numbers are the same.
653. During 1893 you were largely engaged on the Census work? No; it was practically finished. We finished it with our staff; all the temporary clerks employed on the Census had gone.
654. During 1893 they were engaged? They had all gone by the end of the year; they were engaged up to the middle of the year.
655. That entailed a lot of extra work? Oh! yes.
656. Yet you estimate the expense of running your department is as large now as in 1893? No. The Census threw so much of our work behind we had to postpone doing it. We did the Census at the expense of the year 1894.
657. Is some of 1894 going into 1895? Some of the vital statistics are bound to go over to next year.
658. We all know what an enormous work the Census is, and how it must entail a lot of extra work and extra clerks. What I want to know is whether, that work having been finished and the work which was allowed to run into 1894 overtaken, the cost of the department in 1895 can be reduced? It has been reduced. It would have been reduced if my estimates had been printed as I gave them in. But there is a little sum which throws you out. There is £400 for agricultural statistics, which occurs in the first half of the year. You would expect that to be £200. It is £400 because it is all done in the first half of the year. The clerical assistance has been reduced from £1,250 to £1,035. What I expected to save was the £500 and £470, the salary of the clerk we were speaking about.
659. Who is the actuary of the department? A gentleman named Davis.
660. He is the assistant actuary? Yes, he assists me.
661. I see there is actuarial assistance here. What is that for? That is an allowance made to Mr. Davis; he really gets £415 a year; I think he has been promoted since the vote was first taken; there were promotions, and Mr. Davis was next in succession; Mr. Davis really gets £290 as a compiler, and £125 as an actuary.
662. We have been supplied with a schedule here, showing the remuneration received by all public officers who hold more than one office. Mr. Davis' name does not appear here? It is not my fault; I did not prepare that.
663. It is a fact that this clerk or officer who is down here for £290 receives £415? Yes.
664. Have any officers been appointed to your department otherwise than on your request, that is, for political purposes or through the influence of Members of Parliament? No; that is, with the exception of Mr. Donaldson. I had the selection of most of the others. I may be permitted to say that Mr. Donaldson is a very good officer.
665. He was a temporary clerk? No; he was private secretary to Sir George Dibbs. He was a permanent officer and was transferred.
666. Where does he appear on the Estimates? He does not appear at all. I did not put him down, not having any instructions about him.
667. He is on the permanent staff? Oh, yes. The Treasurer sent for me in regard to Mr. Donaldson, and it was decided that I was to leave the matter in the hands of the Government; such being the case I did nothing about it.
668. I see in the Estimates of 1893 an officer appointed in January, 1891, at a salary of £245 a year;—is he still there? Yes.
669. I do not name him specially, but want to cite him as an example: Under what circumstances would an appointment of that kind be made? If I remember rightly I wanted an accountant to look after the Census accounts, a matter of some £30,000. I had not an accountant in the office. I think Mr. Wedderburn was recommended by Mr. Carruthers. I found him a competent man and up to his work, and he has remained in the office. The staff was quite as large then as now, but a less competent man had to go, and a rearrangement of work was made.
670. The work for which he was engaged is completed? The particular work is completed, but he is given other work.
671. When he was appointed were there already officers competent to do that work in other branches of the Service? I do not know anything about that.
672. No steps were taken to ascertain that? No. Persons in my position have no authority to seek for officers in other departments.
673. You simply say you want a clerk? I simply ask for a person. If an incompetent person were thrust upon me I would not rest until he were removed.
674. In another case here an officer entered on the first of March, 1890, at £390 a year? He was in the Service before he came to me. He entered the Service in November, 1889, a few months before he came to me. He was in the Parliamentary Standing Committee's Office.
675. What work was he appointed to do for you? To assist me in my publications. They had grown so large that it was impossible to attend to them. This gentleman had to sub-edit the publications—that is, he did the reading, passed the compilation, and made researches for me. He is now dead.
676. That work is being done by somebody else now? Yes.
677. Can you point him out among the list on the Estimates? No; he is one of the temporary staff, a man who was employed on the Census, but was found competent to do this work. When Mr. Tarplee died he took up part of the work.
678. What salary is he getting? £200. As a matter of fact, the work is distributed between two men. I have not been able to get a man of Mr. Tarplee's special capacity.
679. Generally speaking, no officers are sent to you unless you require them? Generally speaking, that is so. I can say that both Sir Henry Parkes and Sir George Dibbs have allowed me virtually the selection of my own officers. If my officers are not good it is my own fault. No one has been actually thrust upon me except in this last case, and Mr. Donaldson is a good man.

T. A. Coghlan,
Esq.
11 Dec., 1894.

680. You did not select Mr. Wedderburn? Oh, yes, I selected him, because I retained him.
681. You would not have an officer who was not competent? I would simply report the circumstances, and would not retain him. I have done this in many instances.
682. On the Estimates for 1895, amounts you have left off have been restored? I recommended the Government should put on the Estimates the whole of the officers who could be looked on as permanent, but their names have been omitted. That would reduce the vote for clerical assistance.
683. And put the others under their specific offices? Yes.
684. *Mr. Storey.*] How came Mr. Scott into your office? Mr. Scott was clerk to the Parliamentary Draftsman, from whom I took over the Friendly Societies. I was made Registrar solely for the purpose of having some say in the registration of societies. I would have had to do the revision of accounts and the actuarial work in my office, and I thought it much better to be Registrar at the same time. Mr. Scott was clerk to the Parliamentary Draftsman. He came over with an increase of salary.
685. How long ago? Two years ago.
686. He is in the office still? He is getting paid.
687. *Mr. Robertson.*] Is there no work you could give this clerk? I could give him work certainly, but what is the good of giving a man work who is incompetent.
688. *Mr. Storey.*] Your office being a new one there must have been a tremendous lot of work to do at first in starting, which ought now to be falling off? No; it is growing every day. There was a tremendous work to do at the beginning. The Statistics were in so poor a condition; it is only bit by bit we have been able to reform them. I have reformed the commercial and general statistics, but I have the vital statistics yet to do.
689. The method of compiling them rests with you? Yes.
690. *Mr. Robertson.*] Do you think the clerks in your branch are fairly paid? Some of them are a little overpaid; and some are underpaid. Some are just ordinary clerks, and some are very special men.
691. Have you any system at all in your branch with reference to promotion and increase of salary? A man joins at a certain salary, and that is probably what he retains unless he shows a signal aptitude. He gets probably what he is worth.
692. The officers enumerated in the Estimates—do you think their salaries are fair for the office as it is at present? I think the salaries would bear recasting—that there should be a graduated scale, from Mr. Ridley downwards, each man getting a little more than the man below him, so that there might be an incentive to work.
693. And thereby fixing a maximum for the various grades of offices in your department? I think so.
694. Which would not be increased by length of service; that is, the salary attached to an office would not be affected by length of service? The office held by a man should govern his salary, and not the time he has been holding that office.
695. Of course a man hopes to get into a higher office? Yes.
696. Do you think the salaries paid are fair? On the whole, I think they are fair. I think the young fellows get rather too much, and the senior responsible officers too little.
697. *Mr. Humphery.*] How does the annual expenditure of your branch compare with that of Victoria? It is considerably less, or was so until quite recently; and we had a good deal more work.
698. Is the work done in the Statistician's Department of both Colonies similar? I think we have a great deal more to do in Sydney. I have to work for the Government independent of statistics. Up to a certain point the work is almost the same, but I have a great deal more work to do. I am consulted by the Government on many matters apart from my ordinary work. To illustrate that, I may say that various Bills for the Government have been drawn by me or in my office. There were the Factories Bill, the Local Government Bill, and the Taxation Bill, although I am not responsible for the latter Bill in its present shape.
699. The material was supplied by you? No; the actual work was done by me, and revised by the Minister. The Local Government Bill is really the work of the office.
700. How do the salaries in your office compare with the salaries in the Victorian office? They are much the same, except the middle salaries. They have more men on about £200 a year. Where we pay £180 they pay £200.
701. The work for which you pay £180 is ordinary work? Work for a sharp clerk; work that a mediocre clerk could not do.
702. You just want a sharp clerk of ordinary talent? Just so; nothing special about him.
703. Did you say, in answer to Mr. Teece, that you recommended all the temporary officers in your department? Not quite recommended them. They were employed on temporary work. Sometimes they are sent by the Minister.
704. Are you permitted to select? Yes, I retain them.
705. What do you call them? Contingent clerks.
706. Are you permitted to select them? They were employed, and when their work ceased if they were ordinary clerks they were allowed to go. If they were good I retained them, and allowed an inferior man who was there before them to go.
707. Are all the clerks at present employed in your branch clerks that you approve of and suitable for the work they are performing? They are all clerks of very fair conduct, and with few exceptions they are above the average of mercantile clerks.
708. Did you fix the salaries of these various clerks? Of those not on the Estimates I did.
709. Have you assessed the value of the work they are doing? Yes, at the time they were employed. Occasionally they have risen above the value of the salary, and the salary is hardly adequate to their work, but I think they are fairly satisfied.
710. In your opinion could there be any economy practised in your department? Not in salaries.
711. I mean economy combined with efficiency? If you recommend economy it would be much better to economise the amount of work.
712. Is there, in your opinion, any unnecessary work performed in your branch? In my opinion there is not.
713. Is there any work that might be dispensed with? Not anything.
714. Therefore, neither in strength nor in work do you see any opening for the reduction of the annual expenditure in your branch? In my opinion there is no such opening.

- T. A. Coghlan, Esq.,
11 Dec., 1894.
715. You cannot help the Commission in this respect? No. It would be better for the Commission to judge for themselves and see the work done. If the Government ordered a certain class of work to be abolished I could reduce the clerks.
716. *Mr. Storey.*] You would not approve of that? Well, I am biased in the matter; I consider it is all good useful work, but, if any of it is abolished of course I could reduce.
717. *Mr. Teece.*] As an example, take "The Seven Colonies of Australasia"? If that were abolished I could dispense with two clerks, and if "Wealth and Progress" were not published I could dispense with three.
718. With regard to the comparison Mr. Humphery drew between the work of your office and that of the Government Statist of Victoria, it is only fair to say you do not perform valuating for Friendly Societies? Oh, yes, I do; I am starting to make these valuations.
719. But they have not seen the light yet? That is so.
720. But for some years that has been done in Melbourne? Yes, for more than ten years.
721. *President.*] I think you told us that with regard to some of the members of the staff, not in the higher grade, it was possible they were a little overpaid, I think you said two of them? I think two of them are overpaid.
722. They have only ordinary capacity, and you could not put important work in their hands? They have to do common work, and will probably have to do it all their lives.
723. So if they rose by seniority it would be an injury to the department? Certainly.
724. At the same time you said some of the superior men were, perhaps, underpaid? I think so, considering their talents.
725. They are thoroughly good men, upon whom you could rely to any extent? Yes; I have certain men who might well be remunerated at higher salaries.
726. Would it injure the efficiency of the department if the inferior men were discharged? Someone else would have to be appointed.
727. Would you require two? One is a lad, and gets £100 a year, and will never be worth more than that. He is just an ordinary clerk, with not an atom of brilliancy about him.
728. Has your messenger sufficient employment all the day long? Not all the day long.
729. He gets a very large salary as a messenger at £120 a year? Yes; he is not employed all day long. Somebody has to be in the place to keep the people from rushing the offices. There must be a messenger of some kind.
730. Is the office really worth £120 a year—there is a housekeeper;—could you not combine the two positions? £120 is the ordinary salary of messengers.
731. *President.*] We find comparisons are made by different departments with other departments, and each department as it is under discussion says the officers in it, as compared with other departments, are poorly remunerated. That is a universal expression? I have not said so. I said this messenger gets the same salary as other messengers.
732. We find that is a prevalent expression. If we could get a model department, based upon considerably lower lines than those which exist at present, we might be spared these comparisons. That is what we are trying to aim at? I am afraid you cannot take my department as one, because it is a department of experts, to a great extent; they are not the same sort of clerks in our office as in others; I have most efficient officers. I think it is a poor saving to save a few pounds on the messenger.
733. *Mr. Teece.*] Still I suppose a boy at 10s. a week would suit? If you have a boy, he grows, and you cannot turn him out, and 10s. a week would not do.

THURSDAY, 13 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Sydney Maxted, Esq., sworn and examined:—

- S. Maxted, Esq.,
13 Dec., 1894.
734. *President.*] What is your name? Sydney Maxted.
735. And you are Director of Government Asylums for the Infirm and Destitute, and Boarding-out Officer of the State Relief Board? Yes; and chief officer under the Children's Protection Act; and I also act as Inspector of Charities under the Act when required.
736. You are aware, Mr. Maxted, that we are put here with a view to make inquiries as to whether greater economy cannot be exercised in conducting the departments of the Government without impairing their efficiency? Yes.
737. And I hope we shall elicit some information from you that will tend to the object in view; the Charitable Institutions generally are under your direction? Yes.
738. Under the heading of Government Asylums there are two mentioned on the staff who are yourself and the assistant Boarding-out Officer? Yes.
739. Your own duties, I suppose, are chiefly those of overseeing all the departments, and the heads of them? That is it.
740. The Assistant Boarding-out Officer has a very comfortable salary; are his duties onerous and frequent? They are onerous, frequent, and highly responsible; in fact I suppose that officer does not work less than ten or twelve hours a day.
741. Will you roughly sketch out an ordinary day's operations he has to carry out? First, he will open the correspondence and deal with that, which is very voluminous; then he will allot the work to the inspectors—first at the head office at Paddington; from there he goes to the Government Asylums office, at Redfern. That is the central depôt of the Government Asylums Division of the Charitable Institutions. He allots and supervises the work there, and sets it going. From thence he goes to the institutions at Parramatta, Liverpool, and other places. He has also charge of the money.
742. That is, he makes out the pay-sheets, or are they made out for him? They are made out under his direction.

743. But he is responsible for the money that passes through his hands? Yes; for the money that passes through the department. He is the accounting officer to the Treasury. S. Macted,
Esq.
744. And then he acts occasionally in a certain sense as an inspector? That is it. He actually assists me with the general management. 13 Dec., 1894.
745. There is the heading of Office for the Asylums for the Destitute, with a staff of seven, chief clerk, first clerk, and others;—are these gentlemen in attendance at your office? Yes.
746. And is there ever a cessation of work;—I do not wish you to mention them personally, but it is possible there might be a superfluity of supply of clerical hands? I honestly do not think there is. I think if three or four in the office were a little more competent their number might be reduced, but not, perhaps by more than two.
747. *Mr. Teece.*] Is that in the whole of the department? I should say not more than two, both in the State Children's Department at Paddington, and at Redfern.
748. *President.*] If those that remain were thoroughly efficient how many could you spare? If I got rid of four I would require two picked men in their places.
749. And with a thoroughly efficient staff, fewer in number, there would be more comfort in carrying on the business? It is always better to have efficient men. I could possibly do with two less.
750. Your meaning is, supposing four out of the aggregate staff were dispensed with, those who remain, being thoroughly efficient, would be sufficient for you? I do not say that; I think you misunderstood me. I should require two efficient men to do the work that these four are now doing. They would possibly have to receive a little more salary.
- 751-2. I do not want you to judge of the remuneration they receive by comparing it with the salaries in other departments of the Government, but I want you to tell me if you think that any of your staff are overpaid? I honestly do not think so. I fix the salaries pretty well myself, with a knowledge of the capabilities of the officers, and the character of the work they have to do.
753. The chief clerk gets £268, I see? He is an executive officer, and has been thirteen years in the service; that is Mr. Goldrick. His total salary is £290. He is the head of his branch.
754. Is the first clerk overpaid? I do not think he is overpaid at all. Mr. Thorpe is receiving £240 a year, and is doing the work of two men who were getting £450 between them. They were both incompetent. I put up with them for two and a half years, but at last I got rid of them, and had this gentleman transferred from another public department. With the assistance of a clerk at £1 a week he is doing the work which they failed to do for £454.
755. Is he a temporary clerk? No, he is an executive officer.
756. *Mr. Teece.*] What department is Mr. Thorpe in? In the Government Asylums Department.
757. *President.*] Under the heading of Parramatta there is a Medical Superintendent at £470, who also receives, according to page 19 of the Schedule, as the value of quarters, £100; rations, fuel, and light, £50; forage allowance, £50;—has he much travelling to do in the different locations? He is the Medical Superintendent of the George-street and the Macquarie-street Asylums, Parramatta, and the Visiting Medical Officer of the Rookwood Asylum. It is for visiting Rookwood Asylum he receives the forage allowance. He receives no salary for Rookwood, but a forage allowance, and keeps a horse and buggy.
758. *Mr. Robertson.*] What is there at Rookwood? There is a new asylum for old men, with at present about 400 inmates.
759. *Mr. Humphery.*] They have been removed from Parramatta? Yes. It is proposed to make that the central site for all the Government Asylums.
760. *President.*] But has he any cross-country riding? He has to go from Parramatta. I suppose the distance is 5 miles there and 5 miles back.
- 761-2. *Mr. Teece.*] How often does he go? Twice a week, and when it is necessary to go in special cases.
763. But there is a train to Rookwood? Then he would have to take a vehicle to the asylum, which is about 2 miles from the station.
764. *Mr. Storey.*] About what age is he? About sixty.
765. *President.*] Are his services exclusively given to his duty? Yes.
766. He has no private practice at all? None whatever.
767. Is he in the prime of life? He is a well set up, hale man, not quite 60, I should think.
768. Under the heading of Parramatta, there is a chaplain of the Church of England, and a chaplain of the Roman Catholic Church, who each get about £1 a week;—what are their duties, and where are they performed? At the asylums. They are supposed to visit the asylums, hold services, and visit the sick.
769. Do they go constantly every Sunday? Yes; each of them holds a service every Sunday. It used to be a voluntary service, but efforts were made two years ago, and the chaplains succeeded in getting them £50 a year each. The work is rather heavy, I must say; it is not ordinary parish work, and I think really the payment for it is small.
770. At Newington I see, also at Liverpool and Rookwood, there are the same entries, "Chaplain, Church of England, chaplain, Roman Catholic"; are they the professional chaplains at each of these other places? They are not the same as at the other places.
- 771-2. At each place there are a couple of fresh men? Yes; the same men attend Parramatta, and I think the Rookwood clergyman attends Newington. Newington and Rookwood are about 5 miles apart.
773. Then instead of eight clergymen, there are six? That is it.
774. But where they perform the different services do they receive the fee or salary for the two. When they perform at two stations do they receive the salary that is put down at each station? They are each paid £50 a year wherever they perform.
775. But the Estimates provide for eight at £50 a year, so there would be a saving in that? Yes.
776. What are the total number of patients or inmates in all the establishments you control; it seems to me to be about 6,600? That is just about it. The number of inmates in the adult division is 3,440, in the State Children's division, 3,085, and in the Children's Protection branch, 412. That makes the total number of dependents 6,837.
777. In the general contingencies, that is, under the heading Charitable Institutions, "Allowances to cooks, warders, and other servants";—these do not appear in the list of officers you have given? No; they include inmates, some of whom receive from 3d. to 6d. per day each. These are the more able-bodied of the paupers. We utilise the labour of the inmates as far as possible, with a few hospital attendants at £50 a year each.
- 778.

- S. Maxted,
Esq.
13 Dec., 1894.
778. How are the rations, medical comforts, and other things obtained? By tender. The tenders are submitted to the Tender Board at the Treasury, and the lowest is usually accepted, unless there is some disqualification on the part of the tenderer.
779. Are these articles all delivered by the contractors at the institutions indicated by you? They are received by the officer in charge at the institution, checked by the samples, and accepted or rejected accordingly.
780. At each distinct institution? Yes.
781. We sometimes read in the papers of aged and decrepit old men and women being taken up by the police, and upon them have been discovered bank deposit receipts for large sums of money. About a fortnight ago one ragged old man had a bank deposit receipt for £1,000;—have you any such instances? We have occasionally, not infrequently, I am sorry to say. We get people in apparently in the last stages of destitution, and sometimes we discover a man has a bank-book. I do not mean to say the cases are frequent, but they crop up occasionally. We have two or three now at present in hand. I took the advice of the Crown Solicitor with reference to two, and I am going to test the matter in the law Courts. A previous Crown Solicitor said we had no remedy. We are obliged to maintain these people, and we do not discover they have means until they are in. That is the trouble. I made a suggestion in this matter about three years ago.
782. Do you have control of the children until they are 15 years of age? Until they are 17.
783. And then after that they may go where they like? Yes.
784. Do you find the boarding-out system satisfactory? It has proved satisfactory so far. Everything depends upon the carefulness with which it is watched. It depends upon the inspection of the homes, and the care with which the homes are selected in the first instance.
785. *Mr. Teece.*] Have you any temporary clerks in your service? Yes; a good many.
786. How many? I have made a list of them here; there are fifteen altogether.
787. Their payments would be in the contingency votes? Yes.
788. How did you come to get those? By asking for assistance when it was necessary.
789. You have asked for all those? I can hardly say from memory, without hunting up the record. I should not say, without doing so, that I have asked for every one of them.
790. Have clerks been sent to you you did not want? I must say that if ever I protested, and I have been pretty firm about that, I have never had a man forced upon me.
791. Temporary clerks have been put on at your request? Generally speaking, yes.
792. What pay do they get, roughly speaking? From £200 downwards. Sometimes they have been put on to do special work.
793. But you have no special work that would require technical knowledge, such as they would want in the Justice Department, for example? Not in that sense; but take, for example, a shorthand-writer. That is a man I was compelled to ask for and am compelled to keep; he is getting £208 a year, and I am sure he is quite worth every penny of it. I should like to point out one direction in which economy might be practised—that is, by centralising the institutions at Rookwood, and getting rid of the Parramatta properties, which are quite unsuitable for the purpose to which they are put. I suppose they have 1,400 men confined within an area of 3 acres, with no chance of employing them in any industry. Some of them, though not hearty men, would be able to do a little outdoor work.
794. When did the Children's Protection Act come into operation? About two years ago.
795. For what purpose was that Act passed? To regulate the lying-in homes, to overlook the babies placed out by their mothers, and also to see that children under a certain age were not employed in dangerous occupations. That has been a very useful measure indeed. It has been the means of saving a good deal of infant life. I judge that from the number of homes we had to break up. Then it is the means of securing some kind of respectability in connection with the lying-in homes.
796. A number of the duties of administering that Act are being discharged by gentlemen who are already officers of the branch? Yes.
797. Did they relinquish any other duties to discharge these duties, or were they able to discharge these without prejudice to the others? I do not think they were, and that is why I recommended that they should receive small emoluments. Mostly they have to do work in the evenings after office hours. I would like to state that I have prepared a list with the salary, period of service, number and nature of the duties in each case, and I venture to think if you check the work you will see there is not much idle time at the two head offices.
798. I see in the Blue Book for 1893, in the Children's Protection Branch, there were eight officers, six of whom were already engaged in discharging duties under the heading "Charitable Institutions"? That is so.
799. Would it not appear that these gentlemen were not sufficiently employed before, or that there was not any necessity for further payment for this additional work to nearly the whole establishment? Not the whole establishment.
800. Six out of eight? The duties are very heavy.
801. If they are very heavy how is it that six out of eight of the officers necessary to discharge the duties described by the Act were already employed? I have just remarked that in most of those cases the duties would be performed after 4:30. Of course I admit that as the additional work was put upon them I thought it fair they should receive the additional pay.
802. You say the inspection of the lying-in homes, and the looking after the children, and all that sort of thing, is all done after ordinary office hours? Not all done after office hours.
803. Is not the greater part of it done during the office hours? I would not like to say that. If I were to say half and half I would be nearer the mark.
804. What we understand is, that half the duties of administering this Act could have been performed by the gentlemen who were already engaged—that is, they were not sufficiently engaged in their other duties? I can hardly say that; because, I can assure you, on three nights out of the six you will find the clerks at work.
805. Does it not follow if they do half the duties in office hours they could not have been fully employed before this Act came into operation, unless the office duties have decreased? I think the answer I gave would be as near as possible correct—that is, about half the duties are done in office hours.
806. And, therefore, the time occupied in discharging half the duties under this Act was not sufficiently employed

- employed by the officers in the general branch before the Act came into operation: that necessarily follows? It logically follows, of course.
807. Now, I want to ask you this by way of information;—the question of quarters, rations, fuel and light is of frequent occurrence here. Take your own case; do you live in a Government building? I do; it is indispensable I should live there, because the greater number of the papers are dealt with by me after tea.
808. Where does the secretary live? He lives at North Shore.
809. He receives a rent allowance? Yes.
810. I see your quarters are valued at £60 a year? The value of the quarters is divided between myself and my wife: she is the matron of the place.
811. Your wife is matron of the State Children's Relief Branch? Yes.
812. Dr. Beattie is the Surgeon Superintendent at Liverpool? Yes.
813. He lives on the premises? No; he gets a rent allowance.
814. I see on page 18 of the schedule it appears as "value of quarters"? He receives £100 a year for rent.
815. That means he lives in Government property? No; he does not live on Government property.
816. Then it is wrong here. It should be "allowance for quarters"? It should be, undoubtedly.
817. He attends Glenfield Farm Home;—where is that? That is about 4 miles from Liverpool.
818. How often does he go there? Twice a week; sometimes more frequently.
819. Is that near the station? No; it is not near the station; he drives there.
820. The matron of the Liverpool Asylum lives in the place? Yes.
821. She receives a salary of £236 a year, in addition to her board and residence; do you think that is too large a salary for a position of that kind? I think that lady should be put on the same footing as the matron of the Lunacy Department. I think £160 a year would be fair in addition to the allowances.
822. You think she is getting about twice the salary she ought to get? Not twice. I may tell you a suggestion had been made that these matrons should be put upon the footing of the Lunacy matrons.
823. I will take you to the Shaftesbury Reformatory at South Head;—how many inmates are there in that place? On an average, sixty.
824. The superintendent and sub-matron, I presume, both live on the premises? Yes.
825. Can you tell why the superintendent's rations, quarters, fuel, &c., are valued at £65, and the sub-matron's at £90? The sub-matron's are not valued at £90, are they?
826. It is so in this schedule? That must be a typographical error; it should be £65.
827. You think it is a clerical error? I think it must be. They both receive £30 each for rations, and they both have quarters.
828. Oh, they are paid the £30, are they? Yes; they are paid that for the rations.
829. Is that the case throughout where we find, "value of rations, fuel, &c."? In all cases, except that of the ordinary attendants, those who receive £50 a year and are rationed. They appear on the pay-sheets, and are paid out of the Service vote.
830. Do they provision themselves? Yes; that system has just commenced at Shaftesbury only; they used formerly to draw provisions, but now they draw money instead. It is more satisfactory.
831. Take the case of fuel and light;—as a matter of fact, I suppose light is provided whether they get paid or not? They do not draw money for that; they never draw money for anything except rations when they reside on the premises. They simply get their fuel and light, and it is valued for superannuation purposes really.
832. Take any of these cases where we see, "value of rations, fuel, and light, £40"—M. Gorman, for example;—does that mean that M. Gorman is paid £40, or only £30, and £10 is put down as the estimated value of fuel and light? She draws £20 for rations.
833. Then £20 is the estimated value of fuel and light? Yes.
834. Now, as to George-street, Parramatta. There appear to be three engaged there of the name of Dennis? There are also three Burnside's at Liverpool. Mrs. Dennis, the old lady, is going out on pension, the young one is about to be married. The office does not appear on the Estimates for this year. It is not proposed to fill either of these posts. What is proposed to be done is to appoint a male superintendent there, as at the lunatic asylums, instead of having a woman over the institution.
835. I suppose the remarks you have made with regard to that salary of £236 at Liverpool will apply to Parramatta? Yes.
836. Are there any others at Liverpool, besides those three Burnside's;—in other words, have the Parramatta and Liverpool Asylums been each a family matter? It is hardly fair to ask me that question, Mr. Teece. Do not the Estimates speak for themselves?
837. That is what I am trying to get at? They do the work; the old lady has been there over thirty years.
838. They are mother and daughters? Yes.
839. Do you think it a judicious thing to have a mother and daughters in charge of the one asylum? I do not, and I am breaking up the system. Mrs. Dennis's retirement, and her succession by an officer already in the department, and the retirement of Miss Dennis, will effect a saving of nearly £400; that is, her successor will not get any additional salary, and two salaries will be saved. In my opinion the work will be more efficiently done, because there will be a man there instead of a woman in the second principal post.
840. I suppose there must be some servants in the asylums? There are servants who are paid from that other vote; £50 a year is the usual payment, and board and lodging on the premises. They are hospital wardsmen trained to attend on the sick. We prefer them to women nurses for certain duties.
841. And the ordinary household duties are discharged by the inmates? Yes.
842. How about Liverpool;—what is going to happen there with the Burnside family? Of course what is done at George-street, Parramatta, should be done at Liverpool. But I do not think there would be such a saving there, because I doubt whether I could spare another officer to take the place. I think I should have to appoint someone else to fill the post.
843. You would put somebody in the place of Mary Burnside? Assuming she takes her pension.
844. Supposing she does not take it, what happens then? It is not for me to say.
845. But it is for you to recommend;—you submit these estimates? Yes.

S. Maxted,
Esq.
13 Dec., 1894.

- S. Maxted,
Esq.
13 Dec., 1894.
846. *Mr. Storey.*] Is she eligible to retire on a pension? Oh, yes; she is nearly 70.
847. *Mr. Teece.*] If she is nearly 70, is she fit for her position? Yes; she is one of the most active women I have ever seen in my life. She is really efficient in spite of her age, but I think the system of having a woman in charge is wrong.
848. You think the duties could be more efficiently discharged, and possibly more economy effected, by supplying her place with a male superintendent? Yes.
849. *Mr. Storey.*] I see you were appointed in 1888 to the charge of these charitable institutions? Yes.
850. Were you in the Government previous to that? Yes; I was first appointed to the Government service in August, 1878, as Superintendent of the Protestant Orphanage. When the Boarding Act came into operation in May, 1881, I was appointed to administer it in conjunction with a board of advice, known as the State Children's Relief Board. In 1887, a Royal Commission sat upon these charities, and in consequence of its report the Manager of Government Asylums, who received £650 a year and allowances, retired. The Inspector of Government Charities, who received £650 a year and allowances, retired, and these two offices were amalgamated with the office I then held, the office of Boarding-out Officer. The three offices were amalgamated, and there was in consequence an actual saving on these three salaries of £1,010.
851. You have had a large experience in the control of Government institutions? I have.
852. Has there been much decrease in the expenditure of these institutions in the last eight years, or has it grown? The average cost has decreased, and that is the way to test the economy of management.
853. Can you give us any idea of the decrease? I should say it has been about £1 a head upon the inmates.
- 853½. What is the total expenditure under your vote? About £90,000 this year.
854. That is with a total of 6,837 inmates? That includes the whole of them. I may tell you the adult inmates cost about £15 a head, and the State children under £14 per year, and that is cheaper than it is being done in any of the other Colonies.
855. In your position you have great control over the whole thing? I have general control, subject to the Colonial Secretary.
856. To whom do you report? To Mr. Critchett Walker. He is my immediate chief.
857. You have no board? I have a Children's Relief Board in connection with the children's division, but not in connection with the Government Asylums.
858. In making up the estimates you have nobody to revise them; you simply send them to the Minister? Yes; and they are revised in the Chief Secretary's office.
859. You have drawn them up for the next year as economically as possible? Yes. It is impossible to get below that average of cost unless you deprive the old people of the necessaries of life, or impair the efficiency of the department.
860. You say you fix the salaries yourself? I say I recommended them in almost every instance, *i.e.*, the salaries of the temporary officers.
861. What is the nature of the reports you make to the Colonial Secretary, are they weekly, monthly, or half yearly? I do not report specially to the Colonial Secretary more than once a year. It is such a report as this which goes before Parliament. [*Report handed in.*]
862. You say you fix the salaries yourself;—what stand do you take? I judge from the salaries usually paid to officers of the grade and ability of those in my place. I speak only about the temporary clerks, the salaries of the others are fixed by Parliament. If I find a special officer is worthy of it I select him to be put into a special position.
863. Do you compare the salaries with those in other departments? I compare them with what officers of the same class receive in other Government departments.
864. That is about the only experience you have ever had? I was in business once.
865. A long time ago? Yes.
866. I think you mentioned that once you got rid of some men as incompetent;—how did you get rid of them? I reported them for misconduct and incompetency, and after the usual inquiry they were dismissed.
867. Dismissed from the Service altogether? Yes; an inquiry was held in the usual way.
[*At this point the President retired and Mr. Humphery presided.*]
868. *Mr. Humphery.*] You have a number of inspectors;—are they allowed travelling expenses? Yes.
869. What check have you over the expenses? The inspectors are allowed so much per day.
870. How much are they allowed? There is a regular schedule scale. They are allowed 15s. every night they are away.
871. Does that include their travelling expenses? That does not include train or buggy-hire.
872. What does the 15s. per diem cover? It covers the hotel and incidental expenses.
873. What class of men are they? They are gentlemen; they must be so, because they have to visit the boarded-out children.
874. What districts do they travel? All over the Colony.
875. Do they go to Bourke and Walgett? Yes; they also go to Wagga Wagga, Albury, right along the south coast as far as Bega, and along the Manning River. We must have nearly 1,000 apprentices scattered throughout the different districts, in addition to the boarded-out children.
876. Have you any control over the "Sobraon"? No; except to board out the boys.
877. You have nothing to do with her boys? No. I think, on grounds of economy, as well as for other reasons, that all these children's institutions should be under the one Board. It is so in the other Colonies.
878. What is the annual expense of your inspectors? It was about £1,300 this year; that is simply travelling expenses.
879. That is, to simply look after over 3,000 children? Yes; but there are the salaries besides that.
880. How many inspectors are there altogether? Nine, I think.
881. *Mr. Teece.*] Does that 3,000 include those you have in institutions here? We have none in institutions; they are all boarded out. The object of having the boarding-out system was to break up the institutions.
882. *Mr. Storey.*] As far as their travelling expenses are concerned, you have to trust these inspectors? We have to check their reports. They telegraph to us from every town, and we check their railway passes

passes when they go and return. I do not think there is any chance of getting at us there. If a man comes back to town with his railway pass from Saturday to Monday he must use it, and he would be bowled out when his accounts were being checked and compared with the passes.

883. Suppose he went to Wagga Wagga and charged for three days instead of two, how could you control that? We check his work. We seldom send the same inspector over the same district.

884. Have you had cause to complain? Occasionally; not very frequently. I refused to pass an account the other day.

885. Have any inspectors been dismissed for not acting properly? Yes; I dismissed one some years ago.

886. There is a total amount of £26,000 for rations;—do you certify to the Minister that that is properly expended? I have to certify to every voucher. The rations are supplied to the institutions; the voucher is given to the superintendent to certify that the quantities have been received. Then it is sent on to the head office in Sydney, where it is checked as to contract prices.

887. How often do you visit the institutions yourself? On an average once a month or more. If it is necessary, two or three times a month.

888. Is the amount of £26,000 ever exceeded;—you satisfy yourself that everything is correct, you sign the vouchers, and the vouchers are paid at the Treasury? Yes.

889. Are not the medical officers' fees rather high? You see these institutions are largely hospitals. I will give you an example: Out of these 3,440 inmates, 1,445 are in the hospitals, and most of these have been taken from the metropolitan hospitals and transferred to our places, in order that they may be maintained at a cost of £15 a year, instead of over £50 a year in the general hospitals.

890. Even with all that the salaries and allowances for quarters make a good large amount for a medical man? They are professional men, sir.

891. As a rule professional men of large standing would not take these positions? They happen to be men of the best standing. Take Dr. Beatty, of Liverpool; Dr. Waugh, of Parramatta; Dr. Brown, of Newington.

892. They prefer to take these berths rather than stand their chance outside? I suppose so, as competition is keen.

893. Is that reformatory under your charge that was contemplated in the appointment of the captain of the "Himalaya"? It is under my charge, but the appointment is not made. It is proposed to transfer Captain Murray, who is at present at Newington Asylum, and his wife, to act as superintendent and matron of the Boys' Reformatory. I do not intend to fill up their places at Newington. Therefore there will be a saving there.

894. How are you going to manage at Newington? There is a good senior nurse there who may take Mrs. Murray's place at a little increase of salary, with occasional supervision from Captain and Mrs. Murray.

895. You will make a saving thereby? Yes. As a matter of fact, the place is in such good order through Captain Murray's hard work during the last five or six years that there would be no difficulty in running it as I have pointed out.

896. The second Captain Murray will not be wanted? He is out of it.

897. It was reported that the Government were paying too much rent for that place;—is that the case? I had nothing to do with the fixing of the rent, and I am not capable of determining the commercial value of the place. There is an orchard there, and there should be a large income from the fruit. Sir George Dibbs visited the place, made personal inquiries, and himself fixed the £500 a year. By taking that place we saved the rent of an establishment that was known as the Rydalmere Boys' Home, for which we were paying £125 in rent. We transferred the buildings on to a portion of the reformatory ground.

898. What amount did you spend on Eastwood? I could not quite tell you with regard to the buildings. It might probably be £1,000. The buildings could all be removed.

899. Would they be worth anything if removed? At any rate, it was indispensable to spend that much to make the place suitable for reformatory purposes. We had to erect a prison yard, a dormitory, and dining-room.

900. This affair about the Burnside family? It has been going on for a good many years, since before I was appointed, and until the system was altered it was necessary to have the people there—either the daughters or some other women.

901. But you see the allowance for the old lady and her daughters, and for fuel, &c., make up a large item, which you, as Comptroller of the institution, should have brought under the notice of the Colonial Secretary? I have made a suggestion in regard to this matter.

902. What reply did you get? No action has been taken.

903. *Mr. Robertson.*] Do you think it would be possible to reduce your clerical staff? I do not think it would be possible to reduce it beyond the point that I explained in reply to the Chairman's question.

904. Letting four go? Yes; and putting on a couple of smart ones instead.

905. At the salary of the men to be dismissed, or less? About the same. In one case I think a man ought to receive £50 a year more if he does the work better. Sometimes you will get a man who will do the work of two or three ordinary men. Take Mr. Green, for instance, and others I could mention.

906. Does Mr. Green do the work of three ordinary men? He does the work of two, certainly.

907. There is an officer marked here as clerk, at a salary of £200. It seems his duties are to register all papers passing through the office, to keep a register, and to keep an index? Who is that, may I ask?

908. Childers? Yes.

909. Does he do any other work? He has been doing inspecting work. I did not find him suitable at that, so I put him to this work. I have intimated to him it is necessary he should get an exchange, as I want a smarter man.

910. If you had a smart youth at £75 a year he could do that work? Not that work. There is a good deal to do.

911. Not the registering and indexing of papers? No.

912. A smart lad could not do it? I do not think so.

913. *Mr. Teece.*] He is a temporary clerk? Yes. He was acting as inspector outside, but he went on unsatisfactorily—not sufficiently so as to justify me in recommending him for dismissal—so I transferred him and gave him that work to do until he could get an exchange.

914. *Mr. Robertson.*] How do you deal with the correspondence? The method is this: Excepting the merely

S. Maxted,
Esq.
13 Dec., 1894.

- merely formal correspondence, every document is submitted to me, and I write a direction on it as to what is to be done with reference to matters of management, administration, and expenditure.
915. And with regard to the children? Special cases, not mere formal matters of boarding out, but all important documents, go through my hands, in all the divisions of the department.
916. And these duties that are down to Mr. Goldrick, who receives £290, are they the whole of his duties? He has charge of the office, and has to see that everybody does his work.
917. He is the head of the branch? Yes; and is responsible to me for the work of everyone in the place.
918. The first clerk attends to the duties pertaining to general accountant's work;—what accountancy work does he do? He keeps all the Government asylums accounts. That is the officer who is doing the work of the two men who were formerly there, one at £250 and one at £200. They, of course, were incompetent men. We had to get rid of them, and he was transferred from another department.
919. Besides that he prepares the financial statistics? Yes.
920. How many clerks connected with the store department are there at the Government Asylums Office? Two. Sometimes it is necessary to put on a clerk from one of the other offices to help.
921. That remark applies all round? Yes.
922. You call upon one in one department to help in another? That is it.
923. Is this staff able to keep the work in hand? It is right up to date.
924. Could they do more than they are doing? I do not think the present staff could do more than it is doing. It is a common occurrence for the clerks to work at night without being paid for overtime.
925. The only recommendation you could make would be that four men should leave, and you should engage two to do their work? Yes.
926. Four men are at present doing two men's work? That is it. There were no books at all kept when I was appointed, no cash-books, or stock books, or commercial books of any kind. I think, Mr. President, you will see more by inspecting the books.
927. *Mr. Humphery.*] How many inmates are there at the present time at Rookwood? About 400 there, but they are being increased. We are transferring a few from the George-street Asylum. We have just completed the erection of four pavilions.
928. For how many have you accommodation? Not for more than 400.
929. The accommodation is fully taken up? Yes; fully taken up.
930. When you made a suggestion that the inmates of George-street and Macquarie-street Asylums should be removed to Rookwood, you intended to convey that it would be necessary to have additional accommodation;—is that it? That is it.
931. How many acres of land have you there? About 700 acres.
932. In Parramatta you have three only? About three.
933. What will be the annual saving, supposing the Macquarie and George Streets inmates could be removed to Rookwood? It would save quite £1,000 a year in the cost of management, I should say. It would be necessary to put up the buildings first. The economical plan would be to take £50,000 from the Loan Vote, and sell the Parramatta property. Besides, the buildings at Parramatta are utterly unsuitable. It is impossible to get the inmates outside the buildings. They are a lot of helpless old people living on five flats in a building near the river side. It is only by extreme good management and care that an outbreak of disease does not take place.
934. You have had to provide accommodation for the difference between 175 and 400? Yes.
935. What has been expended in providing that accommodation? That is in the Government Architect's Department. I should say, from memory, about £4,000.
936. You provided accommodation for 240 persons by an expenditure of £4,000? Yes.
937. In order to provide accommodation for 2,000 more, what should you say would be the cost? I should say about £1,000 for every fifty inmates.
938. According to your estimate it would cost about £40,000? Yes, from £40,000 to £50,000; £40,000 for the actual accommodation and the other £10,000 for the out offices.
939. There would not be much saving, after making provision for interest? No; but you could sell the other properties.
940. After being used as asylums they would not sell for much? No; but the land is very valuable.
941. Would you expect to save £1,000 in the management? Yes. I am providing for the probable requirements of the next six or ten years. We would require to provide for 1,500 immediately.
942. *Mr. Storey.*] Where are the 1,500? In the George and Macquarie Street Asylums, Parramatta.
943. *Mr. Humphery.*] Touching the expenditure in the State Children's Relief Department for inspectors, are the nine inspectors you have referred to in the course of your examination fully occupied with that particular work? They are fully occupied in that and the Children's Protection Branch, and the whole success of the system depends on the carefulness and extent of the inspection.
944. Are they constantly moving about? Yes.
945. *Mr. Robertson.*] Is it one of the inspectors you can spare to go to Liverpool? I propose to put one there.
946. Then there was another way by which you could save, by dispensing with an inspector whose services are not required? I could put his share of the work on to the shoulders of the others, but there would be less inspection.
947. Would it interfere with the efficiency of the inspection? I think I could make it sufficiently efficient.
948. *Mr. Humphery.*] What is the provision made for these nine inspectors, including travelling allowances—I mean the total annual provision? The average payment would be about £200 or £225 a year to each man, and, say, £100 all round for travelling expenses. One man might draw £200, and another not £50, but that would be about the average.
949. At what do you estimate your salary and quarters, Mrs. Maxted's salary, and various allowances? And the house rent too?
950. Quarters and everything included? £1,026.
951. That includes everything? Yes, excepting travelling expenses, which do not exceed £20 a year. I would like to say that if any other lady but Mrs. Maxted occupied that position she would be receiving the

the same salary as Mrs. Burnside or any of the others. I would like to mention that, in addition to actually controlling and directing the Institutions, I have to deal with all claims from subsidised institutions; they all pass through my hands.

S. Maxted,
Esq.

13 Dec., 1894.

952. Country hospitals? Benevolent Asylums and other institutions.

953. *Mr. Humphery.*] There is no doubt you are fully occupied? Fully occupied.

954. Have you any suggestions to offer to the Commission whereby economy could be effected in the department immediately under your supervision? With regard to the salaries I have already answered you; and I don't think I could say anything else beyond recommending the removal of the Parramatta Institution, and substituting two clerks for four. I do not know whether the matter I am going to allude to would come within the scope of the inquiry of the Commission. I refer to the Randwick Institution, in which the Government has an interest to the amount of £70,000 or £80,000. The children for whom the buildings were erected are actually under the State Children's Relief Department. The place is no longer required for children. At present the buildings are occupied by about 150 children, many of whom would go to their own parents if the institution were broken up. These great buildings might be used to accommodate 500 or 600 adults, and so save expenditure in increasing general hospital accommodation. The accumulated funds come to something like £50,000, and these funds were given for the purpose of maintaining the destitute children of the Colony. If these funds could be invested in Government securities the interest might, I think, under a short Act of Parliament, fairly be devoted to the maintenance of the State children.

955. When you relieved the Randwick establishment of the children no portion of the accumulations, or of the annual interest, was transferred to you? We have not resumed the buildings.

956. You misunderstand me. No portion of the accumulated funds or the annual interest was transferred to the Government? No; none whatever.

957. How many children do you consider you have taken over from the Randwick establishment? We have not been boarding out from there for four or five years. It is difficult to say without going to the books.

958. Before you commenced the boarding-out system what was the average number in the Randwick establishment? About 600 to 800.

959. Therefore, in round figures, you have relieved the Randwick Asylum of about 500 children annually? Yes, including those who would have passed in from the Sydney Benevolent Asylum.

960. For which you have received no assistance whatever from the Randwick Asylum's funds? No assistance whatever.

961. Before you undertook the control of the children did the Government grant annual allowances to the Randwick Asylum? They used to pay them for the maintenance of these children.

962. Has this payment ceased? It has ceased. The children, instead of costing £21 a year, as in the Randwick Institution, are now costing under £14 a year.

963. *Mr. Teece.*] With regard to George-street, Parramatta, and Liverpool Asylums, and the two salaries you spoke of, you stated they were too high, and that you were responsible for the Estimates;—I see the same salaries are retained here in the Estimates for 1895;—did you put them in the Estimates? I submitted the Estimates without any alteration, but I also submitted recommendations for the general reorganisation, including the reduction of these salaries.

964. There are several clerks here;—are they still in your employ? Yes; two of them are inspectors under the Children's Protection Act.

965. They came in about the middle of 1892, or the beginning of 1893, and they are getting about £200 a year;—were there not any officers of the Government service to whom this would have been promotion? Undoubtedly there must have been.

966. What course did you pursue when you wanted these officers;—did you make inquiry to ascertain if there were Civil Servants deserving of promotion? That is not the method under which these appointments are made. I simply said I wanted two inspectors, and these two gentlemen were named as efficient. I made inquiries and found they were suitable. One of them is a magistrate.

967. They were sent to you? Yes. I would like to say something further on the question of economy. There are twenty-two cottage homes for aged and destitute married couples near the railway station, Parramatta. If that Rookwood scheme is carried out provision might be made there for these married couples, and the Parramatta property rented or disposed of. That would save something also in the cost of management.

968. You said in connection with the Randwick Asylum there were about 100 acres of land;—that is valuable property? Very valuable property. If the buildings were reclaimed they might serve for additional hospital accommodation; and about 80 acres of the land cut up and sold in building blocks.

969. You submit to the Colonial Secretary a report on the Charitable Institutions each year, but apart from that do you make any report on the conduct, efficiency, and discipline of your staff? It is sent in to the Civil Service Board.

970. *Mr. Storey.*] What do you send in to the Board? The tabulated returns, the names and statement as to efficiency of each officer in the department.

971. How often do you do that? Every year.

972. Every year? The tables are sent to us and we fill them in yearly.

E. G. W. Palmer, Esq., Secretary to the Civil Service Board, sworn and examined:—

973. *Mr. Humphery.*] What is your name, and your position in the Public Service? Edward Gillett Worcester Palmer, Secretary to the Civil Service Board.

E. G. W.
Palmer, Esq.

974. *Mr. Teece.*] You are quite familiar with the Civil Service Act? Yes.

975. In part 2, with reference to examinations, appointments, and promotions, there are a number of clauses which were intended to regulate admission to and promotion in the Civil Service? Yes.

13 Dec., 1894.

976. Under the direction of the Civil Service Board? Yes.

977. Has that been done in the Civil Service since the Board has been established—I mean, has the Service been conducted under these regulations? It has.

978. Then you have conducted examinations for admission to the Civil Service? The examinations have been conducted by the University.

979.

- E. G. W. Palmer, Esq.
 13 Dec., 1894.
979. And no person has been admitted under the age of 17, or above the age of 25? Not as a probationer. Under the 31st clause they have been admitted.
980. I am coming to that directly;—have there been any probationers? Yes, a large number.
981. Have vacancies in the higher ranks of the Service been filled from these probationers? Yes. The probationers have come in at £50 a year, and after passing the junior examination have received an increase to £75, and a subsequent increase to £100. Then they are considered to be on the staff, and the 4 per cent. deduction is made from them as officers.
982. Then clause 93 provides that every appointment above the class of probationers in the Service shall be made from the probationer or junior class? Or the temporary.
983. It does not say that. It says, "In the general and professional divisions every appointment to the lowest class shall be made from the probationary or junior class, or from persons who shall have been temporarily employed in the Service?" Yes.
984. "Provided that in such latter case the person to be appointed shall have been so employed for at least twelve months, and shall satisfy the Board that he possesses the prescribed qualifications?" That has been carried out, except in a few cases where Ministers have made appointments under the 28th section for special qualifications. In some cases the Board have challenged these appointments.
985. Then are we to understand that, with the exception of that special qualification clause and the temporary appointments, all appointments to, and promotions in, the Service since the existence of the Civil Service Board have been made subject to the approval of the Board? The Board have on several occasions challenged the appointments of Ministers under the 28th section.
986. But with that exception and the temporary ones? And the new appointments under section 29, where a new office has been created.
987. Is that an elastic term? Very elastic.
988. With those exceptions the Civil Service Board is responsible for the present condition of the Service? Only for the appointments to the Service made under section 27. All other appointments are made by Ministers or heads of departments without reference to the Board.
989. And promotions? Yes, but only those made under section 27.
990. Have they anything to do with fixing the salaries? No, nothing at all.
991. You also are entrusted with the power and duty of punishing officers for misconduct? Only when the cases are forwarded on by the Governor-in-Council. The Board have no power of initiation.
992. And has the Board any disciplinary power,—any right to inquire into the condition of the Service? There is no clause in the Act that gives them power to do that. All they can do is to take the reports of heads of departments in reference to the discipline of officers?
993. Do you receive reports from the heads of all departments in the Service as to the discipline and conduct of the staff? As to the efficiency of the staff, and the duties performed by them.
994. What would efficiency mean,—suppose they were not efficient? In some cases they report they are only fairly efficient. They occasionally report an officer as being inefficient, but it is a very occasional thing.
995. Do you get these reports from all the Under Secretaries? Yes; from heads of departments, verified by the Under Secretaries.
996. In case of inefficiency what is done;—is any reduction of salary made? Notice is taken of the case, and when appointments are made it guides the Board in their decision.
997. An officer reported inefficient would not be considered eligible for promotion? No.
998. Have you had many cases where there have been reductions in salary or where an officer has been disgraced or dismissed over any of these reports? Yes, after being cautioned in several cases, officers have been dismissed for breaches of rules and inefficient conduct.
999. And with regard to this special clause 28, have there been many appointments of that character? There have been on an average about twelve per annum.
1000. Have they been appointments which in your view were contemplated by the Act, or has this clause been taken advantage of to make appointments which ought not to have been made? In a few cases it has been taken advantage of; that is to say, men whom the Board would not have passed without examination have been placed in positions by the Minister, simply because they have been working in the office.
1001. They did not possess special qualifications? No; they might have been useful men in the office, but the 31st section distinctly says that temporary employment shall not qualify for permanent appointment.
1002. I am dealing with the 28th section, but now with regard to the 31st—there have been a large number of temporary appointments? A very large number.
1003. Are you consulted about them? Not at all.
1004. Are you informed about them? At the end of the year, but not when the appointments are made. I may state that the great bulk of the temporary appointments that have been made since the Act has been in force have been purely temporary, that is to say, men have been taken on for the Census work, the Local Government work, the Electoral Bill, and for service in the Works Department. The bulk of the appointments although they seem so large have been shifting appointments. Perhaps men have been taken on for two or three months and not being found efficient, fresh men have been taken on in their places. That has been largely the case in the Local Government Office and the Electoral Office.
1005. Then the 31st clause provides they shall not be employed temporarily longer than two years? That has been a dead letter.
1006. Can you supply the Commission with the number since the institution of the Board of temporary appointments, and the number of those who still remain in the Service, and have been there more than the two years prescribed by the Act;—can you get that information for the Commission? I can get it, but could not give it from memory. I might state that when the Act came into force there was a very large staff of so-called temporary officers, who had been in the service then for periods ranging from five to ten years, and who are still there.
1007. Can you also tell us how many there are of these? Yes.
1008. *Mr. Robertson.*] But ten was not the limit, surely? Some were there seventeen years, and some thirty years.
1009. Then the range should be rather from five to thirty, should it not? When I said five to ten I embraced the bulk of them.
1010. *Mr. Teece.*] What I understand you to mean is this: Leaving out the temporary and coming to the regular

regular permanent staff of the Government Departments, the condition of these departments, whatever it may be, good or bad, you hold yourselves responsible for? No; because we took over a most heterogeneous mass of officers, in which no classification whatever had been made. There were all sorts of men in the Service, and we had no power of eliminating any inefficient men, so the Board can only be held responsible for the men who have been appointed under their *régime*, under the provisions of section 27. The Civil Service Board are not concerned in appointments made under sections 7 and 8, which embrace all appointments and promotions made in departments brought under rules and regulations, and of persons who are not "officers" within the meaning of the Act. These embrace all wages men, both permanent and temporary. Teachers in the Educational Division are also appointed and promoted without reference to the Board.

E. G. W.
Palmer, Esq.
13 Dec., 1894.

1011. And promoted? Yes, and promoted.

1012. But you have the means of knowing whether there are a lot of inefficient or improper persons in the Service? Yes. I was, perhaps, indiscreet in saying a lot of persons; but the Board had no power of reorganising the Service.

1013. I am coming to that, but what I mean now is—the reports furnished to you, and the power vested in you, enable you to acquaint yourselves with the condition of the Service and the discipline existing, and you can ascertain whether there are inefficient and improper persons in the Service? Yes; to a limited extent.

1014. What is it limited by? Limited by the reports that are given to us.

1015. As a matter of fact neither the members of the Board nor yourself personally investigate any of these affairs or trouble yourselves about the organisation or discipline of the Service. Is that so? We have never had the opportunity of inquiring into the actual discipline of the departments. The Act gives us no power to do that.

1016. You will remember that just now, in replying to a question as to whether you were responsible for the present condition of the Service, you said you were? Only for the appointments and promotions made since the Act came into force. I qualified the statement.

1017. You are responsible for these? Yes.

1018. And for the present state of efficiency with regard to these, or do you lose sight of them when they are appointed, and rely solely on the reports of the heads of departments? After they are appointed we rely solely on the reports sent in to us by the heads of the department.

1019. Is your knowledge of the condition of the Service entirely based upon the reports furnished to you by the heads of departments? Yes.

1020. Entirely? Yes.

1021. Presumably, therefore, you are supposed to know by means of these reports what is the condition of the Service. I mean the reports ought to show you that, if they are honest. If they are honest and fair, they should inform you of the condition of the staff of every Government Department; if one of these reports discloses a state of inefficiency or want of discipline have you the power to remedy it? None of them ever have made such a disclosure.

1022. If they had made such a disclosure would you have the power to remedy it? I imagine the Board would have drawn the attention of the head to the report.

1023. But if the head had already made the report, his attention would have been drawn to it? But the Board would have no power except through the head of the department. The only power the Board would have would be to draw the attention of the administrator of the Act to the report.

1024. Then this is the position—correct me if I am wrong—with regard to appointments and promotions you have only a permissive power? An advisory power.

1025. With regard to punishments or dismissals you have no power? Only as cases are sent on by the Governor-in-Council.

1026. The Board cannot go into an office and dismiss a man? No.

1027. There is an actuary attached to your department? Yes.

1028. He gets an allowance of £100 a year? Yes.

1029. What work does he do for that? He has all the cases of retirement sent on to him, and he has to report to the Colonial Secretary's Department as to the rebate from the pension to be made in accordance with the 54th section.

1030. He has to advise when the proper amount of pension is to be made? Yes.

1031. *Mr. Robertson.*] What accounts do you keep in your office? We keep an account of all pensions paid to the pensioners, and of all gratuities paid month by month.

1032. Does that require any special qualification at all? It requires a man to be a good accountant.

1033. In what respect does he require to be a good accountant; it is simply a matter of record, is it not? Yes; the accounts have to be kept for each pensioner to see the actual amount of pension received.

1034. But that is a very simple process, is it not? Oh, it is simple accounts.

1035. Those are the only accounts you keep in your department? And salary accounts.

1036. Don't you think £425 per annum for that sort of work is excessive? Well, the accountant is a thoroughly efficient officer. He has the preparation of a large number of returns at different times.

1037. But don't you think that in your office you could effect a saving with regard to that salary? The salary perhaps is a little high, but I don't think it could be much reduced.

1038. Is there any way in which you think the expenses could be reduced in working the Branch? If the work of the Board has to be carried out, and information that I begin to see is becoming more and more necessary has to be furnished, I think there will have to be an extension of the staff, especially as we have the Blue Book to prepare now. Of course that is done with temporary officers.

1039. *Mr. Humphery.*] The whole of the work in connection with the preparation of the Blue Book falls upon the Civil Service Board? Only this year; we began it this year.

1040. There is a sum provided of £626;—is that specially devoted to that purpose? Yes, there are four temporary clerks engaged on that work.

1041. Would the duties of the permanent staff be irrespective of the preparation of the Blue Book? The staff is fully employed irrespective of that.

1042. How are they employed? In the registration of papers, correspondence, preparation of lists of seniority, and the writings of the Superannuation Valuation Book. Lists of appointments have to be kept.

MONDAY,

MONDAY, 17 DECEMBER, 1894.

Present :—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
 THOMAS LITTLEJOHN, Esq., PRESIDENT.

James Powell, Esq., Collector of Customs, *called and examined :—

- J. Powell, Esq.
 17 Dec., 1894.
1043. *President.*] Your department is a very important one. In the Estimates of Expenditure of 1895 I see your indoor branch, heading page 54 in the Estimates, comprises about thirty officers altogether, twenty-nine and yourself? Yes.
1044. Is there any over supply of officers in this list which you could dispense with? I am not aware that I could dispense with any one of them at the present time. Business fluctuates very much. Perhaps we have a slack time for one week, and for the next three weeks we may be taxed to the utmost of our strength. Vessels coming in an irregular fashion, we are obliged to be ready for any emergency, but generally I don't think that there are more persons employed than the business requires.
1045. At the present season I suppose there is rather a larger supply of shipping than at any other period of the year? Shipping is not the only business we have to attend to. We have a statistical branch which alone employs six clerks. The warehouse branch employs several. The drawback branch also has several. The registry of shipping is also included. If you will allow me to say so, I do not think that the Estimates give you a sufficient indication of the manner in which the Custom House Department is employed. This list which I now hand in will show how the work is distributed, and give you the names of all the persons employed, with their positions and duties. [*Report handed in.*]
1046. It is stated that the scale of remuneration has not been diminished, nor I suppose materially increased, since you took charge of the department? I think it has been materially reduced.
1047. In number? Not in number, but in the direction of a reduction of salaries.
1048. Taking the scale as it is given in the Estimates, has it ever occurred to you that, considering the responsibilities of many of these officers, they are more highly paid than, for instance, the chief of the Department is, that is yourself, considering the difference in responsibility and the duties of the respective positions? They are less highly paid than they were twenty-three years ago, take office for office. I mean from myself downward. I have made a statement showing the cost to the department. It is included in the report which I have just handed in. From 1880 to the present time I find that my total cost of collection in the former year was 4.20 and in 1893 it was 3.03.
1049. Would that number be affected by the larger revenue? Yes, and also it would be affected by the gradual increase of the business by the addition of other taxation.
1050. Would the extra machinery which would probably be required for obtaining a larger revenue increase the proportions of which you have spoken? I think it would, under certain conditions. In 1884 tobacco excise taxation was imposed, which required an entirely new staff, and greatly added to the work of the department. In 1887 beer excise taxation was imposed, and that also increased the staff and the cost of collection. In 1889 the distilleries and refineries were added to the Customs Department, and ceased to be a separate branch, so that there was a large saving effected. By the addition and collection generally of the tobacco duties, the distillery and refinery and breweries, the work was done at a less cost of collection than in 1880; the revenue was doubled. It was £1,203,916 in 1880; in 1893 it was £2,448,856. The proportion which I have given of 4.20 and 3.03 as the cost of collection for 1880 and 1893 is inclusive of a number of expenses in addition to salaries. Thousands of pounds are spent for other expenses equal to about £5,000 a year, for travelling, rent, telephones, repairs to offices in Sydney, Newcastle, and all the out port offices and stations throughout the country. The whole of these form part of our charges, and are included in the Estimates.
1051. Of course we are not making a microscopical examination of the duties of individuals. That would not come within the range of our inquiry. But take, for instance, the third cashier. There is a principal cashier, and a second, third, fourth, and fifth? I would like to see the Estimates.
1052. It is on page 54? This is a misunderstanding. It is not principal cashier, second cashier, and so forth, but cashier, second clerk, third clerk, and so on. It is certainly put very awkwardly.
1053. That will not make any difference in my question. One of these officers, I see, gets £350 a year. Are his duties very responsible? Yes. He gets £25 a year less than was received by a similar officer twenty years ago.
1054. I am afraid the authorities wish to make another reduction. But is that not a pretty high salary comparing it with salaries paid for similar duties in mercantile circles? If we were to put it on the footing of mercantile houses then I should be disposed to say that the salary was not so very high, and my reason is this :—The Customs Department is a large establishment, in which there are a great number of people employed in various duties. But it is one establishment, it is not a number of establishments. I quite understand if you have twenty or thirty mercantile establishments and endeavour to institute a comparison between each of them and the Customs Department, you might think at first that the salaries paid in the Customs Department are rather high, but it does not follow that £350 is a high salary if compared with a salary paid for similar duties in a similar establishment. I mean that, in endeavouring to compare the Government service with private establishments, it is too much the fashion to overlook the principals in the private establishments and to ignore them as part of the cost of working.
1055. Can you give us an idea what the duties of this particular officer are? He attends to all matters connected with the entry of ships, takes declarations, examines manifests, and such like. He also has to do with the collection of the harbour and light rates. All matters connected with pilotage, &c., and the preparation of passenger returns, and a number of similar duties in connection with the incoming of vessels are done by him.
1056. There are other clerks on the list. There are two at £250 a year each, and so on down the scale till we reach two at £75 a year each? These two latter positions are not filled up. You will observe that salaries are in gradations—£120, £130, £140, £150, and so on.
1057. Are some of these clerks somewhat aged, or are they, as a rule, young men? Mostly young men. I think we have one or two prettily well advanced—over 50. In charge of the statistics we have Mr. M'Lintock, at £310 per annum, and he has important duties to perform. 1058.

* This witness objected to being sworn, preferring to make a declaration.—P.R.M.

J. Powell,
Esq.
17 Dec., 1894.

1058. Have many of them attained their present stage of remuneration through having held office so long and been raised just by process of adding to the staff—by seniority? Seniority, of course, has much to do with all promotions in the Government service. It influences a man's position considerably, but still in the Customs Department I have succeeded in leaving out in this particular branch men I have thought unfit for advancement, and have put them into other positions, and let younger men come on in their places, at lower salaries as a rule. There has been a general reduction in indoor expenses extending over several years.

1059. Are the landing officers pretty well advanced in life? I do not think we have any over 50. They have generally made a position in the department in other branches, and have been promoted to this branch. Some of the salaries seem perhaps high. The duties vary. For instance, we have examining officers, gaugers, timber measurers, laboratory officers, and others. These are separate offices, and all are necessary for the special work. Examining officers weigh cigars and tobacco and general goods. It is necessary to have competent officers for such duties, who know exactly what is required. This also applies to gauging, the tasting of strength of spirits, and other operations.

1060. And you could not point to any portion of this section—the Landing Branch—where fewer in number would be efficient? I cannot say that I could reduce the number, because, as you are aware, every landing station must have an officer to look after it, and watch it, and we have fifty-five stations at which goods are discharged in Sydney Harbour. The whole of these must be overlooked. A ship can claim to land goods at any one of these stations, and an officer must be stationed there to see that all is right, and the revenue duly protected. A large staff is therefore required. I have endeavoured to reduce the salaries of the Water-side Landing Branch for years, and I have succeeded to some extent. I think the salaries are still rather higher than they should be consistently with the amount of the duties performed and the responsibility incurred. I have always regarded the indoor department as being underpaid, and the outdoor department as being overpaid.

1061. There is a sum of £8,050 down for contingencies;—that is a considerable amount;—I suppose the extra tide-waiters are paid out of that sum? The whole amount voted for tide-waiters and contingencies for the half year is £11,500. A great deal is included in that amount. In addition to the extra tide waiters, the money for occasional clerical assistance comes out of that vote. We have about sixty persons paid from the contingencies at the rate of half a guinea a day, and also included in that are all those matters I mentioned a little time back—the cost of repairs, &c. It all comes out of that amount.

1062. How many men are comprised in the extra supply as tide-waiters, on the average? Altogether the establishment consists of about 380 persons.

1063. Including permanent officers? Three hundred and eighty employed altogether. There are 269 employed at Sydney, 28 at Newcastle, and 83 at the outports and stations. At the head office in the Indoor Branch we have 27, and in the Landing Branch, 38. In the Warehouse Branch we have 34; in the Tide Branch, 11; in the Extra Branch, 17. There are 15 other officers employed as shown, and acting officers, 3. Tide-waiters are paid half a guinea per day when employed, and 60 are constantly employed. There are 27 messengers. The number of tide-waiters, paid only when employed, is 37.

1064. Does that make a total of sixty tide-waiters? Yes, constantly employed.

1065. *Mr. Teece.*] What is the grand total? Three hundred and eighty persons employed.

1066. *President.*] Does the Warehouse Branch consist of those who are in charge of the bonds? Yes.

1067. They open the doors and shut them? Yes; and receive and deliver goods, and see that they are correct according to the entries. They keep receiving and delivery books. That branch is self-supporting to this extent, that the bond licenses charged amount to £10,000 a year. Of course, the number of lockers depends entirely on the number of bonds. When we have a number of bonds we have a proportionate number of lockers, and the amount paid by the person holding the license covers the expense of our control, or very nearly. The Excise Branch expense is also covered to the extent of £5,000 a year by fees of various kinds.

1068. Of course you cannot dispense with the locker? He is paid for by the bond proprietor, therefore we do not object. Lockers cannot be dispensed with.

1069. *Mr. Humphery.*] You say the locker salaries are covered by charges at the different bonds? When any person requires to have a bonded store he takes out a license which is granted according to the extent of the accommodation required. The maximum charge is £300 a year, and the minimum is £50 a year. A licensed Bonded Store keeper can have a locker for a whole day or a part of a day according to the amount of supervision required.

1070. I see the salaries range from £180 to £281? Yes, one bond may require two or even three lockers. We send them irrespective of the amount we pay for the lockers, and according to the amount of work and the supervision required.

1071. So that the salaries are covered by the charges made? To a very large extent, to the extent of £10,000 a year.

1072. *President.*] By the license fees paid? Yes, and the same applies to the excise.

1073. Passing to page 55, I see under the head of Miscellaneous there is £100 a year for a typewriter, is that a boy? No, it is a young lady appointed by the Government; she does very good work and she has a great deal to do. I was strongly opposed to employing a typewriter at first, but I find my work better done, and the documents are printed in a clear readable manner.

1074. The next item is £155 a year for a messenger;—is he worth that. Then there is a warrant messenger. He takes out the warrants I suppose? No, he is simply an ordinary messenger, the head messenger. These salaries have come down from remote periods. Both these are men of long standing in the department.

1075. But you have it in view to substitute youths when they depart? Not entirely. In dealing with so many boys one man is required to look after them. There are only two men on the staff as messengers.

1076. Now with regard to the outports, there is an immense number of them? Yes.

1077. And I daresay a great number of the officers have difficulty in filling up their time? I am quite sure they have.

1078. Is it absolutely necessary that there should be a man at each place? Yes, at the outports. Newcastle is an extensive establishment and collected last year £151,000. In Sydney £2,051,000 was collected and the outports collected £397,000. Of the amount collected by the outport officers, all of which comes under my control in Sydney, Newcastle collected £151,000, being the largest amount collected at any outport; Broken Hill comes next with £96,000.

- J. Powell, Esq.
17 Dec., 1894.
1079. The expenses of Newcastle are about £3,700 odd? Yes; compare it with Willyama, on page 57. It is called Willyama on the Estimates, but it is Broken Hill. The expense for the year is about £1,200. It cost £1,200 and collected £96,500. Newcastle costs £3,700 and collects £151,000. The expense of Newcastle seems large in proportion, but at Newcastle there are a number of ships always on the berth loading, and all requiring supervision. Newcastle tonnage is large.
1080. Do not a number of ships go to Newcastle simply to load coal? Yes; but they have to be looked after all the same to see that they do not land something else.
1081. Your landing-waiters are, I suppose, sharp men, of great observation and perspicuity? If they do as they are told that is all we want them to do.
1082. They are left very much to their own devices, are they not? Yes. We have to keep men specially employed for night duty. A landing-waiter is a special officer; a tide officer is one of a lower degree. He waits for the tide, for ships coming in.
1083. The list of outport branches is an enormous one? In some places we obtain no revenue, but we must have officers. In my return I start with the sub-collectors, and give their stations and salaries. I start with Corowa on the Murray River. The sub-collector there gets £371 a year (see page 56); then there is a temporary assistant at £50, and a bridge watchman at £120. Corowa collects a reasonable amount of money—£6,600 last year. That is worth looking after, and it pays all the expenses and leaves a margin. Take Wilcannia on the Darling—that is a very important station, and a great quantity of trade goes up from South Australia. Wilcannia collected £16,555 at a cost of £371. The collector has no assistant, and it seems to me that the salary paid is not too much for the service rendered. In fact I have the greatest difficulty in the world to get efficient officers to go to these far away places.
1084. *Mr. Teece.*] Eden costs £330. At any rate, that is the salary paid to collect £51? Yes. The collector plays an important function. He has to look after each vessel arriving and departing, and to give clearances. He deals with goods coming seaward for the Victorian border. His salary is less now than it has been in past years. He has a house to live in, and does not feel himself at all overpaid. It requires a man of intelligence at Eden, because emergencies of all kinds may happen there. Vessels from all parts, with different kinds of goods, arrive, and he requires to know both what to do and how to do it. You must have a good man at Eden, although the amount he collects is nothing at all compared with the amount it costs to collect it. There are cases even apparently worse than that.
1085. *President.*] What about Wentworth? Wentworth has been a very important station. It is not now so important as it has been in the past. Still, it is at the junction of the Murray and the Darling, and all the trade passes there to Wilcannia and Bourke. The Customs officer there has the control of all trading vessels. Directly they enter this Colony he has to get a return of the goods on board and to see that they are properly accounted for and delivered. He collected £12,237 last year, and the cost amounted to about £600. It is a decaying place. The year previous the amount collected was £15,000.
1086. *Mr. Robertson.*] What is the amount collected from Swanhill? That is a station on the Victorian side of the Murray. £2,000 is the amount collected. The collector has the control of all the trading steamers. They pass and repass there on the way to and from Echuca, and he has to see that their papers are all in order. We have to look at both sides of the river. Victorian goods may be put on board a boat, and landed on our side without paying the duty. We have to keep a watch on all that,—timber, beer, and articles of that kind are shipped in Victoria, and we collect the duty on all landed on our side.
1087. *President*] Has the Board of Commissioners of Customs been of long standing? Yes; since 1879.
1088. Could you give us a return of the number of cases adjudicated on by the Board since then? I have the return for 1892 here. We had twenty-three appeals in that year.
1089. Have you the return for 1893? I have not the complete list. I have not any earlier years tabulated. I have the decisions in each case.
1090. Were the decisions invariably in favour of the Customs? No; sometimes against.
1091. There was one lately against you, was there not? They very often go against me.
1092. You could not then give us a return, say, for five years? I could not, because I have not access to the documents. You could get particulars from the Secretary to the Commissioners. Everything connected with the disputes is in my department, but I have nothing to do with the regulation of the Board.
1093. *Mr. Storey.*] The amount put down for tide-waiters and occasional help is £13,000 out of a total of £69,000? I have handed in a statement showing that the pay of sixty officers is included in the contingency charges, and that each of these officers is paid half a guinea a day.
1094. What do they do? Some of them are engaged in the *Ad valorem* Branch, and a number in the Warehouse Branch as additional locker's assistant, assistant landing-waiters, assistant gaugers, also in the Examining Branch; and in the various branches of the department where assistance has been required these men have been drawn upon.
1095. How often are they employed? Constantly, the whole year round—that is the sixty men.
1096. Would it not be as well to have them permanently employed? The *ad valorem* duties were put on in 1891. Since that time down to the present I have endeavoured to work the department with a view to the possibility of those duties being repealed. We are so constantly hearing of their being repealed that I felt it would be bad policy to ask for an increase in the number of permanent officers when we might have to retrench. They are all employed in various duties, but in the event of a change in the tariff many will have to go. We have to charge duty on all the parcels that come into the country. That has involved an additional expense. It may seem a small matter, but in parcels alone we collect duties over £6,000 a year.
1097. *President.*] They come through the post? Yes.
1098. *Mr. Storey.*] Is that contingency vote all used up? This year I have asked for £4,000 more. We have always been behindhand, and have had to ask for an additional sum at the end of each year. The more business we have, the more officers we want, but we cannot foresee precisely what business there will be.
1099. The amount of business has been falling off in 1894 in everything? There was a great falling off also in 1893. In 1892 we collected £3,000,000. This year I am afraid we shall find a greater falling off.
1100. With such a falling off ought the incidental expenses to have increased? I think they have decreased, but it is impossible to contrive matters so as to reduce the expenditure in the exact proportion to

J. Powell,
Esq.
17 Dec., 1894.

to the amount received, because the amount of work is frequently not less, although the amount received is less. In good years, when business is brisk, people import and clear in large quantities and amounts, whereas when business is dull the imports are smaller. The larger the cargoes imported, provided they consist of only one kind, the less is the amount of work for the Customs Department. In England, for example, there would be whole cargoes of coffee or of tea, which would greatly simplify matters, but here perhaps each cargo is made up of a thousand different articles, and a number of different duties have to be charged and collected.

1101. The Estimates for the first part of 1895 are more than for the first part of 1894? That is due to the contingency expenses. I have always had to ask for more on the supplementary expenses hitherto, but this year I asked for what I want and for what I know we must positively require. These contingencies, however, also include £5,000 a year spent otherwise than in salaries and wages. I think I said that there are forty bonds at work in Sydney—that is, forty bonded warehouses.

1102. There is a steam launch belonging to the Custom House, is it used? Yes. It was almost forced upon me. I think we might have done better with something of a less expensive character.

1103. There is £150 a year for an engine-driver alone? At one time we had boats for which we paid £80. They lasted from five to seven years. Now we have an engine-driver and a lot of expenses forced upon us, both here and at Newcastle. I would have been quite content to have gone on with the boats. We are sometimes led by sentiment and not by actual necessity in these matters. Before we had the launch we had two boats to do the whole of the work.

1104. What did they cost? We had four men in each boat. The Sydney boats cost us £1,088 per annum, irrespective of the tide surveyors, for merely manning the boats. If we went back to the sailing-boat system, and got rid of the launch, it would only save £150 a year in wages. The launch does the work of going out against the wind, but it is rather an expensive toy.

1105. There would not be much saving now that the capital has been invested? No. I think two launches, at a cost of £400 or £500 each, would have been sufficient and more suitable for the work.

1106. What are the receipts from the pilotage? We collect all the pilotage.

1107. Has not that shown a great falling off? Yes; a larger amount for pilotage and harbour dues was collected formerly than now. It was about £50,000 last year.

1108. *President.*] Was that in Sydney alone? That takes in Sydney and all the outports. It takes in the whole of the Colony.

1109. *Mr. Storey.*] What are the figures for 1894? I have not got the figures for 1894.

1110. It is generally understood that the pilotage revenue has tremendously decreased, while the expenditure is just as heavy. I suppose the expense comes under the Marine Board? Yes, entirely.

1111. *Mr. Robertson.*] Were you asked if you could recommend to the Commission any way by which a saving could be effected in your department? I have endeavored to point out that I have been effecting savings for the last thirteen years.

1111½. I am speaking of the Estimates as they are before us? They were prepared very carefully. I went into every item. There are some items which I might think too high, and some men whom I might think overpaid, but it is part of the system, and we cannot alter it in a day. I think there are some men paid too much. I think there are some men paid too little. I think there are some men who, if they could be got rid of, it would be an advantage to the department.

1112. Are there any clerks in the Indoor Department who are overpaid;—you said, as a rule, the Indoor Branch was overpaid? I am speaking of past years. I said my endeavour had been to increase the salaries of the Indoor and to decrease the salaries of the Outdoor Branch, and that I had succeeded to a certain extent. The Indoor Branch salaries in some cases are somewhat excessive, but then we have this disadvantage to deal with—of promotion by order. If a man falls into the position above him he takes the salary unless there is anything very much against him.

1113. Is there any reason why he should take the salary? Unless there is anything against him, I think he should take it—unless there is anything against his conduct, I mean.

1114. *President.*] He would go up by seniority? Yes; we cannot destroy the position.

1115. *Mr. Robertson.*] But do you not think there might well be attached to an office a maximum salary which would not be affected by long service. That is to say, if a man were in one certain position that was worth £150 a year, he would not be getting £300 a year by merely stopping there twenty years? If he remained in the same position he would receive the same salary.

1116. I suppose the chief clerk, who gets £565 a year, has responsibilities? He gets £515, but he also receives £50 as Secretary to the Commissioners. That makes up the £565. £515 is his Customs' salary.

1117. Has he special responsibility? He prepares the abstracts, looks after the payments, keeps all the accounts, attends to the correspondence, &c.

1118. And does he superintend all the work of the other clerks? Not in any way.

1119. He is not connected at all with them? No, he has nothing whatever to do with them.

1120. Under whom do they work? Under the various branches; for example, under the head of the Statistical Branch.

1121. Is that an Indoor Branch? Yes. There are six persons employed in the Statistical Branch.

1122. How many Indoor Branches have you got—sub-branches, divisions? There are only nominal divisions. In the Statistical Branch I have two principal clerks, one at £310 and another at £281. Then we have four assistants, two at £175, one at £150, and one at £130. They keep the statistics of the whole of the Colony and everything relating to trade and commerce and shipping. Then there is a registry of Shipping Branch. It is an important branch. The clerk-in-charge gets £200 a year, and I don't think he is overpaid, his predecessor was paid £440.

1122½. With regard to the work of a landing-waiter, is there any difference in the kind of work done? The work is very much of a kind, but it differs according to the station. At an import station the landing-waiter has charge of all goods landed. At export stations he has to do with drawbacks. It is necessary that he should see the goods. He must be careful that the goods are exported and that drawbacks are not claimed improperly. But at various stations the business of import and export is combined. At the Grafton Wharf the greater part of the business is export, at Smith's Wharf it is an import business, at the Circular Quay it is principally import.

1123. But a landing-waiter should be able to attend to both? Yes, certainly; but of course some men are more expert than others.

1124.

- J. Powell,
Esq.
17 Dec., 1894.
1124. Is a landing-waiter who gets £385 a year so much more expert than the man who gets £300 and who is fully qualified to do the same work? No. That £384 is a remnant of the old traditions. There is only one man who has that salary, and directly he goes that salary will no longer be given.
1125. In your opinion what should be a maximum salary to a landing officer? £300, and £225 for lockers.
1126. You have a number of lockers here? Yes.
1127. Their salaries vary from £181 to £280? Yes.
1128. You spoke of sixty lockers at half a guinea a day who were kept continually employed during the year? Yes, they are acting officers.
1129. Are they temporary or permanent men? They are temporary men, permanently employed. Out of that number twenty are employed in the Warehouse Branch as junior lockers, in addition to those shown on the sheet.
1130. What is the maximum salary paid to a locker? £281.
1131. Would you make a gradual increase in the salary for length of service until the £225 was reached? Yes. I would lower the minimum. It should not remain at £180. I would reduce those salaries.
1132. You think £180 is too high for a minimum? Yes.
1133. What is the preliminary preparation that he requires before going into that position—is there any other branch of the Service through which he has to graduate? The chances are that he will be taken from the men permanently employed, but not on the staff. Before they can be taken on as junior lockers they have to pass two examinations.
1134. What would be a fair minimum? I would commence junior lockers at £125 a year.
1135. Can you recommend to the Commission anything in the same way in any other divisions of your department? I would make a similar recommendation for the Landing Branch. I think the salary of the junior landing waiters should commence at £150 a year. I think we might commence on the landing Branch at £150 a year and let them work up.
1136. Would you make the maximum of £300 for the landing waiters? Yes.
1137. A man at £180 might be doing better work than a man at £384? That is the difficulty. He might be a smarter and more effective man than the other.
1138. That could hardly be obviated? I am sure it cannot be obviated, but it is an argument in favour of the more equal apportionment of salaries. It is a very discouraging thing for a young man to look at a long list of salaries he has to go through before he can get anything like a living amount.
1139. But it is an ordinary business prospect; when a man enters an establishment he knows that he enters at a minimum, and that he will have to go through certain intervals before he can receive an increase unless some officers above him are removed, in which case he would get more rapid promotion, but when he enters the Service he knows the minimum, and he looks forward to the maximum? Undoubtedly; and he knows that he may have to wait a long time before he reaches that.
- 1140-1. If he gets it sooner it is because of the removals of those above him? Just so. Coming back to the indoor department, when I took charge I found a list of ten persons receiving salaries of £175 a year. It was discouraging to a man to look to that long list before he could get any promotion. In a small establishment the chances of promotion are gradual, but in a large establishment like this you must have a number of small salaries that a man has to live down. A man might go into the Landing Branch and be grey-headed before he would get £300 a year.
1142. Are there any recommendations you can make with regard to the Outport Branch? Do you mean with regard to reductions?
1143. Yes? Not consistently with the safety of the revenue.
1144. Could you make any recommendation with regard to the Border Branch? The same thing applies to that. The salaries at most of the out ports are very small. The pay generally given to pilots, acting as Customs officers, is £50 a year in addition to their salaries as pilots.
1145. Take the case to which you referred; that of Corowa; the sub-collector has more work than the sub-collector at Wilcannia? Nothing like the work.
1146. Is there any need for him to have an assistant, which the other has not got? Yes. He has to go out, and he must leave someone in charge.
1147. And that does not apply to Wilcannia? No; there are bonds at Wilcannia. The officer at Corowa has no bond to attend to. The principal revenue at Wilcannia is derived from goods delivered from bonds, and the Customs officer there attends to all the river steamers between Wentworth and Bourke.
1148. Up to what amount can this temporary assistant go? He cannot go beyond the rate of salary voted by Parliament for the office.
1149. Now tell us something about the Tweed River officer? The Tweed River is on the borders of Queensland, and the officer there is a preventive officer whose duty it is to see that no vessels come in to discharge cargo. He has also the run of the river, for 40 or 50 miles up.
1150. What revenue comes through him? A mere nothing.
1151. Does that apply to every year? Yes.
1152. Could you not effect a saving there? Last year he collected £1,493, double what he collected the previous year. That was in consequence of the works on the railway south of the Tweed; there has been a great deal of stuff for which we have been collecting the duties.
1153. What is the revenue from Bourke? Last year it was £20,000; the previous year it was £27,000; in 1891 it was £29,000. The railway has taken away a great deal of the river trade, but there has been a good river for the last two or three years, and consequently receipts are pretty large at Bourke, but even though the receipts at Bourke continued small it would be still necessary to keep an establishment there because of the Queensland trade and the Bonded Stores.
1154. What control have you of the border branches? Full control.
1155. In what way do you exercise it? All correspondence, all receipts, everything connected with the business comes to me.
1156. Do you find it necessary to send an inspector? Occasionally. If anything is wrong I send someone up. I have been two or three times. I select a man I think fitted for it. If it is a matter of accounts I send one who has had experience of accounts. If it is a matter of examining and gauging I would send a man connected with that particular branch.
1157. *Mr. Humphery.*] How many inspectors are there in the Distillery Branch? The Distillery Branch now is incorporated with the Customs. We call it the Excise Branch. It is regulated by seventeen persons.

persons. The extent of the excise may be judged by the amount of the revenue we collect. In 1893 speaking roundly, we received £260,000.

1158. And the cost of collection? £4,546, and of that amount we recovered in fees £3,650 for various licenses.

J. Powell,
Esq.
17 Dec., 1894.

1159. What system have you of fixing the salaries of the various officers there? The salaries have been partly regulated by myself, with the approval of the Treasurer, since I took control. I took control of the distilleries in 1889. We saved a thousand a year by the change. The breweries and tobacco factories form part of the Excise Branch.

1160. I observe that inspectors receive respectively £425, £335, and £245;—why is there such a marked difference in their salaries? The three men are stationed at Harwood Island, on the Clarence River, at the Colonial Sugar Company's Distillery. The senior officer has the whole charge of the business. They work night and day—forty-eight hours on and ninety-six hours off, in turns. The senior inspector is an old officer in connection with the department; he was sent there to take charge when the changes were made in the department. He has a salary which I think will be reduced when opportunity offers.

1161. Then the difference in salary is accounted for only by seniority of service? Yes, and a more extended experience.

1162. The duties being in each case equally responsible? The duties are the same, but Mr. Bell, the inspector, has charge of the establishment.

1163. And you think he should get a little more? Yes; how much I am not prepared to say.

1164. Are the other two on precisely the same footing as regards responsibility? Yes.

1165. Therefore the difference in salary arises only from seniority of service? Yes.

1166. In your opinion, as soon as the present officers retire from the service or are removed, what would be a fair maximum salary for their respective positions? £250, £300, and £350.

1167. But why make any difference between the junior two? As a matter of experience, it is always better to give a man something to look forward to.

1168. *Mr. Robertson.*] But your maximum would be £350? Yes; in that position.

1169. *Mr. Humphery.*] With reference to the book-keeper in charge of the beer stamps, did you recommend that salary, and is it a fair one for the work performed? I think it is a fair salary. That officer has charge of the beer stamps issued all over the country to every brewer and postmaster requiring them. The stamps are of a great number of denominations, and it requires a man with a clear head to look after the work. The officer now in charge does his work uncommonly well. I do not think he is paid too much, but if we were reconstructing I would say £350 would be a fair salary for the office.

1170. What, in your opinion, should be the maximum salary for the Inspector of Tobacco Factories? I think £350.

1171. Have you anything to say in regard to the other inspectors? I consider the salaries of the gentlemen at the refineries are not excessive. The sub-inspectors of breweries are also paid 15s. a day additional when travelling, in addition to their railway fare. There are three employed, one for the Northern district, one for the Southern, one for the Western. They visit the breweries once a month, and see that everything is going on properly. The other two inspectors at £245 are engaged nearer to Sydney, about the coast, Parramatta, and other places handy to get at, and are also paid travelling expenses.

1172. Are you of opinion that it would be an advantage throughout the Service to have classification? I am.

1173. And to have the maximum salaries fixed for the various grades in the different departments? I am of that opinion, and that the salaries of the different officers throughout the Service should bear something approaching relation to each other.

1174. *President.*] Do you think that promotion by seniority hampers very much the efficiency of any department. Where that rule has been observed in the promotion of an aged officer over the heads, or rather in preference to the appointment of an able though younger man, does it not hamper the efficiency of the Service and increase the cost as well? I think a too slavish fashion of promotion by seniority is fraught with mischief.

1175. With regard to the appointment of temporary officers, is it not a privilege claimed by the heads of departments to appoint temporary officers? No; I have never claimed any such privilege.

1176. It is a power exercised by them, is it not? No; not a charwoman, not a messenger, has been engaged in that way during my time.

1177. You are speaking of yourself? Yes.

1178. I am speaking generally;—is it not a fact that some heads of departments appoint temporary officers at their pleasure irrespective of the Civil Service Board? The Minister appoints.

1179. And he can put in as many as he likes? I suppose he could under section 28 of the Civil Service Act, but such appointments have not been frequent.

1180. And pay them out of the votes of the country? I do not know that he could do that. I have heard of such things being done.

1181. Is it not possible for a Minister to appoint someone whom he believes to possess special qualifications to any office that he likes to establish for him, and to appoint him to this office altogether irrespective of the Civil Service Board? It has never been done in the Customs Department.

1182. The Civil Service Board allows it, does it not? Under certain conditions and restrictions.

1183. And it is possible to be acted on by the Minister? Yes; under clause 28. But these appointments have all been necessary, I presume.

1184. That is in the Minister's estimation? Yes; the Civil Service Board has to specially report such appointments every year.

1185. *Mr. Humphery.*] With regard to two or three ports, the revenue from which appears to be very small, do you see any way of reducing the cost;—take, for example, Kiama, with a revenue of £4, and Wollongong, with a revenue of £6? Kiama costs £52 a year; it is only an allowance to the pilot who is engaged to act as a preventive officer.

1186. Does he receive his salary in addition? He receives his pilot salary.

1187. What would that be? £236 a year.

1188. And in addition to that he receives? £52 a year for the Customs.

1189. The returns for which? It is not necessary on account of the returns. He is there as a preventive officer. If he saw anyone landing a case of cigars or dutiable goods of any kind he would have to protect the revenue.

J. Powell,
Esq.
17 Dec., 1894.

1190. Should not that be combined with his duty of pilot? The extra amount allowed him for that duty gives him an interest in his work. There are about twenty-six pilots treated in a similar way. It is a retaining fee to them to act for the Customs. A reduction has been made at some of these places; on the Richmond River we had a sub-collector and a couple of boatmen. It cost us £500 a year, and I got a pilot to do the work for £52. Then I effected a reduction on the Queensland border where there was an officer receiving £350 a year. I saved that expense by getting the work done by the Queensland officer. At another place we were paying £281 a year and £60 a year for a cottage. I have just removed that officer and am getting his work done by a Queensland officer for £30 a year. Whenever opportunity offers we remove these men with the big salaries and get someone competent to watch our interests at lower rates.

1191. Does that apply to Wollongong? That is different. There are statistics there to be compiled with reference to the coal trade. All these matters go to make Wollongong different. It is a coast station with a fair harbour; £186 is the annual amount received. A few years ago we had a sub-collector and a couple of boatmen there. We got rid of them.

1192. Port Stephens? That is a preventive station where vessels want looking after. An officer gets £186 a year; there is not much work for him to do.

1193. Could not his duties be performed by anybody else? No.

1194. Is there no available officer to do the work? No. A lighthouse keeper cannot leave his light, and I could not get the postmaster to do the work.

1195. All these matters have received your attention, and wherever you have seen it possible to economise you have done so;—is that it? I do not want to make any boast about my own work, but a comparison of the estimates for the past few years will show that there has been a gradual reduction of the expense. For some years past the salaries have been reduced, unnecessary officers have been got rid of, but even now I believe that the salaries are rather high as compared with salaries paid to officers in Customs establishments in other Colonies, and also as compared with mercantile and ordinary establishments. At the same time I am not an advocate for cutting down salaries. I would rather have good and effective service with a maximum of progress in the various classes which I think should be established.

1196. *President.*] Did you mention the average pay for each officer over the whole service of your Department? I have not endeavoured to make an average because I do not think an average would be fair. For instance, it would not be fair to place one man with a big salary against a number of others with small salaries; if you were to take an average of the clerks and an average of the temporary men and an average of the higher salaries, that would be a fairer way of looking at it. There was one point mentioned by the Commission about the Commissioners of Customs. I understood from what was said that you thought some alteration might with advantage be made. If so, I think we should go back to the purpose for which the Board was established. When it was established it was well known that there were many things continually cropping up in the Department which were harassing to the mercantile community. This Board was established at the instance of the mercantile community by the wish of the merchants, and merchants only were appointed to the Board. It was established for the purpose of enabling anyone who objected to the way in which he had been treated by the Customs to put his case before his fellow merchants with a view of getting their decision. That, I think, was the object and intention of the Government at the time when the Board was formed. The whole of the evidence taken in the Court is taken on oath, and it is not only taken on oath but it is taken in open Court in the fairest way that evidence can be taken. Then, again, after the evidence has been taken, and after the decision of the Board is given it is still subject to appeal, and in this way:—The Governor may, if he pleases, disallow the finding and ruling of the Commissioners, so that there is a continual safeguard for merchants, both against the action of the Customs and the decisions of the Board. The merchants were considered in this matter before anybody. The general idea was that the Board should be a kind of safeguard against prejudice or bias on the part of the Government officers, and really I think myself that it has operated very well. It has acted as a deterrent by making the officers of the Customs, myself included, a little careful in the decisions we give, because we know that at any time, if people are not satisfied, they can appeal to the Commissioners against us. I am inclined to think that the business of a tribunal of the kind prevents harsh and ill-considered decisions on the part of the officers. I mean by that that the number of cases decided by such a tribunal is no measure of the advantage gained by the institution of such a Board. It has a good negative influence apart from what it does. I know perfectly well, when I go before that Board, that the matter in dispute will be properly placed before the Commissioners, and will receive a careful consideration at their hands. It is a satisfaction to me, because I feel that my own judgment will be reviewed by impartial and competent men. I think the Board has played a good part so far, and that, generally speaking, its work is appreciated. I am satisfied, as far as the Department is concerned, that we are well pleased to have our judgment reviewed and ratified or otherwise by gentlemen whose experience enables them to take a wider view of questions submitted than we perhaps can take ourselves.

TUESDAY, 18 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.

THOMAS LITTLEJOHN Esq., PRESIDENT.

Francis Hixson, Esq., President of the Marine Board, sworn and examined:—

F. Hixson,
Esq.
18 Dec., 1894.

1197. *President.*] I dare say you are aware that the object of our being here is to make inquiry as to whether steps can be taken or recommendations made by which the departments of the Colony can be placed upon a more efficient footing, and we trust we shall receive from you some information that will help us to make a report in accordance with the object of our inquiry. The department of which you are the head is a very important one, and you have a number of officers under you who seem to be very well paid, and you also have the Marine Board? I may say the officers are under the Marine Board. The whole of the navigation laws distinctly place these officers under the Marine Board, of which I am President.

1198.

F. Hixson,
Esq.
18 Dec., 1894.

1198. You are the mouthpiece of the Board? Certainly.
1199. And you are the controlling power in the department? Certainly not; the Board is the controlling power. The Navigation Act puts all the responsibility on the Board.
1200. But they only meet occasionally, I presume? Always weekly, and occasionally oftener.
1201. So at all times it devolves upon you to see that the machinery of the department is properly worked? Yes; subject, as I have said, to the will of the Marine Board.
1202. They do not define or chalk out the work that is to be performed for a week at the time they meet? In such a department as the Marine Board it is impossible to do that. We are subject to all sorts of contingencies, such as the arrivals of shipping, bad weather, and so on.
1203. It must be really left to your judgment? To a certain extent.
1204. I see the wardens have fixed fees—I presume irrespective of attendance? Quite so. They have a fee of two guineas weekly, whether they meet once a week or three or four times.
1205. Then you have a secretary who receives £470 a year, and an accountant who receives £236;—what are the duties of the accountant? To keep all the accounts of the department, to receive certain pilotage fees, fees for certificates and so on, and pay them into the Treasury. He has also to keep the accounts of the department, and pay salaries. There is an expenditure of something like £50,000 a year, and all this is dealt with by this one officer.
1206. Does he pay the moneys he collects directly to the Bank? No, he pays them into the Treasury.
1207. The actual cheques? I thought you were speaking of the fees of the office. There are many fees collected under the Navigation Act; some are collected in the Marine Board Office, and paid into the Treasury itself, to the Consolidated Revenue.
1208. Engineer, surveyor, and inspector, Mr. Cruickshank;—what are his duties? His duties are to survey and supervise the survey of steamers to enable them to obtain the Marine Board certificate. He is charged, moreover, with the duties of examining the engineer candidates for certificates of competency.
1209. And he has to give certificates as to seaworthiness of vessels, and boilers and machinery? Certain steamers are required to have a Marine Board certificate, so they are surveyed by Mr. Cruickshank and others. Depositions are then sent in to the Secretary of the Board, and on these depositions a certificate is made out to show the sound condition of the steamer, and her fitness to perform the work she is guaranteed for.
1210. Is the engineer's certificate required for ocean-going steamers as well as for coasting steamers? For all. Some vessels come here with Board of Trade certificates unexpired; we do not interfere with these, but should their certificates expire before the vessel leaves port, it is necessary she should be surveyed and get a certificate in Sydney. I might say there is reciprocity between the Board of Trade and the neighbouring Colonies in this respect.
1211. There are two assistant surveyors, engineers, and inspectors, one of whom receives £371 a year, and the other £308; we are very anxious to know whether it will be practicable to condense the staff to any extent by dispensing with the services, say, of one? The work could not be efficiently performed if you were to do so.
1212. It requires the services of the three? Some six or eight years ago there was a strong protest on the part of the two to the effect that they were over-worked, and the Marine Board called for a third man. I might mention that steamers are still increasing.
1213. Especially during the wool season? Yes; not only that, but all the little crafts about the harbour come under our supervision, and they are increasing also.
1214. Even down to private launches? Private launches are not interfered with under the present Act, but the Bill before Parliament purposes to put private launches under us.
1215. That will give more work still? Yes.
1216. Do you think the officers are over or under paid for these duties? They complain they are under-paid, but I think they are reasonably well paid. At all events, they were glad enough to take the situations for the pay offered.
1217. Are they in constant work? I could not say that. Sometimes they are very busy, sometimes they are a little slack, but we could not do without the three. Surveying these steamers means the taking to pieces of the whole of their machinery, and getting into the boilers. The survey sometimes lasts six or eight days. I do not mean to say the officers are there all the time, but they have to make six or eight daily visits.
1218. Shipwright, surveyor, and inspector, do his duties go in the direction of wooden vessels? Yes; but at the same time he has the boats and sails, and all the deck appurtenances in steamers to attend to as well.
1219. The boats and the sails? Yes; and anything pertaining to shipwrights' work on board ship.
1220. There has been a great falling off in the tonnage in sailing ships, more especially in sailing ships? Quite so.
1221. Would that diminish his duties? So far as the hulls of the ships are concerned, perhaps; but he is a hard-working man. Among other things he has to attend to is the "Plimsoll mark," which you know is placed on the sides of ships to prevent overloading. His duties are multifarious, although he is called a shipwright's surveyor.
1222. The examiner in Navigation, Pilotage, and Seamanship—he examines applicants for certificates as master and officers? Quite so. There are many grades—such as master, first and second mates, foreign; master and mates, coasting; also for pilotage certificates.
1223. Has he full employment? He is in the same category as the others; sometimes very busy, at others very slack.
1224. You could not dispense with him? We certainly could not dispense with his constant attendance.
1225. Inspector and surveyor at £299;—what are his duties? To inspect all the vessels that come in and out of the port, also to supervise passenger traffic in steamers, deck cargo, and things of that sort. There are two of these men.
1226. Do his duties dovetail in with the shipwright's duties on some occasions? Scarcely. A shipwright surveyor, as I have pointed out, or intended to point out, has to do with giving vessels certificates. This inspector is employed in inspecting them after they have their certificates to see their certificates are not infringed. He has also to see that the vessels do not carry more passengers than they are entitled to carry, that the passengers have a reasonably comfortable berth, and that the decks are not crowded. The boats are also examined by these men.

- F. Hixson,
Esq.
18 Dec., 1894.
1227. There is another inspector who seems to be also a water bailiff? He is one of the two I mentioned.
1228. And are both necessary to perform the duties? Both are necessary.
1229. The clerk is a salaried officer at £150 a year;—are his duties akin to those of the accountant? No; his duties are more in the office for inquiries, and he performs clerical work for the secretary.
1230. The messenger is very well paid at £150 a year? We have Marine Board regulations, which I would like to hand in. [*Regulations handed in.*] Our officials come in at a minimum salary, which is increased. The reason the messenger's salary is so good is because of his long service.
1231. Then, do you approve of the system of increase of salary and promotion, or improvement of position, by seniority? Quite.
1232. Does it not sometimes happen that a man is forced into a position that he is not particularly well qualified to fill, either through increase of years, or perhaps defective education? There is no opening of that sort in this department; there is no string of promotion, with a lot of officials, as in many other departments of the Government service; so I have no experience in that respect.
1233. However, in this instance, this man has been an old servant, and has got increase of pay in consequence of the length of his service? Yes; the men come in at the minimum salary, and get £5 a year increase.
1234. It strikes me that £120 a year is a large salary for a messenger? It is according to the regulations, which are approved by the Executive.
1235. *Mr. Robertson.*] This man who gets now £150, if he goes on for the next ten years will receive £200 a year? I think not; a messenger joins the Marine Board at £75, and his maximum pay is £150.
1236. *President.*] Those regulations are prescribed by Parliament, and are to be adhered to? Well, they were drawn up by the Marine Board under the Act, and approved of by the Executive.
1237. I suppose the officers at the outports, such as the Clarence River, Macleay River, and Newcastle are appointed in sufficient numbers to perform the service which devolves upon them? Just so.
1238. Some of them are better paid than others—those who are paid less have less to do? I will not say that; they are bound by the same regulations. The pilots join at a minimum salary, and as their length of service increases so their pay increases. A man with a low salary might really be doing more work than a man with a higher salary.
1239. *Mr. Robertson.*] What is the minimum and the maximum? The minimum of the second class pilot is £150, and his maximum is £250.
1240. *President.*] In some cases I see the remuneration is very low; for instance, take the engineer surveyor at the Manning River, who gets £4 4s.? Those are fees in accordance with the work that is done in the district.
1241. Under the heading of Sydney, there is a harbour master, Henry Pettit, who gets £371, and the assistant harbour masters, of whom there are two, get £286 and £281 respectively; now, is the work that falls upon these officers sufficient to employ the three of them? Quite; sometimes it is difficult for a ship to get a harbour pilot on account of a press of work. Pilots all over the world are subject to the vicissitudes of the winds, weather, trade, and so on. We have had no increase in these harbour pilots for the last thirty years.
1242. The clerk to the harbour master gets £236;—are his duties so onerous as to justify such a large salary? He is in the same category as the others, having joined at a minimum salary. But he is more than a clerk to the harbour master, he is the telegraphic operator to the department. He receives "wind and weather reports," and does the telegraphic work of the office.
1243. There is a boatswain who gets £199? In accordance with the regulations and his length of servitude.
1244. And fourteen boatmen, two of whom get £144 each; nine, £143 each; and three, £132 each;—these are remarkably high salaries for boatmen? They are high, but the men come in at £8 a month, and go up to £12 after long service. I might mention they are boatmen for the steam launches—the engineers and steersmen of the steam launches.
1245. I suppose their salaries exceed in many cases the salaries of ship-masters sailing ocean-going ships? No doubt in some cases, but they only get their salaries; they are not kept in provisions.
1246. Lighthouses are a very important department. I see the superintendent, William May, gets £236 as superintendent of the Hornby Lighthouse;—is that at the entrance to the Heads? Yes.
1247. The two light-keepers I suppose are his assistants? Yes.
1248. Now, as to the "Captain Cook," pilot steamer, there is a master, first and second mate, first and second engineer, four firemen, ten A.B's. and boatmen—twenty in all? Yes.
1249. The master of the "Captain Cook" gets £416; I suppose he must have two mates and two engineers? Yes. These men have no holidays. They are on duty on Sundays, Saturdays, and all night, as well as all day. The vessel must be efficiently manned. We could not do with less than the staff we have.
1250. I suppose a certain number are always on duty night and day? Yes.
1251. They are very well paid? Yes.
1252. I see there is a pilot at Twofold Bay; I suppose that is a place of refuge in stormy weather? A place of refuge, and the pilot there maintains the light.
1253. He is absolutely indispensable when it is stormy? We could not do without him; on the other hand, he very often has a lot of slack time.
1254. The finer the weather, the more holidays he has? Yes.
1255. There is a Marine Board at Newcastle with a chairman and members, the latter of whom are paid a guinea a week? Yes; no matter how often they sit.
1256. Or how seldom? Yes; they have a weekly meeting and other meetings if necessary.
1257. From the quantity of shipping at Newcastle I suppose their duties are not light at times? No; it is necessary to have a Local Board there. The Act provides for Local Boards at certain places, and Newcastle is the only one we have at present.
1258. There is a secretary and inspector at £326, and an inspector and surveyor at £308;—are the duties of both of these officers of the same character? The duties of the secretary are to a great extent clerical, but he holds the post of inspector in order that he may be available when he is wanted.
1259. His performance of inspectorial duties is only casual? Yes.
1260. Are the services of both of them ever required simultaneously? Often; if there is a dispute (and the Act provides for disputes) it is necessary, on the side of the Marine Board, to have more than one witness.

F. Hixson,
Esq.
18 Dec., 1894.

1261. The boatman gets £144, the messenger £130; there is no date of appointment given to these two, but the salaries are mentioned, and on a high scale too? They have been there a long time.
1262. The Harbour Master and Assistant Harbour Master and Inspector get £416 and £371 respectively;—their pay is higher than the pay of the gentlemen who occupy similar positions in Sydney? The Harbour Master in Newcastle holds a more important position than the Harbour Master in Sydney. He is really the head of the department there. In Sydney the Harbour Master is not the head of the department.
1263. The pilots are remarkably well paid in Newcastle;—I suppose their duties are rather responsible? Highly responsible. They are in the same category; they come in at £200.
1264. They have risen by seniority? Yes.
1265. I see one of them has been twenty-one years there, another thirteen, another nine, others six, six, three, and two? Yes.
1266. The carpenter gets £167; then there are twenty-four boatmen;—there is no steam launch in Newcastle? There is a small steam launch, but no pilot steamer. These boatmen do the pilotage work for all the ships that arrive and depart.
1267. Do they go outside Nobby's? Yes.
1268. No matter what the weather is? They go out in bad weather, but there are times when they could not attempt it, when the ships are directed by signal not to come in.
1269. *Mr. Storey.*] You mentioned that the accountant receives pilotage fees;—are they not collected at the Custom-house? I did not mean to say all pilotage fees—I mean certain fees.
1270. In reference to the engineer surveyors, each steamer has its certificate renewed every six months, I understand;—that, of course, devolves a good deal more work on the engineers? Yes.
1271. How comes there to be a classification scale in the Marine Board Office and not in any other department;—under the Civil Service Act classification was abolished? Before classification was abolished our scale was drawn up in accordance with the Civil Service Act, and it has been adhered to ever since.
1272. The objection to classification was that it gives an annual increment;—I would like to know how the Marine Board came to stick to it? We consider the regulations are of very great benefit to the Marine Board. We do not want employees of the Marine Board, in the first instance, put in a position to receive high salaries. We want active young men who are willing to come in at a small salary, rather than staid men, who would perhaps be tempted by the high salaries.
1273. Still, in one or two instances men are receiving higher salaries now than perhaps their duties warrant; take the messenger, for example? Yes. I think one of the objects of doing away with classification was to avoid that sort of thing. However advantageous it was to do away with classification in the general Service, we find it beneficial in the Marine Department.
1274. It is still in force there? Yes. When I say it is still in force, the men did not get their increments last year; the increments are held in abeyance. Strictly speaking, the men are entitled to the increase, but in consequence of the general depression they have not got it.
1275. Is it going to their credit? I can't say. It would scarcely tend to contentment to have some of the department reduced and others increased.
1276. One salary seems to be high—that of Examiner in Navigation, Pilotage, and Seamanship, at £380 a year; do you not think that is a big salary? No; I think a scientific man possessing the acquirements of our examiner is entitled to such a salary. Before we got this man there were two or three cases of fraud committed, partly because of the low salaries paid to the examiners. I think that above all others this is a salary which should be liberal, in order that the officer should be above suspicion. It is, perhaps, the office of all others where fraud could be committed. You know, if a man wants to get his certificate he is often ready to give a £20 note for it.
1277. Taking the pilot steamer "Captain Cook," who is responsible for these salaries; have they been revised by you;—that is, do you arrange these Estimates? They were drawn up in accordance with the regulations in 1884, and I think they have been in existence since.
1278. The same salary has been paid year after year? Yes.
1279. The master of the "Captain Cook" gets £416 per year;—does that include rations? No; there is a ration provided in addition to that. The master and the pilots and the officers of the ship are provided with rations.
1280. That is to say, they get these salaries and the rations as well? Yes.
1281. Would the position of master of the "Captain Cook" be as onerous as that of the master of one of our coasting steamers? I don't know that it would be. Of course you want a highly qualified man there, and the master of the pilot steamer is in charge of Watson's Bay. He is the head of the department there.
1282. Then he has other duties besides being master of the "Captain Cook"? Yes, he is the head of the department in Watson's Bay.
1283. Could you explain what his duties are besides being master of the "Captain Cook"? To supervise the look out, and to do all the duties in connection with the pilot service at the Heads; for instance, if a ship fails to get a pilot he is the man who is blamed for it.
1284. His salary is £460 a year; now the master of an ordinary coasting steamer running on the coast here going constantly in and out of port gets £20 per month; this man gets nearly double, is that reasonable? I quite admit he is well paid.
1285. Don't you think he is far and away too well paid? I would not say so, because he has come to his salary by the regulations.
1286. He gets this salary because he has been there a long time? Yes.
1287. The total expense of the "Captain Cook," according to the Estimates, is £3,310 per year for wages? I think this is a high expense, but it is an expense that has been going on for a number of years. I don't see my way to recommend that any of these people should be reduced, as they are working under Marine Board regulations.
1288. Did the Marine Board in Sydney suggest having this new steamer? Yes. The old steamer was obsolete, and it was necessary, in the opinion of the Marine Board, to have a really first-class steamer that would go to sea in any weather, and be available at a moment's notice for any casualties that might occur on the coast.

- F. Hixson, Esq.
18 Dec., 1894.
1289. What did she cost? £23,000.
1290. *President.*] This is the new "Captain Cook"? Yes.
1291. *Mr. Storey.*] What was the old steamer sold for? £450, I think.
1292. What was the matter with her? She was an obsolete wooden vessel, and was worn to such a condition that it would have been wasting money if it were spent on improving her. I may state it took two or three years for the Marine Board to get the Government to grant the necessary money for building the new steamer, and therefore the old steamer when she was sold was really unsafe and unfit to be kept running.
1293. Is it not a fact she is running now as a cargo steamer? Yes, she was purchased at a very cheap rate, and is now being used as a collier.
1294. With reference to the pilots at Sydney, they have all got fixed salaries? Yes.
1295. So it does not matter to them whether they do work or not; they are not on the competitive system as in Victoria? No.
1296. Have you noticed that the amount of work done by the pilots has decreased lately? Yes.
1297. What is that owing to? Owing to the bad times which necessitates as many masters as can getting their certificates of exemption, and therefore they do not need the services of a pilot. I might mention that the Bill before Parliament deals very materially with this point. The Bill at present prevents the issue of exemption certificates to any but coastal and intercolonial vessels. Therefore if the Bill passes the work of this steamer will be largely increased. All foreign vessels will then have to take pilots.
1298. But it will not affect exemption certificates that have been issued? They will not be interfered with.
1299. *President.*] They stand good for all time? It would be a repudiation to make any other arrangement, I think.
1300. *Mr. Storey.*] But in the event of the Bill not passing, will any endeavour be made to reduce the salaries of these men? I don't think so; in fact the Marine Board Department is a paying department, and I don't think that a special tax should be made on the officers of the Marine Board. The Board really benefits the revenue considerably after all expenses are paid.
1301. Is not the revenue principally derived from pilotage? From pilotage and harbour rates and fees for services.
1302. Pilotage plays one of the most important parts of it? Yes.
1303. But if the pilotage is reduced? Then if the pilotage is reduced many captains who do not now take pilots will be glad to do so.
1304. I don't say if the rate is reduced, but if the amount is reduced through so many exemptions it will make your returns less? The present year which has been a very dull one has already brought in £56,000 odd to the Marine Board to the present time, and our expenditure is £49,000 for the year.
1305. The matter of pilotage up to the present time has fallen off to the extent of £6,000? Perhaps so.
1306. Although the number of vessels has not materially decreased? No doubt such is the case. Notwithstanding that circumstance, the revenue of the department is £56,000 odd up to the present day.
1307. What other revenues are there besides pilotage? Pilotage and masters' and mates' certificates, engineers' certificates, steamers' certificates. The Marine Board perform multifarious duties.
1308. There is another department under the control of the Marine Board, that is the pilots down at the rivers. The expense of them is very considerable and it is generally believed, I mean it is talked of, the pilot and the boats crew have very little to do. How do the Board satisfy themselves that this is a necessary expenditure, and the men are fully employed? They are not fully employed. The expenditure is forced on the Government and on the Marine Board by the people in the district. They all claim they are entitled to have a pilot to watch their interests at the mouths of the different harbours, and no doubt the pilot and boatmen are really useful. For instance, they signal to vessels coming in, they guide them in on certain occasions, they have to mark the channels right up from the mouth of the harbour to the principal town, from the Macleay Heads to Kempsey, for example; although they are not constantly employed still they are necessary at these places.
1309. Of course the revenue from these rivers is a mere nothing? Yes.
1310. And the traders are quite exempt? Not all, mostly so.
1311. Therefore the duties devolving on the pilots are principally to sound the bars, and to keep the beacons in line, is not that so? Yes.
1312. The Board have satisfied themselves there are not too many men? There are not too many men at the different stations, but the question of abolishing stations is one you are aiming at, I suppose.
1313. Oh no! I am only asking whether the Board have satisfied themselves that the expenditure at these rivers is absolutely necessary, and not too much? The Marine Board considered that as these pilot stations have been established, and as there is a good deal of work necessary for the safety of lives and shipping in connection with them, it would be injudicious and improper, as the places are growing, to abolish them. They are kept down to a minimum expenditure.
1314. There appears an item of £3,700 for subsidised tug-boats for the northern harbours and rivers, that is for subsidising tug steamers? Yes. One reason why I thought it would be unwise for the Government to own the tugs was, in the first place, the enormous expense that would be necessary in purchasing them.
1315. Have you any idea what the expense would be? No; but one of the best things I have ever done for the Government service, and I think I can claim to have done some good, was during the time Sir Alexander Stuart was in office. He told me he would put £10,000 down for a tug for the Richmond River, but I got him to reconsider the matter and adopt the subsidised system. If £10,000 had been spent on the Richmond River the same sum would have been claimed all along the coast, and the cost would have been almost ruinous.
1316. Is not the tug service at the Richmond River more expensive than at any other? Yes.
1317. You are averse altogether to the tugs being owned by Government? I do not think it would work well. I think the best plan is to subsidise the tugs. I am quite sure if a Government tug towed a vessel into one of the bar harbours and the vessel were lost, the owner would come on the Government for compensation.
1318. *Mr. Robertson.*] Are you aware of any anomalies in your department in the matter of salaries? Yes, there are anomalies subject to the regulations I have been speaking about.
- 1319.

F. Hixson,
Esq.
18 Dec., 1894.

1319. The superintendent at the light-house, South Head, receives £177, the superintendent at Hornby Light-house receives £236 ;—what is the difference in the service they render? The services are almost identical; but this inconsistency is altogether due to the regulations, to which the Marine Board attach great weight.

1320. What are your opinions with regard to the regulations of the Marine Board? I drew them up, so I could scarcely say but that they are favourable, and they have been found to work remarkably well. If we were to pay high salaries to people who first join the Service we should have all the old political people in the country looking out for a berth, and these men as a rule are not suitable for our work.

1321. But if they were not suitable, you would not allow them to come into your department? Well, we have nomination; but many of these old men have great influence and persuasive powers, and the regulations have been found to be most beneficial by giving us willing young men upon a low salary. They gain their experience, and get their increases as they go on.

1322. As regards these two officers, the salary of one is £177, and of the other £236 ;—the man with the smaller salary was appointed eight years before the one with the larger salary ;—how does that fit in with your regulations? He must have been appointed at that time in the junior grade. For instance, there are three grades of light-keepers, he must have joined the Service as second assistant.

1323. Is this man who receives £177 fairly paid? I think so. He is paid under the regulations.

1324. But, according to the work he does, and the responsibility, he is fairly well paid at £177? I think so.

1325. Would not that apply to the other man ;—if he were receiving £177, he would be fairly paid? I do not think he would be unfairly paid, if his servitude were not taken into consideration.

1326. Up to what extent is servitude taken into consideration? Just according to the regulations. The principal light-keepers are appointed at £157 per year, and they get up to £250. The first assistants at £120, and they get up to £157, the second assistants at £96, and they go up to £120.

1327. Well, you have had a great deal of experience in regard to boatmen, what would you say was ordinarily a fair salary for a boatman? I think about £10 a month is a fair salary.

1328. I notice that most of the boatmen in your department receive £126? Yes.

1329. You think this is a fair salary for them to receive? I think so. Of course I am associating them with men who receive similar wages in the working class community.

1330. Do you not think a boatman who receives £154 is overpaid? I do not think a boatman gets £154—£148 perhaps.

1331. You have two boatmen at £154? The man you are speaking of is captain of the steam launch in Newcastle.

1332. Is the other a captain of the steam launch—there are two of them? One is the master, and the other is the engineer.

1333. Apply the principle to a number who are receiving £144—do you not think with regard to these officers there should be a maximum of £126. If that is a fair remuneration in mercantile circles, should it not also be fair in the Government service? Yes; I think these men are well paid. They are entitled to these high wages by the regulations.

1334. Well, then, you do not admit these regulations might be amended beneficially? I think if there is a general reduction of pay in the Government service they might be revised too; but I might say the tendency in the Government service and in the Parliament is to pay the working man more relatively than the higher branches get. There has been a reduction in the Government service, but it has not gone below the men getting £300 a year. The railway employés and employés in other departments with a working man's salary have not been touched.

1335. I notice all the boatmen are appointed by the President, and you could remove them of course? Yes.

1336. They are temporary? They have participated in the Civil Service Fund.

1337. Then they are permanent? Yes.

1338. With regard to the matter of which Mr. Storey was speaking ;—the master of the "Captain Cook" receives a salary of £416 and rations; if anything were to happen to him would you appoint another man at that salary? Certainly not. We would appoint the new man at the minimum rate, according to the regulations.

1339. Would you advance him till he had received that salary? If he conducted himself efficiently and properly.

1340. That is because it is in pursuance of the regulations of the Board? Yes.

1341. *Mr. Storey.*] Will there not be a man ready to step into that position? Probably the senior pilot would step into it; but there is a minimum salary for each promotion. For instance, take the light-keepers. The minimum salary of the principal keeper is £157, so if a man was appointed from first assistant to that post he would come in at £157; and after a certain number of years' services he would get £250.

1342. *Mr. Robertson.*] It has been pointed out that the Harbour Master at Newcastle receives £416, and the Harbour Master at Sydney £371; you stated that the Harbour Master at Newcastle had extra duties in the way of supervision? I said he was the head of the department. The Harbour Master at Newcastle represents me there.

1343. Can he do without a clerk? No; his clerk is secretary for the Local Board. They hold inquiries that occupy three or four days, and this particular officer is a clerical man.

1344. He is secretary to the whole department? Yes.

1345. Speaking of the fourteen boatmen in Sydney, who, you say, are employed on steam launches, how many of these steam launches are there? There are four in Sydney.

1346. Are these in constant use? No.

1347. How frequently are they used? As in other parts of the department, sometimes they are busy and sometimes slack.

1348. Are they ever all employed at once? Yes; sometimes we have not sufficient.

1349. Do you think you can recommend to the Board any means by which a saving could be effected in your department? No. My department is worked at the minimum. We spend two or three thousand pounds less now than we did five years ago. The only way I could bring about a reduction would be by abolishing stations.

1350.

- F. Hixson,
Esq.
18 Dec., 1894.
1350. But you admitted that in ordinary marine institutions boatmen were fairly paid at (say) £10 a month? Yes.
1351. You are paying your boatmen up to £152? But you must not go to the maximum; you must take the average salary, and that is about £10, I think. If they come at £8 and go up to twelve, the average is £10.
1352. You think that is a fair way to look at it? Yes.
1353. Don't you think it would be a fair way to look at what an office is worth, and not at what it may be worth through long service? Well, I say the office is worth about the medium rate, and I think the practice of giving increments of £5 a year tends very much to the satisfaction of the employés. Although certain men are paid different rates for performing exactly the same work, I think the regulations establish an *esprit de corps*, and act most beneficially.
1354. Your way of striking an average is distinctly unfair to the man who is just entering the Service? Quite; but he knows exactly what he is doing. If a man seeks the office he is shown the regulations, and I may say the men are much in favour of them.
1355. I should think so? A man is content to come in for less than an average wage, knowing that he will benefit as he goes on.
1356. Don't you think £8 a month is a very fair thing to give to a boatman? Not as other men are paid in the Government Service. The tendency of the powers that be is really to increase the benefits to all the lower grades, and to ignore the upper ones.
1357. But you would fix a maximum beyond which the lower grades would not go, would you not? I do not quite see the force of that question; will you kindly repeat it?
1358. Would you fix a maximum for the workmen in your department? No, I would give the average as the marketable value of the man.
1359. What is the maximum for a boatman? £12 a month.
1360. *Mr. Humphery.*] Has there been any increase in the annual expenditure of the Marine Board during the past five years? In the year 1889 the expenditure of the Marine Board was £51,291, and during 1894 it will be something under £49,456.
1361. Have you the figures of the intervening years? I did not bring them.
1362. How has the reduction been effected? In many cases through the discharge of old employés, and others coming in at the minimum salary. The contingent vote has also been reduced. We have had no fresh appointments in the Marine Board for six or eight years.
1363. What was the total number employed in 1889? It would be the same as now.
1364. There have been no reductions in numbers? No.
1365. The saving has been effected by deaths and removals? I would say by deaths and resignations.
1366. You referred I think to the cost of the "Captain Cook" in answer to a question by Mr. Storey? Yes.
1367. Is the annual expenditure in connection with the new "Captain Cook" greater or less than the expenditure with the old vessel? It is less, because the ship is more economical in coals, and she has exactly the same staff.
1368. Excepting the cost, and the interest upon the cost, there has been a saving? Yes.
1369. Do your river pilots perform services for any other department? In some cases they are inspectors of fisheries and little matters of that sort. Some, too, are Custom House officers.
1370. Will you mention in what rivers your pilots perform Custom House duties? At nearly all the principal rivers, at the Clarence, the Richmond, the Macleay, the Manning, at Port Macquarie, at Twofold Bay, and perhaps at one or two others.
1371. What duties do they perform? Duties in connection with the Custom House; they see there is no smuggling going on, and that the steamers have their clearances.
1372. Are they competent to perform the duties? Yes.
1373. They have abundance of time on their hands to do it? As a rule.
1374. Is it necessary, in your opinion, there should also be at the ports you mention a Custom House officer? The Collector of Customs is of opinion a Customs officer is necessary.
1375. You think these men are not over paid? They are really well paid, but they are paid according to the regulations.
1376. Having regard to the altered circumstances of the Colony, do you think the regulations of the Marine Board should still remain in force or be modified? The fact is they are the law. I believe if the Marine Board regulations that were framed in 1884 were to be framed now at the present time they would be less liberal, and properly so.
1377. Taking the Tweed River as one of the rivers where you have a pilot service, how many officers have you there? There are a pilot and five boatmen; the fifth man is really the light-keeper.
1378. What would be the annual expense of your service on the Tweed River? About £70 a month is the average. I dare say it is more now, because the officer there is an old officer, and receives above the average.
1379. What services do they perform? They keep all the buoys and beacons in the rivers right, sound the bars, and assist in every possible way the arrivals and departures on the river.
1380. Have you any idea of the number of vessels that arrive and depart in the course of the year? I have not the statistics. Like other rivers, the traffic is pretty well conducted by steam now, there are only three or four sailing vessels.
1381. Would the steamers require the services of a pilot? Oh, yes; they require the shoals to be marked, and the leading marks kept correct.
1382. Do you consider the dredge service is really necessary? I think the dredge service in a good many rivers is very extravagant, but it has been established through the pressure of the inhabitants on their Members, and thus on the Government. I may say the Government is driven into these expenses as a rule.
1383. Can you suggest any way of dispensing with much of the dredge service in the rivers? Under our present political system I certainly could not.
1384. *Mr. Storey.*] That is not in your department at all? No.
1385. *Mr. Humphery.*] Have you a pilot service at Wollongong? There is a pilot service there, but it was transferred from the Government to the Harbour Trust; I have nothing to do with it at the present time.
1386. Can you say whether there has been any additional expense by reason of the transfer? A large expense. As far as I can see, they have had very little benefit, if any.
- 1387.

1387. Can you specify in what particular the additional expense has taken place? I could not. Since the place has been given up by me I have not been there, but I know a great expense has been incurred, and I do not think a justifiable result has been brought about.

1388. Touching the pilotage exemptions, do you see any means by which, until the Navigation Bill is dealt with, the large reduction of fees can be stopped? I cannot.

1389. Can you make any suggestion? The present system is in accordance with the law of the land, and the improvement cannot be effected till the law is altered.

1390. Are the Marine Board obliged to grant exemption? Yes.

1391. After certain examinations I suppose? Never without examination.

1392. And the Marine Board insist on certain conditions—that is to say, they will not allow an applicant to come for an exemption until he has been three times in and three times out of the port;—when you say the exemptions should continue after the Navigation Bill is passed, would that apply to ocean-going vessels? Yes.

1393. Would the master of a Messageries steamer, holding a pilotage exemption certificate under the Navigation Bill now before Parliament, be able to use that exemption certificate? If the present man has a certificate we could not repudiate his rights under it, but the new man coming on would be restricted to coasting and intercolonial voyages.

1394. Can you furnish a return showing a reduction in the income of your department during the past three years, consequent upon the issue of exemptions? I am afraid I have no means of giving an actual return in this matter, but I may say that the exemption custom has increased very largely of late in consequence of the dull times, and the competition in shipping circles, which compel owners of vessels to use every possible means to reduce expenditure. The Messagerie boats, the German boats, the P. and O. boats, the Orient boats, and many of the tramps, are commanded by men who have procured these exemptions. The pilotage rate is so high for a large ship that owners have really been forced into taking this step. I may add that several deputations representing these large vessels have waited on the different Colonial Treasurers with a view to having the pilotage rates reduced. They threatened at last that if the rates were not reduced they would make all their masters take exemption. The high rate of 4d. per ton in and 4d. per ton out for pilotage, in addition to the harbour and light rate of 4d. per ton, made the charge so high in these large vessels that one is not astonished at the action of their owners. In the Bill now before Parliament this charge has been reduced to 2d., but I am afraid the injury to the revenue has been done. No doubt if the pilotage rate had been reduced this system of exemptions would not have been brought about as at present.

1395. Are you of opinion that if the pilotage rate be reduced, as proposed by the Navigation Bill now before Parliament, masters of foreign vessels would make use of their exemption certificates still, or would they employ pilots? In many cases I think they would employ pilots. The fact is, the masters of these large vessels object to the responsibility thrown upon them of having to pilot their vessels in and out of this harbour.

1396. *President.* I think you mentioned as your opinion that, in comparison with the scale of remuneration in other departments of the Service, it would not be fair to reduce the scale in your department? I did.

1397. But do you think that there is no room for reduction all round? In the Government service?

1398. Do you not think the scale of remuneration which is in existence now is excessive? I think it is liberal; and, as you know, a percentage has been taken off the high salaries, but the lower salaries are left intact. I think that is invidious and unfair.

1399. In the good old times, when things were better than they are now, there was no desire to make any reduction in the salaries of the officers under the Government, but circumstances have altered materially, and there is now an imperative necessity to make reductions; these reductions may take place in the diminution of the number of the officers, or in the reduction of salaries all round, or both means may be adopted to arrive at an economical arrangement; we would like very much to be helped by those who are in command of the various departments to assist us in coming to an equitable conclusion;—is there anything that you can suggest, provided it were applied all round, by which the scale of remuneration would still be equitable and yet more economical to the country than the one in existence at the present time? I can make no suggestion other than a percentage to be taken off from all the Government employés. The present reductions are invidious and ineffective.

1400. Do you not think that by the system of rising by seniority a man is sometimes forced into an office that he has no capacity to fill? I think such is often the case.

1401. You know of instances? I only say I think. In my own department, as I pointed out some time ago, we work, as it were, in units. There is no large body of officers working up towards a goal, and therefore I have no experience to speak of.

1402. You believe such to be the case? I believe many men in junior positions are better fitted to fill certain important positions than seniors who may get into them by rotation.

1403. *Mr. Storey.* With reference to the expenses of the "Captain Cook" for wages, would it be fair to compare her with such steamers as the "Namoi" and "Gwydir"? Well, I do not know whether the Government service should be guided by the experience of mercantile vessels. I do not know that there is any comparison between the pay of the Royal Navy and the pay of large steamers on the English coast.

1404. Is it reasonable to pay a higher scale of wages in the pilot steamer "Captain Cook" than it is on coasting steamers such as I have named? I do not know that it is. As you know, the pay to seamen of coasting steamers has lately been reduced; the pay to the men on the "Captain Cook" has not been.

1405. If I were to tell you that the wages per annum of the steamer "Namoi" amounts to £2,868, without cost of passengers' stewards, and that the wages of the steamer "Gwydir" engaged in the cargo trade is £1,818 per annum, and according to the Estimates for 1895 the wages of the "Captain Cook" is £3,310 per annum—do you not think that that shows the crew of the "Captain Cook" are very much overpaid? Yes, it would appear they are more liberally paid than the crews of the vessels you mention. I may state in this respect that the seamen on board the "Captain Cook" entered at a lower minimum rate than the seamen on the "Namoi." The seamen in the "Captain Cook" enter at £8 a month and have to find themselves in provisions. It is only the cabin, where the inmates are frequently changing, that is victualled.

1406. What do the seamen get? The maximum is £12, and £8 minimum—the same as Marine Board boatmen.

F. Hixson,
Esq.
18 Dec., 1894.

- F. Hixson, Esq.
18 Dec., 1894.
1407. The seamen of the "Namoi" get £5 a month? Is that so. The people on board the pilot steamer are always on duty.
1408. But often they have no work to do? But they are obliged to be ready.
1409. *President.*] The fires are always burning? Yes; I guarantee if I were to order the ship to get away now she would be off in less than two minutes.

WEDNESDAY, 19 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Edmund Sager, Esq., Secretary to the Board of Health and to the Medical Adviser of the Government, sworn and examined:—

- E. Sager, Esq.
19 Dec., 1894.
1410. *President.*] Are the two appointments which you hold separate? They are two separate departments. For a number of years past they were administered as two, and now they are administered as one, in order to save the expense of a departmental staff.
1411. Were the Estimates arranged by the administrative staff? Yes.
1412. I asked that, because the Blue Book for 1893 does not correspond with the way in which the Estimates are put? The Blue Book for 1893 is prepared in a different manner to the Estimates of the department for 1894. The Blue Book for 1894 will be on the same system as the Estimates.
1413. Are not the Estimates for your department undergoing some slight revision? For a number of years past it was customary to pay the three chief officers of the Medical Department, who were also the chief officers of the Board of Health, dual salaries, partly from one vote and partly from the other, but it has been thought better to pay for one office alone, giving the officer the salary of the two offices, and making him honorary officer for the other department.
1414. Were the amounts for the two offices added together? Yes; and the salary was paid to the officer from the Health Department instead of from both departments.
1415. *Mr. Robertson.*] The dual salaries were continued, were they? Yes, under one vote.
1416. *President.*] You have an administrative staff, consisting of the President, Secretary, chief clerk, and three other clerks, a probationer, and a housekeeper;—what are their duties? I may remark that the position of President is more that of a visiting and consulting officer.
1417. Does he give his whole time to his duties? He is not a member of the Civil Service in the ordinary sense. He does not pay any 4 per cent., and he does not give his whole time to the Service. He has his duties as Professor of the University in addition.
1418. Does he act as the Board which formerly existed did act? No; the Board is still in existence.
1419. Is the Board of Health composed of ten members? Eleven, with the President.
1420. Then the President has his fee for attending Board meetings, has he not? No.
1421. Then that is struck out? It never existed.
1422. It is down in 1893 as £109? He has not a fee for attending the Board meetings. Formerly, the President got a salary of £600 as President of the Board, and £400 a year as Medical Adviser to the Government. It was reduced by a special vote last year by a lump sum of £500 in addition to a 10 per cent. reduction. Therefore, his salary now for all offices directly under the Government is £489.
1423. Is this all he receives from the Government? Of course, he gets his salary from the University as well.
1424. Are his visits frequent? Sometimes they are. At other times there is a little lapse, when the business is slack.
1425. Have you seen him to-day? To-day I have not seen him, but if there is anything very urgent I would telephone to him, and he would come to the office, and I would consult him.
1426. How long does he stay—half an hour? There is generally something to occupy him for at least an hour or two when he comes in. He also takes papers home with him which require special consideration.
1427. Whatever is laid before him he decides and instructs? Yes; of course, the matters that he chiefly deals with are of a technical and scientific character. The business arrangements are left in my hands, as I am recognised by the Treasury, for all purposes of accounts, &c., as head of the department.
1428. Then, in the administration, you have the services of one chief clerk, at a salary of £275? That is a new appointment from the 1st of August in this year. It was made in consequence of the very large additional amount of work placed on the Board under a new Act of Parliament.
1429. What is the nature of the work and the duties performed by the other clerks? The chief clerk is practically the accountant of the department. Those are his chief duties. He assists in other work, as necessity arises.
1430. Does he keep the books? Yes.
1431. You have cash accounts, I suppose? Very few are paid by cash; payments are mostly made by cheque.
1432. If you receive little you pay away a good deal? We pay away by cheque. The chief clerk sees that the accounts are properly checked and debited against the right votes.
1433. And he writes the cheques out which you sign? Yes. I may state that the whole of the administrative staff duties are not confined to the department under review—the Board of Health—but the members of the staff are also used in connection with the Medical Department, and that particular officer has more to do with the accounts for the Medical Department, which are very numerous, and require a great deal of attention. They are chiefly for the payments of fees for medical evidence throughout the whole Colony. The doctors are proverbially not business men; and they send in their accounts two or three times, frequently wrong, and there is a great deal of work to be done in that way.
1434. You have advances made you by Government? No, excepting in the sense of an ordinary Government advance,—that is to say, an abstract is made up of payments to be made, which is sent to the Treasury, and the amount is advanced to pay those particular accounts. There is no open advance.

E. Sager, Esq.
19 Dec., 1894.

1435. Everything is done to a nicety? Yes, to a halfpenny.
1436. You don't get an advance of £5,000? No. The utmost we get is a petty-cash advance of £20 at a time.
1437. You have three clerks engaged, at £223, £200, and £150? They have plenty of employment. The duty of the second clerk is chiefly in the Record Branch. There is a very large correspondence to deal with; over 10,000 papers have been received this year and dealt with.
1438. The third clerk is occupied with correspondence? Yes, chiefly. He is a very good shorthand-writer, and takes down all his letters from me the first thing in the morning and gets them ready for signature.
1439. Are they written? Yes, not type-written. Out of the four clerks three are shorthand-writers.
1440. Are they ever employed overtime? They were on one occasion, some three years ago, in getting ready particulars of information for the Diseased Animals and Meat Act, under which we had to make 700 appointments all over the Colony. These appointments are not paid.
1441. Is the inspectorial staff under your eye? Yes.
1442. The chief medical inspector gets £785 a year? Yes. He used to receive two salaries, one from the Medical Adviser's Department, and one from the Board of Health.
1443. The amount now received is the total of those two? Yes; there has been no reduction and no increases.
1444. He is a professional man? Yes. Dr. Ashburton Thompson. That officer is paid a lower salary than is paid in the other Colonies for similar work. He occupies a similar position to Dr. Gresswell in Victoria.
1445. Does he give his whole time to it? Yes; he is debarred from taking private practice. He is at present at Narrabri, where an outbreak of disease has occurred. His duties are purely of a scientific and expert character. He inquires into all country epidemics as well as those in the city.
1446. Dr. Sibley, the assistant health officer at Watson's Bay, is he permanently located there? Yes.
1447. Does he attend to ships that come in requiring to be inspected? Yes. He is allowed to do private work in that particular neighbourhood. That was acceded to at the request of the inhabitants who were too poor to keep a medical man there. Dr. Pierce, recently Medical Superintendent of the Coast Hospital, is to succeed him in January. Dr. Sibley, receives £515 a year. Formerly Dr. O'Connor was paid a fee of £200 per annum for proceeding from Sydney to the Shaftesbury Reformatory as visiting surgeon. When the department was asked to point out reductions by the late Government, they thought that the nearest medical officer should take charge of this work, and get a small amount for his services, £50 a year, chiefly to cover his expenses in connection with it. This work is now included in Dr. Sibley's present duties.
1448. I see there is a health officer at Newcastle receiving £226 a year? That office is held in conjunction with the office of Medical Superintendent to the Insane Hospital.
1449. And the salary covers that too? No; he gets a separate salary from the Lunacy Department. Formerly it was held by a private practitioner in the town, but, as it gave him a monopoly of the private shipping trade, the other practitioners objected strongly to it. It gave him the whole run of the business.
1450. *Mr. Storey.*] Who has that now? Dr. Ross.
1451. *President.*] The chief veterinary inspector gets £565;—does he travel much? No.
1452. Is he located in Sydney? Yes. Formerly he travelled a good deal, but now travelling is done by the others. He visits the Homebush sale-yards and condemns the diseased stock that is sent down there from the interior. He also visits the local markets. That is his principal work, in fact.
1453. The places of entrance into the Colony for cattle, I suppose, are few? On the contrary, they are so numerous that we cannot guard the passages. We can only attend the sales. Some travelling mobs are seen by the inspectors, but still a large number come through and are submitted to auction at Homebush. The inspector attends there and condemns the diseased animals. That is done under the Diseased Animals and Meat Act.
1454. Have you any inspectors of the lower rank who are on the watch for them; Yes. That Act is administered with very small cost to the Government in this way: The Board has power to authorise persons to exercise powers under the Act. The whole of the inspectors of stock are authorised, the Government medical officers in each town are authorised, and the senior officers of police are also authorised. They are not paid any fee for this work, with the exception of the country medical officers, who are paid a fee for work done—for giving evidence in the courts as to the character of diseases that the animals suffer from.
1455. I suppose they are bound to inform if they see any diseased animal; they cannot exercise their discretion in saying nothing about it? Not if they do their duty.
1456. There are two veterinary inspectors besides at £300 a year? They are always in the country.
1457. Are they duly qualified medical men? No. They are duly qualified veterinary men. The Board has recently decided only to employ duly qualified veterinary men, so that their evidence would be received in the courts without question.
1458. Is the quarantine staff at Manly Beach? At Sydney, Manly, and Newcastle.
1459. The superintendent and overseer of stores receives £290 a year; is he necessarily a man of such capacity that he requires a big salary? That particular man is. It is a very difficult thing to get a man to act in that capacity without friction. When a vessel with 700 people on board arrives at Quarantine he earns every penny he receives, but there are times when he does not earn his salary. We have had two or three superintendents prior to him, and they have all led the Colony and the Government into disgrace, and have besides cost the country a large sum of money. A Royal Commission was appointed in consequence of the action of one of these men.
1460. He has an allowance besides of £75 for quarters, fuel, and light? It is necessary that he should live on the station and be provided with a house and fuel valued at the rate named.
1461. What about the lazaret? That is provided under the Leprosy Act. The lepers are maintained at Little Bay. There are eight persons employed there on a portion of the reserve. The patients have been increasing of late, and it will be necessary to increase the staff. They have to be paid at rather a higher rate of wages for a lower class of duties on account of the nature of the work, and of the patients they have to mix with.
1462. The Glebe Island Abattoir has a superintendent inspector, an assistant inspector, and a number
of.

E. Sager, Esq. of others. The superintendent has £335, with an allowance for forage, fuel, light, and so forth? With regard to that particular branch, I may say that until these last six months the Abattoir has been under the Treasury, but the Noxious Trades and Cattle Slaughtering Act places the control under the Board of Health. The Board have appointed a sub-committee to go into the whole of this matter and are not at all satisfied with the conduct of the branch. There has been a considerable loss to the Government on the working, amounting roughly to £2,000 a year on the expenditure, and of about £2,500 interest on the Loan Vote, whereas it ought to pay for itself and return a profit. These institutions are generally conducted in other countries by the municipal bodies and they always return a fair profit.

19 Dec., 1894.

1463. Is not the Abattoir Department undergoing reorganisation? Considerably. The Board has already abolished the position of manager at £218 a year. I am not so conversant with this portion of my business as with others, it having only recently been placed under the Board. The position of manager, however, has been abolished and the question of abolishing other positions is now receiving consideration.

1464. The contingency vote seems to be made about equal to what the expenditure formerly amounted to? At the time the Estimates were called for, three months ago, we were well aware that considerable changes would have to be made, but we did not know in what direction; so we asked for a vote the same as usual. I think, however, a considerable saving will be effected in that vote.

1465. It is rather awkward for any one who is not a professional man to say anything about professional salaries, but, with regard to the administrative staff, do you think there is any room for diminution in the numbers? Of course, with the exception of the President, there are no professional men on the administrative staff.

1466. Could you make any reduction in the number of the clerks? I do not think that you could reduce the administrative staff by a single one. The fact is, they have all been there some time, they are exceptionally good clerks, and three are first-class shorthand-writers. The number is not excessive for the business there is to do. Our work has increased considerably within the last three years, and the staff has not been kept up in proportion to the work.

1467. Have the salaries been increased lately? By the appointment of a new officer, that of chief clerk, which is submitted on these Estimates, a small increase is proposed. The chief clerk has been there eleven and a half years, the second, ten, and the third, eight years. All these three write shorthand, and are of great assistance.

1468. *Mr. Robertson.*] Do you want three shorthand writers? No; they are not paid at shorthand rates.

1469. *President.*] Have you ever had occasion to make use of their services in writing shorthand? Yes; I use one of them every day, the one who attends to the correspondence.

1470. You do not think that any reduction could take place with efficiency? I am sure it could not.

1471. *Mr. Storey.*] You say the business is managed by a Board? Yes.

1472. Is it an honorary position? The members are paid two guineas each sitting.

1473. How often do they sit? They sit once a week, but occasionally a meeting lapses.

1474. Do you put all the business of the department before them? No; not all. They are an administrative and advisory Board, but they have nothing at all to do with the expenditure of moneys. They advise on public health questions.

1475. You simply put before them whatever you like? There are certain things that they have to do by Act of Parliament. You cannot put a person into the hospital as a leper without an order from the Board. There are matters in connection with the abattoirs which must be done by the Board under the Act of Parliament.

1476. Does the President always preside at the Board meetings? Yes.

1477. In so far as these figures at the abattoirs are concerned, are they not under revision? Yes; by a special committee of the Board. The revenue received by the abattoir is £10,000 a year, and the expenses have been generally about £12,000.

1478. I understood you to say that the Medical Adviser to the Government comes under your department? The departments are different, but I would suggest that they should be inquired into as if they both belonged to one department.

1479. Are you responsible for the preparation of this estimate? Yes.

1480. For the estimate of the Medical Adviser to the Government? Yes, subject to the medical adviser.

1481. Has this been prepared the same as the estimate of previous years was, or has it undergone revision? It has undergone revision to a very small extent, because it is not possible to reduce it much.

1482. Are the estimates submitted to the Board? No; the Board has nothing whatever to do with the medical adviser.

1483. Who is the head of that department? Professor Anderson Stuart.

1484. How many positions does he hold? He is President of the Board of Health with a salary of £489, and he is Medical Adviser to the Government, without salary.

1485. Without salary? Yes.

1486. What other position does he occupy? He has his professorial appointments at the University as well.

1487. Of course there are a lot of salaries here on account of professional men, but you say they have all been thoroughly revised, and that there can be no reduction? I think the payment to the visiting surgeons of the gaols of £40 is ridiculously small. It amounts to about 2s. 1d. a visit.

1488. Then there is a salary of £627 for Dr. Paton? Yes; he is the Government medical officer and vaccinator of Sydney, and, in addition, is the police surgeon. He is responsible for the medical care of persons locked up in the police stations. He goes every morning to give evidence with respect to persons charged with insanity. The Government medical officer in the Parramatta district has a slightly bigger salary, namely, £650. His duties are somewhat difficult. He does all that the other does, and something in addition. He is the police doctor, the prison doctor, and a general visiting medical officer to the district. These gentlemen are not allowed any private practice.

1488½. There is a lump sum of £5,000, I see, put down on the Estimates for payment of medical fees, &c.? Too little is estimated; we have asked for more, but it has been reduced. We have always to get a supplementary vote for what we want.

1489. To what extent? From £1,500 to £2,000.

1490. Over and above the £5,000? Yes; it is impossible to accurately apportion the amount. There are fees for *post mortems*, and evidence in inquests, evidence of doctors in Courts, where there are no regularly appointed Government medical officers in that particular town.

1491. There is the maintenance of sick paupers? The vote for this is £10,000, for the support of paupers in the various hospitals, and it is too small. We have already spent £12,000, without reckoning the present month. E. Sager, Esq.
19 Dec., 1894.

1492. How is it that this does not come under Mr. Maxted's department? Cases suffering from acute disease do not go to him. Chronic cases, and such as cannot receive any benefit by further active treatment, are passed on to him. They are paid for at a rate of 3s. a day in the Sydney and Prince Alfred Hospitals. My opinion is that the hospitals ought to take more of these patients in than they do without charge. They get an annual subsidy of £4,000 a year, each of these two hospitals, and they undertake to admit urgent cases—accidents in the streets, and so forth—but they will not take any pauper medical cases. They refer these cases to the Government for a pauper-order, which is a guarantee from the Government that they will pay £1 1s. a week for their maintenance. That system has obtained twenty or thirty years. Half the patients in both these institutions are Government paupers, paid for at the rate I have named. The hospital people say they cannot take in more cases without payment, because their funds are not sufficient to maintain the hospital.

1493. If a poor person goes to the hospital, and says he cannot pay, will they send him to the Government for an order? Yes; they would not take him in without. They refer him to the Board of Health for an order.

1494. Suppose the person did not know where to go? They direct him by printed cards.

1495. What about the Coast Hospital? It is maintained by the Government, and has been since its institution. It was built originally for a small-pox hospital at the time of the small-pox epidemic. It so remained for about two years, but it has since been opened as a Government hospital.

1496. With whom do the appointments rest—with the Board? No; with the exception of the first three, the appointments are made by the Medical Adviser to the Government. He approves of them on the nomination of the medical superintendent of the institution. There are all small pay officers, earning between £50 and £100.

1497. *Mr. Robertson.*] As secretary to the Medical Adviser to the Government and as secretary to the Board of Health, I suppose you are conversant with all the matters connected with those two departments? Yes.

1498. And you are unable to intimate to the Commission any way by which a saving could be effected? With the exception of the abattoir establishment.

1499. With regard to the abattoir establishment—how long has this Committee you mentioned been investigating the matter? About three months.

1500. *President.*] And when do you expect to have their report? They have made several recommendations but no consecutive report. One recommendation was that the position of manager should be abolished. That recommendation was carried out. The inquiry was not so much in connection with the staff as with the general internal management of the abattoir. For instance, they found the other day that the officers had been allowed fuel and light. The first accounts that came to me for payment showed that one officer had used £13 odd of gas for lighting in a single quarter. I applied for a return and found that the privilege had been abused, and it was stopped by the Board.

1500½. Have they not finished their investigations after two months? No. They have finished everything excepting the investigation into matters connected with the staff.

1501. Will you furnish to this Commission a statement embodying all the recommendations made by the Committee and the result of their inquiry during the past two months? I will, subject to the permission of the Board.

1502. Have you prepared a statement showing the particulars of the work done by the administrative staff in your department, from yourself downwards? No.

1503. Will you do that? Yes.

1504. *Mr. Humphery.*] Why is the Government veterinary paid on a higher scale than any other member of the staff? He is not paid higher than the chief medical inspector.

1504½. Who is that? Dr. Ashburton Thompson.

1505. Would the duties of the Government veterinary include inspection at Glebe Island? It has done so for some years.

1506. Would the subordinate inspectors also take duty occasionally at Glebe Island? If the chief veterinary was away for some particular business they would; for instance, the other day he had to go to Cobar to make an inquiry about horses.

1507. Is it necessary to maintain a similar staff at Glebe Island? No.

1508. There is no similar staff at Glebe Island? There is a superintendent there.

1509. What are his duties? Generally to superintend and take charge of the whole Abattoir. He was subject to the Treasury at one time, but now he is subject to the Board of Health.

1510. Is he simply in charge of the abattoir? Yes.

1511. Does he not perform veterinary duties? No, he has no knowledge of that.

1512. What about the inspector? He has no special qualifications, but he has charge of the slaughtering and condemnation of animals. If the owner will not agree with him that the animal is diseased, then it is a case of an appeal to the veterinary inspector.

1513. Then the chief inspector comes in? Yes. He decides the question. The Abattoir inspector has under him an assistant inspector and four temporary inspectors. Every animal slaughtered is examined.

1514. Are the members of the veterinary staff fully occupied? Yes. The chief veterinary inspector is the only one retained in Sydney. The others are inspecting dairy premises, slaughtering premises, and other work of a similar character in the country.

1515. How are the salaries fixed for the assistant veterinary inspectors? They were fixed by the Colonial Treasurer, on the recommendation of the Board. They got authority for the engagement of these men at a salary not to exceed £400.

1516. Has there been any increase in the annual expenditure of your staff during the past few years, or do the salaries remain at what they were fixed at in 1885 or 1886? There has been an increase.

1517. Have the increases been in consequence of the length of service or of the increase of work? In consequence of the increase of work. A number of Acts of Parliament have been passed during that period which increased the work considerably.

- E. Sager, Esq. 1518. I want to understand how it comes about that the increases that you speak of have taken place;— was the staff in 1885 fully employed, or was additional work thrown upon them, and did an increase of salary follow? Additional work was thrown upon the staff and an increase of salary followed, and also it was necessary that the number of the staff should be increased.
- 19 Dec., 1894. 1519. What have been the increases between then and the present time? The chief medical inspector had an increase of £100 a year. He got £750, he then got £850, which was afterwards reduced by the 10 per cent.
1520. Who is the next in position? The chief veterinary inspector. He was an officer partly employed by the Health Department and the Stock Department till three years ago, when the Stock Department complained that we used his services to such a large extent that they could not continue to pay him his salary. Then he was taken over wholly by the Board of Health, but his salary has not been increased since then.
1521. Where have the increases taken place? In 1885 we had not these three veterinary inspectors that we now have. That was one increase. As I explained before, there has been another increase in the appointment of a chief clerk at a salary of £275. There was no Leprosy Act in force then, and therefore the amount of £600 for the salaries of the attendants on the lepers is new. There was no Act compelling them to be segregated. Then there was this increase under the Noxious Trades and Cattle Slaughtering Act.
1522. Has there been an increase in the salaries? My own salary was increased £100 and was afterwards reduced by the 10 per cent. Before that I was receiving £505 per annum.
1523. In what year was that? Last year. I am now receiving £475 salary, and I am compelled to reside in Sydney by an order of the Board, and the Treasury makes me an allowance for lodgings of £100 a year.
1524. So that your salary with allowance would be £575? If you speak of it in that way it is; but I asked that the amount allowed for lodgings should not be looked upon as part of my salary or as part of the emoluments of my office. I did not wish to reside in Sydney. I have to attend my office every Sunday morning and after hours. A great deal of work in connection with the department, such as dealing with infectious diseases, arises, so that we cannot observe ordinary office hours.
1525. *Mr. Humphery.*] Would the increase of £100 a year that you spoke of be exclusive of this allowance for your house? Yes.
1526. Have there been no other increases in the department of the Board of Health? Yes; the Superintendent of Quarantine has £50 a year increase. His salary used to be £250 at that period.
1527. Has he been long there? About eleven years—between ten and eleven.
1528. At what salary did he enter? £212.
1529. Would the increase be the result of length of service? Yes; under the Civil Service Act there was an increase of £20 per year, which brought the salary up.
1530. Do you consider he is over paid? No.
1531. Do you think fourteen quarantine officers are necessary? I do not.
1532. How many do you think are absolutely necessary? I think the number might be reduced by one.
1533. How are they distributed? Two in Sydney, one at Newcastle, three at Watson's Bay, and the remainder at the Quarantine Station.
1534. What is the pay of each? The senior men get £120 each, and the others £108, *i.e.*, some get £10 and others £9 a month.
1535. *President.*] You said the Board was advisory? Yes; and in some points administrative too under the more recent Acts. Under the old Acts it was only advisory.
1536. Of course you have got very competent professional men on the inspectorial staff? I believe so.
1537. Could you not dispense with the Board altogether, having such men as these constantly watching the business of the department? I do not think it would be desirable to dispense with the Board altogether.
1538. In what way are their services indispensable? The Board was appointed under an Act of Parliament, and has several Acts to administer. The members are entrusted in some cases with very great power indeed; for instance, they can practically make a person a prisoner for life, and generally you want to have a number of men who are recognised in the Colony as leading men to advise on the different questions that arise. They are a corporation by Act of Parliament.
1539. When I counted the numbers forming the Board it seemed to me that the Board was a very ponderous one, and the fact of each member being paid per sitting makes it very expensive. Sometimes I daresay there is not much business to be done. Is it the case that there are three medical men who sit on the supposed cases of lunacy? No; there are two.
1540. And these are not members of the Board? No; the Board has nothing to do with it. They have power to commit a person to the lazaret who is attacked with leprosy. There are forty persons there now.
1541. Outside of that the Board could be dispensed with so far as the necessity of their professional knowledge is concerned, could it not? No; they advise the Government on a number of questions dealing with matters affecting the sanitation of the country and administer certain Acts. Epidemics in the country occur and they have reports with reference to the epidemics from their officers.
1542. Do you think that the number of members of the Board could be diminished with advantage? Yes. I think the numbers are rather large.
1543. Are they all paid fees? Until recently the official members of the Board were not paid fees.
1544. There are five medical gentlemen and five non-medical gentlemen on the Board, are there not? Yes; besides the President.
1545. Do you think that a Board of five, consisting of medical men and non-medical men, would be sufficient to fulfil the duties of the Board? I think that five would possibly be able to do the work.
1546. Equally as well as eleven? Possibly so.
1547. It would effect a saving of £500 a year, would it not? Yes, about that.
1548. You admit that one officer might be dispensed with on the staff at the Quarantine Station? Yes.
1549. Do you think that the pay is too high? The average is £114; £120 in some cases.
1550. Considering the scale of remuneration that is current now in other departments of business in the Colony, is not that a very large scale for men in that class of life? Judging from the salaries paid in other departments of the Government I should not consider the salaries too high, although they may be high in proportion to those paid by private persons; but I do not think that you could make a very large reduction.

1551. *President.*] Circumstances alter considerably in the Colony as well as in other countries, and it is thought that an ideal scale of pay should not be allowed to regulate everything in the Government Service. It has been dispensed with in mercantile institutions where the pay is in accordance with the nature of the work done, and with the intelligence and ability required on the part of the individual doing the work? You don't want to pay more wages for the class of work referred to than you would to a handy labourer who is a little bit skilled in his particular work.
1552. Of course in certain times when there is a long period of good health the men have very little to do? Yes.
1553. But in times of emergency? They make up for it. When there is a slack time they do painting the buildings, repairing, and such like.
1554. *Mr. Robertson.*] Have you been in any other service than that of the Government? Yes.
1555. What business were you in before? The mercantile.
1556. How long have you been in this department? Fourteen years.
1557. Since your appointment? I was first of all appointed clerk to the health officer fourteen years ago. I was then promoted to the position of secretary to the Board. There was no Board when I first joined the Service.
1558. Do you prepare the estimates? I do.
1559. You have them duly recorded in your books? Yes.
1560. Will you prepare a statement showing the votes that have been passed, and how much you have expended in each year from the time of your appointment? I cannot do that from my books, because we were a branch of the Treasury formerly, and they used to keep all the books in their office.
1561. How long have you been keeping books? Since 1884.
1562. I would like you then to make your statement from 1884? You want to know how much has been paid within the year?
1563. Yes, on account of the votes? A return made in that way would not necessarily give you the exact information that you require, because money is paid in on account of a service in one year, and is spent in another. For instance we may not pay till February a claim made for services in November.
1564. Let us know how much was expended in one year on account of the vote, and how much was spent in subsequent years on account of the same vote? I understand; it would not in any case go over a month or so.

E. Sager, Esq.
19 Dec., 1894.

W. O. Hopkins, Esq., Comptroller-General of Stores, sworn and examined:—

1565. *President.*] The Stores and Stationery Department is under your control, I believe? It is.
1566. And you have a staff and system of inspectors together with a number of clerical assistants and men in the store branch? Yes.
1567. After yourself, I see there comes an inspector who is put down on the Estimates for £380 a year. What are his special duties? He has relieved me considerably of duties which I found had multiplied so much that I could not perform them; he assists me in the examination of goods delivered by contractors; he is a kind of general warehouse manager, such as they would have in most large mercantile houses; he has general supervision of the establishment; he also visits the different gaols and Government asylums, and compares stock with record books in those departments. When he finds a surplus stock it is transferred to another department; he does valuable service in that respect. His duties are to purchase goods that are not in contract; he is the up town buyer as it were; his hands are quite full of work.
1568. Is there a large proportion or a small proportion of the stores required that have to be purchased outside the contracts? A very small proportion.
1569. It just happens occasionally? Yes. Still there are lines about which he has to exercise great judgment in making purchases; it is not like placing an order with the contractor. Under the late system the contractors considered they had a right to supply all lines not in contract. We had to pay a high price for the goods not in contract under that system; now we buy in the open market at best advantage. The proportion of outside purchases has dwindled down considerably. In 1885 the total value of the drapery under contract was £18,000, and the purchases out of contract £300. That is a very small proportion.
1570. I suppose when occasion requires the inspector reports anything to you that is necessary for you to know and to give directions about? Yes.
1571. Is the clerical branch under your own eye? It is somewhat divided. The accountant has a staff more particularly belonging to the account branch, and there is a certain part of the clerical branch that comes more under my own supervision.
1572. Your accountant gets £371 per annum? Yes.
1573. Does he keep books himself or control the clerks in his department? He has the entire control of that branch, and he examines and checks nearly the whole of the work. He does not perform the clerical work, but he checks it. He is responsible for all vouchers that are sent in by him for my signature.
1574. I see you have nine employed at £236 each? Yes.
1575. I suppose their duties are to record the purchases in the books? Yes, and issues.
1576. To register deliveries? Yes.
1577. Do they register the deliveries of stores to the different departments? Yes; there is an elaborate system of double entry, and there is in addition to that a record of the goods received into stock, of every item from a packet of needles to ten thousand blankets, and the stock in hand is compared with the stock book at the end of the year, so that if a packet of pins has been extracted it is missed.
1578. You have a debit and credit side? Yes.
1579. And you can show exactly what stock you have in hand at the end of the financial year? Yes. Every month we have twelve lines promiscuously inspected; they are counted by the inspector and compared with the stock book, which is entirely under separate control.
1580. Where do you store the different articles which you have in hand? At the stores in Young-street.
1581. Does that hold all that you require? It has to do at present, because I cannot get more storage.
1582. But you admit that you can store all the goods in it? No. The place is completely crowded, and I have no accommodation for some of the purchases that I have to make. I could save the country thousands of pounds if I had sufficient storage.

W. O.
Hopkins, Esq.
19 Dec., 1894.

W. O.
Hopkins, Esq.
19 Dec., 1891.

1583. In rent? No. By contracting for fixed quantities and taking them from the ship's side, we would purchase to very much greater advantage than having to buy indefinite or open quantities, where the contractor has to deliver from day to day in small or broken parcels. I have pointed that out years ago, and the system I have introduced has been acknowledged to be an improvement, but I have never been able to get the storage to carry it out in its entirety.

1584. Are you insured against fire? Yes.

1585. Is that usual in Government departments? Not usual, I think.

1586. But you always are well covered? Not quite covered. We insure for £20,000 and we carry a minimum of about £30,000.

1587. In the Store Branch I see you have fifteen men from the stock-keeper with a salary of £281, reduced to £236, down to the labourers;—have you a superfluity, or a short supply of labourers? It is a very fair standard. They fluctuate. Temporary labourers are taken on occasionally for a few hours, a few days, or weeks, when there is a rush of business, but the present standard is a fair one. I could not do with less.

1588. They would not be permanent? No; temporary men are paid 1s. an hour.

1589. With regard to the stock-keeper, he is responsible, I suppose, for the safe keeping and the good condition of the things that are under his care? Yes.

1590. Then there is a stationer;—what does he do? He has the same responsibility in connection with his flat.

1591. Then the assistant stationer, can you not dispense with him? No; he is a very valuable officer. The items issued last year from the stationer's stock were 39,000 in number. Of course, our system is a little more elaborate than that of an ordinary wholesale house. The invoices have to be made in triplicate. There is a great deal of clerical work, and we necessarily employ a larger staff to do the same kind of work that would be done in a mercantile house.

1592. When you speak of stationer and assistant stationer, their special department, I suppose, is in respect of the articles in that particular branch of business? Yes. They deal with stationery, architects' and surveyors' materials, postage papers and postal cards, miners' rights, business licenses, &c. The stationer is responsible for all those.

1593. Then there is an officer charged with the supervision of fuel and light? That is a recent appointment.

1594. What does that fuel consist of? Coal and wood.

1595. Have you supplies of those articles in the store? No; this officer is responsible for the correct reading of all the meters and the supervision of the consumption of gas. He has been instrumental in checking waste.

1596. In Government offices? Yes.

1597. You do not trust the inspector of gas whom the Gas Company sends round? Not now. I have been trying to get an officer to do this work for many years, but only got him three years ago. The cost of gas is about £12,000 a year.

1598. You think £200 a year is well spent on that work? Yes.

1599. I suppose the packer is one who packs up articles that have been requisitioned? Yes. Articles from stock are sent to his flat and are there checked, packed, and despatched. He also receives all goods from contractors, and reissues for town and country services.

1600. Then there is an assistant storekeeper at £200 a year. Does he require that assistance? Yes.

1601. The messenger, I notice, gets £120 a year besides an allowance? Yes; his allowance amounts to £30.

1602. He does not require to be a man of great clerical capacity, and his salary seems rather excessive for the work he does. Is there no room for economy? I think so. I pointed that out to the Civil Service Commission which sat some time ago, and I recommended that this messenger should be moved to the labour staff, and that a youth at half his salary should be appointed in his place. With that exception I do not know of any saving that can be effected in salaries.

1603. Then there is £140 a year for a carter; that is a good salary? Yes; but one must have a responsible man to deliver goods in town. He drives a pair of horses, and takes out heavy and assorted loads, and is responsible for their correct delivery.

1604. I should think that Mr. Shortland pays a good deal less for his trusty man, whom he has had twelve or fourteen years? Perhaps so.

1605. There are several labourers receiving £127 a year;—that is a very luxurious salary for men in that capacity? It is only about 7s. 6d. a day, I think.

1606. And knocking off Sundays it is 8s., which is paid wet or dry, little or no work? They always have work.

1607. There is a very important item here of stores and stationery for the Public Service generally, £50,000 for the half year, that means £100,000 a year;—is that for supplies for the whole of the Service? Yes, nearly so.

1608. Fuel and light for departments within the district of Sydney, £11,000 a year, and conveyance of stores £4,000;—when a requisition is sent to you from any of the Government departments have you any control over it? Yes, absolute control.

1609. You can make inquiry as to whether it is necessary? Yes.

1610. And does it often occur that you can exercise any check over any of the applications? The necessity for revising requisitions is diminishing, but that is one of my important duties. When I have a doubt I have frequently sent the inspector to examine the stock in the department applying, and ascertain if the full supply be necessary.

1611. The Commission have a strong impression that there might be an immense amount of economy exercised in watching carefully the requisitions? I fully realise that.

1612. And impressing upon the departments the value of economy? Yes.

1613. The amount expended by your department comes altogether to about £115,000? Last year the total expenditure was £127,000, and the reduction on previous years was no doubt attributable to a great extent to the directions I had to economise, and the more absolute power of control given to me to reduce the requisitions. A certain amount was voted, and my instructions were to keep within the vote. The expenditure in 1884 was £144,000. It has fluctuated since then. Sometimes it has been a little more,

more, sometimes it has been a little less. Last year it was exceedingly low, and I estimate this year to be able to do with £100,000, notwithstanding the growth of the Service.

1614. And that is all owing to the continual exercise of care, and examination into the condition of the stores of the departments which make the requisitions? To a great extent, and to a careful supervision of the requisitions, as also to the reduced values of goods.

1615. *Mr. Robertson.*] From how many sources do you receive requisitions for stores? We supply the whole Service with stationery, and nearly the whole with stores.

1616. Through what sources do you receive the requisitions? Through the heads of departments and the Under Secretaries, but they are not always supposed to come through the Under Secretaries. There are certain provisions in the regulations that, in cases of emergency, the requisitions may be sent on direct to me.

1617. In that case what do you do with the requisitions? If I consider supply necessary it is made forthwith.

1618. Do you send them back for confirmation? They are approved at the Treasury.

1619. They are not sent for approval to the Under Secretary? No, not if they come from the head of a department, from Dr. Manning for instance, and from gentlemen who would be more conversant with the wants of their department than the Under Secretaries could be.

1620. How much comes to you as a matter of urgency? I am quite within the mark in saying that during the whole year there will not be £1,000 worth. By arrangement with Mr. Potter, the postage stamp paper and duty stamp paper, &c., that might be required at a moment's notice, and would have no value except to the Government, would be sent on at once.

1621. Are all those officers to whom the President made reference under your personal supervision? Yes; but they are more directly under the supervision of the inspector. He is the warehouseman as it were.

1622. Is the accountant under him? From the fact that the accountant has a smaller salary the inspector may be considered as his superior officer. The inspector ranks next to myself, but these officers never interfere with each other's work?

1623. Are the clerks under the accountant or under the inspector? Some under the inspector, and others under the accountant.

1624. Are they all in one place? No, not all; my corresponding clerk and the record clerks are in separate rooms.

1625. How many do they number? There are three in two rooms, the whole of the others are in one room.

1626. You spoke of your system of book-keeping as being elaborate and by double entry, so that all matters are of easy reference? Yes.

1627. Can you enumerate all the classes of books that are in your department? I do not think I could positively, but first we have the ledger and journal, secondly the record of supplies by contractors, which are all copied into another book, and third we have the issue-out day-book. Then we have a clerk to enter in detail all the requisitions as they are sent and mark off the items as they are supplied. Then we have a stock-book and a book in connection with the fuel and light, and so on.

1628. Will you prepare a statement giving the detailed work done by each officer in your department? Certainly.

1629. Enumerating all the books and the number of books that are kept in your department? Yes.

1630. Do you prepare these Estimates? Yes.

1631. Upon what basis? On the supplies of previous years. If I have a large stock at the end of 1893 I can reduce the Estimates for 1894, but the Estimates are based upon the supplies of previous years.

1632. You are entirely responsible for the Estimates? Yes, so far as regards their preparation.

1633. You do not consult the Under Secretaries of the various departments with a view of ascertaining whether the demand will be the same as in the previous year? I make no inquiries of that kind. Our stock allows a little elasticity in that respect. If the demands are less our stock is greater.

1634. What is the rule with regard to temporary clerks—for how long a time may you employ them? I am not aware of any rule. I don't think I have employed in the aggregate more than three during the last ten years.

1635. Here is one who was employed in 1881;—has he been in your department during the whole of that time? That is not my appointment. I thought you were referring to my own appointments. If the Treasury sends them to me, of course they remain till they are removed by the Treasury.

1636. Do you prepare a statement recommending the continuance of these people year after year? Yes.

1637. Do you get a written report from the inspector, or from the accountant, with reference to the work that is being done through and under them? No. I have, of course, daily interviews with the inspector and accountant.

1638. I would like to ask you to prepare a statement of the past ten years, giving the amount of the yearly vote, and the expenditure under the various heads that may be in use in your ledger? Yes. I have that in the office now, since 1884, showing the actual expenditure, and, of course, the Estimates will show what has been voted. You would, I suppose, want to be informed of the Supplementary Votes and the Additional Estimates. It has been the almost invariable practice to vote a certain amount and say that the rest will come from the Supplementary Estimates and the Additional Supplementary Estimates. We have always been able to get through £20,000 or £30,000 in that way.

1639. Do you think that your system of estimating could be improved upon? I do not think so.

1640. Have you ever applied for the means to effect the saving of thousands that you spoke of? Yes. I made a long report to the Minister (Mr. See), and pointed out that if certain powers were entrusted to me, and certain alterations were made, a considerable saving would be effected.

1641. Will you supply the Commission with a copy? Yes.

1642. *President.*] Are the ledgers kept both for quantities and values? Yes, with the exception of stock. We do not balance our stock with regard to value, because it is quite possible that we shall have this year's goods remaining till next year, when the rates may be different, so we have all the stock entered at the current contract value.

1643. *Mr. Robertson.*] Don't you allow for depreciation? No.

W. O.
Hopkins, Esq.
19 Dec., 1894.

W. O.
Hopkins, Esq.
19 Dec., 1894.

1644. Not for stock that may be three years old? There is very little loss by depreciation. The only depreciation would be from moth, because ours is not a stock that is affected by fashion. It is quite as useful to-day as it would have been three years ago. The same remark will hardly apply to most business stores.

1645. What is the amount of stock that you generally carry? About £30,000 to £40,000, but it fluctuates considerably.

1646. *Mr. Humphery.*] Is the stock purchased by tender or is it imported? The only lines we import direct are for the Post Office, watermarked papers, postal card paper, and a few lines of that kind. These are imported direct from the mills, but the rest is purchased under contract.

1647. By local contract? Yes; there are some sixty of them.

1648. Then I understand that all stores instead of being sent direct by the contractors to the various departments are sent into your care? Yes.

1649. Then they are distributed? Yes; when a contract is for a definite quantity of goods, these are delivered from the ship's side, and taken into stock, and distributed from day to day as required by requisition. These goods are sent to the stores, and compared by the inspector with the stores' standard samples, and, if found satisfactory, are accepted. We do not allow the contractors to deliver to any department direct.

1650. Do you receive requisitions from the various departments for all stores that you issue? Yes.

1651. And you issue nothing without requisition? Not a pennyworth.

1652. Does your supervision extend to all Government stores of every description? Not to those of the Railway.

1653. Excepting that? I should not interfere with the Military clothing or the Post Office clothing or with the Railway Department; but we supervise the stationery used by the Railways. We inspect that, and are responsible for the stocks in every department in the Service.

1654. You referred to stationery several times—is that the principal item in your stock? I think the stock of stationery is larger than the stock of drapery and stores; but the amounts fluctuate from year to year.

1655. What about the telegraph material? We supply the Telegraph Department with chemicals, general stores, &c.

1656. Have you the custody of all telegraph material? Not the whole of the material used by that department.

1657. Does it pass under your supervision? A great portion of it we supply, such as chemicals and some stores. Others they obtain under separate contracts.

1658. Do the contracts for telegraph material pass through your books? Not the whole of them. They take a great number of contracts outside my department.

1659. How are the stores distributed throughout the country? They are delivered from my department to Wright, Heaton, & Co., who are responsible for the goods until they reach the consignees.

1660. Do you have an annual stock-taking? Yes.

1661. When will it be completed this year? We are preparing for it. At the end of the year we always take stock. One of the most satisfactory features in the department is that we are never more than a pound or two out in our stock-taking.

1662. Please explain what you mean by that? I mean that our stock corresponds with the stock-book, the record of receipts and issues in our large stock-book shows the balance of stock that we actually find on hand.

1663. Your books then are accurately kept? Yes; and the stock is accurately kept. If there were any defalcations going on it would be apparent.

1664. I observe that the total cost of your department has increased during the past two years? Yes.

1665. To what do you attribute that? The extension of the Service is responsible for much of it. We have over a thousand more lunatics than we had ten years ago, 1,600 more destitute, and a greater number of "Vernon" boys. Then new departments have been opened. Almost every year there is some fresh development necessitating an increase of stores, but at the same time our expenditure has not increased in proportion to the increase of the Service. We are issuing now 50 per cent. more goods than we were ten years ago, and our expenditure is actually less. Ten years ago it was £144,000, and last year it was £127,000, notwithstanding all these increases.

1666. You misapprehend what I am asking. I am not speaking of the quantity and value of the goods, I am speaking of the staff? The fact of our having made 1,200 more issues this year than last year would cause an increase in the staff, as of course it entails extra work.

1667. What do you mean by 1,200 additional issues;—do you mean that you have complied with 1,200 additional requisitions? Yes.

1668. Therefore the number of requisitions has increased from year to year? Yes.

1669. That is four more each day, taking an average of each working day? Yes.

1670. *Mr. Robertson.*] With regard to the stationery supplied to the Railway department, upon whose authority do you supply that? Upon the authority of Mr. Richardson, the Comptroller of Stores in the Railway.

1671. And that is full and sufficient authority for you? Yes.

1672. Is there any necessity for your inspecting the stock of stationery kept by the Railway Department? I do not know that it is absolutely necessary, but we sometimes do so. Should I receive a requisition from the Railway Department which I might consider excessive, I should then mark it to the inspector to report.

1673. Would you do that with regard to all the departments? Yes.

1674. And do you find that there are some cases where the authority is so loosely given that you find things are ordered that are not required? I have found that.

1675. Then there is absolute necessity for a check? I find it necessary to examine the stocks to prevent misappropriation or waste. In examining the stock in one department a short time ago the inspector found some supplies laid aside for one of the officers-in-charge of a dredge, and he asked whether it was necessary that this man should have a box of pens containing a gross, and suggested that a dozen would be enough. I only mention that as an illustration.

1676. To what extent do you inspect and check the supply to the Telegraph Department and Railway Commissioners? We satisfy ourselves that their books, in which they keep a record of the stores and stationery in their respective branches, are properly kept—that everything which is received and issued appears in the stock-book.

1677. Is that part of your duty? Yes.

1678. To inspect the stocks kept by all departments? By every department that draws stock from us. Everything that is supplied from my department I have a right to follow up.

1679. And you do it? We periodically visit all the departments.

1680. *President.*] With regard to the Railway, are you satisfied with an examination of the central part at Eveleigh—you do not go into all the country parts to see what their stock is, and whether they are using things unnecessarily? No; the inspection is made at the head office.

1681. *Mr. Robertson.*] It must be a very incomplete inspection? We satisfy ourselves that the goods are properly used. If we should find that a gross of pens, for example, is sent to a small telegraph station, we would say that that is an excessive supply, and ask for an explanation. We go through their books to see if they have only asked for what we consider is a fair quantity.

1682. And you say that one inspector is sufficient to do all that work? I think so.

1683. *Mr. Humphery.*] Who is he? Mr. Morrow.

1684. When was he appointed? About four or five years ago.

1685. Had you any inspection previous to that? I had to inspect then.

1686. You did the whole work of inspection? Yes.

1687. Throughout the entire Service? Yes.

1688. Did you inspect the country as well? Yes; I used to go on Friday night, work on Saturday and Sunday, and return on Monday. I used to visit Bathurst, Berrima, Goulburn, and various other places.

1689. *Mr. Robertson.*] To inspect the stock and check the books throughout the Service would require, I should think, the whole year? If a certain number of lines correspond with the stock book, I for one should be satisfied. A few days ago a Treasury inspector visited my department, and after comparing a number of lines in stock with the records of the stock book, was satisfied that the whole was correct. I followed the same course in my inspections.

THURSDAY, 20 DECEMBER, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,

J. H. STOREY, Esq., J.P.,

RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Charles Potter, Esq., Government Printer and Inspector of Stamps, sworn and examined:—

1690. *President.*] The object which we have in view in asking you to attend to-night is to endeavour to find out from you how we can recommend economy and not sacrifice efficiency generally in your department. Were the estimates for expenditure for your department for 1895 prepared under your supervision? Yes.

C. Potter,
Esq.

20 Dec., 1894.

1691. I notice generally that your staff seems to consist of very old and probably very experienced men? It does.

1692. There was one appointed in the forties, thirteen in the fifties, five in the sixties, and two in the seventies. That means they are gentlemen of very old standing in your department. Were their salaries arrived at by progressive increments from a lower stage? Yes; according to length of service and ability.

1693. Were the promotions by seniority frequent? Seniority is taken into account where other qualifications fit in.

1694. Take the first officer after yourself, the Superintendent, who gets £516 per annum;—can you tell us what is the nature of his duties? I might hand in this schedule, which is similar to one prepared by me for the previous Civil Service Commission. It contains each man's duty, age, and length of service.

1695. You might roughly state to us verbally what the Superintendent's duties are? They are to distribute the work to different branches and follow it up to its completion. He gets the requisitions from me and then sees that the work is carried out.

1696. The different branches are under his hands? Yes; he sees that the men are thoroughly efficient and do their duty. There is another document I should like to hand into the Commission. It is a memorandum of what I have done, and might suggest questions to you further on. [*Document handed in.*]

1697. Mr. Chapman is the gentleman we have just been speaking of; he has been forty years in the Department? Forty-three, I think.

1698. Is his time thoroughly employed? Yes; fully employed.

1699. You could not dispense with him? I could not dispense with anyone. I have suggested in the memorandum some savings that might be made.

1700. In the Clerical and Account Branch you have eleven gentlemen; the Chief Clerk and Cashier gets £425 per annum? He was one of the officers that the previous Commissioners recommended to get an increase of salary. They did not think he was paid sufficient for the responsible duties he had to perform.

1701. He has charge of the clerical branch and general supervision of the sub-branches connected therewith? Yes; he issues stamps.

1702. Is that postage stamps? Yes; postage stamps and duty stamps.

1703. The accountant has £380;—are his duties laborious? Yes; very laborious. You will see by the schedule the number of returns he has to make out in a month. It entails a lot of work.

1704. You have a clerk of records;—what records might they be? We receive thousands and thousands of papers. I think there are 20,000 official letters to be recorded in a year.

1705. Are the letters of such consequence as to require recording? They must be recorded, as action has to be taken on a great number of them. Numbers of them contain money, for instance.

1706. But when they are laid by they are done with for ever? Many of them are official letters, giving suggestions about the departments, appointments, and other matters that are necessary to record. You do not know when a letter might be wanted; we have often to refer to the records.

1707.

- C. Potter,
Esq.
20 Dec., 1894.
1707. Does it not strike you that is a pretty stiff salary for a gentleman performing such duties? He has been a long time in the Service.
1708. That is one reason of the high pay, no doubt; what is his name? Gilbert Johnston.
1709. He has been twenty-four years in the department? Yes.
1710. Receiving and sales clerk; the sales, I suppose, are of publications which are sold over the counter? Yes.
1711. He gets £290? Yes, he has also been a long time in the Service.
1712. Is there any check upon his entries? He gets a certain number of publications from the publisher, and has to account for the sales.
1713. Could you tell us how much a year you derive from sales over the counter of Government Acts and other publications? Our receipts are about £6,000 a year from sales of documents, subscriptions to the *Gazette*, and so on.
1714. Could you also tell us what would be the value in the same ratio of documents printed and published by you for the public departments? I hand in an annual return prepared on the motion of Mr. Hutchinson when he was a Member of the Assembly. Each department is debited with what we do for them. The total amount of work we did last year was worth £113,000.
1715. That was work alone, leaving material out of the question? Yes, absolute work.
1716. Could you roughly estimate the value of the paper? About £20,000, parchment and paper together.
1717. Do you call each issue an edition; supposing a certain document has to be printed and published, do you call the first issue an edition? If there are no alterations we should call it a reprint.
1718. But how many do you print of the first issue? Of what?
1719. Say of the Blue Book? This is a list of the numbers of the different documents we print. It gives all the Parliamentary work. Some papers are printed by command for both Houses. We then print 1,100, and for the Assembly 750.
1720. After supplying Parliament and the departments with copies of the publications that you issue, have you ever any material quantity of stock left on hand that you do not know what to do with? Sometimes we have an accumulation of stock, but it is necessary to print extra copies. The demand is very irregular, and it is impossible to foretell what it may be. We put down a certain number for stock, and that stock accumulates.
1721. So you are obliged to turn it into pulp to make fresh paper? Yes. The last Commission recommended that a lot of these documents should be sold for waste paper, and so we got rid of several tons. Every session of Parliament increases our stock by many tons I dare say.
1722. Do you consider there is too much extravagance in having documents and papers printed and published by the Government Printer? It has often struck me that the numbers are rather large. I have suggested amendment at different times, and referred that list to the officers of each House to see whether they could not reduce them. They have reduced them from time to time.
1723. You have no means of converting into pulpy matter, in your own establishment, the old books, and of making them again into paper sheets? We could not do that.
1724. There are mills in Sydney who do it? We have an arrangement with the Paper Company, who give us 10s. a ton for the waste paper.
1725. You have seven clerks, one at £263, one at £209, one at £206, and four at £200;—are these gentlemen performing ordinary clerical duties? Yes.
1726. I suppose they have been a considerable time in the department? Most of them have been there a number of years. Some are promoted from the position of compositors very often.
1727. Their duties could be performed by men of less age and experience? I dare say they could in many cases, but experience is valuable in its way.
1728. They have risen by length of service to these salaries? Many of them have grown up with the department.
1729. Are the seven all necessary? All necessary.
1730. But supposing they were to be replaced it would make a considerable reduction in the salaries? When a vacancy occurs, and it is necessary to fill it, I generally recommend a reduction.
1731. There is a large number of readers, compositors, and others—250 I think? I think the total number of the staff all told with temporary compositors is 625.
1732. The 180 improvers, apprentices, and others, are also permanent, I presume? I have here a list of the different branches and the number employed in each. [*Document handed in.*]
1733. There is a great interval between the salaries paid;—the average salaries of these 350 seems to be about £110 per annum; that includes extra hands and overtime, does it not? Yes.
1734. So the extra hands would be an addition to the 350? Yes.
1735. How many extra hands might there be? I think that information is given on the list I have just handed in.
1736. On what occasions are the extras required? During Parliamentary session. This new Electoral Act gave us a lot of work, but I had as many as 350 compositors. We had a day and a night staff to keep the work down. It is much more expensive than the old Act.
1737. The issue of the electoral rolls must have been a very severe strain on the department? It was, indeed. If it had not been for the machinery I got while I was away we could not have got out the work. We use a lot of stereotypes to save composition.
1738. There is an item down on the Supplementary Estimates for your department? Yes; £9,500.
1739. That, added to the cost of the department in other ways, which is in round numbers about £77,000, makes fully £87,000 per annum? It is more than that. Perhaps this statement might be of some use. [*Document handed in.*]
1740. That is for 1893? Yes.
1741. The expenditure to date for 1894 is £88,750 18s. 8d.? ———
1742. *Mr. Teeco.* It is put down at £72,000 in the Estimates? But there are Supplementary Estimates, and then we get paid for the railway work.
1743. *President.* All the publications you supply to Parliament, the public departments, and the Government offices, are all delivered free of charge? Free of charge.
1744. You comply with any requisition so long as you have the documents in stock? I always scrutinise every requisition that comes in, and frequently cut down the numbers. I do not always give the departments what they ask for. If I think a requisition is excessive I refer it back to the department.

C. Potter,
Esq.

20 Dec., 1894.

1745. Even although you might have plenty of the paper in stock? Yes. Some requisitions I put aside altogether, and hear no more about them.
1746. Does the Railway Department pay you for the supply of tickets? Yes. I may mention, in regard to the Railway Department and its tickets, that they had a staff of about six officers to distribute the tickets to the different stations. Now we send the tickets direct from our place with the assistance of one clerk. We save the Railway Department about £1,500 a year in that way. These men used to order large stocks of tickets. Sometimes they had millions of tickets on hand. We do not keep a stock on hand, but just print them as the requisitions come in.
1747. If your staff were to be remodelled you would be able to considerably reduce the salaries, provided the older men were to be replaced by younger ones? Yes. When a vacancy falls due, I never recommend the new man to get the same salary as the older man, because a man has nothing to look forward to if he gets the maximum at once. There is no stimulus for him.
1748. Are your men who may be called seniors all thoroughly efficient? Yes; all our people are workers. We have no idle men. I ask Members of Parliament and others to come into the department suddenly, and go round the offices. They will find every man at his work.
1749. In addition to the saving that might be effected if the elderly men were replaced by younger men, could you form any estimate as to the saving that might be made if greater economy were observed, and if there were less profusion in the demands for Government publications? I have been trying to make savings all along. We have got to such a state that I cannot recommend anything further. In the *Gazette* we have widened the measure, as we call it; we have decreased the size of the type; and, as regards many notices that used to be published in full many times over, we have got them tabulated, and only insert them once. In fact, we save hundreds of pages in the *Gazette* in that way, but, notwithstanding all this, the *Gazette* still increases in size. It has now to be bound in six volumes a year instead of two. I have collected a bundle of *Gazettes* to show the Commission how the different notices have been reduced, and how space has been saved.
1750. Could you form an estimate, if greater thrift were exercised in the Government departments generally in their demands for your publications, how many thousand pounds a year you could save? I could not say.
1751. You could not approach to an estimate? No; we exercise all the vigilance we possibly can in keeping down the requisitions, and in referring back anything we think excessive. I try to manage the place as if it were my own.
1752. *Mr. Teece.*] In answer to a question by the President, you spoke of the salaries being increased from time to time according to length of service;—have you a scale in use? We have a scale for the workmen, but not for the clerks.
- 1752½. Does that scale provide for periodical increases in pay? Yes; I might give you a copy of the rules. The men are supposed to get an increase of £10, but I have not recommended that for years in the endeavour to keep down expenses.
1753. Does that £10 a year apply all round? Yes; to a certain class of officers.
1754. Does it include compositors? No; but readers and others. I have made a great saving in regard to the unclaimed letter list. I suggested when the new Postal Act was passed that provision should be made to do away with this list. We save £600 a year by this means.
1755. Have you compared the wages paid to your printers, machine-men, and compositors with those paid in outside establishments? At present our wages are a little higher than those in the town, as the latter have been reduced. The town minimum is £2 12s.—it used to be £3.
1756. I see in the Blue Book for 1893, under the heading “Engineer, compositors, machinists, pressmen, bookbinders, assistants and others,” the rates vary from £308 per annum to 9s. per day? The engineer gets £300 a year, but that is too little instead of too much.
1757. There are not a number of them getting that? Oh, no; there is only one in that class who gets £300.
1758. Still, on the question of wages—“Improvers, apprentices, folders, and sewers”—these are largely women, I suppose? They are seventy-one women and girls, I think; but their wages are regulated by the rules. A girl comes in on probation for three months and gets nothing, the next three months she gets 1s. a day; then she goes on till she gets a guinea, and even up to 30s. a week, according to ability.
1759. Girls are not included in the 8s. a day rate? No.
1760. Who are they? I could not say by the Estimate.
1761. They are all included under the heading “Improvers, apprentices, folders, and sewers”;—is not the folding and sewing generally done by girls? Yes.
1762. The improvers and apprentices would be getting still less, I suppose—you would not give an apprentice 8s. a day? We call them apprentices even if they have been eight years in the department. We have improvers who have been ten years in the place.
1763. Are they still improving? Oh, they are competent; but we call them improvers.
1764. You stated the value of the work you did for the departments was about £113,000 a year, independent of the cost of paper or parchment;—is there any provision for paper or parchment in these Estimates? No; that comes from the stores. We store it all.
1765. The Estimate for the half year of 1895 is £36,000. That is at the rate of £72,000 per annum, which was the Estimate for 1894, leaving out the Supplementary Estimate for £9,500, which brought the whole thing up to £81,500, and you have received to date £95,000;—does that £95,000 include the charge to the departments? To the railway, yes; to the railway and survey, I think.
1766. That is portion of the estimated £113,000? Yes.
1767. Are we to understand that although you give these wages, which are somewhat higher than those ruling the trade outside, and leaving out the question of interest on the cost of the building, you are making this large profit? Yes, I think so. I can safely say that. Here is a memorandum showing how the different countries of the world have come to establish their Government Printing Office. [*Document handed in*]. One of the American Governments consider they save 500,000 dollars a year by having their own printing office, and the head of the stationery branch in London stated that if the Government had printed *Hansard* they would have saved 45 per cent. *Hansard* himself made a fortune out of it.
1768. You adhere to your opinion that you are making this large profit? Yes.

- C. Potter,
Esq.
20 Dec., 1894.
1769. The prices you charge the departments must be more or less arbitrary? We charge the exact cost, and we put on 50 per cent. on the composition to cover all other expenses, such as superintendence, insurance, &c.
1770. Have you ascertained how the prices charged by you would compare with prices charged by private manufacturers in the city? I have not done that, but we go by the cost of the material.
1771. But you could make that anything? Oh, no.
1772. You might double the wages of every one in your employ, and that would show a greater profit? It is explainable.
1773. Will you supply the Commission with the corresponding figures to these for the last four or five years ending 1894, showing the cost of the department, and the cost of the work you have done and charged to the other branches? Exactly.
1774. You stated that in 1894 you had a large amount of extra work in connection with the Electoral Act, I suppose that largely increased the cost of administration in your department;—you pay overtime, do you not? We had a large night staff, of nearly a couple of hundred men.
1775. Is there anything of the same kind going on now? We have not had so much trouble with the rolls.
1776. What was the necessity for making the appropriation for 1895 equal to that for 1894? Because all the type had to be reset. The arrangement of the rolls was different. They put more columns into the pages. About 34 tons of type had to be distributed and reset. Of course, now that they have got into proper shape, there is less trouble. I may mention that at one time a general election suddenly took place, and we wanted assistance. The then Government Printer sent me round the town to see how much we could get done. There were 3,000 pages to do, but all the town people could do was 150 pages, they had not the material and the appliances.
1777. On that point do you ever do work for the outside public? No.
1778. You have never done so? Never; except when perhaps a person might not be able to get a photolithograph done at any establishment in town, but that would be very seldom.
1779. No considerable work? No.
1780. Are you quite sure of that? Quite sure. A Member complained in the House the other day that we did not do all the Railway work. For instance, we do not do the coloured placards, because we have not the machinery to spare.
1781. Will you tell the Commission what is the course adopted in supplying the Votes and Proceedings and *Hansard* to Members of Parliament? We get the slips down from the Assembly, and print them for them.
1782. That is day by day? Yes; of course, we act on the order of the Assembly and Council, the same as with Parliamentary papers.
1783. Do you not repeat them in bound volumes later on? Yes; Members get loose copies, and afterwards a set of bound volumes. I suggested that we should bind only the first volume, that is only the Votes and Proceedings and Minutes, and that any further documents the Members should get unbound, and put in a paper wrapper.
1784. What response was made to that suggestion? There has not been a very great saving, and most of the Members, I think, want the volumes bound.
1785. Have you any idea what the yearly cost is of supplying the bound volumes? I could not say right off.
1786. Would it be just a few hundreds or would it be thousands? It would be more than a few hundred pounds; each volume costs about 8s. to bind, and they all have to be paged.
1787. In an average Session how many would there be? About seven for the Assembly and three or four for the Council. We had in one Session ten volumes for the Assembly and six for the Council.
1788. What do you do when workmen become old and inefficient in their department? I think I have recommended one or two to retire. One is retiring now. But if they are temporary men we just let them work on piece-work for charity's sake, and make what they can.
1789. In a case of permanent men, if this scale of yours is adhered to—that is, if a man gets £10 a year increase—by the time he is old he will get pretty high wages? He cannot get more than £200 a year. There are quasi overseers who get £225.
1790. You have a foreman of the postage stamps and tram tickets and another for the railway tickets? He is the foreman of the postage stamps, and has to do with the tram tickets.
1791. Are not these two offices analogous? Not at all; the railway tickets are not negotiable, but the tram tickets are.
1792. But the one who understands the one work will understand the other? The railway printing has no affinity with the other. I have suggested that the railway printing be turned over to that department, although I think it can be better done in our place.
1793. There are sixteen people in these two departments; could not the one foreman manage them all? One foreman would not do for the two branches.
1794. What is the foreman's duties? To look after the men, see they do their work, and to take care of the stamps.
1795. You have five ticket-printers and assistants, who get £830 a year, and a foreman gets £310 to look after them? That is one of those cases where men have been a long time in the service. This man has spent his whole life, and what is it after all. This is all he has to look forward to.
1796. But if the State does not want him it is not the duty of the State to keep him? Certainly, but it is better to pay a trustworthy man a liberal wage than underpay him. Otherwise he might be subject to temptation.
1797. What temptation is there in the case of railway tickets? Not so much there perhaps; still some of the tickets are worth £4 or £5 in Melbourne. I think it would be only fair that the salaries paid to the people in the Printing Office should be compared to those paid to people in other departments. Our men are skilled men, and I don't think they get overpaid.
1798. Speaking still of the foreman; the foreman of your bookbinding branch gets £358 per year, do you think that a foreman in a house like that of Sands or of Smith would get the same wages? I could not say. I do not know the rates they pay in the town. Good men in the town get fairly paid, although lately the minimum wages for compositors has been reduced to £2 12s. per week, though numbers of them get more.
- 1799.

C. Potter,
Esq.
20 Dec., 1894.

1799. I am not talking of compositors. The foreman is a man of responsibility and should get more, but you have not taken any steps to ascertain what the men in private employ are getting? No.

1800. There is an item of rent of store for printed public documents, £1,013 a year? One of the stores is a Government building, and the other is at McMahon's Bond, for which we pay £600 a year. In one we store the spare documents and in the other we keep our stock of paper. Sometimes we have 30,000 reams of paper in stock. We get the paper cheaper by storing it. At one time the contractors used to store the paper for us, and we had to pay a deal more for it.

1801. You can store a lot of paper in a £1,000 a year store? Yes; but the Government really only pay £600 a year; £1,013 is merely the estimated rental of the building. That building is at the old A.S.N. Company's Wharf.

1802. Do you want frequent access to these stores? Yes, daily. In addition to those we have a base-ment under the Printing Office where we keep a lot of paper for immediate work.

1803. What do you do in the way of additions to your staff, suppose you want further assistance? We have a large temporary staff, and we find that the most economical method. Of late years I have only recommended a few to be put on the permanent staff.

1804. That would be the wages men? Yes.

1805. Have you ever had men sent to you you did not want? Very few. Of course I have a good many applicants sent to me by Members of Parliament and others, but I cannot complain of great pressure being brought to bear on me. A man out of work may go to a Member of Parliament who shunts him on to me to get rid of him.

1806. You have not had anybody billeted on you you do not want? No; except in one instance. As another instance of economy, I may mention that some time back the pound-keepers were supplied with the whole of the *Gazettes* and the supplements, but I suggested they should get only the impounding notices, and this resulted in a considerable saving of paper.

1807. Do you make your payments for the department yourself, or are they made to the Treasury? We send in the abstracts as usual to the Treasury, then we get a cheque from the Treasury and pay the men.

1808. Do you do that with regard to payments for materials? That is generally done through the stores.

1809. All your abstracts go to the Treasury? Yes.

1810. *Mr. Robertson.*] You say you do not pay for what you get from the stores? No, we do not pay the stores; that comes out of a general vote for stores.

1811. *Mr. Storey.*] You have complete control of the Government Printing Office? Yes.

1812. You have no Board over you? No.

1813. To whom are you responsible? To the Treasurer.

1814. Do you make any special reports, monthly, quarterly, or yearly? No.

1815. Do you report annually? No.

1816. Do you send in no reports? Except when called upon for particular things, but no general report as to the work of the establishment.

1817. Suppose you want any extra machinery, do you get that on your own responsibility? No; I apply to the Treasury, and an indent is sent to the Agent-General.

1818. But you recommend certain things, and if the Treasury approves they are indented for? Yes, some few things we buy in the Colony.

1819. Have any recommendations of any kind ever been refused, or do you generally get what you want? We generally get what we want, if there is money. I wanted an iron safe the other day made of boiler-plate to cost about £50, as I require more room in which to store the postal notes. At present we have to put them on the floor. The reply from the Treasury was there were no funds.

1820. If you want improvements in the machinery you must apply to the Treasury? Yes.

1821. And they invariably grant what you want? Yes.

1822. The stock of paper is, I suppose, your principal stock;—how do you obtain that? By contract. The Treasury manage that. We make out the list of paper required and submit it to the Treasury. That is an annual contract and is advertised for by tender.

1823. Is that generally taken up in Sydney? Yes. Of course there are agents of London houses in Sydney.

1824. You say you do not pay for that; is not your department debited with the price of this material? I suppose the Stores Department do that, but I know nothing about it.

1825. But you do not take any notice of that in your earning power? No.

1826. I understood you to say in answer to the President that your estimate of the work done is £113,000 for the twelve months; you make that up virtually yourself by adding the cost of labour and a lump sum of 50 per cent.? Yes.

1827. Have you ever tried to verify that in any way by work done at other places? It is done by calculation. For instance we take the time it would require to do what we call a token, that is 250 at the machine, the cost of the ink, and so on.

1828. According to this estimate you have 350 men, are all those men paid day wages, that is the sub-overseers, compositors, machinists, folders, and sewers? All the permanent men are paid monthly.

1829. I am speaking of the ordinary compositor;—is it not the practice at most institutions outside to pay the men by piece-work instead of by day labour? So we do the temporary men. Our work is of that nature that it cannot all be done by piece-work. Some of it must be done on time, and some by the thousand ens.

1830. Have you ever tried in your department to work piece-work as a more economical means than day labour? Not with the permanent hands; but we keep an account of each man's earnings, whether permanent or temporary.

1831. You do not pay him according to that? No.

1832. You say the rates of pay are according to these regulations of yours, which I suppose were adopted in the year 1884? Yes.

1833. You say in terms of the Civil Service Act, but all that classification part of the Civil Service Act giving yearly rises to officers was abolished;—why was it not abolished in your department? I do not think it is exactly according to the Civil Service Act; these come under the 7th section of the Act. I do not know that there is anything in the Act by which they could get increments of £10 a year.

1834. I understood that the men had been getting it? They do not get it every year. A man may get £10 this year, but it may be five years before he gets another £10.

1835.

- C. Potter, Esq.
20 Dec., 1894.
1835. You do not admit the right of the men to get it? There are lots of them who do not get the maximum pay.
1836. Do they all contribute to the Superannuation Fund? Lots of the compositors do not contribute. A lot of them have lately asked to be brought under the Act.
1837. *Mr. Robertson.*] You said it was a fair thing to compare the salaries paid to the employees of the Government Printing Office with those paid to employees in other Government offices? Yes.
1838. You have done this, I suppose? I think so.
1839. How do they compare? We find we are paid less. I think you will find a man like our chief clerk in a corresponding position in another department gets more than he does.
1840. And you also say that it is fair to make a comparison with the salaries paid in printing offices such as those of John Sands, W. E. Smith, and Turner and Henderson? I do not know, I am sure. I would not like to say whether it is fair, because I do not know how long the men have been in those establishments, nor the nature of their work, and a thousand other things.
1841. But do you not think that, as a Commission, it would be fair for us to make a comparison? I think it is hardly for me to give an opinion on that point.
1842. Have you a tabulated statement showing how many compositors, machinists, and others you have whose salaries are enumerated in the Blue Book as varying from £308 a year downwards? I think the return handed to the President will show you.
1843. Has your work increased since 1885? Considerably.
1844. Do you remember how many sub-overseers you had in 1885? I could not say.
1845. You had eight? Yes.
1846. You have more work now, and yet you have only five sub-overseers; what is the explanation of that? Perhaps there are assistant sub-overseers; that would make the difference.
1847. Does the overseer superintend the work of the bookbinding branch and the press branch? Not the same man. There is one man for the press branch and another for the bookbinding branch.
1848. What is the overseer's duty? To look after the branch generally, and see that the work is carried out. I have done as many as 1,000,000 books in a year.
1849. These sub-overseers are sub to the overseer? Yes; the object of that, no doubt, was to prevent increasing the number of superior men.
1850. The responsibility of the overseer is considerably more than that of the sub-overseer? Yes.
1851. And are his duties only valued at £45 a year more than those of the sub-overseers? I do not know what the difference is.
1852. The overseer gets £380, and the sub-overseer £335? I think, in the binding branch, there are between sixty and seventy men; and it is necessary to have a reliable man in case the overseer should be sick or absent.
1853. With regard to the photographic and drafting branch—is the manager a draftsman? No.
1854. He is the manager of the department, but not a draftsman? No. It is not necessary that he should be a draftsman.
1855. Is the sub-overseer a draftsman? No.
1856. What do you usually pay the compositors? To the temporary men we pay 1s. 1d. a thousand ens.
1857. How many of the clerks have been compositors? The chief clerk is a compositor, and there are several others, but I could not tell how many.
1858. Then the work they are doing is work that a man could do without any special training? No; he could not. For instance, there is the computing branch. In making out the men's bills it is necessary to have someone who understands that sort of thing. An ordinary clerk could not cast off type; he would not understand the technicalities. It requires a man who has been a compositor to be an efficient clerk in the computing branch.
1859. Except in the way you have indicated, you could not further suggest to the Commission any way by which a saving could be effected? Yes. I think I have suggested that the rates for temporary compositors might be so reduced that there would be a saving of about £2,000 a year. By the introduction of the Linotype machines we would save over £4,000 a year, which would be equal to a saving of thirty compositors. When I was at Ottawa in 1891 the Linotype machines were just coming into use. I have written to the Government Printer there to give me his opinion with regard to them, and I expect to have his reply in a month or two.
1860. Are there any other ways? I don't know of any others.
1861. *Mr. Humphery.*] In the returns you have submitted to us, the cost of composing by the Linotype machines would be 5d. as against 1s.? Yes. I was speaking to Mr. Bennett, of the *Evening News*, the other day, and he told me he can get the work done for 4d. a thousand, but I put it at 5d. to make sure. I think that is about what it costs at the *Daily Telegraph* office. It is only certain kind of work that can be done on the machine. It could not touch the tabular work. But for reprints, a lot of *Gazette* work, and probably the *Parliamentary Debates*, it might be used.
1862. You estimated a saving of £4,000 a year could be effected? Yes.
1863. *Mr. Storey.*] On what outlay? There would be a large outlay at first, but that would soon be saved. I think the machines cost about £700 each and we would want ten of them.
1864. *Mr. Humphery.*] Are the stores you refer to under your charge or under the charge of the Comptroller of Stores? The stores belonging to my department are under my control.
1865. And contain printing material to the value of £100,000? Yes; appliances, machinery, and type.
1866. It is all under your charge? Yes.
1867. What staff have you to keep a record of your stores? Three.
1868. How do you designate them? There is a storekeeper and entry clerk; the others are merely assistant clerks.
1869. Is there any reason why the Comptroller of Stores should not have control of the stores and supply them to you? It would not answer; we could not obtain our supplies quick enough. It is necessary for us to have a paper on hand so as to get it when wanted. If we had to depend on the storekeeper we would frequently fall to the ground.
1870. I want you to explain why as there is a Comptroller of Stores with a large staff there should also be a separate store under your charge? I do not think the Comptroller of Stores has accommodation to take all our paper in.

C. Potter,
Esq.

20 Dec., 1894.

1871. You think it is necessary to have a separate store and a separate staff? Yes; we do not know what the demands will be from one moment to another. If we had to make a requisition to the Comptroller for every bit of paper we wanted it would be very awkward.

1872. How do you satisfy yourself that all the hands have full occupation? By personal inspection. I personally see to that myself, and not in a formal sort of way.

1873. Can you say in round figures what the cost of superintendence, clerical labour, and manual labour in connection with the stores department amounts to? I could not say, but I can send it in.

1874. That would be exclusive of rent? Yes.

1875. In 1893 and 1894 the annual expenditure was close up to £100,000 per annum? Yes.

1876. In framing the estimates for 1895, what is the total amount you consider you require? I think it is £36,000 for the half year.

1877. With the knowledge that your expenditure has not been less in 1893 than £100,000, how comes it that the expenditure in 1895 is estimated at the rate of £72,000? We reckon on getting so much from the Railways—about £10,000 or £11,000—and perhaps nearly £2,000 from the Survey Department.

1878. Do you get the money? No; it is paid into the Treasury and we are allowed to draw upon it.

1879. Is that part of the revenue? No, it is not part of the revenue; we do not view it as revenue.

1880. Is it not viewed as revenue in the Treasurer's returns for services performed? I could not say how they manage it in the Treasury. We charge the Railway for work done and they pay it into the Treasury and it is put to our credit.

1881. Although in 1893-94 the expenditure had reached the figures I mentioned yet you have a set-off against that for those moneys that have been received from the Railway for service? Yes; for printing we have done for them.

1882. And that does not appear twice—that is, to the credit of the printing-office and also in revenue? It does not appear to the credit of the printing-office.

1883. Do you not see that 1895, instead of costing only £72,000, will cost apparently nearly as much as 1893 and 1894? We are aware of that; it comes to over £90,000.

1884. That being the case why is it not shown in the estimates? I could not say. That question was asked in the House. In future it is to be altered, I believe.

1885. Are these figures not misleading? Sometimes when the Estimates are sent in so much is knocked off by the Cabinet and we have to make that good by the supplementary vote.

1886. I am aware of the system, but I want to know from you what you represent your expenditure for 1895 to be? According to what is on the Estimates, but we take into account what we get from the Railway and Survey Departments. We do not put that down in the Estimates.

1887. But you do not receive that money? We receive it.

1888. Then there is a book entry made for it? Oh, yes; you will find that in our books. We send in a monthly statement to the Railway Department and they send a voucher to the Treasury.

1889. *Mr. Storey.*] What rate of overtime do you pay compositors? Compositors get 1s. 6d. up to 12 o'clock, and 2s. 6d. after that.

1890. *President.*] There is one thing I want some explanation about: With regard to the stocks of paper you use in your department, are they stored in this rented store under your charge? That is the bulk of the paper, and the paper we want for immediate use is kept in a part of the basement of our own building so as to be at hand when wanted.

1891. But a large proportion is kept in a store at the waterside? It is.

1892. That is under your own control; you keep the keys of the doors and take the paper out as you require it? Yes.

1893. Is that paper contracted for with Home firms? Public tenders are called for.

1894. In London? No; in Sydney. The large paper mills may have agents out here. For instance, Mr. Mercy is the agent for Spicer & Co.

1895. He always tenders? Very often.

1896. That paper comes out on shipboard? Yes; we supply them with books of samples.

1897. Are stock-books kept in the store? Yes.

1898. The warehouse-keeper is bound to keep these correctly? Yes.

1899. You send requisitions to him for whatever is required, and he has to keep a record? He reports daily what has been received daily into the store.

1900. Has the comptroller of stores and stationery any supplies which are used in your Department? Yes.

1901. Of what nature are they? Things generally used, such as brooms, glue, and things of that sort, but paper is got by tender and we store it ourselves. It is only printing papers and papers for account books that we tender for.

1902. The rent that is paid for the store at M'Mahon's bond is £600 a year;—how many floors do you occupy? *Two upper floors.

1903. When was the lease dated, and for how many years? It is dated about four years ago, and I think it was for six years.

1904. I suppose you could get equal accommodation now for about £250 or £300? For £200 less than we are paying now. We have the use of the gas-engine belonging to M'Mahon.

1905. Is the entrance in Macquarie-street or from Circular Quay? From the Circular Quay only.

1906. So the paper has to be raised to a considerable height? Yes.

1907. *Mr. Storey.*] With reference to overtime, who else gets that? I may quote from our Rules and Regulations: "The overtime rates for officers or officials shall be as follows:—Sub-overseers and first reader, up to 12 o'clock p.m., 3s. per hour; after that time 4s. per hour; assistant sub-overseers and reviser, up to 12 o'clock p.m., 2s. 6d. per hour; after that time, 3s. 6d. per hour. Readers, assistant readers, and assistant revisers, and others in this classification, up to 12 o'clock p.m., 2s. per hour; after that time, 3s. per hour."

1908. Overtime is a considerable item? Yes; especially when the men are working all night.

1909. *Mr. Teece.*] Does this night work necessitate the attendance of the clerical staff? No.

1910. If the issue of *Hansard* were not required with such expedition that night-work could be avoided? A lot of it.

1911. Could you form any idea of what the saving would be? No; I could not without going into the matter.

1912.

* NOTE (on revision):—Five floors and basement.—C.P.

- C. Potter, Esq.
20 Dec., 1894.
1912. *President.*] Do you insure the stock at the building at Circular Quay? No, but we have a fire brigade of our own, and we are in communication with the Fire Brigades' Office.
1913. *Mr. Robertson.*] Is it wise to have such a large stock of paper on hand? We get it cheaper in that way.
1914. The duty of your storekeeper will be similar to that of the stock-keeper at the Store Department? Yes.
1915. You have an entry clerk and storekeeper, whose duty it is to superintend all work done in the store and to draft requisitions and schedules of contract; his work would be similar to that done by the stock-keeper in the Stores Department? I do not know what the stock-keeper does,—I presume it would be similar.
1916. I suppose you do not know the salary paid to the storekeeper? No.
1917. Well, it is £236 in the Stores Department, and you pay £335? Yes.
1918. The assistant storekeeper in the Stores Department receives £200, and you pay a person who has charge of a jobbing ledger and preparation of the daily abstract, £245? Yes.
1919. Do you not think these salaries very high? I do not think £245 is excessive; the man has spent his life in the place.
1920. And the stock is only paper? And other things.
1921. How much of the £30,000 would be other than paper? Really I could not say.
1922. Would there be £1,000 worth? There would be fully that. Our place has about fifteen trades and professions, and each of these uses some particular thing.
1923. How do you obtain your stores? By a requisition to the Comptroller-General of Stores.
1924. Through the Treasury? Yes.
1925. Do you get the paper in Macquarie-street by tender through the Treasury? Yes.
1926. And not through the Comptroller of Stores? No. We furnish quarterly statements to the Comptroller-General of Stores of the amount of stores we have on hand.
1927. *President.*] Is your system of enjoining secrecy on your officers a perfect one? I think so.
1928. They are under a bond, I suppose? No.
1929. No signature? No. There is a sort of understanding in the printing trade not to divulge secrets.
1930. You are aware that some institutions compel their employes to sign a bond of secrecy? There is nothing of that with us, nothing has been divulged.
1931. You sometimes have papers of great importance, I presume? Yes. If we have a paper of a confidential nature we do not tell the men it is confidential. The manuscript is cut up in small bits and handed round, and the compositors do not see the connection; they do the work in a mechanical way. It comes under the eye of a responsible officer, who sees that no proofs are pulled which should not be pulled, and we lock up the type in a safe place.
1932. Has it ever come to your knowledge that important information has leaked out? There have been one or two cases. A case occurred some time ago, and the man was dismissed. Many years ago a man took a copy of the *Police Gazette* out of the office and was dismissed. Those are the only two cases I can recollect.

WEDNESDAY, 2 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

William L. G. Drew, Esq., C.M.G., Chairman of the Queensland Civil Service Board, sworn and examined:—

- W. L. G. Drew, Esq., C.M.G.
2 Jan., 1895.
1933. *President.*] What position did you hold prior to being appointed chairman of the Civil Service Board in Queensland? Before that I was about seventeen years Under Treasurer, and ten years Auditor-General, and was transferred from the latter post to the chairmanship of the Civil Service Board.
1934. What year was that? When the Board was established five years ago.
1935. Before that how were the appointments to the Civil Service made? They were always made as now by the Governor-in-Council, but without any fixed rule.
1936. Was there no nomination? No; each Minister brought up his own recommendations.
1937. Each Minister nominated to the Governor-in-Council? Yes.
1938. Was the system impartially carried out, or was it affected sometimes by personal influence? By some Ministers it was carried out in an equitable manner; in the hands of others the system was eminently unsatisfactory.
1939. Was the employment of temporary officers a frequent thing with you? No; we employed comparatively few, what we call, contingent officers, excepting extra tide-waiters, of whom a great many were taken on as needed.
1940. Were the temporary officers taken on for indefinite periods, or for fixed periods? For indefinite periods, without regulation of any kind, I think, as to payment.
1941. Were they appointed by the Cabinet Ministers? Yes; I think the Ministers had the patronage, though the names of their nominees did not go before the Governor-in-Council.
1942. But the Ministers had the power to appoint? Yes, and even the heads of departments. I always employed anyone I pleased when I was Under Secretary, or Auditor-General.
1943. At your own will? Within the Parliamentary vote for contingencies.
1944. When you were appointed chairman of the Board, was the patronage handed over to the Civil Service Board entirely? An Act was passed, which I have here, for the purpose of regulating the Civil Service generally, and one of the prominent matters necessarily dealt with was that of appointments to the Civil Service. Now no one can be appointed to the Civil Service excepting after going through a competitive examination. Examinations are held once a year. There is one going on now. Before the examinations the number of probable vacancies during the next six months is declared by the Board, and supposing the number to be twenty, the twenty candidates who get the highest number of marks are placed on the list of qualified candidates in the order of merit. When a vacancy occurs in any department it is offered to the qualified candidates in rotation. The Colony is large, and it does not always suit a youngster

youngster (say) in Brisbane to go to Cooktown. If, therefore, he declined to accept the first vacancy on that ground, or on any other, he is passed over and the position is offered to the next in rotation. We go through the list three times, and any one who refuses three times is struck off the list. Then the Act provides that in special cases when no one in the Civil Service is qualified for any special appointment, if the Board gives a certificate to that effect, the Governor-in-Council may select any person outside the Service and appoint him, but that has only been done five times during the five years the Act has been in operation. There used to be, there is no use disguising it, considerable abuse in the temporary employment of officers. To provide for that the following regulation was framed by the Board, and approved by the Governor-in-Council:—"From and after the passing of these regulations no person shall be employed in any public office and paid from the contingent or other general vote of any department without the express sanction of the Board."

1945. *Mr. Humphery.*] Is that regulation still in force? Yes. One of our first duties as a Board was to prepare regulations. I submit a copy.

1946. *President.*] And such persons must have the nomination of the Board before they can be employed? Yes; and we make it a *sine qua non* that so long as there is any retrenched officer (we call an officer retrenched who has been put out of the Service for the purpose of economy) wanting employment he shall be employed in this casual way, supposing him to be qualified for the work.

1947. Is your Civil Service Board composed of three gentlemen—yourself and two others? Yes. It was not necessary by the Act that they should be Civil servants, but as a matter of fact they were.

1948. Is the time of the three members given exclusively to the work of the Board? Yes. We sit when in Brisbane every forenoon and every afternoon. There is always a lot of correspondence. The Board also visit the various parts of the Colony. My colleagues are going to Normanton and other northern towns on my return to inspect the various Custom-houses and other offices on the coast and inland places.

1949. Do you approve of the system that is followed by your Board, as if not perfect, at any rate, an approach to it? Yes; it is very good indeed. The first twelve months we were engaged in organising, and there was a great deal to do, but I think, speaking generally, that two members could do the work.

1950. It must be a great relief to Ministers? Yes.

1951. It must free them from the solicitations of their friends? Yes. All are united in opinion as to the advantage of the present system, with the exception of one portion of the Act, dealing with the Superannuation Fund, which has been unfortunately repealed. The Civil servants are quite satisfied with the Act, and say that they now get fair play.

1952. You said that a part of the Act with reference to superannuation has been unfortunately repealed? Yes; what we term Part IV. I said unfortunately for this reason: One sympathises very warmly with Civil servants who have worked many years in the service, and it is a very difficult thing to put such men out of the service without any gratuity or pension whatever. Our Act provided that any officer in the service, when the Act was passed, might count half his past services, not exceeding in any case ten years, towards a pension, provided he paid up 5 per cent. on the salary he received during that time. The Act has now been in operation five years, and therefore the ten years' past service prior to 1890 and the five years since make fifteen years, which period entitled a man to retire. We have some officers almost past work who have been kept in the service until they were due for a pension under this provision. What are we to do with them now that that portion of the Act is repealed. We cannot turn them out in the streets.

1953. Has Part IV of the Act been repealed altogether? Yes. I have the repealing Act, which is a very short one, here. Some of these unfortunate fellows borrowed money at 8 per cent., in order to comply with the terms of the Act and looked forward to the time when they could retire. They now get their money back with 4 per cent. interest, *volens volens*. The juniors are glad to get their five years contributions returned, and the business men are very glad to assist in the matter; as a very large sum of money will thereby be immediately circulated.

1954. But your own opinion is decidedly in favor of the fund being established, is it not? There were not six Members in the House who voted for the repeal of the clauses who did not avow their conviction that the repeal would probably prove a mistake, but there was perpetual clamour and the superannuation clauses had to be repealed if at all before the 1st of this year, otherwise many officers would have been entitled to pensions, being 60 years of age and having 15 years' service.

1955. So that those who are now past work in the Government service may be dismissed at any period? Yes. Some of them must be.

1956. *Mr. Teece.*] You said in answer to the President there were no appointments except by competitive examination? That is so.

1957. Are we to understand that there are no appointments, except by competitive examinations, subject to the exceptions you made? I ought to have explained that we have no control over the Railways or Parliamentary Officers or Crown Prosecutors. But with those exceptions no officer can be appointed or promoted or receive an increase to his salary, or suffer any penalty without the recommendation from the Board.

1958. Then with the exception of what you have stated you have abolished political patronage? Yes.

1959. With regard to the question of special qualifications, you said in reply to the President that in the event of there being a vacancy requiring a qualified officer with special professional knowledge the Board would have to certify that there was no officer in the service specially qualified before a person not then in the service could be appointed? That is so.

1960. I ask this because there is a Civil Service Board in this Colony. There is a clause in the Act providing that anybody specially qualified may be appointed by the Minister without any reference to the Board at all. We find that this question of special qualifications is extremely elastic? Our Act is very specific.

1961. Is it carried out in its integrity? Yes; there have only been about five appointments outside the Civil Service in five years, so that the Act has not been in any way abused.

1962. The Minister could not make an appointment without the recommendation of the Board? No; a great deal depends on the Premier, and of course the Governor-in-Council has the ultimate responsibility with respect to appointments.

1963. But the Board could prevent the appointment of any improper man? No; once the Board have given a certificate that there is no officer in the Public Service competent to fill a vacancy then the selection rests with the Governor-in-Council.

1964.

W. L. G.
Drew, Esq.,
C.M.G.

2 Jan., 1895.

W. L. G.
Drew, Esq.,
C.M.G.
2 Jan., 1895.

1964. You said that the members of your Board visit various parts of the Colony. In the course of those visits do you do any inspection work, or do you merely see that the offices are properly manned and not over-manned, and that the work has been properly performed? We do not examine books. We inspect, and as far as we are competent, we see that the offices are not over-manned. Personally, I generally interview the chief, and ask for the use of his office in which to see the clerks individually. I listen to what they have to say, and they are able to point out abuses in that way better than could be done perhaps by any other means. When vacancies occur in a large department like the Post and Telegraph, unless the vacancy is of a superior character, those in charge are as competent as the Board to say who is qualified for promotion, and so long as the transfer does no injustice to a senior we generally take the recommendation of the head of the department. It is intended that the Service should be worked as a whole, but there is very great jealousy amongst the officers of different departments. For instance, it was supposed that a storekeeper had been in that position long enough, and that an exchange was desirable; he was nominated for change to the Customs, whereupon many in that department took exception.

1965. I understand that you view the Service as a whole? Yes.

1966. But you do not necessarily think that vacancies in one department must be filled up from that department? No; if any officer who has been retrenched for purposes of economy is competent, he is selected to fill a vacancy. Of course those in the department who are looking for promotion naturally don't care about this, and possibly the Minister also may take exception. However it is our duty to nominate in case of any vacancy.

1967. Speaking of retrenchment, who decides what officer shall be retrenched, the Ministers or the Board? I must say that I have been a very unwilling assistant, and many of the reductions have been proposed by Ministers.

1968. With respect to superannuation, what did you pay away last year? £8,116 as gratuities for loss of office, &c.

1969. Will the contributors be entitled to any refund? Not those who receive gratuities, because the gratuity is double the amount of the contributions.

1970. Has this fund been subsidised by the Government in any way? No; but since the Act came into operation they gave us £5,600 for guaranteeing the fidelity of the officers, and a large profit has been made on that.

1971. But that is quite apart from the superannuation, is it not? No; that is made a part of the fund. The Government have thus subsidised the fund indirectly at the rate of a thousand a year.

1972. As a matter of fact the Government do not provide any subsidy? No, there is no subsidy.

1973. Then the steps which have been taken to repeal the superannuation clauses practically only resulted in the return of the contributions which the Civil servants had made to the fund? Yes; with 4 per cent. interest added.

1974. Do the Civil servants consider that they have been pecuniarily prejudiced by the repealing of the Act? One set will tell you one thing and others another.

1975. Do you consider that the beneficiaries of the fund have been pecuniarily prejudiced? Yes; there are very few public officers who have money at their command, and they have sold and mortgaged property in order to comply with the terms of the Act.

1976. In order to make up these back payments? Yes, because they had to complete their payments before the 23rd of September last.

1977. You spoke of classification. Tell the Commission on what basis you proceed? It is provided for by the Act, and is according to the salaries voted. All officers are appointed on probation for six months.

1978. At what salary? £50 a year.

1979. Then do they pass into the lower class? Yes, at the end of the six months' probation, if recommended by the head of the department, from whom they have to bring a certificate to the Board that their conduct has been satisfactory. They then pass into the fifth class, but without that certificate they retire altogether.

1980. Then having passed into the fifth class are there statutory annual increases? No, none. With us it is the other way about. The Act provides that the increase must be recommended by the Board, and must not exceed £30 or £20 for the second and other classes respectively. Officers of the first class are specially dealt with with respect to increases.

1981. Then the Board determines what increase shall be given? Practically there have been no increases since we have been a Board, except by promotions and vacancies.

1982. Were there not one or two Royal Commissions in 1877 or 1878 which inquired into the Civil Service of your Colony? Mr. Unmack was chairman of one in 1888. There was no other that I remember. If you will give me a list of what information you want, reports and so forth, I will get it for you on my return.

1983. You are aware, of course, that there is a similar sort of regulation of the public service in Victoria? Yes.

1984. You have had a very large experience of Civil Service matters in the Colonies—I suppose few have had much more;—do you think that a Civil Service controlled by a Board of the kind of which you are chairman, or by such a Board as exists in Victoria, is calculated to advance the interests of the Civil Service, and to secure the public good, or do you think it would be better to have the Service controlled and regulated by Ministers of the various departments as it is in this Colony? I do not think there can be the slightest question as to a Board being preferable in every way, both for Ministers and for the service. Whether the Board should be composed entirely of Civil servants is another question.

1985. But on the principle you think there is no question? There is no question whatever.

1986. *Mr. Storey.*] Has that Act met all the requirements since it passed, or have you found any points where it ought to be altered? We made some suggestions, and Sir Samuel Griffith had an amending Act prepared; but, practically, the Act works very well indeed.

1987. Were these regulations to which you have referred framed by the Board itself? Yes, when it was first established, as provided by the Act. The framing of regulations is, of course, a very important duty.

1988. Did the Cabinet embody these regulations in the Act? No; regulations are framed under the Act, and when approved by the Governor-in-Council have the force of law.

1989. *Mr. Humphery.*] I suppose the Act empowers you to make regulations to have all the force of law? Yes.

W. L. G.
Drew, Esq.,
C.M.G.

2 Jan., 1895.

1990. Were they framed as found necessary? They were practically done at once, and, as necessity arose, we got additional regulations passed, but these have been comparatively few.

1991. How often are examinations for the Civil Service held? Not more than once a year. When we see the list of qualified candidates is being used up we provide for an examination being held.

1992. And are these examinations held in Brisbane? In any part of the Colony where the candidates choose. There is an examining Board in Brisbane for the purpose, appointed by the Civil Service Board from time to time. It is at present composed of a barrister and two school inspectors. They frame the papers, which are sent under seal to the Police Magistrates, or to those who superintend the examinations.

1993. *Mr. Storey.*] Is there a regular standard of papers, or are the papers prepared according to the examiners' own idea? The subjects on which the candidates are to be examined, and the maximum number of marks for each subject, are all specified by regulations. There is a special regulation which I will furnish. Those who have entered the Service under these competitive examinations have to a man turned out splendidly. The only thing is that they trip up the heels of some of their seniors, because they must be smart fellows to go through these examinations.

1994. Do you believe in a system of examinations? I do not see any other system. Some men who have come out with high qualifications from your University have asked, as they are shown to possess similar qualifications to those provided for by the Queensland examinations, that they may enter the Service without competition, but the Board always say to them, "You must go through the examinations here, otherwise we do not know how to place you in the order of merit."

1995. Have promotions been by seniority, by length of service, or by ability? Promotion is supposed to be the result of these combined. If we pass over a senior there must be a reason for it. We are occasionally obliged to pass over some who are seniors in the service by length of time, but who are not up to the mark.

1996. Will the doing away of the superannuation fund imperil the Board? Not in the least. There were two Boards. There were associated with us two other members to form the Superannuation Board. These members might be Civil servants or outsiders. The Civil Service Board alone did not form the Superannuation Board.

1997. The Superannuation Board dealt with the investments? Yes. They recommended gratuities and inquired into any application made by the widows or relatives of deceased officers claiming assistance from the fund.

1998. I suppose you have no control over the police or military? No; nor do we interfere with the appointments of school-teachers, although they are all under the Board, and in the event of getting into trouble, or being passed over, they have a right of appeal to the Board. We hear a vast number of complaints of one kind and another in the twelve months.

1999. What is the nature of the complaints? Some are serious, but some are not. Last year there were six dismissals. We never dismiss unless it be for something very gross. There were eleven enforced resignations during the same period, that is practically the same thing, although it does not carry the stigma that a dismissal does. There were thirty-one formal inquiries on oath last year.

2000. Are these charges preferred by the heads of departments against the officers? Yes. They are all referred to us by Ministers. We do not originate anything of that kind, nor do we conduct the prosecution. We let the department do that.

2001. Have you any complaints from the officers against the departments for passing them over? Yes. The departments are so watched that there is very little complaint by the officers, as a rule.

2002. Then the Board is a check against the masters as well as against the men? A very great check. If the head of a department makes a recommendation at any time as to promotion or transfers, and we do not agree with him, we ask him to confer with the Board. The Board, through travelling, &c., sometimes sees a great deal more than the head of the department himself. We get a personal knowledge of the different officers who are in the departments.

2003. *Mr. Humphery.*] If a department asks for more clerical assistance, how do you satisfy yourselves that it is absolutely required? In a large department we go and see, as a rule, but, as a matter of fact, they seldom do ask for more clerical assistance, because they know they would not get it, the present policy being one of retrenchment.

2004-5. In what way do you carry out the provisions of the Civil Service Act in the classification of the various departments? The Act is rather faulty in that way, because under it the classifications are supposed to have been made within six months after the passing of the Act. The Act provides that if an officer was getting a higher salary than the work warranted he was to be put in the next lower class, with the highest salary of that class. We found officers getting £200 a year really doing little more than boys' work. The Act only allows us to put them in the fifth class, at the highest rate of salary of that class—say, £5 less—which would be little or no saving.

2006. Has that provision been a dead letter practically? I suppose since the Act came into operation five, six, or seven officers have been reduced from the third to the fourth class. The fact is that in the Civil Service generally there is little more than intelligence and industry wanted, and there are but few appointments that an educated and reasonably intelligent man could not fill. There has been an attempt at classification with respect to Police Magistrates and Clerks of Petty Sessions. We have provided that there shall be Police Magistrates of the first class at such and such places, and of the second class at other places. And we have done the same for the Clerks of Petty Sessions, but in the offices generally it is a difficult thing to say which is superior work and which is not.

2007. *Mr. Teece.*] Would you do the same with the Collector of Customs? Yes; we have done that; but, as a rule, we generally wait till there is a vacancy, and then we make transfers. We say that such a port is only a second-class port, and act accordingly when there is a vacancy. The collector became Under Secretary the other day, and the opportunity was taken to shift about.

2008. When a new department is brought into existence, do you make the appointment of officers necessary to operate it? Undoubtedly. Of course, there are departments connected with brands and sheep and cattle and so on, which the Chief Inspector of Stock would attend to better than the Board. He would submit the names, and we should take his recommendation, but the officers must be appointed on our certificate.

2009. In the event of a new department coming into existence, would the recommendations as to the staff of that department come from the Civil Service Board to the Government? Undoubtedly.

- W. L. G. 2010. And the appointments would be made on the recommendation of the Civil Service Board? Yes.
 Drew, Esq.,
 C.M.G.
 2 Jan., 1895.
2011. The Board would, of course, consult with the Minister before sending in a formal recommendation.
 2012. *Mr. Storey.*] But the responsibility would rest with you? Yes. The appointments cannot be legally made excepting upon the Board's recommendation.
 2013. *President.*] You would naturally consult the Ministers in certain cases? Yes.
 2014. *Mr. Storey.*] No appointment has ever been made without your recommendation? No, never.
 2015. *Mr. Storey.*] Have you any control over the district in which the police magistrates are placed? No, we have no control; but we suggest.
 2016. You said you were the Auditor-General for ten years? Yes.
 2017. Are there any books of account kept in the Auditor-General's Office? No, none beyond summaries and what they term synopses.
 2018. And you analyse accounts? Yes.
 2019. The work done is purely that of audit? Yes; no vouchers are now sent to the Auditor-General as formerly. He goes to them.
 2020. Can you examine the books in the department? Yes; including the customs receipts and everything. I will send you a copy of our Acts and Regulations.
 2021. With regard to the officers, I understand you to say that the salaries remain without a yearly increment? Yes, there is no yearly increment. They are precisely on the same footing as any other officers in the Service.
 2022. What are the travelling allowances to inspectors? 12s. 6d. a day—recently reduced from one guinea.
 2023. *President.*] Besides fares? Yes; but they get 3s. a day only when on board a steamer.
 2024. *Mr. Robertson.*] No man so long as he remains in one of these classes can get beyond the maximum sum of the class? That is so.
 2025. Even if he remained there for thirty years? No, he would get promotion, to another class if anything.
 2026. But in the case of a man whom you could not promote? If he got a sufficient rise that would put him in the class above.
 2027. Of course, if a man were, in your opinion, only fit for one class, you would keep him for ever in that class? Yes.
 2028. There are cases like that? Yes, where men are fit only for the duties they are now doing.
 2029. Were the books in the Audit Department in a measure duplicated? Yes. Formerly a complete set of books used to be kept in the audit room.
 2030. How long has that system been abolished? I think fifteen years.
 2031. Was that done during the time you were Auditor-General? It was done before I was Auditor-General. The Act was passed when I was in the Treasury. At first it was worked by unwilling men, who didn't believe in it, and it was not very successful. Now, however, it is very successful.
 2032. When was the Act passed? It was passed when I was Under Treasurer, and all are now of opinion that auditors should not become accountants or book-keepers, and audit, in fact, their own work.
 2033. There is no necessity to duplicate the books, is there? None, whatever.
 2034. It is making double entry in the wrong sense, is it not? Yes. When you get a smart man in an office he frequently dislikes to have any alteration made in the system, so that it is difficult to bring about radical changes of system with the same men.
 2035. Then the first and second class officers receive their travelling expenses, 12s. 6d. a day? Yes.
 2036. And the others 10s. a day? Yes.

THURSDAY, 3 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.
 THOMAS LITTLEJOHN, Esq., PRESIDENT.

Dr. Frederic Norton Manning, Inspector-General of the Insane, sworn and examined:—

- Dr. F. N. Manning.
 3 Jan., 1895.
2036. *President.*] Our duty is to find out for the Government how economy may be practised in the various departments without sacrificing efficiency, and we thought that you, perhaps, might help us in your special province? I shall be glad to do so if I can.
 2037. There are a number of hospitals in different places, all of which, I presume, are under your care? They all come under my immediate supervision. I am responsible for preparing the Estimates for them each year.
 2038. And for the general management? Yes, and for the expenditure also; that all comes through my office. There are some six or seven of them altogether—at Gladesville, Parramatta, Callan Park, Newcastle, Rydalmere, Goulburn, and Darlinghurst.
 2039. Can you tell us about the system you have established for the inspection of these different hospitals, how frequent are the visits, and who it is that pays the visits of inspection? I pay the visits of inspection. I go to each of the hospitals about once a month.
 2040. Individually? Yes; not, perhaps, quite so often to the more distant ones, such as Newcastle. By statute I am supposed to go once in every six months to each one of them, but I go once a month, or even oftener to the near ones, such as Callan Park, Gladesville, and Parramatta; sometimes I go twice or three times a month. To Newcastle I go, perhaps, once in two months, and to the Reception House, Darlinghurst, I go always once a month. I mean to say that is the minimum.
 2041. What is the strength of the staff of the assistant inspectors? There are no assistant inspectors; there are official visitors who carry out a certain amount of inspection.
 2042. But still they are under your control? No, they are not under my control at all; they are perfectly independent authorities.
 2043. Appointed by Government? Yes; and the theory is, so far as inspection is concerned, that I inspect for the Government, and they inspect rather on the part of the public to see there is no lapse in the Government work.
 2044.

2044. I notice in the Blue Book "Assistant Superintendent," and I supposed that was, perhaps, a term for an assistant inspector? The assistant superintendent at each hospital occupies the position of head clerk or accountant, and in addition to that he has many duties in connection with the management of the farm, and the general supervision of the outdoor staff of the hospital. These officers are laymen—I mean to say they are not medical men. They have very many duties in connection with the admission and discharge of patients, and in handing over their property to the Master in Lunacy. They have also a great mass of correspondence with friends of the patients.

2045. The term local manager might better express their duties? Yes, or, as they are often called in England, stewards.

2046. Are there any patients who are paid for by their friends? Yes, a large number; but the majority of them only at comparatively small rates. There are a certain number who are paid for at £1 5s. per week; that is the highest rate the Government takes. The others are paid for at sums ranging from about the maintenance rate, which is about 11s. a week, down to as low as 1s. a week. But the arrangement as regards the collection of fees of that kind does not come under me, it comes under the Master in Lunacy, who is empowered by the Lunacy Statute to collect the properties, and at the same time to obtain from the friends payments for those people who have no property of their own.

2047. So the assistant superintendent does not receive any fees? He receives no fees, but very often the money is handed to him in the first instance, and he hands it to the Master in Lunacy.

2048. Are the greater number of the patients in indigent circumstances, or their friends, so that they have to be maintained? The greater number, certainly. The collections amount to about £14,000 or £15,000 a year, including a small sum still paid by the Imperial Government for the maintenance of the very few old convict patients who remain. This amounts to about £300 a year, and is decreasing annually. At the end of each year we make a return of the number we have remaining, and the Imperial Government pays at a given rate for them.

2049. The total amount involved in the maintenance of the institutions seems to me to be pretty nearly £100,000 a year? Yes, during the last three or four years.

2050. Is there any prospect of a decrease in the number of patients? None whatever; the number is increasing rapidly.

2051. Have the bad times much to do with it? Yes. For about twenty years the increase was only about 100 a year, and that was about in proportion to the increase in population. We expect about three lunatics in every thousand, that is the rate in most civilised communities. For fully twenty years we had not increased out of proportion to the population, but during the last three years there has been a considerable increase. That, I think, is almost entirely due to the bad times. In the first place, some people have been driven directly insane, and others have been obliged to get rid of their imbecile and demented relatives whom they used to maintain at home. Possibly the increase in insanity is not so great, but the increase in the number to be maintained by the Government is considerable. There are a great many idiot children and people of weak intellect, who, being unable to earn their living, were kept at home by their friends so long as their friends could afford it, but during the last three or four years they have been sent to the asylums. They are fit cases for the asylum, as they could not be maintained in the poor-houses.

2052. As you prepare the Estimates yourself, I suppose you exercise very great carefulness in seeing that none of the officials you put down on the list are in excess of the actual requirements? I don't think that I have any one in excess of the actual requirements. The staff at my own office is too small; I have only one clerk, and that ends in my having to do a great deal of clerical work myself when my time might be better employed, but I have not liked to ask for additional assistance. I don't know of any officer I could dispense with. I have one medical man for about 350 patients, and he has also to do the dispensing. Except at Callan Park we have gradually abolished the dispensers.

2053. The average number of patients each medical man has to deal with is 350? Yes, about that.

2054. That is a pretty stiff number for one man, especially as they are insane people;—that is the case at Gladesville and Parramatta, I presume? Yes; I am dividing the whole number of patients by the whole number of medical officers. At one institution it may be a little less or more, but that is about the average.

2055. Now, as to the scale of remuneration that is adopted; of course, we can all understand that professional men ought to get something more than mere clerical pay? Yes; they have expenses as regards education, and they have opportunities of gaining money outside at, perhaps, a higher rate than a mere clerical man might obtain.

2056. But all your officials are exclusively employed in the hospitals; they have no other means of obtaining emoluments? None whatever.

2057. Your clerk and accountant, you say, is rather hard worked, but he gets a very good salary? Yes; a very fair salary.

2058. What might his duties be, say, for a week? Well, he has the whole of the correspondence of my office to deal with, which is very large; then the whole of the accounts pass through his hands to be checked. Of course, they have been made up beforehand in the other offices, but he has to check them. There is a very large amount of work altogether, chiefly a matter of correspondence.

2059. The nurses and servants are, I suppose, indispensable in the numbers you have put down? They are indispensable as regards the numbers. I have a return made every half year, so that I keep down the proportion of attendants to patients as low as I can, but I do not consider it safe to have less than one attendant to every ten or eleven patients in the hospitals where there are acute cases, such as at Gladesville and Callan Park; but they run to 1 to 15 at the hospitals at Newcastle and Rydalmere, where the patients are chronic cases, and do not need so much attendance. Then with regard to the payment of the staff, I think, considering the current rate of wages, they are well and sufficiently paid, and perhaps somewhat overpaid; but I have never been in a position to reduce the salaries that have been once granted. Twice lately I have asked the Colonial Secretary to allow me to commence at a lower rate; the attendants commenced at £72 and the nurses at £44 a year about two years ago; then the attendants commenced at £66 and the nurses at £40; and in October last I asked the Government to allow me to have probationers for a year, and to commence at £60, with the nurses at £36, and this was approved. I think even that is high, but at the same time they have very long hours, much longer hours than in most services; and I have to compete to an extent with the police and the gaols, who require the same sort of people that I require. If the remuneration in my department were not as good as that in the gaols and police,

Dr. F. N. Manning.

3 Jan., 1895.

Dr. F. N.
Manning.
3 Jan., 1895.

- police, I would have to take inferior people; but I think, considering the current rate of wages, my people are well paid, and the seniors highly paid.
2060. We must endeavour to get the other two Departments to reduce so as not to compete with you? That is the position. The artisans, such as painters, carpenters, and engineers, are, I think, decidedly too highly paid, considering the current rates of wages.
2061. Then you would not propose to remove them on account of their receiving too ample remuneration? No; but I think that people entering the Service should enter at lower rates.
2062. And that all means there would be greater economy? I have not reduced the salaries; in fact I am powerless to do so in regard to those already granted, but I have tried to economise by bringing in people at a lower rate. In addition to their salaries, they are provided with rations and lodgings which are worth about £30 a year. I have a scheme under which I work, which I will hand in.
2063. You adopt a system of an increase of remuneration after a certain number of years' service? Yes.
2064. In some of the Departments I think that has been discontinued? The increases under the Civil Service Act were discontinued, but I am not aware that any scheme that had been authorised by Ministers had been discontinued.
2065. I fancy that the tendency is to discontinue the increments as they were originally arranged, and to keep down the maximum salary to a much lower level than has hitherto been considered necessary? Yes.
2066. Then you have a maximum, I suppose, above which there is no further addition given? Yes, the maximum is £108 a year for attendants, and £64 for nurses; these salaries are only obtained after a great many years' service.
2067. Are the attendants male? All males, and the nurses are women.
2068. Take this instance of an attendant who gets £108 a year, has he his rations and lodging? Yes.
2069. Washing also? Yes, personal washing.
2070. Then, after six years' service in charge of a ward, he gets £108? Yes; and at that time he is in charge of a ward, and must have something like fifteen years' service, or twenty altogether.
2071. Have the attendants any surgical or medical knowledge at all? They are all trained specially. The first two years of their service they have to attend lectures and to pass an examination at the end of each year—first, at the ordinary ambulance course, and, second, in the nursing of insane people. At the end of each year's service they are subjected to examination, and if they do not pass they are not kept in the Service.
2072. I suppose they are all carefully selected for their patience and good common-sense in dealing with the class of patients that come under their care? They are carefully selected people. I need hardly say it is a trying service, and unless you had people of good temper and well-behaved you could not get on at all.
2073. So their scale of pay, for that reason alone, might be more liberal than usual? Yes.
2074. *Mr. Storey.* You say you are responsible for preparing the Estimates; this Estimate-in-Chief does not give the salaries of nurses? No; they are provided for in a lump sum.
2075. Have these estimates been prepared on the basis of previous years, or have you seen your way to reduce any of the salaries, considering the reduction going on all round? I have not been able to reduce the numbers, because —
2076. I mean the salaries? All the new-comers enter at less, but those already on the staff receive the same as they did, or perhaps a little more, according to the authorised scale.
2077. Do you class these amongst those who are well paid? Yes, I think they are well paid.
2078. Have you represented that to the Government? Yes. In going to Mr. Brunker in October last, and asking him to reduce the salaries on entering, I represented that these people were well paid, but at the same time I was not prepared to recommend a reduction in the salaries, because of there being no reduction in the Police and Gaols Departments. I also spoke in the same way to him about the artisans.
2079. Are there persons in your employ, who, by virtue of their length of service, are getting larger salaries than their position warrants? I do not think that, because they do not get beyond the scheme that was laid down.
2080. In many Departments we have evidence that a man, because he has served some twenty or thirty years, is getting a large salary simply because of his length of service? Well, my staff even of attendants is a young one, and my officers are young men.
2081. How are the medical officers appointed? They are appointed by the Government and Executive Council, but always at my recommendation.
2082. Each of these institutions, I suppose, is almost an institution of its own, subject to your general inspection? They work separately; but at the same time, should an officer be sick at one institution, if necessary, I send an officer from another to help.
2083. Where does the inspection come in? You will find there are official visitors for whom £600 a year is provided.
2084. Who are they? They are two medical men and a barrister for each institution, but some of them take two or three institutions. For instance, Dr. Cox, Sir Alfred Roberts, and Mr. Nugent Robertson go to Gladesville, Callan Park, and Cook's River; then Dr. Browne, Dr. Huxtable, and Mr. Nugent Robertson go to Parramatta. There are no official visitors for Rydalmere or for Newcastle, and none for the Reception-house at Darlinghurst; I do that entirely.
2085. Has there been any complaint from the inspectors? None, except on minor matters, and then chiefly as regards patients. They do not deal with accounts.
2086. Who is responsible for all the accounts and payments? Practically I am responsible for them.
2087. What opportunity have you for examining the accounts from all the Departments? My clerk goes over them all, and I spend a good deal of time with the accounts.
2088. Are payments made in your Department or at the Treasury? They are made from the Treasury on vouchers submitted.
2089. That would not refer to wages? Yes, wages as well. We only pay in money at Callan Park, elsewhere everything is paid by cheque.
2090. By Treasury cheque? Yes, signed by the medical superintendent in each case; but the accountant, when he sends in these vouchers, sends them to me, and I have them checked.
2091. The accounts for rations must be a considerable item—does that matter all come under you? Yes.
2092. Are rations supplied by tender? Yes, all by tenders taken annually, and the Audit Office keeps a very strict check upon our ration scale. Though we are not exactly limited to that ration scale we have to give a good reason if we go beyond it.
- 2093.

Dr. F. N.
Manning.

3 Jan., 1895.

2093. Do the tenderers change very much, or is it the same people year after year who get the contract? They change a good deal, and of late years the contract has been cut up much more into sections. At one time some contractors like Mr. Kidman took the whole contract, but now it has been cut up into bread and meat, groceries, forage, vegetables (although most of these are grown by ourselves), and by that arrangement there has been much more competition, and the contractors change very much more.
2094. You get no return of work from the lunatics? We do not get much return that we can show as payment to the Treasury. We do a little bookbinding for other institutions—the Sydney Museum for instance. Receipts from that source we pay into the Treasury, but most of the labour of the women patients goes in washing, mending, and making clothes, and of the men in farming and gardening.
2095. That is virtually a saving? It is a saving, undoubtedly. If it were not for that we could not maintain the institutions at the rate they are maintained at.
2096. The chief medical superintendent at each place has £600 a year and quarters? Yes; until lately they got £650.
2097. I notice that at Newcastle the salary is much less? Yes; the medical superintendent there holds in addition the position of Health Officer, which gives him £240 more.
2098. In acting as Health Officer, would not time naturally be taken up that should be given to the duties of the asylum? No; the two things work together. He has charge of a lot of idiot patients, who do not require so much care as the ordinary patients of an asylum. Besides, it is rather dreary work to be in wards all day long filled with idiot children. His duties as health officer are a relief, and are generally performed between 6 and 8 in the morning. He has also to give bills of health, which is easily done in his office any time during the day.
2099. The position of medical superintendent of the Hospital at Newcastle is not so important as that at Gladesville? No; a junior always goes there, and as vacancies occur he is promoted.
2100. Are all these salaries subject to the deduction under the Civil Service superannuation? All of them, except those of the attendants.
2101. *Mr. Robertson.*] You said just now, with reference to Newcastle, there was less for the superintendent to do? Yes; on the whole; less active work, at all events.
2102. Would there be less for the attendants to do? Yes; I have only one for fifteen patients there.
2103. I notice you pay the attendants there more than you do at Gladesville? They may have got rather higher salaries by length of service, but they are all under the same scale.
2104. That would account for the difference? Yes. You will notice that the medical superintendent at Newcastle has not the same clerical assistance.
2105. I notice you allow £100 a year for clerical assistance? Yes; a clerk comes in in the mornings.
2106. You said that possibly the attendant's salary was a little high? Yes; and those of the artisans decidedly.
2107. I notice you have eighty-nine servants, and they receive about £73 a year each;—do you not think that is rather high for servants? A good many of them are men cooks, and they have to be very well paid.
2108. What do they vary from? They get about from £108 to £130 in some cases; and then there are gatekeepers, carters, messengers, laundresses, and others.
2109. You do not pay your domestics £73 a year? Oh, dear, no. They get £30 to £36, and the laundresses get from £40 to £44 and £50.
2110. How many official visitors do you say there are? There are really only five.
2111. And do they divide the £600? Yes.
2112. That is £120 each? About that. Those at Parramatta get £50, and those visiting three places get £150 each.
2113. You say they visit on behalf of the public? Well, that is the theory.
2114. By whom are they appointed? By the Government. Independently altogether of any recommendation on my part, because they are supposed to be a check upon me to some extent.
2115. Are they permanent appointments? Yes, during good behaviour, the same as with other appointments. They are statutory officers. The statute runs that the Government may appoint for every institution two or more official visitors. If more than two, two of them must be medical men, and the other a barrister or police magistrate. It is not mandatory. I have recommended to the Government that in such places as Rydalmere it was unnecessary to have official visitors.
2116. Do you think it is necessary to have official visitors at Sydney if it is not necessary at Rydalmere? The cases are very different. At Rydalmere they are all chronic cases that have been in the Asylum a great many years, and are not curable. Part of the duty of the official visitor is to see that patients are not detained illegally, and to examine all such as may make an appeal for discharge, and that is not likely to be the case at Newcastle or Rydalmere.
2117. Do you keep a set of books in your office? Yes.
2118. And you record in them the expenditure of the contingent vote? Oh yes, very carefully. At the beginning of each year I apportion to each hospital what I consider to be sufficient, and I expect them to keep within that at all events.
2119. You apportion the whole of that to the contingent fund? Yes; keeping £1,000 or £2,000 for unforeseen expenses.
2120. Take 1894—have you expended the whole of that vote? No; I had very considerable savings this year.
2121. Will that reduce the vote for 1895? No; it has not done so; I had to take over fifty patients from Cook's River, and I shall have an increase of 150, so there will be 200 more patients to maintain next year. The Cook's River patients were maintained out of a special Vote of £3,500, and now that is reduced to £2,500.
2122. Did you effect a saving for 1893? Yes; I think so.
2123. How often do you effect a saving on the vote? I have had small savings during the last two or three years, but mainly owing to the fact that provisions have been so much cheaper.
2124. What would you have to the credit at the present time? I have possibly about £2,000 to the credit.
2125. Does the £100,000 include the £15,000 you collect from patients? Yes; it includes that sum, but does not come to me. It is paid into the Consolidated Revenue.
2126. What is the steam launch "Mabel"? All the patients are brought up from Sydney to Callan Park and Gladesville in the launch, and all the stores are brought up to these institutions. At spare times she is used to take out patients.

2127.

Dr. F. N.
Mauning.
3 Jan., 1895.

2127. It belongs to your department? Yes; and is kept up at Gladesville. On the whole, it is cheaper to use the "Mabel" than to bring people by land. Even under contract the charge by land is very high. At one time the steam launch was lent to an exploring party that went to New Guinea, but we then found it was more expensive to bring our people and stores up by rail and vehicle.

2128. How many passengers can she carry? Thirty or forty, packed together.

2129. *Mr. Storey.*] Maintenance, I suppose, means wages? Yes, and ship's stores.

2130. *Mr. Robertson.*] Are your books audited? Yes, by the Treasury inspectors; but those gentlemen concern themselves chiefly with collections that I make, and these are small. They consist of moneys received for the sale of vegetables and old stores, and minor matters of that kind, and from my own office such small things as rent of land. I have, for instance, a reserve at Bega that belongs to my department, intended for an asylum in the future. I had one at Goulburn, but they are now building on that. The rent for these is paid in through my office to the Treasury.

2131. Do they audit your expenditure? They look over the books, but it is really not an audit; this is done by the Audit Office. It is chiefly collections the Treasury inspectors attend to.

2132. Beyond the ways you have suggested is there any other way by which economy could be exercised—I mean by which a saving might be made? I think not; the cost of clothing and feeding the patients has been reduced as low as can possibly be done. We are very much under the English maintenance rate as far as feeding and clothing are concerned, but our rate runs up by reason of the large salaries we pay in comparison with the English salaries.

2133. Does the clerk and accountant in your own office keep the books, or are they kept by the clerks in the hospital? The books are kept by the clerks in the hospital, and he checks them to see that the amounts have not been overrun in any way.

2134. *Mr. Humphery.*] What was the cost per head of insane persons for 1893? I am very sorry I have no paper with me to show that—thinking you would have all the printed papers here—but I think it was about 9s. 6d. per week after deducting the collections. It has been gradually coming down.

2135. And for 1894? I have not worked that out yet.

2136. Do you anticipate the cost for 1894 will be less than the previous year? Yes, but slightly only; a matter of a few pence per head.

2137. I observe that the matrons of the principal asylums receive £160 per year? Yes.

2138. In the charitable institutions the matrons apparently receive much higher salaries;—can you say whether the duties and responsibilities of the matrons of the insane asylums are less onerous? I should think the duties of mine were decidedly more onerous, and we have to trust them very much more. It is impossible to go into the wards without some sort of notice, especially at night, because all sorts of difficulties would occur, and, therefore, the matrons in our asylums have to be officers of considerable standing. I take no one who is not already a trained nurse and has not had considerable experience.

2139. We will take the Gladesville Asylum as an example. The matron there receives £160;—how many patients has she under her immediate supervision? About 350 women.

2140. That is a position of very great responsibility? Yes; the matrons are not paid too much, although I think they are sufficiently paid. The matrons have to be trained nurses, in the first place. The matron at Gladesville came out with Miss Osborne as one of the sisters to the Sydney Hospital, and then she came on to me at Gladesville, and has been there ever since.

2141. *Mr. Storey.*] How long has she been there? Possibly twelve years.

2142. *Mr. Humphery.*] During the period you were medical adviser to the Government, was it a portion of your duty to be cognisant of the management of the charitable institutions? Yes; I had then, and I have had at other times, an opportunity of judging of the duties pertaining to the office of matron at the Benevolent Asylum and the Asylum for the Infirm and Destitute.

2143. With regard to the stores supplied for the insane asylums, has the Comptroller of Stores the management of these? Yes; on requisition prepared in the department.

2144. Will you be good enough to describe the manner in which the tenders in connection with the asylum are dealt with? I am generally one of the Tender Board for opening tenders for supplies, both of provisions and clothing. Tenders are advertised for, and are opened by a Board consisting of four of my officers, generally those more immediately concerned with the supplies. They are initialled, and the lowest tender is recommended to the Treasury for acceptance, unless there should be anything against the tenderer by reason of lapses under former contracts.

2145. With the exception of perishable articles, are all the goods supplied by the contractors to the Comptroller of Stores, and afterwards distributed to the various asylums? Yes.

2146. In your opinion, is that preferable to the direct supply from the contractors to the asylum? I think, on the whole, it is, though we have very considerable difficulties as regards the quality of the supplies. I think you want an expert to examine these articles in the store. I don't think the officers of my department, as a rule, would be quite qualified to deal with the quality of woollen and linen goods, blankets, and other articles. The great difficulty arises in the contractor sending in articles decidedly inferior to sample, and then making interest with the Government to get these things accepted at lower rates. Therefore we get a great lot of rubbish in that way.

2147. Can you make any suggestion by which it would not be possible to furnish inferior supplies? I am afraid that is rather beyond me.

2148. Can you suggest any way by which greater economy might be practised in connection with supplies to the various insane asylums? No. I think, on the whole, that our supplies are fairly good, but there is the difficulty I have already referred to.

2149. How can that be remedied? It is extremely difficult.

2150. Have you given it consideration? I have given it careful consideration, but it is a personal matter with the Treasurer for the time being. We have made all sorts of regulations to try to get good articles. As I dare say you have noticed if you have visited the Stores Department, we have a red mark running through some of our goods, such as sheeting, to prevent their being stolen. That was done at my suggestion, and has effected considerable saving.

2151. *President.*] The persons received from Cook's River Asylum—were they inmates the Government provided for? Yes.

2152. What became of the other inmates who were maintained by their families? They are still there. The Government contract ceased on the 31st of December.

2153. But the institution still remains open? Yes, for private patients. The Government contract was first

first of all for 125 patients, and about three years ago seventy-five were removed. For some years past I have been fighting to get the fifty back, because I could maintain them more cheaply in the Government Asylum.

2154. What was the cost at Cook's River per head? £1 2s. 6d. was the contract rate; but you must remember that in giving the Government rate I am not counting the cost of buildings nor interest, and that comes to some 4s. or 5s. more. It is cheaper to maintain the patients in the Government Asylums, than in the Cook's River Asylum, at 22s. 6d. per head.

2155. In the matter of the artisans and attendants, you think some economy might be exercised from time to time as the present occupants of the posts are removed, and others are brought in? Yes; and I should have no objection to see the reduction made at once if it could be made equitably.

2156. Even with the existing holders? Yes.

2157. Then that would be by your putting a smaller sum down on the Estimates? Yes; but I am afraid I could hardly do that without some direction from the Government that it should be a general thing.

2158. *Mr. Storey.*] With whom rests the responsibility of reducing the scale of fees paid by patients? The Master in Lunacy takes that upon himself after considerable inquiry as regards the means of patients.

2159. It is not in your province at all? No; if I get any information on the subject I inform the Master in Lunacy, but, as a rule, he works that himself, and, on the whole, works it rather hardly.

2160. Hardly? Yes. I mean I think he gets every penny he possibly can,—sometimes rather to the hardship of wives and families and of the patients themselves, whose moneys are going into his hands. They go out with very little money when they are discharged.

2161. Still he is quite right in getting as much as he can? Oh, yes.

Richard Nicholas Johnson, Esq., Commissioner of Stamp Duties, sworn and examined:—

2162. *President.*] We are sent here, as you are aware, to find out where economy can be exercised in the Government Departments without sacrificing efficiency, and to try to get it established. We see in the Estimates of Expenditure proposed for 1895 that you are provided with a Deputy Commissioner. Will you tell us the nature of his duties; your own duties of course are to control the whole of the department? The administration of the Act and the conduct of the department generally are under my control. In my absence the Deputy takes up those duties. During my attendance at the office he is more particularly engaged in doing the work in connection with the estates of deceased persons. He has two clerks with him. In his room is done the whole of the clerical work in connection with the estates of deceased persons, records are kept, correspondence is done, and other work incidental to the estates of deceased persons. For instance, the registers in connection with these estates are kept, and the accounts are examined and filed in that room.

2163. You get full particulars in the schedule of the property in each case? The inventory is a debtor and creditor statement of the deceased's effects. The Deputy examines this very minutely, and if he finds omissions they are corrected. The omissions are very general.

2164. It depends upon his instinctive watchfulness to detect anything wrong? Exactly.

2165. Has he full employment? Very full.

2166. He has two clerks to assist him? Yes; two young fellows.

2167. The accountant I see is paid somewhat less than the Deputy Commissioner? Yes; his duties are to keep the books generally in connection with the Revenue Department—the ledger, journal and cash-book, the ledger in connection with all the accounts of the postmasters, public officers, and licensed vendors. There are many hundreds of credit accounts. For instance, most of the postmasters and the public departments have credit accounts which run into large figures. The licensed vendors, such as Turner and Henderson, Penfold, Sands, and others, have credit accounts.

2168. Your office is the source from which are issued all the stamps? All duty stamps, both impressed and adhesive, the adhesive stamps being printed at the Government Printing Office.

2169. Those stamps which are called inland revenue stamps, of a drab or mauve colour, are they considered as postage stamps? They are not duty stamps.

2170. It is a twopenny stamp, and is used for receipts? Postage stamps are used for receipts, but strictly speaking they are not available for that purpose under the present Act, although the practice has been to continue the use of them. They were made available as duty stamps under the Act of 1865, but the Acts authorising their use as duty stamps had reference to that Act and the continuation Acts to that Act.

2171. The clerk in charge of the stampers—the stampers I presume are those who impress the documents? Yes; they impress all the documents requiring impressed stamps, and this clerk is in charge of the room and attends to the public. He receives documents from them, and delivers them when ready. A record has to be kept of all cheques, transfers of shares, &c.

2172. This clerk who receives the documents receives also the money? No; the money is paid downstairs on the ground floor. At the end of the counter the documents are handed in for stamping, and then passed by a lift to the stamping room, but the clerk in charge of the stampers receives all promissory notes, cheques, and bills of lading which require stamping. All deeds are left below and passed up by a lift.

2173. The cashier receives £268 per annum;—does he find security? He does.

2174. In what manner do you pay in the receipts, do you pay them to the Treasury? Into the Bank every afternoon, advising the Treasury of the amount paid in.

2175. You pay in before 3 o'clock; you do not keep the money till next morning? Every afternoon the money is paid into the Bank.

2176. The entry and issue clerk is one and the same person? Yes; he has the sale of adhesive duty stamps.

2177. You have five other clerks at various rates from £135 down to £75? Yes; they are mostly juniors.

2178. Their services are utilised in any way necessary? Yes; they all have their fixed work, but if time will admit of it they have to make themselves generally useful.

2179. The foreman of stampers receives £190 per annum; that seems rather a high salary for an artisan, for I suppose he is no more than that? You will please note that during the absence of the clerk in the stamping room he has to take up the duties. He is a very clever young fellow, I believe an engraver,

and

Dr. F. N.
Manning.

- and his services are very valuable in connection with the presses and the dies if anything goes wrong. His name is Thornthwaite, and I believe he learnt the trade of engraving from his father. He saves a great deal of expense to the department in connection with the presses and dies.
2180. Messengers; we find they are in high estimation generally in Government departments, but we believe the rate of pay to them is considerably overdone. Your messenger gets £120; I suppose his duties are not clerical to any extent? Not beyond keeping a record of all the letters posted. He does other work; for instance, he takes the notices of the intention to apply for probate from the *Government Gazette* and keeps them.
2181. *Mr. Robertson.*] The office-keeper is his wife? No, she is his mother. The messenger is married, and does not live on the premises.
2182. *President.*] Do you not think £120 is too high a salary? I do not; I am not disposed to run the department into extravagance if I can help it, but that is a salary I would have had increased if possible.
2183. *Mr. Robertson.*] How does he receive the £50? He does not receive it, his mother receives it. His father was messenger to the department, and at his death his mother continued his duties as house-keeper. This young fellow was appointed messenger over seven years ago, and is living in Paddington. His mother occupies the quarters, but he gets no allowance for rent, he gets nothing outside the £120.
2184. *President.*] Your contingencies do not amount to much? They do not.
2185. *Mr. Storey.*] Take the Deputy Commissioner;—he has been in the service since 1880—according to the Blue Book;—was that his first entry into the Civil Service? Yes.
2186. What did he enter as? As corresponding clerk, I believe.
2187. In this department? Yes.
2188. What salary would he be getting then? That I am not prepared to say.
2189. About? I really would not like to say—I cannot think.
2190. How has he gradually crept up to £380? An increase was recommended by the late Commissioners. I believe it was according to the wish of the late Civil Service Commission that he received an increase to his salary.
2191. You do not know what he was getting then? I do not.
2192. I suppose you revise those salaries, and are responsible for the estimate? Most decidedly; but one does not keep himself prepared to say what the salaries were years ago.
2193. Have there been any reductions or increases in your department during the last two years? With the exception of one, I think not. £15 was granted to one of the junior clerks by the late Treasurer, but against that there have been reductions consequent on the dismissal of one of my officers named Fligg.
2194. What age is this man? I suppose about forty, as near as I can guess.
2195. Having been fourteen years in the Service, he was not a junior when he came in? No.
- 2196-7. Take the next man, Sullivan, who entered in 1881? He is the oldest man in the department.
2198. In age? Yes.
2199. Take these two men; have they got up to these salaries through their length of service, or because the work was absolutely worth the amounts which are paid? A common opinion is that the positions held by these officers is worth more money.
2200. How do you base your standard? They are positions of high responsibility and trust.
2201. Tell us what is the trust and responsibility? Take the Deputy Commissioner; if he were a careless man it would lead to the loss of thousands of pounds a year for want of proper scrutiny in connection with the estates of deceased persons.
2202. Is his work supervised by you? Yes.
2203. But if he were careless you would not have him? I cannot supervise every one.
2204. But if you have a highly paid officer you do not expect to have a careless one? Certainly not, and I would not keep him if I knew it.
2205. But his work is purely all clerical? No; it is not all clerical, it requires a great deal of legal ability.
2206. Where did he acquire this legal knowledge? Simply by making a special study of the question since he came into the department.
2207. Then you say he is not overpaid? Most decidedly not.
2208. And that the Government get full value for £380? Indeed they do.
2209. The accountant? His duties are to keep the books in connection with the revenue, which averages over £300,000 a year. I have here a comparative statement of the last seven years of the revenue collected by my predecessor, and for the seven years since the department has been under my administration.
2210. Give us the last seven years of your own? It commences in 1888. In that year it was £409,656.
2211. What were the expenses? I have not the figures, but they were more than they are now. In 1889 the revenue was £379,517, in 1890 £460,975, in 1891 £336,778, in 1892 £349,790, in 1893 £311,637, and in 1894 £297,014. Of course I might point out, although perhaps it is not necessary to do so, to you men of business, that the last three years have been disastrous to the Colony, and the revenue is not so high.
2212. But would the work in your department be much more or much less, according to the rise and fall of the revenue? At the present time the work is as great as ever, but the business is not so heavy. For instance, I can earn £500 as quickly as I could earn 5s., that is, by the impression of a stamp. There may be a little more work in scrutinising a difficult conveyance as compared with a real property transfer, but the number of instruments is almost as great as in any other year.
2213. In spite of your revenue falling off do you say there has been as much work done in your office? I think the work has been quite as great. I would like to point out that the difference in the revenue since I have had the administration of the department compared with that collected by my predecessor for his last seven years is £784,457.
2214. *President.*] In favour of you? Yes.
2215. I see 1890 was the most prosperous year you had? Yes; that was the year the Berry estate fell in; I got £65,000 for that.
2216. *Mr. Storey.*] I suppose all the stampers are mechanics? Yes; most of them are.
2217. We understand from you that you have sole control over your department, and you consider the Government gets full value in paying these salaries for the work performed? It is generally considered even in Parliament that the department is poorly paid, so much so that in 1891 I was promised my salary would be increased to £800, but it has been decreased from £650 to £605, and most of the others have suffered.

2218. Do any inspectors go over your department? Yes; the Treasury inspectors. Mr. Brodie has just finished his inspection to November of last year.

2219. There is no economy you could suggest in your department? I would be very glad if I could. I might mention that if I take a revenue of £300,000 as the basis of my calculation, the present expenditure would only give a cost of barely $1\frac{1}{3}$ per cent. to the department.

2220. *Mr. Robertson.*] But you must take into consideration that you received £65,000 in one estate? Not often.

2221. But in receiving that sum there would not be any more effort than in receiving £5,000 in another estate? There is a good deal of extra effort. I was for two years fighting the firm of Norton and Smith over that estate of David Berry's, and it ended in £10,000 additional duty being paid to the Government.

2222. *Mr. Humphery.*] Has your staff been increased during the past five or six years? No.

2223. Have the salaries been increased during the past five or six years? No, with the exception of the one I referred to.

2224. *Mr. Robertson.*] Did not the stampers get an increase? That is further back than six years ago.

2225. *Mr. Humphery.*] What is the total cost of administering your department? Nothing beyond what you see in the Estimates, £4,296. Sometimes I do not exhaust the contingent vote.

2226. How many probates and letters of administration were dealt with from 1881 to 1887? 9,728.

2227. And subsequently to that? From 1888 to 1894 there were 12,995. That was during my administration.

2228. Have you prepared a statement of the total collections for the whole period the Act has been in operation? Yes; the amount is £4,352,579, or an average of £300,178 per annum. During the year 1894 the following documents were stamped:—Deeds, 28,617; probates and administrations, 1,622; transfers of shares, 5,403; bills of exchange and promissory notes, 232,893; bills of lading, 104,029; cheques, 7,768,077; and receipts, 238,505.

MONDAY, 7 JANUARY, 1895.

Present:—

JAMES ROBERTSON, Esq., F.S.I.A., F.S.A.V., | J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq. (PRESIDENT).

Henry Turner, Esq., Branch Accountant in the Bank of New South Wales, sworn and examined:—

2229. *President.*] One of the matters which the Commission think you could give us some information upon is the average salaries that you pay to your officers in New South Wales? The average of the salaries paid to our officers in New South Wales is close upon £200. Of course the amounts vary in different years; but on the 30th September, 1894, the average amount paid was £199 15s. odd.

2230. That embraces the salaries of all the officers in the Colony from the general manager down to the lowest clerk? Yes; in New South Wales.

2231. Do you remember the number of officers? I think it is 474. That was the number then. Of course, it has altered since.

2232. Can you also tell us what the average of the salaries would be for the whole of the bank's officers? At the same time it was about £203—that is, including all the Colonies.

2233. Leaving out London? No, including London. We do not separate it.

2234. And what was the total number of your officers then? 953.

2235. With regard to the inspectors of the Bank, of course they are paid a salary as officers, but when they are travelling on duty as inspectors, what is the allowance you would make them? £1 a day, and their travelling expenses or railway fare.

2236. Is that a fixed allowance for every one? That is a fixed allowance for the real inspectors; but then we have relieving officers, who are sometimes sent to inspect, a sort of deputy inspection, and they get variously paid. They receive 15s. a day in this Colony, and I think it is the same in the other Colonies. They are not inspectors properly, but they are relieving officers, who are sometimes sent to inspect in a casual way, but if they are sent on a relieving tour they are variously paid; some get 12s. 6d., and others get 10s., but that is when they go to relieve and not to inspect. The seniors get 12s. 6d. and the others 10s., but after the first month they all get 6s. The inspectors always get their £1 a day when they are out.

2237. They are what you call the inspectors proper? Yes.

2238. Can you tell us something about the Superannuation Fund? I don't know how much I am entitled to tell you about that, because it is private business. It is not the bank's business strictly. I can tell you the general nature of it. Of course, if the Board of Directors were willing, I could show you the whole affair, but when we publish it to our own officers we do so for the use of the officers only.

2239. At what age does an officer become entitled to membership in the Fund? When he has paid to it for ten years.

2240. But not before? He is a member after ten years' contribution, and could then retire on a pension if 55 years of age. At 55 he can retire and claim a pension, but previously to that he can only retire on a pension on the condition of mental or physical incapacity. If he has then contributed to the fund for fifteen years, he can get a pension. The rate of contribution has been altered lately to $2\frac{1}{2}$ per cent. upon the salary per annum, paid half-yearly, except that all officers having a salary under £100 contribute as if they had £100 a year. For instance, a youth going in at £25 a year does not pay $2\frac{1}{2}$ on that, but as if he had £100. That is the lowest sum on which a contribution can be made. I should mention that our fund is primarily a guarantee fund, and that all defalcations on the Bank by the contributors are chargeable to it.

2241. *Mr. Storey.*] At what age do you take clerks into the Bank? As a rule we restrict it to seventeen years of age. There is no absolute rule, but it is an understood rule. We do not take in youths under 17, nor much over.

2242. Have they to undergo any examination before they are taken into the service? They have to undergo a medical examination, but nothing else.

2243. What salary do they commence with? £25 a year. They serve three months on probation.

2244.

H. Turner,
Esq.

7 Jan., 1895.

2244. For nothing? No; for £25 a year. They usually then get £40. If it was a young man of 19 or 20 with some experience, I suppose he would get more. But none begin at less than £25 a year.
2245. After he has served three months, what happens then? After his probation, during which time he gets £25 a year, he ordinarily gets an advance to £40 a year, but this is not necessarily the case. Sometimes the period of probation is extended. Sometimes at the end of the three months he gets £30 instead of £40, but if there is an increase when he is taken on to the staff, after the period of probation is over, he generally gets £40 a year—from £30 to £40.
2246. How long does he stop at that? That depends on his qualifications and on what work he is put to. If he goes to a branch, for example.
2247. Let us suppose that he stops in Sydney? In that case he would probably have to wait for a year before he got another increase.
2248. Then what would he get? It would all depend on his quality. It would not be more than £60 or £70 a year. Beginning with £40 a year it would seldom be more than £60 after a year. I am only speaking from general recollection.
2249. I thought there would be some general rule at the bank? No; there is no rule.
2250. After three months he would get from £30 to £40 a year, and then after a year £50, what would be the next rise? At a branch he would receive a salary and an allowance which would be really a salary. Many are sent away to a branch. It does not do to keep a youngster at the head office, he learns nothing.
2251. Do you send them all away to a branch? No; but they are constantly going to branches.
2252. The reason I am asking is that Government clerks do not go away; I want to compare bank clerks with Government clerks? Ours go away. We give them an allowance, and if they return as unfit their allowance drops.
2253. After the first year, if they do not go away from Sydney, what would they get then? Not more than £20 a year increase.
2254. That would make it £60 at the commencement of the second year;—how many years will a clerk be in the Sydney office before he got £100 a year? Times are very different now from what they were, but unless he was very smart I suppose he would be four years before he got that.
2255. What would men in the position of ledger-keepers get? I should think a ledger-keeper at the Sydney office would get from £100 to £200.
2256. How long would these men have been in the service? Some might have been in the service for six or seven years.
2257. What salary would the tellers in the Sydney branch be receiving? From £225 to £450. The head teller would get the latter sum at least.
2258. What length of service would he have had? Ten or twelve, or fourteen years.
2259. It would be a special man who would get £450? The position of head teller is a very responsible one.
2260. *President.*] Would it include allowance for mistakes? No, it would not; there used to be an allowance for that, but now they bear their own losses.
2261. *Mr. Storey.*] Are you sure that £450 is the salary of the head teller? It is £450.
2262. A chief teller would have from ten to fourteen years' service? He ought to have that certainly.
2263. What is the responsibility of these tellers? A teller has to be honest, smart, quick, and intelligent enough not to pay bad cheques, and to know customers. That is the duty of the teller. There is a good deal of strain on the attention. It is pretty hard work, and he wants to be thoroughly honest.
2264. Is he liable for mistakes? Yes. If he paid away more notes than he ought to, as he might occasionally, he would be held responsible.
2265. Have you any idea what amount would pass through such a man's hand? No; I have nothing to do with the head office. It is not in my department at all.
2266. Take a country branch, say a branch manager at Goulburn or Bathurst, what would be the salary of a man like that? About £500 a year and allowances.
2267. What would his allowances be worth? A house, and a servant's allowance of £30, candles, coals, gas, and the newspaper. I suppose it is equal to another £150.
2268. You say that the average of the salaries of the bank officers, including the general manager, is £200. Of course, we know that the general manager's salary is very large, and it is hardly fair to include his salary in the average. Without his salary, what would the average be? It would not diminish it very much if you were to take that away, because it is divided among 474 people. It would diminish the average by between £4 and £5.
2269. Then the average would not, in that case, be £200? No; not if you exclude the general manager's salary. In the other Colonies the average is higher, simply because the head office here has so many youngsters; in London there are not so many, but in the country offices there are a number of juniors.
2270. What was the practice, so far as increases are concerned, before the present crisis? That lay with the Board. Once a year all the inspectors submitted lists of all their officers, and the increases they proposed. These were submitted to the Board, who took action accordingly.
2271. What would these increases generally amount to? £10, £12 10s., £15, £20, and occasionally £25, but it was very seldom, as far as I can remember, beyond that.
2272. Did the officers get those increases every year? No. Of course it depended upon the circumstances of the bank partly, and partly on the merit of the officer, as to whether he would get an increase at all. If a man had got as high a salary as his work and responsibility deserved, he would not get any more till he received promotion; but all that is out of or almost out of my knowledge. I am only speaking from general knowledge, but that was the method of doing it. The inspectors yearly reported upon all the officers they thought deserving an increase. That used to be the custom once a year, but whether the recommendations of the inspectors were carried out was purely a matter for the Board. The Board has to consider whether the bank can stand the increases being made, and how large the staff is. They have to keep the expenditure within certain limits.
2273. If a bank manager got into a country town with £250 a year salary, and he did not get promoted, would length of service entitle him to an increase? No.
2274. *Mr. Robertson.*] What are the various classes of work performed by the bank officers? The officers of the bank are a manager and a teller, whose work at a country branch is done sometimes by the accountant and sometimes by the manager.

2275. I am speaking of the head office? There is a manager, accountant and assistants, tellers, ledger-keepers, cash-book keepers, exchange clerks, remittance-clerks, and bill clerks.

2276. Would that embrace all? Yes. Of course the inspectors belong to the general service—not especially to the head office.

2277. What do you pay your inspectors;—what is the minimum and maximum? I do not think there is one.

2278. Speaking from your general knowledge, what is the salary of the inspectors? As far as I can remember, it is from £600 to £900 in this Colony.

2279. The inspectors, of course, are both town and country officers? No; they are all in town.

2280. But their work is principally done in the country? Their office is in the town, and the returns from the country are sent to them. They frequently go to the country to inspect.

2281. How many of them are there? We have four of them in Sydney. They are called assistant inspectors, but they are really inspectors.

2282. Do these inspectors get £600? Yes; from £600 to £900.

2283. What would you pay your accountants? Various salaries, from £250 to about £600. There are only one or two at £600.

2284. Is £600 exceptional? Yes. The accountant is second officer of a branch. Taking them all round, the second officers of branches get from £225 to £275.

2285. What would you pay a ledger-keeper in the country? He is not a ledger-keeper.

2286. He is a ledger-keeper and a generally useful clerk, is he not? Such a one would be paid from £125 to £225.

2287. Have you a night watchman? Yes; a man who is always on the place at night.

2288. What do you pay your messengers? From £2 2s. to £3 10s.; I think £3 10s. is the highest per week.

2289. What do your clerks receive? From £25 up to —.

2290. Take an Exchange clerk? He is a youth, and receives £40, £50, or £60 a year.

2291. Give us the amount of the salary of the clerks up to the time they become ledger-keepers;—you don't put juniors to be ledger-keepers? A very smart lad might be taken on the ledger. It depends so much on circumstances. I can only speak from general memory. The accountant would be the best to ask particulars from on these matters, both as to the amount of payment at the head office and as to how he ranks the men. The book is kept in my room containing the information, but I do not consult it.

2292. *President.*] I think that an average taken from so large a number of salaries will be a good guide for us? I think it will.

Frederick Adam Scrivener, Esq., Member of the Accountant's Department at the Commercial Banking Company of Sydney (Limited), sworn and examined:—

2293. *President.*] What is the average salary you pay in this Colony to your officers, from the highest officer in the Bank to the lowest clerk inclusive? The total number of officers in the Bank is 438, from the general manager down to the youngest junior, not including messengers.

2294. Does that include other Colonies? Yes; it includes Queensland and the London office. £250 per annum is the average salary. On the Queensland staff there are forty-three officers whose salaries average £208 per annum. On the London staff there are twelve officers whose average salary is £253 per annum. Of course the amount is brought up in the latter case by the number of the officers being so few, and the manager in London receiving a high salary. Mr. Dibbs asked me to mention that the total given above, 438, includes the general manager, the assistant manager, the heads of the departments, the inspectors, and 128 branch managers, as also the branch account auditors.

2295. It includes all officers from the general manager down to the lowest clerk? Yes.

2296. And some of your head men are very liberally paid? Yes; that is why Mr. Dibbs asked me to mention that the 128 branch managers made the average high.

2297. What do you pay the branch managers—give us the maximum and the minimum? The highest is at the London office.

2298. Leave out the London office? The maximum in that case would be about £1,000.

2299. Where would that be? At Brisbane, where the salary is exceptionally high.

2300. And the lowest would be? £250 or £275; about £275.

2301. I presume there would be a number between these two? Yes.

2302. Receiving amounts spread over between those two? Yes.

2303. And is that exclusive of house accommodation? Yes; if there are no premises owned by the Bank in the town, the officer gets a house allowance, a servant's small allowance, light and fuel.

2304. How many inspectors have you? A chief inspector; but he never travels. He is not exactly an inspector. We have three inspectors and three branch auditors. The latter check more the detail of the work. The inspectors take a general view of the business done by the Bank.

2305. The work of the branch auditors is inspectorial to a certain extent? Yes.

2306. Besides checking details, do they count the money? Yes.

2307. And make the balance? Yes; that is specially their first duty. The moment they arrive that is the first thing done.

2308. What allowance do you make the inspectors for travelling? The three inspectors get their absolute railway expenses or coach expenses.

2309. The travelling charges? Yes; and £1 a day as well. The auditors get their actual expenses.

2310. The salaries of the inspectors proper are much higher than the salaries of the auditors? Yes.

2311. What is the maximum and minimum? The three inspectors range from £650 to £800. From £650 to £750, I should say.

2312. And the branch auditors? About £400.

2313. Are not their duties highly responsible? Yes, decidedly. In fact they may be looked upon as junior inspectors.

2314. You have no superannuation fund proper in your Bank? No.

2315. So that if an officer is superannuated he depends upon the grace and goodwill of the Board for a pension? Yes.

2316. Are there many who are in receipt of pensions? No; only about six, I should say.

H. Turner,
Esq.

7 Jan., 1895.

F. A.
Scrivener,
Esq.

7 Jan., 1895.

F. A.
Srivener,
Esq.
7 Jan., 1895.

2317. And could you tell us what ratio their pension bears to the salaries they gave up? About two-fifths of the salary that they were in receipt of when they retired.
2318. *Mr. Storey.*] At what age do you take juniors into your office? About 16.
2319. Is that the limit? We have occasionally taken them younger than that, but 16 is about the youngest.
2320. Do they go through an examination as to their abilities and education? They have to bring certificates from the schools they were at last, and also certificates from friends. It is proposed that some examination should be made by the Institute of Bankers.
2321. What salary do they receive? It used to be £50 per annum, but it has been reduced to £25, there having been so many applications, and circumstances having changed somewhat.
2322. How long do they stop at that? Under the old *régime*, which was two or three years ago, these juniors used to get an increase every year, provided a satisfactory report was given.
2323. How much? £25.
2324. Until they reached? £250; but now that limit has been reduced to £200.
2325. How many years did it take it to get to that? Eight years after they commenced.
2326. They used to get £25 every year? Yes.
2327. That is, if they showed any ability, I suppose? Yes.
2328. They could not get on faster than that? No.
2329. Did all the juniors go on increasing like that? No, it all depended on their report; each officer was reported on.
2330. *President.*] It was a possible thing to do, but it did not occur in every instance? Just so.
2331. When a junior reached a salary of £100 a year what would his duties be? If in Sydney there would be various positions he could fill; there would be the position of inward and outward exchange clerk, or assistant behind the counter, or cash-book keeper; almost every department in the office has its junior officers; the corresponding room has two or three junior officers; the general ledger department has also junior officers; and so on.
2332. These juniors get about £100 a year? Yes.
2333. What do your ledger keepers get? They would average from £225 to £275; one might touch £300, but that is not often.
2334. How long would these gentlemen have been in the service of the Bank before they would reach that? I think the shortest time would be twelve years.
2335. What salaries do the tellers get? Ranging from £250 to £350. The receiving tellers are paid at a slightly lower rate than the paying tellers.
2336. What would the paying tellers receive then? As high as £450. There was one paying teller in receipt of a much larger salary, but he retired on a pension on account of age.
2337. How long have these tellers been in the service? From fifteen to twenty-five years.
2338. What is the average salary of a branch manager? Of course I could tell you that exactly by consulting the books. It would be £350, or perhaps a little higher.
2339. Does that include perquisites? No; these managers live on the premises, as a rule. They have allowances for fuel and gas, and a servant. The servants, of course, keep the Bank in order.
2340. Could you give us the returns for New South Wales only, showing the number of your officers and the average salary they receive, without taking in London and Queensland;—I would like to have this information, exclusive of the general manager's salary? I could not give you that information at once. Out of the 438 officers in the Bank there are 215 receiving salaries of £225 and under, and the average salary of these 215 officers is £139 per annum.*
2341. Do the clerks pay guarantee premiums? Yes; there is a fund they pay into.
2342. The Bank's fund? Yes; the Bank's own fund. We subscribed to one of the companies, but this was ultimately done away with.
2343. What is the rate? It is graduated. The first year, on entering, the officers are supposed to be guaranteed to the extent of £500.
2344. What do the messengers receive? From £3 to £3 10s. a week. The resident messenger at the head office gets about that. His wife receives a certain allowance for cleaning, but that is apart from messengers' duties. There are about six messengers for the head Bank. There is only one resident in the Bank.
2345. What would you pay your caretaker? He gets his salary as a messenger. He has an allowance for cleaning the bank and for an assistant. He receives several allowances.
2346. What is the expense of caretaking;—what does it amount to? The caretaking of the head office, which includes all cleaning, costs about £168 per annum.

William Reid, Esq., Secretary of the Australian Joint Stock Bank (Limited), sworn and examined:—

W. Reid, Esq.
7 Jan., 1895.

2347. *President.*] What is the number of your officers all over the Colonies, and the average salaries they receive? We have branches in New South Wales and Queensland. We are not represented in any of the other Colonies. We have a branch establishment in London, and our head office is in Sydney. Of course the number of officers has varied considerably, as the business has varied. We are not employing so many officers now as we were three years ago. I can give you the figures up to the present time. We have in New South Wales and Queensland 142 branches and 514 officers. The average salaries in New South Wales, taking New South Wales by itself, would be about £184 in round figures.
2348. That is from the highest to the lowest? Yes; leaving out the messengers.
2349. I presume that is on the present basis? Yes. Some years ago the average was rather higher than that, but I am dealing with the present figures. In Queensland the average salaries are about £212 per annum. Taking both Colonies together, the average is about £187 or £188 per annum; but in Queensland there has always been a tendency to pay more on account of the expense of living and the climate, and the inconvenience generally. For instance, in some parts, where there are gold-field branches, the salaries are considerably higher than at a sea-port town, as the expense of living on the gold-fields is very much greater, and the life is altogether different to what it is in more settled parts of the country.
2350. You have a number of inspectors? Yes. 2351.

* NOTE (on revision):—The average salary in New South Wales, excluding the salaries of the general manager and the assistant general manager, is £243 per annum.

2351. Irrespective of the salaries which are no doubt paid to them as officers of the Bank, what allowance do you make to them when they are travelling on duty? They are allowed their actual travelling expenses—coach, or steamer, or railway, which are always paid in full. All the senior officers travel first class. It would be very rarely that an officer would travel second class. All these various kinds of conveyances would be first class, when possible, and the fares would be paid in full. Then there is an allowance to cover hotel expenses, and that varies from about 10s. to 15s. a day. At the present time we have two or three grades travelling allowances, and the highest is about 15s. per day, and the lowest about 10s. to 12s. 6d. for personal expenses.

W. Reid, Esq.
7 Jan., 1895.

2352. But not more than 15s.? In no case.

2353. Except, perhaps, in the case of the chief inspector? The inspectors I am alluding to are inspectors who are actually out in the field. The amount for expenses was reduced from a higher scale some time ago. In much better time—the boom times—the allowance was 15 to 20 per cent. or 25 per cent. higher than at present.

2354. It would not exceed £1 in the best of times? No. I suppose you did not contemplate in your question such a thing as the general manager or the resident inspector going round. That would be a matter of special arrangement. There are managers of branches—large branches—acting as district inspectors in places such as Grafton or Lismore, on the Richmond River, who have a number of smaller branches under them. The smaller branches are subject to the supervision of the district inspector or senior manager. South Grafton can be inspected very well at very short notice. The same thing would happen at the Richmond River and Kempsey, as also at Mudgee; and in Queensland, Rockhampton and Townsville are the centres of inspecting districts.

2355. So the inspectors from the head office would not go to the outer edge of these smaller circles? No; except under very special circumstances.

2356. What is the minimum and maximum pay of the inspectors? When an officer commences inspecting he is to some extent on his probation. He is not permitted to be a full-fledged inspector all at once. He might commence by being relieving inspector, and then acting inspector, and the salaries would vary from £250 to as much as £600 or £700.

2357. Have you any superannuation fund or guarantee fund? We have no superannuation fund, but we have an officers' fidelity guarantee fund.

2358. Managed by the Board? Yes. In former years we used to take bonds—fidelity guarantee bonds—from private friends and from guarantee companies, and we found that that did not work very well. It was, therefore, decided to guarantee the officers' fidelity within the bank itself. We not only took the bond from friends, but in some cases from a guarantee company such as the Victoria Assurance Company, or the old European Insurance Society. Since about 1867 or 1868 the bank's own fidelity guarantee fund has been in existence, and it has been found to work very well on the whole.

2359. Do the funds become too ample for use? There are occasionally, unfortunately, debits against the fund.

2360. What happens when anything goes wrong? The companies required you to prosecute the defaulter, and the whole thing was made public, but under the present system the knowledge of a fraud is confined to the Board and the Bank officers themselves.

2361. What is the rate of contribution to the guarantee fund? As a rule, 2 per cent. on the annual salary, or, say, 10s. per cent. on the amount guaranteed. It is much cheaper than it was under the companies. The company's rate was 15s. per cent. per annum to commence with on amounts up, to say, £2,000, but for larger amounts, I think, special arrangements were made. In the course of time the company reduced the rate to one-half per cent., 10s. per cent. per annum. But the Bank itself was able to undertake the risk at 10s. per cent. straight away. The various amounts were fixed according to the position the officer held, and other circumstances were taken into consideration.

2362. Have you any pensioners—retired officers? Not now. We had one officer, but he died some years ago.

2363. Then you have no pensioners at all? No.

2364. But the Board have occasionally granted pensions as a special act of grace, have they not? Yes; there is an allowance to one widow lady, but it is a very special and exceptional case.

2365. Is your guarantee fund in a comfortable position at the present time? Oh, yes.

2366. Quite good for all probable demands? Yes.

2367. *Mr. Storey.*] What is the average of your salaries in New South Wales only, omitting the general manager and the chief inspector? About £182 per annum.

2368. How do you take your juniors into your office, and what salaries do they get when they enter, and what is the system of promotion? A lad was taken in at about the age of 16 or 17. He was not to be less than 16, and not more than 18 or 20. He had to pass a junior or a senior public examination, or a Civil Service examination, or have matriculated at the Sydney University, because otherwise we found that those who presented themselves had to be examined by some of the senior officers, and oftentimes at considerable inconvenience, whereas if the candidates had passed any of these examinations mentioned they were able to show a proper certificate. Moreover, we insisted that a candidate should present himself before a medical man, and, if in Sydney, that gentleman was one selected by the Board, to whom a small fee was paid for the examination. If the applicant was admitted to the service the Bank paid half the costs of the medical examination. If the candidate did not pass at all he had to pay the whole of the fee. That had a sort of deterring effect, and prevented some unsuitable persons from presenting themselves as candidates for examination. Country applicants went through the same form. They applied to the nearest branch manager, presented their credentials, and not only were they obliged to show educational certificates but a candidate had to be presented by some one known to the Bank authorities—a shareholder or a customer—to vouch for his respectability. After passing the examination the junior commenced on probation of one, two, and sometimes three months, and then he received a small commencing salary. It was equal to £25 per annum generally.

2369. *President.*] Was that after his period of probation had expired? Yes; the junior on probation had no salary for the first month or two, sometimes for two months. Then he got his commencing salary of £25. In the ordinary course of things he was promoted, if his conduct and progress warranted it, to something better in the course of six months, and his pay was doubled. Then he remained at that increased pay for about six months longer, and after about two years' service he received about £100 per annum; and his further progress depended entirely on his merits and the exigencies of the service. At the present time we are not admitting any applicants at all. The system described was in force for many years and up to within the last two years.

- W. Reid, Esq. 2370. When an average clerk got up to £100 a year, how long would he stop at that? For about twelve months or two years, perhaps, sometimes longer; it greatly depended on circumstances.
- 7 Jan., 1895. 2371. What increase would he get after that? According to the prosperity of the Bank. If we were making substantial profits the Board dealt liberally with the officers, and where deserving the junior might get an increase of £10, £15, or £20 a year; perhaps, in some cases, £25; on the other hand he might get no increase.
2372. When does a clerk reach the maximum figure after which he does not expect any increase unless he is sent away to the country? That is a very difficult question to answer. A great deal depends on the officer's own merits and the exigencies of the service. Junior clerks sent from Sydney to country branches were and are specially dealt with.
2373. He goes through the various grades, say, up to a ledger-keeper;—what salary would he get as that? Various salaries are paid; sometimes £125, £150, or even more; it would depend greatly on his ability, age, and length of service.
2374. How long would an officer have to be in a Bank before he got that salary? To reach a salary of £150 might take six or seven years; to get £200 to £250, about ten years.
2375. What salary do branch managers get? They vary. The average salary for New South Wales is about £270 per annum.
2376. And quarters? Yes, mostly; they get a house allowance or a residence provided for them, with allowance for paying servants to clean the Bank offices, and, in addition, fuel, light, and water in economical use.
2377. How do you take youths into the office—are vacancies reported to the Board or the manager? To the general manager. No branch manager can take an officer into the service without applying to the general manager, and the general manager would have the authority of the Board before making any appointment. The appointment of juniors is left to the general manager in ordinary times, but in the case of other candidates or for any considerable appointment it is always submitted to the Board.
2378. *Mr. Robertson.*] Have you any classification by which salaries are regulated? Yes; we class according to their positions, and we deal with Queensland officers somewhat differently to New South Wales. We have grades from, say, £150 and upwards.
2379. In New South Wales? Yes, from £150 to £250, and from £250 to say £500, from £500 to £1,000, and from that upwards. We do not find these classifications are very much help to us, because there are always many special circumstances to be taken into account. The branch officers above £500 are in charge of the best or most important branches, and the emoluments of such an officer, and the consideration in which he is held, to a great extent depends on the success of his business.
2380. What do you pay your tellers? Our chief teller in Sydney is paid very much more than tellers at any branch. In some branches the tellers are accountants also—that is, they combine the two offices. In large branches these offices have to be separated. In Sydney we have several tellers, and a great deal for them to do, so that they are paid very much more than tellers at branches. The average salary of a teller would be about £170 per annum throughout the service. In Sydney the average is considerably higher. This arises from old and very highly skilled officers being kept in that position for many years, and the chief teller is paid as much as many of the branch managers.
2381. What do you pay accountants? The term accountant is somewhat misleading. The accountant of a smaller branch is the second officer. He assists the manager in the general duties of the office. He may be a raw youth knowing very little of book-keeping or, indeed, of general business matters. The average in the country for accountants or second officers is about £130 per annum. The highest of them would get not more than about £250, because when an officer gets to be an accountant at a country branch he expects to be, and is frequently, promoted to be manager at another branch.
2382. You said the accountants averaged from about £130? Yes.
2383. They would be real accountants, would they not? Yes; in the majority of cases they would have a thorough knowledge of the Bank duties.
2384. What do you pay your messengers? In Sydney we have a staff of messengers who are paid from about 30s. a week up to £2 10s.
2385. I suppose you have a caretaker at the head office? Yes.
2386. What would you pay him? He gets about £3 per week with residence, and, in addition, light and fuel in economical use.
2387. *President.*] With regard to the system of paying cheques, the cheques are first of all presented to the ledger-keeper? Yes.
2388. He, I presume, is satisfied with the signature? He is bound to be satisfied with the signature, and to make the necessary entry into the ledger. Then he initials the cheque, and it is taken to the counter.
2389. Has the teller any responsibility with regard to the genuineness of the signature;—is he bound to be satisfied himself that it is genuine, or does he act upon the ledger-keeper's initials? As a rule, he acts upon the ledger-keeper's initials. Of course, in the case of cheques in Sydney, the chief teller and the next officer would generally know as much about the signatures as the ledger-keeper himself. Perhaps the teller would be more competent to say whether a cheque was genuine or not, supposing the ledger-keeper was a new officer.
2390. If the ledger-keeper initialed a cheque, and it was a good forgery, would the teller be in any way liable or responsible if he paid it? I think not.
2391. The system of handing back the cheques initialed by the ledger-keeper to the party presenting them has been adverted to as rather a dangerous one? It may be so sometimes.
2392. Operating with a cheque after it has been initialed—you may remember rather a notable case that happened some time ago—has occurred before now;—has anything been done to revise that system? Yes; the cheques are specially stamped or marked by the ledger-keeper.
2393. I suppose the ledger-keeper is warned not to initial a cheque that might be filled in afterwards? The ledger-keepers have to be, and are, continually warned, as the warnings addressed to one might not, perhaps, be carried on to the next.
2394. You said that the average salaries of the tellers were from £150 to £200? Yes; excepting the principal tellers. To be more exact, our general average for country tellers in New South Wales is about £170 per annum.

Thomas Buchanan, Esq., Branch Inspector of the London Bank of Australia (Limited), sworn and examined:—

2395. *President.*] What is the average of the salaries of your officers in New South Wales, from the highest to the lowest, leaving out the messengers? I should explain that there are three branches in New South Wales over which I have no control, and whose returns all go to Melbourne. They will not affect the average, however. T. Buchanan,
Esq.
7 Jan., 1895.

2396. Are they branches near the border? At Broken Hill, Wilcannia, and Deniliquin. They are nearer to Melbourne than Sydney. They will not affect the average at all. The number of officers at these branches is about three at each.

2397. Nine altogether? Yes. That will make sixty-nine officers in New South Wales, and the average salary of the whole of them is £198 10s. Excluding the manager of the George-street Branch, the average would be £179.

2398. Of course the inspectors are salaried officers, but when they travel on duty, have they any allowances? Yes. A branch inspector is allowed £1 a day travelling expenses, and the assistant branch inspector 15s. a day. The inspecting accountant, who is an officer not of the rank of the inspector, but he assists, receives 10s. a day—that is, exclusive of coach and actual travelling expenses.

2399. Actual travelling expenses are allowed in addition? Yes.

2400. Is there any superannuation fund established by the Bank? No; there is a guarantee and provident fund.

2401. But not a superannuation fund? No.

2402. What is the contribution per cent. per annum? It varies considerably. I am not a member of the guarantee and provident fund at all, so that I am not able to give you the information. I joined the bank after many years' service elsewhere, and I did not come under the fund at all.

2403. Can you supply us with the information? Yes; 10s. per cent. on every £100 assessed. The assessment is governed by the salary.

2404. *Mr. Storey.*] I should like to have the averages of the salaries of the officers of the Bank without the manager's salary. Tell me the average salaries of the juniors, the tellers, the branch managers? The juniors start from £40 to £50 a year after three months' probation. There is no fixed time for rising. They rise as their merits are displayed and opportunity offers.

2405. They do not get their rise in six months? There is no regulation time for increasing the salaries.

2406. How long is a youth getting up to £100 a year? Promotion is very slow just now.

2407. I speak of the time before things were so very bad? It varies very much. It might have taken a lad three years to reach that sum.

2408. *President.*] It might take him six months, and it might take him six years? Just so.

2409. *Mr. Storey.*] What pay do the ledger keepers get? From £100 to £175.

2410. What do the tellers receive? There is a teller getting £125 in one of the branches, doing very good work.

2411. *Mr. Robertson.*] What is the maximum? I think about £250 is the highest salary paid at present.

2412. *Mr. Storey.*] How long would the recipients of the highest salaries have been in the service? Many of them twenty years or more.

2413. How long would an ordinary smart man take to get up to the sum named? I could not fix any time; he might be only three or four years getting promotion as branch manager, but the salary depends so much on the locality, and on the man's adaptability for work.

2414. What do branch managers receive? From £200 to £375. These are suburban and country managers. Some town managers are paid better than that.

2415. They would be ten or twelve years before getting that? Yes.

2416. I suppose a country manager has had a great deal of experience, has a general knowledge of banking business, and knows that it depends on the business he makes for the branch whether he improves his position? Quite so.

2417. *Mr. Robertson.*] What do messengers receive? It varies very much according to length of service? We have a man in the Sydney office, who has been there quite thirty years. I do not know what he is getting just now, but he was getting £4 a week. He is a very useful man, and can do any clerical work that you ask him to do.

2418. I suppose the salaries of the messengers would be from £2 up to that? Yes.

2419. *Mr. Storey.*] How many bank officers are there with a salary of £500 per annum and upwards? Four.

2420. *President.*] It is on the present basis of salary you are speaking? Yes; I am speaking of the salaries as they were paid on the 31st December, our last pay-day.

2421. *Mr. Storey.*] Has there been much reduction during the last year? Yes; a very considerable reduction—a 10 per cent. reduction; and there is another 10 per cent. reduction in contemplation. It has not come into effect yet, but it will soon.

2422. All this reconstruction business would involve a deal of labour on the part of your clerks? Yes.

2423. There is no such thing as overtime? When the officers are at work at night-time, and they reside out of town, they are allowed tea money.

2424. It is not at all an unusual thing for bank clerks to work at night? No.

F. P. G. McRae, Esq., Inspector of the Bank of Australasia, sworn and examined:—

2425. *President.*] What is the number of your officers, from the highest manager down to the lowest clerk, leaving out the messengers? There are 124 officers in New South Wales, and the total amount of salaries is £26,305, averaging £182 per annum. The salaries and the allowances make together a total of £29,519. F. P. G.
McRae, Esq.
7 Jan., 1895.

2426. What are the allowances for? Various purposes, such as office cleaning, and so on.

2427. Light and fuel? Yes; for the country branches. This brings the average up to £205.

2428. How many branches have you? Twenty-nine in this Colony.

2429. You have, of course, a certain number of branch inspectors? Yes.

2430. When they are travelling on inspectorial duty, what would be their allowance? In the case of senior inspectors, 30s. a day. It is an exceptional thing for these inspectors to travel. 2431.

- F. P. G. 2431. Is that over and above railway charges? Yes; the sub-inspectors get 20s. to 25s. a day.
 McRae, Esq. 2432. How many grades of inspectors are there? Two. There are senior inspectors and sub-inspectors.
 7 Jan., 1895. 2433. These would be men of considerable standing, I suppose? Yes.
 2434. Have you any superannuation fund or guarantee fund? Both.
 2435. Are they distinct or amalgamated? They are amalgamated, but there is a certain amount put aside for guarantee purposes.
 2436. What is the scale of contribution? £3 10s. per cent. up to £1,000, the latter being the maximum. £35 a year is the utmost that we pay.
 2437. A salary of £200, or even of only £100, pays £3 10s. per cent.? Yes. Officers become subscribers to the fund after three years probation. There is a compulsory subscription. It is deducted from their salaries.
 2438. At what age does an officer continue until he is superannuated? Sixty.
 2439. Is it optional or compulsory at 60? It is optional on either side. If the Bank wishes you to leave, or you wish to leave, either side has only to say so.
 2440. But if he is a good man he is retained? Yes; that is the experience so far. We have very few pensioners on a high scale.
 2441. About what percentage of the salary that a man gives up when he retires does he receive as a pension; of course there must be a scale? There is a scale. Not exceeding five-eighths of average salary during contributorship, and the maximum pension is £600 a year.
 2442. I suppose the fund is in a very satisfactory condition? I hope so.
 2443. Mr. Storey.] What is the average of the salaries of your clerical staff—taking the juniors, you start them at a fixed rate? We have been in the habit of starting them at £40, giving them £60 for the second year, and £80 for the third year, but we have altered that and start them now at £30. After that it is £45 and £60.
 2444. Is that for three years? Yes.
 2445. President.] That, of course, is consequent on the depression of the times? Yes; and I do not believe that the youngsters often get £100 a year before they deserve it.
 2446. Mr. Storey.] How long would it take a junior to get £100? Say four years.
 2447. What is the average salary of a ledger-keeper? There is no average salary. There is no salary attached to any particular post. It frequently happens that we have a man on a small salary as ledger-keeper, or we might put on a high salary man, but there is no actual salary attaching to any special post.
 2448. A junior goes in, and at the end of four years he receives £100; at the end of eight years, what would he be getting, supposing he were a fair average clerk? It varies very much.
 2449. I do not mean a genius or a duffer? All things being equal, and in ordinary good times, a man may receive an advance of from £10 to £15 a year, even without promotion. In the ordinary course of events, if he were worth keeping, he would receive that until his salary reached, say, about £150 per annum. That was so before the depression.
 2450. At the end of eight years he would be getting £150? Yes, about that.
 2451. How quick would his promotion go on after that? It is impossible to say. It depends on the openings, and on a hundred circumstances. It depends on whether the bank are opening up branches.
 2452. What do your branch managers get? I could show you one at almost £2,000 a year, and another at only £200. It is difficult to make an average.
 2453. Are your branch managers' salaries much higher than other banks? On the contrary, I think they are lower in many cases.
 2454. You spoke of £2,000 a year? I was speaking of Melbourne.
 2455. And I was speaking of Sydney? In Sydney they would vary from £1,500 a year. A man at a large centre would receive a large salary.
 2456. Then your branch managers get from £200 a year to £1,500? That would be putting it tolerably fairly. But the last-named salary would only be given in one instance to a manager in this Colony. Sydney excepted, manager's salaries range from £700 to £200.
 2457. President.] Of course the managers get lodging and light and fuel in the country? Oh, yes.
 2458. Mr. Storey.] How many officers are there in the Sydney office? About forty-five.
 2459. How long would a man in the receipt of £400 in the Sydney office have been in the service? He may have been in the service as long as I have, who receive over three times as much. It is not a matter of length of service only.
 2460. A man in receipt of £400 a year must be a practical man? Yes.
 2461. What length of service must he have had? He would be a very lucky man if he got it in ten or fifteen years. One man might get it in that time, but the many would not.
 2462. What is the maximum salary of a ledger-keeper? I could not give it you. There is none, and no minimum. At Sydney the salaries paid range from £175 to £145.
 2463. What do the tellers receive? The highest gets £275. He is a very old servant, and the lowest, a little less than £200.

TUESDAY, 8 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
 J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

William Lees, Esq., Manager of the Union Bank of Sydney, sworn and examined:—

- W. Lees, Esq. 2464. Chairman.] We do not wish to subject you to an inquisitorial examination, but we think you may
 8 Jan., 1895. be able to give us some valuable information on one or two points. The Government departments are managed at a certain expenditure, and we are asked to try to find out means of reducing this expenditure without sacrificing efficiency. It has occurred to us that by ascertaining the cost of managing a financial institution such as yours we might be able to make a rough comparison that would enable us to recommend a revision of the Government expenditure. Can you tell us the average salary each clerk receives in

in your establishment, from the biggest general manager to the lowest clerk, not including messengers? In New South Wales we have 136 officers, and the average salary is £180 a year. I may say parenthetically there are no general managers in New South Wales; they are in Melbourne. If there were a general manager in New South Wales possibly the average would be somewhat higher.

2465. We will confine the inquiry to New South Wales solely? The number of officers in Sydney is fifty-two, and the average salary is £199, including everyone except the messengers.

2466. That includes inspectors, of course? There are no inspectors in New South Wales; they are all on the head-quarters staff.

2467. What is the allowance granted to your inspectors when on inspectorial duty? From 10s. to 30s. per diem; the average is 20s. There are some junior men, who merely audit books and count cash; they are allowed 10s. to 12s. 6d. per diem.

2468. These allowances are besides fares? Yes.

2469. There is one very important matter in your bank, the superannuation fund. Can you tell us at what age the officers become connected with it and at what age they retire? They become connected with it at the moment of joining the service. It is a condition of their joining the service that they subscribe to the guarantee and provident funds.

2470. I suppose they are two or three months on probation, and then join as officers? No; they pass an entrance examination, medical and educational, and join at once. The earliest age for retiring, except on the ground of ill-health, mental or physical, is 55.

2471. Is it optional or compulsory? Optional. It may be compulsory in some instances. A man at the age of 55 may have outlived his efficiency, and the bank may ask him to retire, but in the case of a man who is in the possession of all his faculties and is valuable they do not ask him to retire. According to statistics, the average age of retirement has been a little over 60.

2472. What is the rate of contribution to the fund? New officers joining have to pay $5\frac{1}{4}$ per cent. for five years on their salary, and after that $3\frac{1}{2}$ per cent.

2473. That is invariable? Invariable.

2474. Has the bank also a guarantee fund as well as a superannuation fund? - Yes.

2475. I suppose it is in a very healthy condition? Very.

2476. Do you happen to have many pensioners at the present moment? Not many; speaking from memory I should think there are under twenty.

2477. Would that be in New South Wales or on the whole? On the whole.

2478. We do not want to know microscopically what any individual gets in the bank, but you might be able to tell us roughly the minimum and maximum salaries the tellers receive? I think the maximum is £250 at the present time, and the minimum £150.

2479. This question occurs in connection with the salary of the tellers;—the cheques are handed to the ledger-keepers for initialling, and I suppose the ledger-keepers have to be satisfied that the signature is a genuine one? Yes.

2480. Has the teller any responsibility in that respect? No, not if the cheque is marked by the ledger-keeper.

2481. That is his warrant to pay? Yes.

2482. What are the minimum and maximum of the ledger-keepers' salaries? Speaking from memory, the same as the tellers', from £150 to £250.

2483. And should any vacancies occur in the higher offices in the bank, of course they are filled by meritorious men, whose capacity has been proved and well known? Yes, as a rule.

2484. There is no rising by seniority, for instance, beyond the maximum you have mentioned? All things being equal, a senior man would be preferred if competent. In all cases we would prefer to promote a senior from the top of the list, as seniority has very considerable weight.

2485. It is a prize the officers may look forward to if they show capacity? Yes.

2486. *Mr. Storey.*] What do you start the juniors with? It has lately been reduced to £30 a year. It used to be £40.

2487. And the age? Not lower than 16.

2488. They start at £30; do they go up? We have a scale of promotion, and annual increments are given to officers if they are found capable and deserving in every way. I think the salary of a junior goes to £100 by annual increments.

2489. Extending over how many years? I think about five years; but I should like to refresh my memory as to that, because it has been altered lately.

2490. From £30 to £100 in five years, and after that? It depends upon the merit of officers as to whether they can fill the posts.

2491. Tellers and ledger-keepers reaching the maximum of £250, as a rule, what length of time will they be in the service of the bank before they reach that sum? I suppose about ten years.

2492. They would have had to show themselves smart business men? Certainly.

2493. The ordinary salary of branch managers is about what? It entirely depends on the amount of business done. They may get from £250 a year up to £500 or £600.

2494. I suppose a man getting £600 has been in the service for some considerable time—fifteen or twenty years? Fully; over twenty years in most cases.

2495. *President.*] They would have residence, lighting, and fuel? Yes; they have perquisites.

2496. *Mr. Robertson.*] What is the salary generally paid to inspectors? I am afraid I could hardly answer that. It is only known to the head office, and I have not been connected with that for a great many years. I should think about £800 a year.

2497. *Mr. Humphery.*] An inspector receiving a salary as high as £800, would, I presume, have charge of a great number of the branches? Yes.

2498. How many inspectors have you for New South Wales? There is one man in the head office who attends to the New South Wales branches almost entirely.

2499. How many branches? There are twenty-two in New South Wales.

2500. These branches are spread throughout the Colony? Yes.

2501. With regard to Queensland, how many branches have you there? In Queensland there are nine.

2502. How many inspectors? There is one inspector at the head office that attends to the Queensland branches. The inspectors are all attached to the head office staff.

W. Lees, Esq. 2503. In Melbourne? Yes.

2504. Have you not an inspector attached to the Sydney office? No.

8 Jan., 1895. 2505. The inspector you refer to as having the supervision of the whole of the New South Wales branches is attached to the head office? Yes; he is a secretary for the general manager to look after the New South Wales branches. He lays before the general manager all the returns, and makes statistics from them. He has no authority over the branches except through the general manager.

2506. Have you any method of classification in your bank; that is to say, have you a certain number of clerks at a salary that is fixed for the work to be done by clerks of that class? There is no absolute classification. We very often have a man on a salary much too high for the work, simply because he has been a long time in the service, and has done something or other which has necessitated his return to the head office, but the bank has not reduced his salary in consequence. There is a sort of rough classification without any actual system, but it suits the occasion.

2507. Can you explain it in any way that may assist us? Well, we think for the ordinary run of tellers £200 a year is a fair and proper salary; for ledger-keepers £170 to £200 is sufficient to pay for the work they have to do; and £200 a year is considered the maximum for general clerks—that is for men who only make out returns and keep the detail books of the office. But there is no rule laid down for the purpose.

2508. *Mr. Storey.*] The only ones who really look forward to and are almost entitled to annual increments are the youngsters? Yes; until they reach a certain salary.

2509. *President.*] We find in our inquiries that in some of the banks where the cheques are initialled by the ledger-keeper in the first instance and approved by him, supposing there were a forgery pretty well executed that passed the discovery of that officer, the teller is also responsible for the detection of the forgery, and is held equally liable with the ledger-keeper in case of the payment of the forged cheque; but in your bank your teller is not responsible after the ledger-keeper initials? If a man had been a certain length of time, say, in Sydney, and we considered he ought to know the signatures, and if the case were a gross one and the ledger-keeper had passed what was palpably a forgery, very likely the teller would be made responsible if he paid the cheque. But as a general rule it is understood that the passing of the cheque by the ledger-keeper frees the teller from responsibility.

2510. If there were a very well-executed forgery, the teller would be exonerated from blame? He would be exonerated.

2511. About the guarantee fund. I don't know that I understood your reply to the question I put about that. Did you say the guarantee fund is in connection with the superannuation fund? They are joined together. They are kept in one sum in the bank's books.

2512. But the guarantee fund, that is to say, the payment of a loss would be the first claim upon that? Yes.

2513. Irrespective of the superannuation section altogether? Yes, there is a clause in the rules that if defalcations occur which charge the guarantee fund with more than a certain amount in any one year it is possible for the trustees to make a call on the officers in addition to their ordinary contribution in order to make up the deficiency, but the amount of the fund is so large that there is no likelihood that any such thing would occur.

2514. When a clerk retires what ratio of pension does he get in comparison with the salary he has been receiving—50 or 60 per cent. of his salary? It runs up to three-fourths.

2515. But it is variable? It is variable according to the number of years' service. It goes by fortieths, according to the number of years a man has been contributing to the fund. If he had been contributing twenty years he would get twenty fortieths of his average salary, that is 50 per cent.

2516. *Mr. Humphery.*] In the event of the death of a clerk who has been a contributor to the fund for a considerable period is any provision made for the widow? He would be treated as having retired at the day of his death, and his widow would get the pension for five years that he would have been entitled to had he retired at the day of his death.

2517. *President.*] I think it is as satisfactory a superannuation arrangement as we have heard of? I think it is very liberal, it is the first established in the Colonies.

2518. It must be a great comfort to the officers? Yes.

2519. *Mr. Storey.*] Was it subsidised by the bank? Yes, very liberally by the Board, both in its inception and since.

2520. Has it been based upon any actuarial investigation? Yes, every five years it is investigated.

2521. *President.*] And found it to be satisfactory? Yes.

2522. *Mr. Humphery.*] Have you any fixed rule when calculating the retiring pension? I cannot say from memory; it is calculated on the average salary for the last twelve, fourteen, sixteen, eighteen, or twenty years, according to certain circumstances that arose when the person joined the fund, according to what his salary was when he became a member.

2523. What would be the shortest period for which the average would be taken? Twelve years. Our fund has been very much swollen by men leaving the service and joining other banks, when all the sums paid in by them were forfeited according to our rules.

2524. And in case of dismissals? Yes, the same with dismissals as resignations. A great many of our senior men since the fund was established have gone over to other Banks, or have left the service for their own private reasons, and in all those cases their contributions have lapsed to the fund.

Robert Sands, Esq., stationer, sworn and examined:—

R. Sands, Esq. 2525. You have a great many employés—what do they number? About 200.

2526. Have you divided them into sections? I have all sorts of departments.

8 Jan., 1895. 2527. You have a clerical staff, I suppose? I have a clerical staff and salesmen, travellers, artists, rulers, rubber-stamp manufacturers, lithographers, cigarette-box manufacturers, binders, compositors, and machinists.

2528. How many are there on the clerical staff? Seven.

2529. What is the aggregate salary you pay these seven? I have not that information with me.

2530. The head man, for instance? £350 a year, and then say four others at about £4 10s. a week each, and two juniors at 30s. and 15s. a week respectively. A junior starts at 10s., and after the first year I give him a rise.

2531.

2531. What is the most important department in your business? The one in which I pay most salaries is the letter-press department. If you take the litho. department, I pay my foreman £4 10s. a week. R. Sands, Esq.
2532. *Mr. Storey.*] Would that be similar to the photo-lithography, photography, drafting, and photo-mechanical branch at the Government Printing Office? No; my man is a foreman of lithographic printing. He takes the work as it comes from the artist's hands, puts it on the stone, and takes absolute charge of it from the time he gets the artist's proof till it is brought out a finished job. He is a specialist, but he is a lithographer pure and simple. 8 Jan., 1895.
2533. *President.*] He does not prepare the stones? Yes, he prepares all the stones, and puts down every transfer, whether it is a photo-lithographic transfer, a process transfer, or whether it comes direct from the plate. He prepares every stone as it comes from the artist's hands, whether it has one or twenty colours on it.
2534. Then he is an artist? I do not know what you call an artist; he is a lithographer.
2535. He is the head of that department? Yes.
2536. How many are in it? Twenty-two, including boys.
2537. And the scale of wages I suppose runs down? It goes from the foreman at £4 10s. down to £2 5s.
2538. And the boys? There is an apprentice getting 25s., and the others get what they are worth, from 12s. 6d. to 10s. That is only the litho. department.
2539. *Mr. Storey.*] In the clerical and account branch, what does the chief clerk get? £350.
2540. What does the accountant have? That is my book-keeper.
2541. The receiving and sales clerk, have you such an officer? I don't think I have.
2542. Well, clerks in the clerical department altogether? There are two at £3 10s., and another at £2.
2543. Printing, bookbinding, and publishing, what does the overseer get? My overseer gets at the present time £3 10s. a week, that is in the letter-press department.
2544. Have you such an officer as foreman of the bookbinding branch? I have.
2545. What does he get? £4 a week.
2546. What would the foreman of the machine branch get; I mean the printing, bookbinding, and publishing. I am using the titles of the officers in the Government Printing Department? £3 15s. is the salary of the head of the letter-press printing department. He really gets a bigger salary than his foreman does at the present time.
2547. Clerk in charge of the publishing branch;—is there such a person in your establishment? I have not any publishing branch.
2548. What would such men as these get—compositors, machinists, pressmen, bookbinders? £2 12s. a week as a minimum.
2549. Such men as these—improvers, apprentices, folders, and sewers? That goes in with the girls' department, I think; some of the apprentices start at 7s. 6d. per week, and finish at 30s. The forewoman of the girls gets, I think, £2 a week, and other girls get from 25s. to 10s.
2550. How many people do you employ altogether? About a couple of hundred.
2551. I mean all told? Yes; men, boys, and girls.
2552. There are 604 in the Government Office; your establishment is not so big I suppose? No; it is not so big.
2553. You have not in a lump sum your annual expenditure for salaries, I suppose, including wages to compositors, printers, and everyone? I think it is about £20,000 a year as near as possible. It was more, but I think it is about that now.
2554. In the Government Printing Office there is a foreman of the electro-stereo branch;—have you any such man? No; I get all that sort of work done outside.
2555. Could the greater part of the work done at the Government Printing Office be done by tender? I am perfectly certain it could be, and infinitely cheaper.
2556. The quantity of the work done by the Government Printing Office is very extensive, and the quality very good? The quantity may be very extensive.
2557. Could an establishment like yours or others always have in stock the material and goods required in the Government Printing Office? If I could do £50,000 worth in a year I think if I got a Government contract I could do £100,000 worth. If I had the Government contract I don't think I would have any difficulty in keeping all the stocks wanted.
2558. Have you any idea of the value of the stocks kept by Government? I have not the faintest; I should think it must be gigantic.
2559. Would £20,000 worth of stock be sufficient? It would be sufficient.
2560. *President.*] That would be of every description? Yes; from thread to paper and railway tickets. Though as to railway tickets that is one thing I do not know anything at all about, but anybody would have to get a special plant laid down for them. That is nothing, if I got the Government contract I would provide the plant.
2561. That is for railway tickets and postage stamps? Everything. There is nothing in what they are doing that anybody else could not do; there is no mystery about it.
2562. In your opinion the Government could so arrange their tenders that the whole of the work of the Government Printing Office could be done outside? Yes; but I think a good deal of the work of the Government Printer should not be done outside. It is private work that really belongs to the Government; for instance, private Bills, and though it could be done outside, it would be at great expense and risk. But account books, telegraph forms, and other work that is being continually done by the Government could be done under contract.
2563. There would still have to be a Government Printing Office then? I think so.
2564. *Mr. Robertson.*] You employ in your business about 200 persons? Yes.
2565. How many overseers have you? There is one overseer.
2566. Have you any that would occupy the position say of sub-overseer? Yes, the foreman of the artists would take the position of sub-overseer, and the man who is getting £3 15s. and is in charge of the rubber stamps and all sorts of ornaments is a sub-overseer.
2567. Of how many? He has two boys at £1 per week, and another boy at 10s. In the lithographic department Mr. Hands gets £4 10s. a week; he is a sub-overseer or foreman; but then there is a sub-foreman for the machine-room, in the same trade, who gets £3 5s.
2568. Is £3 5s. the general trade salary of these men? No, I pay £3 5s. to my best lithographic machinist.
2569. Three pounds five shillings is a good salary? Yes, I know he is the best machinist in Sydney, and I suppose if he were not satisfied he would not stay. 2570.

- R. Sands, Esq.
8 Jan., 1895.
2570. Have you an officer that would correspond to the storekeeper in the Government Printing Office, who would look after the stock of paper? I have.
2571. What remuneration does he get? £3 10s. a week.
2572. Then you have a man who takes charge of the stock of paper? Yes, and who indents for me. I pay him £5 a week.
2573. Has he any assistants to help him? Yes; he has one man at £3 10s., and a boy,
2574. What stock of paper would be kept by these three, say at any one time? I should say about £7,000 worth, that is of stationery, pens, ink, paper and all sorts. Our stock is a very different thing from that of the Government Printing Office, because we have all sorts of things.
2575. It is a more varied stock? Oh, yes.
2576. How much do you pay your readers? £3 10s. a week.
2577. Do you pay up to £3 15s.? Yes. It is one of the most difficult things in the printing business to get a good reader. Anyone who has a good reader would not let him go for any money.
2578. Would you give more than £3 15s.? I don't know that I would stop at much if I got a good one in order to keep him, but I would not give more than £4 a week.
2579. What is a fair salary to pay to an engineer? I know we pay Mr. Toyer, the engineer of the *Daily Telegraph*, for looking after the machines there, £6 10s. a week, and he has an assistant at about £3 a week, and other men also to help. At the *Daily Telegraph* the machines are very fast running, and run under peculiar conditions at all hours of the night. I know the Government Printer has very nice machines and wants good men to look after them. Machinists range from £4 down to 25s., and then there are boys. If you get a man like Mr. Toyer he is always worth £6 10s. a week, and I suppose they have a good man at the Government Printing Office.
2580. *Mr. Humphery.*] How does the cost of work turned out by the linotype process compare with the old method? I think there is an absolute saving in the proportion of 6d. to 1s. 2d. to 1s. 3d. a thousand.
2581. That is to say in 15d. you would save 9d. a thousand? Yes.
2582. That would be a saving of 60 per cent.? Yes. We pay 1s. 1d. a thousand to compositors for ordinary newspaper work, for machine work we pay about 3d. a thousand, but on top of the 3d. a thousand is the sinking fund for the machinery, the wear and tear of the machinery, and the interest on the machinery, so you do not save as much as appears on the face of it.
2583. Would there be a saving of 60 per cent., after making every provision, including interest on the cost of machinery? Yes; that is to say, comparing the interest and the cost by setting at 1s. 1d., and the interest on machines and the setting at 3d., there is a saving of 60 per cent. on the transaction in favour of the machines for the same quantity of stuff that is set. There is an absolute net saving of 60 per cent.
2584. *Mr. Storey.*] What is the cost of the machines? Our twelve machines at the *Daily Telegraph* cost £8,000.
2585. How long do the machines last? I do not know any reason why they should not keep on going as long as they have a competent engineer to look after them. It is just the same as with a watch. How long will a watch last?

James Henderson, Esq., Assistant Manager and Inspector of the City Bank of Sydney, sworn and examined:—

- J. Henderson, Esq.
8 Jan., 1895.
2586. *President.*] Our object is to ascertain whether we can suggest means for reducing the expenditure in Government departments without sacrificing efficiency. To that end we wish to ascertain the salaries paid in financial institutions, such as yours, and compare them with the sums paid by Government. You have branches throughout New South Wales, but in no other Colony, I believe? We are entirely a New South Wales institution.
2587. How many officers have you altogether, from the general manager in Sydney and all the other managers down to the lowest clerk, leaving out messengers? I think there are about eighty-six, all told.
2588. We do not want to individualise salaries, but we should like you to tell us the average, beginning at the very highest officer down to the lowest? Our average is somewhat low, as we have a great many boys in the place. Excluding the general manager, it is £152.
2589. I should like you to include him? It is £167 per man, including him.
2590. At what age do your juniors come in? At about 17 or 18.
2591. Do you put them on the staff at once? No; they are usually three or six months on probation.
2592. From what salary? We give them a salary of £25 a year. It used to be £40 some years ago, but in these times of retrenchment it is £25.
2593. By what increment do they progress, and until when? There is no regular rule. It depends entirely on their ability, and on their luck in some cases. At one time we looked forward to £25 a year pretty regularly, but those days have gone. If an officer is of exceptional ability he will get on much more readily.
2594. What is the minimum and maximum salary paid to ledger-keepers? I think a fair average would be from £150, say, to £225.
2595. Are your cheques shown to the ledger-keeper for initialling before they can be paid? Yes.
2596. Is the ledger-keeper exclusively responsible for the genuineness of the signature? Yes. Of course, in a case of doubt he would refer as to the signature. If he does make a mistake, and it is a very patent one, we hold him entirely responsible.
2597. What is the minimum and the maximum salary the tellers receive? I think a fair salary for a paying teller would be from £300 as a minimum to probably £500. It is a responsible position, as he has charge sometimes of £30,000 in cash, and is paid accordingly.
2598. When he pays a cheque which has the initials of the ledger-keeper is he held responsible in any measure for the genuineness of the signature? He would be if it were anything he ought to have known about, or if it were a well-known account. The ledger-keeper and the teller would be both held responsible. The teller would not be entirely void of responsibility, as he is not supposed to shut his eyes and pay a cheque simply because it is initialled by the ledger-keeper. He must exercise his own common sense.
2599. The ledger-keeper is primarily responsible? Yes.
2600. You have inspectors of the country and suburban branches? Yes.

2601. When they travel on inspectorial duty what is the allowance? Our inspectors' allowance is 15s. a day. Of course there would be no allowance in the case of a suburban branch. You are not supposed to make any profit out of travelling. We do not profess to cover all the expenses; it is only supposed that a man will not be out of pocket. J. Henderson, Esq.
8 Jan., 1895.

2602. That allowance is exclusive of railway fares? Yes.

2603. The inspectors, of course, are men of considerable experience in the bank. What is the minimum and maximum salary paid to them? It is very difficult to say, as our staff is small. Really I am the only inspector. The branch accountant does nearly all the inspecting in our place.

2604. Have you a superannuation fund or a guarantee fund? We have a guarantee fund but not a superannuation fund. The guarantee fund might eventually merge into something of that kind, but it has only been recently established. Up to the present it is somewhat limited.

2605. Has the bank given a sum to found it? Yes.

2606. What is the ratio of contribution to the salary? Officers with salaries under £200 are to be guaranteed for £500; from £200 to £300, £750; between £300 and £500, £1,000; between £500 and £800, £1,500; between £800 and £1,200, £2,000; from £1,200 to £1,600, £2,500; £1,600 and over, £3,000; and the rate is $\frac{1}{3}$ per cent.

2607. Upon the salary? Not upon the salary; upon the amount for which they are guaranteed. If you are guaranteed for £1,000 you pay $\frac{1}{3}$ per cent. on the £1,000.

2608. The fund is in a satisfactory condition? Very; we have never had any loss as far as I remember. Of course, being a small establishment we exercise a considerable amount of supervision.

2609. *Mr. Storey.*] What is the average salary paid to the branch managers? Take the manager at _____, that is a fair example; he gets £325 salary, has an allowance of £25, and has a very good house to live in.

2610. A man in such a position would have been in the service some time? Yes.

2611. What length of service would a man like that have had? He was born in 1855, and he entered in December, 1876. He had some experience before he came to us.

2612. How long have the ledger-keepers been in the service? One man entered in 1888, and is getting £120; a man getting £200 entered in March, 1880; another getting £175 entered in December, 1885.

2613. The only ones who get absolute increases are the boys? Yes, up to, perhaps, £150, or in some cases £200. We revise the salaries up to £200 twice a year, and we make a rule for the present not to touch £200.

2614. How long is it before an officer gets up to £200? It varies; some men rise very rapidly. The manager at _____ entered in January, 1880, at £50, and now he gets £300. If a branch is paying, the manager looks for an increase, but if the branch does not pay you think it is a good excuse to say that when the branch pays the salary will be increased.

THURSDAY, 10 JANUARY, 1895.

Present:—

Hon. F. T. HUMPHERY, M.L.C.,

J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

William Henry Hoskings, Esq., of the firm of Messrs. W. Gardiner & Co., sworn and examined:—

2615. *President.*] It will help us considerably in our inquiry if we can ascertain from you the cost of the clerical part of your establishment. We do not want you to tell us the individual salaries, but you might tell us how many clerks you employ, and what the average pay is? I take it that what you want is the average salaries of the ledger-keepers. W. H. Hoskings, Esq.
10 Jan., 1895.

2616. Yes, that would do? We have four ledger-keepers, and the salaries range from £10 to £24 per month, or (say) from £120 to £300 a year.

2617. And their duties, of course, are? Entirely confined to the ledgers.

2618. And they are pretty stiff sometimes? You know what it is in a commercial house. For instance, some of our ledger-keepers will work back in the office till 10 o'clock at night.

2619. And they have no overtime? The only thing we allow them is 1s. 6d. to 2s. 6d. for tea-money. Then we have three merchandise clerks, whose salaries range from £120 to £200 per annum.

2620. You might tell us a little exactly what the duties of the merchandise clerks are? They discharge all obligations in connection with the invoice of goods. They enter up in books specially provided for them all the different invoices.

2621. Debiting the purchases? Yes; they check the invoices as to the casing, insurance, and the additions. They enter into departmental books for the various departments, and attend to the receiving and checking of goods.

2622. I suppose part of their duty would be to keep a stock-book of the special goods that are disposed of? That is one of the duties of the merchandise clerks. There are three clerks, and each has his special duty. The work is divided between the three of them.

2623. And, of course, they have to enter through what you would call the books proper to the different customers? No, that is a different branch altogether. The entering clerks enter the goods in a journal and make out the invoices as well for the customers.

2624. Showing the money value? Yes; and then we have what they call a journalising clerk, who simply posts up the total amounts to our respective customers, and they are journalised ready for the ledgers. That is a distinct duty in itself.

2625. So the first book in which goods are entered is a fully detailed account of the sales, and the others are what you call lumped? The others have to do with total amounts.

2626. Is the journalising clerk paid a good salary? His salary is about £12 per month.

2627. Of course there is no superabundance of servants in the establishment—there is no one looking about for a job? No; they have always quite enough to do; in fact sometimes they think they have a little too much to do. You know, Mr. Littlejohn, what it is in the commercial world better than I do.

Then

W. H. Hoskings, Esq.
10 Jan., 1895.

Then there are our shorthand and typewriters, of whom we have two. The salaries are £5 and £8 per month. Of course we have a confidential man who supervises the office work. His salary is about £500 per annum. Then we have a shipping clerk and two assistants, who discharge all obligations in connection with the passing of Custom entries, and as each entry has to be made out threefold there is plenty to do in that department.

2628. You are your own Custom-house agents? Yes; we pass our own entries with these clerks. Their salaries are from £120 to £220 per annum.

2629. Of course, the duties of these Custom-house clerks are certainly not sinecures? They have plenty to do, I assure you. They work very hard and have not a spare moment. They take home work about four nights in each week.

2630. To come back to the ledger-keepers. You have an account for every one of your customers? Yes, and every item has to be posted. A man may come in and buy every day in the month with the exception of Sunday, and so may have more than twenty entries during the month. We have often twenty to sixty entries to a man in a month. The statements have to be made out in a form showing every item; of course the detailed information goes with the invoices. The statement may represent twenty to sixty lines, and it is all made out by one of the ledger-keepers.

2631. Does he make out the promissory note forms? They are made out by one of the juniors. The statements pass through my hands, and I supervise them. I think that takes in pretty well all the hands in the office. Of course we have eighteen departments in the warehouse, with a different class of goods in each department, and every department is managed by a special manager with juniors under him.

2632. *Mr. Storey.*] Can you tell us about the total number of hands employed in your establishment? Do you mean in the warehouse proper?

2633. Altogether, in the clerical department and in the warehouse and the office, but not labouring men? The total number is about ninety.

2634. Could you give us the average salary of these ninety men? Yes, £130 per annum.

2635. What length of time have most of the men who are holding fairly important positions been in your service? Many of the principal men in our employ have been with us over twenty years.

2636. When you take juniors in, what salary do they get? They get nothing for the first twelve months, but of course we reserve to ourselves the right to give them a bonus at the end of the year. There are no special conditions in respect to that bonus; it is left entirely to ourselves. The juniors come into the service on the distinct understanding that they work twelve months without remuneration.

2637. When a young lad in your service has proved an efficient, smart, steady young fellow, what salary would you give him at the end of five years? That is not an easy question to answer. If a boy displays good ability, and is capable of taking up the position of a salesman in a department, he would get about £10 per month after five years' service, or he might get from £12 to £15 per month. You ask a question now that is very hard to answer, because some men are keen salesmen—they will sell goods where another could not sell. Much would depend on a man's ability as a salesman.

2638. What is about the fair average salary of the eighteen heads of the departments? I can answer that question in a general way. £18 per month.

2639. And the juniors? £6 15s. per month.

2640. What are the ordinary office hours? Nine till 1; an hour for lunch; and 2 till 5. On Saturdays, 9 till 12. Of course that does not apply to the clerks, because if they have special work to do they have to get through with it. If the special ledger-keeper has special work to do, he will remain to do it.

2641. To make a comparison with one of the Government departments. You have packers, of course;—what salary do they get? From 42s. to 50s. per week.

2642. And carters? We are not responsible for carters; we do all that work by contract. We find it much cheaper to put our work into the hands of a firm in the city, such as Sanders & Co. or Whitehead & Co.

2643. You employ a certain number of labourers in the warehouse;—what is their pay? We only employ packers.

2644. They would not come under the heading of labourers? No; we have no labourers in the warehouse; they are all supposed to be packers.

2645. Do you mind answering this: What is the maximum salary paid in your house for clerical work? £500 a year.

2646. What length of service has that man had? Twenty-four years. He supervises the office work, but has no responsibility. The next salary is £350, and the lowest is 10s. a week.

2647. *Mr. Humphery.*] What is the turnover in your business? About £400,000; and the total amount paid in salaries is £13,500.

Alfred William Meeks, Esq., of the firm of Messrs. Gibbs, Bright, & Company, sworn and examined:—

A. W. Meeks,
Esq.
10 Jan., 1895.

2648. *President.*] You divide your establishment, I suppose, in sections; there are so many clerical offices, pure and simple—clerical in the mercantile department, and clerical in the shipping department—and there are others, I suppose, salesmen pure and simple. We do not want you to individualise anybody, but can you tell us the average salary you pay in each of these sections. You might begin with the mercantile clerical section? Taking the heads of the department first?

2649. From the head of the department to the humblest clerk in it, giving us the average or the maximum and the minimum? I pay those who have special knowledge, or are able to conduct the department, probably higher than those in the accountancy department—that is to say, the salesmen or the head of the shipping branch receive higher salaries than the officers in the purely book-keeping department. We consider the book-keeping department is one that a man with any ordinary knowledge can easily manage; in fact, it does not require much ability to become an ordinary clerk or book-keeper. When a man becomes a head, and occupies the position of accountant, he would probably get as much as, but not more than, what is paid to the principal salesman in my business. The principle which I am adopting, more particularly within the last few years, is to endeavour to pay the heads of the departments what I consider well, and the subordinates have a very much lower salary. There is a great drop from the first salary to the second. In my sales branches I pay from £400 to £425, and then there is a drop to something under £200, and so on down to £25. The practice adopted in regard to the boys is to start them at £20 or £25 a year and let them work up by gradual increases.

2650.

A. W. Meeks,
Esq.

10 Jan., 1895.

2650. According to merit? According to merit. Length of service, so far as my office goes, I do not regard as a chief item.
2651. It is not a stepping stone? No; I have in the office at the present time lads who are receiving higher salaries than others who have been there a longer time. They have shown exceptional abilities, and instead of keeping them in the message or postal department I transfer them into a department where they may be of more service and will rise more rapidly. I may say that in one of the neighbouring colonies our leading shipping clerk for many years was one who stepped over a very large number of clerks, because he showed abilities the others did not possess. In the shipping branch I have a confidential manager who holds a power of promotion, but the arrangement with him as regards remuneration is on a different basis altogether. Up to a certain period he received a much higher salary than those of the other department, but of course he has been there a very long time and possesses unusual abilities.
2652. What would the salary of an ordinary entry or invoice clerk or ledger-keeper be? An ordinary entry clerk would get about £75 or £80 a year.
2653. And the ledger-keeper? From £100 to £200 a year. One possessing special qualifications who could take the place of the chief book-keeper, if he were absent, would receive probably over £200.
2654. You could tell us roughly, I suppose, the total number of your staff? Off hand I could not say, I think it is about thirty; there may be fewer now. At times we economise in this way: When a clerk receiving £300 or £400 a year obtains some other position better for himself, the lower ones work up gradually to the salary, and are not immediately put into the position at the high salary. I think it is a mistake to immediately increase a man who is getting £200 to £400 upon promotion, because his predecessor got £400. The work which a man does must be valued, and not the man himself, however good he may be; and a man should not be placed immediately at the maximum of what his work warrants. This system is one which I think should obtain in the Government service if I may say so. A third-class clerk, for example, in a Government department or a mercantile firm does work which is only worth a certain sum, and however good or valuable he may be, there is no object in increasing his salary so long as he remains at that work; when he has higher class work then he should rise gradually to the maximum of pay for that work.
2655. *Mr. Storey.*] What is the number of the specific departments in your business? We have six departments practically.
2656. What is the maximum and minimum salary of these departments, also the average salary of the whole of your staff? Excluding the confidential manager, £425 maximum, £30 minimum; average (say) under £150 per annum each. But I may say that the tendency now-a-days is to reduce expenses rather than to increase them.
2657. Have you a man called the general head of the whole establishment? The head of my shipping department is the confidential man, and is the head of the whole office. In an ordinary business like ours, putting aside the controlling chief clerk or confidential man, the highest salary at all likely to be paid would be £500, but only after years of working up.
2658. How long? I should think a boy going into the office would be fifteen or twenty years working up to that.
2659. How long usually would it take a youngster to get £100 a year? He would not get £100 a year in my office before four or five years.
2660. And before he got £200? Unless vacancies occur he would have to remain at £150 or £160.
2661. Possibly eight or ten years? Quite; eight or nine years at least.
2662. *President.*] And when he reached £100, the amount of increment, and the times when the additions were given, would depend on circumstances? Undoubtedly.
2663. *Mr. Storey.*] The only ones who look forward to annual increases are the boys? Yes; the boys are the only ones who can look forward to annual increases, and I never allow a year to go without increasing their salary by a certain amount; but when they get £80 a year I do not feel myself called upon to increase their salaries, unless vacancies occur enabling me to grant an increase.
2664. You have a storekeeper; what salary would he get? The late foreman in charge of the store department got £200 a year, but the present one gets about £150. Certain men have a special knowledge in regard to certain goods; this is really technical knowledge. They can handle certain goods, and tell my salesman what he requires.
2665. What do you pay the labourers;—you have a lot of permanent hands, I suppose? We have three permanent hands now. We pay £2 or £2.2s. a week to a storeman, but I know from my own knowledge in connection with the Bonded Stores Company that wages at the wharf stores have been reduced from 45s. down to 36s. and 40s.
2666. £100 a year would be the outside? Yes, of course I look upon £100 a year now as good as £125 some time ago, probably better.
2667. *Mr. Humphery.*] In connection with the store department have you any clerical staff? Not now, the work is done in the office. I used to have a youth in charge of the store, a clerk practically, who got about £80 a year, I think.
2668. About what value of goods annually would pass through the hands of your storekeeper? I should think over £100,000 worth.
2669. Does your storekeeper keep any books? Yes, he keeps a book to show the receipts and delivery through his store.
2670. Under whose immediate control is your storekeeper? He is under the salesman, but the control is more nominal than real. If he wants anything done he generally does it through the sales-room.
2671. What staff have you in the sales department? About ten altogether.
2672. What would the annual salaries amount to approximately? Average, about £160. The average is larger owing to the division into sections, the heads of which have special knowledge. My sales-room is divided into three sections, each of which is under separate control. I should like to say in regard to the storekeeper that he is hardly in the same position as a comptroller of stores would be.
2673. But your chief salesmen would be? Oh, yes; our head salesman is thoroughly competent to control all the stores that pass through any Government department. There is one matter in regard to the Government department I would refer to. I have an opinion that the officers generally are too much shut up in coops, there are too many small rooms in the buildings. I believe a public office, mercantile or otherwise, should consist, as much as possible, of large rooms divided off perhaps into sections, but not absolutely into close rooms, so that the head of the department or the principal passing through the main office as through

A. W. Meeks, Esq.
10 Jan., 1895.

through the long room of the Custom-house, may see the whole business at a glance. I know some people make this out as being detrimental to the work, but we do not find it so in our own office where bookkeepers are at work and frequently have intricate calculations to go into. They get quite used to people passing through the office; besides the public have no difficulty in ascertaining from the various counters as they pass along what they want. If you go into a Government department or any other public institution you have to go into a small room, and are then ushered into another small room which you learn is perhaps the wrong room, and so the loss of time is very great. I am strongly of opinion that the open large room should be adopted in preference to the small cupboards. My firm's offices were divided into small cribs, but I opened them out later on.

2674. *President.*] You have no overtime payment? No.

2675. When the clerks have work to do they have to finish it? Yes; in fact I have abolished tea money except under exceptional circumstances. I have in some cases made special allowances to some of the clerks, but rather than give them so much per evening I give them so much per annum as compensation, so as not to allow the system of overtime to grow.

Robert John Lukey, Esq., Acting Secretary of the Australian Gas-light Company, sworn and examined:—

R. J. Lukey, Esq.
10 Jan., 1895.

2676. *President.*] You can tell us the number you have in your office as clerks? Seventy-eight, including the branches.

2677. You have different branches throughout Sydney? We have two in Sydney, one at Parramatta, one at Ryde. Seventy-eight is the number of the whole of the clerical staff, including Mr. Johnson, the secretary.

2678. You can tell us the nature of the duties of the seventy-eight clerks? There is the secretary and the assistant secretary to begin with. We have no accountant at present, as our accountant died some year or two ago, but we have an acting accountant. Then there is a chief clerk, a residual clerk, one cashier, two assistant cashiers, one bookkeeper, one counter clerk, one check clerk, and fifteen whom we term ordinary rental-keepers. Sydney and suburbs are divided into fifteen districts, and there is a ledger for each district. That is in addition to Parramatta and Ryde, they being outside the boundary of Sydney and suburbs. We have a Government rental-keeper set apart entirely for the Government work. The Municipal accounts are also included in his duties. The Municipal work and the Government work form a large ledger.

2679. The Municipal work is the street lighting? Yes.

2680. How many ledgers have you? Sixteen with the Government,

2681. What is the number of accounts in these ledgers? They average about 2,600.

2682. Are they individual accounts? There would be about 2,300 consumers and 2,600 accounts. Every meter has an account of itself and is kept accordingly. We do not give a ledger page to each account, but a line, and a few lines are left for removals and so on.

2683. But you keep the account under the names of the consumers? Yes.

2684. *Mr. Storey.*] What is the total number of accounts in all the ledgers? We have about 33,000 consumers and 38,000 accounts. That will give roughly about 2,300 consumers and 2,600 accounts for each ledger.

2685. Does one man keep a ledger? Yes, and there are sixteen ledgers, including the Government one.

2686. *President.*] How often is the gas consumption posted? We divide the accounts into daily accounts; that is, so many quarterly accounts are becoming due every day—forty to each ledger. There are 600 quarterly accounts falling due every day in addition to what we call removals; there are a few extra in consequence of that.

2687. This division of the accounts into daily maturing accounts, if we may so call it, has every convenience? Yes; it is a new idea, but a good one.

2688. It spreads the work of collecting over the whole year instead of letting it come in an enormous wave at a particular period? Quite so.

2689. Your hours of duty in the office are? From 9 to 5.

2690. Is it found the officers can do all their work in that time without working overtime? If there is overtime there is no pay for it.

2691. Tea money? Tea money is allowed at the end of each half-year for balancing only; but the day's work must be done in the day. We cannot allow a day's work to go into the next day. The cashier's cash-books are for alternate days, so that when the books are sent down from the branches to the head office they must be posted next day and returned to their various positions again.

2692. You have alternate books? Yes.

2693. Can you tell us the maximum and minimum salary of your clerks? Yes. The rental keepers range from £120 to £220. There is no fixture for the amount of salary, because the directors consider the salaries every year, and if they see fit to make an addition they do so.

2694. Have you a separate set of clerks who make out the consumption accounts? That is done by the rental keepers. Of course a gas company's accounts are different from ordinary accounts.

2695. To enable them to make out the rental accounts you have a staff of examiners of meters? Yes; they are called meter-readers.

2696. How many are there of them? Twenty-five altogether—that is, there are seventeen—one for each rental keeper, and the others are called special readers, to look after the removals between the quarters.

2697. What is about the average pay of the meter-readers? They receive from £2 2s. to £2 14s. per week.

2698. I suppose that occupation is not very arduous? No, but they are always at it.

2699. There is a good deal of stooping and getting into awkward corners? Yes.

2700. But they must be accurate men at the reading? Yes.

2701. *Mr. Storey.*] What is the maximum salary paid in the office; I do not mean your own or the manager's? £450.

2702. How long has that gentleman been in the service? I should think twenty years, roughly speaking.

2703. What is the next salary to his in amount? The cashier at £375.

2704. How long has he been there? He has been perhaps sixteen years.

2705. What is the income of the Gas Company? Roughly about £350,000.

2706.

R. J. Lukey,
Esq.
10 Jan., 1895.

2706. Do you remember the amount of salaries paid for clerical work, including the clerical work in the engineers' department? About £13,000, including the engineers' clerks.
2707. What do you pay your collectors? From £150 to £250. £250 is the maximum.
2708. Do these rental men and collecting men get annual increases by right, or is it only as the directors see fit? As the directors see fit. We give a report every year, which is considered, and recommendations are made. The officers get the increases entirely on merit.
2709. Are clerks charged for any guarantee at all? They pay their 7s. 6d. per £100. They are all guaranteed in the Colonial Mutual Insurance Company.
2710. You have no scheme of pension or anything of that kind? No; it has been mooted once or twice, but nothing has come of it yet.
2711. I think you said there are 38,000 meter accounts opened? As near as I can guess there are 38,000 meter accounts, but there are 33,000 consumers. One consumer may have several meters, and every meter has an account.
2712. How often are those 38,000 accounts sent out? Once a quarter.
2713. That is, four times a year? Four times a year.
2714. *President.*] So that would make 152,000 accounts sent out in a year? Yes.
2715. *Mr. Storey.*] You say the work has to be done every day? Yes, every day, and the ledgers are balanced once a week to see the weekly consumption, and they are balanced again quarterly to ascertain the quarter's consumption. We like to find out every week the quantity of gas consumed, so we balance our ledgers weekly, and finally once a quarter.
2716. *President.*] And I suppose that is tested roughly by the appearance of the gasometers? We can judge what is going out and what the leakage is.
2717. *Mr. Storey.*] Is not the correspondence large? Yes.
2718. Have you any idea of the number of letters received every year? I think we get from eighty to ninety daily.
2719. *President.*] That will be about 24,000 a year? Yes.
2720. *Mr. Storey.*] How much of that correspondence requires written replies to it? A large number would contain cheques to pay accounts. I should think one-third of it would be in connection with the payment of accounts.
2721. That would involve the sending acknowledgment of receipts? Yes; and there would be reports and answers in many cases.
2722. What is the average number of letters you send out? 250 daily, including receipts, notices, and special accounts.
2723. Letters of complaint are not replied to; they are answered personally? Yes.
2724. And this is in addition to telephone messages? Yes.
2725. What would be the number of telephone messages in a day? We reckon about 300 in a day; we consider it takes two junior clerks to attend to the telephone, that is in consequence of having the branches.
2726. You would not receive 300 a day? No, we receive about 150, but there are the replies to them which make about 300 a day.
2727. What do you disburse in wages besides the £13,000 to the clerical staff? Last year about £93,000, including the meter-readers.
2728. What do the boys get when they begin? Twenty-five pounds a year, then a rise of £25 a year till they get £100. Afterwards it is at the discretion of the board to make further rises.
2729. According to merit? Yes.
2730. *Mr. Storey.*] There are very few of the men getting over £220? None of the clerical staff, with the exception of clerks in charge of branches.
2731. And some of the men have been there how many years? The senior collector has been under the company about forty years.
2732. The men are all satisfied with their positions? Oh, yes.
2733. Lots of applications for vacancies? There is no trouble about that.
2734. *President.*] Do you have stated periods for holidays? The officers are allowed a fortnight each year.
2735. Each one is entitled to that? Yes; we like them to have the fortnight, as we think the company benefits by it in the long run.
2736. Do you keep the accounts in alphabetical order? No, they go in streets.
2737. You find that the best plan? Yes, much the best plan.
2738. *Mr. Storey.*] Tell the Commission the system of rendering accounts—some you render monthly and some quarterly? We render large accounts monthly, as many of the larger firms like to have their accounts monthly. Theatre accounts are rendered weekly.
2739. The small shopkeepers, and people you are doubtful about, how often do you render these accounts? Generally quarterly, but we take a deposit for a quarter's gas if we think the people are doubtful.

MONDAY, 14 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Archibald Colquhoun Fraser, Esq., Under Secretary of Justice and Chairman of the Civil Service Board,
sworn and examined:—

2740. *President.*] I notice there are thirteen headings of Service in your Department in the Estimates. The one more particularly under your individual eye is the Department of Justice, on page 94 of the Estimates, and there you have a considerable staff, chiefly of clerks. After your own name comes the chief clerk, with a salary of £605 a year. Could you tell us what his duties are generally? His duties are to take the place of the Under Secretary during his absence, and to see to the details of the administration of the office. 2741.

A. C. Fraser,
Esq.
14 Jan., 1894.

- A. C. Fraser, Esq.
14 Jan., 1895.
2741. When you are present how does he occupy his time? In seeing that the details of the administration of the office are properly carried out, communicating with the clerks, attending to every matter of minor importance, and collecting information before it is submitted to me either to be dealt with or to be submitted to the Minister.
2742. The next one is the accountant? You can see the amount of responsibility which he has by the total amount of the vote, viz., £141,000. He has not only to deal with the accounts of the Ministerial office, but with the accounts of all the sub-departments, excepting that of the Prisons. These are dealt with by him and checked or looked into before they are passed on to the Treasury.
2743. Does he keep sets of books? He does, the lines of which have been laid down by the Treasury. I am not responsible for the way in which he keeps his books. The Treasury is responsible for the system.
2744. Does the Treasury inspect his books periodically? I made a recommendation to the last Civil Service Inquiry Commission that the Treasury inspectors should check the accounts of expenditure as well as of revenue, and I believe they have adopted that recommendation, and that it is to be carried out in future; but for the past there has been no check whatever upon his accounts except what ultimately results from the Treasury or the Audit Office. That check would not operate till after some time had elapsed.
2745. Are the entries in these books receiving and paying? We do not collect revenue in our head department, and have nothing to do with receipts in our sub-departments; the Treasury sees to that.
2746. You merely draw cheques under the vote? Yes; cheques are drawn against accounts advanced by the Treasury.
2747. You have got rather a numerous body of clerks in charge of correspondence records;—what are the duties generally of a clerk who is in charge of the records? To connect all papers referring to the same subject, to take charge of all the papers that have been received in the office, and to give information that may be required as soon as possible on what has been done in a particular matter. That is one of the most important branches in the establishment, because, without an efficient record staff in an office like that of Justice, where everything depends so much on precedent, it would cause a great deal of delay. A complete system of keeping records so as to refer readily and promptly to any matter that crops up is indispensable to the efficient working of this department.
2748. And the chief clerk of the records is a man of considerable standing in the Service? Yes; he is a very excellent officer. His duties are very responsible.
2749. The next clerk to him receives a somewhat smaller salary? Yes.
2750. Are his duties of a general nature? He takes the place of the record clerk in the event of his absence, and I may say that, in my opinion, that branch is not over-manned in any way whatever. They are kept constantly at work, and frequently they stay over hours, and I do not think you could possibly reduce their number without impairing the efficiency of the department.
2751. There are some lower on the scale who are paid at a somewhat less rate? There are only four altogether in the Record Branch—the officer-in-charge and three clerks. It is a small staff. The Corresponding and General Branch is the largest branch in the office.
2752. There are eleven corresponding clerks, besides two temporary clerks; that is, after the clerk-in-charge;—are they writing original letters or are they merely copying instructions given to them? They compose letters for my signature, embodying minutes and verbal instructions. I have taken a great deal of pains to select efficient men for the head office as on the head office depends to a great extent the efficiency of the numerous sub-departments. The staff have to make long and laborious researches into many matters and very voluminous papers are received. These have all to be considered. It is impossible for an Under Secretary to do that himself. I have to relegate it to different clerks who get me the information required on these different matters, and I have brought about a system which was taken exception to, I believe, by the last Civil Service Commission (but the Ministers have since upheld me) of encouraging those men to be, not only copying clerks, but to be as original as they can in their work. I have placed certain men in certain positions, one to deal with licensing matters, which are very intricate, and another to deal with judicial matters, the holding of Courts and so on. Most of the clerks have a particular kind of work detailed off to each of them and the clerk next in charge is trained to take up his duties in his office, so that each of these clerks has an intelligent idea of the work under his eyes.
2753. I see that the date of the appointment of one of these officers in the Correspondence Branch was 1882, has he been in the department since then? Yes, the oldest I think is Mr. Rainsford who was first appointed in 1875.
2754. You do not think there is any room for diminution of numbers? I am quite certain there is not in the Ministerial Branch.
2755. With regard to the salaries, looking at the rate at which so many professional men are paid, I suppose these men have not had professional training as, say, solicitors have had? No.
2756. Do you think there is any room for curtailment in their salaries? I conscientiously do not think there is. I think that some of these men have work to do which, if they had to do outside the service, would bring them in more than they now receive. It is work of a difficult nature.
2757. There are a clerk in charge of the Record Branch and three other clerks? I said already that I did not think it possible to economise there without delaying the business of the office.
2758. In the Account Branch Mr. Greene is the accountant? He is one of the most efficient and careful officers. I should suggest it would be advisable, supposing the present system continues, that the accountant of the Ministerial Branch should be placed in a more independent position than he is. It is impossible for an Under Secretary to go over his work and check it. It would almost take me as much time as it would take the accountant, so that the Under Secretary is very much in the hands of the accountant. I believe that in Victoria the accountant to the Crown Law Offices has to give a large guarantee and is held responsible for the correctness of his computations and other details, and signs the cheques himself, the Under Secretary being only responsible in that he has to see that the payments are made under the proper votes, and that the payments are correct without having any detailed responsibility, and I am quite satisfied that that would be the proper course, because it is absurd to put responsibility on a man which he cannot carry out.
2759. *Mr. Robertson.*] Would not the chief clerk relieve you of the responsibility? He deals directly with the Under Secretary, and has nothing to do with the accounts.
2760. Has he to do with any of the clerks? Yes; with all the other clerks.

2761. Then why not with the accountant? Because I myself could not feel satisfied if anyone else has had to do with the accounts besides myself, and I think that is the same with most of the Ministerial Departments.
2762. You do not think he could undertake the superintendence of the accountant's work? I do not think he could satisfactorily.
2763. *President.*] The accountant's work then does not consist in receiving, but in paying? Entirely.
2764. And you satisfy yourself that the moneys that he pays are placed under the proper vote? I see that the charges have been properly made to the respective votes.
2765. But you do not consider that you have time or opportunity to examine the accounts? Not to properly do so. I am responsible for them. It is not, however, satisfactory, as it is impossible for me to look carefully into the accounts.
2766. You rely to a considerable extent on the inspection of the Treasury? The Treasury have not, since the present accountant's appointment, inspected the accounts.
2767. But you suggested that they should? I believe it is to be done in future. Of course I can always see that the balances at the bank agree with what the books show.
2768. But the details? As the cheques come to me for signature I examine them, I know what the general amounts should be, and I look into the matters as carefully as I can. The Treasury has to be satisfied first of all that I have accounted for one advance before they make a second. The papers go on to the Auditor-General who checks the accounts in detail, but there is no check upon embezzlements, because it would take them six months in the Audit Office to find out that one had been committed. I do not consider that the Audit Office exercises a very great check.
2769. Supposing for argument's sake there was an accountant there who was not very honest, and who drew a cheque in the name of John Brown, for a monthly salary. He might put a batch of cheques before you for signature, and this among them, and you might not be able to detect that there was a fictitious payment among the lot? That is so.
2770. At what time and in what way could this fraudulent cheque be detected? I think it could be detected at the Treasury if a cheque for a salary; if it were a contingent matter it might go on until discovered by the Auditor-General.
2771. Would it be a certain matter of detection then? I think so. The case of the accountant who was in the office when I went there about seven years ago was such a one. I looked through his books, and finding them in a confused condition, reported to the Treasury, an officer from which after examination found that the accountant had been systematically embezzling money. But no one in the Treasury, nor in the Audit Office, nor in the department, had up to that time discovered it. The Auditor-General held me personally responsible for the deficiency and asked me to refund it, putting it as a surcharge. I held that I was in no way responsible, in which view I was supported by the Treasury, and ultimately I was held not to be responsible for it.
2772. Then unless the recommendations that you made are adopted the position is somewhat unpleasant and irregular? I believe the recommendations are to be carried out, but I would like to urge upon the Commission that, if this system of accounts is to go on, the accountant should find a very large guarantee and be held responsible independently of the Under Secretary, except that the latter should be called upon to see that the money is paid under the proper votes. It is useless to throw on any officer a responsibility which he cannot bear.
2773. I see the accountant does find sureties for £500? Yes.
2774. You have temporary clerks in the Corresponding Branch;—are they employed continuously? Yes; they have been three or four years in the Service.
2775. One has been four and another has been three? And they are being trained for their work, and I do not see how I could well do without them.
- 2775½. You have also two temporaries in the Account Branch? Yes.
2776. They are on the same scale as the Account Branch;—are they also necessary? I think we could do with two clerks of a lower grade.
2777. The Account Branch? Yes. These men are, of course, placed there by the Minister. The appointment of these temporary men does not come under the notice of the Civil Service Board in any way. It is a difficult thing sometimes to keep the proper number on the staff.
2778. You have sometimes difficulty in finding work for the youngsters sent to you by the Ministers? I do not think that that difficulty prevails so much in the Ministerial part of the Justice Department. It may prevail to a certain extent throughout the Service.
2779. What is the Emergency Branch? That is one of the most useful offices in the whole department. We have such a large number of offices in the country.
2780. In order that you may know what they are doing you require some officer who will visit and report whether they are doing their work properly, whether any reduction can be made, and who can relieve officers absent through sickness, &c.? We require a certain staff to go up the country to take their places.
2781. But have you no inspectors? The chief emergency officer is an inspector. I may say that I have found his services most valuable as an inspector. We have been able to bring about a large measure of retrenchment through him. It is the only way of doing it by means of a responsible man. We have two or three temporary men who occasionally assist us in that way. If we are hard pressed we have a couple of men whom we could employ at any time.
2782. Are they continually on the move? Yes, they are, with the exception of the head officer who is very often retained in town to deal with urgent or important matters connected with the country offices, proposals for making alterations of any kind. Supposing a place is vacant we would employ him to report as to whether the salary could be reduced, and whether there was any necessity for filling up the position. We therefore find it convenient to keep him very often in town for actual departmental work.
2783. There are a good many heads of branches (thirteen) under your administration. There is the Prothonotary, and the Curator, the Sheriff, and so on, so that you have the administration of all those what we might term sub-heads of Service;—do they report to you, and are they responsible to you for the proper carrying out of their sub-departments? Yes; excepting in those legal offices, such as the Equity office and others. I do not interfere with these officers in carrying out the duties connected with the Administration of Justice, but I do with regard to the general administration; for instance, with regard to the appointment of transfers, increase of salary, leave of absence, and matters of that kind. The Judges deal with matters directly connected with the Administration of Justice by them.
- 2784.

A. C. Fraser,
Esq.
14 Jan., 1895.

- A. C. Fraser, Esq.
14 Jan., 1895.
2784. Do these officers make reports? No, they do not make any.
2785. Then if anything goes wrong you have to find it out? Yes.
2786. Do they tell you? The head of the sub-department is supposed to bring the matter under my notice. The heads of the sub-departments are selected for their efficiency, and would be blamed if anything went wrong. There was a difficulty raised by the Judges with regard to our interference in these matters. The Chief Justice has been very desirous for some time of obtaining complete control over these departments, and a very long correspondence, and a somewhat acrimonious one, took place with regard to that, but it was ultimately settled, and the Chief Justice admitted that the Minister who was responsible for the administration of the votes, and under whom by executive arrangements the control of these departments was placed, should have the control of them, and not the Judges, provided he did not interfere with the Judges in their immediate department. That was a sore point with us and is so still, because it is clear that if the Judges had their own way, and there was no supervision, things would not be in a satisfactory state. The supervision of these officers, through the attitude of the Chief Justice, has been difficult. The matter will, however, be decided, definitely one way or the other, probably by the Cabinet.
2787. Then if there is no report adverse to the sub-heads of service, I suppose you consider that all is going on as it ought to? Yes; excepting that we did hold inquiries into some of these departments occasionally, when we thought there was any reason for it. This received the opposition of the Chief Justice very much indeed, but in one or two cases it has resulted in considerable retrenchment. That has only been done, I think, once since I took office.
2788. There is a Judge in Bankruptcy and a Registrar, under whom there is a staff of ten clerks. If they were short of a supply of officers to carry on the work would they apply to you for more? Yes.
2789. Supposing they were overmanned would they send any intimation to you? I have never known any head of a department to do that except in one or two instances of an unimportant nature in connection with the location of temporary officers.
2790. It strikes the Commission that messengers generally are not only handsomely paid but that the payments in some cases are in excess of what men in that position ought to expect. I see that you have one messenger in the Justice Department at £130, two at £95, and one at £80? The one at £130 is a very old messenger.
2791. That is about £2 10s. a week, is it not? Yes. In addition to his £130 he gets an allowance of quarters amounting to £50. He also has charge of the Attorney-Generals' and Ministers' law libraries, and altogether receives £230 a year.
2792. What might his duties be? He is in charge of the other messengers, and performs the usual duties of a messenger. He is responsible for the safe delivery of all letters, and he is in charge of old records and inquest papers, and he sees that people do not take away papers. This salary was fixed long ago, before I came to the office.
2793. Then we come to District Court Officers, Clerks of Petty Sessions, who are very numerous, Police Magistrates, and so on? The salaries of the Police Magistrates come to very nearly £30,000 a year.
2794. There are about sixty of them. I see that many of them have districts which they visit. With your knowledge of the requirements of the Colony and the various districts which these Magistrates preside over, would it not be possible to condense them very considerably? Yes, and a very large saving might be effected.
2795. Could you give us a return of the number of Magistrates throughout the Colony? Do you mean paid Magistrates?
2796. Yes; I want their individual salaries, the aggregate of their salaries, and the districts which they severally visit. In what way could you suggest alterations or changes by which a large saving in the Petty Sessions Department might be effected? I prepared such a scheme at the request of Mr. R. E. O'Connor, when Minister of Justice in 1893, and introduced it to him with a minute, from which the following is an extract:—
- The system in connection with appointments throughout the country of Police Magistrates and Clerks of Petty Sessions has been hitherto carried out not so much with reference to economy as to the efficiency of the administration of Justice. It would appear to have been thought desirable to have the services of a Police Magistrate available at every Court of Petty Sessions, either by location of one at each place where a court is held, or by the attendance of one upon requisition.
- During Mr. Clarke's tenure of office, as Minister of Justice, he was unfavourable to the system under which officers held the combined positions of Police Magistrate and Clerk of Petty Sessions, and caused to be appointed Clerks of Petty Sessions at a large number of towns where a Police Magistrate was located, and had previously performed the duties of Clerk of Petty Sessions in addition to those of Police Magistrate.
- There are, no doubt, objections to Clerks of Petty Sessions who prepare the preliminary documents upon the *ex parte* statements of persons aggrieved in cases to be brought before the Bench, sitting in judgment upon the same cases as Magistrates, and the question, therefore, is whether the interests of economy should overpower such considerations. If the Minister decides to amalgamate these offices, where possible, it would necessarily involve either the immediate retrenchment of a large number of deserving and long-service officers, or the gradual bringing about of the desired change in cases where, either through death or retirement, vacancies occur. The call upon any officer to retire in the present condition of the Superannuation Fund would, in my opinion, be unjustifiable, and enforced retirements caused by a general scheme of retrenchment would only plunge the Fund into deeper difficulties than it has been involved in through the retrenchment made on a large scale in the Works, Lands, and Railway Departments.
- Assuming, therefore, that the Minister approves of gradual amalgamation of the offices mentioned taking place, it would be necessary, in the event of any vacancy where such a change can be brought about, to consider the special circumstances of each case and to deal with it accordingly.
- A considerable saving might be made by the amalgamation of the offices of Clerk of Petty Sessions and Crown Land Agent, but care would require to be exercised in such cases so that the proper prestige of the position under the Justice Department would not be affected nor the patronage of that Department unfairly interfered with.
- A considerable amount could be saved in the way of abolition of offices by increasing the area over which certain Police Magistrates travel to hold Courts, but in such cases it would be desirable that there should be a Clerk of Petty Sessions at headquarters, so that the principal Court in the district might not be closed during the absence of the Police Magistrate. Where it would be inadvisable to extend the area of jurisdiction as suggested, it might be arranged in some cases, for the purpose of saving travelling expenses, to call upon the services of unpaid Magistrates at the less important Courts. To secure the regular attendance of Magistrates in these instances it would, however, be necessary to insist upon each Bench fixing a roster, and to make neglect of duty by non-attendance a reason for superseding the defaulter.
- With reference to the last suggestion it would be a matter for grave consideration whether the necessity for retrenchment would be so great as to render justifiable an alteration that might involve the deterioration of the administration of Justice, and, in addition, throw upon the Ministerial Office an immense amount of extra work in correcting the mistakes and dealing with the complaints which would arise in consequence of errors committed by inexperienced Justices.
- My opinion is that were a system of retrenchment in the Petty Sessions Branch carried out, which would be based upon the above suggestions, an annual saving to the country of £10,000 might, I estimate, be ultimately brought about.

Before

Before submitting any scheme of retrenchment involving the retirement of certain old and valued officers, I shall be grateful if the Commission would undertake to suggest to the Government that the alterations should be carried out in a gradual way, with as little severity and as much consideration as possible to those whose services might be dispensed with.

A. C. Fraser,
Esq.
14 Jan., 1895.

2797. The Commission agree to make such a recommendation to the Government when presenting their report? The scheme of retrenchment with regard to Petty Sessions was embodied in three lists. List "A"—Suggestions relating to Police Magistrates over 70 years of age; List "B"—Suggestions relating to Police Magistrates in the Colony generally; List "C"—Suggestions respecting country Clerks of Petty Sessions. List "C" did not include any suggestions in cases where the offices of Clerk of Petty Sessions and Crown Land Agent were not already combined in the absence of certain information not then received from the Lands Department. I submit these lists to the Commission with memoranda thereon showing what has been done in carrying out the proposals up to date. [*Lists "A" and "B" were read by witness, and questions answered in reply to inquiries of Commissioners.*]

TUESDAY, 15 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Archibald C. Fraser, Esq., Under Secretary of Justice and Chairman of the Civil Service Board,
further examined:—

2798. *President.*] I think we may now look to you for some information in regard to the Clerks of Petty Sessions, beginning the list as we began with the Magistrates? As the Police Magistrate is to be taken away from Berrima, it is proposed to appoint a constable as acting Clerk of Petty Sessions at £10 per annum. That is quite sufficient for Berrima, as there has been an average of only twenty-five cases per year for the last five years. Then at Bombala it is proposed to combine the offices of Police Magistrate, Clerk of Petty Sessions, and Land Agent; that was portion of the retrenchment set out in List B. At Branxton and Greta I think we could do away with the Clerk of Petty Sessions, and appoint a constable as acting Clerk of Petty Sessions at £10 per annum; that would save £150 a year. At Brewarrina I think the duties of Clerk of Petty Sessions might be performed by an officer at £150. At Broken Hill there is a temporary clerk at £156 per annum. I think we might dispense with that man and send him somewhere else; that would save us £156.

A. C. Fraser,
Esq.
15 Jan., 1895.

2799. *Mr. Storey.*] Do you propose to leave the Clerk of Petty Sessions at Balmain at £380 per year? He has a lot to do.

2800. I should think, being so close to Sydney, he would not have so much to do. The salary is a very large one? You see he has to act as Chamber Magistrate in rather an important centre. The position of a Chamber Magistrate is a very responsible one, as he is called upon to advise in a great number of cases. In the Central and Water Police Offices the Chamber Magistrates receive high salaries. At Burrowa, as already suggested, a Police Magistrate is unnecessary. I think the Land Agent might be appointed as Clerk of Petty Sessions at £50 per annum; that would be in accordance with what has already been suggested. At Camden, we have an officer at £200 a year. The average number of cases is about 193 during the year; a police constable could easily do the work. Campbelltown is one of the most notable instances where efforts have been made to do away with the Police Magistrate. The salary is too high, there have been only 215 cases a year on an average for the last three years. The salary now stands at £175. The Clerk of Petty Sessions is also Land Agent.

2801. You propose to do away with Camden altogether? No; to have a constable as acting Clerk of Petty Sessions.

2802. *Mr. Humphery.*] You would not propose to take the same course at Campbelltown? I think as long as there are Courts of Quarter Sessions and District Courts held there a Clerk of Petty Sessions should be retained.

2803. *Mr. Robertson.*] You simply recommend a reduction? From £215 to £150; there is a Land Agent there. At Clarencetown it is proposed to abolish the position of Clerk of Petty Sessions. The duties of the Clerk of Petty Sessions might easily be performed by a constable at £10 a year.

2804. *Mr. Humphery.*] Cobar? I think that is one of the cases where a Police Magistrate might combine the duties of Clerk of Petty Sessions and Land Agent, with a slight addition to his salary, say, of £50; that would be a saving, but it would be made in connection with the suggestion made in List B.

2805. What saving would that effect? The arrangement would save £240.

2806. Crookwell? There are 180 cases during the year on an average. The duties of Clerk of Petty Sessions might easily be performed by a constable at £10 per annum; that would be a saving of £271.

2807. Eden? The duties of Clerk of Petty Sessions might be performed by a constable at £10 per annum. Eden is visited now by a Police Magistrate from Bega. There is a Clerk of Petty Sessions there at £150, who is also Land Agent, so that would be a saving. There is a District Court at Eden, and there must be someone to act as District Court registrar. This suggestion is contingent on the removal of the District Court from Eden to Bega.

2808. Emmaville? There are only 136 cases on an average there. I think the duties might be performed by a police constable, and that would save £208.

2809. Merriwa? There are eighty-seven cases on an average; the duties could easily be performed by a constable at £10 per annum; the saving would be £226.

2810. Moama? The acting Clerk of Petty Sessions gets £200 a year; there are only 112 cases. I suggest a constable should do the work at £10 per annum.

2811. Murrumburrah? There are 247 cases there. The only other appointment the Clerk of Petty Sessions holds is Registrar of Births, Deaths, and Marriages. He gets £281 per annum. A constable could do the work, and the saving would be £271.

2812. Nymagee? There are 393 cases there. The acting Clerk of Petty Sessions is the Warden's Clerk, and gets £218 a year. This is a case for a constable, and would mean a saving of £208 per year. A small saving might be made at Paterson. The Clerk of Petty Sessions gets £200 a year, and gets £25 a year for visiting Gresford. A constable could do the work at Gresford for £10 a year. This would be a saving of £15.

2813.

- A. C. Fraser, Esq.
15 Jan., 1895.
2813. Then you still leave Paterson? Yes.
2814. How many cases are there? There have been only seventy-three cases on an average during the last three years, but the Clerk of Petty Sessions is Land Agent and Registrar of Births, Deaths, and Marriages. He gets £176 12s. as Clerk of Petty Sessions, and £23 Ss. from the Department of Lands. I do not think it would do to take away Paterson altogether.
2815. *Mr. Storey.*] Could you not serve the Clerk of Petty Sessions there the same as you propose to do to the officer at Campbelltown, and reduce the salary to £150? Of course, that could be done.
2816. *Mr. Humphery.*] Richmond? There are only 170 cases there. The salary of the Clerk of Petty Sessions, £115, could be saved by having a police constable.
2817. Tingha? A Clerk of Petty Sessions could be dispensed with, and a constable appointed at £10. That would save £226. There are 107 cases there on an average.
2818. Tumarumba? It is proposed that the Police Magistrate, who is also Clerk of Petty Sessions, should be transferred. A Land Agent is stationed there, who might be appointed Clerk of Petty Sessions, and given £50 per annum for the additional work. That would be a portion of the retrenchment already alluded to.
2819. Uralla? There are 233 cases there, and the Clerk of Petty Sessions gets £236 a year. I think a police constable at £10 per annum could do the work. If the proposals in List C were carried out there would be a saving of over £2,000 a year. In the case of the Police Magistrates I calculated a saving of about £8,000. If the scheme contained in these lists were carried out in its integrity, I think I might safely say over £10,000 a year would be saved altogether.
2820. What is the additional cost of holding suburban Courts at Glebe and Paddington? The cost is small, because we have transferred clerks from the City Police Offices, and they simply take their salaries with them, but as time advances the salaries will surely be increased.
2821. What is the annual cost? At Paddington it is about £330. I do not think the expense of maintenance is important, but as regards the cost of building, the Court at Paddington cost over £5,000 and at the Glebe over £4,000.
2822. Now take Redfern? A Court at Redfern is absolutely necessary.
2823. What is the cost per annum of Redfern;—I see you have a Clerk of Petty Sessions at £425, an assistant at £200, and a junior clerk? The business is very large there. The Court sits often for a long period in the day. I do not think it would be advisable to touch that Court.
2824. Take Balmain? I think there should be a Court there, as it is across the harbour; otherwise we would have to fetch prisoners over the water to the Central Police Court, and that would be very awkward. Balmain is an important place, and I think it is quite right to have a Court there.
2825. About Newtown? Newtown is a very important place.
2826. The cost at Newtown is very considerable;—this year you have an assistant Clerk of Petty Sessions and a junior clerk? I am satisfied you would never think of doing away with any of the Courts you have mentioned. You could not effect any economy at Newtown. There must be a Clerk of Petty Sessions and deposition clerk. A large revenue is received there.
2827. North Shore? North Shore is not so important, but I do not think you could dispense with a Court there.
2828. You think it necessary? I think the salary of the Clerk of Petty Sessions may be reduced, an opportunity occurring at the present time, owing to the office being vacant.
2829. Must the work be done by a Clerk of Petty Sessions there? Certainly.
2830. What do you think the salary should be; it is now £335? I could not exactly say. I think it might be reduced to, say, £250. My opinion is that neither the Glebe nor the Paddington Court-house should have been opened. The reason they were opened was because these expensive court-houses having been built it was thought necessary to utilize them. For suitors and other persons engaged in business at the Sydney Police Courts the facilities for attending are inexpensive and easy from Paddington and the Glebe. The advantages of centralisation in the administration of justice are great. It is at the City Courts attorneys congregate, and this is an advantage to those who desire to have their cases defended. Law libraries are available for reference, and there are greater facilities for consultation by the Stipendiary Magistrates with each other. The cell accommodation is larger, and, as the police are in greater numbers, information can be better gained than in the Suburban Courts. I do not know whether it is a good reason against the multiplication of unnecessary Suburban Courts, but in my opinion it is not a good thing to encourage litigation. I think people living at the Glebe and Paddington would seldom come into Sydney to go to law with each other if they had not Courts close to their own doors.
2831. With regard to Visiting Justices, do you think any economy could be effected in that direction? At the present moment I do not recollect any Visiting Justices of gaols other than police gaols who are Police Magistrates, excepting those at Darlinghurst, Biloela, and Parramatta. I think as soon as the gentlemen visiting these gaols retire, and they are both old men, one of the Stipendiary Magistrates should be appointed Visiting Justice at Darlinghurst and Biloela Gaols, and the Police Magistrate at Parramatta at the gaol there. I do not think it is worth while to disturb them now.
2832. *Mr. Storey.*] Taking your own immediate department, the Department of Justice, what hours do you devote daily to the work in your office? I generally do two or three hours' work at home, which I find absolutely necessary to enable me to deal with matters of difficulty, or requiring much consideration, because through the day I am so much interrupted, and there is so much routine work, that I could not attend to these matters. I get to the office about half-past 9 or a quarter to 10, there is the luncheon hour, and I generally leave between 5 and 6.
2833. What are the acknowledged hours of the office? Nine till half-past 4 for the staff. They do not generally come very punctually, it is about a quarter-past 9 when they come; a quarter of an hour's grace is allowed.
2834. Are the clerks overpaid? None of these men in the Ministerial Office.
2835. Do they do their work in a proper way? I think it is a most excellent staff. It has been thoroughly organised since I came into the office; I got rid of all the inefficient men. I adopt a different system from that employed in most departments. I encourage these men to do as much original work as they can, and I let them have the credit of it.
2836. Have the men been getting yearly increases to their salaries? No, but there have been a few increases; there are men, however, who are absolutely underpaid, and whose services outside the department would be recognised at a very high rate. There are several men in the department I should call first-class men.

A. C. Fraser,
Esq.

15 Jan., 1895.

2837. First-class men in what respect? In intelligence and technical knowledge, and ability as correspondents and in preparing minutes on difficult matters.
2838. Take the position of accountant;—how long has he been in the Service? Eighteen years.
2839. His salary is £470? Yes, he has the responsibility of dealing with all these votes, except that of the Prisons Department, and with all the vouchers; and the payments from the other sub-departments as well as of the Ministerial Office come under his ken. He has to check them and take exception to them if there is anything at all irregular or improper about them. There has been a large retrenchment caused since the system adopted in deference to the recommendation of the last Civil Service Commission came into force. I think it has worked very well, because although anything wrong in the vouchers may ultimately be discovered, it is a long time afterwards. As the Minister is responsible for the expenditure it seems only fair he should have an opportunity at once of checking any improper expenditure, and taking steps with regard to it.
2840. *President.*] So the superintendence of this experienced man is valuable in enabling him to detect any mistake or blunder? Yes. The increase of salary is amply compensated for by the saving, as there is a repression exercised upon the sub-departments by the knowledge that anything sent in irregular or wrong would be immediately detected.
2841. *Mr. Storey.*] What allowance do you make inspectors when travelling? We give the Chief inspector 15s. a day with cost of conveyance; that is under the new scale. But if he remains at a place over a certain time it is reduced. The others get 12s. 6d. a day, but if they remain over a certain time they suffer a similar reduction.
2842. Has the expense of your department increased or decreased since you became the permanent head of it? I joined the department in 1887, and since then the total increase of cost of the whole department under the Minister of Justice has been £10,000 per annum.
2843. What do I understand by the whole department? Taking the whole votes of the Minister of Justice. The Prisons Department has increased £16,000, so there has absolutely been a decrease on the total votes of the other departments of about £6,000 per annum. I need not tell you the staff has largely increased, and so has the business; there has therefore been in that department a system of retrenchment going on to a certain extent.
2844. I suppose a great deal of the work done by the clerks is receiving and answering letters;—what is the number of letters you receive in the course of a day, or of a year? Last year the total number of letters received was between nineteen and twenty thousand, not including replies to circulars. The number of letters, telegrams, &c., dispatched was over 14,000.
2845. What is the amount of revenue received by the department altogether? I can only state it approximately. The Treasury does not keep the items of revenue of Petty Sessions apart from other sources of collection. I estimate the amount at about £70,000 a year.
2846. What is it principally derived from? Fees of office collected by Prothonotary, Registrar of Probates, Master in Equity, Curator of Intestate Estates, Registrar in Bankruptcy, Sheriff, District Courts, and Courts of Petty Sessions, besides fees for licenses granted by Benches, fines and forfeitures, &c., and receipts for work performed by prisoners in gaol. I may mention that a sum of upwards of £7,500 is annually saved by labour of prisoners in erecting buildings, &c.
2847. All passes through your department? These funds do not pass through the head office, where expenditure only is dealt with. Revenue collections are paid direct to the Treasury.
2848. Is the system of inspection by the Treasury of any value to your department? It is of great value. It would cause the department heavy expense if it had to employ inspectors of its own to inspect accounts. I have found that the Treasury inspectors make very complete and thorough inquiries into the accounts of country and other officers.
2849. Do they attend at stated times? No, they go under instructions of the Colonial Treasurer.
2850. How often in a year on an average? I have known them go sometimes twice a year to the same man. It depends a good deal on the information received at the Treasury.
2851. Have you suggested any schemes of retrenchment in your department lately? Yes; I have suggested the amalgamation to a considerable extent of the offices of Clerk of Petty Sessions and Land Agent further than what appears in list "C", but I have had a great difficulty in securing the co-operation of the Lands Department. Where a combination could be made of the duties of the two offices the question of patronage arises as to whether the Land Agent should be made Clerk of Petty Sessions or the Clerk of Petty Sessions should be made Land Agent. I suggested some time ago that the Under Secretaries should meet and try to arrive at some principle by which this matter could be adjusted, but this has not yet been agreed to.
2852. Can you give us any idea of what your estimated savings would be if that were brought about? I could not tell you that, because it would depend upon the number of amalgamations that would be mutually agreed to, but you can see it would be considerable.
2853. *Mr. Robertson.*] Have you ever gone into the matter for the purpose of finding out where the saving could be effected? I have in individual cases frequently, and have suggested certain amalgamations. The Department of Lands has generally insisted on the Land Agent being made Clerk of Petty Sessions. There has been a difference of opinion as to which is the more important, the office of the Clerk of Petty Sessions or of Land Agent.
2854. *Mr. Humphery.*] Is it your opinion that one officer could perform the duties of both offices? In many cases, but not in all. There are centres where you must have a separate Land Agent.
2855. *Mr. Storey.*] Could any retrenchment be brought about by limiting the number of Circuit Courts which are held all over the country? I think a great deal of saving may be made in that way, as the number of Circuit Courts is, in my opinion, unnecessary. Since travelling has become so much more easy by railways we could dispense with some of the Circuit Courts, perhaps three or four of them. I did prepare a paper for the Minister on the subject. In the scheme which I submitted to the Minister for the redistribution of all the Circuit Courts I recommended that certain Courts should be abolished. That scheme is based on the supposition that the Circuit Courts would be diminished in number. For instance, I recommended that the Circuit Courts at Mudgee, Yass, Albury, and Young, should be abolished, and that one might be established at Bourke so as to meet the requirements of the north-western portion of the Colony.

- A. C. Fraser, Esq.
15 Jan., 1895.
2856. *Mr. Humphery.*] What is the average cost of holding a Circuit Court? The principal cost is the expense of a jury, and of the Crown Prosecutor, and there are travelling and other incidental expenses.
2857. Approximately, what would be the cost and the number of Courts in the year? Circuit Courts sit at fifteen places, twice a year at each place. The average cost of each sitting of a Circuit Court would be about £200.
2858. *Mr. Storey.*] Are the dates of the Courts fixed by your department or by the Judges? They are fixed, on the recommendation of the Minister of Justice, by the Governor and Executive Council.
2859. They are not held at stated times at the various places? They are. The places and dates are proclaimed at the end of a year for the next year.
2860. Who fixes the dates? The Supreme Court Judges fix the Circuit Courts, the Quarter Sessions are fixed by the Minister of Justice, and the District Courts are fixed by the District Court Judges. I propose that Quarter Sessions should be abolished at Windsor, Cootamundra, Grenfell, Burrowa, Queanbeyan, Bombala, Wentworth, Tenterfield, Port Macquarie, Singleton, and Murrurundi, and I propose the abolition of District Courts at Balranald and Wentworth.
2861. *Mr. Storey.*] Is it possible to amalgamate the sub-departments? I think it would be worth considering whether the offices of Curator of Intestate Estates and the Registrar of Probates could not be combined.
2862. In the Prothonotary's office there are eight clerks, cashier, and an accountant;—have you any supervision over the work of this department; do you know that the work is necessary? Yes; we have complete supervision with regard to these matters. The only exception would be with regard to the execution of judgment, decrees, orders, and the process of the Court. The Minister of Justice supervises and controls the offices connected with the Supreme Court in respect to other matters than those which are immediately connected with the administration of justice. This supervision and control of the legal sub-department involves a supervision of an annual expenditure of £41,000, and the employment of a large body of Civil Servants.
2863. Are there any other amalgamations you could suggest? The office of Examiner of Patents might be amalgamated with that of the Registrar of Copyright.
2864. *Mr. Robertson.*] The work could be done with one staff? Easily. I will go further than that and say that the sub-department of Weights and Measures, which is under the Minister of Justice, and all matters connected with trades marks, patents, and copyrights should be under one head.
2865. With a very considerably reduced staff? Yes. My idea is that a Board should be appointed on account of their technical knowledge, who could advise the Minister upon any matters connected with any of these departments, and that all the business connected with these matters should be under one Minister. The trades marks are under the Colonial Secretary now.
2866. *Mr. Storey.*] Has not the Registrar-General something to do with that question? Yes; he is under the Chief Secretary. It seems to me that the Minister of Justice should hardly deal with such matters as patents and copyrights.
2867. In reference to Magistrates, is it not more desirable to have the stipendiary Bench composed of professional men? I do not think so.
2868. What are the present men;—are they not professionals? None of them. As a rule, to get a competent professional man, he would probably have to give up a good practice, and the salary would not be sufficient to tempt him. Further than that, with the occupant of the Bench as much depends upon a knowledge of the world and experience as upon a fair knowledge of law.
2869. Whom could you place in that position? I would not have police office practitioners. They are not from their training, as a rule, the class of men to put in the position of judges in the Court. Barristers you could not get, except inexperienced or inefficient men, because if they are able men they will make a good position for themselves by their practice. All the present men have been specially trained from Clerks of Petty Sessions up, and have won their position by a reputation for efficiency, and have been selected on that account.
2870. Would it be desirable to utilise the unpaid Magistrates in the country? To a certain extent. In remote or unimportant places the unpaid Magistrates might safely deal with cases of drunkenness, obscene language, and some matters under the Vagrant Act; but there is no power to limit their jurisdiction in these matters. Unpaid Magistrates can sit on the Bench out of Sydney and its suburbs and deal with any cases which Stipendiary Magistrates can deal with in Sydney.
2871. At present they have the power? Yes; but in the Metropolitan District they have only Ministerial jurisdiction.
2872. But in country places where Police Magistrates are stationed, can unpaid Magistrates go on the Bench? Yes. Police Magistrates up the country have double powers vested in them, so where to deal with an offence would require two unpaid Magistrates, one paid Magistrate can act alone. As a rule it would be most objectionable to allow unpaid Magistrates to deal with the business of a Court altogether. No doubt in England they do it to a certain extent, but they are generally a superior class of men than you have here. We have upwards of 4,000 unpaid Magistrates in this Colony, and they come from all classes. Many of them are very illiterate. A large portion are storekeepers, and it would be very unsafe for these men to sit in the Small Debts Court, and deal with cases in which their customers would be mixed up. It would destroy public confidence in the administration of justice if such a practice were allowed to exist. Take also the case of a strike, when assaults arising out of trades disputes may occur, and where one section of the community is excited against another. The only safety to the country consists in allowing the decision of such cases to be left in the hands of an independent paid officer who has no reason to fear the displeasure of either side; but it would be a very unsafe thing, in my opinion, that men living in the district, merely citizens, not in any official capacity, should be called upon to decide on such matters. I think, taking everything into consideration, the less unpaid Magistrates have to do with the administration of justice, except in trivial cases, the better for the country. As I said before, if you carry economy very far in regard to the administration of justice, you get an inferior quality of justice. It is a difficult thing to say how far economy should be allowed to interfere with the administration of justice. The suggestions I have made with regard to retrenchment are not made because I think more efficiency will be obtained, but simply because I understand the condition of the country requires a certain saving should be made, and I have pointed out the direction in which that saving could be made with the least danger, in my opinion, to the administration of justice.

2873. How long have you been connected with the Civil Service? Forty years.

2874. Not all the time in the Justice Department? No; here is my official history:—Total service, 40 years; service in Crown Law Offices, 37 years. 1854.—Entered Public Service as clerk, Immigration Office; shortly afterwards transferred to Registrar-General's Office. 1857.—Entered Crown Law Offices as clerk to Mr. Plunkett, who then held position similar to that of Under Secretary of Justice; salary, £200. 1859.—Promoted to clerkship under Mr. Rogers, Clerk of the Peace for the County of Cumberland; salary, £260. 1860.—Promoted to Criminal Clerkship under Mr. Williams, Crown Solicitor; salary, £350. 1863.—Promoted to be Clerk of the Peace for the County of Cumberland; salary, £550. 1870.—Appointed Clerk of the Peace for the whole Colony; salary, £600. 1881.—Offered the first position of Stipendiary Magistrate on passing of the "Metropolitan Magistrates Act, 1881"; since that time passed Law Examination, and admitted as an Attorney of the Supreme Court. 1885.—Appointed a member of the first Civil Service Board of New South Wales, from which retired by rotation at end of 1887. 1887 (April).—Appointed Under Secretary of Justice; salary, £960. 1891.—Was again appointed, and still remain, a member of the Civil Service Board of which am Chairman.

A. C. Fraser,
Esq.
15 Jan., 1895.

2875. From your connection with the Civil Service Board, you have a good knowledge of the service altogether? I do not know any man who ought to have a better knowledge.

2876. Will you give us your opinion fully of the Civil Service on the whole, will you say whether it is overmanned and overpaid, as the public say? I should say the service generally is considerably overmanned, but that is no new condition of affairs, it has existed for a very long time. When the Civil Service Act was introduced, the service was largely overmanned, and the anomalies were very great as to rates of remuneration and positions occupied according to length of service. Instead of having a Board of Inquiry to place the service on a proper footing, an Act was introduced, which, by classification of officers according to salary, immediately confirmed all these anomalies, and made things worse. It made it a very difficult thing to get rid of officers on account of inefficiency. It was a well intended Act, if they had put the service in a proper condition before it was passed. The principal danger we have in the direction of undue increases in the number of officers lies in leaving to Ministers the appointments of probationers and temporary clerks. Nearly 2,000 temporary clerks have been appointed since the passing of the Act. A number of these have been made permanent. They get into the service without any limit as to age.

2877. *President.*] And the salary at the discretion of the Minister? At the discretion of the Minister. The selection of probationers being left to the Minister, there is no special guarantee as to the fitness of the men. No doubt there ought to be a system of competitive examination so as to ensure getting the best men as far as education is concerned, and the decision of these matters should be left with a commission of men perfectly independent of Parliament in every way—say, a commission of five men. I would like to point out another thing to the Commission. It is a very common thing, both in Parliament and out of it, to hear the Civil Service attacked because there are too many men in it to do the work, but many of the members of Parliament who attack the service are to some extent the cause of the overcrowded condition of the service. The pressure that is brought to bear upon the department by Members of Parliament who seek to get in their friends, relatives, and political supporters would astonish the public, and as I have said many of the men who do that, and are continually doing it, are the men who raise the cry that the service is overmanned, and who recommend a general reduction of the whole of the salaries. That general reduction has a most fatal effect on the tone of the service, because men who really know they deserve the salaries they receive find their salaries cut down in the same proportion as those whom they know to be inefficient.

2878. *Mr. Robertson.*] Does not that also apply to the silent members who only record their votes? Certainly. The appointment of a probationer appears to be a very small matter, because he gets only £52 a year, but it may be a very important matter. That youngster gets £75 the next six months, he is eligible to be put on the staff at £100, and having the same chances of promotion as any one else in the Service he may become, in our department for example, a Police Magistrate. So it is a very important matter to check the indiscriminate appointment of probationers to the service.

2879. *Mr. Storey.*] But the probationers have to undergo a certain examination before they can get on the staff? Yes, they have; but it is an easy examination. It would be much better to adopt the competitive system in my opinion.

2880. Is it a fact the Civil Service Board have very little power either in preventing appointments, or in controlling appointments in any way in the service? Their power is too limited. The power they have is virtually conceded to them, not by the force of the Act itself but by the Government.

2881. Even then in the case of a Minister wanting to put one officer over the head of another, have the Board any power to prevent it; in fact have the Board any power other than calling attention to it? The Minister may overpower the Board in this way: Supposing the head of the department recommends A, and the Board says B is entitled to the position, then it is left for the Minister to select between the two, and he can recommend either one or the other; so if there is a difference of opinion between the Board and the Minister, the Minister gets his way. Another great cause of inefficiency is the clause in the Act under which people can be appointed because of special qualifications.

2882. Would you be in favour of a Civil Service Board to have the whole control of the Civil Service, taking away from the Minister altogether such a power? Yes; but under recommendations from the heads of departments. I think the heads of the departments should have the power to recommend, as I do not consider the Board could have the requisite information otherwise.

2883. Should that Board consist of outside people? I think it should consist of men outside the service altogether, but it would be advantageous that one or more should have held some responsible position in the service.

2884. Are you aware of the provision of the Queensland Civil Service Board? I cannot say that I am intimately acquainted with it.

2885. Speaking under correction I think they have pretty free control over all the departments, they can say whether appointments shall be made or not; would you be in favour of that? I should; but there ought to be some provision by which they should consult the heads of departments, and there should be a power of appeal always against the decision of a Board.

WEDNESDAY, 16 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,

J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Archibald C. Fraser, Under Secretary of Justice and Chairman of the Civil Service Board,
re-examined:—A. C. Fraser,
Esq.
16 Jan., 1895.

2886. *Mr. Robertson.*] To what extent do you exercise supervision or control over the various branches of your department—take the Supreme Court? All letters which are written to the department upon administrative business by the Prothonotary, who is the head of the Supreme Court Office, are addressed to the Under Secretary, and dealt with by him in the ordinary course. As I before stated, the Under Secretary is, by the provisions of the Civil Service Act, the permanent head of the department. He has to deal with everything pertaining to the department, and with all matters of administration except those which I specially mentioned in my last evidence regarding the execution of process and matters immediately connected with the administration of justice by the Judges. He deals with all these matters excepting those named, subject, of course, to the Minister's instructions. In all other matters he has the same control in virtue of the Act under the administrative arrangements laid down by the Government as any other Under Secretary would have.

2887. Have you any control over the Registrar of Probates? I have the same control as I have already specified with regard to the Prothonotary's office.

2888. What control have you over the sheriff? The Sheriff's Branch is more under direct supervision of expenditure than the others, because his duties are so largely administrative.

2889. To what extent does the work of the Sheriff come under your supervision? The sheriff cannot take any important step beyond the ordinary routine without obtaining the sanction of the department. In that way every matter of importance that is dealt with outside the established routine is brought under notice and is liable to be controlled.

2890. Do you exercise any control over the expenditure under the heading of contingencies in that branch? Yes. Every voucher is forwarded to the Ministerial Branch, and is carefully inspected by the accountant, and before it is sent on to the Treasury. If anything requires, or appears to require, to be questioned, the matter is inquired into by the accountant.

2891. You check the expenditure? Yes; immediately before it goes to the Treasury.

2892. Is there any one in your department who authorises the payment of the amounts? Yes; the Minister. All the accounts from the sub-departments are first of all sent to the Under Secretary, who refers them to the accountant. The accountant calls attention to any matter which has no ministerial authority. There are a large number of payments which come under a general ministerial authority, and which, therefore, do not require to be submitted specially for such authority, but whenever the accountant thinks there is anything that requires to be looked into, he brings it under my notice. I examine it, and then refer it to the Minister.

2893. You say that this branch, more than any other, comes under the control of the Minister? More than any other of the legal departments. I am not speaking of Petty Sessions, but of the legal departments.

2894. Can you give us any information with regard to the duties of the Sheriff's office? Yes. It is the duty of the Sheriff to provide for the preservation of order in the Supreme Court, and Circuit Courts, and Courts of Quarter Session, and to make all necessary arrangements respecting the conduct of the business of the Courts. He must be present, personally or by deputy, at all Jury Courts throughout the Colony, excepting District Courts. He executes all process of the Supreme Court, such as writs of *fi. fa.*, *ca. sa.*, *ca. re.*, &c., and writs of attachment. He deals with fines, and recovery of fines, and matters of that kind. He has charge of all debtors in the prisons, and other prisoners, excepting such as are under sentence for indictable offences or under some other conviction. All the court-houses and the grounds connected with them are under his supervision, subject, of course, to the control at any time of the Minister of Justice—that is, where Jury Courts are held, but he has nothing to do with minor courts. Where a plan of a building for a new court-house in which a jury will sit would be required, he would be consulted, or where alterations were required in such a building or any question connected with its care or maintenance would arise. All jurors, civil and criminal, are summoned by him in the Supreme Court and Circuit Courts. He has to take all steps with regard to the execution of prisoners sentenced to death. This is a general summary of his duties. The duties connected with the execution of process are very onerous and responsible. If he makes a mistake, personally or through his officer, he is liable to be sued for damages, and might be held personally responsible.

2895. Have the officers in the Sheriff's department any special training? They gradually grow up to the business of the department. The Under Sheriff is a man of considerable experience, and conducts the business of the Sheriff during his absence. The Sheriff's officers are to a certain extent trained in the office before appointment.

2896. Then it requires nothing further than the experience they gain from the time they enter the office? No.

2897. Is there any suggestion you could make with regard to effecting economy in that branch? The Sheriff is a most zealous officer, and he is very desirous to have his department administered with the greatest efficiency, but I daresay he would not so much consider the question of expense as he would of efficiency, and, like other departments I think it wants close supervision in the matter of expenditure.

2898. What are your reasons for suggesting that—is it expensive or is it over-manned? I do not think it is over-manned so far as the head office is concerned, but there is a considerable amount of expense incurred, especially in country districts, which might possibly be curtailed. If the same economy were exercised in that sub-department as is exercised in some others it would reduce the cost to the country very considerably. Take the case of bailiffs—they are now called sheriff's officers. We know how a bailiff has hitherto been regarded; the position is not looked upon as that of a high officer. The present bailiffs have been selected by the Sheriff from a superior class, and no doubt do their work better than the old bailiffs, but the country has to pay for this advantage. Some of these men up country receive in proportion to their duties high remuneration as compared with the Police Magistrates and Clerks of Petty Sessions.

2899.

A. C. Fraser,
Esq.
16 Jan., 1895.

2899. Are these the thirty-five you referred to? Yes.
2900. In what way do they increase their salaries? By fees.
2901. What are the kind of fees they receive? The fees are fixed under the Sheriff's Fees Act. I could not exactly tell you at this moment.
2902. And do the Sheriff's officers keep the fees? They do; they are paid mileage at the rate of 1s. per mile one way. The fees are for serving and executing process and work in connection therewith.
2903. Is it mentioned anywhere officially that the Sheriff's officers receive these fees? Yes—in the Schedule to the Estimates.
2904. Is it laid down by the Act? Yes.
2905. Are the fees checked? Yes; by the Sheriff.
2906. Under the old system, what did the bailiffs receive? I believe they received salaries as well as fees under the old system, but I do not think it was known what remuneration they got. Some bailiffs did remarkably well. The present system is far superior.
2907. Do you not think these men are sufficiently well paid at £160 per annum, and that the country should get the benefit of the fees? These men have responsible, unpleasant, and frequently laborious work to do, and have to keep up a travelling equipment, and receive forage for only one horse, but I think some of them receive too high a remuneration.
2908. What are the fees received by the Sheriff's officers? ———
2909. Have you entered a protest about the expenditure of the Sheriff's Branch? I have called attention to it. The Sheriff's vote for expenditure was reduced by the Minister in 1892 and in 1893 by a large sum—nearly £4,000. He was told that only a certain amount would be available, and that he would have to keep the expenditure within the reduced limit.
2910. What are his travelling expenses? They were £2 a day and a railway pass. The £2 allowance, with over £50 per annum for forage allowance, is under an old authority, but I presume he will now come under the new scale.
2911. You said the travelling expenses had recently been revised and fixed at £1 1s. a day? Yes; that is the first-class daily allowance. The Government called upon the Under Secretaries to meet together, I suppose more than a year ago, to devise a scheme of travelling expenses which should be equitable to the Service generally and more uniform in its operation than under the old system. A general principle was recognised as a basis that no officer should make a profit out of his travelling expenses or suffer a loss. It was considered that officers in the first-class division should, when travelling in the country, use private rooms. It is obvious, for instance, District Court Judges and Crown Prosecutors should not use the same sitting-room in a hotel as the general public would use.
2912. Are there others besides those you have named who would be similarly placed? Yes, Under Secretaries, heads of departments, and all officers receiving above a certain salary. It was considered that £1 1s. with the cost of conveyance, would be the proper amount to give for travelling expenses in such cases as I have mentioned.
2913. What was the minimum agreed upon? The fourth class can be paid 10s. or anything lower per day. A scheme was submitted to the Cabinet, but an amendment was made which was not considered judicious, and the scheme was virtually abandoned, but this Government has readopted it and it is now in force.
2914. In all the departments? Yes, since 1st January, this year.
2915. Do you think that the system of rendering an account for actual expenses would be advisable? I am inclined to think not. In the first place, it would be a difficult thing to check it. You would have to trust officers more than you do now. If there is to be a system of allowances to officers travelling it must be one that is practicable and easy to administer. It must not require a very large amount of supervision to ensure its being properly administered.
2916. *President.*] The system of rendering accounts would lead to a good deal of friction in the adjustment of accounts, would it not? Yes.
2917. I notice that a good many officers have given security? Yes.
2918. Who is the security of these bonds? A certain amount is deducted by the Treasury from the salaries of the officers from whom security is required. The officers are not consulted in the matter. They do not give any bonds. The Treasury deducts the amount of the premium out of the salary of the officers. I find security for £500.
2919. Then the Government are practically the insurers? Yes.
2920. *Mr. Robertson.*] Is there a guarantee fund then? I believe there is.
2921. Is the system you have mentioned followed throughout the departments? Yes.
- 2922-3. Is it done through the Treasury? Yes.
2924. Could not the inspectors for the Mines and the Justice Departments amalgamate their offices? At present it is probable that in many cases a police magistrate might have travelled to a town in his district and incurred considerable travelling expenses, and the mining warden might have travelled from a town in his district at a considerable expense to the same place. It might be possible to avoid the double expense in some cases. If you make the police magistrate *ex officio* a mining warden, the mining warden might not have to go to the same place. There are certain mining centres where a mining warden could be appointed irrespective of any suggestion of that kind, such as Wyalong. In very important mining centres the Mines Department should have the power of appointing mining wardens to visit areas irrespective of the police magistrates who might be located therein, where the mining wardens' work is very important and extensive, as for instance, at a mining centre like Wyalong.
2925. Could you make any recommendations with regard to inspections? There is a large number of inspectors employed throughout the various departments of the Service. I do not see how you could combine in one man the knowledge of all the duties of these inspectors so as to enable him to be effective for each department. A Treasury inspector would not be a competent man to inspect the detail work of a Petty Sessions, as we would require the report to be made by him. As far as accounts are concerned he would no doubt be efficient.
2926. There is one class of inspectors for stock, and another for tanks, and artesian bores, is there not? I know very little about these officers.
2927. You do not know sufficiently about the inspectors to see your way clear to make a recommendation to the Commission? No.

A. C. Fraser, Esq., 2928. Who could give us that information? Heads of departments. The Lands inspectors could not inspect stock, nor the details of the Works Department, nor those of the Department of Public Instruction.

16 Jan., 1895.

2929. *President.*] Could the Post Office inspectors and the Treasury inspectors be welded into one, there would be more similarity of duties in those cases? I think there would appear to be less difficulty there. The chief inspectors of the different departments would be the officers to call, or the Under Secretaries.

2930. *Mr. Robertson.*] You are a solicitor, I believe? Yes.

2931. The work done by the Ministerial Branch requires no special training, does it;—take for instance the correspondence, does it require a legal training to deal with the correspondence that comes into your department? I think that by reference to the Attorney-General and the Crown Solicitor, all legal matters could be dealt with by the department, but in my opinion it is desirable that the head of the department and some members of the staff should have knowledge of the practice of the Courts, and if possible a general knowledge of criminal law and the law coming under the notice of Coronial and Petty Sessions Courts.

2932. Do you refer to your own office? Entirely.

2933. Is it necessary that anyone else in your Ministerial Branch besides the head—that is to say, the Under Secretary—should have that knowledge? I think it is desirable.

2934. Then the work done is not of a legal character? It involves a certain knowledge of law and the practice of Courts, but it does not necessarily require a legal knowledge, because all legal points can be settled by the Attorney-General and Crown Solicitor. I should call the Justice Department a lay department.

2935. In which it is not required to have a special knowledge for the transaction of the business? It is advantageous that there should be certain legal knowledge, but it is not an absolute necessity.

2936. I suppose the officers in your department get knowledge in the course of their duties? Yes.

2937. What do you record? Nearly every paper that comes into the office; and if any previous papers on the same subject exist in the office they are connected by numbers and kept together, and where precedents are established by any particular course of action the index is prepared so as to show in a variety of ways where the information can be obtained; so that if it is required to find out what had been done in a certain case the papers connected with it would not only be indexed under one head but under several, so as to give facility of reference.

2938. But they would be all in order? They are all in absolute order.

2939. If you have one competent person to control that branch don't you think that smart youths under him would be amply sufficient to do all the rest of the work? I think it is important and responsible work, and if it is slummed over errors might not be soon discovered, and might prove very embarrassing.

2940. *Mr. Humphery.*] As chairman of the Civil Service Board I suppose you have made yourself familiar with the Civil Service Act? I have been twice a member of the Board, in all for upwards of six years; but I have only recently been chairman. As member of the Civil Service Board I have made myself familiar with the Act.

2941. Have you given any attention to the provisions of the Act with regard to the appointments to the service, and can you suggest how that Act could be improved so as to promote efficiency? The provisions of the Civil Service Act, irrespective of those relating to superannuation—that is to say, the provisions for the regulation of the service are in my opinion deficient in many respects. The Act was originally passed, as I understand, for the purpose amongst others of excluding Ministerial and political influence with regard to appointments and promotions. It has to some extent failed to achieve this end. There are certain points I would like to bring under your notice. First, the appointment of probationers lies in the hands of Ministers, so that virtually the majority of officers are in the first instance not appointed to the service by the Board, or by the Governor or Executive Council, but independently of the Board, and are selected and appointed by Ministers themselves. Secondly, temporary officers are appointed by the Ministers without reference to the Civil Service Board, irrespective of age, and at such salaries as Ministers may fix, and these men can be permanently appointed afterwards by the Government on producing evidence of sufficient educational attainments. The latter has been, in my opinion, disastrous to the service and injurious to the Superannuation Fund, as it enables those in power to put men into the service at advanced years who fall more speedily upon the Fund, and who have to contribute less in the way of rebatements. Thirdly, as the Act at present stands, supposing promotion is recommended by the head of the department, if the Board disagrees with his recommendation it can only report in favour of some other officer whom it may think more entitled to the position. The papers then go back to the Minister who can select whomever he chooses, so that virtually in the case of a Minister disagreeing with the opinion of the Board he has the power of making the appointment independently of the Board altogether. That appears to me to be contrary to the spirit of the Act as originally framed. There was another matter you spoke of. You asked me whether there was any way other than the present whereby a greater spirit of emulation to do good work could be introduced into the service. The present Act makes seniority the principal reason for promotion. Suppose there are two men who are candidates for a higher position. If one man is competent for that position and has a year's more service than the other, the Civil Service Board would be bound to approve of his appointment, whereas the other man might be very much more efficient, might have worked much harder, and it might be very much more to the interest of the service that he should be promoted to the higher position, but he would be prevented owing to the reason stated. That appears to be the most fatal point in the system at present in existence, because to a great extent it takes the life out of the service. I think that with an independent Board it would be proper that they should receive the recommendation of the head of the department as to who, in his opinion, was the more efficient man and more deserving of promotion, and that the question of seniority should not be considered paramount, except in cases where everything else is equal, in which cases the principle of seniority should govern. This would, I think, be comparatively easy to carry out, because if an independent Board were in doubt about the matter they could hold a personal inquiry, and make themselves fully acquainted with the merits of the case. If the system I have referred to were adopted in the way I have suggested, officers in the service would feel that if they worked hard and well their promotion would be proportionate, and they would not be kept back because lazy men, or men less efficient than themselves, must necessarily be kept ahead of them on account of their seniority. There is a case in point in my own department of one of the best men I ever met in the service. I have advanced him as well as I could and he now

receives

receives a salary equal to the officer ahead of him, but I cannot well advance him further, as he deserves, A. C. Fraser, Esq.

2942. From which I gather that the services of one officer could be dispensed with? No; they have different work to perform. It means that if a promotion takes place the older officer would be bound to get the position instead of the abler man. 16 Jan., 1895.

2943. *Mr. Storey.*] You pointed out in your evidence that this might be done by a Minister? Yes, but it has been rarely done.

2944. *Mr. Humphery.*] With regard to the appointment of probationers, have any been made without reference to the Board and without any examination to test the qualifications of the persons appointed? A probationer must first of all be registered on the books of the Civil Service Board after passing the Civil Service examination. When a probationer is required the Minister looks through the list and can select anyone he chooses. There are nearly 200 probationers now on the list.

2945. Does the Minister do that whether in the opinion of the Board the services of these probationers are necessary or not? The Board is not consulted on that point.

2946. The appointments can be made, and have been made then, without reference to the Board? Yes.

2947. Have there been any objections raised by the Civil Service Board to appointments of that kind? I do not think the Board could tell whether the services of a youngster at £50 a year would be required or not in any department. It is such a very small matter at first. The Board would not be in a position to tell, as under the Act the matter rests with the Minister.

2948. I think you have explained that when once a probationer has entered the service he will be eligible in course of time for the best positions? Yes, he may be eligible.

2949. What would you suggest by way of a check upon the appointments to the service without the knowledge or approval of the Civil Service Board? I would suggest a system of competitive examination, and the selection of candidates, according to their qualifications, by an independent Board, irrespective of Ministers.

2950. According also to their characters? That would be a qualification.

2951. In what way do you think it would be possible to remove the appointments from the influence of political patronage? By passing an Act it would be possible to do so. Of course you would have to pass an Act. I would point out the great difficulty of keeping promotions and appointments outside political influence. In this country I think there would be a constant struggle to get the patronage back again under political influence. Members of Parliament would never rest satisfied so long as patronage was taken away from them entirely. That is a difficulty which stares us in the face. But although Parliament might not rest satisfied with such a system, it is the only system that I can think of by which the country could deal with the problem.

2952. In the Report of the Civil Service Board for 1893 it is mentioned there were 740 appointments made? Yes.

2953. That included 282 temporary officers, under section 31? Yes. I think that Ministers should have power to employ temporary hands on an emergency where extra work demands it, but there should be no power to appoint such men excepting under special representations to an independent Board.

2954. Have you given any consideration to the suggestion that was made as to the classification of the work of the various departments, and attaching a maximum salary to each class, that is to say, to have the work graded to some extent so that a superior officer might not be kept to the class below that for which he was receiving a salary? I am inclined to think that the suggestion was a good one, but I am of opinion that it would be somewhat difficult to carry out in detail. I think that the work might be classified. Under the Civil Service Act in the first instance salaries were classified, but I think it would be better that there should be a classification of work. It appears to me that the Civil Service in Sydney is overmanned principally by the unnecessary number of copying clerks, men who do purely clerical work, and that the expense of the service is unnecessarily increased by the large payments that these purely clerical officers receive in proportion to what their services would fetch outside. I am satisfied that the men who receive from £150 to £250 for copying work are, as a rule, more highly paid than they would be for a similar service outside; but I would further say that I think the men who have head work to do and serious responsibility are not, as a rule, paid sufficiently. I believe that the men who have the best of the service are those who enjoy moderate salaries for doing work for which they would not receive nearly as much outside the service.

2955. Are you prepared to say that there are an unnecessary number of the class you refer to in the service? In some offices there are not, as in my own office for example. But take some of the offices where there is a large staff of men doing the same kind of clerical work. There you have a body of men whose work could be easily classified. In the smaller offices it would not be so easy to classify the work. I think a man whose duties are of a purely clerical nature should endeavour to show himself worthy of doing higher work. If he were a drone he would remain at clerical work all his life. I do not think that by long service he should get an increase of salary every few years if his competency does not improve so that he cannot be placed at work of a higher value.

2956. You strongly advocate an increase of salary for merit instead of seniority? Yes, as a general rule. If a man knows that if he works hard and does good service he will, as a natural result, be promoted or get an increase of salary; he is much more likely to do his best than if he knows that so long as he does not commit any flagrant breach of discipline or gross act of misconduct he will be retained in the service and obtain the usual promotion through seniority.

2957. How would you suggest that such a scheme could be carried out? Under Secretaries if called together to confer could give valuable suggestions as to how general retrenchment and improvements in the service might be best brought about. An Under Secretary of a department might naturally have a bias in favour of his own department. That would be corrected by the other Under Secretaries, who could compare the relative work done throughout the departments. Under Secretaries have never, to my recollection, been called together for such purposes except once, and that was the Conference which I have mentioned about travelling expenses, the result of which was a large retrenchment.

2958. Are you aware of an unnecessary duplication of clerical work in the departments? I think there is frequently an unnecessary routine, but that arises from the want of business capacity in the men who are dealing with the work; it is not the result of any system.

2959. What means have you at present of insuring the discharge of their duties properly by officers in
your

- A. C. Fraser, your department? Unless an officer commits some flagrant breach of discipline or neglect of duty it would be difficult to deal with him.
Esq.
- 16 Jan., 1895.
2960. Could an independent Civil Service Board deal with cases of that kind? Certainly. If power were given to such a Board by an Act of Parliament to inquire into charges of general incompetency or neglect the Board could do what under the present state of things cannot be done.
2961. Can you say whether the spirit of the 28th section of the Civil Service Act has been ignored by appointments being made to junior clerkships, or by the promotion of officers from a lower grade of the Service instead of persons being appointed to higher positions possessing technical knowledge? Yes, I think the section has been treated in too elastic a manner.
2962. Have many appointments within your knowledge been made under that section? Not very many. All these appointments are reported in the appendices of the annual reports of the Civil Service Board.
2963. Is there any reason why appointments under that head should not be dealt with by the Civil Service Board; assuming that technical knowledge is necessary, would it not be better that the Civil Service Board should have a voice in the recommendations of the officer? As is well known, certain appointments do not come before the Board—special appointments, such as those of Under Secretaries and high professional officers; but I am not clear that appointments of a very high character should not be submitted to the Board, such as the appointment of an engineer for instance. I think if the Board is to be trusted at all it ought to be trusted with regard to the higher appointments.
2964. Should not the Board be as well qualified to pronounce as to the value of testimonials of competency as the Board of Directors of an important company? I think so.
2965. Have you given any consideration to the question of the age at which officers of the Civil Service should be permitted to retire on a pension? I think the Government should have the power to retire any man after 60 if they think through age he is incompetent to perform his duties, but it would be in the interests of the service to retain men who are of a greater age than 60 if they do not show signs of mental or bodily infirmity that would incapacitate them from performing their duties satisfactorily. For instance, I think a Stipendiary or a Police Magistrate who has not to travel any great distance would probably be a better man on the Bench between 60 and 70 than he was between 40 and 50. His judgment would be more mature. He would not be so liable to be carried away by undesirable influences as a younger man, and I think he would take a more wise and discreet view of human nature. The longer a man lives, provided his mind does not give way, the more valuable, it appears to me, is his experience. I would not, therefore, make it compulsory for every man to retire at any particular age. I would make each case stand on its individual merits, but of course the Government should have power to compel a man to retire after a certain age, say 60.
2966. Is it the case that many retirements have been permitted of officers less than 60 years of age? No man can retire under the provisions of the Civil Service Act under 60 unless he suffers from an infirmity of mind or body which would incapacitate him. There were, however, a large number of cases thrown on the Superannuation Fund which the fund was never contemplated to meet, namely, from retirements under a general system of retrenchment which was carried out in the Departments of Works, Lands, and Railways.
2967. Speaking generally, do you think it would be better that the higher officers in the various departments should have separate rooms, and that the general clerks should work in one room, where they could be supervised by the chief clerk? I think it would be much better that they should be in as few rooms as possible, excepting the head, who, of course, should have a room to himself.
2968. Speaking for your own department, could you suggest any improvement in that direction? Do you mean with regard to the buildings?
2969. I mean with regard to the grouping of the officers? There is not a more unsuitable building than that of the Department of Justice. The branch offices are mostly away from the main building, excepting two rooms in which are the chief clerk and the chief emergency officer. A sum of money has been placed on the Estimates for the purpose of building rooms by which the offices would be better consolidated.
2970. Do you know if the plans of the proposed rooms make any provision of the kind suggested? They do not.
2971. Have you made any suggestion to the Minister with a view of rearranging the office work? No suggestion of that kind has been made because I do not believe the building can be interfered with sufficiently to allow any such change. All that can be done is to add a few rooms where there is space by encroaching on the yard.
2972. In that case the scattered character of the service would be continued? Yes, but the officers could be brought somewhat closer to the Under Secretary by the proposed alterations.
2973. You require more messengers than would be necessary if the office arrangements were more convenient? Possibly so.
2974. Is there much loss of time in communicating between the offices under the present arrangements? Yes.
2975. Do you see any way to lessen that? Yes; it would involve a large expenditure in the first instance. I think the Government ought to bring departments as near together as possible, so that instead of having to send papers by messengers, a clerk could, in many cases, obtain necessary information readily by verbal inquiry.
2976. *Mr. Robertson.*] Can you give us the expenditure on the court-houses erected within the last few years? I can furnish a list of the courts erected since 1884, with the number of cases dealt with therein yearly, the cost of construction, and the name of the Ministers who were respectively responsible for their erection. [*Witness reads Return.*]
2977. Do you consider that all these courts are necessary? No.
2978. What unnecessary expenditure do you think, speaking roughly, has been entailed by their erection? Speaking roughly, I might say that some of these needless courts have absorbed more expenditure than would be met by the whole of the retrenchment of 10 per cent. that was enforced on the salaries of the Justice Department.
2979. *President.*] You said you thought the clerks of intelligence and intellect were underpaid? Yes, I do.
2980. Were you referring to other departments as well as to your own? Yes.
2981. When a clerk who is merely a recording clerk of entries, figures, either of money, items, or of storekeepings accounts and things of that kind, is receiving through length of service, perhaps, £300 to
- £400

£400 a year, does it occur to you that by having classification of work there would be a good deal of saving effected in the lower class, which you describe as non-intellectual, and might not means be afforded thereby not only of economising generally but of paying the men of intelligence a higher salary? I am sure of it.

A. C. Fraser,
Esq.
16 Jan., 1895.

2982. It appears from certain evidence which we have received that, owing to length of service, a great many clerks whose duties were simply that of recording entries from documents or vouchers given to them, which required no power of intellect at all, had been forced up into very highly paid positions which are out of all keeping with the nature of the duties which they performed? I quite agree with you. That may be so in other departments.

2983. Can you tell us anything about the present positions of the Superannuation Fund and the Civil Service Board? I might mention that a triennial report has been made to the Civil Service Board as to the condition of the Superannuation Fund as required under the Act. That report not having yet been forwarded to the Minister, I am not in a position to produce it, but I might state that it confirms the opinions of two previous actuaries, who each made a triennial report that there is a very large deficiency indeed, sufficient to justify the Board in considering that unless immediate steps are taken to remedy affairs the fund would break down in course of time. I am of opinion that the fund could be placed on a solvent basis without injustice to anyone, and that it could be carried on successfully. First of all the Government should make good to the fund the deficiency which they intended to meet at the first inception of the fund, that is the amount of liabilities then due. There were certain liabilities in the shape of pensions which were due at the commencement of the fund. There was a rush made on the fund for those pensions. The actuaries have calculated that the amount required to start the fund on a solvent basis was about £1,000,000. We have only received £20,000 a year for five years, or a total of £100,000 in all towards the million. My opinion is that there is a fair claim against the Government for a large contribution. The Government started this fund and led the Civil Servants to believe that the fund was commenced on a solvent basis. The Civil Servants were not consulted as to whether they would join this fund or not, it was compulsory on them. They supposed they were paying into a solvent fund. Now that it appears that the fund was started on a basis that must lead ultimately to insolvency we want the Government first of all to pay the money to the fund which we think they owe. That includes the amount which has been unjustifiably paid out of the fund by the Government for the purpose of general retrenchment in three or four departments—the Works, the Railways, the Lands, and the Public Instruction. Under that system of retrenchment men were thrown on the fund who had not attained the necessary age. In various ways this has affected the fund most seriously, so much so that half of the amount of existing pensions is paid to men who would not have been thrown on the fund had the Government not adopted this policy—pensions which it was never contemplated that the fund should bear. Gratuities were paid in certain cases where retrenchment had taken place, and the Government have recognised the principle that so far as gratuities are concerned the fund should be recouped, but they have never repaid the value of any of the pensions. The same principle, however, should operate in both cases; and by a minute which was forwarded to the Board, the Government stated that in proper time the value of these pensions would be recouped to the fund. Supposing that we had these two matters adjusted, the question arises what more is required to make the fund solvent? There have been many suggestions. I do not propose to go into them fully now because the Civil Service Board has come to no decision on the matter, but I might enumerate what may be suggestions worthy of consideration, and which, there is reason to believe, might, if carried out, put the fund on a proper basis. One is the extension of the age at which pensioners should retire. I am not now speaking as Chairman of the Civil Service Board, because the Board has as yet come to no agreement on the matter, but I am simply giving my own private opinion. I should say it would be worthy of consideration, whether deductions of 4 per cent. should not be made from the pensions as well as from the salaries. I am not at all sure whether it might not be advisable to raise the rate of the contributions of persons joining the service after the age of 35. I do not see why a man who goes in at 36 should pay simply 4 per cent., the same as would be paid by a man who went in young. It might be advisable to charge all persons who join the service under sections 7 and 8 of the Civil Service Act the 4 per cent. contribution, and also those who join in a temporary capacity; in the latter case the temporary service to be calculated in the computation of service should the temporary service become permanent. Changes in the way I have indicated would materially assist the fund.

2984. The average of the last three years of service gives a retiring officer a very much larger pension than the average of his whole time would do? Yes. An extension of the time of service upon which the computation of pension is made would also assist the fund. There may be various other suggestions which, I think, if submitted with the foregoing to one or more actuaries, who would show us the proper proportion in which the suggestions should be carried out, so that hardship should not fall too heavily in any one direction, might also very considerably assist the fund, and help to place it on a proper footing.

2985. I suppose your mind is absolutely made up that a Superannuation Fund is indispensable? I think if the Superannuation Fund is destroyed the efficiency of the service would be deteriorated. I think in a democratic country like this you are more dependent upon the uprightness and integrity of the Civil Service, which administers the affairs of the country, than in an older country with a more conservative Government. We see what has been the result in America of playing fast and loose with the Civil Service. This service has been an honest service. Ministers come and go, and it is possible that the Ministers whom we may have in the future may not all be as good as those we have had in the past, but the Civil Servants remain, and, unless they are strong in opposition to wrong-doing, and able to insist upon the good traditions and precedents of the service being carried out, the country must suffer. To have a strong service, officers must know that they will be upheld when they are in the right, that they will not be rashly dismissed, and that they will have a retiring allowance, even if it is provided for by themselves. But I will go further, and say that the Government ought to contribute as a matter of policy. In England the Civil Servants contribute nothing, and when the Imperial Government handed over the lands of this Colony to the people, it made a condition that all the Civil Servants in the Colony then existing should be provided with pensions. Many of these pensions are still being paid. The Government recognised the principle again in the late Civil Service Act, which was repealed in 1873 owing to its extravagant provisions. It again recognised the principle I refer to, and the present Act, which was unfortunately badly mangled in Parliament, and on that account has turned out to be inefficient, and it seems to me that the principle is a fair one. I think that it would be a bad thing for the country to make the

- A. C. Fraser, Esq.
16 Jan., 1895.
- the tenure of office of Civil Servants in any way uncertain during good behaviour, or to take away the prospect of their being provided for in their old age.
2986. *President.*] Can you let us have a copy of the report which you say the Civil Service Board had prepared? It will be ready very shortly.
2987. It would, I suppose, be impossible to establish a Superannuation Fund in a favourable condition without Government aid? I think the Government ought to provide to a certain extent towards the fund. But the fact of the Government making good the arrears, which they are honorably bound to do, would hardly be sufficient of itself to place the fund on a satisfactory basis. The extension of the age at which men could retire on a pension, the extension of the term of service upon which pensions are computed, the levying of contributions on pensioners, and the raising of the amount of the contributions of men joining after 35 years of age, and the charging contributions upon persons coming under sections 7 and 8, and upon temporary officers, could, I think, bring about such a result as to place the fund in a solvent state.
2988. That would be in addition to the Government making good the arrears? I think the Government should pay what is justly due to the fund.
2989. *Mr. Storey.*] Then your starting point is that the Government should make good the difference between the £100,000 and the million? Yes; but independently of that, I think if the suggestions made were all fully carried out, the fund would be placed on a fairly workable basis.

THURSDAY, 17 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Edward William Knox, Esq., Manager of the Colonial Sugar Refining Company of Sydney, sworn and examined:—

- E. W. Knox, Esq.
17 Jan., 1895.
2990. *President.*] Can you tell us the number of men you have on your clerical staff in the head office and throughout the branches? The clerical staff is very small; we pay in salaries and allowances altogether between £60,000 and £70,000 a year, but the proportion of that paid to the actual clerical staff is very small.
2991. How many might there be on the clerical staff? About sixty.
2992. You can tell us what you pay to ledger-keepers or invoice clerks, per annum? From £150 to £300.
2993. Is £300 the maximum? That is about the maximum for the ledger-keepers.
2994. Those who attain the £300 payment have probably been a considerable number of years in the Company's service? About twelve or fifteen, I think.
2995. Of course the number of accounts you have must be very large? I don't think the number of accounts is anything like the number of a large soft goods house, for example.
2996. Still it is very large? I think 500 at each principal branch.
2997. How many centres or branches have you in the Colonies? Besides Sydney, we have four branches for the sale of sugar.
2998. Of course there is a staff at each branch? Yes.
2999. Have you managers at each of these branches who are responsible for the discipline and proper conduct of the affairs of the Company? Yes.
3000. Of course these managers are paid special salaries on account of their responsibility—their responsibility is very great? Yes.
3001. Is there any system of inspecting these branches? No regular system.
3002. If an inspection takes place it is only casual and not stated? We have a large inspecting staff, but it is almost entirely technical—engineering, chemical, cultivation, and so on.
3003. You might tell us something about the class of servants whom you would describe as labourers or wage-earners, but of course you will exclude from that category any engineers or men who would have technical knowledge of machinery, for instance; you would not include them in that class of wage-earners, would you? All our clerical officers and chief engineers are on the staff. All of the grade of second engineers and below are classed as wage-earners. We require a certain educational standard on the staff which we do not require with a wage-earner. A man may be quite fit to serve as a second engineer who is not fit to rise beyond that post.
3004. Up to what rate of salary might these wage-earners rise? They might rise up to £200 a year, although they are paid weekly.
3005. These men would be efficient hands, working under a skilled artisan, I suppose. They would possess a certain knowledge, say of engineering, but they could not be put in charge of any of the branches or departments of the Company? A man who stops at second engineer would be supposed not to be fit to go on as first engineer, but there is no reason why a second engineer should not be promoted to be first engineer if he had the qualifications.
3006. It might perhaps be better if we were to ask you to tell us generally the position of your wage-earners, the number of men, and the rates of remuneration, giving the minimum up to the maximum, because you will be better able from your knowledge of the position to see what would be serviceable to us than we are able to learn by putting questions to you? The Sugar Company's salaried staff includes about 250, and we pay in wages and salaries to European and coloured employés about £500,000 a year. If it is convenient to the Commission, I would suggest we take the Parliamentary estimates as they stand. With a view of giving the Commission information as to the relation which the wages paid in the Government service bear to those obtained in private employ, I have examined the estimates as submitted to Parliament recently.
3007. Will you give us the result of your examination? Take the Police Estimates, page 36. The senior constables and ordinary constables receive 8s., 7s. 6d., and 7s. a day, besides an allowance of 1s. a day to those without quarters; they are paid for seven days a week; their pay is the same as during the boom, four years

E. W. Knox,
Esq.
17 Jan., 1895.

years ago, and if it was sufficient then, it is more than sufficient now, as the cost of living has enormously decreased. Proceeding to the Lunacy Estimates, you will notice the engine-drivers are paid £3 3s. a week, the current rate of pay for such work being from £2 5s. to £2 8s. a week. In the estimate for the Botanic Gardens and Parks no particulars are given in regard to the rates of pay. Turning to the Treasurer's Estimates, on page 55, you will see, under the heading of "Miscellaneous," provision is made for a watchman at £120.

3008. *Mr. Storey.*] What do you pay your watchman? £2 2s. to £2 5s. a week. The boatmen under the Treasury receive £133, and they would be more than well paid at £109, and the coxswain gets £145, who ought to receive £117. The engine-driver has £150; he should have about £120.

3009. What are these fellows, coxswains, or what? The Customs keep a boat.

3010. *President.*] I suppose the engine-driver at Newcastle would come under the same category? Yes; the one remark applies to both. As to the Government Printer, no rates are supplied. These men are, of course, paid to a certain extent by the piece, and it would be necessary for the Commission to obtain information from someone in the trade as to the comparison between their wages and those paid in private establishments.

3011. *Mr. Humphery.*] You are speaking of the compositors, I suppose? Yes. A great portion of the work is piece-work. In the store branch, page 59, the carter receives £140; he should have at most £125. The labourers receive £127; if working eight hours they should get £94. On the same page, in the Explosives Department, it will be noted in all cases where the rates are given at per day, the calculation is carried out at 365 days for the year, although in no instance are the men employed on Sundays. It will be for those members of the mercantile community who import powder to say to what extent the cost of this article is increased by the enormous expense in this department. I would also point out that there is a charge for rations, fuel, light, and medicines, for residence on the islands, presumably Goat Island. Proceeding then to the Marine Board Estimates on page 52, it will be seen that in the Macquarie lighthouse there are two engineers who draw salaries to the amount of £413, and three light keepers who draw £354, presumably in addition to having quarters provided for them.

3012. *Mr. Storey.*] What would you estimate they are worth; an electrical engineer, I suppose, is worth a little more than an ordinary one? I have not much experience in electricity, but I should say £4 and £3 a week would be ample pay for first and second engineers, and it is quite impossible for three other men to be profitably employed about the place.

3013. *President.*] The assistant engineer has £150 a year, that is nearly £3 a week, but the other is out of proportion, it is £5? Yes; there are only two gas engines to be attended to, there is no steam machinery there.

3014. *Mr. Storey.*] It only works at night? That is all. I would point out then that the Hornby lighthouse requires the expenditure of £513 a year, the men also being provided with quarters, while the "Bramble" lightship requires a staff costing £689 a year, whereas a pile light could be erected on the Sow and Pigs for about £200, and maintained probably for about £50 a year. The two leading lights in Port Jackson cost £60 a year to maintain. The pay of the men employed in the maintenance of the other lighthouses is in the same proportion. It will be noted that the keeper at Newcastle acts as signal master, but the signal master is also provided for elsewhere in the Estimates. The signal men in Sydney receive very high pay. Coming then to the Pilot Service, page 64, I would draw attention to the crew of the "Captain Cook." This vessel is manned by five officers and 17 men, at an annual cost of £3,510 for wages alone. Considering how seldom the steamer goes to sea, and how short are her trips, I should think an economy of £1,500 a year might be made in the cost of her staff.

3015. *Mr. Storey.*] Can you tell us the wages paid to the crew of the "Fiona," owned by the Colonial Sugar Company? The captain receives £300 a year, the mates £168, £120, and £108; the engineers £240 and £186, in all cases with board. The "Fiona" is three times the size of the "Captain Cook."

3016. What do the firemen get? The firemen get £8 a month, and the seamen £6, in both instances these rates being above those current in the port. I might state, for the information of the Commission, that during the six months ending 31st December last, 161 vessels entered the port. If the same number left, the steamer "Captain Cook" was away from her moorings twice during the twenty-four hours for a period of about an hour and a half on each occasion, while the five pilots have each taken out and brought in one ship in each six days during the half-year. The boatmen employed in the outports under the Marine Board receive from £106 to £154 a year, or about £25 a year more than the work is worth.

3017. Have you ever visited the rivers on the coast where the pilots are stationed? The Clarence very frequently.

3018. Any of the others? Not frequently.

3019. Take the Clarence River. Can you say whether there is anything like work enough to keep the pilot and his men employed there? It is twelve or fifteen years since I was on the Clarence, but I was there pretty constantly for the preceding twelve years, and I should not think there were two days' work a week for the pilot and his crew.

3020. *President.*] At that time? Yes. On page 67 provision is made for watchmen on the public wharves at £130 each, whereas night watchmen are apparently obtainable at £104 each. Proceeding, then, to the Works Department, I would draw attention to the expenditure in the Dredge Service, page 89, Schedule A. Fifteen masters and chief engineers are provided for the dredges, as against ten last year. The pay of these men is stated as from £263 to £380 a year; in private employ they would receive £175 to £240; the plant being very simple, and there being little risk or responsibility in connection with the working of it. In the dredge "Sydney" the officers comprise a master, a mate, an engine-driver, and two coxswains, the crew being two firemen, four sailors, and a boy. The pay of all these men is from 15 to 20 per cent. above that obtainable in private employ. As illustrating the economies that can be effected, I would refer to the case of the "Little Nell." In last year's Estimates this vessel was set down to cost £824 a year for wages. In March last year a letter appeared in a newspaper drawing attention to this extravagant expenditure, and the wages are now set down at £642 a year, this amount being still 15 per cent. over the fair rate for the work that is to be done by the men employed. The seamen in the dredges receive £114, and at the highest rate paid in the port they would get £98. The mate gets £125; while the second mate on an ocean steamer would receive £120 and board, or, say—£146 a year. In the "Thetis" the wages bill is £1,186, which should be reduced to about £980; and the pay of the men in the grab dredges should be cut down in the same proportion. In regard to the staff employed at Cockatoo

E. W. Knox, Esq.
17 Jan., 1895.

Dock no details as to the wages paid are given, nor is there information about the number of men employed. The same remark applies to the men employed on the main roads, or under the Government Architect, these two branches of the Works Department absorbing between £600,000 and £700,000 a year. Turning then to the Justice Department, page 120, the warders seem to have high pay, considering they get clothes, a house, and possibly board in addition; and the carters are again set down as working 365 days a year. In the Mines Department, page 139, the caretakers of the artesian bores or public tanks, receive £135 a year, and, I believe, house accommodation as well. Coming to the Post and Telegraph Office, page 144, it will be noticed that boys in the Telephone Exchange receive over a £1 week. Letter-carriers appear to receive up to £3 5s. a week, and to average £2 8s. 6d., receiving in addition uniforms, and having a number of holidays. Drivers of the mail-carts get £120 to £150 a year, many of them being mere boys. The wages all through this department seem exceedingly high. Then in the Railways, as to which I take my figures from the Supplementary Report of the Commissioners issued recently, the locomotive drivers average 14s. a day; they receive three weeks holiday in the year, besides lodging money when away from Sydney, so the best paid of them must thus get nearly £5 a week. Were the railways under private control the pay of drivers would be, for the slow trains £3 a week, and for the express about £4 a week. In the same way a fireman would get from £2 5s. to £2 10s. a week, instead of 10s. a day with allowances, which they get now. In the shops the fitters and turners average 10s. 6d. a day with twelve paid holidays; in most large establishments in Sydney the average is about 9s. a day with two paid holidays. So far as I have been able to ascertain the wages paid directly by the Government of New South Wales to the men working under the direction of Government officials is probably about 2½ millions, and I estimate roughly that these wages might be reduced from 10 to 20 per cent., say 15 per cent. on the average, not only without inflicting any hardship, but without bringing the men down to the level of the pay of the best services in the Colony at the present time.

3021. With reference to your own clerical staff in the Colonial Sugar Company, at what age do you take junior clerks? Between 16 and 17.

3022. What rate of pay do you give them on entering the Service? £30 a year for the first six months, £50 for the following year, and an advance of £25 a year until £150 is reached. After £150 promotion depends upon opportunity and merit.

3023. How many years is it before they get up to £100? Two and a half years.

3024. In the clerical department a man to get up to £200 a year must be in the office for five or six years? If opportunity permitted he would be in the office four and a half years before getting £200, unless there were some special reason for promoting him.

3025. *Mr. Humphrey.*] Have you any provision for superannuation or retiring allowance in your Company? We have a Provident Fund, to which all members of the staff must belong, and all wage-earners who have been not less than two years in the employ may belong. The payment by the members is 2½ per cent. on their average yearly earnings, and a similar amount is contributed by the Company, the object being to provide death payments equivalent to one year's salary, and a superannuation allowance after service for a certain number of years—that is, after reaching the age of 60, or after serving ten years, if then incapacitated by physical disability.

3026. Upon what basis do you calculate the retiring allowance? We have not got as far as that, the fund has only been in existence between four and five years, and no retiring allowances are payable until after the completion of the fifth year. In framing the rules of this fund we had in view the provisions of the fund instituted by the London and North-Western Railway Company, one exception being that where, as in the case of the Railway Company, the funds were all invested on deposit, in our case half the funds are invested on deposit and half in the purchase of shares in the Company. The retiring allowances under the fund are to be calculated on the average salary of the member during the period for which he was a subscriber, in relation to the period of such subscription.

George Miller, Esq., Comptroller-General of Prisons, sworn and examined:—

G. Miller, Esq.
17 Jan., 1895.

3027. *President.*] The different gaols throughout the Colony are all directly under your control? There are sixty gaols proclaimed under the Prisons Act, but twenty-three of these are what we call established gaols; the remaining thirty-seven are police gaols. The twenty-three are solely under the Prisons Department, and are directly under my statutory care and control. The police gaols, for the sake of economy, are occupied partly by the police and partly by the Prisons Department. They are, in effect, mere houses of detention for prisoners awaiting trial on the spot, and for short-sentenced local offenders. They are under acting gaolers at very small salaries, ranging from £15 to £20 per annum, which are paid by my department. All the established gaols have a governor, who is resident on the premises. The large first-class gaols have "governors," the designation of the officers in charge of the lesser gaols is gaoler.

3028. Do they render to you any report at stated times? Yes; regularly.

3029. As to the discipline and good order of the establishment? I receive bi-monthly reports from all the established gaols; and from Darlinghurst and Biloela I also receive a daily report as to the state of the gaol. From all the established gaols outside Sydney I receive bi-monthly reports, and any occurrence of a special nature is at once reported to me.

3030. Is that the case with the police gaols? The acting gaolers send to me a return of the number and particulars of prisoners in the gaols throughout the month.

3031. Are the salaries paid monthly in each of these places? Yes. As regards the police gaols, the Inspector-General pays the police salaries, but I pay the warders and the small salaries allowed to the acting gaolers by the Prisons Department. In all the established gaols we pay the salaries monthly ourselves.

3032. Are the salaries paid through your office? They are paid by me.

3033. Both in town and country? Yes; I sign the cheques.

3034. Under the vote? Yes.

3035. I see that you have a deputy-comptroller and chief clerk;—can you tell us what his duties are generally? I have prepared a statement giving an outline of my own duties, and of those of each of the officers in my department, from the Deputy-comptroller downwards. He has powers under the Prisons Act to act for me when I am away on a tour of inspection. It is necessary he should have them, because the

the Prisons Department bristles with regulations and law. When I am away he takes my place, and has the same powers, under the Act 37 Victoria No. 14, as I have.

3036. And when you are on the spot what does he occupy himself with? There is a great deal of work done in the office. He is responsible for seeing that all my instructions as to performance of work are properly carried out. He opens the letters and sends them to the record clerk; he distributes the work in the morning; all papers received and despatched pass through his hands; and he sees the majority of the callers, and also attends to the personal representations or complaints of discharged prisoners who come to the office. [*Document handed in.*]

G. Miller,
Esq.
17 Jan., 1895.

3037. I see you have five clerks in addition to the accountant;—the accountant's duties are? They are not confined to the head office. When I took charge of the Prisons Department the office was one of the most slovenly I have seen anywhere, and I have had a long experience in the Service. There was no proper system in the office, and there were certain necessary checks and records not kept. There was no system whatever of inspecting the gaol accounts and books. There was no one I could send off at any time to inspect the books if I suspected a gaoler was not correct in his accounts. My eyes were opened to that fact by disclosures of fraudulent conduct on the part of a gaoler at Young. His office had been visited at different times by Treasury officers, but the frauds had not been discovered, so I saw the necessity of having some officer as accountant and examiner who had been trained in the Prisons Department, and was aware of all the details of a gaoler's work, so that he might go very closely into matters which the Treasury inspectors had not looked into. I brought the matter under the notice of the Minister for Justice, and the result was the appointment of an accountant and examiner who had been chief clerk at Darlinghurst. The last Public Service Commission, in connection with their inquiries into the working of the country gaols, found some things which did not satisfy them, and they suggested this independent inspection, but I had already taken steps to have an appointment made. The officer in question is most efficient.

3038. Then this accountant is really an inspector as well? Yes, of accounts.

3039. You sometimes make visits of inspection yourself? I visit the gaols at different times, but it is impossible for me to examine all the books of the gaols. I have to see all the prisoners who wish to make any complaints or statements, and I have to see such officers as may wish to interview me. Perhaps I may have to hold an inquiry. If I had to examine the books of the various gaols throughout the Colony, my duties at head-quarters would have to be neglected. The accountant makes a searching investigation.

3040. And sees there are no bogus names put upon the list of officers drawing salary? Oh, certainly; we know exactly the staff of all the gaols, and that could not occur.

3041. So there could not be any claim to salary under an assumed name? Certainly not; a careful check is exercised. I should be glad, as the Prisons' is a department full of technicalities, if you could find time to visit the office, and see the kind of work the clerks have to do, and also visit one of the large gaols, and make inquiries on the spot. You will see that the books of a large gaol are very numerous, as each labour gaol carries on a sort of manufacturing business.

3042. Then the staff in your own special department, is it under-manned or over-manned? It is certainly not over-manned.

3043. Are the messenger's duties very onerous;—are they worth £120 a year? Well, I think they are, because he is the only messenger I have. He has to go out a good deal, and has also to keep a certain amount of watch over the place. Discharged prisoners frequently come to the office, and he has to prevent them from entering the rooms without permission. He opens telegrams, and repeats them to me at my residence after office hours, or on holidays. He is a good trustworthy man, and was ten years bedroom steward at the Australian Club.

3044. In your visits to the established gaols do you take any cognizance of the numbers of the staff, and do you make any inquiry as to the necessity for their services? Oh, yes; I go round the posts at each gaol.

3045. You see there is no superabundance on the staff? I do.

3046. As to the remuneration of the chaplains at the various established gaols, although the individual amounts in many cases are small, the total is £1,985? They are small salaries, as you observe.

3047. £120 a year in two cases in the Sydney gaols;—of course, we ought not to grudge services of this sort, they may be of great efficacy, but do you think the good that is done is worth the money? It is a very difficult matter for me to express an opinion as to the effects of religious instruction on the prisoners. I have no positive information on that point, but the religious instruction has a good effect on the general tone of the gaols. As to whether the chaplains have any permanent influence over the prisoners, I could not say. The chaplain is required under strict regulations not only to conduct services at least once a week, but he has to see the prisoners of his denomination, and endeavour to induce them to observe the regulations of the gaol. He has to exercise his influence in endeavouring to soften them, and no doubt most of the chaplains do to some extent assist in that way, but as to the permanent result of their teaching I could not speak.

3048. In appearance, at any rate, it has a beneficial affect? I am sure of it.

3049. Some receive £20, some £120? The numbers of prisoners in any gaol are of varying quantities. They vary according to the activity of the police and the seasons of the year. We have more in summer than in winter. That is the case, I think, all over the world. Darlinghurst has sometimes over 600 prisoners. So the chaplains have a good many to deal with. The chaplain at Berrima Gaol gets, perhaps, the highest pay of all the chaplains; that is what we call our separate treatment gaol. We have the same system at Goulburn, Bathurst, and Parramatta, but we send very troublesome prisoners to Berrima for coercion. The prisoners are in separate cells, and more work devolves upon the chaplain in personally interviewing the prisoners.

3050. Prisoners are obliged to declare what denomination they belong to, and a minister of that denomination is accordingly engaged to attend to them? Exactly.

3051. In some cases I see only the Roman Catholic and the Church of England mentioned? That is where the number of prisoners is so small that there is no necessity for a chaplain of Presbyterians, Wesleyans, or Congregationalists, because they attend the Church of England service.

3052. Is it possible that any of these established gaols are superfluous—could you not point to some of them that might with advantage and economy be discontinued? That is a question which has been put to me very often, and I have carefully considered it, but I do not see my way to recommend the closing of one of the gaols so long as the Government keep Circuit Courts and Quarter Sessions on the spot. The gaols have arisen out of the local demands for Criminal Courts. Where there is a Criminal Court we

must

G. Miller,
Esq.
17 Jan., 1895.

must have a gaol. In 1886, before we had a large gaol at Bathurst, and a gaol at Biloela, the crowding at Darlinghurst was frightful. There were at times between 900 and 1,000 prisoners in the 323 cells. They were sleeping even in the school-room, and school had to be discontinued. I am speaking of my predecessor's time when accommodation was limited. The stench from the cells in the morning was sickening. The men were actually confined three and four in a cell, with a night-pan. By having the country gaols we are enabled to relieve the pressure on Darlinghurst and Parramatta, and carry out to some extent what has been the aim of the department since my predecessor visited England in 1870, that is, to give every prisoner a separate cell. Associating prisoners at night is one of the worst phases of prison life, for they not only plot and scheme, but all sorts of abominations are carried on. That is known to the prison authorities although it is not openly inquired into. We never put two men together in a cell, but always one or three or more. These practices become known through perhaps some comparatively well-behaved prisoner giving information to the Governor of the gaol. We cannot inquire into the matter, because the informer would be a marked man. He would be what is called a "dog." We simply break up the association by transferring the men to other gaols, and putting them into separate cells. If you close the country gaols it will prevent my carrying out the single-cell system. I will read from this memorandum to show how the gaols are overcrowded. At Darlinghurst with 323 cells, there were, on 31st December, 546 prisoners; Bathurst had 308 cells and 301 prisoners; Berrima 82 prisoners and 80 cells.

3053. There is association there? I might mention that there are some cases in which it is necessary to have more than one man in a cell. If a man is suffering from epilepsy or heart disease, and is likely to suffer at night, the doctor orders that two men shall sleep in his cell. We receive these men in a most shattered state from dissipation, they are constitutionally broken down, and cases have occurred where men have died in their cells at night. At Biloela there are 189 prisoners and 15 cells, but I may explain that there are two large dormitories. The gaol is chiefly used for short-sentenced town offenders of the incorrigible class, the broken down old prostitutes, petty thieves, and vagrant men about the streets. It would be too great an expense to erect a separate cell for them, so they sleep in long dormitories with iron-grill doors at each end lighted at night. There is a warder always on duty, and in the female division there is a female warder who can look through a peep-hole to see whether any mischief is going on. The 15 cells are punishment cells, and are for isolating prisoners when necessary. At Goulburn Gaol there are 310 cells and 303 prisoners. At Maitland, 114 cells and 149 prisoners. At Parramatta, 283 cells and 364 prisoners. At Trial Bay, 64 cells and 84 prisoners. But some of the men at Trial Bay are associated in huts; that is what we call a modified servitude prison. They are men approaching the end of long sentences, and they are a good deal more trusted than the ordinary prisoners in a close gaol. In the principal gaols, 2,018 prisoners were, on 31st December, confined in 1,497 cells, so you see there is still objectionable association to be overcome. Why that occurs is partly owing to this: In Darlinghurst some of the men are short-sentenced men, and I do not think it worth while to incur the expense of sending them to the country, although I do occasionally relieve the gaol by sending prisoners to Albury or other country districts where useful work can be found for them. At Albury there are 24 cells and 42 prisoners. At Armidale 26 cells and 25 prisoners, but the numbers often go beyond that.

3054. Is it ever the case that Armidale gaol is almost empty? Never in my time.

3055. *Mr. Robertson.*] How long have you been Comptroller? Five years.

3056. *Mr. Humphery.*] I suppose there is no gaol at Baker's Creek? There is none.

3057. Prisoners would be brought on to which gaol? I do not know whether it is nearer to Armidale or Tenterfield. At Broken Hill there are 34 prisoners and 18 cells; at Deniliquin there are 15 prisoners and 16 cells; at Dubbo, 58 prisoners and 15 cells; some of these may be short-sentenced men. I very often relieve Dubbo by sending to Bathurst. At Forbes there are 25 prisoners and 7 cells; Wilcannia, 34 prisoners, 8 cells; Tamworth, 40 prisoners, 14 cells. These were the numbers on the 31st December.

3058. *President.*] There are a great many warders, especially of the third class—is there no possibility of diminishing the numbers without sacrificing efficiency? There is not. I have given very careful attention to that. In Mr. O'Connor's time as Minister I made a most strict investigation, and wherever I possibly could I endeavoured to reduce the number. If I were to reduce the staffs in the gaols it would injure the efficiency, because we have to provide day and night guards. Our warders' hours are very long—from eleven to twelve hours a day. They have to work on Saturdays and Sundays, their duty is constant, they have not only to guard the walls and gate of the prison, but from posts within the gaols they must overlook the whole of the interior. They have to exercise great vigilance, as the prisoners are up to all sorts of tricks, and all sorts of malpractices would go on. I may mention a recent case at Bathurst where one prisoner took up a broom and killed another on the spot. If we had had no warder outside the yard no one would have known who committed the deed, as the prisoners would probably never inform. Each post must be where the officer can be in touch with the other and be able to signal to him if he wants assistance. A great deal depends on the construction of the gaol as to what staff is necessary. Darlinghurst Gaol is badly constructed, and some other gaols contain objectionable nooks and corners. Bathurst and Goulburn Gaols are more modern; although they contain a large number of prisoners fewer warders are required, but we are obliged to keep a large number of warders to secure a proper guard and prevent fighting amongst the prisoners. They attempt to gamble in the yards and quarrel.

3059. Inspecting is done partly by yourself? I may say wholly by myself.

3060. You look into the discipline of the gaols, but the accountancy department is attended to by your accountant? By the accountant and examiner.

3061. He is an assistant? He is the principal assistant; there are only two in my account branch.

3062. He examines the books and accounts how often in the year? Perhaps twice a year in each of the large gaols. I have no fixed time for sending him to any gaol.

3063. *Mr. Storey.*] Are the warders provided in clothing? Yes; that is, uniform, boots, and caps. The service is a partially armed one.

3064. Has there been any reduction at all in the expenses of the department under your control since you took charge? There has been a reduction indirectly, but not in my vote. I mean to say the expenses have been cut down as much as I possibly could as regards material for manufactures and for repairs, &c., to buildings.

3065. What do you estimate the savings have been the last two years? I really could not say.

3066. Has it been material? It has not. The estimate has always been kept as close as possible. My predecessor exercised strict economy on all occasions.

3067.

G. Miller,
Esq.

17 Jan., 1895.

3067. Take the last item—"Provisions, medical comforts, fuel, light, &c."—is that estimate exceeded, or is it well within the mark? The estimate for contingencies has been slightly exceeded as a rule, because it has always been placed at too low a figure until within the last two years. In Mr. O'Connor's time a certain sum was cut off, but the amount had to be increased afterwards. Our expenditure for 1894 was based on our expenditure for 1893, but a saving has been made by cutting off in various ways. For instance, the warders' sustenance allowance in going with prisoners on escort was 7s. 6d. a day, but when I found the police were allowed only 4s. a day, I reduced the allowance to warders. The police get quarters at night, but our warders have to provide quarters. I have power under the authority which was given to my predecessor to grant in cases of emergency a sum not exceeding £10 for any small repair that may be necessary in a gaol, but I have in every way resisted every application from gaolers, unless the work was absolutely necessary. I would like to read a circular which I issued on the 16th June, 1893, to officers. [*Document handed in.*] All matters for expenditure to which I give my sanction must, in the first instance, be passed by the visiting Justice who on the spot represents me. That circular was carried out to such an extent that a few gaolers allowed their gaols to fall into a comparatively neglected state.

3068. What is the system adopted by your department for supplies to gaols in the shape of provisions, fuel, light, &c., is it done by tender? By tender accepted by the Treasury.

3069. Yearly contracts? Yes; commencing on the 1st April of each year. We submit to the Treasury the estimated requirements of each gaol for the year, and the Treasury publishes them in a *Gazette* notice. There are nine scales of rations. The contractor has to submit a tender for supplying the different scales, and has to enter into a bond. We do not keep rations in bulk in gaols. The contractor has to supply them on requisition sent out every evening.

3070. Do the successful tenderers change yearly? Generally speaking I think it is the same man.

3071. *President.*] Of course they are all local? Not all of them, some of them are only local agents.

3072. *Mr. Storey.*] Have these tenders been reduced in prices at all during the last year or two? I do not think they have been reduced very much.

3073. It is generally supposed that everything is much cheaper now, do you not think there ought to be a reduction? The Secretary of the Tender Board at the Treasury would probably know that better than I.

3074. But it is an expense under your department, would you not have some control over it; for instance the tenderers for 1893 ought certainly not to get as much as for 1895; generally speaking everything is much cheaper? The tenders are considered at the Treasury by a Board. I do not think there has been much difference.

3075. Some contractors seem to have a grip of certain departments, and nobody opposes them; £40,000 a year is a large sum to be spent in these things? It appears a heavy vote, but I assure you the utmost effort has been made to economise in every direction in the department, which has to house, feed, control, and instruct thousands of prisoners annually. You will, no doubt, observe there has been an increase on the estimate of this department since 1886, but since then the population of the Colony has increased some 223,000, and necessarily the expense of departments like the police, lunacy, and the prisons, has also increased. The police has increased £34,000, the lunacy about £17,000, and our increase has been £15,800. All these increases hinge upon the improvements of the systems and the growth of the Colony. Our increase is due to the opening of a large prison in Bathurst, the gaol at Cockatoo, the gaol at Broken Hill, the Wilcannia Gaol, and some small local police gaols.

3076. In your opinion you could not say where any economy can be affected under the heading of gaols generally, £61,000, or under the heading of contingencies £42,000—you say they are on the strictest economical lines? They are all on the strictest lines of economy; everything has to be checked in my office, and the officers have all to know thoroughly the regulations and general orders. A good deal of the work of the clerks consists in checking returns of various kinds, and in compiling remission schedules and other information for the Minister of Justice, which must be strictly accurate.

3077. The rates of pay are 8s. to 10s. a day for the warders;—do they include provisions? The male warders do not get rations, excepting at Trial Bay.

3078. Considering the work they have to do, which is not so arduous as that of labouring people outside, who do not get such high wages, do you not think the warders are overpaid? They do not commence at 8s., they commence at 6s. 6d., then they rise to 7s., 7s. 6d., and 8s. a day. It takes four years to get to 8s. a day, the maximum pay for ordinary warders. The warders are all selected men. I select, appoint, reprimand, or disrate between four and five hundred men in the department; all the lesser grades are appointed and dealt with by me.

3079. Why does the superintendent at Trial Bay get so much more than the others? His position is one of great responsibility, and it is exceptionally dull and cheerless. The salary was fixed from the start, but I do not know why at that rate. He has a great deal of responsibility there, and the men sent down averaged 130 in 1893.

3080. But he gets £475; there is a deputy at £209, and a clerk and schoolmaster at £198? There is a good deal of anxious responsibility in the working of the prison there, and the prisoners are on varying scales of reward. In regard to the gaol warders, they are all picked men. They have to furnish certificates, generally a first-class discharge from the army or navy, the Permanent Artillery, or police. Sometimes I take good tradesmen, but they must all possess a certain degree of education. They are all men who are under disciplinary restrictions which an ordinary labourer is free from. They must not supplement their wages in any way, such as by keeping little shops; they must be men of exceptionally good character. I do not think the pay for nearly twelve hours a day, including Saturdays and Sundays, is too much. They get one day off duty a month in the large gaols, when it can be arranged, and seven days in the year.

3081. *Mr. Robertson.*] Do you mean to say that these warders and senior warders, who are paid so much by the day, are working seven days in the week? Yes.

3082. What are their hours? From 6 in the morning, the day men generally, till about a quarter to 6 in the evening. Everyone of the 500 or 600 prisoners in Darlinghurst Gaol has to be searched every night, and the cells and yards also have to be searched. In times of emergency the day men might have to remain after a quarter to 6.

3083. There is no break allowed during the week to these men who are paid by the day;—they are working twelve hours a day all the year round, except on seven days in the year and one day a month? I will not say always twelve hours, because by an arrangement of dog watches they take it in turns to go

on

G. Miller,
Esq.
17 Jan., 1895.

on at night. The hours of duty are arranged so as to have a change in the night-watch. If this was not done, the same men would always be on guard at night.

3084. Does the same thing apply to the carters? No.

3085. Do they work on Sunday? No, but they may be required to do so.

3086. But are they called upon? I believe they are called upon occasionally.

3087. They are paid 7s. a day for 365 days in the year? Yes, they are.

3088. That applies, of course, to all the other officers who are paid by the day—they are paid for 365 days? Yes. Warders work Saturdays and Sundays. The carters never go any higher, no matter how long they may be in the Service. A carter is not promoted to the position of warder as a rule.

3089. What are the travelling expenses allowed in your department over and above conveyance? I get £1 1s. a day and conveyance.

3090. Is there a second rate? Yes, the same as right through the Public Service.

3091. You are the only one getting the £1 1s.? Yes.

3092. You said you were led largely to send an inspector to the various gaols to look through the books because of frauds perpetrated? It was not exactly because of one fraud; there were a series of small pilferings.

3093. Could you tell the Commission why they escaped the notice of Treasury Inspectors. You say these officers failed to detect the frauds? I don't think I could do that.

3094. Can you tell us what the Treasury audit consists of? I can only say from what I have heard. The Treasury Inspector looks into the amount of cash received by the gaolers; the cash received by gaolers for work done is not sent through the head office, but is remitted to the Treasury direct, a statement only being sent to me. The Treasury Inspector checks the cash receipts and counts the prisoners' money, but he does not go round any of the workshops to inspect the books.

3095. He inspects only the receipts? Yes, not disbursements.

3096. What check have you over the expenditure of your department, because it is all done under your supervision? I have a complete check over it.

3097. What is the check? The ration returns are sent to me every month from the established gaols with the vouchers, which are signed also by the visiting Justice, and every single ration is checked in my office. The police gaols send in their returns quarterly.

3098. How is it, then, that you did not discover the frauds at Young? That was shortly after I took office, and they had been going on for years.

3099. Have you to accept the certificate of the gaol officials themselves? Necessarily, I have.

3100. Well, what check have you upon them? The check of my own examiner when he goes round. Every voucher is accompanied by a return showing the number of prisoners in the gaol on each day, and the number of rations issued to each prisoner, and this is signed by the visiting Justice as well as by the gaoler. In the case of medical comforts the return is also signed by the surgeon.

3101. Is it not possible the books might record the matters contained in the vouchers and yet be wrong? It is possible.

3102. *Mr. Humphery.*] Do you obtain supplies through the Comptroller of Stores? We obtain all our supplies for manufacturing purposes from the Comptroller of Stores, that is for mat-making, tinsmithing, blacksmithing, and other trades, but all material for works carried out in the gaols, such as repairs and extensions to the buildings, are obtained by contract under the Government Architect's Department.

3103. Can you say approximately the value of the supplies obtained annually through the Comptroller of Stores? I could not.

3104. Is there nothing to show? The Comptroller of Stores could show you that. We keep a copy of every requisition sent to him.

3105. *Mr. Robertson.*] But you have a record of what comes back? When I requisition for certain things they are sent to the gaol by the contractor or by the Government Storekeeper, accompanied by an invoice. The officer receiving the goods, not the officer who requisitioned, compares what is sent with the invoice, and if they correspond he takes them into stock and debits his stock-book with them. Every article issued from stock is credited in the stock-book.

3106. *Mr. Humphery.*] Would the gaol books show the receipts from the Comptroller of Stores? Everything.

3107. Have you the means of ascertaining the daily average number of prisoners? Yes; but I have not the daily average now with me. I could give you the monthly average throughout the year. My reports give the exact number of entries and discharges and of district persons. The monthly average in 1894 was 2,484.

3108. Can you say what the cost per prisoner was, and have you made any attempt to compare one year with another? It would be a difficult comparison. The prisoners vary so much in number in the different gaols. If you mean taking in rations —

3109. I mean maintenance? I have roughly. I should say it was from £28 to £32 a year, that is including rations, clothing, and salaries of all officers, and allowing for value of work done.

3110. Would your average of £28 be spread over 1894, or for a longer period? It would be for one year.

3111. Have you any means of ascertaining the cost of maintenance for previous years? The maintenance of each gaol?

3112. No, of all the prisoners. You say £28 a year; are you confining that to Darlinghurst? I was taking that as an average of the whole of the prisons.

3113. Can you furnish similar information for previous years? The numbers of the prisoners may not vary so very much, but I will do what you ask. [*Return subsequently handed in.*]

MONDAY, 21 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Vivian William Williams, Esq., Superintendent of the Mercantile Explosives Department, sworn and examined:—

3114. *President.*] Have you a staff under you in Sydney? Yes.
3115. Consisting of an Inspector of Magazines, an analyst, two clerks, a messenger, carters, and visiting surgeon? Yes.
3116. Do you find the staff sufficiently employed in your office? Quite so.
3117. They have never any spare time? No.
3118. The Inspector of Magazines, I suppose, is pretty much on the move? Yes; but he has also work in the office as well. He checks the reports which we receive from country inspectors of magazines, which duty is performed by the police. He overlooks their reports, and also supervises and checks the books which are kept by subordinate officers connected with the registration of persons to whom licenses for the sale and keeping of explosives are issued. He also does all the metropolitan inspection, and supervises and assists in the preparation of licenses.
3119. When you give a license to anyone to store explosives do you call his place of storage a magazine? Yes. It may be only a compartment of what are called "registered premises," but the general term which we apply to all places where explosives are kept is "magazine," no matter how small or how large.
3120. Whether privately owned or whether public? Yes.
3121. How many of these may there be in Sydney and in the country? I have not statistics made up, but I should say there are more than 100 of these magazines about Sydney; but the greater part are in the country. I am not prepared to give the exact number.
3122. Your inspector does not visit the country magazines? No; he is not able to visit the country magazines. It would add considerably to my vote if he did.
3123. I suppose they consist merely of receptacles for half a dozen kegs of gunpowder? Yes. The country storekeepers would keep about that; but in the mining districts—Broken Hill, for instance—there would be very important magazines. We have to be exceedingly careful with those in which very large quantities of explosives are stored.
3124. But these important places are under Government control? They are all under Government control.
3125. I mean they are all kept by Government? No; there are very many large magazines in the Broken Hill district which are only licensed by the Government, and a supervision over them is kept by the police. They are privately owned—not public magazines.
3126. Does the inspector visit Goat Island? Yes.
3127. And Middle Harbour? Yes.
3128. And Newcastle? Yes.
3129. And I suppose Broken Bay? Yes.
3130. You have a clerical staff, an analyst, and two clerks, besides the inspector; also one clerk, appearing under "Goat Island" in Estimates, but at present employed at the office;—is there plenty of work for the clerks? Yes.
3131. Has the messenger an easy time? No. When he is not employed in delivering messages he is employed in the office in scheduling papers and in making himself generally useful; but he is never allowed to be idle, and there is never any occasion for him to be idle.
3132. You allow carters 7s. a day? Yes.
3133. And you have two? Yes.
3134. Are these the men who drive the vans? Yes.
3135. Have they constant employment? When there is anything to deliver they have to turn out early (between 5 and 6), and the delivery may take them till mid-day. After that they do not turn to till the afternoon. Then they have to look after the horses and the vans. One of the carters is fully employed in that way. The other one I sometimes cannot always find employment for in connection with the carts, but there is plenty of employment for him at the magazines.
3136. As a labourer? Yes.
3137. But you do not send him out once a day on the average? No. Lately the state of business has affected our department as it has affected others, and we have had some slack days on which there has been no delivery at all.
3138. In our business in explosives there is very little, if anything, doing? The depression has told on our department.
3139. You pay a carter 7s. a day on Saturdays and Sundays? Yes.
3140. Can you tell us the necessity for paying the carters on Sundays? No, except that it is the custom of the service? They are paid in the same manner as, I believe, other Government employees are paid.
3141. As far as you know all other Government carters are paid in the same manner? Yes.
3142. You are satisfied that there is no overmanning at the magazines? I am quite satisfied about that.
3143. I see that the warders are also paid at the rate of 7s. a day, including Sunday, are they resident at the magazines? One or two are resident, the others have to reside away from the magazines, because there are no quarters for them at the magazine. I am speaking now more with reference to Goat Island. At the Middle Harbour magazines there is a residency provided for the warders in close proximity to the magazine. At Broken Bay there are quarters close to the magazine, but at Newcastle the warders have to find their own residence.
3144. You have a steam vessel called "The Kate"? Yes.
3145. The senior master receives £160? Yes.
3146. How often per week is "The Kate" under steam doing duty? I am not prepared with particulars of that, but she is under steam every day. She has to be under steam in order to be ready for any call that may be made for her services.
3147. Does she go outside the Heads? Yes, as far as Broken Bay.

V. W.
Williams,
Esq.

21 Jan., 1895.

3148.

V. W.
Williams,
Esq.
21 Jan., 1895.

3148. Is the master a passed master? He has a limited coasting certificate, which enables him to take charge of the vessel between Broken Bay and Port Hacking.
3149. I see that the boatmen and deck hands get 8s. a day, and two other boatmen get 8s. a day each, including Sundays? Yes.
3150. That you say is the universal custom? As far as I know.
3151. The magazine in Newcastle is next in importance to that of Sydney, I suppose? Hardly so. The magazine at Middle Harbour is next in importance, although of course the receipts and deliveries at Newcastle are more on a par with the Sydney magazine, that is the Goat Island Magazine, but there are more explosives stored at Middle Harbour.
3152. But the deliveries from Middle Harbour are under your own control, that is to say, it is a mere branch of your magazine in Sydney? Yes; the explosives are transferred to Goat Island when required for issue.
3153. Is your department a very remunerative one as regards the revenue? Our revenue for 1894 was £6,600 odd. That is derived from rents for the storage of the merchants' explosives, fees for the carriage of the merchants' explosives, fees for licenses, and the registration of premises, fees for the analyses of explosives, and sundry other items.
3154. Is lighterage included? Yes.
3155. That is a very considerable item, is it not? Yes; with the rent it is the item from which we derive most revenue.
3156. Does the revenue equal the expenditure? It does not.
3157. How much is the deficiency? £2,400 per annum was the amount of the deficiency last year. The difference has been getting greater during the last two years since the depression in trade.
3158. The expenditure has become greater? No; the expenditure has been the same for the last ten or twelve years. The same staff has to be kept up for the custody of a small quantity of explosives as for a larger quantity. We can deal with a much larger amount with the present staff, but it would not be safe to lessen the staff on account of the smaller quantity of explosives dealt with.
3159. *Mr. Robertson.*] Is there any system in your branch by which the salaries are governed? I know of none. I was only appointed at the beginning of last year. I do not know on what system my salary was fixed, but the warders, who form the greatest part of the department, are paid at the uniform rate of 7s. a day.
3160. When was the analyst appointed? He has served the Government for a number of years now. I do not know exactly when his services were first engaged, but he was appointed permanently from 1st January, 1894, at £200 per annum. Formerly the sum of £100 was set apart for fees for his work.
3161. Does he do any more work since the revenue has been diminishing? No. Of course I had not the placing of the £200 on the Estimates for him, because I was not the head of the department when the Estimates for 1894 were prepared; but I understand it was considered that the character and importance of his work was worth £200 a year if his services were retained by a salary.
3162. Is he a permanent officer? Yes.
3163. What are his duties? On the arrival in the Colony over sea of nitro-glycerine and other chemical compounds, samples are submitted to him for analysis, and he determines by analysis whether they are in a fit state to be received into the public magazines. He also makes periodical tests of all the nitro-glycerine compounds stored in the public magazines, also of any new explosives which it may be proposed to manufacture in the Colony, and he undertakes any other incidental analytical work that may be required.
3164. Is his time fully occupied? No.
3165. But is he not occupied in testing these compounds all the time;—does he render you any assistance in clerical work? That is a point in dispute. I do not know exactly on what conditions he was appointed, but he does give me assistance; still the whole of his time is not occupied.
3166. Have you charge of the department? Yes.
3167. Do you get clerical assistance from him as a matter of grace or as a matter of right? I understand that he is appointed as an analyst. I have not tested the question as to whether I have the right to demand other work from him.
3168. But you have charge of the department? Yes.
3169. What is the work of the first clerk? He has the management of the accounts in the first instance. He checks the second clerk in all his work. When I say the accounts, of course, I mean the revenue accounts and expenditure. He receives the money, and keeps the cash-books and all other books connected with the revenue, and he also checks the expenditure accounts and prepares them for my signature.
3170. What do your expenditure accounts amount to? Not very much, certainly.
3171. There would not be very many entries in the year? No; not very many.
3172. What does the second clerk do? He keeps the ledgers showing the stock of merchants' explosives at the magazine with the record of their receipts and issues. He receives applications from merchants for the delivery of explosives, issues orders to the officer-in-charge of the magazine, computes the rent and carriage due, sees that the Custom House and all other necessary documents are in order, and generally is responsible that all the clerical work appertaining to the receipt, storage, and issue of explosives is correctly done.
3173. I suppose that the messenger at £75 is a smart youth? He is half deaf. He has been in the department about thirteen or fourteen years.
3174. Does he write? Yes.
3175. Does he do any clerical work? Some; but not of much importance.
3176. In your opinion do you not think that the whole of the clerical work could be done by one clerk? I certainly do not think so.
3177. Do you think these clerks are sufficiently paid for their services? No, I do not.
3178. Do you think they are underpaid? Yes; I think the first and second clerks are underpaid, especially considering the time they have been in the service.
3179. Suppose they went out of office and you employed new clerks, what salary would you give them? I intended only to mention incidentally that they had had very long service, but I still consider that the work those two clerks do is worth more than £200 and £175 per annum as compared with the salaries given to other officers in the Service. Of course I am not acquainted with the pay given to officers in mercantile employ; I can only compare the salaries given to my officers with that given to officers in other departments holding similar positions.

3180. I suppose the work done by the overseeing clerk in the magazine at Newcastle is similar to that done by the officer-in-charge? Yes; but he has also duties similar to those performed by the second clerk at Sydney office, only of course the volume of his work is not nearly as large.

3181. Does he combine with his other duties the office of foreman of magazines? Yes; and he is clerk besides.

3182. For which he receives £200 a year? Yes.

3183. Is there not an anomaly in that man receiving £200 and an officer at Goat Island receiving £268? I do not think so. The duties of the officer-in-charge at Goat Island are very much more important than those of the officer at Newcastle.

3184. In what way are they more important seeing that the work is similar? He has control of the whole of the traffic in explosives in Port Jackson, and the responsibility is very much greater in his case than it is in the case of Mr. Dunn, the officer at Newcastle.

3185. Would the work be much more—Newcastle is a large place? Yes; but there is very little traffic in explosives there. To my mind there is no comparison in the importance of the duties of the two posts.

3186. Do you require nine warders and magazine assistants at Goat Island? I do.

3187. I think you said that they were fully employed? Yes; they are.

3188. Are they employed on Sundays? Partly. All of them are not employed every Sunday.

3189. How many of them are employed? The night and day watchmen and a boatman.

3190. Those men are specifically provided for, are they not? Yes.

3191. As a matter of fact, you do not open the magazine on a Sunday? No.

3192. Then there is no need for the magazine assistants on a Sunday? No; not for that number. Of course, there must be a certain number. There is this, besides, to be considered: in dealing with explosives you cannot look at them in the same light as ordinary merchandise. I acknowledge—everybody will acknowledge—that these men are well paid, but they are required to be in attendance at any hour of the day and night when their services may be wanted—Sundays or any other time.

3193. *Mr. Humphery.*] Have you any statement showing the quantity and value of the explosives at various magazines? I have a statement as to the quantity but not the value at the various magazines.

3194. Tell us approximately? Here is a return of the last month. [*Document handed in.*]

3195. Does it apply now? Yes; excepting what has been issued this month, which is not material. The quantity at Goat Island on 1st January was 63 tons. I am referring to merchants' explosives only. There are other explosives. At Middle Harbour the quantity was 94 tons; at Newcastle, 46 tons; and at Broken Bay, 45 tons; making a total of 248 tons.

3196. Can you explain why the cost at Newcastle is greater than that at Middle Harbour? Yes; because we have to keep a steam launch round there.

3197. Why do you have to do that? To tow powder barges with explosives for delivery in the city and railway, and from importing vessels to the magazine.

3198. Can you suggest any means of reducing the cost of the Newcastle magazine? No; it is worked at the lowest possible figure at the present time, and has been ever since it has been built.

3199. Why is there so great a difference between the cost of the magazine at Broken Bay, where you have 45 tons, and the cost of a magazine at Middle Harbour, where you have 94 tons? At Broken Bay we need only keep three men—an officer and two men—but at Middle Harbour we have to keep two hulks, a foreman, and a cook and five warders.

3200. Why have you to keep so many more hands? On account of the watch duty.

3201. I notice that one engine-driver receives £128 a year on one boat, while another engine-driver on the "Kate" receives £160;—why is that? Because the "Kate" is an ocean-going steamer and the other is only a small harbour launch.

3202. In addition to the pay, provision is made for allowances in lieu of quarters to officers and warders;—what is the allowance in lieu of quarters? The officer in charge of Goat Island has quarters which we value at £52 per annum. The employees also have quarters provided at Goat Island, which are valued at £25 per annum, and quarters valued at the same rate are provided at Middle Harbour and Broken Bay. All the others on the magazine staff get an allowance of £25 per annum in lieu of quarters which should be provided for them at the magazines.

3203. So that, in addition to the pay, they get £25 a year for quarters? Yes.

3204. There is a provision of £578 for different things—fuel and light, and rations, &c.? That provides for an allowance of 1s. a day for rations which the warders and some of the officers are allowed, and an allowance for fuel and light which the warders and some of the officers are allowed, and for the medicines, of which a small stock is kept at the magazine in case of emergency.

3205. Approximately, what is the allowance per day for a warder? It is £20 15s. per annum.

3206. So that with the allowance for quarters the addition to the daily pay would be £45 a year? Yes.

3207. Can you suggest any method by means of which the annual cost of management of the Mercantile Explosive Department can be lessened? I think the cost of the department might be lessened by abrogating the law which at present exists, compelling the storage of different varieties of explosives in separate magazines, also by the removal of the dynamite hulk at Broken Bay to a more convenient position—say at Middle Harbour. If these two reforms were carried out I think there would be a very considerable saving to the department.

3208. Speaking generally, can you say in round figures about what saving could be effected if your suggestions were adopted? Yes; I think that £2,000 a year could be saved.

3209. What objection do you see to it? Some people have a great dread of the word dynamite, and the hulk was sent up to Broken Bay on account of that dread.

3210. How many years ago was that? It was in the latter part of 1884.

3211. Has there been any disaster in connection with that hulk? No accidents have occurred to the public magazines of this Colony since their establishment. There is no doubt that under certain conditions explosives of the class to which dynamite belong becomes very dangerous indeed, but the analyst was appointed for the purpose of exercising a strict supervision on those explosives in order to determine when they become dangerous, so that they might be destroyed or removed.

3212. *Mr. Storey.*] You have steamers belonging to your service? Yes; one at Sydney, and one at Newcastle.

3213. And does it cost £200 a year for fuel, light, and storage? More than that.

V. W.
Williams,
Esq.

21 Jan., 1895.

- V. W. Williams, Esq.
21 Jan., 1895.
3214. Without wages? Yes; the Newcastle boat does not cost as much as the one here.
3215. It is an expensive boat, is it not? Yes; it burns a lot of fuel.
3216. In addition to that there is the hire of tugs? That is, when the launch is laid up for half-yearly repair.
3217. You say that a saving could be effected by bringing the dynamite hulk from Broken Bay to Sydney? Yes; the conveyance of the dynamite from Broken Bay to Sydney is all under our control.
3218. What charges do you make to owners? The owners pay the charges. That is included in the general rates from which our revenue is derived.
3219. Is the expense of sending this stuff from Broken Bay to Sydney borne by the owners? Yes.
3220. But what if it does not cover the total expense of maintaining a magazine there, and sending dynamite backwards and forwards. Do you not make the owners pay the expense of sending the dynamite to Broken Bay? No; we do not make them pay anything for sending it to Broken Bay, but they pay a fee for having it brought from Broken Bay.
3221. *President.*] How much? 18s. 8d. for 100 packages, 9s. 4d. for fifty packages.
3222. What is the minimum charge? 9s. 4d.
3223. For a single package? Yes; or for fifty.
3224. *Mr. Storey.*] Why do you not make them pay for sending it up to Broken Bay? I do not know; they pay the usual lightering charges; they pay the same charges as for an explosive that goes to Goat Island or Middle Harbour.
3225. What quantity of stuff is handled in the year from Broken Bay? I have not any statistics of the quantity handled from Broken Bay.
3226. Can you give us an idea? There are 45 tons there at present, but I would rather not give an approximation of the annual amount handled. All the dynamite that is issued must come from Broken Bay, because it is all sent there.
3227. What is the relative danger of dynamite, gunpowder, and gun-cotton? That is rather a difficult question to answer, but I would say that dynamite in a perfectly sound condition is a much safer thing to handle than gunpowder, and gun-cotton is safer than either if it is kept wet.
3228. How about the other Colonies? Victoria is a model colony in this respect. She has a modern Act based on the English Act. She treats her explosives according to the latest methods. I cannot tell you in detail how the explosives are dealt with there. Victoria is the only colony worth going to as an example for information in that respect.
3229. Where do you get this information from? From their Acts of Parliament and Orders in Council.
3230. But you have no actual knowledge of the matter? No.
3231. Would it not have been worth your while to have gone down there to see? Yes; I should be very thankful for the opportunity.
3232. How do they deal with dynamite? I am not aware that dynamite is kept separate from gunpowder in Victoria.
3233. *President.*] Do you consider it would be safe and advisable to discontinue the magazine at Broken Bay, and to store the dynamite in Middle Harbour? Yes; I consider it to be quite safe to store dynamite at Middle Harbour.
3234. And you think that it would effect a saving in the expense of the Broken Bay establishment? Yes; and an alteration all through the Act would make a saving of about £2,000 a year.
3235. *Mr. Storey.*] What is the date of our Act? 1876. Dynamite was not generally known to the world in that year. There was very little dynamite in these Colonies in those days.
3236. *President.*] You said that the expense of the supervision was for overhauling the powder hulk, did you not? For the general supervision of the magazine establishment and for a special inspection of the hulks, boats, and steamer, to see that they are in efficient order.
3237. Would not ordinarily a six-monthly inspection be sufficient, and a small fee to cover it? No; I hardly think so, because, although the traffic is not so very much at Newcastle, yet the whole of it would then be under overseer and clerk Dunn, and I do not think there would be sufficient guarantee of safety if it were left entirely to him. I think the £50 a year given to the Superintendent of the Local Marine Board is well spent down there. He gives very valuable assistance.
3238. Does the item of fees for the shipwrights' surveyor apply to Sydney? Yes.
3239. Does he make a similar inspection of the "Kate"? Yes; whenever he is notified that his services are required.
3240. But surely £1 a week is high; he does not pay a visit every week, does he? No.
3241. Have you any lighters or hulks of your own, or do you hire them? They are all our own property.
3242. Because I see here "hire of lighters and horses"? We have sometimes to hire a tug when our own tug is undergoing its half-yearly overhaul, but we have never had to hire lighters. We have sometimes to hire horses in the morning, when a delivery is too much for our one horse. We have to send it with one of our vans when two or three vans have to be sent from different directions, and we should not be able to complete the deliveries in the required time if we only used our own horse, so that occasionally we have to hire horses.
3243. *Mr. Storey.*] Do the charges to the merchants cover the expenses referred to? No; not by £2,400 last year.
3244. Why was that? Owing to the decrease in trade. Trade has been gradually getting less since 1887. Of course the very large revenues between 1885 and 1887 were caused by the increase in the rates. They cannot be put down to the increase in the volume of the business.
3245. Has your expenditure been reduced in any way in proportion to the reduction in the revenue? No; not to any extent; not in proportion to the falling off in the revenue. In fact we could not do it. We want the same staff to handle the smaller quantities as we do for the larger. We could manage a very much larger quantity of explosives with our present staff, but it would not be safe to reduce it.
3246. In view of the falling off of the revenue, would it not have been advisable to reduce the staff? I do not see how we are to do it. I do not think that any reduction could be made in my department, except at the expense of efficiency.
3247. *President.*] Have you night and day watchmen? They patrol at Goat Island, and are on board the hulks.
3248. Is there constantly someone on the watch? Yes.

3249. So that no one can go on board without their knowledge? That is so.

3250. And so that nobody can land at Goat Island without being seen? That is so.

3251. *Mr. Humphery.*] What was the average revenue from your department during the last ten years? It has varied from £13,700 to £6,600 last year. The larger revenues were due to an increased rate for storage and lighterage. The decreased revenue is due to the decrease in the rate and to the decrease in the volume of trade. There have been less explosives handled during the year.

V. W. Williams,
Esq.
21 Jan., 1895.

TUESDAY, 22 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C.

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

John Charles Maynard, Esq., Under Secretary for Public Instruction, sworn and examined:—

J.C. Maynard,
Esq.
22 Jan., 1895.

3252. *President.*] What are the duties of the chief clerk in your department;—I see there are mentioned in the Estimates first clerk, statistical clerk in charge of records, a number of other clerks, accountant, and assistant accountant? His duties are to superintend generally the work of the clerks. He is responsible for seeing that the whole of the correspondence that comes in and goes out is properly attended to. The first clerk is the first man in the department that actually does any writing or correspondence. He is the head of the Corresponding Branch, and takes charge individually of a good number of subjects. This document details the duties of the various officers. [*Document handed in.*]

3253. The first clerk is fully employed? Fully employed.

3254. You do not reckon overtime in your department? No overtime at all is allowed.

3255. The cashier comes next;—I see he is paid on a higher scale than the first clerk; is that in consequence of the responsibility? The cashier ranks in the department as next to the chief clerk. He has control of the whole of the Pay Branch, every farthing that is paid is paid by him. He, with the accountant, signs all cheques paid by the department. The assistant cashier, of course, is with him.

3256. And his services are necessary in addition to those of the cashier? Absolutely necessary. The accountant keeps all records connected with expenditure and income. The accountant and cashier's books check each other.

3257. Can you tell us about the amount that the cashier disburses monthly? The average is about £55,000 a month.

3258. You make all these disbursements through the cashier? Yes.

3259. The receipts by the accountant—from what source are they obtained? The only receipts we get are fees from pupils.

3260. There is often great talk about education being free, secular, and compulsory—in cases where people are able to pay fees, of course, you expect them to pay? Where they can pay, they have to pay, otherwise they are prosecuted.

3261. If they cannot pay? They get a certificate from the teacher in the first case, and that is passed on to the inspector, who inquires into the matter. If the inspector and teacher are quite satisfied that the parent is unable to pay he gets what is called a free certificate; it is good for six months. There are no free certificates in the case of a high school or the University; they are only used for the ordinary public school.

3262. The education being of a superior kind in the high school? That is not exactly the view; the view taken by the Minister who framed the regulations was that special facilities are provided in the shape of bursaries for poor but clever boys in the public schools who desire to receive an education at a high school without cost, and to go from thence to the University. A free ticket is not granted in the case of a high school, a bursary takes its place.

3263. Can you tell us the number of pupils in public schools who pay, and the number who do not pay? Paying pupils, 187,660; free pupils, 18,605.

3264. There are a good many clerks employed in your office I see, and some of them begin at a very high rate of salary—the first is £403, and they descend till they reach £110;—what are the duties the clerks perform? The first one mentioned at £403 is Mr. Caldwell; he has been in the service twenty-four years and eleven months; his duties are fully set forth in the return I have handed in. He is a man of good literary attainments, and writes well; he also takes his share in the general correspondence.

3265. On getting general directions as to any matter that has to be written about, he can write the letter without any assistance, and it is signed, I suppose, by you? It is signed by me or by the chief inspector.

3266. The other clerks from £380 downwards, are they employed in pretty much the same way? Of the two at £380, the first one is Mr. Richards, an officer of twenty-nine years' service. The return gives his duties in full. If I wanted a paper connected with some out-of-the-way little school I should write the name of the school on a slip of paper, and in five minutes the document required would be brought to me.

3267. In our inquiries we have heard a good deal about record clerks and register clerks; now do you not think that there is a little too much stress put upon the keeping of records and registers at such a great cost of clerical labour? When I first came to the office I used to be inclined, when a paper came to me, to write "Yes" or "No" on it, and send it about its business. I soon found that system would not do. Most of the recording is the outcome of asking for papers in Parliament. Parliament frequently asks for papers connected with dismissals, returns, and other things, and they must be kept in order to meet that demand. That is the great difference between the methods of a private office and those of a Government Department. A private office can deal with a paper and get rid of it, but a department must keep all papers and be ready to produce them years afterwards if required. We keep our papers six or seven years, the period being simply limited by the room at our disposal.

3268. Then the inquisitiveness of Parliament, if I may use the word, is at the bottom of this terrible labour? There is no doubt about it.

3269. From the evidence we have had from the different departments the recording and registering of papers is simply a Herculean task? That is the reason of it, and if a question were asked and the information could not be supplied the department would be looked upon as inefficient. 3270.

- J.C. Maynard, Esq. 3270. *Mr. Robertson.*] But, in any case, would you not file the papers? Not to the extent we do.
 22 Jan., 1895. 3271. *President.*] Then the most paltry document is preserved by you? Every letter and all reports. The inspectors' reports on schools alone are most voluminous, as we get about 3,000 every year. We have to keep them because someone may inquire six years hence why a certain teacher was disgraced, and we must turn up the reports on the subject. The keeping of these records involves a large expense.
3272. And in the present state of affairs it cannot be dispensed with? I am sure it cannot. Every officer that I know in the Government Service would very much like to dispense with it.
3273. Then this staff of clerks is required to prepare these records? The record office consists of six clerks, whose duty it is to attend to all the records, and they generally complain, and I think with justice, of being overworked. They are always busy, and are generally pushed for time.
3274. What are the salaries of the six record clerks? £330, £281, £185, £150, £125, and £75—total, £1,196.
3275. The messengers, I see, receive most remarkable salaries in your department; there is one at £175 and one at £150. The others are more reasonable—£80, £60, and £50. Can you tell us why the first two messengers receive such large salaries? The first one is the Minister's messenger; he is a man with sixteen years' service. Messengers come in at £50, then there is an annual increase—although it is not regular now—of £10 or £15 a year, and sometimes £20. His salary has grown from £50, when he entered, to its present amount, by annual increments. The next man is the Under Secretary's messenger; he has fifteen and a half years' service, and his salary has increased in that way. The next one, at £80, is a junior, a young man with eight years' service. The next one, at £60, has five years' service, and the junior comes in at the minimum salary of £50. The three juniors are messengers for the whole of the department.
3276. Are not the offices of the two senior messengers to a great extent sinecures? No; the Minister's messenger, for example, sits all day at the Minister's door, receives all visitors, shows them in and out, and answers all questions. His post is like that of a telegraph-master in the country—there may not be much to do, but he must be there.
3277. Is he a man of any clerical capacity? No.
3278. Perhaps he has a good presence? No; but he is a very trustworthy man.
3279. The Under Secretary's messenger acts in a somewhat similar way? Yes; he is stationed there all day.
3280. Does the chief messenger hold a dual office? His wife (Mrs. Jessop) is the caretaker, and does the cleaning of the whole department. She gets £110 a year, but I don't think she makes much out of that, because she has to employ two women exclusively to do the work. No one person could clean out those offices. The second messenger's wife (Mrs. Sherlock) is responsible for keeping clean the whole of the examiners' and inspectors' offices. She gets £52 a year.
3281. I see the quarters for Mrs. Jessop are valued at £52 a year, and the quarters for Mrs. Sherlock at £20 a year? They live on the premises. They are the caretakers. Mrs. Jessop lives in the cottage at the back of the main building. Sherlock and his wife occupy rooms in the inspectors' offices. In the architect's branch there is a Mrs. MacAulay. She is the caretaker there, lives on the premises, and keeps them clean. A man named Hadwin takes care of the Church and School offices and keeps them clean.
3282. To proceed to the inspectors' section, I see you have a chief inspector, a deputy, nine district inspectors, and other inspectors, numbering twenty-five altogether; the salaries seem to be very liberal; are the duties very onerous? I might, if you like, read a report I got in connection with some revision we were making a short time ago. It is from Mr. Bridges, the Chief Inspector:—
- The inspectors of schools are, I believe, the hardest-worked officers in the Government Service. Nearly every day, after devoting the ordinary Civil Service hours to the inspection of schools, they have to spend several hours of the night in writing reports and attending to correspondence, which is heavy. The duties of these officers are of a very varied character. In addition to those which directly fall within the functions of the office, viz., to take care that the districts of which they have charge are adequately supplied with the means of education, and that the schools under their supervision are efficiently conducted, they have to select and report upon sites, arrange for and supervise the erection of small school buildings, attend to repairs and improvements, and look after water supply and sanitary matters. It is really impossible to specify in detail all the work that the inspectors of schools are called upon to perform.
- Inspectors have to inspect every school, and be responsible for everything done in their district. This involves an amount of riding about and travelling that is really very heavy. They do the whole of their own correspondence; they have no clerical assistance whatever. I might mention, in connection with the duties of the inspectors, that in a district like Bourke you would find the inspector had sixty-three or sixty-four schools under his supervision. Another inspector might have 100, and another only forty. The difference is accounted for in this way: In the case of the Bourke inspector, some of his schools are hundreds of miles apart; but in a compact district like Braidwood, the travelling takes up very little time, and the inspector can get from one school to another without loss of time. In Sydney there might be sixteen big schools which would take a month each. So in regulating the work for each inspector account has to be taken of the time necessary to get to the schools and to make the inspections.
3283. The Colony then is divided into districts, over which a certain man has control? Complete control. It is divided into nine main districts, each under a district inspector, with the other inspectors assisting him.
3284. How many schools are there which they have to inspect annually? I got the returns made out to the end of December, 1894. At that date there were 2,719.
3285. How often a year do they pay an inspectorial visit? They must go once a year at least, and that is as much as they can do. As a matter of fact, whenever an inspector passes a school he gets off his horse and calls in to see whether things are going on properly. Inspectors, at the annual inspections, must spend sufficient time in schools to enable them to examine every child.
3286. Every child? Every child must be examined in every subject.
3287. They judge of the teacher's capacity to impart knowledge by the results? Yes; by the attainments of the children.
3288. Can you tell us the allowance made to inspectors when on duty? Twenty-five shillings a day, and they pay for everything themselves. There are no free passes of any kind.
3289. No railway passes? No officer in our department gets free railway passes.
3290. They pay for their travelling expenses and living? They pay everything out of the 25s.—that is, if they sleep away from home. If they go out and come home in the one day, they simply charge actual expenses. 3291.

J.C. Maynard,
Esq.

22 Jan., 1895.

3291. Can you tell us the aggregate cost of travelling for 1894? £5,732.
3292. *Mr. Robertson.*] How many inspectors have you? Thirty-six.
3293. They are constantly travelling? Thirty-four are constantly travelling. The deputy and the chief only go out occasionally.
3294. *President.*] Below the list of the inspectors I see there is one who is called an examiner at a pretty high salary? There is an Examining Board for conducting examinations of all pupil-teachers and teachers, and of all candidates for high school bursaries and scholarships, and this Board has one paid officer to collate all the results as they come in. He has to keep all records, to add up the different results, and write up all the reports. That is Dr. Morris.
3295. *Mr. Robertson.*] How often in the year would you call an inspector to Sydney? Inspectors are never brought to Sydney, unless for some special purpose. They are obliged to reside in their districts, and are not allowed to come out of them except by permission.
3296. *President.*] There is one heading here—the Hurlstone Training School;—is this for female teachers? Yes.
3297. The staff consists of four, besides the servants? That is a large boarding-school, with fifty resident pupils in it.
3298. Are they self supporting? No. Admission to Hurlstone is one of the prizes given by way of scholarships to the chief pupil teachers. There is a competitive examination every year, and the first twenty-five boys and the first twenty-five girls get scholarships. The boys receive a year's training at Fort-street for nothing, and the girls go to Hurlstone, where they get free board, lodging, and education.
3299. How many girls are there? Fifty last year, but a change has been made, and only twenty-five are now taken. Formerly they were trained two years, but from the beginning of this year they will be trained one year only. This will lower the expenses, but only in regard to the rations. The expenses for the servants will be about the same.
3300. *Mr. Robertson.*] How many servants are there? There is a cook at 22s. 6d. a week, two housemaids at 14s., and two other servants at 12s. If you consider that each of the inmates has a separate bed-room, and that there are lecture-rooms, lavatories, and all conveniences connected with a large college, you will see that the servants have as much as they can do to keep the place clean and in order.
3301. *President.*] Do you consider the results obtained are ample? Yes.
3302. *Mr. Robertson.*] The cost for servants is under £200 a year, but in the Estimates you have £250? Occasionally they get extra help.
3303. The cost of the extra servants would not come out of the contingencies? It would come out of the Hurlstone vote. If they did not employ anyone extra, and no one took sick, and we had not to take a substitute, we should save on the vote. I may say in connection with this matter that the washing used to cost a great deal, but now the whole of it is done for nothing at the Parramatta Girls' Industrial School.
3304. *President.*] That is a Government institution? Yes; an account is kept of what the cost would be; the superintendent of the school sends in an account every week, showing the number of pieces washed, and what the cost would be at market rates.
3305. You have an architect specially appointed for public schools, I suppose? Yes.
3306. He has a salary of £650 a year; he does no other work on his own account? He does nothing but attend to the buildings and the repairs. There is a branch working under him; you will see there are a chief draughtsman, and three other draughtsmen, with one or two juniors. Then there are six clerks of works. As a matter of fact, we are under-staffed in clerks of works. It would be better to have more of them. The question sometimes arises whether it would not be better and cheaper if this branch were passed over to the Government Architect's branch, but we know that to do so would greatly increase expenses. That is not, however, the chief reason. We could not get the work done in the time. This officer is entirely under the control of our Minister, and we can get the work done to order, but if we sent it out we should have no control as to design and expense. We look on this branch as a very cheap affair.
3307. You can depend upon having the things done to time? Yes.
3308. What is the average aggregate annual expenditure on the Public School buildings? Last year it was about £60,000.
3309. But within the last four or five years? In 1893, £94,758; 1892, £141,204; 1891, £175,924; 1890, £135,728.
3310. *Mr. Robertson.*] Could you say how many schools have been built during the last few years? I could give you information on every school that has been built, and as to what has been spent on repairs, but not from memory.
3311. *President.*] Can you tell us how many new schools were established last year? Eighty-three.
3312. Absolutely new? Absolutely new schools.
3313. Were any discontinued? One hundred and one.
3314. So the result was? The result was a reduction of eighteen schools last year. Schools are opened (say) where a number of miners temporarily settle. They may have twenty children among them, so a wooden hut is put up good enough to last their time, and when they clear away the school is closed. There were 101 of that kind last year.
3315. Can you furnish us with a detailed statement of the number of teachers, the classification of them, their salaries, and the regulations under which the salaries are paid? Yes; I will supply it. [*Return subsequently handed in.*]
3316. In the meantime you could give us an approximate idea of the number of teachers you have? The number on the 31st December was 4,453, which is 74 fewer than the year before. In closing up the 18 schools and amalgamating others we reduced the staff by 79.
3317. It is a good deal less than an average of two to each school? Yes. Up to an attendance of 50 there is only one teacher, when we get to 50 we put in a pupil teacher till the attendance reaches 75 or 80, then the increase in the number of teachers goes by forties or fifties of the attendance.
3318. Do you consider the teachers are fully employed in their duties? Yes; fully employed.
3319. They have no opportunity of mooning away their time? Not unless they break the regulations; we have very little fault to find about that.
3320. The inspector would soon find that out? He would find it out in the results; the children would know nothing.
3321. I see there is a vote of £9,000 for the high schools;—what is that supposed to cover? Salaries, and general maintenance. The actual salaries amount to £6,092.

J.C. Maynard, Esq.
22 Jan., 1895.

3322. What is the average number of pupils attending Bathurst, Maitland, and Sydney High Schools? The average in Bathurst is 30; in Maitland (Boys), 48; Maitland (Girls), 44; Sydney (Boys), 152; Sydney (Girls), 152. The attendance has fallen off greatly during the last eight months, since the fee was raised, and since the depression. I do not think raising the fee affected the schools as much as the general depression did, but people who formerly sent their children to a high school cannot do it now, but send them to the public schools and pay 3d. per week. It is the same in private schools and colleges all over the Colony.

3323. What is the revenue from the High School? Our report for 1894 is not yet out, but this is the report for 1893, which is practically the same. The total expenditure in 1893 on High Schools was £8,230 15s. 11d., and the total income from fees was as follows—Sydney (boys), £2,057 17s.; Sydney (girls), £1,768 4s.; Maitland (boys), £297 12s. 8d.; Maitland (girls), £313 4s. 11d.; Bathurst (girls), £222 12s., making altogether £4,659 10s. 7d. The actual cost to the State per head in 1893 was £5 12s. 9d.

3324. Can you tell us the expenditure on Bathurst and Maitland separately? In 1893 it was: Bathurst, £815 16s. 7d.; Maitland (boys), £686 8s. 1d.; Maitland (girls), £820 4s. 11d.

3325. Is it the intention of the Government to carry out schools of this class at such a heavy loss? Nothing new has been started since the first opening years ago. The general feeling of the department is that they are too expensive, and practically we see and have seen that they are not very necessary. When we establish one, we get applications for others. After those at Bathurst and Maitland were established, applications came in from Grafton, Albury, and from other country towns.

3326. The cost of maintaining the buildings, the repairs and additions, is that included in the result that you have just given to us? The repairs would be, but not the interest. The buildings at Maitland belong to the department; the buildings in Sydney belong to the Government. I think the girls' High School buildings belong to the Railway Commissioners now, but we pay nothing for them. At Bathurst we pay £100 a year rent.

3327. Then it comes to this I suppose: There is a class of people who make use of these schools by sending their children to be educated at a much lower cost than they ought to pay, the Government being the loser? The Government of course is the loser on every school; it costs £3 or £4 per head to support every public school.

3328. I am speaking more especially now of the high school;—of course I can understand that the others are carried on notwithstanding the expense and loss, but high schools are supported to a certain extent by people who are in a position to pay more for the education of their children than the high schools charge? Nobody pays in the high schools anything like the cost to the State, nor do they in the Sydney Grammar School, which to the State is the most expensive school in the Colony, while those who attend the University pay only a very small fraction of the cost to the State. On the High Schools in 1893 the loss was £5 12s. 9d. per head, exclusive of interest on buildings.

3329. Seeing that it is such a universal thing for the Government to support all these classes of schools, do you consider that the principle is an erroneous one? If you subsidise the University or the Grammar School, then, I think, you should subsidise the high school on the same principle.

3330. Of course you know that when boys are sent to a private academy the cost is very much greater than at the Sydney Grammar School, for example? Yes.

3331. And it is because the Sydney Grammar School is subsidised by Government that the charge for teaching is as low as it is? It is exactly the same in the high schools.

3332. This principle must be applied in its integrity? Yes; or swept away in its integrity. As to the high schools, I may remark that we profess to take out of the public schools boys of exceptional merit who can gain scholarships. So many bursaries are given every year, and there must be some place to send these boys to. In theory and also in practice they go to the high schools, and if there were no high schools, other provision would have to be made for them. So far as the department is concerned, therefore, the high schools enable us to keep faith with these boys in the public schools.

3333. Could you give us your views as to the best methods of technical education? I could point out the difference of opinion between the two classes of thinkers on the subject; they are very distinct. Some think that State technical education should only supplement knowledge acquired during apprenticeship or individual experience, and not be given in lieu of preliminary training; that where it would be for the interest of the country to obtain better results than can now be got in the Colony—as, for instance, in making cheese or wine, in dealing with wool, in improving sanitary matters, or in perfecting any industry on which the whole Colony is to a large extent dependent—the State would be justified in employing experts of undoubted ability to give farmers, wine-makers, engineers, and others who can at present make a tolerable but not a good article, such hints, trade secrets, or instruction as would enable them, in their different lines, to turn out products equal to the best in other countries. Other people hold the view that the Technical College should teach as many trades as possible, irrespective of any consideration as to what demand there may be for workmen so taught, and without reference to the present or previous occupations of pupils. They aim at making artisans, engineers, painters, shorthand-writers, dressmakers, cooks, &c., without necessarily expecting the students to have had any practice in such occupations outside the College course. In these cases the benefit is mainly for the individual, and scarcely in any degree for the State, as it can be of no advantage to the Colony as a whole for the college to go on multiplying the number of carpenters, masons, engineers, dressmakers, &c., &c., when it is known that all those trades are generally overcrowded. There is one branch of technical education that has no reference to trades or occupations. That is the manual training for school-boys. The intention is not to teach the boys a trade, but by means of drawing and simple workings in wood or metal to train the eye and the hand.

3334. Will you furnish a return showing the annual cost of technical education, the interest upon the building, and the results, distinguishing between the day pupils and the night pupils;—you might also give their ages? No record of age is kept, but I will distinguish between boys and adults.

3335. Passing on to the Industrial Schools, page 109, we see the "Sobraon" with a staff of twenty-two altogether;—I presume that that school is well conducted? Very well conducted.

3336. There are no superfluous men about it? None; there is a great increase in the number of boys this year. There were 346 boys on board yesterday. There is now some change in the practice of sentencing boys. Formerly there was a distinction in dealing with boys who came before the police as to where they should be sent. That distinction has been done away with, and now a great many boys are sent on board the "Sobraon" who could not be sent there formerly.

3337. The Industrial School for Girls at Parramatta? That is just a little over-staffed, but that was rectified last week. There was a matron who really could have been dispensed with—she was an applicant for the matronship of the gaol. I was consulted in the matter, and as it meant a saving of her salary, through our department she was appointed to the gaol. With that exception I think you may say the rest of them are needed. Somebody must be always on duty, it is a night and day establishment. J. C. Maynard,
Req:
22 Jan., 1895.
3338. You have a teacher of singing—is instrumental music taught, or is it only vocal? No instrumental music is taught; it would interfere with the studies of those not learning the instruments.
3339. It would be rather an absurdity to teach musical instruments to children who pay nothing? Yes.
3340. And mislead them perhaps in their future course of life? Yes.
3341. The Observatory is under your control? I don't think any change could be made there. I must say that Mr. Russell for several years past has kept everything down as much as possible. The Observatory if worked as economically as you could expect.
3342. The thirty-six meteorological observers are scattered over the Colony? Yes; all over the Colony.
3343. And they communicate their observations to Mr. Russell? Yes.
3344. They are not very highly paid; there are thirty-five of them at £12 a year? There is one at £50.
3345. I suppose he is at Sydney? He is stationed at Lake George, and has special duties in connection with the record of evaporation; but generally throughout the country an observer is someone who has control of an office, say, a station-master or a telegraph officer. It suits Mr. Russell better I suppose to have such men as observers, because with them his instruments are safe. Most of them are either telegraph-masters, station-masters, pilots, lighthouse-keepers, or harbour-masters.
3346. There is one here described as an attendant at a photographic telescope;—is this something new? He was engaged in 1890 to photograph the stars and to make a chart of the heavens. The work will take him at least another year.
3347. The Free Public Library, Reference Library, and Lending Branch? That is really not under the department; it is in exactly the same position as the University; it is under a separate trust. Our Minister simply acts as the Minister to obtain the vote, but he has no control over the detail work; it is the same with the Museum.
3348. *Mr. Robertson.*] I think you said just now, with regard to the grants in aid of Public Institutions, that you are not in a position to speak as to details;—take page 133, Grants to the Sydney University? I can get you any information, but the money is simply given in a lump sum, and the department has no control over the expenditure. They apply to the Minister to obtain a certain sum, and he can ask for that sum or a lesser sum. The amount voted is handed over to the Senate to spend.
3349. You are simply the instrument by which the money is obtained? Yes; but the department has no control over it. The Sydney Grammar School is under a trust; so are the Museum and the Free Public Library.
3350. Do you know what check is exercised by these institutions? The Senate has absolute control over the University.
3351. Does the expenditure come under the notice of the Auditor-General? Yes.
3352. What check have you upon the receipts in your department? Do you mean the fees?
3353. Yes? Each teacher has an attendance-book which we call a class-roll. He calls this roll every morning and every evening. On Monday morning as the fees are called up each boy is expected to pay his 3d., and this is entered in the class-roll; if he does not pay a blank is left. At the end of the week this column is added up; in a country district the money is banked, but in Sydney it is paid into the Cashier's Branch, the teacher getting a receipt for the amount. At the inspection of the school the books are always balanced. The checks are pretty strict and quite effective.
3354. That is, the check is through the annual inspection? And the amount sent in. For instance, say the average attendance at a school for the week is 40, out of this 40 there are two free scholars, so there would be 38 attending that week who would have to pay. The accountant in getting a return would know there were 38 threepences to be collected, and if the amount received did not tally he would make inquiries.
3355. You have a tolerably effective check? As far as we know we have never lost a penny piece for fees.
3356. That is the only source of revenue? That is the only income we get. There were never so many free scholars as during the last six months, this is on account of poverty; usually the fees amount to about £70,000 a year.
3357. What do you do with the fees? They are paid into the Treasury; for the purposes of collection all the teachers are collectors under the Treasury.
3358. What is your check upon the expenditure of the various branches of your department? Take the Inspectors' branch; an inspector recommends certain repairs at a school, and if they are small he is entrusted with the job; tenders are invited, one tender is accepted, the work is done, and it is inspected by one of the inspectors or clerks of works. It is paid for on the certificate of the inspector or clerk of works. Nobody can spend a penny in the department without the authority of the Minister or of myself.
3359. You must initial everything? The Minister or myself initials for every sixpence that is spent, except of course the salaries and allowances provided for under the Act and regulations.
3360. Do you undertake any responsibility by initialling? Some eight or ten years ago any inspector was permitted to spend up to £10 on his own responsibility. The result was that they would sometimes spend money on what we might consider not urgent things. That practice was stopped, and we adopted the principle that the inspectors should recommend expenditure. Up to £10 the Under Secretary can sanction it, but sums beyond that must be authorised by the Minister.
3361. And do you think the check you have upon the expenditure is thoroughly effective? I think so. Of course the Treasury inspector goes through all the department. He was through our department the last three weeks, and I was asking him about our books and what he thought of the checks, and he said he considered them a perfect system of keeping accounts.
3362. Do you know whether the inspectors from the Treasury examine the vouchers of expenditure? I could not say that from my personal knowledge, but the inspector referred to told me the other day that he traced every cheque that had been entered for the last three months.
3363. Can you say what the work of the inspection by the Treasury is? It is not under me at all. It is under the Treasury Department, so I should not know what the inspector does.
3364. Would you not know exactly what he does in your department? I should not know, but the accountant would know all the details.

J. C. Maynard, 3365. No expenditure can take place without your authority? And the authority of the Minister.

Esq. 3366. Do you remember Scott in your department? Yes.

22 Jan., 1895. 3367. You remember some frauds that were perpetrated by him? Yes.

3368. How did they occur? He forged the accountant's initials.

3369. How long had that been going on? I could not say; I was not Under Secretary at the time.

3370. What office did you occupy at that time? I was chief inspector, and had nothing to do with it. I do not think that anyone knew exactly how far back the frauds went.

3371. Can you tell us how it had gone on without being detected? I could not tell you that; the accountant and chief clerk could tell you. The chief clerk was then the accountant. He is the only man who would know all the details.

3372. Were those frauds not perpetrated through the department of the Architect? No. I think the money taken was for bogus contracts in connection with buildings.

3373. I will ask you a general question: Can you make any recommendations to the Commission by which economy could be effected in your department without, of course, diminishing efficiency? To a very small extent, because we have been doing that year after year, trimming down our Estimates in every branch. I think we have got now as far down as we can go. The only way in which we might have further reduction would be by reducing the salaries all round. At the rate voted for the half-year, the vote for 1895 for Public Instruction under the Act is £675,000. Out of that the teachers receive £560,000, the building expenses are £60,000; so that if all the officers, the architect and the inspectors, the supplies, the travelling expenses, and all other expenditure except that on teachers and buildings, were entirely swept away, there would only then be a saving of £55,000. Of the total vote, the teachers receive 83 per cent., the buildings nearly 9 per cent., and all other expenses amount to 8 per cent.

3374. Take, for instance, the Record Branch, which costs £1,196. Do you not think that all the records could be kept at a considerably less expenditure? If you got cheaper men, of course you could. The man in charge of that branch is an old officer, who has promotion under regulations. If he died, and we started afresh, a cheaper one might be employed.

3375. Does it not appear to you these salaries are very high for that class of work? I should not think so, not the salary of the head man; it is a very responsible thing to keep all these records. He has all the secrets of the department in his keeping, and knows everything that is going on.

3376. Granting you pay the clerk in charge a big salary, those under him are receiving large salaries for that class of work? The one receiving £281 is in a very responsible position.

3377. Have you any recognised system of classification in the Ministerial Branch? You mean classification according to salary?

3378. Well, according to salary, or according to the class of work done? All the officers are graded by their service and their efficiency in the particular place in which they serve, and when there is any promotion if there is nothing to stop the next man in succession by service he is the man to get it.

3379. Will you tell us what are the grades? They begin at £50, then go to £75, £90, £95, £110, £125, £150, and £175, and so on, right up. If there is a vacancy the next man below will succeed to the position if there is nothing against him. If there should be a vacancy at £175, for instance, the next man at £150 would get that position.

3380. What is the class of work done by clerks who receive £290? It depends on what branch they are in.

3381. Well, how many branches have you—what branches have you embracing these clerks? You will find the information in the return I have handed in.

3382. *Mr. Humphery.*] Do you consider the Cadet Corps Branch, the annual cost of which is over £5,000, a necessary or useful branch of the service? It is certainly not necessary, and not very useful, but I will not say it does any harm. It does a lot of work. It superintends all the drill-work of the schools which used to be done without this staff. The teachers always did it as they did other teaching, but it was detached from the teachers and made into a separate branch, and that introduced the expense. It could all be put back, and the teachers could do the drilling without any additional cost.

3383. And a saving of £5,000 effected? Pretty nearly that; there were always one or two drill sergeants kept, but they were never expensive.

3384. Would that include rifle-firing? Under the old system there was no rifle-firing. If rifle-firing should form part of the training there must be some such branch, the teachers never went past school drill. If it is thought that the drill should extend to the use of arms, there must be something of the kind, but, personally, I do not think rifle drill advisable or necessary for such young children.

3385. With regard to the supplies of material, do you get them through the Stores Department—take for instance, the supply of books, printing, stationery, &c., £10,500? We get those through the contractor. We invite tenders for the supply for five years, and we get them through the tenderer. Everything required about the office, such as forms, envelopes, foolscap, and materials, for the use of the office or inspectors, is got through the Stores Department, but everything for schools in the way of books, maps, slates, pencils, and so on, is got through our own contractor.

3386. *Mr. Robertson.*] Do you ever find that the requisitions you send to the Stores Department are curtailed in any way? Yes.

3387. By the Stores Department? By the Stores Department.

3388. Seeing that the requisition comes with your authority, by what rule do they curtail these requirements that you say are necessary? We will say a certain officer applies for so many reams of paper. The Stores Department, from its experience, thinks a certain quantity less will do, so it cuts the requisition down and sends less. Then it may turn out that we are quite right, and that another requisition has to be made. Because the Stores Department cuts it down that does not prove that the full quantity applied for will not be needed.

3389. Seeing the requisition comes from someone who knows what is really required, and that it is confirmed by you as Under Secretary, do you think it is a right thing for the department that really cannot say what your requirements are at all to cut down your requisition? I do not.

3390. Have you taken any steps to protest against that sort of thing? Since I have been Under Secretary I do not remember a case in which anything has been cut down. There is a Board, consisting of all the Under Secretaries, and if there is a dispute between the Supply Board and an Under Secretary, they act as a kind of committee to express an opinion.

3391. But you know these things have been done? Yes.

3392.

3392. With regard to the contingencies for the Free Public Library, are you consulted at all? No; the Library is under a trust. The department knows nothing of the details of its working. It simply pays over in a cheque the amount voted by Parliament. J.C. Maynard,
Esq.

3393. The officer in charge of church and school lands gets £515;—what are his duties? He has full control of the whole of the church and school lands of the Colony; he recommends all gold leases, mineral leases, and pastoral leases on these lands. When required, he has to go out and survey them, and he draws all agreements. 22 Jan., 1895.

3394. Have you control over that? Yes.

3395. And no expenditure takes place without your authority? No; that is really a receiving branch. Every lessee pays so much per annum, though it is a very small amount.

3396. Is the office in your own building? No, it is in Young-street, where we have three rented buildings—one for the inspectors, one for the church and school lands, and one for the cashier.

3397. *Mr. Humphery.*] What was the average number of pupils for 1894? Enrolled, there were 206,265 individual pupils.

3398. 1893? 210,277.

3399. There has been a large increase? The general increase, if weather or disease does not interfere, is about 7,000 or 8,000 per annum; that corresponds with the increase of population. If there is not an increase of about that number, we know there is some disturbing cause. In 1894, children under 6 were excluded. This reduced the enrolment by 4,012 below that of 1893.

3400. What was the average cost per pupil for 1893? The cost was £3 1s. 0½d. for every child enrolled.

3401. And 1894? I have not the figures for 1894, as we are making up the accounts, but the cost would be somewhere about the same.

3402. Do you know the salaries paid in the other colonies by the Public Instruction Departments? It is not a very easy matter to get at some of them; we get them out every year as well as we can. In Victoria they pay so much salary, so much for results, and so much as allowances.

3403. Can you prepare a comparative statement, showing the expenditure for salaries in Victoria, South Australia, Queensland, New Zealand, and New South Wales? Yes.

3404. Can you make any general suggestion by which the annual expenditure in connection with the Public Instruction Department may be reduced? I could not suggest anything, unless you make a reduction all round, and I do not think that would be a wise thing.

3405. *President.*] You spoke of having contracts for stationery material;—is that separate from the supplies you receive from the Government Stores? Yes.

3406. Have you such contracts to a great extent? The Government Stores Department only keeps what is necessary for all departments; it does not keep books, slates, maps, and things we want in schools.

3407. Do you find you can make advantageous contracts for these things as you require them? Much cheaper than we could get them through the Stores, I think.

3408. And the supplies, I presume, are spread over the year—you do not order an enormous quantity at a particular time? We just order what is required.

3409. For the twelve months? For twelve months. Each school sends in a requisition some time during the year, for a year's supply. The inspector deals with the requisition, sends it to the contractor, who packs up the things required and sends them off to the school.

3410. Are the contracts annual? Five years.

3411. When a period of five years matures, you then call for tenders for another period? Yes.

3412. You find you can do it much cheaper than through the Government Stores? We have not tried it through the Government Stores, but I think the competition among the educational houses is so keen that we could not fall upon a cheaper method for getting the things.

3413. The supplies are sent in as you forward the requisitions for them? As we order them from the contractor he sends them on to the schools, and we order only just as many in each case as we require.

3414. What are the articles that you requisition from the Government Stores? Stationery, and things of that kind, envelopes, rubber bands, ink, writing paper, and everything required in an office.

WEDNESDAY, 23 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Charles Cowper, Esq., Sheriff, sworn and examined:—

3415. *President.*] You are, I understand, the Sheriff of New South Wales? Yes. I have prepared certain papers, and I would suggest that I should be allowed to read them, so that the Commission might ask me questions about the contents. C. Cowper,
Esq.

3416. We should prefer putting questions to you first. You can put the papers in afterwards. The staff in your particular department numbers altogether, according to the Estimates, 80, beginning with yourself and including the Under Sheriff, Sheriff's officers, clerks, and so on;—is the Under Sheriff absolutely essential to the conduct of the department? Certainly; because he really does a great many things that I do, and it is impossible for me to be always in the office. Therefore it is necessary to have an Under Sheriff to do those things. I attend to the administration of the department generally, while he does most of the interviewing with solicitors. He has to be in the office continuously to interview the legal profession and advise. When there is a difficulty he consults with me. 23 Jan., 1895.

3417. What is the nature of the duties of the chief clerk and the other clerks? I have prepared a statement giving the name, age, date of appointment, length of service, salary, and duties of all the officers, &c., in my department, which I beg to hand in. [*See Appendix.*]

3418-9. Does the Under Sheriff keep the register himself? He keeps all the suitors' accounts himself—that is, accounts between plaintiff and defendant. When I came into the office there were no accounts kept, and some of the officers were attending to private business as well as Government work. I put a stop to their doing private business, and made them permanent Government officers, whose sole duty was to do Government work.

3420. Are you very particular about recording every document? Yes.

348—R

3421-2.

C. Cowper,
Esq.
23 Jan., 1895.

3421-2. Everything that is addressed to you in the shape of a note or a letter? Yes. We are continually receiving instructions of some kind or another, and if these are not carefully minuted and every document carefully recorded we should be apt in our department to be involved in actions, as so much depends on the instructions we receive. We act under authority from solicitors to a great extent.

3423. Tell us generally the duties of the clerks? The chief clerk attends to the accounts, the second clerk to the records. The third clerk is head of the jury business. We have to summon all the juries in the Colony. Sometimes a precept comes in at the last moment, and we have to summon 200 extra jurors immediately. He has charge of that part of the work, preparation of requisitions, &c. This requires a very trustworthy and efficient officer.

3424. What are the duties of the fourth clerk? He generally deals with writs and prepares warrants. People are coming all day long to search, and he is there to enter their inquiries, see papers, and see that the search fees are paid.

3425. What are the duties of the fifth clerk? He is in the jury room. When I became Sheriff there was an item of £500 put down for the delivery of jurors' summonses. Half-a-crown a summons was paid for each delivery. I thought it better to select the jurors by ballot and serve summonses by post. Say there are 4,000 cards all numbered, they are put into the ballot-box, which is turned round and round; one clerk draws a card with a number, another clerk at the table enters that number on a sheet of paper. Afterwards the name attached to that number is copied on a list taken from the jurors' register. Summonses are prepared and sent through the post.

3426. The Sheriff's officers, or at any rate two of them, are paid £209 a year each;—are their duties very important and essential? They are very important. There is no way of recovering debts except through the Sheriff's officers. They are obliged to execute all processes of that sort. People complained a great deal that they could not recover their just debts, and the number of these officers was consequently increased. It was specially pointed out to me by Sir Wigram Allen when I was made Sheriff that more officers must be appointed throughout the Colony. There is a considerable difference between the salaries of the two I have just named and most of the others. There are thirty at £160. The chief officer is responsible for the Sydney business. A higher salary is always paid for that. The next officer is a very good accountant, and he helps the Under Sheriff when he is not busy.

3427. Another one after him has £180, so that there are four officers with higher salaries than the rest? The one you refer to is at Muswellbrook; he is not in the Sydney office. He is an old officer.

3428. What about the messenger? He is employed all day between the banks, lawyers, and the various offices. A great deal of money is carried by the messenger. It is rather a heavy office, but my messenger is paid on the lowest scale in the service.

3429. Do your court-keepers live on the premises? They have the care of the premises. There is a court-keeper at the Supreme Court, a second at Chancery-square, King-street, and another at Darlinghurst.

3430. What about contingencies? There is a vote for services generally, including jurors' fees, meals for jurors, &c. Jurors' expenses is a large item. The purveyors ask 3s. 6d. and 4s. in the country for hot meals sometimes. At Bourke they asked me 5s. the other day. There is a difficulty in getting meals supplied, because no Judge will order them till they are required. They never know whether a case is going to last or not. The hotel-keeper, having his hotel full of visitors, has a difficulty in providing at a moment's notice. Sometimes at the last moment the hotel-keepers decline to send any meals at all.

3431. There are allowances mentioned for quarters and forage? The allowance for quarters is to myself.

3432. On page 51 your quarters are valued at £150? They are not of that value. I have lost £150 a year by having to take the quarters. [See Appendix.] When I was about taking this office I was advised not to take it by Sir John Robertson and Sir Alexander Stuart, the latter of whom afterwards advised me to take it. I had a right to the house built for the Water Police Magistrate as Superintendent of Water Police. [See Appendix.] As to forage, I was promised by Sir Wigram Allen forage, and although I have no written arrangement I produce copy of my letter to him when the question was brought up in the House, and I was on circuit, and I should have been Senior Stipendiary. [See Appendix.] Since 1881, comparing my salary with that of the Stipendiary Magistrates, I have lost £700.

3433. Throughout the department I see there are a very considerable number of allowances for forage at the rate of 12s. a day;—there is an allowance to the officer at Grafton, at Glen Innes, and so on? All country officers, except at Newcastle, get it. There is only one allowance for Sydney, which is given to me, and I find a horse for the officer when one is required.

3434. Is this allowance of 12s. for forage necessary? Some ask for more; they have a good deal of difficulty in keeping their horses on that in some districts, and have been allowed a special rate extra. In a cheap district they can do it. A reduction of £1,300 a year has been effected by my officers doing the duties of District Court bailiff and Small Debts' Court bailiff without salary. They also do other duties for which no charge is made, such as serving estreats.

3435. Are the horses their own property? They have to pay for horses, as also for buggy and harness, and keep the latter in repair. They have to take a possession man wherever they go. I have tried to do away with that, as it is a great expense, and to get a local man to do the work, but I find by experience that it does not work well. The Sheriff's officer is liable for the due execution of the processes, and if he puts a man in possession of a house who goes away and does not keep possession, the Sheriff's officer is liable for the whole amount of the writ; he enters into a guarantee for the due performance of the work. In an instance where the Sheriff's officer put a District Court bailiff in possession for greater security he had to pay the whole amount of the writ through the neglect of the possession man.

3436. Mr. Robertson.] But he would not be a man of business if he did not do that part of his work properly? The Sheriff's officer has to trust these men, and he took special caution in this case of appointing an officer of the Court, still he was deceived. The officer cannot bestow all his attention on one writ; he may have several writs and several men in possession at the same time. It is necessary to have a reliable man because, if not, the Sheriff's officer might be sold at any moment. I had a case at Robertson, where the services of a local man were utilised. He was put in possession; he was a very respectable man, but he lost the writ, and the Sheriff's officer was made liable.

3437. You have been all over the Colony? Yes.

3438. Has it ever occurred to you that the Court-houses are built upon too lavish a scale, and that they are inconvenient in their arrangements? There is no question about that, particularly some that were built many years ago. They were built hurriedly without any conference with those who understood the requirements of the Court-houses. The architect attended more to architectural beauty than to the real comfort

C. Cowper,
Esq.
23 Jan., 1895.

comfort and necessities of the Court. At Bathurst and Goulburn the jurors' rooms are not large enough to bed down twelve jurymen. The Minister saved a large sum at Newcastle by altering the plans at my suggestion. As it was, £2,000 or £3,000 more than was necessary was spent for purposes of adornment. A general plan was subsequently adopted, which was afterwards approved and recommended by the late Civil Service Commission. It provides, in the first instance, for a room long and broad, with two rooms partitioned off at the end, like an auction mart. These might be used by the Police Magistrate and the Clerk of Petty Sessions. At Broken Hill this plan was adopted. It provides for the Police Magistrate and staff on one side, for the witnesses, barristers, and the Crown Prosecutor on the other, and for the Judge and jury at the end, with passages all round the Court-room, enabling anyone to approach any room in the building without interfering with the business of the Court. This plan can be extended, so that there would be no extraordinary expense subsequently incurred in the erection of other buildings for public offices.

3439. *Mr. Storey.*] Do the Sheriff's officers, who get £160 a year, receive fees? Yes.

3440. What are these fees for? For work performed. When I became Sheriff the officers charged what they liked, and entered into private business. Since then an Act of Parliament has been passed, under which certain fees are charged for executing a warrant.

3441. Is your department aware of what these fees amount to, and what these men earn? Yes.

3442. What is it on the average? I append a statement showing roughly the fees, but there are expenses which cannot be accounted for. [*See Appendix.*] The fees of the chief officer seem large, but his duties are responsible. He must be well up in Sheriff's law, and he trains all officers who have to pass an examination before appointment.

3443. Is he a professional man? No; he has been trained in the office.

3444. Have you any way of checking the £114 to see that it is a legitimate charge? Yes; there is a book of regulations, and there are reports every day showing exactly what these men do and what they charge, and if any officer makes an illegal charge he can be dismissed at once.

3445. Has it ever occurred to you that £250 a year, and what he makes in addition, is too high? I have reduced it considerably. [*See Appendix.*] At Bathurst, Dubbo, and Sydney the officers get over £300 a year.

3446. *Mr. Humphery.*] Is that exclusive of fees? No; it includes fees. The fees in these districts are greater owing to the officers being specially good, I think.

3447. *Mr. Storey.*] Do these men give their whole time to the Public Service? Yes. I saved £1,300 a year in the District Court alone by making these men do the work without salary. They also act for the Small Debts Court without salary. £175 is paid to the tipstaff attached to the Chief Justice, £162 to the tipstaff attached to Sir George Innes, and £150 to the five tipstaves attached to the Supreme Court Judges. I have nothing to do with them. They are on my Estimates, but are entered under the Judges'.

3448. What are the duties of the tipstaves? They have to wait on the Judges. The Judges require men who can find them any law book at a moment's notice. A man of more than ordinary intelligence is required for the work. They do all the cleaning of the Judges' rooms. They objected to that, but I could not relieve them, because I have not sufficient cleaners for the increased work in the Court-house.

3449. *President.*] With regard to their procuring any book the Judge wants, of course there is a librarian? He is not always there. He is only paid a small salary to see that no books are taken out and not returned.

3450. Then these men must know how to find the books themselves? Yes.

3451. Has there been any reduction in the expenses of your department of late years? Yes, a great deal. The total for the past year was £19,707.

3452. How does that compare with previous years? [*See Appendix.*] I have tried to cut down on more than one occasion, and I found that I could not do it. We had to borrow from the Advance Account in order to make up the deficiency.

3453. Do you keep within the figures on the Estimates? I have to do what I can. I send in an estimate, and I don't spend any more than I am obliged, but last year I had to ask for £2,047 more from the Advance Account. £29,548 is the amount voted for salaries and contingencies.

3454. The amount of contingencies depends very much on the character of the work done, which is a variable quantity? That is so. For instance, suppose there is a noise in the Court and I am ordered to keep silence; it is necessary to have enough assistance to enable me to carry out the Judge's instructions. If I do not I am liable to a fine of £50. And I am obliged to have ten qualified men always ready to take charge of Courts. The amount paid for jurors fluctuates.

3455. *Mr. Storey.*] Have you any knowledge of the work done by the different officers, such as the Prothonotary, the Curator, &c.;—could any of these offices be amalgamated? It is possible. In former days, when I became Sheriff, the Prothonotary had all the work of these two departments under him, but ultimately these two branches were separated.

3456. Each department, I suppose, was under its special head? Yes; I don't think the Probate Office was started then. Some of the wills were getting quite decayed, at least I have been told so by the Judges. When they start a separate department they require all the usual officers, such as messengers and office-cleaners.

3457. I suppose that the office of Prothonotary and the Probate Offices are the only ones that could be amalgamated? The Bankruptcy Court is a separate department, and was in another building altogether, under the head of insolvency. In looking over the Estimates the other day I found that they are about the only ones that have not been increased, the others have increased. They require a special department now for divorce. There is no doubt that the multiplication of departments increases the expenditure of Government. It ought to be done away with as much as possible. The great secret of keeping down expenditure is not to increase the clerical staff. The Chief Justice is very strong on the necessity of having these departments, and their importance.

3458. There is no other way of retrenchment by which you can save in your department? I have tried to do more. I have done a good deal. I have always carried out the principle of not having more people upon salary than is necessary. The Chief Justice objects to any decrease at King-street. I have the same number of permanent officers in my office now, and at Darlinghurst, as I had in 1878. [*See Appendix.*] There are ten courts in Sydney which may sit any day. I am responsible to the Judge for the proper conduct of every one of these courts. I do not say that I should be often called on to open ten courts at once, but I have eight courts sitting regularly.

3459.

- C. Cowper,
Esq.
23 Jan., 1895.
3459. You have nothing to do with the Police Courts, have you? No; I have the Supreme Court, King-street, the court at Chancery-square, the Criminal Court, Darlinghurst, and all Jury Courts throughout the Colony. [See Appendix.] There has been no increase in the clerical staff of my department since I became Sheriff, except for certain new work. I have only increased, at the instance of the Minister, the number of the Sheriff's officers where they were asked for, and where I believe they were required, and where they were not required I have discontinued their services. Since 1891 I have reduced the salaries and fees.
3460. *Mr. Robertson.*] What amount of fees did you receive last year? None at all that I know of. I have only received six guineas as fees since I have been Sheriff in twenty years.
3461. It says in the Estimates that the fees are divided by the Sheriff? Yes; they are divided by the Sheriff among the officers. I never take any myself.
3462. Do you think it a wise provision that the fees should be taken by the officers? I am not exactly prepared to say that it is unwise.
3463. Are not the officers paid sufficient salary? The officers who get the fees do not receive high salaries, and the fees paid in other colonies to Sheriff's officers are quite as high as those paid here. The fees paid to the staff are for work done out of office hours, and the work cannot be delayed but must be done by experienced men. If I had increased my staff like other departments it would not be necessary. If you come with a writ, and want the office kept open after hours, the fee is £1 1s. I believe I could claim this fee myself, but I never have. Copying jurors' panels entails a fee of 5s. The work is done out of office hours. [See Appendix.]
3464. How much did the Under Sheriff receive for fees last year? They may be considered high, because he gets a larger sum than anybody else; but when I first became a Sheriff the office was in a very disorganised state. I found that I must get a good man to do the class of work required, and in order to obtain one I gave up my fees. I got Mr. Thurlow, at the Water Police Court; to take up the work on the understanding that he should receive my fees in addition to the salary, and the officer now holding the position is doing the work on the same terms. The fees are principally for transfers of land. It requires a good deal of legal and official knowledge. He has to carefully examine documents. It has been simplified since the Land Titles' Act came into force, but it requires a good deal of work on the part of the Under Sheriff out of office hours. The present holder of the office, Mr. Maybury, would probably by this time have become a Stipendiary Magistrate if he had not accepted the position in my department. Mr. Johnson, who was succeeded in my department by my chief clerk, Mr. Morgan, has since been promoted to the head of the Stamp Office.
3465. The sum you have received in fees over and above your salary has not amounted to £10 since you have been Sheriff? I have not received above £6.
3466. What is your opinion as to this practice of Civil Servants receiving fees? I think it is better to give them good salaries. I think allowances are objectionable. I get an allowance in lieu of salary.
3467. Do you live in a Government house, or do you draw £150? I live in a Government house, but it is not worth the £150 set down for it. I took the house because I was offered £800 a year, and the salary on the estimates was put down by mistake at £650.
3468. Sheriff's officers are the bailiffs in the country, are they not? They are called Sheriff's officers. It gives them a better position. There were such accusations of bribery and corruption, and so much talk of "bumbailiffs," that I changed the name and obtained the services of superior officers, almost any one of whom could take the position of Clerk of Petty Sessions.
3469. What was the total amount received in fees in 1894? The amount of fees has averaged about £56 per annum per man. We considered the matter of paying salaries instead of fees, but Mr. John Williams, the then Crown Solicitor, who was considered a great authority, disapproved of making any change. There is a good deal of difficulty in getting Government fees when they are paid to the Government instead of to the Sheriff's officer. The lawyers say they are willing to pay the officer, but they object to pay the Government.
3470. Do you inspect the statement of fees received by those officers? Yes, every day.
3471. Can you tell me why one officer, drawing a salary of £160 in Sydney in 1894, received £73 for fees, while another officer, drawing a similar salary, only received £5 5s. 9d. in fees? Because the latter is a new man, who is being trained in court duty.
3472. These new men who are being trained in court duty would be sent to different parts of the Colony? There are three men who do the active work outside; the others are men training. I have always to have certain officers ready to take charge of the courts. These men do that work. The Darlinghurst officers have sometimes to work from 5 in the morning to midnight for a fortnight at a time in Criminal Courts.
3473. Do the officers pay their own travelling expenses? Yes; they keep their buggies, horses, and harness, and everything.
3474. *Mr. Robertson.*] Are you obliged to be in attendance at all the jury courts throughout the Colony? Yes, either personally or by my deputy.
3475. Who is your Deputy, as a rule? If I can get a Police Magistrate on whom I can rely I like to appoint him, but sometimes a Police Magistrate has to go to the gold-fields as Warden, or to visit other Courts where there is more work to be done. In that case I have to make other arrangements.
3476. Are the Police Magistrates in the country not fit to fill the position of Deputy Sheriff? Certainly they are, but in cases such as those I have named I am unable to avail myself of their services.
3477. When you do not appoint a Magistrate to act as your deputy whom do you appoint? The best man I can. There are two or three who are willing to take the duty regularly. Mr. Taylor, of Dubbo, is one.
3478. Does that not mean so much more expense? No. They do the duty for nothing, but you cannot always get them. You cannot be sure that they will be disengaged.
3479. How often were you out of town last year? I could not say exactly.
3480. Could you tell how much you drew in travelling expenses? The usual travelling expenses came to about £70, but I had some special trips extra; for instance, in reference to the execution of Lee and Cummings.
3481. How are those securities that you have to give affected? We are all guaranteed by the Society.
3482. What Society? The R.M.I. Co. (Limited).
3483. Where are the policies? In the safe in the office.
3484. Who has charge of the safe? The Under Sheriff.

3485. Has he got charge of his own bonds? Yes, I think so. I have made a mistake. The Government have got our bonds, but the Sheriff's officers being made responsible to me, their policies are lodged with the Under Sheriff in the safe.

3486. Are these officers liable to you? Yes.

3487. What departments come under you—I suppose all the Courts come under you? All Courts where there are juries.

3488. Do all the Clerks of Petty Sessions come under you? No. The officers do not, but most of the courthouses do. I will read you Sir James Martin's letter to the Government. [*See Appendix.*]

3489. *Mr. Robertson.*] Who has control over the contingencies, amounting to £8,400? I have. Formerly I paid the contingencies without sending my vouchers to the Minister, but now the vouchers have to be approved by the Minister before they are paid.

3490. These vouchers have to be always submitted to a Minister, have they? Every voucher, except urgent matters which are paid by me, and then submitted to the Minister.

3491. What system have you in your department with reference to the increase of salary? None; I cannot get any increases. I see a good many elsewhere get increases, but I can't get any for my department.

3492. Have there been considerable increases in your department since 1885—I see that Mr. Maybury received £470 in 1885, and that he receives £515 now? I think he got one increase, as well as under the Civil Service Act, which provided for annual increases.

3493. Then your chief clerk received £320 in 1885, and receives £358 now? I think he received an advance because other people received one in other departments, as also the Civil Service Board. [*See Appendix.*] These are small increases compared with other departments.

3494. I suppose you keep books in your department? Yes; there were none kept when I became Sheriff.

3495. And you have a complete record of all the receipts and expenditure? Yes; we have a record of everything done in the office.

3496. Can the Commission see it? Yes; I shall be only too glad to show it to the Commission.

3497. What is the system of audit? The books are audited by the Treasury, and the accounts by the Auditor-General.

3498. What do they audit? They go through every receipt and every account in the books.

3499. Do they go through the expenditure as well? No; only through the receipts. The Auditor-General audits expenditure.

3500. Is all the expenditure incurred on your authority? Yes; and approved by the Minister.

3501. *Mr. Humphery.*] Can you tell this Commission why there is so great a difference between the annual payment for the District Court officers and the payment for the Sheriff's officers? The District Court officer in the country engages in private business, and is supposed to get more money. The fees for the District Court are higher than those for my officers. In the country districts the fees payable to Small Debt Court bailiffs are settled by the Magistrates.

3502. Is the scale of fees for the District Court bailiffs similar to the scale of fees paid to your officers? Yes.

3503. In the metropolis as well as in the country? Yes. I don't know how it stands now. I don't think the fees paid to my officers are as high as the fees paid to the officers of the District Court. District Court bailiffs charge what they like. There is no control over them.

3504. Has the scale of fees been altered since you became Sheriff? There was no scale at all when I became Sheriff? The first thing I did was to get the solicitors to agree to a scale of fees. It was years before I could get it authorised by Parliament.

3505. Was the scale similar to the scale of fees previously charged by the country officers? It was similar to what we thought they charged. They could have charged fees which we knew nothing about. We were told a good deal about them, but we don't know what was paid. The lawyers paid them what they liked, but the officers are not now allowed to accept anything but the fees provided by law.

3506. What was the payment made to country officers previous to the change giving them salaries? Their salaries have not been increased much. I made the salary at Newcastle equal to that of Maitland, because it is a seaport. I put a very superior officer as an inspector at Dubbo, and these three officers were paid a salary respectively of £200. The others were paid £150. Each have now increases under the Civil Service Act.

3507. Although the Sheriff's bailiffs became the Sheriff's officers, the fixed salary was not increased in consequence of the alteration of status? No. The salaries have not been increased except under the provisions of the Civil Service Act, but I have got a superior class of men, although, as a matter of fact, there has been no increase in the expenditure.

3508. What is the total revenue of your department from all sources? For last year it was £1,882 15s. 10d. [*See Appendix.*]

3509. Why is the revenue less now than formerly? Because there has been a dispute about the poundage, and we don't now get the amount of fees that we used to.

3510. Explain the falling off in revenue? There has been a general falling off under the various heads, but the principal falling off is in the matter of poundage.

3511. Why is there a falling off in that particular item? Because they interpret the law differently now to the way in which it was interpreted before 1891.

3512. *President.*] Was the poundage levied upon the amount of the judgment? It is levied upon the amount actually recovered.

3513. The poundage has been discontinued as a charge altogether, has it not? No, not altogether. There was a difficulty as to how far we ought to go in levying before we charged poundage. We are not now allowed to charge it except we can ascertain that plaintiff has benefited.

3514. *Mr. Humphery.*] When was the decision given under which you at present act? In 1891.

3515. What was the revenue in 1892, 1893, and 1894, and give me also the reasons for the decrease that has taken place? The revenue in 1892 was as follows—fees, £2,256 5s.; fines, £592 12s. 11d.; total, £2,848 17s. 11d. In 1893 the revenue was—fees, £1,974 7s. 1d.; fines, £754 9s. 7d.; total, £2,728 16s. 8d. In 1894 the revenue was—fees, £1,553 6s. 2d.; fines, £329 7s. 8d.; total, £1,882 13s. 10d.; thus showing a decrease for 1894 on fines, £263 5s. 3d.; fees, £702 18s. 10d.; making a total of £966 4s. 1d. The largest falling off has been in "fines" and "poundage," the loss being on fines, £263 5s. 3d.; and on poundage, £520 18s. 1d. From their nature these sources of revenue are of an extremely fluctuating character—the fines imposed by the courts naturally varying very much in number and amount.

3516.

C. Cowper,
Esq.

23 Jan., 1895.

- C. Cowper, Esq.
23 Jan., 1895.
3516. In your opinion would £4 be an excessive charge when a case is set down for trial? I do not think so.
3517. Do you consider that it would be a fair charge? I think so.
3518. Would you have a scale in proportion to the amount involved? Perhaps that would be fairer, with a minimum of two guineas for the smallest cases.
3519. You think that would be fairer than the present system? I think so.
3520. Is there any other way by which you can suggest that an increase could be shown in the revenue of your department? I do not see any other way except by making the law clearer as regards these legal charges, and making the payment of fees compulsory. I think a short Act might be brought in. I could only suggest that the law should be made clearer as to payment of poundage. Now there is a doubt about it, although the Court have come to a decision on the matter. I acted under the advice of able lawyers in making the charges that I did before the present decision was arrived at. It is difficult to ascertain what amount has really been paid by the parties.
3521. In what cases do you get full poundage? Where we have actually sold and recovered, or the plaintiff can be shown to have benefited.
3522. What is the rate of poundage charged? 5 per cent. on £100 and under; 2½ per cent. on all sums over. It is charged under the rules of court.
3523. Is it your opinion that the charge should be continued as before? I do not like to give an opinion; but if it was made clear as to what should be charged our revenue might be increased.
3524. Are you of opinion that poundage should be charged in all cases of money recovered? No; but in all cases where money is received by the Sheriff, or the plaintiff benefits; but it is so difficult to prove this that I believe we lose. If the money actually passes through the sheriff's office the poundage is easily collected.
3525. Is there any other suggestion you can make? No, not for increasing the revenue, except by making payment of fees in advance, and insisting on all services being made by sheriff's officers.
- 3526-7. Have you considered how it is possible to decrease the cost of your department, and can you suggest where it is possible generally to effect retrenchment in branches of the Public Service with which it is connected, or of which you have had experience? The Chief Justice does not approve of reduction at the Supreme Court. I have reduced the expenditure authorised by the Minister at Chancery Square; but I have only the same staff I had at Darlinghurst twenty years ago, although the work has increased fourfold. I have been asked by the Commission to recommend a reduction in expenditure. While fully aware that retrenchment is necessary, I submit that I have done more than could have been expected in keeping down the clerical staff, but while doing this I cannot shut my eyes to the fact that increases still are obtainable in other departments chiefly by a rearrangement of officers. During the retrenchment of 1892 while I was ordered to retrench, other departments were not retrenched in a similar degree. I have had a large amount of work added. I have reduced the expense of the District Court work by £1,300, and my contingencies are £2,125 less than they were in 1885, notwithstanding the increased work in the Courts, while the vote for salaries this year is £80 less than in 1885, although the work of the department has largely increased. When I was appointed Sheriff twenty years ago it was specially pointed out to me that more Sheriff's officers were required, and it was agreed that if they were appointed to distant parts I should have a free hand to travel and visit them periodically, also that I should have the power to remove and dismiss the latter, subject to the approval of the executive. No one could manage such a Shrievalty, extending from Broken Hill to Tenterfield, satisfactorily, without such large powers. By travelling I have saved thousands of pounds in actions alone. With reference to Sheriff's officers' fees it is to be remembered that their salaries were fixed at a low rate—only about equal to that of a messenger—in view of these fees, which it was intended should form part of the emoluments of the office. Their life is often in danger in making arrests. They have to incur large expenditure and wait for their money. I produce an account for £80 due by solicitors to one Sheriff's officer. They have to purchase an equipment consisting of buggy, harness, and horses, which at times entail great loss by wear and tear, breakage, and death. Every officer must have money at command, and a city officer, although not subject to travelling expenses to so great an extent as those in the country, has his hand always in his pocket for expenses which cannot be avoided in executing warrants. Sometimes they are days trying to obtain possession of property or to arrest a debtor, and this necessitates payment for information in many different ways. I would rather take the opinion of a man like the late Crown Solicitor, Mr. John Williams, than my own in these matters, and I acted on his advice in establishing the system I have adopted, and in not doing away with fees which would necessitate the payment of a higher salary as once proposed, providing equipment and paying all travelling expenses when absent on duty. Formerly, the officers received salaries, forage allowance, charged what they liked, and carried on private business, so that I have already considerably reduced their incomes. As to Court-keepers, I attempted to retrench by employing only females as cleaners. It was found, however, unworkable, as women could not clean public closets, which are often in a disgusting state, or clear the gutters of the buildings of leaves, attend in Court, or act as messengers, and the payment of extras for these services was found to amount to more than the original salary, which, in most cases, was not more than the rate paid in private families, and when higher they have to employ and pay assistants. At the suggestion of the Member for the district, it was agreed to re-open the question of the re-instatement of the Court-keeper at Armidale, which was the weakest case I had; and at Tamworth a salary of £1 per week is now paid to a clerk for assisting the Clerk of Petty Sessions, which was done by the Court-keeper in a satisfactory manner previously. The Sheriff's Officer and Court-keeper might often assist the C.P.S., and prevent the necessity of employing an assistant. The only difficulty is I should lose a certain amount of control over my officers, which is essential in the Sheriff's Department to prevent actions. At Deniliquin, no sooner had I knocked off the Court-keeper, in obedience to the call for retrenchment, than the Minister, at the instance of the Police Magistrate, who had previously accused me of extravagance and said the Court-keeper was necessary, asked that he should be reappointed, and as the grounds are large as well as the building, it no doubt requires a man and wife to keep them in proper order. Public property must be looked after, and if expenditure is cut off in one way it will be put on in another, as the work must be done. With regard to special assistants, the item appears large, but it must be recollected that the Chancery-square Courts have been established, and the expense comes principally under this head. By employing specials, who only receive pay for the days they are actually employed, I get the services of three men for the amount of money paid to two permanent men in other departments working alongside of them. In one instance

a man receives a higher permanent salary and is allowed to wait at Parliament House, for which he receives five shillings an evening. At one time I tried to reduce the number of specials and employ the police in the Courts, but found it impossible to get police, as they are otherwise fully employed, and if I require a constable for an hour or so sometimes when I am short-handed I have great difficulty in getting one. If the police were employed the Force would have to be increased and more expense incurred in permanent salaries. My men not only attend in Court, but one acts as tipstaff to the Judge at Quarter Sessions, while the others attend to Jurors' luncheons and other duties which the police could not perform, and are only paid for actual work done. My travelling expenses have been alluded to, but while the rate per day has been higher than others, as specially arranged when I accepted the appointment, I have not exceeded the amount voted for my predecessor annually, twenty years ago, when he seldom went beyond Bathurst and Goulburn, while I travel all over the Colony. A large reduction in expenditure might be made by decreasing the number of Assize Courts and Courts of Quarter Sessions. More cases might be tried in Sydney, which would save travelling and other expenses. The jury system if not done away with might be modified, and all civil cases tried by a Judge, unless a jury was especially demanded by the parties. The Sheriff should have a Court of his own for revising jury lists, and might have the power, with the approval of the Judge, of excusing jurors on affidavit, which affidavit should be produced to the Court, the Sheriff being held responsible. Cases often happen where jurors have made important business arrangements which cannot be delayed. By waiting until the Court sits to be excused they are sometimes heavy losers. This might be avoided. If the Sheriff had the summoning and paying of all Jurors, with the power to excuse, a great deal of the existing friction would be avoided. At present the duties connected with jurors are divided between the Sheriff, the Clerk of the Peace, and the police. I think the office of Police Magistrate and Clerk of Petty Sessions could be combined in many instances, but the same difficulty would arise that I have in appointing Police Magistrates my deputies. They have other Courts to attend to, and who is to do their duty in their absence. They act as Wardens and Coroners, and are continually called away on these duties. Where police act as Clerks of Petty Sessions a Police Magistrate is necessary, as the depositions should always be taken by a Magistrate, the police being very often the prosecutors in the case. If a Police Magistrate is appointed to do the duty of Clerk of Petty Sessions he could not visit any other place, and this would necessitate the appointment of more Police Magistrates, and might add to rather than decrease the expenditure. Neither would he be available for the position of Deputy Sheriff as he would, in his capacity of Clerk of Petty Sessions, have to act for the Clerk of the Peace. At present, as far as possible, I avail myself of the services of Police Magistrates as Deputy Sheriffs, and, when otherwise, arrange for the service without expense to the Government. The great secret of retrenchment is to fill up all vacancies from the Service, and gradually decrease the number employed. If every officer had set his face against increasing his clerical staff, as I have done, there would be no need for retrenchment. It has been accomplished in my case by the Minister refusing to interfere, and allowing no one else to do so. I have carefully gone through the Estimates with the idea of giving my views upon retrenchment, but the more I consider it the more difficult I find it to deal with. At first sight the amounts seem to have increased so much that one fancies he can see a way of proposing retrenchment, but, upon consideration, I have come to the conclusion that the best and most effectual way to meet the difficulty would be to appoint an independent permanent Board, who would make gradual and systematic retrenchment. I believe that such a Board would get rid of the anomalies which now exist, where a man in a branch of a department is paid £500 a year while another man in another branch is paid £400 a year for performing a much more important duty.

C. Cowper,
Esq.
23 Jan., 1895.

William Henry Burton, Esq., Chief Clerk in the Customs Department and Secretary to the Board of Commissioners of Customs, sworn and examined:—

3528. *President.*] As chief clerk in the Customs Department will you tell us shortly what is the nature of your duties? I have charge of the correspondence, records, payments of salaries and accounts, and I also keep what is called the deposit account. I superintend the preparation of refund certificates, refunds to merchants.

W. H. Burton,
Esq.
23 Jan., 1895.

3529. Drawbacks? No; refunds of money erroneously paid, and I receive overtime for the officers and pay it out again. I receive payments from the public for the services of officers superintending the repack of goods for drawback. These are my principal duties. They embrace a lot of work such as the preparation of returns.

3530. What is the nature of the papers you receive which are called records? All the letters received by the Collector which are of any importance, and especially any letters from the Treasury and other Government departments, are recorded in the register and numbered consecutively.

3531. So that you can refer to them at a moment's notice? Yes.

3532. How many of the staff do you employ to assist you? One clerk and one probationer.

3533. Do you think that the service rendered by having records kept in that way is worth the cost? Yes; decidedly.

3534. How often do you refer to the records? Pretty nearly every day, on an average every day.

3535. Are the occasions very important or just casual when the reference has been made? Of course the Collector often calls for information as to letters received, and generally the only place that we can find a record of it is in the record register. We find particulars there, the contents of the letter and the Collector's reply all condensed, and of course we can trace where the letters have gone to. If we did not keep a record of the letters it would be impossible at any time to say whether any given letter had been received or where it had gone to.

3536. Have you ever requisitions for information on account of questions put in Parliament? Yes, often, through the Collector.

3537. You have nothing to do with the receipt of money? Except receiving money for superintendence of repacks, money for officer's overtime, and money for deposit account, as I have already mentioned. They are the only moneys I receive.

3538. Would you approve of overtime being done away with? No.

3539. I suppose you know that in mercantile establishments it is not known? I am not aware.

3540. In your establishment overtime exists? Yes.

- W.H. Burton, Esq.
23 Jan., 1895.
3541. Strictly? Yes. The landing-waiter has often to be in attendance all night.
3542. *Mr. Storey.*] But there is no overtime for the clerical staff in the office? Yes, there is some paid by the Government for the preparation of annual returns, and there is also a little paid for other services. The clearing clerks also receive overtime fees from shipowners. The clerks remain behind till 9 p.m., for instance.
3543. The rates vary, of course, with the status of the officer? Yes.
3544. Can you tell us the aggregate amount paid for overtime during 1894? Not exactly.
3545. But could you ascertain and furnish us with the amount afterwards? Yes.
3546. In the case of repacks, of course the officer has to be in attendance whenever a package of bonded goods is broken—that is to say, if it is opened and a portion of the goods removed, the officer has to be in attendance, and is paid for that? There would not be any charge for attendance for that. If the goods are in bond of course there is no duty paid.
3547. When an officer attends at a merchant's store to superintend the repacking of duty-paid goods that would be known technically in the department as a repack attendance, would it not? Yes; it would be an attendance at merchants' stores at any hour of the day to superintend the repacking of goods on which duty had been paid, and which they wished to export for drawback.
3548. I suppose a fee is paid for attendance on a repack of goods that had been duty-paid and which were in a merchant's store? Yes.
3549. *President.*] You are also Secretary to the Board of Commissioners for Customs;—how long has that Board been in existence? Since 1st July, 1879. It came into force with the present Customs Act.
3550. How many Commissioners have been on the Board at a time;—how many have constituted the Board? Three.
3551. Could you tell us how many times a year the Board meets? I could give you the attendance for three years, because I had occasion recently to prepare a return.
3552. What years are they? The three years ending the 30th November last.
3553. You mean the years 1892, 1893, and 1894? Yes.
3554. Three calendar years? Yes.
3555. Has the Board a stated day for meeting? Yes; it meets on Thursdays, according to the printed rules.
3556. Does the Board meet every Thursday? Yes.
3557. Could you also tell us how many cases of appeal came before the Board in those years? The return was made up to the 30th November.
3558. Call it a fiscal year—a year of twelve months? It begins with one month in 1891, and includes, for the first year, eleven months in 1892. There were sixty-one cases altogether in the three years.
3559. Give us the number separately for each year? I cannot without reference to the records.
3560. I understand that the Board did business on sixty-one occasions in the three years? The business of the Board often extends over three or four sittings, and the Commissioners meet more than once a week. They meet whenever there is business to do.
3561. Could you tell from your records the amount of money, in the aggregate, involved in the cases brought before the Board? I think so; but a particular case dealt with may be a portion of a shipment, and the decision on the case would guide the Collector of Customs as to the whole shipment.
3562. Of course, but we only want to get what business comes before the Board, in order to see whether the Board has sufficient employment;—do you keep the minute-book? Yes.
3563. And there is a minute for every meeting? Yes.
3564. If we want to see that could we do so? I suppose there would be no objection. Of course I should have to ask the Commissioners' permission.
3565. You might send it here on Monday, and it will be returned on Tuesday morning? I will do so.
3566. What proportion of cases was in favour of the appellants and what proportion in favour of the appellees? I could tell that from the records.
3567. As chief clerk of the Customs you have no control over the clerical branch, have you? No; I have control of nothing outside my own office.
3568. How many clerks have you under you? A young man and a boy—a clerk and a probationer.
3569. *Mr. Robertson.*] Then what does the term "chief clerk" mean? I do not know. The Government appointed me chief clerk.
3570. But you have nothing to do with the other clerks? I pay them.
3571. But you have no oversight of their work? No.
3572. Can you make any recommendations to this Commission whereby any saving could be effected in the Customs? No.
3573. *Mr. Storey.*] Who is the responsible head of all the indoor part;—is it the Collector? There is an inspector of the indoor branch.
3574. Has he control over all those clerks? Yes, under the Collector.
3575. *Mr. Robertson.*] Does he inspect your work? No.
3576. Who inspects your work? No one inspects my work, except when it is finished, and it goes into the Collector for signature, and the Collector, of course, looks at it.
3577. Who is the inspector of all those twenty-six clerks? Mr. Baxter.
3578. *Mr. Storey.*] The salaries and positions of all those clerks are under the immediate control of the Collector, are they not? Yes.
3579. And he is the only one who could speak with reference to them? Yes, certainly.
3580. *President.*] But the Collector does not go through the office and see that every man is at his post? No.
3581. Who is the officer who directs and controls the great staff of clerks that you have here and is responsible for the due execution of their duties;—is there anyone? I could not say that Mr. Baxter is responsible for the due execution of the duties by all the clerks. The clerks are placed in different rooms and under different branches, having different work to do. The head of the different rooms is directly responsible for those under him. There is the Jerquer's Branch, and the Long-room Branch, and others.
3582. There is a head over all those rooms? The principal clerk in each of those rooms is responsible for the work that is done in it.
3583. Supposing one of the inferior clerks were guilty of some dereliction of duty, does the head of that room report to anyone? Yes; if it came to his knowledge he should do so. 3584.

W. H. Burton,
Esq.
23 Jan., 1895.

3584. To whom would he report? Perhaps to Mr. Baxter, or perhaps to the collector.
 3585. Either of them? Yes.
 3586. And then measures would be taken to remedy the trouble? Certainly.
 3587. There is a warehouse branch with a warehouse-keeper and several clerks;—who is directly responsible for the work done by the clerks in that branch? The warehouse-keeper.
 3588. Are the lockers under his control? Yes.
 3589. And guidance? Yes.
 3590. And are they responsible in the first instance to him? Yes.
 3591. If anyone commits a fault has he to report it? Yes.
 3592. What is the present warehouse-keeper's name;—is it Bethune? Yes.
 3593. I see many clerks have had long service, some from 1864? They are not all there now; some are out of the Service.
 3594. These are the senior clerks, I suppose? Mr. Madden has retired, Mr. Coates is dead, and Mr. Hill has had a long service, but his services have not been continuous as a clerk all through.
 3595. So they have risen by seniority to these well paid posts? Yes.
 3595½. I think you said that you could not suggest any way by which economy could be introduced into the department? I am not aware of any way.
 3596. *Mr. Robertson.*] Have you given the matter any consideration at all? I do not think I have particularly.

THURSDAY, 24 JANUARY, 1895.

Present:—

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | J. H. STOREY, Esq., J.P.,
 THOMAS LITTLEJOHN, Esq., PRESIDENT.

Stephen Harbord Lambton, Esq., Deputy Postmaster-General, sworn and examined:—

3597. *President.*] I notice there was a considerable step in the direction of economy in your department some time ago on the occasion of the death of Mr. Cracknell; the office of Superintendent of Telegraphs as so designated was discontinued? Yes.
 3598. And a saving of salary effected, I presume? Yes.
 3599. I suppose we could hardly have before us an older Civil Servant than yourself? I think I have been nearly as long as anybody else in the Service. I have completed forty-two years.
 3600. After the heads of the department the first division is that of the Ministerial, in which there are sixty-five officers, beginning with the Secretary and going down to the temporary and probationary clerks; can you tell us what the duties of the Secretary of the Postal Service are generally? They are generally to distribute to the various branches the correspondence as opened in the morning—we get about 240 letters every morning. He supervises the work of the office generally, interviews the public, which occupies a large portion of his time, and assists me generally in the work of the Postal Service; his duties are practically the same as stated in the report of the previous Civil Service Commission on page 19. Since the amalgamation of course the work falls more heavily upon those who remain.
 3601. Have you a system of registering and recording papers? Yes; to a certain extent.
 3602. No matter what the communication is about, however trivial or however important, is it registered? Not always; we use our discretion—we do not register everything.
 3603. Those which are of trivial moment or of only passing interest are simply docketed away, and no record is kept? Or in some cases torn up after being answered. To-day our mail lines are upside down on account of the floods, and I suppose I have received twenty-five telegrams on the subject giving the state of the river at West Maitland and so on, but none of these will be recorded.
 3604. You do not consider the service suffers any detriment by that course? None at all; anything we think likely to be useful for future reference we record, but not otherwise.
 3605. Upon whose shoulders rests the responsibility of exercising the option in preserving or destroying papers? There are two principal records clerks who confer with Mr. Dalgarno when they are in doubt, and he decides for them.
 3606. Your inspectors number nine, including the chief inspector? Much too small a number to do our work properly.
 3607. Do the duties of the chief inspector keep him constantly in Sydney? No.
 3608. He visits anywhere? He takes his turn anywhere when he can be spared. He was at Blackheath from Friday till Monday inspecting the new building there, and making inquiries on his way.
 3609. His duties are also to inspect the clerical work? More particularly in the country; he regulates the duties of the other inspectors when he is in town; he looks after the stabling of the horses; and he goes to the country when he can spare time.
 3610. Then the other inspectors act under his supervision;—are they inspectors of the clerical establishments in the country? Their duties are to inspect country post-offices, mail lines, and so on. Our inspection in this respect is weak, because we have a number of post and telegraph offices which should be inspected two or three times a year, but with a staff of only nine inspectors it is impossible to have a thorough inspection.
 3611. Is there any inspection of the books of the country offices? The inspectors do that as well.
 3612. I need not ask if they are thoroughly competent accountants? They are all picked men from the other staffs.
 3613. They are in constant employment? Constant employment; but we could do with more of them in order to do the inspection of this large country properly. We have 1,445 post-offices, about 600 of which I suppose are official post and telegraph offices; we have also 450 receiving offices, which are something less than a post-office, no stamps are sold at them nor accounts kept, and we give the person in charge about £5 a year.
 3614. Do you consider your inspectors overpaid or underpaid. I see they begin at £470 after the chief inspector who gets £560? Considering everything the pay is about fair; I have no doubt inspectors in banks would get more, but, on the whole, I consider the pay fair. I would like to see the juniors brought up a bit, but I have not proposed an increase of any kind.

S. H.
Lambton,
Esq.
24 Jan., 1895.

S. H.
Lambton,
Esq.
24 Jan., 1895.

3615. You have two senior clerks less than in 1894;—what are the duties of the senior clerks? The senior clerk at £398 is a most valuable officer. He has the regulation of all the appointments—the appointments of every one of the 1,445 post-offices and the 450 receiving offices; the numerous letter carriers are also regulated by him. All the bonds and statistics of the Department are under his charge. He is one of the most valuable officers in the Department, and he is a man who I believe would get in private employ £500 or £600 a year without trouble. His name is Arndell. He is a man of ability although he gets less remuneration than some who are in the same classification with him.

3615½. *Mr. Storey.*] Does he not get £425? The £425 man is Mr. Joseph Clarke. He is also one of our most valuable officers. His work is to look after the whole of the mail contractors, to examine their time bills, arrange the time-tables, and he is editor of the Postal Guide.

3616. *President.*] The fact is, Mr. Arndell has got promotion since 1893 in consequence of his ability? Yes.

3617. He is now on a level with Mr. Clarke? He gets £398.

3618. In promoting officers is seniority closely adhered to as a rule? As a rule it is, if the men are competent. Practically it is so up to about £200 a year; but we have a sort of unwritten law that promotion by seniority should not be claimed after a man gets to £200 a year. As an instance of that I may say I incurred great displeasure recently from some of the staff and their friends because I pressed for the appointment of a Mr. Templeton, who has grown with our Postal Union question, and is most fitted for the work. I recommended his appointment over the heads of his seniors. Where a man shows undoubted ability for a particular position I do not consider seniority.

3619. And in the case of a man of very poor or moderate ability, but of senior rank, you would decidedly object to give him promotion if you had a man of superior attainments, who could fill the office better, but was at the time junior to the other man? Yes; I have done that for a good many years past. Mr. Dalgarno himself was originally not the senior; he was promoted over the heads of others because of his superior ability. I may say that was the case with myself; I do not say because of superior ability on my part, but I was not the senior officer in Major Christie's time.

3620. If promotion by seniority were slavishly adhered to the Service would be disorganised? I am sure it would; at the same time it is a very invidious task to pass over a man. When I have had occasion to do so I have had to meet the friends of those passed over, and have found it an unpleasant task to explain that what I have done has been in the public interest.

3621. You have forty-four clerks, ranging from two at £326 down to three at £100;—what are the duties of the forty-four generally? They are distributed amongst the B and C divisions, for recording papers and writing letters in reply. I could not say exactly what their duties are, but would refer you to the Report of the last Commission, pages 19 to 22, in which their duties are fully set forth. Their work is all more or less clerical. They are fully employed with two exceptions, but I have since found employment for these two men. A death took place in the Telegraph Office, and I put one there; and I put the other in the Dead Letter Office, to replace a man who was arrested. That is the way we try to retrench. These two men were provided for elsewhere, but they take their salaries with them, which are a little more than the other men got.

3622. Have you heads over the different sections of the office to see that the duties are properly performed? Quite so.

3623. Do they make reports at intervals? No; because they are under Mr. Dalgarno, who exercises a general supervision over the whole branch. Every section has its own clerk in charge. The record clerk is Mr. Richardson, the Appointment Branch is under Mr. Arndell, and the inland mail service is under Mr. Joseph Clarke. These are all men we can depend upon. The time-book is examined by Mr. Dalgarno every morning, and by me once a week.

3624. If everything goes without a hitch, he has no occasion to report to you? No. If an officer is not at his post within a reasonable time after 9 o'clock, a report comes to the head of the branch, and if the absence is extended a report comes to me, but unless an irregularity is of a serious character no report is made to me.

3625. How often would you allow irregularities without making a man suffer? Two or three times, but we punish him each time. One man lost £100 a year of his salary. Another man I recommended to be reinstated, fined a £1, and warned that this was the last chance. We do not allow anything like drunkenness while on duty. Dr. Marsden is employed by the department to give certificates when people are ill, and if we have any doubt as to the cause of a man's absence we send Dr. Marsden to report.

3626. His examination is without a fee to the patient? We pay Dr. Marsden.

3627. Passing on to the financial division, that is also under your control? Yes.

3628. There is a staff of eighty-two;—what is the nature of the transactions that come under the eye of the chief accountant and the comptroller? The chief accountant and comptroller is also in charge of the important branch called the Money Order and Savings Bank. I look upon him as one of the worst paid men in the Public Service. That is Mr. Doak. His salary is £740 a year. The enormous transactions he has to deal with seem to me to warrant a salary of, if not double that amount, at any rate of £1,200 a year. I am told that in the Barrack-street Savings Bank the officer in command gets about £1,500 a year, but I do not know how true it is. Mr. Doak's personal responsibilities in connection with the Savings Bank are enormous.

3629. *Mr. Robertson.*] If Mr. Lambton thinks, Mr. President, that Mr. Doak ought to get at least £1,200 a year, I would like to know what he thinks the Deputy Postmaster-General ought to get? I would rather not give any opinion as to what I ought to get. When the offices were amalgamated I got no increase of salary, and did not ask for any, and although the work of amalgamation took up a lot of my time I received no bonus. I would not object if a man in Mr. Doak's position got even a higher salary than myself, because the office he occupies is a most important one, and is of great pecuniary responsibility.

3630. *President.*] I understand there is no one to whom Mr. Doak is responsible between him and you; he is directly responsible to you? Yes.

3631. Of course all the clerks of this section, numbering 82, give security? Every one in the Post Office gives security.

3632. According to the extent of their responsibility? Yes; Mr. Doak gives security to the extent of £2,000, I £1,000, and Mr. Walker £1,000.

3633. What is the nature of the bond? We give security to the Treasury.

S. H.
Lambton,
Esq.

29 Jan., 1895.

3634. They charge you the premium? They are going to reduce it this year from 5s. to 3s. I suggested we should have a departmental guarantee, but they did not consider it desirable. They receive £4,000, but our losses have only been £400 in four years.
3635. You lost only £400 in four years? £416, I think.
3636. You consider that satisfactory? I think it speaks volumes for our check.
3637. The check is as perfect as you can devise? It is absolutely perfect as regards postage stamps, but no check in the world will be able to prevent frauds in the Savings Bank Department; that is why we must get good men and have the offices properly inspected. We cannot have perfect checks in regard to telegraph money orders, Savings Bank transactions, as there may be collusion with the officers, as was shown in the case of the Healy frauds.
3638. As to the remuneration of the clerks in that division, I see they begin at £335? The chief clerk gets £560.
3639. What are his duties? You will find them detailed in the report of the previous Commission. He is under Mr. Doak, and assists him in the work of the Money Order and Savings Bank Branch. Mr. Docker's duties now are to check chief office tellers' accounts; he counts the cash occasionally, writes out all cheques, and despatches debit remittances to postmasters, assists in checking the daily Savings Bank accounts and the receipts from country offices, keeps the cash-book, debit remittances, intercolonial and foreign account current book, &c.
3640. Are the duties of the teller actually those of a teller—does he receive moneys solely, or does he receive and pay? There are several tellers. Sometimes we have a dozen men doing tellers' work. Mr. Doak preferred not to call them tellers, I do not know for what reason, but he prefers one chief teller over the rest, and they are just ordinary clerks.
3641. Those who are found to be adapted to the handling of money in times of pressure? Yes.
3642. You have increased the number of clerks very considerably in 1895, compared with the number that were in office in 1894? I think by three, and they are not yet appointed. We asked for three at a minimum salary of £100, mainly on account of the postal note business. That has increased our work, but not our profit; it cuts into the money order trade.
3643. Is there quite full employment for all these clerks? So far as I know there is; but I have to leave the Money Order and Savings Bank almost entirely to Mr. Doak. So far as my observation extends they are all fully employed. In fact my instructions, not only to heads of branches, but to everyone in authority, are, not to have a man more than is wanted.
3644. Proceeding to the Account Branch, the accountant gets £560; in what way do his duties differ from those in the financial division? The financial division is solely confined to the Money Order and Savings Bank business. The accountant in the Account and Cash Branch deals only with postal matters; the Money Order Branch is a branch of its own. We are more amalgamated here than in most other places. In Great Britain the Money Order Savings Bank is entirely separate. They do not attempt to merge the two into one, as we do here. It works well with us, because under the new system which the Commission recommended we save a good deal of clerical labour. At one time I used to have about 3,000 cheques to sign during the first fortnight of the quarter. That labour has been considerably reduced, and I do not suppose I now sign more than 500 or 600. A large country office, say, like Goulburn, pays its staff from the funds and sends the voucher down as cash. That saves a lot of circumlocution. That is really the principal benefit of having the thing so completely amalgamated under Mr. Doak's charge. The Treasury Inspector, when he last reported on our accounts, advised that Mr. Doak should be relieved of the supervision of the accounts of the Post Office.
3645. By that system of utilising the cash in the country, and thereby sparing you the trouble of drawing so many cheques, is there any possibility of any irregularities? I think not. I do not see how there can be. Towards the end of the month we send the abstract up to the Postmaster, and he has to return it to us representing the cash he has paid away.
3646. Perfected by signatures? Exactly; there has not been the slightest irregularity since the system was adopted two years ago.
3647. How often does the Treasury examine your accounts? I think they have no particular time, but about once a year; they sometimes check the Money Order and Savings Bank only, at other times the Post Office only.
3648. Do they make a complete investigation? A thorough overhaul. The inspectors are in the office for weeks.
3649. The mail division is also under your supervision? Yes.
3650. In what direction do the duties of the superintendent of the mail division lie? He has to supervise 95 letter-carriers, and an army of stampers and sorters, in addition to the clerical staff. He is also in attendance all day to answer inquiries from the public. His position is somewhat analagous to that of the Traffic Manager of the Railways. He has to keep the thing going; to see that everyone is at his post and to personally look after the 200 or 300 people under him. Our Mail Branch is open practically throughout the twenty-four hours. We are at work at 5 in the morning, and I do not think we finish before midnight. When Mr. Asher Day is not on duty Mr. M'Mahon takes his place.
3651. He is the assistant superintendent? Yes; his duties are practically the same as in 1889.
3652. There is no overtime? In the mail branch?
3653. Yes? We have considerably reduced it of late years. When I did recommend a reduction I got into bad odour, but the system of overtime was originated years ago in the Mail Branch, when the English mails came in at all hours of the day and night. I have been called up at 2 in the morning to sort the mails. The overtime has gone on ever since, although our English mails now come, in nine cases out of ten, by the express train. The only ones that come in at night are those by the Vancouver or San Francisco lines. With the large staff we have, I think this overtime might be reduced. It has been reduced from £3,500 to £3,200.
3654. Are the letter-carriers required to attend when the mail comes in? If a mail comes in by the early train they are required to come earlier in the morning, and when it comes by the express at a quarter to 12 they return half an hour earlier. Sometimes they return in the evenings to sort the newspapers, and that means a little overtime, but the necessity for overtime does not exist now as it did formerly. I do not think the average of any carrier's attendance after hours in connection with the English mails would be more than an hour and a half once a week.

S. H.
Lambton,
Esq.
24 Jan., 1895.

3655. You think further saving might be effected in the future in this matter? I propose reducing it gradually.
3656. Considering the time when the clerks have to be prepared to attend, you do not think they are over paid? I do not think they are. You mean the clerks generally?
3657. In the Mail Division? I do not think they are overpaid as a rule, but it is a very difficult question to answer. If you ask if none of the clerks are overpaid, I should say some of them are overpaid, but the fault is not mine. The fault, I consider, lies with the Civil Service Act, which was passed in 1884, and which provided for increments of £20 per year for two years to every clerk that went on. I am quite certain the effect of that was to give many clerks more than they were worth, and it has been difficult to take away from them what has been given.
3658. You do not believe in the system of continuing to give increments to clerks, simply because they have been so many years in the service? I do to a certain extent, but the increment was too large. If it had been perhaps £5 or £10, the system would work very well. I do not think the Government on the whole would lose, because you would give the staff an incentive to work well; a man likes to look forward to some progression.
3659. You believe in the system of classification? I think so. We have it in regard to our telegraph operators, those who come under section 7 of the Civil Service Act; they do not get the annual increments, but every man as he reaches the top of his grade, if deserving, gets promotion to a higher grade as a vacancy occurs.
3660. We come next to the Electric Telegraph Division, that is the one Mr. Walker is in charge of? Only as regards the technical part, the other is merged in the Post Office; Mr. Walker has no correspondence clerks.
3661. What are his clerks? They are merely the checking clerks, who check the stamps on the telegraph messages, but they are not correspondents.
3662. They examine the actual messages given in by the public, which are stamped? Yes; and those that come from the country are examined in the Head Office to see that they all bear the proper stamps, and that the stamps are defaced.
3663. And they have to count the words? Quite so.
3664. That is a tremendous labour? Yes; but we think it necessary in order to protect the revenue, it was done before stamping was introduced. If we had not this check there might be collusion between the operator and the person handing in the message. The operator might accept 1s. for a 5s. message, and divide the difference with the person handing in the message.
3665. I suppose you have thought over every means of minimising the labour? Yes.
3666. And this is the shortest way? Yes; a Treasury inspector has gone into the matter thoroughly. He advises that the check branch be taken from Mr. Walker and put under the account branch, but I cannot see that would make much difference, because he does not suggest a reduced staff. Mr. Walker objects, because he says the operators are under him, and the check clerks must also work under him; he fears a division of authority.
3667. As a matter of fact have any frauds been detected? Yes; we detected one about twelve months ago, in a small place on the Western line called Hampton. The offender was a non-official postmistress who made use of stamps that had been used before.
3668. It costs a lot to keep up this check, £8,600? But these clerks are not all employed in checking messages; if I remember rightly I think there are only seventeen or eighteen employed in the check branch. There are two clerks in charge of the telegraph messengers, and others are employed in sorting away messages after they are examined.
3669. The messengers' overseers? The messengers are mostly boys, and are on duty the whole of the twenty-four hours; they want an overseer constantly to keep them in order.
3670. It takes four people to look after them at a cost of £600 a year? They want it.
3671. The horses and accoutrements belong to the department? Yes; but the horses are kept away from the building; they are stabled in Castlereagh-street; the overseers have nothing to do with the horses.
3672. How many boys are employed by the telegraph division? I think the number of messengers in the head office is about 100.
3673. Monitors is a term I do not exactly understand;—what are they? They are really clerks—something above a messenger; I think they address envelopes and put up the messages. They also supervise the switch attendants. Mr. Walker suggested the change of designation, but I don't know why.
3674. If a boy is not a good decipherer of writing? The boy would not decipher; we take by sound. The operator takes the message, and it is passed on to be folded up and addressed by somebody. Instead of giving it to senior messengers, Mr. Walker, I think, preferred to promote some of the best messengers to do the work, and called them monitors.
3675. The Telephone Branch, of course, is quite a new thing comparatively? Yes.
3676. At the same time there are a good many employed there? Yes; and it is growing by leaps and bounds since we introduced the renting system.
3677. The switch-board attendants, I suppose they are? The men who put you on to the person you want. In other Colonies—especially in South Australia—they have women for this work. The Adelaide Exchange is worked entirely by girls, with a matron at their head, but we have never introduced into this Colony the system of employing women, although, no doubt, they would work cheaper than men. Still we have always held that it is not right to take bread out of men's mouths.
3678. *Mr. Storey.*] Who is the manager of that department? *Mr. Watson.*
3679. *President.*] Stopping at the bottom of page 143, the amount is £73,000 per annum? But included in that sum are the salaries of Mr. Walker himself, his assistant manager, and three assistant station managers.
3680. Still they are essential to the conduct of the department, just the same as a Bank manager who is paid £3,000 or £3,500 a year, is necessary to the bank, and whose salary is included in the average expenditure of the bank? Yes.
3681. Supposing we call it £70,000 per annum, do you think, in addition to the small savings you mention, any more could be saved in such a large amount? I am not in a position to say it could. This is the technical division under Mr. Walker. I have not personally gone into the various technical branches to see whether we could retrench, and Mr. Walker assures me that all the men are fully employed.

I admit this amount looks high, but there is an amount for line repairing which I think could be reduced. 3682. The total of your department is a very large one; indeed it is about three-quarters of a million per annum? Yes; but it was less in 1894 than in 1893 by £10,000. Although you point out there is a large expenditure there is also a large revenue. In 1894 this was £626,864.

3683. Is that net? Just the gross revenue. You can imagine the amount of work involved in collecting that sum, for the most part, in penny and twopenny stamps.

3684. *Mr. Storey.*] That is from all sources? Yes.

3685. *President.*] Do you receive your supplies of stationery and necessaries for the department from the Government Stores? Most of them we do. In the Annual Report we endeavour to show what our earnings are. On page 4 of our Report for 1894 we give exactly the items of expenditure.

3686. You do not actually pay it? No; but we show it as an out-go.

3687. *Mr. Storey.*] Your department was reorganised some two or three years ago? Yes; after Mr. Cracknell's death.

3688. Can you tell us whether any savings were effected by that reorganisation? We effected immediate savings to the extent of £5,293 per annum.

3689. With all these subdivisions, although nominally you are responsible, you have to trust, I presume, to the heads of the department? A very great deal.

3690. Are you in any way responsible for the Estimates and for these salaries? Certainly.

3691. Do you prepare the Estimates? I have to satisfy myself the various items of expenditure are necessary. When Estimates are called for, I ask the heads of the different branches to let me know what reductions they can make. I go through these, and before they reach the Minister I knock off, perhaps, several thousands of pounds. The Minister cuts them down more, and when they go to the Cabinet they are still further cut down.

3692. Then we understand the whole of these salaries under the subdivisions are examined critically by you before being sent to the Minister? As far as possible.

3693. You take that responsibility? Of course I cannot go into the duties of every one of our numerous staff, but I satisfy myself every shilling is required before I submit the Estimates to the Minister.

3694. What salary do you begin the clerks at? The staff salary at £100. We take on probationers, according to their age, at 10s., 15s., and £1 a week.

3695. When would they get £100 a year? Not till they pass the junior examination. If they do not pass they do not go on the staff. A good clerk, who joins at £1 a week, and passes the examination, ought to get on the staff in two years' time.

3696. A junior clerk would get £100 at the end of two years? Yes; unless promotion happened to be very slow. We would not provide £100 for him unless we required another staff clerk.

3697. Take the low grades, four at £100, they do not get annual increases until there is a vacancy to step into? No; unless Parliament votes increases for them, or a vacancy occurs, and they step into it.

3698. There is one department, the Electric Light Branch, at an expenditure of £2,900;—what is that for? We do a lot of work we get nothing for. We light up Parliament House and Circular Quay, besides our own establishment, but we get no payments from the other departments for what we do.

3699. There is a chief engineer, also two other engineers, and two assistant engineers? They are all, I believe, fully employed. I know that the other day when an engineer got into trouble through drunkenness we had to find some one to supply his place.

3700. The expenditure is not confined only to lighting the Post Office itself? Oh, no.

3701. There is a large sum expended in wages for letter-carriers, stampers, carriers, and sorters; you have had a long experience in the Post Office, and you know that in every line of business during the last few years the wages have come down;—has any reduction been made in the Post Office in any shape or form during the last three years? None whatever; the salaries over £200 were reduced, but the wages have not been reduced.

3702. Is it not a reasonable thing to suppose that, in keeping with everything else outside, the wages of these men should come down;—in your opinion is a letter-carrier overpaid or underpaid at £170 a year; that seems to be the maximum? There is one thing to be said; a letter-carrier, to get £170, must have had to work a long time. I would not like to commit myself, but I should think none of these men receiving from £150 and upwards have been less than fifteen years in the department. I think letter-carriers are men above the cut of ordinary labouring men. They require to be men of more education, sober, steady, and trustworthy. I confess I would not like to see their pay reduced.

3703. There is nothing in the position of a letter-carrier requiring ability? Honesty and intelligence, and some little education. A man must be able to read and write; he has to enter up the receipt forms for registered letters, and must be able to decipher bad addresses. He must be a trusted officer, because a dishonest man would open letters, and purloin the contents. We never think of bringing in a carrier at £170 or £150. If a man at £150 or £170 died or retired, the man at the next grade would go up, and so on, till we got in a mail-boy at 10s. a week.

3704. The lowest letter-carrier gets £100 a year? He has to go through the routine from telegraph boy, and is, perhaps, two or three years a temporary letter-carrier at £91 a year, before he gets £100. I do not think we have one at £100 who has been with us less than five years. Twenty years ago it was a common thing for a Minister to appoint a man at £120 a year, but that is not done now. If a post at £120 is vacant, a man at £110 gets it. I have no doubt, however, that we could get plenty of men outside willing to do the work for less, but they would not have had the training and experience.

3705. We gather, then, that in your opinion the rates of wages paid to these men are high, you could get the work done for less now, but these men have all earned their position from length of service? Yes, by long and faithful service.

3706. Has not the increase in the number of letter-boxes diminished the letter-carriers? I do not think so. We take care to give every man his day's work. We have not appointed additional letter-carriers in the city for many years, but in the principal business centres, where many private boxes are taken, we extend the carrier's beat.

3707. These mechanical estimates in the telegraph office—you have not had time to go into them? No; Mr Walker has to do with them.

3708. It might be advisable to have Mr. Walker here? I certainly suggest that. The complete amalgamation was only effected about fifteen months ago.

S. H.

S. H.
Lambton,
Esq.
24 Jan., 1895.

3709. There is an item of £215,000 per annum paid to postmasters and others;—has there been any reduction in that, or has it grown? It has grown according to the requirements. If a new post-office or telephone is wanted that means another man to work it. We have not increased the rates of salaries, much to the disappointment of many concerned. We have a number of married men paid out of this vote who have had no increase for years. A lot of pressure was brought to bear on the Postmaster-General for the purpose of getting him to spare £500 or £600 to increase the pay of the junior post and telegraph masters.
3710. When the reorganisation took place, how did you manage in the country districts where there was a postmaster and telegraph master? The amalgamation helped us. Previously, if a man wanted a day's leave, he had to write to Mr. Cracknell and to me.
3711. But the one man filled the two positions before reorganisation? Sometimes yes, sometimes no.
3712. What is the average rate of salary to country postmasters? I could not say without calculating.
3713. Take a place like Bathurst, Goulburn, or Wagga, where you have a post-office of your own? I do not think the average would be £200.
3714. It is £371 at Wagga? That is an exceptional case. Wagga is one of the best. On page 56 of this report you will see that Bathurst, West Maitland, the Haymarket, Newcastle, and Goulburn get each £380, and there is Bourke at £371. Those are the first class.
3715. What extras do those salaries include? Quarters, or allowance in lieu thereof.
3716. They get house-rent? Quarters, or an allowance in lieu thereof. We have abolished that also; at one time if a man did not get quarters he expected an allowance.
3717. But in the large centres there will be a house? Yes.
3718. Does that include firing and lighting? To a limited amount only, something very trivial.
3719. *President.*] The quarters would be in addition to the salary? Yes; they are allowed quarters.
3720. *Mr. Storey.*] Tell us candidly your opinion; do you consider the position of a post and telegraph master at a place like Bathurst equal to that of the manager of a branch Bank in Bathurst—should he have the same salary? I think his work is greater than that of a manager, but his responsibility is not so great. A Bank manager has to exercise care in the matter of overdrafts, for instance, and so on, but the postmaster is the harder worked man of the two. He has to live on the premises, has to be in attendance at all hours, and has sometimes to get up at 2 or 3 in the morning to dispatch mails.
3721. Still he has to carry out the work that comes to him—he has not to seek for work? Yes.
3722. You would think the manager of a Bank should have a higher salary? I think, all things considered, his position should be a more remunerative one.
3723. Do I understand the salaries of post and telegraph masters are all graded? All graded, but without the increments.
3724. There has been no reduction in the last three years? They shared in the general reduction of 10 per cent. over the £200. The only people who get overtime are some of the operators in the country.
3725. What check have you over the travelling expenses, £8,350 a year? Every inspector has his route mapped out by the chief inspector, and he has to keep a diary, which he submits to me on his return; it is the best check I have been able to suggest. I see that the voucher tallies with the diary, the voucher goes on to the accountant, who checks it, and it is paid.
3726. What are the allowances? They have been reduced of late. Under the recommendation of the Board appointed for the purpose, the inspectors only get 15s. a day, but the Government would pay cost of carriage. Formerly they got 30s. a day, and paid everything.
3727. Are all the disbursements in the Post-office paid by the Post-office department or through the Treasury? The abstracts go to the Treasury, who pay the money to our credit, and we draw the cheques.
3728. The Audit Office verifies the expenditure? Yes.
3729. Is there any system of leave of absence? I think the Government is unduly liberal in this respect, but it is the fault of the Civil Service Act; that Act provides that every officer may get three weeks' leave in the year, and extended leave under certain conditions, such as sickness. It provides, inferentially, for a man to get a day in lieu of any public holiday that may come within his period of three weeks. If he comes down on a public holiday for an hour he is entitled to a day. In fairness, as we bring the telegraph operators under the disabilities of the Act, we thought it fair to extend to them the leave provisions of the Civil Service Act, except as regards the holiday; but the leave provisions are too liberal in my opinion.
3730. Have you ever made any estimate of the loss to the Government involved in granting this leave? I have not. Some twenty years ago, before the Civil Service Act came into operation, there was a move in the department to get an annual leave for every officer. I prepared for the Minister of the day an estimate of the additional hands we would require, and I know it came to something considerable. At that time I think in the head office alone we would have required from twenty to twenty-five fresh hands. If the leave provisions were not so liberal we could do with a less number of hands. Under the law a man could claim three weeks in December, and after returning to work for a few days he could take another three weeks in January, but I have stopped that. I do not recommend a further leave of absence until after an interval of twelve months from the previous leave. I think in an office where the hours are liberal, where the men come at 9, get an hour for luncheon, leave at half-past 4, get a half holiday on Saturdays, and all the numerous public holidays, an annual leave of three weeks is too liberal.
3731. If the leave of absence were abolished in your department, and only an ordinary leave given as in mercantile houses, there would be a great saving? Yes; I believe the principle of giving a little holiday is a good one.
3732. You find the bulk of the staff claim the three weeks? Oh, yes. In the country it is a heavy matter for us, as we have often to send a man to take the place of the officer on leave. We keep relieving officers.
3733. That is a big tax on your department? Yes; we do not give letter-carriers three weeks' leave because we consider their work is of a more healthy character, and we allow them only a fortnight, provided they can be spared.
3734. Have you ever estimated what the cost to the department is of the free newspaper postage? Yes; but we have not made an estimate lately; but I calculate if we were to put a half-penny postage on newspapers we would receive £40,000 a year additional.
3735. You could not give us any idea of the extra cost to the department for handling the newspapers? I could not say.

3736. You have to pay a large amount for carriage? But still we would have the mails running. The mail-bags would have to go, and the same people would have to be employed as now, so I do not think you could form an estimate of the value of the work.

3737. *President.*] The newspapers are greater in bulk than the letters? Of course they are, but the postal machinery would still exist. Post-offices would still have to be maintained, and a certain staff appointed.

3737½. *Mr. Storey.*] This large item of £100,000 per annum for inland conveyance of mails;—what is the system adopted to get this done at the cheapest possible rates? We are blamed for doing it too cheaply. We call for tenders every year, for one or three years according to the option of the tenderers. About a third of these tenders are renewed every year. We accept the lowest tender. It was argued in the House lately that before we called for tenders we ought to value the work, and not accept a tender for a less valuation than our estimate, but such a thing would be impracticable. We are expected to accept the lowest tender, although we do not always do it. We have a sort of unwritten law that if a man has served the district well, it is to our advantage and that of the public to give him the preference in the new contract to the extent of about 1 or 1½ per cent. In one case we had a tender for £100 10s. from a man who had served us well, and we gave him the contract in preference to one who tendered at £100. The lowest man consequently accused us of bribery and corruption. As a rule we are bound to accept the lowest tender. As one check we require a deposit of 20 per cent. so as to secure good men. That was objected to last year by several Members of Parliament who called on me and pointed out that some poor men could not stand a 20 per cent. deposit. In order to meet them we waived the 20 per cent. deposit. The consequence was a man put in at too low a price, threw up the contract, and we had to call for fresh tenders and pay a much higher price. We have very strict conditions in this matter. We require that all tenders should have the name of two men as sureties, certified to by a J.P. The tender must be signed by all parties in the presence of a J.P. It is a legal document, and if the contractor does not fulfil his obligation he is liable to £200 penalty. We have recovered under it. We contend that with all these precautions we are justified in accepting the lowest tender.

3738. You are aware of the present Civil Service Act; I presume you know its weakness;—how would you, as an old Civil Servant, propose to deal with the Civil Service of this Colony? It should be free from political influence—political patronage of every kind should be done away with. I would make every position competitive, even the smallest, and give it to the best man.

3739. Should there be a Civil Service Board? Yes, or what they call in Victoria a Public Service Board. Appointments are made absolutely by the Board, I believe.

3740. Should Boards consist of the heads of the Service or of outside people? I have not given much consideration to the composition of the Board. I should say a mixture of both would be advantageous, but it would not matter what the composition of the Board was if the examinations were competitive. You could not extend that system to messengers of course; they would still have to be appointed by the Minister. I do not think the Victoria Public Service Board goes so low as to interfere with minor appointments of that kind, and we have a great many in our establishment—letter-carriers for instance. I think any position above the grade of letter-carrier or messenger should be competitive in the first instance, and then promotion would depend on the reports as at present. I am bound to say the Minister invariably promotes on my recommendation, and I base my recommendation on the reports I get from the officers.

3741. All these appointments should be dealt with by a Board, do you think? Yes.

3742. *Mr. Robertson.*] I suppose there are classes of work in your department the same as ten years ago? Oh, yes.

3743. What is your opinion with regard to limiting the salary paid to any specific office;—should there be a limit to it? If possible, but it is so very hard to value the particular work done.

3744. Suppose that in the class of work the value of which can always be estimated a man had been employed for twenty-five years, do not you think that by that time he would have reached the maximum attached to the particular work he was doing? Yes; that is why I believe in the increments to a certain extent.

3745. In the particular work that man was doing, after that length of service do you think anybody doing the same class of work ought to get more salary? No; he ought to get less, because he has not had the experience of the older man. He ought to begin at the minimum.

3746. Then I understand you to say that if a man has been on a certain class of work for twenty-five years, and reaches, say, the sum of £235, he will have reached what you would consider the maximum for that particular office? Oh, yes; if he were doing the same work all the time, certainly.

3747. Having that in view, do you think a man who receives £235 in 1885 should be receiving £308 to-day? Not if he is doing precisely the same work. It sometimes happens we put a man of smaller pay to do more responsible work because he is better fitted for it. You cannot altogether cure anomalies.

3748. The work of an operator is the same to-day as it was ten or twenty years ago? Yes; but there are operators and operators. There are what we call sound readers, and those who take the tape. I may say that Mr. O'Connor was exceptionally liberal to the operators. In one year's Estimates he provided £5,000 as increases to their salary. I will not say it was too much, but it was a fact.

3749. This is the case: In 1885 an operator received the sum of £235 per annum after twenty-seven years of service? As operator?

3750. I will not say, but after twenty-seven years of Civil Service he received £235? I should think he ought to be worth more than that after twenty-seven years' service. This man may have been thirteen years a messenger. I am only speaking in general terms; there are several cases over twenty years. I know Mr. O'Connor was very liberal to telegraph operators.

3751. What maximum would you put to the office of operator? I think the present maximum is very liberal. I adopt this plan: When a vacancy occurs at a higher grade, unless it is clearly wanted, I do not recommend that it be filled up.

3752. In your opinion, is that matter the result of the system obtaining in the Civil Service? The result of what system?

3753. Evidently of annual increments? But these people do not get annual increments.

3754. Can you tell us how they get them? I do not know how this £235 man got up to £308. Our first class comprises officers from £380 to £236; our second class comprises officers, whether post and telegraph masters or operators, from £308 down to £254, which means that these people in their turn are entitled

S. H.
Lambton,
Esq.

24 Jan., 1895.

S. H.
Lambton
Esq.
24 Jan., 1895.

entitled to go up to any position. If a man with £281 died, one at £254 would take his place, so if a £308 man died, a £299 man would take his place. The third class ranges from £236 down to about £180 I think.

3755. What is the difference in the work? The difference in the work of operating is not very great but in regard to the post and telegraph masters it is great.

3756. *President.*] A post and telegraph master in the country must be a good telegraph operator himself? Yes; as far as a first-class officer is concerned, you can see that a man in charge of the post and telegraph office at Goulburn would require to be a man of greater ability than the one in charge at Nyngan; he has a larger staff under him and his transactions are heavier.

3757. Take the general body of clerks, what is the nature of their work? Their work in our office is very varied, the time of one class of clerks is occupied in recording and connecting papers.

3758. Looking at the Blue Book for 1893, could you say how many of these clerks were employed in correspondence? They would all be more or less.

3759. What do you think is the salary to award to the office of corresponding clerk? Perhaps I am not much of a judge, but I think a man who is able to do the class of correspondence required in our department ought to be well paid. Some of our correspondence is of a very intricate character, and requires a very able man to deal with it. Matters like the cable guarantee or ocean mail service, &c., are most complicated affairs, and a man who is able to deal with them properly would be well worth £300 a year. A man who is able to analyse a case, take out all the points, and write a letter grammatically deserves to be well paid.

3760. Do you mean to say that if a man can merely draft a letter grammatically he is worth £300 a year? He must be able to do more than that, he must understand the case, and be able to make a *précis* of it. I should think in our B Correspondence Branch there ought to be at least two really good corresponding clerks. Looking at the intricacies of some cases I do not think that two at £300 would be too much.

3761. What would the others get? The others might get anything from £100 to £200. The officer in charge of our inland mail service and the one in charge of the B Corresponding Branch are men who are worth £500 a year to any establishment.

3762. Are you aware of the salaries paid to corresponding clerks in mercantile houses? Would you include insurance offices?

3763. Yes, merchants' offices and insurance offices—fire and life? What is the nature of the correspondence, may I ask?

3764-5. Just general correspondence such as you have described, the writing of neat letters, and attending to matters on which they write? I attach great importance to *précis* writing. In an office like ours it is a necessity. I had a Minister who would not look at an important case unless there was a *précis* of it. Our corresponding clerks do that work; I could get copyists by the score at £2 a week, but not good grammatical writers.

3766. Have you experience outside the Service? Not much experience of the salaries paid for that work.

3767. You are not speaking comparatively, but simply from your connection with the Civil Service? We get a good deal of correspondence from mercantile people, but my experience is that it is not to be compared with the correspondence we have to do with the London Post Office and other postal administrations on all sorts of complicated matters. I do not see the class of correspondence such as we have to do emanating anywhere from private establishments.

3768. But you do not see the important correspondence of mercantile houses; the matters that come under your notice would only have reference to postal matters? But I have had to do with insurance and other offices in my private capacity; I fancy the class of correspondence they send to me is similar to what they send to other people, and I am not much impressed by its intricate nature.

MONDAY, 28 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
THOMAS LITTLEJOHN, Esq., PRESIDENT.

James Dalgarno, Esq., Secretary of the Postal Service, sworn and examined:—

J. Dalgarno, 3769. *President.*] In the estimates of expenditure you are next to the Deputy Postmaster-General? I am.
Esq.

3770. Your duties are closely allied to those of that officer? Yes. I largely assist the Deputy Postmaster-General in carrying out duties which are far more onerous than he can possibly undertake.

28 Jan., 1895.

3771. You are his right-hand man? I endeavour to be so.

3772. In the case of his absence you act for him? In that case I take charge, as I shall do to-morrow, when he goes to Hobart. I shall then conduct his duties for him.

3773. So that you are thoroughly conversant with the whole routine of the department? I am.

3774. The department in the estimates is divided into different heads—first, there is the Ministerial division? Yes.

3775. You have, I see, eight inspectors? There are nine, I think.

3776. Including the chief? Yes.

3777. Their duties take them all over the Colony, I suppose? They have to go throughout the Colony as often as we can send them forth, not only to inquire into the necessity for increased expenditure involved in extension or changes in the Service, but to see that everything is right in connection with the office, including financial matters, the telegraphic arrangements, the cleanliness of the offices generally, also the personal conduct of the officers themselves. Of course when an inspector goes to a town he places himself in contact with the people in the town, and he will learn much more readily than we at a distance can how things are going on. People will often put up with a grievance sooner than report it, but by sending inspectors to the districts we are able to place ourselves in touch with the people and find out in that way what is going on, and to perfect the Service as far as is practicable.

3778. You have a considerable staff of clerks in the Ministerial Division? Yes; forty-seven.

3779.

3779. What is the nature of their duties? If I may be permitted to explain what is the system, that will give you an idea of what the duties are: We, first of all, have a Record Branch, in which all letters addressed to the department are opened by a staff of two or three officers belonging to the Record Branches, and after they are opened all the new matters that have not been shown to the superior officer before are brought to me, after which they are entered in the register, in which particulars of these letters are given. I can only run through these letters very hurriedly. From my long training at this kind of work I can catch the subject quickly. After I have run through these letters, I select out of them any which are remarkably urgent. I take these out of the rest of the letters, and see that they have that prompt attention given them which they deserve in the public interest. The breakdown of a mail, for instance, would require immediate attention. When this is done the work is passed into the Record Branches to be recorded. It would then be distributed among various branches. First of all there is the Inland Mail Branch, consisting of an officer receiving £425 a year. He is the officer in charge, and has four gentlemen under him, receiving respectively £245, £200, £110, and there is an extra clerk at £3 10s. a week. In the case of the irregularity of a mail these gentlemen would have to set to work immediately to put it right, and the officer in charge of that branch must, therefore, be an officer of experience, who could, at a moment's notice, be able to devise a method in the case of the breakdown of a mail by which the service would be continued. He must be in touch with the methods of putting the service right by knowing the kind of people to send telegrams to in the country, or from whom to get offers to run a special mail. He is, therefore, somewhat out of the line of an ordinary clerk. He is one on whom you must place some reliance, and to whom you must look to see that that work is done correctly. In cases of difficulty he would consult higher officers. The other clerk is bound to be fully in touch with the movements of his senior in that room, embracing changes of time-tables and regulations of exchanges of mails. There is enough to occupy both at this superior class of work. The third officer at £200 is also entrusted with the duties of framing and revising the time-tables, which requires some amount of ingenuity, and certainly some great care, in considering the various interests affected by the time-tables. For instance, a time-table may be suggested in any part of the country. If injudiciously carried out it may possibly disturb a great number of what we may call latent interests, such as market days, the days of the publication of the local newspaper, &c., each of which interests will be up in arms against the department for making a time-table without consulting the general interest of the locality.

3780. And the press would object to such a thing although their papers are carried free? Yes. That is one of the weak points of the service. This gentleman at £200 has to act as a sort of editor to the Postal Guide. After the senior officers, myself, and others have settled what alterations shall be made in the Postal Guide, the papers are handed over to the officers of the Inland Mail Branch to see that the directions are properly carried out, and that whatever fresh action is taken is consistent with the past action relating to the numerous phases of business regulated by the Postal Guide. Senior officers like myself would not be able to go over hundreds of pages to see if they were consistent or otherwise with previous action. The work done by this clerk receiving a salary of £200 a year may be said to be more valuable than that which an ordinary clerk would be expected to perform. Then we have a junior clerk receiving £110 a year who looks after the time-bills. Six hundred of these came in this morning. There was a disturbance with the mails in the country, and through that the accumulation of time-bills to-day has been somewhat heavy, but this officer has to go through them to see that the mail engagements have been properly carried out. That is what we call our Inland Mail Branch. The B Correspondence Branch is a branch which is in charge of an officer getting £371 a year. He has to see, generally, to the carrying out of any instructions that may be given in regard to the obtaining of information or granting or refusing requests by the public for mail, telephonic, or telegraphic communication, or any other work that may come under the cognisance of the department. He is expected to see these instructions properly carried out. He has to keep the record books, the statistics of the branch, and so on, and, generally, to make himself useful in that department. The B Correspondence Branch has a head with £326 a year, clerks at £326, £290, two at £200, one at £120. I might mention, with regard to this branch, that I made a report some weeks ago in which I recommended that it be reduced by two officers—by one officer at £326, and another at £200. This, of course, would materially reduce the expenditure of that branch. It has been brought about in this way: When the amalgamation of offices took place some two years ago—when two large departments possessing separate branches very much alike were thrown together—we had to take into our branch, so as to make it one, certain officers of the other branch, viz., the telegraphic branch. In doing that we had to take certain salaries which were rather higher than we would have put them down at if we had originally arranged the salaries of the branch. Then again, one of the officers, Mr. Fry, who is a very expert shorthand-writer, was used very largely by the late and other Ministers, who would take him about the country and use him generally more as a ministerial private secretary than anything else. That, of course, impaired his usefulness to the branch. We now have Mr. Fry's services more at command, and we are therefore able to effect some reduction in the branch.

3781-2. The Postal Department has a very considerable staff as regards number. We understand that a good deal of the work consists in recording, in registering, and answering letters. Of course each department must have a good man at the head. There ought to be a thoroughly competent man to control the different sections, but the inferior men appear to us to be exceedingly well paid at salaries ranging from £100 to £200. The object of this Commission is to endeavour if possible to find out ways and means to economise very considerably in each department of the Public Service. So far as we can at present judge every department is excessively liberal in paying mere clerical work, work, I mean to say, which is not highly intellectual, which just requires ordinary care and a fair education to be discharged efficiently. As you have mentioned that two members of the staff could be dispensed with, perhaps you could tell us something more in the same direction? The Post Office Department has been considerably retrenched in the past. Whenever the Estimates have come on an effort has always been made to cut down expenses and we have cut the expenditure down very finely indeed. The late Royal Commission that inquired into the Civil Service devoted some months to the Post Office itself; they went into the actual work performed. It is almost impossible in a few words to explain the difference between what might appear to be ordinary routine clerical work (which I quite think ought to have its limit in payment), and work of a higher kind. One of the great difficulties of the Public Service seems to be that some men who are not worth very much manage, under the present system, to be able to get high salaries which they would not perhaps attain if they were outside.

- J. Dalgarno, Esq.
28 Jan., 1895.
3783. Through seniority? Yes; and through the general rules of the service.
3784. They get paid beyond their abilities in many cases? In some cases. I have no doubt that they do in some cases in our office as in others.
3785. So that instead of seniority and length of service being considered a pass to promotion you think that it should be more on account of merit? I believe the public interest itself would derive advantage by having merit made the pass to promotion. The public are the main people to be served in this matter. Seniority should only be called in to settle between candidates of equal merit. Where two men are absolutely equal as regards merit seniority should be applied to settle the difference. There has been no standard in the Service as to what might be called a fair rate of payment for an ordinary routine clerk. If that could be settled not as regards one department but as regards the Service generally, something like a system could be introduced, provided that somebody would be at the back of it to see that it was properly carried out, and that it was not left in the hands of a political administration to work it in the way it pleased.
3786. In your opinion would that be accomplished by the creation of an independent Board? I do not believe that any real reform will ever be effected till the whole of the Service has passed out of the hands of all political control; until, in fact, it is governed by such a Board.
3787. An impartial Board? In England they have encountered precisely the same difficulties that we are encountering here, and the remedy they applied, and which has worked so successfully, is the one suggested. They are now, I believe, working under a plan which regulates the service by a Commission with open competitive examination.
3788. Do you think it would be a good thing to establish a classification of salaries, to classify the salaries commencing from a certain amount and increasing them to a higher amount, ranged in classes such as A, B, C, D, and so on. Of course we are quite aware there must be good men at the head of each department. This classification would not affect them, but it would affect the great bulk of the staff in each department, so that those who are merely called upon to discharge ordinary clerical duties, such as simply copying that which is given to them—no doubt good handwriting is essential in that case, but where a great demand is not made upon them for intellect or for a very liberal education—should not be paid such a sum as many of them are receiving at the present time. Many clerks, who are called upon to discharge very plain and ordinary duties, are really paid salaries which men of intelligence and intellect would be glad to receive outside the Service? There is no doubt that the whole service would require to be classified into something like two grades, the first only embracing men of the routine type, of the purely clerical character, whose salaries might be limited to a rate which should be settled by a Commission as a fair thing in comparison with the market rates.
3789. For example, the maximum salary for such a position might be fixed at £200? Quite so.
3790. Beginning, of course, considerably lower? Yes, £50 or £100, or whatever might be decided.
3791. In that case merit would have a chance of rising, because if it were found that a man could do duties of a much higher grade than that in which he was placed he would be promoted to a position commensurate with his abilities? Quite so.
3792. What is the financial division? That division is more within the scope of Mr. Doak. We were obliged to divide the work up when the amalgamation took place. I was placed in charge of the postal division, which embraces the whole arrangements for the Circulation and Correspondence and Appointment Branches. Mr. Doak was placed in the position of carrying out the Money Order and Savings Bank duties combined with the postal accounts and telegraph revenues, &c., and Mr. Walker was left in charge of the Technical Branch relating to telegraphs and electric lighting, so that while assisting generally in the whole administration each of us had more especially under his charge the separate branches which I have mentioned.
3793. The superintendent of the mail division is Mr. Day? Yes.
3794. Are you intimately acquainted with that division? Yes, that comes fairly under my scope; Mr. Day has the general management of the Mail Branch.
3795. I see he has an assistant superintendent, who I suppose performs the duties of the office when Mr. Day happens to be absent? You will bear in mind that we are obliged to work night and day, and therefore we have to have relieving staffs, so that where we appear to have two highly paid officers the one is constantly relieving the other.
3796. Is there any overtime? There is a system of overtime for sorting English newspapers which the Mail Branch officials and letter-carriers generally get. The idea is to get the newspapers out without delay, but we are trying to do away with the system if possible altogether; but it has been found imperative to grant it for very special work where expedition or other advantage is gained in the public interest.
3797. I see there are 261 letter-carriers; their amount of remuneration seems very high for persons who have only to distribute letters? The highest paid will get at the rate of £170 a year. They have to do a considerable amount of physical exercise, so that if you compare the highest class carrier with a skilled mechanic (who would be satisfied with his £3 a week) you would have to consider the loss which the postman suffers by the wear and tear of his boots, &c., in making several deliveries a day. A postman must also possess the personal characteristics of civility and tact in dealing with the public, who are not always the most easy to deal with. They have to use considerable tact in dealing with the public, and they have to possess enough education to be able to write an explanation in decent terms when called upon, which explanation might be sent to a court of law, and perhaps be roughly handled in the Press. While, therefore, a skilled mechanic would not be thought too well paid at £3 a week, probably the letter-carrier, with an extra expenditure entailed by the extra wear and tear in all weather, and possessing these extra qualifications, might not be thought to be overpaid at a few pounds more. Of course that applies to the higher class of letter-carriers. Their wages range from less than £100 a year to £170.
3798. There are twenty-three at £100 a year? We have ninety-five in Sydney, and 365 in the suburbs and country.
3799. The income of the Post Office is about £70,000 or £80,000 below its outgoings? It is more than that. The expenditure of the combined departments is about £125,000 in excess of revenue, not taking into account the interest on the cost of public buildings, and on the cost of construction of telegraphs, &c.
3800. Could you devise any plan by which it could be made to meet its own disbursements? That is the question that we have been considering for I cannot tell you how many years. We have this difficulty to contend with: We are given the elements of what might appear to be a commercial concern to manage, and

J. Dalgarno,
Esq.
28 Jan., 1895.

and we are told, "You must not charge more than this rate of postage—you must carry on this service for nothing, and you must be animated by certain sentiments with regard to incurring postal losses where the development of the land and other features of the country is concerned." For instance, in spending money for a mail service like the Vancouver service, the Government tell us that it is going to confer great international trade benefits. We are told to take account of this and to make our charges accordingly. I would defy any commercial combination in the world, having to contend with such conditions, to bring a profit out of a concern like ours. In England it was a very long time before they made the Postal Service pay a profit. They make a profit now of £3,000,000 a year, but they have a population as against ours of 38 or 40 millions to 1. We have a big machine capable of doing a very much larger amount of work which could not be run at very much less expenditure, and if we had better opportunities and better conditions we might turn out better financial results.

3801. With regard to the non-payment of newspapers, although it might be popular, do you not think it would be equitable to make a charge for carrying them? Certainly. At a half-penny rate newspapers would bring in from £35,000 to £40,000 a year. The free carriage of newspapers has been justified from an educational point of view. All the newspapers of the country are almost indiscriminately carried about without cost, while the permanent literature of the magazine type, the articles which are thoughtfully written, are charged a fairly high rate of postage.

3802. And there is a heavy charge on books? Yes.

3803. The Education Department should pay the Post-office to carry newspapers? I am afraid the Minister for Public Instruction would not see the justice of that.

3804. It might bring home the equity of the case? I think the equity has been very largely admitted by some of the Ministers, but it is a big thing to make a change in the way you suggest. You run right against the whole of the press of the country immediately you put any charge on newspapers. They call it a tax. We call it a payment for services performed.

3805. Did the reduction of the letter rate between this Colony and Europe diminish the Post-office revenue? Very largely.

3806-7. Has that been made up? No. We make a loss now on the federal service of £12,000 a year, and when the change was made we were very nearly covering the expenditure.

3808. That, added to the loss on the carriage of newspapers, would make up between £50,000 and £60,000? Yes. Another question is whether we get as much as we ought out of our telephone system. When you consider the enormous advantages to the mercantile houses (I do not refer to telephones at private houses) that the use of the telephone confers, it would hardly appear that sufficient money is paid for the use of it. By the present system of telephonic communication, the large hotel proprietors and merchants of the city save a deal of money in the cost of city telegrams and also in the cost of messengers. We only charge £12 a year for the use of the telephone. When you come to look at its enormous value to commercial business, it certainly ought to be worth very much more than that to the individual merchants using it.

3809. Is it remunerative to you at £12 a year? It is supposed to be remunerative on the basis of the cost of the plant up to the present time. I am not sure that we have a proper estimate of the plant. That is, however, one of the matters that properly falls within Mr. Walker's administration.

3810. The operators on the telephone are called switch-board attendants, are they not? Yes.

3811. They need not be persons of very pronounced education? No.

3812. They must be smart? Yes; quick at hearing, and civil in speaking.

3813. There are 100 of them at £4,000 a year? Yes.

3814. *Mr. Robertson.* Tell us something more about the Record Branch? It is at present in charge of an officer getting £313 a year. It is the duty of this man to see that all the matter that is recorded is properly summarised and headed, so that anyone reading it can see what the subject is without having to wade through the many pages of a communication. And he is responsible for the distribution among the branches of the papers that are minuted by myself, or Mr. Lambton, or the Postmaster-General, or any other officer. He has also to watch the career of each of these papers, to see that they are not unduly delayed elsewhere, that officers are not delaying any public business through omission to report, and then, finally, he has to receive these papers back after all the necessary action has been taken on them, and finally to keep the records and be answerable for them whenever they are asked for.

3815. What assistance has he got? He has a gentleman at £299 to assist him, who has not only to assist in the same kind of work, but to make entries in the books themselves. He has another officer at £227, he has one at £180, another at £160, one at £150, and one at £140, and one at £100. These matters have to be very carefully and very promptly indexed, as it occasionally happens that, when any interviews take place, either with the Postmaster-General or the Deputy Postmaster-General, instructions come out concerning some subject of which the record clerk has no recollection, but he will be told that a particular set of papers is required, it may be a month or a year or more old, and he has to produce these papers without delay. People may be in the Postmaster-General's room waiting for information, and it is necessary for the record clerk to be a fairly smart officer, methodical and careful, and to have men under him capable of the same methods as himself, in order to be able to carry out the work of his department.

3816. Do you not think that the Correspondence Branch and the Record Branch might be amalgamated? I do not think it would work well at all. I am sure it would not as regards this particular record office.

3817. Would it not work under one chief clerk? The functions of the chief correspondence clerk are so entirely different and distinct from those of the record clerk, who is merely the observer of papers and of the course the papers are taking. He has to keep them in view. The other is a reflective man. He has to deal with the facts themselves, and place them before the public or the department. One is a reflective officer, while the other requires great care and memory.

3818. But the memory is aided by the indices? Yes. They have a very good system. Some people think it is too elaborate, but that is explained by the fact of our constantly having to find papers quickly.

3819. So you do not trust to the memory of the record man? Yes, to some extent. Sometimes we get the vaguest kind of clues to what is wanted. Perhaps the messenger of the Postmaster-General or of the deputy will come out and say that somebody has written a letter from some station in the country that wants to have mail communication. There is no ready means of identifying it with what we have in the records, except by analysing whatever this writer has communicated to the department in the past, and referring to all previous communications on the subject, among which we may come across some clue which will guide us in the matter.

J. Dalgarno,
Esq.

28 Jan., 1895.

3820. Have you given us the full staff of the Record Branch? Yes, connected with this division.
3821. I mean the full staff in connection with the General Post Office? No; this division only comprises all improvements, alterations, and extensions of the existing service. All that affects the existing service, or any proposals for extending it, are attended to in this Record Branch.
3822. Is there a second Record Branch? Yes; it is what we call the C Branch. It is intended to deal with all irregularities that occur in the service. One set of men is dealing with propositions for appointments to and extensions of the existing service; the other lot is dealing with the irregularities in the existing service, so that we may be keeping the one up to the mark while we are doing our best to improve and to extend the other.
3823. What is the cost of that? The Record Branch C embraces the Missing Letter Branch and the Dead Letter Office, which is a very important office, dealing with 250,000 returned letters, not including packets, &c. The officer-in-charge receives a salary of £371. He combines as well as he can the features which you presented just now in reference to combining the offices of record clerk and corresponding clerk. He supervises and is responsible for the records of his division. He has next to him an officer at £371.
3824. That is the same salary, is it not? Yes. He is the officer in charge of the Dead Letter Office. Then there is another officer at £308, who assists in the Dead Letter Department. His duties pertain to the reading of letters for the purpose of ascertaining addresses. In the Dead Letter Office letters are opened by confidential officers who might have to read the whole of the contents; therefore it is necessary to have in connection with that office gentlemen whose probity is apparent, otherwise you might have valuable enclosures appropriated or private affairs of people talked about.
3825. But you expect that, I suppose, throughout all the departments? Yes; but in this particular branch we find it is necessary to make doubly sure by making all officers who perform any work in this office swear a special declaration. Then we have another gentleman at £290, who works under the clerk of the C Branch. Then there are two clerks at £268, one at £263, one at £254, one at £245, one at £227, one at £200, one at £190, one at £160, two at £150, two at £120, and one at £100. Then in the Dead Letter Office there is an extra clerk at £188, and another at £207, and a temporary clerk at £2 a week. Then there is another at £91, and one in the Dead Letter Office at £26. I hand in a return showing the staff of the department, and also of the officers employed in the various branches in the Ministerial Division.
3826. Is there a third Record Branch? Yes. It is called the Stores Branch, where the whole of the material of the Telegraph, Post-office and Money Order, and Savings Bank is kept and distributed, not only to the head office but to all the country branches, so that they may have a proper supply of mailbags, &c., and telegraphic instruments and all forms and material necessary to carry on the service. The stock there would be worth probably between £25,000 and £30,000. There is an officer in the Mail Branch with a salary of £340, who is assisted by another officer who has a salary of about £200. I am not sure of the exact amount. The former is in charge of the division that deals with changes-of address and certain matters relating to the circulation of letters and inquiries regarding letters.
3827. How is it that the clerk in charge of the Record Branch gets £313 and two clerks in the C Branch are getting £271? He may be senior in service. In the case of the gentleman who now holds an office in the Mail Branch, he used to be the officer in charge of B Record Branch, and he is the senior. He has a longer service than the officer at present in charge of the B Records. It was found that the gentleman previously in charge was not efficient, and as a consequence he was shifted from the branch, but he took his salary with him. That is one of the evils of the Service that sometimes you cannot get over. The only way to get over it would be the strong one of having the best man to the front, and by providing that seniority should not always entitle a man to a rise. A man is sometimes allowed to carry his salary with him to another branch who is not found equal to the position he previously occupied, but I think that this is neither fair to the service nor equitable to the public.
3828. I suppose you have a very decided opinion as to advancement by ability? I have a very strong opinion on that subject. I certainly would give routine clerks a salary not exceeding £250, and in cases of promotion the next man should go to the front, seniority only settling it where two men are equal in merit.
3829. Do you think it a wise thing, after the office of Deputy Postmaster-General, to have in the service a division necessitating two secretaries holding equal positions? It is more a question of title than of anything else. The appearance of two secretaries seems to give rise to some anomaly, but really we are practically officers in charge of three different divisions working up to the one head, that is the Deputy Postmaster-General.
3830. What is the third division? The financial division. The manager of that is called the chief accountant and controller of the Government Savings Bank and of Money Orders. There are three separate divisions, and we work just as under a military system, in three companies. I take charge of one company, but I am supposed in addition to that to work as an assistant to Mr. Lambton. Mr. Walker takes charge of the second company, and Mr. Doak of the third.
3831. Do you think these three officers should receive an equal salary? Yes. I may say that while we each have charge of a separate branch we come into communion with regard to our different operations, and if we differ Mr. Lambton adjusts the differences.
3832. Are there any recommendations with regard to the management of post-office matters outside Sydney that you could make to the Commission? No. We have been making very vigorous efforts of late to curtail expenses in every direction. In some cases I am afraid we have gone a little too far. We have made mistakes, perhaps, in some instances.
3833. Could there not be in the country towns a greater amalgamation of post and telegraph masters? We have amalgamated throughout the country with the exception of seven offices. It is part of our policy to do that whenever we can.
3834. Take Goulburn? That is a very large place. Newcastle is another. Where these large places have two separate buildings, and where the work at present is enough to occupy each staff with its head in a fairly full manner, we think that the public money would not be wasted in keeping that amount of supervising strength going. We have not seen the opportunity yet of amalgamating the offices I have named.
3835. Is not the Goulburn building one? Yes, it is a large building. I am not quite sure whether the offices are so conveniently arranged there as to allow of amalgamation or no.
3836. It is one building, is it not? Yes; but unless you have the offices together there might be a difficulty in carrying out the work under one head.

J. Dalgarno,
Esq.

28 Jan., 1895.

3837. Have you got a guarantee fund? Yes; the guarantee fund is a general Public Service fund worked by the Treasury.
3838. Is it effected in the case of all the clerks? Yes.
- 3839-40. And the charge? Is 5s. per cent.
3841. What is the state of that guarantee fund now? So far as the Post Office contributions to it are concerned, it leaves a very large margin over the Post Office defaults upon it; so much so that we have been in communication with the Treasury, pointing out that we do not think we ought to contribute to guarantee the whole of the Service, and that we ought to get some consideration at their hands.
3842. Have they made any change? The Treasury say they will reduce the 5s. to 3s., which rather shows they admit the justice of the complaint.
3843. What is your opinion with regard to the Superannuation Fund? A superannuation fund is absolutely necessary in the Service. To get rid of your decrepit people you must have a superannuation fund, based on something like reasonable lines. We are not in favour of the present Act. The present Act seems to be drawn up on somewhat liberal lines, and the way it has been administered is almost like a breach of faith.
3844. Are you of opinion that there should be competitive examinations before entering the Civil Service? Undoubtedly; unless a proper competitive system operates, for every good man you get in the service you have two others who are not so good.
3845. Do you also think that a medical certificate should be furnished by the candidate? Undoubtedly, and more especially where the superannuation comes in. Unless you have, at all events, a fair chance of having a good life you may probably saddle the fund with disabilities before its time.
3846. Do you not think that the Civil Servants might effect policies upon their own lives outside the Superannuation Fund—let the salaries be such as would enable them to provide for their own old age? There is no doubt that a system of compulsory insurance, which is what you propose, would to a certain extent meet the difficulty, but not altogether, because the public interest itself demands that you should have the means of getting rid, in the interests of the public, of decrepit people, and if you have no direct fund to put them on many would, no doubt, be kept in the Service, simply because they will not go out themselves and no one, under existing circumstances of the Public Service, would put them out.
3847. Do you not think that there ought to be some plan by which a person who becomes quite incapacitated might be removed from the Service? Suppose there is no fund when you order him out. Perhaps he has been serving forty years, and during that time he may have been getting no great remuneration. The prize positions of the service are few, while the majority are getting but moderate incomes. If you do not pay a man enough to provide for himself, and after thirty or forty years' service you turn him out after squeezing as much as you can out of him, you create an amount of public sympathy which will react on your department, and you will find that a very unpleasant state of feeling will arise, painful in itself, and which will to a certain extent impair and stop the operation of squeezing the sponge too soon by the people who have to administer it.
3848. I do not refer to men who have grown up in the Service, but more to those who are entering the service, because of course they enter knowing what is before them, just as they enter into a life assurance office or into a merchant's office? Yes, I admit that there has been strong argument on both sides of the question—that is, on the question of an agreement or contract. Where a man makes a contract without any stipulation, or with a stipulation that when he is worn out he is simply to be cast off, then that is in the bond, and to that extent of course there would be no injustice in carrying the contract out; but public sentiment has not always endorsed that. Pension systems have been sometimes abolished, but they have been generally reintroduced, showing that they are necessary.
3849. *Mr. Humphery.*] I notice that in the financial division there is an increase;—can you explain that? That would have been through the expansion of the Service—the annual growth. Mr. Doak would be able to explain the particular details of this increase.
3850. Take the Account and Cash Branch—you have a decrease of eleven officers? That was owing to a certain number of officers being transferred from the Account and Cash Branch to what we call the Check Branch in the Telegraph Branch under Mr. Walker.
3851. Can you point out in the Estimates where that increase in the Check Branch is shown? There are thirty-three clerks in the Electric Telegraph Division, and against that there are forty-one clerks, which would make about the number. You will see it on page 143. They passed these check clerks into the Electric Telegraph Division, as it was considered that Mr. Walker should be able to exercise the best control over the staff. Mr. Doak will know about that.
3852. What is the nature of the work done by the clerks? They take the telegrams as they come in which have the revenue stamps on them, and they have to see that all the stamps are properly there, and that they represent the number of words that the telegram shows should be charged, and so on.
3853. What check is there upon the country telegraph offices? They send those messages in which have to be checked at the head office.
3854. *Mr. Robertson.*] The check is in the head office? Yes.
3855. How is that compared with the books in the country office or the records? They send in statements, which are checked.
3856. *Mr. Humphery.*] What check do you keep between offices other than the head office? That is going into details which I would rather leave to Mr. Doak.
3857. In the mail division you have an increase of nineteen clerks, principally in the Parcel Post Branch? Yes.
3858. When was that branch inaugurated? About twelve months ago. It has added an enormous amount of work to the Mail Branch. From January to December, 1894, the revenue was £12,344 for the postage of 212,964 parcels posted at the head office. An enormous department has thus been suddenly opened by us without any great increase of staff.
3859. Is the branch self-supporting? Yes.
3860. How does it happen that there is a provision of £1,500 for the Parcels Post Branch for the half-year of 1895 in excess of 1894? The Parcels Post Division was not included specifically in the Estimates for the previous year. This has been placed on the Estimates for this year as a separate branch. We are formulating it in this way; so it appears in 1895 in a definite form for the first time on the Estimates. In the year 1893 the branch had only been in operation for three months.

- J. Dalgarno, Esq.
28 Jan., 1895.
3861. I see you have added nineteen to your staff for 1895 for the Parcel Post Division;—were these officers transferred from other branches or were new appointments made? All except three new appointments were transferred from other positions in the service.
3862. In the Electric Telegraph Division I see you have an addition of eighteen officers for 1895 over those employed for 1894? Mr. Walker could better explain that. I believe it was owing to the transfer of check clerks.
3863. Have you the whole of the returns from your country post and telegraph offices showing the total annual cost and the revenue for 1894? No, it is not yet ready. Probably it will not be ready for another few weeks. I have already given instructions that in view of what is going on, and in order to expedite other matters, this 1894 return should be got out with the least possible delay.
3864. Will you furnish a return showing the total revenue from all the post and telegraph offices and the cost of maintenance irrespective of the cost of conveyance of mails? Yes, that is really what we prepare annually. (*Return subsequently handed in.*)
3865. Are your office arrangements convenient for the clerical staff? If I had the arrangement I would like to alter the shape of the General Post Office, but we cannot help the shape we have. I think, under the circumstances, we have now as good an arrangement of offices as we could get in regard to the economy of supervision, which is one of the essentials of administration in a large department like the General Post Office.
3866. Can you make any suggestion by which the efficiency of the supervision might be increased? I do not think I can. It has been a subject which Mr. Lambton and his immediate assistants have considered. We have given some time to thinking out what is the best system for working purposes, and I do not know that our efforts have been altogether unfruitful of results, judging by public comments upon the matter.
3867. Upon whose recommendation are appointments made in the Postal and Telegraph services? The original appointments are generally made on the nomination of the Minister. We have so far succeeded by our classification arrangements as really to place a check on the Minister's power of putting anyone in the office at a big remuneration. The consequence is that all the appointments the Minister has are the initiatory ones—clerks I mean, at £50 or £100 a year; and it is here that a beneficial reform can take place by absolutely removing the appointments to an independent Board, or to some Board that will consolidate the whole service and introduce a competitive system with, I think, a probationary system in connection with it. A youth may pass an examination and yet not be found up to the mark when he is placed in a department. If a probationary period were attached to the competitive system it would enable the head of a department to know whether an officer was worth keeping, and if not, it would enable him to send him away and to put the next youth on in his place, treating him as a probationer in the same manner.
3868. Are the junior appointments usually made upon the recommendation of the head of the department? As a rule they are, but the vacant appointments would be filled up by the nomination of the Minister.
3869. What salaries do these juniors usually get? Generally £50; sometimes less on first appointment.
3870. And by what stages are they advanced? They go along until they have been twelve months in the Service or so on, and then, if they have passed the Junior Examination, they are allowed the first opportunity of getting on the staff at £100 a year. A good many of them do not succeed so early as they would like in passing the Junior Examination and they have to wait, so that a certificated man may step in and get passed over their heads in that way.
3871. *Mr. Robertson.*] What is the greatest length of time you have had a temporary clerk in your employ? I suppose we must have had a temporary clerk at least nineteen or twenty years.
3872. *President.*] There is one here who was appointed in 1877, eighteen years ago, and another in 1879? What are their names?
3873. Joshua Clarke is one; the other is a storekeeper named Joseph Law Stokes? Stokes has been a rather useful man.
3874. He has a salary of £245? Yes, and he is, perhaps, worth that at his present duties.
3875. *Mr. Humphery.*] How does it happen that you have been able to dispense with twenty-one letter-carriers this year—it is on page 144 of the Estimates? I expect that has been owing to the fact of the appointments voted not having been actually filled up; probably we have had a few more appointments than were filled up, and in the efforts to retrench it is thus shown in the Estimates. It does not follow that because we have so many letter-carriers voted that that number has been always filled up.
3876. *President.*] The diminution consists in those employed at £100 a year; there were forty-four in 1894, and twenty-three in 1895; all the others are exactly the same, so that it was those who were paid least who were removed or discarded? I have no doubt there has been some alteration in connection with the retrenchment. Mr. Lambton had this matter particularly under his direction when the Estimates were brought up.
3877. *Mr. Humphery.*] In your opinion, is the present system of appointments to the Post Office unsatisfactory? Yes; that is to say, if appointments were made more on the competitive system and less under the influence of politics a better result would accrue to the public.
3878. Would higher qualifications and greater efficiency be ensured if the clerical appointments were entirely free from political patronage? I am satisfied that they would if appointments were based upon the competitive system.

TUESDAY, 29 JANUARY, 1895.

Present:—

Hon. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Professor Thomas Peter Anderson Stuart, M.D., Medical Adviser to the Government, President of the Board of Health, and Health Officer for Port Jackson, sworn and examined:—

3879. *President.*] The Department of the Board of Health has been undergoing reorganisation recently? Professor T. P.
Anderson
Stuart, M.D.
29 Jan., 1895.
Yes; but ever since I took office, wherever I have seen a chance of making an economy, I have done so.
3880. We have here the estimates of expenditure for 1895 as passed? I do not really know the minute details of the department's work, because I am not a Civil Servant in the ordinary course at all. I do not give all my time to the Board; I only go when wanted, and deal with specific matters.
3881. Are the estimates of that department prepared under your cognizance? Yes; the secretary consults me, then prepares the estimates, and submits them to me. I go through them, and talk the matter over with him again, and vary them or not, as may seem desirable.
3882. The Board consists of eleven members, you being the President? Yes; and one of the members. I have been gazetted as a member of the Board, and was a member of the Board before I was President, so my being President does not supersede my membership.
3883. How often do you meet? Practically every week. Occasionally there is not sufficient work, in my opinion, for the Board, and I do not have a Board meeting. On the other hand, there are emergency meetings—for instance, when small-pox breaks out. So if you take the emergency meetings in place of those which fall out, there is practically one meeting a week.
3884. It is a very large Board;—is it your opinion that the number of members on the Board is in excess of what is necessary for efficiency? Well, it is much a matter of opinion, because every man brings some special knowledge to the question. The original Act said six members, and it might be taken that that should be the number, but every man beyond that number brings some qualification or other.
3885. The most necessary, of course, are the members of the medical profession? Well, yes; I think I might say that, but I would like the Commission to understand that members of the community, such as mercantile men are of extreme value on the Board. I should be sorry to see a Board of Health composed solely of medical men.
3886. Without individualising, do you think, if the Board were limited to six, composed of an equal number of professional gentlemen and of representatives of the general community, it would be able to efficiently fulfil the duties? Yes; if you could select the men.
3887. I should fancy that the greater number you have upon the Board the greater chance there is of having some individual who might not contribute very much to the furtherance of the business? Of course, but that just cuts the other way too.
3888. You think, then, that if three professional men of the right sort and three men right members of the general community, were to be obtained, the duties would not suffer at all; they would be carried on satisfactorily? This matter has been engaging my thoughts for some time past, and I have come to the conclusion that about seven or eight would form an efficient Board. The Act mentions six, but that was the minimum number, because the Act says not less than six. I think six, including the President, is rather small.
3889. Are they nominated by the Government? Every one of them.
3890. To come now to the staff the secretary gets a salary of £425? —
3891. *Mr. Humphery.*] I think it is nearer £600? In fairness it should be mentioned that £100 is an allowance for house-rent, the secretary having been compelled to relinquish his own house at Ashfield and to come to town to live. The reason for that is perfectly plain. I know it, because I see what work he does. He works every Sunday, and is often at the Board office until long after Government hours. He comes punctually in the morning. He is sometimes in the office till 4, 5, and 6 in the afternoon even on Saturdays, and, indeed, is practically always on duty. His residence is connected with the Board office by telephone, and he is called up frequently, sometimes right into the night. I consider therefore that the £100, which he gets by way of house allowance, is fully earned.
3892. *President.*] He would otherwise live in his own house at his own cost? Yes; and he would be free from all the bother, because if he lived at Ashfield he would not be worried.
3893. After him comes the chief clerk at £275; but perhaps you may not be thoroughly cognizant of the duties of the chief clerk? I may say this generally about the staff: I am out and in at all times; in fact, daily. I pay, as it were, surprise visits to the office, and they are always at work.
3894. Besides the chief clerk there are three clerks—one at £223, one at £200, and one at £100;—I suppose their work principally consists of registering correspondence and writing letters? Yes; our office pays all the medical fees throughout the whole Colony, and there is an extraordinary amount of correspondence to be done in that way. Every doctor who gives evidence at an inquest is entitled to a fee; it might be only a guinea, but that involves the writing of letters and filling in of vouchers.
3895. The cheques for these fees are all signed in the office, after having been passed as satisfactory? Yes; I think I might add that the chief Treasury inspector has been spending a good many days in the office, and has come to the conclusion that our staff is not sufficient for the work. He is recommending certain changes in the mode of keeping the books, and in order that these may be carried into effect he has recommended that an extra clerk should be employed, and we are asking for this additional assistance.
3896. Are the books kept by double entry? I do not know that.
3897. Are the duties of the chief veterinary inspector very onerous, requiring his attendance in very distant parts of the Colony at times? Yes; he is sent all over the Colony.
3898. He has two veterinary inspectors? They are chiefly employed in the dairy inspection, and they are not nearly able to cope with the work. I could employ two more easily, but we do the best we can with the staff we have. Instead of going round the dairies every year we select certain districts, but our staff is not adequate to make a complete investigation.
3899. I suppose the southern railway leads to a number of the dairies? It leads to very big districts. The Berrima district for instance takes one man nearly three months to inspect. 3900.

- Professor T. P. Anderson Stuart, M.D.
29 Jan., 1895.
3900. The next heading is Quarantine staff;—the superintendent and overseer of stores gets £290 a year; does he control the whole station? Yes; of course I go down, and so does the secretary every now and then, to see that things are right.
3901. He has an assistant storekeeper; I presume the stores require to be pretty fully supplied? Yes, and they are very well kept; everything is in very good order there.
3902. They have of course quarters and rations also? Yes; there are certain rations when the station is in quarantine. The officers must live there, and they must be rationed to a certain extent, when quarantined.
- 3902½. There is a staff of fourteen quarantine officers and boatmen stationed at Sydney, Watson's Bay, North Head, and Newcastle? They are distributed a good deal.
3903. They are also rationed, and provided with quarters? I do not think the Watson's Bay people are provided with rations, but they have quarters.
3904. Nor perhaps Newcastle? They get their wages and quarters.
3905. It is a lump sum in the Estimates, so we cannot say whether it is equally distributed or not? I can supply the information if you like. I have laid up the Quarantine launch within the last few days; the coxswain had to go, and I did not fill his place. I am going to see whether I can do without a constant steamer; if so it will be a saving.
3906. The fourteen men must on many occasions have great difficulty in filling up their time? No; because it is a very extensive place. When you take away a man for Newcastle, three men from Watson's Bay, and two from Sydney, that leaves eight, which is not so many men for the Quarantine Station. They are constantly occupied in painting, doing small repairs, and keeping the grounds in order. I believe they are fairly busy. It has often been said that the Quarantine staff was too large, but I do not know that it could be reduced much.
3907. How much saving will be effected by laying up the launch? As intended, at least £140 a year.
3908. If the same course could be followed in one or two other directions it would be a matter of some moment? But I have been doing that. At the Coast Hospital we have reduced the staff, and we have also made large savings at the Abattoirs.
3909. In the Estimates, as reorganised under the Board of Health, there are at the Abattoirs a superintendent, an inspector, and an assistant inspector;—I suppose they have their appointments given them under the new system? They are the old officers.
3910. But under a different régime? Quite so; we have not changed the men at all.
3911. Do you consider the office of superintendent necessary at the Glebe Island Abattoirs? The Board has recommended within the last few days that this office should be abolished.
3912. Does the Board consider the retention of the inspector as necessary? You must have an officer of that sort.
3913. And also an assistant inspector? Yes; the office of manager is abolished.
3914. Ten men, under the 1894 arrangement, have been dispensed with, and three have been appointed to do their duties? I do not know what the numbers are.
3915. And one of these three—the superintendent—you can afford to part with, so that would leave two performing the duties I have mentioned? I do not know what the numbers are, but the same report recommending the abolition of the superintendent's office recommended the dismissal of two labourers and the submission of two others to medical examination as to whether they were fit for their work. The medical report was that one was fit and the other was not.
3916. The saving effected by that change is considerable? Yes.
3917. Did you estimate it? I do not know what the separate item for that is, but I reckon we have saved £1,500 a year since we have taken over the Abattoirs, and if we add to that the superintendent's salary the saving will be greater. We discovered that they had been getting coal—a great many tons a year—at the ordinary schedule rate; they never took a contract. When we found that out we called for tenders, and the result is a saving of £500 a year in that one item.
3918. What was the number of days per year the temporary inspectors were paid for; were Sundays struck off? The only detail of that kind I can tell you without the papers before me is this: We have looked into that matter and have made considerable reduction, for the amount of overtime paid for labour was, as we thought, absurd, and that has been entirely cut off. An absolute order has been given that there shall be no overtime. Various rates per week have been reduced to other rates, and, in fact, retrenchment has been carried on wherever we thought it possible.
3919. There is an item: "Wages to men temporarily employed, £2,266"? That arises from a misuse of words. A great many officers have been called temporary, although they have been in the service for many years, but in the new arrangement we are not going to miscall people. If they are permanent we are not going to call them temporary. There are temporary officers who have been in the Service twenty years. We found that in spite of all the money which had been invested by the Government in the Abattoirs, and in spite of the fees they were getting, there was an actual money loss of about £3,000 on that establishment alone. Municipal slaughter-houses can be carried on at a handsome profit, but the Government Abattoirs were actually carried on at a loss.
3920. The changes which have been effected will perhaps turn the scale? There are two modes of dealing with the matter, by cutting down the expenditure and by increasing income. We thought it not right to impose new fees on the people using the Abattoirs until we had done our duty in reducing expenditure. That is what we are doing now, and if after that we cannot produce a satisfactory balance-sheet we shall require to increase the fees.
3921. *Mr. Storey.*] Can you give us any idea of the amount of savings that have been effected in the last few years under the Board of Health? I could not.
3922. I gather from what you say that you have been, and are now, studying economy in every shape and form, and wherever you have a chance you take advantage of it? I have only been in office about two years, but my attention during the whole of that time has been concentrated upon economy, because of the events of the day, and particularly so because the Government of Sir George Dibbs sent me a letter asking me to recommend retrenchment. I went into the whole matter, and sent my report in to the Government, though my recommendations have not all been carried out. Sir George Dibbs asked me not only to review the medical services in my own department but also in the Charities Department under Mr. Maxted.

3923. Do the Lunacy Department and the Charitable Department come under your control in any way? No. At that time I was asked to review the Charitable Department, but not the Lunacy.
3924. Were any reductions made in the Charitable Institutions at your suggestion? They were all approved by the Colonial Secretary, but that is the last I heard of them.
3925. Did you not find it difficult to get rid of the officers you have spoken of? The manager had not an executive appointment, and the labourers had only ordinary appointments, so we could tell them to go. The Act transferred to the Board of Health all the powers residing in the Governor, and we could, if we chose, of our own motion, abolish the superintendent's office, but we have not done that. We recognised that after all we are under the Treasury, and, therefore, instead of on our own motion telling him to go we have recommended that it be carried out in the ordinary Government way.
3926. Officers would have their rights under the Civil Service Act? No doubt, if they have been paying the contribution.
3927. You spoke of the large amount of fees that had to be paid away, what are the fees for? Medical evidence and medical work throughout the whole Colony. Supposing a dead body is found the Coroner wants to hold an inquest, a medical man has to view the body, make a *post mortem*, attend and give evidence. He receives a fee for this work. Fees have to be taxed in our office to see there is no over-charge, and frequently they are called in question. Or suppose an inquest has to be held 30 miles away, the doctor has to receive a special fee for travelling that distance. There is correspondence as to what he did or how long he was away. After receipt of all these particulars I adjudicate and fix the additional fee. Or suppose again a man were taken up by the police for lunacy a doctor must give evidence. For medical services generally the money is disbursed by the Board of Health, and they are nearly all small matters, such as a fee of a guinea, two guineas, three guineas, and so on. The amount of work in connection with these matters is very considerable indeed.
3928. The salaries of these medical officers, medical advisers to the Government, has there been any reduction in these of late years; are they in your opinion sufficiently low? There has been a tremendous reduction in mine.
3929. The Government vaccinator at Sydney? He works for his money.
3930. The Government medical officer at Parramatta? I think he works for his money now, but he did not for years, after the medical charge of the asylums was taken from him. There was a continual struggle on the part of the Medical Adviser to get him more work, and the office made frequent recommendations, which were in one way or another not carried into effect, but eventually more work was attached to his office, instead of employing outside practitioners to do it.
3931. Why should he get more than the man in Sydney;—he gets £650, and the officer in Sydney only £628? It is more historical than rational; but I cannot say too much about that, because all this took place before my assumption of office. Of the two men, the Government officer at Sydney has the more important work, and does the most of it, but if you are going to make a comparison it might be argued that you should level up the Government officer in Sydney to the Parramatta salary.
3932. *Mr. Humphery.*] In connection with the Coast Hospital, I observe the provision for 1895 is £3,565, in addition to the cost of maintenance of patients,—some £5,500 more. What changes do you contemplate, and what economy do you hope to effect? Changes have been going on mainly since the accession to office of the present Medical Superintendent. These consist in the reduction of the number of male officers employed. I think it is not unlikely that, although a considerable reduction has been effected, a further reduction may still be effected.
3933. Does the reduction already effected apply to the Estimates for 1895? I do not think so—not the main portion of it—because he only took office at the end of the year.
3934. Can you say what economy will be effected by the reductions you have in contemplation? I could not say that.
3935. Can you say approximately? I can say definitely there will be economy, but how much I could not say.
3936. Do you intend making any change in the salary of the Medical Superintendent? No; the only change I could suggest would be to raise it. He gives the whole of his time to the work.
3937. Provision is made for twenty-four nurses, and last year there were twenty? I think we shall require to have more still. The present nurses are complaining bitterly about the amount of work they have to do. The result is, we cannot get nurses to go there.
3938. Will there be any reduction in the staff? Yes, chiefly on the side of the male attendants; we will have fewer male attendants, but more female attendants.
3939. How many patients had you in 1894? I cannot remember.
3940. What was the average cost for 1893? About £55.
3941. And for 1894? About the same; this year we will perhaps get it down to £53; at all events we will reduce it somewhat. The ambulance charges are very high; the hospital is 10 miles from Sydney and we have to cart everybody and everything to and from it. These charges are included in the £55, so it is really a very cheap hospital.
3942. Can you make any suggestion by which the cost of maintenance can be reduced? I cannot.
3943. In what way do you obtain your stores? By contract with Kidman; he is the chief contractor.
3944. Is the contract controlled by the Stores Department? I could not tell you, but I do not think so.
3945. *Mr. Robertson.*] Is it, in your opinion, necessary to have the branch of Medical Adviser to the Government in one department of the service and the Board of Health in another? It is not necessary, but to amalgamate them under one department would not make one farthing's difference in the cost.
3946. Would you not recommend that, notwithstanding it would make no difference as far as the cost is concerned, these two divisions should be in one department? No, I would not. At first when I began it was a little bit confusing, but now that I know how things are done it saves a good deal of circumlocution to be able to deal directly with each department. At first I thought it was nonsense, but when you come to see the working of the system you find it is all right.
3947. Would it not work equally well if it were in one department? No; because so many things must go to the Colonial Secretary and so many things to the Colonial Treasurer. If you were in one department only your work would be constantly filtering through Under Secretaries.
3948. We want to avoid circumlocution? And that is what we do avoid by having it as it is.
3949. It certainly does seem an anomaly; you are actually Medical Adviser to the Government in one

- Professor T. P. Anderson Stuart, M.D.
29 Jan., 1895.
- Department, and President of the Board of Health, and Health and Immigration Officer under another department? Yes; I frankly confess it took me some time to understand, but it works out all right in practice.
3950. *President.*] I suppose there must be forty buildings on the block of land at quarantine station;—are they all tenanted, or in occupation? Of course there are no persons in them, but they are occupied by beds and bedding. Everything is kept ready for small-pox.
3951. *Mr. Storey.*] There have been times when the buildings have been quite full? They have been quite full.
3952. *President.*] The proposal to have an initiatory quarantine station for the whole of the Colonies at Thursday Island on the one side, and Albany or King George's Sound on the other;—is that feasible, and likely to make progress? It is feasible, and it is likely to make progress, but it would not diminish our expenditure here. It is a common error that if you had a quarantine station on the two sides of Australia you would not require a local station. The local quarantine station would still be required.
3953. The tendency would be to diminish the cases in the nearer places? Certainly; but the necessity for having our own quarantine station would still exist. To have these distant quarantine stations would tend to protect us as to frequency of invasion.
3954. It would not altogether do away with the existence of small-pox in our own place, or in vessels approaching Sydney, which have no occasion to touch at these other places; for instance, sailing vessels with cases of small-pox on board would not touch at Torres Straits or King George's Sound, but would come straight to Melbourne or Sydney? Of course part of the idea was to direct sailing vessels that had disease on board not to come to Sydney, but to repair to King George's Sound, but that is not always possible, and the captain could always plead ignorance.
3955. Then the saving would be immaterial? There would be increased safety, but increased expenditure.

Hon. Charles Kinnaird Mackellar, M.B., Ch.M., M.L.C., sworn and examined :—

- Hon. C. K. Mackellar, M.L.C.
29 Jan., 1895.
3956. *President.*] You were first President of the Board of Health? Yes; and I am still a member.
3957. You were at one time a member of the Government? I was Representative for the Government in the Upper House for a considerable period and for a short time Minister for Mines.
3958. Including the President there are eleven members on the Board of Health? Yes.
3959. Do you think such a number is requisite to carry out the duties? No.
3960. Supposing you were to have (say) six members besides the President, what selection would you make of the six or seven? I may state in the first place that I think seven members, including the President, would be sufficient.
3961. You would have a certain number of professional gentlemen? Of a necessity there would be some representation of sanitary science in the shape of medical men.
3962. And some members representing the community generally? Yes; representing the community generally, and also the interests with which the Board of Health is called upon to deal.
3963. But seven could efficiently perform the duties? I think so.
3964. So that would be a saving of a certain amount in the fees that are at present paid;—does the Board require to meet every week? The Board meets only when called upon by the President, but it usually happens that it meets once a week. Occasionally a meeting may be omitted, but in the event of any emergency arising, such for instance as the introduction of infectious diseases seaward, or the occurrence of virulent disease on shore, the Board of Health would be called together.
3965. Then, does the President keep himself *au courant* with the duties that have to be discharged by the department, or does it rest with the secretary principally to keep everything well up to the mark? It rests both with the secretary and President. The secretary is an officer who is always at his post, and he has the ordinary routine of the Board under his supervision, but he would not feel himself called upon to undertake any responsibility. The President would decide upon what questions the opinion of the Board was required.
3966. Then the President, of course, keeps himself very closely in touch with the secretary? He must.
3967. And the secretary appeals to him on all occasions? On all occasions when necessary.
3968. A good deal of responsibility rests upon the President? The whole responsibility rests upon the President. Practically, it is only routine work that the secretary would be responsible for.
3969. And the Board, when they meet as a Board, discuss the matters that are laid before them? Yes.
3970. So they are what you might call an advisory Board, the President taking the initiative, and the control generally? Subject to the revision of the Board. In cases of emergency he might take the initiative, but the President would not deal with any great question without taking the opinion of the Board.
3971. As a rule, could you say from memory what the attendance at the Board is—whether there is what is called a full Board? Usually there is a good attendance. The Mayor of the City is a member of the Board *ex officio*, but his attendance has been rather rare. His civic duties, I suppose, will not admit of his attending regularly.
3972. The secretary, of course, has very constant duties to perform;—are they very responsible and very onerous? They are both responsible and onerous.
3973. He was required to live in town, instead of being allowed to live in his own house somewhere on the line, and an allowance was given to him for the residence he had to take up in town? It is necessary he should live in town. Emergencies have frequently arisen in the past, especially during the time when small-pox was prevalent. Small-pox occurred several times in the city between the years 1883 and 1886, and it was necessary during that time, and always will be necessary, to deal with such cases immediately in order that those suffering from the disease shall be immediately isolated. That is always done under the immediate directions of the secretary.
3974. So he must always be at hand? He must always be within hail.
3975. Has the secretary any professional or medical knowledge? None; all the knowledge he has of this subject, which is now considerable, has been acquired since he took office with the Board, or rather with the department. Prior to my holding office as Health Officer and Medical Adviser to the Government, Dr. Alleyne held the position, and the man who at present occupies the position as secretary to the Board was a clerk with Dr. Alleyne.

Hon. C. K.
Mackellar,
M.L.C.

29 Jan., 1895.

3976. So he has acquired a very considerable practical knowledge and skill in the fulfilment of his duties, in consequence of his long experience? I should say a considerable amount of practical knowledge.

3977. Can you tell us whether, comparing the duties that are required from secretaries in ordinary business walks, it is necessary to pay him the amount of salary he receives? I am not aware of the amount of salary he does receive.

3978. £575, including the allowance of £100 for residence? Well I would say the salary was by no means too great, considering the amount of responsibility, and the amount of knowledge, which might be called technical knowledge, involved in the secretary's position—that is, comparing it with salaries which are given to men occupying somewhat similar positions in various mercantile institutions.

3979. At the Glebe Island Abattoirs the old arrangement for 1894 has been discontinued, and instead of about ten officers being employed they have been dispensed with, and three appointed under the reorganised system: these three are called superintendent, inspector, and assistant inspector;—now, if there were ten that fulfilled certain duties and could be dispensed with in that particular direction, could you suggest any other department where some of the offices might be abolished—under the Board of Health? Not under the Board of Health. The Abattoirs are now being administered by the Board of Health, and from my knowledge of that department in former days, and my knowledge of it now, I feel convinced that it will be more economically and more efficiently managed than it has ever been.

3980. Even with a smaller number of officers? Yes.

3981. Taking the administrative staff of the Board of Health, there is a chief clerk at £275, and three other clerks below him at £223, £200, and £100, and a probationer;—is such a clerical staff necessary, as far as you are aware? I can only say that I think it is, my knowledge of the duties of the office not being sufficiently great to enable me to give a definite opinion, but when I consider the number of departments, and the number of Acts that are being administered by that office, and the difficulty of administering those Acts, I should say the staff was not too great. For instance, I may cite the Quarantine Laws: The regulation of the Quarantine establishment at North Head, which during times of emergency is a most difficult institution to manage, I can assure you; the management of the Coast Hospital, which has about 220 beds, if my memory serves me rightly, being about as large as the Prince Alfred Hospital as regards numbers; the Leper Lazarette, the administration of the Dairies Supervision Act, the Diseased Animals and Meat Act, the Cattle Slaughtering, and the administration of the Abattoirs. These are very serious matters to tackle with a small staff. It must not be forgotten that these Acts have been passed recently, and the difficulty of bringing them into operation has been considerable.

3982. *Mr. Storey.*] Involving a lot of clerical work? Yes, a great deal of clerical work; because beginning with the Dairies' Supervision Act, a number of what may be said to be vested interests were interfered with, and it was with considerable difficulty, and by the use of a great deal of tact and forbearance at times, that this Act was brought into force efficiently. To a certain extent the same may be said of these recent Acts—the Diseased Meat Act and the Noxious Trades Act. Of course persons who had been conducting these businesses conducted them just in a manner that pleased themselves, to their own advantage and not to the advantage of the general public, and when stringent rules and regulations were brought in to bring them into line, they naturally resented it. A good deal of correspondence has been entailed in that way, and will always be entailed by it.

3983. *President.*] There is a division of the administration of some of these Acts that you have just mentioned;—does not that complicate the work of the Board of Health, or of the officers rather, in having the different Ministers administering the different Acts? I think it does.

3984. Would it not ease the labour to some extent and simplify matters considerably if they were all brought under the administration of one department of Government? Perhaps it might, but I do not think that would materially affect the case at all.

3985. The scare, if we may so call it, which has recently arisen about milk, and its proper sanitary management, has that given much more work to the Board of Health now than formerly? Not to my knowledge.

3986. Inspecting of the dairies is done now as it has been done hitherto, I suppose? Just exactly in the same manner. What you call this scare is perhaps something which is easily accounted for. There is not much in it. These dairies have been efficiently inspected, and on the whole as efficiently managed as we had reason to expect they would be.

3987. Can you tell us how many temporary inspectors are ordinarily employed at the Abattoirs? I could not say.

3988. There is a line here, in the cost of the temporary inspectors at 10s. a day; that was in 1894, but that of course has been reorganised? Reorganisation has always been directly carried out, or rather the recommendations for reorganisation have come from the sub-committee.

3989. A sub-committee of the Board? Yes.

3990. *Mr. Storey.*] Under the heading, Medical Adviser to the Government, the Estimates provide for an expenditure of £31,833; under the Board of Health the Estimates provide for the expenditure of £25,144;—now, have the Board the direct control of the whole expenditure of this money, or who has the responsibility of this expenditure? The items of expenditure are not brought before the Board; the employment of officers would be a matter for the consideration of the Board, but the rendering of accounts to the Government, vouchers for expenditure, and other documents would not be the duty of the Board.

3991. Do I understand the Board have no control over the estimates, or the appointments, or the salaries, or the expenses? Some of the appointments are upon the recommendation of the Board.

3992. Who prepares the estimates;—do they ever come before the Board? No.

3993. The Board is not responsible? No.

3994. Who is really responsible for this large expenditure;—does it rest with the President and the secretary? The President and the secretary, I should say. Under the heading Medical Adviser to the Government, you have the surgeons to the gaols, the dispensers for the gaols and the Government asylums. They come under Medical Adviser to the Government, but the Board of Health has no relation whatever to them.

3995. No relation as far as the £31,000 is concerned? Yes; that is all directly under the care of the Medical Adviser to the Government and he is responsible.

3996. Has the Board of Health as a Board any control over this expenditure of £25,000? As a Board no.

3997. Then is the Board simply an advisory Board to the President? To the Government. The secretary of the Board is the channel through which the advice of the Board would reach the Government unless it were given privately by the President, but the official channel would be the Secretary.

3998.

Hon. C. K. Mackellar, M.L.C.
29 Jan., 1895.

3998. I understand the Board does not deal with matters where retrenchment is necessary, or where economy can be exercised or salaries reduced or appointments made? Yes, that is a thing which might reasonably come within the cognizance of the Board—such salaries as have been apportioned to the various members of the staff, who have been appointed by the Board, or I should say have been suggested by the Board.

3999. Have there been any attempts at reductions of late years under the Board of Health? I do not see how any reduction could be made. For instance, the President of the Board of Health receives £489 per annum. When I was President of the Board I received £1,030 per annum, and the Government offered, if I would retain the office, to increase it to £1,500 per annum, but I declined.

4000. Who is responsible for this big expenditure under the Medical Adviser to the Government? The Medical Adviser to the Government is Professor Anderson Stuart; he is also President of the Board of Health. The duties which are performed under the Medical Adviser to the Government and the subjects which come under his consideration are so apt to come also more or less under the consideration of the Board of Health, I think it would be almost impossible to carry on the work efficiently unless both offices were held by the same man.

4001. Professor Stuart gave us the reasons why the two departments are under separate Ministerial control; he says himself that he thought it was a curious arrangement at first, but when he came to inquire into the working of it he found it far better to leave it so? While I was occupying the position of President of the Board of Health I thought it would be better to have the two departments under one Ministerial head, but after consideration I did not think it was a matter of so much importance as to justify me in pushing it further. As you are aware the quarantine law has always been administered by the Treasurer because of its interfering to so large an extent with the mercantile interest, whereas the Medical Adviser's Department has always been administered by the Colonial Secretary. The Medical Adviser deals with hospitals and medical matters generally throughout the Colony, and outbreaks of diseases in remote districts which could scarcely be dealt with except through the police, and as the Police Department is under the Colonial Secretary, the Medical Adviser's Department must of necessity be under the Colonial Secretary.

4002. *Mr. Humphery.*] Can you say how the salaries and duties of the medical officers under the immediate control of the Board of Health compare with those of the medical officers connected with the Charitable Institutions? The Charitable Institutions are under the Medical Adviser to the Government.

4003. Not under the Board of Health? No; the salaries are on a par, as far as my memory serves me, with those of the medical officers of the Charitable Institutions.

4004. And the duties? The duties are very much on a par. You will understand that in this connection you cannot compare the duties or the salaries of a medical officer under the Government in such positions as those now under discussion with those of the medical officers in public hospitals. The positions are not analogous at all. In regard to the comparison of the salaries of the various medical officers employed, I should say that the technical knowledge which is necessary in the Chief Inspector of the Board of Health is such as to entitle him to a larger salary than the other gentlemen receive. Public health matters have assumed a more scientific character altogether of late years, so much so that most of the Universities now grant a special diploma in public health which is given after an examination upon public health matters. And the gentleman who occupies that position here ought to have that diploma, and in fact does hold it. Dr. Ashburton Thompson has a diploma from the University of Cambridge, I believe, as a public health expert. That is something over and above his medical qualification entirely. He must, in the first place, be a qualified medical practitioner, and, after being that, he must submit himself to another examination for the acquisition of this public health diploma.

4005. Are you of opinion that the Public Health Department should embrace branches of the Public Service at present not under its control? I think it should be administered by a Minister for Health as has been advocated in England and elsewhere. All subjects relating to the general health of the community, such as those which have recently been added to the duties of the Board of Health, should be under this Minister. The notification of infectious diseases should also be placed under him; this will be a very important department when the Act for the Notification of Disease is passed, which I trust will be at an early date. My opinion is that the registration of disease would clearly be better administered in conjunction with the registration of deaths, if not, indeed, of births, and other statistics of that character, by this Minister of Public Health. Of course this would need some consideration, because, as you can easily see, the duties that we propose to perform by this office might, to a certain extent, overlap those of two other offices, that of the Registrar-General and the Government Statistician, but the difficulties which that would present are not, I think, insuperable. Besides, I do not think that should form any reason for preventing the change, because it is clear that the public health officers are those more immediately concerned not alone with the births, but with the sickness and the deaths in the community. There are several other departments that could be administered from the same office with advantage; I could not give you the names at the moment, but in the past I have thought them over.

4006. Would your suggestion lead to the lessening of the numbers of officers in other branches, and a reduction in the cost of administration? I should say, probably, it would.

4007. You cannot specify in what direction? I cannot say positively it would be a less expensive, but I am perfectly certain it would be a more efficient, method of dealing with these questions.

4008. *President.*] Do you not think that the system of registering and recording communications, letters, and despatches, of all kinds is overdone in the Government departments generally; we find that there is a slavish adherence to the system of notifying the receipt of all letters, even the most trivial; so much has that been the case, that I believe one of the members of the late Commission followed a document which was of an ordinary nature through all its wanderings in the department until it had passed through twenty-one hands before it was finally put into a pigeon-hole? That would seem to be an unnecessary circumlocution, but I would not be prepared to say it was advisable not to carry that out. On the face of it it seems to be an unnecessary waste of power.

4009. Of course you saw how documents were dealt with in the Mines Department—generally, do you think a good deal of the correspondence could be dealt with summarily, without having to go through so many hands as at present? I have no doubt of that.

4010. There might be a great deal excised, leaving the more important letters to be recorded and dealt with? I have no doubt of it; but anything of that sort would need to be done with very great judgment, because

because some very important matters might slip by, and papers which ought to be recorded might be done away with; they might be wilfully or carelessly lost.

4011. Or by mistaken judgment? Yes.

4012. However, if the papers were to pass through the hands of one of the heads of a department or sub-department for his decision, there might be a great deal of labour saved by throwing aside really unimportant and trivial papers? Probably, I should say.

Hon. C. K.
Mackellar,
M.L.C.

29 Jan., 1895.

WEDNESDAY, 30 JANUARY, 1895.

Present:—

Hon. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

A. J. Doak, Esq., J.P., Chief Accountant and Comptroller, Money Order Office and Government Savings Bank, sworn and examined:—

4013. *President.*] You have a very important branch under your care. Referring to the estimate of expenditure, I see the principal officer under you is called the chief clerk? Yes, Mr. Docker.

4014. And his salary is £560;—could you tell us generally what his duties are? He is at the present time in charge of what we call the check-room, Money Order and Savings Bank. He has the supervision of that room. He takes my place at any time when I am away, and acts for me. The exact nature of the duties would be very hard to explain, unless you saw the forms. I have a copy of the Postmaster's account, which I should be very glad to explain.

4015. Do so in as short a manner as you can? Every money order postmaster is obliged to send in a statement daily of the money order transactions, and also of the Savings Bank transactions. All the Savings Bank accounts are kept in the chief office. The postmaster simply records from day to day the transactions, and forwards them to the chief office.

4016. You have a ledger account of each deposit? Yes.

4017. In your office? Yes; I may say that there are three separate branches in connection with my department—the Savings Bank, the Money Order Office, and the Postal Note Department, each of which is entirely separate from the others. They are distinct systems in connection with the offices over which I have charge. Mr. Docker is in charge of the room to check the whole of the transactions in connection with the postmasters' accounts.

4018. Have you a separate staff of clerks in each of these three sections? Yes.

4019. They do not interfere with each other? No.

4020. Each sticks to his own last? The duties are pretty well classed out, as it were.

4021. And you receive daily returns from every post-office in New South Wales of the money order transactions? That is from each money order post-office.

4022. And these are separately dealt with by the staff set apart to take care of them? Yes; the first duties after the letters are opened in the morning are to check the accounts, to see if the proper charges have been made for commission on money orders issued, and to compare the vouchers with the entries on the credit side. A similar course is pursued with reference to the Savings Bank accounts.

4023. We will suppose that the returns from Goulburn come to you in the morning with the names of the depositors and the amounts;—what is done with these returns? After they have been checked in Mr. Docker's room, as to the credits, &c. (both the credits and debits are entered on the same statement), they are sent in to the ledger-keeper's room, where they are summarised and then posted directly into the books.

4024. Each depositor has a distinct account? Exactly.

4025. Then you said there was a third section devoted to postal orders? Yes.

4026. Does that refer to those printed orders that are in use now? Yes.

4027. They are payable anywhere? Yes; according to the wishes of the purchaser.

4028. But if they are issued generally they can be made payable anywhere? Yes, at all money order offices.

4029. The country postmasters have supplies of these from you? Yes; through the distributor of stamps.

4030. Do you mean Mr. Johnson? No; I mean the distributor of postage stamps in our own office.

4031. You debit the offices which receive the supplies with the amounts, and see that they are properly accounted for? Yes, and we credit the paying office with the amount when they are paid.

4032. You debit the issuing office and credit the paying office? That is so.

4033. How do you know that the notes are properly dealt with;—in what way do they check the supplies that you send, and the use that is made of them? I do not quite grasp the question.

4034. The head office of the New South Wales Savings Bank sends to the country branch 100 notes; how do you know that they are properly made use of;—in what way do you check them? The postmaster has to account for every penny he receives. He receives these just in the same manner as he receives cash.

4035. Supposing you send him 100 five-shilling postal notes, 80 of which are used, and you send an inspector to inquire—the postmaster would have to show what was in stock? Yes; and show an equivalent in value for the notes disposed of.

4036. How often do you send inspectors? They are not under my control. I suppose they visit periodically. If I suspected something radically wrong I would suggest to the proper quarter that one should be sent.

4037. The title of examiner means an examiner into documents that come to your department? Yes, that title is used in the English system. When the Savings Bank was first introduced we used the same titles that they have in England.

4038. The examiner will check the statements and vouchers from country postmasters? Yes. I would like to explain our system of accounts as it stands now, and what it was prior to the amalgamation. Prior to the amalgamation there were three separate account branches—the Telegraph Account Branch, the Post

A. J. Doak,
Esq., J.P.

30 Jan., 1895.

A. J. Doak,
Esq., J.P.
30 Jan., 1895.

- Post Office Account Branch, and the Money Order Account Branch. At the time of Mr. Cracknell's decease I was asked to amalgamate the accounts, being the senior officer, and I undertook it. In going through the accounts I found that postmasters requiring postage-stamps, for instance, would send their requisition and their remittance to the cashier of the Post Office, and the postmaster would be debited with the amount of the stamps, and also be credited if there was a remittance, which nearly always occurred, in the ledger account in the Post Office. I saw that this was a work of supererogation, simply a debit and credit to no purpose, so I suggested that the whole of these ledger accounts in connection with postmasters in the Post Office department should be abolished. Almost precisely similar action was taken in connection with the telegraph accounts. The telegraph masters would report weekly to the Telegraph Office their receipts, and they would also forward remittances in adjustment of their receipts.
4039. Of the precise amount? Supposed to be. There were ledger accounts in the Telegraph Office in connection with all these. There were 600 or 700 of them. I suggested the abolition of these accounts, and that postmasters requiring stamps should simply send their requisitions to the distributor, and that their money order account should be charged with the value of the stamps; so that at present there is only occasion for one remittance on the general account, which covers the Money Order, Savings Bank, Postal Note, Post Office, and Telegraph Office business. All these transactions pass through the money-order cash-book. In this manner I did away with the whole of the ledger accounts connected with postmasters, postage-stamp, and telegraph message accounts.
4040. So that instead of having ledger accounts with each of these postmasters you do a cash transaction? Scarcely so. The items are debited or credited, as the case may be, to their money-order account; instead of having three ledger accounts there is one only.
4041. You keep the postmasters' ledger account? His money-order account is charged with all his collections, including stamps and telegraph collections. A great saving was effected by the improvement which I introduced. Instead of three accounts there is now only one, and one cashier and one distributor of stamps.
4042. How many clerks in each of these three sections that you mention are required to do the work of checking and attending to the remittances and advices in connection with the Money Order, Post Office, and Savings Bank? I would have to turn to the Estimates to get the exact number. In the Money Order Office we have at the present time seventy-nine officers.
4043. There are three less than we have estimates for? Yes. According to the Civil Service Act the probationers are supposed to be promoted. They get £50, and then £75, and then, I think, £100, which is the minimum salary for a permanent appointment. The case you are referring to was simply that of a transfer. We provided for the transfer of three men from the temporary class to the permanent class at £100 a year, the minimum rate. The positions have not been filled so far; but it is just possible that we shall require this extra help before the end of the year to provide for the increase that goes on in the postal note business, which is increasing very fast.
4044. You keep the three sections of clerks distinct; their duties are distinct? As nearly as possible; but the work is so interwoven that the money-order ledger-keepers keep the postmasters' ledgers, in which all the credits and all the debits occur. I have a copy of the ledger accounts here. It would be very difficult to explain the system unless you saw it. The postmasters are debited for postage-stamps, money-orders, Savings Bank deposits, and postal notes, and the money they receive in connection with it from the chief office. That work is combined. We may call these ledgers agents' ledgers. Postmasters are simply agents.
4045. Is your system of checking these accounts efficient; does it prevent fraud to a great extent? I think it is as efficient as it is possible to make it.
4046. Do instances of fraud frequently occur in your experience? Not in the chief office. It is impossible to prevent fraud in the country; but we have been particularly fortunate in connection with frauds. We have only had one large one.
4047. What was the amount of fraud for 1894 in the country? About £300; but it was nearly all covered by the fidelity bonds.
4048. Have all given security? Yes.
4049. So that the Post Office lost nothing? Very little. I think £100 would cover the whole loss.
4050. Considering the nature of the work of the ledger keepers and the clerks, do you consider that they are over or underpaid? I think in some cases they are underpaid. In the Money Order Office and Savings Bank the clerks are worse paid than in any other branch, comparing the duties.
4051. For instance, take the ledger-keepers? There are two classes.
4052. They are not divided here? No, they are not.
4053. In the column for 1894, those who are specially named ledger-keepers do not appear in the column for 1895. I am speaking of the Estimates. The ledger-keepers seem to be thrown altogether among the clerks, of whom the number put down is fifty-six. The two highest on the list receive £335, and so on? I can give you the duties of these two. One is in the Checking Branch, under Mr. Docker, and the other is in the Money Order Branch. The first has almost similar duties to Mr. Docker. Mr. Docker takes charge of the room, and Mr. Lumsden, the officer in question, comes next.
4054. What about the other? He is the head of the ledger-keeper's room, of the Money Order Office. He is the senior officer upstairs.
4055. What are the duties of the others? The bulk of the work is nothing but checking. They have to check all the accounts received from these 616 Money Order Offices, and 450 Savings' Banks.
4056. There is a constant stream of these coming in every day? They are supposed to come in every day from each office.
4057. Have these clerks any spare time? No, the work is continuous. The southern mail comes in at noon and has to be picked up after the morning work is done.
4058. Is any overtime charged? No, except in connection with the Savings' Bank at the beginning of each year. Interest on the Savings' Bank accounts is then calculated. That is the only claim we have made for overtime in the branch.
4059. What rate is charged? The two seniors have been getting 3s., and clerks who have had five years' service 2s. 6d., and others are paid 2s. per hour.
4060. Is tea money charged in addition? No.
4061. What is the total amount of overtime for 1894? I think it is about £450, distributed between forty clerks. They make about £10 on an average each for six weeks' work.

4062. In calculating interest do you take the monthly credits? No. The interest is added to the accounts when our annual summing up is made. If, for instance, I make a deposit in the Bank to-day of (say) £20, an entry in the ledger would credit me with £20. They would multiply interest on £20 for eleven months. The interest would not be added to the principal, but it stands as a record in the interest column. If that account is not operated on the interest is added at the end of the year.
4063. You don't enter the interest in decimal figures? No. We simply take the monthly rate of interest—eleven months interest upon £20.
4064. How do you manage with your clerks? Whenever I see one with special qualifications I place him where I think he is best fitted to display his abilities to the best advantage. Of course I am obliged to take whatever clerks are given to me and to make the best of them.
4065. What is the system of nomination to a position in your office? Do you mean if there is a vacancy? 4066. First of all, on entering, who exercises the patronage? The Minister.
4067. Do you ever make requisitions for additional men? Yes, if I find I am short. I made a requisition for those three of whom you were speaking just now. I thought it was necessary to meet the requirements in the postal note system for the coming year. It is a new system.
4068. Is it increasing fast? Very rapidly.
4069. Do you think it will supersede post office orders to a great extent? Yes, to a very great extent, but not altogether.
4070. Are you ever asked to receive into your department by the Minister any clerks for whom you have no occupation? No; I have never been asked that.
4071. You have never had any clerks sent to you to be employed anyhow? No. I have been asked if there was a vacancy, but I have never been asked to take clerks. I would not take any unless there was a vacancy.
4072. Is your department limited to the Money Order, Postal Notes, and the Savings Bank Branches? I am supposed to be the chief accountant. I have the supervision over the whole of the duties of the Post Office accounts. I have an accountant, Mr. Gregory, who has entire charge of the expenditure accounts. All the revenues pass through the money-order books. The expenditure in connection with the Post Office is very great now. Mr. Gregory has supervision of all vouchers of expenditure.
4073. He is called the accountant? Yes.
4074. Does he work under your control, or is he in a manner independent? He is under my control. I might explain that when the departments were amalgamated it was the Deputy Postmaster-General's idea that I should certify all the vouchers in connection with the Post Office and telegraph services, but I found it was rather too much, and that I had to certify to lots of accounts that I knew nothing at all about—contingent accounts, travelling expenses, some in connection with telegraph service, and some in connection with postal service,—so I asked Mr. Lambton to relieve me of those duties, which he did. He now signs those vouchers in connection with the Post Office, and Mr. Walker signs those in connection with the Telegraph Department, so that I am relieved of that duty.
4075. Would Mr. Gregory be more versed in the details of these disbursements than you are? Yes.
4076. You have to take his word? Yes; he initials everything. There are thousands of vouchers.
4077. You took them on the responsibility of Mr. Gregory saying that they were correct? I did for a period on Mr. Gregory's initials, but I asked Mr. Lambton to relieve me. I thought it was an anomaly signing vouchers that I knew nothing at all about.
4078. Are the country post officers paid by cheque? In numbers of cases they are, but in most cases it passes through my books. I credit all the postmasters through the money-order books with their salaries, and they pay the officers under them. That has been done to reduce the labour of writing cheques. Formerly we had to send cheques to all of them.
4079. How many postmasters have you? There are 616 money order postmasters. There are perhaps ten or a dozen officers in some of these offices. In Bathurst there would be eight or twelve to pay, including letter-carriers and so forth.
4080. So that if you had to send cheques to each of these you would have to draw several thousands? Yes.
4081. You have dispensed with all that? To a very great extent we have.
4082. Are the officers paid by cheque? No; principally in cash by the cashier.
4083. That also saves the writing of cheques? Yes; there are half a dozen exceptional cases in which cheques are drawn.
4084. Incidentally, you may have seen in the newspapers a proposal to pay the officers of the Government weekly. Do you think that would be expedient? No; I do not. It would be a very laborious work.
4085. There is a good deal of time necessarily taken up in the payment of salaries, is there not? Yes; that is done by the cashier, and the greater part of his staff. The cashier, I may say, is underpaid. He is a very zealous officer, working from early in the morning to get through his remittances from the country. He gets through these pretty well before 9 o'clock. His name is Mr. Coote.
4086. Would you consider it very inexpedient to increase the performance of that task to four times the present amount? Yes.
4087. Would it be a great waste of time, in your opinion? Yes.
4088. Could Mr. Gregory give us any particular details with reference to the management of this subsection? Yes; he has been in charge of that for years. Before the amalgamation took place he was the accountant to the telegraph service.
4089. Taking your staff all round, numbering seventy-nine, you do not consider you have any superfluous hands? No.
4090. You could not dispense with any? No; they are fully occupied. The Money Order Office, the Savings Bank, and the Postal Note Branch are always growing.
4091. You do not think that the nature of the duties would justify the employment of men at less salaries? No; I think it is the other way. The Savings Bank is such a large institution that I think the salaries are scarcely equal to the responsibilities.
4092. To a mercantile eye the salaries seem exceedingly liberal. We do not look at the remuneration of the officers in the service from the ideal basis or platform that officers in the department do. They draw comparisons between each other, and the heads of the different departments say, "My department is not overpaid compared with another department," but the platform that has been ideally fixed by the service is considerably higher than the platform outside? That is just possible, but the late Civil Service Commission—

A. J. Doak,
Esq., J.P.
30 Jan., 1895.

A. J. Doak,
Esq., J.P.
30 Jan., 1895.

Commission—Mr. Dibbs, and several of the Commissioners, visited the office frequently, and had me under examination all the time—came to the conclusion that we were not overpaid. I do not think there is any commercial institution that will fairly compare with the Money Order and Savings Bank. I do not know of any institution that you could name.

4093. In importance? In similarity of work. A banking institution would be more like it. I compared the Government Savings Bank with the Savings Bank in Barrack-street, and I found that the latter does not do half the work, while it costs nearly as much as our Savings Bank, Money Order Office, and Postal Note service put together.

4094. Do you think that trustworthiness of the officers in the Post Office is required to a greater extent than in one of the banking institutions of the Colony? Certainly not. I say that the only comparison that can be made with the Government Savings Bank is with a Bank. We resemble a banking institution more than anything else.

4095. Yes, of course, that is so? The Barrack-street Bank issued a return in 1892 which showed that the charges—including, I suppose, printing and advertising and postage stamps—amounted to £16,103.

4096. *Mr. Humphery.*] That is too general for comparison? They have no rent to pay. I do not know what they include in the sum I have named. Our salaries come to £12,600. That leaves a margin of £4,000 compared with ours. I am including the Money Order, the Savings Bank, and the Postal Note salaries in ours. The number of transactions in the Barrack-street institution is 147,000 odd, while in the Government Savings Bank it is 278,000 odd. The number of accounts that remain open at the end of the year is 66,000 in the Barrack-street institution, and 114,000 in the Government Savings Bank.

4097. *Mr. Storey.*] The department of which you are the head takes pretty well all your time? Yes.

4098. Do you know personally that the whole of the clerks under your charge are fully employed or do you take it from the reports of the accountant? I know it pretty well of my own knowledge, but I am dependent a great deal on the reports of others; still I have a supervision.

4099. Within the last two years retrenchment has been the order of the day, especially in Banks;—has there been any retrenchment in your department? Only the 10 per cent.

4100. Were not all the heads of departments told by Sir George Dibbs to exercise retrenchment—did you not receive a circular to that effect? Yes; but I do not think it was to reduce salaries. That does not rest with the permanent head of the office.

4101. You made no recommendations of any kind? None whatever. I did not feel justified.

4102. Are the clerks in your department worth the money they are receiving? With one or two exceptions I think they are underpaid.

4103. What standard have you for comparison—have you had any experience outside the Government service? Scarcely experience—hearsay.

4104. In stating that the officers in your department are mostly underpaid, what is your standard? I think a Savings Bank ledger-keeper in my department is worth £200 a year.

4105. What is a teller worth? I should think the senior teller would be worth from £250 to £300, but I would not pay all tellers alike. The receiving teller has very much simpler duties than the paying teller.

4106. How many years' service should they have had before reaching £300? Fifteen to twenty years.

4107. Have any reductions been made in the Estimates during the last three years? I think not. It is easy to see. I think the amalgamation happened within the three years. If so there would be some alterations. Under that amalgamation three or four officers were done away with. Mr. Lambton's suggestion was that the three seniors in the Post Office, Mr. Dalgarno, Mr. Walker, and myself, should receive £100 a year increase.

4108. Do I understand you to say that the salary of the ledger-keeper should be £200? Yes, of Savings Bank ledger-keepers.

4109. But £304 and £232 are the salaries paid to the ledger-keepers in your department? They are money order ledger-keepers.

4110. Is that work more onerous? Yes.

4111. In what way? A money order ledger-keeper keeps agents' accounts. He keeps a section of the accounts of these 616 agents scattered throughout the country. These accounts include all money order, savings bank, postal notes, and postage stamps transactions, and all the credits and debits for remittances.

4112. Does not he enter these credits and debits in the ledger from papers put before him? Yes.

4113. It is purely clerical work? It is more than clerical work. There is clerical work and clerical work.

4114. How does it differ from ordinary clerical work? He has to exercise a great deal of judgment in regard to the state of each account. He has to see that the postmaster does not retain more money than he should. He has to see that the postmaster is properly supplied with cash to carry on the business.

4115. *Mr. Robertson.*] Would not the postmaster see to that himself? No; that would be too late in the day.

4116. When a country postmaster makes his application for money does it go to the ledger-keeper? Yes.

4117. Is he responsible whether he shall execute that order? Yes.

4118. He is something more than a ledger-keeper? Yes; he keeps the agents' accounts.

4119. Then the ledger-keeper has the responsibility of executing these orders, and of seeing whether the agents' accounts are correct? Yes.

4120. The ledger-keeper is surely not the name for such an officer? I do not know that you can find a better name. He has the ledger. There are three or four of these ledger-keepers.

4121. And these other twenty-six clerks, with salaries ranging from £335 downwards;—do they have special duties? Yes.

4122. Does the Checking Branch simply take the documents and vouchers and check them? These are the forms that are checked. [*Witness shows forms.*]

4123. At what salary do the juveniles commence? At £50.

4124. At the end of six months you give them £75? Not always.

4125. I thought you always did that under the Civil Service Act? Some are taken on as temporary clerks. The Minister might appoint a clerk who was not qualified as a probationer under the Act, in which case he would go on as a temporary clerk.

4126. Then you cannot suggest any reductions in your staff; at all events except the one officer referred to? No; and I do not suggest that.

A. J. Doak.
Esq., J.P.

30 Jan., 1895.

4127. Have there been many increases in the number of the clerks last year? Very few.
4128. You said that you thought a fair salary for the discharge of the duties in connection with a certain office was £250? Yes.
4129. And you subsequently said that there might possibly be a maximum of £300? Yes.
4130. Can you tell the Commission what reason there is for a person holding that office and discharging those duties receiving £371 salary? Yes; he is responsible for the whole of the cash in that branch. From the 1st January to the 24th January this year the transactions at the head office were as follows:—For commission on money orders, £129; amount of money orders issued, £8,090; for savings bank deposits, £43,897; remittances received, £85,419; received for sale of postal notes, £741. The amount of money orders paid was £36,503; savings bank withdrawals, £59,702; postal notes paid, £5,527; cash remitted to comptroller, £39,087. All these amounts passed through that senior teller's cash-book.
4131. But why does he receive £371? He receives that by virtue of long service. He formerly held the position of postmaster at Oxford-street.
4132. When he was transferred to the head office did he carry his salary with him? Yes; it was an exchange.
4133. Is not the position of postmaster at Oxford-street more responsible than the position of teller in the head office? No.
4134. Are not the duties far more varied in the Oxford-street office? They may be more varied, but they are certainly not as responsible.
4135. Do you think that man is fairly paid at £371? I think he is well paid.
4136. Do you think he is overpaid? I think he has more than the position is worth.
4137. Are the books in your branch kept by double entry? The principal ledger accounts are.
4138. What books have you in use? They are very numerous.
4139. I just want the class of books? I think you would have to separate the departments to get at them.
4140. The class of books would be the same in every department—journals, cash-books, and ledgers? There is only one journal in connection with the principal ledger.
4141. Then you do keep the accounts by double entry? Yes.
4142. Was this system introduced after the Report of the last Civil Service Commission? No.
4143. Did it exist before? Yes, almost from the beginning.
4144. Did you carry out the recommendations of the last Commission? I scarcely know what they were. They made no recommendations in regard to the Money Order Office and Savings' Bank.
4145. Did you keep a copy of the Report? Yes, I have it here—*i.e.*, the Money Order and Savings' Bank report.
4146. Can you say whether the recommendations made by the last Commission were given effect to? No, they were not. No alteration was made in either the Post Office or Telegraph Office system of accounts until the offices were amalgamated under my suggestions—that is, after Mr. Cracknell's death. They are not consolidated now as suggested by the Commission.
4147. You have charge of the financial division, and the accountant has charge of the Cash Branch? Yes. The Accountant has charge of all expenditure; the cashier has charge of the cash.
4148. Have you charge of any other division; is there any other immediately under your control? No.
4149. What is the difference between a financial division and an Account and Cash Branch? I am not responsible for the subdivisions or headings of the Estimates. That is a matter which rests with the Deputy Postmaster-General's Department. I did not give the title to the office.
4150. Is it necessary to have two divisions separately recorded? I have nothing to do with that. It was a subdivision of the financial division.
4151. Is it under you? Yes.
4152. You said because of the anomaly created by your certifying to expenditure about which you knew nothing you had asked Mr. Lambton to relieve you of work, which he did? That is correct.
4153. Why should you pass matters in connection with the Account and Cash Branch on to Mr. Lambton? Because it is required by the Audit Act that the head of the department should sign vouchers.
4154. Are not you the responsible head of this department? Not according to the Audit Act.
4155. Does Mr. Lambton sign all the documents in connection with the financial division—all the vouchers and receipts? Yes; everything in connection with the Estimates or expenditure, but not revenue; I sign all revenue vouchers.
4156. Then what is the nature of the accounts that you said you could not sign because you knew nothing about them, and you passed them on to Mr. Lambton? Travelling expenses, contingent expenses in connection with the contingent vote which you will find on the Estimates.
4157. But you said you did sign these for a time? Yes.
4158. Was not that contrary to the Act? I was speaking of sub-vouchers. I was wrong in saying that the Audit Act required the head of the department to sign sub-vouchers. There was some trouble in the matter and the Auditor-General allowed some of the sub-vouchers to pass. He did not require Mr. Lambton to sign them. The head of the department is required by the Audit Act to sign all acquittance vouchers.
4159. Where is the check-room? It is in the Money Order Office.
4160. How many clerks are employed in the check-room? There is the chief clerk at £560, and other clerks receiving salaries of £335, £277, £268, £259, £236, and £232. That is the number checking.
4161. What is the nature of the work checked? The money order agents' daily returns, also the Savings Bank returns, and the postal notes.
4162. Is there any check upon these people before they send their statements down to the head office? None whatever.
4163. Do you not send inspectors to examine the Money Order offices? Inspectors are under the chief inspector. It is only in special cases that I personally request that an inspector should be sent. Inspectors inspect the offices periodically.
4164. All the offices? I believe so.
4165. Do you not know it? I could not say positively.
4166. Is there an outside check upon these money order agents' work? Not in the daily returns. They could not possibly check the officer without the vouchers and the vouchers come to the head office.

- A. J. Doak, Esq., J.P.
30 Jan., 1895.
4167. What is the nature of the inspection by the inspectors, if they cannot check the work done? Before leaving the head office the inspector gets the last certified balance of the office he has to inspect; he then proceeds on his inspection, and sees that the balance on hand corresponds with the books.
4168. Did you find any discrepancies in 1894—any embezzlements, or any deficiencies? Yes; several.
4169. What did they amount to? Most of them were covered by the fidelity bond.
4170. Could the inspection be done more economically if it is a case of checking statements; it does not require very great ability; an honest sort of clerk could check these vouchers and trace any discrepancy under an able chief clerk? I think not. Nearly six millions sterling per annum passed through those checks.
4171. *Mr. Humphery.*] When was the postal note system introduced? At the end of 1893.
4172. What was the additional cost per annum to the department? I think the initial cost was only for clerical work.
4173. Did the introduction of the postal note system lead to an increase in the staff? Yes; to three.
4174. What did their united salaries amount to? The item placed upon the Estimates is £500. The appointments were distributed amongst some of the clerks. We did not make a fresh appointment. One of the juniors was given in charge of a portion of the work. Provision was made for two clerks at £100 a year and one at £150 a year extra.
4175. What was the number of money orders issued in 1893? 530,546; and in 1894 there were 430,588.
4176. Has the annual cost been in any way lessened? No.
4177. Although the business done in 1894 was apparently only four-fifths of that done the preceding year? No; the cost has not been lessened. The work was distributed among 616 offices.
4178. What was the work done at the head office in 1894? I have not the returns with me.
4179. How many of these money orders were issued at the head office? About 3,000 a month.
4180. That would be, approximately, between £35,000 and £40,000 a year? Yes.
4181. That is the issue in Sydney? Yes; at the chief office.
4182. Were there more or fewer issued in 1894 than in 1893? I fancy there were fewer in 1894 than in 1893, on account of the postal notes. The postal notes have assumed very large proportions.
4183. How do you deal with the cross-country money orders? The vouchers are forwarded from the paying office down to the chief office, and, after they have been compared with the credit side of the postmaster's returns, they are forwarded to the paid order room. The vouchers are then compared with the debit side of the issuing office, to see that the debits correspond with the vouchers themselves.
4184. Do you keep at the head office a copy of the country records? We keep the original record. I wish to explain that each postmaster forwards a daily return of his transactions, and that that is what I mean by the original record.
4185. Is that the only voucher you receive from country postmasters? We receive the original application from every intercolonial and foreign order.
4186. Is every money order, after payment, sent to the head office? Yes.
4187. What is then done with it? It is first of all compared with the credit side of the account rendered by the paying office. It is afterwards forwarded to the paid order room, and then compared with the debit side of the issuing account.
4188. Is that the work done by the checking branch of your establishment? Only the credit side is checked.
4189. *Mr. Storey.*] Not the debit? No; those orders would be issued at the different offices throughout the Colony, and the accounts would therefore be too numerous to be kept in the check-room.
4190. *Mr. Humphery.*] How many officers in your department are engaged in examining and checking country orders with the daily returns? Ten. They are not all engaged in this work alone—checking postmasters' accounts and orders.
4191. Is this their principal work? Yes; there are three only engaged in checking paid orders.
4192. Would special qualifications be necessary for that duty? It requires very great carefulness.
4193. What, in your opinion, would be the value of services in connection with the checking of vouchers, such as the Money Order, Savings Bank, and Postal Note returns? I think £250 would be about an average.
4194. Have you considered if it would be possible to reduce the work of checking in any way, so as to lessen the cost of that branch of your department? I think it has been reduced to a minimum. I do not think you could do away with any of the checks.
4195. You think all the checks are necessary? Yes; that branch of the department has very recently been reorganised. The whole system in connection with the ledger work and the checking work has been reorganised within the last eighteen months.
4196. With the exception of the ten clerks employed in checking the country business, would the remainder of the officers of your department be fully engaged in connection with the Money Order and Postal Notes and Savings Bank business of the head office? With the exception of two, who are in charge of the correspondence and of deceased accounts.
4197. That would be of course in connection with it? Yes.
4198. *President.*] Could you supply us with a statement of the members of your staff and their respective duties? I have it with me. [*Return handed in.*]
- 4198½. Is the revenue derived from the postal notes as remunerative as from the post office orders? No.

THURSDAY, 31 JANUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,

J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Philip Billingsley Walker, Esq., Secretary of the Telegraph Service, sworn and examined:—

- P. B. Walker, Esq.
31 Jan., 1895.
4199. *President.*] There was a change recently in your position through the death of Mr. Cracknell, and the abolition of the office that he filled? Yes; I was Assistant Superintendent under Mr. Cracknell, and on his death the two departments were amalgamated. I was then made Secretary of the Telegraph Service, with duties of Chief Electrical Engineer, under the Deputy Postmaster-General. 4200.

P. B. Walker,
Esq.
31 Jan., 1895.

4200. The one next to yourself on the staff is called the station manager;—what is the nature of his duties? He has sole charge of the Operating Branch, and the general management of the business of the lines and stations.
4201. Does the fulfilment of his duties require him to travel much in the country? He does not travel at all, he has nothing at all to do with the lines, his duties are entirely confined to the traffic.
4202. He has three assistants—one at £446 and two at £326? Yes.
4203. Is the full time of the assistants necessary in the discharge of their duties? The manager has to have one assistant on duty with him. Two assistants come on in the afternoon, and two in the morning.
4204. Are they always present? There are always two present; the chief assistant comes on at 3 and stops till 8 p.m. or later, according to the state of the business; he stops till it is all cleared away; every day's business is cleared off before they leave.
4205. I suppose your own duties require your constant attendance in Sydney? Yes. My duties occasionally take me away from Sydney if there is anything particular to do with the lines.
4206. In such cases does the station manager act for you? Yes; he acts for me in my absence.
4207. Do you consider the station manager and his assistant manager are over or under paid? I do not consider the station manager is overpaid—I think he is rather underpaid; but I think the chief assistant manager—that is, the one at £448, is overpaid.
4208. And the two at £326? I think they are not overpaid.
4209. The next in order is the clerk in charge of the check branch; he gets a very high salary—£403 per annum? The check branch requires a good many clerks to fulfil its duties.
4210. I suppose these forty-one clerks are principally employed in checking? The whole of these forty-one clerks are not employed in the check branch; there are only twenty-five of them so employed.
4211. There is the senior clerk? The senior clerk has nothing to do with the checks—he is the receiving clerk downstairs, and has very heavy responsibilities in the receipt of cash. He is the principal clerk in the receiving-room at the George-street entrance.
4212. *Mr. Storey.*] What is his salary? £371; he is worth £450 or £500 per annum for the duties he performs.
4213. *President.*] Of course he has an assistant? Yes; he has several assistants.
4214. But he is responsible? Yes; he has nine hands in his branch.
4215. And they are under his control? They are all under his control.
4216. Are those nine hands mentioned in the forty-one? Those would be a portion of the forty-one.
4217. Then are the remaining twenty-five employed as check clerks? There are twenty-five clerks in the check branch and five messengers, and these twenty-five clerks form a portion of the forty-one; so also do the nine clerks in the receiving office. The others are distributed in other branches of the department.
4218. You could tell us shortly what the duties of the check clerks are? The duties are to check all the statements that come in daily from the country, to see that all messages have stamps on them under the stamp system, to see that all the returns from the different cross stations agree—that is, the different statements showing what messages have been sent from one station across the Colony to another. They make up the monthly statement and the quarterly returns, showing the revenue received during the year at all the stations throughout the Colony.
4219. It requires great accuracy, but not a great amount of genius, however, to fulfil the duties of check clerk? It does not require any great genius to do it, but great care, and of course there is a heavy responsibility in regard to the stamp system. These stamps all represent cash, and therefore the officers who have to handle them must be very careful to see that there is no loss.
4220. Do the check clerks take down the values? They simply see that all the stamps received are obliterated. The messages are carefully put away, and at the end of twelve months they are burned.
4221. They do not take down the amounts? No.
4222. They simply see that each telegram has a sufficient number of stamps for the words it contains? Quite so. Every day's statement that comes in has attached to it the messages from each station throughout the Colony, and that is checked to see that the messages are properly stamped. The statement is then passed to the chief check clerk, and the messages put away in a pigeon-hole.
4223. Is the remuneration of these clerks in excess of the duties they perform? I do not think it is.
4224. They require to be accurate, but there is no further responsibility? Yes; I hand in this statement of their duties. [*Return handed in.*]
4225. The typewriter, I see, is paid £125 per annum;—I suppose he has full occupation? Yes; he is very well occupied.
4226. The chief mechanic? I recommended his office to be abolished at the end of the year, and the Postmaster-General has approved of it, and has superannuated him. That is a saving of £515 per annum. I think he gets a pension of £300. He has been about thirty-three years in the Service.
4227. To come to the assistant mechanic at £300 a year—has he been retained? He has been retained. He was getting £290 a year, but I suggested he should get £300 a year, and that he should be called foreman of the workshop.
4228. That is a very excellent salary for a foreman, but I suppose he has expert professional knowledge? He is very well up in his work; he has been trained in the department, and has been there some fifteen years.
4229. The electrician gets £403 a year? And very badly paid at that; the position is worth £500 a year.
4230. Is he constantly employed? Constantly employed.
4231. And he has an assistant? He has an assistant too; both of these men are well worth their money and more.
4232. Both indispensable? Both indispensable. I recommended that the office of telegraph instructor should be abolished on the resignation of the instructor, and now the duties, instead of being performed by an instructor who was receiving £250, and was costing the Government £500 a year, are being performed by an operator under the electrician. That saving was effected last year.
4233. The inspector of lines, city and suburbs, £350 a year;—is he constantly employed inspecting? A very hard-working officer.
4234. Does he wait for flaws and breakages to happen? No. He is at work from 8 in the morning till 8 and 9 at night very frequently; he has a large gang under him.

- P. B. Walker, Esq.
31 Jan., 1894.
4235. Examining the condition of the wires? Constantly looking after the wires in the city, and erecting new telegraph and telephone wires. He has complete control of all that work under me.
4236. Messengers' overseers—one at £236 and three at 8s. per diem, Sundays excepted;—you do not pay for Sunday work—there is no Sunday work? Yes, there is Sunday work; but we do not allow anything extra for that; we allow them a spare night off. We used to pay them 10s. a night, but I objected to it. There was an officer recently appointed to the position of night overseer; he did the Sunday night work, and he gets a night off occasionally for that.
4237. You have a good many officers you class as monitors—two at £120, one at £110, and eight at £65;—what are the duties of the monitors? Their duties are mostly in connection with the clerical work; they do a lot of clerical work connected with the booking up of messengers' work; we call them monitors instead of junior clerks.
4238. The booking up of messengers' work? They book up the returns of the messengers and other matters in connection with the messengers' branch. We always have double staffs in this place, because there is a lot of night-work with us; we work all night in the head office.
4239. The messengers are those who deliver telegrams all over the town? Yes.
4240. In the Telephone Branch you have a manager at £450 a year;—is he a scientific man? No, he is not; he is a telegraphist, well acquainted with his duties as principal officer in connection with the Telephone Exchange, and is a very good officer. He has been thirty-seven years in the Service.
4241. Then the mechanic, of course, is a scientific man? The mechanic is a mechanic.
4242. Does he do actual mechanical work? He does most of the mechanical work in connection with the Telephone Exchange.
4243. And probably the fitters are under his care? The fitters are all under his care.
4244. Then the mechanic at £300 a year is very well paid? I think he is very well paid at that, but it is not too much for him. He is well worth it, because he has the supervision of 3,382 telephones. He has to keep these in order, besides having to fit up all new telephones. Applications for new telephones have all to go to him.
4245. The foreman of lines;—is he indispensable? He is a very good man, very necessary too.
4246. These two offices could not be amalgamated? You could not dispense with these officers; the telephone business is a very large one.
4247. It is more than self-supporting? Yes; there is a large profit on it.
4248. The fitters are those who set up the instruments? They fit up all the telephones, and attend to them when they are fitted up.
4249. They seem to be remarkably well paid for persons in that position; there is one at £223, two at £200, three at £175, three at £135, four at £125, nine at £100; now a storeman in a store in town, for example, in the mercantile world, is remarkably well paid at £150, and he has the responsibility of storing goods and accounting for them properly, and of seeing that he delivers all that he receives? There is no comparison between the work of a storeman and the work of a fitter of a telephone exchange; no comparison whatever.
4250. Well, no; the duties are certainly very different; but, while a fitter must be, to a considerable extent, a good mechanic, a storeman requires knowledge and ability in some respects superior to that of a fitter? I think a fitter holds a very responsible position, because he has to fit up these telephones, and see that they do not interrupt the circuits. If he interrupted a circuit he would interrupt the whole exchange work on that circuit. He has to be responsible for all that, so a storekeeper would be in quite a different position from that of a fitter. If we had not good reliable men we should get into no end of trouble with our customers.
4251. The Estimates provide for 100 switchboard attendants; that is a considerable increase, and shows expansion of business? Yes; that shows an increase in the business. Last year we put up between 500 and 600 telephones. This necessitated an increase in the staff. We had to put about 200 odd numbers on our shutter-board in the main exchange, and we have now to enlarge it. I had to apply for 600 more numbers in order to provide for further business. To show the increase in the business, I may say the year before last we had only 400 telephones for the year; last year we had 600; this year I have been obliged to get the Postmaster-General's sanction for tenders for 800.
- 4251½. The electric light branch is also under your control—that is, for the lighting of Circular Quay? And the Post Office, Parliament House, and Cowper Wharf.
4252. There is no revenue from that? No; that is a loss to the department. When the last Commission was sitting I strongly recommended that each department should pay the cost of lighting under their own branch. At present it is a dead loss to us of over £3,000. The Parliament House lights cost about £580, Circular Quay about £1,000, Cowper Wharf about £616, and the Post Office, £1,500. We have 650 lights in Parliament House, 28 lamps on Circular Quay, 380 lights in the Post Office, 6 outside cluster lamps in Martin-place, and 12 lights on Cowper Wharf.
4253. You have some highly paid officers in the operating branch. The manager has £515 a year, and there are two assistant managers, one at £447 10s. and one at £336;—are these all fully occupied, and are they indispensable? They are all fully occupied.
4254. The ordinary operators seem to be paid on a very high scale of salary; there is a telegraphic instructor, then the electrician? The telegraphic instructor is abolished, and the electrician has nothing to do with the operating branch. He is a technical officer like myself, and is not to be put on the same plane as an operator. He has to do with all the testing, and so has his assistant. They are both technical officers.
4255. I see the operators begin at £308 per annum;—are these ordinary operators? These are superior operators, sound readers, men who work quadruplex and duplex instruments. We have ten quadruplex, three duplex, and forty-seven Morse instruments, making ninety-three circuits altogether. Eighty operators are required to work the quadruplex instruments, ten for the duplex, and forty-seven for the Morse. These men are supposed to be able to adjust their instruments if they go out of adjustment, supposing there were no electrician or higher officer by at the time; therefore they are paid in proportion to their responsibility and capacity as operators.
4256. Is it the case that more than one message can be despatched along the same wire at the same moment? Yes; you can send four messages on the same wire by the quadruplex—you send two and receive two on the one wire at the same moment. We have ten quadruplex instruments; they represent forty circuits and eighty operators, because there is a morning staff and an afternoon staff.

4257. Could each message be sent to a different place of destination? We generally work them on the Melbourne and Brisbane lines. We have a quadruplex working to Wagga, and we branch off a duplex to South Australia, and work a single line to Deniliquin and a single line to Hay, so we work four circuits on that one line off the branch at Wagga.

P. B. Walker,
Esq.
31 Jan., 1895.

4258. What are the hours of duty of the operators? Their regular hours are from 8.30 a.m. to 3 p.m., and from 3 p.m. to 8 p.m.; there are two staffs.

4259. They relieve each other? Yes; sometimes it is 10 o'clock before they get away, but they take turns at the night work; the staff that is on this month in the morning comes on next month in the afternoon. During the recent floods it was 1 or 2 o'clock in the morning before they finished.

4260. Do you consider these higher salaried men are overpaid, or only well paid? I do not think they are at all overpaid; I think they are rather underpaid.

4261. Is their remuneration at all affected by the length of their service, or is it entirely owing to their capacity? So far as I am concerned I have endeavoured to deal with all the officers in regard to their capacity, but many of them were handed over to me at the time of Mr. Cracknell's death, and their salaries have remained intact; but in the newer appointments I have made alterations in the salaries and have reduced them; in some cases I have not advised the filling up of the appointments. For instance, an officer was sent from the head office to Bega. I recommended that his office be abolished altogether, and a junior was put to do his work at £100 a year. This officer had been merely working a suburban circuit, and was not worth the salary he was getting, so I took the opportunity of placing him at Bega.

4262. In this manner large savings would be effected in the course of time? Yes. In another case one of the receiving clerks died who was receiving £320 a year; instead of filling up his position, I simply advised that a messenger be added to the office at £50 a year, and the position of assistant receiving clerk was abolished altogether. Although it created a great deal of stir in the office, I fought the matter out, as I saw it was the most economical way of doing the work, and the Minister and Deputy Postmaster-General supported me.

4263. Could you estimate the probable saving that you could effect in this way, taking the chapter of accidents into consideration through the retirement of aged officers? That is a thing you could not estimate at all.

4264. I do not expect you to estimate it closely? You do not know when a man is going to die or retire. You would have to go through the staff and take the ages of the different officers.

4265. Still it is a point you have constantly before you? My plan has been in all cases where vacancies occur not to advise that they be filled up if it is possible to do without them, but I make the staff that is doing the work perform the duties, with a little extra salary. If I do not think so I make the staff do the work without extra help. I find that system has worked very successfully in all cases where it has been tried.

4266. You have a manager of the Telephone Branch, who receives £402 10s.;—is that absolutely necessary in addition to the head man in the Electrical Department? Yes, absolutely necessary.

4267. And there is a mechanic who is getting £290? Yes. To give you some idea of the work in the Exchange, I may mention that there are 28,000 calls made during the day, the total number of hands employed is 121, the number of telephones 3,382, and the revenue produced last year £20,290 10s. 4d.

4268. That is the gross revenue? The gross revenue.

4269. Could you tell us the profit? I could not tell you the profit; that is more a matter for the accountant.

4270. You receive rent for the instruments you hire out? Yes. The number of miles of line is 601. To show you what the Exchange foreman has to do, I may mention that in three hours, from 2 till 5, at one telephone number, one boy had to return 387 calls in one hour, in another case 306, in another 295, in another 240, in another 300, in another 269, and in another 224.

4271. Do those who receive the messages come under the designation of switch attendants? Yes.

4272. There were forty-two, I see, in 1893;—of course you have more now? Yes; we have 121 altogether now on the Telephone Exchange.

4273. *Mr. Storey.*] The electrical business in New South Wales—is it a paying concern, or is it a loss to the Colony? Under the present system I could not tell you anything about it; I have nothing to do with the accounts; mine is all technical work.

4274. How long is it since the amalgamation took place in the Post Office? It took place on the 1st of February, 1893.

4275. Since that time the staff of the Electric Telegraph Department has been more immediately under your control? Quite under my control.

4276. How much more under your control than under the previous system? It has been always under my control.

4277. It was under your control previous to this? It was under my control under Mr. Cracknell, but I had not the supreme control, as he was head of the department; now I have complete control of the whole staff, as Secretary of the Telegraph Service under Mr. Lambton.

4278. Can you give us an idea, perhaps roughly, of the savings effected, or have any savings been effected since 1893? Some very large savings have been effected in the working of the Telegraph Service. At the time of Mr. Cracknell's death the Estimates had been framed according to his ideas, and they were approved of and ready to be submitted to Parliament. Upon their being handed to me for revision I struck off £14,500, which I considered unnecessary. At the end of the year, after working the Telegraph Service for twelve months, I was about £6,000 or £7,000 within my Estimates. I thus saved over £20,000 by this transaction. If Mr. Cracknell had carried out the Estimates as he submitted them he would have spent about £21,000 more than I did.

4279. Where were the savings principally effected? The amount was simply struck off, mostly in working expenses, repairs to lines, and general contingencies.

4280. That was the first year? Yes; and in addition to that I saved £4,000 for instruments during the last two years. £2,000 a year was usually spent for telegraphic instruments, but when the instrument mechanic put before me a requisition for £2,000 worth of instruments I struck it out, simply because I went through his stock and found that he had enough instruments to last for six or seven years. A great deal of extravagance was practised in former times, over which I had no control. I was always in antagonism with my chief, and was always trying to get the expenditure cut down. When I was placed in charge of the branch I cut down wherever it was practicable.

4281.

- P. B. Walker, Esq.
31 Jan., 1895.
4281. This year the savings have not been in the same proportion? Of course not, because they had already been effected. Then there was another case: Prior to Mr. Cracknell's death 400 telephones were ordered from England. There was always the bogey that they could not be bought here because of the patent rights. The 400 telephones cost the Government between £6 15s. and £7, laid down in England. They were bought through the Agent-General, paid for in London, and shipped out here, so if anything happened to them on the way out, the Government would have lost, as they were not insured. Prior to their arrival I was short of telephones, and found we could not get any of this make—"Hunnings" they were—unless we paid £6 13s. I refused to pay this price, as I was well aware there was another telephone in the market, the "Berthon-Ader," which could be worked just as well as the other. On my recommendation the Minister bought 150 of these, and thus we effected a saving of £252 10s. Then I recommended the Minister to call for tenders for 600 last year, which we got at £4 a piece, so we got 200 telephones more, and effected a saving of £700, making a total saving of £1,500.
4282. *President.*] And for the 800 required this year. We have got them for £3 9s. 6d. I declined to notice the patent rights, as I contended that under the Patents Act the Government could use any patent whatever without payment. The agents for the telephones tried to bluff the matter out by saying they would prosecute, the Government for using the "Berthon-Ader" telephone, but they could not do it. Last year I obtained the Ericsson telephone which is equal, if not far superior, to the one these people had patented. Last August the patent rights expired, so there is now no difficulty in that respect.
4283. *Mr. Storey.*] Is the whole of the staff, both clerical and mechanical, entirely under your supervision? The whole staff is under my supervision. There is one other point I would like to call attention to in reference to the savings: I was always trying to get the lines tested, because the electro-motive force we were using was considerably in excess, that is the generating power was in excess of what was required for working the lines. I never could get the late Mr. Cracknell to have the lines tested with a view to effecting economy in the working of them. Immediately after the late Superintendent died I set to work, had the lines tested, and found, as I had expected, that we were using a great deal more current than there was any necessity for. I made a calculation, and the result was that I took off a considerable number of cells. On one line alone there were 350 cells in excess. By this means a saving was effected in 1893 of 35 tons of copper, worth about £1,000; we were paying £28 per ton for the copper under contract. This last year we saved 35 tons, so instead of using 70 tons of sulphate of copper per annum we are using 40 tons, which means a saving of £1,500 per annum. There has also been a saving of £450 on general battery material, so the annual saving in these items alone has been £2,000 a year.
4284. In preparing the Estimates, as I presume you do, of the salaries according to the Blue Book—? I have nothing to do with the preparation of the Estimates, and I never see them till they are in print; they are prepared by the accountant and placed before the Deputy Postmaster-General.
4285. You have no say in the salaries of your subordinates? Nothing to do with the salaries put on the Estimates; I simply make recommendations as regards the appointments when they come before me. Mine is the technical portion of the department, and I do not interfere with the administrative portion.
4286. I am speaking of the salaries, not only of the clerical department but of the operators, electricians, and all? I never see the Estimates. Of course if there is any alteration or increase then I am consulted.
4287. In view of the continual demand for economy and retrenchment don't you think you ought to have been consulted about the salaries received by the large staff under your control? That is a matter more for the head of the department. The Deputy Postmaster-General is the administrative head of the department. I have the right to recommend that an officer's salary should be increased, but he would not think of increasing or reducing a salary without referring to me.
4288. I will put it this way: Some years ago the business of an electrician was more of a profession than it is now, and you had to pay very much higher for electricians than now;—am I right in saying so? I don't think so.
4289. Say fourteen or fifteen years ago? Not electricians.
4290. Is not the supply of people engaged in the electrical world far in excess of what it was years ago? But you cannot get expert electricians or operators unless you pay them good salaries. An expert operator has to read by sound, and to take something like 300 and 400 messages a day by sound, as I have done myself; there is a great strain upon his mind, and after seven years he generally breaks down. The average life of an operator is not considered to be more than seven years, just as a telephone boy will not last more than four years. You cannot expect a man to knock under in seven years, and to get him for a small salary. Of course if he is doing light work he might stand for fourteen years, but that would be considered the outside for heavy work. The men doing heavy work get either writers' cramp or mental paralysis, and they have to be shifted about. We then sort them into the country stations and give them light duties.
4291. The salaries of these innumerable people have been in existence for some years? They have been in existence for many years. We have given very few increases since Mr. Cracknell died. We have set our faces right against all increases, and have endeavoured in every way to economise in order to meet the exigencies of the times.
4292. Not being responsible for the salaries of these officers I suppose you can hardly give an opinion as to whether these men are under or overpaid? If you will pick out any particular officer I can tell you.
4293. Speaking generally of the whole Service; here is a line of operators whose salaries go from £190 to £281? I do not think any of those are overpaid.
4294. You would not be disposed to put down any less if you prepared the Estimates? Certainly not.
4295. In spite of the general depression? Certainly not.
4296. Supposing any of the men left, could you replace them at a lesser salary, do you think? That, of course, is a matter I would have to consider. I might propose a reduction of the salaries if the men had to be replaced.
4297. There are temporary clerks here receiving salaries from £200 down to £100. How come they to be temporary—why are not they put on the staff—and in the Estimates as passed for 1895 there are twenty-three temporary clerks, at a salary of £2,500—how comes there to be such a lot of temporary clerks? Most of those are engaged in booking up messages, doing different work in various ways throughout the department, making out the wind and weather reports, and so on.
4298. Yes, but why temporary clerks;—why are they not put on the staff? I do not know why they are not

not put on the staff. They ought to be made permanent clerks. They were appointed prior to my P. B. Walker, taking charge of the Telegraph Service. Esq.

4299. By whom are these temporary clerks appointed? They are all appointed by the Minister, but the appointments were all made prior to my taking charge of the Telegraph Service. I have not altered the staff at all, except to advise a reduction of it whenever I had a chance. 31 Jan., 1895

4300. Will you take into consideration whether you should not have some control over both the clerical and mechanical staff under your department? Of course I have complete control as regards their work.

4301. Should you not have control as regards their pay? That is a matter which rests with the Deputy Postmaster-General.

4302. You said there is one person who is overpaid, the assistant manager in the Operating Branch, at £448 a year? I recommended to the last Commission that that office should be abolished, and that the officer should be pensioned off. He is not vigorous enough for the work. Somehow, the matter has remained in abeyance, and my suggestion has not been adopted. He has been a very long time in the service, though he is not 60 years old yet.

4303. Are there any others, except the one at £448? That is the only one I can single out.

4304. In the clerical department under your control there are a lot of clerks, some twenty-five, engaged in checking, which costs a lot of money;—has it ever been tried to dispense with such a lot of almost extra work; could this work not be done by inspecting the different telegraph offices in the country, that is, could not the inspectors do the work, instead of having everything checked in the head office? It could not be done by inspectors; it is absolutely impossible. The system we have in force now is one that requires every message that is stamped to be checked. Every message that comes in is stamped, and all the messages are sent into the Check Branch with the daily statements. All the statements have to be checked. The Treasury insists upon this being done, in order to prevent frauds on the revenue.

4305. It seems to cost such a lot of money;—is there no way of avoiding such a large expenditure as that? I don't see any way, unless you abolish the Check Branch altogether.

4306. How long has the system been in use? Since October, 1893.

4307. Has it resulted in any saving? It has resulted in a large saving.

4308. In the Electric Light Branch you have a chief engineer, four other engineers, and seven assistant engineers;—you do not require all that staff, surely, to run an establishment to light up four or five different places? You must have a staff at the Legislative Assembly; there is a 28-h.-p. engine in the Domain to work the electric lighting of Parliament.

4309. Are the engines scattered about the city? They are all scattered about. There are different installations; there is an engine at Cowper Wharf, another at Circular Quay, and another at the Post Office; you must have a staff at each of the places. There is no installation worked so economically as my installations are worked; as a matter of fact, we are effecting a large saving annually by lighting the Post Office with electricity.

4310. If you have to keep a separate engineer and staff at Cowper Wharf, Circular Quay, and Parliament House, why does the expenditure come under your department? That is exactly what I want to know. I think it is an expenditure we ought to get rid of. I tried very hard to do so, and the last Civil Service Commission adopted a recommendation of mine on the subject. On page 16 of their Report they say:—

This branch, (*i.e.* the Electric Light branch) though under the control and superintendence of the head of the Telegraph Department, has nothing in common with postal or telegraphic business, and is not a source of revenue. It should, therefore, not appear as a charge against the Telegraph Department in the Estimates. There are at present installations at Parliament House, Circular Quay, and Cowper's Wharf, and the cost incurred should be made a charge against the departments benefited,—

but under my control.

4311. That accounts for such a big staff of engineers? We could not do with less than our present staff.

4312. You are an old Civil Servant;—what, in your opinion, should be the constitution of a body to control the service—what would you suggest to get rid of political influence, which I understand is your bane; should the work be entrusted to a Board—you know the limited powers of the present Board? I have always thought that the present Civil Service Act is quite a mistake. When they were bringing this Act into operation they ought to have adopted some such plan as they have in Victoria, that is, they should have framed an Act empowering three Commissioners to deal with everything in connection with the service. That plan works very well in Victoria, and also in Queensland; I do not know what arrangement exists in South Australia. I am quite satisfied the Service could be more efficiently worked by such a Board than under the present system of ministerial and political influence. Such a Board would not be subject to influence, but would simply be guided by certain rules and regulations laid down. It would give general satisfaction to the officers of the service, and would be productive of economy.

4313. Who do you suggest should compose a Board of that kind? I should say there should be at least one officer on the Board thoroughly conversant with the working of the Service, one good business man, and one good accountant.

4314. Would you have them devote the whole of their time to the Service? Certainly, as in Victoria.

4315. Should they be nominated by the Government? They would have to be nominated by the Government. The Government would have the selecting of them in the first instance, the same as with the Railway Commissioners. There would be one officer who would be the Chairman of the Board, as in Melbourne, and the other two Commissioners would co-operate with him.

4316. You think that all appointments and promotions should be regulated by them? Everything. A proper system of working the Service would obtain, instead of the present system. Now, when a vacancy occurs in one department, it is considered that no officer in another department has a right to fill it. That is a mistake, because there are men in other departments, outside the one in which the vacancy occurs, much better qualified to fill the vacancy. It is very disheartening to old officers to find themselves treated in this way.

4317. How would a Board of that kind regulate appointments without having a recommendation from the heads of the departments? I presume the system would be somewhat similar to what it is at the present time as regards recommendations. In Victoria the Board generally consult the head of the department in the matter of appointments, but they do not always adopt his recommendation. They have set it aside frequently, and have taken the matter into their own hands by appointing the man they considered most suitable.

- P. B. Walker, Esq.
31 Jan., 1895.
4318. How would an outside Board know better than the head of a department which man would make the best officer? Of course in the Telegraph Service they could not judge well of a man's abilities, because they would require to be technical men; but in another department any man with a good business capacity could, I fancy, fill almost any position. We have had instances of this. Take for instance the late Mr. Eagar, a man who had had no experience whatever in the Service; he was put into a most important position in the Service, that of Under Secretary for the Treasury, and although it was considered the position could not be filled by anybody outside the Service, he proved to be one of the best Under Secretaries for the Treasury we ever had. Then take the case of the Principal Under Secretary. When Mr. Elyard died many years ago, Sir Charles Cowper (then Mr. Cowper) appointed Mr. Owen, the present Judge Owen, to the position of Principal Under Secretary. He was not considered to be a man with any knowledge of official affairs, and yet he was thought to be fit for a position like that. Subsequent events have proved that he was a very able man, as he is now occupying a high position on the Bench.
4319. Are you in favour of a superannuation fund in the Civil Service? I think that the Superannuation Fund is a very good fund indeed, the only difficulty in connection with it being the large number of persons who have been foisted on the fund who had no business to be there at all.
4320. Speaking generally, you are in favour of such a fund? Decidedly.
4321. You would not leave officers to insure their lives and look out for themselves? I think not. I think if the officers are willing to allow a certain deduction from their salaries to provide for their old age they ought to be allowed to do so, and the Government should assist them in doing so. There is an idea that Civil servants get their pensions for nothing, but that is a huge mistake, as of course you are aware, as we all contribute our quota towards the fund. The only thing is, in the present position of the fund, the percentage ought to be increased. For myself I would not object to pay an extra percentage with the view of securing my pension in a few years when I am ready to retire.
4322. *Mr. Robertson.*] When was the amalgamation of offices effected? On the 1st February, 1893.
4323. In most towns now the postmaster and telegraph-master are one and the same person? Yes, they are. There are 449 Morse telegraphic stations worked by post and telegraph masters, 219 railway telegraph stations, some under the charge of railway officials and some under our own officials, and 162 telephone stations, that is, telephone stations acting as feeders to the main lines, making a total of 830 stations altogether.
4324. How many towns are there where the offices are held by different people? I could tell you some of them. There are Goulburn, Albury, Deniliquin, Maitland, Newcastle, and Bathurst. There were only 18 offices of our department, when the last Commission was sitting, that were not amalgamated, but since their report was issued several have been amalgamated, for instance Armidale, Wagga Wagga, and some station out west. Newcastle and West Maitland are separate, as they are places which you could not well amalgamate. For the last Board I prepared a statement showing that a saving of £32,000 could have been effected if the whole of the 18 offices that were unamalgamated could be amalgamated with the post offices. In this way, the buildings which were occupied for the post and telegraph offices could have been sold or made use of in other ways. At Armidale, for instance, the buildings were worth about £3,000, and since we left them they have been taken up for land offices, and by this means a saving, I believe, of about £500 or £600 a year for rent effected. There is a difficulty in the way of amalgamation in some large towns. Albury, for example, is a border station, and the wires to Victoria pass through there. We have to keep a first-class man there, with a good staff, so that when an interruption takes place they may be able to repeat all the business; otherwise there would be complaints of the delay in the traffic. It is a question whether it would be advisable to amalgamate in a place like that. In Bathurst we have the same difficulty, we have quadruplex and duplex instruments there which require an expert to deal with. A postmaster could not deal with them. At Maitland I do not see so much difficulty in the way, unless it be that the postmaster is a very old man and will be retiring in the course of a few years.
4325. And in that event? I certainly should say that the amalgamation should take place.
4326. Has the amalgamation of the offices been found to work satisfactorily? Very satisfactorily.
4327. Well, that being so, could it not be arranged that all branches could be amalgamated in the same way? They are all pretty well amalgamated, with the exception of about ten.
4328. Would it not complete the work and effect a further saving? Yes; it would effect a saving in this way. The expensive buildings the officers are living in might be utilised for other purposes.
4329. With regard to the boys who are messengers, how are they appointed? They are appointed by the Minister, under his patronage.
4330. Without examination? Yes; without examination.
4331. How are they promoted, and where to? They are generally promoted to be mail-boys. Sometimes, if they were very smart, they used to get on as operators, but they have to serve as cadets first now and pay their £1 a quarter, go through a training, and pass an examination prior to being appointed operators.
4332. What check is there upon the time occupied in taking the messages, and upon the work done by these messengers? Do you mean in the delivery of the messages or in the receipt of the messages on the line?
4333. I am speaking only of the messengers? In the delivery-room there is a clerk who is specially charged with the work of seeing that all the messages entrusted to the boys are delivered without delay. After the boys are gone there is another messenger who goes round and searches the bags to see that no messages are left in them.
4334. With regard to the operators, at what salary do they commence? They commence from £52 and go up to £78, £91, then from £78 to £100; then they work their way up in grades from £110 up to £308.
4335. In grades? They go from £110 by increases of £10 up to £308.
4336. Is that a yearly increment of £10? Not a yearly increment, but it goes by grades. Sometimes an operator might die, and that would perhaps make a hundred changes in all the different grades. It might make a lift up for each operator. That is how they get their increases.
4337. If a man had been in the Service say for twenty-five years, and at the end of that period he was an operator receiving £235 a year, would you consider he was fairly paid? No, I should not. I should consider he was worth £300 a year, if he was any good at all. If he was a first-class operator and had been twenty-five years in the Service, he was only getting £235, I should think there was something wrong, or that he had been very unfortunate.
- 4338.

P. B. Walker,
Esq.
31 Jan., 1895.

4338. There was a man who, in 1885, had been twenty-seven years in the Service, and was receiving then as operator a salary of £235; in 1893 he was receiving £308;—how can you account for the increase? That I cannot account for, because I have had no control over it. I think length of service should count in his favour.

4339. Would you count it beyond the grade that you would fix a certain post at? No, I would not. I think £300 a year for the work he is doing is not out of the way. If he were to go away I would not give the next man £300 a year.

4340. In saying you have no control over that, does that apply to the operators? I have no control over the salaries fixed. I have control over the officials.

4341. Did I understand you to say in reply to Mr. Storey that you never see the Estimates until they are in print? I do not see them until they are in print. I am merely asked what additions to the staff I have to recommend.

4342. By virtue of the important office you occupy would you not probably be the greatest authority in the department as to the Estimates? I should think I ought to be.

4343. And you say the Estimates are prepared without you? They are prepared by the accountant but not sent to me for revision. I may say my duties are as follows:—Maintenance and working of 27,450 miles 15 chains of telegraph wire and 12,165 miles of line, 601 miles of telephone wire working 3,382 telephones; the maintenance and working of all telegraph and telephone lines. I am responsible for the whole of the construction of telegraph and telephone lines; also for the construction and maintenance of all railway telegraphs, for the maintenance and working of the electric light system at Parliament House, Circular Quay, Cowper's Wharf, and General Post Office; for the working of the telegraph stamp system and the general expenditure of the telegraph service, as well as for all construction expenditure for telegraphs and telephones. I give security for £1,000. All recommendations for leave of absence for the telegraph branch as well as complaints and other clerical work involved in the working of the branch are also discharged by me as well as correspondence pertaining to work of the branch done in the name of the Deputy Postmaster-General.

4344. Then, although you have to do with telegraph stores and material, you are not consulted with regard to the Estimates? No.

4345. Where are your telegraphic stores and materials warehoused? Our telegraph stores are all in the postal stores in George-street, under my control. We have some outside stores at Finnigan's Siding, Parramatta.

4346. You are under no expense for warehousing your stores? The premises are considered a part of the Post Office.

4347. Have you a system of fines? Yes, fines are inflicted in accordance with the offence from 1s. up to 10s. Beyond 10s. the matter is referred to the Minister.

4348. What is the nature of the offences? Complaints in regard to missing messages, misdirecting messages, misdating messages, putting messages on the wrong file, and making mistakes in copying them.

4349. What system of correspondence and record have you? As far as I am concerned I have no records. The records are kept by the Post Office, and all the papers referring to my branch are sent on to me. All correspondence in regard to line repairing is done under me in the electric branch, through the electrician. That is a matter that is purely technical. I have no records beyond that.

4350. But you have a great deal of correspondence? Yes.

4351. Do the duties of the inspectors include the complete inspection of postal, money order, and telegraphic business, as well as the inspection of telegraph lines? The inspectors have nothing to do with the inspection of lines and instruments. A postal inspector need not necessarily be an expert in telegraphy. All that is required of him is that he should thoroughly understand the checking and receiving of revenue. The telegraphic work is done by my own line repairers, of whom I have forty-five; inspectors are not required for that work.

4352. Seeing the inspectors are highly paid officers, and that they inspect on behalf of the amalgamated offices in the Post Office Department, don't you think they ought to be able to inspect in matters of telegraphy as well as in postal matters? I do not think it is necessary. Of course they could do so; there are two or three of them who are telegraphists.

4353. But if they were qualified, would not that be a saving by avoiding the necessity of your sending line repairers? No saving at all, because at present the inspectorial branch is none too large for the department.

4354. In your opinion do you think there is a necessity for two secretaries in the department? I have nothing to do with postal matters; I know there must be a head to my branch, an officer well versed in all technical work connected with the branch, but so far as the Post Office is concerned I would not venture an opinion. So far as my position is concerned, I think the designation of secretary is a misnomer; my proper designation should be—engineer-in-chief and chief electrician.

4355. How do you and your co-secretary arrange with regard to matters that come from post and telegraph masters? The matters are kept distinct. We are, as it were, two channels communicating with the Deputy Postmaster-General.

4356. But the correspondence is under the control of the Secretary to the Post Office? The Correspondence Branch is under his control, but he has nothing to do with my correspondence; he never sees it.

4357. Although the record is kept out of your department? It is really all one department; the whole of the correspondence is opened in the Record Room by the two record clerks, and they sort it out, sending to the Secretary of the Post Office all papers concerning him, and to me all papers pertaining to my branch.

4358. *Mr. Humphery.*] What is the value of the stores connected with your department? When Mr. Cracknell died it was £21,000 at Finnigan's Siding, and £20,000 in the main store.

4359. And now? I should say it was between £30,000 and £40,000, including the heavy stores at Finnigan's Siding.

4360. *President.*] Is it insured? Yes.

4361. *Mr. Humphery.*] Where is the record kept of the stores on hand? In the head office, that is under the Secretary for the Postal Service.

4362. How do you obtain your stores? By requisition.

4363. From whom? We send to the storekeeper direct.

- P. E. Walker, Esq., 4364. Are any contracts entered into? We call for tenders for stores, and they are put into our general store.
- 31 Jan., 1895. 4365. Under whose control? Under the control of the storekeeper for the whole department.
4366. Has the Comptroller of Stores anything to do with the telegraphic material? Nothing whatever.
4367. Are all your contracts independent of him? Not all of them; there are certain things, such as ironwork, paints, oils, and acids, we get through him.
4368. Of considerable value? Not very great value.
4369. Have you any statement showing how the revenue compares with the expenditure? I cannot give a statement like that; that must come from the accountant.
4370. Who is the accountant? Mr. Gregory.
4371. *President.*] As to checking telegrams from country stations,—of course if the public will not themselves see that every telegram they give in for despatch is stamped it would be possible for the telegraph clerk to receive the money and send the telegram away without stamping it at all, and unless you got this telegram to examine there might be a big open door for fraud and theft;—is that so? Quite so. If the telegram were put in and the public did not see it stamped, the officer receiving it could put an old postage stamp on, but he could not get that telegram through anywhere unless it was stamped. The moment it went to the operating room the manager's attention would be called to it, and it would be returned to know why it was not stamped.
4372. That is, supposing the system of checking is carried out; but in the country if there were only one receiver he might receive telegrams and money, pocket the money and not stamp the telegrams—he would send the messages away, keeping the money for himself, and, unless you had this system of checking in operation, fraud to a considerable extent might be committed? Yes, all over the Colony.
- 4372½. And you do not see any other way of preventing that fraud than that of checking the telegrams? I do not see how it is to be rectified unless you have the system of checking that we have.

TUESDAY, 5 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Francis Henry Wilson, Esq., Chief Clerk and Acting Under Secretary, Department of Lands, sworn and examined:—

- F. H. Wilson, Esq., 4373. *President.*] Taking the Estimates of Expenditure for 1895, next to you there is the accountant;—have you control of all the sub-sections of the Department of Lands? When the Under Secretary is here he controls the accountant, and I control the other departments. The Under Secretary is at present absent on leave.
- 5 Feb., 1895. 4374. I may explain that I am speaking to you now as the Under Secretary's substitute, so you will please to put yourself in his place during our examination;—does your department control and receive reports from all the other sub-sections of the department? Yes.
4375. Do they render reports to you at stated times or casually? The accountant furnishes a monthly report, showing how far the revenue has come up to the estimate, and this is laid before the Minister.
4376. That revenue consists of—? Deposits on conditional purchases, interest and instalments on conditional purchases, rents on conditional leases, sales by auction, rents on pastoral occupation, and special leases, &c.
4377. And that all comes under the care of the accountant? Every month he has to submit to the Minister a statement showing how the revenue as received tallies with the revenue as estimated.
4378. Is any statement rendered of the arrears that exist? We do not know anything about arrears now; that is a Treasury matter entirely.
4379. Have you in your department an account against each person who has a selection upon which he pays annually? Not as regards the money. We have nothing at all to do with the money except the first deposit paid and the survey fees; the Treasury keep all the accounts.
4380. But as regard the area? Yes; we have some 400 or 500 books of them.
4381. Ledgers, you mean? The books show all the transactions which have taken place with regard to the conditional purchases from the first time they were taken up, transfers, alterations in areas, survey fees, the amount of the deposit paid, and any action taken by the Land Board in dealing with the applications; in the remarks column there is shown the registered number of every letter that has been addressed to the department with respect to any particular conditional purchase.
4382. So each conditional purchase has its own history? Has its own history.
4383. But you take no cognizance of payments of money? No.
4384. Do they come before you at all? No; they are paid to the Land Agent or to the Treasury. When paid to the Land Agent, he reports to the Treasury. The only time when we deal with them is when the Treasury report that certain conditional purchasers are in arrears with their payments. We then call upon them by notice to pay up the arrears; and if they do not pay, we gazette the selections as liable to forfeiture.
4385. Then when the last payment has been made by a conditional purchaser, and he is free from all further liability to pay, are you notified to that effect? The Treasury then notify the department that the balance of purchase-money has been paid, and we then prepare the deed.
4386. And that is issued to the purchaser? That is issued to the holder of the conditional purchase at the time of the payment of the balance.
4387. You have a very large staff of clerks; I see there are clerks in charge of divisions;—these are the subdivisions of your department I suppose? I will explain. In 1887 there was a Board of Inquiry appointed by Mr. Garrett for the purpose of ascertaining whether there were too many clerks in the department or not. The Board consisted of Mr. Traill, Mr. Fitzgerald, Deputy Surveyor-General, and Mr. Houston, the present Under Secretary, and they decided that a large number should be removed from the Service as being no longer required. After that had been done as regards the head office, another

F. H. Wilson,
Esq.
5 Feb., 1895.

another Board, consisting of Mr. Conder (now dead), Mr. Houston, and Mr. Macdonald, one of the district surveyors, went through all the country offices, and in 1890 they sent in a report, recommending certain changes in the country offices, and that certain officers should be dispensed with. Then in 1892, when Mr. Houston took the office of Under Secretary, or soon afterwards, he thought it would be better to improve on the system that had been fixed on by the Board of Inquiry. He said it would be a good thing to divide the department into three—one head of division to look after the leases,—that is, the pastoral runs, the reserves, special leases, and the homestead leases; another head of division to look after the sales, conditional purchases and leases, sales by auction, reclamations, rescission of reservations, or unnecessary roads; and the chief clerk, to whom these two heads of division were to send in their papers, should also look after the Ministerial Branch, the Roads Branch, and anything else that the others did not deal with, including now the Rabbit Branch, the Labour Settlements, and so forth. All the papers from the two heads of division come to the chief clerk.

4388. What is the nature of the duties of these clerks in charge of branches; they get pretty large salaries? The first one is, I think, Mr. Landers, who deals with pastoral occupation—that is, the runs in the country, and the occupation licenses—that is, the half of the run that is open to selection, and homestead leases. He has, I think, four or five clerks, or more. It is very responsible work, for a very large revenue comes from it.

4389. Are there many applications in that branch for leases? Oh yes; every run-holder who has asked for an extension of his lease has had to do it through that branch. In 1885 they were up night after night all night preparing for the division of runs. Of the two at £380, one is Mr. Salway. He takes charge under Mr. Capper of the conditional sales division. The two heads of the division are Mr. Capper, the head of the sales division, and Mr. De Low, the head of the lease division. Mr. Salway is the sub-head of one of these divisions, and he submits all new cases to Mr. Capper requiring Ministerial approval. He has to prepare a *précis* of every case, and some of them are very difficult indeed. Legal points arise which make the work very difficult. As no doubt you are aware, even Judges say they do not know how we are able to deal with these cases, as the Acts are so very vague. This *précis* is sent into the head of the sales division, who, after writing on it what he may think advisable, sends it on to me to be submitted to the Minister. Then there is Mr. Williams, who is the head of the conditional lease division. The conditional leases are the leases attached to the conditional purchases. In the Eastern Division you take up 640 acres of a selection, and 640 acres of a conditional lease, and you have power under the Act to apply to have that conditional lease made into a conditional purchase. You can take up altogether 1,280 acres. In the Central Division you can take up to 2,560 acres. You can take up three times the area of the conditional purchase as a conditional lease, provided the whole area taken up does not exceed 4 square miles. Mr. Williams deals with the whole of these leases. He sees that the rent is appraised by the Land Board, and that records are kept of what the rent is. Then there is Mr. Thomson; he is the head of the Ministerial Branch, and deals with all questions of promotion and leave of absence.

4390. You have a staff of seventy-five clerks besides the clerks in charge, beginning at £358 and descending to £100;—what are the duties of these seventy-five? It will be better to begin at the bottom. There is a number of clerks in the office whose duty it is to enter in these registers all the conditional purchases that have been received in the department. They do not receive very large salaries. All that is required of them is that they shall be perfectly reliable and be able to spell correctly. The head of the branch goes round to see that their work is done properly.

4391. *Mr. Robertson.*] Are you beginning with the probationers? The clerks at about £100 a year; the probationers as a rule fill up forms. Then there are others who after they have entered these things send them on for succeeding action to a higher officer. He reads the paper and makes any remark on it he may consider necessary and sends it on to a still higher officer. Other clerks, when the papers come in, find all the former papers connected with each particular case, and connect them together. Suppose a man asks for leave of absence, they collect all the papers with respect to similar applications from that man in times past for years, attach them to this last paper, and send them on to an officer who knows how much leave the applicant is entitled to. It then goes on to the head of the branch, who gives him the leave that is coming to him. Then in the Lease Branch, a conditional purchase is 480 acres. If the conditional lease is more than three times that area, there is a clerk who puts a memorandum on the paper saying that the lease is too much. That has to be inquired into, and has to be sent off very likely to the Board. Another man's duty is to see what the amount of rent is to be, and he enters that into a rent register. The head of the branch, after having got all this information from the under officers, makes some recommendation which goes on to the head of the division. There is one officer whose time is spent in attending to transfers of conditional purchases. There are some 20,000 a year of these. Notwithstanding that the land agents know the law as well as I do, they will pass some little mistake they ought not to pass. This officer acts really as a lawyer, and has to discover little legal quibbles in these different transfers, and see that they are all made perfectly right before the transfer is passed, and the parchment copy sent on to the Registrar-General.

4392. *President.*] Is he a professional lawyer? He was brought up as a lawyer. He was four and a half years, I believe, in Richard Driver's office. Although he is not a professional, I do not think any professional lawyer would know much more than he does about these particular points.

4393. This staff of clerks is necessary to carry out all the details? I think every one of them is.

4394. Are they fully employed? Yes. During the time I have been chief clerk, now some years, I have made it a practice to go round the offices among the clerks, to some rooms four and five times a day, and to every room every other day at least, so I know myself personally how much work each man does.

4395. I suppose there is a senior clerk in each room who is supposed to exercise a little control over the juniors? Yes; that is what we call a head of the branch.

4396. And if anything goes wrong which they cannot rectify themselves they report to you? No, they report to the head of the division. The head of the division is really the overseer.

4397. If necessary, he reports to you? Yes, if necessary. There is Mr. O'Dwyer, in charge of the reserves, Mr. Sherring in charge of the special leases, Mr. M'Guanne in charge of the Inquiry Branch, Mr. Taylor in charge of the Rabbit Branch and the Labour Settlement; and Mr. Wilkinson in charge of the records of the Conditional Purchase Branch; also Mr. M'Kern in charge of the Deeds Branch.

4398. You have a great many communications every day, I suppose;—are they all recorded? Every one; we often have from 800 to 1,000 letters in a day.

4399.

- F. H. Wilson, Esq.
5 Feb., 1895.
4399. They are all connected with leases or selections in one stage or another? Yes; and there are also a number of letters from people seeking information as to what land is available.
4400. Are they all recorded and laid by? They are dealt with as quickly as possible.
4401. You have applications for land that may be available for lease or purchase;—have you any maps that are easily accessible to the public, showing land that is available? When people write to us asking what land is available, we usually tell them there is a great quantity of available land in the Colony, in different parts of it, and that, if they will say whereabouts they would like to settle, we should recommend them to go to the district surveyor or land agent in that particular neighbourhood, and find out from him what land is available. Land is taken up every Thursday under the law, and the district surveyors have charted on their maps the land that is taken up. We do not know in Sydney for six months afterwards what land has been taken up, as the district surveyors only chart it in pencil on their maps till the land has been surveyed, and then they inform the Lands Department. Mr. Carruthers has given instructions to have an information bureau to enable us to give all the information that possibly can be required to anybody who wants land. There is £1,000 on the Estimates this year for this purpose. He has delegated to a Board the work of formulating some scheme; he wants to have a room covered with maps showing what land is available. We also hope to be able to show on the maps the reports of the district surveyors giving information as to the quality of land that is available.
4402. Do you think that scheme will be a successful one in securing applications? I do not think it will be much good in Sydney, but up the country I think it will be. People come to Sydney, and they really do not know what kind of land they want. If they want land, for example, in a cool climate, it is better for them to go and see it first than it is for them to make up their minds before inspecting it.
4403. In addition to the clerks we have been speaking of, there are also thirty-four others? They are temporary clerks. It is proposed by Mr. Carruthers to put the best of the men on the staff; a great many of them have been ten and twelve years in the service, and are very good men. He thinks they ought to be put on the staff, but the question is how it is to be done; there is, unfortunately, the Civil Service Act in the way.
4404. Although called temporary they are permanently employed? Yes.
4405. They are efficient? Very efficient.
4406. Do the numbers fluctuate at all? We are trying to cut them down as fast as we can.
4407. There is sometimes more and sometimes less? Yes.
4408. We come to the messengers. I see your principal messenger gets £175;—is he a messenger only? He is a messenger, and is watchman here in the building; he lives in the building.
4409. Is he supposed to attend to the Minister? Yes; there are always three messengers attending on the Minister, and very often that is not enough.
4410. They are remarkably well paid for the office of messenger, but I suppose this one, at any rate, is provided with quarters? He lives underground, at the front of the building.
4411. Are there more than one on the premises? He is the only one that has quarters.
4412. The others have their salaries only? Yes.
4413. *Mr. Robertson.*] And he is allowed £50 as the watchman? Yes.
4414. *Mr. Storey.*] Is he the watchman at night and the messenger in the day? He has to go round the building the last thing at night. There are also three constables employed outside to watch the building.
4415. *President.*] Are all the messengers really necessary? We have had an inquiry during the last three weeks on the subject, and it was reported to the Minister that all the messengers were necessary at present. There is a great deal of work to be done at times, especially when the House is sitting, then we really want more messengers.
4416. You see there are eighteen? But that includes some of those who are up the country; these are not all at the head office.
4417. *Mr. Robertson.*] In the Blue Book for 1893 it says 18 messengers engaged at the head office, 8 office cleaners, 3 corridor cleaners. These are at the head office? I suppose they must be.
4418. That is, the 18 do belong to the head office? I suppose they do; however we do not find we have one too many. Mr. Carruthers thought there were too many, but on inquiry it was found there was work for every one of them.
4419. *Mr. Storey.*] What was the nature of the inquiry? It was held by the chief inspector, Mr. Saunders, who found out what each messenger had to do. There are a great many letters to be delivered every day, and the messengers have to go to the post, I think, four or five times a day.
4420. *President.*] They seem to be really lavishly paid as messengers. Besides the principal messenger, there are 11—1 at £160, 1 at £150, 2 at £140, 1 at £135, 1 at £130, 1 at £120, 1 at £106, 1 at £75, and 2 at £60. £160 for a messenger really seems excessive considering the nature of his service? One of those at £140 was at Goulburn, a man named Hill, but he is dead now.
4421. How do they get their increases; how do they come up to £160? Those who get over £120 have been here for a great many years.
4422. Has there been any increase of remuneration within the last year or two? Small increases have been granted to those under £100, but nothing beyond that so far as I know.
4423. Neither in respect to messengers nor to the clerical staff? I am not aware of any increases to the messengers at all, except that two got £20 a year, making their salaries up to £90, and two more got £12 10s., making theirs up to £72 10s. Those are the only increases I know of for years among the messengers.
4424. *Mr. Storey.*] If one man who is getting £150 died would the next man at £140 get the increased salary? That is the only way to get promotion, but messengers, as a rule, do not die.
4425. The great number of offices in this big building entails a lot of messengers? A great many papers have to be sent to the Mines Department and other departments. At the Mines Department they are always wanting plans and papers from us.
4426. These men have nothing to do but carry papers; they have no head work? None.
4427. *President.*] That being the case, one would think an active youth would be the best messenger? That is what we are doing now; when there is a vacancy we put on a boy at £52 a year. Of the last three taken on one gets £60 a year, and the other two £52 a year.
4428. And by this means there will be a great saving eventually? Yes; Mr. Carruthers' idea is that there should be no large salaries for the messengers.
4429. The corridor cleaners I see get £100 a year? And they earn it.

4430. They have no quarters? No; they are at work the whole day long, one on each floor; the accumulation of dust is something frightful.
4431. This department has more visitors relatively than the other departments? I think it has; there is a tremendous traffic, and the formation of the department is such that wherever the wind blows from we have plenty of dust.
4432. You have only one office-keeper? The office-keeper is the widow of Kendall, the poet. Her business is to look after the women who clean the place. There are eight office-cleaners. Mr. Dalley got her that appointment. She receives £75 a year, and about £30 for a house.
4433. Has she quarters? She gets something for a house.
4434. But she does not sleep on the premises? No.
4435. The next heading is Local Land Board Offices; are these in the country? One of them is in Sydney, and the others in the country.
4436. There is a chairman? There are fourteen chairmen—one at £740, and thirteen at £650.
4437. *Mr. Storey.*] Are any of them in Sydney? One, Mr. Harriott. His duties take him all round the county of Cumberland, as far south as Nowra. Mr. Moriarty gets £740; he used to be the Chief Commissioner of Conditional Sales, receiving £800 a year. When the reorganisation of the department took place, and the chairmen were all appointed, they gave him his salary of £300 to take up to Goulburn, where he was appointed to. The 10 per cent. reduction accounts for his getting only £740.
4438. Are their duties continuous? The chairmen act almost as chairmen of Quarter Sessions, with two members of the Board, to hear all the cases that come before them. They wait till they get a lot of cases in one neighbourhood, and then they hold a court there. They are always moving about holding courts within their district.
4439. Who compose the Board? The chairman and two local men.
4440. What is the full composition? That is all, three.
4441. *President.*] The other members are paid by fees? Yes, and the chairman is paid by salary.
4442. *Mr. Robertson.*] Do the members travel round the district with the chairman? Yes.
4443. *President.*] The chairman cannot pick up two members of the Board in his district wherever he sits? No. The Land Act provides there shall be a Land Board for each land district, consisting of two members. I represented to Mr. Carruthers it would be a very good thing if that could be amended so that the chairman could have as many Land Boards as there were places that he held courts at, and thus do away with the expenses of travelling.
4444. How much does the chairman of the Land Board get for his maintenance when away from home? £1 1s. a day.
4445. And how much does a deposition clerk receive? He gets 12s. 6d.
4446. Do the other two members of the Board receive any maintenance allowance? Yes; they get 1s. an hour for travelling allowance up to 15s. a day. Then they get the cost of their conveyances to take them to the Board meetings besides.
4447. The 15s. a day is for their maintenance? Yes. And then they get £2 2s. for a whole day, or £1 1s. for a half a day, as their fee for attending the Board on the day of sitting, and they are also entitled to from half a guinea to a guinea a day for loss of time. I think that is a thing that should be most tremendously reduced.
4448. What do they get when travelling? Fifteen shillings a day, and the cost of their conveyances.
4449. They get no fee? Only when they are sitting in the court. As to loss of time, if a man is in business in Sydney, and has to go to Windsor, he would claim a guinea a day for the number of days he is absent from town.
4450. *Mr. Humphery.*] He gets compensated, in addition to his travelling expenses from the start to the return, at the rate of a guinea a day? Yes. There are instances, I am sorry to say, where a man, who was perhaps at the time of his appointment living in the centre of the land district, has removed to the far corner of it, and has to go from one end to the other to attend a meeting. This involves a tremendous expense.
4451. *President.*] He is paid for that? Yes. There is one man who lives at Ryde and goes to Windsor. He charges a guinea a day for loss of time, although he does nothing. According to the Report of the Department of Lands for 1893, page 28, the following sums were paid in that year on this account:—Chairmen's and clerks' travelling expenses, £5,860 16s.; members' travelling expenses, £1,938 8s. 3d.; members' fees, £5,255; fees and travelling expenses of surveyors, witnesses, and others, £540 18s. 3d.—total, £13,595 2s. 6d. I think the loss of time ought to be done away with. The Act ought to be amended so that the Land Board members should live at or near the places where the Land Board sittings are held, and that the fees should be reduced to a guinea a day. At present it is one guinea for half a day, and two guineas for a whole day. Suppose a case lasted till lunch, and the Board adjourned till after lunch, and then sat only half an hour, they would get two guineas.
4452. If the men were got locally, you would do away with travelling expenses altogether? Yes; I think there would be a saving of over £4,000 in that item alone.
4453. You think that efficient men could be found locally to sit on Land Boards;—would there be no risk of little local jealousies intervening to interfere with the administration of the Board? I do not think there ought to be. I think you could find somebody you could rely on to sit on the Board. Besides the man who lives at Ryde and has to travel to Windsor, there is another member who lives at Wollongong. He comes all the way from Wollongong to Sydney, and then goes from Sydney to the place where the Board has to sit. Certainly he does not charge for the loss of time from Wollongong to Sydney, but he could do so. That shows one of the anomalies of the present system, and we cannot do anything, because the law is involved. Now that the country is getting more peopled, and there are more intelligent men in the different towns—such as storekeepers, auctioneers, &c., there are different people who ought to be fit to sit on the Land Board.
4454. With regard to the payment of temporary persons who are engaged at so much a day;—is a year counted as a year of 365 days? They are paid for 313 days, or 314 in leap year.
4455. Are they paid for Sundays? No.
4456. On page 80 of the Estimates there are inspectors of conditional purchasers, twenty at £290; they are paid so much per annum, but they are not in constant employment, are they? Yes, they are. Here is a map of the Tamworth district, showing where the three different inspectors have been during the year 1894. [*Map handed in.*]

F. H. Wilson,
Esq.
5 Feb., 1895.

- F. H. Wilson, Esq.
5 Feb., 1895.
4457. What compensation do the inspectors of conditional purchases receive when they go on a tour of inspection? £1 a day to cover the expense of carriage.
4458. And their maintenance? Nothing more.
4459. Is the result of their inspection communicated to your department by the local Land Board? We get in the whole of the reports. In 1893 they sent in 17,000 reports to the chairman; he sends them on to the head office ultimately.
4460. They send them to the central chairman? They send them to the head office if there is any necessity. So long as a conditional purchase is all right the chairman keeps the papers till the end of the five years, when he issues a certificate that the man has conformed to the provisions of the law, and then the papers are sent to the head office to be kept there.
4461. And thereupon you issue a certificate? The certificate issues, which is virtually a title, provided that the whole of the instalments are subsequently paid.
4462. It is a merchantable affair? Yes; the Banks have lent on these certificates.
4463. I suppose the inspectors are constantly on the move? Almost always. I think they are about twenty-five days a month on the move.
4464. *Mr. Storey.*] How often do they inspect each person's selection? I do not think they go to the place very often; it is only in case they hear anything about the man, or if the place happens to be on their road.
4465. *President.*] But their movements are directed by the chairman? Yes.
4466. Except when they hear of anything on the road? Then they just quietly look in to see how things are going on. They get £1 a day to cover the cost of horse feed or of finding horses; some of them have to keep three or four horses.
4467. Is any supervision exercised over the time they take on a particular journey? When the chairman sends in their voucher he has to satisfy himself that the service has been satisfactorily performed. If he thinks they have made a false charge or an exorbitant charge, he strikes it out or refers it to the head office to have it struck out, or if he thinks they have been longer on the way than is necessary he will ask them for an explanation.
4468. In the contingencies the preparation of deeds is set down at £700. Is that for the parchment and printing? We prepare all the deeds ourselves; the work is almost all done by contract; there are a few clerks in the Deeds Branch, and the rest are all contractors. So much is paid for the diagram put on the deed, and so much for the engrossing.
4469. The diagram is done in your own establishment? Yes; in the office.
4470. There is an item in the contingencies towards the erection and maintenance of rabbit-proof fencing; this, I suppose, is only a temporary outlay, and is obtained finally from the land-owner or squatter? No. In this case, out of the £3,000 voted for the six months there is a sum of £2,000 that is voted for the following reasons: The Government of Queensland wrote to this Government offering to pay £4,000 towards the cost of a fence from the Queensland border down to Gunnedah, on condition that the Government here would pay the other £4,000. They wanted to have a second barrier line to stop the influx of rabbits into Queensland. This Government agreed to find £2,000 of the £4,000 on condition that the squatters who would be benefited by the erection of the fence paid £2,000 towards it, so we put £2,000 on the Estimates. Then £1,000 remains for the Government to pay as their contribution towards the erection of rabbit-proof fences in the infested districts, which we have to pay if our lands adjoin private lands.
4471. What about land agents, appraisers, and others? Those are what we call land agents; there are some who do not get anything from us at all.
4472. But the others are paid pretty high salaries? Yes.
4473. Albury for instance, £325? Of course some of them have a tremendous amount of work to do.
4474. Are they authorised to sell selections? They are authorised to accept on every Thursday an application for a selection; they do not sell it.
4475. Which application they transmit to—? To the chairman of the local Land Board, and they send a copy of the description to the head office, which is entered in our registers every week.
4476. And the final decision upon that application? That has to go to the Land Board, and has to be dealt with.
4477. Are these offices open only on Thursdays? They are open every day, but Thursday is the day the public can make applications for conditional purchases; then there are other things they can apply for only on a Wednesday. Their work is divided over a whole week. They have to answer any inquiries that may be made as to what land is available.
4478. The chief inspector, who is at the head of the subsection, is he resident in Sydney? Yes.
4479. And travels occasionally? Wherever the Under Secretary wants him to go.
4480. What is his allowance? That is all he gets—£605, and his allowance under the new system is 15s. a day, besides what the bare expenses of his coach fare may be. Then there is the inspector of local Land Board and District Survey Offices; at present that is vacant. It is intended to be filled up, but we are waiting until Mr. Houston comes back.
4481. The relieving officers; who are relieved? Where land agents are taken ill, or want leave of absence, or when a man is being shifted, the relieving officers take their places. They are really land agents, and have the whole work at their fingers' ends. The inspector of land offices is almost always in the country, and has a travelling allowance. He goes to one place for about a week or ten days, and off he goes again. Very often he is away for five months at a time.
4482. That is a large item of £10,000 under the heading of contingencies? If the law could be altered so as to allow the members of the local Land Boards to be taken from among the people who live in the places where the Land Boards hold their meetings we could do away with a large proportion of that sum.
4483. Is it your opinion that the expenses of the inspectors of conditional purchases could be considerably curtailed? No; we have reduced them to the extent of £50 a year; they used to get £350, and we cut them down to £300, and 10 per cent. reduction off all sums above £200, brought it to £290.
4484. But with respect to their travelling expenses? I don't think you could do it any cheaper; we have tried to do it as economically as possible. A case came in to-day which I may cite. A man who was away for four weeks sent in a claim for £6, being at the rate of 30s. a week, but under the new arrangement, as determined on by the Governor and the Executive Council, we shall have to pay him 9s. 4½d. per day.

day. Here is another case of a man, a draftsman from Maitland, who was sent up to Tamworth for three months. Under the old system we would have allowed him 10s. a day for two weeks, and 30s. a week afterwards, but under the new arrangement we shall have to give him 12s. 6d. a day for the first ten days, and 9s. 4d. afterwards. We shall have to pay more than we used to pay in by-gone times.

4485. *Mr. Storey.*] Coming back to the head office, am I right in saying that the duties of all the seventy-five clerks are clerical? Yes.

4486. And you have satisfied yourself that their time is fully occupied;—there is a popular impression that they rush away at 4 o'clock? I am perfectly satisfied that is not true. Somewhere about twenty-five minutes past 4 they will begin to go out, but not before. The railway tram leaves at 4'30, and they make a rush to catch that.

4487. You keep an attendance-book? Yes, and every man that is away more than twenty minutes late in the month, or goes too soon, has to make it up. We have a return furnished by every head of a branch every month, and any clerk who is twenty minutes late in the month has to make up the time.

4488. What check have you over the seventy-five clerks that they cannot leave their offices on private business during the day? No clerk is allowed to leave unless he gets permission from the head of the branch.

4489. How many rooms do the head of the branch have control over? There is a head of the branch in each room.

4490. Would it not have been better if you had had larger rooms, and the clerks had been more under complete supervision instead of being shut up in these small rooms? The Colonial Architect made the building for the sake of appearance and not for the clerks, and there is an immense amount of room lost in the corridors and the little balconies. We really have not the rooms to enable us to exercise complete supervision. We endeavour to have the clerks as much as possible under the supervision of the head of the room.

4491. Have there been any complaints at all about clerks being absent from the office? I have not heard any.

4492. Do you prepare the estimates for the salaries of these gentlemen? The estimates come to me from the accountant.

4493. Do you fix the salary for any particular office, or is the salary for the man? The salaries were fixed by the Board of Inquiry held here, of which Mr. Houston was one of the members.

4494. That was in 1892? Yes; they fixed the salaries, and nobody interfered with them since.

4495. Have you any idea what standard he took at that time? I cannot say. They examined everybody in the office and fixed what they considered to be a fair equivalent for the service performed by each man.

4496. What length of service would men have who are getting (say) £350? From fifteen to twenty years, I think.

4497. What do you start with? A great many begin at the bottom at £100.

4498. What do the juniors start with? The probationers come in at £50, and at the end of two years they get £75, and then £100.

4499. Is it not at the end of six months they get £75? No. The first lot only got it a few months ago. I think they were there for two years before they got it, although it was intended they should get it at the end of a year.

4500. You say Mr. Carruthers proposes to put the temporary clerks on the staff? He wants to put the best of them on, and a Board has been inquiring into the qualifications of each one of the temporary clerks. It has a recommendation to make to Mr. Carruthers on the subject. Some sixty or seventy are not recommended to be put on the staff; that is taking in the Survey Office also.

4501. What is to be done with these? They will remain on the temporary staff. The temporary staff can be dispensed with at any time, as they are only appointed for two years, in accordance with the Civil Service Act. At the end of every two years we have to get the authority of the Governor and the Executive to employ them again; but you can get rid of them at any time.

4502. Is that ever done, asking for permission to employ them again after two years? Every two years it is done. We are doing it now. The Auditor-General will not pay them unless we do it.

4503. What system have you of leave of absence? Every man is entitled to three weeks' leave in the course of the year.

4504. Do they all avail themselves of it? No.

4505. Cannot they claim it; do you not recognise their claim? They have a right to it, and if we can spare them we always grant the leave. For myself, since 1876, I have not had more than three weeks altogether.

4506. Is not this leave of absence business a great tax on the department? Generally the clerks in a branch combine to do the work of the man who is absent, knowing that when they go away for their leave he will assist with their work.

4507. Does not the same thing apply up the country? Oh, yes; they get leave, and generally try to do the work in the office; if they will not do it we cannot give them leave. Either the district surveyor or the Chairman recommends a man for leave, saying that arrangements can be made to let him go.

4508. I understood you to say that one of your clerks was principally engaged with promotions and leaves of absence? Well, he has to deal with all the ministerial cases, of which there is a tremendous lot. There are promotions, leaves of absence, regulations under the law, and appointments of land agents. Some of our officers are also clerks of petty sessions, and the Justice Department is shifting them every month, which causes us no end of trouble.

4509. Are the clerks in the local Land Board under your control in any way? They are more immediately under the control of the chairman of the Land Board, and if there is anything wrong he at once reports it at the head office, and we call on the man to explain, or if he has misbehaved himself very seriously we suspend him, and refer the matter to the Executive.

4510. The alterations in 1884 of appointing the Land Board have not resulted in any saving to the country, or have they tended to work the business of the country in a better way? No.

4511. What is your opinion in reference to the salaries of the chairmen of the local Land Board;—do you not consider them extraordinarily high? I think they are rather high.

4512. Is there any particular reason why the salaries were fixed so high? It was merely thought that as the Chairmen occupied a kind of judicial position they ought to be well paid. They are just like judges in their little courts, and they have a constable to call order.

F. H. Wilson,
Esq.

5 Feb., 1895.

- F. H. Wilson, Esq.
5 Feb., 1895.
4513. Take a fairly busy district, Wagga Wagga for example;—of your own knowledge, how many days a year would the chairman of that Board be really actively employed? I know the chairman at Wagga Wagga has a lot to do. In 1893 there were altogether 673 courts held by the chairman, occupying 1,449 days, being an average of about two and a-half days to a court, and there were 33,000 cases dealt with.
4514. These cases would require some judicial handling, would they not? Yes, it is all on oath. They ask a man if he has resided on a selection, he swears he has, and they put an inspector in the box who swears he has not, and perhaps brings evidence to show that he has not, or *vice versa*, as the case may be.
4515. These gentlemen who are appointed as chairmen to the Land Board, were they not officers holding positions in Sydney? Yes; all of them; many of them were heads of branches in the Survey Branch.
4516. Some of the land agents are very well paid, and some do not appear to get much? Their salaries are fixed according to the amount of work they have to do.
4517. There are eleven at £50; I suppose they have some other occupation? They are clerks of petty sessions as a rule, who have very little to do as land agents.
4518. Are there any offices that could be amalgamated with that of the land agents? I do not know that there are. We have great trouble sometimes in the case where a man who is both police magistrate and clerk of petty sessions is appointed to the position of land agent. He may be summoned to some distant place, perhaps he may be a Coroner, and so the Land Office must be shut up, unless he telegraphs and gets permission for the constable to attend while he is absent. We find also, when Quarter Sessions are being held, that the clerk of petty sessions, who also fills the position of land agent, may have to attend to the criminal cases, and so the work of the Land Office has to remain in abeyance. Our men might do some forest inspecting, but I am afraid the Mines Department would not agree to it, as they say sometimes that our men will not recommend certain land to be proclaimed forest reserves. When the Mines Department want a particular portion of land declared a forest reserve our surveyor has to meet the forest ranger, so that the two may come to a decision on the ground, and not give two adverse opinions to the different departments.
4519. As far as the office of the local Land Board in Sydney is concerned is there any suggestion you could make by which a saving could be made? I do not think so. In the travelling expenses I think there could be a large saving, and in the next item, the President and the members of the Land Appeal Court. The Court might be got rid of and the work done by a District Court Judge; that is my opinion, and that would save £4,000 a year at once. Of course you would have to keep the officers, but you would save all the travelling expenses and £4,000.
4520. What are the duties of the Court? The Court only deals with cases that come by appeal from the Land Board, or are sent by the Minister on some legal point. They have had a lot of work to do, but it has now nearly come to an end. Mr. Oliver can go away for a couple of months.
4521. Under the heading of Survey of Lands, would you be able to speak about that matter? I think it would be better if you had the chief surveyor, Mr. Twynam.
4522. Is it more immediately under him? It is immediately under him. I have here, for the information of the Commission, a statement of the expenditure of the Department of Lands from 1886 to 1894 included, showing how our expenditure has gradually come down, and also a statement of the land revenue for the same time. [*Return handed in.*]
4523. *Mr. Robertson.*] With regard to the Land Boards, are the chairmen all surveyors? No.
4524. How many of them are not surveyors? Those at Goulburn, Orange, Sydney, Forbes, Wagga Wagga, Bourke, Hay, and Tamworth are not, and those at Grafton, Maitland, Dubbo, Moree, Armidale, and Cooma are. Mr. Finch was head of one of the Charting Divisions in the Lands Office, Mr. Harriott was head of the Occupation Branch, Mr. Edwards used to be a land agent, and afterwards was an inspector, Mr. Watt was head of the Charting Branch, Mr. Thompson used to be a clerk in the head office, Mr. Trollope was an inspector of conditional purchases, and Mr. Freeman was head of the Charting Branch in the head office.
4525. These chairmen who are not surveyors, are they qualified to inspect the leases and make surveys? No; but they have nothing to do with the surveys. What the chairman does is to instruct the surveyor. When an application comes in and goes to the chairman he sends it off to the surveyor to see whether the land is available, and if the land is available the surveyor has to survey it or order it to be surveyed. The chairman does nothing with the survey, even if he is a surveyor. He instructs the district surveyor to do all that work, so it does not make any difference whether he is a surveyor or not. The chairman's work is judicial. A great many of the chairmen have been heads of the Charting Branches here, and have had to deal with surveys for a great many years. In the olden times they used to be able to tell whether mistakes had been made. They really knew as much about surveys as surveyors themselves. They had very great technical knowledge of surveying. If they had not had this knowledge they could not have done as they did as heads of the Charting Branches.
4526. Are not the district surveyors men of considerable ability and integrity? Yes.
4527. And would not the chairmen of the Land Board be influenced very largely, if not almost entirely, by the advice tendered by the district surveyor? I suppose he would, in the same way that the Minister is influenced by the advice given by his Under Secretary.
4528. Do you not think that the district surveyor could undertake the duties of the chairman of the Land Board? On two or three occasions we carried out that idea by appointing district surveyors to vacant chairmanships. Mr. Betts at Cooma succeeded Mr. Conder. Mr. M'Master, at Moree, was district surveyor, and became chairman, and Mr. Finley, who was district surveyor at Armidale, became chairman. We have endeavoured to do that wherever vacancies have arisen. We really believe that is the best thing to do. But even these chairmen have their district surveyors, who make the surveys.
4529. Is it, in your opinion, necessary to have two colleagues—what do you call them, Boards of Advice—the members of the local Land Board? No. There have been several cases where the two members of the Board have gone against the chairman, and the cases have come down to Sydney with the chairman dissenting.

THURSDAY, 8 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Francis Henry Wilson, Esq., Acting Under Secretary for Lands, further examined:—

4530. *Mr. Robertson.*] Is it necessary in your opinion for the Chairman of a Land Board to have two colleagues as at present? No. F. H. Wilson,
Esq.
4531. Then economy could be effected by dispensing with these officers? I think so, but of course you would have to amend the Land Act to do it. 8 Feb., 1895.
4532. In what way would there be a saving? There would be the saving of fees and travelling expenses.
4533. Can you give us an idea how much that would be? Roughly speaking, there would be a saving of about £7,000.
4534. With regard to detail surveys, could not these be conducted by the district surveyors? There is almost work enough for one surveyor to look after the whole of these. You would have to take a district surveyor away from his own work in order to look after a survey of this kind; it requires constant attention.
4535. But if a district surveyor were on the spot could he not give the necessary supervision? They are very seldom on the spot.
4536. Is not that practically the work of the district surveyors? It is always handed over to a special surveyor to do. He is under the chief surveyor. The chief surveyor, who is also the district surveyor in Sydney, has this surveyor, Mr. Maitland and his staff, immediately under him.
4537. But where a survey is being made of some town in which there is a district surveyor, you still send members of this special staff? We send members of this staff, as district surveyors have no surveyors to put on to the work.
4538. But is it not work for which they have been duly trained and qualified? It is more particular work perhaps than any we have, that and the trigonometrical survey.
4539. Could not any of your district surveyors undertake this particular work? I dare say they could, but they have no time.
4540. With regard to the disposal of lands stated to be infested with prickly-pears, do they come under your department? Not now. Some years ago when the Forest Branch was first under the Mines Department, the Secretary for Mines brought in a Bill for the eradication of the prickly-pear. I do not know why they did it, but it was always believed they had not enough work to do in the Mines Department in those days. Then the Forest Branch and the Prickly-pear Branch, which was supposed to be attached to it, were transferred to this department. Some few years ago, without any notice being given to this department at all, Sir Henry Parkes had an Executive Minute prepared removing the Forest Branch and the Prickly-pear Branch to the Colonial Secretary's Office, and he then appointed Mr. Ednie Brown to be chief of the Forest Department; and about two years ago the Forest Branch was transferred back to the Mines Department.
4541. Should not these branches be connected with the Lands Department? I think so; but they were removed by the Minister for the time being, and, of course, we can say nothing about it.
4542. When application is made with regard to this prickly-pear land, does not the Mines Department refer to you? No; we have nothing to do with it, except that they get our maps to see whether the land is vacant.
4543. Still then they have to refer to you? In that way, yes; they have to ascertain whether the land is vacant or a reserve.
4544. Could you say whether any saving would be effected by bringing the question back to your department? Of course there would be the saving of the constant traffic to and from between this department and the Mines.
4545. Will you explain to the Commission how the leases of the prickly-pear land are effected, and how they are affected by application for conditional leases? The prickly-pear leases are dealt with entirely by the Mines Department, so we do not know anything about what they do. We have annual leases with a yearly tenure, leases of inferior lands going up to twenty years, residential leases up to fifteen years (they are for miners), scrub leases with a tenure up to twenty-one years, snow leases up to seven years (that is the land up on the Snowy Mountains), special leases up to fifteen years, pastoral leases and homestead leases up to fifteen or twenty-one years, and occupation licenses. Counting from 1885, the pastoral leases in the Central Division have ten years tenure, with a possible extension of five years further; and in the Western Division they have twenty-one years tenure, from the division of the run in 1885, with a possible extension of seven years more. Those are all the leases we have of Crown lands. Conditional leases are attached to, and considered to be part of, a conditional purchase; because if a man takes up a conditional purchase he is allowed three times the area of it up to 1,280 acres in all in the Eastern Division, and 2,560 acres in all in the Central Division. He can take the whole of a conditional lease up at any time as a conditional purchase if he likes.
4546. Do you not think that all Crown lands should be dealt with through the Lands Office? I do.
4547. Are there any other anomalies of this kind you could point out? Not that I know of.
4548. Under what department are the Botanic Gardens? At present that happens to be a matter in dispute. Some years ago we considered they were wholly under the Department of Lands; but when Sir Alexander Stuart was Premier he proposed to place them under the control of the Colonial Secretary, and, I believe, had an Executive Minute prepared to that effect. Ever since that time the Colonial Secretary has dealt with the Botanic Gardens in his department, but I believe Mr. Bruncker is going to introduce a Bill to settle who is to have charge of them.
4549. At present they are not under your department? No.
4550. Do you not think they ought to be? We always used to think that the Park was under us, but as to the Botanic Gardens we do not know whether they should be under us or not.
4551. Can you make any suggestion to the Commission for the amalgamation of offices in the country districts by which economy could be effected? I do not know how we can effect further economy. If the Forest Branch were put under us again we might do the forest rangers' work.

- F. H. Wilson, Esq.
8 Feb., 1895.
4552. What about the agents for the sale of Crown lands? I do not think we can do anything more with them.
4553. But already a great many—most of the agents in fact—are acting clerks of petty sessions? Yes; most of them.
4554. Could not the district surveyors perform all the duties that are now being discharged by the chairmen of the Land Board? I do not think so. I have made inquiries as to what the district surveyors do with regard to the Land Board. The only thing they do is, when an application comes to them, to look in their maps and direct their surveyor, who may be in the neighbourhood concerned, to make the survey if there is no objection. The district surveyor never appears again in the matter, except to report that the survey has been made, unless it should turn out that there are some valuable Crown improvements on the land, in which case the district surveyor generally appears before the Board to give evidence as to their value, so that the Board may be able to determine how much the selector has to pay for the improvements. The chairman of the Land Board is a judicial officer.
4555. What are his duties? The applicant is summoned by the chairman to attend the meeting. He comes before the chairman and members of the Board to prove his *bond fides*, and then he is informed that the land is available and that he can enter into possession. Then the chairman instructs the inspector at the end of three months, or a little later, to visit the selection to see whether the man is residing on it, and whether he is improving it. If it comes to the knowledge of the chairman that he is not residing on it, he sends the inspector to report on the matter. There were fourteen chairmen in 1893, and they dealt with 33,000 cases at the different courts. A chairman holds one court in this town, and goes off perhaps 30 miles to hold another court. He holds the courts as much as possible in the centre of the groups of selections. That takes up almost all his time.
4556. If the district surveyor were granted the assistance that would be required in the event of his undertaking the duties that are now discharged by the chairman, could not the work be done satisfactorily? That plan has been tried, but it has not been a success. We tried it in two or three places, and found it would not answer.
4557. *President.*] There are a number of draftsmen at different places—fourteen, I see? There are fourteen district surveyors, and each district surveyor has a staff of his own. There is a draftsman in charge, and on an average there are about six draftsmen to each district survey office.
4558. These draftsmen are paid very ample salaries; are they men requiring much technical or scientific knowledge; are they responsible, for instance, in defining the sections and portions of land in the districts where they are located? The plans, when they come in, pass through the hands of the different draftsmen. The higher officers are men of great technical knowledge, and they are able to see whether the survey is a correct one. They have to check the area of every selection, after the surveyor sends the plan in, to see whether it is right. After the plan has been passed it has to be transferred to the parish map and the county map in order to show that that land is not available for anybody else. When the application is first received this is done in pencil on the maps, but the survey, when it has been received, is charted on the parish map and the county map. There is also noted on the map what conditional purchase it is, the number of the portion, and any other information which it is necessary to note.
4559. Has it ever been found that the charting or sketching has been so inaccurate that a certain portion has been made to overlap another? Not in late years, I think; but in the old surveys there is a good deal of overlapping. The old surveys were very badly done. I myself know of instances where a block of 640 acres has only one marked tree in the whole length of line. Now they are very particular, and insist on everything being correctly charted.
4560. But you require intelligent, skilful men in that position, and that is why they are so well paid? That is so; and the qualifications of each of these draftsmen were inquired into by the second Board that went out, and they fixed their salaries according to their qualifications.
4561. Would local government diminish your work to a very large extent? I have never seen the Local Government Bill so I cannot tell.
4562. Looking at the question broadly, there would be certain portions of land in the country that would be taken under local management; the Government would be relieved, we would say, of the parks and public cemeteries;—all the parks at a distance from Sydney would be taken charge of by the local authorities, would they not? Well, we have very little to do with the parks. We appoint trustees for them, and hand over to them the parks to look after when we have measured them or dedicated them. All that we do then is to make a small grant out of the total sum voted for the improvement of parks. It is a mere matter of account-keeping with us. The accountant takes the list to the Minister, who allots so much to each park. Formerly we used to give large sums, but it has been reduced to £20 or £50.
4563. But the parks require looking after? They are all in the hands of trustees.
4564. The trustees have the management of the parks, and are responsible for the disbursement of the money? Yes; and they have to satisfy the Auditor-General that they have disbursed the money received from the Government according to law; in fact, till they furnish us with a voucher from the Auditor-General, or till we know from him that the accounts have been adjusted for last year, we will not give any money for this.
4565. You have a great many draftsmen in this building under your control under the heading "Survey of Lands," page 82 of the Estimates;—are these men all constantly employed? Every one of them.
4566. Each room, I believe, is under the control of the head draftsman? Yes; sometimes one draftsman may have two rooms, but then he has a sub. to look after the other room.
4567. Part of his duties is to see that all those under him are always properly occupied? Yes. For instance, the chief draftsman has the supervision of the work in the whole of the branches of the Survey Office in the main building—that is, the Miscellaneous Charting Branch, the Miscellaneous Compiling Branch, the Parish Map Compiling Branch, the Lithographic and Printing Branch, the Miscellaneous Contract Branch, the Occupation Drafting Branch, the Plan Sales Branch, the Plan Records Branch, the Plan Mounting Branch, and the Roads Branch. He has to deal with all the submissions from the chief surveyor to the Under Secretary, and he is responsible to the chief surveyor for all the work done in all the branches. Then there is Mr. Stopps, in charge of the Roads Branch, who has seventeen officers under him. They deal with all the applications for surveys of roads, surveyors' reports, road plans, alignment plans, applications for public gates, applications for the purchase of unnecessary roads, and objections and claims

claims in respect to the same. Then we have the officer-in-charge of the Lithographic and Printing Branch, who has twenty officers under him. During 1893 the Lithographic Branch printed 3,300 copies of county maps, 5,950 copies of town maps, 29,921 parish maps, 23,334 plans of auction sales, 17,045 copies of miscellaneous plans, 68,120 maps for other departments, and they also lithographed 67,525 official forms for the Survey Office. Then we have others. We have one draftsman at £371, Mr. McMinn, the officer-in-charge of the Occupation Drafting Branch, who deals with the charting of all lands held under lease throughout the Colony, and miscellaneous returns. He has ten officers. Then there are three officers at £358, Mr. Vautin, Mr. Ireland, and Mr. R. McLean. They are in charge of the Miscellaneous Compiling Branch, the Parish Maps Compiling Branch, and the Miscellaneous Charting, having twenty-three, and twenty-six officers under them respectively.

F. H. Wilson,
Esq.
8 Feb., 1895.

4568. Can you see ahead of the present time so far as to fix about the time when a considerable portion of the work that is done in the Lands Department would as a matter of course be disposed of, and less clerical and other work required in the department? When the Act of 1884 came in we were under the impression that the work would fall off, and we looked forward to be able to reduce the amount of work in the department in ten years, but it has absolutely increased. We have more work to do than ever we had in the head office, and we have had a large number of men removed, dismissed, and sent to the country.

4569. Does that arise from the increase of the number of selections? Not only from an increase in the number of selections but all the papers have eventually to come to this office. The local Land Board may recommend the forfeiture of a conditional purchase, and yet, under an Act lately passed, the Minister can, if he thinks fit, waive that forfeiture on certain conditions. Many of the advantages of the Land Board are thus done away with. We certainly get the Boards to take evidence, but it rests with the Minister whether he will carry out their recommendation or not. So there is absolutely more work now than ten years ago.

4570. Do you consider that want of finality in the payment for selections is the cause of a great deal of work? Yes; we had over 4,000 applications for extension of time in the payments on conditional purchases last year, really owing to the bad times, floods, or drought, and the Minister in almost every case had to grant the application. That gives a large amount of work to the officers of the Department. A Member of Parliament called on me to-day to say he wishes to see the Minister to-morrow to ask that ten or twelve homestead leases in the Western Division may not be declared forfeited. He says the men cannot pay, that the wool only fetched 2½d. or 3d. per lb., and almost the whole of the receipts were swallowed up in the expenses of bringing it to town. These lessees represent some 120,000 acres of land in the Western Division.

4571. In the Contingencies, page 85, the fees to licensed surveyors for the year 1894 are stated to be £90,000, but for the six months to the 30th June, 1895, they are put down as £25,000? The Minister was under the impression that a large area of the Central Division leases would have expired in July next, and that, therefore, he might have to put on a lot of surveyors to survey the land; but the Supreme Court decided that the lessees were entitled to extension of their leases, and, therefore, there are very few areas on which you can employ the surveyors.

4572. You have diminished the amount? We have put it at £25,000, but it will not come to that. That sum was only to provide for what might have happened if there had been extension of leases, because it was thought there might have been some millions of acres more open to selection in July next than there will be.

4573. Taking generally the rate of remuneration to the Civil Servants who are employed as draftsmen, or to the district surveyors and other surveyors, the draftsmen in charge in the different heads, and also to their assistants, do you not consider that these rates of remuneration are very liberal? I can only say what I said before, that they were fixed by a board consisting of Mr. Houston, Mr. McDonald, the present district surveyor at Armidale, and Mr. Conder, who was chairman of the Land Board at Cooma, and who laid out the trigonometrical base line at Windsor. These three officers held a technical examination of every man, and it was on their report that these rates were fixed; of course they have since been reduced by 10 per cent. off all sums above £200.

4574. With all respect to the opinions of these gentlemen, we must not forget that in boom times there is room for the exercise of more liberality than in ordinary or dull times, and seeing that the cost of living, house-rent, clothing, and other things is so very much reduced, that the income of the Colony has suffered most severely with the bad times, and that every section of the community engaged in business is getting very little in spite of all the exertions it can employ, I think it is only reasonable that the officers in the service of the Government should share, along with their fellows, the infliction of some diminution of their income; at any rate, as things are now, the country is not able to support the expenditure on the scale that has been in existence for some considerable time, and we are put here to point out to the Government wherever it is possible to make a reduction? I do not know what reductions could be made. An attempt was made in Parliament at the instance of Mr. Miller to reduce the district surveyors by £100 a year each, but the Government restored the amounts on the Supplementary Estimates.

4575. We find that almost all the departments draw comparisons between themselves and other departments, but that is altogether an ideal basis? We have always this to say in the Department of Lands, that we have been reduced. I myself have been reduced twice, besides the 10 per cent. With every Board that came, somehow I was one that came to grief. The first Board cut me down by £50, because they said I was no longer Registrar of the Appeal Court; Mr. Garrett cut me down £25 more, and afterwards there was the 10 per cent. reduction. At one time I was getting £750 a year, now I am getting only £605. A great many of the officers in the department have suffered in the same way, so it would be utterly impossible for me to say how further reductions could be made. I could not say what standard you could fix in dealing with the draftsmen.

4576. Is it your opinion that there could be classification in the duties that are performed by the officers in your department—that there could be, for example, four classes in the general staff, without of course touching the heads of departments and superior officers; could there be (say) a class A which would contain clerks able to do work of an inferior description, but not qualified to go into a higher grade, the salary for which would be fixed at a certain maximum, and could not be increased because of length of service on the part of the clerks? That was the system adopted when the Civil Service Act was first introduced.

4577.

F. H. Wilson, 4577. But it has been dispensed with? Yes, I know.

Esq.
8 Feb., 1895. 4578. The second class would be a stage higher with a higher maximum salary, but the duties of clerks in that class would not require the exercise of very superior ability; then there would be a third class of a still higher grade, and, say, a fourth class, to which the best men could aspire; but there would be no increments of salary beyond the amount fixed in each of these classes. We find in many departments of the service that there are men who, through seniority and by the retirement of officers above them, have been pushed up into positions which they are quite unfit to fill; while there are men of much greater ability that are junior to them, but who cannot get into the positions that their capacity fits them for because these inferior men stand in the way? The system adopted in our department is this: When a vacancy occurs, we ascertain whether the next man below is possessed of sufficient qualifications to fill the vacancy; but if not, and there is a better man below him, we give the position to the better man. There would be no difficulty that I could see in dividing the whole staff into four or five classes; of course there would have to be some above the highest class, such as the Under Secretary or very superior officers, but as regards the general bulk of the clerks there would be no objection to their being classified into four or five sections.

4579. And you think in time it would work well? I am certain it would. It would be adopting the old system of the Civil Service Act, only without the increment.

4580. Then any of the officers who showed special ability and vigour of intellect could be selected for the superior positions? They are picked now; I know Mr. Houston has been very particular always to investigate every man's claims, and the character he holds.

4581. With regard to appointments, instead of the present system do you think a Board of Commissioners, specially set apart and all experienced men, with at least one of their number practically acquainted with the Government Service, should be appointed to make all recommendations for appointment, dispensing altogether with Ministerial and political influence? The only appointment we have had under the present Minister has been that of one probationer. Mr. Copeland only made, I think, two or three temporary officers permanent, and the other appointments were only temporary ones.

4582. I was wanting your opinion? I think it would be a good thing to take the matter out of the hands of Ministers generally.

4583. And get rid of political influence? Yes.

4584. *Mr. Humphery.*] Have you with you, and, if not, will you prepare, a return of all the officers and persons employed by the Lands Department, specifying the duties performed by each, and the salary of each, showing also the total remuneration where more than one office is held, and all fees and allowances of every description in addition to salary? Yes; it is being prepared now, with the addition of the age of each one and the length of service. [*Return subsequently handed in.*]

4585. What are the duties of the chief inspector? The chief inspector's work at the present is almost that of Assistant Under Secretary. He has attended the Minister on the new Land Bill, and I can assure you that has been no easy job. During that time I have been doing all his work, or a great deal of it. He looks after recommendations for leave; in fact all the papers of the department have to go through his hands before they come to me; this work is multifarious.

4586. The next position is that of inspector of local Land Board and district survey offices, for which there is a salary of £470;—is that officer's time fully occupied? There is no appointment made.

4587. That is vacant? It has been vacant about nine months.

4588. In your opinion is it necessary? I think it could be done away with.

4589. In that case how would the duties be performed? The chief inspector might do the work on the return of the Under Secretary to the office.

4590. Do the land agents keep registers showing the instalments paid by selectors? Yes.

4591. Does each selector's account show every amount paid by him on account of his selection? Yes.

4592. Are you aware that similar information to that contained in the Treasury registers with regard to selections is contained in the books of the Auditor-General, and is this duplication necessary? I believe that similar information is contained in the books of the Auditor-General, but I do not think the duplication necessary, unless a fire should take place in the Treasury, and then we could fall back on the local land agent for the information.

4593. *President.*] You do not receive any money in this department? We receive a little by post. Last year we received, I think, £20,000, but you cannot stop it. We tell people not to send money to the Lands Office, but they will do so. When the letters come in of a morning all the money letters are entered in a book by the two openers of letters, who are locked up in a room while the sorting of the letters takes place. The cheques and all papers connected with them are taken up to the accountant, who sends them to the Treasury, from whom we get a receipt in our book.

4594. In the case of a selector not paying his instalment on a proper date, does the local land agent send him notice, or do you? The land agent sends first notices, and we usually send a final notice before we are going to non-forfeit.

4595. But the local land agent? The local land agent sends a notice to begin with.

4596. Is it an invariable rule? Yes, he sends them.

4597. Does the inspector of land offices inspect the books? Every book.

4598. And ascertains whether all moneys have been duly accounted for? No; the Treasury look after the money, and our inspector looks through the books to see that every entry is correct; that the hour at which the application for land is received is properly entered in the book; that the man's name is correctly spelled, and, in fact, he looks after every technical point.

4599. But the Treasury inspector only concerns himself with the money? He sees what money the man has received, what he received it for, and whether he has accounted for it.

4600. How do you arrange the payment of your salaries? The accountant has to do that. Generally the accountant, the assistant accountant, and the examiner of accounts here have to initial the vouchers, which are then sent by the Under Secretary up to the Treasury.

4601. Who signs the cheques? The cheques are signed by the accountant, and countersigned by the assistant accountant.

4602. The cheques are given to the officers? Yes, who signs the salary abstract, as we call it.

4603. On your first attendance you gave us evidence about the expenses of the travelling Land Board—I see the amount put down in the contingencies column for the half-year is £10,000—there will be a very considerable

- considerable saving effected in that? If the Land Board were reduced that would be one very large item.
4604. Even the fees to licensed surveyors, £50,000, have been reduced considerably? It was £90,000 voted for 1894, but we have put it down at only £25,000, as I explained to you.
4605. You do not think that would be capable of still further reduction? It is one of those things you have to put on the Estimates, but you only pay what amount is earned by the surveyors. They get so much for each portion they measure, according to the length of the lines; of course if there is a small amount of surveying so much of that will be saved.
4606. *Mr. Humphery.*] The district surveyor has a scale of fees? Yes.
4607. *President.*] They are paid by fees? Yes, the licensed surveyors are, and the fees are according to the work they do.
4608. Which is carefully checked, I suppose? Yes, by the district surveyor. A great many of them, if it is a large survey, do it by contract. They are called on to send in a tender, and they do the work for something less than what our schedule rates are.
4609. There are four altogether, I see, who get over £1,000? One of those licensed surveyors received £2,300 a year some few years ago. If a man gets into a good district he has plenty to do.

F. H. Wilson,
Esq.
8 Feb., 1895.

TUESDAY, 12 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Edward Twynam, Esq., Chief Surveyor, Metropolitan District Surveyor, and Director of the Trigonometrical Survey, sworn and examined:—

4610. *President.*] You have control of the sub-department of the Survey of Lands? Only so far as regards the particular branches under my control. As district surveyor, I have charge of the surveyors who are employed in the Metropolitan district; in the trigonometrical survey, of those who are employed on the work, and as chief surveyor I am the professional adviser of the Minister for Lands. As to the office here, I am considered to be the professional head of the office staff—the draftsmen.
4611. And also of the surveyors? In the Metropolitan Land Board District and the trigonometrical surveyors.
4612. Have you any control over the surveyors who go into the country? I have no control over them.
4613. Who is their head? The district surveyors in the various districts where they are employed, and the Under Secretary, of course.
4614. Then who is the head of all these district surveyors? The Under Secretary, I apprehend.
4615. Not through you? I am not the head. The duties of the Surveyor-General's Office have altogether been abolished and altered. I was appointed Acting Surveyor-General in 1887, and after that the office of Surveyor-General was abolished by the Cabinet, and I was created chief surveyor, with certain duties attached to the office, as I have already explained to you.
4616. On page 106 of the Blue Book for 1893 there are a great many draftsmen;—are all these under your control? Yes, to a certain extent; that is to say, I am held to be the professional head of this office, but that is all.
4617. Then who superintends the proper performance of their duties? The chief draftsman.
4618. But he is your second in command? Yes, he is.
4619. What is the routine of your own special duties? As chief surveyor, all matters connected with disputes over land come before me—disputes touching boundaries to land or claims to land. All cases where claims are made by surveyors for payment which may be disputed as not being in accordance with the regulations I have to advise upon, also upon all promotions to the office staff. I am considered to be the head of the professional branch of the department in Sydney in this office; therefore the draftsmen are under me to a certain extent. I have to be answerable for their work to a certain extent, but the Under Secretary is virtually the head of the department under the present arrangements.
4620. Supposing that a report should come to the chief draftsman of a dereliction of duty on the part of any draftsman of the staff, would he decide on that matter or would he refer it to you? He should refer to me, and, as a general rule, I believe he does.
4621. And do you decide—are you the ultimate? No, I am not; I have to submit the case.
4622. Do you invariably carry it on to the Under Secretary? Always; I am not aware of any instance to the contrary.
4623. Do you make a report at stated periods to the Under Secretary of the working of your department? I have here the annual report of the department for 1893, which contains my report; the one for 1894 is not printed yet, although it is ready for printing.
4624. Do you take any part in recommending increases of salary to the officers? In this office, yes.
4625. Do you see the Estimates? As to the draftsmen of this office, but not with regard to the surveyors in the country.
4626. Your views are taken as to the desirableness of increasing their emoluments? Yes.
4627. Or as to dismissing an officer in case he should commit a dereliction of duty? Yes.
- 4628-9. I suppose you are very nearly the eldest officer in this department? I think I am; I was appointed in 1855.
4630. In the fifties there were two appointed; in the sixties, five; in the seventies, fifty-four; and in the eighties, nine; that is, more than two-thirds of the number were appointed in the seventies;—now seeing that you have something to say in the matter of recommending the salaries of these gentlemen, can you give us an idea of the increments they get? I have nothing to say with regard to the adjustment of the salaries, that was all done by a Board of Inquiry which sat here during the year 1889. There was a Board in 1886 and another in 1889, and the salaries were all adjusted by the latter Board. It also defined the duties of each officer, and my own as well.
4631. So you cannot tell us the steps by which these officers arrived at the present stage of their salaries? No; I am not able to tell you. I was away for years in the country, and only came to Sydney in 1887. I was in charge of the Goulburn district for twenty-five years.

E. Twynam,
Esq.
12 Feb., 1895.

- E. Twyman, Esq.
12 Feb., 1895.
4632. After the chief draftsman, who receives £515, there is an array of draftsmen getting from £461 down to £175, there being an immense number at £245. We are here to endeavour to find out where economy can be exercised, and, looking at the rates of salaries paid to these officers, we are anxious to know whether some modification could not be reasonably made in their remuneration. Most of them are men who have been a considerable time in the Service; we might say two-thirds of them have been more than 20 years in the service; do you think, considering there must have been increments of remuneration from time to time, probably on account of seniority or something else, that some modification in the scale of remuneration could be exercised now? As I said to you just now these salaries were all adjusted by a Board after careful inquiry into the whole of the circumstances. I may point out that the chief draftsman's salary was fixed at £600, but he has never got it, which is an injustice to say the least of it. As to many of the highest salaried men you will find they have been in the department many years, over an average of a working lifetime, and their salaries to some extent accrued under the old Civil Service Act, in which if you remember there was a provision for increments. Of course, after many years good service in the department it would have been very hard and very arbitrary and unjust too to have cut down their salaries. If they were young men it would be different.
4633. Supposing some of these gentlemen were removed from their present position, or died, or resigned, or were superannuated, you would fill their places with officers at a very much less rate of remuneration, would you not? Probably there would be a diminution in the salaries. For instance, I hold that a good draftsman should not be worth (say) more than £400 a year; but I know several of them get more than that.
4634. Would that be a very superior man? That would be a high class man.
4635. Now, take a draftsman going into the position at a comparatively youthful age, not a genius, but one possessed of sufficient ability for the post, how much would he be worth? Of course you must take age into consideration. A young man will enter on a business and accept a reasonable salary to start with in the hope of being raised afterwards. An efficient draftsman should be paid at the rate of £200 a year when he starts, with the prospect of increases afterwards. That was about the rate paid in England when I was articled to my business.
4636. Do you look with favour on the establishment of classification in the Service; that is to say, would you consider it desirable to have, for example, four classes, the first, the lowermost, to be confined to juniors, the next a scale higher and better paid, the third still higher and better paid, and the fourth to be the best of the four, there being the possibility that men of unusual ability in the discharge of their duties would rise to superior offices? I think it would be preferable to the system of arbitrary increases. As things are now, the Minister will sometimes increase a salary by a half rate from one step to another. It would be better for everyone if there were such a classification, and if it were strictly adhered to.
4637. Where merit would have a chance of rising? Yes.
4638. And accompanied by that, do you consider that appointments to the Service would be better made by a Board of Commissioners who would be beyond political influence or influence of any kind except that which the merit of the applicants would cause? There are very few appointments made. The practice now is to accept probationers from the public schools. The headmaster of a school is asked whether there are a number of scholars fitted for employment. Those accepted are put on by the Minister as probationers, and then afterwards they must trust to their merits as to how they rise.
4639. They have all to pass the junior examination? Yes; in accordance with the requirements of the Civil Service Board.
4640. Do I understand that you have not found political influence an interference? There has not been an opportunity for any because ever since I have been here a gradual reduction of the staff has been going on, for the reason chiefly that the demand for land has fallen off so much that the necessity for survey has ceased also to a certain extent, and, consequently, we have had to reduce the staff as far as we could do so.
4641. Are the draftsmen put to work which is all of a homogeneous character; are the duties similar that each of them has to perform? No, they are not—not in the several branches of this office. For instance, there is the Compiling Branch in which the best draftsmen are employed, you may say. They are engaged in compiling maps and drawing. Then there is the Miscellaneous Charting Branch, in which a good deal of administrative business is done.
4642. Your best men would be employed in these branches? Our best men are employed on the best work—the compilation work—that is, the getting up of territorial maps. All our best men are there, and properly so, because that is where we want the best drawing done.
4643. Would you classify your men into sections, putting the best men at the most arduous work, and so on down to the common duties of a draftsman? I think it may be said that generally they are so classified, and that was done by the late Board of Inquiry, who went to the trouble of classifying all the branches, fixing those who were to be employed in it, and their salaries as well.
4644. Were they classified under letters of the alphabet? Oh, no.
4645. It was done in a practical way? Those who were considered best suited for any particular work were put into a particular branch.
4646. Do you think that, by having special platforms of classification, it would be an inducement to the officers to show their best ability through being able to rise from the lowest grade to the highest, instead of having a merely understood scale of gradation;—would you have the classification defined in classes A, B, C, and D, for instance? We are able to find out the capabilities of a man here as we go along, and so we place them.
4647. You practically do that, though you do not put them under specific numbers or letters? Quite so.
4648. Would you approve of that principle if it were established? The principle of classification by merit?
4649. Yes? That is what we do now, practically.
4650. On page 107 there is what I suppose you call the clerical staff, that is, the corresponding clerk and the clerks under him;—what are their duties? The chief clerk attends to the papers for me, records them, and gets information for me in the office to enable me to deal with the different matters; the other clerks are copying clerks, and attend to the writing of the books and the dispatching of letters.
4651. Engrossing letters that are drafted for them? Two of them do the copying for me.
4652. I see they are paid moderately,—Mr. Briscoe gets £267 10s., and the two below him get £207 4s.
and

and £200 respectively? I have advised frequently that Mr. Briscoe's salary should be increased, but it has not been increased. E. Twyman, Esq.

4653. Is he a good man? Very good indeed. He has a wide acquaintance with the whole office, and is able to find any information when it is wanted. He is a very useful man indeed in that way. 12 Feb., 1895.

4654. The number of office-keepers in the Lands Department seems to be very great? I really cannot tell you anything about them.

4655. You have a number of temporary clerks; are they all necessary in the Corresponding Branch—there are ten of them? There is a clerk attached to each branch, just to keep the record of plans received and issued and instructions received and issued. They are all juniors, I believe.

4656. The correspondence that you have to attend to is connected with the Survey Department, and is not general correspondence? We have no general correspondence at all; our correspondence all relates to survey, and as a general rule you may say that nine-tenths of it consists of reports from myself to the Under Secretary.

4657. What would be the nature of these reports? They would be on all possible subjects.

4658. Disputed matters or ordinary business? With regard to survey business generally; that is to say, disputes over land, trigonometrical survey work, and promotions in the office.

4659. Do you carefully register and report every communication you receive from outside and from everybody? I receive very little indeed from outside, inasmuch as the papers come to me through the Under Secretary. As district surveyor, I have to report to the Under Secretary all the business incidental to the Land Board District of Sydney.

4660. Is your correspondence with the Under Secretary bulky? I think, according to the report for 1893, there must have been 900 or 1,000 reports, of which not more than 200 I apprehend are merely formal endorsements. They are all my own reports, which have to go into the history of the various cases. You understand I have to advise on all professional matters, and these have a pretty wide scope in such a department as this, embracing as it does such a great lot of things.

4661. Temporary draftsmen and miscellaneous officers; there are forty-nine of them;—do they all belong to your department? Some of the temporary draftsmen do, and there is a Board now sitting in the office to consider the question of the transfer of all the temporary employes on to the permanent staff. Mr. Allworth, the district surveyor at Maitland, is the Chairman of the Board, and there are associated with him Mr. Palmer and the chief draftsman.

4662. Does that mean that these temporary draftsmen are all necessary to the department? They are all necessary now, and for some years to come we could employ a great many more on useful work if we got them.

4663. But you do not intend to take any more temporary men on? Certainly not. I believe there will be an end to the temporary employment, because it was found to be rather embarrassing.

4664. Would you approve of the abolition of temporary employment? My own opinion is that for probationers it is a very good thing to have them temporarily, because there is not much difficulty then in getting rid of them if they are not suitable, but otherwise I think it is a mistake. It has caused a great deal of embarrassment in this department.

4665. *Mr. Robertson.*] In what way? In the claims which are urged by the temporary draftsmen as if they were permanent, and you cannot ignore claims which are put forward by a man who has been (say) over eighteen years in the service. He begins to look upon himself as a permanent employé, and has certainly some grounds for doing so.

4666. *Mr. Storey.*] Did I understand you to say, in answer to the President, that although you are down on the Estimates as Chief of the Survey Branch, you are not in any way responsible for all these subordinates under you, or for this large expenditure of money under the head of the Survey of Land? I am responsible so far that I have to see they do their work, that is the employes under me.

4667. Whom do you consider to be the employes under you? It is difficult to define. I am not allowed to communicate with the district surveyor except through the Under Secretary; therefore how can it be said for a moment that I have any control over them?

4668. Who has the control over the thirteen district surveyors? The Under Secretary is the only official who has. I am not allowed to communicate with them in any way.

4669. How many have you under your charge in the Metropolitan District? Five or six surveyors besides the detail city surveyors and some contract surveyors.

4670. What work are they engaged on? On survey work under the Crown Lands Acts for the Metropolitan Land District, the survey of free selections, conditional leases, reclamations, rescission of reservations, roads, feature surveys; in fact all the survey work that goes on in a Land Board District.

4671. Are there not too many district surveyors and too many paid Government surveyors over the Colony of New South Wales? As to the paid staff that is another thing altogether. You have to look at it in this way. We employ a contract staff and a salaried staff. If the work diminishes for one we can apply the other to it. For many years the staff in Sydney was too small for the work, and the Government was put to a good deal of trouble and expense in consequence. As the work diminishes the contract surveyors get less employment, but the salaried men always get the same employment, they are kept employed all the year round.

4672. Could the system of having salaried surveyors be improved upon? You cannot improve upon it I think.

4673. You have not more salaried surveyors than are necessary? Quite so. In fact we can foresee that the time will come when the salaried staff will have to do a great deal of work that is now done by the contract staff, that is in remote parts of the country where it would not be remunerative for a contract man to undertake the work.

4674. Is there any return for all this work done by the surveyors? The return for it is in the settlement of the country. Someone must survey the land, the roads, and the features of the country.

4675. I gather from what you have said that of late years the demand for land has not been so great? It has fallen off very much, and the demand for survey has also fallen off.

4676. Have any of the surveyors been got rid of? As to the contract staff, I do not suppose that one-fourth of the number employed seven years ago is now employed; and as to the salaried staff a good many of them have been retired or have resigned from time to time.

4677. Is the work of the surveyors sent down to the head office in Sydney for checking purposes? No; it

- E. Twynam, Esq.
12 Feb., 1895.
- it is the district surveyor of the Board district who is responsible for all the surveys conducted in that district, and all that work is examined and passed by him in his office. He approves of the plans.
4678. Where are these plans made? In the district office.
4679. What are all these draftsmen employed at in Sydney? The compiling draftsmen are employed in compiling maps for publication, territorial maps, parish maps, county maps, Land Board district maps, the Colony map, and so forth.
4680. Is there an everlasting preparation of maps going on? Certainly, and it will go on as long as the Survey Department continues, and as long as the settlement of the country requires it to go on. We have had a branch exclusively employed for many years past in the matter of opening roads alone, and it is still so employed. It is a very intricate branch of the business and a very costly one.
4681. Well, under the heading, "Engaged at Head Office,"—do I understand from you that the chief draftsman and all these other draftsmen are absolutely necessary, or have we to get the evidence from the chief draftsman? I think you might, with advantage, call upon the chief draftsman to give you some evidence in the matter. I can give you general information on the subject, but he can enter into particulars more fully than I can.
4682. So you cannot answer me as to whether all these men are required? Certainly, I can answer that.
4683. How do you satisfy yourself on that point? I understand the business of the office; I know the men, and I know the work they do.
4684. It is a big staff? But there is an immense business here to conduct.
4685. Do you see the work that is to be done before it goes to these people? No; I do not, I am sorry to say. It is wrong, but I do not. The Under Secretary is responsible for sending the work out.
4686. But if you do not see the work before it goes to these people—? I see the results.
4687. I gather from you that you ought to see the work before it goes to the draftsmen? Certainly, but not all, as there are some branches of the office—for instance, the Compiling Branch—where there is nothing to see first. The maps are compiled from data in this office, and of course there is nothing for me to see there. I am not in the position of the Surveyor-General; I am simply subordinate to the Under Secretary.
4688. Under the heading of Contingencies in the Estimates, there is a matter of £35,000, beyond the fees to the surveyors, that you have no control over, I understand? I have no control over it with regard to country expenditure. When I was Acting Surveyor-General, I used to have to prepare the estimates for the Survey Branch, but I do not do so now. I have nothing to do with it, except with regard to the officers who are immediately under me.
4689. There is a department under the Registrar-General called the Lands Titles Department;—could not that work be done in the Lands Office? A great deal of it is of legal character, and would hardly come within the scope of survey work.
4690. There is a lot of drafting there? I believe there is a lot of drafting work done in the way of drawing diagrams on deeds, but that is a very simple sort of drafting. It would be an advantage if there were a more intimate connection between the Lands Titles Office and the Lands Department, but it would involve a good deal of consideration to advise upon such a subject as that.
4691. In the Registrar-General's Office there is a principal draftsman at £628 a year, and then there is £3,300 per year paid for draftsmen; a hint was given to me that a good deal of this work could be done by the draftsmen of the Lands Office;—I would like to know if such is the case? If so, we should have to increase the staff; we should have to import men to do it. Every one of our draftsmen is fully employed, and there is work in view for years to come.
4692. Is that in spite of the falling off in taking up lands? Yes, because it is the compilation of maps which involves a great deal of our time. There are two branches engaged in the work of compiling parish maps, county maps, Land Board district maps, the Colony map, and other incidental maps which have to be made sometime. And if the Local Government Bill is passed the income to be derived under that Bill must be based on an assessment, and an assessment cannot be made without maps. If that Bill should become law we shall have to increase our staff considerably in order to keep pace with the demand for maps.
4693. You made a remark that you thought it very hard that salaries should be cut down in any shape or form;—have you considered the altered state of the Colony within the last few years and the fact that everybody's salary has been cut down? I have thought about it enough, I assure you.
4694. Do you not think it a good thing that the Government officials should bear their share in the general depression? I do not see why. You must remember that in the good times the salaried staff did not flourish like other people, and they have to take the good times with the bad. A few years ago contract surveyors who had ability, industry, and intelligence could earn easily £1,000 a year, but the salaried men at the best were never getting more than £400.
4695. It was quite optional to turn contract men if they liked? It would have been a great loss to this office if they had done so. The surveyors are not overpaid; on the contrary, they are underpaid. As to the draftsmen, they lead a different life from the surveyors.
4696. It was more in connection with draftsmen's salaries that you made the remark? Yes, as to old servants of the State who, as I said, had spent the whole of a working lifetime in the Service, surely it would be hard to deprive them of their salaries.
4697. But if the circumstances of the Colony require it, why should they not suffer as well as anybody else? They have suffered already, as you are aware; their salaries have been cut down 10 per cent.
4698. What did you mean in speaking of the claims of temporary officers? Claims to all the benefits which accrue under the Civil Service Act.
4699. Is it not a complete answer to that to point out that they have never paid anything into the Civil Service Fund? Notwithstanding that, a man after many years' service has claims, and it is very difficult indeed to ignore them. In fact the Minister has not ignored them, and he has allowed these men to have all the privileges which accrue to Civil Servants, except the pension.
4700. Surely you do not mean to tell this Commission that the man who has allowed himself to be a temporary officer, and has not contributed one iota to the Civil Service Fund, should have privileges at the end of his time? Surely I did not say anything of the sort. I said the claims of the temporary employé were very embarrassing to the department, and have been so.
4701. And you say these claims should not be ignored? Of course these men cannot get a pension.

E. Twynam,
Esq.
12 Feb., 1895.

4702. How can they have claims under the Civil Service Act? No; but still they are employed here in common with others to do like work, and they consider themselves entitled to the same privileges. It is very hard to refuse them, and the Minister has not refused them. They are not entitled to any pension, but still when a temporary employé has been retired from the service the Minister has always authorised a gratuity.

4703. He must pay it out of the department's money; the Civil Service Board does not pay it? It has been paid.

4704. Has there been any reduction of the staff within the last two years? With regard to the surveyors or draftsmen?

4705. In any department which you have under your control? Yes; there has been, most decidedly.

4706. Can you give the Commission any idea to what extent? During the last six or seven years there must have been a good deal of reduction.

4707. I will limit it to three years? I am afraid I could not give you that information in a moment's notice. Years ago when a demand for retrenchment in the department was made, the Trigonometrical Branch was retrenched by removing two surveyors and one piling party, and for the last two years or so the surveyor in charge has been the only surveyor employed on the trigonometrical survey.

4708. I see there is £3,400 a year spent on this trigonometrical survey;—is that money well spent? Certainly it is. It is a very great pity there is no more to spend on that work; it is the foundation of all the surveys in the Colony. It is the survey on which the compilation of maps is based; it is a survey that is carried on in all the civilised countries of the globe.

4709. *Mr. Robertson.*] What are the classifications of the surveyors? I understand there are four classes besides district surveyors, but that is all I can tell you.

4710. Who can give us this information? The Under Secretary.

4711. Is he the only person who can give it to us? Unless you can send for members of the Board who made a report to the department.

4712. Is it a Board that still exists? No.

4713. Is any member of the Board in the Lands Office? The late Board which had to deal with the matter comprised Mr. M'Donald, district surveyor of Armidale, Mr. Allworth, district surveyor of Maitland, and Mr. Houston, the Under Secretary.

4714. Do your duties keep you in the city? Yes.

4715. Do you ever travel? I undertake any work in the way of inspecting applications for roads and so forth which I can conveniently get at.

4716. What arrangement is made then with regard to your travelling expenses? Where I expend money I get it refunded.

4717. I find in the Estimates that you have an equipment allowance of £100? There is an allowance of that kind.

4718. What equipment have you? I do not keep any equipment in the ordinary way.

4719. Then you have no equipment? No; I do not keep any at all.

4720. Can you tell us how many chairmen of the Land Boards have been surveyors? The chairmen at Armidale, Maitland, Grafton, Moree, Cooma, and Sydney have been surveyors; the chairmen at Orange, Tamworth, and Wagga Wagga were draftsmen; and the chairmen at Dubbo and Hay had not been in the Survey Branch of this department.

4721. Is it necessary that a chairman of the Land Board should be a surveyor? Certainly not.

4722. What are the duties of the chairman? To adjudicate very often on land questions. The duties are rather more of a judicial character than those which appertain to district surveyors.

4723. There are two other members connected with the chairmen on the Land Board; is it necessary to have these members? I think for the satisfaction of the public it may be desirable, but it is not necessary as far as the conduct of the business goes.

4724. Could the services of these members be dispensed with? Yes, without any detriment to the conduct of the business.

4725. Could you tell us what the saving would be? I am not able to tell you off hand, because I do not know how many courts the members attend. They are paid according to their attendances.

4726. Do you know whether the chairman is accompanied by a deposition clerk? He is.

4727. Is it necessary that a deposition clerk should accompany the Chairman wherever he goes? I think so.

4728. Could the duties be discharged by the clerk of petty sessions, or the land agents of the different towns that the Board visits? I do not think that the clerk of petty sessions could undertake the work, simply on account of the interference with his other duties which it would involve. Very often a Land Board holds a sitting while the magisterial court is going on; but it is very possible that the Crown Lands Agents might undertake some of the work, for the reason that when the Crown Lands agency is not held in connection with some other office the Crown Lands agent may not have all his time occupied, but as a rule the Crown Lands agency is held by the clerk of petty sessions.

4729. Could the district surveyor discharge the duties of chairman of the Land Board? Could he do so, or would it be advisable?

4730. I will ask could he do so? He is certainly qualified to do so.

4731. Well, given extra assistance, do you think it would be advisable to appoint district surveyors to the office of chairman of the Land Board? I do not think so at all.

4732. If the district surveyor stated he could discharge the duties in conjunction with his own? Still I should hold the same opinion as I do now, because the duties of one office or the other would be sacrificed, and that we have already had experience of.

4733. Are the district surveyors competent to undertake detail surveys? With one exception I do not think any of them has had any experience on detail survey work.

4734. But, being surveyors, do not you think they could undertake the work; are they not qualified to do so? Like all other businesses there are many branches in surveying, and some of them require special study and aptitude. Of course any surveyor could soon pick up the business.

4735. I am not asking that question; I am asking whether the district surveyors throughout the Colony could undertake the work? They have not had experience in that particular class of work, and it is quite a special class.

- E. Twynam, Esq.
12 Feb., 1895.
4736. I dare say the district surveyors could give us evidence as to what they could perform? Certainly.
4737. What is meant by the term detail survey? The term detail survey applies to surveys of cities and towns for the Water and Sewerage Board.
4738. *Mr. Humphery.*] How many draftsmen are there engaged in the head office under your immediate supervision? About 107 with the chief draftsman.
4739. In answer to a question I understood you to convey that the duties of the draftsmen in your department are of a more important character than those performed at the Registrar-General's Office? Yes, I think they are.
4740. Is that correct? I am not an officer of the Registrar-General's Office.
4741. Have you any idea of the nature of the work performed by the draftsmen in the Registrar-General's Office? The principal draftsman has to investigate a good deal of the business relating to titles, boundaries, plans, and so forth; he gets up information for the Registrar-General and for the examiners of titles.
4742. Are you of opinion that the duties of a draftsman engaged in the Registrar-General's Office are of a more responsible and important character than those of the draftsmen engaged in your department? I don't think they are more important, but it is a matter of opinion. As to the draftsmen under the principal draftsman, a good many of them simply draw diagrams.
4743. How would you classify the draftsmen engaged in your department;—would you divide them into four grades? Four grades would not be sufficient.
4744. Give the Commission your views? I should think seven grades would be more nearly what there should be.
4745. Will you specify what, in your opinion, should be the salary attached to each grade? The highest officers would be those engaged in compiling, and they should receive a maximum of £400 a year. The salaries for each of the other six grades should be as follows: £350, £300, £250, £200, £150, and £125, which last would be the minimum.*
4746. What description of work would be done by the draftsmen of the lowest grade? I suppose at first they would be put upon tracings, possibly the lowest form of compilation. I may explain to you, first of all, that it is difficult to get men who are able to draw well. Out of the draftsmen of this office you cannot say that even half of them can draw well. The art of drawing plans is acquired only after many years of hard work.
4747. Tell me how many draftsmen there are in your office engaged in compilation work? I should have to give you that information in a return.
4748. Are there salaried surveyors attached to each district office? Yes.
4749. What are the duties of the salaried surveyors? To act under the direction of the district surveyors in road surveys, inspections of all sorts, feature surveys, designs of subdivisions, selection of sites for towns, and of reserves for public purposes, and in the examination of contract work.
4750. Does the examination of the contract surveyors' work include a re-survey? It includes a resurvey of such lines as are necessary for the purpose of ascertaining whether the work is done in accordance with the regulations. A contract surveyor's work should be examined twice in a year, or a sufficient number of times to satisfy this department that the contract surveyor is doing his work properly.
4751. In reply to a question, you said the work in connection with the alienation of land had been diminishing? It has certainly.
4752. What suggestion can you make, having regard to the fewer surveying operations, and with a view to lessening expenditure in connection with the working of the Land Acts? It is no secret that the Minister intends to merge two districts into one, that is, the Cooma and the Goulburn. There is very little doing at Goulburn; there has been a very great deal to do in the years gone by, but as the Crown lands have become alienated and occupied, so the business has diminished at the Survey Office at Goulburn.
4753. Are there other districts that can be similarly treated? If there are not now there will be shortly.
4754. Speaking approximately, can you say how many? As another instance I might mention Tamworth and Armidale. I have no facts to adduce in support of what I say, but I think the business in the Tamworth district must be rapidly diminishing, for I suppose in the course of a short time that district will have been merged into some other district, probably the Armidale. At present it would not be advisable to make any other alterations within the next two or three years.
4755. What about Albury? It is part of the Wagga district now.
4756. And Bourke? Bourke is an immense district with a sparse population; in fact it ought to be diminished if anything.
4757. What about Dubbo? Dubbo has lately been enlarged considerably. I think a part of it was taken out of the Tamworth district.
4758. What about Forbes? That is a district where there is a good deal of Crown lands still remaining.
4759. And Grafton? Grafton is one of the old settled districts, and I should say in three or four years some alteration might be made with advantage. I wish to point out with regard to the settled districts that there is a good deal of miscellaneous business which arises as settlement takes place in the older parts of the country. The only changes which I consider practicable are those in regard to Goulburn and Cooma, and Tamworth and Armidale.
4760. *President.*] What is the reason that so much was paid in fees to licensed surveyors in 1893? It is not likely that half the sum was expended. Probably a sum was put on the Estimates, but not half of it expended. That has happened sometimes.

* NOTE (on revision):—In accordance with the request of the President, I have sent to him a sketch of a scheme of a drafting staff which more nearly represents my ideas on the subject after consideration.—E. T.

WEDNESDAY, 13 FEBRUARY, 1895.

Present:—

Hon. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

James W. Boulton, Esq., J.P., Superintendent of Public Watering Places and Artesian Boring, sworn and examined:—

4761. *President.*] Have you exclusive charge over this department? Yes.
4762. Are you consulted when the salaries are placed on the Estimates? Yes.
4763. You are consulted as to the remuneration that the officers receive? Yes.
4764. Has there been any increase lately? No.
4765. For how long has there not been an increase? The only increase has been that of a probationer, who has been increased from £50 to £75. The salaries are pretty well as they were originally fixed.
4766. Tell us generally what your own duties are? The supervision of the entire branch, and the arrangement of all the details in connection with the working and maintenance and construction of the artesian bores, tanks, and wells.
4767. Is there much correspondence? A good deal.
4768. Does it all come before you? Yes.
4769. Do your duties ever require you to leave town? I leave town occasionally.
4770. For what purpose? I like to satisfy myself how things are in the country, especially with regard to artesian boring.
4771. When anything attracts your notice, you like to see it? I like to see all the artesian bores. I have seen them all with two exceptions, and I was proposing to see the remainder this week.
4772. Have you anything to do with the coal bores? No; only with the bores for water.
4773. Do you lease the boring machinery out? No. Our work is entirely contract work. We do not employ any Government employes at all for the actual work of boring; it is all done by contract. We have no machinery.
4774. What are the duties of the chief inspector? He is mostly in the field inspecting the tanks and the work as he goes along. He is the outside officer, reporting to me.
4775. Is he much away? He is entirely away.
4776. All over the Colony? Yes; he is really the supervisor over the inspectors.
4777. Do you attach more importance to the artesian boring than to the watering places? I do personally. I think it is one of the biggest questions in the Colony. I think that in a few years time we shall practically revolutionise the western country. People say I take a very rosy view of matters, but I think that artesian boring is the coming thing for the west. The importance of watering the stock routes is also very great. It has enabled the settlers to get to market in seasons when otherwise they could not.
4778. Besides the chief inspector, you have six inspectors? Yes.
4779. At salaries of £245 each? Yes.
4780. Are they always on the move? Yes.
4781. Do they frequently send reports to you as to their movements? Every fourteen days they send me notice of their movements; we call it a "route plan."
4782. Sketched beforehand? Yes, so that I can communicate with them at any place.
4783. Do you know from the plan they send you that on a particular day they will be at or about a certain place? Yes.
4784. What are their allowances? They get £1 a day when absent from head quarters, finding their own conveyance, buggy and horses, and 12s. 6d. per diem if we provide transit for them.
4785. When they are on railway routes would 12s. 6d. a day cover their expenses? Yes.
4786. Are the chief inspector and others in any sense scientific men? Two of them are trained engineers; the rest are men who have had long experience in the western country as station managers, men who can use a level and do all the work that is required, and are thoroughly conversant with all the requirements of stock.
4787. Describe a typical public watering-place? The general run of them are large excavations of 4,000,000 gallons capacity. The water is carried into them by catch-water drains. Their supply is, of course, dependent on the rainfall, and is precarious, according to the season, but for all that their size will enable them to stand any ordinary drought. There is always water for stock or for the travelling public. We do not let the stock into the excavation. The water is pumped into an iron supply tank, which holds about 25,000 gallons, and thence delivered in troughing to the stock. The area of land attached to one of these tanks is 640 acres, used either for cultivation, agistment, or for whatever purpose the tenant likes to put it to. We fence it in and put up a cottage and the tenant pays a yearly rental. He is allowed to retain the charges that are levied for watering stock. These charges are fixed by regulation.
4788. What are these charges? A penny a head for horses and bullocks, 10s. a thousand for sheep, 4d. a head for camels, and ½d. a head for pigs and goats.
4789. How many artesian bores are there? Twenty-two flowing wells.
4790. I see there are eighty-five caretakers;—does that mean that there are eighty-five wells? No; we have about eighty-five of the tanks not leased where caretakers are required, but there are over two hundred watering places altogether.
4791. I see you have mechanical and administrative draftsmen;—are they required? Yes; the mechanical draftsmen attend to all the machinery and plans for the same, and the administrative draftsmen attend to all the matters of survey and also to the boring sections.
4792. Have they constant employment? Yes.
4793. You have a chief clerk and two other clerks? Yes.
4794. Are they kept exclusively at clerical work? Entirely.
4795. Are their services absolutely essential? Yes.
4796. There is a chief clerk and three other clerks, making four? Yes.
4797. Are the probationers engaged at clerical work? Yes; entirely. I have a statement showing the exact nature of the duties of each of these officers. [*Witness hands in document.*]
4798. Do you open the correspondence, or the chief clerk? Both.

J. W.
Boulton,
Esq., J.P.

13 Feb., 1895

4799.

J. W.
Boulton,
Esq., J.P.
13 Feb., 1895.

4799. And you sort it out and give directions? Yes. I should like to hand in this list. It is a weekly list we publish and hand to all the inspectors; it shows the state of the feed and water at each public watering place on each road. It is greatly appreciated by the stock people. The caretakers of the tanks send us a report at the end of each week showing how the feed is, and the tenants do the same thing. It is published in some of the country papers, and it is exhibited in every stock office in the Colony. [*Return handed in.*]

4799½. Is it a weekly publication? Yes.

4800. Do you require a messenger? Yes.

4801. I suppose he just runs messages? Yes, and helps generally; he is a very useful man.

4802. It is rather an easy billet? No, there is a good deal of broken machinery to be brought from the station, waters are constantly coming for analysis, and he has to look after all that, and deliver them to the analyst.

4803. What is the revenue of your department? I do not think that our revenue averages more than £4,000 a year.

4804. And the outgoings are £18,000? Yes. The outgoings have increased every year by reason of the increase in the number of watering places.

4805. Leaving out the staff expenses, the managing of the department, the wages alone amount to three times the revenue? Yes.

4806. Is there no way of remedying that? I think by having a larger area of land at the watering places we could more readily get tenants.

4807. I suppose the Government have the control of the lands round about? Yes; but it is provided by the Lands Department that we cannot get more than 640 acres. They cannot declare more than that for the purpose I have named. We have had a little trouble about that.

4808. If you had the control of the lands in the immediate locality of each tank or bore, would you then give a greater portion to the lessee? That is what I would try to do. I think our Minister shares that idea as well.

4809. Then it is almost a pity that you have not got the power? Yes. I think we shall be able to arrange it. I think the Minister means to see Mr. Carruthers about it to ascertain if it cannot be done. The question of granting these areas has to go before the local Land Board, and each case has to be thrashed out in open court.

4810. *Mr. Storey.*] How long has the department been in existence altogether? Since 1883 or 1884, or before that. I joined the Service in 1886, and it had then been in existence a number of years. The tanks were first constructed by the Survey Branch of the Lands Department. I think they started them early in the seventies.

4811. Who authorised those tanks to be made? The Government. The Governor, with the advice of the Executive Council, authorises the use of the land for public watering places.

4812. On whose recommendation are the tanks made? On the recommendation of the local people and of our inspectors and inspectors of stock, &c. The petitions that come in from the local residents are often supported by Members of Parliament. When we receive a petition it is sent to the local officer to investigate and report. If his report is sufficiently favorable, we go a step further and furnish a plan and an estimate, and send it to the Minister, who approves or otherwise.

4813. Seeing that the revenue for the department is very much less than the expenditure, would it not be advisable to increase the fees for the stock? We have really reduced them this last year. We used to charge 2d. a head for the horses, but even now I think the fees are a little high. If a man has a team of fourteen bullocks, he has to pay 14d. for a drink at night, and 14d. in the morning; and if there are a large number of these tanks on his way it would eat up his profit for carriage.

4814. Seeing that your department is a losing one, what propositions can you make by which more revenue can be obtained from it? By increasing the area of the land we should be able to do away almost entirely with the caretakers. Under the present system we are absolutely obliged to retain the caretakers, and there is no doubt that their wages are most liberal.

4815. Who has the appointment of these caretakers? The Minister.

4815½. Are you consulted in any way about these appointments? No; I submit the applications and the Minister appoints. Sometimes the local officers will in an emergency appoint a man and then we submit his action for approval.

4816. Who fixed the remuneration for these caretakers? It was originally fixed by Mr. Gilliat, the then chief inspector, with the Minister's approval.

4817. Since your accession to office have you ever suggested the reduction of wages? Yes.

4818. What was done? Nothing.

4819. Was your suggestion made in writing? Yes.

4820. How long ago? About eighteen months or a couple of years.

4821. *Mr. Robertson.*] Will you name the districts into which the Colony is divided for watering-places and artesian bores? It is divided into six districts—Bourke, Wilcannia, Hay, Narrandera, Condobolin, and Narrabri.

4822. And each district is worked by one inspector? Yes.

4823. Do they ever visit each other's districts or are they confined to their own districts? They are confined to their own districts.

4824. You said that two of these inspectors were trained engineers? Yes.

4825. And that the other four had long experience in the western country as station managers? Yes.

4826. Is it necessary that these inspectors should be engineers? No. He must know how to use the level and to do a little bit of surveying.

4827. Are they surveyors besides being station managers? No; they are not professional men at all.

4828. In the letter accompanying your map it is stated that part of the business of the inspectors is taking the levels and making such surveys as are required;—are these men competent to make surveys? Such as we require they are.

4829. They do not require further training than any ordinary station manager might have? No.

4830. Are not these tanks established on travelling-stock routes? Yes.

4831. Are you aware that there are stock inspectors? Yes.

4832. Constantly travelling these routes inspecting stock? Yes; but they are only supposed to travel their district once in twelve months. They do not travel anything like our men. We sometimes make use of them when our own man is away.

4833.

4833. Do you know how many stock inspectors there are? About fifty.

4834. And you say that these fifty men only go over the routes once a year, but your inspectors go over four times a year? Yes; the stock inspectors are required to visit the whole of their district once a year if possible.

4835. Could not the inspection of tanks be conducted by the stock inspectors? We tried that originally. That was the original idea. Stock inspectors were employed, but it was found not to work. Stock inspectors are under a board of directors, and we found that they did not give that nice attention to the work which we require.

4836. Are these stock inspectors fully competent to inspect the tanks? Some of them are. Two or three are really good men.

4837. Is it not necessary that every stock inspector should be thoroughly conversant with stock—just as conversant as the four inspectors to whom you have already referred? Yes.

4838. As their experience has been gained on station properties as managers, they are able, I suppose, to discharge the duties of that office? Yes. The stock inspectors are men who are more acquainted with the diseases of stock than with the outside working.

4839. In their visits they must pass by the watering tanks? They do, and whenever they do we get a report from them.

4840. You said that the inspectors receive 20s. a day travelling expenses if they provided their own conveyance, or 12s. 6d. a day if the Government provided the conveyance? Yes.

4841. Has it generally been the case for them to provide their own conveyance, or have they asked you to provide them with a conveyance? They all provide their own, but sometimes it may happen we want a very hurried trip made, in which case we might send a man by coach and by train.

4842. Then the travelling expenses given to these men amount to 20s. a day? Yes.

4843. Are there any other allowances? No; not from which they derive any pecuniary benefit.

4844. No forage allowances? No. The inspector of the Wilcannia district was allowed 25s. a day for his travelling during the drought, owing to the difficulty at that time of getting about.

4845. *Mr. Humphery.*] When did you commence duty as superintendent? In February, 1890.

4846. Previous to that how were you connected with this department? I was then chief inspector for a few months, and previously I was inspector. I was first appointed inspector in February, 1886.

4847. Who was superintendent previously to that? Mr. Harry Gilliat was chief inspector. That was his title.

4848. You were not so familiar with the working of this branch before 1890 as you have become since 1890? No.

4849. Can you furnish the Commission with a return showing the total annual expenditure and receipts in connection with each watering place since 1890 inclusive? Yes.

4850. Will you furnish a similar return in connection with flowing artesian wells; also with a return showing the annual expenditure and revenue of your branch, and the number of persons employed for the last five years; also with a return for the same period showing the total sums paid to inspectors for travelling, &c.? Yes. [*Return subsequently furnished.*]

4851. *Mr. Robertson.*] Have the draftsmen to visit the tanks? No. The engineer goes only when there is anything specially wrong with the machinery.

4852. *Mr. Storey.*] You are not in favour of increasing the charges to stock? No.

Harrie Wood, Esq., J.P., Under Secretary, Department of Mines, sworn and examined:—

4853. *President.*] Am I right in supposing that the position of the Assistant Under Secretary has been abolished? Yes.

4854. So that Mr. Ormiston, the chief clerk, is the next one under you? Yes; there is a chief clerk in Mines, and a chief clerk in Agriculture.

4855. What are the duties of the chief clerk, who, I see, has been in office since 1871? Generally speaking his duties are to assist me. I can furnish you with a statement, giving the names, salaries, and duties of each officer. [*Return subsequently furnished.*]

4856. The Commission will be glad if you will supply it. I see Mr. Ormiston has been accountant, and was promoted to the office of chief clerk, so that he has had considerable experience? Yes.

4857. You have a staff of clerks totalling very nearly thirty? Yes; more than that I think.

4858. Are they employed in a clerical sense? Yes; I presume that under the head of clerical you would include work done by the registrar and the accountant?

4859. Yes? In that sense all are engaged in clerical work.

4860. What does the registrar do? He registers leases and transfers, issues miners' rights, mineral licenses, and so on. He has charge of all revenue that comes in. Of course when he issues miners' rights or mineral licenses he receives money and fees on the leases that are issued, and for transfers. Money for stamp duty is received on behalf of the Commissioner for Stamps. It saves time and is a convenience to have the stamp duty paid in the office.

4861. Does the accountant have anything to do with the receipt of money? No; nothing.

4862. What are his duties? Keeping all the accounts of expenditure, preparing cheques for payment.

4863. Cheques for salaries? Yes, for every kind of expenditure.

4864. He does not actually handle money, does he? Only in this sense: It was found that in paying salaries by cheques we gave the banks a lot of unnecessary trouble, and at their request it was ordered by the Government that whenever possible one cheque should be drawn for as many officers as possible in Sydney, and that they should be paid from the cheque in cash. In that sense he handles cash.

4865. So that instead of paying your staff by cheque you cash a large cheque and pay them the money? Yes. That does not include the whole of the staff, because some of the officers have a banking account, and in that case a cheque is paid into their credit. In other cases we include a number of salaries in one large cheque and pay them in cash.

4866. Does it involve much waste of time? We reckon it is a saving of time. It was always a part of the unwritten law of the Service that on pay-day when an officer got a cheque he was at liberty to go to the bank to get it cashed.

4867. And you have what they call a pay-sheet which they sign? Yes.

4868. There is a clerk in charge of the record and stores? Yes.

4869.

J. W.
Boulton;
Esq., J.P.

13 Feb., 1895.

H. Wood,
Esq., J.P.

13 Feb., 1895.

H. Wood,
Esq., J.P.
13 Feb., 1895.

4869. What do you mean by records in your case? All papers connected with the department.
4870. Do you religiously preserve every communication, no matter how trifling the subject matter? Yes; we may be called upon by Parliament at any time to make a return.
4871. How many of your staff are occupied in the strictly record department? You are speaking now of the records in the Mines. We are not able, on account of our accommodation, to bring all the records into one room as we have long desired to do, and consequently we have to have two or three—four—sets of records in the department. We ought to have only one.
4872. Do you think that there is unnecessary labour bestowed on the preservation and recording of any considerable portion of the correspondence? No; not in view of the conditions under which we live.
4873. The necessity of being able at a moment's notice to produce them to Parliament is a sufficient justification? Yes. That is, it is a necessity. I am not sure it is a justification, but it is a necessity.
4874. If Parliament were not so inquisitive over trifling matters there is a great deal that could be laid aside for ever? Yes, and a large number of letters which are now required might very well go to the waste-paper basket.
4875. After the matters had been attended to? Yes.
4876. But under the present system you have to record them? Yes.
4877. At a very considerable expense? Of course it is an expense. I could not say at this moment what reduction in staff we could make if we could cast aside letters that we do not consider of importance without registration.
4878. Of course you have had large experience, and know what ought to be preserved and what could be laid aside? Yes. I could tell that in a great number of cases.
4879. Taking the salaries of the clerical department—I will refer first to the clerk, Mr. Tunks, who heads the list, whose salary is £326;—what would be the nature of his duties, as an example? The duties of the record clerk are very important. You really want a good man there. If you have an indifferent man at the head of your records you are always in trouble. When anyone comes in about a particular case, I have to send to the record clerk for the papers. Unless he is really a man well experienced in his work, he would not know where these papers are. He is supposed to know where they are even when they are not in his possession. In that way we are able to get the papers. A gentleman comes in to see me about a case. I cannot discuss it with him without the papers; I send for them. If I had not a good record clerk who could get the record papers speedily, the loss of time would be very considerable in comparison with the salary paid to the officer.
4880. When the salaries are put on the Estimates the whole list is submitted after being prepared by you, is it not? The draft Estimates are either prepared by me or by the accountant for the Mines, and by the heads of each branch for his own branch. They are then submitted to the Minister, and, if he approves of them they go on to the Treasurer and the Cabinet, and the Cabinet revises them finally.
4881. Has there been any increase recommended of late years? No; officers may have obtained increases in this way: If an officer dies or retires from the Service, and there are other officers subordinate to him, they may get a rise by reason of his retirement or death, but I think I am safe in saying that no increase has been put on the Estimates for some time past.
4882. I presume that some of those gentlemen who are in the clerical department have been some years in office? Yes.
4883. Have they benefited by increments of late years? Yes.
4884. That was according to the Act, was it not? Yes; and before that the increments were by recommendations of myself, say, approved by the Minister. That was before the increments were provided under the Civil Service Act. Any increment that an officer got he got in that way. If I found an officer was worthy of an increase I should make the recommendation to the Minister. If he approved, it could be inserted on the draft Estimate.
4885. In the case of a vacancy occurring through the death of a superior or higher officer, those below him, as a matter of course, would get a step? Yes.
4886. Whether they were capable or not? No; that is not strictly so, for this reason: If the officer below the officer who had so retired were, in my opinion, not competent to fill the position, I should recommend in some cases that he should be passed over, and that a more meritorious officer should get the promotion, while the other stood still.
4887. So that merit would be an element in the promotion? Yes.
4888. But usually if there were nothing very great against an officer of less capacity, if he were just fit to do the work, probably he would get the position? Yes.
4889. But there might be officers under him of greater ability who would not get it? Just so.
4890. Would you approve of appointments and patronage being exercised by an independent Board instead of by Ministerial or Parliamentary influence? No, I cannot say that I would. Where that is in operation I do not think it gives altogether complete satisfaction, and as far as I can see I would just as soon trust to Ministers as to a Board or Commission.
4891. Such a Board is in Queensland? Yes, and in Victoria.
4892. Is your opinion founded upon any experience? It is the result of conversations with members of the Civil Service—with superior officers in the Civil Service.
4893. I suppose that Parliamentary influence (political influence) is not a desirable influence to bring to bear upon the Civil Service? No. I think that influence outside the Minister is not desirable, but so far as the so-called political patronage that is exercised by the Minister is concerned I think there is very little to find fault with.
4894. Of course, Ministers sometimes vary in their ways of action and disposition? Yes, they do, no doubt; but my experience has been that, with a very few exceptions, the Minister takes the recommendation of the head of the department if he has confidence in him.
4895. In the case of temporary officers, a Minister has the entire responsibility of appointment? That is no doubt so, and, generally speaking, a Minister does not appoint even a temporary officer unless the appointment is recommended, either by the head of the department or the head of the branch.
4896. Generally? Yes.
4897. But not always? I am not sure that I could name an instance where that rule has not been observed, so far as my department is concerned. On the other hand, I am not prepared to say that such a thing has never happened. I cannot charge my memory with all the appointments that have been made

made during the last twenty-one years, but the feeling that I have on the subject is that as an invariable practice the Minister does not appoint even a temporary officer unless the appointment is recommended either by the head of the department or by the head of the branch in which the officer is said to be required.

H. Wood,
Esq., J.P.

13 Feb., 1895.

4898. A good deal has been talked lately about the advisableness of arranging the Service of the Government departments in classes? Yes.

4899. What do you think of that; there may be four, six, or even seven classes, as has been suggested in some instances, each class with its minimum and maximum salary, so that the officers of merit and capacity may look forward to obtaining a position in, perhaps, the highest class without having to wait for their chance by seniority;—how do you think that would work? It might work very well. Do I understand you to mean that the Service could be divided into classes without reference to the department?

4900. Yes, according to the nature of the work; some work would be performed by officers of ordinary intelligence, and the highest officers in that case would consist of men of intellect and ability, with capacity sufficient to do justice to the work? Something of the same nature was introduced under the Civil Service Act. Officers were all classified.

4901. Yes, but things are all adrift again? That was a classification of departments and not of the service. There is a great difference between the two. The Victorian Service is divided into classes as applied to the whole Service, and not as to departments, I think. That system is good, no doubt, in some respects, but it has its defects in this way: Suppose a vacancy occurs in department A. This appointment has to be filled by the person next in that class without reference to whether he is in department A or some other department. It is quite possible, and I think I may venture to say that it is almost the practice in Victoria, that a man who would be next entitled to that position might be a man who was good enough for the work in his department, but would be of no value in the other. He has been in a different department engaged on work entirely different from that which would be given him in department A. The work of the departments differs very much from each other. Take two warehouses. One deals entirely in tea and another in cloth. A man taken from the warehouse dealing altogether in cloth would be quite out of his element in the warehouse dealing altogether in tea. The same applies to the departments.

4902. If this classification according to ability were to be established, the appointments to be under the control of an independent Board, who could choose anyone in or out of the Service if necessary, that difficulty could be overcome, could it not? I am not sure; but from what I have heard some of the head officers in Victoria say, I am inclined to think that that is really the defect of the practice there—that they get men unsuitable to the work.

4903. That must be through want of discrimination on the part of those who make the appointments? I do not think so. The man who is next entitled to promotion may have been engaged in a class of work entirely different from the class of work he would get if he obtained promotion. That is where the difficulty comes in. If the classification is made to apply to departments, which is only a matter of detail, then you get away from that difficulty to a very large extent.

4904. Of course, the principle could be broken up into sections, so that each department could be worked in that way? Yes.

4905. Instead of having a great Service it might be split up into sections and worked so? Yes. All the same, I am not in favour of an independent Board.

4906. Your department is cut up into so many sub-sections that it takes a long time to overtake them all? Yes. If we had a suitable building for the department we should economise; for example, by having all the correspondence for all the branches done in one room, by having all the records for all the branches kept in one room, instead of having them spread over the various branches. In that way we could effect a considerable saving, but we are occupying rented buildings, and the consequence is, we have to employ more hands than are absolutely necessary. If we were to attempt to carry out the arrangement I have suggested, some of the branches would be so far away from the records and correspondence that it would create a considerable loss of time in passing to and fro. We have, therefore, come to look upon it as impracticable to carry out the arrangement suggested under present provisions. With a suitable building it could be done to advantage, and will enable us to dispense with a number of our officers.

4907. I suppose you might save five or six sets of salaries by condensing the work into one or two rooms? It certainly would reduce the number of officers considerably, because there would only be one man in charge of the records. There would be only one set of records to deal with, and the same would apply with regard to the correspondence.

4908. Under the present arrangement all that work has to be done for each section? Yes.

4909. You would be favourable then to having a very large building with big rooms in which a group of the clerks would be located, under supervision? Yes. I am quite opposed to these small rooms, and to one or two officers being shut up by themselves.

4910. It causes a great waste of time, does it not? Yes; and the supervision is inefficient where the men are not under your eye.

4911. I see you have a number of draftsmen? Yes.

4912. They are rather highly paid officers;—what is the nature of their duties? To make and check the plans of surveys of leases, and to chart them on to maps. Occasionally we prepare and publish maps. When we get a sufficient amount of new information from any parish we publish a new map, so that the public may know what land is available and what land is not.

4913. What is Mr. W. S. Campbell? He is chief clerk in agriculture. The office which he previously held of chief draftsman has been abolished. Mr. Sullivan is chief draftsman and surveyor in one.

4914. He has the draftsmen under his control and supervision? Yes.

4915. Is the Government metallurgist under your wing? Yes.

4916. He gets a very ample salary, does he not? Yes. From our standpoint it does seem so, but, I believe if you were to consult anyone in that profession they would say it is a very small salary, and they are surprised he would accept it.

4917. He would not accept if he could make three or four times that amount outside the service? One at Broken Hill has, I think, two or three times that amount. Personally, I think the salary is a good one.

4918. There is a long list of surveyors;—how are they paid? By salary and fees. I do not think we have any long list of mining surveyors on salaries. I presume in the Blue Book they put down every man who is appointed a mining surveyor.

4919.

H. Wood,
Esq., J.P.
13 Feb., 1895.

4919. Yes, that appears to be so? There are four surveyors on salary in my department, but any surveyor who has passed the Surveyor-General's examination, or the chief surveyor's examination, is entitled to ask us to appoint him mining surveyor. We refer to the Lands Department to know if there is any objection, and if there is none we appoint him. The surveyors ask that, I suppose, in order that we may give them occasional work. We occasionally do so, giving them fees and district allowances.
4920. What sort of mines is it they are supposed to inspect? They do not inspect mines. They survey lands for leasing and for claims under the Act.
4921. On the surface? Yes; not underground. Occasions do arise in which we have to make underground surveys. One of our salaried surveyors has been occupied for a considerable time at this work. In consequence of the surveys he has made we have found that the owners of collieries have in some cases gone outside their boundaries, and have taken coal to which they were not entitled, and we have recovered money from them, which will, I daresay, cover the expense we have been put to by having these surveys made. The pay is not of so much consequence, but it is very important that the owners should know what land they are entitled to work.
4922. I was not aware of the distinction between the surface surveyors and the inspectors of mines? They are distinct officers.
4923. The inspectors of mines are men who go down into the mines? Yes.
4924. Are there different inspectors for the coal-mines and the gold-mines? Yes; there is one staff for the coal-mines and another for the metalliferous. The latter comes under Mr. Slee.
4925. The chief inspector of mines gives his attention to metalliferous mines, does he? Yes.
4926. And the inspectors under him, of whom there are four, work under his supervision? Yes.
4927. Do they travel everywhere? Yes. There is always one stationed in the Albert Mining District, at Broken Hill, which is so remote from any other mining district in the Colony that it would not be advantageous for the whole of the inspectors to travel there to inspect the mines. It was found more economical and more efficient to have one man stationed in that district.
4928. So that he is thoroughly acquainted with all that is going on? Yes.
4929. It is a very extensive place? Yes; and requires pretty frequent inspection sometimes. Some of their works are—I won't say dangerous—but there is an element of danger involved that requires, comparatively speaking, frequency of inspection.
4930. And he is constantly in the mines, seeing that all the regulations are carried out? Yes.
4931. I suppose the Broken Hill mines are more dangerous owing to their size? The workings there are certainly on a very large scale. In the Proprietary Company there is a description of working not to be found in any other mines in the Colony. No doubt, what with the peculiarity in the methods of working, and the difficulty in connection with the provision of ventilation, there is a necessity for a pretty constant supervision.
4932. Do they allow the fumes to ascend the chimneys in the air, or do they intercept them? They intercept them as far as possible, but there is no doubt that particles are carried through the flues into the air and round about, but everything is done to reduce it to a minimum.
4933. The presence of the inspector helps considerably, does it not? Yes. He sees that the regulations are carried out as far as possible. These regulations are based on the reports of experts sent out there to investigate the matter.
4934. The salary of the officer who is stationed there is, I suppose, on a higher scale than that of the others? No, that would not be so, as a matter of necessity. I am inclined to think that his salary is much the same as that of the officers who go about the other portions of the Colony. He has to devote a good deal of attention to those matters that require so much supervision, but he has not so much travelling to do as the other men, who take all the rest of the Colony.
4935. But I suppose they get their travelling allowances in addition? Yes.
4936. Besides the surveyors, you have a Government geologist? Yes.
4937. Is he constantly in Sydney? No; his head-quarters are here, but he goes into the country whenever required. For example, it is not very long since he returned from a very long tour, tracing the boundaries of the cretaceous formation from the borders of Queensland and South Australia, and a little time before he was doing the same sort of work in the direction of Bourke. He has a good deal of travelling to do.
4938. His office is more scientific? Yes; it is more scientific.
4939. For the credit of the Colony, you do not think that such an office should be discontinued? I do not think it should. I do not see very well how we could do without it. It could be done without, no doubt, but we should lack information which is very useful to us. There is no other way of getting the information without a staff of geological surveyors.
4940. It would be only haphazard work? Yes.
4941. What about the curator and the mineralogist? He has charge of the Museum.
4942. That is a scientific office, too? Yes; he is a good mineralogist, who has been trained in this kind of work.
4943. The assayer and the analyst are something similar? Yes.
4944. Could you not dispense with the palæontologist? As a matter of fact, we have none at this moment. Mr. Etheridge, who occupied that position, was engaged by the Agent-General as palæontologist to the Department of Mines and the Australian Museum. He gave part of his time to the one and part of his time to the other, month and month about. That was carried out up to last year. We paid half his salary and the Museum paid half. Then Mr. Ramsay retired from the Service and the Trustees appointed Mr. Etheridge to the position of Curator of the Museum. He is no longer an officer of the Mines Department, except that, being an enthusiast, he has agreed to act as consulting palæontologist.
4945. The superintendent of caves gets £245? Yes.
4946. That is somewhat of an ornamental position, is it not? I think the position is very important; that is, if we are to conduct the caves as we have done in the past. There are continual improvements to be made in opening out the caves to facilitate their inspection, and this involves a certain amount of skill. Mr. Lee is the officer to whom we have entrusted that part of the work. There may be differences of opinion as to what should be done with these caves; they are not a direct source of revenue.
4947. I think the visitors would only be too willing to pay a fee to go into them. If these caves could be made self-supporting it would be a great saving? It is quite possible. It is open to question whether they

they should not be put on a better footing. The only charge made in connection with the caves is for sleeping accommodation and refreshments, and these are supplied by the man in charge of the caves.

4948. A small charge would not be objected to? Perhaps not.

4949. The Coal-fields Examiner is assisted by four inspectors? Yes.

4950. They have to visit periodically every coal mine? Yes; under the present Act they are supposed to visit once every eight weeks. The Act provides that they shall visit every mine once in eight weeks, but as a matter of fact they make more visits than that to some collieries, according to circumstances.

4951. Considering the nature of the work, do you think they are under or overpaid? They are not overpaid; I should say they were underpaid. I consider their duties to be quite as important as those of a colliery manager, and the salaries paid to colliery managers are very much larger than we pay to inspectors.

4952. Are the inspectors men of scientific attainments? Most of the inspectors of collieries hold the certificates granted under the Imperial Act to colliery managers. As far as you can ascertain by examination, the inspectors are on an equality with colliery managers.

4953. They are practically acquainted with all that is necessary? Yes, they are men who have been brought up in collieries.

4954. Who has charge of the diamond drills? Mr. Slee.

4955. Are the diamond drills lent out to promoters of new mines? It is scarcely correct to say we lend them out; we hire them out; we do work for pay; we never let anybody but our own men work the drills; otherwise it might involve a heavy loss, as the machines are very expensive, and the diamonds are very easily fractured or knocked out and lost. When you knock a diamond out of the drill in the bore—that is, down on the bottom—the drill grinds the diamond which, in its turn, cuts the drill. We, therefore, never allow our diamond drills to be worked except by our own men. We charge £10 a week for the use of the drill including the supply of the diamonds, and the people who hire the machines have to pay the wages and to find the wood and water necessary for working the drill. Difficulties arise in connection with the working of the drills which can only be overcome with experience. Another plan, by which we do the work, is: we first estimate the cost of boring, and then make a contract with the mine-owner to bore at so much per foot for a certain depth.

4956. Supposing you want to go below that depth? Then we increase the rate.

4957. It is a self-supporting branch, I suppose? It has been all through until quite recently, but of late years there has been very little work for the drills.

4958. The cost of the coal-fields examination and inspecting is entirely outlay, is it not? Yes.

4959. There is no assessment? No, there is no direct revenue from that service.

4960. I see you have two clerks for the Diamond Drill Branch? All the clerical work connected with the administration of the prospecting vote is done in Mr. Slee's branch. For some years past we have been having a vote, some years of £20,000, one year of £40,000, one year of £15,000, but as a rule there is a sum of £20,000 voted every year for assistance to prospectors.

4961. That is in the contingencies, is it not? Yes; there is a considerable amount of clerical work connected with that, and that is all done by the clerks who are under Mr. Slee.

4962. You have a good deal of apparatus not exclusively employed in being hired out to mine projectors, but which you employ to enable you to discover strata;—is that so? We have not sent out our machines except in those cases where we have been paid for the use of them; but it has happened, when it is made to appear that prospecting is to some extent in the public interest, that aid is granted out of the prospecting vote towards the cost of boring, but under the regulations made in connection with the prospecting vote the Minister has no power to grant aid in such cases in excess of 50 per cent. of the cost of the works. In some cases where the drill has been used half the cost of working has been borne out of the prospecting vote, the other half being contributed by the persons who have the use of the machine; but that 50 per cent. has been computed upon the cost per foot of boring, and in addition to contributing the 50 per cent. the people who use the drill have also to bear the cost of supplying the fuel and water.

4963. Is all the clerical work in connection with that done by the clerks in Mr. Slee's branch? Yes; there are three.

4964. Mr. Bruce is chief inspector of stock; his duties take him abroad constantly in all parts of the world? He has been sent about a good deal of late years, but that is not usual. Until quite recently it was very seldom that he left the Colony, except to attend the conferences of chief inspectors of stock of the different Colonies held for the purpose of regulating the quarantine of stock; and it is very important that all the Colonies should act together in matters of quarantine.

4965. Is the large clerical staff there, consisting of four clerks, necessary to do the work? It would be difficult, rather, to deal with the clerical staff in the way in which it is arranged there. There are a number of branches under Mr. Bruce, and there is no doubt that the work is distributed among the clerks in the whole branch without reference so much to the way they are placed on the Estimates. For example, Mr. Bruce is charged with the prevention of scab in sheep, imported stock, and brands, and the clerical work of the whole branch is distributed amongst the clerks.

4966. How does the revenue of your department, as a whole, stand now as compared with the outgoings? Our revenue is not anything like our expenditure. The revenue from mining would possibly exceed the expenditure if it were not for such votes as the prospecting vote. The administration of that prospecting vote is a loss to the department, because we have to spend a lot of time and trouble over it to see that it is properly administered; but there is no revenue direct to us from it. Then take the Stock Branch. Although the revenue that comes in pays the officers connected with the diseases in sheep, there are other portions of it where the revenue we get will not at all equal the expenditure. Then we get a certain amount of revenue from the public watering-places, but not nearly equal to the expense. Then there is practically no revenue from the Agricultural Department. Take it altogether, therefore, the revenue from the department would not equal the cost of administration. The Forestry Department is another where the cost is greater than the revenue. In fact we do not really regard ourselves as a revenue-producing department—that is, not in the sense of producing revenue in excess of our expenditure.

4967. You mentioned the public watering-places and the artesian bores? They are administered together.

4968. There seems to be an enormous sum spent in paying caretakers? No doubt.

H. Wood,
Esq., J.P.
13 Feb., 1895.

- H. Wood, Esq., J.P.
13 Feb., 1895.
4969. There are eighty-five caretakers, who receive wages ranging from 3s. to 10s. a day, making an average of 7s. 8d. a day for each, which brings it up altogether to £145 10s. at the end of the year for each salary, averaging them all round? Yes.
- 4969½. Could not these public watering-places and artesian bores be leased out to men who would cultivate a piece of land, and save all this tremendous expenditure of £4,000 a year? Yes; some are let, and we try to let them all. We try to let all the tanks and wells. We have not tried to let all the bores. The reason is that we are trying to devise a scheme under which we shall be able to let the land attached to the bores to advantage by supplying water for the purposes of irrigation, but this is a matter that requires some little time to work out. It is possible, if we can work out a scheme, we may be able to get a very fair revenue.
4970. You said you had portions of land in your control;—have you the areas of land surrounding these watering-places under your control which you could lease to the caretakers? Yes.
4971. Could you not succeed in giving them enough land on which they could live? We always try to lease the tanks and wells, but we do not always succeed. Some are in places where there would be very little market for produce, and, for various reasons, people do not care to lease them, and yet they are necessary in order to provide means for travelling stock from one part of the Colony to another. If it were not for these tanks and wells, the owners of runs could not get their stock from one part of the Colony to another, or to market.
4972. The watering-places and bores are put there to satisfy the wants of travelling stock? Yes.
4973. They are not selected for the utility of the locality? No; a piece of land might be very poor in some respects, but that would not influence us. We select the site most convenient to water the stock that would travel along the routes. The tanks or wells should be at such a distance apart that stock could travel from one to the other.
4974. Of course, that is everything; but you could get respectable men and careful men at a great deal less than £145 a year, even to take care of places which, from their position, are not likely to be run after by lessees? It is possible that we could get them at a less rate, but that might involve a question of minimum wages.

THURSDAY, 14 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,

J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Harrie Wood, Esq., J.P., Under Secretary, Department of Mines, further examined:—

- H. Wood, Esq., J.P.
14 Feb., 1895.
4975. *Mr. Storey.*] How long have you been in the service of this Colony? Something over twenty-one years.
4976. How long have you held the position of Under Secretary? I have never held but the one position. I came here to take charge of the Department of Mining when it was first formed.
4977. That was when you first joined the service? In this Colony, yes.
4978. What were you previous to that? Immediately previous to my coming here I held the positions of district mining registrar for the mining district of Ballarat and secretary to the Mining Board.
4979. You were in the Civil Service of Victoria? Yes; I was really only in the service of Victoria for a few years before I came here. I did hold office under the Government before, but I always refused to go into the Service.
4980. Have you sole control of the sub-branches of this large department of which you are really the permanent head? Yes; they are all subordinate to me.
4981. Do you exercise a continual supervision over the whole of them? Yes; that is, continuous supervision over the general operations, but not the details. The details of each branch I leave to the officer in charge of the branch, but all matters affecting the branch are submitted to me, and usually the head of the branch consults with me before making a submission in any matter of importance.
4982. Have all these sub-branches been made branches since you took charge? There have been a variety of changes. At one time I had the occupation of Crown lands in the Mines Department—that is, all the squattages in the Colony. I also had minor roads and the administration of the Rabbit Act and Public Parks Act. Continual changes have been made, something has been taken away and something else added. The Forests were with me some time ago, but that branch was transferred to the Lands Department, and from the Lands Department to the Chief Secretary's Department, and then it came back to me again. These changes are always going on.
4983. You occupy offices belonging to the Government? Our offices are all rented.
4984. What is the aggregate rental you pay? At the present time we are paying £2,800 a year for the offices; then we have a store where we keep the diamond drills and machinery connected with them. I cannot tell you the exact rent we pay for that, but it is not large.
4985. Have there been any reductions in rental within the last few years? Yes, in this sense: We had four houses in Macquarie-street, and when we reorganised the Department of Agriculture and Forests we gave up two of them.
4986. Are all these houses held under a long lease that you cannot get rid of them? No; the lease has very nearly expired in Macquarie-street. The lease of the main building in Phillip-street has expired, and we are now holding under an annual tenancy. We have given notice to quit on the 30th June, in the hope that we will be able to get another place to go to.
4987. You know that rentals have come down very much, and you are alive to the fact that you can get reduced rentals when an opportunity occurs? We tried to get the rental of our main building reduced, for which we are paying £2,000 a year. I made an offer of £1,500 a year, but it was refused, and the owners offered to accept £1,750, on condition that we would take the building upon another lease.
4988. Which building is that? It belongs to the Commercial Building Society.
4989. How long ago is it since it was taken at £2,000 a year rental? It was taken on a lease of ten years in 1883 or 1884.
4990. You would almost think if it brought £2,000 a year in 1883, it would not be worth more than £1,000 in 1895? They would not take £1,500 a year.
- 4991.

H. Wood,
Esq., J.P.
14 Feb., 1895.

4991. But you are alive to the fact that rentals have come down? Oh, no doubt.

4992. Beginning with your clerical staff;—there is an amount on the Estimates of £6,200 per annum in your own particular office—all these salaries come under your supervision when the Estimates are made? Yes.

4993. Was there any attempt at all this year to make any reduction in the salaries? Do you mean in the salaries of individuals?

4994. Taking the whole of the clerical staff, embracing as it does a gross expenditure of £6,200 a year, was there any attempt to make a reduction this year? Not this year; there was in 1893.

4995. What was the reduction? In 1893 I had an assistant Under Secretary at £700 a year, and his services were dispensed with.

4996. In view of the general depression, and the reductions and retrenchment all round, was it not reasonable that some reductions should have been made in the salaries of your staff for the years 1894 and 1895? The salaries were all reduced by 10 per cent.

4997. That was last year? You could not go on doing that every year.

4998. But if the altered circumstances of the Colony require it, why not? Of course there is no reason you should not if you think it would be just.

4999. I gather from a remark you made to the President, that you consider all these salaries are fair and not excessive? That is my opinion.

5000. Upon what do you base that opinion? Upon the salaries that have hitherto been paid for similar duties in the Service.

5001. But you have never in any way attempted to compare them with salaries paid outside the service? I won't say that, because in my own mind I have no doubt that I frequently compare some of the salaries with salaries paid outside.

5002. With what result? With the result that I consider we are underpaid; that is, some of us, not all.

5003. Have you ever considered that, although the contributions to the Superannuation Fund come out of the salaries paid to Civil Servants, yet there is a pension ahead for them, which is not for the outside men? No doubt one has to keep that in view, but it really does not amount to much in very many cases. Take my own case for example; the probability is that if my health continues as good as it is at present, I shall never get anything out of the Superannuation Fund, and yet I have paid a good deal in. As regards comparing salaries in the Service with salaries outside, I may state that Mr. Hordern informed me, in the presence of my Minister, that in his establishment he has six gentlemen to whom he pays each £3,000 a year, and one gentleman in London to whom he pays £6,000. I do not know, but I believe I do as good work for my £900 odd as these gentlemen probably do for their £3,000.

5004. However you have no hesitation in saying that your staff is not overpaid or overmanned? It is not overmanned, and the salaries are not excessive, according to the rates that have been paid in the other departments.

5005. Have you any temporaries among all these? We have some temporaries, and we have recently reduced the number of them.

5006. The temporaries would appear under the heading of clerks? The salaries of temporary clerks do not appear in the Estimates. They are paid out of contingencies. As soon as a salary appears in the Estimates it is taken to mean that the officer receiving the salary is on the staff.

5007. How many temporary clerks have you? In the Mines proper I should think probably eight or ten.

5008. They have been a long time there? Some of them have been a long time.

5009. Is there any particular reason why they remain temporaries all this time? The difficulty of bringing them on to the staff is this: There are so many young people in the department who have come in as probationers, and to bring these men off the temporary staff on to the permanent staff one is bound to put them over the heads of these young people, and that is a thing I have always tried to avoid as much as possible. I have recognised, and in fact have recommended from time to time that some of the best temporary men should be put on the staff.

5010. In dispensing with the services of the temporary men you have the advantage that they have no claim upon you? They have no claim upon us.

5011. You do not recognise any claim? No; I think it is always a good thing to have a certain proportion of temporary men on the staff. When you have a rush of work, instead of increasing your staff you put on a certain number of temporary men, for when the rush subsides you may get rid of them without making a charge on the Superannuation Fund.

5012. That is if you do get rid of them? As a rule we do get rid of them, if we can spare them.

5013. You seem to have plenty of messengers, and the general opinion of the Commission is that messengers are paid exorbitant rates for people in their position in life? Yes.

5014. I suppose you cannot make any reduction in their salaries? I think you will find the salaries paid them are quite as low as, if not lower than, the salaries to messengers in other departments.

5015. That is the standard you take—other departments? You see the position really is this: A messenger in my department will come to me and say that the messenger in another department is getting so much more than he is, and that as the work of the other is not more than his he thinks I ought to recommend him for an increase. I may say to him that I am not prepared to recommend an increase; but at the same time there is something in what the man says.

5016. But if all the heads of the department would reduce the rates of pay for the messengers to what they would be outside, that would get over that difficulty; I do not suppose a man at £150 would leave you if you knocked £50 off his salary? I do not know, I am sure; he might.

5017. Survey staff, with a chief mining surveyor at £605 a year;—seeing that we have a Survey Office, with a large staff, could not any of that work be done in the Survey Office? There is no doubt that the draftsmen in the Survey Office do a very similar kind of work to what our men do, but my own impression is that if the staff in the Lands Office had to do the work of our office as well as their own it would be necessary to increase the staff to a number that would equal the two staffs. I am frequently asking the chief mining surveyor whether he cannot see his way to reduce the staff, and he always assures me they are so fully employed that he cannot do so.

5018. Do I understand you take it for granted when the chief mining surveyor tells you, or do you use your own judgment in seeing that his report is correct? It would be impossible for me to see for myself. I should have to spend a great part of my time in seeing what work they do.

5019.

H. Wood,
Esq., J.P.
14 Feb., 1895.

5019. You are of opinion that if that work were done in the Survey Office there would be no economy, as extra hands would have to be employed in the Survey Office? That is my impression. It certainly must be so if what the chief mining surveyor assures me in regard to his men is correct, and if the men in the Lands Department are also fully employed in the work they have in hand now.

5020. Will you explain to the Commission what is the difference between the chief mining surveyor who gets £605 a year, and the chief inspector of mines and superintendent of drills, who gets £560;—could these two offices be amalgamated? No, not very well, seeing that the chief mining surveyor is not only chief mining surveyor but also chief draftsman, and a great deal of his time is necessarily occupied in the office. The duties of the chief inspector of mines and superintendent of drills are chiefly outdoor.

5021. The chief mining surveyor's duties are chiefly indoors? As chief draftsman wholly indoors, and as chief mining surveyor sometimes outdoors.

5022. Chief mining surveyor is not a proper title to call him, is it? Quite proper, because he is in charge of the surveyors, and issues instructions for the work to be done by them, and he sees that the work is properly done.

5023. Is he in charge of your surveyors? Of all the men who make surveys. We have some four salaried surveyors who are immediately under him, but there are a number of surveyors who are really surveyors in the Lands Department who are also appointed Mining Surveyors, and when it is convenient to do so we give mining work to them for which they get paid fees.

5024. *Mr. Robertson.*] Would not that be an additional reason why the survey should be done entirely by one department? We have had some experience of that in times past, and we had to alter it.

5025. *Mr. Storey.*] Has that question been in your mind? Yes. Formerly we had no salaried surveyors in the department, and as the Deputy Surveyor-General was chief mining surveyor the work was done entirely through the Lands Department, but the delays were so great that we found it would be more economical, notwithstanding the expense, to have a separate staff—for this reason. The rent under a mining lease does not commence to run until the lease is issued. If the survey of the land should occupy as it did in some cases under the old system twelve months or even two years, it is clear that we lost one or two years' rent of the land. If you apply that to a large number of leases spread over the Colony, you will see that the loss of revenue would be something very serious, and that is altogether in addition to this important fact that until the lease is issued the persons applying to lease are under no obligation to work. Now the object is, of course, to get people to work and to develop the resources.

5026. Under the two departments, is there any revenue derived from the work of all these surveyors? There is a revenue derived from the rent of leases.

5027. But all the plans, which I presume the draftsmen do, are done for nothing? No; the applicants to lease pay fees for the survey. The work of these men consists in checking the surveys that are made as well as in charting them. For example, a surveyor may go on to the land, and owing to the length of time that a survey has been made the bench marks may be obliterated, the old plans may be defective, and in making his survey he may make it in such a manner that he encroaches on land that has been alienated from the Crown. It is quite clear that if we were to grant a lease of land that had been alienated from the Crown, and persons had gone on to it, we might be liable for heavy compensation.

5028. No reduction can be made in these two departments? As far as shown on the Estimates, no. I explained to you that we have some temporary officers whose salaries do not appear on the Estimates, and I also stated that we have recently dispensed with some of the temporary clerks.

5029. There is another item of £2,964 for the Geological Staff, with the Government geologist at £785; will you explain in what way the Government gets value for that money? By the assistance they give to the development of the resources of the country.

5030. Is their time fully occupied? Yes.

5031. Of course they are all scientific people? Yes.

5032. Are they stationed in Sydney? Oh, no; invariably they are in the field.

5033. What occasion takes them into the field? I will give you an example: You know we are boring for artesian water in the back country, and it is important for us before we go to the expense of putting down the bores to know whether we are likely to be boring in a particular strata in which water may be expected. We have to invoke the assistance of the geological staff to advise us upon that point. Then again, we have had to get the geological surveyor to trace the boundaries of this formation, and only recently the Government geologist while on a tour was able to indicate that this formation extended in a certain direction in a back part of the country where we did not previously think it existed. If that should prove to be true by experience it will make a very important difference to the Colony, inasmuch as it will enable us to get artesian water in portions of the Colony where we did not expect to get it. Then again, our geologists have indicated extensions of our coal-fields, and they have also given information that has led to the opening up no doubt of metalliferous mines.

5034. Do I understand that these gentlemen are always at work? Oh, yes; except when they are on leave. Every officer is entitled to a certain amount of leave each year. Some take it and some do not.

5035. What is the extent of their leave? Three weeks is the ordinary leave.

5036. But there is sufficient public work to keep these men absolutely employed? Yes; a great deal of their time is taken up, too, in inspecting land with a view to prevent the sale of land that is required for mining purposes, and to prevent land being locked up for mining purposes which can be spared for alienation for settlement.

5037. Under whose control are these men—do they select their duties themselves, or is that done by the Minister or yourself? They are all under the Government geologist, and the Government geologist is under my direction, subject to the Minister, of course.

5038. Who maps out the geologist's particular work;—does he do it himself? Whenever I see that anything is necessary to be done, I send for him and require him to despatch a surveyor to the place. There is always a certain amount of general work that they would take in hand without any specific directions. In matters affecting the sale of land that might be required for mining purposes the papers come to me from the Lands Department, and I forward them on to the Government geologist to see them attended to.

5039. Is that department in any way revenue producing? Not in the direct sense.

5040. There is the assayer and analyst at £335? The assays that are made are mainly for the purpose of assisting prospectors. If any person out prospecting should find something he thinks likely to contain gold, or other metal of value, he sends it to us and we make the assay free of charge. The effect of that

H. Wood,
Esq., J.P.

14 Feb., 1895.

is that sometimes it leads to the opening up of valuable deposits, and on the other hand prevents the expenditure of money upon worthless deposits.

5041. Would it be possible to make a charge for that sort of thing? Quite possible, but not desirable, I think.

5042. Is there any reason why the position of inspector of coal-fields should not be filled by the chief inspector of mines? Yes; there is the very good reason that the chief inspector of mines has never had any experience in coal-mining, and the practice of coal-mining is so different from that of metalliferous mining that it would be very difficult to get a man who could combine the two.

5043. There is no saving in the Geological Branch? It is quite possible to cut down the staff, but the work could not be done as efficiently as it is done now.

5044. £785 a year is a very fair salary for a man, even a professional man? Yes; it is very fair.

5045. In fact it is pretty high? Yes; it is quite possible to get a cheaper man, who would be very much dearer. Take for example my case: In one single instance I saved the Government thirty odd thousand pounds; that more than covered all they paid me since I came to the Colony, and more than they will have paid me when I retire.

5046. Take some of these contingencies: Allowance to mining surveyors to supplement applicants' fees, £4,500; allowance for surveys, reports, locality maps, &c., £2,000; rent of offices, £2,100; travelling expenses of officers when specially sanctioned, £5,000;—under whose supervision is all this; are you responsible for it? I am responsible for everything in the department, subject to my Minister.

5047. You satisfy yourself that all these amounts are not overcharges? If you will permit me to say so, they are not charges, they are simply sums of money set apart for certain purposes.

5048. But I presume that at the end of the year there is not much left? Sometimes there is.

5049. Is that allowance to mining surveyors paid? I think four are paid salaries, and then there is a rule in the Lands Department that, according to the character of the district, a surveyor is allowed a certain percentage over and above the scale fees. This is called a district allowance, and is supposed to be regulated by the character of the country. If it is very rough troublesome country to work in the percentage is so much more. We allow to any of the lands surveyors we employ the district allowance in addition to the fees that are paid by the applicant, and that is paid out of that item.

5050. Are the travelling expenses on a scale? Yes.

5051. Are they under the new scale? At present the new scale is in force.

5052. Diamond Drill Branch;—do I understand that you contract with private people to do work for them? Yes.

5053. Has that in all cases proved remunerative? Until, I think, last year, the diamond drill work has been a little more than self-supporting. We make our estimates so as not to make a profit; we do not seek to make a profit, but simply to clear expenses, so that the public may have the full benefit of the drills, yet be no cost to the State.

5054. This expenditure of £20,000, under the head of Prevention of Scab in Sheep;—I understand that is recouped to the country? Yes; you will find in the summary they always strike that off.

5055. Has there been any attempt to reduce that; it is at present rather hard upon many squatters, I understand? The trouble is to keep it from increasing. The squatters are always wanting us to subdivide districts and create new districts, which means appointing additional inspectors; we ought really to have two more inspectors than we have. Our desire is always to keep down the number of the districts, and consequently the number of inspectors, but the Boards, or the persons who are the contributors to the fund, press us to increase the number. We never increase the number of the districts on our own motion.

5056. Then how do you estimate the amount that is required to tax the squatters; do you do that at the end of the year when you know your expenditure? At the end of one year we fix the rate for the next year, and if we have somewhat exceeded our estimates at the end of this year we increase the assessment so as to recoup the Treasury what they may have paid on behalf of the funds. If on the other hand we have a surplus we decrease the amount and so work out the surplus.

5057. In all cases that expenditure is recouped? Always to the Treasury; that is provided for in the Act.

5058. Some inspectors are receiving £160 per annum, and, with et-ceteras, £188 10s.; now others are receiving up to £397 10s. inclusive of the extras, how is the difference accounted for? That is explained in this way: These officers who get a small salary—I think there are only one or two in the whole lot—are inspectors who are stationed at some place where there is a very large quantity of stock trucked by the railway, and it is necessary to have these stock inspected before they are sent away. Their duties are different from those of the ordinary inspectors, that is to say, they do not have to travel about to the same extent.

5059. What about the inspector at Hay? The inspector there has both to inspect the stock that is being trucked and to travel as well.

5060. You pay them for the whole of their time? Yes; but you must bear in mind it will cost them a great deal of money to keep horses.

5061. Could not these inspectors do the inspecting of watering-places and boring? These inspectors do assist in that work whenever we require them to do it. We avail ourselves of their services to a great extent, but they could not undertake the whole of the work, as it would take them away from their head-quarters too much, and the boards would not stand it.

5062. I suppose the chief inspector of stock is more immediately responsible than you are for all these people under his charge? Oh, yes.

5063. Does he report annually to you? He inspects all the officers; whenever he can get away he goes on a tour, takes a section of the Colony, and reports to me on the officers.

5064. During his absence who does his work;—he was away a long time, was he not? Mr. Jones, metropolitan inspector.

5065. The public watering-places and artesian boring are a dead loss to the country? Yes, directly. Of course we claim that they are a great benefit to the country in affording means to the settlers, both squatters and selectors, of getting their produce to market.

5066. Could you make that a self-supporting branch? I think we can; we are trying to do it, but the difficulty is mainly that we have to construct a tank or well where it would be required for the purposes of stock without regarding the character of the country. Say that these watering-places are 15 miles apart,

H. Wood,
Esq., J.P.
14 Feb., 1895.

apart; if instead of 15 miles we could go 20, we might get on to a good bit of land which would let, but to do that we should destroy the value of the system of watering. The main object is to provide water for stock along all the routes, so that the pastoralists and others who own stock and require to move them about, or take them to market, may be supplied with water. For example, the squatter may have no water or no feed on his run, so he must shift his stock and travel along the stock routes, and he cannot travel unless he can get water at certain distances apart for his stock.

5067. Is it not reasonable that these people who benefit should pay something more towards it? The probability is they do pay indirectly. If they could not get their stock to market the rents for the runs would possibly be much lower than they are.

5068. There is a large outlay for caretakers? That is a thing we are always trying to reduce. We are always trying to let the tanks, even at very low rents, but where we cannot succeed in letting them we must put a man in charge to protect them till we can let.

5069. Is it not a fact that the salaries paid to these men are greatly in excess of what men in the country really do get? I suppose, taking them as a whole, they would be rather high; but you must bear in mind that in many cases a man has to keep his own horse, and we allow him nothing for that.

5070. Who fixed the salaries of the caretakers originally? The salaries are generally recommended by Mr. Boulton, and either approved or modified by the Minister. Sometimes I may recommend either an increase or a decrease when the appointment is being made, but I have very seldom done that. In some cases the Minister may have either increased or decreased the rate recommended.

5071. Do you find the appointments are principally made by Ministerial influence? No; of course these men must have been appointed by some one originally, but the rule we follow is that wherever a caretaker is required for a tank we first of all make a choice from among the men who have been caretakers of the tanks, and whose tanks have been let. We keep a list of these men, and select from them. But in the first instance they must have been selected from outside, and I think a large proportion of them will have been employed on the recommendation of the local inspector. The local inspector, generally speaking, when reporting that a tank or well has been completed by the contractor, recommends that a caretaker should be appointed, and if he knows of a suitable man in the locality he recommends him.

5072. What about this very big item which has been tacked on to your department—agriculture and forestry? You will find that in 1893 we effected a very large reduction in both of these departments. In the Department of Agriculture we dispensed with the director of agriculture, the chief clerk, and the first clerk, and in the Department of Forests we dispensed with the director-general, the secretary, and the chief clerk. In place of all these people we appointed Mr. Campbell as chief clerk of agriculture and forests.

5073. The whole of that department is principally under his supervision? His immediate supervision; he is head of that department under me.

5074. What about the scientific staff at £3,000 a year? I do not think there could be any reduction made in the scientific staff. For example, take the pathologist, Dr. Cobb. In the scheme of retrenchment I not only recommended that we should get rid of most of these officers I have named, but also that the other salaries should be cut down. They were all cut down upon my recommendation, including Dr. Cobb's, but he told me that if the reduction were adhered to he would retire, as he could always have a position in America at a higher salary than we proposed to give him.

5075. What are his particular duties? He is a very able man. You could not replace him, I suppose. He takes both animal and vegetable pathology. I do not think you could find his equal in the colonies.

5076. *President.*] That is another name for the science of diseases? Yes, diseases both in animals and vegetables. He has rendered us most valuable services. He is an enthusiast, and works both night and day.

5077. *Mr. Storey.*] How long has this department been in existence? It was formed in 1890 or 1891.

5078. Has the result been satisfactory to the Government? Oh, yes.

5079. What is the ultimate gain derived from it? The introduction of improved processes of agriculture.

5080. Has that been tested in any way? Yes; it is tested in a variety of ways by the correspondence we have from people who say that owing to their having adopted recommendations made by the department they have benefited.

5081. How is that information disseminated among the people? We have officers who travel through the country, and we have publications which we distribute free of cost.

5082. The officers travelling through the country;—are they the foresters? The foresters have to travel within their respective districts, but the officers I spoke of in connection with the Agricultural Department are officers who travel whenever their services are required. For example, we have officers who travel about to give instructions and advice in the treatment of orchards, as to the best kinds of fruits to grow, and how to deal with and eradicate pests that affect orchards.

5083. How are these people paid? By salary.

5084. And travelling allowances? Yes. Then we have an officer who gives advice upon subjects relating to dairying, and the introduction of the factory system of butter making.

5085. £7,000 a year is paid for foresters;—it is a common remark to hear that these men are too highly paid for their services? Of course I know it is not an uncommon thing for people outside to say that Civil Servants are too highly paid.

5086. But particularly the foresters? I do not think they are too highly paid, but I think it is quite possible the number might be decreased. In fact we have got rid of several since the reorganisation, and we are still getting rid of some. I hope in the course of a little time to bring the number down considerably, but I do not know that it is quite wise to rush the retrenchment.

5087. There are thirty-two here? Of course there are some we must keep; that is to say, we must if we want to do what we are hoping to do in our forests. For sometime past we have been labouring to introduce our hardwoods into other countries, and I believe before long we shall be doing a large export trade in timber; but in order to do that we must protect our forests, and endeavour to get as far as we can some permanent tenure of them, so that we can afford to improve them.

5088. What are the particular duties of the foresters? To prevent the cutting of timber wastefully—that is to say, cutting timber before it is matured. That is one source of waste, while another is to cut down trees and leave them on the ground to rot, because they do not come up to the expectation of a timber cutter. Another of their duties is to measure up timber that is taken to the sawmill—timber that is subject to royalty—in order that the royalty may be collected upon it. Until quite recently they have had the

the charge of supervising the ringbarking of trees where the Lands Department have granted to owners the permission to ringbark. The conditions would probably be that no valuable timber should be ringbarked, and it would be the duty of the foresters to visit the place periodically and see that the conditions were observed. Quite recently we have arranged with the Lands Department that they shall get that duty performed by some of their officers.

H. Wood,
Esq., J.P.
14 Feb., 1895.

5089. How is it that the salaries vary? They vary according to the importance of the district. For example, the districts on the Murray are very important, as there are forests there both of pine and gum. Down on the South Coast, and at Narrandera also, we have some very important districts. In some districts the revenue is considerable, and we require to have a very good man, otherwise we should lose a lot of revenue. In these cases we employ the best men on the staff, and they get somewhat higher salaries than the others.

5090. Salaries irrespective of travelling allowance? Well, as a matter of fact we do not give them any travelling allowance now, but we give them a forage allowance. The sum of money we had voted was insufficient to pay them anything like the daily rate for travelling, so we have divided up the amount voted in order to give each one so much in the shape of forage allowance, and he has to do his travelling for this fixed amount which he gets per month. If they were paid travelling expenses on the prescribed scale it would come to a very much larger sum.

5091. You said yesterday, in answer to the President, with reference to the Civil Service of the Colony, that you would not approve of being under a Civil Service Board? Pardon me, I do not think I said that. At any rate that is not what I desired to convey. What I wish to convey is this: I do not think that giving the patronage, so to speak, or the right of making appointments, to a Board would be any improvement on the present system.

5092. *President.*] I think you said you would as soon rely upon the judgment of a Minister as upon the judgment of a Commissioner? Yes, or a Board.

5093. *Mr. Storey.*] With your twenty-one years experience in New South Wales, and previous experience in other Colonies, will you admit that any improvement can be made in the management of the Civil Service of this Colony? I think an improvement can be made in the system of appointments.

5094. Appointments only? Well, that is a very important feature. It would be very much better if the permanent heads of the departments were made responsible for the number of officers that are employed and for the work they do. I am not sure that it would be advisable to give effect to such an idea, but I am inclined to think it would.

5095. In what way made responsible? So that they would have the power of saying so-and-so's services should be dispensed with, and they would be dispensed with as a matter of course.

5096. Putting the power in the hands of the heads of the department? Yes; much as you have in a large business house, or, rather, I do not know about business houses here, but that is what they did in London.

5097. If there were a Board in existence, composed of people outside the service—a Board that would take suggestions from the heads of the departments in dealing with appointments—do you not think that would work? I do not think it would. Of course you can only judge of that from what you see elsewhere. That would depend very much upon whether the classification of the officers—supposing you had a classification—applied to all the Service or only to departments of the Civil Service; that is to say, if you had a first, a second, and a third class as applied to one department, whether the officers of the lower classes could rise into the higher class in that department, but not in any other department.

5098. At all events, do you not think it would be better to have the control of the Civil Service beyond the power of the Minister or political patronage altogether? It may be that it would. My experience does not show that, so far as patronage is left with the Minister, there is great ground for complaint. If the patronage is exercised by people who are not Ministers, then, of course, there is a danger.

5099. But is not that so? No doubt it is so in some cases.

5100. Is it your experience that it is so in many cases? No, as far as my department is concerned I may say we have been very free from that sort of thing.

5101. As an old Civil Servant, and one whose opinions we respect, do you not think it would be better that the Civil Service should be so managed that Ministerial or political influence could be done away with—for example, if you had to run the Service on your own account could you not do it on much better lines? I think if my department were left in my hands I could have prevented from time to time some men from being appointed that we could have done better without. My own impression is that the present system is not the best, no matter who administers it.

5102. *Mr. Robertson.*] In that case who appointed the inferior men? In all probability it would be the Minister, but the cases of that kind which have occurred in my department are very rare.

5103. *Mr. Humphery.*] In what respect is the system defective? In this way: No one can enter the Service on the permanent staff except as a probationer. A very large number of youths qualified are registered with the Civil Service Board, and plenty of them, I believe, remain on the list until they pass the age when they can come in. On the other hand, take a lad who has just qualified. If he has influential friends they will move to get him introduced into one or other of the departments. That is, no doubt, scarcely fair to others who are on the list, and it seems to me it would be better, whenever a vacancy occurs, if the law were such that you could take a fair number from the list of those who are registered—of course you could not take the whole list, because it is much too voluminous—and require the head of the department to make a recommendation as to which of these candidates would be best suited for the work. And in order that he might arrive at his judgment he should cause a competitive examination to be made as between this number of candidates upon the class of work that the probationer would be required to do if he were appointed. That would reduce patronage to something quite nominal, and nobody could be injured. Then there is another way in which you enter the Service—that is, by special qualifications; and that, no doubt, is the most dangerous element in our present system. My opinion is this: Suppose a vacancy occurs for an officer, a specialist, the appointment should be filed only temporarily on probation, say for a certain period, and there should be some means of reviewing the appointment during the probation, perhaps by having the man's name laid on the table of Parliament with all papers connected with the appointment, or in some other way which would be open to challenge during the term of probation. And if it could be shown that this man had not been fairly appointed to the position or was not qualified for it, then at the end of his time he would go and another appointment would be made. That would prevent anything like an abuse of the Service with regard to special qualifications. You see these

H. Wood,
Esq., J.P.
14 Feb., 1895.

these are men who are put over the heads of others, and it is a very important thing that the greatest care should be taken in selecting them. There is only one other thing, and that is the temporary appointments. It would be quite possible, I think, to arrange that a temporary appointment should not last more than six months, and that unless a vacancy could be found for the officer on the staff his services should terminate at the end of six months in any case.

5104. *President.*] And not be renewable? I would not like to say that; but suppose a temporary clerk had served his six months in the Department of Mines, and a temporary clerk were required in the Lands Department, I do not think the temporary clerk from the Mines Department should be debarred from going into the Lands Department; but if you mean that he should not be reappointed in the Mines Department for another six months, I agree with you.

5105. *Mr. Storey.*] I gather you are not altogether opposed to the Civil Service Board, but you would have it on somewhat the lines you lay down? If entry into the Civil Service were arranged something like that it seems to me it does not matter who has the patronage. I would just as soon trust a Minister as the Board.

5106. Competitive examination would stop patronage? Yes.

5107. In making appointments to your department do you consider nationality at all? Never; I never know a man's nationality or his religion.

5108. *Mr. Robertson.*] In an early part of your examination you were asked if you thought that a Civil Service Commission might be judiciously formed to control the appointments and classifications in the Civil Service, and you said it had been tried in other places and had not been found, you thought, to work satisfactorily? That is as to the appointments.

5109. In how many Colonies are there Commissions of this kind? The only Colonies I know of are Victoria and Queensland, although there may be others.

5110. Have you read the reports of these Commissions? No; I may, perhaps, have glanced at some of them occasionally, but not with any idea of studying the contents.

5111. I think you said further that you came to that conclusion after talking the matter over with others in the service? Yes, quite so.

5112. But you have not read anything in any of the reports indicating that these Commissions have failed in the objects for which they were established? I am afraid they would hardly report the fact if they had failed.

5113. That is true; but you have not read the reports? Certainly not with a view to forming an opinion on the matter.

5114. Did you state that, in your opinion, the Service could be best conducted by allowing the authority vested in a Commission of that kind to be vested in the Under Secretary? Yes; I believe it would be better for the service, especially if the making of appointments were arranged as I was suggesting just now. I think the power could be quite as well left in the hands of the Under Secretary as in a Board, and of course at less expense.

5115. Do you advocate a classification throughout the Service? Yes; I think classification is an advantage if the classification does not involve the transfer of officers from one department to another. I don't know whether I make myself quite clear. In this Colony we had a classification under the Civil Service Act; but that classification was only supposed to apply to the departments each within itself; that is to say, an officer could rise from the lowest class to the highest class in that department, but he could not go from a low class in the one department to the next class in another department because there happened to be vacancy in the higher class in the other department.

5116. Although he might be qualified for the higher class in his own department? Yes.

5117. Where there would not be a vacancy? Of course he could not rise in his own department unless there were a vacancy.

5118. Is there not throughout the various departments of the Civil Service work similar in nature? Yes; no doubt there is within certain limitations. For example, take the Mining Department. It is quite true that we write letters, and that other departments write letters too—so far you might say that it is the same kind of work. Now, as a matter of fact, it is so up to a certain point, but unless a man charged with the correspondence of the Mines Department knew something about the mining laws he might very easily, in his correspondence, make very serious blunders.

5119. Take another batch of clerks, say accountants, of whom there are a very great number in the Civil Service;—your scheme would not permit the accountant in one department to be transferred under any conditions to the Accountancy Branch of another department? Pardon me, that is not so. Even now, you know, without any classification at all, transfers are made from time to time, and there is no reason why they should not be under any scheme you might devise. But what I say is this, that a man in one department, because he is senior on the list for promotion, should not be entitled to claim a vacancy in another department over the heads of the men who are in that department.

5120. Although the men in that department to which he might be removed are in a lower class? Pardon me: What I mean is this: Suppose a man at the head of the lowest class in the Mines Department and the oldest man in the service at the head of that class, and a vacancy occurs at the foot of the second-class in another department—

5121. *President.*] Immediately above him? Yes, but in another department. I say that this man who is at the head of the third-class in the Mines Department, and the senior of that class all throughout the service, should not be entitled to claim the position in this other department simply because he is the senior at the head of that class.

5122. *Mr. Robertson.*] In what way would you recognise ability? I would recognise ability in this way: Supposing there were two men who had served the same length of time in the Service, and an opening occurred for the promotion of one from one class to another in any given department, I would recommend that the better man of the two should get the promotion in preference to the other man, although in point of seniority they were both equal.

5123. Now, suppose that one man has been appointed some years before the other, and the man more recently appointed is the abler of the two;—what would you do in that case? I should do what I have done occasionally in my own department. I should recommend the abler man for promotion over the head of the inferior man. I have done that in the matter of increases of salaries more than once. I have told a man that he was not doing as well as he should do, that he must stand aside and another would be promoted above his head.

H. Wood,
Esq., J.P.

14 Feb., 1895.

5124. Is that the general practice throughout the service? I don't know; it has been the practice in my department. It is a practice you do not often have the chance to carry into effect because we do not get promotions as often as we like. Promotions have recently only occurred in the Mines Department through the death or retirement of some men.

5125. In the list of the Survey staff which you have handed in there is added a note saying, "Experienced draftsmen" is written against the names of those officers who are capable of performing all general duties expected from a draftsman in this department"—I would like to ask whether Mr. Drummond is a draftsman? Yes.

5126. Is he not an experienced draftsman? Yes.

5127. It does not state so here? The fact of his occupying the position of examining draftsman would indicate his qualifications. We should not be likely to put an inferior man to examine the work of superiors, but I think you are quite right in view of that note in suggesting there should have been something put there to indicate that. I simply mention the fact that Mr. Drummond is the examining draftsman by reason of his long service and qualifications.

5128. Are the draftsmen in this department paid any additional sums besides the salaries stated here? No.

5129. Do the temporary draftsmen who are engaged at 12s. 10d. a day receive pay for six days a week or seven? They are paid for six days per week.

5130. Do the surveyors who are temporarily employed in your department prepare plans also, or do they send their field-books into your department? The staff surveyors send their field notes into the department, and the plans are made there.

5131. Is there any work done by contract now in the preparation of plans? Yes.

5132. Who are the contractors? You have the names on that list.

5133. Is there any contract work done by the permanent staff? Not now.

5134. When did that cease? I am not sure that it was not in 1889. During the mining boom, the work was so heavy that it could not be done within the office hours by the staff, and I devised a scheme by which it could be done by the staff working overtime, so that the cost to the department would be less than by increasing the staff, and of course it would be a great deal better for the draftsmen themselves; that is to say, they would be able to earn more money than they would have done but for this. However, exception was taken to the scheme as it was supposed to have been abused, and possibly was abused.

5135. Are you a member of the Civil Service Board? No.

5136. You know the Act? Yes, somewhat.

5137. I suppose you have read it through? From time to time.

5138. You have studied it? I have studied portions of it from time to time, but I do not think I could quote from any one of the clauses.

5139. But you could state your opinion as to the results of the operations since the Act came into force? The operations under the Act have been so altered by Amending Acts. There is so much of the Act that is now inoperative, and has been inoperative for some length of time.

5140. In your opinion, is this Act performing the purposes for which it was enacted? Certainly not, because the principal part of the powers has been taken away.

5141. It is practically a dead letter? Not absolutely that, because under that Act the Civil Service Board are no doubt doing very valuable service in connection with the Superannuation Fund, but there is no question the Act has been emasculated to such an extent that I suppose the Board has scarcely any useful powers outside of their powers in relation to the Superannuation Fund.

5142. Then, excepting as to the Superannuation Fund, it has failed? No, pardon me, I don't think that is so. It has been altered, but I am not at all sure that very good service was not being done by the Board in regard to matters, power to deal with which has been taken from them. But of course it is by the will of Parliament that it has been altered, and I think it would be hardly fair to the Board to say the Act has failed.

5143. The Act has failed—I don't say the members of the Board have failed? Well, the Act has failed in this way,—that Parliament in its wisdom has seen fit to alter the law.

5144. So far as relates to the appointments to the Service it is practically inoperative? Yes, no doubt that is so.

5145. Generally speaking, what are the duties of a sheep inspector? His duties are to inspect sheep going from one part of the Colony to another, as to the state of their health; to prevent the stealing of sheep by the alteration of brands, and so forth; to prevent loafing, so that one man's sheep shall not live on the grass belonging to another man; to protect the travelling stock routes so that they may be available for the travelling stock; to report upon diseases of any kind in cattle and sheep, and as far as possible to get those sheep and cattle destroyed that are diseased. I may say the law is somewhat defective, and in some cases we do by our inspectors destroy cattle that we have no right to destroy, but we do destroy them, and chance having to pay compensation.

5146. Are the inspectors constantly on the stock routes? I could not say that. For example, an inspector of stock is supposed to attend the meetings of the Stock Board.

5147. I will put it in this way: are they frequently on the stock routes? Yes.

5148. They frequently traverse the whole of the stock routes in their district? I don't know whether it would be quite correct to say that each inspector frequently traverses every stock route in his district.

5149. How would you describe his visits? I should say he as nearly as possible traverses periodically the main stock routes of his district.

5150. But what about the branch stock routes? He would traverse them less frequently unless there were a special reason for it.

5151. Are all the watering tanks upon the stock routes? Yes.

5152. Would it not be possible for the sheep inspectors to inspect those tanks? It would be possible for them to inspect those tanks sometimes, but, of course, there are plenty of stock routes where there are no watering-places, because of the existence of natural water, and therefore we do not need to construct watering-places on some of the stock routes.

5153. But in that case you would not require an inspector of public watering-places to visit those lagoons? That is quite so, but the time that would be occupied in inspecting these public watering places, including the bores, would, I believe, be more than the Stock Boards would consent to the inspectors giving. We have to bear in mind that these inspectors of stock are under the control of the

- H. Wood,
Esq., J.P.
14 Feb., 1895.
- Board of the district, and inasmuch as the Board represent the people who contribute the money that pays the salaries of these men they have certainly a right to some voice in the matter as to how the men shall be employed.
5154. Do they not, as a matter of fact, see that the watering-places are in order? Whenever required.
5155. Would they not see that the tanks were in order as portion of their duty in protecting the sheep and the sheep-producers? I do not think they would do that. Sometimes that would involve a delay of some days at a particular watering-place, while in very many cases an inspector of stock could not afford the time to stay; he would have to be moving on.
5156. The staff of inspectors, I think, are preventive in their work? Yes.
5157. When was the last case of scab reported to the department? The last case of scab was when those American sheep were admitted into the Colony.
5158. How many years ago? I fancy it would be about ten years ago.
5159. *President.*] Some Vermont rams were admitted to the sales, I think, some three or four years ago? Those were Vermont sheep I am speaking of. A very large claim was set up by the owner. The matter was brought under the notice of the Government of the United States, who put themselves in communication with the Imperial Government, and there was a great to-do about it because we resisted this man's claim for compensation.
5160. *Mr. Robertson.*] Seeing that for many years there has been no case of scab reported, don't you think the expenses could be very much reduced? As I have said before, the owners of stock, as represented by the Stock Boards, are the people that are always trying to increase the number of stock inspectors. Of course there is no doubt Parliament could repeal the Act under which these people work, and so abolish the whole of them, but the country would save nothing if that were done.
5161. But still to the station-owners who produce stock it would be a considerable saving? It would, no doubt; and that is why it appears strange these are the very people who want us to increase the number, unless upon the assumption that they consider these inspectors do good service.
5162. Are those people the people urging the expenditure? Certainly.
5163. Of course we can say nothing to that? Oh, no.
5164. How many watering-tanks have been constructed since 1889? I could not tell that from memory.
5165. Could you make any suggestions to the Commission as to the transference of branches of one department to another that might be effected with economy? I must confess that that is a subject I have never thought about. I have always had so much to do in looking after my own department that I have never thought about what is done in other departments, but it is possible something of the kind might be done.
5166. You deal in your department with the prickly-pear? Yes.
5167. Is that a matter that should be dealt with by the Department of Mines, and not by the Department of Lands? It really is very difficult to say whether the Lands Department could deal with it less expensively than we do. We deal with it by our foresters, and it is possible that the Lands Department may have some officers who could look after the work as well as our foresters. As long as we have to keep the foresters, I do not know that the work could be done more economically.
5168. Have you recently discharged any forest rangers? Yes.
5169. How many? I think since 1893 we must have got rid of six or eight.
5170. Who are performing the duties of the forest rangers who were dismissed? We re-arranged the districts some little time back, increased the area under one man, and so dispensed with the services of another.
5171. Could you make any suggestions by which the work of one class of inspectors could be done by another class travelling over the same country; have you ever given that a thought? Yes; I have thought that over to some extent, but I do not mean to say that I have by any means thought the question out. The difficulty that would present itself in regard to that would be that the man belonging to another department, who travels over the same ground, might not have the requisite qualifications for performing the duties.
5172. Is it part of the duty of the Under Secretary to watch the expenditure of his department with a view to the necessary work being done as economically as possible? Oh, yes.
5173. What other dismissals have there been besides the forest rangers in your department, say within the last year? I do not know that we had any dismissals last year; we had in 1893. There were a great many officers dispensed with in 1893. I could give you a return if you like.
5174. Had you recommended these retrenchments? Yes; many of them.
5175. You might furnish the Commission with a list of the retrenchments you have suggested since 1889? Certainly.
5176. What steps are taken to bring the mineral wealth of this Colony under the notice of the nations of the world? The only way in which that is done is by publications.
5177. What publications? There is an annual report always, and there are publications in connection with the geological survey. These are sent to all the scientific societies of the world practically, and are more or less commented upon.
5178. *President.*] Are they also supplied to the newspapers? The scientific papers are not so much supplied to the newspapers, but the annual reports are, and they are very frequently commented upon by the newspapers in various parts of the world.
5179. *Mr. Robertson.*] That is your letter [*handing letter to witness*]? Yes.
5180. You hand that in together with the other documents? Yes.
5181. It refers to inspectors of watering-tanks and artesian boring? Yes.
5182. Are these men supposed to have any special knowledge or training for this work? Yes. What we aim at in getting these men are such qualifications as would fit a man for the position of manager of a station. Our desire has been always to have these tanks and wells constructed as much as possible on the lines adopted by station-holders, and not to go in for expensive engineering works. But as a matter of fact two of our men are engineers.
5183. But the other four? The other four are men who have had considerable station experience.
5184. So it is not necessary that they should be surveyors? They require to be able to use some of the instruments used by surveyors, for example, a level.
5185. I suppose any man on a station can use a level? Not any man
5186. Any manager? Any manager, yes.

5187. One would think from this description that they were surveyors, because you say, "taking the necessary levels and making such surveys as are required"? That requires a little explanation. What is known in this Colony as a surveyor is a man who holds his certificate under the chief surveyor, but these are men who can make such a survey as is necessary to lay out the work and make a design for calling tenders for the construction of the tank. They can also lay out the lines of races or ditches for conveying water into the tank.

H. Wood,
Esq., J.P.

14 Feb., 1895.

5188. And do your surveyors never superintend the making of these tanks? No.

5189. The surveying that is required is simply the surveying that any station manager could do? Yes, as nearly as possible that.

5190. Any gardener would have the same knowledge? That may be true, but my knowledge of gardeners would not justify me in expressing an opinion.

5191. You have no knowledge outside your department? The whole of my attention is taken up in my department.

5192. What is the duty of these officers in "supervising the construction and investigating questions in connection with artesian bores"? Well, there are a variety of questions that arise in connection with artesian bores. We let a contract to a man to bore, say 2,000 feet deep. When he gets down a certain depth and comes upon hard rock his desire is to knock off his contract, because when he gets on to hard rock the price he receives for boring does not pay him. But it sometimes happens in the sinking of a bore you may come across very solid rock which is supposed to be, and appears to be, bed-rock, that is to say, something below which you will not get rock of a different character likely to contain artesian water. It is the object of the contractor to make the officer who inspects believe that the hard rock is bed-rock, in order that his contract may be declared finished, and he may draw his money and go; and it is the duty of the officer to satisfy himself, before he recommends that the contract be given up; that it is really solid rock, and not merely a block of hard rock that occurs in another formation. This really requires very great care.

5193. It does not require that he should be a geologist, does it? Of course it does not for this reason, that whenever a difficulty arises as to the nature of the rock a sample is submitted to one of the geological staff for an opinion; but even for a geologist it is sometimes very difficult to give a definite opinion as to whether the rock which is being bored in is the solid bed-rock, or simply a piece of rock in another formation.

5194. How does the inspector satisfy himself? If he has any doubt he refers it to the Geological staff, and we depend upon the opinion given by our geologist.

5195. Well, that is work that could be done by almost any man? Oh, no; I beg your pardon.

5196. What knowledge does an inspector of boring have that a sheep inspector would not have? Of course I do not mean to say that there is anything he does that a sheep inspector could not learn in a little time. He has to understand something about the shutting off of water after it has been struck, and so forth, and the construction of troughs into which the water is conveyed for the purpose of supplying stock.

5197. Has it ever been recommended to you that the staff of inspectors of watering-places could be abolished? Yes, it has.

5198. And what is your opinion? My opinion is that probably there would be no saving.

5199. Upon what account would there be no saving? In the first place, we could not make sure of having the services of the sheep inspectors, because it would be in the power of any of the Boards to object, and that would probably result in this: that we should have to say to these Boards, "Well, gentlemen, if you will allow us your inspector to act also as inspector of watering-places within your district we will allow so much money towards his salary." And inasmuch as the district under the charge of a sheep inspector is, in some cases, very small, as compared with a district under the charge of an inspector of stock, possibly these allowances would exceed the salary we pay to the inspectors of watering-places.

5200. Suppose you withdrew the inspectors of watering-places, would that break any contract that you have with these sheep-owners? No.

5201. In that case would they not see that the men they have working for them would inspect the tanks? I do not think so; they would expect us to look after our own work.

5202. Very well, if that was not done and the tanks ran dry, who would suffer, the Civil Service or the sheep-owners? The country would suffer, inasmuch as the money expended by the department on these works might be lost.

5203. *President.*] Would not the possible loss they might sustain in a drougthy season be an inducement to them to provide for the care of the tanks? I am not at all sure that it would. Of course the position of affairs is this, that in some sheep districts there may be no public watering-places at all, while in another sheep district there may be several, perhaps a considerable number, and the inspection of them would involve a very large amount of travelling which the inspector would otherwise not have to undertake, and this would occupy a very large portion of his time. Of course the Board of that district might reasonably say—why should our inspector in this district undertake all this work, seeing that we have no more benefit from the stock routes than another district where there are no watering-places to inspect?

MONDAY,

MONDAY, 18 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,

J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., J.P., PRESIDENT.

Harrie Wood, Esq., J.P., Under-Secretary, Department of Mines, further examined:—

H. Wood,
Esq., J.P.
18 Feb., 1895.

Witness.] Before answering questions, I would like to state, in continuation of my former evidence, that Mr. Pittman, the Government geologist, is also employed as lecturer on mining in the University, for which, I believe, he receives an honorarium. I was also asked with regard to my Victorian services. My position was kept open for me for something over twelve months, till I had quite decided to remain here. I wish to say that because a Member of the Upper House here made a statement in the Council, to the effect that I was one of the officers who were dispensed with on Black Wednesday. That occurred some five years after I came to this Colony. In regard to the return I handed in of the officers in the Mines Department the name of the metallurgist is included under the head of the Geological Survey Branch. The inclusion of that officer under that branch was a mistake on the part of the clerk. That officer is quite distinct from the Geological Branch. [*Return handed in.*] They omitted to put in it the officers of the Water Conservation Branch. This branch is still occupying rooms in the Works Department. It belongs to the Mines Department, though it is worked down there.

5204. *Mr. Humphery.*] Have you read the report of the Royal Commission on the Public Service which inquired into your Department, and reported on the 27th September, 1889? Yes.

5204½. Have all, or many, of the recommendations contained in that report been carried out? Certainly not all. Some had been carried out before we received the report.

5205. Referring to the Mines proper, has the discontent referred to in that portion of the report ceased with reference to the Leasing Branch? Yes. That is the matter referred to in the Auditor-General's report. The registrar of that date has been dispensed with.

5206. There is a recommendation that the services of the registrar, who is over 60 years of age, should be dispensed with? Yes.

5207. And that the accountant be appointed registrar;—has he been appointed registrar? No.

5208. Has the vacancy caused by the removal of the registrar been filled? Yes; but not by the accountant.

5209. How has it been filled? By the appointment of Mr. Ray, who was record clerk.

5210. Why did you not carry out the recommendation made by the Royal Commission? Because we had a better man for the work. As a matter of fact, Mr. Ray was well suited for the registrar's position, and we wanted the accountant to remain the accountant.

5211. Was any economy effected by appointing Mr. Ray? No; and there would not have been any economy effected by carrying out the recommendation of the Commission. So far as economy is concerned it came to the same thing.

5212. There was also a recommendation that the services of Messrs. Burcher and Nash, of the Registrar's Branch, should be dispensed with? Yes.

5213. Was that recommendation carried out? Mr. Burcher was not dispensed with, but he was fined. Mr. Nash was dispensed with, but that was not by reason of the recommendation of the Commission. As a matter of fact, Mr. Nash was injured in a railway accident, and the result of that was that he practically lost his sight. That was why we got rid of him. He has recently been appointed caretaker.

5214. *Mr. Robertson.*] Was Mr. Burcher suspended? Yes.

5215. And disgraced? Yes.

5216. *Mr. Humphery.*] Did you give effect to the recommendation of the Commission that the Correspondence Branch should be transferred from the Account Branch and amalgamated with the Record Branch? No, we did not, for the reason that the officer who was in charge of the accounts was a much better man for conducting the correspondence than the record clerk. Since then changes have again been made. The Assistant Under Secretary's office was abolished, and Mr. Ormiston, who was then in charge of the accounts, has been made chief clerk. We had no chief clerk when we had an Assistant Under Secretary. Then the officer who had charge of the records would have been next in rank for the position of accountant, but he was not a good accountant, and for that reason he was, with his concurrence, passed over and left in the Record Branch, and the officer who had charge of the Lease Branch was made accountant, and is so still.

5217. What is the salary of the officer who was incompetent for the position? That gentleman had no experience in accounts, but he is a good record clerk, and his salary is £326 a year.

5218. The Commission also recommended that the services of three clerks should be dispensed with as unnecessary in consequence of the reduction of work;—what was done to give effect to that recommendation? The services of one officer were dispensed with; the services of the other two were retained.

5219. Why? Because we considered their services necessary. Both these officers are still in the department.

5220. The Commission recommended that the services of four of the clerks should be dispensed with at the close of the year;—were they dispensed with? No; we considered them necessary.

5221. In the Leasing Branch the Commission appear to have been of opinion that two officers were not required;—were their services dispensed with? No; but one of the two died.

5222. Has his position been filled? Not actually that position, but the vacancy created has been filled by a probationer. We brought in a probationer, and the other officers moved up. For some time before the death of the officer in question I got the Minister's consent to not giving him any increase of salary. The man who died was an elderly man but a good clerk.

5223. The services of one temporary clerk were apparently considered unnecessary;—were his services dispensed with? No; but one temporary clerk left.

5224. Was his position filled? I do not think so.

5225. Did you follow the suggestion that the Inquiry Branch should be discontinued? No; but we placed it under the registrar, instead of having a separate officer to take charge of it.

5226. Was any economy effected? Yes; in so far as we did not keep an officer simply in charge of the inquiry office. We put the officer elsewhere.

5227. Was a vacancy created by the transfer of the chief mining surveyor to the Geological Department? Yes.

5228.

5228. Has that vacancy been filled? Yes; by the appointment of Mr. Sullivan, who was the senior salaried surveyor.

5229. At what increase of salary? I am not quite sure what salary he was receiving as a surveyor, but his salary as chief mining surveyor was £600. In order to bring that up to date, I would say that since then we have abolished the office of chief draftsman, to which a salary of £600 was attached, and Mr. Sullivan performs the double duty of chief mining surveyor and chief draftsman.

5230. In addition to salary, is there any equipment allowance? No; that is abolished.

5231. You did not give full effect to the recommendation of the Commission that the position of chief mining surveyor should be dispensed with? No.

5232. You combined that office with another? Yes; the Commission recommended us to do away with the chief mining surveyor, and to retain the chief draftsman. The salary in either case was the same. We abolished the chief draftsman, and we retained the chief mining surveyor, with the advantage that the chief mining surveyor can have the control of the surveyors as well as of the draftsmen, he being both a surveyor and a draftsman.

5233. There was a recommendation that as the pressure of business in the department at the time this report was presented had ceased, five temporary officers should be dispensed with;—what was done with respect to that? Some of them were dispensed with, and some are still there. I think two are still in the branch.

5234. Are their services necessary? Yes.

5235. Has any improvement been made in the method of dealing with leases, with a view of facilitating their issue, as suggested by the Royal Commission? Not as suggested by the Commission. They proposed a system of decentralisation which, if carried out, would have involved a very heavy increase in the expenditure. They thought it would lead to economy, but it would have done nothing of the kind.

5236. Would it have led to more expense in the country? Yes; we should have been obliged to have a staff in every centre instead of having one staff in Sydney.

5237. As a matter of fact, you say there has been a very considerable saving of time in dealing with leases? Yes; we have always aimed at reducing the time that elapses between the date of application and the date of issue of a lease, but not on the plan recommended by the Commission.

5238. Does the practice in the department still obtain of entering overtime work to the credit of the various draftsmen? No; that is the matter that is dealt with in the report of Mr. Saunders. The system that they no doubt are referring to there is the system that I introduced, and I am free to admit it was a failure; it ought not to have been a failure, but it was. The fact is, it was abused, and you will see by the report of Mr. Saunders how the abuse crept in and what was the effect of it. But from the time of that report it was abolished.

5239. A suggestion was made that an inquiry should be held to ascertain the methods by which officers could expedite their work;—was any attention paid to it? We are continually making inquiries into that.

5240. With what result? I think we have reduced the time of doing work of various kinds.

5241. Can you make any suggestions with regard to the Lease Branch? I have urged the chief mining surveyor to reduce the staff in any way consistent with efficiency, and he assures me that it is not possible.

5242. Have you made any recommendation with regard to the temporary officers? Yes.

5243. In consequence of there being less work to do in the department? Yes. Every now and then I look into things and see if there is a possibility of reducing the staff, especially the temporary men. I get reports from the heads of the branches, and if they say that they can do with less men than they have, I at once recommend the Minister to dispense with them.

5244. You have certain mining surveyors paid by fixed salaries? Yes.

5245. Would you recommend any change with a view to economising in that direction? No; I would not recommend the abolition of the offices of paid surveyors for the reason that we find that, especially with regard to scattered work, we can get it done more expeditiously under the existing method than in any other way. Surveyors who are paid simply by fees won't take up scattered work; it does not pay them; they would be out of pocket.

5246. The Commission of 1889 recommended that there should be no mining surveyors paid by fixed salaries? I think so.

5247. And that the preparation of the surveyors' accounts should be their own work and not done by the draftsmen in the head office;—did you give effect to that? No; we still have salaried surveyors.

5248. And are the accounts prepared in the head office as formerly? I think so.

5249. Why did you not see your way clear to falling in with the view expressed by the Commissioners? I do not think they could have quite understood the nature of the case. A surveyor sends in an account, which, of course, we never pass till we are quite satisfied that the survey has been properly performed. We might be able to pass a number of items and there might be a number of others that we could not pass. If we had to keep that account hanging up till we could satisfy ourselves as to every item, we should be keeping the men without their money for a very long time. The rule, therefore, has been for some time past for the surveyor to forward a voucher signed, and we fill in the work as it is passed, and in that way a great deal of complication in the accounts is saved.

5250. With a view to localize the administration of mineral lands, the Commissioners in their report recommended that the distinction between mining and ordinary Lands Department surveyors be abolished, and that all surveys should be made under the direction of the district surveyors in each district;—what was the result? That recommendation was not acted upon. Of course, as regards the distinction, that was made by Act of Parliament, and we cannot get rid of the distinction without repealing the Act. The Mining Act of 1874 requires mining surveys to be made by mining surveyors. The reason why we have not adopted the recommendation made there to place the mining surveys under the district surveyors is that by the present system we can get scattered surveys made more expeditiously than by the plan recommended. As a matter of fact, we do get a good many surveys made through the district surveyors, but the Commission recommended that all should be made.

5251. Is much of the time of the Geological Branch occupied in connection with the prospecting vote? Yes, but not always. We utilise the services of geological surveyors in connection with the prospecting vote, when they have something to do in the particular locality where aid is applied for, and, if there is anything that requires a special knowledge of geology in dealing with an application for aid out of a prospecting vote we avail ourselves of the services of the Geological Branch. 5252.

H. Wood,
Esq., J.P.

18 Feb., 1895.

H. Wood,
Esq., J.P.
18 Feb., 1895.

5252. Have many payable discoveries resulted from the prospecting votes? Yes; we publish every year the number reported, but the difficulty is that the discoveries are not followed up.
5253. I am speaking of payable discoveries? Yes, even payable. We have had a number of reports of payable discoveries, but for want of means in some cases I think the discoveries have not been followed up.
5254. In what way have you apportioned the vote? Application is made by a party of men for aid to enable them to do a certain work, sometimes to sink a shaft, at other times to construct a tunnel, with a view of reaching some reef or lead, and we then make an inspection, unless it is in country that we know. If we know the locality sufficiently, we deal with the application without an inspection; but where we do not know the country, someone makes an inspection and reports to the Board, and the Board consider the application, and we make a recommendation to the Minister.
5255. What fields are now being worked as the result of the prospecting vote? I do not think I could answer that. There are claims being worked.
5256. What claims? I could not tell you from memory.
5257. Are many claims being worked? I think there are. A good many discoveries have been made that are not being worked.
5258. Can you specify an instance in which a substantial success has followed the expenditure from the prospecting vote? I am inclined to think that perhaps the most substantial would be Mount Drysdale. That mine is paying very good dividends now.
5259. Was that discovery the result of the prospecting vote? They had aid from the prospecting vote.
5260. Was it discovered before aid was granted? I do not think they had any payable stone when aid was granted to them. For the last few years there has been a certain amount of revival at Hill End. That was the result, to a certain extent, of the prospecting vote.
5261. In what manner do you ascertain that the money granted for prospecting purposes is properly applied? Upon receipt of an application for aid, unless the mine or the immediate locality of the mine is known to one or more members of the Prospecting Board, an inspection is made of the mine both above and below ground, and an estimate is made of the cost of doing the work proposed to be done, and, according to the judgment of the Board, the Minister is recommended to grant or refuse aid to the applicants. If aid is granted, no payments are made until work is done, and certified to as done by an officer of the department. Then if, in the course of the operations, it is discovered that the estimate made by the Board as to the value of the work is too low, we increase the rate. If, on the other hand, it is found that the estimate is too high, we reduce the rate. The Minister, in granting aid, reserves the right to vary or stop the work at any time.
5262. Have there been many instances of the abandonment of claims after receipt by the prospecting parties of money granted by the department? Sometimes mines are abandoned before the money granted in aid has been expended; but mostly the abandonment would take place after the whole of the aid granted has been expended without a discovery. Most of the abandonments occur in that way.
5263. The men go on working as long as they can get any money? There are many cases where they would not go on working even if we gave them further aid.
5264. Are there numerous instances of that? Yes; a good many. It is supposed that the work thus carried on is to the advantage of the people round about, who live upon the miners, and who are benefited by the opening up of the mine, while the country generally is benefited by the development of its mineral resources and by the employment of labour.
5265. Is much of the time of the scientific staff occupied in connection with the expenditure of the prospecting vote? I could not say that much of the time of the whole staff is occupied, but very frequently one or other of the members of the geological staff may be engaged on work in connection with the prospecting vote.
5266. Has the cost of the branch been reduced as recommended by the former Commission? No; they recommended that some of the people should be dispensed with, and these people have been dispensed with; but I think the staff is quite as large now as it was then, but not larger; so that practically there has been no reduction. The work done by the staff is sufficient to occupy them and to keep them fully employed.
5267. It was recommended that the services of three temporary officers should be dispensed with;—was that recommendation carried out? No; we could not reduce the staff.
5268. Do you agree with the recommendation of the former Commission that the position of examiner of coal-fields should be abolished? Yes.
5269. And the services of the present examiner dispensed with? Yes; of course the one follows from the other.
5270. A recommendation was made with respect to the Inspector of Mines and the Diamond Drill Branch, that an officer of 60 years of age should be dispensed with? He has been dispensed with.
5271. Is there any other economy that can be effected? A temporary clerk has been dispensed with quite recently, but I do not think we could reduce the staff very much more.
5272. Is this branch a necessary one? There is very little doing now. Whether there will be a revival it is difficult to say, but we have a large sum of money invested in these drills and I suppose we shall have to keep them. We cannot sell them.
5273. How many officers have you on the staff of the Diamond Drill Branch and the Chief Inspector of Mines? Four—the superintendent and three clerks.
5274. Is any work now being done by the diamond drills? No.
5275. Is it necessary to maintain the staff in connection with the branch, having regard to the fact that there is no work at present being done by the drills? It would be necessary to continue some of the men, such as the chief inspector of mines, even if you got rid of the branch. The two things are worked together. They are both under the same officer, and worked in the same room. The two clerks who appear on the Estimates under the head of Diamond Drills are employed also in connection with the inspection of mines and the prospecting vote.
5276. Is their time fully occupied? Yes.
5277. There was a very strong recommendation by the late Commission with reference to the public watering places and the conservation of water? Yes.
5278. Was that recommendation fully considered, and has any change been made? Yes; a change has been made, but not in the direction recommended by the Commission. Of course the report was not considered.

considered in the sense of a report of a Commission. We never recognised that report, because we could not get the evidence. In saying that the recommendation has been carried out I am only telling you what has occurred; I am not saying that our action was the result of the recommendations of the Commission.

H. Wood,
Esq., J.P.

18 Feb., 1885.

5279. It was a change considered by the head of the department as desirable? Yes.

5280. The recommendations of the Commission contained reference also to the construction of watering-places? These watering-places were then being constructed by the Public Works Department, and as a matter of fact another Royal Commission was inquiring into that matter, and recommended that the works connected with the public watering-places should be constructed by the Public Works Department. We held that they should not, because their mode of dealing with them was too costly. They employed engineers to carry out these works. We said they were works which anyone who was used to station work could carry out, because we only wanted a tank or a well such as would be used on a station. We did not want an engineer to do the work. Eventually the question was referred, after the Commission's report was received, to the Under Secretary of Works and myself, and we made a report recommending that these works should be carried out by the Mines Department. Our report was dealt with by the two Ministers at the head of our respective departments who practically concurred. The matter was then brought before the Cabinet and was settled in the way we recommended.

5281. Is it a fact that there are inspectors of conditional purchases and various other inspectors covering each others routes? Quite possibly. Yes, I think so. That is the case more or less. I do not mean to say that they have all precisely the same districts to travel.
